CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80. 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— £0: 5 s.;	2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 ;	3 ;	9.50;	11.60
2.50— 0: 10 ;	3 ;	10.60;	12.85
4.00— 0: 16 ;	5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Charges that a coffee combine exists which is "the most monstrous imposition in the history of human commerce," were made before the National Coffee Roasters Association at Chicago last week and they were urged to initiate a movement to overthrow Brazilian domination of the coffee market. "We have to pay famine prices for coffee where no famine exists," was alleged. "Brazil produces eighty-five per cent of the world's coffee. The government issues bonds to the amount of seventy-five million dollars to buy the surplus stock of coffee. The coffee is turned over to the banking syndicate, which is in absolute control of the coffee market of the world. Herein Brazil, by abrogating her legislative powers, has violated her treaty obligations, and the matter should be a subject of inquiry by the American state department."

The promoters of the Atlantic & Pacific Transportation Company announce that they will be compelled to abandon their project to establish a fleet of independent vessels between the Atlantic and the Pacific oceans by way of the Panama canal because the financial backing, influenced, it is said, by transcontinental railroad interests, on which they had relied, has been withdrawn, and this may result in the government constructing and operating a line of steamships to run through the canal. The question which is likely to receive much attention in Congress during the coming session is whether the transcontinental railroad shall control transportation from the Atlantic to the Pacific by way of the canal after the waterway shall have been completed.

Delegates from Maine to Oregon were present last week when the first American Good Roads Congress assembled at Richmond, Va., for its initial session. The principal object of the organization is a nation-wide campaign for correlated systems of good roads. Under the auspices of the National Association for Highway Improvement, delegates have been sent from nearly every state in the Union. Southern states especially showed marked interest in the propaganda. The congress plans not only an active campaign for more good roads, but a propaganda of education for the preservation of those which exist.

The weather bureau has adopted an additional marine warning, to be known as the "small craft warning." By it owners of fishing, towing, motor, and yachting craft will be notified of the approach of the strong winds which may interfere with the safe working of small vessels. This went into effect Dec. 1, and consists of a red pennant flown from the flagstaffs on the Atlantic, Pacific, and Gulf coasts and the Great lakes, and will signify high winds which would not justify the issue of a regular storm warning.

Postmaster-General Hitchcock has expressed strong views as to some publications which are issued periodically and which make a specialty of advertising matter, and has expressed doubt whether such publications ought to be permitted to pass through the mails at second class rates. The statement is made that he intends to advocate a law that newspapers which carry more than fifty per cent of advertising be refused admission to the mails as second class matter.

Steps for the construction of the first state pier in Rhode Island at Providence are being taken. Proposals and specifications for the work call for a wooden pier about one hundred and twenty feet wide and six hundred feet long. The pier is to be erected on the west side of the Providence river on land which is passing to the title of the state under condemnation proceedings.

Dr. William G. Erving, surgeon of the Yale Peruvian expedition, is back after an absence of seven months, in the course of which he penetrated to little visited recesses of the mountainous interior of Peru with Prof. Hiram Brigham of Yale University. The expedition discovered a hitherto unknown Inca city, containing a palace, temples, and baths.

There had been excavated from Culebra cut on Nov. 1, 70,042,244 cubic yards of rocks and earth, and there yet remained 18,501,761 cubic yards. The average excavation a month for the twelve months just passed has been 1,372,000 cubic yards, and at this rate the work will be completed by Jan. 1, 1913.

International.

The Earl of Plymouth has purchased Crystal Palace, one of the great amusement places of England, for one million fifty thousand dollars. His purpose is to hold it until the national fund shall purchase it, thus avoiding its sale by public auction. The freehold estate comprises a little over two hundred acres, and includes the famous gardens and grounds laid out by Sir Joseph Paxton, with the fountains and waterfalls, the cricket and football grounds, tennis courts and bowling greens, the lower lake of nearly six acres, with its collection of prehistoric animals, and some five thousand feet of valuable frontages. During its existence of fifty-seven years no less than one hundred million visitors have passed its turnstiles.

The general criticism in connection with the Moroccan agreement with France, that the Reichstag should have a voice in the conclusion of such treaties, has made a breach in the constitutional position of the Emperor as a treaty-making power, and Vice Chancellor Delbrueck has announced to the committee of the Reichstag to whom the Franco-German treaty had been referred, that the government has found it to be just that Parliament should hereafter be consulted in a treaty which involves the acquisition or cession of colonial territory.

A lecture of considerable interest was delivered recently at the Royal United Service Institution in London in favor of a railway under British control from Egypt to India. Starting from Port Said the line would run eastward to Nushki, which is at present India's westernmost rail head. This route follows closely the thirtieth parallel of north latitude, and offers no insuperable topographical obstacles. The railway would touch the sea at three points, Port Said, Akaba, and Koweit, and would be in communication with the coast at several points.

Wu Ting Fang, former minister to the United States, who has accepted the position of secretary of foreign affairs under the republic proclaimed by the Chinese revolutionists, asks the world powers to recognize the newly organized republic.

Industrial and Commercial.

With a view of bringing about closer relations with the New England farmer, and for the encouragement of agriculture, the New York, New Haven & Hartford Railroad Company, through its industrial bureau, has recently secured a favorable option on thirty-six thousand acres of farm and timber land in Maine, a part of which the Maine Central Railroad Company will use for an experimental farm, under the supervision of the bureau, with a view to colonizing the property at a later date. The New Haven company also has erected a large warehouse at its Harlem river terminal for the express purpose of providing storage and giving New England farmers opportunity to reach the Harlem and Bronx markets with their farm products. The first report by Manager Seeley of the industrial bureau refers especially to the work of the bureau in developing farm industry, including the encouragement of specialty farming, truck gardening, the expansion of apple culture, and to its part in recent exhibitions where New England farm products took high prizes. An agricultural publication has been purchased and will be conducted for free distribution among the farmers. In its first six months the bureau has dealt directly with twenty-five hundred freight and ticket agents, with fifteen hundred or more chambers of commerce, boards of trade, business men's bodies, and state, town, village, collegiate, farm, and other associations in the New England states.

The Ottoman-American Development Company, a New Jersey corporation, which planned to build a one hundred-million-dollar railroad in Asia Minor, is about to withdraw from the proposed project because of its inability to obtain an approval of its concession from the Turkish government. Secretary of State Knox has backed the proposed project with his diplomatic influence. The failure of the plan is generally attributed to the influence of Germany in Turkish affairs. Officers of the state department admit that the project is practically dead, with no hope of reviving it. Several years ago the company applied to the Turkish government for a concession to construct and operate a railway system in Asia Minor, having a total length of about twelve hundred miles and involving an estimated expenditure of about one hundred million dollars.

A new method of making diamonds has just been discovered by Dr. Werner von Bolton, a chemical expert connected with the Siemen-Halske laboratory of Berlin, Germany. The process is based on the decomposition of lighting gas by a mercury amalgam, whereby the carbon contained in the gas is crystallized into diamonds. As these diamonds are extremely minute, small bits of diamond dust are introduced into the apparatus, where they serve as mother crystals upon which larger diamonds are gradually built up. The process is still in the experimental stage and the diamonds are small, but it is hoped that the discovery may result in the solution of the problem of manufacturing diamonds by artificial means.

Recently the Pennsylvania railroad imported two hundred and nine thousand seedlings. In the seed beds were sown twenty-five bushels of acorns and nuts, three hundred and seventy pounds of other hardwood seeds, and seventy-five pounds of conifer seeds. Trees which are not suitable for timber production are being grown for ornament. The company has begun the propagation of ornamental trees and plants for beautifying its property, and intends to develop a large amount of shrubbery and hedges for the protection and ornamentation of the station grounds and rights of way.

The present increase in the price of sugar in England has aroused protest among British consumers. Sir Edward Grey, the foreign secretary, announced in the House of Commons recently that unless the powers allowed Russia to export at least five hundred thousand tons of sugar westward in the current season, the British government had decided to notify the powers of its intention not to adhere to the convention regulating Russian export of sugar beyond September, 1913, which is the earliest date at which Great Britain could withdraw.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE TENETS.

JUDGE SEPTIMUS J. HANNA.

THE tenets of The Mother Church should be frequently and carefully studied by all who desire to live and prove the teachings of Christian Science not only for their own growth and aid, but for the information they are thereby enabled to impart to others. Moreover, an intelligent grasp of these tenets greatly aids the Scientist in correcting misapprehensions and misrepresentations of the teachings of the Christian Science text-book, "Science and Health with Key to the Scriptures," in which these tenets are incorporated. (See page 497.) Their brief consideration may be helpful in the connection mentioned:—

"1. As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

This tenet completely negatives all charges to the effect that Christian Scientists do not believe the Bible to be of God and divinely inspired. The fact is that all true Christian Scientists accept the Bible, in its spiritual import, without the slightest mental reservation. They endeavor most earnestly to make it in fact and in deed their "sufficient guide to eternal Life."

"2. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness."

This tenet fully and unqualifiedly answers all objections that Christian Scientists do not believe in God and in His supremacy and infinity. It also refutes all assertions that Christian Scientists deny the doctrine of the holy Trinity, for in this tenet is clearly and broadly set forth the unity of the Father, the Son, and the Holy Ghost,—the three in one and the one in three.

"3. We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts."

In the face of this tenet no one can truthfully say that Christian Scientists ignore sin. They believe that sin exists as a claim of human error, and that this error is forgiven in the only way it can be forgiven; that is, by its destruction through obedience to God's law, which means a cessation of sinning. Nor can it be truly charged that Christian Scientists do not believe in the punishment of sin, for in this tenet its punishment is distinctly taught.

"4. We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death."

Here is distinctly set forth the doctrine of atonement, and man's salvation in the true, full sense of that term. Also the divinity of Christ is here plainly shown.

"5. We acknowledge that the crucifixion of Jesus and his resurrection served to uplift faith to understand eternal Life, even the allness of Soul, Spirit, and the nothingness of matter."

This plain averment leaves no doubt that Christian Scientists believe in the mission of Christ Jesus, and that the man Jesus was crucified and resurrected as taught in the Scriptures. Nor in the light of this tenet can it be held that Christian Scientists believe in pantheism, for here is a sweeping declaration of the allness of divine Spirit and the nothingness of matter, while pantheism is a belief that the totality of the universe, including matter, its forces and laws, is God, and that there is no other life or action than that which proceeds from matter.

"6. And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

This last tenet is one of the most comprehensive declarations of true Christianity ever given to the world. One of its remarkable features is that it sets forth in words the golden rule. We shall search in vain the creeds of the old churches for a literal incorporation therein of the golden rule, however much its spirit may appear. There could not be embraced in language a higher standard of Christian living than is contained in this tenet. It admits of no compromise with error in any form. It is as inflexible as are divine Love and eternal justice. Its demands are supreme, its terms superlative. It is the Bible in epitome; it is the teaching of "Science and Health with Key to the Scriptures" in a paragraph; it is Christianity in a nutshell. Genesis is there. Exodus is there. The Psalms are there. Isaiah and all the prophecies are there. The gospels are there. Revelation is there. Salvation, redemption, atonement, sanctification, baptism, predestination, foreordination, crucifixion, resurrection, and ascension all are there.

He who watches, and prays for the possession of the Mind of Christ, is reaching out for every essential thing in Christianity. He who is truly gaining ground in this direction is treading the way that Jesus trod, and his ultimate goal is that state of existence to which Jesus referred in his wonderful admonition, "Be ye therefore perfect, even as your Father which is in heaven is perfect." This state of existence comprehends the golden rule with its all-embracing Christianity, for upon this, Jesus declared, "hang all the law and the prophets."

In the light of these tenets, the teaching which Christian Scientists are called upon to follow, how can any who believe in God, in the Christ, and in the Bible, question for a single moment the absolute Christianity of Christian Science? Moreover, in this light we who have solemnly subscribed to these tenets as our profession of faith, must truly watch, and pray to prove ourselves worthy of such teaching in lives consecrated to the demonstration of Christ's full and complete gospel.

LOVE'S REQUITAL.

MYRTLE B. S. JACKSON.

THE divine law of loving one's enemies seems a very high altitude of Christian thinking to attain. Perhaps the chief difficulty in this line of achievement lies in the suggestion that we have not yet learned how to love our friends, and until we do know just how to do it, it is hardly to be expected that we shall make much headway in making friends of our enemies.

The Scriptures say, "If ye love them which love you, what thank have ye? for sinners also love those that love them." We leap over this verse in our eager, breathless haste to reach the command, "Love ye your enemies," which follows after, but we might meditate in more wasteful ways than to give a few minutes' sober thinking to the question, Do we always love those who love us? Do we always understand, sympathize with, and return the affection of those who for varying reasons care for us? There is no reason why we should not always do so, and yet the suffering caused by heartbreak and unrequited affection is so prevalent a belief among men that a mental attitude of courteous indifference toward our fellow beings has come to be regarded as the only sensible state of feeling. The fact is that mortals regard human affection in too personal a light altogether, and so become either inordinately proud of it, or else they fly to an even worse extreme, and are desperately afraid of it—afraid of love, which, when rightly understood, is beautiful, blessed, our native atmosphere and vital breath.

Our text-book tells us that "God is Love, and therefore He is divine Principle" (Science and Health, p. 275); and that which is Principle must necessarily partake of the nature of law, attraction, adhesion, continuity, strength, righteousness, peace. Man, the image and likeness of divine Principle, Love, must therefore express and radiate love, give it forth and receive it, and abide in the consciousness of it forever and forever. Can we repress, or reject, or fear that which is the essential of the Science of being? Would it be wise or good for us to do so, would it be possible? "Ah, yes," some reader exclaims at this point; "but then, human love as we know it is tainted with material concepts, while divine Love is pure Spirit, and its reflection is purely spiritual and impartial and looks to God alone." Yes, but still it is sweet to remember that our human love is no more material than we think it to be, and in this connection it is worth while to ponder more deeply than before the incident of the alabaster box of ointment as recorded in the twenty-sixth chapter of Matthew.

Mary had risen to perceive "the divinity of the Christ . . . made manifest in the humanity of Jesus" (Science and Health, p. 25). She recognized the spiritual idea unfolding to human consciousness. Wherever it is seen, it is the purest, brightest, most exquisite revelation known upon earth; and Mary saw it, and she loved it. She brought her most sacred sense of gratitude and friendship and worship, as typified by the costly ointment, and she poured it all out at Jesus' feet. But all that the disciples were able to understand of it was to exclaim with indignation, "To what purpose is this waste? for this ointment might have been sold for much, and given to the poor." And are not modern disciples prone to say the same thing very often?

Devotion is seldom expressed for one individual, that others do not immediately suggest it could have been disposed of more advantageously in different directions; but Jesus did not tell Mary that she was presumptuous, or foolish, or misguided, or any of the things which we may assume that his disciples were thinking about her in their hearts. No, "the most scientific man that ever trod the globe" (Science and Health, p. 313), although her love was called forth by that in him which reflected the divine, accepted the tribute humanly, and regarded it as a tender ministration to his human needs. He even praised the discernment which felt his needs to be far greater than those of the poor, for he stood alone in the rending apart of the veil of the flesh, alone in his mighty demonstration out of it,—no one could do that work for him, as indeed no one can do anybody's work in that respect, however much they may wish to; and so the time in which to take a few of the thorns from his pathway was short, for he would not always be with them. That he approved and requited her love is still more emphasized in his solemn words, "Verily I say unto you, Wheresoever this gospel shall be preached in the whole world, there shall also this, that this woman hath done, be told for a memorial of her." And in the gospel pages has the record stood, a testimony of right loving, for nineteen hundred years.

Christian Science demonstrates the compassionate Principle of love, made practical in every-day affairs and in ways which all can understand. It sanctifies and hallows all human relations, it removes fear from every friendship and protects and preserves it, and it also presents the opportunity for us to express love to one another. Moreover, it enables us to go on loving in quiet and in silence, when wisdom requires this test, and instead of our hearts breaking through want and weariness, instead of sinking exhausted into a dull stupor of despair, we find that in loving truly we reflect the one divine heart, and discover ourselves to be alive in light and joy, awake in everlasting Life. Finally a new and wondrous power springs up within us, breaking through the cold crusts of selfish and conventional thought, like streams of living water uprising through the hard earth,—the power of loving those who ask for love, and whom, before we had seen the Christ expressed in one illumined life, we might have deemed uninteresting and commonplace. Now that we have seen the light shine in one dear face, we have learned to seek for it in all, and this last sacred experience is indeed not of ourselves, "it is the gift of God."

SPIRITUAL HEALING.

REV. HUGH A. STUDDERT KENNEDY, B.A.

Two men once stood at night in the lamp-room of a lighthouse. One was the lighthouse-keeper, and the other a stranger. It was a wild and stormy night, and the wind shrieked and howled round the glass walls as it rushed by on its hurricane way, while ever and anon from far below came the thunder of the waves as they hurled themselves upon the rock upon which the lighthouse was built and threw up spray far into the night.

"Are you never afraid?" asked the stranger, during a lull in the storm, as he watched the other tend his lamps. "Of what?" said the keeper, looking up. "Afraid?" replied the stranger: "Afraid that one night a greater gust of wind or a greater wave than ever before will come and sweep the lighthouse into the sea?" The other said nothing for a time, but went on tending his lamps; and when he did speak the stranger noticed that there was a smile upon his face which was good to see, for it seemed to speak of a great security. "Yes," he said at last, "I was afraid of that once. But that was a long time ago, when I first came here; and I have long since ceased to be afraid. Would you like to know how I was cured?" "Yes," replied the stranger; "tell me." "I will do more than that," said the keeper, "I will show you, if you will come with me." And he took the storm-lamp from where it stood near by, and they went out of the room together and began to descend the winding staircase which led to the rooms below. They went down a long way, and as they left one flight after another behind them, the sound of the storm grew fainter and fainter, till at last it was heard only as a distant murmur and then ceased altogether.

Digitized by Google

They reached the bottom of the last flight of stairs, and the stranger looked around him. They were in a large room, larger than any he had been in before. The walls were great blocks of rough-hewn granite, and the floor was solid rock. As the lantern lit up its rugged grandeur, there was borne in upon the heart of the stranger a sense of silent immovable strength which he could find no words to describe.

"These walls and this rock cured me," said the keeper, breaking the silence; "this rock upon which the floods have come and the winds have blown, and all the powers of the deep have spent themselves in vain—this rock is the foundation and those are the walls. Night after night at first, when I felt afraid I would come down and stand just here—and look around, and then I was afraid no more; and I would go back again into the storm up aloft and tend my lamps. And when the wind blew and the rain and spray dashed against the glass, I just remembered the rock. Are you afraid now?" "No," said the stranger, "for I understand. Shall we go up again?"

Many, many times at the Wednesday evening meetings does the story come back to the mind of the writer as he listens to some faithful "keeper" giving his testimony of healing in Christian Science, or as he turns over the pages of the *Sentinel* and *Journal*, and week after week and month after month, with unfailing certainty he finds one record which is always the same, always there, steady, rocklike, unshakable—the testimonies of healing. And when the writer was getting his healing, and sense told him that it was slow and long in coming, when the way seemed dark and hope deferred, many, many times has he taken the "storm-lamp" of a faith all too small and gone down to the foundation and found a great calm and a great assurance. And it is always so; it matters nothing how wild may be the storm of "cold disdain, stubborn resistance, opposition from church, state laws, and the press" (Science and Health, p. 224), unshaken and unshakable—here indeed is a rock. "The waves of the sea are mighty and rage horribly," cries the trembling voyager. "Aye," says a voice close at hand, "but the Lord who dwelleth on high is mightier."

Christ Jesus spoke the final word as to the sure foundation when, at the close of his wonderful sermon on the mount, he said concerning the work of the wise builder: "The rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock."

SUBSTANCE.

HELEN W. BANNON.

THE following thoughts were suggested by a passage from Deuteronomy which occurred in one of our Lesson-Sermons: "There is none like unto the God of Jeshurun, who rideth upon the heaven in thy help, and in his excellency on the sky. The eternal God is thy refuge, and underneath are the everlasting arms." This declaration of God's omnipresence and of His power to help and sustain His children in any situation, however dangerous to material sense, should bring comfort and assurance to every Christian Scientist, who can prove, and indeed has proved, that divine Mind is a God at hand and not afar off. These verses seem especially applicable to the case of those daring men who are endeavoring to sail their craft through aerial regions in defiance of the material law of gravitation, and the words seem also to convey a promise of ultimate success in this field of exploration.

The belief has been expressed by some writers, from the fact that carvings resembling winged ships have been discovered on some of the Mexican monuments, that the navigation of mid-air was not quite unknown to the ancients. On the other hand, the verses quoted may be prophetic of our own day, for there are passages besides these which clearly promise that mankind shall not always be earth-bound. Isaiah says: "They that wait upon the Lord shall . . . mount up with wings as eagles." A case in point was that of Philip, who, after baptizing the eunuch somewhere in the desert country south of Jericho, was caught up by "the Spirit of the Lord," and was afterward found at Azotus. This wonderful experience certainly implied great spiritual growth in Philip.

Years before hearing of Christian Science, the writer used to enjoy attending the lectures given at a well-known institution where experiments were made which have now become commonplace, but the remembrance of them has often helped to make clear the Principle of divine Science. Some of the demonstrations showed that there is no such thing as a material substance. A block of steel, so solid in appearance, was proved to be an aggregation of molecules, no two touching one another. Certain chemicals, fluid or gaseous, when brought into contact with their affinities, immediately changed their conditions or disappeared. Throughout the whole round there was no stability or permanence.

It is, however, more than probable that neither the lecturer nor his audience, at that time, saw the tendency of the results obtained. It was left to Mrs. Eddy, the Discoverer and Founder of Christian Science, to point out the tremendous issues involved and how they concern us; and as her teachings become better understood, so will the human race, by degrees, be enabled to cast aside its sense of limitation. Through the Science of sciences will mankind discern that "Spirit is the only substance, the invisible and indivisible infinite God;" also that God is everywhere, and "fills all space" (Science and Health, pp. 335, 331). With the psalmist we shall then sing: "If I ascend up into heaven . . . even there . . . thy right hand shall hold me."

The time will come when the aviator will feel as safe in his air-machine as when comfortably seated at home in his armchair, because he will know that neither the one nor the other really supports him, both alike being without substance or cohesion. In Science and Health we read: "Adhesion, cohesion, and attraction are properties of Mind. . . . We tread on forces. Withdraw them, and creation must collapse" (p. 124). Take away the mental support, and the chair would collapse. Neither is the earth on which things rest self-sustaining; and the wise men of antiquity perceived this; but their belief that it was upheld on the shoulders of Atlas, who stood on the back of an elephant, supported in its turn by a turtle floating in space, seems to us ridiculous. The astronomers of today are also beginning to admit many weak points in the theories they have held. "Whence or what is the power back of gravitation,—the intelligence that manifests power?" our Leader pertinently asks in "Miscellaneous Writings" (p. 23). Through her teachings, which have illumined the Holy Scriptures, we can realize that God alone, the one Mind, governs and maintains the universe, and all things therein.

SPIRITUAL INTERPRETATION.

EMMELINE HASKELL.

OUR Leader, Mrs. Eddy, has said, "Take away the spiritual signification of Scripture, and that compilation can do no more for mortals than can moonbeams to melt a river of ice" (Science and Health, p. 241). When we recall the passages which have been most helpful to us in moments of need, it is probable that even those who are not Christian Scientists can testify that such passages have been those whose spiritual meaning was obvious; or, if capable of material interpretation, it was not the material but the spiritual which was helpful.

Many years ago the Bible seemed to the writer to be contradictory, enigmatical, and in many of the well-known

Digitized by Google

parts commonplace. One of the first passages which aroused the suspicion that the fruitlessness of efforts to find good might not be due to a lack in the Scriptures but rather to a lack in the one who was reading them, was that in Hosea, "They eat up the sin of my people, and they set their heart on their iniquity . . . they have left off to take heed to the Lord." At that time the writer had not heard of spiritual interpretation; the Bible was history, and some people called it inspired; a desire to know why they said this, prompted a study of its pages.

These words of the prophet Hosea could not be taken literally, and their spiritual meaning contained a sharp thrust at a long-indulged habit of so contemplating the worldly-mindedness of some professed Christians as to leave no desire for closer fellowship with them, but to "eat up" sins might reasonably have tended to produce mental dyspepsia, which condition would possibly explain why one had been unable, or had "left off to take heed to the Lord," it being impossible to partake at the same time of both good and evil. This reasoning brought about a contrite and receptive state of mind, wherein both the Bible and its professed followers appeared in a new aspect. A resolution was formed to stop looking for difficulties and inconsistencies, if such existed, but to seek if there might be any helpful statements, and if so, hold to them, letting others pass unconsidered.

That one spiritually accepted passage served in many ways, for it was not only a warning against a besetting sin but an incentive to gain that state of consciousness in which one might know how "to take heed to the Lord." It opened the way into profitable Bible study and to years of joyful fellowship and communion with the members of another Christian church. It often occurs to the writer that if those who stumble because of supposed shortcomings in professed Christian Scientists, or because of some passages in our text-book which at first seem obscure, would heed the warning of Hosea and be willing to accept such words of truth as they find in Science and Health, that they would in due season reap a rich recompense for their patience and meekness.

During those early days the writer had many talks with a clergyman who confessed that parts of the Old Testament and some of the imprecatory Psalms were not to him helpful reading. He was a kind-hearted man, and King David's prayers for the destruction of his enemies appeared such as Christian love could not utter. In view of their spiritual signification, however, such parts of Scripture may now be read in full recognition that "a man's foes shall be they of his own household;" even such thoughts as besiege us, claiming to be our own, and regarding which we can all heartily pray that they may be destroyed root and branch, showing no mercy to any of their kindred, not even to those which are seemingly harmless.

Orthodox Christians of the present day interpret many parts of the Bible spiritually, and Christian Scientists are seeking through the study of Science and Health, and our Leader's other writings, to understand the sacred Scriptures and through them to come into that knowledge of God which is life eternal; Him whom all men must at last worship "in spirit and in truth."

ADAPTATION.

MIRIAM ADEE.

Not long ago it became necessary for me to review various problems in mathematics, in order to pass an examination which was pending. I had always found this branch of study difficult of comprehension, so much so that only by memorizing and sticking steadfastly to given rules was there any hope of arriving at the correct solution of a problem. Even when the desired result had been demonstrated, there was very often an inability to explain satisfactorily the method of operation. During this period of preparation, however, I not infrequently was able to work out intricate problems by two or more different ways, apparently getting the right answer each time without regard to the method used, and so absorbed did I become finally in my pursuit of new methods of working, that I very nearly lost sight of the primary object of study.

One day, just after an experience similar to the above, and when slightly chagrined because of a feeling of inability to explain which of two operations bearing equally correct results was preeminently accurate as to method, the opportunity came to effect a final differentiation. A man who is noted as being an expert mathematician came into the office, and I told him the situation. I was eager to show him the figures used and to explain how I had done the work; but to this he gave little heed, merely asking to see the problem and then proceeding to set it out on paper in a simple, direct way. When the work was completed it was clear and concise, a perfect demonstration of correct fundamentals and easily understood. I exclaimed at its unlikeness to my work, which certainly had the result called for, but he dismissed the matter by saying, "There is never but one correct way to work out a problem. You may dodge and hedge about, and apparently get the answer; but if you search closely, you will in time discover the flaw."

Mrs. Eddy has quoted De Quincey as saying that "mathematics has not a foot to stand upon which is not purely metaphysical" (Science and Health, p. 113). Formerly I was unable to reconcile this statement and its connections with Christian Science, for the reason that mathematics had seemed to combine so many principles and rules, all equally good and correct and merely necessitating the individual's choice of some one of them. What possible difference could it make which ones were used, just so the answer was obtained as given in the book? Owing to this very illogical reasoning, and the awakening consequent to the above incident, I very soon discovered that for more than a year past I had been employing personality in my effort to demonstrate a given problem successfully, my understanding of Principle apparently lying idle in the mean while. With vision clarified, a most subtle error was revealed at work in the premise, the reason for inaccuracies and only partial results was made manifest, so that, with Principle once more established in consciousness and set at work, there was an almost instantaneous elimination of its counterfeit.

As a result of this experience I would express my thankfulness for having obtained a glimpse of that understanding which is absolute in its realization that there can be but one correct method of working out life's problems. A perfect Principle has been stated for our guidance in the Scriptures, and Mrs. Eddy has given a clear, demonstrable interpretation thereof in the text-book of Christian Science, "Science and Health with Key to the Scriptures," so that perfect results may be attained by all who will correctly apply its teachings.

[Written for the *Sentinel*]

A DISCIPLE.

AGNES FLORIDA CHALMERS.

Dear child, what is the prayer that thou hast given
This morning for thy home which is in heaven?
Father, I only asked of Thee the way
To better do each little task today.
Dear child, in proving well these few things, thou
Shalt know the joy of ruling many now.

Dear child, what is the prayer that thou hast given
This morning for thy church which is in heaven?
Father, I only opened wide love's door
That they might enter who were barred before.
Dear child, the Christ is calling once again:
Come, I will make thee fishers, now, of men.

SELECTED ARTICLES.

[From *Akron* (Ohio) *Times.*]

Probably no newspaper in the world has made such a fight for clean journalism as *The Christian Science Monitor.* In March of this year a day was set aside in which over a hundred meetings were held in different towns and a hundred newspapers participated in a consideration of this subject. Most newspapers in the general scramble for circulation and advertising have lost their ideals entirely, and some never had any, but the *Monitor*, a noted exponent of absolutely white journalism, is one of the most interesting general newspapers in print. Many people have the idea that it is strictly a religious sheet, but this is a mistake. It is a general newspaper, containing perfectly authentic accounts of home and foreign happenings, sporting page, home forum, fashion news, and is a big advertiser. The fact of the matter is, the world is getting educated morally and there are enough people of fine caliber to sustain and financially support clean newspapers, if the men were available to launch and maintain them.

[E. M. Ramsay in *Montrose, Arbroath, and Brechin* (Scot.) *Review.*]

I notice that the *Gordon Town Missionary* still continues to circulate false charges against Christian Science, and I shall feel grateful if you will allow me to tell your readers something of what Christian Science teaches, that they may judge for themselves whether such teaching makes for the good of the race or for its undoing.

Christian Science is founded on the nature of God and His relationship to His creation, as set forth in the Bible. It recognizes God as infinite, ever present, eternal, all powerful, as the only cause and creator, "with whom is no variableness, neither shadow of turning." It acknowledges Him as Father, Love, Spirit, Life. The Christian Science student is taught how to open his consciousness to such thoughts as these, to welcome them with humility, gratitude, and joy. As these heavenly truths enter his heart and take possession of him, he perceives something of the meaning of the following words of our Lord: "If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him." He begins also to understand St. Paul's statement, "It pleased God . . . to reveal his Son in me." Thus in his own heart he knows that man is made in the image and likeness of God, since for the first time in his life he feels satisfied, at home; the everlasting arms are underneath him. At moments such as these he condemns sin as never before, but he sees it as a monstrous delusion, as a nightmare which, having no place in God, can form no real part of His child; he recognizes that as it is not created by God nor permitted by Him, it can possess none of the God-qualities, and is therefore without presence, life, or power. He sees that pure thoughts are essential to health, since God is infinite Life; that to harbor resentment, hatred, revenge, is to feed on poison, is to wander in the prodigal's country, is to be in the outer darkness, far from God and far from home.

Thus this communion with God, with Truth, enables a man to walk the every-day paths of this work-a-day world as a better man, more pure, truthful, serene, faithful, and kind. It makes him more healthy, natural, practical, capable, more successful, humble, and free.

[Edward W. Dickey in *West Coast Magazine.*]

Christian Science is a science, and not contingent upon any human personality. It is not an invention or creation of Mrs. Eddy, but solely the outcome of her own spiritual study and research. It is a subject so vast that it cannot possibly be regarded in the light of an "ism" or "ology." It is not a doctrine. It is too large for a creed, and it goes beyond mere form in worship. Insubordination to the divine law of life inaugurated by the Master is not taught in Christian Science, but on the contrary an undeviating adherence thereto. It makes for purity, righteousness, honesty, and good will to others; in fine, it is but the scientific statement of Christianity. The two are indissoluble, and cannot be considered separately. For this reason Christian Science cannot be considered as akin to any human teaching or system. Furthermore, it cannot be understood in the light of these teachings nor explained by means unlike itself, because it is spiritual, entire, and complete.

Our critic asks the question, "Is Christian Science Christian?" and then, as a preliminary to his conclusion that it is not Christian, he declares that Christian Science denies a personal God. If he had studied what Christian Science teaches on this subject, he would have found the following on page 116 of the Christian Science text-book: "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." In amplification of the foregoing, Mrs. Eddy writes: "We understand that God is personal in a scientific sense, but is not corporeal nor anthropomorphic. We understand that God is not finite; He is the infinite Person, but not three persons in one person. Christian Scientists are theists and monotheists. Those who misjudge us because we understand that God is the infinite One instead of three, should be able to explain God's personality rationally. Christian Scientists consistently conceive of God as One because He is infinite; and as triune, because He is Life, Truth, Love, and these three are one in essence and in office" (Messages to The Mother Church, p. 40).

Because God is infinite He works according to infinite laws. The word infinite precludes the possibility of time. What was done through an understanding of God in the time of Jesus and the apostles can be done in the year 1911 and in all other years. The word infinite precluding the possibility of space, God is omnipresent. The word infinite precluding the possibility of limitation, God is omnipotent or all power, in fact the only real power in the universe. Christian Science therefore reveals the God of the Bible, "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies." Because God is good His laws are good, and are therefore for man's integrity, health, and well-being. Christian Science declares unreservedly for an infinitely good God, who is "Love" as John declared Him, and who does not send sickness or sin to afflict the race.

Christian Science is entirely spiritual in premise and conclusion, and is deductive, going from cause to effect. It reaches the conclusion that the concept of man and universe which is the basis of pantheism is a counterfeit of God's man and universe. When one grasps the meaning and significance of what Christian Science gives, it is readily seen that sin, disease, and death are not a part of God and cannot possibly be, any more than light can commune with darkness or Christ have concord with Belial. Christian Science, therefore, declares and proves evil, root and branch, to be unreal, without basis, foundation, or cause, and something to be denied and cast out through a realization of the infinite power and presence of God.

Because Christian Science declares sin is not a part of the "very good" things which the Scriptures declare God made, it does not in consequence overlook the fact that sin and evil are a part of mortal belief. It is doubtless true that this statement of Christianity constitutes its students a "peculiar people," but there has never come to this world, either as a philosophy or religion, a teaching that so clearly, so concisely, and so demonstrably shows the necessity of overcoming "the world, the flesh, and the devil" as does Christian Science. Christian Science bases the whole of salvation upon an infinitely good God, but it shows that

Digitized by Google

there cannot be salvation and attainment of everlasting life without the acceptance and living of Christ's moral standard. Christian Scientists have set their hand to the most stupendous task that has ever engaged or ever will engage the attention of men—namely, the extinction of all belief in evil. They are taught to bring "every thought to the obedience of Christ." Christian Science is emphatic in its teaching that "whatsoever a man soweth, that shall he also reap." It reveals the imperative necessity of grappling with and overcoming all evil through the power of God.

The denial of evil in Christian Science means a denial that puts sin aside and quenches all thought of it. Through the revelation of God's omnipresence and omniscience that comes in Christian Science, the sinner is encouraged to master sin and destroy it. He learns that God, good, is the only real power; consequently evil is without power, allurement, or attraction. He learns that sin is not something to be loved or feared, hence it ceases to exist. Through the unceasing prayer of Christian Science, the sick and the sinner reach the consciousness of the ever-presence of an infinitely good God, and prove that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear."

Christ is the voice of God to humanity, and teaches humanity the knowledge of God. In the Christian Science text-book, "Science and Health with Key to the Scriptures" (p. 583), Mrs. Eddy gives the following definition of Christ: "The divine manifestation of God, which comes to the flesh to destroy incarnate error." She defines Jesus as "the highest human corporeal concept of the divine idea" (p. 589). He was endowed with the "Mind of Christ," which established his claim to the Messiahship and enabled him to say, "I and my Father are one," and "Before Abraham was, I am." It was this Christ-Mind that healed the sick, reclaimed the sinner, raised the dead, moved mountains, and enabled Jesus to raise his own body from the dead.

[William J. Bowtin in *Middleton* (Eng.) *Guardian*.]

The brief report of the Rev. E. Lloyd Jones' lecture attributes to the lecturer the remark that there was a great deal to be said for Christian Science, as twenty per cent of people's diseases were imaginary or mental. Taken as it stands, this remark would leave one to suppose that Christian Science was merely a process for healing the sick and adaptable only for imaginary and mental cases.

Will you allow me to state through your columns that Christian Science is a scientific interpretation of the Biblical teaching, and that it has come to this age to demonstrate how any one and every one, Greek or barbarian, Jew or Gentile, may overcome evil with good. For to overcome evil with good is the end of the Christian faith, the calling of the Christian. And the contemplation of this fact immediately reveals the necessity of understanding the meaning of the terms, of knowing what we have to destroy and with what it is to be destroyed. If the fundamental Christian teaching that God is good, and omnipotent and omnipresent, is not merely a theoretical abstraction, but a truth of such a nature as to be of value and of help and worth knowing, then evil, as an unavoidable necessity, must be without power and without presence. Evil, then, must necessarily in its origin and nature be a deception. Christian Science insists on this inexorably. Another solution of the seeming problem must be found.

To restate the proposition, then, we are to destroy the deception with the truth, the false with the genuine, the unreal with the real. It is the material consciousness that tells us, on the information of the senses, that evil is real and a power, and therefore it is this consciousness that we have to deal with. Christian Science declares that this mortal, material consciousness is not a witness to truth, but is itself the dupe of the deception, and, in point of fact, part and parcel of it. Within the scope of this consciousness there are things both true and untrue, both good and evil, according to its own standard of truth. But Christian Science declares that its standard of truth is a false one, that it is merely a relative one and of no use for the testing of absolute values.

And it does declare that before we can apprehend absolute, as distinguished from merely relative, truth, the process of exchanging this consciousness for spiritual understanding must have been entered upon, and the fruit of the tree of life sought in place of that of the tree of the knowledge of good and evil. The message of joy which Christian Science has for the race is that this process may be entered upon here and now, and that the change of consciousness is accompanied by a change of experience. When it is seen that all causation is mental, however it may appear to be vested in materiality; that the one real cause is the one divine Mind, God, who is Love, and that the human mortal mind is but a spurious cause with a spurious effect, it becomes natural to desire to obey Paul's advice, "Be ye transformed by the renewing of your mind." And it becomes plain that Jesus and the apostles did not heal the sick and sinning as so many mere wonder-workers, but that they thus demonstrated the truth they had to preach. That same truth Christian Science is preaching today, and in demonstration of it is healing, not "imaginary ailments," but sin, and misery, and sickness, and disease of every description.

[From *Washington* (D.C.) *Post*.]

The hater is to be envied on no account. His abilities are extremely ordinary and commonplace. It is far easier to hate than to love. Without much effort, one can hate anybody. Ninety-nine times out of a hundred, however, the hurt is to the hater. It is his own soul that becomes impoverished and broken down.

Love is the foundation of Christianity. The injunction to love, even your enemies, is not merely a commandment, but the enunciation of a divine Principle that involves happiness to the one who follows it. It can only be carried out through the recognition of spiritual truths. What is the secret meaning, for example, of the command, "Whosoever shall compel thee to go a mile, go with him twain"? Apparently this: The first mile represents the power of hate, manifested by force; the second is a mile throughout whose whole pathway the principles of hate are wholly inoperative, a mile that is entirely beyond the first power, trodden in the heights, transcending and overcoming in benignant sublimity the vapors of the valley below.

Hate is sometimes confused with justice and righteousness, and works under those guises. But it never brings joy or satisfaction.

[Joseph B. Lovell in *Montreal* (Can.) *Witness*.]

In a letter headed "The Conference and Higher Criticism," a critic calls "Science and Health with Key to the Scriptures," by Mary Baker Eddy, a blasphemous book. May I say that the reading of this book has healed many persons, morally and physically, and has done and is doing more for humanity than any one can estimate. The first impression of the writer when he read it some years ago was that it was inspired, and with careful reading and study of the truths contained in it, he has not had any reason to change that first impression.

I quote from an article in *The Christian Science Journal* for October, entitled "The Christian Science Text-book," by the Rev. William J. Noble, A.M., Ph.D.: "The distinguishing characteristic of Science and Health, however, is its power in the sick-room. To many otherwise hopelessly sick, it comes with a peace and assurance utterly impossible apart from inspiration. Let sick people read

Digitized by Google

the so-called scientific discussions of the nature of their affliction and its cure, and their conditions and symptoms are very apt to be aggravated. Even physicians admit this. But this book, instead of arousing, soothes the anxiety of the sufferer. It never delineates disease or its symptoms. It brings to the sufferer 'the sunlight of Truth' (p. 162) concerning his condition. Yet more interesting and important, it has the power to allay existing fear and prejudices, and to convince the patient that health is man's eternal possession. People who are not sick may have opinions about the book, widely differing, but the sick who study it are practically a unit concerning its nature and worth."

In the book itself all the power and all the glory is given to God. God, Truth, Life, and Love, pervades its pages from first to last, and those who read it and study it find a new incentive to study the Bible daily. On page 497 of Science and Health, the first tenet of Christian Science is, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life."

[Ezra W. Palmer in *San Luis Valley Graphic*, Monte Vista, Col.]

Christian Science requires spiritualization of thought, a true and exact knowledge of God as the divine Mind, and man as a spiritual being. It moreover requires love for God and man to be the sole motive for undertaking the work, the one ideal being to bring the kingdom of God to earth. To attain this state of mind, which was the Mind of Jesus the Christ, may take time, a great deal of time, or it may be attained quickly. It depends on the capacity of the student to grasp spiritual things. St. Paul, it will be remembered, very quickly gained the understanding needful to preach Christ Jesus and to heal the sick.

Christian Scientists hold no brief against the medical fraternity. They cheerfully acknowledge the high motives, the philanthropy, the courageous efforts to alleviate disease and suffering, among the better class of physicians. They desire every person who wishes to employ *materia medica* as a healing agency to be unrestrained in his choice. They have no sneers to offer over the failures of *materia medica* to heal particular cases, nor have they any stones to cast at individual members of the profession for their personal failures or idiosyncrasies. They endeavor to live the golden rule in their relations to all men, knowing that only by so doing can they truly follow the Master, who taught his followers to love all men, enemies as well as friends.

[W. E. Fell in *Yorkshire Telegraph and Star*, Sheffield, Eng.]

"There may be methods of treating such a disease (nerves) by suggestion, and this is at the foundation of the doctrines of the so-called Christian Science." This opinion, which I quote, I am well aware is somewhat generally held, but incorrectly, since Christian Science has nothing whatever in common with suggestion. The basic discovery in the Science of Christianity is that all causation is mental, all cause and effect are mental, and as such the modus of thought directly influences the phenomena of existence. The Bible gives utterance to this basic truth in the words "As he [a man] thinketh in his heart, so is he." "There is nothing either good or bad, but thinking makes it so" (Shakespeare). Jesus declared, "Ye shall know the truth, and the truth shall make you free."

Christian Science is the Science of right thinking, which brings out the right result or manifestation. The study of this Science instructs the student how to differentiate between right thoughts and wrong thoughts, and to apply this knowledge in the destruction of discordant conditions. The right thought is, of course, "the truth" spoken of by Jesus, that "makes free" from the error, the wrong thought that has superinduced the sin, the sickness, or the disease. We see, therefore, that suggestion can have nothing in common with the above process of knowing "the truth," the freedom-bringing truth.

A knowledge of the spiritual, or the absolute, frees us, as Jesus said it would, from the merely relative sense of things, the discords that obtain in the human sense of life. The truth must be good, wholly good from the very nature of its source, and this brings us quite naturally to the consideration of the question of suggestion, and we at once see that Christian Science and suggestion have no common basis. Manifestly if a sick-headache can be removed by suggestion, it can also be produced by suggestion, and herein lies the latter's menace to a defenseless public. It claims to be productive of good and evil, the fruit of that tree of which God said in the beginning, "In the day that thou eatest thereof, thou shalt surely die." Christian Science, from its very nature, is absolutely incapable of working aught but good. It cannot injure, but must benefit and bless the receptive thought, manifesting its Christliness in better health, improved morals, higher ideals, and a sense of happiness and freedom from care undreamed of by the thought uninstructed in the Principle and rule of scientific Christianity.

For every evil under the sun there is its antidote of truth. Just what that antidote is the Christ-knowledge, or Christian Science, unfolds, proving by practical demonstration the impotence of evil and the omnipotence of good. The daily destruction of some evil prophesies the ultimate destruction of all evil, and man, redeemed, walking a holy thing, will know what Christ Jesus meant when he said, "If a man keep my saying, he shall never see death."

[George A. Law in *New Haven* (Conn.) *Union*.]

In the account of the remarks of a clergyman before the Connecticut Baptist convention, in referring to what he terms soul hunger, he is credited with having said, "There is Christian Science, professing to satisfy the hunger, although it denies the reality of sin and exalts Mrs. Eddy above the Christ."

Inasmuch as the gentleman belongs to a profession devoted to the destruction of sin and its results, he apparently places himself in a peculiar position when he finds fault with the attitude taken in Christian Science relative to sin, for were the gentleman's contention true and well taken, all the efforts to free humanity from its bondage would avail nothing, since it is a self-evident proposition that it is impossible to destroy anything which is real. In Christian Science sin is regarded as that which has no just claim to a rightful place in the life of man; that it is illegitimate, abnormal, a producer of discord, inharmony, and unhappiness, to be contended with and eliminated from man's experience. It is in the sense that such belong to that which is temporal and fleeting, and not to the permanent and enduring, that in Christian Science sin is regarded as unreal; and for the reason that it can be destroyed and thereby the peace and harmony of man established, is proof of its unreality.

Christian Scientists do not "exalt Mrs. Eddy above the Christ," nor do they consider her as having been equal to Christ, as has sometimes been stated. Christian Scientists never considered Mrs. Eddy as supernatural; they love her for what she accomplished and for what she was, in the same sense in which any teacher might be regarded. Those who are beneficiaries of her labor and sacrifice for humanity, justly recognize their debt to her for health, happiness, and their return to usefulness. Evidence of the general recognition of her worth was the beautiful tribute which was almost universally given by the press of the world at the time she passed away.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"I WILL FEAR NO EVIL."

On page 392 of Science and Health Mrs. Eddy writes, "Stand porter at the door of thought," and it will do Christian Scientists much good to bear this admonition constantly in mind, for their daily and hourly encouragement. We need always to remember that the belief in evil which would alarm and discourage us is but false thinking carried into effect. Discouragement is but the belief that subtly and insidiously strives to impress upon our consciousness that evil is a reality and more powerful than good. Sickness is but another ruse of the tempter, evil cloaked in another guise, the manifestation of the belief that man is subject to a power which can render him useless and to which he must finally succumb. But, whatever the guise in which evil may present itself, either boldly asserting its usurped authority or with cunning craft seeking to intrench itself ere its presence be recognized, it may nevertheless be routed from its would-be stronghold if it is met with a determined front, with the truth which is mighty and must prevail,—that "God is infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17).

Perhaps doubt as to the sureness of our defense will try to gain a footing, but if we have followed the advice of that true soldier of the faith, the apostle Paul, and put on "the whole armor of God,"—our "loins girt about with truth, and having on the breastplate of righteousness; . . . shod with the preparation of the gospel of peace; above all, taking the shield of faith, . . . the helmet of salvation, and the sword of the Spirit,"—we have naught to fear. The truth is just the opposite of all false beliefs. If God is omnipotent and the creator of nothing but good, and man is His image and likeness, there is no reality or power in evil. To believe otherwise is to dishonor God. Christ Jesus knew what his followers would have to meet, for he was himself tempted of the evil one; but he met the suggestion of the tempter with a declaration of the allness, the omnipotence of God, good, and won the victory, even as we may. Paul's counsel, "Be not overcome of evil, but overcome evil with good," is along the same line.

Mrs. Eddy reiterates this counsel. She writes: "At all times and under all circumstances, overcome evil with good. Know thyself, and God will supply the wisdom and the occasion for a victory over evil" (Science and Health, p. 571). Again, in the pamphlet "What Our Leader Says," she gives us this reassurance: "Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort." There is no sense of discouragement, no doubt or hesitation here, but a steady, persistent following up of the line of defense.

What would be thought of a traveler who continually declared his inability to proceed, or of a mechanic who persistently decried his ability to do the work assigned him. The one would make but little progress toward his destination, the other would soon find himself out of employment. Continuing this line of reasoning, what right has a Christian Scientist to expect deliverance from evil, or to escape the snare of the fowler, if instead of boldly meeting the advance of the enemy and repelling its attack, he is but half-hearted in his declaration of God's allness, and is continually prompted to say, "I am sick," "I am unable to do what others do," and so on through the entire range of uncertainty and discouragement.

The belief of evil, and the results of this belief, would be entirely destroyed if every one knew the truth about it, that is, its nothingness and powerlessness; then why should Christian Scientists, who have learned this, be tempted to let into their thought that which would keep it alive? We have learned in Christian Science that the only footing these evil beliefs can gain is what we permit them by leaving unguarded the door of thought and thus allowing them entrance. Then it is the part of wisdom, surely, to cease limiting ourselves by admitting in any way the so-called reality or power of evil. No matter what the seeming, let us hold fast to the omnipotence of God, good,—know, as our Leader counsels, that "Mind is the master of the corporeal senses, and can conquer sickness, sin, and death. . . . Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man" (Science and Health, p. 393). Thus guarded and defended, we can say with the psalmist, "I will fear no evil: for thou art with me."

ARCHIBALD MCLELLAN.

THE SURE FOUNDATION.

There can be no safe and stable superstructure without an adequate substructure, as all will concede, and that this is no less true of a life than of a building, all will do well to remember; also this, that while the foundation of a house may be quite unlike the material of the house itself, in character building the fundamental concept on which we build is revealed in every part of the structure, from sill to comb. The truth or falsity of one's impelling ideal is sure to project itself in his words and conduct.

They who have wrought mightily and achieved, who have proved themselves superior to the storm and stress of adverse fortune and left a lasting impress upon civilization, have always had their foundations laid upon the rock of Truth, and the world is rapidly recognizing how clearly this fact is illustrated in the instance of the woman of this age whose teaching and life-accomplishment have already marked an era in Christian history. In one sentence Mrs. Eddy has embodied the great essentials of the Christ consciousness, and the texture and quality of her thought, the secure abiding-place for her faith, in all the years of a momentous mental struggle. "God is my life." This was her supreme declaration, and it speaks for the continuity of that spiritual parentage and support which is not only emphasized, but which is being realized and demonstrated in Christian Science. It speaks, too, for the freedom and inspiration, the wisdom and capacity, the peace and joy which all pertain to that true living identified by Christ Jesus with the knowing of God. The compass and sweep of this assertion are simply tremendous, and it is impossible for one to make it while consenting to any baseness or materiality as belonging to his true selfhood or nature. This is the illumination and redemption of Christian Science, that it gives the intelligent daring of faith which accepts the unity of God and man, which claims and strives for the effective realization of kinship to Spirit.

In their effort to get at the truth of things many Christian believers have been led to accept the philosophy of material evolution as a means of scientifically articulating the man of material sense with God, Spirit, his assumed Father. Even Luke falls into this form of speech in his tabulated genealogy of the child Jesus, the son (as it was supposed) of Joseph, the son of Heli, and so on through the seventy-five generations enumerated, to Seth, the son of Adam who alone is denominated the "son of God." In human thought and statement the process of material procreation and development are supposed to link men to their creator, but for the average materialist the distance back through all the forms of animal life to the original divinely commissioned monad, is so interminably long that it begets a sense of removal from God, rather than of nearness to

Digitized by Google

Him. Apart from the concept of man as the continuous manifestation of the divine activity, an uplifting realization of our kinship to God is handicapped to a degree that is utterly discouraging to spiritual aspiration.

In his late London lectures Henri Bergson is reported to have said, "It is the great process, not the resting aspects of it (the universe) which is important. Life must be viewed as expressing itself in creative impulses, and as always giving rise to something new." This is a daring rebuke for the mechanical theorists respecting the relation of God to man, and it hints at that recognition of God as the immediate source and support of all true being, action, and effect, which Christian Science is pressing home today. In all the affairs of the kingdom of the Father and His man, from its beginning until now, God, divine Principle, is recognized in this Science to have been, and to be, the only agent, the only source of life. He has not set a system of forces in order and left them to eventuate in the ideal man, but His wisdom, perfection, and activity are forever expressed in man, hence the potent privilege of every true Christian Scientist to be able knowingly and victoriously to say, "God is my life."

JOHN B. WILLIS.

THE ONE MASTER.

TOWARD the close of Jesus' earthly ministry he gave some of his most vital and far-reaching instructions to all who desired to listen, whether friends or foes, and it would seem that many of these discourses were given within the precincts of the temple, where also he healed the lame and the blind. What mattered it to him that those high in power demanded his authority for his words and works, and that they were "sore displeased" because of the grateful homage of the children? He had his work to do, and knew that not a word of truth could be lost though heaven and earth should pass away.

In the twenty-third chapter of Matthew we find the great Teacher giving a solemn warning against what in modern terms might be called personal domination. He said, "One is your Master, even Christ; and all ye are brethren." Early in his ministry he had said that no man could serve two masters,—that we must serve God alone. This was probably taken by his auditors as a warning against worldliness, for such has been the general opinion about the passage in recent times, but Christian Science teaches us to look beyond the surface meaning for the real lesson in every case. It is not enough to admit that we should not try to serve "God and mammon," but we should see clearly that we cannot have two masters, God and self, neither can we impose upon others the domination of self-will without forfeiting our loyalty to the one Master, even Christ.

Here we need to discriminate between personal domination in households, organizations, or communities, and the recognition of rightful authority. In the epistles we find many exhortations to those who serve, that they should obey their masters, also to children, that they should obey their parents, and this is certainly right. The employer is the one who should decide as to how work must be done, as otherwise we should have an attempt at personal domination on the part of those who have agreed to serve. The warning of Christ Jesus was directed against the subtle tendency of mortal mind to take control of others' thoughts, words, and actions, so that "heavy burdens and grievous to be borne" are imposed on men through ignorance of the essential truth that all should be left free to follow the guidance of the Christ-mind. The mental servitude which ignores this demand of Truth is no less harmful to the one who blindly, and sometimes unconsciously, imposes it upon others, than it is upon those who to avoid friction submit to the habitual dictation of some person or persons. Spiritual and mental freedom is a divine gift to all men, and woe betide the one who, either in thoughtlessness or with ill intent, would rob others of this essential to their growth and unfoldment; in brief, to their salvation. Some who ought to be loved and cherished are feared and shunned because of their tendency to take control of others, in utter forgetfulness of the one master, "even Christ."

We should never forget that mental freedom, more than all else, is needed by the sufferer, as well as by those who have to work out the seemingly hard problems of human experience. Here we may well ponder the words of our revered Leader, respecting the command to love God with all the faculties of our being. She says that this command "involves the Science of Life, and recognizes only the divine control of Spirit, in which Soul is our master, and material sense and human will have no place" (Science and Health, p. 9). Who would not seek this freedom for himself and gladly and gratefully accord it to all others?

ANNIE M. KNOTT.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

GREAT FALLS, MONT.

The corner-stone of the new chapel of First Church of Christ, Scientist, was laid this morning [Aug. 28] at seven o'clock on the foundation at the corner of First avenue north and Eleventh street. Simple and devout services were conducted, the only people present being the building committee, the readers, and the contractor. Selections from the Bible and from "Science and Health with Key to the Scriptures," by Mrs. Eddy, were read.

A copper box contained a Bible, a copy of "Science and Health with Key to the Scriptures," and Mrs. Eddy's other works. The service concluded with a silent prayer followed by the Lord's Prayer. The new chapel will be erected at a cost of twenty-five hundred dollars, and it is to be completed by Jan. 1, 1912.—*Great Falls Leader.*

EMPORIA, KAN.

Excavation for the foundation of First Church of Christ, Scientist, has been started. The new building will be on the northwest corner of Ninth avenue and Commercial street, on lots purchased by the Christian Scientists last spring. The building will have a cement foundation with stone reinforcements; and the main body of the church will be of buff veneered brick. The auditorium will be plainly but richly finished, and the ceilings will be reinforced by heavy wooden beams. The seating capacity will be two hundred. The main building will be forty-four by fifty-four feet and will cost five thousand dollars. The bungalow type of architecture, with broad veranda, stone trimmings, and gray shingles, will give the church a unique appearance, which is characteristic of most Christian Science buildings.

The Christian Science faith in Emporia has grown steadily, and the building of the new edifice is imperative because of the inadequate seating capacity of the rooms in the Holderman block now occupied.—*Emporia Gazette.*

THE LECTURES.

MELBOURNE, AUSTRALIA.

William D. McCrackan, M.A., lectured under the auspices of First Church of Christ, Scientist, Melbourne, Australia, in the Melbourne Town Hall on Sept. 11 and 12. The Town Hall, which is one of the largest halls in Melbourne, was well filled both evenings by an interested audience, who listened with very close attention and occasionally applauded. The introducer on the first evening was E. E. Dillon, a city lawyer and secretary of the Melbourne Peace Society, who said in part,—

Although until the other day Mr. McCrackan was a stranger to the community, we can welcome him not only because of the great country from which he comes, but because of the subject on which he is to speak. I myself am not a Christian Scientist, but from what I know of that body I do not fail to recognize that they are the stuff of which good citizens are made. They endeavor to demonstrate to the world at large the fatherhood of God and the brotherhood of man: and a people who make these their principles and strive to carry them out cannot go very far wrong.

H. Gyles Turner, retired manager of the Commercial Bank, presided at the second lecture, and in the course of his introduction said:—

The subject of Christian Science has taken a great hold in other countries, particularly in America and in England, and people who have accepted the faith have substantiated it by their works. While I do not include myself in the cheerful optimism which the faith embraces, I welcome on the ground of intellectual freedom and religious tolerance the expression of any form of religion that tends to uplift the spiritual life. I am interested, also, inasmuch as—so far as I am able to follow it—I believe the Christian Science religion to be free from sectarian bitterness or denominational antagonism. The method of teaching the religion is simply to place before the public what I may term their form of creed, and leave decision on the matter entirely to the individual conscience. That, I understand, is the object of such meetings as I am now addressing, and I am sure that you will be gratified to give Mr. McCrackan the earnest attention his subject demands.—*Correspondence.*

MATTOON, ILL.

A lecture Sunday afternoon [Oct. 1] at the Grand Theater by Judge Clifford P. Smith attracted a large and representative audience in spite of the inclemency of the weather. The speaker was introduced by G. W. Sawin as follows:—

More than nineteen hundred years ago a bright star sent forth its radiance over and around the city of Bethlehem in Judea, proclaiming to the world that a babe was born, concerning whom an angel said, "Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord." The radiance of this star, and the glad tidings, attracted the humble shepherds and also the wise men, and with the coming of Jesus Christ there was a new example of devotion, a new manner of dealing with enemies. A higher life was exemplified, which marks an epoch in the world's history. The story of Jesus Christ is intensely interesting, because it portrays a perfect life among people who, while living under different conditions and different environments, at the same time had practically the same physical, mental, and spiritual problems in their lives to contend with that we have today. His life's history, together with the preceding chapters of that great Book upon which all truth is founded, has been directly and indirectly the foundation for more than five hundred sects and creeds, many so inconsistent with its teaching that the relation can hardly be seen: but it has remained for this century that new radiance should shine, sending forth a bright message that has attracted thousands and hundreds of thousands to a new interpretation and new adaptation of the Scriptures.

I say a new radiance has shone forth, advisedly, for the interpretation and adaptation by the Christian Scientists is certainly different, and it must be something out of the ordinary that would attract and retain such a high type of citizens, such a deep thinking people as is represented in the Christian Science churches and societies all over the civilized world, and I think that this fact alone, outside of all other reasons, is sufficient to commend it to our thoughtful investigation. I think, too, that especially we who are not Christian Scientists, yet are prompted by a spirit of fairness and justice, should welcome an opportunity to listen to an explanation by one who speaks with full authority.—*Mattoon Commercial Star.*

KEWANEE, ILL.

Before an audience of more than one hundred and fifty, which assembled last evening [Oct. 6] at the Christian Science church edifice on South Main street, despite the inclement weather, Prof. Hermann S. Hering lectured upon the subject of Christian Science. The speaker was introduced by the Rev. S. R. Chubb of this city, who said in part.—

I come as a learner, and it is ever a joy to me to become better acquainted with any of the moral forces at work in this community or any other community. Any and every institution which has for its main object the lessening of suffering of whatever description, and the bringing in of anything tending toward the brightening of the experiences of struggling humanity, is worthy of respect, although we may not fully understand the underlying truths or be in closest touch with all the details of such an institution. I am free to confess I am an outsider regarding the movement known all over the world as the Christian Science movement, and although I have casually read many of Mrs. Eddy's writings, I am afraid I have to plead ignorance for the greater part in the full understanding of her words as expressed in writing. This being so, I am not able to form intelligently an opinion of the movement as a whole.

So I repeat, I am here as a learner, and have no doubt but that I shall receive instruction from the lips of one so versed in the question as the gentleman to whom we have come to listen this evening. The longer I live, the less I think of or believe in any mere creed, knowing as I do that for the greater part creeds are but the expositions of human beings and not faultless as a consequence. I believe in the vital truths outlined so fully by Jesus Christ when upon this earth, and which, perhaps more than in any one other of his discourses, are to be found in that matchless parable of the good Samaritan. The coming into the closest touch with the sufferer—the rendering of assistance to any such—the abandoning of all selfishness—the administering of help to any, without regard to who may be the needy one, and disregarding all clannishness or favoritism with the purest compassion, carry out the evident teachings of our Lord as outlined therein. Such actions on the part of any certainly form a part of that great kingdom of God which Christ came to establish here upon earth. This is the true spirit of Christianity as I understand it, and any movement or institution thus measuring up to the standard is worthy of the support of any and all people.

I believe in such a doctrine (or creed, if you please), as

Digitized by Google

I have in these few sentences shown, and any church adopting and living up thereto will merit and receive the approval and assistance of the majority of citizens everywhere.

Kewanee Star-Courier.

SAN ANTONIO, TEXAS.

Francis J. Fluno, M.D., lectured on Christian Science Oct. 8. He was introduced by Atty. Walter Napier, who said:—

Since coming here this afternoon I have been reminded of how true is the saying that "he who judges without first informing himself to the utmost, cannot acquit himself of judging amiss," especially when applied to religious doctrines. Yet I venture to say there is no current subject that is so often discussed with such positiveness and at the same time with almost total ignorance of its true foundation, as is that of Christian Science.

It is our disposition to prejudge and discount all religious teachings save those we have been taught to believe in from early childhood by our parents. Why we do so I cannot say, for a moment's reflection will convince us that it is wrong. No such standard is followed, or feeling allowed to intervene, in any of our other pursuits. In business matters we are always only too glad to take counsel from and carefully consider the views of others before finally reaching a decision. If this be true, then why should we not be equally anxious to grasp all the information possible before forming an opinion upon so important a subject to all mankind as Christianity. As we are charged by the church, it is our duty to spread the word of God; so I say it is our double duty to listen in turn to the word of God when interpreted by others.

I have not as yet accepted the Christian Science faith, for the reason perhaps that I know so little about it. Still I insist that its version, as believed in and taught by Scientists, in view of the success they have achieved, is entitled to the most profound and sincere consideration. And particularly is this so since I understand that they teach nothing save that which they can prove to be true. "Proven to be true," sincerely and in good faith stamped upon the covers of any volume, should be sufficient inducement to cause a person in search of religious truth to read its pages. I understand that The Mother Church has deemed it wise to carry to the people, through the medium of lectures, the Word of God, as understood by Christian Scientists, and to that end we are to have the pleasure this afternoon of listening to a discussion of this all-important question.—*Correspondence.*

MEMPHIS, TENN.

On Sunday, Oct. 8, Willis F. Gross lectured at the Lyceum Theater to perhaps the largest audience ever furnished by Memphis on the occasion of a Christian Science lecture. Mr. Gross was introduced by Attorney Henry Craft, who said:—

Some forty years ago Mrs. Eddy began to teach and to put into practice the religion which her investigation of the Bible led her to believe was the religion taught and practised by Jesus and his disciples. She did not profess to have originated a new religion, but did claim, as the result of many years of patient investigation of the Scriptures, to have discovered how and why the religion of Christ and his followers healed the sick as well as regenerated the sinner. She had sought and found a spiritual apprehension which offered hope, health, and happiness and was full of joy and peace, based on unchanging Principle, which experience proved to be scientifically correct.

From a small beginning the growth of Christian Science has been phenomenal. There are today churches and organizations in every part of the world. Its development has been orderly and systematic. Its doctrines have been expounded and its teachings disseminated only by those authorized and qualified. As a part of this system there is what is known as the board of lectureship of The First Church of Christ, Scientist, in Boston, and the gentleman who will address you is a member of this board.

Correspondence.

WESTMOUNT, PROVINCE OF QUEBEC.

A lecture on Christian Science was delivered Oct. 27 in Victoria Hall, Westmount, to a large number. The speaker, Virgil O. Strickler, was introduced by Walter J. Stetham, who said in part,—

Christian Science is now interesting people of the whole world. When I first became interested in it I thought it a beautiful philosophy, but utterly impracticable. Now I find it not only beautiful, but a practical religion which a business man can introduce into his every-day life; any professional man can find in it not only a great spiritual advantage but also physical advantage, and can introduce it into everything he comes in contact with.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Alma, Neb.—William R. Rathvon, Shaffer's Opera House, Dec. 11.

Anaheim, Cal.—Judge Clifford P. Smith, Opera House, Dec. 15.

Dubuque, Iowa.—William R. Rathvon, Church Edifice, 9th and Bluff streets, Dec. 14.

Firth, Neb.—William R. Rathvon, Christian Church, 2:30 p.m., Dec. 10.

Hastings, Neb.—William R. Rathvon, Kerr Opera House, Dec. 12.

Kansas City, Kan.—Prof. Hermann S. Hering, Masonic Temple, 3 p.m., Dec. 10.

Kearney, Neb.—Prof. Hermann S. Hering, Opera House, Dec. 14.

Los Angeles, Cal. (Churches and Societies).—Judge Clifford P. Smith, Third Church Edifice, 734 South Hope street, Sunday afternoon, Dec. 10, and Monday and Tuesday evenings, Dec. 11 and 12.

Malden, Mass.—Virgil O. Strickler, City Auditorium, Melrose, Dec. 11.

New York, N. Y. (Third Church).—Clarence C. Eaton, Church Edifice, 125th street near Madison avenue, Dec. 8.

New York, N. Y. (Sixth Church).—Virgil O. Strickler, Lexington Assembly Hall, 155 East 58th street, Dec. 12.

North Adams, Mass.—Virgil O. Strickler, Richmond Theater, 3:30 p.m., Dec. 10.

Pittsburg, Kan.—Frank H. Leonard, Orpheum Theater, 3 p.m., Dec. 10.

TESTIMONIES OF HEALING.

Whenever I see or hear a sneering reference to Christian Science, I think instantly of the words of Jesus: "Father, forgive them; for they know not what they do," as once, a few years ago, I myself sneered at Christian Science. Twenty-two years ago I was admitted to the bar and commenced to practise law under most favorable circumstances. I had youth, strength, health, education, money, friends, and the prestige which these things bring; I belonged to the leading fraternal organizations, mingled in politics, and was on the highway to success.

I was, however, said to have been born with a hereditary taint in my blood,—the appetite for intoxicating liquor,—and as my law practice grew larger, my appetite for drink grew stronger. Friends warned me, but I laughed at their fears and told them that drinking never would overpower me; that whisky might have downed many a good man, but it never would down me. By sheer force of will I held the appetite in check for a while, but little by little it crawled upon me until it held me within its grasp. Friends advised, relatives reasoned, and my dear mother, who was a student of Christian Science, begged me to see a Christian Science practitioner and free myself from the bondage which enthralled me, but I laughed at her and said that while Christian Science might do for nervous old ladies, it would hardly answer for a strong, rugged, intellectual man like myself. I struggled for a while, then took the gold cure; but its effect was only temporary. I did everything I could. Friends, physicians, relatives did all they could, but it was too late for any human help. I lost everything—law practice, money, home, friends, mother—all. I was lost. I went away. My relatives did not know where I was for years. They had given me up as lost. I was a slave to liquor, a hopeless wanderer on the face of the earth, a nameless derelict on the ocean of failure. I was merely waiting for death to come and end my misery.

In this condition I had wandered across the continent, and was up in the foothills of the Sierras one day, when I met a brave and noble woman who looked me in the eyes and told me that Christian Science could set me free. She gave me a few treatments and some literature which I read with avidity; but I wandered on, thinking that Christian Science would doubtless do for some, for most perhaps, but that I was too far gone to be saved. A few weeks later I met a Christian Science gentleman in Oakland, Cal., who took me by the hand, lifted me out of the gutter, and told me that divine Love makes men free from the law of sin and suffering; but my time was not yet come, and I wandered on. After a few weeks more of suffering, I was surfeited and was in direst extremity. One morning I awoke hopeless, friendless, and alone, and realized that I had squandered my youth in riotous living and that nothing but husks remained for me who had once lived in comfort and luxury. As I stood there watching the sun rise over the Sierras, the thought came to me as it had come to another prodigal long ago: "I will arise and go to my father"! I had kept a page of *The Christian Science Journal* with the address of a Los Angeles attorney who had been saved from the very bondage that then held me, so I determined to go to this man, tell him my story, ask his aid, and give Christian Science a fair trial—and if that failed, I would then end it all.

I started for Los Angeles immediately. I had no money, but I lost no time. I rode on freight trains, engines, blind baggage cars, farmers' wagons, and walked when I had to—any way to get there; but I kept on and on. One day I arrived in Los Angeles, found the attorney, who took me to his heart in kindness, introduced me to a practitioner, and—that is all! I awoke from my nightmare and found that I was not a drunkard; I had begun to apprehend man in God's image, free from bondage and limitation of every kind. This was over three years ago. From that day to this I have never had the slightest desire to drink intoxicating liquor. I used to think that if I could only be freed from the liquor habit, I would be the happiest man in the world, but I soon found out that I was not satisfied with freedom from that bondage alone. I had smoked for twenty-five years, but I do not smoke any more.

I soon found out there were many other things which I must do, which I longed to do, and had the strength to do. In the old days I used to be proud, arrogant, aggressive, with a temper that did not brook opposition; I was selfish, dishonest, lustful. By the exercise of the understanding that has come to me through Christian Science, I am gradually growing out of these evils, or, to put it scientifically, they are gradually fading away into the nothingness from which they came. I am learning the happiness of meekness and the strength of humility, and I am receiving the blessing of one who has done his best to walk in unselfishness, honesty, and purity. In the old days I was a scoffing agnostic whose life was a continual protest against the God I had learned to ignore. Now I rest serenely in the absolute understanding of a God who is Life, Truth, and Love. A few years ago each morning brought me nothing but gloomy foreboding, but now I arise with a joyous expectancy that something good is sure to find me during the day and that I am sure to be able to do some good to my fellow man. In the old days I saw little but evil; now I see little but good. My feet are planted firmly on the "stone which the builders rejected," the rock of Truth, and I have learned that when once our feet are planted on that rock, we can never go back.

For the benefit of any one who may desire further information or who may seek proof, I will say that every statement in this testimony is capable of legal proof, and I will gladly furnish it to such as may desire it. Men who get down and out as I was, are very apt to say to themselves that it is too late for them to be helped. Allow me to say that it is never too late to be helped in Christian Science. No matter how bad your case is, it is not too late. No matter how ill you are, it is not too late. No matter how serious a business reverse may seem, it is never too late. No matter how bad you may think your position is, you can yet become a happy, strong, normal man. The overcoming of your suffering will enable you to help others, and you can be a helpful, active, loving force in the lives of other men. It is a sublime truth that Mrs. Eddy has given us! Its clarion call is even now ringing in the depths where men lie asleep in sin and error as I was three years ago, and daily it awakens some one from the mortal dream to the grand reality of life.

Is it any wonder that my heart is filled with gratitude? Is it any wonder that I say in humility: "Father, forgive them; for they know not what they do"! I spoke unkindly of Christian Science in the old days, but when I was in the depths of misery and despair, abandoned by every mortal friend, Christian Science with infinite compassion and tenderness drew around me its sheltering arm, raised me up, and pressed me close to the great heart of Love.

FREDERICK HAYES ALLEN, Chicago, Ill.

Some time ago Frederick Hayes Allen, who was formerly in Los Angeles, wrote me that he had forwarded a testimony to you, relating his experience in Christian Science, and I desire to take this opportunity to say that I know he was healed of the drink habit in Christian Science. I saw him immediately before he took up treatment here, and his condition was pitiable. He had beaten his way on the brake-beams of the trains in order to get treatment, and when he called upon me the morning of his arrival he looked very little like the gentleman he is now. I was acquainted with the course of his treatment in Christian

Digitized by Google

Science and knew the practitioner who was working on the case. I saw Mr. Allen daily while his regeneration was going on, and had him before my eyes constantly for many months after he was healed. I know what his condition of thought was, and I am convinced that the healing is permanent.—LEWIS R. WORKS, Los Angeles, Cal.

When asked the other day, "What is Christian Science treatment?" my thought turned immediately to the time when a practitioner gave me my first treatment. I was then, as I thought, resentfully, bitterly, and selfishly ending my last few days on earth, absolutely "without God in the world," yet with the strong determination that I would live as long as I could, die bravely, and leave the solution of all mystery until after death. Reared in a Christian home by loving, God-fearing parents, with every religious privilege, I still had no knowledge of God as a living, palpitating presence, a practical help; all was intangible and wrapped in mystery. When it became known that the end was near, the minister of the church to which I belonged called repeatedly, and with loving sympathy tried to help me; but he could give me no practical help (I did not want to know how to die, but how to live), so after many fruitless visits he turned sadly away. My loved ones tried in various ways to turn my thoughts to higher things, and often would I find the Bible open beside me, but all to no avail; it held no message for me then, though now it is my constant help and guide.

It was at this time (in the autumn of 1907) that my husband heard of Christian Science and asked me to see a practitioner. Thinking it to be another effort to prepare me for future life, I refused; but ultimately, to please those around me, though my thoughts were filled with bitterness and I was determined never to yield my own opinions one iota, I had a little curiosity and consented to see the practitioner. Little did I think what peace and joy were to be mine; how I was to comprehend for the first time, however dimly, what is meant by "the peace of God, which passeth all understanding." The practitioner, instead of talking of death, talked of Life,—Life which does not depend on the organs of the body, but the eternal, infinite Life which is God and which never can suffer and die. She patiently and simply explained that God is Love, and knows no discord; therefore that His children, made in His image and likeness, could not experience anything apart from God. After melting all my hardness by revealing to me divine Love, and telling me of His watchful care over His own, she left me filled with hope and peace, with thoughts turning away from self, where they had dwelt so long, away and up to our Father-Mother God, the giver of all good.

Need I say that from then all was changed? This was truly the new birth, which commenced during the first treatment in Christian Science,—and this to one prejudiced against everything of a spiritual nature. Now, I know,—have proved beyond a doubt,—that as we grow in the knowledge of God as the source of our health, strength, and our support; and as we understand, even in a small degree, that God is infinite, omnipotent Love, in that proportion do we manifest the true health,—health, not limited or subject to material laws, but the unlimited, eternal sense of being, ever flowing from the infinite source, God, for surely health is the birthright of all God's children.

GERTRUDE KIRKLAND, Didsbury, Manchester, Eng.

I wish to express my gratitude for all that Christian Science has done for me and mine. I first heard of it about three years ago, while I was suffering terribly from what the doctors pronounced a diseased kidney. I was in bed four months, and was obliged to wear a pad and belt. With the second treatment in Christian Science I was able to go about without this appliance, and am now well. My little boy, five years old, was healed in three weeks of a badly injured elbow, without having the doctor even set it; also my daughter was healed of inflammatory rheumatism. She had suffered from it once before while under *materia medica*, and it then lasted nearly a year, but she was healed in Christian Science in less than two months.

For all these healings I am grateful, but I am most thankful for the peace of mind that has come to me and for the spiritual understanding of the Bible which I am gaining through the study of Science and Health. I thank God, and am grateful to our dear Leader for showing us the way.—MARY R. WILLIAMS, Seattle, Wash.

I thank God for the many healings I have had through Christian Science. Since I was nineteen years old I had suffered terribly with a pain in my back. I was treated by several specialists, tried various liniments, plasters, etc., but derived no benefit. Some time ago I met a lady who is a Christian Scientist, and I told her I was suffering from a general breakdown. I also asked her to give me a treatment, which she did; and since that time the lameness in my back has entirely disappeared. I am now in my sixty-eighth year, and since I was nineteen there never has been a day in which I could say I was entirely free from pain until I came to Christian Science for help. Since then, I am thankful to say, I have not felt the slightest symptom of the return of the pain.

Daily I thank God for having given us our Leader, Mrs. Eddy, who has followed Christ in the way of banishing all suffering, sickness, and sorrow.

MRS. EUDORA EATON, Mamaroneck, N. Y.

About four years ago I was healed in Christian Science of a chronic case of neuralgia of the head. I am grateful for the truth it teaches and for the help of a practitioner. I have not had any return of the disease since.

MRS. M. R. WILLIAMS, Milford, Utah.

I wish to tell what Christian Science has done for our little girl, now seven years old and a perfect picture of health. From the time she was two weeks old until she was ten months old she was a very sick baby. She had what five different doctors pronounced spinal trouble and tubercular disease of the bowels. All of them gave her up, and said there was no help for her. We finally turned to Christian Science for help, as we were then willing to try anything to save our child's life. There was only one Christian Science practitioner here then, and we called her. To our surprise our baby began to improve at once. The practitioner took up the case Aug. 21, 1904, and that very day and night our little girl had her first natural sleep; she also took food and could digest it without any trouble. She gained very fast, and at Christmas time she was able to use her limbs and could stand alone. She is now as strong and healthy a child as could be desired, with no trace of any spinal or bowel trouble. She is, in fact, a living testimony to Christian Science, and we are truly grateful for all that Christian Science has done for us.

This is only one of the many healings which we have received since coming into Christian Science, and we thank God, also our Leader, for this truth that heals the sick and the sinner.—MRS. G. G. WITT, Omro, Wis.

As the years come round one naturally pauses, begins to think, then counts one's blessings. As I owe so much to Christian Science, gratitude prompts me to acknowledge what a great help it has been to me in every way. Although for over nine years it has been my only medicine, and there have been many demonstrations over physical ills of different kinds (these we know to be proofs of the truth we

Digitized by Google

profess), still this seems only the smaller blessing. The greater one is the moral regeneration, expressed in purification of character, in learning to be more unselfish, more considerate for others, less self-indulgent, in learning to control temper and to be gentle, kind, and always to be ready to help those in need, even if this is inconvenient at the time; and to be shown the right way to attain this is indeed cause for thankfulness.

Many times the way has seemed dark and rough, but by holding fast to Truth, and refusing to yield to discouragement, by pressing on and putting into practice what I knew, the difficulty was overcome, or rather banished into its native nothingness. I have often been tempted to think environment had much to do with preventing my advance, but when one realizes that one lives in the omnipresent consciousness of good, and that evil has no power, nothing can stop one's coming into the light, into a fuller understanding of the true Science of being. "One on God's side is a majority," so there is nothing to fear, wherever we may find ourselves.

Being a great lover of animals, it is a great joy to see how they respond to the thought of truth which is held for them. In treating them I have had proofs of the effectiveness of Christian Science, various ailments having been entirely healed. Words are poor expressions of gratitude; the best way to show it is so to live as to prove it, and this is my gerat desire. I am indeed grateful to our dear Leader, Mrs. Eddy, for having given us this great truth, and for having shown us the way by her beautiful life, which remains an example and encouragement for us all.—Mrs. Charlotte F. Brooks, London, England.

As one of the many who have been benefited by Christian Science, I wish to add my thanks to God and my gratitude to Mrs. Eddy for what it has done for me. Fifteen years ago I was thrown from a bicycle, striking on my right knee and hip. At the time I did not think I had been injured very severely, although I suffered considerable pain and had to use a cane in walking. For many weeks I tried simple remedies with no relief, and finally I went to a physician and was treated for several months without any good results. I tried other physicians, electricity, and everything that was suggested to me, with no relief. This condition continued for fourteen years, and I had about given up hope of ever being able to walk again without the cane I had used all this time.

Through friends I was induced to try Christian Science. While I had heard considerable of what had been done by it, I did not think it could cure or help an injury such as I had received, and at this time the limb had shortened about an inch. I, however, decided to give it a trial; and I thank God that I did, for after the second treatment I began to improve and in twelve weeks I was able to throw away my cane, as on May 12, 1909, I went to Wednesday night meeting without it. I have continued to improve ever since, and expect to have the limb attain its normal length.—George W. Farwell, Oakland, Cal.

Two years ago I underwent a serious operation, which left me a nervous and physical wreck. Life did not seem worth the living and I felt that I was a burden to myself and the rest of the family. When the physician said the only thing he knew that would benefit me was a three-months ocean trip (and this was an utter impossibility), I turned to Christian Science, and my voyage was a walk of two blocks each morning to the home of the practitioner, where I read the Lesson-Sermon. In a short time I felt like a new person; the severe headaches were gone, and I continued to improve until those of my immediate friends who were sure the change was but temporary were forced to admit that there was something in Christian Science. I was also healed in one treatment of severe hemorrhages of the bowels, by this same practitioner.

Our little girl of nine years was also healed of congestive chills which brought on many alarming conditions. The continual struggle against the fear of those who came to the house seemed to retard the work of the practitioner, and at last she took the child to her own home, keeping her for an entire week. At the end of that time the child returned in a completely normal condition, able to go to school, and in all respects perfectly healthy.

For all these physical healings we are indeed grateful to God, also to Mrs. Eddy, but I am more thankful for the great blessings which have come to us spiritually. Through the study of "Science and Health with Key to the Scriptures" the Bible is a different book, and I know that "[divine Love] is my shepherd; I shall not want" (Science and Health, p. 578).

Mrs. Alta G. Farwell, Oakland, Cal.

Christian Science has done and is doing so much for me that I feel I should give expression to my gratitude. When I came into Science, over three years ago, I was completely discouraged. I was weak physically, had been so since the birth of my son nine months previous, and each day I seemed to be undertaking more than I was equal to. It also seemed as if I never again would have peace and rest on earth, but thanks to Christian Science a new light has dawned.

From the first of my study I began to feel free, knowing that I had strength enough to do all that was required of me. Before, I had dreaded the coming of each day, but now I am glad to work out little by little this beautiful truth, and I find it a most practical help. It is a great inspiration to know that there is a perfect divine Principle, and to know man as the idea of this Principle. As we do this it becomes easy to separate error from the individual, either as sin or sickness, for we cannot conceive of Principle being less than perfect. In reasoning from this basis I have been able to destroy a sense of hatred which had caused me much unhappiness. I know now that "divine Life destroys death, Truth destroys error, and Love destroys hate" (Science and Health, p. 339).

I am truly grateful to Mrs. Eddy for this truth, and I deeply appreciate the first line of the Preface in Science and Health: "To those leaning on the sustaining infinite, today is big with blessings."

Caroline B. Wingert, Missoula, Mont.

Love for God and man impels me to offer my grateful acknowledgment of benefits received from Christian Science. For nine years I had been seeking health and harmony through physicians and drugs, but without avail. As diagnosed by different physicians, I had partial paralysis of the bowels, and after all these years spent with *materia medica*, and later with other healing systems, I was in a much worse condition than when I began. Finally conditions grew alarming, and an acute attack was pronounced inflammation of the bowels and hemorrhoids, from which there was no relief except in a surgical operation. Then, as a last resort, I turned to Christian Science.

At this time I only knew that Christian Science claimed to heal the diseases of the flesh, and it was for this alone that I sought it. During these years of physical distress I had been very much dissatisfied with my spiritual status, so much so that at one time I removed my letter from the church of which I was a member, remaining outside of the organization for years; but I renewed my membership, because all of my family were there. I was seeking a practical religion, though up to this time my religious training had been beautifully theoretical but lamentably impracticable.

Digitized by Google

In September, 1907, I came to Christian Science for help, and was instantly healed of the inflammation and hemorrhoids and have had no return of the discordant conditions. Overjoyed at this beautiful demonstration of God's care, I told the practitioner that I must know how it was done, and he handed me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, saying that it was all explained in that book. I immediately began to read the text-book, and it is leading me to an understanding of God, who, as the psalmist declares, "forgiveth all thine iniquities; who healeth all thy diseases." It was four months, however, before the paralysis yielded and regular action was established. During these months the faithful practitioner steadily pointed me to "the only living and true God." I am thankful for this slower healing, for by the time I had received it I was seeking "first the kingdom of God, and his righteousness," and all things are being "added" unto me. Hereditary sick-headaches, neuralgia, and other diseases are gradually yielding to Truth.

In 1905, my little daughter, who was then eight years old, was playing whip-crack at school, when she was thrown from the end of the line, severely injuring her spine. Very serious congestion of the bowels, spasms, erysipelas, and stomach trouble followed as a result of this injury and she was unable to attend school. Upon advice of the best physicians we maintained the strictest diet for her, dosed her with drugs, kept her in the country, gave her physical exercise, etc., but with little, if any, improvement. In October, 1907, after I had received so much help from Christian Science, my husband and I decided that the child could be benefited by the same means. We had been reading only a few weeks, but such was our faith in God that we threw away all medicine and let the child have solid food. She was not under the care of a practitioner, but we did our best to know the truth. Two weeks from the time we began to depend on God for her healing, she was eating anything she wished. She improved in all ways, showing no more signs of the former discords. For three years she has been exceptionally well, doing her school work and taking a very thorough course of musical study. She is also learning the truth of being, and tries to work out her own problems.

I am indeed grateful for the physical healings, since "they are the sign of Immanuel, or 'God with us'" (Science and Health, Pref., p. xi). Through the study of the Bible and our text-book I am beginning to know God, and so am enabled to show forth more of His attributes. I have found the religion which one carries into daily living, and it is transforming all creation for me. I can best make known my loving gratitude to God, and to our Leader, by "the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds" (Science and Health, p. 4).

MRS. PEARL STUCKEY KNUDSEN, Texarkana, Tex.

O heart of mine, keep patience! Looking forth,
As from the mount of vision, I behold,
Pure, just, and free, the church of Christ on earth,—
The martyr's dream, the golden age foretold!
And, found at last, the mystic Grail I see,
Brimmed with his blessing, pass from lip to lip
In sacred pledge of human fellowship;
And over all the songs of angels hear,—
Songs of the love that casteth out all fear,—
Songs of the gospel of humanity!
Lo, in the midst, with the same look he wore,
Healing and blessing on Gennesaret's shore,
Folding together with the all-tender might
Of his great love, the dark hands and the white,
Stands the Consoler, soothing every pain,
Making all burdens light and breaking every chain.

WHITTIER.

FROM OUR EXCHANGES.

[*British Congregationalist.*]

There is not much building to be done with the things a man does not believe. His only substance is his positive faith. Believing never so little, he must hold his faith firmly and his doubt tentatively. If he believes in God, though his doubts be many, he must begin to shape his life on a faith in God. If he believes in the persistence of life, though through mists of questionings, he believes too much to be a practical materialist. His faith is positive, as far as it goes, and he must give it authority up to its limits. On the smallest nucleus of positive faith, if he is wise and brave, he must begin to shape his character. It is all he has for the making of moral and spiritual manhood. He must stand on that, crying ever to the great Lord of all, "I believe; help thou my unbelief."

And as he is an honest thinker he must grapple with his doubts in the light of his faith. There are areas of unbelief in many lives that exist because they have not the courage of their convictions, because they have not dared or cared to follow out the logical road of their beliefs. They are in the position of one accepting both the premises of an argument, and yet hesitating to draw the conclusion. Having so much faith, their very reason ought to carry them further. And he who has rested his life on his faith, however small, and lived out that, will find that in that very fact he has commenced an assault upon the regions of his doubts, and that he must and will reclaim fresh areas of his mind and heart from unbelief.

[Rev. T. Rhonda Williams in *Christian Commonwealth*.]

It is always true that a nation's religion is involved in the disgrace of any injustice that nation does or permits. The Christianity of England today is bound to suffer through the fact that England allows so many of her people to live and work under unjust conditions. We have had some warnings lately that our tolerance of such conditions may bring upon us not a little inconvenience and suffering. To my mind it is quite certain that unless we set ourselves very seriously to right the wrongs under which so many millions are laboring today, grave troubles are in store for us. When men are long indifferent to the claims of justice, the settlement of such claims may be demanded in a very rough way. When I think of the inequality of conditions in human life, I am not surprised that we have strikes, I am only surprised that we do not have a revolution. In the old time when rich people were very few, the multitudes looked upon the old nobility almost as demigods. But now, when a considerable number of quite common persons have acquired wealth, and when they flaunt it in the public gaze in so many ways, the multitudes who are disinherited do not feel that there is any difference between these people and themselves in point of character or of merit to warrant this disparity of circumstances. The masses are poor, but they are not so ignorant as they were.

[Charles Reynolds Brown, D.D., in *Christian Work and Evangelist.*]

When you repeat the Ten Commandments the second one has a certain far-away sound. It is the longest of the ten and seems to have no particular application to modern life. "Thou shalt not make unto thee any graven image." Not a soul here ever felt the slightest impulse to make a graven image. When the commandment was originally uttered idolatry was a live issue; now it is dead. Image-making for purposes of idolatry is a lost art among us and in almost all the civilized world. Men are still engaged in all sorts of mischief, but making images has small part in these performances.

If you apply the commandment simply to the making of

Digitized by Google

images in wood and stone, this is true. The real sin of idolatry, however, lies in setting up something in the place of God which is not God. You can shape your idol out of thoughts as well as out of clay. You can set up in your mind that which is not God and say to it in the depths of your own soul, "This is the final, ultimate, and infinite force in the world—this is God."

[Rev. Roger S. Forbes in *Christian Register.*]

Have a lovable spirit, and you may then count yourself among the powers of goodness in a universe which is not godless. The good shepherds of mankind are they who can find and reach the view-point of others, they whose perception is sharpened by fellow feeling. Believe that life is more like a psalm than angry strife. Look through its temptations to its indelible purposes and its sublime implications. Possess the peace which you would bestow, —the peace that comes of self-control and trust,—and your word will never fail to win its way. You will inevitably speak as one having authority. The harmony of a life that derives strength from the appeal of others' needs, and that deems itself blessed amid the daily vicissitudes, being ruled from within and giving what it would receive, is more tuneful than the music of the spheres, and just as heavenly.

[*Congregationalist and Christian World.*]

If we are steadfast in the simple, the patient, the faithful, we shall find the heroic meeting us when we did not dream it existed. We shall find enemies enough to fight within and without. We shall find that the call for such a sacrifice as lifted the cross upon the hill is not wanting even in serene and quiet fellowships. We shall find that goodness is never easy, fidelity never cheap. We shall find ourselves good soldiers of Jesus Christ in unnoted battles and we shall become increasingly adequate to the exceptional and dramatic. We shall find that the charge which wins the day was made in the drill-hall, that the courage of the commonplace is the courage of the crisis, and that the chief wage of overcoming is kept for those who were faithful in a few things.

[Rev. W. H. Fitchett, LL.D., in *Public Opinion.*]

The certainties of the future, in the judgment of the present writer are (1) a revolt of the world's common sense against the present system of international politics, with their intolerable burden of fleets and armies; (2) an immense advance in the social condition of the working classes, due to the new political force these classes will derive from cohesion betwixt themselves; and due, in an even higher degree, to the new authority of Christian ideals among all classes; and (3) a new authority which Christian faith will take, largely as the result of science, which, like Kepler, will learn "to think God's thoughts after Him." But this new authority of religion may express itself in terms which at first the churches may not recognize.

[*Watchman.*]

What is needed is the realization of the fact that men are receiving in themselves that recompense of their error which is meet. There is a judgment which is present and is in operation all the time with perfect exactness. For every idle word men not only shall give account but do make up an account. There is a conservation of nature in human experience. The brain is a bundle of impressions and the body is a story of experience. In moral and spiritual experience the same universal law prevails, and the pen of iron and point of diamond are at work.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet has just been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Flumo, M.D. 32 pages.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $1 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— £0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.80;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Complete publicity of the affairs of great corporations, coupled with rigid laws defining the character of legitimate corporation business, will solve the trust problem in the United States, according to Elbert H. Gary, chairman of the board of directors of the United States Steel Corporation, who appeared before the Senate committee on inter-state commerce to give his views on trust legislation. "The first great thing is publicity," said Mr. Gary. "The great corporation that is compelled to publish its facts and figures and to live up to the requirements of the law will prove a great thing for the entire country." Mr. Gary declared that the United States cannot give up the big corporation or the big combination of capital. They are necessary, he said, if the United States is to maintain commercial supremacy and industrial equilibrium, and the greatest public good will be secured by working out a system of federal control that will prevent the misuse of the power of corporations. As a curb for the trust evil he offered the following plan: Federal license of corporations, requiring full publicity, preventing overcapitalization and preventing discrimination in cases between persons and localities; the creation of a corporation commission with power to grant, suspend, and revoke federal licenses, subject to a right of appeal to a court; the corporation commission to have power to decide questions submitted by managers of business organizations who desire to avoid illegality in their actions and to regulate prices as far as necessary to prevent monopoly and restraint of trade.

The Amherst College faculty has taken another step in raising and broadening the educational standards of the college. Beginning with the present freshman class, every candidate for a B.A. degree must be able to read French and German. Examinations will be given twice every year, the applicants reading separately before two members of each department. Greek may be substituted for either French or German.

With only one dissenting vote the American Bankers Association, in session at New Orleans, La., unqualifiedly approved of the Aldrich plan for reform of the monetary system of the United States. Congress was urged to deal with the proposal as an economic question outside the domain of party politics. Detroit was chosen unanimously as the convention city in 1912.

Secretary Nagel of the department of commerce and labor has chartered a swift motor boat to catch the owners and masters of vessels, especially the so-called "oyster fleet," on Chesapeake bay and its tributaries, who are alleged to be shanghaiing men, brutally ill-treating their unfortunate crews, giving them unfit food and filthy quarters, and in many other ways violating the law for sailors and ships.

On the ground that the administration has substantially changed its announced Alaskan policy, Attorney Louis D. Brandeis, counsel for the House committee on interior department expenditures, has advised Chairman Graham that no further action by that committee investigating Controller bay affairs is necessary.

An agricultural course at Columbia University by which the city man may go back to the farm via the college has been opened. "How a City Man Can Succeed in Farming" was the opening lecture. The University has five hundred acres of land near Fishkill Landing which will be used for demonstration purposes.

Ten governors from a chain of states extending from Illinois to the Pacific coast, left St. Paul, Minn., Nov. 27 on a special train for New York and a tour of the East. The trip is to be made to advertise the resources of the West and middle West.

International.

Reports have been current for several months that a repartition of Africa is under consideration by the interested powers. It is reported that the proposed scheme provides for the withdrawal of Belgium from the Congo, the territory to be divided between Great Britain, France, and Germany. In compensation, according to reports, Belgium is to receive the grand duchy of Luxemburg and territory along the left bank of the Scheldt, Holland to receive counterbalancing colonial concessions.

The Japanese budget as finally completed and officially announced shows the following amounts in yen, a yen being equivalent to about fifty cents in American money: Receipts, ordinary, 500,500,000; extraordinary, 53,000,000; expenditures, ordinary, 400,500,000; extraordinary, 161,500,000. The deficit shown by the 17,500,000 excess of expenditures over receipts will be met by using the existing surplus, amounting to about 16,000,000 yen.

The German ambassador to Spain and the Spanish minister of foreign affairs held a conference in Madrid recently, the subject under discussion being the cession of Spanish Guinea to Germany. The Spanish territory on the Gulf of Guinea has an area of about twelve thousand square miles, with a coast line of about one hundred and twenty-five miles and a population of approximately two hundred thousand.

The cocoa planters of Ecuador have petitioned the government to convoke Congress in extraordinary session for the purpose of passing a bill appropriating funds for cocoa valorization as provided by the agreements with Portuguese and Brazilian planters.

Industrial and Commercial.

The Central New Hampshire Power Company of Maine has been incorporated at Augusta, Me., with an authorized capital stock of fifteen million dollars. The corporation is formed for the purpose of developing extensive water-powers which have been acquired in New Hampshire, conservative estimates placing the combined potentiality of the properties at nearly one hundred thousand guaranteed ten-hour horse-power and about twenty thousand secondary horse-power, constituting the largest water-power project in New England and the seventh in size in the United States. Utilization of the vast amount of natural energy will necessitate the construction of seventeen separate power plants in addition to numerous reservoirs. By means of an extensive storage system it is estimated that every drop of run-off from a watershed of more than sixteen hundred square miles can be conserved and used repeatedly before it is allowed to proceed on its way to the Atlantic. Twenty-five miles of highway and seven miles of railroad will have to be relocated and more than twelve thousand acres of woodland cleared. Four small villages will be totally inundated, together with a like number of historic cemeteries. The largest storage basin will have an area as great as that of Sunapee lake; another will be nearly half as large. It is expected that the work of construction will extend over a period of almost five years, although a portion of the power is already under development and can be made to yield its maximum capacity in a much shorter time.

Construction of the great Chuckawalla dam across the Colorado river at a point in Pyramid canyon, forty miles north of Needles, in Arizona, will be commenced in six months. The plans include an intake dam and settling reservoir fifteen miles above Ehrenberg. From the settling reservoir to the first pumping station is a distance of eight miles; to the second nine miles and to the third ten miles, and in this distance the water is raised the three hundred feet to the tablelands to be irrigated. Plans call for fifty miles of initial canals to distribute the water over the three hundred thousand acres which it is proposed to irrigate. This has all been filed upon by desert entrymen, so that by the time the project is completed all will have proved up on their claims and have patents from the government.

The Gulf Pipe Line Company has purchased a site in Fort Worth, Texas, for a large refinery. It will also lay an oil pipe line from its eight-inch Oklahoma-Texas trunk line at Saltillo, Texas, westward to Fort Worth, a distance of about one hundred and fifty miles, to supply its proposed refinery with crude oil. The Pierce-Fordyce Oil Association, which is the successor of the Waters-Pierce Oil Company in Texas, has purchased a site in Fort Worth for a new refinery, which will have a daily capacity of fourteen thousand barrels of oil. It is also preparing to lay an oil pipe line from the Electra oil field in Texas to Fort Worth, about one hundred and fifty miles. This concern also owns a large oil refinery at Texas City.

Spain is famous for its onions and garlic. The annual production of the former is 10,130,300 bushels and of the latter 1,039,574 bushels. Over three thousand bushels of saffron are also produced. The province where the Spanish onion is grown most abundantly is Valencia, in which 9,256 acres are planted and the annual crop amounts to 3,203,071 bushels. The province of Zamora leads in the output of garlic, the crop amounting to 258,307 bushels. Saffron is cultivated principally in the province of Albacete, where 10,749 acres are under cultivation.

Smoke-consuming devices may be placed on all the locomotives on the various divisions of the Boston & Maine railroad as the result of six months' experimenting with one of the machines. The contrivance, which carries the cinders back into the firebox and causes the smoke to disappear, has received a thorough trial. It is the invention of an Austrian and has been in successful use in Austria for several years.

The interstate commerce commission's report of railroad accidents during the twelve months ended on June 30 shows that during that period 10,396 persons were killed and 150,150 were injured on the railroads of the United States. However, of the number killed only 385 were passengers and more than half of the total number killed were trespassing upon railroads or stealing rides on trains.

The British Columbia herring output this year is valued at two million dollars. The fish are salted and most of them are sold in Japan and China, where the market is unlimited.

Three rapids in the St. Lawrence river, entirely in Canadian territory—the Cedars, Cascades, and Cotcau—are to be developed for power purposes by an English syndicate.

Steam and trolley lines in Connecticut paid into the state treasury as taxes $1,659,264.87.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CHURCH READER.

GEORGE SHAW COOK.

CONSIDERATION of the subject of readers for our churches may and properly should begin with reference to the provisions of the Manual of The Mother Church concerning readers in branch churches; namely, Section 6 of Article III, which among other things stipulates that "these readers shall be members of The Mother Church. They shall read understandingly and be well educated." It scarcely need be said that one who is not sufficiently alive to the privilege of membership in The Mother Church would not be likely to make an acceptable reader in a branch church. Therefore, even if this provision were not part of the organic law of the Church of Christ, Scientist, it still would be a wise rule to follow in practice.

The second part of the by-law above quoted is likewise of obvious importance, especially when considered in connection with Section 1 of Article III, which prescribes that readers "must devote a suitable portion of their time to preparation for the reading of the Sunday lesson,—a lesson on which the prosperity of Christian Science largely depends." To "read understandingly" a Lesson-Sermon, "on which the prosperity of Christian Science largely depends," is work which should inspire those to whom it has been entrusted with a sincere desire to make adequate preparation for each service.

It should be plain to Christian Scientists who are church readers that due preparation to read the Lesson-Sermon understandingly involves not merely careful study, but likewise "prayer and fasting." Those who have had the experience of serving as readers will be likely to recall instances when the mere study of the "letter" of the Lesson-Sermon or some part thereof would not reveal its true meaning, and when it was only after earnest prayer to be free from human opinion and let the divine Mind interpret itself, that the real spiritual message which the Lesson contained was revealed to them, and in turn they were able to read it to the congregation with understanding.

It should be evident that to "be well educated" is not of itself a sufficient qualification for those who would make satisfactory church readers. While they should be sufficiently well educated to read correctly and to comply with the provisions of the Manual, it should be remembered that in this by-law our Leader gave precedence to the requirement, "They shall read understandingly." A college-bred man or woman may be indifferently educated, and a "self-educated" person may be more thoroughly informed and more scholarly. Yet neither of these would make good readers in a Christian Science church by reason of educational attainments alone. Mere "worldly wisdom" is insufficient. Without spiritual perception, honesty, humility, virtue, love, and consecrated devotion to his work, the church reader will be "found wanting;" hence church-members before and at the time of the election of readers should earnestly desire to be led by divine Mind to select those individuals who will most nearly fulfil the requirements of the Manual and who will be most likely to attain a high standard of excellence as their work progresses under divine guidance and protection.

The readers, when elected, should be humbly conscious of the great privilege which is theirs in being chosen thus to serve the cause of Christian Science, and should be ever willing to obey the injunction, "They must keep themselves unspotted from the world,—uncontaminated with evil,—that the mental atmosphere they exhale shall promote health and holiness, even that spiritual *animus* so universally needed" (Manual, Sec. 1, Art. III). If they are obedient to the spirit and letter of this and other rules given by Mrs. Eddy for conduct of her church, they will be able to avoid or to overcome the temptations which beset them. Such readers will not be found courting "mental applause" or audible expressions of approbation, though they may be grateful for honest words of encouragement and helpfulness, even though these include needed rebuke or correction. Well-poised readers will not allow themselves to indulge in strained interpretations which confuse the listener, nor to use strange and startling emphasis which has no legitimate warrant and obstructs rather than conveys the meaning of the passages read. Readers need to know that they cannot be used by evil to yield to whims and mannerisms, thereby marring their otherwise good work and distressing instead of uplifting their hearers.

A temptation which observation indicates is too frequently yielded to by readers is that of reading at great length from the Bible and Science and Health at the Wednesday evening meetings, or, what is worse, talking at length in opening the meeting for testimonies. These mistakes indicate that readers who make them either wish "to be heard of men" (Science and Health, p. 2), or that they are afraid there will not be enough testimonies to occupy all the available time. Neither of these excuses constitutes a reason for taking up time which should be devoted to testimonies, and which would be fully utilized by the congregation, in most instances, if the reader's faith in God were sufficient to make him expectant of good rather than fearful of evil.

This by no means argues that a reader may never say anything from the pulpit with profit. Sometimes a short testimony by the reader is an inspiration for others, and occasionally a reader may find it necessary to correct briefly and kindly an erroneous impression of Christian Science resulting from a testimony. Generally speaking, however, the thing most needed, is an attitude on the part of readers which constitutes an unspoken invitation and encouragement to those who may find themselves timid in telling in public of the good which they have derived from Christian Science.

Our best-governed churches make provision for freeing their readers from the problems of church government. That is, they do not expect readers to become involved in the business of the church, nor to be burdened with other matters which should properly be cared for by church officers elected for that purpose. Obviously it would be a

Copyright, 1911, by The Christian Science Publishing Society.

Digitized by Google

mistake for readers in such churches to thrust themselves uninvited into the consideration of the many perplexing questions with which the official boards are often confronted. Harm has sometimes resulted by reason of readers failing to appreciate fully their limitations in this respect; therefore they should guard most carefully against being drawn into situations which are complicated rather than simplified by their presence. Their work is too sacred to be stultified, and their opportunity for doing good too great to be vitiated by wasted effort.

In view of the unprecedented growth which the Christian Science movement is having, and the increasing popularity of Christian Science, it is certain that every righteous effort should be made to meet the demand for healing and teaching. No agency affords greater opportunity for impersonal healing and teaching than our church services. Is it not, then, of highest importance that these fountains of the "water of life" should be kept pure and free from the contaminating influences of evil? Should we not work more diligently to protect those who are inquiringly turning their gaze in the direction of Christian Science, and insure against their being given "a stone" when they come to our services hungering for "the true bread"? If so, it would then seem that a great responsibility rests with the readers in our churches, and with those who have placed this responsibility upon them. Not only is it true, therefore, that those who are now reading should increase their effort to improve their opportunity to the fullest, but in view of the approaching elections the church-members should awaken to the need of selecting those who will carry on this wonderful work with progressive unfoldment of good.

Our Leader wrote in one of her messages to The Mother Church that "the song of Christian Science is 'Work—work—work—watch and pray'" (Messages to The Mother Church, p. 20). Perhaps no work would be of greater importance to all concerned than earnest, intelligent, prayerful thought on the part of our church-members with reference to forthcoming elections. Such "work" well done will not only make it easier for those who are now in office, but will insure a wise choice of those who are to carry forward the banner of Christian healing. If approaching elections are protected in advance by prayerful thought on the part of members, they will be governed by Principle and the result will be right and satisfactory. Thus and in no other way will our churches be properly safeguarded against being dominated by cliques, imposed upon by ambitious self-seekers, or victimized by those who are well-meaning but incompetent.

We shall do well to remember the psalmist's declaration that he alone shall stand in God's holy place who has "clean hands, and a pure heart." He it is who "shall receive the blessing from the Lord and righteousness from the God of his salvation."

"E PLURIBUS UNUM."

REV. CHARLES D. REYNOLDS.

HISTORY teaches that a nation is seldom conquered by an enemy coming against it from without, so long as the people practise among themselves a large measure of righteousness, justice, virtue, humanity; and for the reason that right doing, justice, chastity, humanity, is the foundation of unity, and this unity gives strength and stability. A love for what is right and good subjugates the personal desires and begets the true humility; and unless this loyalty to right is steadily practised by individuals, there is no assured unity among them, no continuance of their communal organizations. The founders of the American government understood this when they chose for the national motto the words "*E Pluribus Unum*,"—one composed of many.

The significance of this thought once clearly seen, we can understand why an enemy from without is less to be feared than an enemy from within. It is the silent foe within, and not an enemy from without, that saps the vitality of institutions and nations, demoralizes its individual component units, disrupts, overthrows, devastates. Jesus taught this in that very remarkable language reported by Mark: "Whatsoever thing from without entereth into the man, it cannot defile him; because it entereth not into his heart." "That which cometh out of the man, that defileth the man. For from within, out of the heart of men, proceed evil thoughts, adulteries, fornications, murders, thefts, covetousness, wickedness, deceit . . . these evil things come from within, and defile."

Primitive Christianity presents an illustration and proof that so long as the individual consciousness continues Christian, is strong in the love of all that is good and right, opposition from without falls harmless. It was only as evil was permitted entrance into thought and fostered there, that Christianity began to be void of healing power and almost lost. Now that Christian Science is reinstating primitive Christianity, what the Christian Scientist needs to guard against more than any enemy that can come against it from without, is this enemy from within, the unfaithfulness and indifference, the self-love and self-desire that trespass upon justice, chastity, and humanity, the desire that would have a personal following, and the desire that impels us to lean upon a personal leader instead of upon God,—all this enemy within, the worldly thought and ambition, does not make for unity and strength, but for discord and division. The letter without its spirit is the worst foe a religion can have, and Mrs. Eddy aptly summarizes it thus: "There was never a religion or philosophy lost to the centuries except by sinking its divine Principle in personality" (Pamphlet, Personal Contagion, p. 5).

The alert Christian Scientist takes less note of the external enemies than he does of the internal foes. He has sifted his philosophy down to bed-rock. God is its foundation. Here his thought rests calmly. Beyond this he has no desire and no need to inquire; hence he is not alarmed by assaults or rumors of assault from without, because he is fully protected by the spiritual citadel within.

So long as the Church of Christ, Scientist, performs the work of the early Christian church, seeks the understanding of God which casts out sickness and sin, it can withstand all the misrepresentations and worldly attacks its enemies may bring against it. Issues forced upon the Christian Science movement by its avowed enemies from without have received only a passing notice from Christian Scientists, because they know perfectly well that the truth abides, is forever safe and serene, and hence they too can rest in peace. The predictions so industriously heralded from the housetops, that the future of the Christian Science movement is hanging upon this or that contingency,—all this fails to frighten the true Christian Scientist in the least. The knowledge of God's presence and power is priceless, it is above rubies, it is man's treasure from God. No purpose or apparent power of error can prevent the hungry soul from holding communion with God and realizing His saving presence. And this is every man's inalienable right. The Christ-consciousness is above every other consideration, it is man's recognition of and loyalty to his source. This is internal; other events and relations are external. This is primary, other things secondary. So long as the disciple remains faithful to the ideal set before him, no foe from without, no persecution and no hatred can harm or destroy that sacred life within, for it is God manifest.

"HAVING THE HARPS OF GOD."

MARY P. BELLINGER.

IN no one thing is the heaven-born mission of Christian Science more truly attested than in the spiritual joy which is the immediate result of each demonstration of the power of good over the apparent power of evil. This gladness

Digitized by Google

which flashes into our consciousness is absolutely independent of time, place, or circumstance, and is the living witness of that "Sun of righteousness" which shines, resplendent, eternal, unchangeable, behind the clouds of discord with which mortals surround themselves. In the midst of a world of inharmony,—sojourning in a strange country of pain, suffering, and wrong,—it is a hard battle to overcome and banish the thoughts of despondency, doubt, discouragement, and dread which at times sweep over us like a tidal wave. Many of us are inclined to envy the few fortunate individuals we know who seem to have been born with the joyous, care-free disposition which treads lightly over the rough places. We are too prone to envy the people "born" with things. We forget that as God's children we all have the same heritage. Perhaps it is not so easy for others after all. We cannot tell how hard the way may be, how difficult it may be for them to overcome self and reflect the sunlight of Truth to others, and as we seek for the inspiration of this lovable quality, the source of this wellspring of happiness, we find it in the one word—gratitude.

One night, last summer, the writer awoke to find it slowly raining. It was a warm, close, dismal night, and the clouds without were not thicker than those of sadness and despondency which reigned within. Suddenly, thrilling through the rain, came the clear, happy song of a little bird awakened by the falling drops. There was no thought of fear or resentment at being disturbed, the spontaneous impulse of praise sprang from the heart of the little songster in tones so rich and sweet that the night of gloom became a night of rejoicing. In Science and Health (p. 17) we read: "Love is reflected in love." As the drops fell softly on the little head, the song continued for several moments, rebuking the discordant thought of the listener and causing her heart to go out in gratitude and love to the tiny, unconscious disciple of the truth. He did not know he was teaching a lesson long to be remembered; he had no thought of reaching others with his song, he was merely pouring out thanks to the giver of "every good gift and every perfect gift."

How many of us, when our material hopes fall around us like autumn leaves, can still sing and make melody in our hearts to the Lord,—can still say, "I know that my redeemer liveth"! When we strive to hold our minds in this attitude of thanksgiving for the good already received, we are then responsive to every pure and ennobling influence. Over those "waiting harpstrings of the mind," of which our Leader has written (Poems, p. 12), will then sweep the divine hand, and will waken such tones of gratitude and love that our joy will be reflected even to those we know not of. Every right effort on our part, however, feeble, has its reward. No aspiration is too small for God to notice, for we are thus placing ourselves in accord with the divine Principle of heavenly harmony. Mrs. Eddy says, on page 13, "Unity of Good," "God is harmony's selfhood." Thus we find that the tidal waves of belief in evil do not overwhelm us. They stand still like the Red sea of old at the voice of the most High, and we pass safely through our terrors, on to the promised land.

In Revelation we read of those who have gained the victory over the beast, and his image, and his name, as standing on the sea of glass and "having the harps of God." I used to wonder what the spiritual meaning of this verse might be, but now in the light of Christian Science it seems quite plain. Mrs. Eddy tells us in Science and Health (p. 559) that the sea represents "elementary, latent error, the source of all error's visible forms." The Scriptures speak of "the troubled sea . . . whose waters cast up mire and dirt," and we are told in Revelation that in the day of that new heaven and earth "there was no more sea." We are taught in Christian Science that we overcome evil only by seeing its nothingness, and that we do this,—perceive its unreality and inability to harm us,—through the understanding of God's all-powerful love for His children; that as we worship the one perfection, the one Mind, the one intelligence we were always intended to serve, the falsity of belief in any other power whatever will disappear from our consciousness. "Our God is a consuming fire"!

This beautiful crystal sea in Revelation was mingled with fire. Thus, when that wonderful day cometh of which "no man knoweth," but which St. John's clear vision recognized centuries ago, our fear and dread of evil will have vanished. The dark raging waves of error will be stilled; their power nothing, their turbulence gone, and we shall behold the illuminating fire of Truth and Love. Then they who have fought the good fight, who have not worshiped the beast,—the god of evil and despair,—but have remained steadfast to the one perfect God, shall stand on this sea, strong in their victory over evil, "having the harps of God." And their song is always the song of gratitude: "Great and marvelous are thy works, Lord God Almighty; just and true are thy ways, thou King of saints."

Let us then follow our Leader's example in keeping the high goal of Science always before our thoughts, grateful for the love and goodness with which we are surrounded, and through daily strivings bring into our own lives the ideal expressed in the poet's beautiful words:—

May I reach
That purest heaven, be to other souls
The cup of strength in some great agony,
Enkindle generous ardor, feed pure love,
Be the sweet presence of a good diffused,
And in diffusion ever more intense!
So shall I join the choir invisible
Whose music is the gladness of the world.

STUDYING THE BIBLE.

S. CONSTANCE LOGAN.

On first coming into Christian Science, a difficulty is sometimes felt by persons with much time on their hands as to how to dispose of it. The old pursuits and occupations now fail to please,—society is tedious, bridge and such amusements no longer amuse, the most dearly loved study has lost its zest; health is perhaps restored and duties that were perforce abandoned have been taken up again and are being faithfully performed; but still, with many a man or woman whose days are not occupied with earning a living, there remains much time on hand, and a problem may arise as to how to make the best use of this. The beginner has applied for membership with some church, but has not yet been admitted; no active work in the church is therefore open to him at present, patients do not readily present themselves, even if he felt equal to accepting that work, which very likely he is still hesitating about. He sees other Scientists who are church-members busily employed on committees, Sunday school teaching, secretarial work of all kinds, or the distribution of literature, and he heartily wishes that he also could do something to help; he feels himself useless and inactive where so many seem to have almost more on their hands than they can get through.

The writer has passed through this uncomfortable intermediate stage, and found a solution of its difficult problem, which at one time threatened serious discouragement, in the study of the Bible. Former studies, in which much time had been spent, had become distasteful and impossible; but the Bible, which had been perforce much studied in early youth and completely dropped later on, was still looked upon as a tiresome school lesson book. Slowly, however, it began to dawn on her mind that here was a vast, unknown, unexplored country, full of interesting possibilities; that for many centuries the most scholarly had expended their intellect and energy in writing countless

Digitized by Google

libraries of books on this one theme. The more this idea was pondered over the larger the subject grew, till from having at first appeared inconsiderable it now appeared too large to be attacked with any hope of success. But this feeling soon gave way to a resolution at least to make a beginning. A concordance was soon seen to be necessary, then a dictionary of the Bible was added, and both were found to be of the greatest service. With these helps the interest began to deepen, and a little book called, "How we got our Bible," by Paterson Smith, quickened it considerably. To attempt even to indicate what books might be helpful to others would be impossible, but "The Life and Epistles of St. Paul" by Conybeare and Howson and Canon Farrar's "Early Days of Christianity" were of great assistance to the writer.

Each one must make his own selection. One of the greatest advantages of studying the Bible is that the merest child can understand its essential truths, and the least educated mind can assimilate all that is necessary to the working out of his life-problems; while the most highly trained intellect will find that such subjects as the Greek and Hebrew languages, archæology, Egyptology, and the deeply learned work done by German scholars and excavators in Palestine, Syria, and Persia, all throw light on the study of the Bible. Here is milk for babes and meat for strong men, and food for every degree between. When once the deep interest and enormous scope of such study has been realized, it will be found that here is occupation sufficient for every leisure hour. The many different translations of the Bible, and especially of the New Testament, will often throw light on an obscure verse when compared with each other, and if a foreign language can be easily read it is wonderful how different a passage may sound when heard through the medium of a new tongue. Above all will the light of Truth reflected in our text-book, "Science and Health with Key to the Scriptures," aid us in understanding and feeding upon the Scriptures.

When at the right time more active work for our cause presents itself, it may be a surprise to experience some reluctance in taking it up, till it is discovered that our fellow beings are more interesting even than books, and that to give is more blessed than to receive.

A MONITOR MEETING.

JULIA BAKER.

THE article "A Great Missionary Movement," which appeared in the *Christian Science Sentinel* of Dec. 3, 1910, together with reports of "Clean Journalism" meetings held in New England and in Chicago, aroused a desire on the part of some of the members of the distribution committee of a western city to awaken a greater interest in *The Christian Science Monitor* among the students of Christian Science in that place.

The first step taken was to secure the interest and support of the entire committee, and then the official boards and readers of the two churches were enlisted. Several evenings were devoted to this purpose, which resulted in a joint meeting of all students, also members of any Christian Science church, at which each officer of both churches and each member of the distribution committee chose a special page or department of the paper and read selections therefrom to show the high character and interesting treatment of the subjects dealt with. Political and social affairs, industrial and financial conditions, and the business situation, the progress of modern methods and inventions, advertising methods, art, literature, music, the peace movement, travel, household, and children's pages, famous people, etc., were among the subjects briefly touched upon; also the general character of the editorials, and a comparison was made between head-lines that appeared in the daily press and in *The Christian Science Monitor* of the same date. The latter were noticeably practical and encouraging.

The beneficial results of the meeting were manifold. Those taking part were aroused to a keener interest in extending the good influence of the *Monitor* with an ever widening circle of readers. The listeners were impressed with the broad outlook on the world's affairs contained in this brave advocate of clean news, and that the *Monitor* supplies daily, in condensed form, information which would require the reading of many magazines to obtain. An enlarged understanding was gained as to how the *Monitor* is daily spreading a helpful, corrective, and healing influence throughout the world; that it is accepted and read by many whose thought is not yet prepared to accept other Christian Science literature, and thus all Christian Scientists may become missionaries and have a part in the greatest reform movement of modern times.

We can but hope that the thoughts set in motion at this meeting will expand in influence, and bear fruit in similar meetings in this locality in the interest of clean journalism. We need to recognize in the *Monitor*, God's quiet, peaceful messenger, clearing the reader's thought of every seeming hindrance to the entrance of the truth, thus breaking down all opposition and letting in the light. As this is seen, we shall realize the good that flows to us and our friends, and keep this avenue constantly open and active until every copy of the *Monitor* is put into circulation and not one left at a news stand or on the street corner.

LESSONS FROM THE KEYBOARD.

PHŒBE S. HAMAN.

IN watching the development of children at the piano, one learns many valuable lessons. For instance, every musician knows that the scale is a repetition of seven tones, but in learning to place the notes in either the G or F clef the beginner sees at once that though there are many octaves containing A, B, C, D, E, F, and G, yet each note has its own individual place as regards position in each clef and does not infringe upon nor supplant any other note. Governed by laws of harmony, each fills its own place.

So, too, the beginner in Christian Science is learning to demonstrate that, since man is the perfect idea of God, infinite Mind, he is in his individual place, doing his individual work, rightly governed by God's law, and that a clear perception of this fact will eliminate any thought of envy, jealousy, or malice; it will dissipate the fear that anybody or anything can deprive the child of God of what is rightfully his. He who is thus governed by God's law of harmony is striving daily to put out of his consciousness all that would seem to make discord, and is therefore manifesting more clearly each day his own true place in the infinite scale of being.

Another clear illustration has been brought to notice in the correction of a pupil who persisted in playing an E flat in the scale of C major. This scale has neither sharp nor flat in its signature, and when this fact and the mathematical formation of the major scale was explained to the pupil, the mistake disappeared. Where did the mistake come from and where did it go? It seemed to come from ignorance regarding the formation of the scale, and it disappeared when the true law governing scale formation was understood. There was neither remorse nor condemnation about that correction, and there should never be any feeling save of joy and gratitude when Truth uncovers and destroys any error in our consciousness, no matter how black a name mortal mind may have for it.

Paul brings out this thought clearly when he says in the first verse of the eighth chapter of Romans, "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit."

SELECTED ARTICLES.

[Frederick Dixon in *Torquay* (Eng.) *Directory*.]

In a recent issue of your paper there is a report of an address given in Tor parish church. It is headed, "A Terrible Creed." I quite agree that if what the reverend gentleman said in the faintest degree represented the teaching of Christian Science, it would deserve that title. The fact, however, unfortunately is that he has simply followed the example which is as old as that of the Quietist opponents of Confucius—of erecting a figure of a creed, of which he is not only ignorant, but to his own misapprehension of which he is naturally opposed, for the purpose of gaining a decidedly bloodless victory by knocking it down.

This critic's first objection to Christian Science is that it pays more attention to the welfare of men's bodies than to their spiritual welfare. Unluckily for this argument, he is forced to admit that Christian Scientists, in their ministrations to the sick, are following the example of Jesus of Nazareth. It might have been thought that this would have made him pause to consider if he was not making a mistake, but this does not appear to have occurred to him. The truth, of course, is that Christian Scientists have adopted the healing of disease as well as the healing of sin in accordance with the divine command to do this. The one is, however, dependent on the other. You cannot make a man a better man without making him more healthy, and the only way to make him more healthy is to make him a better man. This constitutes the true healing of sickness.

A doctor, it is true, succeeds frequently in curing people without in any case attempting to improve them morally. In the eyes of Christian Science, this is not healing: it is *simply getting* a man's body well and leaving him in a position to be sick again the next moment. Christian Science healing requires that a man's physical ills should be overcome by giving him a truer understanding of divine Principle. If this is accomplished, not only is the specific sickness healed, but he is left with some understanding of the truth which Jesus declared would make a man free, to protect himself against sickness in the future. It is this intimate connection between sickness and sin which drew from Jesus the wonderful saying, "Whether is easier, to say, Thy sins be forgiven thee, or to say, Arise, and walk?"

This may serve to explain the Christian Science position with regard to sin, which the critic has altogether failed to comprehend. The Christian Scientist does not say that sin is not a reality to the human consciousness. He says, in the words of Mrs. Eddy (p. 110 of Science and Health), that it is an "awful unreality." Awful, because of the hideous tragedies and misery to which it leads in human existence, and an unreality—fortunately for mankind—because it is not sent of God. Before starting to criticize Christian Science, the reverend gentleman might at least have acquainted himself with the sense in which words are used in Christian Science. He might as reasonably attack natural science with a complete disregard of its definitions as attack Christian Science without having mastered the sense in which the word "real" is used in it.

By "real" the Christian Scientist means God-created, and so eternal. That which is created by God is eternal and indestructible, and if the critic is prepared to make this admission with respect to sin, then he may regard it as real. The Christian Scientist, however, regards sin as something absolutely outside the divine Mind—as a lie necessarily bound to be detected, and so exposed and destroyed; therefore he speaks of it as unreal. Probably in his daily efforts to heal sickness and overcome sin, he sees the human scope of sin from even a broader standpoint than does this critic. He sees the ordinary sins of commission, which the entire world admits as sin, but he sees, also, those sins of omission the significance of which the world is not apt to appreciate. If, for instance, mortal man had not omitted to realize that the only reality and power is God and the spiritual creation, he would never have begun to believe in the lie of sin, sickness, and death. Writing to the Romans, Paul said that death entered the world through sin. If death entered the world through sin, sickness certainly entered in the same way, and unless this clergyman is prepared to admit that sin, sickness, and death are the creation of God, he is bound to admit that they are unreal. If they are the creation of God they are part of the divine consciousness, and no power on this earth can blot them out of that consciousness.

This may help your readers to understand the sense in which matter is described as unreal in Christian Science. The critic evidently imagines that if there is no matter there can be no sickness. In other words, his philosophy is out of date: it is that of Dr. Johnson, who stamped on matter by way of proving it real, without realizing that if matter were unreal the whole act of stamping was an equal unreality. In the dry humor of Huxley's phrase, he proved matter to be unreal by stamping on it, or some such irrelevant proceeding. Christian Science accepts the teaching of all the idealistic thinkers in natural science in so far as it admits that all material phenomena are either the subjective condition of the human mind or the result of energy. If this is a ridiculous position, it can only be said that it is a position which has been shared by half the great thinkers of the world, from Plato to Berkeley, and from Berkeley down to Lord Kelvin.

At this point, however, Christian Science severs its connection with the teaching of the idealistic schools of natural science, and accepts, without question, the idealism of the New Testament. The idealism of the New Testament was expressed in the phrase of Jesus, "That which is born of the flesh is flesh, and that which is born of the Spirit is spirit," and that "the flesh profiteth nothing." It is absolutely inconceivable that God should have created something which profiteth nothing; therefore it is perfectly clear that He did not create either the flesh or, consequently, that which is born of it. The creation of God is the spiritual universe, and Christian Science insists that all material phenomena represent nothing but the negation of spiritual truth. That is an explanation of the unreality of matter which is about as far from anything our critic has yet begun to imagine, as could well be conceived.

Finally, the gentleman asks, if prayer is sufficient to heal the sick, why the prayers of those who love the patients are not of more value than the prayers of paid Christian Scientists. He does not seem to observe that he has, in the earlier part of his discourse, given away this part of his case. He had declared that Christian Science was progressing all over the world because it healed men's bodies. If it heals men's bodies, and the prayers of those who are personally attached to the sick do not, the critic's definition of love must be a little out of joint. The fact is that the greatest love which can be shown to mankind is that realization of the truth which makes men free from sin, disease, and death, and it is because of this that Mrs. Eddy writes (Miscellaneous Writings, p. 358), "The student who heals by teaching and teaches by healing will graduate under divine honors."

This being so, the clergyman's sneer about Christian Scientists being paid is a little out of place. Jesus commanded his disciples, when he sent them out, to preach the gospel and to heal the sick, and he bade them, as they went, enter into the houses of those whom they helped and remain there until they left, telling them to shake the dust off their feet against those who failed to receive them. The simple customs of the east are an impossibility to complicated western society, and so the method of entering into the houses of those you help has been changed to payment of another description, and that there is nothing objection-

Digitized by Google

able in receiving this payment, from a Christian point of view, is perfectly clear from the words of Paul: "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?" This critic, as a clergyman, receives a stipend, which he has presumably no scruples in accepting, for preaching the gospel. The medical men of the world naturally and properly receive fees for healing the sick. In the opinion of this critic, the point at which it is improper to receive payment is only reached in the case of the Christian Scientist, who is endeavoring to fulfil, not part, but the whole of the divine command to preach the gospel and to heal the sick, knowing, as Jesus said, that "the laborer is worthy of his hire."

[From a sermon reported in *Seattle* (Wash.) *Times*.]

In what he termed "a sermon that will please nobody," the Rev. E. Tremayne Dunstan, pastor of the West Seattle Congregational church, outlined his attitude toward Christian Science, toward which some of his congregation had accused him of having an undue leaning. Mr. Dunstan denied any intention of embracing the Eddy doctrines, but frankly declared that he found much to admire in the new church. At the same time he pointed out its faults. Preaching from the text, "Prove all things; hold fast that which is good," Mr. Dunstan said:

Of set purpose I have announced this as a sermon that will please nobody, because my object is not to please, but to bear witness to the truth as I apprehend it. I have for years been preaching some of the neglected truths upon which Christian Science lays emphasis, and I have frequently acknowledged the indebtedness of the church to those who have revived this teaching. I have tried to rid my mind of everything in the nature of an unreasoning prejudice against that which is new, and have never taken part in the denunciations of Christian Science which orthodox preachers have frequently made. I have insisted that no man, no church, no creed, can have a monopoly of truth; and that we should ever be prepared to learn from those who can teach us, and ever preserve the open mind. Frequently I have spoken appreciatively of Mrs. Eddy's teaching, and because of this some of my friends have been just a little fearful as to my own position.

I am not much concerned about these fears, but I do want to make my own attitude perfectly clear, even though in doing so I may possibly offend those who are prejudiced against Christian Science as well as those who are strongly prejudiced in its favor and impatient of criticism. There are some things about the Christian Science movement which cannot fail to gain our admiration. There can be no question that it has become a vital moral agent in a society which was becoming more and more sordid and grossly materialistic. It is a spiritual idealism which has leavened the thought of millions of people and has completely changed the lives of the great majority of these. Never since the apostolic days has a religious movement spread so quickly.

Seventeen years ago there was not a Christian Science church building to be found anywhere. Now there are more than twelve hundred churches, some of them cathedral in proportions, and the value of these buildings, in this country alone, is estimated at more than ten million dollars. Its sway has been principally over men and women who were formerly connected with various branches of the Protestant church, and even now its converts are almost invariably from among church-members. I have no doubt that the great majority of these converts are at first influenced from the physical and material side, even though Mrs. Eddy's fundamental position is a denial of the physical and material. I have known a great many who have been attracted to Christian Science and the larger number of these were influenced first of all by the stories of healing. But as they follow the teaching of the new cult they find a new attraction in the emphasis laid upon certain truths which orthodox Christianity has until quite recently almost entirely neglected. There can be no question that the church has suffered immense loss because of this neglect. And while a great change has come of recent years, and the neglected truths are being voiced from multitudes of pulpits in the older denominations, it has been too late to stop the exodus of thousands of our most intelligent hearers.

The fundamental teaching of Christian Science is by no means new. It was familiar to the Greeks even before the days of Plato and Socrates. It was revived by Spinoza two hundred and fifty years ago. Swedenborg based much of his teaching upon this conception of truth. And mystics belonging to all the churches have taught these truths though they were not always understood. In mere metaphysical speculation there is a great deal that is profitless, but the practical truths of Christian Science are those on which St. Paul lays emphasis. In the presence of an enthroned materialistic philosophy like that of Locke and Herbert Spencer, it asserts the claims of idealism, which is another name for faith. It destroys the dominance of matter by restoring the kingship of mind. It emphasizes the need of cheerfulness and has given thousands of morbidly sensitive people a new and brighter outlook. It has forced men from the old mental ruts and has helped them to think. And, above all, it has helped to restore our faith in the indwelling Christ who is the source and secret of all power. We know better now that we are the temples of the Holy Ghost and that the Spirit of God dwelleth in us. The general result, as far as the Christian Scientists themselves are concerned, has been a tremendous quickening in the spiritual life and a new interest in the spiritual side of life as against the material side.

I have yet to mention the main obligation of the Christian church to the new movements of thought with which Christian Science is associated. There has been restored to the church, though only partially as yet, that faith in God as a living presence and power which was the source of the church's early triumphs. Christian Scientists believe, and with them now many others, that God has power to heal the body and to answer prayer today as in the days of our Lord's appearing. There can be no question that the primitive church accepted, literally, the word of the Master when, speaking of his own works of healing, he said, "Greater works than these shall he do." For centuries the church, because of its lack of faith, narrowed the scope of that promise to the apostolic age, or explained away its meaning by declaring that the work of God in saving the soul is greater than the work of God in healing the body. But we are beginning to understand that we must put no limit to the power of the Almighty if we really believe in a living God.

Personally, I believe that the Emmanuel movement falls far short of a proper realization of the power of faith, and the limitation it sets is unworthy of the churches. Why, in speaking of the power of God, should we separate functional diseases from organic diseases? We may reasonably distinguish between these as regards the power of mental suggestion. But if we believe in the New Testament we must also believe that mental suggestion, though a great power, will not explain all the works of healing wrought by Christ and his apostles. And I hold with the Christian Scientists, and with the misguided Dowie, and with others who have believed in faith and prayer, that we dare not fix a limit to the power of Almighty God. We dare not say how or when His power shall operate. It is quite possible that now as in old time mighty works are not wrought because of our unbelief. I speak as one who knows little of the power of which I speak. But I must not allow my consciousness of weakness to limit the divine operation. I believe that the main strength of Christian Science is that

Digitized by Google

it has restored among its members a real active faith in God, instead of an empty profession of faith. . . . While I would avail myself of all the helps that medical science can give, I would also seek that help which makes possible the task which with men is impossible. In so far as Christian Science has helped us to believe that with God all things are possible, in so far as it has taught us that the spiritual dominates and controls the material, I rejoice in its success and thank God for its inception. But having said all this, I yet declare that I have not the slightest inclination to leave the church which is my spiritual home and to attach myself to the fellowship founded by Mrs. Eddy. For while the movement has features of strength, it also has in it elements of weakness, and of these I shall speak with absolute candor, though with courtesy and kindness.

[John M. Dean in *Memphis* (Tenn.) *Commercial Appeal*.]

A press despatch quotes a prominent Unitarian minister as declaring Christian Science to be "a menace to the country and to national life" and "a fanaticism." Such a far-fetched denunciation of a sister religion is particularly surprising coming, as it does, from a member of a denomination which was only recently compelled to resent similar charges made by narrow ecclesiastics in connection with Mr. Taft's presidential candidacy, he being a Unitarian. How the nation (regardless of politics) resented such bigotry is a matter of history, though this critic seems not to have profited by its lesson.

The strength of a nation can be measured only by the strength of its citizenry, and the true strength of the individual citizen can be gaged only by his ideals. Thus that nation is the strongest whose people have the highest standards of morality and living. If Christian Science destroys these ideals, it is indeed a "menace;" but if it upholds them, it can only be a tower of strength to any nation, and its influence on the individual units composing that nation must inevitably tend toward every essential element of greatness. Can any person truthfully charge Christian Science with making worse citizens of its adherents? Its ideal government is comprised in the golden rule, and no higher standard has ever been placed before men, nor indeed can be. During momentary excitement some of the brethren of other faiths seem ofttimes to lose their perspective, and thus to conceive the loosening grasp of some particular creed to mean the crumbling away of Christianity itself. Such critics fairly epitomize Sam Jones' scathing analysis of those who confuse "churchianity with Christianity."

The charge of "fanaticism" was shopworn in Paul's time, and Tertullus called him a "pestilent fellow" and charged him with being a menace to the government. Jesus was maligned because misunderstood, and misunderstood because of that element of self-righteousness which was determined to maintain existing institutions at all hazards —right or wrong. The apostles experienced a similar storm of Pharisaical abuse, and each succeeding generation has witnessed this repetition of history. But for these lessons one would sometimes wonder why some who claim to be advocates of Christian teachings should traduce the one religion which is attempting to follow the Master all the way in the healing of both sickness and sin, consistently maintaining that the command to preach was never given without its correlative command to heal, which is every whit as binding. If the calm, unostentatious teaching and doing of these things constitute a menace and promote fanaticism, then Christian Scientists indeed plead guilty; but if otherwise, what justification has a professed Christian minister for making such charges? Jesus prescribed a test that is good for all ages, and by it Christian Scientists are willing to stand or fall: "By their fruits ye shall know them."

[John Ashcroft in *St. Louis* (Mo.) *Globe-Democrat*.]

While appreciating the reverend gentleman's commendation of that which he can approve in Christian Science, we must enter a protest against being held up to the world as a stumbling-block to human progress. As to how that progress is best achieved there is, and will continue to be, a wide divergence of opinion. Is it not taking a great deal for granted to assume that "preventive medicine," and what our critic terms "real science," alone are efficacious along these lines, when our cemeteries are being filled with those who have succumbed to diseases our forefathers never heard of? Is there less disease in the world today, in spite of all that has been done to reduce it by medical research? Is it not a question whether the more healthful condition of the Canal Zone is not the result of intelligent engineering and sanitation rather than of "preventive medicine"? and is not the pollution of our streams and the adulteration of our food principally attributable to human selfishness and greed?

Christian Scientists are as appreciative as their neighbors of the efforts being made for their protection along these lines. Why should we be thought desirous of abolishing, or evading, reasonable restrictions against the spreading of conditions believed to be contagious by those around us? Christian Science insists upon obedience to the rule of doing unto others as we would have them do unto us. Our attitude toward vaccination is that of obedience to law where law demands this; though we have only to note the wide difference of opinion among medical men as to its value to realize that we are not alone in thinking it unnecessary. To say that Christian Science is a menace to human life is utterly to disregard the fact that the majority of its adherents are people who had exhausted medical skill before availing themselves of its ministrations. If Christian Science were the unreasonable thing its critics believe it to be, it would have disappeared long ago, and would not command, as it does, an ever-increasing consideration and respect.

[Written for the *Sentinel*.]

THE LAW OF SERVICE.

WILLIS E. BLOOMFIELD.

THE fields are white for harvest,
But the laborers are few.
So spake our Lord in Galilee,
And still the words are true;
Around us in life's waiting fields
There's work for all to do.

The world still groans in bondage,
Its ransom must be bought
With priceless wealth of loving deeds
Inspired by loving thought;
And that which you can do to help
Is waiting to be wrought.

Your own load may seem heavy
And more than you can bear,
So that for others' burdens
You have no strength to spare;
But your own load will lighter grow
When you another's share.

The good we do to others
Our own good best assures;
The cup of water given in love
A sure reward secures.
Carry your brother's burdens,
And Love will carry yours.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"BE YE THEREFORE PERFECT."

WHEN Jesus said, in his sermon on the mount, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he placed a high standard before his followers, a standard seemingly impossible of attainment, from the human view-point, and yet one entirely in keeping with the Master's teaching and with his own demonstration of spiritual understanding and power. Again, in the same sermon, he rebuked the sense of anxious thought for that which is merely temporal, and bade his followers seek first "the kingdom of God, and his righteousness;" indeed, throughout his ministry we find him enforcing and pressing home the teaching that no lesser endeavor than the attainment of that perfectness which is of the Father is permitted to pass as the ideal of Christianity.

There is no hint, in this demand for perfection, that any concession will be made, any excuse accepted. Whatever the obstacle that seeks to interpose itself, to hinder or prevent the desired accomplishment, it must be overcome. When, after that indubitable proof on the mount of transfiguration of the divinity of him whom they knew as the great Teacher, the Master, Jesus the Christ, the disciples failed to accomplish the healing of the epileptic boy, doubtless some of them excused their failure with the thought that anyway they had done the best they could with the case. It will be observed, however, that their work received no commendation from the Master; there was only the implied rebuke that were their faith even "as a grain of mustard seed" nothing would be impossible to them. It will also be noted that Jesus showed them that this so-called best could be improved upon, and demonstrated the truth of his declaration by his own healing of the boy.

That which has ever wrought for lofty accomplishment has been the holding fast to a high ideal. The great sculptor spoke truly when he said to the friend who could see "only trifles" in the touches of the chisel which brought out new beauties in what already seemed a masterpiece, "Recollect that trifles make perfection, and perfection is no trifle." So, too, in Christian Science the perfect ideal of full obedience to the Master's command—the healing of the sick as well as the sinning—has been set before us; the commonplace plea, "I did the best I could," has been lifted to a higher plane of endeavor, and is no longer accepted as a just excuse for mediocrity or indolence in the accomplishment of the task to which we have set our hand. Mrs. Eddy sounded the key-note of this daily striving for perfection when she encouraged Christian Scientists to "work—work—work—watch and pray" (Messages to The Mother Church, p. 20), and it is only through unceasing prayer and persistent right thinking and doing that any one will be able to justify even his own conscience to believe that he has done the best he could.

Nor need we expect to reach perfection in any walk of life unless we have set this standard as our goal and are bending our every energy to its attainment. To have anything less than the perfect as our ideal means that we shall be satisfied with the crude and faulty results which attend inefficient workmanship. The remedy, then, for imperfection in result is the elimination of the imperfect in desire; or, as Mrs. Eddy expresses it, "we must form perfect models in thought and look at them continually, or we shall never carve them out in grand and noble lives" (Science and Health, p. 248). This does not mean that we shall accomplish perfection before we have laid down every mortal desire, but it does mean that the sincerity of our motives and the faithfulness of our performance will be manifest in the quality of our achievement.

Mrs. Eddy also tells us that "to understand God is the work of eternity, and demands absolute consecration of thought, energy, and desire" (Science and Health, p. 3); and we cannot fail to perceive that these teachings from our text-book are entirely in line with Christ Jesus' command that we seek first and above all else the kingdom of God. Therefore, in putting these ideals before Christian Scientists Mrs. Eddy is but following up the Master's command that we strive for that perfect understanding of the Father through which we may heal the sick and the sinning even as he did, instantaneously and completely. When we have honestly conformed our efforts to the truth of the statement, "I have done the best I could," so that we can say with the apostle, "Forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus,"—then and then only are we putting ourselves in line to merit that high commendation, "Well done, thou good and faithful servant."

ARCHIBALD MCLELLAN.

TO THE LINE AND TO THE PLUMMET.

IN the prophecy of Isaiah we read: "Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies." Again, we find the demands of Principle presented in a similar way in the prophecy of Zechariah: "Not by might, nor by power, but by my spirit, saith the Lord of hosts." Then we are told of the plummet in the hand of the prophet, and also of "the eyes of the Lord, which run to and fro through the whole earth." These passages recall very forcibly the words of Christ Jesus to the religionists of his day, "Except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven." The strange thing is that any students of the Bible should ever have come to believe that aught less than perfect obedience to divine law could meet the requirements of the all-perfect One.

In scathing terms Isaiah describes, in the passage already quoted, the condition of those who have made falsehood their refuge, and who have made a covenant with death to pay their debt to divine justice. Respecting this sort of belief Mrs. Eddy says: "The suppositions that sin is pardoned while unforsaken, that happiness can be genuine in the midst of sin, that the so-called death of the body frees from sin, and that God's pardon is aught but the destruction of sin,—these are grave mistakes" (Science and Health, p. 291). This brings us face to face with the demand for right thinking and right doing, both measured by the line and plummet of the Mind which knows all good and can never be satisfied with anything less than good. The belief that anything less than this can satisfy either God or the real man, is the "refuge of lies" which the floods of Truth are fast sweeping away; and this is well, for thus will humanity be divinely impelled to find shelter in the Christ-consciousness which ever delights to do God's will in God's perfect way.

No one would deny that the demand for a perfect standard in all things is both just and merciful. It would not, therefore, be kindness but cruelty to permit men to go on in sin under the impression that it would be just as well for them in the end as if they had striven after perfection at each step of the way. The highest is ever the best for each and all, and the effort to demonstrate righteousness to the line and to the plummet in all our relations with our fellow men,—in business, in the church, or in the home,—must bring to those who are striving to reach perfection won-

Digitized by Google

derful strength and clearness of vision, also mental and physical health. Besides this, it tends to bring back to us the justice and truth which we give out, for the law of God is, "Whatsoever a man soweth, that shall he also reap."

It is possible that some may overlook the fact that the line and plummet of Principle lift thought far above the plane of mortal belief. We must measure up to the demands of Love as well as of justice. It is not enough that we do not kill; we must not hate. But we cannot stop there, we must forgive the offender "seventy times seven" and then go on to the "new commandment" of Christ Jesus: "Love one another, as I have loved you."

If God loves unceasingly, and is absolutely just to all, we must take this divine ideal as our standard and bring it to every transaction as Moses did the pattern shown him in the mount. Surely no one would choose to be among "the weak and worldly, who think the standard of Christian Science too high for them" (Science and Health, p. 168). Should we not rather rejoice that we have found refuge in knowing divine Principle, whose requirements mean blessing and blessedness to all mankind.

ANNIE M. KNOTT.

ESCAPE FROM THE SEEMING.

EVERY man knows, and most men would concede, not only that falsity is valueless, but that it is a deception and a snare which when clung to leads inevitably to moral degradation and disaster. They would concede, too, that even the seeming power and influence of a given error is entirely due to the fact that it always parades itself in the guise of genuineness; and this for the reason that it is an offense to its victims when clothed in its own habiliments and known for what it is. The innate moral sense of all free men is so strong that they will ridicule and condemn pretense even when they know that in so doing they condemn not a little in their own life and conduct. The educational system of every civilized country witnesses that its supporters look upon falsity and ignorance as outlaws, and by a universal consent which freely assumes the colossal expense involved, they plan to put it away that all may know the only thing worth knowing or that we can know, viz., the truth.

This recognition by all wholesome-minded folk that the rule of the seeming, of the untrue, is a bar to progress, is irrational and unprofitable, and that to find and prove the truth about everything is the one sensible course to pursue, constitutes that scientific spirit which has always been an emancipator and which forever makes war upon the content of ignorance, the immobility of the prejudiced and the reactionary. Loyalty to this spirit explains the wonderful progress which has been made in the domain of physics, especially during the last century. The significance of the discoveries and inventions of a Bell or Edison to human life is pertinently manifest to every one, and we do well to estimate rightly their contributions to physical freedom and efficiency. More than this, to physical scientists and especially those of philosophical disposition, we are indebted for disclosing the superstition and sophistry of unnumbered beliefs to which our fathers, even of a relatively late day, were in bondage. They have taught men to question the reliability of much evidence and to submit experience to the test of honest and thorough investigation. In this way they have led the thoughtful to rely on their conclusions only after having considered much more than appears upon the surface of things. The scientific spirit has thus come to stand for full and fair inquiry, a logical consideration of all the available facts, that wholesome skepticism which is not easily duped and which is sure that the truth needs no patronage.

It is an interesting fact, however, that many who are quite ready to grant all this, are not ready to consent to further progress toward freedom if it trespasses in any way upon their accepted religious convictions. They may have learned to question many material beliefs respecting the nature of matter, etc., and yet, when asked to consider the possibility that the entire material concept of being is erroneous, that all evil, all the unspiritual is a seeming, they draw back as though something of value were imperiled. Thus, while exalting that scientific procedure which has proved to them that many of their materialistic concepts are false, they are indisposed even to consider the teaching of Christian Science that all materiality is unreal, its law of disease and death the product and rule of false belief.

Nothing is more incongruous, more out of keeping with the scientific spirit than this fact, and they are especially inconsistent who having come to know the truth of Christian Science are yet given to toying with deception, who consent to compromise and indefiniteness in the fight with falsity when they should be positive and unequivocal in their stand for Truth. Happy the day when, as an example to all men, Christian Scientists in their every word and deed recognize the fact that the rule of the true alone is rational and profitable, and give to Christian Science its divine right of way because it is entirely in harmony with that spirit of progress which has accomplished everything worth while in the past, and which is destined to win all things for Christ in the future.

JOHN B. WILLIS.

AMONG THE CHURCHES.

NEW YORK, N. Y.

[Telegram.]

New York, Nov. 30, 1911.

John V. Dittemore, Secy., The First Church of Christ, Scientist, Boston, Mass.

On this day of thanksgiving First Church of Christ, Scientist, New York city, at its Thanksgiving service, by unanimous vote of the members present, desire to express to the Board of Directors of The Mother Church our deep appreciation for the great work that you are doing not only for Christian Scientists but for humanity in general. We are grateful for the efficient service rendered to the field by *The Christian Science Monitor* and the periodicals issued by the Publishing Society, for the board of lectureship, and for all other branches of Christian Science activity for which you are responsible. We desire not only to express our love and thanks, but to cement more closely than ever the bond of unity which already exists between us.

FIRST CHURCH OF CHRIST, SCIENTIST, New York City,
ARTHUR O. PROBST, *Clerk.*

LOS ANGELES, CAL.

With the commissioning of the architect to prepare plans for a house of worship of ornate and classic design, to cost in the neighborhood of one hundred thousand dollars, the first definite step was taken yesterday [Sept. 19], looking toward the erection of a permanent home for First Church of Christ, Scientist, of this city. The new church, which when completed will be second in architectural beauty only to that of the three hundred thousand dollar Second church, is to be erected on a commanding site at the corner of Alvarado street and Alvarado terrace. No details are as yet obtainable as to the specific character of the edifice, except that it is to follow the massive and imposing lines characteristic of churches of its denomination.

First Church, which is the nucleus about which the faith has grown to its present proportions in Los Angeles, has been without a church, strictly as such, since its inception, six years ago. From its example have since been formed five other Christian Science churches in this city, the sixth having been incorporated only a few days ago.

THE LECTURES.

OMAHA, NEB.

Virgil O. Strickler delivered lectures on Christian Science in the new edifice of First Church of Christ, Scientist, Oct. 5 and 7. He was introduced the first evening by Atty. Carl E. Herring, who said:—

Within our own generation a religion has been given to the world which has circled the globe with churches, whose followers are numbered by hundreds of thousands, but which lays no claim to originality except the originality of returning to the simple words and works of the religion of Jesus the Christ. On this basis of doing the things which Jesus commanded,—endeavoring to bring the kingdom of heaven down on earth, instead of reaching it by an unknown journey called death,—Christian Science has healed the sick of their diseases, reclaimed the drunkard, taught the utter uselessness of sin, and better far than all, has brought its adherents into the realization of an ever-present, protecting God, and dignified the perfect, real man as made in His image and likeness.

This discovery, or the reawakening of a slumbering truth, was made by our revered Leader, Mrs. Eddy, and we recognize that hers was the divinely appointed task to find and hers the task to demonstrate this truth until the Master's teaching should clear away the mists and break down the false structure which stood between man and his legitimate inheritance as a child of God. Coming as we do from many religions, nationalities, beliefs, and occupations, we have had neither time nor inclination for disputations as to doctrines, dogmas, or creeds, but we have united upon the common platform that God created all things, and without Him was not anything made that was made; that God is good, and that evil is not, never was, and never will be triumphant; that poverty, sickness, and sin are evil—not of God—and can be overcome through the understanding of the perfection and harmony of the divine Principle which creates, rules, and governs all.

Our philosophy we confidently commend as simple, direct, easy to be understood, and imperative. Our Master said, "By their fruits ye shall know them," and we do not seek to avoid the issue, but with grateful hearts for blessings received, we lay our offerings upon the altar and ask the world to judge of us,—if the sick be not healed, if sin be not lessened, if lives that have been groping in darkness be not brightened. It is gratifying that this new-old truth should have come at a time when the higher civilization is receptive to the message of "on earth peace, good will toward men;" when formalism and creeds are loosening their grasp and men and women are willing to listen patiently, judge dispassionately, and are brave enough to follow where Truth shall lead them.

The second evening the lecturer was introduced by W. S. Wright, a prominent business man, who said:—

I want to say, not as an apology, but by way of explanation, that I am not a Christian Scientist. I am, however, a firm believer in anything that will develop and maintain a broader, higher standard of living and of the duty we owe to ourselves and to each other and the advantages that will result to ourselves and our associates when this standard is reached. To that extent I believe all creeds can meet on common ground. I never attended a Christian Science service until two weeks ago, and on the invitation of a friend I came from curiosity to see this beautiful building. I was favorably impressed with the building, but my interest in it soon passed to the congregation, which completely filled every seat in the house, which has possibly double the seating capacity of any church in the city. I inferred from this that the service must be something unusual, but it was so extremely simple, so lacking in any interest or appeal to an outsider, that I drew the conclusion that the congregation must be of the feeble-minded class or they would not find it interesting. When the service was over and I passed out among the congregation, this impression was quickly dispelled, for I found them to be an unusually intellectual, cultivated people, among whom were men and women prominent in financial, mercantile, professional, and educational affairs, whom it was a pleasure to meet and to know; and I said to myself, There must be something here out of the ordinary, and I purpose finding out what it is. I hope this evening that many of you in this audience as well as myself will have that opportunity.

Correspondence.

HIGHLAND PARK, ILL.

On Sunday, Oct. 8, Judge Clifford P. Smith gave a lecture in the church edifice on the subject of Christian Science. He was introduced by George D. Forrest, first reader, who spoke as follows:—

This church welcomes you most lovingly to listen to a lecture on Christian Science, and when I say most lovingly, it is with the earnest desire that to any inquiring person here today there may come, through the words of our lecturer, the conviction of the truth as found in Christian Science, and that the truth may make him free. No greater blessing could possibly be promised than that freedom, based upon a knowledge and understanding of God and of man's relationship to Him. Any one healed through Christian Science is inspired by a love unspeakable to pass along the joyful news, that others may be blessed and benefited, and it therefore gives me the keenest pleasure to introduce to you one eminently qualified to speak upon the subject.

Correspondence.

KIRKSVILLE, MO.

Miss Knapp lectured on the subject of Christian Science the evening of Oct. 9 at the Opera House before an audience that listened very closely. He was introduced by a member of the local church, whose introductory remarks were in substance as follows:—

We are here for the purpose of hearing a lecture on Christian Science. The world cannot be blamed for making mistakes, for it is doing the best it can with the material it has at hand. If it had something better to do with, it would do better. As it is, we seem to be in a very unsettled condition. We are grasping after something more satisfying than we have experienced in the past. We are in great need of something that will make us free from the bondage of sin, sickness, worry, and fear, and with the view of satisfying this need, the present lecture is given.

Correspondence.

NILES, MICH.

The Niles Public Library Auditorium was crowded to its fullest capacity last evening [Oct. 13] to hear a lecture on Christian Science given by Prof. Hermann S. Hering. The speaker was introduced by H. O. Parker, first reader of the Christian Science society, who spoke in part as follows:—

In this age, as never before, men and women are restlessly seeking in every direction for a whole salvation. There is on every hand a feeling that to be saved from punishment after death is not the ultimate goal. Rather is there a need for a salvation that is operative in the everyday problems of existence; and through the constant striving for a daily salvation, thus to achieve heaven, hereafter. We feel that Christian Science is a sure guide to that salvation which is of God, that salvation which is spoken of in Exodus, fourteenth chapter and thirteenth verse: "Fear ye not, stand still, and see the salvation of the Lord, which he

Digitized by Google

will show you today." Christ Jesus said, "By their fruits ye shall know them," and as Christian Scientists, we are willing thus to be known.—*Niles Star.*

RICHMOND, IND.

William R. Rathvon lectured on Christian Science to an audience of over seven hundred at the Murray Theater, Sunday, Oct. 15. He was introduced by Attorney William A. Bond, who said:—

Christian Science and kindred subjects have in recent years received the profound consideration of many men and women, and they will undoubtedly continue to be thus considered until the truth is found which is in harmony with the profoundest cravings of the human heart, the unsatisfied longings of a hungering humanity. When this time will come, I know not, but it will surely not be reached until mankind obtains a true and satisfactory conception of the infinite, and that which is called faith shall be superseded by actual, demonstrable knowledge. The great demand of today is to know; not simply to believe. Man is not satisfied with faith alone, unless that faith will ultimately and unerringly lead him to a satisfactory knowledge of his creator.

Man is undoubtedly a worshipful being. In all ages and in every clime, from the very earliest dawn of the human race, judging both from sacred and profane history, man has ever looked upward, outward, and beyond for that help, strength, and assistance which can come only from the infinite. His pathway, however, as he has sought to obtain a satisfactory conception of the great truth of his existence, and to learn whence he came and whither he is going, has not always passed through "flower-bespangled plains and verdant meads, where summer sunshines sift and fall through interlacing boughs, and perfumed zephyrs sigh," but rather has it passed through the valley of discouragement and over the hill of despair, with only an occasional glimpse of that glorious light of the immortal truth which alone can satisfy the longings and hungerings of his inner and better self.—*Correspondence.*

JOPLIN, MO.

A large audience heard the Hon. Clarence A. Buskirk deliver a lecture at the Club Theater last night [Oct. 16]. Samuel H. Smith introduced the lecturer, saying in part,—

And here the Christian Scientist comes, saying: "We do not offer a new religion; we simply restore the old—the Christian religion of its Founder; and in offering this we say to all who will accept it and live it, 'All the blessings and all the power enjoyed by its early teachers and followers will be yours.'" When we consider how gladly the people heard that gospel from the lips of the master Teacher, how abundant the healing—in spirit and in body—can we ask for more? Is it not amazing they do not offer less?

A generation ago the bigot was the rule; today he is the exception. Then few were broad enough to give Christian Science a fair hearing; now the many will. Then Christian Scientists were deemed possessed of hallucinations, were of doubtful sanity, and should be restrained; now who will question that in intellectual ability, in evenness and harmoniousness and placidity of life, no others rank higher than they? A religion which attracts to it men and women of the highest mental ability and attainment; a religion where peace and contentment erase lines of care; a religion which banishes worry (and if it did naught else, this would amply commend it), which has to its credit remarkable and innumerable cures of bodily ills—such religion commands attention, and is getting it.

The Christian religion, as the church has presented it for the past fifteen hundred years, has evidently departed widely from the faith and practices of its Founder and its early teachers and followers. It has lost in zeal and spirituality, and (probably as a result) it has lost its power to heal bodily ills. It has not kept pace with intellectual development, and therefore it has not satisfied our mental and spiritual wants.—*Joplin News Herald.*

HARRISBURG, PA.

A large audience heard Clarence C. Eaton lecture on Christian Science in the Majestic Theater Nov. 9. The lecturer was introduced by Atty. Aaron E. Brandt, who said:—

There are many wrong impressions among people, and some prejudices, in regard to Christian Science, the subject of this evening's lecture; but they last only until people learn to understand the unvarying scientific nature of the Christ-truth and its practical utility as taught in Christian Science. Mrs. Eddy, the Discoverer and Founder of Christian Science, defines truth as the intelligence of God, which was manifested by that Mind which was in Christ Jesus. She also wrote that "if Christianity is not scientific, and Science is not of God, then there is no invariable law, and truth becomes an accident" (Science and Health, p. 342). Christ Jesus said: "A good tree cannot bring forth evil fruit." There is no accident, no variation, in the truth of that statement, and as if to give emphasis to the eternal fact, he further said, "Either make the tree good, and his fruit good; or else make the tree corrupt, and his fruit corrupt."

If you will ponder over that statement, and study it until you can accept its full meaning, and if you will also admit that God, who made all things, is the good tree, you will then begin to comprehend what the nature of all evil is, and must of necessity be, from a logical and scientific standpoint, and a new light will dawn upon you. You will then begin to understand something about Christian Science and why it heals the sick. You will no longer count your pulse-beats and listen to the throbbing of your heart to learn something about your health and life prospects, but instead you will listen to something better. You will listen to "a still small voice," the spirit of Truth, the intelligence of God, and step by step you will endeavor to order your daily living by every word that proceeds out of the mouth of God.

When a Science honors the Christ, and upholds his teaching both in theory and in practice, it will be accepted when understood, as Christian Science has already been accepted by many thousands of people in all walks of life.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Dublin, Ire.—William D. McCrackan, M.A., Leinster Hall, Molesworth street, 3:30 p.m., Dec. 10.

Fort Smith, Ark.—Prof. Hermann S. Hering, New Theater, Dec. 18.

Halifax, N. S.—Bliss Knapp, Masonic Hall, Dec. 11.

Harvard University, Cambridge, Mass.—Bliss Knapp, Dec. 15.

London, Eng. (First Church).—William D. McCrackan, M.A., Queen's Hall, Jan. 4.

Lowell, Mass.—Virgil O. Strickler, Lowell Opera House, 3 p.m., Dec. 17.

Mena, Ark.—Prof. Hermann S. Hering, Harmon Opera House, Dec. 19.

Pasadena, Cal.—Judge Clifford P. Smith, Church Edifice, Oakland avenue, 3 p.m., Dec. 17.

Riverside, Cal. (First Church).—Judge Clifford P. Smith, Loring Opera House, Dec. 19.

San Bernardino, Cal.—Lecture Dec. 14, canceled.

Twin Falls, Idaho.—Clarence C. Eaton, Orpheum Theater, 3:30 p.m., Dec. 17.

TESTIMONIES OF HEALING.

Two years ago a neighbor called to spend the evening at my home, and saw that I was suffering with a severe headache. He said, "I can tell you how to get rid of headaches," and then went on to explain that about a year previous a lady had advised him to buy a copy of Science and Health and read it with an unprejudiced mind, she believing that if he did so he would enjoy good health. This neighbor had for years required the constant services of one of our best physicians. He explained that during the past year he had enjoyed perfect health and had taken no medicine, all due to his reading of the Christian Science text-book. This sounded rather odd to me, but knowing him to be a hard-headed, successful business man, I concluded to follow his advice, which was to buy a copy of Science and Health and read it, as he had done.

Now is the time to state what will probably appear incredible to some who read this. Before stating what Christian Science has done for me, I will explain that for more than thirty years prior to the time mentioned, I suffered with headaches nearly all the time. I bought a drug in bulk, keeping a supply at my home and at my office, and took large doses several times a day. I had worn glasses for years, used cathartics nearly all my life, also used a catarrhal remedy without which I was very uncomfortable. I now bought a copy of Science and Health and started on a trip, my traveling-bag containing the usual miniature drug-store. I read the book on the trains, on the boats, and at hotels. I was away about a month, during which time I did not take any medicine, and did not have a headache or any trouble with my bowels, though it was on such trips that I formerly suffered most. I met my wife at a hotel, and in her presence destroyed all the medicine I had, and I have never taken any since. A few months later I began going to a practitioner, and through his assistance it was demonstrated that I no longer required glasses. At his request I left his office without them, and that evening I read the *Journal* for more than hour and got along all right for about a week, when I had to wear them again. I called on the practitioner, and he talked to me for fully an hour, when without his requesting it I handed my glasses to him, and have not needed them since. It was, however, two or three months later before I could overcome the seeming necessity for the catarrh remedy.

I still have much to learn. With me the truth comes slowly, but I study the Lesson-Sermon every morning before coming to the city. I carefully read the *Sentinel* and *Journal*, and the first thing upon arriving home in the evening, after greeting my wife, I look for the *Monitor*, which I consider the very best daily publication extant. I look over several New York daily papers, but I read the *Monitor*. I wish all my loved ones understood how I feel about Christian Science. God knows I am grateful to Him for His goodness, and I am truly grateful to Mrs. Eddy for making it possible for me to understand His goodness.—EDGAR A. WALZ, New York, N. Y.

It has been my desire for some time to testify to the great benefits which have come to me in Christian Science. This great truth was presented to me in the early part of June, 1909, at a time when the best of medical skill had failed to relieve my suffering. There seemed to be nothing that would give me even temporary relief, to say nothing of a permanent cure; in fact, I was told by a number of the best physicians that they feared my time would be short on this earth. But the understanding which has come to me through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has reversed these decisions, for I am thoroughly healed, and my health is now better than it has ever been.

My case was one of seventeen years' standing. At the age of thirteen I was taken with a pain in my right side, and after our home doctor was given a fair trial without much improvement, my father decided to take me to a hospital where the best of physicians could be had. After a thorough examination they advised my father to let me remain for two weeks and take treatment, and this he consented to; but after two weeks they telegraphed to him to come, and upon his arrival he was told that the only thing for me was a surgical operation. To this he consented, and I was operated upon the following day. I recovered from this operation in due time, but was told that I must be very careful for at least one year. I believed that I might get entirely well, but as time went on I found myself again suffering from the same trouble, only worse.

When I was fifteen years of age I again sought relief at the hospital, and again I submitted to an operation, but with the same unsatisfactory results. After giving the physicians at the hospital a long and fair trial, I turned away, satisfied that they could not cure me. I then tried nearly every remedy I could hear about which promised to cure such cases as mine, but no cure followed any of these long trials. I then tried specialists in the various eastern cities, spending in this way a great deal of money, but still no cure. Finally I became discouraged with medicine, and tried several drugless systems without gaining the desired result. After having given these methods fair trial without much relief, I again turned to *materia medica* for help. I was examined by about six different physicians, all of whom I knew personally, and each one expressed different views as to my ailment, also different methods which might relieve me. I finally concluded to follow the advice of one of these, a surgeon in whom I had great confidence and a very noted man in his profession, both in this country and abroad. This surgeon operated on me in May, 1908. It was a very severe operation, and I was told by the nurse after my recovery that after the work was done the doctors did not think I would ever awake again.

For a time I seemed to be fairly well, but in the early part of 1909 I grew worse again, my ailments being more complicated and more painful than ever before, and I again turned to the physicians for help, but none of them seemed to be able even to give me relief. The doctors finally decided to operate once more, the operation to be performed on the next Tuesday, it then being Saturday. I went home very much discouraged, did not sleep at all during the night, and the next day (Sunday) I went to the surgeon who was to do the work and asked him to give me a few days to think it over, saying I would see him the following Monday. I was then advised by a friend to give Christian Science a trial, and I at once looked through the telephone book for a Christian Science practitioner. That same evening I called at his house, took treatment, and went home feeling that I would soon be better. I was advised to procure a copy of Science and Health and read it, and I did so. I began the study and kept it up almost day and night. After two weeks I discontinued the treatment, telling the practitioner that I would try to work it out myself. This I did, and only now and then asked for help. At the end of one year I was completely healed, and during this time I have occasionally been the means of helping others.

To say that I am very thankful for this great truth does not half express my feelings toward our dear Leader, Mrs. Eddy, for her noble and most precious life-work, which has brought health and happiness to thousands throughout the world, people who have been healed in Christian Science after all else had failed. Christian Science explains God as no other teaching has done since the time of Christ Jesus, and the proof of its correctness is that all manner of disease is healed, as of old, through the word of God. Jesus said that his followers would do the works which he did, and even greater works. We learn in

Digitized by Google

Christian Science how these mighty works are done, and all may avail themselves of this great truth and prove it for themselves.—GEORGE A. FECHTER, Topeka, Kan.

I should like to express my deep gratitude for what God through Christian Science has done for me. I had suffered for over twenty-three years from an internal trouble, for which I had gone through two operations and had at last been told by two specialists that it was now chronic, and that I would always be delicate. I did not come to Christian Science for the physical healing, but because the services appealed to me so much. When, however, my old trouble was causing me a good deal of pain, I thought I should try it; that, as so many others had been healed, my case could also be met, since nothing is impossible to God. I went to a dear friend, and was completely healed in one month's treatment.

I cannot express sufficiently my heartfelt gratitude for God's goodness to me, and the joy and peace I have now in my life, the peace that nothing can destroy or take away

MRS. ROSETTA MOORES, Bedford Park, Chiswick W., London, England.

For ten years I was under the care of physicians, and was a constant sufferer the last years of my illness. Three physicians said the ailment was gall-stones, and wanted to operate, but gave me very little hope. The fourth physician said it was something else, and left me a large quantity of medicine. I took a few doses, but felt so bad after taking it that I had to vomit.

I had been for three months in bed and in constant pain when a dear niece came from Milwaukee to see me, and advised me to try Christian Science. After my niece told me that God could heal me through Christian Science, I felt that I must try it, so she telephoned to a practitioner, who asked whether I could come to see him (we were then living about forty miles from Milwaukee); but as it was impossible for me to go, the practitioner said he would give me an absent treatment and be out the next morning. The treatment gave me such peace that I slept all night for the first time in three months, and such a refreshing sleep! I got up the next morning and ate my breakfast with a good appetite. At about nine o'clock the practitioner came, and after telling me what God is, gave me another treatment. I felt so happy that when the practitioner and my niece, who had been with me for five days, were ready to leave, I said I would go also. So I got ready, went to Milwaukee, and walked about nine blocks that afternoon, after having been in bed for three months, and having had pain that seemed almost impossible to bear! After my walk of nine blocks, I had to lie down and rest.

After three weeks' treatment I felt like going home, and did so, feeling much better but not entirely healed. After being home about four weeks my feet began to swell very badly, so I thought I must go back for further treatment. I could hardly walk, on account of my feet, but I continued the treatments for about seven weeks, after which I was completely healed. I feel as though I would like every one to know of my wonderful healing. I know that if it had not been for Christian Science I would not be here today.

I am truly grateful to Mrs. Eddy for this wonderful revelation that came through her, and which makes plain to us the truth of man's being, proving that God heals us of all our diseases, and renews our youth like that of the eagle, as the psalmist says. I am daily striving to realize the power of divine Love, and hope that I may some day be a member of the Christian Science church.

MRS. ANNA WOLLWAEBER, Milwaukee, Wis.

I feel that I have reasons above the ordinary to be thankful for Christian Science. My case was more hopeless than that of many whom I knew and who have journeyed on to the unknown shore. The last doctor who saw me gave me but a few days to live, three or four weeks at the outside; and I doubt not that his prediction would have come true had it not been for Christian Science. When this truth found me I was as helpless as a new-born babe, and had been so for three long years from rheumatism. I could not move hand or foot, and no one can know the unspeakable anguish that I suffered unless he has had a similar experience. I had tried all the known remedies, doctors, baths, electricity, etc., without any results, except that I grew worse.

Christian Science was tried only as a last resort. Although others were skeptical, I felt its beneficial effects and told my friends that I was getting well, long before any physical manifestation was seen on the body. In time my toes began to limber, then my feet and legs, and so on until I can now walk fairly well, and am improving faster every day. Some well-meaning people thought that the good ladies who were helping me ought to be sent to jail for arousing hopes that could never be realized, and said it was a shame to take my money in such a manner, not knowing that I had no money to give them and that they stood no possible chance of being paid until I was able to earn the money to pay them. After it was seen that I was going to get well in spite of this prediction, they said that I would have gotten well anyhow had I quit taking medicine. I did not take any medicine while under one other treatment, but I did not get well or show any sign of improvement. The gentleman who had treated me for several months said that he could do me no good; that mine was a hopeless case. Still others said that I was being "hypnotized." As to this, I will say that a prominent hypnotist came to see me and tried to hypnotize me and failed. He afterward told my brother that I was too far gone and could not respond.

Not one of the many who came to see me ever offered me one ray of hope except the Christian Scientists, and they pointed me to a God who is Love, a God who knows no evil; they lifted my troubled thought above the sordid things of earth. This eased my aching body, and I began to know the unreality of pain and death. My healing has been slow, hardly perceptible to others, but I have felt from the beginning that ultimately I would be perfectly healed.—HARDY N. FANNIN, Waco, Texas.

I feel it to be a duty to testify to my healing in Christian Science of a severe illness; namely, nervous exhaustion and stomach trouble. I had been treated by two physicians, and we finally called the third, who said I must go to the hospital right away. I did so, and was treated there for five weeks; still I could not retain anything on my stomach. I went home very little better, and when I had been at home a while I was almost as ill as when I went to the hospital. We called the doctor, and he was very much discouraged.

I had a friend who was a Christian Scientist, and I read some of the literature which she brought me. I thought it very good, but it did not seem possible that Christian Science could help me. When, however, all hope was gone, we called a practitioner, and she gave me fresh courage; she also told me I could eat anything I wanted; which I did, without any bad result. I have had no return of the trouble, and I feel truly grateful for what Christian Science has done for me.—MRS. CLARENCE HOLT, Oskaloosa, Ia.

I wish to give expression to my gratitude to God for Christian Science, and to our dear Leader, through whom this saving truth has been given us. I feel grateful indeed for the physical healing which I have received, and

Digitized by Google

also for the spiritual understanding, which enables me to realize more clearly each day our relationship to the one omnipotent Father. My great desire now is to live and demonstrate this healing and saving truth. I trust I shall ever be a loving follower of Christian Science.

LORENA MOORE, Memphis, Tenn.

I am very glad to testify to the efficacy of the healing work done in Christian Science. In May, 1900, a bad case of eruption from poison oak yielded to its treatment, while I was still close to the oak and touching it many times daily. Before I had treatment in Christian Science, I suffered for weeks if I once came in contact with it.

MRS. DELLA M. BROOKS, Sacramento, Cal.

I give this testimony with gratitude and thanks for all that Christian Science has done for me. About four years ago, through the wonderful healing of an aunt, I turned to a practitioner for treatment. I had been under the care of two specialists in this city for deafness, and had been treated by them for over a year, with the result that I rapidly grew worse instead of better. At this time I was studying voice work, and was so troubled with hoarseness, sore throat, and colds, that I felt I had better give it all up. In a great state of discouragement I turned to Christian Science, and I was healed of all these ills. Although the healing was not rapid, I am nevertheless grateful, because I had to search my own mentality for the lurking error, and in that way I was able to overcome a very bad temper and disagreeable disposition, and when this was accomplished my hearing was restored.

My mother has also been benefited through the study of Christian Science, and was able to lay aside glasses which she had worn for reading for almost fifteen years. The healing was instantaneous, occurring during a Wednesday evening meeting. A short time ago my husband applied for treatment for an ulcerated tooth. After he had tried all material remedies, the dentist saying he could do no more for him, he was completely freed from pain in a few treatments. This same dentist, a personal friend of my husband, was very much impressed by this healing, as he did not think Christian Science could relieve any such inflammation.

I could go on and tell of very many blessings I have received, but will not take up too much valuable space. I however wish to add that Christian Science has helped me in my musical work. I had always believed that I could not memorize music, and I was so fixed in this belief that in an examination I was the only one allowed to play with a copy of music before me. Now, as I realize that God is Mind, and that man reflects intelligence, I am overcoming these beliefs, even if only in a small degree. I am truly grateful to God, also thankful to Mrs. Eddy for the truth which has freed me so much.

MISS PEARL ROSE, Los Angeles, Cal.

Words are inadequate to express our deepest thoughts and I realize fully in saying what I can say to declare my gratitude to God, the giver of all good, but in the earnest hope that what I write will be for the help of some other in need, I send this testimony. It is now nearly four years since I began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, and found that indeed it was the key, for it unlocked and revealed the treasures of the Bible as no other commentary on holy writ had ever done for me. I read this wonderful book for nearly three months alone, and I remember coming to a passage in the Sermon on Atonement and Eucharist which as far as I was conscious did not to be for others, but do they follow him in the way that he commanded? Hear these imperative commands: "Be ye therefore perfect. . . . Love thy neighbor." I then saw how these could not be for just one particular period, or for a limited number of people, but that we, if we were to be real disciples, must do likewise.

After this time I went to one of the services, and remember being much impressed by the simplicity and earnestness of all the people present. It seemed that here were men and women to whom prayer evidently meant direct communion with the infinite. After some little time, one said to me, "You too will leave your glasses off some day." I had worn glasses for sixteen years, and had been told that I could never leave them off; indeed this dictum was so fixed in my thought that they seemed to have become part of me, and I did very little work or reading by artificial light, for my eyes would constantly ache or pain me. I then decided to prove this Science for myself, and went to a practitioner, who gently and lovingly led me to see how I, as God's child, had all I needed every moment, and that He did not require any aid from matter, for He had created man perfect, in His image and likeness. After three weeks' treatment I left my glasses off, and have never required them since. I am now able, and have been since my healing, to work and read for hours together without any difficulty.

I give the above testimony as one of the many proofs of the healing power shown forth in Christian Science, but I should feel I had poorly expressed my gratitude did I not add the joy and wonderful spiritual understanding which is given to one through the faithful study of the Bible with the aid of Science and Health—words fail to express fully this part, which comes to each and all of us in the study of Christian Science. I can never cease to be grateful to Him who never ceases to bless and who has sent anew the truth to this age through His messenger, Mrs. Eddy, whose spirituality has enabled all mankind to understand and make practical in every-day life the teachings of the Master, and to prove his wonderful words, "The works that I do shall [ye] do also;" for "Lo, I am with you alway, even unto the end of the world."

MISS MILDRED PALEY, The Nook, Henley-on-Thames, England.

I wish to express my gratitude for the understanding of God and of man's relation to him, which I have attained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the study of the Bible. I realize that I am only a beginner, but I have learned that "progress is the law of God" (Science and Health, p. 233), and therefore as I outgrow material beliefs and live more of the spiritual sense of being, greater enlightenment will follow.

Many ills have been overcome, both for myself and different members of our family, through the application of Divine Truth, as taught in Christian Science. The [illegible] feel in [illegible] physical ailment is something for which to be very grateful, much greater is [illegible] from the bondage of false [illegible]

Digitized by Google

As a small token of love and gratitude for what Christian Science has done for me, I willingly testify to Truth's healing power. Four years ago I was healed of an eye difficulty, and after having worn glasses for five years gave up their use. Shortly after this I was healed of a stomach trouble. The next season my husband was healed of an acute affection of the eye, and following this my daughter's shoulder, which had been dislocated, was set in place through Christian Science. The following year a still greater healing came to us. Our son fell and broke his collar-bone. In recalling the case of the dislocated shoulder I was helped to believe that this condition could be overcome through Christian Science. No other treatment was used, and several hours after the fall the child jumped out of bed and asked for his supper, perfectly healed. Christian Science has been a great help to me in taking care of my children. From his birth until he was five years of age, my eldest son had a stomach trouble, sleeplessness, nervous twitching of hands and feet, and lack of appetite. The specialist who gave the last diagnosis of his case said that he was hopelessly deficient mentally, that he would never understand or be understood by any one. He could not speak. The reliable physician who had his case from birth until the age of five entreated us to place the child in an institution for mentally deficient children. I rejoice, however, that through Christian Science one child has been spared that fate. Shortly after I became interested in Christian Science the boy developed a normal appetite, and he was able to retain his food for the first time in five years. The nervousness next left him, and he was able to sleep at night, bringing peace to our home. Mentally he has been improving every day during the four years of Christian Science care which he has had. He is able to say the "scientific statement of being" (Science and Health, p. 468) with understanding. His intellect is remarkably good, considering the difficulties to be overcome to mortal sense. At various times the children have had measles, fever, toothache, and throat trouble healed through Christian Science. No contagious disease has remained in our home over two days.

Christian Science has made our home a happy one, free from all the discord which sickness had brought to it in the past. I am indeed grateful to our Leader for establishing a Sunday school where the little children can be taught to start life aright and through this training be spared much trouble and care. Words cannot express my gratitude to God for Christian Science. I know that it heals every form of sickness or sin, and I am very happy to have found it.—LYDIA B. THIELE, Chicago, Ill.

[Written for the *Sentinel*.]

THE LIVING CHRIST.

CHARLES C. SANDELIN.

Dost seek the Christ, that thou may'st humbly kneel,
And to his mercy all thy wounds reveal,—
With earnest heart beseech the healing balm,
And for thy troubled thought crave heavenly calm?
Turn not in sorrow, thinking hope is vain—
That ages long the Christ entombed has lain!
In olden time indeed were wonders wrought,
And all were healed who Christian healing sought.
The power that healed died not and vanished then—
'Tis present now and bringeth peace to men;
Though changed the years, yet Christ is still the same;
That Christ who long ago unwelcomed came.
New-born are they who now to Truth do come—
Diseased and halt, the blind, the deaf, the dumb;
And sinners, too, though scarlet be their sin,
May Christ's forgiveness and Christ's healing win.
A hand of welcome waits thee—do not fear:
'Tis Christ indeed! The living Christ is here!

FROM OUR EXCHANGES.

[Rev. T. Rhonda Williams in *Christian Commonwealth*.]

Jerusalem was to be established in the top of the mountain; that is, it was to be in a position of preeminence and command. But it was there because of its character and its truth. It was to be there by virtue of its inherent worth and attractiveness. "The nations shall flow unto it." This does not indicate an iron supremacy, or superiority through terror; it does not picture Jehovah, as the prophets often did, subduing the nations to Israel, breaking them with a rod of iron; it thinks rather of the nations feeling in Jerusalem a magnetism drawing them to itself. "The nations shall flow unto it," as if they felt that their life also was in it.

Would that we could think of qualifying to get this sort of power in the world! Our national arrangements for power are mostly of a very different kind; our means are battleships, because our ambitions are too material. How glorious it would be for a great nation like ours to have power in the world by reason of the quality of the truth we believed in, and our fidelity to it in private and public life! I do not mean to suggest that the British empire has no character that gives it an influence in the world. It certainly has, and we should be thankful for our measure of true power. All the same, it is not an uncommon thing abroad to find men believing that there is a very wide disparity between our moral professions and our political practices, and while there may not be as much disparity as a stranger would sometimes make out, there is undoubtedly too much. We would be better liked than we are if we acted more faithfully upon the high principles we often profess. Politically the Christian nations are now established in the top of the mountains; the greater part of the civilized world is under their dominion; but Christianity is not in a similar position of supremacy. And why? Because the Christian nations act so much on unchristian principles.

[Dr. R. F. Horton in *British Congregationalist*.]

I should like to make clear that the supernatural is here with us today just as much as it ever was in any period of the past. I do not mean, of course, necessarily that the same miracles occur today that occurred in the distant past—that would be too strong an assertion; but I mean that by miracles similar to those that occurred in the past the same effect is produced today as was produced then. And, further than that, so far as I know, the miracles in the Bible—making allowance for some misunderstandings which can easily be removed by a sound scholarship and commonsense—the miracles of the Bible are to be paralleled in the experience of today.

What is the method by which we can come in contact with the supernatural, learn its secrets and use its powers? It is that method of spiritual communion which we call prayer, believing prayer. It is the opening of the soul itself to the realities which are within the soul and beyond it. It is that kind of communion with God which is the highest exercise of all our faculties. It has been beautifully said that we look upon prayer as the means whereby we attain all good things from God; God looks upon prayer as the means whereby He is able to naturalize eternity in the heart of time. It is free believing prayer that will work the revelation of God into the very fiber of heart and brain and will, until the imagination is deep dyed with the true God and the whole nature vitalized by His presence; and therefore by prayer, the life of prayer, we enter into the supernatural.

[*Christian World*.]

A man may belong to the communion you regard as entirely orthodox, may carry out all its ecclesiastical pre-

Digitized by Google

scriptions, and so far as inwardness is concerned have no religion in him at all. All his inwardness may be a heathen inwardness, one belonging to the lowest spiritual type. Another man, whose communion is one against which you have been fighting all your life, is full interiorly of those very things which Jesus spoke of as religion. Beneath his heresies we find a love, a tenderness, a sympathy, whose accent we know at once. This is the language of the kingdom. This is the sign manual of Christ. Here is the true orthodoxy, the orthodoxy of the heart; the orthodoxy not of the letter but of the spirit. Bishop Creighton was expressing this when he spoke of his sense of union with many men at a far remove from his own church dogmas, a union far closer than with multitudes of those who, in his own words, "symbolize with me." The day is dawning upon us when this new perception of spiritual values will become the only one; when we shall cease our emphasis upon doctrinal confessions, and ask, as our religious test, not what creed a man signs, but how much love he has, what amount of patience, of sympathy, of willingness to suffer and to serve?

[*Christian Register.*]

The spontaneously generous, appreciative nature is as rare as genius. By recognizing all that others do or can do, by the mere act of appreciation we help forward the race toward the high ideal of perfectness. Thus the light is spread, the truth that touches souls and germinates in act and deed is disseminated. Out of high unselfish love and admiration grows influence. Thus the good seed is sown that yields a harvest of noble endeavor and pure impulse. The great leaders of thought and action gain their disciples by means of this pure and holy sentiment. Where we love and admire much, we are enlarged: something of the spirit that quickeneth enters into us. We are more and greater than we could ever have been without the sentiment of appreciation expanded to the uttermost.

[*Churchman.*]

The revolt against a purely intellectual presentation of truth has tended to increase the restlessness of those who find a stumbling-block in the use of the creeds. It is felt that the verbal presentation of truths, no matter how fundamental they are, is a relatively unimportant factor when contrasted with that generous and palpable growth of the human family into its proper relations with God. Life and not words govern the thought of the world now, and when one thinks of salvation it is not of the individual saving himself, but rather of the capacity of the individual to work for the betterment of the whole of God's family, and to realize under the simplest human and social relationships the principles of the divine kingdom.

[*British Congregationalist.*]

The merely fussy temperament never gives the highest influences their needed chance. And in consequence—since there is no making of moral and spiritual richness and resource within—all the effort the fussy nature puts forth starts, not from within, but from without. The whole thing is artificial. Each movement is a movement which merely intimates what the soul might indeed do if it quickened, but which, as a matter of fact, is not traceable to the soul's inspiration or motive-power at all.

[Rev. Herbert A. Jump in a farewell sermon.]

When a church cares more for respectability than for humble service; when it is prouder of its organ and its brownstone front than it is of the poor people who seek its pews for worship; when it regards itself as a polite religious club with its clergyman an errand boy to do its bidding rather than a regiment marching into battle with its minister leading the charge, then its days are numbered.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet has just been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.00. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

PAMPHLETS AND REPRINTS

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $4.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25 — £0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25 — 0: 9 : 3 ;	9.50;	11.60
2.50 — 0: 10 : 3 ;	10.50;	12.85
4.00 — 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The fifteenth annual report of the secretary of agriculture begins with a series of trenchant statements of national importance. It says: The consumer pays a dollar for food. The farmer gets less than fifty cents of it. Who gets the rest? After years of experimentation we find we can grow Egyptian cotton in southern California and bulbs in the state of Washington. The finest dates from the Sahara desert succeed in our Southwest. Seven hundred and fifty million dollars is the best estimate for poultry products this year. The day is not far distant when we will cease to import potash. Alaska will some day provide farmers in lower latitudes with grain seeds superior to what they can grow at home. The corn crop is moving northward by seed selection. There is great promise in the fact that whole classes of graduates of agricultural colleges go back to the farms, having learned how to make them profitable. Our foresters are learning by experiments how to reforest thirty thousand acres in a year; ten times as much must be planted annually to cover all the bare acres in a generation. There should be publicity regarding the cold storage of foods, through monthly reports to some federal authority that would give them to the press, to the end that the people might know to what extent foods are being withdrawn from consumption.

One year ago the Kansas Legislature passed a law requiring that before any stock or bond certificate could be sold in that state the seller must obtain a permit and certificate from the banking department of the state. In order to obtain that permit the financial standing, organization, plans, and operations of the company whose stock or bonds are to be sold, must be presented to the banking department and be passed upon. Out of over five hundred requests made in ten months since the law went into effect, only forty-four have been granted. One mining promoter is in jail for trying to sell stock without a permit. The banking department of Kansas estimates that already it can see a saving of from four to eight millions of dollars yearly to the people of Kansas who had been mulcted by dishonest promoters of fiat stock certificate property.

The interstate commerce commission has declared its assumption of jurisdiction over the practices of a railroad or railroads, constituting a through route, "affecting the right of the shipper to safe and speedy transportation of his freight." The railroad's defense was that if it allowed its cars to go to lines outside its system the cars would be confiscated and it would not have sufficient equipment to conduct its local business. The commission holds "that the temporary confiscation by carriers of the cars of other railroads, and the placing of embargoes against cars being sent off of the lines of the owners, are alike unlawful, and the railroads are expected to make such rules for the return of cars as will terminate such abuses."

The government has won a sweeping victory in its campaign against Alaska coal lands frauds. The supreme court of the United States has decided that a person or association is limited to one coal land entry in Alaska. The decision not only means that the men already indicted must proceed with their trial for alleged conspiracy to defraud the government of Alaska coal lands, valued at ten million dollars, but that similar indictments at Spokane, Tacoma, Detroit, and Chicago will be pressed. The substance of the decision was that it is just as much a fraud in Alaska as in the United States proper to hire dummy entrymen to take up coal lands.

President Taft devoted his third annual message to Congress exclusively to the Sherman anti-trust act and the trust question in general. He defends the Sherman act as interpreted by the supreme court of the United States, and indicates his opposition to the repeal or amendment of this statute. He suggests that Congress pass a federal incorporation law and supplemental legislation that "would describe and denounce methods of competition that are unfair." To supervise corporations chartered under federal law, he proposes the creation of an executive bureau or commission, with powers akin to those of the inter-state commerce commission.

In preparation for presentation to the state Legislature is a bill calling for an appropriation of fifty thousand dollars to be expended in reclaiming wet lands in Massachusetts, that they may be used for agricultural purposes. It is indorsed by real estate men and officials of the state board of agriculture. It is said that there are at least one hundred thousand acres of wet land in the state which are practically valueless now and which may be reclaimed and economically developed. One third of the area is said to lie within twenty miles of the State House at Boston.

Suit has been filed in the United States circuit court at Cincinnati against the National Cash Register Company of Dayton, O., charging that the company is in a conspiracy in restraint of trade and that it be enjoined from further carrying on practices set forth in the petition to be illegal. One of the main charges contained in the petition is that the company sold cash registers below the cost of production in various instances where competition was rife.

In the presence of a crowd that taxed to the utmost every available space in the courtroom at Chicago, the ten meat packers, for whose prosecution the government has been working for eight years, last week formally pleaded not guilty to indictments charging criminal conspiracy in restraint of trade, and District Judge Carpenter began the preliminary processes to a jury trial.

The estimates for running the government during the next fiscal year contemplate a saving of $21,283,021.43, as compared with the amount appropriated for the fiscal year 1911-12. The total amount estimated for all expenses of government is $745,834,863. This amount does not include the appropriation for the post office department, which is expected to be self-sustaining.

The career of the oil trust officially came to an end Thanksgiving day. Theoretically it passed out of existence on Aug. 31, when the books containing the records of the company's stockholders were closed for distribution of the stock of the subsidiaries, but during the intervening period of readjustment it was necessary to preserve the old form to a large extent.

It is declared that the tipping custom costs commercial travelers above fifty million dollars annually, in addition to the three hundred and twenty-five million paid for legitimate and lawful service. In view of this the president of the Commercial Travelers League has started a war on tipping.

International.

The London *Morning Post* says Persia has presented an ultimatum to Russia demanding that the Russian troops shall not proceed beyond Kasbin, and an undertaking that orders for further drafts of troops shall be countermanded. Great Britain, it is said, is asked to assist not only in settling the present difficulties, but in removing the antagonism and enmity between Russia and Persia which might lead to further hostilities. It is understood that Persia has agreed to be bound by any just settlement of the case that England may reach. The provincial assemblies, as well as the National Assembly, continue to indorse the actions of W. Morgan Shuster, the American treasurer-general of Persia.

In western Australia the Labor ministry has been elected by the caucus, with Mr. Scadden as premier. There, as in New South Wales, much attention is concentrated on the land policy of the Labor government, between which and the late Wilson ministry there is great divergence. The Labor platform, providing non-alienation of lands with a view to nationalization, was one of the main contentions of the election.

Prince Chun, the regent and father of the Chinese Emperor, abdicated last week. The administration remains for the present in the hands of the premier, Yuan Shi Kai, while the empress dowager and the Emperor continue to hold audiences and carry out ceremonial functions.

The King and Queen of England have reached Delhi, India, after a stay at Bombay. Here on the 12th the festivities of the durbar took place.

The population of British India and Burma is 315,132,537.

Industrial and Commercial.

American railroads lose five million dollars' worth of fuel every year and consume two hundred million dollars' worth of coal to obtain eighty million dollars' worth of efficiency, a further waste of one hundred and twenty million dollars' worth of fuel power, according to figures prepared by the chief engineer of the Chicago Great Western railroad. That road conducted an investigation as a result of the charges of Louis Brandeis that railroads waste one million dollars a day through inefficient service. The remedy suggested is a fuel bureau of experts, improved firing devices on locomotives, a school for firemen, more scientific ordering of locomotives for service, and closer watch on exposed coal yards. "Each loss of one per cent of fuel in American railroad business means a loss of two million dollars," says the report. "Only forty-five per cent of the coal used returns effective results, the remainder being wasted. This loss goes into blown-off steam, unburned gases, waiting locomotives that have been fired up too soon, radiation from boilers, lumps lost along the road and taken from open coal yards, unscientific handling of locomotives, and other wastes."

The appointments to the newly created board of directors of the port of Boston have been made. The law under which this commission is to operate is already in force in all its provisions. It gives it complete jurisdiction over Boston harbor, or all the water and water front inside of a straight line drawn from Point Shirley to Point Allerton. This includes the water frontage of Winthrop, Chelsea, Boston, Quincy, Weymouth, Hingham, and Hull. For the improvement of this frontage it will have nine million dollars.

The total surface under irrigation in Spain is now about three million seven hundred thousand acres, supplied by three hundred and forty miles of canals.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE TRUE BASIS OF HEALTH.

ALFRED FARLOW.

STRANGELY enough, after nearly half a century of healing work done by Christian Science, and the records of thousands of cures accomplished by its means, a question has been raised by critics as to whether the teaching of Christian Science is a menace to the health of the community. It has been charged that because it demands an absolute reliance upon Spirit, God, it thus creates a disregard of material laws; that it ignores sanitation and quarantine, and makes no discrimination as to dietetics, exercise, food, and air.

It is the mission of Christian Science primarily to improve the mental and moral condition of the individual, and as a result of such advancement to improve his bodily condition, and surely no one will argue that this sort of improvement is not beneficial to mankind at large. Every man, in our country at least, by common consent is privileged to choose his own religion and medicine, provided in so doing he does not interfere with his neighbors' rights and privileges. If the general public has not endorsed Christian Science, it is for the same reason that it has not endorsed many other important and valuable discoveries. Christian Scientists are willing to allow the good name of Christian Science and its endorsement by the public to be determined by its good works. They have proved that "a scientific mental method is more sanitary than the use of drugs, and such a mental method produces permanent health" (Science and Health, p. 79).

The standard of Christian Science is indeed an exalted one. It demands constant devotion to the spiritual side of life. It is in strict accord with the Scriptural teaching, "Thou shalt have no other gods before me," which means, Thou shalt recognize and serve no other life, substance, or intelligence but divine Mind. In this respect, however, it does not demand more than does primitive Christianity as set forth in the Scriptures. For example, Christ Jesus declared: "Be ye therefore perfect, even as your Father which is in heaven is perfect," and yet no one expects to attain perfection at a single bound. We know that each must advance gradually to the fulness of spiritual manhood. Notwithstanding his knowledge of the insistence of Christian Science upon an unreserved dependence on Spirit for the supply of all human needs, the student of Christian Science is sometimes obliged to say, as did the Master of old, "Suffer it to be so now;" but he at the same time knows that all material practices and usages will disappear from his life in the ultimate of his spiritual growth. Christian Science comes to us while we are in more or less of an imperfect state. It is considerate for the situation in which it finds us, and involves not only an interest in the spiritual estate which it points out, but a wise and sensible disposition of what St. Paul denominated "the powers that be," the material conditions and environment in which we are placed.

All Christendom endorses the radical Scriptural teaching, "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on. . . . But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you;" and yet, so far as we know, no critic has expressed a fear that this teaching would interfere with reasonable sanitation and the necessary care of the body. It will surely be admitted that no thought or care as to food and raiment and proper care of the individual is so much needed as it is to find the kingdom of God and to attain to His righteousness; but every believer of this word is well aware that this must be gained by gradual growth, and that therefore the best possible observance of the command is to take as little thought as possible today, less tomorrow, and still less the next, until we shall gradually grow into a full consciousness of the divine presence and so effect our departure from material thought-taking.

Thus we may note that the demands of Christianity are quite as sweeping as the demands of Christian Science, that in fact the two are identical, and yet no one is making the public charge that Christianity is a "menace to the public health." Some Bible students have insisted that the text which we have just considered should read, "Take no anxious thought;" but if it were so rendered its real import would not be changed, for all thought which is based upon materiality is anxious. Anxiety is fostered and perpetuated by a consciousness of limitation, by a dependence upon that which one knows or believes to be imperfect, unstable, and insufficient, and his anxiety departs only as he learns to depend upon the immutable, infinite, all-wise God.

It is consistent with the teaching of Christian Science that one shall be wise and patient in the task of overcoming materiality, and a considerate Christian Scientist attempts only that which experience and observation have taught him may be undertaken with a reasonable promise of success. He practises absolute Christian Science in so far as his understanding will permit him to do so, and is observant of lawful sanitation and quarantine requirements. It is not intelligent sanitation which Christian Scientists deplore, but unreasonable hygienic methods. It is in keeping with the teaching of Christian Science that the mass as well as the individual should be perfectly pure and clean both in body and mind, and if this hygienic rule were enforced to the fullest extent there would be no sickness in the world. The Christian Scientist believes in pure food and pure air and in general cleanliness, because the purest and best in the material world most nearly approaches the spiritual.

It has been alleged that Christian Science is a menace to the community because it holds out a false hope which induces the sick to rely upon it until it is too late for them to be benefited by material remedies. One can readily see that this fear is misplaced, in view of the fact that according to investigations made in two states some time ago, one in the North and the other in the South, it was discovered that seventy-five per cent of those who had turned to Christian Science had already exhausted their hope in material remedies, and that a large percentage of these were either healed or permanently benefited by Christian Science. Such evi-

THE UNUSED TALENT

ANNE MAY LILLY.

On page 323 of Science and Health Mrs. Eddy makes the following statement: "If 'faithful over a few things,' we shall be made rulers over many; but the one unused talent decays and is lost." This statement is deserving of the most serious consideration from every earnest Christian Scientist who is striving for progress, because therein is clearly shown the reason for the seeming lack of progress which disheartens so many.

It is doubtless the desire of every Scientist that he may be a messenger of healing to at least a few of the many sick and sorry folk whom he sees on every side, and perhaps he feels grieved and unhappy that his help is not sought for at once. If this be the case, let him ask himself if he has been "faithful over a few things;" that is, if he has really done thoroughly and conscientiously every bit of work which is legitimately his. It may be that he is manifesting some physical discord which is not particularly serious, humanly speaking, and which therefore he has endeavored to overcome only in a desultory, half-hearted manner. Possibly he is in bondage to a sense of limited or insufficient financial supply, or it may be that there is inharmony in his home or in his business surroundings. May not just as much experience in the practical application of the truth be gained in destroying these errors in himself as in another? Every day, yes, every hour brings opportunities for the solving of problems of every nature through the application of Principle, and there is no excuse for idle moments.

Then, too, there may be neglected opportunities in the seemingly material work which in the present day is necessary to advance the cause of Christian Science. The branch churches afford a wide field for activity, and it is only just that the burden of this work should fall upon those whose time may not be so fully occupied as that of the regular practitioner of Christian Science. In the establishment of *The Christian Science Monitor* a new avenue of usefulness has been opened up, and the alert Scientist is always on the watch for an opportunity to bring the paper to the attention of the reading public. He rejoices, too, whenever an occasion presents itself to secure a subscription to the *Monitor*, knowing that in so doing he is not only aiding the cause, but is conferring a lasting benefit on the subscriber. The distribution of the other Christian Science literature that he sells for careful thought and faithful work.

It is then that in a broad sense of the word each one may become a lay—that is where he is—to be a "practitioner of Christian Science, and it is only as the mind is made of every one, many that comes to us in the way spells out a utter futility of uselessness. If the most trivial duty each day brings to us be neglected, not only do we retard our progress, but we gradually lose the enjoyment we have already gained, while making the way harder for us at the beginning of this article: "The unused talent decays and is lost."

GROWTH.

EMMA CURTIS.

In every one of the articles of most interest to the readers of Christian Science is that of growth. Our Leader in her writings has given us most helpful teaching upon this subject, one of the parables which occurs perhaps most frequently to our thought being that found on page 206 of Miscellaneous Writings: "Growth is governed by intelligence, by the active, all-wise, law-creating, law-disciplining, law-fulfilling Principle, God."

It is most necessary in our work with others, as well as in our own experience, that we should be thoroughly cognizant of all that Mrs. Eddy has written regarding spiritual development. Our Master gave us a beautiful illustration of growth when he bade us "consider the lilies"—their gentle unfoldment from the moment the tiny green spear comes into view until the white beauty of the perfect bloom delights the eye. Many students become impatient at their seemingly slow growth, forgetting that each step of unfoldment can only be complete when the full time for the perfection of each phase of experience is accomplished. We may, out of a desire to bring about a more rapid unfoldment of some cherished plant, loosen the sheath which hides the fresh green leaf from our gaze; but such efforts are never crowned with success, for the delicate leaf was not yet ready to leave its fostering care, and our rough handling and perchance a blast of cold air may destroy its growth. So is it sometimes with students of Christian Science in their earnest desire for Truth and for more rapid progress. They break willfully away from environment, gentle guidance, or the correction of habits which need the regenerating power of Truth and patient work to set them free, failing to understand that their overweening desire for rapid growth oftentimes fosters those very things which prove a blight and hindrance to advancement; i.e., selfishness, pride, ambition, etc.

We read in I Kings that God was not in the wind, the earthquake, or the fire, but was in the "still small voice;" and as one works on in Christian Science, he sees more and more clearly that harmonious happenings take the place of the storms, tempests, lightnings, and earthquakes of material methods. The tender brooding love of our heavenly Father never injures, never wounds, but blesses all the time, and will, if we are subject to its gentle guidance, bring forth in due season, "first the blade, then the ear, after that the full corn in the ear."

In our insistent desire for rapid growth we should bring about, if it were possible, the most incongruous results—flowers without the soft aureole of tender leaves to heighten their beauty, tall straggling stalks with no crowning of bud or blossom—no fruitage. It is true that some students appear to progress more quickly along the path which leads onward and upward, but who can judge whether another whose feet still seem to falter upon the threshold may not, in the greater overcoming of probably more adverse material conditions, laws of heredity, caste, or race, etc., and which have not been easy to break through, call down an even

Digitized by Google

richer blessing for the patient, faithful work which seems to have brought him so short a way upon his journey. Who can say whether, like the palm, the slower unfolding may not mean an even greater, more lasting, more enduring growth.

It is well to remember that those who entered the vineyard at the eleventh hour received the same reward as those who had toiled since sunrise, but one feels that in this parable it would almost point to the fact that those entering at the noontide hour would be called upon to undertake the more difficult work—difficult owing to the midday heat. Those who entered early have the remembrance of the dewy freshness of the dawn, of calm unlabored effort, to sustain them; but not so the late comers. They have no time to gaze around and admire the scene, no time for friendly converse; they have arrived when strenuous, unceasing toil is called for, requiring all the strength, courage, and sustaining power which owing to the longer unfoldment is theirs.

May each and every one of us, as we journey on from sense to Soul, give thanks to God for the glorious heritage which is ours, and strive to realize that, whether fast or slow, we shall all at last reach the goal our Master set before us when he bade us be "perfect, even as [our] Father which is in heaven is perfect."

OUR RESPONSIBILITIES.

A. COPE STONE.

THE thought has come to the writer on many occasions as to whether Christian Scientists are awake to realize what a rich legacy their revered Leader has bequeathed to humanity in her published works. Do we, as students of Christian Science, sufficiently recognize our duty to God and to our cause in regard to our part in this matter? We know, of course, that "Science and Health with Key to the Scriptures" comes first; it is the text-book of Christian Science; we find stated therein the absolute Science of being, also the rules whereby we may demonstrate the Principle of Christian Science. This book, together with the Bible, is no doubt the companion and guide of all students of Christian Science; but are we awake to the necessity of a regular and systematic study of her other writings? The writer would here refer particularly to "Miscellaneous Writings," in the introductory page of which Mrs. Eddy says: "To loyal Christian Scientists in this and every land, I lovingly dedicate these practical teachings, indispensable to the culture and achievements which constitute the success of a student and demonstrate the ethics of Christian Science." The use of the word "indispensable" in the above quotation is very significant. Webster thus defines its meaning: "Impossible to be dispensed with," "absolutely necessary."

"Miscellaneous Writings" gives the reader a true and beautiful insight into our Leader's life and her love for all mankind; it is also a never-failing guide in all questions that pertain to our progress in Christian Science. The first healing in Christian Science that was experienced in the writer's family came through the reading of this book. Our little boy, aged sixteen months, was seriously ill. He had been under the care of the family physician for a long period, but continued to grow worse. We then heard of Christian Science as a remedial agent through one who had visited Chicago. We were unable to procure a copy of the Christian Science text-book, but succeeded in obtaining a copy of "Miscellaneous Writings," and through the realization of the truth which came to us during the reading of that book, and without the aid of a practitioner, as none was within our reach, our little son was immediately relieved. He was very soon in perfect health, and has remained so ever since, which is now nearly fourteen years.

As Science and Health unlocks the treasures of the Bible, in like manner the faithful and obedient study of "Miscellaneous Writings" so illumines the human understanding that one is able to take up anew the text-book and to enter into the inspired thought of its writer; as indicated in the article "Pond and Purpose" (p. 207), where our Leader says: "Drink with me the living waters of the spirit of my life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science." Is it not imperative, at this juncture in the history of Christian Science, that we should be on the alert and wide awake to our duty and privilege? Our Leader's words on pages 176 and 177 of this book should be as a bugle-call to all workers in our beloved cause.

"PERFECT LOVE CASTETH OUT FEAR."

ELFIE M. MILES.

AMONG the experiences of the past year and a half are some of the most beautiful which have come to me in Christian Science. Two of these especially, when recalled, never fail to awaken anew feelings of wonder and deep gratitude. Wonder, because both accomplishments had always seemed utterly impossible; and gratitude, because in each time of need God, infinite Love, most tenderly revealed to me His willingness and ability to care for us if we but trust Him.

Having accepted a position as teacher in a western town, and having made a long and expensive trip to reach my destination, I learned soon after my arrival that an examination was required, as the certificate which I held was not good in that state. Only one who has suffered from the same dread of examinations as that which held me can fully realize what this requirement meant to me. My certificate had been granted some time before this, and most of my teaching had been in the primary department. I had often thought that if it should ever become necessary for me to take the complete examination again, I would be compelled to allow myself several months for study, in order to meet this ordeal. So utterly impossible did it seem to go through it without having reviewed a single subject, that I decided to hand in my resignation, and after finishing the month already begun to do something else until I felt better prepared for an examination.

Upon receiving my resignation, the county superintendent immediately replied, urging me to keep the place. She asked me to try the examinations, and at last, after a desperate struggle, I decided to do so. Only a few days remained before the time set, and in them I did what I could toward reviewing the subjects involved. Many times this line from one of our hymns came to me: "I do the little I can do, and leave the rest to Thee," and before starting to a near-by town where the examinations were to be held, a victory over fear was realized and a complete surrender of all human striving was replaced by humble trust in God. A very sweet part of this experience was my association with another teacher, who also expected to take the examinations, and to discover, while studying together one evening, that she, too, was a Christian Scientist. In the fuller understanding which Christian Science gives of the one Mind, she like myself was confidently trusting God to bring about that which was best for all concerned. In due time a certificate was sent me, and the standings which could have been better were nevertheless satisfactory; indeed, they were so far above what I had thought possible that gratitude and humility too deep for words filled my heart.

At the close of the school year there, it seemed best to make a change, so I obtained a position in another part of the state. Being in a new town, only a small school was expected, and as it was to include all grades which happened to be represented, I certainly hoped that the calculations of the board would prove true. The one great fear

Digitized by Google

which now presented itself to me was that among the number might be found some eighth-grade students. For two reasons error argued that I ought not to attempt eighth-grade work. One was that my work had always been among little ones and I would not know how to deal with the older boys and girls; and the other was that more time was needed for preparation of the lessons before such a thing should be attempted. When at last I learned that there were pupils for all of the grades and a number much greater than was at first expected, the fear which took possession of me amounted to terror. I think I may say that it was the worst I have ever experienced. But the battle was fought and the victory won.

To help conquer the argument first mentioned came the thought that in Truth we are all little children,—not young and old, but all God's little ones. It was therefore not my place to govern, but to know that God would govern us all. As a result of these and other thoughts of Truth which had gradually replaced fear and false suggestion, a bond of love, unity, mutual helpfulness, and a considerate regard for the rights of others, has been established to such an extent that corrective discipline is seldom needed. To prove the nothingness of error's arguments, many, many times has divine Mind met my need, making clear and easy some seemingly difficult task. Not long ago I was rewarded in a small way by hearing one of the eighth-grade pupils remark incidentally that a certain study had never before been so clear to her; and again, when there was some thought of hiring another teacher to assist for the rest of the year, and I had expressed a desire for primary work, a member of the board asked me if I would be willing to continue with the upper grade work in case a regular high grade teacher could not be found.

For these assurances of divine aid and guidance, we, as Christian Scientists, striving with a new understanding to know and do the will of the Father, turn in humble thankfulness to God, and with St. Paul realize as never before that by the grace of God we are what we are. Only by lives rendered pure, upright, loving, joyous, and helpful, by a faithful application of the laws of God, down to the smallest details of our daily living, can we ever hope to pay even in part our share of the world's great debt of gratitude to Mrs. Eddy. Well may we say with the poet,—

Let us, then, be up and doing,
With a heart for any fate;
Still achieving, still pursuing,
Learn to labor and to wait.

WHY NOT GREATER FAITH?

IDA T. DAVIS.

ONE day, while working on a case which was considered by many as hopeless, my thought turned to the beautiful words of our hymn,—

Why is thy faith,
O child of God, so small?

and I said to myself, Yes, truly, we should, as we grow in Science, refuse to abide forever among those to whom Jesus referred when he said, "O ye of little faith." I then questioned my own thought, and asked, Is there any reason why our once "little faith" should not grow rapidly and surely into great faith, and from great faith to a positive understanding of the power of God?

Thought was so uplifted and so filled with joy as I realized our present possibilities, that I longed to share the feast of good things with others. As I thought of the courageous, faithful Daniel, I could see that very likely error, or material sense, whispered to him of the hungry lions which never fail to eat when they have the opportunity to do so, and perhaps error even argued that the very belief that God could or would save him savored of fanaticism and conceit. It may have been that doubt whispered into his ear that he ought to have kept himself out of this trouble, and that if he had not been wise enough to keep out of this situation he ought to suffer in consequence of his poor judgment. We know, however, that Daniel must have turned resolutely away from every suggestion of doubt and fear. He knew that God could and would deliver him, and this mighty faith saved him not only from his own doubts and fears, but from all impending danger, mental and physical.

Thought also went back to the lesson taught by the three Hebrew children in the fiery furnace, heated to its utmost capacity by jealousy, greed, hatred, and intolerance, and I thought how their simple but strong faith in the care and protection of almighty God, in whom all power was, and is, and forever shall be, saved them. Let our faith, then, grow into that perfect understanding of God which removes mountains and replaces fear with joy and peace.

[Written for the *Sentinel*.]

"THE DIAL IN THE ROSE-GARDEN."

BEN. HAWORTH-BOOTH.

I TELL the toll of human weal and woe,
While the wing-footed ages come and go:
When the night dews are shaken,
Soon as the sun doth waken,
Hasting his footstep o'er the twinkling sea
He seeks the rose and me.

I love the rose long as the crimson morn
Shall leave his blush upon the bud new-born—
Long as the sun doth trace
His finger on my face,
I to the rose have vowed a changeless vow
To love as I love now.

I mark my tablet by the measuring skies,
But watch the hour the rose is born or dies:
What though within my breast
The heartless years have pressed
Their myriad memories? I forget them all
Soon as the rose doth call.

I ne'er look back—save, after Ahaz' day,
When the swart shadow ten degrees gave way:
Onward to speed 'tis mine,
Till dawns the day divine
When earthly time and rose and sun shall cease
In Spirit—and in peace.

Dear pilgrim wanderer! the past is gone;
Present and future only are thine own:
Thou and the rose wert born
In some far-distant dawn,
To be reflectors, each in differing ways,
Of wisdom, joy, and praise.

Child of a day, and fair ephemeral flower!
Ye were not formed but for the fleeting hour:
Each in the eternal Mind
Eternity doth find,
In the deep well of wisdom, at whose store
The thirsty thirst no more.

Then let the wise learn of the rose and dial
Ere the last angel empty forth his vial:
To point the times of Truth,
To prove perennial youth,
And in the eternal sunlight of God's face
His beauteous thoughts to trace.

SELECTED ARTICLES.

[C. L. Ramsay in *Aberdeen* (Scot.) *Free Press.*]

In the review of Dr. Cutten's book, "Three Thousand Years of Mental Healing," I note that Christian Science is classed as one of the many forms of mental healing which have appeared throughout the ages. The term "mental healing" is defined so as to include "any cures which may be brought about by the effect of the mind over the body." Now, paradoxical though it may at first sight appear, in actual fact Christian Science has less in common with all such methods of mental healing than any other curative system known today. Far from regarding as a healing agent the human or carnal mind, with all its fears, weaknesses, and mistakes, Christian Science comes to set men free from the tyranny of their own and other people's beliefs, by revealing to them their true and scientific relationship to God, the one supreme, infinite, ever-present Mind or intelligence, the all-wise and all-loving Father, the sender of every good and perfect gift, "with whom is no variableness, neither shadow of turning."

Christian Science says to the sufferer, in the words of the great Master, "Ye shall know the truth, and the truth shall make you free." Thus the disciple of Christian Science, while he may begin with faith in the goodness of God, must advance to a scientific and absolute understanding of the perfection of God's nature as the life-giving, living Principle of the universe, before he can succeed in freeing himself or others from the multitudinous fears and beliefs in evil which result in sin, sickness, and death. He must deny himself, take up the yoke of him who was "meek and lowly in heart," rise above all superstition, and daily endeavor to gain that Mind which was in Christ. In the words of the Christian Science text-book, he must "let unselfishness, goodness, mercy, justice, health, holiness, love—the kingdom of heaven—reign within . . . and sin, disease, and death will diminish until they finally disappear" (Science and Health, p. 248).

[H. L. Conger in *Eau Claire* (Wis.) *Leader.*]

As Christian Scientists we believe the commands of Jesus were meant for all of his followers, and that the command to heal the sick is no less imperative than that to preach the gospel.

For one not a practical Christian Scientist to assume to declare how a Christian Scientist heals, is rather presumptuous. Healing is accomplished through the divine power, not "through the power of mind over matter." Had the afflicted woman Jesus referred to as one "whom Satan hath bound, lo, these eighteen years," gone to a physician to have the case diagnosed, he might have pronounced it rheumatism or some other bodily disorder. Jesus said Satan had bound her, showing that he diagnosed sickness from a spiritual standpoint.

"Freely ye have received, freely give," which is the last clause of the text, this critic says is seldom if ever practised by Christian Scientists. Christian Science churches all over the world are built and supported by free-will offerings of Christian Scientists and those interested. The services on Sunday and Wednesday night are open to everybody. All are welcome.

"Man's extremity is God's opportunity." A large proportion of Christian Scientists turned to God through Christian Science after all material means had failed, and found health. Cases classed as incurable by *materia medica*, where the death sentence had been pronounced, have been cured by Christian Science. The writer listened to a testimony last night, given by a woman from Chicago. When the time limit of three days for her to live had been set, she turned to Christian Science and was healed. Her husband at the time was a medical student, expecting his diploma in a short time. This experience opened his eyes to the efficacy of Christian Science healing, and he could no longer believe in inert drugs; so he gave up his study of *materia medica* and turned to Christian Science.

The so-called miracles of Jesus' time are being performed daily for those who turn to God for help in sickness and trouble. Christian healing was lost sight of for a great many years. In 1866 Mrs. Eddy again found its Principle and rule, which made her well and showed her how to make others so. The rule has been worked out to a scientific accuracy, and given to the world in the Christian Science text-book, "Science and Health with Key to the Scriptures," with the result to her followers of better health, more happiness, less fear, anger, impatience, discouragement, etc.

[W. E. Fell in *Yorkshire* (Leeds, Eng.) *News.*]

Our friend "C. W. S." quotes certain "eminent critics" on the subject of Christian Science. It must not, however, be forgotten that there are just as many eminent people who have nothing but good to say of it, and with every reason. Now, if I want to find out the quality of the groceries sold on one side of the street, I do not necessarily go to the grocer on the other side of the street for my information; he might be just a little biased, you know. Is it conceivable that these "eminent critics," confessedly the rivals of Christian Science, advocating an entirely opposite method of treatment, are likely to be unbiased judges in such a case?

What does "C. W. S." expect the advocates of another and opposite system to say? Had he read the replies in refutation of these pleasant little speeches in the London press, he would know just how much truth there was in these assertions. Had the statements quoted been true, or anything like the truth—and they have been flung broadcast—Christian Science would now be as dead as a door nail; but, on the contrary, it thrives as no other religion or system of therapeutics thrives. And why does it thrive? Because it is doing just what it sets out to do. Christian Science is daily picking up those whom *materia medica* has declared would never rise again, and putting them on their feet well men and women.

If Christian Science were not successful, do you suppose that these eminent persons would bother themselves about the matter? It is not a man's failures that exercise the minds of his rivals, but his successes. In spite of all that critics may say to the contrary, Christian Science will go on growing; nothing can stop or hinder the progress of a religion that is doing for the world of sin and suffering what Christian Science is doing. Christian Scientists, as a body, are striving to live in strict obedience to the commands of Christ Jesus, and they are not likely to be led away from that allegiance even by the *obiter dictum* of an eminent and interested rival. I am old enough to remember the bitter resentment and opposition that followed on the discovery of homeopathy, and also what came of it. The greatest philanthropist of the age was stoned in the streets because he brought to the suffering masses something new and better. Today he is considered fit company for princes. Every advance in knowledge, every improved method, has from all time been met by the same dogged opposition and persecution from the advocates of older systems.

If Christian Science is not the truth, it needs no malicious shove from any one; but will come crashing down of its own impotence. Let me recommend the advice given on a similar occasion by one Gamaliel, a doctor of the law, held in reputation among all the people: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

[From Packard in *Healdsburg (Cal.) Enterprise*]

To publish the dissected statement that "man is incapable of sin," is to invite misunderstanding and confusion. Mrs. Eddy does not so present Christian Science. In the chapter Recapitulation, which begins on page 475 of Science and Health, is this quotation from Genesis: "And God said: 'Let us make man in our image, after our likeness.'" This is followed by the statement: "Man is incapable of sin, sickness, and death. The real man cannot depart from holiness, nor can God, by whom man is evolved, lose the capacity for good. Mortal error is not the man. Mortals are the counterfeits of immortals" (p. 475).

Here the contrast of unreality to reality is drawn between perfect man in the image and likeness of God, and sinning mortal man. St. Paul makes a similar distinction where he writes of the inward man, speaking of the inward man as having "received mighty power," and says, "The things which are seen are temporal; but the things which are not seen are eternal."

In the first epistle of John, in which the apostle writes, the same truth is expressed in the words: "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." In her writings, Mrs. Eddy uses Scripture as a text upon which to base, but at the same time explains, Science and Health. [illegible] "When reading the Scriptures, the spiritual sense of the word must be sought, to learn the exact meaning in a multitude of cases." A careful reading of the Scriptural context in passages where the words occur will show in what cases it is intended that the literal sense, and at other times a spiritual sense, that simply is shall be." Exodus xxxii. 4.

[illegible] "Thou shalt love the Lord thy God with all thy heart" [illegible] Pages 23-24. See also Science and Health, p. 570.

Similarly the question of Jesus' meaning, "What shall it profit a man, if he shall gain the whole world, and lose his own soul?" must be, What shall it profit a man, if he shall gain the whole world, and lose his own spiritual sense? The fundamental claim before us, whatever its manifestation, is that there is something apart from God and His perfect creation. If the whole good creation of God be recognized as real, then whatever contradicts this fact must be classified as unreal. No law of God ever punished a man for the acceptance of what is real and God-created; but of necessity a belief in the unreal must prove unsatisfying. This is illustrated in the science of mathematics; and Christian Science shows that the same law holds throughout the entire realm of man's experience.

Christian Science teaches that those who argue for the reality of sin, who believe that it confers pleasure, and who acknowledge the power of a devil to tempt them into sin, must some time, through the inevitable suffering consequent upon this belief, discover their mistake and come to acknowledge but one power, one God, in accordance with the Scriptural command, "Thou shalt have no other gods before me."

[Edward W. Pixley in *Los Angeles (Cal.) Times*]

Christian Science declares God to be Spirit, Soul, Mind, Life, Truth, Love; the sole cause of the universe, the only self-existent, all-knowing, all-wise Being. It further declares God to be good—supreme, infinite good without the taint of evil. This is the foundational fact of Christian Science. The correlative fact is that creation is "after his kind." The conclusion is that man and the universe is spiritual and not material. The phenomenon of evil is not then considered in Christian Science a God-ordained reality, but as an abnormality, a thing which, considered from the standpoint of infinite Truth, God, is unreal. This, however, does not mean the overlooking of evil, but the overcoming of it, and Christian Science shows the imperative necessity of overcoming all sin and evil. Logically, if God and His spiritual universe is real, the opposite thereof must be unreal. They can no more be a part of each other than Christ can have concord with Belial or light have communion with darkness.

Christian Science teaches one Christ—the Christ of the Scriptures. It shows the impossibility of there being any other. It teaches the very highest morality and obedience to the law of the land and society. It inculcates sympathy, charity, and love for all mankind. It declares and proves itself to be both Christian and scientific. Christian in that it proclaims the entire gospel of Christ and conserves all the elements of Christ's Christianity, scientific in that it stands for the immutable truth. The prayer of Christian Science is spiritual and in its very nature remedial. The ministrations of Christian Science are beneficent and elevating, destroying all forms of sin and healing all manner of sickness, error and human ills. There is no involution to the divine laws of life inaugurated by the Master and taught in Christian Science, but on the contrary an unbelievable adherence thereto. In fine, Christian Science is but the scientific statement of Christianity. The two are indissoluble and cannot be considered separately. For this reason Christian Science cannot be considered as akin to any human teaching or system. Furthermore, it cannot be understood in the light of these teachings, nor explained through means unlike itself, because it is spiritual, entire, and complete.

Our critic says Christian Science is unscientific, and in support of this contention quotes various passages of Scripture. The very nature of Christian Science precludes any one in passing judgment upon it unless he understands its principles sufficiently to demonstrate them. A person who presumes to do so from a mere intellectuality of the subject is in eternally the same position as one who would reject an electric proposition without having first endeavored to demonstrate their truth or falsity. The Master refers his critics by healing signs, so that the multitude might believe. Christian Science is today building upon the same plan and refuting the extravagant and unwarranted statements of its critics.

Mrs. Eddy is neither more nor less than the Discoverer of Christian Science. Nowhere in her writings is there the slightest evidence that Mrs. Eddy claims to be the equal of or even the successor to Jesus. She has written in the Preface of her book Science and Health (p. ix.): "Though repeating in some progress, she only finds herself a waiting Lazzle at the heavenly gate, waiting for the touch of Christ." And again in her message to The Mother Church in 1901, she writes, "I pray simply the love I may be, and the way my Leader only so far as she follows Christ." Mrs. Eddy's entire life-work has been the unfolding modesty, selflessness, and love for others. The allegation that she otherwise than Mrs. Eddy discovered Christian Science it is primarily entitled to credit for its discovery has been so frequently refuted over and over again. The very hopelessness of Christian Science and other teachings evidences different source.

One critic asks, "If what we call 'evil' [illegible] there is sickness to be healed and sin to be destroyed, why has come for the salvation of the world from any manner of evil." Its coming is the removal of the cause of earth's pain, and will "reveal men" and women "as a permanent [illegible] Science and Health, p. 570. Years ago Mrs. Eddy wrote: Science and Health, p. 126: "No human sentence can more than approximate the Science contained in this book. Science and Revelation and neither is open to [illegible]

Digitized by Google

may be distorted by shallow criticism or by careless or malicious students, and its ideas may be temporarily abused and misrepresented; but the Science and truth therein will forever remain to be discerned and demonstrated."

I submit that "false prophets" and "damnable heresies" cannot be determined upon a doctrinal basis, but solely upon the invincible rule given by the Master, "By their fruits ye shall know them." Christian Scientists are striving to keep their eye "single" in overcoming evil in themselves and in helping their fellow-men to know the only true God, and His Son, Jesus Christ. The Christian Science church is keeping its eye "single" in preaching the whole gospel of Christ and in doing the works of Christ. So, *without wasting time* in criticizing the beliefs of others, it *is striving to follow* the Scriptures, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

[George Shaw Cook in *Freeport* (Ill.) *Standard.*]

Our critic's opinion of the teachings of Christian Science is due to a lack of correct information. Christian Science does not deny the divinity of Christ, and in following the command of Christ Jesus to heal the sick as well as to preach the gospel, Christian Scientists believe that they are offering the best proof of faith in Jesus' words and works. They have faith in all the promises of Jesus and they are daily demonstrating, through healing the sick and reforming the sinner, the truth of his teachings.

[C. R. Munro in *Newmarket* (Ont.) *Express-Herald.*]

Mrs. Eddy's interpretation of some doctrinal points may differ from that of some theologians, but that in itself does not prove her wrong. The value of any interpretation of Scripture lies in the practical results it makes possible, and judged by this standard, Mrs. Eddy's interpretation will stand the test.

Christian Science does not teach that the ills which beset us are only imaginary. Mrs. Eddy says in Science and Health (p. 460), "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." Jesus proved the unreality of sickness and sin by destroying them, and when Christian Scientists speak of sin and sickness as unreal, it is equivalent to saying these things were never created by God, they are absolutely unlike Him; therefore they are not eternal, or in other words not real. While these things seem to form a part of our daily life, Christian Science teaches that in proportion as we attain to the Mind that was in Christ Jesus, we shall be able to gain the mastery, even as he did, over sin and disease and all other things which are opposed to God's government.

Critics may disagree with Christian Science, and may call its adherents "fools" for not believing as they (the critics) do, but such criticism is not argument; in fact, it generally shows a very weak case and a lack of argument. The great and final test of any system of healing or religion is the one set by our Master, when he said, "By their fruits ye shall know them." He also said, "He that believeth on me, the works that I do shall he do also."

Christian Science is daily proving its efficacy in the healing of innumerable cases of sickness, including so-called hopeless cases of functional and organic disease; it is daily overcoming the most inveterate forms of sin, including liquor and drug habits of the worst kind; it is bringing into the lives of its adherents happiness and prosperity where before there was misery and poverty, and it is making men and women better in every way, and benefiting the world in general. Are Christian Scientists "fools" because they have adopted into their lives that which has been of such inestimable benefit to them, after having tried other things and found them wanting; and are they to be censured for having followed the apostle's injunction, "Prove all things; hold fast that which is good"?

Let those who are inclined to condemn Christian Science investigate it for themselves and give it a fair trial, and we venture the opinion that if they do this with an open and unprejudiced mind they will find in it so much that is good that they will have no desire to criticize.

[Alfred Farlow in *Oshkosh* (Wis.) *Northwestern.*]

In a recent issue the Rev. John W. Greenwood is reported as having said: "Christian Science has spoken nobly for the spiritual; it has not always practised what it preached." The gentleman evidently has overlooked the point that Christian Science, like mathematics, does not practise itself. It must be understood and practised by somebody, and if Christian Science, as he admits, has "spoken nobly for the spiritual," it has done its part; and it remains for the adherent to do the work. If Christian Science has spoken more nobly from a spiritual point of view than some other religious theories, and still the people have not deported themselves accordingly, the point to be lamented is not that Christian Science is wanting, but that the age is so steeped in materialism that it refuses to move forward even under the impulse of Christian Science.

Certainly Christian Science points to the "unselfish," as our critic declares. The old saying is, "One man can lead a horse to the water, but twenty cannot make him drink." However, the writer has a very large acquaintance among Christian Scientists, having been identified with the movement for a number of years, and he thinks it is but just to say that those persons who have become adherents of Christian Science have, as a rule, been greatly improved morally as well as otherwise. The mere fact that one makes use of the best things in life should not be taken as positive proof that one is not spiritually elevated, for the purest and best in the material most nearly approaches the spiritual. However, material possessions should be a secondary matter to those who appreciate the Master's teaching: "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: but lay up for yourselves treasures in heaven."

[Written for the *Sentinel.*]

OPPOSING VIEWS.

LILLIAN BARKER BEEDE.

Friends and loved ones from you parted,
Are you sad and lonely-hearted,
Longing for the days now flown?
Does your heart grow weak and weary?
Does the way seem long and dreary,
Since you've trod the path alone?

Alone? With Love divine beside me?
The pathway long, with Him to guide me?
Alone? No, surely never;
His presence with me ever,
No power can part or sever
True love from Love divine.

My heart knows only joy, thanksgiving;
There is no death, my love is living;
Heav'n is not won by dying.
My God is Love. Denying
All other power, relying
Upon His word, I live.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

GUARDING THE HOME.

In these days of competitive sensationalism in the newspaper field, it sometimes seems as if all consideration for the home life of the people has been lost sight of in the efforts made by the newspapers to outdo each other in reporting the scandalous and salacious details of some case which happens to be on trial or in the exploitation of some crime that has been committed. Because we are condemning the evil itself rather than the persons concerned, we refrain from mentioning the name of any city or paper; but it is to be deplored that such a condition seems to exist in one of our principal cities at the present time, and the only excuse offered in defense of it is that the publishers believe their patrons desire to read such stuff. This, however, is scarcely to be considered flattering to the community as a whole, and in proof that the desire for "news" of this kind is not unanimous, in this particular city at least, we quote the following resolutions, which were adopted by one of its leading women's clubs, and all other women's clubs were asked to endorse:—

Whereas, certain daily papers in this city are continually giving in revolting detail the accounts of crimes and scandals, setting forth the same in the most conspicuous manner; and,

Whereas, if these papers are received into our homes the filthy and demoralizing news above referred to must come under the eyes of our children;

Therefore, be it resolved by the Home Study Club that we protest against the moral wrong being done our children, ourselves, and the whole city by the debased journalistic ideals at present dominating the publishers of these papers; and we ask that they who are responsible for the publication of such news as is suggestive of evil, and demoralizing to all who read it, adopt a higher standard of morality and decency for their papers, if they hope to have them remain in our homes.

In addition to this courteous yet emphatic protest, the matter has been taken up by some of the ministers of the city, one of whom said from his pulpit:—

How are you and I going to protect the minds and morals of our growing boys and girls if we put that sort of thing within their reach? We all remember what earnest objections our people made to our reading the old yellow dime novels when we were young; and if we will stop a moment to consider the psychology of the thing we will see how much worse it is to give our children daily access to the most degrading facts of actual life as published by these newspapers. If you have any doubt on this point, just stop for a moment and ask yourself what you would think of me if I were to gather your boys and girls together and put such stuff into their hands as fit literature for them to read? . . .

When we criticize the newspapers for these things we are constantly reminded that they are commercial enterprises and must give the people what they want in order to command circulation. Since that is the case Christian men and women can best impress the newspapers with what they want by some form of commercial treatment. Many of you men are patrons of the advertising columns of these newspapers; and if you see fit to do so you can very quickly let the publisher know what your disapproval of their news columns means; for it is the publishers who are directly responsible for the present situation. By refusing to read their papers as long as they follow their present policy, and by refusing to patronize them, you can make the most effective protest against this kind of journalism.

In common justice, however, it should be stated that one of the newspapers of the city, a paper which had the courage to announce in a recent issue that at the expiration of existing contracts no more advertisements of beer, liquor, or cigarettes would be accepted, in commenting on these protests says:—

Nor do these public protests reflect in full the disgust of many thousands of respectable citizens who give vent to their feelings in private conversation whenever the press is mentioned. Yet these people are not seeking a quarrel with the press out-of-hand. Many of them entertain a mystic fear of newspapers; some of them cling to a faith in the moral integrity of the press that amounts to a childlike affection. Nor do they ask that legitimate news be suppressed. They only ask that the news be presented in such form that it will not corrupt the young nor spread crime and immorality among the ignorant.

Under sufficient pressure we think the newspapers will come to that way of handling news; and that pressure will be sufficient when the people who demand clean journalism can demonstrate to the newspapers that they are better worth considering than the people who demand unclean journalism. An "epidemic of crime" is in the first instance largely an epidemic of the bespangled and bejeweled publicity of crime.

Nor should it be inferred, in citing the conditions which prevail in this particular section, that it is by any means an isolated instance. It is unfortunate that this pandering to morbid and vicious tastes is so nearly universal that anything in the way of protest stands out in vivid contrast. For instance, a prominent metropolitan newspaper had this to say about a recent murder case which was largely exploited by the press:—

The mushy sentimentality of which this case has furnished a somewhat extreme illustration is a more serious element in our national life than most people realize. In the matter of homicide itself, we have no doubt that it constitutes one of the chief reasons of our country's most unenviable prominence. . . . No sooner does a case figure conspicuously in the newspapers than it is turned over in every conceivable way on its sentimental side, and the monstrousness of the crime lost sight of in the "human interest" of the criminal. The wrecker of banks is a stanch comrade and a dead game sport; the wife murderer is not half bad when you get to know him.

The time was when space in newspapers was too valuable for anything save the most important news and that briefly told, but the lessened cost of production that has made possible the modern newspaper at a popular price has not worked altogether for the good of the public; the choice of reading matter wherewith to fill its columns has not always been wisely made, and this evil has grown with the years. As long ago as 1883, Mrs. Eddy had recognized this tendency toward sensational journalism, and as a practical protest she began the publication of *The Christian Science Journal*. In the initial number she says: "Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air. These descriptions carry fears to many minds, to be depicted in some future time upon the body. A periodical of our own will counteract to some extent this public nuisance; for through our paper, at the price at which we shall issue it, we shall be able to reach many homes with healing, purifying thought" (Miscellaneous Writings, p. 7).

In founding the *Journal*, and later the *Sentinel* and *Herald*, Mrs. Eddy was of course grappling with only one phase of this pernicious tendency, but she continued to cherish the idea of founding a clean and reliable daily newspaper, and in November, 1908, she put this idea into effect in the launching of *The Christian Science Monitor*, which at once took its place as the leading exponent of clean journalism. The fact that the *Monitor* is a success, and has received the widest possible commendation as a newspaper, even that "sincerest flattery," imitation, evidences that Mrs. Eddy was not mistaken in her estimate of the innate right desires of humanity when she founded a daily paper whose policy is "to injure no man, but to bless all mankind."

ARCHIBALD MCLELLAN.

"THAT YE INCREASE MORE AND MORE."

When Mrs. Eddy declared that "growth is the eternal mandate of Mind" (Science and Health, p. 520), she but rephrased a frequent New Testament expression of the need and normality of spiritual increase. We are all subject to the temptation to rest content with an unprogressive spiritual life, and we do well to recognize that, in the whole realm of mortal sense, the moment growth ceases that moment decay begins, and that unless we are spiritually alive we are subject to the domination of this material law. We also need to recognize that growth means the thoughtful control of means, the utilization of circumstance. Increase of wisdom and strength is not a matter to be left to take care of itself in the problem of human redemption, and forgetfulness of this fact is the sufficient explanation of much weakness and decrepitude.

Digitized by Google

Every thoughtful observer of the living things about him has been impressed with the number of factors and conditions which enter into their nourishment, and with the sweep of the history of their provision. For the plant there must be a prepared soil with its multiplied ingredients, together with air, water, sunshine, a favorable location and temperature. There could have been no soil without the wearing away and decomposition of the rocks, and this again makes requisition for those vast time-consuming changes which crowd the annals of the planet's past. So, too, the moisture and warmth without which the plant would speedily perish, links it to daily events as tremendous as the turbulence of the earth's atmosphere and as distant as the conflagration of the sun. When one thus notes that the growth of things in the realm of human sense is a matter with which the entire solar system seems to have to do, he can but be impressed, and especially when he reads St. Peter's description of spiritual growth as involving a correspondingly large number of factors. He says: "Giving all diligence, add to your faith virtue; and to virtue knowledge; and to knowledge temperance; and to temperance patience; and to patience godliness; and to godliness brotherly kindness; and to brotherly kindness charity. For if these things be in you, and abound, they make you that ye shall neither be barren nor unfruitful in the knowledge of our Lord Jesus Christ."

Here, however, it is to be noted that in contrast with all other creatures, we are called to determine the bulk of the contributions and conditions which enter into our spiritual progress. The heroisms of faith, the inspirations and instructions of the sages and prophets, especially the words and works of Christ Jesus,—all these will bring us quickening and strength, if through daily study and meditation we assimilate their virtue. So also are we largely responsible for our helpful or unhelpful surroundings and associations; even while the upbuilding life Principle, the vital element of every Christian character, stands at the door and knocks, His incoming awaits our "Welcome!"

The Hebrew term Jehovah is said to signify "He who has life in himself," and in identifying our spiritual life as the continuous unfoldment in consciousness of this ever-living Truth and Love, Christian Science establishes the normality of daily growth and impels to the realization of that exalted status to which St. Paul refers when he says, "Till we all come . . . unto a perfect man, unto the measure of the stature of the fulness of Christ." When this full-orbed privilege of Christian living is apprehended and accepted, there at once springs up the desire to realize all its potential possibilities for the glory of God and the good of men, and growth in spiritual wisdom and power becomes the natural and inevitable register of active aspiration, that hungering and thirsting after God which wins the highest beatitude.

JOHN B. WILLIS.

DIVINE SCIENCE UNCHANGING.

IN Science and Health we read: "Belief is changeable, but spiritual understanding is changeless" (p. 96). It is well to remember that one's belief respecting the truth is not the truth itself, but perfect understanding reflects the spiritual fact and is therefore changeless. It is true that the one who accepts Christian Science usually gains at the start a remarkably clear sense of its basic teachings as given in our text-book, and especially those found in the chapter Recapitulation; but the application of these teachings to constantly changing human conditions is a different thing. Here it must not be forgotten that students of Christian Science are themselves changing, as the "old man" of material belief is "put off" and "the inward man is renewed day by day."

In Mrs. Eddy's "Miscellaneous Writings" (p. 65) she answers at some length and with great clearness the question, "Have you changed your instructions as to the right way of treating disease?" to which she replies, "I have not; and this important fact must be, and already is, apprehended by those who understand my instructions on this question." She then goes on to say that Christian Science "demands both law and gospel," and adds, on page 66, that she endeavors to accommodate her instructions to "the present capability of the learner." She further declares, "Justice uncovers sin of every sort; and mercy demands that if you see the danger menacing others, you shall, *Deo volente*, inform them thereof;" to which she adds, "Only thus is the right practice of Mind-healing achieved."

In establishing the cause of Christian Science Mrs. Eddy has been a faithful and consistent follower of Christ Jesus, who taught and demonstrated the omnipotence of God, good, and who also denounced in scathing terms the pretensions and delusions of the mortal mind. On one occasion, when he was warning his disciples respecting its devices, we read that Peter undertook to rebuke his Master; but Peter himself was rebuked for his presumption, and was shown, with the others, that the uncovering of evil means the taking up of the cross daily. Our revered Leader asks, "What artist would question the skill of the masters in sculpture, music, or painting? Shall we depart from the example of the Master in Christian Science, Jesus of Nazareth,—than whom mankind hath no higher ideal?" (Miscellaneous Writings, p. 270.)

Throughout the entire period of her work our Leader kept this ideal before her students. She uncovered the monstrous yet baseless claims of evil, but never for a moment admitted any reality in them, and if students ever came to believe that the evil which was uncovered had any power whatever, this was because they misunderstood her teachings. Her earlier students all remember her oft-repeated words from the Bible, "The Lord he is God; there is none else beside him;" and at each step of the way she laid greater and greater emphasis upon the fact of God's all-power. She however insisted, as did Christ Jesus, that we must "watch," as well as pray, and each one who enters the membership of The Mother Church solemnly covenants to do this. (See Science and Health, p. 497.)

In Science and Health we read, "Every mortal at some period, here or hereafter, must grapple with and overcome the mortal belief in a power opposed to God." "Escape from evil, and designate those as unfaithful stewards who have seen the danger and yet have given no warning" (pp. 569, 571). This recalls the warning of St. Paul to the Galatians, against accepting any other gospel than that which they had received; to which he adds, "If I yet pleased men, I should not be the servant of Christ." To be a faithful follower of Christ is surely the one vital consideration for each Christian Scientist, and it demands steady adherence to all of Jesus' teachings as well as to the inspired message given to this age in Christian Science, that we may not be robbed of our crown of rejoicing.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

ANAHEIM, CAL.

The little bungalow church built by the Christian Scientists of this city is completed, and the first service in the new building will be held on Sunday morning, Nov. 5, at eleven o'clock. Since the organization of the Christian Science Society of Anaheim, a little over two years ago, it has been difficult to secure a suitable place in which to hold services, and the erection of this church edifice is the cause for much rejoicing among the members.

THE LECTURES.

CEDAR RAPIDS, IOWA.

Filling the first floor of Greene's Opera House, a large and interested audience, last night [Oct. 9] listened to Judge Clifford P. Smith, of Boston, Mass., lecture on Christian Science. He was introduced by Glenn M. Averill, who said in part,—

Friends, we have asked you here tonight to listen to a lecture on Christian Science, because we have something that in these times of financial, political, and religious unrest helps us in our business, makes us better citizens, and brings us peace and happiness, and we are minded to share this good with you if you so desire. Christian Science is not a series of ceremonies that can be performed for you by another, it is something that each must take and think about for himself and manifest in his life, and it is certain that as a man "thinketh in his heart, so is he."

Cedar Rapids Republican.

YONKERS, N. Y.

At the lecture on Christian Science held yesterday afternoon [Oct. 15] in the Public Library Hall, every seat as well as all available chairs were filled, making an audience of fully five hundred people. The lecturer, Bliss Knapp, was introduced by Seymour Conover, first reader, who spoke as follows:—

It is your opportunity this afternoon, and I might very properly add, your privilege, to listen to an intelligent presentation of a demonstrable religion. The science of mathematics is a demonstrable science or it is no science. Christian Science is a demonstrable religion or it is no religion; and the only evidence of man's understanding of the law of God, whether he be a Scientist or a non-Scientist, is his ability to prove it—without which all religion is mere speculation. Do you remember what the woman said to Elijah when he had healed her son: "Now by this I know that thou art a man of God, and that the word of the Lord in thy mouth is truth."

An evidence of culture is the degree of spontaneity with which a man recognizes and acknowledges true worth, and so in looking over this splendid audience this afternoon one likes to feel that you have come here in that great spirit of simplicity and open-mindedness—the very essence of culture; unhampered by prejudice, unfettered by bitterness, determined to analyze and weigh this message and decide whether it is worthy of a larger investigation—not as you may have understood it, but whether Christian Science, in its purity, might aid you as it aids us, better to discharge the responsibilities of citizenship, yes, and of sonship.

It has long since been recognized, but very reluctantly acknowledged, that Christian Science has awakened the serious thought of the world to the stupendous significance of those words of St. James: "Faith without works is dead;" and it is rather in the spirit of those words of the apostle, "Show me thy faith without thy works, and I will show thee my faith by my works," that I welcome you this afternoon, and take very great pleasure in introducing the speaker.—*Yonkers Herald.*

WILMINGTON, DEL.

A lecture on the subject of Christian Science was delivered last evening [Oct. 19], at the New Century Club, by Virgil O. Strickler. His audience, which comfortably filled the auditorium, gave to the lecturer a close attention that indicated a deep interest in the subject. Caleb Burchenal, who presented him to his audience, spoke in part as follows:—

We have assembled here this evening to listen to a lecture on the great doctrines of Christian Science, the doctrines which, as I understand them, are based upon the Old and New Testaments—on the Bible. It does not promulgate a new religion; Science and Health is but a key to the Scriptures, and the Christian Scientist reads the same Bible and the same teachings that all Christendom reads. The difference, then, is in the interpretation of the Scriptures.

I am not a follower of this faith, yet we must acknowledge that it appeals to the understanding and the reason of many earnest and intelligent people of this community and the country at large. We must also acknowledge that many marvelous works have been done in its name, and it therefore merits our most earnest consideration. Its arguments can no longer be answered by a mere shrug of the shoulders. Every intelligent man is in search of the truth, and with Socrates, is willing "to follow reason whithersoever it leads," and if the truth leads to Christian Science, then we are willing to follow and enter into the fold of its teachings.

Once the wise men in ancient times declared that the world was flat, but it was ultimately sailed around and a new science of geography arose. Once the ancient doctors asserted that the arteries were filled with air, but a Harvey demonstrated that blood coursed through them, and a new science of physiology arose. We are here this evening to study carefully a new science of religious interpretation, and I trust that every one here, whether believer or not, will be brave and honest to follow the truth wherever it leads.—*News.*

CAPE TOWN, CAPE COLONY, AFRICA.

Under the auspices of the Christian Science society of Cape Town a lecture was delivered last night [Oct. 20] before a large audience by William D. McCrackan, M.A. Dr. Forsyth presided and introduced the lecturer. Doing so, he stated that he sometimes thought the name "Christian Science" was a misnomer; the word philosophy seemed better suited. But whether it was philosophy or science, a creed or a doctrine, a perception or a conception, or a new interpretation of Scripture, it contained many things that must be regarded as wonderful. There were a very great number of men and women in various parts of the world who regarded it as a cardinal factor in their daily life, thousands of men and women of high literary attainments who had embraced it. Many who had been materialistic and worldly were now, through it, searching after Truth. He would ask them to adopt the attitude of a great French essayist, who had the following motto engraved above his door: "I do not understand; I pause; I examine."

Cape Times.

OTTAWA, CAN.

An unusually large audience at the Russell Theater Sunday afternoon [Oct. 22] was addressed by the Rev. William P. McKenzie, on the subject of "Christian Science: A Present Redemption." The speaker was introduced by Robert D. Edey of the local church, who said in part,—

In the fifth chapter of Acts we read that at the time when the healing and saving power of truth was being practised by the disciples of Jesus, a great deal of persecution of and opposition to this healing and saving truth came from the very representatives of established Christianity. We also read that an influential Pharisee named Gamaliel, in endeavoring to prevent this needless opposition to truth, addressed his fellow countrymen as follows: "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

The claim of Christian Science to be "of God" is borne out in the healing of sickness and sin which is everywhere manifested when this Science is conscientiously applied.

Digitized by Google

Is it not very great cause for gratitude that in this present day people are more willing to follow the counsel of Gamaliel, and judge a religious teaching by the good it accomplishes? Christian Scientists ask no other test for their religion.—*Ottawa Citizen.*

CONNERSVILLE, IND.

Under the auspices of the local Christian Science congregation, Frank H. Leonard delivered a lecture on Christian Science at the Lyric Theater Sunday afternoon [Oct. 22]. The speaker was introduced by Mayor J. S. Hankins, who said in part,—

I must confess to you that I know very little about the teachings of Christian Science. However, if I am correctly informed, and I believe I am, its followers are earnest and conscientious seekers after truth, with a high and exalted purpose implanted in their hearts and lives, to the end that society may be elevated and purified and man brought into closer relation to his God, and that he may have a better understanding of divine Truth.—*Connersville News.*

NEWARK, N. J.

A lecture on Christian Science, given under the auspices of First Church of Christ, Scientist, Newark, was delivered by William R. Rathvon in the new auditorium Oct. 23, to an audience of about twelve hundred people. He was introduced by Mrs. Emma L. de Prosse, who spoke in part as follows:—

A casual survey of the religious world as spread out before us today, furnishes ample evidence that Christianity is rapidly universalizing itself. A universal religion must of necessity meet the universal needs of humanity. A theology not in harmony with the highest Christian ethics, not cooperative in establishing the brotherhood of man, the key-note to all civic, political, financial, and religious growth, not adapted to the redemption of humanity from pollution, from guilt, from sorrow and suffering, sin, sickness, and death, does not hold within itself the animus or elements of universal Christianity. That Christian Science has been largely leavening the entire realm of thought is proven, for its nature is one with and dependent upon that Mind "which was also in Christ Jesus." It cannot be denied that Jesus did the will of the Father, and was universal in character, purpose, words, and works.—*Correspondence.*

FLORENCE, ITALY.

The first lecture under the auspices of the Christian Science Society, Florence, was given by Bicknell Young on the evening of Oct. 26 in the Ferroni Palace, 4 Via Tornabuoni, where the services have been held for some years. Although the admission was by invitation, the hall was well filled. The lecturer was introduced by Edgar Gerst, who said:—

It gives me much pleasure, in the name of the Christian Science Society of Florence, to extend you welcome this evening. The Christian Science movement may be compared with the apostolic church, carried on by the disciples of the Wayshower, in that it teaches among other Christian doctrines, that of the Christ-healing. The truth which Jesus taught was also the same truth which he practised, and it not only reformed the sinner but it healed the sick. Thus, today this same truth, the very word of God, is being carried to every part of the civilized world and explained through the medium of Christian Science literature and Christian Science lectures.

The gentleman who will speak to us this evening is one of a given number of accredited lecturers appointed by The Mother Church, The First Church of Christ, Scientist, in Boston, and is therefore authorized to speak upon the subject. I would like to state that I enjoy the great privilege of being a beneficiary of Christian Science, and through an understanding of its teaching I have not only been uplifted morally and spiritually, but physical ailments have been healed thereby after all other remedies had failed.

Correspondence.

ATLANTA, GA.

On Oct. 29 Prof. Hermann S. Hering gave a lecture on Christian Science in the Lyric Theater to a very attentive audience of about six hundred and fifty people. Professor Hering was introduced by the Hon. James L. Mayson, city attorney of Atlanta, who said in part,—

I have been much impressed with two things concerning Christian Science: First, the great devotion to its doctrines of a number of men and women whom I know to be possessed of the highest order of intelligence and the keenest appreciation of progress. Second, the fact that it seems to meet a demand, or call, or need on the part of so many people everywhere. When this is the case, I am glad to extend the right hand of fellowship, and bid them Godspeed in their work. There is no better sentiment than the one expressed in these words: "Shall I ask of the brave soldier fighting by my side in the cause of humanity, Do our creeds agree?" It may be that I believe this way because I have been tutored in a denomination whose views are broad because of the motto of its great leader, "The world is my parish, and to do good my religion." I know the final test can be summed up in a few words, "He cannot be wrong whose life is in the right."—*Correspondence.*

CATLETTSBURG, KY.

There was a large audience present at the Court House last night [Nov. 13] to hear Clarence C. Eaton deliver his lecture on Christian Science. Mr. Eaton was introduced by Stanhope Patton, who spoke briefly as follows:—

Many and varied are the reports we have heard concerning this new-old religion, some of our friends ridiculing and criticizing it severely, while others have such faith in its Principle that they entrust their very lives to its care. We have observed that those who have embraced its teachings apparently live better and more upright lives than formerly, we know that Christian Scientists as a class are a healthy, happy, and prosperous lot of people, and we also know that hundreds of people are being healed daily through its ministrations. In fact, there have been many remarkable cures in our own city.

All these things have a tendency to make us wonder from whence comes this wonderful power. Is it available to me? Is it of God, or the devil, or is it purely imaginary? Now, my friends, I see a number of people here whom I have heard testify to their healing through Christian Science. I have never heard their veracity questioned, and I am sure they would tell you that it is real. As to the other question, I feel sure that the gentleman who is with us tonight can give us further enlightenment, and I wish to say that it gives me great pleasure to introduce him.

Catlettsburg Tribune.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Dresden, Saxony, Ger.—William D. McCrackan, M.A., Neustädter Casino Saal, Jan. 8.

Fayetteville, Ark.—Prof. Hermann S. Hering, 3 p.m., Dec. 17.

Las Vegas (East), N. M.—Frank H. Leonard, Duncan Opera House, Dec. 26.

The Hague, Holland.—William D. McCrackan, M.A., Diligentia Zaal, Lange Voorhout, 8 p.m., Jan. 6, 1912.

TESTIMONIES OF HEALING.

A testimony is an open attestation of some experience. Locke says, "The difficulty is, when testimonies contradict common experience." Now it may not be a common or every-day experience for middle-aged mortals to be thrown, by the bolting of a frightened horse, from a carriage and dragged for some distance, or to fall down the entire length of a flight of cellar stairs with hands heavily loaded, and in both instances recover in a short time from bruise and shock without a doctor, medicine, or any material remedy whatsoever; and yet it is because of the "difficulty" mentioned above that I beg space in this valuable paper to tell those who may be interested to know, that it was through the knowledge of God as learned in Christian Science that the "difficulty" disappeared and the true Bible healing occurred.

One accident happened on the aviation field. Much tooting of horns and applause frightened an otherwise gentle horse, and as it gave a leap forward I was un-seated, and thrown out and dragged. My first recollection was of declaring the truth mentally, and then audibly to the friends who assisted me up and back into the carriage. During the ride home I was very quiet, as I knew that I needed to work hard to keep mortal sense at bay and to know only the truth of being. All through the night, however, when sleep seemed to dull somewhat the ability to think true thoughts, the mortal sense of bruise and injury grew worse and worse, until in the morning, when I attempted to go about, error indeed screamed loudly. The right knee and thigh refused to do my bidding, and it was only by catching hold of objects that I could move from place to place at all. So matters rested until the family had all left the house, then according to custom I took up the Bible and "Science and Health with Key to the Scriptures" to go over the daily Lesson.

A "key" indeed has this text-book proved itself to be, unlocking the treasures of the Bible and revealing the truth which is from the beginning and shall be without end. On this particular occasion, however, only the Bible was used. As I read on and on, losing all thought of time and self, the moments grew into hours, so absorbed was I; and when at last the beautiful words in the fourteenth verse of the ninety-first Psalm arose before my vision, "Because he hath set his love upon me, therefore will I deliver him," I closed the book and knew that I was healed. Oh, the blessedness of knowing! How did I know? It was because then the Spirit did "quicken" me according to Jesus' words, and I perceived that "the Spirit itself beareth witness with our spirit" that it is God indeed who heals all our diseases. Thus was my cure effected through the higher understanding of the inspired words of the Book of books, and spiritual healing was externalized when I arose "in the strength of Spirit" (Science and Health, p. 393) to find every vestige of pain and lameness gone. Joyously I walked around and around the rooms on the upper floor, even descending the stairs, to find the ill condition nowhere. It had vanished into its native nothingness. The Christ-healing was accomplished.

Twenty-one days after, the second accident came, as though mortal sense could not bear to let me go without another fierce attack. I had started to go down the cellar stairs, carrying a heavy ironing-board, when I tripped at the top step and plunged headlong, the board striking me in its descent. All seemed dark and still for a moment, then, even before I was able to rise, I repeated a part of the "scientific statement of being" (Science and Health, p. 468) and scarcely heard the questions propounded by the family, who by this time had rushed to my assistance. The first words I seemed to comprehend were from a dear sister, a Scientist, who was visiting me. She said, "Let me help you in Science;" and during that half hour of silent treatment I realized that humanly speaking the three factors in Christian Science healing were assembled. First, there was God, who is Spirit, who is Love, who is all-presence, waiting to help,—"the same yesterday, and today, and for ever;" second, the practitioner, who already was silently and earnestly declaring the above truth and knowing for me that because I lived, moved, and had my being in God, no evil should befall me. Third, myself—the patient. Had I anything to do? Yes, believe—believe with such a belief as is mentioned in Hebrews, where we read, "He that cometh to God must believe that he is, and that he is the rewarder of them that diligently seek him."

Mrs. Eddy says, "Correct material *belief by spiritual* understanding, and Spirit will form you anew" (Science and Health, p. 425). Thought must be changed. Obediently I turned to the light, and spiritual aspiration took form in prayer. "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Beautiful indeed was the peace that descended on me: visible symptoms of suffering ceased, and Truth's task was to drive away pain as the sunlight drives the shadows backward. In a few moments I quietly told my sister that all was well with me, and arose from the couch healed. The next day, although to mortal sense the ankles presented a sorry appearance, there was no pain, and I walked more than a mile to take the train to church service.

Space forbids my telling at length how the bondage of twenty-five years' duration to a sense of deafness has been greatly lessened. While not entirely overcome, still the use of instruments has been laid aside. I now hear better than ever since this supposed condition set in, without the aid of any instrument whatsoever. This also is the testimony of my family and friends. I know this house of bondage cannot hold me, and I am pressing on through the gate of spiritual understanding "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

MRS. CLARA ISERMAN, New Hyde Park, Long Island, N. Y.

While serving in the English army I lost the sight of my right eye. Receiving my discharge a few months later, I came to this country and then went to a hospital in the East for treatment for both eyes, as the left was greatly inflamed and the lids affected. Not receiving any relief, I was advised to try a noted specialist, which I did, and for the next fifteen years I was continually going from one specialist to another, seeking help. About seven years of that period I could not go where there was a strong light, so in the evenings I lived in darkened rooms, and in the daytime I could not go out in the sunlight without wearing smoked glasses. The suffering I endured was almost unbearable, and I was continually praying for help,—relief, or even death to end the agony. Receiving no answer to my prayers, I felt I was getting farther and farther away from God, becoming almost an agnostic. I never went to church during that period, and my Bible was never opened. In fact, the only reading I ever did at that time was to glance at the head-lines of newspapers. The last specialist I was with, after a year's treatment succeeded in slightly restoring the sight of the eye, and by the use of strong lenses I was enabled to read for short periods only, but even that would result in great distress.

Since coming to Christian Science, I had succeeded in working out several problems in the past few years, by reading "Science and Health with Key to the Scriptures," so about eighteen months ago I decided with the slight understanding which I had of Christian Science to try to work out the problem of my eyes. I realized that it was as easy for God to heal my eyes as it was for Him to have healed my headaches and other minor troubles; so, con-

Digitized by Google

timually holding to the thought of man as God's perfect child, and that in Him was my sight, I was enabled in about three months to lay aside the glasses which I had continuously worn for over twenty-five years, and I can truthfully say that I can see today better t an I ever could in my life before. The working out of these problems in Christian Science has given me a knowledge of the Bible such as I never possessed before, and the physical healing cannot be compared with the spiritual quickening which I have received and which points to the regeneration of all mankind.

I write this testimony with the feeling of deepest gratitude to God, and to our revered Leader, Mrs. Eddy, for bringing to poor suffering humanity this demonstrable truth which is a panacea for all ills. It is also written with the hope that some despondent one may realize, as I did, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

A. J. THORNE, Cincinnati, Ohio.

It is with a heart full of gratitude that I write this testimony to tell what Christian Science has done for me and mine. I was healed of a weakness from which I had suffered for years, and three physicians had told me that nothing but an operation would do me any good; but, thanks be to God, I am a well woman now, and have been for six years.

I wish also to tell of the healing in two treatments of an attack of jaundice for my little son eight years old. This disease was quite prevalent in the school the child was attending, and a number of his schoolmates were out of school with it. He awakened one morning quite sick, and I telephoned to a Christian Science practitioner. The next day he was much better, and with one more treatment he was healed. Our little daughter was healed of a serious fever last summer in one treatment. She had been quite sick for several days, and I tried to realize the power of Truth to the best of my understanding; but she did not seem to gain much, so in the morning she asked me to telephone to the practitioner. I did so, and in a few minutes she fell into a refreshing sleep, which lasted for about an hour, when she awakened and said she was hungry. I gave her something to eat, and then she wanted to be dressed; and that was the last of the sickness.

I also wish to tell of the healing of our son, more recently. He was in Idaho, a distance of fifty miles from home, engaged in hauling grain to the depot. The wagon was heavily loaded, and in going down hill the forward sacks on which he was sitting slid off, and he was thrown under the horses, one foot catching in the harness. He was dragged for some distance, but finally his foot became free, though the heavily loaded wagon passed over one hip and foot. His father and brother, who were both close by, ran to his aid, and they got him into a buggy and started to town. On the way he asked his father to telephone to me and have me telephone to Salt Lake to a Christian Scientist, a practitioner. This was done, and he was benefited right away. He was brought home that evening, and had very little pain; but I telephoned again to the practitioner, and he then went to bed and slept like a baby all night. This happened on Tuesday, and on the following Saturday he walked a distance of four blocks (our blocks are long ones) and back, without any crutches, and improved right along. This we consider a marvelous healing, for the wagon was loaded with two tons weight of wheat.

For all these healings, and for the many other blessings received through Christian Science, I feel thankful to God, also to Mrs. Eddy, and my prayer is that I may live worthy to be called a Christian Scientist.

MRS. MARY R. PACK, Richmond, Utah.

Like many others, I wish to tell of the blessings I have received through Christian Science. In March, 1909, I was living in Canada, and was taken ill. I called on a doctor, and he told me I was much run down and had a very weak heart. I had treatment from him for about three months, but did not seem to get much better. Then he prescribed a change for me, and my son readily agreed that I should go to Michigan to see some friends and spend the remainder of the summer. I went out on a farm with one of my sisters, and seemed to gain quite a little while there. A friend wanted me to go to see a certain doctor, and I did so. He said I needed to have an operation for female trouble, but I did not consent.

My daughter came to Michigan, got me a house, and made me comfortable, but the following spring my old trouble seemed to return. My sister wanted me to try Christian Science, and told me of some people who had been helped. She had read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and although she did not accept its doctrine herself, she was anxious to see me get relief in some way. I told her it was useless for me to resort to Christian Science; that God's power to heal was not limited, but I did not think I was worthy. About a month later I had a complete nervous collapse, and called the doctor again. He told me I would have to go to the hospital and he would make arrangements for me to go the next day. After preparing some quieting powders, he left me.

The next day I got up and prepared to go to the hospital. I was to stay there a week and be built up for the operation, but the first day there were four operations, and the cries of patients when coming out from the influence of the anesthetic were too much for me. In two days my sister came to see me, and I begged her to take me home. She did so, and I arrived home in a very bad state. My friends were all vexed at me for coming back, and as I was worse than ever the doctor arranged another day for me to go to the hospital; but I could not make up my mind to do so. The doctor then refused to come to me when I sent for him. He said he could not do anything for me, as I would not go to the hospital. I sent for another doctor and under his care went on for about three weeks, but did not get any better.

I prayed very earnestly that fear might be taken away, and that God would send a comforter to me. Soon after this I went to my sister's, and there I read the Christian Science text-book, Science and Health. I read quite a long time and then got her to take me to some Christian Science people. The lady said she would come and talk with me next morning, and I asked her to write to a practitioner for me. She did so, and I had treatment at once. At this time I could neither eat nor sleep, but in a week's time I was doing my work and was perfectly well. I cannot find words to express my gratitude to God, also to our dear Leader, Mrs. Eddy, for the spiritual quickening I have received through Christian Science; and other ailments besides those mentioned have vanished. I could not see to read without glasses, but now I can read perfectly without them. My prayer is that I may follow Christ daily, and that I may be the means of showing others how to find God and His Christ.—MRS. A. BLOOMER, Bad Axe, Mich.

I did not come into Christian Science for physical healing, nor did I come into it feeling myself spiritually lost. I had graduated through several churches, always seeking truth, and for twenty years I was a Unitarian in thought, worshiping in that church whenever I had the chance. To me it seemed a purer Christianity than I had found elsewhere, but while they taught the fatherhood and motherhood of God and the brotherhood of man, with Jesus as our elder brother and example, it was always a humanly

Digitized by Google

circumscribed concept—never the eternal Christ, forever in the bosom of the Father, and which we might all reflect in varying degrees. It remained for Christian Science to make this clear to me, and for that I owe endless gratitude to the one who brought this truth to our spiritual consciousness and showed us how we may practically demonstrate the same.

I find Christian Science to be a religion of daily life, Immanuel, "God with us" at all times and in all places; that we cannot be separated from God, as we live, move, and have our being in Him. Christian Science makes one conscious of this, and this consciousness is the peace which the world cannot give or take away. I thank God for bringing me into Christian Science, and I am very grateful to all those who have so lovingly helped me step by step from sense to Soul. My great desire is to get nearer to God by whatever earthly experiences I may be led.

Though I did not come to Christian Science for healing, I was healed, very soon after taking up the study of Science and Health, of influenza and a terrible mental disturbance which accompanied it. This might have been the impurities coming to the surface of which Mrs. Eddy speaks as "fermentation" (Science and Health, p. 401), and many minor demonstrations over error are being made all the time. If I had needed to be convinced of the truth of the Christ-healing, I had it in the case of one whom I had been enabled to lead into Christian Science and who was daily and hourly under my observation. She was healed instantaneously, through a practitioner, before she understood much of Christian Science, of a life-long bowel trouble, which physician after physician had treated without avail. This person is upward of seventy and has remained free from that burden for more than two years, never needing any medicine or using any material means whatever. She knows and acknowledges with the deepest gratitude her debt to Christian Science, as explained to her by those who have so lovingly helped her to realize its power.

I. M. McBEAN, Inverness, Scotland.

I wish to express my gratitude for Christian Science. I am truly thankful for the many blessings I have received through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the Lesson-Sermons. I am thankful for the moral and physical healing, for the spiritual uplift, and for all that has helped me in gaining an understanding of this great and beautiful truth. My desire is to continue to learn more of Truth's power.

MRS. CELIA ANN HAYES, Rock Island, Ill.

Having experienced a wonderful proof of the power of divine law to correct and heal the discordant conditions of mortal experience, I desire to offer my testimony and to express my gratitude for our revered Leader's priceless gift to humanity in her discovery of Christian Science. For several days I had suffered from a slight soreness of the throat, but I failed to recognize the need of meeting it in Science. In consequence of this neglect I was awakened in the night with a well-developed case of quinsy. I then attempted to do the work which should have been done when the disorder was first recognized, but the condition seemed so real that I felt compelled to call for help. After two treatments in Christian Science the condition was completely overcome and the healing perfect. Just before the second treatment I had great difficulty in swallowing, but during the treatment the pain left me instantaneously and to my great astonishment the swelling also had disappeared and I was perfectly healed and free.

This positive evidence of the power of divine Love to heal those who trust God has given me a deeper understanding of the importance of our Leader's life-work. It has enabled me more fully to realize that through her consecrated devotion to the laws of God and the holy desire to awaken mankind out of their dream of life in matter, with its resultant discords and limitations, she was enabled to give to the world the Science of Christianity as found in "Science and Health with Key to the Scriptures," which gives fixed and positive rules whereby we are able to prove the healing and redeeming power of Truth as demonstrated by Christ Jesus. This experience has also shown me the absolute necessity of strictly obeying the admonition of our Leader, as found in Science and Health (p. 390), to "suffer no claim of sin or sickness to grow upon the thought."

RICHARD W. HUNNER, Brewster, Wash.

It is about eleven years since I became *interested in* Christian Science. I was at that time passing through a very great sorrow, and had lost all faith in God. It seemed to me that some evil influence of great power stood always ready to snatch from me happiness, health, joy, and everything that I held dear. It was thus that Christian Science found me, a hopeless, despondent woman.

In Science and Health (p. 299) we read, "Corporeal sense, or error, may seem to hide Truth, health, harmony, and Science, as the mist obscures the sun or the mountain; but Science, the sunshine of Truth, will melt away the shadow and reveal the celestial peaks." I realize as never before that since man derives his being from God, good, he cannot depart from wholeness, health, and harmony, for the eternal good is his source, his substance, his all; that his life is "hid with Christ in God;" that Life is infinite, inexhaustible, limitless, without beginning or end. Joy and peace are thus seen to be man's true and rightful inheritance, and health, harmony, and happiness his portion. My heart goes out in gratitude to Mrs. Eddy, for the joy and the blessing that have come to the whole world through her discovery and revelation of the truth in Christian Science.

MRS. ETHEL BLODGETT COOK, Detroit, Mich.

Since I came into Christian Science I have had a clearer sense of God's nearness. To my shame and sorrow I must admit that I had given Him but scant thought in past years, but had gone on thoughtlessly, as so many others did, looking and seeking for health, rest, happiness, and pleasure in the world, but finding them not, little knowing, and probably not caring to know, that those things were to be found only in the realm of Mind. In the course of time I with my husband drifted into atheism, and then I was indeed most miserable.

So the years sped on, until I was nearing the threescore mark, living without hope or God in the world, and by this time I was quite ready to exclaim, as did Solomon, "All is vanity and vexation of spirit"! But at last, heartsick and weary, I declared, I will arise and go to my Father! By that time I had heard a good deal concerning Christian Science, and had concluded that this was what I wanted. At the first opportunity I joined First Church of Christ, Scientist, in Chicago, and later, The Mother Church in Boston. Now, after reading and pondering that marvelous work, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I can tell of a very, very great change in my thought and experience. It is now over nine years since I came into Christian Science. I did not come for the physical healing, but solely for the spiritual insight which I saw it gave to those who understood its teachings, a measure at least of that peace which passes human understanding, and I greatly desired to possess it also. I however grasped the truth very slowly, and I often asked our Father for a clearer sense of Truth and Love.

Gradually the pearly portals opened from whence the healing waters flow, and since that glorious day I have been healed of many ills. I thank God that I have also been enabled to overcome innumerable discordant conditions, both

Digitized by Google

for myself and others. I have proved over and over again the truth of the promise, "Before they call, I will answer; and while they are yet speaking, I will hear." Many times, when only two or three words of my prayer had been uttered, the healing has been accomplished, and my consciousness has been flooded with spiritual light. At last I see that all my supposed sorrows and trials of the long ago were but the "wholesome chastisements of Love" (Science and Health, p. 323), drawing me nearer to God.

To say I am grateful for this beautiful truth which does indeed set us free from all the ills of mortal experience, and for the spiritual insight I have gained from its study, also to those who have helped me on my journey from sense to Soul, is but expressing my feelings in the most feeble manner. I do indeed thank God, the giver of all good, and I am grateful to our beloved Leader for the rediscovery of this Science which Christ Jesus left as a rich legacy to the world.

MRS. CHRISTIANA S. WEEDOW, New York, N. Y.

In gratitude to God, for Mrs. Eddy's discovery of Christian Science, I send my testimony. At ten years of age I was morally and physically diseased. I was considered subject to bronchitis and acute lung trouble, had violent fits of sullen temper, and was exceedingly nervous and backward in my school work. In 1901 my parents bought a copy of "Science and Health with Key to the Scriptures," and from that time, steadily and surely, as the true understanding of God was realized, as shown in Mrs. Eddy's works, all these conditions have gone, also a craving for novel-reading. Every day brings some new blessing, and I can never be too grateful.

STELLA C. BATTLEY, Thornton Heath, Surrey, England.

[Written for the *Sentinel*.]

GOD IS LOVE.

LAURA GERAHTY.

Aye, God is Love! Repeat the restful words
So early learned, so oft, so lightly said.
The backward years, dull with material thought,
Murmuring a self-rebuke for guerdons lost,
Lie in the shadow, as a withered bud
That ne'er unfolds, from rip'ning sunshine hid.

Aye, God is Love! and certes Love is God—
No fearsome Father fashioned in the sky
Of childhood's searchings; hid beyond the clouds
Which, by their very distance, kept Him far—
Not throned in heav'n, where sometime undisturbed
And erstwhile moved by mankind's passionate prayer
He reigns, content, o'er floods of human tears—
No pow'rful potentate manifesting wrath
Which strikes and thunders through a sinful world.
Our God is Love; a gentle tide thus flows
Through all His true reflections, where the soul
Speaks through the stupid flesh in deeds of love,
Healing the wayward thought which seemeth vile.

Love yields the beauty of th'unfolding rose;
The timid luster in the violet's eye;
The songs of birds; peace of the midnight still;
The morning's glory on a storm-swept sea.
Love tends the garden where our purest thoughts
Bloom into deeds of worth and nobleness.
Knowing no sin, no fevered breath or pain,
No selfish motive or inconstancy,
Above a sin-swept world Love reigns supreme,
Where naught else is—for only God is Love!

FROM OUR EXCHANGES.

[*Congregationalist and Christian World.*]

The church never needed stronger or braver leaders than she does today. The ministry never offered a larger scope for devoted and prophetic men. A large part of the world today lies in a slough of materialism. We imagine there are as many good Christians as ever in the churches, and many more outside. Nevertheless, there is nothing gained by denying the fact that our civilization is not a spiritual civilization. Thousands are wholly absorbed in business and the pursuit of wealth. Europe is staggering under militarism. Many of our great cities seem at night only huge pleasure palaces. The masses are outside the churches. Trades unionism and socialism constantly show trends toward the stomach only. Even the best of us are oppressed by the continued impact of material things, and are much more interested in the construction of vast insurance buildings, high-hung bridges, long-distance airships, and Panama canals than in the things of the Spirit. Even in our colleges, insurance and banking courses are fast supplanting philosophy and the humanities. A lot of deadening materialistic philosophies, creeds of fatalism, of the worthlessness of life or the worship of the senses, are getting a tremendous hold upon our youth, more especially in Germany and France, but also here. One has only to read the novels of the last ten years to see how true this is. The effect of all these things is seen in a certain drying up of the spiritual nature, that makes idealism and the life of the soul seem illusions.

There is always, however, a speedy end to this sort of thing. Things never satisfy humanity long—not even pleasant things. There is always a rekindling of desire for the bread of life. Signs of this awakening are rising just now in every sky. Science is tending toward a spiritual interpretation of the universe. Philosophers are becoming idealistic. The brutality of Nietzscheism is becoming disgusting, even in Germany—as is the kind of young men that type of philosophy has produced. In our own land there is a decided renewal of interest in religion among business men, as witnessed by all the recent men's movements. We believe that the young men of America have not lost power of response to the call to leave all this money-grubbing and the service of Bacchus and Venus—yes, even the worship of our modern god, "Success"—to follow him who offers only high manhood, a passionate enthusiasm for humanity, and a chance to give rather than to get.

[Rev. W. E. Orchard, D.D., in *Christian Commonwealth*.]

Do three things: First, recognize the fact that you are a creature with limitations—recognize it solemnly. There are mental limitations. When you have thought all your thoughts of God, made your pretty theories, are you not conscious that there is more beyond, yet unknown? And there are spiritual limitations. Admit it! Inside your heart is such an ideal, so white, so high that you dare not let any one see it; they would draw such odious comparisons between the ideal and the actual. Never mind other people. I want you to look at it. You recognize, do you not, that you are living infinitely beneath what your spirit desires to be? Now, the next thing is harder still. The moment you have recognized your intellectual and spiritual limitations, ask this question of your mind: "How do I know of these limitations?" How do you know? Is it not because of something already in your heart which is greater than your failure, greater than your attainment? How could you see these shadows unless the light behind was shining? Turn round and look—for your very knowledge of limitation is there, because in your mind, ever shining upon you, is the glory of God. And then this is the third thing—a daring thing. Get quietly alone and face this power which

Digitized by Google

has been pushing you, and making you unhappy. I want you to get quietly still, and say, "Now, I am going to let this power take me just where it will, and do whatever it likes with me." I believe if you do this there will come to you as in one flash the knowledge that there dwells within, as your twin star, your other self, that mighty Spirit which found expression in Jesus of Nazareth. And the whole secret of religion, its power, its consolation, its certainty, will be yours.

[*Christian Register.*]

The church needs reforming as well as the world. It has too long stood apart from the great throbbing, aching wrongs of society. The salvation it has preached has been too narrow and personal. It has given its spiritual gifts to the few, and the many have stood aloof, feeling there was no place, no redemption for them in the old sanctuaries. Now the passionate cry is, Let us show ourselves human, make vital our brotherhood, work and live as if indeed we are all children of one Father. Must we all not rejoice that the rousing word has come at last, that love and sympathy are free to flow out from the sanctuary and make good the word of Jesus, "He that is greatest among you shall be your servant"?

[Theodore Roosevelt in *Outlook.*]

Surely we must all recognize the search for truth as an imperative duty; and we ought all of us likewise to recognize that this search for truth should be carried on, not only fearlessly, but also with reverence, with humility of spirit, and with full recognition of our own limitations both of the mind and the soul. We must stand equally against tyranny and against irreverence in all things of the spirit, with the firm conviction that we can all work together for a higher social and individual life if only, whatever form of creed we profess, we make the doing of duty and the love of our fellow men two of the prime articles in our universal faith. To those who deny the ethical obligation implied in such a faith, we who acknowledge the obligation are aliens; and we are brothers to all those who do acknowledge it, whatever their creed or system of philosophy.

[*British Congregationalist.*]

The men of the coming day will scorn utterly the dependence upon tricks and methods, upon numbers and wealth, and they will challenge the assumption that miracles are past. They will declare that the Christian gospel is "miraculous from end to end." They will begin to boast of God in Christ, who, when he had overcome the sharpness of death, opened the kingdom of heaven to all believers. They will dare to claim his power to help in the fulfilment of that which is his concern supremely. They will hear the knocking of his patient hand on the door, and they will open to him—to the Christ whose power none can measure.

[*New York Observer.*]

We cannot believe a person without believing some things about that person. The cry "Back to Christ!" is therefore meaningless and misleading unless it means a return to the teachings of Jesus, which teachings are in themselves the materials for a creed and the body of a theology. Moreover, Jesus spake not only by his own mouth to the disciples who followed him through Galilee and Judea, but as well by his Spirit to and through the apostles, whose epistles are an integral portion of the Bible. This we must remember, while exalting the person of Jesus as the center of theology and the source of life.

[*Outlook.*]

The heavens and earth are new, not by reason of any change of substance, but by reason of the clearer vision and larger knowledge of men; the new heaven and earth, "wherein dwelleth righteousness," will come in the purer character and more spiritual nature of men.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet has just been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $3 a year, $1.50 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.20 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of *Divine Science, alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 29 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.80;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Good roads for New Hampshire were discussed at the first state good roads convention held at Concord under the auspices of the state highway department. State, town, and county officials from all over New Hampshire were present and Gov. Robert P. Bass opened the convention, which was originally planned for one day. So much interest was shown, however, that it was decided to continue it a second day, and the scope of the convention was considerably broadened. Some of the results of the conference, in which some four hundred and fifty legislators, selectmen, town road agents, grangers, and others participated, are: A better understanding of the need of good roads in New Hampshire, a knowledge of the practical methods to be employed in making good roads, a knowledge of road-making materials and machinery, recognition of the importance of preserving the roads by continuous small appropriations for maintenance, and the desirability of a concerted movement for a change in the highway laws of New Hampshire so that the highway commission shall be a continuing board of three members, with at least two experienced members in each year.

The post office department, as a result of the investigation of the special postal commission, intends to recommend to Congress that the rate on all newspapers and periodicals be increased from one to two cents per pound and increased by degrees later on until they pay a rate nearing the cost to the government of handling them. The government is now making a surplus of $62,031,000 a year from first-class matter, including letters, while at the same time the sum of $66,336,662 is lost each year on the carrying of second-class matter. Just as soon as the rates on second-class matter are readjusted Congress will be asked to grant a one-cent rate on letters.

Immediate development of Alaska coal beds along conservation lines recommended by Gifford Pinchot as president of the National Conservation Association, is sought in three amendments to the Works Alaska bill, introduced by Senator La Follette. Provision is made for staking out a coal claim, like a placer mine, by any adult for ten years. Another amendment provides for government construction of a railroad costing three million dollars from the Matanuska or Bering Sea coal fields, using equipment discarded in Panama. Survey of a route for another government railroad from interior Alaska to the coast is provided in the third.

"Vandalism will continue unchecked" unless a national reservation is established at Niagara falls, declares a report which President Taft sent to Congress from the committee for regulation and control of the waters of the Niagara river and the preservation of Niagara falls. The report shows that many improvements have been accomplished, but it declares that the committee has been powerless to cope with deplorable conditions on the American side, north of the falls. "Apparently," it is asserted, "the situation is beyond control, except through the creation of the national reservation recommended in the Sixty-first Congress."

The railroad securities commission, headed by President Hadley of Yale, has reported that it would be practically impossible at this time to place issues of railroad securities under federal control. The commission recommends that enforced publicity for all railroad financing is the most effective weapon against stock watering which the government has at its command. The commission was created in 1910, when the Senate refused to accept a House amendment to the pending railroad bill providing that all future issue of stocks, railroad securities, be placed under the control of the interstate commerce commission.

Attorney Louis D. Brandeis of Boston, before the Senate committee on inter-state and foreign commerce, replied to the advocates of federal-regulated monopolies, declaring that the latter were destructive of efficiency and individual initiative, both of which well-regulated competition would foster, and hence were a menace to real economic and industrial progress.

Narragansett bay, Rhode Island, has been selected as the site of one of three great Atlantic coast navy yards proposed by Secretary of the Navy Meyer in his reorganization plans, the others being at Norfolk and Guantanamo. This would mean the elimination of the New York, the Boston, and the Portsmouth (N. H.) yards as major stations.

Senator Poindexter of Washington has introduced a bill in Congress to abolish the United States commerce court, which seems to have lost favor ever since it enjoined the interstate commerce commission from enforcing its order regarding the long and short haul.

Physical valuation of all railroad property in the United States is proposed in a bill presented in the House by Representative Esch of Wisconsin. The bill would direct the interstate commerce commission to begin the investigation Jan. 1, 1912.

That the primary cause of the destruction of the United States battleship Maine in Havana harbor was the explosion of a submarine mine or some similar contrivance is the verdict of the Vreeland board of United States naval experts who have examined the exposed wreck.

A preliminary statement of the statistics of the acreage owned and held under lease by anthracite and bituminous coal mine operators in the United States shows a total of 6,066,088 acres controlled in 1909, as compared with 1,741,401 acres in 1889.

International.

The first stage of a gigantic scheme for supplying power to the Kolar gold fields of India and for providing a canal system for irrigation purposes, has been sanctioned by the durbar of the Mysore state. A great masonry dam, forty-two hundred feet in length, is to be constructed across the river Cauvery at a point eight miles west of Seringapatam at a cost of two million seven hundred thousand dollars. The dam will store eventually forty-one billion five hundred million cubic feet of water. The area to be submerged in the first stage of the project will be twenty-four square miles. It includes eight villages with a population of five thousand and twenty. The whole project is estimated to cost seventy-six million dollars and provides for a canal system to irrigate one hundred and fifty thousand acres of land.

King George V. and his consort, Queen Mary, were on the 13th proclaimed Emperor and Empress of India. The Emperor made a gift of one million six hundred thousand dollars for educational purposes and announced the change of capital from Calcutta to Delhi. The transfer will cost, it is estimated, five million pounds. The site of the durbar territory has been acquired and it is proposed to utilize it as the location of the new city.

According to the report of the surveyor general of South Australia, during the year ended June 30 last, the government purchased a total of 71,237 acres of land for closer settlement at a cost of £448,124, and the aggregate area repurchased for that purpose to the end of the year was 570,052 acres for which £1,671,915 was paid. Of this 464,434 acres have been allotted to 1,866 persons, the average holding being three hundred acres.

The National Council of Persia still stands firmly by its minister of finance, Mr. Shuster, an American, and refuses to dismiss him at the demand of Russia.

Industrial and Commercial.

The pressure for legislation for the perpetuation of the forests of the country is certain to grow rapidly, in the opinion of Henry S. Graves, chief of the United States forest service, unless private owners themselves forestall action by taking up forestry. "Beyond a doubt," says Mr. Graves, "the sentiment against forest destruction and the demand for the application of lumbering methods which will better utilize and perpetuate the forests will grow stronger. The demand for better lumbering methods will result in the proposal of legislation by the states aimed at the regulation of the lumber industry. Since four-fifths of our standing timber is in private hands, the problem of conservation as related to this resource must be held far from satisfactory so long as a reasonable expectation of the general practice of private forestry is not in prospect. Lumbermen have not yet reached a point at which they are generally ready to regard their holdings of timberland as permanent investments."

Eighty commercial organizations in eastern Washington and Oregon, northern Idaho and western Montana, reporting a total membership of more than seventeen thousand, will be invited by the chairman of the logged-off land committee of the Spokane Chamber of Commerce, to assist in developing one million acres of cut-over lands in the "inland empire" district by securing *bona fide* settlers to engage in farming and dairying. It is designed to increase the agricultural wealth of the country and populate the sparsely settled districts with earnest men and women who have some capital and are not afraid of hard work.

South Norwalk's municipal electric light plant was so successful in the year just ended as to turn a gross profit of $26,417.35, and the new fiscal year begins with a substantial reduction in rates for public and commercial lighting and power. The bulk of the profit was made on commercial business, and this explained the reduced rates which are by way of a dividend to the taxpayers. The former rates were so low that the South Norwalk plant has been quoted as a model all over the country.

More than one million dollars' worth of raisins were exported from the United States in the last fiscal year, the quantity, eighteen million five hundred thousand pounds, being far in excess of the total exported in any earlier year. The imports during the year amounted to only two million five hundred thousand pounds, against ten million pounds in 1900 and as high as fifty million pounds in certain years prior to the development of their production in the United States.

More than a third of the new gold now produced in this country goes into the arts and manufactures. Ten years ago the proportion put to this use was only about one fifth of the total production, or eighteen million dollars. Last year the amount was thirty-four million dollars, or nearly double that of ten years ago. This left sixty-two million dollars for coinage and other purposes.

CHRISTIAN · SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE FAITH OF GOD."

CLARENCE W. CHADWICK.

THERE is perhaps no other word in the Christian vocabulary that has suffered more at the hands of ignorance and superstition than has the word faith. Neither Jesus nor his apostles are responsible for having separated the words faith and God. They employed the word in its highest sense, which always linked it with the infinite. When the Christ-healing was lost sight of, and human consciousness became impregnated with the erroneous theories and opinions of men, the word faith lost its divine significance and so drifted to the level of human belief. Upon this lower level, "without works," and therefore "dead," Christian Science found it, and has already gone a long way toward restoring it to its primitive place in consciousness, its true relation to the one Spirit, God.

The wide-awake Christian must admit that, according to the teaching of Jesus and of his immediate followers, there was nothing but God and His Christ in which to have faith. They taught and demonstrated the all-sufficiency of omnipotent power to care for every human need. They believed in no other power or influence; consequently they could have faith in no other. It is therefore evident that Jesus was in no way responsible for the divided faith which characterizes the lives of almost countless multitudes who profess belief in his teachings. Whence, then, the seeming departure from the exercise of that living faith which lays hold of omnipotence and trusts implicitly in its directing and controlling power? Disobedience to Jesus' commands is directly responsible for the divorcement of faith from God. Jesus said, "If ye love me, keep my commandments." Obedience to the Master's teaching would have preserved intact the living faith of the early Christians, and this activity of right thought, for such it would have been, would have barred out the thousand and one human inventions which have claimed the attention of Christ Jesus' professed followers.

Neither by precept nor by example did the Master pay homage to any so-called material law or agency. He was very positive in his conviction that, without the Christ, humanity could do nothing toward the betterment of its demoralizing conditions. He was never known to condone the use of will-power or hypnotic suggestion as a substitute for the activity of the Christ-idea; but he did say, "Without me [the Christ] ye can do nothing." *Materia medica* cannot point to the Christ-teaching for one atom of divine authority or sanction. Jesus was no material diagnostician, nor did he advocate the investigation and study of material laws and conditions in order to acquire an intelligent understanding of how to cope with them; but he did say, "Come unto me [the Christ], all ye that labor and are heavy laden, and I will give you rest."

By word and deed the Master taught and proved the supremacy of spiritual life laws and urged upon his followers the necessity of seeking first to understand the nature and operation of these laws, through which would come the knowledge of how to cope with so-called material laws as being unnatural and unreal, and therefore as only mistaken concepts of spiritual facts. He laid all stress upon the knowledge of facts, the real and eternal, as affording the only possible means of dealing intelligently and effectively with the illusions and misconceptions of the human senses. His concept of disease and his treatment thereof were not based upon the evidence of the physical senses. His understanding of the unseen spiritual facts of being was the source of his power to destroy the evidence of sin and disease, and this understanding was uninfluenced by the outward appearance of things. His faith was pinnacled in the omnipotence of divine Love. It was steadfast and loyal to the end. It was nothing less than spiritual knowing or understanding. It was a healing and saving faith always manifest in good works. It was always inseparable from God.

Jesus had no other kind of faith to enjoin upon his followers. When he admonished his disciples to "have faith in God," it is evident that he meant a faith which could prove itself by its works. He meant no blind faith or belief, without chart or compass with which to steer safely amid the storms of the senses. The marginal rendering of the expression, "Have faith in God," is, "Have the faith of God," which strengthens the scientific meaning of the word faith. The faith which God inspires always leads thought Godward and away from material ways and means. Under no circumstances could it ever tempt one to resort to material means for the healing of mind or body. The "great Physician" never provided drugs nor authorized the use of them. The divine Mind, the creator of the universe and man, never made the carnal mind and its will-power to dispute the divine sovereignty.

God is not the author of hypnotism, nor could the knowledge of God ever lead one to believe in any such agency. The right understanding of good destroys all belief in suppositional evil. It leaves no other power, influence, or agency in which to share one's faith. Faith in matter bears no relation to "the faith of God." Science and Health informs us that "the first idolatry was faith in matter" (p. 146). The use of material means, therefore, betrays some phase of human idolatry, a lack of faith in divinity; it means that the first commandment has been disobeyed; in other words, that faith has ceased to be understanding, has lost its light and is no longer identified with God, good. It is sometimes called a divided faith, but the fact remains that faith in two powers ceases to be faith at all, because there is but one power, and faith in omnipotence is "the faith of God," and is the only faith there is or ever will be. Any lower faith, so called, is therefore only some phase of blind human belief, bereft of all authority or power from God.

An unfailing characteristic of "the faith of God" is that it is always accompanied by demonstration. "Faith without works" is only some phase of the deep sleep of Adam; it is no part of intelligent existence or conscious being. "The faith of God" is a living, vitalizing, energizing, and transforming influence in human experience. The individual

Digitized by Google

who does not possess some degree of this prime essential of the Christian life is not in conscious touch with the Science of being, and must necessarily be reckoned among the congregation of those "dead in trespasses and sins." Faith in good is not merely intellectual or passive, it is always active, always operative to correct the misguided senses and to direct thought into heavenly or spiritual channels.

There is no scientific or right thinking without the guiding influence and dominating presence of the faith of God. To quote Scripture and to talk Christian Science do not of themselves necessarily betray any of the faith of God. The exercise of human will is not the activity of God-directed thought. Pride, egotism, vanity, and impurity are not channels for the faith of God. Animality is not one of its adjuncts. Humility, sincerity, honesty, and chastity, on the other hand, are indispensable to the exercise of genuine faith. Mere mental argument, where these spiritual qualities are not in evidence, is nothing short of taking the name of the Lord in vain, for "no man can say that Jesus is the Lord, but by the Holy Ghost." No man can say that God is Love, without the faith of God, good, through which to work. Any claim of mental activity or work which is not founded upon and characterized by faith in an understood Principle, is not work at all. Unless faith and works are found together, the true significance of both faith and works is unperceived.

Holy Writ declares that "the prayer of faith shall save the sick." This certainly associates faith with activity. When sickness is scientifically healed, such healing must necessarily be the resultant of mental activity, the operation of spiritual law. This is the leading contention of Christian Science, that faith in God is something which can be and must be exercised, in order to prove that one has the faith enjoined by Jesus and his apostles. When once it is learned that faith becomes operative to heal only through right or spiritual thinking, one is not likely to resort to material means as a healing agency and expect to derive any benefit therefrom.

If professing Christians who now imagine that they have no use for Christian Science will humbly appropriate the faith of God and begin to think as God thinks, they will soon become actively interested in the claims of Christian Science, and will marvel that they could ever have associated faith with anything but the activity of God, the one Mind, entirely independent of matter and its assumed laws.

GENUINE CURES.

ALFRED FARLOW.

WHEN we take into consideration the fact that disease is at bottom an erroneous mental condition, a mere belief, we can understand that it is possible to substitute a belief in health for a belief in sickness and thereby effect an apparent cure. Such a cure, however, will not be genuine. It has no foundation in the Principle of being, the source of health, and can be only temporal. This is in keeping with the Scriptural statement: "They have healed the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace." Respecting this matter, the psalmist said: "Except the Lord build the house, they labor in vain that build it."

An apparent result which is dependent upon human will as distinctive from the power of divine Mind, is at best only an exchange of beliefs, both of which are unstable and without foundation. It is the false belief in a mind apart from God which constitutes the basis of sickness. If this false belief is simply exchanged for another one, though apparently better, which is based upon "carnal" will, we still have an erroneous belief, so that the so-called cure is simply an exchange of one error for another. On the other hand, if the understanding that there is but one Mind, one power, constitutes the basis of the improved condition, the advancement is genuine and permanent. The Scripture refers to "false Christs, and false prophets," who "shall show great signs and wonders; insomuch that, if it were possible, they shall deceive the very elect." So-called miracles or revelations of human suggestion are sometimes wonderful to human sense, but they are "lying wonders," which prove nothing except the ability of a lie to assume the semblance of the truth.

However, it still remains true that the truth is demonstrable, and that the results of spiritual power prove the truthfulness of the spiritual ideas which are exercised in order to produce such results. A misguided student of mathematics might by manipulation of figures chance upon the answer to a problem, but if he is not reasoning from the right basis he has become simply the prey of falsity and is sunk in deeper deception because of this fact. On the other hand, if the proposition is solved upon the right basis and according to the correct rule, truth is thus established. Deception sometimes works out apparently good results, but it still remains true that the demonstration of the truth alone is legitimate and verifies its truthfulness. No one would hold that a correct demonstration of a mathematical proposition does not prove that the proposition is correct, though an erroneous demonstration may have apparently proved a wrong proposition to be correct.

We agree with the Scriptural statement: "To the law and to the testimony: if they speak not according to this word, it is because there is no light in them." We must first be in possession of the law of truth and righteousness, and then we must have proper results in proof of our understanding of the law. Mental ways of treating the sick are many and varied, but only that method which gives all honor and power to God measures up to the standard of the Master, who not only declared, "By their fruits ye shall know them," but who practised in keeping with his declaration, "Not my will, but thine, be done." Christian Science plants itself unreservedly upon the premise, "God is Spirit" (Science and Health, p. 117), and that therefore Spirit is the only real power. The results effected by its practitioners are in keeping with their understanding and reliance upon this truth.

DIVINE LAW.

ADELA LE PAGE.

FROM time immemorial the world has sighed for peace and plenty, for justice and equity, and has striven to attain these human ideals by various methods, all more or less unsatisfactory. Mortals have, however, slowly but surely come to see that the reflection of Love is the highest and most satisfactory way of gaining harmony, and this is manifested at the present day in the many endeavors for the greater education of the masses, the betterment of institutions, and the protection of the rights of communities.

Nevertheless, in spite of higher ideals and greater refinement generally, mortals still break out periodically in lawlessness and rioting, wars and strikes, hoping to adjust seeming wrongs and establish peace and equity. When the results desired seem to be thus achieved, they foolishly imagine that to such methods they owe the accomplishment of their purpose, instead of perceiving that out of evil and error nothing good can proceed. From the cradle onward, mortals have rarely gained anything of progress, love, or true kindness, through contentions and strife. They ignorantly think otherwise, and so it happens that hitherto revolutions have often seemed their highest way to some good end.

Any seeming good, however, which arises from such material efforts is purely the result of error rising to such

Digitized by Google

a pitch that it becomes its own self-destruction, and thus, when the smoke of conflict is cleared away the truth of being is revealed under better human conditions. Nothing good has ever been brought to human consciousness through wrong. God is never heard in the wind, the earthquake, or the fire, but in the "still small voice" of Truth, "of scientific thought . . . made manifest in the destruction of error" (Science and Health, p. 559). Thus we see that whatever of justice or love bridges over a seeming separation or rectifies a seeming wrong, always springs from the one and only source of good, which is God.

In "Retrospection and Introspection" (p. 88) our Leader says that "Mind revolves on a spiritual axis, and its power is displayed and its presence felt in eternal stillness and immovable Love. The divine potency of this spiritual mode of Mind, and the hindrance opposed to it by material motion, is proven beyond a doubt in the practice of Mind-healing."

What humanity needs is more love and patience, based upon an understanding of the law of Christ. This understanding Christian Science has brought to light, and as we avail ourselves of it, the omnipotence of this law is manifested. James says: "Let patience have her perfect work;" perfect here meaning "complete." Completeness implies evolution, that which is begun, continued, and ended. In Science and Health we read: "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (p. 22). Therefore, to attain that "peace . . . which passeth all understanding" in every phase of human experience, we must "learn to labor and to wait," learn to know that behind all that seems so tempestuous, so wrong, is the eternal law of Christ, the immutable law of Love which, in spite of all adverse testimony, is the spiritual fact, and will gleam at last in harmonious expression through the mists of matter and doubt, if we but patiently wait.

The psalmist knew that the understanding of this law was life and peace to him, and it is instructive to read in this connection the one hundred and nineteenth Psalm, wherein every one of the hundred and seventy-six verses refers to God's law, statutes, commandments, precepts, or word. Jesus had such an understanding of God's law that he walked on the wave, thus annulling the material law of gravitation by the infinitude of Mind, and he raised those under the so-called laws of death by the eternal law of Life. We must recognize that all error claims to act according to law, but Christian Science, in accordance with Jesus' teachings, proves this law false, exposing its lack of permanence and stability by revealing the true law which annihilates everything unlike itself. If, then, material so-called law can be annulled and proved erroneous and false, we have nothing left to fear from it, and the healing of its false claims, sin, sickness, and death, becomes a simple and natural result, rather than mystery or miracle. Thus we shall learn beyond all question that material law can never hinder the operation of spiritual law.

God's law is unchangeable; it is, like Christ, "the same yesterday, and to day, and for ever;" and our first duty and privilege is to learn and obey this law so thoroughly that we become one with it. As we become one with divine law in our daily living, we shall find that our declarations and realizations of this law (*i.e.*, our treatments) have power to enforce it, and that instead of making any effort to invoke the law on our behalf, we shall discover it to be an established fact and one with our true being, therefore manifest in our consciousness. For instance, in a court of criminal law we have the prisoner at the bar, and the judge, after hearing the case, passes sentence on the defaulter according to the requirements of the law of the land. He is reputedly a man of integrity and uprightness, consequently one with the law, and he is also thoroughly versed in that law; therefore, when he declares it and enforces it he is practically identified with that law, and the law consequently operates as he declares it. So it is with each of us. It is claimed that disease acts according to law, and in order to destroy its so-called power we must declare God's law aright and be one with it, that it may operate through us. It is necessary, however, to know this as undoubtingly as the judge in our illustration, or our declarations will be wanting in power and ineffectual.

Now what is the law, and how can we become one with it? The law of Life is the only law. Do we think, know, and see only Life and its manifestations, granting to all God's ideas from the least to the greatest the right to manifest Life, declaring always Life to be God, Spirit, ever operative, ever manifest? Then indeed are we one with the law of Life. Divine Love is the lawgiver. Do we think, know, and act love, see only love everywhere and in every one? Do we dispense love in every possible way, on the waters of mortal mind? Then we are at one with the law of Love. Divine Truth is the source of law. Do we know, think, and act the truth, and see only the truth, the Christ, everywhere? Do we refuse to believe in anything which contradicts the truth that God is All, that He is the only creator, presence, or power? Then we are at one with the law of Truth which heals the sick, the law of understanding which, enforced in human consciousness, destroys the so-called reality of error and substitutes the truth of being.

If we will patiently work on, the spiritual fact must appear, because of its permanence and reality, and thus the omnipotence of spiritual law will be vindicated everywhere and in everything. All material methods, beyond what is normal activity, hinder instead of advance the appearing of Truth to human view; but to "be still, and know" God, is a divine command which, when obeyed in right thinking and right doing, brings about harmony in the home, in business enterprises and in church relationships,—it establishes the kingdom of heaven on earth.

THE CHILD AND THE SUNDAY SCHOOL

EMMA E. HAHN.

IN Science and Health (p. 582) we read, as the definition of children: "The spiritual thoughts and representatives of Life, Truth, and Love. Sensual and mortal beliefs; counterfeits of creation, whose better originals are God's thoughts, not in embryo, but in maturity." To mortal sense a child is but the manifestation of the parents' thought; and every sense of discord or harmony in the parent is apt to find its way quickly to the child's consciousness. The same may be said to be true in the case of Sunday school teachers. In Christian Science we are taught to think of the child as God's pure thought, and our effort should ever be to protect this untainted thought from the poisonous darts of error. We, the natural protectors of the child in the Sunday school, cannot allow ourselves to be darkened by any suggestions of error, and thus drag the child down into the mire of material sense. We must change our own concept of the child, and know that God's idea is capable of reflecting intelligence. We shall not then be searching among cobwebs to find some means whereby to simplify or modify the teachings of Science and Health for the children. By presenting the truth in its purity, the unfolding of the child-thought will go on, and its spiritual manifestation touch every heart that is receptive to purity.

If we put Science and Health into the hands of our little ones, and tell them God is intelligence and that they are reflections of all-knowing good, they will at once begin to demonstrate its teachings. When we assimilate the purity taught in our text-book, we shall find ourselves so cleansed of the errors of the flesh that we can meet the sweet purity of this idea of God; and as the old prophet said, "A little

Digitized by Google

child shall lead them." Jesus said, "Whosoever shall receive this child in my name receiveth me: and whosoever shall receive me receiveth him that sent me: for he that is least among you all, the same shall be great."

As Christian Scientists we sometimes forget our Leader's words: "Thou shalt not adulterate Life, Truth, or Love,—mentally, morally, or physically" (Miscellaneous Writings, p. 67). In Sunday school the system of government is simple: Love is our guide, the golden rule our motto, the Lord's Prayer and the "scientific statement of being" (Science and Health, p. 468) our impetus for action. Let us then get down to actual work in demonstrating the Principle of Christian Science, feeling sure of the infinite Love that embraces all that is true, thus bringing to the little ones the thought of the one intelligence and the consciousness that they reflect the all-knowing Mind. The work of the Sunday school is a glorious work, for the children sow the seed given them. They feel so sure of the Love that protects, and fearlessly talk of this power as something beautiful that they have learned in the Christian Science Sunday school. We cannot, therefore, afford to neglect them, for through their purity of thought this healing gospel is spread throughout the world.

How tenderly the "good shepherd" gathered the lambs in his arms, and we must become as tender if we would realize his presence and power. Let us then, in the light of Christian Science, arouse ourselves from the long dream of materiality, and with one accord flee to the mountain of holiness, where we may stand in the majesty of Truth and proclaim the glad tidings of Christian Science.

THROUGH THE LENS OF CHRISTIAN SCIENCE.

W. S. ILIFF.

AMONG the many blessings brought to this age through Mrs. Eddy's discovery of Christian Science, one which stands out very prominently is the clearer understanding the student obtains of the Scriptures, and very often passages —learned by heart, perhaps many years ago—come suddenly into consciousness with a dazzling clearness that for the moment causes astonishment. On such occasions we often exclaim, "How simple! why did I not see that before?" but on reflection the reason is discovered in the fact that, before being enlightened through Christian Science, we were looking at the verse or chapter from an entirely different view-point, and consequently were expecting an interpretation perhaps directly opposite to what it contained.

Recently I had a clear illustration of the foregoing and derived very considerable help therefrom. It was after reading the third chapter of St. John's gospel. The first reading seemed only to spell "regeneration" until I came to the thirteenth verse. There I stopped, and read the verse over and over again. Slowly but surely the light dawned, and the incident of the interview of Nicodemus with our Master and Wayshower stood out as a present-day practical illustration of the ever-present truth, the truth which Christian Science is daily enabling us to discern and demonstrate. Nicodemus approached Jesus from the commonly accepted standpoint that God at different periods endowed certain mortals with divine power, thereby enabling them to perform wonderful works which otherwise would have been impossible; namely, "We know that thou art a teacher come from God: for no man can do these miracles that thou doest, except God be with him." Jesus in his reply commenced at once to lead his inquirer from the unreal to the real, demanding an entirely new birth. Nicodemus, through the clouded lens of wrong teaching, fails to see the possibility of this, and our Master lovingly proceeds to make the meaning plainer to the perplexed ruler. He makes a sharp division between the false and the true, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit," or spiritual. Nicodemus exclaims in amazement, "How can these things be?" and is unable to grasp the fact that "man is not material; he is spiritual" (Science and Health, p. 468), so the Wayshower leads him still higher to the wonderful statement that "no man hath ascended up to heaven, but he that came down from heaven, even the Son of man which is in heaven."

To me this verse is like Christ's "Peace, be still" to the troubled waters. It seems to say, Why look to the false sense of man for salvation. Wherein is he to be accounted of? This wrong conception of man never has ascended up to heaven, and can therefore be of no assistance whatever. "If the Son therefore shall make you free, ye shall be free indeed." This rich legacy Mrs. Eddy has given to the whole world, to be used and demonstrated. I am constantly applying this spiritual understanding to my own problems, and was recently able to prove it to the complete satisfaction of one who as yet is not interested in Christian Science. It arose out of a business visit, during which he informed that the only business he was concerned about at that moment was a certain fever, which he named. He knew I was a Christian Scientist, and when I offered to help him he accepted readily. The truth was immediately declared, and next morning he informed me that he was able to keep on working until eleven o'clock the previous night and was then feeling better than ever before.

Truly this age has much cause for songs of thankfulness!

[Written for the *Sentinel*.]

STARLIGHT.

MARY J. ELMENDORF.

WHAT whisper you, stars of the eloquent night,
What whisper you ever?
O listening child, in the language of light
We whisper of wonderful things unseen,
Of blessings that wait, resplendent, serene,
To comrade your heart forever.

But pain is my portion, O stars, and grief—
Wan loneliness ever!
Why gather, O child, the withering leaf
When June at your casement has crimsoned the rose?
In fathoms of light come bury your woes,
In fathoms of light forever.

The ultimate shadow, O stars of the night,
Encumbers me ever!
That phantom, dear child, is fainting in flight;
Your Father is God of the living alone;
All live in the light unto Him, unknown
Of sorrow or shadow forever.

Shall I find them, O quieting stars, whom I seek?
Shall I fare with them ever?
You will find them, O child, and know them and speak!
In the longing unsullied that upward wings,
In the doing and thinking of worthier things
You fare with your dear ones forever.

What holds them, O stars of the answering night,
So close to me ever?
Love holds them, O child, in His absolute might:
Love comforts and shelters, consuming the shroud;
Love, merciful, blazons the vanishing cloud
With beauty that burgeons forever.

Then Love is your anthem, O stars, the theme
Of your radiance ever?
Love regnant, O child, is the presence supreme—
The glory that changes the tear as it falls
To a lily, the music that heavenward calls
The heavensick heart forever.

SELECTED ARTICLES.

[From *New York* (N. Y.) *World*.]

When the *World* published two weeks ago a list of thirty-two children who had died of diphtheria and other diseases during the last thirteen years while being treated by Christian Science practitioners, it moved Virgil O. Strickler, former first reader of First Church of Christ, Scientist, Ninety-sixth street and Central Park West, to compile a few statistics from the vital records of the city to set against the list. This is his response as he made it when lecturing to Sixth Church of Christ, Scientist, in Lexington Hall, No. 158 East Fifty-eighth street, Tuesday night [Dec. 12].

"Many people do not understand why Christian Scientists have more faith in Christian Science treatment than they have in drugs. The reason is very plain," said Mr. Strickler. "They get better results under Christian Science than they formerly obtained under the drugging system.

"The *World* published on Sunday the names of thirty-two children who, it claimed, had died under Christian Science treatment in the United States during the past thirteen years. Whenever a person, and especially a child, dies under Christian Science treatment the fact is published under glaring head-lines in the papers, and as a rule somebody is arrested. It is safe, therefore, to assume that the list published contained the names of all the children who have died under Christian Science treatment during the last thirteen years. In the published list of names ten are said to have died from diphtheria, five from pneumonia and bronchial pneumonia, two from scarlet fever, and the remainder from a variety of causes.

"I hold in my hand an official report of the department of health of the city of New York for the year 1910, which shows that during the last year there were seventeen hundred and fifteen deaths from diphtheria, nearly all children under fifteen, under the care of doctors in this city alone, as against ten deaths from the same cause under Christian Science practice in the entire United States in thirteen years. Of these ten cases, only one was in New York city. The official report also shows that there were nine hundred and fifty-three deaths in the city last year from scarlet fever under medical treatment, nearly all of which were of children, as against two in the entire United States in thirteen years under Christian Science treatment, and not one of those was in this city.

"The results in pneumonia and bronchial pneumonia are even more startling. The official report shows that ten thousand five hundred and nineteen people died in the city of New York alone last year from these diseases under medical treatment, more than fifty per cent of whom were children under fifteen years of age, as against five children in the entire United States under Christian Science treatment in thirteen years. The report of the board of health also shows that twenty-seven thousand one hundred and eleven children under the age of fifteen years died from all causes under medical treatment in the city of New York last year, as against thirty-two who are shown by the published list to have died under Christian Science treatment in the entire United States in thirteen years.

"These facts show why Christian Science parents have more faith in Christian Science than in drugs for themselves and their families. If any school of medicine could guarantee cures, it would not be necessary to arrest people in order to compel them to employ doctors of that school. Why do the newspapers call attention in a spectacular way to the death of one child in New York city in thirteen years under Christian Science treatment from diphtheria, when more than fifteen hundred children under the age of fifteen years died last year in the city from the same disease under medical treatment without the newspapers saying a single word about the failure of the doctors?

"Really in all fairness why should not the doctors be arrested for allowing these fifteen hundred children to die from diphtheria under their treatment, the same as a Christian Science practitioner is arrested when one patient dies from the same disease under her treatment? Or why not arrest the mothers of these fifteen hundred children for employing doctors who allowed their children to die, the same as to arrest the mother of the one child who employed a Christian Science practitioner?"

The *Westchester News* of White Plains, N. Y., also published the above statement by Mr. Strickler, which it introduced with the following editorial caption:—

"Very often articles appear in the daily and weekly press of the country in relation to Christian Science, but to our way of thinking the following statement of facts contains an abundance of food for serious thought before passing the subject lightly on."

[From *Chicago* (Ill.) *Journal*.]

Some attempt is made among pronounced opponents of Christian Science to make much out of the announcement that a branch of the church in New Jersey has seceded from The Mother Church in Boston and started in business for itself on an independent basis.

It is fitting comment upon such attempt that, since Mrs. Eddy's death, only two other branches of the denomination have taken similar action. Both were very small bodies and practically under the management of one man. And nothing has been heard of them since they seceded. At the same time, many new congregations have been organized and new church structures erected.

So far the believers have held fast to the faith and practice taught by the Founder of the sect. And their number is increasing. Non-believers may criticize and oppose. But Christian Science "stays."

[From an editorial in *West Texas News*, Del Rio, Tex.]

The phenomenal growth of intellectual religion as propagated by the Christian Scientists is the logical result of the application of the God-given attributes of love and intelligence whereby spiritual elevation is attained and love, the essence of religion, is manifest.

Ten years ago Christian Science was denounced in the pulpit, in the home, and in the halls of learning. Today it is recognized by all thoughtful, intelligent people as a religion of the heart and mind. It has withstood the criticism and denunciation of orthodoxy and has passed into a new stage of existence by the simple but dignified process of the great Master's mandates of extending love to all and by quiet but persistent appeals to the higher spirituality of mankind. It is true that much opposition is yet dominant in country pulpits, but that increases rather than diminishes its power and influence, by contrast. People are reading and are gradually awakening to the manifest truths upon which the new religion is founded, the modern intellectual interpretation of the Holy Bible and the Christ-life.

The *West Texas News* is not an apologist of Christian Scientists—they need none—but this article is written with a desire to minimize, if possible, the intolerant and uncalled-for criticisms in local pulpits and in local organizations whereby disciples of the new church are practically and individually boycotted in their vocations in life. Several instances have come to our knowledge of such unchristian-like and intolerant procedure, and it is our privilege, in the interest of Christianity and humanity, to appeal for justice to all—discrimination against none.

It is just such unseemly, unchristian, uncharitable work as this that is disrupting the denominations and drawing people by the scores and thousands to a thoughtful study of a religion that teaches only love; not the love of the sexes, but the love which passes all understanding, the love that created the world—the love that radiates from the eternal throne of the omnipotent, ever-merciful God.

[Editorial in *Quincy* (Ill.) *Herald*.]

When the Rev. A. LeGrand announced as his subject Sunday, "Why Does a Righteous God Allow Suffering?" we had hoped to have some satisfactory explanation of something that has worried the world ever since the world was. The good minister was rather clever in his presentation of the subject. He told how man was ennobled by suffering; how it was a benefit in checking too great complacency and self-sufficiency in prosperity; that suffering was the alchemy which refined out the coarseness and separated the good from the bad. "True greatness is the result of much hardship. Suffering may also remind us that we are on the path of error. When we turn from right and duty, suffering overtakes us, not for the purpose of punishment, that vengeance may be wreaked upon us, but to turn us to the path of right. Many a man has stopped abusing mind and body because of the warnings of pain."

All of which, while it sounds well and may give a very good explanation of the value of suffering, still does not answer the question of the text satisfactorily. Why does God permit it? Why does the great creator of everything that is good, create evil? With all power, all wisdom, all goodness, why does not God make man perfect and good, so that there is no need for him to suffer pain or do evil? That is the puzzle which most religious sects and theologies have tried to answer for ages in vain. Concede, as all Christians do, that God is absolute goodness, and that He made everything that was made, how can the idea of evil and suffering be reconciled with His infinite goodness? The Bible says, "And God saw every thing that he had made, and, behold, it was very good." Where, then, does all this evil and pain that fills the world with never-ending anguish come from? If God created them, they cannot belong to the things that He saw were "very good." If He permits suffering, is that an attribute of goodness? If an earthly parent allows his children to suffer from disease and pain when he could prevent it, would any one say that he was a good father? Now, if God did not make evil, where did it come from? Did something else make it? If so, then there is more than one creator, and God is no longer the only power and "great First Cause." That takes away from divinity its infinity, and God is deprived of His absolute character as maker of everything that is made.

There may come a time when advanced metaphysical understanding may be able to explain to poor, weak mortals why an all-wise, good, and righteous God inflicts suffering and evil upon our helpless race. As yet theology, notwithstanding its philosophic and high-sounding speculations and explanation, has not been able to elucidate this mystery to the satisfaction of mankind. One sect, which is discredited somewhat by other churches, has a solution which possibly may possess advantages over the others in answering this question, if their doctrine could be understood and accepted. They maintain that since God created everything and it is conceded to be all good, the existence of evil is an unreality; that just as every one of the material senses deceives us at times, so we are deceived by our material belief in the reality of evil; that wrong thinking makes suffering and all the ills that beset frail humanity; and that there may come a time in the consciousness of every one when, looked at from a spiritual rather than a material standpoint, he may recognize evil and pain as a delusion or a dream, having no actuality. When this mental attitude is reached, these metaphysicians maintain that suffering and evil will disappear into their native nothingness.

This may seem difficult to comprehend, but perhaps it is no more difficult to accept than the belief that an all-good, righteous God is the creator of suffering.

[Edward W. Dickey in *Los Angeles* (Cal.) *Herald*.]

To call Christian Science "Eddyism" is just as logical and fitting as to call algebra "Newtonism." Christian Science is a science and not contingent upon any human personality. It is not an invention or creation of Mrs. Eddy, but solely the outcome of her spiritual study and research. It is a subject so vast that it cannot possibly be regarded in the light of an "ism" or "ology." It is not a mere doctrine. It is too large for a creed, and it goes beyond mere form in worship. There is no insubordination to the divine law of Life, inaugurated by the Master, taught in Christian Science, but on the contrary an undeviating adherence thereto. Christian Science makes for purity, righteousness, honesty, and good will to others. In fine, Christian Science is but the scientific statement of Christianity. The two are indissoluble and cannot be considered separately. For this reason Christian Science cannot be considered as akin to any human teaching or system. Furthermore, it cannot be understood in the light of these teachings, nor explained by means unlike itself, because it is spiritual, entire, and complete.

Our critic asks the question, "Is Christian Science Christian?" and then as a preliminary to his conclusion that it is not Christian he declares that Christian Science denies a personal God. If he had studied what Christian Science teaches on this subject, he would have found the following on page 116 of the Christian Science text-book: "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." In amplification of the foregoing, Mrs. Eddy writes: "We understand that God is personal in a scientific sense, but is not corporeal nor anthropomorphic. We understand that God is not finite; He is infinite Person, but not three persons in one person. Christian Scientists are theists and monotheists. Those who misjudge us because we understand that God is the infinite One instead of three, should be able to explain God's personality rationally. Christian Scientists consistently conceive of God as One because He is infinite; and as triune, because He is Life, Truth, Love, and these three are one in essence and in office" (Messages to The Mother Church, p. 40). The Christian Science text-book on page 587 defines God as follows: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all-substance; intelligence." It is not possible to obtain a clearer definition of God as person than that quoted above from the Christian Science text-book, when we regard the word person in its correct sense.

Because God is infinite, He works according to infinite laws. The word infinite precludes the possibility of time. What was done through an understanding of God in the year one can be done in the year 1911, and all other years. The word infinite precluding the possibility of limitation, God is omnipotent or all power, in fact the only real power in the universe. Christian Science therefore reveals the God of the Bible, "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies." Because God is good, His laws are good and are therefore for man's integrity, health, and well-being. Christian Science declares unreservedly for an infinitely good God, who is, as John said, "love," and who does not send sickness or sin to afflict the race. If we are to be stoned, this is the place to stone us, for we rest our full hope of salvation on the boundless goodness and love of God, who is "of purer eyes than to behold evil."

Christian Science is not pantheistic. Pantheism (which is from the Greek *pan*, all, and *theos*, god) means that God and the material universe are identical. The word is defined in Webster's as follows: "The doctrine that the universe, taken or conceived of as a whole, is God; the doctrine that there is no God but the combined forces and laws which are manifested in the existing universe." Pantheism is a sort of middle ground between atheism, which denies the existence of God, and theism, which teaches belief in God. It is inductive, going from effect back to cause. It makes

Digitized by Google

matter, if indeed it regards matter, the necessary expression of a God who is Spirit, and includes sin and evil in the divine order. Christian Science is entirely spiritual in premise and conclusion, and is deductive, going from cause to effect. It includes the conclusion that the man and universe which is the basis of pantheism is a counterfeit of God's real spiritual man and universe. When one grasps the meaning and significance of what Christian Science gives, it is readily seen that sin, disease, and death are not a part of God and cannot possibly be, any more than "light can commune with darkness," or "Christ have concord with Belial." Christian Science, therefore, declares and proves evil, root and branch, to be unreal, without basis, foundation, or cause, and *something* to be denied and cast out through a *realization of the infinite* power and presence of God.

Because Christian Science declares sin is not a part of the "very good" things which the Scriptures declare God made, it does not in consequence overlook the fact that belief in sin and evil pertain to mortal existence. It is doubtless true that this statement of Christianity constitutes its students a "peculiar people," but there has never come to this world, either as a philosophy or religion, a teaching that so clearly, so concisely, and so demonstrably shows the necessity of overcoming "the world, the flesh, and the devil" as does Christian Science. Christian Science bases the whole of salvation upon an infinitely good God, but it shows that there cannot be salvation and attainment of "everlasting life" without the acceptance and living of Christ's moral standard. Christian Scientists have set their hand to the most stupendous task that has ever engaged or ever will engage the attention of men—namely, the extinction of evil. They are taught to bring "every thought to the obedience of Christ." Christian Science is emphatic in its confirmation of the Scriptural teaching that "whatsoever a man soweth, that shall he also reap." It reveals the imperative necessity of grappling with and overcoming all evil through the power of God.

The denial of evil in Christian Science means such a denial as puts sin aside and quenches all thought of it. Through the revelation of God's omnipresence and omniscience that comes in Christian Science, the sinner is encouraged to master all sense of sin and destroy it. He learns that God, good, is the only real power; consequently evil is without power, allurement, or attraction. He learns that sin is not something to be loved or feared, hence it ceases to exist for him. Through the unceasing prayer of Christian Science the sick and the sinner reach the consciousness of the ever-presence of an infinitely good God, and prove that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." Christian Science teaches one Christ, the Christ of the Scriptures, and also declares that Christ is divine.

[Howard C. Van Meter in *Hood River* (Ore.) *News*.]

While appreciating the kindly tone of the editorial commenting on Christian Science, there are a few references that might make it less easy for your readers to approach the study of this subject, which you will not mind having pointed out.

Christian Science is the name given to an exposition of religious teaching by Mary Baker Eddy. As you say, the ideas advanced are not new. This is because they are to be found in the Bible, if the teachings thereof are spiritually and scientifically discerned. Mrs. Eddy's work tends to promote this, and consequently makes the truth contained therein more available today as a means for abolishing evil. The words and works of Christ Jesus are better understood, and thus become more potent in bringing a greater and more enduring experience in good to every earnest seeker.

Inasmuch as Jesus declared, "The Father that dwelleth in me, he doeth the works," and also taught reliance upon spiritual rather than material means, it is easily recognized that "the Father" means infinite Spirit, or divine Mind. The expression of this Mind is therefore divine, and it was the presence of this truth in him that constituted the divinity of Christ Jesus. This the Christian Scientist believes in, and therefore is not to be properly charged with repudiating the divinity of Christ, as you infer. As to the circumstances of Jesus' birth, Mrs. Eddy says on page 70 of "Retrospection and Introspection": "We do not question the authenticity of the Scriptural narrative of the Virgin-mother and Bethlehem babe, and the Messianic mission of Christ Jesus."

The healing effect wrought in Christian Science is in no sense "to be ascribed to the rehabilitation of the will." It is rather a giving up of the human will to the divine. The text-book of Christian Science, "Science and Health with Key to the Scriptures," says on page 482, "Christian Science is the law of Truth, which heals the sick on the basis of the one Mind or God;" also (p. 490), "Human will is an animal propensity, not a faculty of Soul. Hence it cannot govern man aright."

[*Duluth* (Minn.) *News-Tribune*.]

No matter what your religion is, a Christian Science lecture will do you good.

[Herbert M. Beck in *Southwest American*, Fort Smith, Ark.]

There is hardly a fundamental of law better known and established than that a religious belief is no excuse for an overt act of crime. Otherwise the law might find no check for certain human sacrifices sometimes sought to be made in the name of religion, or for polygamous marriages among certain people, or the like. It should be thoroughly understood that Christian Scientists do not refrain from medicine merely in support of some theory, ology, or ism, but because, in their judgment and experience, they have a better and more efficient therapeutic agent. Christian Scientists merely choose to rely upon a remedy that is wholly mental and spiritual, and they do this because, according to their observation and experience, it provides the best health and the most of it in the shortest space of time.

Nothing short of doing the best one knows will mark the action of a "reasonably prudent man" (which is the law's standard), whether in the exercise of his judgment he chooses to depend upon allopathic, homeopathic, eclectic, osteopathic, Christian Science, or any other form of treatment, provided always that he can show reasonable judgment and prudence in so doing.

WHEN ALL ELSE FAILS.

CASSIUS M. LOOMIS.

Dost thou, dear one, still face an angry sea?
Do clouds of darkness yet encompass thee?
Do seething white-capped breakers, giants they,
About thy ship with vicious moanings stay?
Then lift thine eyes to yonder pilot tower;
Thy Friend is there, however dark the hour.
The hand of Love, unfailing, tried and true,
Is sure to bring thy bark with safety through.

Hast thou been turned away from earthly ties?
From all that worldly wealth and station buys?
Alone? bereft of hope and sick at heart?
Hast thou not strength to act thy given part?
Then turn to God in thy extremity;
The hand that was thy pilot out at sea
Is guiding into harbors safe and fair,
And Love's supply will ne'er be wanting there.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"COMPARISONS ARE ODOROUS."

On page 327 of this issue we copy from the news columns of the New York *World* an article which deals with recent criticisms of Christian Science. The reason for the statements made in the article is, as explained, that a short time ago the *World* compiled a list of thirty-two children who were alleged to have died under Christian Science treatment during the past thirteen years, not in New York city alone, but in the entire country.

Whether or not the list was authentic or complete we do not know, but as the article was intended to discredit Christian Science, it is probably safe to assume that all available instances were included, yet what do we find? Simply that the failure of Christian Science treatment in the cases of children, during thirteen years and in the entire country, averaged about two and one half per year, while the failures of all other kinds of practice, or no practice, in the cases of children in one year and in one city alone, were over twenty-seven thousand. It may be claimed that some percentage of these twenty-seven thousand did not receive medical treatment, and this is probably true, but we should have to concede that ninety per cent of these cases failed to receive medical treatment (which is not true) in order to bring the ratio of failures of medical practice and the failures of Christian Science practice down to a thousand to one; and even then the proportion would be on an unequal basis, because the medical failures are counted in only one city, while the failures of Christian Science practice are counted in the whole country. As a matter of fact the ratio, according to the figures of the *World* and the official figures quoted by Mr. Strickler, is over ten thousand in one city to one in the whole country.

It is also to be noticed that the list published in the *World* included ten cases of diphtheria in the whole country in thirteen years, whereas there were seventeen hundred and fifteen fatal cases of this disease in the city of New York alone in one year under medical treatment, nearly all children under fifteen. These figures do not speak well for the claimed superiority of medical treatment, neither does the fact that a few years ago in the city of St. Louis more than ten children died within a week from the effects of antitoxin administered to them by physicians. These children, so the record showed, did not have diphtheria at all, but the antitoxin treatment was given to them as "preventive medicine." It certainly prevented them from having this disease, but think of the anguish of the parents who, in some cases at least, had little if any choice in the matter of entrusting the lives of their children to supposedly skilled treatment. Yet no one, so far as we know, was arrested because "somebody blundered," nor were the parents haled into court for having employed or permitted what they or some one in authority considered the best treatment for these children. The inconsistency between this instance and the one in New York city which occasioned the compilation instituted by the *World*, is certainly striking.

The opponents of Christian Science treatment have always been ready to seize upon every instance of its apparent failure, but the absurdity of attempting to discredit a system of healing which shows a ratio of but one failure in the whole country to ten thousand in medical practice in one city, as the figures above quoted show, seems to have escaped them. The thinking public, however, can be trusted to draw a "safe and sane" conclusion.

ARCHIBALD MCLELLAN.

THE LESSON-SERMON.

It is possible that not all who study the Lesson-Sermons which appear in *The Christian Science Quarterly* are conscious of the vast scope of the topics considered. There are in all twenty-six subjects, which are repeated twice in each year, and these cover the whole groundwork of theology,—of God, of man's relation to Him, and also of man's relation to his fellow men. No vital doctrine of Christian faith is omitted from these Lesson-Sermons, and the one who studies them prayerfully and intelligently twice a year has gone deeply into the Bible, that treasure-house of spiritual lore, guided by the search-light of Truth. Some of the subjects lead at once into familiar lines, *especially so far* as the titles are concerned, while others are *almost startling* in their presentation of themes which are too little understood, but which have no lack of Scriptural authority.

One of these themes is the Lesson-Sermon which has for its title, "Ancient and Modern Necromancy, *alias* Mesmerism and Hypnotism, Denounced." It is probable that many professed Christians fail to see the need for a discussion of this subject, and this on the assumption that Christianity has banished necromancy with all other idolatrous beliefs; but the question is a vital one, and we cannot be too sure that we are lifted wholly above the darkening error which it involves. When the children of Israel were on their way to the promised land, they were given the most solemn warnings against all forms of idolatry, including necromancy, divination, and against "observers of times." They were told that the nations which were driven out before them practised all "these abominations." We however find that on many occasions the chosen people lapsed into these evils, and their failure to be true to the one God, the one Mind, "paved the way, to villain bonds and despot sway," to quote a modern poet.

In the prophecy of Isaiah we find these warnings repeated, and the unfaithful are told that neither "the astrologers, the stargazers," nor "the monthly prognosticators" can save them from the consequences of their disobedience to God's law. Malachi declares that God "will be a swift witness against the sorcerers" and other evil-doers, for the belief in a secret occult and evil influence would "rob God," infinite Mind, of "the glory, honor, dominion, and power everlastingly due [His] holy name" (Science and Health, p. 143). The modern inquirer into necromancy, astrology, or occultism seeks good apart from God, its only source, and inevitably finds evil; indeed the predictions of evil greatly outweigh the prognostications of good, but Christian Scientists surely need no warnings against error other than those found in the Bible and Science and Health.

Our beloved Leader points the way to universal freedom from this phase of error when she says, "The planets have no more power over man than over his Maker, since God governs the universe; but man, reflecting God's power, has dominion over all the earth and its hosts" (Science and Health, p. 102). What if there are predictions of evil, of days darkened by unseen baneful influences! These have no warrant from on high, and should be denied and put out of consciousness ere they go forth to work mischief on the plane of mortal belief, where ofttimes superstition hides under the guise of innocence. A prediction that evil can have special activity on any day is a virtual denial that God is omnipotent every day and every hour, a contradiction of the statement that "all things [including the stars in their courses] work together for good to them that love God." In St. John's vision we are told of the annihilation of all fear, hate, lust, and sorcery, everything that defileth "or maketh a lie," and the daily study and practice of the truth contained in the Lesson-Sermons is enabling countless thousands to see the holy city and find their own place therein, serving God and having His name written in their foreheads.

"GIVE, AND IT SHALL BE GIVEN UNTO YOU."

DESPITE all the joys and pleasures of the Christmas-time, most sensitive people soon come to realize that its giving is far from ideal. It is a bloom that too frequently lacks fragrance,—a sunset sky without either crescent or star. There is a fair form, but there is no beating heart within, and all this because it is more or less calculated, if not competitive; it is wanting in spontaneous impulse. It may be very kindly, but it is not free and natural. When, however, some little token tells of love's patient and perchance self-sacrificing efforts to supply another's need, the presence of the saving quality of true kindliness is recognized, and such giving is never forgotten; but when, as is so often the case, we have a feeling that we have received or are giving because it is the 25th of December and something is expected, or because some sense of indebtedness is being canceled, then we know that the heart of the deed is pulseless and cold; that we are celebrating a pagan rather than a Christian rite.

The spirit of the true Christmas is the spirit of love, and love is perennial, continuous. From the altar of its pure heart the perfume is forever ascending. We must needs date a human event, but the nobler Christmas celebration honors that divine appearing whose radiance floods every morning and every evening of the years. Instead of consenting to any bondage of time-necessity, or custom-requirement, it cultivates the habit of doing and saying the truly helpful thing upon every occasion, giving of good whenever the need and the opportunity is presented.

When Christmas day brings a gift we say, "That was very good of him," even though it prove a trial to our taste: but when in some weary week there comes to us a little show of remembrance, of appreciation of our load and the heroism of our effort to bear it, then we say, "That was so dear of him," and through our tears of gratitude we gain a clearer vision, see a brighter sky, for days.

Human sense is wont to locate ideal things. It anchors them to persons and places and seasons, while spiritual sense is forever giving them the freedom of the universal, the liberty of the sons of God. Thus, for the spiritually-minded the Sabbath day speedily gathers under its wings all the days of the week, and the Christmas giving becomes an all-the-year-round offering upon the altar of brotherhood. This is the vision and impulse of the true Christian Scientist. His best sense has been expanded in every direction, it has begun to dominate his every thought and deed. Goodness is now a wellspring within him, springing up in an everlasting life. He is forever finding just the time and just the thing to give, that there is always some uplifting thought to express, some helpful thing to do. He is adding richness and breadth of meaning to unnumbered little relations, freighting every least sprig of thought with love's crystal dew. The pressure of a simple handclasp may be made to preach a sermon if we have but learned the secret imbedded in those wonderful words: "God so loved the world."

And the best of it all is that this true giving unseals the fountains of other lives. As one walks through the New England pastures, he comes upon many a delightsome leaf and blossom, but the charm of the bayberry and the sweet fern is disclosed only as he gives them the warm handclasp of affection. Then they open their treasures. So, too, as we walk among men in the ofttimes stony pastures of human experience, we may not only find for ourselves but bring to others the abundance of good, if we but awaken to the true meaning of Christmas, the Christ-coming: begin to reflect the love of God in all things, at all times, and toward all men. This is the Christian bearing which our profession enjoins and which the world has a perfect right to look for in us, and thus only can we hope to make our lives a benediction to those about us.

JOHN B. WILLIS.

AMONG THE CHURCHES.

PORTLAND, ORE.

A most important step in the Christian Science movement in Portland will be observed today [June 11], when the imposing new church edifice, at Nineteenth and Everett streets, will be opened for service. It has been two and a half years since the members of First Church of Christ, Scientist, decided to erect a church structure of such pretentious plans. The building lot, covering half a block of ground, was acquired at a cost of twenty-three thousand dollars. An active campaign for funds was started, and the church soon found that it would have enough to erect the style of building that was desired. The edifice itself cost over ninety thousand dollars. While the church has been built mainly through the efforts of its own congregation, the members have appreciated greatly the helpfulness and interest shown by Second Church members, who have contributed frequently to the cause and last Thanksgiving gave their entire building fund of two thousand dollars toward the erection of the church.

In point of artistic beauty, the edifice is believed to equal that of any other church building in the city. In its style of architecture it follows the general trend of Christian Science churches, which is toward severe simplicity of classical lines. The exterior walls were constructed of Wilkeson sandstone from a quarry in Washington. The spacious auditorium with mahogany pews is reached by six wide stairways from the first floor, entrances to which are at both ends and on Everett street. The auditorium has a seating capacity for thirteen hundred people. The interior finishings are simple but beautiful.—*Oregonian.*

GLENS FALLS, N. Y.

At a quarterly meeting of First Church of Christ, Scientist, at the church on Warren street, the matter of building a new church on the plot of ground owned by the congregation at Lincoln avenue and Davis street was discussed at length, the unanimous decision being that work should be started upon it as soon as possible. [The work has since been started and the foundations are built. It is not expected that the building will be ready for occupancy before spring.]

The edifice will be somewhat larger than the present place of worship, having a capacity of between two hundred and seventy-five and three hundred. It will be set at some distance back on the lot, and will be built diagonally on the lot facing the corner. It will be constructed of hollow tile with stucco exterior.—*Glens Falls Times.*

MONROE, LA.

The Christian Scientists of Monroe wish to report on the work of the cause in this city. In October, 1907, three persons interested in Christian Science began to read the Sunday services together at the home of one of their number. Gradually others became interested, until we had quite a large attendance; and in August, 1909, we organized ourselves as a society and moved into two small rooms in the Masur Building. In nine months we had outgrown these quarters, and moved into Annex Hall, Opera House, where our services are now held. We gave our first lecture last spring, and it was well attended.

Our growth has been steady, though sometimes seemingly slow, and we are greatly encouraged, knowing that if we do our part in planting the true seed, it cannot fail to spring up and bear fruit.—*Correspondence.*

pouring was a lecture on Christian Science, under the auspices of First Church of Christ, Scientist, by William R. Rathvon. The lecturer was introduced by Byron B. Hatherell, first reader, who said in substance:—

The lecture subject for tonight is "Christian Science," a new light on an old subject. Christian Science rests entirely and unreservedly on the words and works of the humble Nazarene. In his resurrection and ascension the great Master, the great demonstrator of spiritual Truth, Life, and Love, provided a way of escape for all mankind from the baneful influence of belief in sin, sickness, and death, want and woe. There is a legend of Jesus which says that as he walked away on the morning of his resurrection, sweet flowers grew in the path behind him. According to Christian Science, the flowers that mark the way are ever unfolding in each individual consciousness, and when their sweet fragrance is recognized the effect is quietness from fear of evil and blessed assurance that the Christ, the true idea of God, has indeed risen.—*Racine Journal.*

GREENVILLE, MICH.

The Rev. William P. McKenzie delivered a lecture on Christian Science in the Congregational church Nov. 3 to a very attentive audience. He was introduced by the Rev. Julia Gould Moffatt, who said:—

In Paul's letter to the Thessalonians we read, "Prove all things; hold fast that which is good." Christian Scientists who are present tonight, and hundreds and thousands all over the civilized world, who have been benefited through the study of Christian Science, are obeying Paul's injunction and are holding fast to its teachings, for it has been proven good to them. It makes better men, women, and children, and happier homes. It therefore becomes a pleasant duty for me to introduce the speaker of the evening, who will explain to you the teaching and doctrine of this wonderful truth in such a manner that those who are its students may get a clearer, better view of what it really is, and those who are not may have a desire to know something of this great question as to what is truth, a question which is agitating intelligent thinking people throughout the world today.—*Correspondence.*

FRANKLIN, MASS.

Odd Fellows Hall was well filled last evening [Nov. 6] with followers of the Christian Science faith and others, and for more than an hour the speaker, Willis F. Gross, held the closest attention of his audience by his eloquent and logical presentation of the tenets of this faith. He was introduced by the Rev. Mr. Marvin as follows:—

I am glad to be invited to introduce the speaker tonight for two reasons. First, for my own instruction in the teachings of Christian Science. I am not particularly young, and yet I have never attended a Christian Science meeting before. Ministers do not get many opportunities even as laymen to visit different churches, and are kept pretty closely confined to their own particular flocks on Sundays. Probably there are people here tonight to whom the teachings of Christian Science are unfamiliar. We have known of a little company of people meeting in this room for some years, Sunday after Sunday, but we have not taken particular pains to find out their point of view. Tonight we are to be informed. As far as interest and attention go, I do not believe the speaker will be able to distinguish who are the Christian Scientists and who are strangers. Franklin is an academy town, and therefore may be expected to be hospitable to all forms of religion.

Another reason I am glad to be here is because the history of the Christian Science church presents a certain parallel to my own church. Both were born into a hostile world. Both have had to face criticism and opposition. Both were hardly wanted by the world, and both have been plainly told so. But we are here tonight, and the fact that your church and my church have persisted in spite of opposition, perhaps because of it, are good reasons for their existence, and for our presence here to learn one more chapter in the book of truth. Surely any organization that can survive, as these two churches have survived, the slings and arrows, has justified its existence and being. These two churches have a future simply because they can rise triumphantly above these tribulations and at the same time feel no spirit of bitterness toward those who have differed from them.

Down in Rhode Island there is a little church that has this sign in it, "Churches are many as the waves, but religion is one as the sea." The angles of approach to God are many, but it is one and the same God we are all trying to seek out. So, I wish your church complete success in your particular search after God.—*Franklin Sentinel.*

CAMBRIDGE, ENGLAND.

On Thursday evening, Nov. 17, at the Christian Science Church in Panton street, Bicknell Young addressed a crowded audience on Christian Science. Major Wade, who presided, and introduced the lecturer, said in part,—

The motive which above all others inspires these lectures, is the gratitude which Christian Scientists feel for the good that has come to them through Christian Science, and they consider that the most practical way of showing their gratitude is to make the knowledge that has helped them available to others. The object of these lectures is, therefore, to give those who may have heard something of Christian Science, perhaps in a fragmentary way, and who wish to learn more of it, an opportunity of hearing about it from one who is authorized to speak in its name; and also to remove misconceptions which may have arisen owing to discussions of the subject in the press or elsewhere.

My own experience of Christian Science goes back to about six years ago, when I came to it for healing. I found in it not only healing, but a Principle which one could learn to apply to every kind of problem, and a religion which was pure and simple and which satisfied the intelligence. When I used to live in this town, as a boy, there was I believe not one Christian Scientist in Cambridge, and at most a score in Great Britain. This building in which we are assembled is a very tangible evidence of the numbers who since then have found something in Christian Science which has rewarded them for impartial and patient investigation.

Correspondence.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Bakersfield, Cal.—Frank H. Leonard, Bakersfield Opera House, Jan. 6.

Bishop, Cal.—Frank H. Leonard, Bishop Opera House, Jan. 2.

Boulder, Col.—William R. Rathvon, Curran Opera House, Jan. 2.

Chico, Cal.—Frank H. Leonard, Majestic Theater, 3 p.m., Dec. 31.

Frankfurt a. M., Ger.—William D. McCrackan, M.A., Loge Sokrates, Hochstr., Jan. 11.

Portland, Me.—Virgil O. Strickler, Jefferson Theater, 3 p.m., Dec. 31.

Pueblo, Col.—William R. Rathvon, Grand Opera House, Jan. 4.

Rochdale, Lancashire, Eng.—Bicknell Young, Royal Hippodrome, 3:15 p.m., Jan. 14.

Wichita, Kan.—Francis J. Fluno, M.D., Auditorium, 3 p.m., Dec. 31.

TESTIMONIES OF HEALING.

It is with a heart full of gratitude to God that I send this testimony to the healing and regenerative power of Christian Science. It is now a little over two years since I was rescued from the horrible pit of agnosticism. For about twenty years I had been seeking God in active evangelistic work, hoping against hope that the assurance of a future salvation, of which others seemed to speak with such certainty, would one day be mine; but the God I sought to worship seemed to me like the god of the children of Baal, too far off to hear, and yet I read in the Scriptures that He both heard and answered prayer. The doctrine of Calvinism crowned the grave with victory by making death the possible portal to everlasting misery. Later, reason and philosophy took the place of religion, but when I read of the miracles performed by Jesus of Nazareth, and that he came to do the will of his Father, I wondered if God had changed His will, when the Christian churches of today were doing nothing in the way of healing the sick. I had been taught that God was the forgiver of my iniquities, but my diseases had to be entrusted to some other power. Further, I could not get away from the suffering and sin I saw around me, and the assumption that if God was the only cause and creator, He must have created them. It then became impossible for me to reconcile the knowledge of their existence with an all-loving Father, so I soon found myself adrift on the sea of doubt—doubt even of the existence of God.

Such was my condition when Christian Science found me. I had stopped all religious work, had ceased to pray, had even stopped my reading of the Bible, for it now was to me only a book of beautiful thoughts which had proved of no practical value. What a glorious revelation it was to learn through the teachings of Christian Science that "the Lord God omnipotent reigneth," and that He is Love! It put new heart in me. For some time I confined my reading to Science and Health, and when I took up the Bible again it was a new book and I could with difficulty lay it down. I had found the only living and true God, and His Christ.

I saw quite clearly that as Jesus came to do the will of his Father, then the destruction of sin and disease was his Father's will; and as God is changeless in His wisdom, the miracles of Jesus could be repeated today. Christ had not left the earth two thousand years ago, but was ever present, the perfect idea of the perfect Principle, God. The Psalms became a storehouse of beautiful promises, the ninety-first being changed from poetry to a practical possession, "the whole armor of God." The eleventh chapter of Isaiah, which latterly I had looked upon as the limit of poetic fancy, was now to me the demonstrable teaching of Christian Science,—Immanuel, "God with us."

It is this redemptive work of Christian Science that I am most grateful for, but I am not without proof of its healing power. Jesus said, "Watch and pray, that ye enter not into temptation;" and Mrs. Eddy in Science and Health repeats that counsel in these words, "Stand porter at the door of thought" (p. 392). Through failure to do this I arrived home one evening feeling very unwell. The entire night was spent in severe pain accompanied by sickness, this condition lasting through the next day. Although no medical man had been called in to diagnose the case, I felt sure the symptoms were those of appendicitis, and when I related the symptoms to a personal friend who is a medical man, he said there seemed to be no doubt as to the cause of the suffering. My condition becoming no better, toward the evening of the following day I telephoned for help, which was almost immediately given. About two hours after treatment had been started I knew I was healed, and the experience of that night was one that words will never enable me to describe. The pain and fever left gradually, but I had such a delightful sense of peace, and I drank deeply at the fountain of divine Love. How real these words of Isaiah were to me that night, "Thou wilt keep him in perfect peace whose mind is stayed on thee." I had often read in the Psalms these words, "Who forgiveth all thine iniquities; who healeth all thy diseases," but this was a glorious realization of their truth. God had indeed been to me my refuge and my strength, "a very present help in trouble."

I am deeply grateful to God for the revelation I have had of Him through Christian Science; to Jesus Christ the Wayshower; also to our Leader, Mrs. Eddy, for her rediscovery of the Christ-Science, so plainly set forth in Science and Health that he who runs may read.

JAMES WARDLE, Greenock, Scotland.

[Translated from the German.]

Two and a half years ago I was led through divine Providence to Christian Science. Three years ago my little daughter, while on a visit with her grandparents, slipped while running out of doors, and in falling apparently injured her hip severely. She complained of pain and had to stay in bed. We immediately took the child home, and a physician in good standing (who is also the head of a local hospital) was consulted. An X-ray examination of both the leg and hip was made, but it seemed impossible to locate the injury. The physician said that the diseased leg must be taken great care of, and advised much fresh air. Here I would like to mention that my little daughter limped very much, and in walking would fall on her side.

Things went on this way for fully nine weeks, the child being in bed during the forenoon daily. One day she made a false step, and falling on the diseased limb was unable to rise from the floor. We carried her to bed amid agonizing cries, and she lay there a long time, unable to move. A gentleman with whom we were acquainted then gave me the address of a skilful specialist, who had my child taken to his clinique, where she lay for four weeks with the leg extended, it having, as he said, become shorter than the other; but six weeks later the child was dismissed with no hope of the limb ever becoming normal. The child was by nature very cheerful, but she became weighed down by this sad prospect. I then said to her that we should pray to God to heal her limb—that nothing is impossible with Him; and I believe the child clung to this thought. After she again became able to go without crutches, although limping considerably, I called once more upon a well-known professor at Heidelberg. He told me at one glance that it was a case of fracture, and that every penny I might spend for a cure would be in vain. Later on I had another examination of the hip made at the Frankfort city hospital, and this time it clearly became apparent that it was an injury of long standing.

My husband and myself were very much grieved at the thought of having to see the little girl go around deformed, as she is our only child, but we were to experience the power of divine Love. One day I met one of my former teachers, with whom I had not talked since childhood. Upon hearing of my distress, she told me of a case of healing through Christian Science. It seemed inconceivable to me, but I called upon a practitioner. Error, stubborn and rebellious, caused me many sleepless nights, but divine Love did not loose its hold upon me. I had treatment first, as I was in a state of mental depression; then the child was given treatment. Great patience with both of us was required by the dear practitioner, especially with me, for hopelessness and melancholy had struck deep roots in me. Gradually, however, the light dissipated the darkness in my consciousness, and the condition of the child improved slowly but perceptibly. There was no indication of curva-

Digitized by Google

ture of the spine or of the shortened limb which we had been told were to be expected. Our little daughter became entirely straight and has developed into a tall, healthy, buoyant girl. Her leg is healed, and while an almost imperceptible stiffness still remains, I am confident that with our growing understanding this too will disappear.

I thank God, good, with all my heart, and recognize Him to be Love, the source of all reality; and I herewith wish to express my sincere gratitude to the revered Leader through whose labors for mankind we were led in a way to receive these great blessings. In closing I would say that God is performing miracles in my consciousness. It seems rather difficult at times to write about one's own experiences, but I may say that from an afflicted woman I have become an energetic, active person, and am trying to show my gratitude by striving to live so that God may be glorified.—LINA BROFFT, Wiesbaden, Germany.

It is one year and nine months since I heard of Christian Science. A friend invited myself and husband to go to the Sunday evening service. We did so, and were interested. I wished to know more about it, so we went to the Wednesday night meeting to hear the testimonies of healing. I did not come to Christian Science for the healing, but I knew I had not enough faith, and I believed the day of the so-called miracles was past; but when I heard the testimonies of those who had been healed, I saw that this healing power was for all time, that Christ is "the same yesterday, and to day, and for ever." After the service I borrowed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read and reread it. It made me think of Christ in the days of old, meeting with his disciples and opening to them the Scriptures. I had loved the Bible from very early years and strove to follow its teaching, but now I prize it more than ever. It has brought divine Love nearer to me, and has taught me how to take up the cross and follow Christ.

I have proved this healing power of Truth for myself. I had a very bad rupture, which could not be cured by medical treatment. I am seventy years of age, and the doctor said this was against me. I was not acquainted with a Christian Scientist, but I went to see one of the readers of the church and told her of my trouble. She kindly offered to help me, and after spending a little time in silent prayer, she encouraged me by saying that all would be well. A day or two after, to my surprise, I did not need my appliance—I was healed! That is eighteen months ago, and I can lift any weight without fear. I had rheumatic fever in 1863, and have suffered from rheumatism, gout, and severe neuralgia since that time, but this too has been overcome, and any slight disorder that appears is overcome by divine Love, which meets all our needs. I had a stomach trouble which made me afraid to eat many things, but "perfect love" is casting out all fear and I can now eat anything I like without harm. I have also been healed of severe bladder trouble in one treatment, and have had no return of it.

My husband is rejoicing with me in this truth. We are happy in the consciousness that divine Love will help us to overcome all error. We are grateful for all these blessings. In the words of our Leader (Science and Health, Pref., p. vii): "To those leaning on the sustaining infinite today is big with blessings."

MRS. ELIZA WILKINS, Sydenham, London, S. E., England.

We read in the prophecy of Hosea, "I will ransom them from the power of the grave; I will redeem them from death." I am truly grateful to God, as well as to our beloved Leader, Mrs. Eddy, through whose loving and patient toil the true understanding of God and man is continually becoming clearer to our consciousness, so that now, through the power of this truth, the efficiency of the above verse may be proven.

In February, 1910, my mother, seventy-seven years of age, had a stroke of apoplexy, which would probably have been fatal but for the power of God as revealed in Christian Science. My sister and I declared the truth for her, but after a few hours it seemed, to sense, as if the end was near, and human sympathy and the sense of death seemed so to alarm us that we felt it was better to send for a Christian Science friend. As soon as she came God's presence and power was again declared and realized, with the result that our mother began to breathe quietly; gradually the color came back to her face, her eyes lost their dull expression, she raised the hand that had been helpless to her face, and not long after she was sleeping naturally. We knew that Truth had done the work, that death had been stayed. That afternoon and night she slept quietly; the following day, Monday, she began to talk a little, but her mind seemed to wander a good deal; on Tuesday she woke up perfectly bright, knew us, was able to talk, and sat up a little in the afternoon. On Wednesday she was perfectly well, so well in fact that in the afternoon she went to town and did some shopping.

Since this experience our mother has been brighter and more active than she had been for some time previous. God is indeed a very present help in every trouble, and I cannot express in words how deeply grateful I am for this wonderful truth.—HARRIET DENTON, Los Angeles, Cal.

I wish to add a few lines to express my heartfelt gratitude for the experience mentioned by my sister in the testimony above. I deem it a great privilege to have witnessed the wonderful transformation wrought by the word of Truth going forth with power, by which the dread of death with all its seeming terrors was changed into that peace which passes all human understanding.

ANNIE YOUNG, Pasadena, Cal.

[Translated from the German.]

"Prove all things; hold fast that which is good," wrote the apostle. These once seemed empty words, and the thought never occurred to me to put them to a test in practice. It is the world's prejudice which in time of need makes us seek help with men instead of with God, the All-in-all! It is only the fear of being scoffed at which holds us from turning to God. Fear drove me from one physician to another, but I only stepped into greater darkness, until I had become almost blind. I was told that it would be impossible to have an operation performed on the eyes, the trouble having become chronic.

A dear acquaintance then advised me to investigate the teachings of Christian Science, in order to know God aright and seek help in Him. I could not believe what she said, but all resistance seemed to be useless, as the way kept growing darker. Finally I made up my mind to apply to a Christian Science practitioner for treatment. I attended the services of the Christian Science church in Hannover in the company of my sister. The very moment I entered the church a great calm and a sense of peace came over me, and while listening to the Lesson-Sermon my thought was uplifted and I was filled with great joy. The Scripture, "Let there be light: and there was light," became true in my experience, for with a few treatments I completely regained my health, being able to grasp the truth quickly.

I thank God for graciously leading me to find people who showed me the way to divine Truth, and for the ministry through which I was freed from error, so that I can truly say I have tasted and seen "that the Lord is good."

FRAU BERTA TIEDGE, Shöningen (Braunschweig), Germany.

[illegible] greatly. If these evils try to manifest themselves now, I am able to overcome them with God's help and through my perception of Truth and Love. There is normal action of the bowels, for which I am very grateful, as I had formerly to use medicine every day. I can hardly express in words my gratitude to our all-loving Father, and next to Him to our beloved Leader, Mrs. Eddy, for having shown us the way to Truth so plainly.

HENRY J. EBER, Blue Island, Ill.

I am extremely grateful to Christian Science for the healing of a felon. A short time ago I awoke during the night with a painful finger, and applied what knowledge I had of Christian Science, with the result that I was soon free in my pain and asleep. The gathering, however, spread for about a week, and although it did not pain me, I grew alarmed and wired to a Christian Science practitioner to help me. The finger became apparently much worse, but it broke during the night, and I awoke in the morning overjoyed to find my hand quite comfortable, as the swelling was all gone. I have now a new nail growing, and am most grateful for this demonstration of the healing power of Truth.—FLORRIE ROBERTS, Bangor, Ireland.

In grateful recognition of what Christian Science has done for me, I desire to give expression to some of the blessings received therefrom. I was not in need of physical healing, but was hungering and thirsting for something better in a spiritual way than I possessed. When Science and Health was placed in my hands, I knew absolutely nothing about it, but it appealed to me from the first and its teachings seemed very beautiful to me. It also seemed reasonable, and I have never for one moment felt any antagonism to Christian Science or to our revered Leader. I am grateful for the enlarged understanding of God, man, and the universe which has come to my consciousness through the study of the Bible as illumined by Science and Health.

Through this understanding I have been able to demonstrate the truth for myself and others. I have had the privilege of class instruction, and I am indeed grateful for all the Christian Science literature, which always brings a special message to me. I am grateful to God, and also to Mrs. Eddy, who has so faithfully and lovingly given to the world the message of Truth and Love.

MRS. ELLA G. JOSEPH, Hopkinton, Iowa.

I am thankful to God for what Christian Science has done for me; not only for the healing of hernia of several years' standing, together with other ailments, and the thorough cure of the tobacco and liquor habits, but even more for the spiritual uplift which I have received. I am also grateful for the privilege of class instruction in Christian Science, as I have been enabled in a degree to make demonstrations over error for myself and others by the application of the truth. I am truly grateful for Science and Health, and for all of the Christian Science periodicals. It has now been about six years since the liquor habit was cured, nearly five years since my total abandonment of wearing a truss for rupture, and more than three years since I have used tobacco in any form whatever, and I consider the aforementioned cures permanent.

CYRUS P. JOSEPH, Hopkinton, Iowa.

Some time ago I was severely burned on my face, eyelids, neck, hand, and arm, by the explosion of a gas stove. I called a Christian Science practitioner, and in thirty minutes after she began to treat me I was perfectly easy and fell asleep. By the next morning one bad place had the appearance of at least ten days' healing. My husband and

---

[Translated from the German.]

I too feel it is my duty to give a brief expression of gratitude for the help received through Christian Science. It is nearly eighteen months since I derived benefit through treatment by a practitioner. My son-in-law, who was our family physician, went with me to see two other physicians, in order to hold a consultation. They decided that an operation should be performed, this being, as they thought, the only means whereby I could possibly be helped. I went to my office in order to settle my business, and chanced to meet an acquaintance, to whom I mentioned my troubles, and he told me about the mighty work which Christian Science was accomplishing; that he himself had for years sought healing in *materia medica* for his ills, but had failed to find relief until he was healed through Christian Science.

My attention having been drawn to this wonderful healing method, I was immediately willing to give it a trial, and the next day called on a practitioner. I experienced relief from the start, and absent treatment was given me, as I was too weak to go to the practitioner's. My son-in-law feels very happy about my having been helped. For many years I suffered with periodical attacks of stomach trouble, also an abdominal complaint, and in 1909 the attacks were more severe than ever before; I could retain no food whatever, and suffered great pain day and night, but I was to experience that man's extremity is God's op-

Digitized by Google

other members of my family insisted that I would be marked for life unless I used material remedies, but I was not in the least alarmed. I continued with Science, and in ten days my face was all smooth and perfectly healed, leaving no sign whatever of scars.

Several weeks later I had another demonstration of the wonderful power of Truth. I had all my life been subject to very severe attacks of quinsy, my suffering always being intense for a week or ten days. I had tried a number of the very best physicians, who administered medicine and other remedies, but all to no avail, as I could not sleep or even rest. My throat was so bad that I could not speak a word distinctly, could not take a morsel of food, or swallow even liquids. The doctors would finally say, after giving me many kinds of nauseous medicine, that the disease would have to take its course, that nothing could be done until it was time to lance the throat, and on one occasion it was lanced seven times. The last attack was in January, 1909, and as I was extremely alarmed to think of having to go through with such suffering and knew that no relief could be gained through material means, I sent for a Christian Science practitioner. After one treatment the high fever was reduced and my suffering allayed. With the third treatment I was entirely healed.

Both of these demonstrations have proved to me the healing power of divine Truth, which is realized in Christian Science, and that Truth is the only reality.

MRS. ELLEN N. MCROBERTS, Kansas City, Mo.

I wish to testify to the healing which I received through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Nearly seventeen years ago I was led to take up the study of Christian Science through my daughter having been invited to attend a Christian Science Sunday school held at a private home. I bought a copy of Science and Health, and read it in order to get a better understanding of the Bible, which had seemed contradictory to me. While reading the text-book I was healed of severe chronic headaches, also while going through class I was healed of mental depression.

For all these and for added blessings which have come through the periodicals, I am deeply thankful—more indeed than mere words can express—thankful to God, also to our loving Leader in Christian Science.

MRS. SOPHRONIA S. HEPLER, Seattle, Wash.

[Written for the *Sentinel*.]

REALITY.

MIRIAM ORMONDE SMALLWOOD.

THERE is no life but God!
Across the surging waste of mortal strife,
With luring rifts and shoals and glamour rife,
The star of ancient days gleams radiant white,
And truth, with feet unshod,
Soars upward through the trackless night.

There is no power but Love!
Uplifted from the stress of human aim
Into the unseen world, with heart aflame,
And vision quickened—born anew—
Love recks of things above,
And points with steadfast hand the true.

There is no way but Truth!
Through narrow paths and steep, its shining mark
Is beckoning, leading onward through the dark,
Up to the very heart of God.
Above all clash and ruth.
Truth's ever perfect road is safely trod.

FROM OUR EXCHANGES.

[Rev. Philip S. Moxom in *Christian Register*.]

The grand heresy, I think, has been the identification of the church with the kingdom of God. It is only an instrument for the realization of that kingdom. The moment it ceases to be that, and insists that it is an end rather than a means, the sharp, solvent air of our time will show the pretense or the blunder, and society will pass beyond the church in the great secular movement toward the fulfilment of the divine kingdom. The critical question of questions today is, Will the church align itself to the new conditions, the new truths, and the new demands? The answer to that question depends on the attitude and action of the teachers, the ministers, and the members of the church. The recent marked decline in the supply of able ministers is partly the result of the church's lack of adjustment to the life of the modern world.

It is a day of decision. Religion in the deep, true sense will not decline, revelation will not cease. There are foregleams of a new, a great spiritual experience. Science is giving wonderful intimations concerning God and the soul, the law of love, and the eternal life. A change greater than the passing from the Ptolemaic to the Copernican astronomy is coming. Will the church welcome it and assume the spiritual leadership? The change will come through doubt and struggle and fainting of heart in the timid, but it will come.

[Lyman Abbott in *Outlook*.]

The spirit of the Christ is Christianity. It was a spirit of consecration to a great cause and courage in prosecuting it; it was a spirit of sympathy with men and with all sorts and conditions of men; it was a spirit of forgetfulness of self and service of others; it was a spirit of companionship with his Father and an absorbing desire to accomplish his Father's will; in brief, it was a spirit of love, service, and sacrifice. Whoever is dominated and directed in his life by this spirit of love, service, and sacrifice is a Christian, whether he has been baptized by immersion, by sprinkling, or not at all; whether he thinks Jesus Christ is of one substance with the Father, of a different substance from the Father, or does not know; whether his devotional temper is best expressed by the mass or by a Quaker meeting; whether he worships in a Jewish synagogue or a Christian church.

[Walter Rauschenbusch in *Congregationalist and Christian World*.]

The evangelism of the past offered salvation to the soul and promised heaven after death. The evangelism of the future will offer fulness of life to the soul now and hereafter, demand the redemption of the social life of the nations from collective sin, and promise the reign of God on earth in justice and brotherhood. For ages the church has been crying, "Repent ye, for death is near!" Now it is learning to say, "Repent ye, for the kingdom of God is at hand!" The organized sinfulness and the scientific hopefulness of modern life have brought us around to the earliest of Christianity. The gospel of Galilee in the twentieth century—that is what this movement, half unconsciously, is reaching out for. If it has faith to proclaim that message, and to let the spirit of Jesus and the prophets set it on fire, it will reach the men and inspire the church.

[*Universalist Leader*.]

As to church unity, we are all getting quite sane in our consideration of this most vital matter. It was but a little while ago when the members of every denomination were willing to settle the question right off by admitting every other church to their fellowship, and it was thought it could all be accomplished by the adoption of a resolution in some

Digitized by Google

convention. But men are thinking, and thinking to some purpose when they begin to see that the ends of unity may sometimes be defeated by union! We need under present conditions many different forms of religious exercise to meet the wants and supply the opportunities of different men and classes of men. What we want is the federation and cooperation of all churches in the common work.

[*British Congregationalist.*]

Prayer is the act in which the members in the body of Christ understand and rejoice in their true relation to each other. In prayer they are most social. But it is this inherent social character of prayer which we most readily ignore. Jesus, it is true, left us in no doubt; but we have a way of beginning the *paternoster*, as an old writer said, with "Give us this day our daily bread." Yet before this there must be the cry to "Our Father," the hallowing of His name, and prayer for His kingdom and the fulfilment of His will. This we are tempted to forget, so that we may come the more swiftly to the personal petitions. We miss much, the church misses much in its corporate life, because of this failure to pray as Jesus taught us to pray.

[*Christian Work and Evangelist.*]

If part of the world seem to have no room for Christ, a larger part is making him to be born more really than ever in its life. If wars persist, peace and arbitration and Hague courts are outstripping it. If dishonesty pervades business, the public conscience has more of Christ in it than ever. If evil men are everywhere, there are more good men, and they are organizing for the reign of Christian ethics. If many of the world seem to be rejecting him—many rich and a few great ones—more men than ever are following after him, and he is being born in India, China, and Japan as well. It is not altogether true that there is no room for him in the inn today.

[*Churchman.*]

The outlook for the future of a religion that stands for the collective energy of good works and for efficiency in producing the highest and most progressive standards of moral life is certainly destined to solve that hard problem of the relation between religion and science. In fact, what has helped largely to produce the sense of strain between the facts of religion and the facts of science is that the formulas of religion have been so often treated as if they were the germ and the source of the religious life of society as well as the individual. If the matter is really looked at in its largest aspect, any one can see that today so much of dogma has become unintelligible because it fails to satisfy the obvious social needs of men.

[*Watchman.*]

The Bible itself, as a standard of faith and practice, tends to unify believers. Those who hold to it firmly as the Word of God get together more and more in their belief and practice. Their differences are due to the creeds of the past, but their unity comes through the Biblical standard. The Bible produces a certain simplicity of faith and a certain strictness of life. The power of Christians is strengthened according to their loyalty to the truth, as it is in the original standard of Christian faith.

[Rev. William Charles O'Donnell, Jr., Ph.D., in *Zion's Herald.*]

As for hoary creeds inadequately expressing the living faith of living sons of God, the church today is paying too great a price for her too great reverence for them. Splendid as they are in their historical setting, is there any divine law or human reason compelling their repetition to the end of time? The great church of the years to come will be the church brave enough to renounce the tyranny of the creeds, yet wise enough to cling to their essential truth.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

A new pamphlet has just been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health, 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

4.00	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

In the report of the interstate commerce commission, just made public, the charge is advanced and arguments are set forth to show that under the ruling of the commerce court in the so-called "inter-Rocky mountain cases" the intent of Congress in extending the powers of the commission has been thrown to the ground, and it is intimated in no uncertain terms that efficient regulation of railroad rates and the power to prevent discriminations is at stake. The commission declares: "A railroad policy of rate-making must certainly be subject to the limitations of the law, or else there is no law. To say that the railroads may, to any extent they please, carry out a policy of blanketing the country for the benefit of the farther and not the nearer points, is to say that a railroad may, without restraint, effect a ruinous discrimination, and give no justification save its own determination or whim." If this ruling holds, the argument concludes, "there can be no regulation of rates in this country."

With the first bulletin, which has just been issued by the American Game Protective and Propagation Association, comes the announcement that it has been decided to put out similar pamphlets at frequent intervals. The first booklet speaks of the conditions out of which the association grew, and sets forth the general policy of the organization. It comes out in favor of federal legislation to protect migratory wild fowl; modern forestry methods and the establishment of game refuges; stocking the waters with game and food fish and the enforcement of laws designed to protect them; protective laws and laws encouraging game propagation along lines which shall be for the benefit of all sportsmen, the poor as well as the rich; hunters' license and bag limit law; absolute protection for insectivorous birds; prohibition of the sale of native wild game; and all measures calculated to preserve, protect, or increase the game supply.

The Eastman Kodak Company of Rochester, commonly known as the "camera trust," as it controls a large percentage of the camera output and photographic supplies of the United States, has sent out a circular letter to the trade saying that no effort will be made hereafter to control the selling price of its products. It is understood that this action followed the receipt of a letter from Attorney-General Wickersham, pointing out that the company was using methods to restrain trade in violation of the Sherman law and upon the heels of complaints received from the Photographic Dealers' Association of New York. The association numbers two hundred and fifty dealers and agents, who say they are tired of letting the Eastman company tell them how to get rid of their wares and at what price.

The twenty-eight trustees of Mr. Carnegie's gift of ten million dollars for the promotion of international peace, at their first annual meeting on Dec. 14, adopted a budget which authorizes an expenditure in the fiscal year beginning July 1, 1912, of $387,270. Four fundamental principles were promptly agreed upon by the executive committee; namely, not competition with nor supplanting of other efficient peace agencies, but rather encouragement; activity outside the United States; sympathetic support of peace organizations in foreign countries; application of peace principles based upon complete knowledge in the solution of concrete problems.

With Secretary of State Knox as the only witness, President Taft at 10:17 on the 21st signed the joint resolution passed by Congress ratifying his action in serving notice on Russia of the abrogation of the treaty of 1832 with that country. The treaty will continue in effect until Jan. 1, 1913. In the mean time efforts will be made to negotiate a new treaty eliminating the causes of friction which led to the termination of the old one, the most prominent being the refusal to honor passports of American Jews.

Mapping out final plans for obtaining congressional support to their project of developing the American national park system, delegates to the seventh annual convention of the American Civic Association concluded their sessions at Washington last week. A campaign for vacant lot gardens was also outlined. "A garden is a bit of ground on which plants and people grow and love each other," said Leroy J. Boughner, president of the Garden City Club of Minneapolis and city editor of the *Minneapolis Tribune*.

Government action to dissolve the Keystone Watch Case Company, charging it with being an unlawful combination in restraint of the Sherman antitrust law, has been begun at Philadelphia. The government declares the company now manufactures and sells eighty per cent of all watch cases manufactured and sold in the United States, and that it is the intent and purpose of the defendant that the company shall monopolize the remainder of the trade.

Attacking the entire financial system of the country, Representative Lindbergh of Minnesota appeared before the rules committee of the House to support his resolution providing for a special investigation committee to look into the "money trust." He said that a group of New York capitalists dominate the entire financial situation, through controlling the reserve funds of the national banks.

The jury which will try the Chicago packers indicted, charged with violation of the Sherman antitrust law, was completed and sworn in at noon Dec. 19. The taking of testimony began in the afternoon.

Over three million cubic yards of concrete have been laid in the construction of the three sets of locks for the Panama canal. This is about three quarters of the concrete required for this work.

It is officially certified to the Massachusetts harbor and land commission and the railroad commission that the Cape Cod canal is about half done.

International.

To the United States belongs the credit of bringing about a concert of action in China by the six great powers of the world. What is regarded as the most unusual and most satisfactory feature of the situation is the fact that, contrary to past experience, the six powers now practically are united in recognizing the necessity of preserving the integrity and autonomy of China. Whether this is accomplished under a republican or an imperial form of government is not regarded as material. Washington believes that success will attend the meeting of the peace commissioners at Shanghai and that the present armistice will be replaced by a condition of peace without a relapse into war.

Speaking in the House of Assembly recently, the commissioner of crown lands said that there was a time not many years ago when it was thought South Australia had reached the limit as a wheat-growing territory, but the area of the wheat country in South Australia during recent years had been extended by millions of acres, and every new expedition to the Pinnaroo country or the black blocks of the west coast found another half a million or more acres of new land.

The London county council, having found that the botanical gardens in Battersea park are not used as much as they should be, has decided to replace them by an old English garden, as gardens of this nature have been much appreciated in other parks controlled by the council. It is estimated that the change will cost about two hundred and sixty-five pounds.

The King-Emperor and Queen-Empress on the 15th laid the first stone of the new capitol of India, which, as was proclaimed after the durbar, is to be at Delhi.

Industrial and Commercial.

"The waste wood of the South and Northwest from the lumber industry—tops, stumps, slabs, and sawdust, and the dead and down timber from fires and storms—furnishes one of the great undeveloped resources of this country," say investigators of the bureau of chemistry of the United States government. "From this wood, by industrially developed chemical methods, the entire output of naval stores, embracing turpentine, rosin, tars, pitch, rosin spirits, and rosin oils, having an annual value of at least thirty million dollars, may be obtained without boxing or turpentining a single live tree. There is more than sufficient waste material to yield annually all the papers (except news), paper and box board, and building board required, for which wood is suitable. More methyl alcohol, acetate of lime and acetone can be produced from this wood than is now made in the country, and large quantities of ethyl alcohol may also be recovered. There are millions of acres of cut-over land covered with stumps and dead and down timber, all of which, because of its resinous nature, decays very slowly, enduring for years. There is enough of such material to supply all demands for the above-mentioned products for a long period."

Control of the Elgin Board of Trade has passed into the hands of Chicago and Wisconsin creamery men, elected on a producers' ticket. Under the new regime the quotation committee will be abolished, according to J. P. Younger of the producers' faction. "The price committee is a farce," said Mr. Younger. "It is nothing more than a scheme that is in direct violation of the Sherman antitrust law and always has been."

An investigation to determine why the price of sugar was increased several cents a pound last summer has been begun by the House committee appointed to investigate sugar conditions. Letters were sent to all the cane sugar and beet sugar refineries in the United States requesting sworn statements on a number of pertinent points.

A reduction of the duties on many classes of wool and wool manufactures is recommended by President Taft in a special message to Congress. This recommendation was based upon the long-awaited report of the tariff board on schedule K of the Payne tariff act, which was transmitted at the same time.

Figures procured by the Manitoba government show that damage to grain crops by rats will amount to two million dollars this year. The rats, known as the Norwegian brown variety, make their nests in the stacks of wheat about to be threshed and destroy the stack.

The American Ice Company of New York has dropped its appeal from a conviction for violating the state antimonopoly law and paid the five thousand dollars fine assessed against the company.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DIVINE REALITY.

SUE H. MIMS.

THE highest philosophic thought has for many centuries grasped the sense that there is and must be an invisible reality opposed to the phenomenal and transient view of things. Kant teaches the difference between "empirical reality, or appearance of facts in our experience, and absolute reality, which belongs to the thing itself;" while Bronson Alcott writes that "the idealist is the true realist, grasping the substance and not the shadow; the man of sense is the visionary or illusionist, grasping things as permanencies and thoughts as fleeting phantoms." In the light of this statement, surely we cannot be surprised that our beloved Leader, Mrs. Eddy, should say of Alcott: "His athletic mind, scholarly and serene, was the first to bedew my hope with a drop of humanity" (Pulpit and Press, p. 5).

St. Paul defines this difference from the Christian point of view, when he admonishes us to "look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." The power, the wonderful power which accompanies the spiritual understanding of this philosophic and Christian truth, is today through the teaching of Christian Science being demonstrated to the world, and is the spiritual leaven that will "overturn, overturn, overturn, . . . until he come whose right it is." Mrs. Eddy writes: "Reality is spiritual, harmonious, immutable, immortal, divine, eternal. Nothing unspiritual can be real, harmonious, or eternal" (Science and Health, p. 335). In the New Testament we find this luminous verse in the fifth chapter of I John: "And we know that the Son of God is come, and hath given us an understanding, that we may know him that is true [real], and we are in him that is true [real], in his Son Jesus Christ. This is the true [real] God, and eternal life."

Just as electricity, radium, and perhaps other so-called forces have slumbered in the recesses of the unperceived or unknown, and are now being utilized for humanity's convenience, so for centuries the dynamics of this great spiritual truth of being, the divine reality of immortal Mind and its perfect, harmonious manifestation in spiritual man and the universe, is again brought to light through Mrs. Eddy's clarified vision of Christ Jesus and his mission. Jesus distinctly said, "Ye shall know the truth, and the truth shall make you free,"—free from the illusion of the untrue or unreal; and with equal clearness Paul taught that the contemplation of the unseen, the "beholding as in a glass the glory of the Lord," the divine ideal, will change us "from glory to glory, even as by the Spirit of the Lord."

In a present-day use of this glorious truth, we are admonished in Science and Health to "hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (p. 261). What a glorious hope, what a longed-for possible achievement is here opened to our gaze! How unspeakable the fruition of this hope, and how absolutely free to all who will enter and persist in the path.

In "Retrospection and Introspection" Mrs. Eddy writes (p. 64): "It is scientific to abide in conscious harmony, in health-giving, deathless Truth and Love. To do this, mortals must first open their eyes to all the illusive forms, methods, and subtlety of error, in order that the illusion, error, may be destroyed; if this is not done, mortals will become the victims of error." This was evidently the experience of St. John. The radiance of Truth and Love opened to his vision the false claims of the unreal masquerading as the real. He even "wondered with great admiration" as the iridescent bubble of human invention, the pride and fleeting splendor, sensualism, occultism, sorcery, hatred of Spirit and the spiritual idea, was unveiled to him. The angel explains this mystery of evil seeming, and then follows another mighty angel crying with a loud voice, "Babylon the great is fallen." The nothingness of the fleeting phantoms is seen, and the heavenly Jerusalem, the spiritual sense of Love, and its embracing harmonies, descends from God out of heaven and the radiance of the one perfect Life floods consciousness with the glow of eternal reality.

Our dear Leader also had this experience, and uncovered for this age the secret methods of the unreal claim of life, substance, and intelligence in matter. Then there dawns upon the uplifted thought the glories of true substance, the abiding sense of Love's omnipotence, omnipresence, and entire supremacy. As we dwell more and more in this scientific sense of being, the false sense of any other reality than good is met with sudden dismissal, and we dwell in the supreme heights of spiritual consciousness, whence good permeates all the phenomena of our being, and the healing radiation of Love goes forth spontaneously without need of argument or effort.

THE FATHER'S BUSINESS.

LOUIS A. GREGORY, LL.B.

IN some branch churches the business of the church, which is surely a part of the "Father's business," is not given the thought by some of the members to which it is entitled. A typical instance is that of a large branch church in which a majority of the members rarely fail to be present at the Sunday and mid-week services, but less than half of the membership regularly attend the business meetings. Further, the difficulty which some of those in attendance have in applying the fundamentals of Christian Science in the transaction of church business, augurs lack of mental preparation for these meetings.

The fidelity of Christian Scientists generally in attending the services of their churches indicates a lively appreciation of this one obligation of membership and a realization of the benefit received through fulfilled obligation. If a member frequently fails to attend the business meeting of his church, it is because he does not realize either that such

Digitized by Google

attendance is a part of his duty, or that he is benefited by doing his duty. The privilege of church-membership involves the duty of aiding in carrying on the work of the church, even if the obligation were not specifically stated in its by-laws, and every opportunity to participate in the church work that is taken advantage of brings a blessing. Consistent attendance at all meetings is the least return which a conscientious member can make for the privilege of membership, and the most plausible excuses are not a fair equivalent for failure in this respect.

Mere attendance is not the whole duty of any member to the business meeting or any other service of his church, for each should be prepared to do his part in making the meeting harmonious and effective. The work of all Christian Scientists is largely mental, and those who have no physical work to do for the church should not forget that which belongs to every member. The fact that one may occupy some official position in the church adds nothing in reality to his obligation to the church. If the clerk, the treasurer, or the chairman of the board should come to the meeting without having prepared a report, it would be apparent that he had not fulfilled his obligation to the organization, and while the slighted duty is not necessarily so obvious when a non-official member comes to the meeting without the requisite preparation, it is apt to result in some feeling of doubt or discord with regard to the affairs of the church.

Prayerful preparation and a clear apprehension of truth are as necessary in handling the financial element as in any other phase of the church work. The statements that the church must have money, and that money is the only thing which will enable it to meet its financial obligations, indicate a failure to perceive the full import of Jesus' admonition, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It cannot rightfully be questioned that in order to pay a debt some representation of money value must be used; but if a sense of financial insufficiency arises, it is proof positive of a failure in some respect to seek "first the kingdom of God," to realize that God's kingdom, with its harmony and abundance is ever present. Abundance cannot be demonstrated by talking about and considering solely the belief of lack, for this is looking away from the kingdom of God. Neither is the sense of need to be overcome by putting reliance upon a particular method or means of raising money. Material methods of procedure are no more effective in themselves to overcome the sense of financial need than material medicines are effective in healing disease. The only power they have is what is erroneously attributed to them. For several hundred people to act in harmony requires effort in the right direction, but in truth alone is the only perfect method to be found, and it is to be attained through the realization of the presence and power of God. The realization of the one Mind is the only absolute basis of harmony.

Let men realize that good is the only power, and they cannot be frightened into shirking or evading any task because of opposition to their views. The one who is right is always victorious over error, and numbers, persons, or opinions to the contrary cannot affect him in any way so long as he holds to the truth. A firm grasp upon Principle makes a church-member impregnable to any suggestion that he give up his position in case others' views prevail over what he thinks right. If an officer has any thought of deserting the post of duty because of the apparent failure of something he esteemed good, then he should know that his reliance has mistakenly been placed upon opinion or personality instead of upon Principle. It is only error which would tempt a worker to desert his work because of what seems opposition, for at such a time he should be the more steadfast in his thought and effort for right.

The duties which a member owes to the church organization are possibly not among "the weightier matters of the law, judgment, mercy, and faith," which Christ Jesus enumerated to the scribes and Pharisees and of which he said, "These ought ye to have done, and not to leave the other undone;" that is, the "tithe of mint and anise and cummin," which they had paid, but without faithful discharge of these minor duties a member cannot hope for the promised reward, "Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord." The duties of a member to the church are among those he can most easily fulfil first when he awakens to the deeper meaning of Jesus' words, "I must be about my Father's business."

THE CALMING OF THE STORM.

LUCY HAYS EASTMAN.

A SMALL dog was playing in the street one morning when suddenly a pair of horses drew up, two men jumped down from a caged wagon, and throwing a netlike bag over the little fellow, roughly tumbled him into the wagon, where there were many others of his kind. The dog's mistress ran to his rescue, but her efforts were of no avail. At the crack of the whip the horses sprang forward, while the woman with tears in her eyes ran back into the house.

Across the way lived a student of Christian Science who that morning had been seeking refuge in the text-book, Science and Health, from an overwhelming sense of injustice. She was questioning how it was possible to maintain equanimity amid lawlessness when her attention was called to the experience with the dog in the street. Immediately indignation beat tempestuously upon the sandy shores of human sympathy. This state of misled consciousness so clouded the situation with its own darkened hues that the student bitterly condemned the city officers, and jumped to the prejudiced conclusion that mercenary motives rather than the protection of the people's rights lay back of city government. Then, with Peterlike impetuosity, she hurried to the telephone and related the experience to a friend of whose sympathetic attitude toward animals she felt assured. Much to her surprise, however, she met with neither acquiescent comments nor indignant ejaculations, but simply a kind explanation of the affair. It was the season of the year when the city enforced its license law; the dogs were well cared for and would be returned to their proper homes as soon as their owners complied with the law. "You know," it was added, "that harmony never remains in the presence of broken law, and divine justice lifts the penalty of disobedience only when law is obeyed."

As the student hung up the receiver she realized that indignation had vanished before the humility of a self-seen mistake. Had she not been guilty in laying blame where blame was not due, and thus manifesting the same injustice which had so distressed her in another? Clearly she perceived, then, that the only way to cease doing evil when one would do good was to leave all judgment and retribution to God, while steadfastly abiding in the consciousness of good, against which there is no law. Later in the day, when she saw the dog safely restored to his rightful home, she realized that the mental storm had been without cause, and better understood how the raging elements of mortal mind are powerless to resist the authoritative command, "Peace, be still," if declared by those who have become a law unto themselves.

How true it is that our weapons must be spiritual if we would pull down, through God, the strong holds of all that would exalt itself against the power of good! He who meets error with astoundment, scorn, or even sorrowing endurance, loosens his grasp upon the good he loves and is self-inflicted with his own carnal weapons, even as he who "takes the sword perishes with the sword." To at-

Digitized by Google

tempt to right a wrong with the self-will that menacingly shakes its fist at the images of error, makes one an anarchist against the common good of all, and through the bigoted view of retaliation shuts out the broader vision of the whole, where the far-seeing eye of wisdom beholds always the ultimate triumph of good. All error is unjust because it is disobedience to law. Nevertheless, to become so wrought up over evil as to give it power before the omnipotence of God, also breaks law,—the law of self-government; and he who does this forsakes spiritual supremacy and becomes the unconscious victim of the very injustice he is seeking to destroy. Have we a passionate love for all that is good and true? Do we yearn for perfection here and now? Then we need to beware of our attitude toward these unreal opposites, for though we may resist the deceiving temptations of evil, we are still its promulgators so long as we argue its power, its activity and awfulness.

Suppose, by way of illustration, that everybody believed in ghosts, and that some were so beset with fear as to lose all self-control and thereby become absolutely useless, while others through determined resistance maintained a certain degree of dominion despite their fears. Suppose that the latter, however, constantly argued the reality of ghosts, condemning and punishing those who were unable to overcome the effect of their fears: how soon would they save the world from its ghostly illusion? The fear of evil is indeed as disastrous, in a degree, as the love of evil, for it shuts out the healing realization of the Mind that is "too pure to behold iniquity." The self-righteousness that condemns everything but itself is never so near the line of perfection as the repentance that, grown weary of husks, acknowledges its wrong and seeks reformation.

In the fourth chapter of Genesis we are told that the Lord set a mark upon Cain, lest any finding him should kill him. Does not this allegory clearly indicate that judgment of another should be left to a higher than mortal decree? The human mind is incapable of meting out actual justice because of its mistaken belief in the reality of evil. When the omnipotence of good becomes fully realized, the human sense of evil will be dealt with from an entirely different standpoint. Then will the individual who places himself on the side of right, "fear no evil" in his conflict with error. Understanding the energies of good, the more tenacious the error the greater will be his demand upon the infinite resources of righteousness, and thus will good eventually overcome all evil. It is only as the human mind learns how to reflect the divine that it gains wisdom and love enough to deal justly. Then it declares mercy unto the merciful, love unto the loving, even as, soaring above the mother's love that would spare the penalty of disobedience, it wields the law that withers the fruitless fig tree.

In the "Miscellaneous Writings" of our Leader we read, "Ofttimes the rod is His means of grace; then it must be ours,—we cannot avoid wielding it if we reflect Him" (p. 127). In many cases this is undoubtedly one of the highest methods of overcoming sin, but it is only as "we reflect Him," and become a law unto ourselves by realizing the unreality and impersonality of sin, that we may hope to reach that spiritual altitude where we are worthy to use this method. Otherwise the rebuke does not "reflect the sweet amenities of love" (Manual, p. 40) and is tinged with a human sense of response to error that is devoid of healing. We have pointed out to us in our text-book, Science and Health, two ways of dealing with evil: "When error confronts you, withhold not the rebuke or the explanation which destroys error" (p. 452). If we have not yet learned to abide undisturbed in love when confronted by hate, or if we still murmur and complain over sin, we must refrain from the rebuke even as we would hesitate to enter in where angels fear to tread. Rather must we patiently wait on God until the explanation of the allness of good and the nothingness of its opposite becomes so clear that "the prince of this world" comes and finds nothing in us to respond to him.

The calm assurance that God governs all, the willingness to let error be self-destroyed by its own self-inflicted penalties, will stir down every upheaval, dissipate pent-up emotions, and smooth out strained relationships. The humility which knows that the battle is not ours but the Lord's, will maintain its poise of thought in every experience by resting satisfied in the assurance of good's omnipotence. Likewise will courage and forbearance, whether in the wilderness or in the darkness of the lion's den, be exalted, as they behold the operation of that metaphysical law under which "every knee shall bow, every tongue shall swear." So will the Master, "the elder brother," come to our rescue, calm the storm, and "bid our raging passions cease."

SPIRITUAL SENSE.

FRANK H. SPRAGUE.

CHRISTIAN SCIENCE emphasizes and elucidates the fact that beauty, truth, and goodness are not attributes of matter, but they are spiritual ideas, and that as such they can be identified only with the reflection of Spirit. Material sense associates them with forms of matter. An analysis of the situation in the light of modern physics, however, shows that material formations have no existence apart from the physical senses which give them seeming reality. Whatever beauty a flower, landscape, or work of art may appear to possess, is in consciousness and not in the array of diversified material forms that seem to be there on their own account.

From the standpoint of material sense, not only do beauty and harmony appear to be inherent in matter, but organized matter appears to be the medium through which they are perceived. On the contrary, one sees what he sees in nature not because the objective phenomenon has any absolute existence in space, not because it is there irrespective of mental considerations, but because his thought is so attuned as to make the external manifestation just what it appears to him to be. The landscape which presents an ideal of beauty to the developed imagination of the artist holds no such esthetic quality for the animal type of consciousness. In the same way that material sense conceives of beauty as inherent in forms of matter, so it identifies truth with intellectual formulas, verbal statements, books, organizations, places of worship, and various other material symbols. In like manner it ascribes goodness to personality, acts, deeds, conduct, observances.

Although, owing to the crude, unspiritual state of human concepts, we are at present obliged to reckon with material symbols and agencies in our practical economy, it should be with a clear understanding that nothing materially conceived is in any way identified with spiritual reality, and that the seeming materiality of things will disappear as human concepts become spiritualized. In the mean time it is the part of wisdom to avail ourselves of such ways and means as prove most efficacious in bringing the divine idea into manifestation in human consciousness. Experience has proved that, in the present stage of human apprehension and realization of the divine idea, outward means and measures are oftentimes necessary to hold experience to the line of spiritual progress, but the Christian Science text-book, the church organization, the Manual, have grown out of the inspired thought and demonstration of Mrs. Eddy, the Discoverer and Founder of Christian Science and Leader of the cause, even as the picture on the canvas is the outcome or visible expression of the artist's ideal.

And, like the forms and colors portrayed on the canvas, which are instrumental in acquainting the discerning observer with the ideal of beauty which inspired the artist, so the letter of Christian Science and the institutional measures associated with the propaganda are means of un-

Digitized by Google

folding to the open-minded student an understanding and realization of heaven—the harmony and immortality of man. This is the secret of the earnestness and devotion displayed by Christian Scientists in the study of the Bible and their text-book, and in their attendance at the church services. They find through experience that application along these lines helps them to grasp and keep in touch with the revelation of man's spiritual nature and capacities. The Bible, thus illuminated and interpreted, is seen to be a record of the experiences of spiritually-minded individuals of the past, and opens up the present possibilities of man as the reflection of Spirit.

From the standpoint of spiritual sense, the light of divine beauty and goodness shines through the letter, transfiguring words and statements which to material sense seem empty and meaningless; even as a photographic transparency, dull and monotonous when looked at apart from the light, presents a wealth of beauty when held up to it. "In thy presence is fulness of joy," exclaims the psalmist; "I shall be satisfied, when I awake, with thy likeness." This is another of the many benedictions of Christian Science, that it brings a new and higher interpretation to nature and to experience. What once ministered simply to our pleasure, to an esthetic satisfaction, now yields the added gain of nourishment to our spiritual life.

THE SPIRIT OF FRIENDSHIP.

NELLIE B. MACE.

WHO among Christian Scientists has not suffered as a result of the concept of friendship entertained before the corrective influence of Christian Science entered his life—the poignancy of his disappointments being usually commensurate with the warmth of his attachments or the idolatrous element entering into his thought of those he loved. Much has been written and said concerning the influences and obligations of friendship, and it has been quite generally agreed that no name is dearer to the human heart than "friend," while to say of one tried and found worthy, "He has been a friend," is regarded as sincere praise. A thoughtful student of Science and Health soon grasps its promise that the truth declared in this book will eventually redeem every false sense of human relationships and establish instead the ideal peace and changeless harmony in which God's ideas abide. As thought adapts itself to this higher standard, the conclusion is reached that the idea or spirit of friendship remains an undisturbed reality in the truth of being, while the mortal concept alone is fleeting and disappointing. Mrs. Eddy tells us that "Science speaks when the senses are silent," and when spiritual sense rules, "pure humanity, friendship, home, the interchange of love, bring to earth a foretaste of heaven" (Miscellaneous Writings, p. 100).

The strongly gregarious tendency of the human family seeks satisfaction in personal companionship, and until there comes perchance a sting from its falsity, mortals are wont to deem this earthly treasure too beautiful to be exchanged willingly for the divine idea, although it may be dimly perceived and somewhat reluctantly admitted that sometime the spiritual must overcome the material at every point. The counterfeit sense of friendship, dependent as it is upon personal presence, in time discloses its frailty and finiteness, and the suffering sense turns at last from the fable to seek refuge in the spiritual fact. It is not the scientific way to learn spiritual lessons through suffering, yet retrospection often points to a seeming rift in a prized friendship as an instrument by means of which thought has been divinely driven to seek the spiritual ideal. We read in Science and Health (p. 48) that when there was no response to his "human yearning, . . . Jesus turned forever away from earth to heaven, from sense to Soul." It is well indeed, when there has come the spiritual strength to accept quickly the lesson hidden in these experiences and, following the Master's example, turn without bitterness to seek surcease of sorrow in a higher realization of Truth.

The sense gratification resulting from dependence upon a select few or upon many personal friends must be laid down for the spirit of friendship, and a joy and willingness to walk with God alone is at last attained. Abraham learned how to be a friend of God, and from this eminence how genuine a friend he has been to all who have sought to realize the supremacy of good. Jesus said: "Ye are my friends, if ye do whatsoever I command you . . . I have called you friends; for all things that I have heard of my Father I have made known unto you." What a *perfect* model of friendship and conversation! *All things I have* heard of my Father! How speedily should we find our conversation on heavenly things were this standard accepted,—friends because we were making known to each other the things we had heard of our Father! How soon would vanity, self-seeking, and love of popularity, with all their hollow mimicry in the name of friendship, be abased!

Blessed indeed is the illumination of the Master's teaching through Christian Science which makes possible the present realization that the kingdom of heaven is within; eternal Love, the king; His own ideas, our companions, our changeless friends. It is the Christian Scientist's frequent privilege to commune alone with these pure ideas; to feel the refreshment of these brighter views of Life and its purpose. Again, at the bidding of divine Mind, it becomes his duty and privilege to let these pure ideas speak a message of truth to others, and then no error of fear, or of self-depreciation, should be allowed to hamper this spiritual impulse toward true expression.

We ourselves can be friends to others in the truest sense only as we let these ideas of God work and speak through us, mindful that on the path winding upward there will be found other sincere ones engaged in the same endeavor, and we should be quick to listen for the Father's voice that speaks through His other children to us and let no suspicion of unworthiness debar us from this joyous intercourse because of past unhappy dreams.

Thus gratefully shall we find the old false sense of friendship giving place to its substance, its true spirit of friendship, the spirit of service. The endeavor to turn from all human yearning, to be a friend rather than to have a friend, is the true way of following the great Exemplar. In our Leader's loved poem, "Christ My Refuge" (Poems, p. 12), is unfolded a sacred sequence leading from the perception of the Christ walking over the waves of our troubled experience, speaking divinely to our inner consciousness, teaching us to place our whole heart's affection upon the spiritual idea, revealing the happy intercourse between God's children and finding repose, satisfaction, in the true spirit of service—to be a friend, to do some daily good

To Thine, for Thee.

God and His ideas alone are real and unchanging. Abiding in this glorious revelation until our thought becomes replete with its truth, we shall at last with gratitude exclaim with the psalmist: "Whom have I in heaven but thee? and there is none upon earth that I desire beside thee."

[Written for the *Sentinel.*]

"PLUS ULTRA."

RENICE RADCLIFFE.

MORE beyond? We scarce can see
The loftier lights which lead the way;
We scarce can trust our slender faith
To lift our feet from clod and clay.
And yet, to reach the higher plane
We dare to break this slothful bond,
And read the watchword of the hills:
More beyond! There's more beyond!

SELECTED ARTICLES.

[Washington despatch to *The Christian Science Monitor.*]

Christian Scientists may practise on the Canal Zone, according to an executive order issued today [Dec. 26] by President Taft, amending the regulations governing the practice of medicine which had debarred them. President Taft's action followed protests from Christian Scientists that the executive regulations prevented them from establishing themselves along the canal. The rules provided a fine and jail penalty for any person practising medicine, dentistry, or pharmacy without a license, or using the title of "doctor" without authority, and so defined the practice of medicine as to include in its provisions any one "who shall attempt to heal, cure, or alleviate, or who shall in any wise treat any disease or any physical or mental ailment of another." President Taft amended this regulation today with the following provision:

"Nothing in this order shall be construed to prohibit practice of the religious tenets of any church in the ministration of the sick or suffering by mental or spiritual means without the use of any drug or material remedy, whether gratuitously or for compensation, provided sanitary laws are complied with; or gratuitous service in case of emergency or the ministering of ordinary household remedies."

The Christian Scientists who are already established on the Canal Zone will resume practice on Jan. 1, President Taft making his order effective at the beginning of the new year.

[St. Louis despatch to *The Christian Science Monitor.*]

Miss Bertha Reichenbecher, second reader of Third Church of Christ, Scientist, was arrested Monday [Dec. 18] on a charge made by the health department of practising medicine without a license. When she was arraigned Prosecuting Attorney Wilson refused to issue a warrant, declaring that the arrest was the result of a deceit. Miss Reichenbecher was taken to headquarters upon her arrest and searched, being compelled to disrobe before the matron. For this action Chief of Police Young exonerated the matron.

"One of the agents of the health department pretended to be sick," explained associate Prosecuting Attorney Wilson. "He gave the Christian Science practitioner a marked dollar bill, which was found in her purse after her arrest. I will not issue a warrant because it was feigned sickness. If a genuine complaint is made, where sick persons are treated, I shall issue a warrant."

Dr. Max Starkloff, the health commissioner, when told of the prosecuting attorney's refusal, said that he would appeal to the grand jury.

Miss Reichenbecher says the "patient," to aid whom she was summoned, insisted upon her accepting a dollar bill. Special officers Lawrence, Coats, and Moneyhan laid the trap at 2118 Gregon avenue, where Coats feigned illness.

[Editorial in *St. Louis* (Mo.) *Post-Dispatch.*]

The question of the application of the law prohibiting the practice of medicine without a license to Christian Scientists must be settled by the courts. It is proper for the authorities to test the law by obtaining evidence that fees are received by them for religious teaching and treatment. But why malingering spies and detectives and other paraphernalia of crime detection in prosecuting practitioners? Why should gentlewomen, officers of a church, openly teaching and practising what they believe to be Christian truth, be inveigled into false cases by a spy, arrested on the street, dragged to the police station, disrobed and searched like a thief or a murderer? What did the police expect to find on Miss Reichenbecher—dangerous Bible texts on the divine power to heal without medical license? Or heretical maxims by Mrs. Eddy concerning spiritual grace as a hygienic and curative agency?

These people make no secret of their convictions or practices. They will admit their religious methods of curing disease and will doubtless supply ample evidence of the charge of receiving pay for their work. Whether right or wrong, their professions are candid. Laws to prevent quackery and dishonest practices in medicine are weakened by the exercise of such brutal stupidity as that exhibited in Miss Reichenbecher's case. Nothing would be more disastrous to sound legislation than to arouse public indignation by turning prosecution into persecution.

[Editorial in *St. Louis* (Mo.) *Star.*]

The treatment of Miss Reichenbecher by the police as a common felon and a member of the criminal class, is one that every citizen should protest against. Her offense, if any, is merely a statutory one, and of a nature in no sense indicating criminality or viciousness. She could be dealt with by indictment, if a grand jury felt disposed to indict her upon such evidence as the police possess. There is no excuse for subjecting her to the same treatment as is given those who commit crimes of violence and theft. There was no occasion to arrest her as she was arrested, nor to submit her to the indignity of a search.

For what was she searched? What was expected to be found upon her? Was she, an exponent of the gospel of love and peace, expected to have a concealed weapon? Was she, a teacher of the art of healing without drugs, expected to have poison in her possession? Was she expected to have burglars' tools or contrivances by which she might break jail concealed in her clothing? It is not only an outrage, but an absurd one. The *Star* believes in the enforcement of the laws, but it believes in decency also; and more, for if there is not decency there can be no real enforcement of law and observance of it.

The question at issue is largely academic. It is not a crime of turpitude for a person to practise some theory of treatment of the sick contrary to the generally accepted standard of the medical profession. It has been made an offense against the statutes of the state, and there is a proper and decent method of procedure in such cases. That taken in the instance of Miss Reichenbecher is neither proper nor decent. The safety of the people does not demand such oppressive and brutal methods. On the contrary, the real safety of the people demands that citizens be not subjected to such treatment needlessly. It is on a par with the unspeakable "third degree," and should never be witnessed without protest. No citizen knows when his turn may come for like treatment through no fault of his own.

[Editorial in *New York* (N. Y.) *Telegraph.*]

It is the custom in this city to arrest relatives of a person who dies, if they did not hire a doctor to treat the sick one during illness. If a Christian Science healer has been employed by the sick person or relatives, the healer also is arrested. And the physicians of the city grow hoarsely indignant because of the Christian Scientist's lack of success. But how about the doctor's success? Do they always cure patients? A morning newspaper published a list of thirty-two children in various parts of the country who were alleged to have died from diphtheria and other diseases in the last thirteen years under Christian Science treatment, and Virgil O. Strickler, a former reader of a Christian Science church, replies by showing that there were seventeen hundred and fifteen deaths from diphtheria in 1910 in New York city, of children who were being treated by doctors.

Doctors clamor for the arrest of Science healers, and Mr. Strickler properly asks, "Shall doctors be arrested because their patients also died?"

Most of the trouble about Christian Science is due to the action of doctors. Fees probably are at the bottom of the matter.

[From *State Journal*, Columbus, Ohio.]

Had she been permitted to do so, Mrs. Mary Stewart, aged 42, milliner, of McConnelsville, would have testified Friday [Dec. 8] at the trial of Mrs. Eva Earl, 31 Sellscourt, Christian Science healer, charged with practising medicine without a license, that she had been cured of cancer by the Christian Science method of healing. Mrs. Stewart came to Columbus expressly to give such testimony. She was a guest at the home of Mrs. G. H. Hamilton, 2132 Summit street. She was ready to testify, but the court refused to go into the merits of the Christian Science method of healing. In referring to Mrs. Stewart's case yesterday Mrs. Hamilton said:

"To my knowledge Mrs. Stewart at one time suffered with cancer of the breast. She had been operated upon twice and undertook the Christian Science treatment when she had all preparations made for a third operation. Physicians had said hers was a common cancer case and likely would result as such cases do—in long-continued trouble and final death. Mrs. Stewart came to Mrs. Earl and commenced Science treatment. Within four weeks two new growths had healed. Two running sores, resulting from operations, required more time, but eventually were healed. She has been in perfect health for two years, with nothing to suggest a recurrence of her trouble."

Mrs. Hamilton, who at one time was head night nurse at Grant hospital, credits Christian Science with a remarkable cure of a personal ailment which seriously affected her kidneys. "One of them grew to three times normal size and my condition became serious. Physicians did not help me. As a former nurse, I sneered at Science, but in desperation took it up. From that moment I began to regain my health, which had been failing for six years," said Mrs. Hamilton.

[Frederick Dixon in *Light*, London, Eng.]

Christian Science healing is certainly not new. It is just as old as the Christian era, and is the revival of the application of that knowledge which in the New Testament is spoken of as the full, exact, or scientific knowledge of God, and so of Truth. This knowledge, in turn, had its roots in that gradual realization of spiritual facts which distinguished the monotheism of Israel from the gross materialism of the surrounding polytheism of the east, and was alluded to by Jesus when he declared, "Your father Abraham rejoiced to see my day: and he saw it, and was glad."

The roots of so-called healing by suggestion antedate the days of Nero or Marcus Aurelius. The temples of Asklepios, with their serpents and their spells, existed several centuries earlier, while centuries again before that, the magicians of Egypt knew all, and rather more than all, that the hypnotists of today are in a position to disclose. A recent writer takes a story out of Aristides, of how he was cured of a fever by bathing in ice-cold water and then racing against the north wind. He adds, "and, *mirabile dictu*, Aristides survived." There is nothing more remarkable in this than the changes which have taken place in our own time in the treatment of fever or consumption. Twenty years ago, consumptive patients were kept in rooms from which every breath of air was excluded. Today they are exposed in the open air, and, "*mirabile dictu*," they sometimes recover. One or the other system should be murder, and inquests should have followed on every death resulting from them. As a matter of fact, people got well and died under both, for the all-sufficient reason that the real remedy was the faith inspired by the treatment.

What, however, is more remarkable than all this, is that any person who has read the Bible should compare this healing with the healing accomplished by Jesus. One of the centers of the worship of Asklepios was the Asian city of Pergamum, sometimes called Pergamos. Here there was a famous temple to the god, and of it the author of the letters to the seven churches writes, "I know . . . where thou dwellest, even where Satan's seat is." A curious description of an acknowledged seat of spiritual healing. The truth is, of course, that the medical healing of the early Christian era was a gross jumble of educated magic, unadulterated materialism, and gross superstition. The serpent-gazing of Cos constituted the first; the loathsome prescriptions of Pliny's "Historia Naturalis" the second; while the two combined to provide the third. In spite of this, it is argued that "Luke, the beloved physician," was a physician of this school. The suggestion is obviously preposterous, and a knowledge of the facts explains why Eusebius wrote: "But Luke, who was born at Antioch, being for the most part connected with Paul, and familiarly acquainted with the rest of the apostles, has left us two inspired books, the institutes of the spiritual healing art which he obtained from them." There was little of spiritual healing to be learned, one imagines, where Satan's seat was.

No one could have understood better than Luke the claims of the exorcists which the remnant of Israel had brought with them out of Egypt. He had seen the Jewish hierarchy, the descendants of the kings and prophets, who had fought so stubbornly against "other gods," conniving at the practice of this exorcism, and then hurling it as an accusation at the healer of Gennesaret, in the taunt, "This fellow doth not cast out devils, but by Beelzebub the prince of the devils," and he must have been familiar with the reply of Jesus. "Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand: and if Satan cast out Satan, he is divided against himself; how shall then his kingdom stand? And if I by Beelzebub cast out devils, by whom do your children cast them out? therefore they shall be your judges. But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." In these words Jesus once and for all drew the line between spiritual healing and healing by suggestion in any form. The one, the result of an understanding of spiritual law; the other, a belief in thought-transference, of the power of one human mind to dominate another. Every human mind, the world admits, is instinct with carnal appetites, passions, and desires, and is governed sometimes by thoughts of evil, and at others by ideas of good. It is, then, a kingdom divided against itself which cannot stand, and its so-called knowledge is nothing but the fruit of the tree of the knowledge of good and evil, which culminates in death. If, then, thoughts of healing could be transferred from such a mind, thoughts of sickness could equally be transferred; and this in reality is the claim of the worker by mental suggestion.

Such a mind is incapable of exercising any healing power. Spiritual healing becomes operative in the exact proportion in which the infinity of good is understood and the utter unreality and powerlessness of evil is grasped. To heal in this way it is necessary to give a patient some understanding of spiritual power, not by a transference of human thought from an impure reservoir, but by that destruction of evil in the human consciousness which comes from the mastery of that understanding of spiritual law summed up in the phrase of the writers of the epistles, a scientific knowledge of God. This is itself the acquisition of the Mind which was in Christ Jesus, and so is healing in Christian Science wrought.

[Editorial in *Boston Saturday Sun*.]

Last week [Nov. 29] there was published in Boston a ninety-six-page special Thanksgiving edition of a newspaper, designed to celebrate the close of its third successful year as a pioneer of clean journalism. This newspaper, *The Christian Science Monitor*, was founded by Mary Baker Eddy, the Discoverer and Founder of Christian Science. The bringing forth each year of a Thanksgiving number, because the first issue of the paper came at that season, calls the attention of other newspaper publishers and the public to the ideals upon which the *Monitor* was founded, and

Digitized by Google

causes fresh comment every twelve months as to the degree in which this unique newspaper has succeeded in making its ideals of practical benefit to mankind.

That the paper has progressed is revealed on every page of its third anniversary number. It has found and catered to a field unoccupied by any other daily journal. Some have said it has created a field of its own. Probably it is more just to say that the field was always there, waiting for the coming of a clean, reliable, high-purposed newspaper that could always be counted upon to censor its news and advertising in such a manner as to leave the contents live and sparkling, meeting the needs of readers of all classes and all shades of opinion, yet so elevated in tone that the most refined reader could not object to a single word. A comparison of today's *Monitor* with the early copies of three years ago proves unmistakably that the paper has accomplished more than merely to go forward with the times. Its larger and broader method of treating world news, its exhaustive manner of handling special articles that supplement the news, its institution of additional departments to meet popular needs as the editors have discovered those needs—all this shows the adaptability of the *Monitor* to the desires of that increasing proportion of the public which is demanding cleaner and more rational newspapers.

Three years of service on the part of the *Monitor* have changed the opinion of many newspaper publishers, who once voiced the thought that clean journalism was doomed to failure at the outset because of lack of any popular interest in "good news." Taking the majority of newspapers as a criterion, it was true that the evil in the news seemed to overbalance the good, and it was not strange that the average editor acquired a habit of looking for the bad news. He found that for which he looked; hence it seemed to him that the disasters and distresses of humanity actually filled a greater part of the calendar of social activity than did the constructive and uplifting elements.

Looking for the good in the news, the *Monitor* editors found it. As they discarded more and more of the undesirable material that came to their desks, new and previously unsuspected sources opened up. Subscribers to the new journal became an army of lay correspondents, personally interested in having the best things of their respective communities written up in the *Monitor* because of its wide circulation and its clean policies. The latest Thanksgiving *Monitor* therefore records a growth and development of clean newspaper procedure that can only properly be understood by one who considers all the difficulties and problems which confront the publishers of a journal that insists upon an exacting standard in a day when the tendency has been too strong in the opposite direction. The *Monitor's* anniversary number may be styled a mile-post in the general onward and upward movement that is becoming apparent in journalistic circles all over the world.

[From an editorial in *Kingston* (Ont.) *Standard.*]

The Rev. Mr. —— has, we very much regret to say, only made a bad matter worse by endeavoring to explain away his attack on Christian Science. He asks us to tell what Christian Science is, and to set forth its good. But that is quite apart from the mark It is not what Christian Science is; it is what Christianity is—and is not. Our point, simply, is this: that a Christian clergyman is not fulfilling his true mission as a Christian, but rather is transgressing it, when he assails another religion. The groundwork—the fundamental basis—of any religion is "on earth peace, good will toward men;" and no clergyman is living up to that idea or ideal who assails his fellow men or the manner in which they worship God. And to say, as this critic did, that one cannot be a Christian Scientist and a follower of the Lord Jesus Christ at the same time, is simply to laugh oneself out of court. If the clergyman does not know it, he should know it, that the Bible is the daily handbook of the Christian Scientist, and that every true Scientist reads his Bible every day of his life. And if he does not know it, he should know it, that the Christian Scientists believe so supremely in God that they are willing to leave everything in His hands, taking it literally that He is in fact omnipresent and omnipotent and that as a loving Father He will ever guard them.

And this is the religion that a clergyman attacks! Well, we fancy if he can stand it, Christian Science can. We can only say, however, that his idea of a Christian is not our idea. A Christian is to be judged not by his professions but by his deeds. Whether we agree or disagree with Christian Science, with Methodism, Anglicanism, Presbyterianism, Roman Catholicism, or any other religion, we can at least show the faith that is in us, and show also our own Christianity by refraining from attacking them.

What the *Standard* is aiming to do is not to defend Christian Scientists from the charge that they are not followers of Christ, for that charge answers itself, but to defend Christianity itself from being held responsible for the utterances of clergymen whose very attacks are wholly opposed to every idea of genuine Christianity. A man cannot be a real Christian and strike at his fellow Christian, whether the latter's religion be Roman Catholic or Protestant—and we say this not in any personally offensive sense, but merely from a consideration of Christianity in the general acceptance and understanding of that term. If each Christian sect in the country is to be assaulted by every other sect, then indeed may Christianity well pray to be delivered from the hands of its friends.

[Willis D. McKinstry in *Abilene* (Kan.) *Reflector.*]

To say that Mrs. Eddy claimed "divinity for the human soul" is to misrepresent her teaching. One to be a true critic must be a master of the subject criticized. Christian Science is revealed truth. It is not something Mrs. Eddy has created or has a patent upon, nor does she make such a claim; she says it came to her "through divine revelation, reason, and demonstration" (Science and Health, p. 109). This spiritual interpretation of the Scriptures, as imparted to the world through the teachings of Christian Science, reveals spiritual cause and effect as the true basis of all true reasoning; that God, Spirit, is the only creator.

The immortality of Soul declares that it has no place in the human concept of existence—that matter never becomes Spirit, or that immortality returns to dust. Soul is not a material something that helps to make up a corporeal body; Soul is God—infinite Spirit. Infinity proclaims its oneness—one Soul, one God; and we have Scriptural authority for declaring that man is the image and likeness of God; therefore the Soul of man is God, Life, Truth, and Love.

The works of Christ Jesus are called miracles not because they are violations of divine law, but because they seem miraculous to those who have no knowledge of the fact that Spirit being the source or basis of all existence, all creation must be governed by spiritual law,—the only law, for Spirit is one. Jesus' life and work proved this fact; his very being, his ministry, and his demonstrations were directly opposite to and silenced all physical or so-called natural law. All Christendom accepts Christ Jesus as the way of salvation. Then why should Christian Scientists be condemned for doing the same thing? Jesus' commands to "preach the gospel" and "heal the sick" are just as imperative now as they were the day they were uttered.

The spiritual consciousness of scientific being, as given to mankind through the teaching of Christian Science, enables him to show his faith by his works. "The tree is known by his fruit." If it is not wrong to reform the sinner through a knowledge of God, it certainly is not wrong to heal the sick by the same process. "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

CANAL ZONE ORDER MODIFIED.

THE majority of our readers have doubtless noted, through the despatches to the press, that President Taft has so modified the wording of the executive order of Oct. 14 that it can no longer be construed to prohibit the practice of Christian Science in the Canal Zone. From the time the order was issued, those who have followed closely the administration of governmental affairs under President Taft, were confident that neither he, nor the secretary of war, in whose department the affairs of the Canal Zone are administered, had the slightest intention of discriminating against Christian Science, and that as soon as the phraseology of the order of Oct. 14, which had been passed through as routine matter, was called to their attention, steps would be taken to change it; and results have justified their confidence.

It is only fair, perhaps, to say that Christian Scientists, naturally enough, were alert to the probable interpretation that the order as originally promulgated would receive, but they simply took steps to bring the discriminating effect of such an order before the proper authorities, and relied upon the sense of justice and fairness which has been so manifest throughout President Taft's administration, to correct it. Consistently with the teachings which Mrs. Eddy constantly impressed upon the members of her church, they made no objection whatever to the sanitary rules and regulations laid down for the Canal Zone, and we feel safe in saying that no one will more scrupulously obey these rules and regulations than will they.

What they did object to, however,—and certainly it was justified,—was that which stirs the spirit of the fair-minded and liberty-loving men and women of this free country, and that is the attempt, upon the part of the doctors who undoubtedly inspired the order of Oct. 14, to violate the inalienable right of American citizens to select for themselves the system of healing they prefer, in their zeal to disassociate and debar a system of healing which in the last forty years has proved effective in thousands of cases after medical practice had failed. The founders of the American republic declared the right of its citizens to "life, liberty, and the pursuit of happiness," and the Chief Executive of these United States has shown that he will not knowingly countenance what could not be otherwise construed than an attempted infringement of this right.

As an instance of what might have occurred in the Canal Zone but that President Taft and Secretary of War Stimson were quick to see that the executive order which had been presented to them as "routine business" would have curtailed individual liberty, we would call attention to a recent happening in St. Louis, as reported and commented on by the daily press and republished on page 347 of this issue of the *Sentinel*. Certainly this and similar occurrences do not reflect credit on those who devise and carry out such schemes with the intent to terrorize Christian Scientists. Such a crude and undignified proceeding is unworthy of a profession which counts among its members so many good men and women, and should rouse them to ask themselves how much longer they can afford to give the backing of their own high standing and respectability to the "political doctors" who act as though the question were not as much one of whether the people should be healed, as it is of debarring them from seeking other means of relief when, as so frequently happens, they have been pronounced incurable according to medical standards, or have grown weary of protracted or recurrent suffering.

As a matter of fact, there are very few of the many thousands that have turned to Christian Science and have been healed, who have not first sought relief through some one of the drug systems, but without success. It is not surprising, therefore, when they have found for themselves in the practice of the teachings of Christian Science the freedom not only from sin but from sickness which they had sought in vain elsewhere, that they should desire to share their new-found happiness with their fellow men. Christian Scientists are simply trying to be loyal to the command of the Master who sent out his disciples "to preach the gospel and to heal the sick," and surely those who consecrate themselves to this work have no need to be ashamed of their calling.

ARCHIBALD MCLELLAN.

"IN THE BEGINNING GOD."

As New Year's day draws nigh, the traditional time for "making another start" in all good endeavor, not a few of us will be visited by the remembrances of many a good plan and undertaking earnestly entered upon in the past which has seemingly come to naught, and though we may be ready and glad to reenlist for the cause of this and that winsome ideal, we are likely to do so with more misgiving and less joy than becomes a time of good decision, and for the reason that past defeats are permitted to augur the repetition of such experience, the unhappy outcome of former undertakings are allowed to count as lessening the likelihood of overcoming in the tomorrow-trials of our faith and strength. In other words, there is a practical denial of the possibility of a really new beginning, because the bias and momentum of old failures are facts with which we think we have got to reckon. This is undoubtedly the perspective with which many a reconsecration to right doing is made. Though professed Christians, we may have forgotten that the coming of light means the annihilation of darkness; that in the dawning of truth a wholly new day is indeed begun. Though having ears, we may not have heard the word of the Lord as spoken by the prophet Isaiah, saying, "Behold, I create new heavens and a new earth: and the former shall not be remembered, nor come into mind."

Christian Science comes to awaken human sense to the eternal truth that the unideal has no reality or power; that there is no inevitable hold-over of habit, disposition, tendency, etc., to defeat our ends, under the rule of natural law, no sword of Damocles leaping forth from the darkening clouds of the past to descend upon the head of him who, dwelling "in the secret place of the most High," is ambitious for the best. It comes to center thought ever upon the first enunciation of revealed truth, "In the beginning God"! to inculcate in us the habit of making and having no beginnings apart from God, and thus to save our aspirations and consecrations from the blight of past failures' recall. He who begins ever with God, and he alone, has a fair start and a fair chance. The promise, "No evil shall come nigh," guards well his work and way; it is his bulwark and defense against every claim of weakness and incapacity. It whispers ever, "The Lord is thy strength and thy salvation," and "the former [things] shall not be remembered."

When we declare that God is infinite Spirit, we aver that neither He nor His manifestations are subject to the limitations of material sense. This concept, so foreign to finite experience, so removed from everything mundane and material, grows more and more startlingly significant as one thinks upon it, and when in the exalted spirit of the poet we dare to say "I know [and will know] no life divided, O Lord of life, from Thee," the possibility of escape from the past, from every fetter of failure, and of the realization

Digitized by Google

of every hoped-for achievement in good, is now and forever at hand, and the stumbling and defeats of mortal history need not and will not "come into mind." The heart of the gospel of Christian Science is found in our Lord's teaching that we may and must know God, divine Truth, and that however great or small it may be, in every choice, circumstance, and decision we are to seek first (in every beginning) Truth's kingdom and Truth's righteousness. But the knowing of Truth means the unknowing of error, exemption from every phase and claim of material sense, the entire severance of its handicapping hold upon our thought. It thus means the freedom of the sons of God.

The beginnings of mortal sense have been, are, and ever will be indissolubly linked to endings: failure is written upon their foreheads. The beginnings of divine Mind know no ending, no defeat, and as we take our every step this new year "in His name," our joy and rejoicing will be heard at its every mile-post.

JOHN B. WILLIS.

"THE SENSES OF SOUL."

IN thinking upon the songs heard by the shepherds on the night of the nativity, these words of our Leader were recalled: "Divine Science reveals sound as communicated through the senses of Soul—through spiritual understanding" (Science and Health, p. 213). It will be quickly seen that the simple watchers over the flocks must have caught this echo of heavenly harmony through a dawning spiritual sense, for their ready obedience in seeking "the young child," the Christ-idea, shows that they were not dominated by material sense, but that they were willing to follow the heavenly guidance wherever it might lead. It is not possible that the angels have been silent all through the long centuries since that night, or that they have been singing in a far-away heaven, but how many have been ready to hear and heed the message which ever ascribes "glory to God in the highest," and declares "on earth peace, good will toward men"?

It should not be forgotten that the "good tidings of great joy" were to be for "all people;" not alone for those who saw Christ Jesus and experienced his healing and saving power, but to all who in any age are ready to turn away from material sense evidence and to gain the spiritual facts from the senses of Soul. The great Teacher had little regard for the belief in material sense. He said that men had eyes but saw not, and ears but heard not. He then told his students that they should rejoice in being able to behold those things which so many had desired to see but had not seen.

Some may here ask whether, after all, people may not get on very well without knowing anything about the senses of Soul. The answer from the Christian Science viewpoint would be an emphatic No! As the Bible, in the light of Christian Science, opens up to us its priceless treasures, we begin to appreciate the wonders wrought by spiritual sense, not alone when the young man's eyes were opened and he saw "horses and chariots of fire round about Elisha," symbolizing the divine protection which the children of Israel so much needed, but whenever and wherever Truth triumphed over error and proved that God is with His own in every age. This is especially true of the wonders wrought by Christ Jesus, which can only be explained on the assumption that spiritual sense sweeps aside material evidence and accepts only the fact of Life as God, forever reflected by man. The Master said, "If a man keep my saying, he shall never see death." He who said this gave full proof of the truth of his teaching when he gave sight to the blind and hearing to the deaf, when he awoke the widow's son at Nain, restored Jairus' daughter to her sorrowing parents, and called Lazarus forth from the tomb.

Mrs. Eddy tells us that "Life is real, and death is the illusion;" to which she adds, "A demonstration of the facts of Soul in Jesus' way resolves the dark visions of material sense into harmony and immortality" (Science and Health, p. 428). To her great discovery we owe it that we know how to utilize the senses of Soul, not for the purpose of dipping into the occult or mysterious (to which they have no relation), but that we may behold God and His idea at every step of the way, and hear the voice of Spirit bidding us be of good cheer, however dark the night may seem to mortal sense. As spiritual sense unfolds we shall begin to realize that in Truth there is "no darkness at all,"—no sin, sorrow, sickness, or death; and thus we shall take Paul's advice and "lay hold on eternal life." Thus, too, we shall hear more and more clearly the unceasing strains of heavenly harmony and join the angelic host in proclaiming the greatness and goodness of divine Love.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

HOUSTON, TEX.

All regular services of the Houston congregation of First Church of Christ, Scientist, today [Oct. 8] will be held in the handsome new building just completed at the corner of Main street and Jefferson avenue. From today on the old church at the corner of Travis street and McKinney avenue will be abandoned. It was erected in 1901, and since that time until now has been their regular house of religious worship. Long before the new church was completed, the congregation had grown so large as to render this little building entirely inadequate, and the move into the new building will effect a decided change in conditions as to comfort afforded by sufficient room.

The new building, which will seat comfortably from six hundred to six hundred and fifty persons, will not be dedicated for the present. Representing a total outlay of about eighty thousand dollars, of which about fifty thousand dollars covers the cost of the building, about twenty thousand dollars the value of the lot, and the remainder the cost of the handsome pipe-organ and mahogany pews, the edifice comprises a notable acquisition to the line of beautiful structures along Main street. Over all, the dimensions of the building are about ninety-five feet by fifty-two feet, fronting on Main. The structure is of steel, fire-proof material, handsome pressed brick, and a very pleasing variety of sandstone brought from the state of Indiana.

There are now over thirty churches and societies of Christian Scientists in the various towns and cities of Texas. The church is just now, it is claimed, undergoing a rapid development and expansion in the state. While a society existed in Houston for many years, the church was organized as such here only about twelve years ago. The membership at that time was small and the work was carried on in a modest, unassuming way. As soon as the members took charge of the building at the corner of Travis street and McKinney avenue, new attention began to be attracted to their work, and a steady growth was noticed in point of regular attendance. The church does not measure its strength by numbers, and for that reason does not favor any publication of the numerical size of its membership-rolls.—*Houston Post.*

MINNEAPOLIS, MINN.

Plans for the proposed new edifice of First Church of Christ, Scientist, have been accepted and a lot secured, and we expect to begin construction early in the spring of 1912. The edifice, which will be of Bedford stone, is planned to seat about one thousand people, and will cost approximately one hundred and twenty-five thousand dollars.—*Correspondence.*

THE LECTURES.

JOHANNESBURG, TRANSVAAL, S. A.

William D. McCrackan, M.A., member of the board of lectureship of The Mother Church, the First Church of Christ, Scientist, in Boston, United States of America, gave two very interesting lectures on Christian Science in the Masonic Hall, Jeppe street, on the evenings of the 12th and 16th of October. The hall was well filled with eager listeners on both occasions, and the lecturer received a sympathetic hearing. At the close of his addresses he was greeted with expressions of hearty approval. On the first evening J. L. van der Merwe, mining commissioner, in introducing the lecturer said in part,—

On behalf of the Christian Science organizations in the Union of South Africa, I have great pleasure in extending tc you all a hearty welcome. We are here this evening to listen to a lecture upon Christian Science. Now, Christian Science is not a new religion. It is the religion of the Bible. It starts with the God of the Bible as the only cause and intelligence. It teaches us how to understand and demonstrate the truth of what the God of the Bible has said about Himself: "I am the Lord, and there is none else." This was later on emphasized by Jesus in his reply to one of the scribes, who asked him, "Which is the first commandment of all?" Jesus answered, you remember, "The first of all the commandments is, Hear, O Israel; The Lord our God is one Lord." This is true from all eternity; it was true when Jesus uttered it; it is true now that Christian Science is demonstrating it.

Christian Science teaches that there is only one way to understand the truth of the Bible, and that is by demonstrating, by living it. Now it is evident one person cannot live for another. It is an individual work. To live the truth of the Bible means reformation. In Christian Science, reformation is the taking up of the cross; it is the going through Gethsemane; it is the climbing of Calvary; it is the overcoming of all materiality; it is the way that leads to the understanding of God, when we shall see Him as He is.

Christian Science is encircling the globe. The Bible, and its key, Science and Health by Mrs. Eddy, are going through it together as two missionaries, and wherever they enter into a home, there hypocrisy, envy, hate, malice, sickness, and discords of every sort are dethroned, destroyed, and love, peace and joy, health, happiness and harmony enthroned and demonstrated in daily life as the grand realities of man's being.

On the second occasion W. P. Grimmer, attorney-at-law, in introducing the lecturer, referred to the immense advances that had been made during the past centuries in material science, and how almost every new step therein had been bitterly opposed for many years by the settled belief of the time. He instanced, among others, the long and bitter struggle before the views on astronomy known as the Ptolemaic system yielded to the Copernican. The life-story of Galileo was typical, and illustrated the fact that all the material science we now possess was attained only through centuries of struggle between the settled beliefs from time to time of the majority, and new views advanced by despised minorities. All future knowledge would no doubt be attained in the same way.

We had been so taken up with material science during the past century that it never entered our minds that there was, or could be, any other science. But this accepted position is being challenged, and people are coming forward to maintain that there exists, and always has existed, a spiritual science, the rules of which are as true and exact as those of mathematics, but that it can only be attained by unlearning much of the accepted beliefs of the day. To this new knowledge there is being and will be applied the test: Does it work, and can it be demonstrated? and according to the result is its present and will be its future.

In the fifteenth chapter of Gibbon's "History of the Decline and Fall of the Roman Empire," we read that throughout the first three centuries of the Christian era, all Christendom claimed and believed that the spiritual knowledge which the Founder of Christianity brought was daily curing in their midst all manner of disease. It is of supreme importance to Christians and to all others to know whether in this regard all Christendom was under a delusion or not. If the four gospels are to be accepted as correct, it is clear that what Gibbon speaks of were the signs which Jesus said would follow all who believed his teaching, and if the signs have ceased to follow, it is time to revise the belief. The lecturer comes before you on behalf of a body of people who conscientiously believe that the signs spoken of by Gibbon did follow the early Christians, and that the knowledge which was available to them is also available for the people of today, and as such I have the honor to introduce him to you.—*Sunday Post.*

CONCORD, N. H.

A large audience, thoroughly representative of the capital city, and including many from outside Concord, heard the free lecture in First Church of Christ, Scientist, Thursday night [Oct. 19] by Bliss Knapp. Allen Hollis, Esq., introduced the speaker in the following words:—

It is an honor, as it is a pleasure, to be selected by this church to introduce the speaker who will address this meeting, and it may be fitting, in connection with the introduction, to say a few words bearing upon the value of these lectures to this church and the public as well.

Every change in the existing order of things, whether in art, science, business, politics, or religion, meets with opposition. This opposition results principally from a human dislike to change—a desire to be let alone; but active and violent opposition must be expected from those whose interests are threatened or whose settled convictions are disturbed. Thus it happens that every form of progress has to struggle for the right to exist. The ready weapon for these antagonists of change is misrepresentation and misunderstanding; and these can be overcome only by truth. Public discussion is the most effective means of combating error and supporting truth. The spoken word carries with it the personality of the speaker as no printed page can do; and Christian Science has owed its wonderful progress largely to those who have come forward to speak in its behalf.—*Concord Patriot.*

ASHEVILLE, N. C.

Judge Clifford P. Smith delivered a lecture on Christian Science at the Auditorium yesterday afternoon [Oct. 21] to a representative audience of about four hundred and fifty persons, notwithstanding the threatening weather. George S. Powell presided, and in introducing the lecturer spoke in part as follows:—

Some of the perplexing questions to humanity are these: What is man? What is the source of his being and what is it that governs his thoughts and acts? Is it God, Spirit, or is it matter? When we can answer these questions correctly we will be able to prove the truth of the Master's promise when he said: "Ye shall know the truth, and the truth shall make you free." The purpose of these lectures is to give those who do not read the literature an opportunity to get a more accurate knowledge of Christian Science, and to bear testimony to the facts regarding the life and work of its Discoverer and Founder, Mary Baker Eddy, in her consecration to the teachings of Jesus.

PORTLAND, ORE.

In this issue is published in full the lecture on Christian Science delivered by Virgil O. Strickler, last Sunday afternoon, Nov. 5, at the Heilig and in the evening at First Church of Christ, Scientist. I believe Mr. Strickler's message will repay reading. It was heard by between three and four thousand people at the Heilig; in the evening the church was crowded; many rapt listeners stood up, and five or six hundred people had to be turned away. Mr. Strickler was introduced in the afternoon by Federal Judge Robert S. Bean, and in the evening by Howard C. Van Meter, Christian Science committee on publication for Oregon. Judge Bean was heard with attention, and his remarks, which made a deep impression on the audience, were as follows:—

"Your presence here this afternoon," he said, "is an evidence of your interest in the great religious movement of which the distinguished lecturer is an official representative. Any one at all familiar with the religious history of the past or present, it seems to me, must be impressed with the fact that unnecessary attention has been given and is now given to mere controversial questions and doctrinal disputes, and that the controversialists often overlook the vital and important question: Does the movement make for better citizenship, does it make for better morals, right living and right thinking? Whatever tends to these ends should, I take it, be recognized and encouraged by all good people, whether they are able to accept some of its technical doctrines or not.

"The Christian Scientists believe they have such a message. They believe that they have demonstrated by actual experience that, when rightly understood and lived, it adds to the sum of human happiness, joy, and health."

Spectator.

TROY, N. Y.

There was a good attendance last evening [Oct. 26] at Music Hall to hear Virgil O. Strickler expound the fundamentals of Christian Science, laying great stress on its practical side. The Rev. William H. Dodd, first reader of First Church of Christ, Scientist, of this city, in introducing the speaker, referred to the growth of the Christian Science church, saying:—

It is organized in Asia, Africa, Europe, North and South America, Australia. The sun never sets on the Christian Science movement, and if you were to inquire of the members of this church why they believe in Christian Science, almost without exception the reason would be given, "Christian Science found me in bondage to false appetite and set me free," or, "I was suffering, helpless and hopeless, with so-called incurable disease, and Christian Science gave me hope and health. I was one of those 'having no hope, and without God in the world;' Christian Science gave me a sense of love to God and love to my fellow man."

Troy Times.

COLUMBUS, OHIO.

Clarence C. Eaton lectured on Christian Science in Memorial Hall, Nov. 5, to an audience of over twenty-five hundred. He was introduced by William H. Howard, president of the church, who said in part,—

In obedience to the Scriptural commands, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you," we are here to contemplate the deeper import of eternal Truth and its application in human experience, as revealed through the teachings of Christian Science. The Master said, "Lo, I am with you alway;" and again, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do, because I go unto my Father."

Christian Scientists believe—yea, they know—that the divine Principle of Life, Truth, and Love, as demonstrated in the land of Judea so long ago by the great Exemplar, has changed not one iota throughout the Christian era of twice a thousand years, and will continue to endure as the ages roll on to eternity; therefore, every Christian Scientist knows that all the true wisdom, power, joy, health, happiness, and saving grace that ever came to humanity, is for us, here and now. Divine Love is ever beckoning us onward to a fuller realization of these blessings,—to a richer experience, to nobler endeavors, to a higher hope, a sublimer faith, a grander reward. The sweetest carol ever sung was, "Glory to God in the highest; and on earth peace, good will toward men." It ushered in the Christ, Truth, to be made manifest in the lives and deeds of men.

The mission of Christian Science is to revive the teachings of Jesus and the apostles of old, and wherever accepted it is making better men and women, happier homes, is elevating the standard of our citizenship, abolishing caste, reforming the sinner, healing the sick, and teaching neighbor to love neighbor as never before. The teachings and practice of Christian Science, which is enlisting the attention and earnest devotion of countless thousands of happy, thoughtful people all over the world today, who were once in the throes of agony, sin, or despair, may rightfully and profitably engage us this afternoon.—*Correspondence.*

CAMBRIDGE, MASS.

Willis F. Gross delivered a lecture on Christian Science in Scenic Temple, Sunday afternoon [Nov. 5], to an earnestly attentive audience. Mr. Gross was introduced by G. Leonard McNeill, first reader, who spoke as follows:—

Christian Scientists are always glad of an opportunity to tell others of the reason for the hope that is in them. They have received many blessings from the teaching and practice of Christian Science, and wish to share these blessings with others. Many persons who are now earnest and faithful Christian Scientists, were at one time bitterly opposed to Christian Science, or I should say, they were bitterly opposed to what they believed its teachings to be; but after experiencing or witnessing the healing ministration of Christian Science, they were awakened to some realization of the meaning and magnitude of this movement. This led to careful investigation and the gaining of a sufficient understanding of the Principle to enable them to prove for themselves the truth of its teaching. Then they saw that what they had opposed was not Christian Science, but simply their false conception of what it teaches.

Cambridge Chronicle.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Canon City, Col.—William R. Rathvon, Opera House, 2:30 p.m., Dec. 31.
Chillicothe, Ill.—William R. Rathvon, Church Rooms, Kelly Block, Jan. 11.
Florence, Italy.—William D. McCrackan, M.A., Jan. 14.
London, N., Eng.—Bicknell Young, King's Hall, Hackney Baths, Lower Clapton road, Hackney, N. E., Jan. 18.

TESTIMONIES OF HEALING.

It is ever an occasion for profound gratitude that we can testify to the fact that Christian Science has been at one time or another a help and joy to us; and the deeper we penetrate into its teaching, the more sincerely we try to apply what we have learned, the more numerous become the proofs that its promises do not fail. Often the help we have received is, however, of such a nature that we cannot or even will not relate it publicly, as it touches the most intimate relations in our lives; and yet this very kind of help is often the most valuable, for sorrow and despair or a broken heart are often far more difficult to endure than any physical disease.

There is so very much that I have to give thanks for, but only one thing would I here relate, although this may not perhaps be called a marvelous demonstration. In the middle of November, 1910, I one day slipped and fell. From the position of my foot it was clear to me that the condition was serious, though there was no pain, and I allowed myself to be carried back into the store while a surgeon was summoned. While waiting for him the pain started, but I tried to apply what I knew of Christian Science, with the consequence that the pain after a short while totally disappeared. The surgeon, upon his arrival having stated that there was a breakage, advised me to seek assistance at a hospital, and to have the limb examined by the X-ray. I was then taken to the hospital, but I was constantly endeavoring to fill my consciousness with the comforting thoughts of Science. The X-ray photo proved that both bones were broken, and the physician insisted that the limb be put in a plaster cast. Uncertain and wavering as I was, and am still when the physical senses seem to testify to danger, I permitted the physician to do as he wished. Upon my arrival home, however, I called one of my Christian Science friends, and asked for help, while I myself kept on reading Mrs. Eddy's writings most of the day.

After about a week I was able to walk about in my house, the plaster cast still on; but the half-way position I was maintaining annoyed me beyond description. After another couple of days I could not endure the cast, which only became a hindrance to my unreserved trust in the omnipotence and love of God. I therefore sent for the surgeon and asked him to remove the cast. He then offered to apply a less heavy bandage, and most positively discouraged the thought of my doing without any appliance, but he finally had to yield to my wish, and left the limb free. This done, I was seized with a fear more intense than I had before known. In the night there was very great pain, mortal sense trying to convince me that this trust in God was foolishness, for which I was now to be punished. This night was for me a hard fight, but I finally gained peace, and the pain left at the same time. The next day, however, I dared not step on the foot at all, but on the following day all fear was gone; the reading from Science and Health gave me courage and strength, and I walked across the floor without any material support, but I was clinging to God, the only real support. This was on the fifteenth day after the fall. Two days later I walked in the street, and I could from that day walk better and better without the use of a cane. Though my step was uncertain and uneven for a long time, friends and acquaintances marveled at my quick recovery, and if it had not been for the X-ray photo they would probably have claimed that the injury had never taken place.

It is a joy to have this opportunity to express publicly my gratitude to God, and also to the good woman who has so lovingly and wisely taught us how we may know the only true helper.

MRS. DAGNY LUNDBERG, Göteborg, Sweden.

I would like to express my thankfulness to God for the glorious teaching of Christian Science, as given in Mrs. Eddy's writings. I found in these the truth for which I had always been looking, the truth that makes us free; and I proved almost at once that this was indeed the truth. I would particularly like to express my gratitude for the better understanding of God and of the teaching of Jesus the Christ; for being able to understand and to know instead of merely believing.

It is now about two and a half years since I started on the study of Science and Health,-and I have indeed found it to be the Key which unlocks the Scriptures and reveals the truth about God and man. I cannot express all I would, but I often thank God for calling Mrs. Eddy, and also that, like Samuel, she responded to His call.

JANE SILLISS, Sevenoaks, Kent, England.

It is over three years since Christian Science was first recommended to me as a healing agent, and it was only for healing that I at first turned to it. I thought I did not need religion, as I rather prided myself on being broad-minded, which meant in my case, as it does in many others, that I did not believe wholly in anything. I had my own views, which were a mixture of so-called new thought, spiritualism, theosophy, Darwinism and a few other isms, and for my physical help I relied wholly upon *materia medica*, physical culture, and breathing exercises. As to their practical value as a harmonizing influence in my life, my physical condition was most potent testimony. For years I had suffered with a bowel trouble, and with the advent of each new member into the family the condition was aggravated, until finally, after the birth of my third child, the suffering became unbearable, for it involved not only the local suffering but many complications. My physician could offer nothing for relief but opiates and other drugs, and he advised (as had three other physicians) an operation, which they all agreed was the only cure.

At this point a friend offered me the Christian Science text-book, "Science and Health with Key to the Scriptures," to read. I merely glanced at it and turned away from it contemptuously. Finally, however, I agreed to try the treatment, and in spite of the prejudice which I thought I entertained toward Christian Science, I was healed. The pain and inaction were cured in the first treatment and after about five weeks' treatment the hemorrhoids disappeared. Naturally, with such convincing proof that there was "something in it," I commenced to read Science and Health, and found that I was not opposed to what Christian Science is; I had only been opposed to what I thought it was, and investigation proved the error of my opinion. I have found this truth to be a "very present help in trouble"—all kinds of trouble—because it makes us realize the omnipresence of God, and know that God is for us.

In the first days of our acquaintance with Christian Science, before we had learned enough of its practical application to prevent discordant conditions, there were many experiences which required aid, but we have found Christian Science a sovereign remedy for all. Our children have been cured of fever, measles, croup, and minor ailments. My husband has been cured of chronic catarrh, a stomach difficulty, also of the tobacco habit, which he had many times tried in vain to overcome with will-power. Our financial condition has been changed from the darkest of experiences to prosperity, and best of all, we have found a church whose religion is a genuine help, a living, livable doctrine, which makes every blessed promise of the Bible a fact in our experience. We are learning what it means to have dominion over all things, which is just another way of saying that we are subject only to God. Our children, who were continually being made the victims of our intense

Digitized by Google

efforts to be careful of their diet and raise them according to strictly hygienic rules of living, are now enjoying perfect health, with freedom to eat things which we formerly thought would endanger their lives.

One more statement I must make. It has been my privilege to have a child born under Christian Science treatment. After having had three experiences of long hours of suffering, chloroform, and surgical aid, I have known the comfort of a normal birth with no doctor present. I was out of bed on the fourth day, and have been entirely well ever since, having had no return of the original condition which the previous experiences had so aggravated.

I am grateful to God for the physical healing, but more so for the enlightenment concerning Christian Science, which has removed my prejudice and enables me to say that I am grateful to our dear Leader, Mary Baker Eddy.

ALICE E. LAWRENCE, New Orleans, La.

The following testimony is given with the hope that some railroad man may see it and gain courage. I am forty-two years old and have been in this business for twenty years. I was completely broken in health when I found Christian Science over three years ago. The reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, healed me morally and physically. I commenced the reading in order to help my wife, as the practitioner said it would aid in her effort to gain health. Perhaps I would not have cared to read it if I had known it would work a change in me as well.

First, I noticed that I had quit swearing, then the tobacco habit left me. One day the tobacco tasted bad and made me sick. I changed pipes and tobacco, but it was of no use—the appetite was destroyed. I was afflicted with the lame back which all railroad men have more or less. I had partial paralysis of the right leg from the knee down, and the doctor said my only way to get relief from pain when riding on my engine was to have a block under the foot to lift the weight, but the only relief came through Christian Science. From childhood I had a bad case of catarrh and hay-fever; besides this I was operated on for piles but not cured, and when the disease returned I was entirely healed in three days through reading Science and Health. Reading-glasses were removed after three days' treatment, and I can now read the Bible and Science and Health at any time. Many immoral tendencies also have been totally destroyed.

At first I could not understand how a fellow as bad as I could possibly receive so much benefit from God in Christian Science, as all the religion I had was the belief that there was a God. I never used to read the Bible, but now it is a pleasure to read and study the Lesson-Sermon daily. I had been baptized, and was in childhood admitted to the church to which my parents belonged; but I early drifted away from it, and it is now nearly fifteen years since I entered it except to attend funerals of friends. At the time I began to read Science and Health I was much reduced in weight, but I am now in good physical condition. With the exception of two occasions when a practitioner treated me, all my healing and reformation came through the reading of Science and Health. I know that my gratitude to God, also to the Leader of Christian Science, is proven every day in the effort to live right and help others.

PETER J. KIMENER, Logansport, Ind.

[Translated from the German.]

As far as I can think back I was afflicted with a stomach trouble, and this ailment had been deeply impressed upon me, for I can remember that whenever I was ailing my mother would say I had inherited the weak stomach from my father. As years went by the trouble became more severe, and was fostered rather than improved by the treatment of the physicians, who pronounced it a chronic case. Light food was specially prepared for me, as I could not retain ordinary food, but I ate under constant fear of bad results. To this trouble there was later added often recurring inflammation of the bowels, chronic inactivity of the digestive organs, besides other painful conditions. I tried everything which medical skill could suggest, and submitted to some treatment which I recall with a shudder.

In the mean time members of my family went through severe illnesses which in several instances resulted in death, while my nervous system was so much affected that I looked for a complete breakdown. For months I was unable to sleep, and a paralyzing pain in the arm, shoulder, and right side of the neck set in, making it impossible for me to turn my head or to raise even a spoon to my lips. To this was added insensibility in both hands, as well as other troubles. Medical treatment was resorted to, but all to no avail. Finally the physician sent me to a health resort to take hot sand-baths, and this is an awful cure, as the patient has to submit to a very high temperature. This was in August, and the weather was extremely hot. After my fourth sand-bath my condition was such that the physician shook his head and said that these baths must be discontinued. It took a couple of weeks until I recovered sufficiently to be able to return home, and that in a worse condition than when I left. But man's extremity is God's opportunity!

Soon after—this was nine years ago—I first heard of Christian Science, and upon the urgent advice of a friend I went to Hannover and applied for Christian Science treatment. After a few treatments the so-called chronic and incurable inactivity of the bowels, for which I had used medicine daily for eight years, was cured, and in a few weeks my stomach was healed and has remained so. I now eat all that is set before me, and with none but good effects. I do not suffer from my nerves any more, and whereas formerly I had to have some one to serve me and care for me, I now attend to everything myself and enjoy working. Above all, Christian Science has taught me what religion and science really are, and that divine Truth delivers us from all suffering. With all this has come a better apprehension of the words "man" and "God's child."

I thank God for showing me the way which led me to find Christian Science. That this teaching stands firmly on the rock of Christ is shown in the practical application of Mrs. Eddy's teachings.

FRAU C. EICHMANN, Hannover, Germany.

I wish to express my gratitude for Christian Science,—what it has done for me and what it is doing for the whole world. Six years ago I was considered very ill. I suffered from hemorrhages, catarrh, and nervous trouble; was confined to my bed for weeks, and almost given up by the doctors and my family. Christian Science was brought to me through the advice of a little girl, and I was healed. Since then, through the study of Science and Health and help from faithful practitioners, many discordant conditions have been overcome, and I know that I shall be entirely free if I continue to watch and pray for that Mind to be in me "which was also in Christ Jesus."

I am truly grateful to God, also to Mrs. Eddy, for this wonderful truth that makes free.

MRS. MINERVA WALKER, Los Angeles, Cal.

I am truly grateful for Christian Science. It has proven to me that all sorrow, sickness, and loss come from a false concept of God and man. I was a little weakling, carried on a pillow until I was two years old. As I grew older I seemed to be stronger, but for some unknown reason I would be very ill for days and sometimes weeks, and I never passed three months without going to bed for a few days at least. Since I have been in Christian Science, which

Digitized by Google

is over seven years, I have only been in bed two days, and we all know the gratitude which follows such a sense of freedom as this. But it is only one of my blessings.

After I had suffered all I could, and for a time my suffering was mental as well as physical, I felt like a prisoner, my hands and feet bound with chains. I could not succeed in anything. I often spoke of this to my clergyman, but he would say that I must be patient, and some day God would set me free. But the more I tried to keep still the more nervous I grew, and the more I tried to be patient the more fearful I grew, until I could stand it no longer. Then I turned to Christian Science, hoping to be healed in a few treatments and then return to my own way of thinking; but I was not healed in that way. I took up Christian Science and I studied the letter as a child studies its multiplication table, but I was looking all the time for the mistake in everything except myself.

The longer I studied, however, and the more I studied, the more I had to give in, and I know now that every time I yielded to Truth I pulled a stone out of the walls which held me a prisoner. Through the loving patience of my practitioners, these walls have been pulled down sufficiently for me to see what they were, namely, self-consciousness, self-will, self-condemnation, and self-pity. This liberation is to me the greatest of all the blessings I have received, and I am indeed thankful to our dear Leader, Mrs. Eddy, for showing me the way out of bondage. Christian Science has changed my false concept of being, changed false beliefs for spiritual facts, and I can say honestly and earnestly that I am no longer "ungrateful for Life, Truth, and Love" (Science and Health, p. 3).

EMMA HINCHMAN, New York, N. Y.

I had been troubled with pains in my arms, hands, and shoulders for more than a year, and at times there would be numbness. I tried to work the problem out myself, but did not seem to have the understanding, so I called on a Christian Science practitioner and asked for treatment, and thus I was patiently and lovingly led to where I can say that I am healed. When the treatment was commenced I could not rest at night, but now I have perfect rest. Christian Science has also healed others in my family.

MRS. MATILDA LOFLAND, Medford, Ore.

I deem it my duty to give some expression of gratitude for all the blessings which have come into my life with Christian Science. This truth was brought to me through the healing of a motherless babe that we took into our family. Three of the best doctors said the child had an incurable disease, so we threw away all the drugs and asked for treatment in Christian Science. In a very short time he was cured. He has never taken any drugs since, and is now a strong, healthy boy. His healing was brought about by absent treatment and was my first experience in Christian Science. The kind practitioner sent me some literature to read, and as I read I felt that this teaching was what I had been looking for all my life. I had been a church-member for a number of years, but never was satisfied with the teachings and was very much discontented with everything. Now all is different, thanks be to God, also to our dear Leader, Mrs. Eddy, who has shown us the way.

I have had beautiful demonstrations, and have also had some battles to fight, but Truth has always prevailed, and by studying "Science and Health with Key to the Scriptures" I have been enabled to get a better understanding of God's promises, and I am now a happy woman. I have great help from reading the *Sentinel* and our other Christian Science literature, and no words can express my gratitude for the blessings received.

MRS. C. EGGLESTON, Richmond, Va.

Each day I feel more grateful for what Christian Science has done for me. I suffered from a complication of diseases, one of them being severe headaches, which were becoming worse and more frequent as time advanced. I also had catarrh and a very severe cough. From these and many other ailments Christian Science has healed me. I had faithfully tried doctors and medicine of all kinds, but all of them failed to cure me.

It is over three years since I discontinued the use of medicine and asked for help in Christian Science, and in one treatment was healed of a chronic ailment of twenty years' standing, for which I had received medical treatment all these years with very little relief. In the summer of 1909 I was healed of a very badly poisoned foot in about three weeks' time, and went about my work and household duties as usual, except for about twenty-four hours, during which time I rested and studied Science and Health. I lost no sleep in the mean time. Later I was taken very suddenly with an attack of illness which was very severe, but in thirty hours I was completely healed through Christian Science treatment. I have had slight returns of some of the old ailments, but Truth has been my ever-present help in all times of need.

For all of this healing I am very grateful, but much more so for the spiritual uplifting which is bringing peace and joy into my daily life. It gives me great pleasure to be able to help others even in a small degree. My husband and I are studying the Bible, with the Christian Science text-book, "Science and Health with Key to the Scriptures," and this is instructing us in the truth about God and man and the Science of being.

MRS. ANNA PERRY, Houston, Tex.

I have long had a desire to express my gratitude to God, good, for the wonderful blessings that have come to me and mine through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. While I did not come to Christian Science for physical healing for myself, I have found that and much more of peace and happiness than I ever dreamed possible, even "the peace of God, which passeth all understanding." Had I seen nothing more of the healing of Christian Science than I have seen in our own family, I could have no doubt as to the efficacy of Truth to heal all our diseases and to meet the much greater need of mankind for mental healing, or spiritual understanding.

During the past four years we have experienced in our own family the healing of stomach, liver, and bowel trouble, insanity, tumor, asthma, partial deafness; the overcoming of the liquor and tobacco habits, etc., also of the results of serious accidents, besides wonderful changes which were wrought in dispositions,—all through the understanding of Truth as taught us by Mrs. Eddy. I am grateful for even a very limited understanding of God as Love, of God as Life, harmonious and deathless; and of God as Truth, the knowing of which makes men free. I am indeed grateful for the steps by which I was led to accept this wonderful teaching for myself, and that I have been enabled, by recognizing man as the reflection of divine intelligence, to demonstrate in part the power of Truth for myself and others.

I am grateful for a faint realization of the unreality of material selfhood, and the necessity of overcoming self-love, self-will, self-pity, self-condemnation, self-justification, pride, dishonesty, criticism, hypocrisy, hatred, envy, and the myriad forms of evil which clamor for recognition. I have learned that man, made in God's image and likeness, is the only man there is; the reflection of divine Mind, and he has no material selfhood. I am grateful for the *Sentinel, Journal, Quarterly,* and *Monitor;* also for class instruction, which means much to loyal Christian Science students.

I thank God that one was found pure enough and consecrated enough to discover the Principle of healing demon-

Digitized by Google

strated by the Master, and who was divinely guided to reveal this wonderful truth to a sin-sick and heavy-laden world; and for the self-forgetfulness and devotion to the right which have made our Leader's labor for mankind possible, and for the good that is continually coming to mankind through her labor of love.

NINA E. FRANKLIN, Ophir, Col.

I wish to express through the *Sentinel* my gratitude for Christian Science, for the periodicals, and for the Lesson-Sermons; also my appreciation of the loving work done for me when I needed help. Many unhappy hours were mine through sensitiveness, selfishness, and a very uncharitable disposition, but these discordant conditions are being overcome gradually, and for every victory over self my happiness increases. At last I have come to understand that heaven—harmony and happiness—is a condition possible within myself, and that I must not rely so greatly on circumstances and personality for happiness.

Physically my healing has been very great. The law of inherited disease in an advanced stage was laid upon me, and with it a lung difficulty from which I seemed to suffer greatly. A number of other ills, which while not serious were sometimes distressing, have also been overcome. For a number of years I was almost never free from colds, and until three years ago I can scarcely remember a year in which I did not have a severe attack either in the spring or fall, and sometimes at both seasons in one year. To escape from this discord is a matter of no small satisfaction and relief to me, but I am much more grateful for the spiritual help and understanding which I receive in overcoming ill nature, selfishness, and a spirit of criticism and uncharitableness. While the whole of this Science is contained in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I find the *Journal* and *Sentinel* very instructive, and gain a great deal from a faithful study of their contents. I am very thankful for both.

In Psalms we are told that he who "desireth life, and loveth many days," has only to "depart from evil, and do good;" and no other way leads to heaven, harmony. My gratitude to God, also to Mrs. Eddy, increases daily as I realize more and more that I am being led out of Egypt.

MRS. GUSTAVE A. BRACHER, Spokane, Wash.

[Written for the *Sentinel*.]

I FOUND A PATH OF BLUEBELLS.

MARY J. ELMENDORF.

I FOUND a path of bluebells
A-winding through my thought:
The winter's frosty presence
Its russet robes had brought
To fold the trembling grasses
And mantle tree and hill;
Yet there, amid the grayness,
The sudden gusts and chill,
Amid the lonely grayness
Where borean banners waved,
I found a path of summer
With blue of summer paved.

I did an act of kindness,
Though hard it was to do;
I gave another's longing
The very best I knew;
And, somehow, all the shadows
That wrinkled heart or brow
Were smoothed away in sunshine:
And that, I think, is how
My day was filled with singing,
And how, when self was fought,
I found a path of bluebells
A-winding through my thought.

FROM OUR EXCHANGES.

[Rev. Rufus P. Johnston, D.D., in *Christian Work and Evangelist*.]

There has never been a time when the church could have safely dispensed with criticism. And be it swiftly added, the critics have never failed her. Being, on the one side at least, an expression of human life, the church has always shared in the defects and excellences common to man. Never has she been free from shortcomings in vision and method. In no era has she attained her ideals or completely measured up to her tasks and possibilities. The golden age of perfection is yet to dawn out of her East. Thus far she has needed constantly to pray, "God be merciful to me the sinner." Like other human movements she has shown, too often, a predilection for ruts, a tendency to exalt custom to the authority of Holy Writ, and to regard herself as the end rather than the instrument of the divine purpose. She has not always been free from strains of worldly ambition, from symptoms of self-centered egotism, and from efforts to set herself up as an infallible and unimpeachable judge. Sometimes she has seemed to exalt the creedal, formal elements above the vital, has not shown herself a friend of scientific, political, and social progress, has lost touch with and anathematized the spirit of the age, and has sought to enforce a monotonous uniformity rather than to cultivate the varied fruits of a living spirituality. She has too often conceived herself to be a changeless organization rather than a living organism ceaselessly adjusting itself to its environment. Her leaders have not always been gifted with insight, they have not always been free from the taint of selfish aims, and they have sometimes carried the virtue of conservatism to such an extreme that it became a vice. Some of them have in so far as possible committed the church to policies which plainly spelled suicide, and have attempted to array her against movements which carried in their hearts the hope of the race. From many mistakes her critics have delivered her. Long ago she would have become an unbearable despot but for the spirit of freedom which dared to express itself in criticism.

[*Christian World*.]

What is the real meaning of forgiving your enemy, of using trust instead of cunning, of loving instead of hating? It is no insanity. The method has a perfect rationale of its own. It is nothing less than the bold appeal of the spiritual in a man to the spiritual in his fellow. "I have this compulsion in me. Have you the answering compulsion in you? This force which is acting on me from some upper realm is a force which must be acting from that realm on other minds. Is it not acting on yours. My trust in you is a belief that it is so acting."

That is the real meaning of Christianity, the meaning which assures its position as an eternal religion. The significance of Jesus, more than any other significance, is in this, that his life and utterance were the proclamation of this new order of things, of this new force by which man was to be ruled. When, unarmed and defenseless, he said to the Roman power, "My kingdom is not of this world," he spoke the word of inauguration. Over the kingdom of the elemental forces, over the kingdom of the animal, over the kingdom of the intellect, he beheld rising, with himself as prophet and embodiment, that kingdom of the spiritual whose forces should be those of purity and sacrifice, love and trust, obedience and service. It is the last of the kingdoms because it is the highest. Latest and highest, it will be the most enduring, for there is nothing that can take its place.

This spiritual imperative will rule on earth because it rules in heaven. It is the heart of God. In proportion as we find it in ourselves, we feel the surer of Him.

[*Universalist Leader.*]

The plain truth about most of our efforts at saving the world from sin is that they do not touch bottom, nor top, nor either side of the problem. They are mostly makeshifts. They deal with symptoms and local specifics. They carefully avoid the real issues. When some brave prophet utters a cry that cuts deep into the running sores of society, even good men howl with pain and shout for him to stop. Is it not true that there is almost a "conspiracy of silence" concerning many of the worst vices and the blackest crimes of real existence? How long, O Lord, how long will we go on crying, "Peace, peace: when there is no peace"?

There are signs of an awakening. There are indications that the moral conscience of Christendom is demanding a reexamination of the fundamentals on which society rests. There are voices in every land crying in the ears of our generation for a better understanding of the difficulties and temptations under which men live.

[*Christian Register.*]

There are some tendencies in the organized religious life of all nations that will soon become notable for the embarrassment they cause. For instance, there is a widening breach between theology and religion which is already disturbing to theologians who are bound to profess a creed that is not binding upon the laymen whom they teach, but who are not hampered by clerical vows. Another chasm is opening between theology and ecclesiasticism. The ecclesiastic is bound by his professional obligations to maintain the standards of his church: the theologian is under no such obligation. In theory at least the student of truth is bound to follow the course laid out for him by sound reason, a good conscience, and a due regard for the revelations already made to those who were friends of God and prophets, and this course is not always identical with that of the high and dry ecclesiastic.

[*Christian Commonwealth.*]

The same resistless, awful energy that makes the tiny shoot shatter the rock, the bud expand into the flower, the oak emerge from the acorn, is ever giving birth through human organisms to new ideas, new visions of truth, new conceptions of the universe, and opening up unsuspected vistas of possibility. Every day is the birthday of the race. Always is it Christmas. Many of our sufferings are but the birth-throes of the new humanity. The "unrest" at home and abroad is the stirring of the Spirit that urges mankind on to its glorious destiny. The key-note of the universe is, Forward, upward: the best is yet to be. Humanity was never on so lofty a plane as it is today. Sometimes the curve dips down, but always it rises to a loftier height than was attained before.

[Rev. J. B. Silcox in *Advance.*]

You cannot shape other lives into beauty if you have not made your own life beautiful. You cannot kindle noble aspirations in others if there is not nobility of thought and purpose in your own life. You must be what you would make others be. Milton argued rightly that to write a heroic poem one must first make his own life heroic. You cannot teach reverence unless you yourself are reverent. You cannot bring a soul nearer to Jesus than you yourself are daily living.

[*Western Christian Advocate.*]

We doubt not those critics are correct who declare there should be more business injected into religion. He is equally correct who holds that there should be more religion injected into business.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel.*

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel, Journal,* and *Herold,* whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thou-and references (more than ten thou-and words being indexed). It al-o contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 04 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, al-o her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

4.00 — 0: 16 ;	5 ;	16.60;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The congressional joint committee on printing has discovered that "adulterated" paper has been used for years in the government printing office. A complete new set of government paper standards has been ordered. The paper adulteration was accomplished by the substitution of clay for the more substantial wood or rag fibers. The public printer has been authorized to advertise for bids on twenty-five million six hundred thousand pounds of paper for the year beginning March 1 next.

Another shipment from Culebra of fossils collected from the excavations on the isthmus will presently be sent to Washington for classification by the government experts there. The collection of tertiary fossils made on the canal work up to the present time is said to be the best that has ever been made in tropical America, and the information given by them and by a study of the rocks in which they occur will mark a new epoch in the geology of Central America.

The five-hundred-dollar limit upon postal savings bank deposits will be removed in the near future, according to statements at the postoffice department. This limit has already been reached by many depositors and the bank trustees have been urged to permit deposits without limitation.

Already the records show that nearly three hundred thousand fewer immigrants have landed at Ellis Island, New York, up to the present time than for the corresponding period in 1910, and indications are that there will be a reduction of thirty per cent or more from 1910 figures for the year.

With fifty-one hundred policyholders and more than two million dollars of insurance in force, industrial savings bank life insurance in Massachusetts is proving the soundness and efficiency of its methods by declaring increasing dividends to its policyholders.

International.

In an interesting lecture on "British and German Influence in West Africa," which she gave before the Royal Colonial Institute, London, Mrs. Mary Gaunt, the well-known African traveler, in making comparisons, as the result of her travels, between the British and German possessions in that part of Africa, said that Togoland, the German colony, looked as if some thoroughly clear-sighted man, a man who appreciated the full value of a tropical dependency, had planned not for this generation or the next, but for all the generations that were to come after, and had laid well and truly the foundations for a mighty colonial empire. In a part of the gold coast through which she had traveled there were neither roads nor bridges, or at any rate she came across none, and in many places the track was so bad that it was even impossible to be carried in a hammock. On reaching the German border, however, there was an immediate change. She stepped from a rough bush track to a well-made, well-kept, well-drained, and well-shaded road. "If we have no roads we have no trade," said the German commissioner, and the words he spoke were words of wisdom.

The Chinese throne has agreed to Premier Yuan Shi Kai's suggestion to refer the question of the future government of China to a national conference, and to abide by its decision, whatever it may be. It is further stated that the imperial family has decided to leave Pekin. The decision taken was followed by an imperial edict in the following terms: "Dr. Wu Ting-fang, the chief of the revolutionary delegates to the peace conference at Shanghai, and others, contend that the people of China desire a republic. This question neither the government nor a section of the people is able to decide. Therefore a national conference is necessary. The princes and the members of the imperial clan agree to let the cabinet inform the revolutionaries and then frame regulations for a conference and arrange for an extension of the armistice. The Empress Dowager sanctions the calling together of a conference, as she is desirous to avoid bloodshed and to bring happiness to the people of China according to the wishes of the majority."

The German Reichstag has passed a bill enabling the government to extend the existing Central East African railway as far as Lake Tanganyika. This railway, which starts from Dares-Slaam on the coast, is already open for a distance of four hundred and forty-three miles from the Indian ocean and it is expected that Tabora, five hundred and twenty-six miles from the coast, will be reached by the end of February next. The country which will be opened up by the extension is said to be fairly well populated and to be capable of considerable development. Already there is a large trade in palm oil, and it is hoped that rice, cotton, and sugar can be extensively cultivated. There are also large salt deposits in the sultanate of Unwinsa, from which it is hoped that some ten thousand tons per annum can be produced.

The surrender of General Reyes probably marks the end of the most perplexing problem yet brought before the Mexican government under President Madero. Seemingly all over the country recently have sprung small revolts, and most of them were in the name of the former military leader of the country. The gray-haired rebel in giving himself up said: "I called upon the army; I called on the people, and no one responded. This attitude I regard as a protest and I am resolved not to continue this war against the government. I place myself at its disposition."

The Persian Cabinet has finally yielded to the ultimatum of the Russian government and complied with its demand that Morgan Shuster, the American financier, who has been so ably reforming the money conditions of Persia, be dismissed. He is reported to be awaiting the appointment of his successor in order to hand over the affairs of his office. With him are about a dozen American assistants.

The refusal by one man and two women to join in a trades union, coupled with the decision by the master cotton spinners to close their mills three days in the week, has caused a complete stoppage of a great portion of the cotton mills in northeast Lancashire, England. The lockout involves one hundred and sixty thousand weavers, and nearly an equal number of spinners will be reduced to half pay.

The London county council education committee has decided on a scheme for the further provision of school accommodation for London. This scheme is to cost four million five hundred thousand dollars and it involves the erection of many more schools, the enlargement of several existing ones, and the remodeling of all the old board schools.

Industrial and Commercial.

The United States possesses the largest phosphate fields in the world, but all of the potash required for our fertilizers is imported from Germany, the annual importation amounting to about fifteen million dollars. In the giant kelps of the Pacific coast a satisfactory source of potash has been found. The kelp groves along less than one fourth of the coast line have been mapped, and yet these should yield from two to three times as much potash as the present importations. These sea weeds are able to extract, by selective absorption, the potash salts from the sea water, and the dried plants contain from twenty-five to thirty-five per cent of their weight of potassium chloride, which can very readily be extracted. The kelps also contain iodine; and many other by-products, such as glue, shellac, paper, etc., can be obtained from them, that will more than pay the manufacturing expenses, leaving the potassium chloride free from cost. Some of the Pacific groves are five miles long and two miles wide and the growth is exceedingly dense. The plants reach a length of one hundred feet or more, and grow in strong tideways or where they are exposed to the full force of the open sea. On a conservative basis upward of a million tons of potassium chloride, worth nearly forty million dollars, should be obtained each year. No estimate can be given at the present time of the value of the by-products.

Mayor Samuel Lewis Shank's personally conducted sales of potatoes and turkeys at cut prices in Indianapolis, Ind., have inspired the formation of an association to reenforce the mayor in his "war on the middleman." Two thousand shares of stock in the Wage Earners Cooperative Association have been put on sale at five dollars a share. Its organizers plan to open a depot where the ultimate consumer of foodstuffs shall meet the producer, thereby eliminating the jobber's profit. The campaign for extended membership will be made largely through the Central Labor Union.

On the second day of January the Pacific Steel Company began to operate the big steel making plant that has been in process of construction for more than a year. It is the most complete steel making plant on the Pacific coast and involves an outlay of more than seven hundred thousand dollars. It is believed that within a few years five hundred to one thousand men will be regularly employed at the works. The building now covers about five acres and contemplated extensions will eventually utilize the entire twenty-acre tract.

United States Secretary of State Knox, in a letter on the subject of protection of American foreign trade, deals with the excess "tare" charged in foreign countries against American cotton, compared with African and Asiatic cotton. The resultant loss falling upon American cotton producers is estimated to exceed twelve million dollars. He recommends that the baling and binding of export cotton be standardized and improved so as to prevent the wastage which the foreign trade gives as excuse for the high tare now charged.

The British government has decided to exclude all the American meat packers against whom prosecutions have been instituted in the United States from tendering for contracts for the supply of meats to the British army and navy, pending the settlement of the suits.

Luther Burbank, the wizard of horticulture, announces that he has discovered processes whereby he can use the leaves of the spineless cactus plant in manufacturing whitewash, paint, automobile tires, and print paper.

Persia's trade with the United States in the fiscal year 1911 amounted to $1,077,502, of which imports from Persia were $1,055,603 and exports to Persia $21,899.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE LIGHT THAT NEVER FAILS.

ROBERT NALL.

THE advent of Christian Science into human consciousness is to the beginner like the parting of the ways. The night is past; the dawn appears. Light has come,—life, real and beautiful, because seen to be spiritual, is entered upon. This is the new birth, the unfoldment of truth to the hitherto darkened vision; and for a time there may be something like bewilderment. The light has revealed what seems to be a new world of thought and reality. It is well known that those who by means of the microscope and the telescope have once caught a glimpse of the wonderful secrets nature reveals, are amazed that so much exquisite form, so many entrancing designs, so much that is glorious and marvelous, should not have been known before. And the poet spoke truly when he wrote that he "who findeth out those secret things hath a fair right to gladness," for he has thus "awakened another note of praise on nature's harp to hymn her great creator." It is in this way that, as a great astronomer has said, "to the natural philosopher there is no natural object that is unimportant or trifling; from the least of nature's works he may learn the greatest lessons." What this means is not that the seeker has created anything, but that he has entered upon a discovery and that nature's laboratory with all its wonders is revealed to him; he is getting nearer the truth of things; and truth is always beautiful, because it is the reflection of God, who is infinite Truth.

But nowhere is the beauty of God's creation so clearly revealed as in the light of Christian Science; the spiritual universe, real and perfect, begins to appear, and is gradually unfolded to the consciousness of the searcher. It is this glimpse which gives such joy to the new student. He finds that the dark images of mortal thought are disappearing, that life is being transformed. That was a wonderful thought conveyed in the Urim and Thummim in the breastplate of the high priest. The thought of light and perfection as possible ideals was constantly kept before the people. We of today, in the fuller, deeper, more comprehensive, more spiritual conception of God and man which Christian Science has brought, are able to realize in a clearer and in a more practical way what this light and perfection stand for. Mrs. Eddy frequently speaks of light as a symbol of Truth and Love, and on page 508 of Science and Health she explains that "the third stage in the order of Christian Science is an important one to the human thought, letting in the light of spiritual understanding." On another page (305) she voices the revelation of human reflection: "Man, in the likeness of his Maker, reflects the central light of being, the invisible God."

What encouragement there is here! Darkness, the symbol of ignorance and discord and unsatisfied cravings, has no place in God's creation, and therefore is not in man; and the entity or power which is given it in human belief is pure illusion. What becomes, then, of all the hideous array of mortal specters that take the shape of sin, sickness, and death? The possibility of reducing these to their native nothingness is at once revealed. Thus the sufferer finds that his hope of relief is translated into a belief in its possibility, and then into fuller knowledge. He is lifted to a higher, purer plane of consciousness, where the mists of materiality are seen gradually to disperse.

The student may at the same time be enjoined to remember that it is possible to take too much for granted. The light of Truth comes to no one unless he is ready and willing to receive it. Centering thought on material desires means alienation from God, because there is no felt need of God, and the light of Truth would find no welcome; but once awakened by suffering or mental unrest, hospitality will be given to all Love's gracious and tender gifts. It is blessedly true that we may "walk in the light," and when faithful to this light, aroused to a sense of the dire results of mortal ignorance of God and the frailty of human beliefs, may daily prove that the carnal mind can be regenerated and renewed. But we are not to assume that the rich blessings in the divine storehouse are showered upon the spiritually indifferent and the mentally lazy. The philosopher and the natural scientist find their reward because, in the ratio of their understanding and light, they penetrate nature's mysteries with wisdom, ardor, and perseverance. "Seek," said the Master, "and ye shall find; knock, and it shall be opened unto you." Once experience that "truly the light is sweet," the hem of Truth's garment may be touched, and never again will the darkness of error's delusions be feared. Rather will life's paths be strewn with Elims where there are many springs of living water and many palm trees affording nourishment to hungry pilgrims.

The light reveals that true rest is activity; growth is fruitfulness. It brings with it knowledge, power, liberty, the liberty of Spirit, with an enlarged understanding to grasp spiritual realities. The impermanent concept yields to the eternal. Mortals see something of the allness of God as absolute good and the consequent possibility of solving the awful problem embodied in the human acceptance of the reality of sin, sickness, and death, with all the appalling suffering attendant upon that belief. They see the potency of good and the impotency of evil. They behold man as God made him; not as human conjecture has pictured him. They see the impossibility of any separation between the creator and the creation, between infinite Mind and its idea; that Life is spiritual; that what all around seems to be frail and shifting and transient, is but human phenomena, built upon material foundation. And so, as knowledge of Christian Science broadens, fresh impulses and strength are received and a more perfect equipment for work is acquired. For light cannot be hid. "Ye are the light of the world," said Jesus. And light is to be reflected. The lesson is obvious. "He who sees clearly and enlightens other minds most readily, keeps his own lamp trimmed and burning" (Retrospection and Introspection, p. 84).

A PARABLE FROM JANUARY.

ANNIE M. PAYNE.

SINCE coming into Christian Science, January has not been differentiated to the writer from other months, in regard to a sense of cheerfulness and contentment. But she well remembers that in the old days a certain dulness and weighed-down feeling was apt to beset her family and herself as the new year set in. Christmas pleasures were over, visitors had departed; there were beliefs of colds, and a sense of inadequateness to a round of duties, made duller and heavier than usual perhaps through indisposition in the household. Such were frequently the signs of January's presence; while to match them outside there was a somber neutral-tinted garden, overhung by leaden skies, or fogs, or falling snow.

Across this saddened aspect of things, however, streamed one bright little thought that the family circle never failed to enjoy and to comment upon as though it were some rare piece of news. It had actually arrived in December; but on the twenty-first of that month we were far too busy to do more than remark that the shortest day had come. But now the dull hours were streaked as by a sunbeam with the knowledge that we had already left behind that landmark of time, and the open secret was passed from one to another, "The days are getting longer!"

Now, observe, the actual difference as to length of daylight in that first fortnight was practically *nil*. We still rose in semidarkness or by gaslight; and at the other end of the day the skies were often so overcast as to render any change in time of sunset imperceptible. Nothing, however, could disturb our satisfaction with our prospects; we were so absolutely certain that an abundance of daylight would by degrees be bestowed upon us. Let the hours be never so dark, let fog put us back to November, or black skies confirm the wind's shriek that there was no additional daylight to be thankful for, we still relied upon our certain knowledge that we were tracing the upward march of the year. And being thus sure, we felt we had a right to picture a green tint coming before long upon the trees, or to revel in a vision of snowdrops lifting their pure white heads above the brown earth. And did thought stay there? No, it traveled among unfolding leaves and primroses and hyacinths, till it reached the roses and June ablaze with glory.

In this simple thought the writer has found a parable for the Christian Scientist, if for hours he will read weeks, and for one cold fortnight, months, or it may be years. Let us be assured that we did reach our darkest day just before we heard of Christian Science. Henceforward we are on the upward track, let sense appearances say what they will. Baffled by the mists of animal magnetism; buffeted by the shrieking winds of a mortal selfhood that seems as though it would never be silenced, yea, even our first love chilled by cold critical thoughts, so that a pitiless downpour of problems finds us seemingly unprepared to solve them; though all these assail, yet we need not despair. Let us rather resist our temptations, in the happy assurance that the days of God's creation are lengthening, even as we know that in January the days grow longer.

What are God's days? According to the Glossary, day is "the irradiance of Life" (Science and Health, p. 584). God's day then reflects Life, and Christian Science teaches that Life is without beginning and without end; hence the conclusion that "there is no night there." Moreover, according to this same definition, day is "light, the spiritual idea of Truth and Love." And we know that Truth's idea is as eternal as Truth itself. Again, a further description is, "This unfolding is God's day," that is, the unfolding of good; and here, since God and good are synonymous, we have again the note of eternity, or good forever present.

But, if God's days be thus eternal and without night, how can they be said to lengthen? This effect is of course due to the awakening of human consciousness, its gradual turning to the light, through which process more and more of Truth becomes visible and our days perceptibly lengthen. Let us note the parallel in nature, where to earth's children there is the appearance of light and darkness, though to the sun itself there is no lengthening day, no intervening night.

Let us then rejoice in the assured presence of God's day, and know that when its irradiance has once dawned in consciousness, the beclouding mortal sense does little by little disappear. And if, as our Leader tells us, "progress is the law of God" (Science and Health, p. 233), the "lengthening" is for us a fixed fact, of which we may be even more certain than we are of the pleasant bit of symbolism which cold, plain-faced January brings as her cheering message to mankind.

MAKING A PLACE FOR THE TRUTH.

JOEL T. ACTON.

THE experience of a man who for many years had at regular intervals visited a certain city, will serve to illustrate the truth of the statement some one has made, that "through self-sacrifice one finds himself." The man's visits were so regular, and his time in the city was on each trip so uniformly the same, that he grew to think he was very systematic, so much so indeed that when he began the study of Christian Science he was not a little disturbed when his regular routine began to grow very irksome.

When he was prompted, through diligent study of our text-book and the other writings of Mrs. Eddy, to begin gradually the putting in order of his own house, he detected a growing dislike for all the petty disorders in his personal affairs, and one day, as he opened his grip for his books, he noticed that while they were conveniently at the top, nevertheless there were so many needless articles in the grip that the books seemed in constant danger of being crowded out entirely. He began right there to take an inventory, and was astonished to learn how this silent companion of his many trips had been made the receptacle for almost every conceivable useless object. When he had finished that inventory he had beside him a stack of letters, circulars, and various odds and ends, including many labeled boxes and small bottles which he had not seen for months, and in getting rid of these he found a roomy wholesome resting-place for the Christian Science text-book, to which was soon added a Bible, a *Quarterly*, and many of our periodicals for distribution. This grip, however, was within two months after this given honorable retirement, and in its place came a new one, specially selected for its adaptability to accommodating his books, and one can scarcely appreciate, without a like experience, the secret joy which accompanied the selection of this new grip.

It is needless to state that the experience in this connection soon began to permeate his whole business life. He had been, as he believed, so systematic that nothing could be done or added to enlarge his borders, but he then discovered that he was in a rut, and upon looking about him he soon learned of innumerable opportunities for improvement. Within a short time he found himself on one of his trips a guest at one of the leading hotels, having given up cheaper but very inaccessible quarters in another part of the town. Here he was surrounded not only with very desirable associates, but also with an abundance of light, cleanliness, and good cheer. One day, while pursuing his ordinary affairs, there was suddenly brought to mind the passage in Science and Health (p. 60) which reads as follows: "Soul has infinite resources with which to bless mankind, and happiness would be more readily attained and would be more secure in our keeping, if sought in Soul." He seemed for the time to be in a different world. The sky, the streets, the buildings, seemed illumined with these

Digitized by Google

words, and from that day he felt that it was useless to look for success, health, or happiness in the direction to which he had all his days been taught to look.

A promotion in business came soon after this, wherein his sphere was broadened, his opportunities were enlarged, and with a greatly increased financial return. It can never be said of him, however, that his affairs adjusted themselves or that anything "happened." There had been no perceptible change in his business position, his methods, or in his personal conduct for about fifteen years, and although he has but started in Christian Science his vision is clear and he sees the possibilities in Truth not only for himself but for every individual who is willing to be guided by Truth. There may have been moments in his experience since coming into Science which are now unspeakable; he may have met conditions which tended to keep him in certain narrow ruts, but if this were so the contest must have been short, for he has passed them by and has gained a dominion and freedom which no one can deny. Daily, in his expression of thanks for Christian Science, he mentally reaffirms the Master's words: "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes. Even so, Father: for so it seemed good in thy sight." He has had a pleasant and withal a practical proof of the statement that through the sacrifice of self one finds himself.

THE SIGN OF THE CHRISTIAN SCIENTIST.

AMY RUTH WENZEL.

THROUGH the russet and gold of an October afternoon, a party drove, glad in the unwonted liberty of outdoor motion. Among their number was a Christian Scientist, who, while enjoying with the rest the charm of the beautiful day, felt a bit apprehensive as to what awaited her at the end of the road. When finally the company stopped and alighted, some bent wholly on pleasure, the others in a measure dependent on their will, a lady said to the apprehensive one, "You would like to see that woman who is a Christian Scientist;" and turning to those who had come out to greet their guests she said, "Where does Mrs. —— live?" "In the next house," came the ready reply. "Climb in again," said a man, "I will drive you there." And the wondering Scientist climbed in.

For years she had known vaguely of this solitary student, but had found no way of reaching her, and at this particular time was not thinking at all of her. Yet all through those years she had cherished the hope that some day they would meet. Fittingly, at this season of fulfilled promise came the autumn of her hope, and with it a tender rebuke of her recent misgivings that aught but good might be waiting at the journey's close. Of the delight of that meeting, and of the happy interchange of thought and experience, it is not necessary to write. Suffice it to say that these women, deprived for many months of the comfort of freely speaking of their beloved faith, voiced only "the joys and triumphs" (Science and Health, p. 41) which had been their share. On that quiet Wednesday, enfolded by the blue peace of the sentinel hills, they held a testimony meeting. And the Christ was there "in the midst of them."

The Scientist returned to her excursion friends quietly, but her glowing gladness could not be concealed, and her friends gazed in amazement as they plied her with questions. Afterward, one asked, "Had you met that woman before? Or have you a sign?" The questioner was of course answered in the negative, and a prayer-guarded effort made to dispel the evident impression that there was something secret and mysterious about Christian Science and its adherents. But the question, "Have you a sign?" recurred persistently to the Scientist, compelling attention and analysis. What was it that established instant confidence between two erstwhile strangers, meeting unexpectedly at a lonely farm-house, and made them friends? And the answer came, The sign of the Christian Scientist is spiritual love, that understanding, even in a degree, of perfect Love which removes all fear.

SCRIPTURE IN THE SUNDAY SCHOOL.

C. F. L. HOFFINGER.

WE sometimes hear it said that our Sunday school children lack a consecutive knowledge of the Bible. It was this assertion that impelled the writer to read prayerfully page 62 of the Manual, whereon is defined the necessary work for the pupils in the Christian Science Sunday school. This led him to see that the Ten Commandments, the Lord's Prayer, and the sermon on the mount, studied in the light of Christian Science, and followed by the study of the Lesson-Sermon, is a preparation which fits the children of the Sunday school, as well as the teachers, to read the Bible intelligently.

The Bible is not one book, it is a collection of many books. It contains the history of a nation and its literature. It is the production of many writers, widely differing from each other because of different environment and training. The religion of the Bible in its successive stages of unfoldment up to Jesus the Christ, is not a mere system of ideas, like the philosophy of Plato or Aristotle, but is based upon spiritual experience, and unlike human philosophy, it is practical and authoritative, hence inspired, for to speak with authority is to be inspired.

To be thoroughly familiar with its order of arrangement, and to have a correct knowledge of its contents, is undoubtedly necessary for both teacher and pupil, in order that our text-book may be intelligently applied to its study. The more important study, however, namely, the Ten Commandments, the Lord's Prayer, and the sermon on the mount, should never be lost sight of, and should certainly precede all other work in the Sunday school. This is just as much a necessity in the classes composed of older children as it is in the juvenile classes, because this study will scientifically instruct both teacher and pupil, making them better able to understand the Lesson-Sermons, as well as to study the Bible, and less likely to misinterpret the experiences and lives of some of its characters which seem so material, than they would be did they study the Bible without the spiritual interpretation as given by Christian Science.

The Bible characters, as they appear in the Lesson-Sermon, may and should be used to illustrate the activity of Truth today. Even the most material characters can be dealt with, as well as those whose lives expressed more of the spiritual, for the children can be shown that it was disobedience to these demands of Truth which led to the untoward events and ill consequences on the part of those who lived in disobedience to spiritual law. It can also be impressed upon the pupils that the characters in the Bible who were good, and who accomplished great things in behalf of their fellow men, lived in obedience to divine law.

It must be taken into consideration that some of the older children do not remain in the Sunday school more than a year, and when they leave it they should be well equipped with a knowledge of the spiritual interpretation of Scripture, and be prepared not only to read intelligently the Bible, but to meet the problems that come up in their experience. A thorough, practical knowledge of the Bible will better equip them for their future work than would a large acquaintance with Bible history without the spiritual sense of its meaning; hence it is very important that all the pupils should diligently study the "first lessons," whether these students be young men and young women or those

Digitized by Google

younger in years. Even if there is little time for other study beyond the Ten Commandments, the Lord's Prayer with its spiritual interpretation, and the sermon on the mount, this work thoroughly done will prepare them to understand clearly the Lesson-Sermons.

WORKING OUT ONE'S PROBLEM.

CARL HORTON PIERCE.

SOMETIMES, among people who are just coming into Christian Science, a remarkable healing takes place as a result of the young Scientist's own reflection of the truth. For this he gives due credit and gratitude to God. Then the next problem arises, and possibly it is not met instantaneously, in which case the tendency of some beginners is either to doubt the efficacy of the Principle or else to say: "I wonder why God does not heal me," or some other complaint.

It is sometimes comforting to turn back to the days of arithmetic for a parallelism which may be of service to us in answering these questions. One remembers that after he had worked out a hard problem and had gotten the right answer, he turned to the next problem, to study it, to get all its properties into shape and to delve into the axioms relating to it before even thinking of arriving at the right conclusion. So, in every life-problem there is need of this preparation, of probation, of positive holding to the truth of the situation prior to arriving at the answer. True, in some instances the whole situation may be so clear from start to finish that the answer comes almost instantaneously, yet, by reason of education, training, and environment, there usually seem to be certain problems which are not at once clear to us; problems which require the application of reason and logic as well as faith. In such instances it is well to remember that there is nothing the matter with Principle. Principle is certain, unchangeable, final, complete; we are but trying to unfold our understanding of it. To question, then, or to complain, or to be discouraged because such a one did this problem instantaneously, is fatuous, is it not?

Some one has said that the surest and quickest means of getting into a frame of thought where one is able to receive a blessing is to be grateful for the blessings which we see come to others. The human heart would seemingly reverse this and make us envious and jealous of another's demonstration and triumph. But when this claim of envy and jealousy is clearly seen, and gratitude is rendered every time we hear of the success of a brother or sister, then the quality of thought is obtained through which God works, to do the same things through us. Is it not true that some of us, on learning of another's success in business or healing, begin at once to try to account for it by saying: "Well, he had such and such advantages that I have never had"? In other words, we at once begin to think about our brother's problem instead of our own; whereas, the opposite attitude of gratitude, instead of comparison, would put us into the state of receptivity for which we have been working and which is necessary in order to obtain a correct answer to our own problem.

It is to be noted that, as these same beginners work out more and more of their own problems, they drop this habit of questioning and complaining, and they begin to declare, "Hitherto hath the Lord helped us." This attitude in turn begets more confidence, a calmer faith in the never-failing goodness of God, and the demonstrations become easier and more frequent. Then, instead of just an occasional big problem solved, the mountain-peaks of lofty purpose and high accomplishment are more often seen, until they occasion no comment but rather are the logical concomitant of the student's thinking. Then complaints vanish; God's power and willingness are no longer questioned; His tender mercies are too numerous to mention; His loving-kindness to the children of men is past finding out; and the Christian Scientist's cup "runneth over."

That we each may attain this position is assured. Mrs. Eddy says in "Pulpit and Press": "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this" (p. 4). Such an attitude on the part of the student will forever eliminate petulant questioning as to why healing is delayed, and will lead to the scientific working out of one's individual problem.

ENERGY.

CLARE GERMAIN.

ENERGY, rightly understood, is a quality of the divine Mind. It is wholly spiritual and is never dependent on muscles, nerves, matter, or the so-called human mind. It is an expression of intelligence, and always operates intelligently and according to law. It is not a blind or a destructive force, neither is it a mere happening, but it is cause operating with infinite wisdom, it is an intelligent and natural effect of this good cause.

As activity is really an expression of divine being, or spiritual existence, it can never be separated from its cause, any more than a ray of the sun can be separated from its source. Thus activity and energy are scientifically expressed through man, who is the reflection of divine Mind. Mrs. Eddy tells us that the true Science of being is to "feel the divine energy of Spirit, bringing us into newness of life and recognizing no mortal nor material power as able to destroy" (Science and Health, p. 249).

[Written for the *Sentinel*.]

THE LARK'S ESCAPE.

BEN. HAWORTH-BOOTH.

My heart is like a winged lark
That, from his cage escaping,
Like arrow flies toward the mark,
His upward pathway shaping
Over the poplars of the park.

He leaves the darkness of the cloud,
And, in the sun's embraces,
He pours his gratitude aloud
In psalms and tuneful phrases:
And I, like him, my vows have vowed.

Though he had known the cruel cage,
The heartless separation,
He made his lonely pilgrimage
His spirit's consecration,
And calmed his woes with counsels sage.

Above the blackness, in the blue,
He has forgot his sadness,
He sings his raptured song unto
The author of his gladness,
And thrills my spirit through and through.

I too will sing with joyful strain
And, free from pain and sorrow,
Rejoice in life new-born again,
And bid my tears good-morrow:
For Love has loosed my clanking chain.

From all my woes I find surcease,
From bolt and bar escaping,
I sing the song of Love's release,
My upward pathway shaping
Into the sunlit heaven of peace.

[From *New Haven* (Conn.) *Register.*]

It is the President himself who opens the Canal Zone to Christian Science. The President is sensible.

[Editorial in *Chicago* (Ill.) *Post.*]

President Taft's amendment to his general executive order, by which Christian Scientists are to be allowed to practise in the Panama Canal Zone, will appeal to the American sense of fair play. Nobody is to be compelled to accept this treatment; but, on the other hand, it is no longer to be denied those who want it. The phantom fears conjured up by various well-meaning persons as to the difficulties which this step may make under the sanitation laws of the isthmus need not greatly disturb us. The good sense of the Scientists and of Colonel Goethals may be counted on to make things run smoothly on a basis of mutual respect. Meanwhile the country has the satisfaction of feeling that "in the zone" it is once more living up to its best ideals of freedom of conscience.

[H. Farmer Hall in *Hastings and St. Leonard's Observer*, Hastings, England.]

The statement made by the bishop of Chichester, in which he affirms that Christian Science is "neither Christian nor scientific," is not likely to carry with it any great sense of conviction to those who are not believers in Christian Science, and certainly will not produce any sense of uneasiness in those who are. The bishop of Chichester must remember that the very great majority of those who have embraced Christian Science have done so because, after earnest seeking and practical proofs, they have found the teachings of Christian Science able to meet their need, where the beliefs and methods of former experiences have failed.

Now as to whether Christian Science is Christian. It is noticeable that the bishop gives no reason for his statement. It would naturally be much easier to answer any misconception with regard to Christian Science if the bishop had some ground for his charges. At present one cannot help feeling that the bishop's statement that Christian Science is not Christian rather rests on the basis of nothing being Christian unless one sees eye to eye with the bishop. Now, Christian Scientists, while daily praying for that Mind to be in them which was also in Christ Jesus, realize that the claim to the name Christian cannot stand alone on a declaration of faith, but must be accompanied by works, for "faith without works is dead." Mrs. Eddy, in "Science and Health with Key to the Scriptures," has pointed out that Christian healing is not limited to moral conditions alone, but must include physical conditions also. She shows us that the promise of the Christ, "Lo, I am with you alway," is a demonstrable fact. She teaches that the Christ is present today to heal the physically sick as well as the morally sinful, just as much as he was in the days gone by.

Christian Scientists are today proving to the world something of the power of God to meet men's needs. Hundreds of thousands are rejoicing in healing from sickness that under *materia medica* was pronounced hopeless, hundreds of thousands are giving thanks for healing from sin that had brought them into the depths of despair and from which there seemed no escape. Then for which of these works does the bishop of Chichester stone us? Possibly the bishop does not agree that the power of the Christ is present today to heal physical ills; but then we have the witness that the Christ, as understood in Christian Science, is today healing the sick in accordance with the Master's promises: "He that believeth on me, the works that I do shall he do also;" and "They shall lay hands on the sick, and they shall recover." It is these very healing works that must confirm the "word," and are the "signs following" mentioned in the sixteenth chapter of St. Mark's gospel.

Just as long as Christian Scientists have this divine confirmation of their right standing, so long will they be able to meet the disapprobation of others unmoved. There is one point further that I must ask to be allowed to mention, and that is the bishop's reference to Mrs. Eddy. He says: "Mrs. Eddy came into the world, and made her fortune by her religion." It is true that the sale of Mrs. Eddy's book, which has brought such happiness to millions, has been large, but the money accruing to Mrs. Eddy from its sale she has given entirely to the furtherance of the work she had so much at heart. I cannot help feeling that in all probability such a record compares favorably with those of her critics.

If the bishop wishes to combat that which he believes to be wrong in the teachings of Christian Science, let him present to the world a higher understanding of God, a clearer and more practical view of the Christ as the Saviour and healer of men, than is already presented in Christian Science, if he believes he has it to give. No good can ever be done by incorrect and unkindly assertions contrary to the experience of those who have found in the teachings of Christian Science that which has led them into the realization of a "closer walk" with God and a fuller sense of His ever presence.

[From an editorial in *Dallas* (Tex.) *News.*]

Neither custom, nor policy, nor expediency can make wrong right. There never was a time, there can never be a time, when a lie can be justified, for it can never be anything but a lie. Theft is simply a lie in action. He who would lie would bribe and steal, for when by cunning or flattery he causes another to believe that which is untrue, he is displacing the true with the false—stealing a place for error in the mind of another that the truth should be occupying.

It is most extraordinary that the law of cause and effect is not generally recognized as being equally applicable to spiritual and moral affairs as it is to material things. "Whatsoever a man soweth, that shall he also reap." It is found in the law of principle—of right and its reward, of wrong and retribution. The violation of a physical law brings its inevitable hurtful consequences, and the violation of a spiritual or moral law is just as inexorable in its finality. "Be sure your sin will find you out." It is a trite saying that "murder will out," and it is just as true that lying will out, and that theft will out, and that any other crime or sin will out—no matter by whom committed nor for what purpose. No good cause can be subserved by evil deeds. No righteous cause can be achieved through iniquity nor sustained by dishonor. He who is a party to wrong-doing in the attainment of any end, whether social, moral, or political, is an offender whose culpability is in proportion to his evil deeds.

It is strange that men have thought it not wicked to use wrongful means, for instance in a political contest, in order to carry their point, when in every-day life—in business and social affairs—they would disdain the suggestion of even questionable methods. They seek to excuse themselves by saying that in politics, like love and war, everything is fair. But everything is not fair, even in love and war. Many men who would not think of bribing a susceptible juryman, or of lying to an ignorant one, and who would scorn to steal an article of value, seem to look upon the securing of votes by questionable or dishonest methods as being entirely justifiable. Justification for political misdeeds cannot be found in the assertion that those on "the other side" are stultifying themselves by indulging in such methods. Lying, bribery, and corruption are just as repugnant to truth and principle in politics as in anything else, and an election secured by the utilization of dishonorable practices is an election secured by theft. It is a matter

Digitized by Google

for congratulation that the public conscience is becoming more and more awakened to the prevalence of theft in politics, and is emphasizing the commandment, "Thou shalt not steal," as evidenced by numerous recent investigations.

Thus we find it is plain that this commandment is not to be applied to only the theft of material articles of value. There are things of greater value than material possessions, as suggested by Shakespeare when he wrote,—

> Who steals my purse steals trash; . . .
> But he that filches from me my good name
> Robs me of that which not enriches him
> And makes me poor indeed.

All realize how true this is, and yet there are things which are just as precious as a good name. These things are good thoughts, and he who takes another's time to lie to him and give him an untrue or degrading thought instead of a good one, is the most wicked and subtle of thieves.

Many a character has been assassinated by the purveyor of evil thoughts, a murdering worse than the killing of the body. Our ancient friend Socrates adjures us, "Whatsoever thou wouldst affirm, first prove with care, for the tongue often outruns the understanding." All those things which degrade and corrupt would be avoided if men would only burn into their hearts the desire to do good.

[Editorial in *Boston* (Mass.) *Times*.]

Recent experiences resulting from medical examinations in our public schools call for a protest on the part of the liberty-loving people of Boston. In times of epidemics or threatening epidemics there might be some excuse for this sort of practice, but the infringement upon personal liberty which has been in vogue here recently is almost pernicious. Nothing has happened to call for such unsolicited attention as is being devoted to the school children in this vicinity, and the effect is anything but healthful. If this sort of practice is continued, the dread of the schoolboy and schoolgirl will be the visits of the school physicians. We see no reason why the innocence and tenderness of childhood should be demoralized by this sort of practice. It will be a wonder if all the children do not turn into adenoids. If they do not, it will not be the fault of the treatment to which they are subjected. We doubt if it is ever necessary that well folks should undergo physical examinations, and if it ever becomes necessary there is no reason why it should not be done in the homes of the children in the presence of their parents or guardians, and under the supervision of the dear old family physician who is kind enough and Christian enough to have already won the confidence of the children.

Any one who knows anything at all about human nature understands that disease is largely occasioned by fear, and that a knowledge of the horrors of disease and deformities peculiar to the child is the direct opposite to that which is conducive of health, and for that reason should not be permitted. There is no reason why children should not be taught to be clean in the extreme, there is no reason why they should not be taught good morals. We believe it should be early impressed upon the child mind that purity is the foundation of health, while filth both of mind and body breeds discord; but to go into a description of disease and to subject the child to practices which emphasize the unpleasantness and horrors of disease and create a fear of it, seems to us to be entirely wrong. Besides, this intrusion upon the schools, which are really intended for educational purposes, is also an offense against the community.

As we contemplate the evils which are resulting from the medical influence which is already being exercised in the community, we wonder what might be expected if we had a federal health department. It is high time that the people of this commonwealth were waking up to a realization of the situation.

[Charles D. Reynolds in *Concord* (N. H.) *Monitor*.]

When the highly educated and cultured young Pliny, a pagan Roman, served as governor of the province of Bithynia, in the early part of the second century of our era, he found spreading there what he termed a crude "superstition," a sect whose followers, although not guilty of any flagrant violation of law, were accounted possessed of a strange and dangerous religious "fanaticism." In country places, as well as in cities, the temples of the gods had almost become forsaken, and victims for sacrifice found few purchasers. Pliny desired special instructions from the Emperor at Rome respecting the method of dealing with this deluded and ignorant and dangerous sect. I refer to this instructive historical incident not for the discomfiture of the eminent scholars and preachers who are reported in your columns as delivering before the national conference of Unitarian churches held at Washington, D. C., hostile denunciations of Christian Science, couched in such vernacular as "fanaticism" and "fad," "the offshoot of religion," but as a former Unitarian clergyman, familiar with the honorable traditions of that church, I may surely point to the similarity between second-century Pliny and the two twentieth-century clergymen whose observations we have here under consideration.

My purpose is to ask what the basis and object of Christianity is in the world, and why people whose religion is based upon the testimony presented by the physical senses are always so mistaken in their observation and judgment respecting the fundamental teachings and effects of primitive Christianity. The phenomenon of spiritual blindness was explained by Jesus when he said: "That which is highly esteemed among men is abomination in the sight of God;" "Ye cannot serve God and mammon;" "It is the spirit that quickeneth." And Paul reiterated the same truth when he said: "The natural man receiveth not the things of the Spirit of God," and that spiritual things (religion) can only be spiritually discerned, or known.

Those who go no farther, but rely implicitly upon the testimony of the finite human senses, will of necessity find the activity of spiritual consciousness in its healing, regenerative work to be foolishness, as Paul declared they would. The Bible, which is acknowledged to be the world's greatest treasury of spiritual wisdom, explains why mere human education and culture, deduced from sense testimony, is so mistaken in its estimates and attitude toward Christianity as applied to the practical solution of every-day problems.

Our social problems are writ large only because the individuals composing society fail as individuals to do their own work, according to the standard set by Christianity. If every man did his own individual work according to that standard, there would be no collective accumulation of work to be cleaned up. It is the personal character, or lack of character, that is responsible for many of the conditions from which philanthropists and reformers are seeking relief through mechanical applications or else restrictive legislation. It is the purpose of Christianity to make the individual better, and then society will be better and have fewer problems on its hands.

Take the health problem as an example. In so far as it is an honest effort to promote the public health and not the aggrandizement for profit of one school of medicine, it is a clear confession that there are now living in our midst too many people who in their private life are indifferent to dirt and filth, who are not sensitive to its presence in their environment and so are content to live in disease-breeding slums and in homes where nauseating odors are the rule. If the money that is being spent and proposed to be spent on the study of filth and the various kinds of bacteria that inhabit it and spread disease therefrom, were devoted to the removal of filth in the common sense way, and the education of the delinquents to the standard of cleanliness of body and mind set by Christianity, we should have the kind of reform that Christian Scientists

Digitized by Google

are most interested in. Christian Scientists are more interested in removing the cause of filth and dirt than they are in the investigation of the effects of filth and dirt, and no more misleading and untrue sentence could be framed than was made by the Rev. Mr. Dodson when he said: "If the world were peopled with Christian Scientists, the country would face a terrible calamity; there would be no investigation of unhealthful conditions."

Here is where practical Christianity shows its superiority over the theoretical Christianity which expresses itself in "wrangling about doctrines and creeds" which these reverend gentlemen deprecate, but in fact represent, and practical Christianity. The latter removes the cause of the evil effects and teaches that if every man will set his own house in order the problem will be solved, whereas the former wastes itself in a hopeless struggle with an unending series of "effects," whose cause is not taken away. Christian Science has contributed more toward revealing a correct understanding of the cause and nature of disease in the past forty years than all other means of the world combined. The world is rapidly awakening to the understanding that the moral status of the individual has more to do with the environment and bodily condition than any other cause. Not riches, nor poverty, but character, is the basic fact.

Christian Scientists can follow Mr. Dodson to the greatest extreme in the matter of reasonable sanitary measures. If all the people in this country would measure up to the standard of cleanliness of mind and body demanded by Christian Science, sin and sickness would be immediately lessened and our health boards and reformers would soon find their task ended and ideals achieved, and that too without the elaborate material investigations they had believed so essential to any radical betterment.

Christian Science teaches that Christianity properly interpreted and applied is synonymous with cleanliness of mind and body and environment. The study of bacteria will never root out bacteria. Every one knows that "cleanliness is indeed next to godliness"—is a divine attribute. It is not necessary to investigate filth to find out its undesirableness and how to get rid of it. If all men lived the teachings of Christian Science, as the people of Concord know from personal observation and experience Mrs. Eddy lived them, dirt and filth would be at a minimum. The time must come when all people will emulate her example in this matter, and find in her teaching a practical and not a theoretical Christianity. Such reform is radical and it is becoming an accepted fact, as the individual lives of many thousands of Christian Scientists will attest, and it comes as an encouraging sign that there were at the conference other ministers whose outlook was broader and who in pleading for Christian unity and effort contended that Christian Scientists should be included. At any rate, the statement by one of the speakers that it is fortunate there are so few Christian Scientists in the world, quite lost its effect. The United States census report places the number in advance of his own sect, while the Christian Science congregations in the home cities of both these critics are extremely flourishing.

Those who preach the gospel ought to find no fault with those who comply with the whole command of the Master to heal the sick, especially if they cannot interpret his teachings so as to realize this effect in their own work. Christian Scientists freely grant to others the same freedom which they claim for themselves in religious and in medical matters. They are willing to wait on God and leave with Him all that now perplexes mankind.

[John M. Dean in *Commercial Appeal*, Memphis, Tenn.]

In these days it should be easy to view the life and achievements of Mrs. Eddy from an unbiased standpoint, and the impartial critic, however he may disagree with her premise and its inevitable conclusion, will hesitate long before charging her with either ignorance, superstition, or dishonesty. Contemporary historians rarely do justice to their subjects, but it cannot be said that Mrs. Eddy was without honor in her own times and country, even at the hands of those who opposed her teachings; though, after all, the true measure of one's worth must be left to the infallible scrutiny of time, and to this tribunal Christian Scientists are willing to refer the case of their Leader. That she was a marvelously enlightened Christian gentlewoman is the verdict of those who knew her best, and where can more competent witnesses be found?

It will be a surprise to Christian Scientists to be informed by this rabid critic that there is an "inner circle" in Christian Science, that they are mere "book agents," and that they regard "healing as if it were the be-all and end-all of human life." As one who is somewhat familiar with the operations of Christian Science, as well as with its church government, permit me to say that it is difficult to conceive of an institution more democratic and allowing a wider range of true "intellectual liberty." It is, *par excellence*, the religion of individualism in accordance with the Biblical injunction, "Work out your own salvation." No member of a Christian Science church was ever required to buy or sell a book of any kind, and if such have felt the desirability of owning a copy of the text-book written by Mrs. Eddy, they have also felt the necessity of owning a Bible, to which she only claimed this text-book to be a "key." Why not, then, charge them with being Bible agents?

It may also be said that, far from being the ultimate of Christian Science, healing is only an incident of its ministry, as was true of the work of Jesus himself. His works were performed in proof of his words, and the same divine Principle is potent today to solve every question with which mankind is confronted. In short, Christian Science stands the test prescribed by Jesus in the last chapter of Mark's gospel, and those who make no effort to approach this standard are placed in an awkward position by illogical attempts to discredit those who are honestly trying.

[Ezra W. Palmer in *Rocky Mountain News*, Denver, Col.]

Christian Scientists assail no man's religious views. They find they have plenty to do in striving to live according to the standard established by Jesus Christ, both in their personal conduct and their relation to their fellow men. Christian Science is essentially a religion of the individual man. When understood, it heals his diseases, destroys his sins and vicious habits, and places before him, as a standard for his highest endeavor and aspiration, a perfect infinite God, Spirit, who is Love, and man His sinless, perfect, spiritual offspring, created "in the image of God," as the Bible declares. That Christian Science in holding to this ideal correctly interprets the teachings of Jesus and the prophets and apostles, is shown by its good effects in the lives of thousands of people at home and abroad. Christian Science, therefore, is not "a menace to our national life," it is not "fanaticism," it is not "an offshoot from religion," as some critics declare. It is the calm, scientific presentation of spiritual things, and its fruits have been, and will continue to be, happiness, concord, health, and holiness to all those who strive for and gain its message to humanity.

Through knowledge and wisdom, its culmination, the human soul rises above nature and becomes identified with God. This return to God is effected for nature in general, in man; for man in Christ and the Christian; for the Christian, in his supernatural and essential union with God through the spirit of wisdom and science.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"LOVE ONE ANOTHER."

It is quite as difficult today to reconcile the differences which sometimes seem to exist between those of the same "household of faith," in family, business, social, or church relations, with their attitude of professed Christians, as it must have been for the apostle John when he penned the keen rebuke we find in his first epistle: "If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?"

Even in the days of the children of Israel men were commanded to love one another. Under the law they were not to take vengeance or hold a grudge against any who had offended them, but were to love their neighbor even as themselves. Such was the law that was to develop a higher meaning, a better interpretation, in the gospel of Christ Jesus. When the Pharisee, skilled in the letter of the law, sought to tempt or to try Jesus with the catch question as to which was the greatest commandment in the law, the Master sounded the key-note that rings clear as a silver bell through all his teachings, namely, that the foundation stone of all the law and the prophets is love,—to love God with all one's heart, soul, and mind, and one's neighbor as himself.

Again, in the tender words of consolation and comfort with which the Master sought to prepare the disciples for the approaching test of their faith, there is a new basis of comparison,—they were to love one another even as he had loved them. Who could hope to equal that compassionate love which welled forth to the children of men, to the sick and the sinning, even to those who were then seeking to destroy him; yet this was the command laid upon those who henceforth were to exemplify Jesus' teachings, his words and his works, to the world, and then came the significant statement: "By this shall all men know that ye are my disciples, if ye have love one to another."

Commenting on this "new commandment" in its relation to Christian Science, Mrs. Eddy says: "No person can heal or reform mankind unless he is actuated by love and good will toward men. The coincidence between the law and the gospel, between the old and the new commandment, confirms the fact that God and Love are *one*. The spiritually minded are inspired with tenderness, Truth, and Love. The life of Christ Jesus, his words and his deeds, demonstrate Love. We have no evidence of being Christian Scientists except we possess this inspiration, and its power to heal and to save" (Messages to The Mother Church, p. 82).

How wise, how far-seeing was our revered Leader, how mindful of our fallibility, our proneness to err, when, "lest we forget," she provided that the "rule for motives and acts" should be read from the desk on the first Sunday of each month. We are humbled that we should need so often to be reminded that "in Science, divine Love alone governs man; and a Christian Scientist reflects the sweet amenities of Love, in rebuking sin, in true brotherliness, charitableness, and forgiveness" (Manual, Art. VIII, Sect. 1); and that, too, when daily we petition "our Father" to "forgive us our debts, as we forgive our debtors," with its spiritual interpretation, "Love is reflected in love" (Science and Health, p. 17).

In the face of all this,—the commandments of the law and the gospel, the fact that the world is watching us and applying the Master's test, "if ye have love one to another,"—there is need of heart-searching before we venture to proclaim ourselves as followers of the Master, striving as Christian Scientists to follow in his footsteps, to do the works of healing that he declared should be the token of fellowship with him. How can we, how dare we, take upon our lips the petition of forgiveness for our own shortcomings while we know there is aught of bitterness, envy, jealousy, evil of any sort, trying to erect a barrier between us and a brother or sister in Christ.

As we enter upon this first Sabbath of the new year, let us resolve to love as we would be loved; to forgive as we would be forgiven; that our daily living shall exemplify St. John's admonition: "My little children, let us not love in word, neither in tongue; but in deed and in truth."

ARCHIBALD MCLELLAN.

MISUNDERSTANDINGS HEALED.

The earliest record of misunderstandings which we have is that found in Genesis, where we read that the people were building a tower, intended to reach heaven, and that the Lord came from the sky to see what they were doing and said, "Let us go down, and there confound their language, that they may not understand one another's speech." It is needless to say that the concept of deity here presented is very different from that held in Christian Science, where we are told that God, divine Love, "changeth not and causeth no evil, disease, nor death" (Science and Health, p. 140). Mrs. Eddy also says (p. 537) that the merely literal sense of the Bible "would imply that God withheld from man the opportunity to reform, lest man should improve it and become better; but this is not the nature of God, who is Love always." It is therefore mortal man's belief about God which is given in the story of the tower of Babel, a belief that God would harm instead of help men, and a misunderstanding of God which must be healed, for if we fail to understand God, we are sure to misunderstand our fellow men, and thus be hindered in our efforts to reach heaven, the harmony of being.

It is safe to say that all the misunderstandings of the ages have arisen from a false concept of God and man, but if we know God aright, we shall never take the false for true, nor the true for false. Here we are reminded that the Bible says, "Cursed be the man that trusteth in man, and maketh flesh his arm." This passage in the light of Christian Science means that we must turn from personality to Principle at each step of the way, for if we fail to do this we are certain to have misunderstandings and wonder why we are so afflicted. Our brethren, until they emerge wholly from the bewildering bondage of mortal belief, are often mistaken, even where their intentions are good; hence the warning against trust in mortal man.

Even among the immediate followers of Christ Jesus we read of differences of opinion. In the epistle to the Galatians Paul criticizes Peter very severely, charging him with insincerity. He says, "I withstood him to the face, because he was to be blamed." That this misunderstanding was healed is very evident from Peter's noble defense of Paul's teaching. In his second epistle Peter speaks of this great and fearless worker as "our beloved brother Paul," and refers touchingly to "the wisdom given unto him." It may be that Peter's own stumbling on a crucial occasion made him very charitable in his judgment of another, moreover he could not have forgotten the heart-searching words of the Master at that wonderful morning meal. When Peter would fain have meddled with John's problem, their teacher said to him, "What is that to thee? follow thou me."

Jeremiah says that one should above all else rejoice or glory in the fact that he understands God. We read that Daniel had a marvelous understanding of God and His law. Had he become confused and perchance blamed God or some person for his plight in being thrown to the lions, it is scarcely possible that he could have been delivered. Because Daniel persisted in understanding God, the king's misun-

Digitized by Google

derstanding of him was healed, and Darius had a glimpse of the living God who is "stedfast for ever." He also promoted Daniel to honor, according to the promise in the Psalms, "I will deliver him, and honor him." We are told that God is "slow to anger, and of great kindness,"—a wonderful model, surely, for all His children, who may well ponder Solomon's prayer, "Give therefore thy servant an understanding heart to judge thy people, that I may discern between good and bad;" which in Christian Science would mean, to know ever the allness of good and the consequent unreality of evil. With misunderstandings thus healed or averted, there come to those who are true to Principle, "length of days," enduring riches, and true honor.

ANNIE M. KNOTT.

LOVE'S EXALTATION.

IN his thrice-repeated inquiry of Peter, "Lovest thou me?" the Master was addressing a disciple whose devotion had proved to be pitifully impulsive and unreliable. More than this, he was emphasizing for all time and all professed Christians the divine insistence that love shall be genuine; that Truth can tolerate no pretense; that, however simple the offering, it must be neither deformed nor marred. There is thus brought to awakening thought the need of thoughtfulness respecting the quality of one's affections.

We may feel hurt, as did Peter, by the intimations involved in Truth's persistent questioning, but this sensitiveness argues for rather than against the propriety of a careful examination on our part respecting the genuineness of our loving, since in no matters are we more subject to self-deception than in those of the heart. No plea is so likely to receive a favorable hearing at the bar of our judgment as that entered in behalf of some loved object, and we cannot be true to our need or to the scientific spirit if we hesitate to submit the heart of our devotions to the test of Truth.

How frequently is it said, "I love you," when the sum and substance of the asserted attachment is nothing more than a personal liking, the glamour, perchance, of a mere physical attractiveness. Indeed so long as selfhood is identified with or at least made to include the body, this sense deception is not only possible but inevitable; and yet no intelligent Christian can think of love, the only true love, as Christ Jesus defined it, without perceiving that no element of physicality pertains thereto. Our Lord's supreme command involves the at-one-ment of love to God and love to our brother. He taught that the only wise for a Christian to love is God-wise. Frequently he expressed the thought to his disciples that he loved them with the Father's love for him, and that they were to continue this loving, and thus continue his work. To love divinely is the highest spiritual activity, an activity which is impossible apart from the recognition of man in God's image, and that compassion for mortals which this recognition engenders.

Upon the human sense plane love's beginning is physical, and as such its promised satisfactions are as sure to fail as its basis is sure to decay. This is no less true of one's relation to his parents and children than it is of his relation to his wife. As thought is lifted we recognize higher qualities, the winsomeness of goodness, purity, intelligence, spirituality; and knowing man as the perfect embodiment of these qualities, the Master healed the sick, and in his healing taught mankind how to love aright. This exaltation and beneficent activity of love is the consummate feature of Christian Science. Says our Leader, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals." His atonement is "the evidence of divine, efficacious Love," which "fulfils the law of Christian Science" (Science and Health, pp. 476, 497, 572).

Real love for one means the embrace of that one in the consciousness of truth; this is the test we are to apply, the standard we are to maintain in the instance of every life-relation, and it means house-cleaning for the most of us in the whole range of our affections. "If any man love the world, the love of the Father is not in him." In the light of Christian Science this saying of St. John has a wondrously new, deep meaning. It hews severely to the line, and if we would bless and be blessed in our loving, we must yield our every thought to the cleavage of its keen edge. To love aright is to recognize, rejoice in and express the divine. This is the love of Christ, "shed abroad" in our hearts, and it makes possible our inspiring part in the healing of humanity.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

OMAHA, NEB.

Postponing the formal dedication of the handsome new edifice until later, the members of First Church of Christ, Scientist, will hold their first worship in the new church, at the corner of Twenty-fourth street and St. Mary's avenue, Sunday, Sept. 3. The elegant building has been erected at a cost of more than one hundred thousand dollars, and is a complete church building in every particular. The exterior is finished in gray pressed brick and Bedford limestone, and the effect is most pleasing. Access to the building is gained through five entrances, of which the main one, leading into the foyer, faces St. Mary's avenue.

The first floor is devoted to Sunday school and class rooms, while on the second floor is the auditorium or chapel, arranged to seat about twelve hundred persons. The floor in this room slants very gradually toward the rostrum, above which is a balcony for pipe organ and choir. There is also a balcony extending over a portion of the auditorium, which will contain pews for a large number. The interior walls are done in ivory and white. The floors in the lower rooms are of marble, while the woodwork is all of oak and the windows are of opalescent glass. The pews, with which the entire church is to be fitted, are of fumed oak. The auditorium has a large skylight of stained glass.

The new building is to be occupied by the only Christian Science congregation in the city, and has been in process of construction since December, 1908, the corner-stone being laid in October, 1909. The church was organized in 1893.

Omaha Bee.

WASHINGTON, D. C.

With the simplest ceremonies possible, and witnessed only by the earliest of the morning workmen engaged on the building, and the board of trustees, the corner-stone of the new Christian Science church, at Euclid and Champlain streets northwest, was laid this morning [Oct. 12] at eight o'clock. The board of trustees, representing the church, performed the ceremonies. In the corner-stone were placed a copy of the Bible, and a copy of each of the books written by Mrs. Mary Baker Eddy.—*Washington Times.*

THE LECTURES

WATERTOWN, S. D.

The auditorium in First Church of Christ, Scientist, was filled to capacity last night [Oct. 20] with an audience which listened with keen attention to the lecture delivered by Frank H. Leonard. The speaker was introduced by George W. Case, who spoke in part as follows:—

The Master said, "Go ye into all the world, and preach the gospel to every creature." Gospel in its strongest sense means "good news concerning Christ and his salvation." We are not told nor commanded to originate and preach new theories, but to teach and preach the old truths. The gospel has been taught and preached, in a way, for over nineteen hundred years; but many of its beauties, benefits, and unfailing qualities have been overlooked, neglected, and side-tracked, from a misunderstanding of those truths which Christ Jesus came to teach from God's Word and to exemplify.

Christian Science, as I understand it, does not claim to be, nor is it, a new idea or theory; but it is the name of a Science, the Christ Science, or Christian Science. To teach this thought and to live it is the mission of Christian Scientists and of The Mother Church, and it is upon this mission that our brother comes to us tonight. No greater riches can come to man than that he may understand God and live in harmony with His divine laws. Jesus taught that to know God aright is life eternal. We are progressive in the physical sciences and in our ability to understand the hitherto hidden mysteries of God's creation, and so we may and must progress and learn of the Father's love and truth, to realize the fulfilment of the promise made to us, and as taught by Christ Jesus and lived by him.

Public Opinion.

DE KALB, ILL.

Bliss Knapp delivered an interesting lecture on Christian Science at First Church last night (Oct. 24) before an attentive audience. He was introduced by Mrs. Bertha H. Clark, who said:—

Our great Master and Wayshower, Christ Jesus, taught and practised a religion of love; that God is Love; God, who, as the psalmist saith, "forgiveth all thine iniquities; who healeth all thy diseases," and Jesus proved his words by his deeds. Christian Science comes with this same message of love and peace. It reestablishes the teachings of Jesus, bringing surcease of sin and disease. That its teachings are founded on the Bible is proven in the lives of those who have been healed of sin, sickness, and sorrow by its touch. These, our Master assured us, would be the signs that should follow "them that believe." You have been invited to listen to a lecture on Christian Science. It is hardly to be expected that upon so vast a subject as pertains to a knowledge of God and His eternal laws, much can be said in so short a time; but if you go from here with some prejudice removed, some misconception corrected, and with a larger thought of the allness of God and the consequent nothingness of all that is unlike Him, we shall feel amply repaid.—*Correspondence.*

PHILADELPHIA, PA.

Judge Clifford P. Smith lectured on Christian Science at First Church Oct. 29, and again on the following evening. He was introduced by H. W. Nelson, president of the church, who said in part,—

The purpose of these lectures is to present to the public a fair statement of Christian Science, what it is and what it does. Our presentation of the subject, whether by lecture, by church service, or in our periodicals, is always an appeal to your reasoning powers, your clear thought, and never under any pretense through the emotions. True to its name, it is scientific explanation and not ecstatic experience. The great mission of Christian Science is of course the destruction of sin. It may, however, be definitely stated, supported by an enormous mass of irrefutable evidence, that Christian Science does heal the sick; but Christian Science does better than this because it prevents sickness, disease, and discordancy. If one may be permitted a paradox, it cures disease before it happens.

There are thousands upon thousands of happy people all over this land and in other countries who, since their advent into Christian Science, have been entirely free from illness for a long period of years, and yet in a like period immediately previous they were hardly ever free from some form of inharmonious condition.—*Correspondence.*

BROOKLINE, MASS.

Under the auspices of The Mother Church, The First Church of Christ, Scientist, of Boston, Prof. Hermann S. Hering delivered a lecture Nov. 9 on Christian Science at the Beacon-Universalist Church, Brookline. He was introduced by B. O. Flower, the well-known editor and publicist, who said:—

We have assembled tonight to hear an address upon Christian Science, a spiritual evangel that during the past quarter of a century has brought health, peace, happiness, spiritual illumination, and moral enthusiasm into hundreds of thousands of lives. Two thousand years ago the world was given over to externalism. Material grandeur and physical force in government; pomp, show, rite, and ritual in religion, engrossed the imagination of men. True, temples and shrines rose on every side in increasing magnificence, but faith in God and love for man were more and more meaningless terms to the heart of civilization. Then dawned a light in the east. A great spiritual leader arose who appealed to the pure in heart and the truth-seekers to turn from the worship of the letter and look within. He taught that man is the son of God, and that a realization of this relationship to the Father, his oneness with the Father, would enable him to rise superior to sin and sickness and make him in deed and in truth a child of light and love. He cured the sick, cleansed the lepers, and brought radiance, peace, and victory to the lives of those who heeded his teachings. Furthermore, he taught that the works which he did his disciples could and should do, and even greater works, if they retained a living faith and reflected the truths he had taught them.

The materialistic world attempted to destroy this Son of God, but he triumphed over the grave and gave his disciples their marching orders, commanding them to go into all the world and preach this gospel of health, of life for the here and the hereafter, to all the people. For three hundred years this message was borne abroad, instinct with living faith and spiritual enthusiasm, and during this period the sick were healed and Jew and Greek, Roman and Barbarian, were won over to the gospel of truth. After this, we find the world-spirit more and more dominating the church; and the living faith and beautiful simplicity of primitive Christianity giving way to an elaborate formalism and impressive ritualism, borrowed largely from the pagan world. Next comes the long night of superstition, intolerance, and growing corruption known to history as the dark ages. Out of this night there arose a great prophet of righteousness—Savonarola, the Florentine monk, who was in a real sense the John the Baptist of the Protestant Reformation. He was followed by Luther, Zwingli, Calvin, Melancthon, and other master spirits of the Reformation. These men demanded that the people should have free access to the Word of God; that man should be allowed the free use of his God-given reason, and that he should have

Digitized by Google

the right to worship God according to the dictates of his conscience. Under the inspiration of this great movement, the western world awoke; spiritual enthusiasm, a nobler morality, and intellectual emancipation ushered in a new day. But at length the ancient error again crept into the religious consciousness of the world. The letter was exalted over the spirit, and the living faith of civilization again began everywhere to wane.

About a half a century ago a daughter of New England puritanism, a woman overmastered by a passion for the truth, after years of pondering over the Word of God and searching for the spirit that giveth life, received into her consciousness a message instinct with the faith that makes faithful and the love that redeems and glorifies life. It was not a new religion, but an attempt to reflect the deeper import, or I may say the heart of the teachings of the great Nazarene. It came to a society that was rapidly yielding to cynical materialism and vicious opportunism, and the signs which the Founder of Christianity said should follow the teaching of his gospel have followed the proclaiming of this message, in the liberation of tens of thousands from the bondage of disease and the thraldom of sin. It is to hear an authoritative presentation of this message that we have assembled.—*Correspondence.*

OAK PARK, ILL.

Under the auspices of Second Church, William R. Rathvon gave a lecture Nov. 9 on Christian Science in Masonic Temple to a full house. He was introduced by E. S. Conway, one of Oak Park's old residents, who said in part,—

We have met here tonight to consider a recent and modern revelation of the old truth, which has been made known to the world through the medium of one of the most remarkable women of modern times. Perhaps it would be more in keeping to say that her work has consisted, mainly, in vitalizing the great and divine truths which the Master made known nineteen centuries ago, as the new revelation, but which by long neglect and disuse have been forgotten and become moribund. But whosoever presents a new view of truth is always subject to criticism, and as a rule the less one knows of a subject the more bitter and unjust is likely to be his denunciations; but, as its value and utility are demonstrated, the more widely it will be accepted and the more fairly it will be judged. Christian Science has passed its critical period, and is now being impartially examined and by very many accepted. It has stood the test, hence it is that it is being adopted as the rule and guide of Christian living in every quarter of the globe where education, refinement, and morality are regarded as essential to purity of life and as an index of character. It comes with the olive branch rather than with the sword in its hands, and to all Christians it utters no defiance, but rather speaks the conciliatory word of the great apostle to the Gentiles, when he said to the men of Corinth, "I show unto you a more excellent way."

Christian Science does not stand at the parting of the ways, but rather at the point where all differences converge. It brings no new creed, and on its lips there is nothing other than the promises of the infinite creator and the words of Jesus based upon them. In a word, it is reviving the practices held sacred by the Christian church through the three hundred years of its early history. It is simply emphasizing the commands of Christ when he directed his disciples to heal the sick as well as to preach the glad tidings of a better, purer, and happier life.—*Correspondence.*

GREAT FALLS, MONT.

One of the largest audiences that has greeted a Christian Science lecturer for some time assembled [Nov. 2] to listen to a very able discourse on the subject by Virgil O. Strickler. The audience gave marked attention to the speaker, which was indicative of the growing interest in this much-discussed theme. Mr. Strickler was introduced by William C. Kaufman, state committee on publication, who spoke as follows:—

We are not here to proselyte. The purpose of this lecture is to give you an accurate statement of the teachings of Christian Science. No subject is demanding greater attention today than that of Christian Science, and the reason for this is that Christian Science has healed disease where medicine has failed; it has reformed the sinner where scholastic theology has failed; it has brought peace and comfort where wealth and learning have failed. These proofs have been witnessed, and have resulted in the investigation of the subject.

We are all aiming to reach the harmony of being, and Christian Science offers to you the definite Principle and rule required to attain this state of being. Christian Science is of no human invention. It is God with us. It is Christ with us. It is the fulfilment of the Scriptural promise: "Howbeit when he, the Spirit of truth, is come, he will guide you into all truth: for he shall not speak of himself; but whatsoever he shall hear, that shall he speak: and he will show you things to come."—*Great Falls Leader.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Alma, Mich.—William R. Rathvon, Opera House, Jan. 16.
Battle Creek, Mich.—Virgil O. Strickler, Independent Church, Maple street, Jan. 12.
Bellevue, Ohio.—William R. Rathvon, High School Auditorium, Jan. 18.
Binghamton, N. Y.—Willis F. Gross, Stone Opera House, 3 p.m., Jan. 14.
Galesburg, Ill.—William R. Rathvon, Universalist Church, Jan. 12.
Galveston, Tex.—Francis J. Fluno, M.D., Scottish Rite Hall, 2128 Avenue F, Jan. 15.
Hackensack, N. J.—Prof. Hermann S. Hering, Oritani Hall, Jan. 15.
Lockport, N. Y. (Second Church).—Virgil O. Strickler, Temple Theater, 3 p.m., Jan. 14.
Mechanicsburg, Ohio.—Virgil O. Strickler, Main Street Theater, Jan. 11.
Milwaukee, Wis. (First Church).—Willis F. Gross, Church Edifice, Prospect avenue and Keene street, Jan. 18 and 19.
Minneapolis, Minn. (Third Church).—William R. Rathvon, Auditorium, Jan. 14.
Montevideo, Minn.—Bliss Knapp, Opera House, Jan. 19.
Muskegon, Mich.—Virgil O. Strickler, Woman's Club Building, Webster avenue and Second street, Jan. 18.
Newark, N. J. (Second Church).—Virgil O. Strickler, Symphony Auditorium, Jan. 9.
Oxford, Eng.—Bicknell Young, Town Hall, Jan. 29.
Paducah, Ky.—Bliss Knapp, Woman's Club Building, Jan. 16.
San Bernardino, Cal.—Frank H. Leonard, Opera House, 3 p.m., Jan. 14.
Sandusky, Ohio.—William R. Rathvon, Carnegie Hall, Jan. 19.

TESTIMONIES OF HEALING.

In gratitude to God, also to our beloved Leader for the great benefits I have received from Christian Science, I can no longer keep silent; in fact I have done so too long already. For over a year I was very ill, and I was treated by one of the most prominent New York specialists, also five or more other doctors at different times. I however found that I was not improving, so turned to Christian Science as a last resort. I became interested just from passing the beautiful church on 96th street, New York, and after having treatment for four days I improved rapidly. Then came a crisis, and the nurse and those around me, not understanding that a change for good was taking place, sent for the doctors instead of the Christian Science practitioner. For days I was hardly conscious of anything around me; all the time I lived in a world apart from those near, but the future seemed bright, as it has proved to be.

After months of care I recovered, but my few days' experience in Christian Science had taken deeper root than the onlookers thought. I then had a second attack of the severe nervous condition, and again had to return to the doctors, although at that time I was living with a dear sister who was in Science. I did not improve, so thought it best to return home with a nurse and die with my people; but no sooner was I united with them than I began to mend. I stopped all medical treatment and medicines, and held firmly to Christian Science. I treated myself as best I could and read our text-book constantly. In a few weeks I was a well woman. With God's help I have taken no material remedies for three years or more. I am thankful to say that I have eliminated all hate and malice from my consciousness, and now love those whom once I hated. I am laboring on for our beloved cause in this "isle of the sea," and notwithstanding ridicule and opposition from those who do not understand this truth, I know that some day we shall all be of one fold. I am only thankful to give my help to any one who may appeal to me, which has met with success so far. If such is the harvest with my small understanding, what big blessings the future holds.

Three years ago I was the only Scientist (to my knowledge) in this portion of our beautiful island, but today there are a few dozen interested, who are reading our literature and studying "Science and Health with Key to the Scriptures" by Mrs. Eddy. Our constant prayer is for more understanding and greater help from our brothers and sisters across the waters. They can have no idea what it means to get our literature once a week; it is the brightest day in all the week to us and it is the only thing that cheers us with our work here. We live in the hope of having a society or reading-room started, and a few of us have begun to save with that end in view. I have four copies of Science and Health and one of "Miscellaneous Writings" for loaning. I must conclude by thanking the dear brothers and sisters in Science who have helped us and evinced interest in this island by sending literature and helpful letters. The harvest truly is great, but the workers are all too few.

LOUISE AARONS, Montego Bay, Jamaica, B. W. I.

I am glad to be able to confirm the testimony given by Miss Aarons, and I also know of much good healing work done by her. I wish to add that I, too, have been the recipient of many blessings through Christian Science. I used to take drugs almost continually, but since knowing of the Truth-remedy, two years ago, I have not used any other.

Our progress here seems slow. Often we are tempted to wish that some Scientists more experienced than ourselves would come to our help. Those at headquarters may be able to form some idea of the welcome we give to all the Christian Science literature that comes to our island. We wish to add our pean of praise to that of the great throng who are daily thanking God for having given to us in this age, through our beloved Mrs. Eddy, a practical knowledge of the Christ-healing which Jesus taught.

MAUDE ADDISON, Falmouth, Jamaica, B. W. I.

My little girl had attended the Sunday school of First Church of Christ, Scientist, in Denver up to the age of nine years. A compulsory edict for vaccination was obeyed, and the bad results therefrom were such that a stiffness of the muscles became noticeable, and at the age of twelve years she could no longer walk to school. Relatives not then clear in Christian Science demanded help from *materia medica*, so a winter was spent in Eureka Springs, Ark. The dear Christian Scientists there looked on with compassion and pity, until the experiment should have been satisfactory to those making the demand, but the muscles at this stage were drawing the child forward in a stooping posture. Crutches were used for over a year, and a physician again made his utmost effort in vain.

One morning, as he sat by her side, she said to him, "It is useless to leave any more medicine, for I will not take it. My mother uses Science and Health, and I will invest all I have (a five-dollar gold piece) in one of my own." She did so, and commenced to read for herself, and divine Truth did the work. The regular study of the Lesson-Sermon with the family each week, and the memorizing of the Christian Science platform in the chapter on The Science of Being, were of great help. She was wheeled in a chair six months, as it seemingly required that length of time for the truth of Christian Science, which slowly perhaps but surely "disentangles the interlaced ambiguities of being, and sets free the imprisoned thought" (Science and Health, p. 114), to do the work; but she is now a picture of perfect health and has been in school two years. She can ride a bicycle or walk for miles if necessary. She ranks high in her studies and will graduate from the common branches this year. We are very thankful to God, also to dear Mrs. Eddy, for what this means to the cause of Christian Science and to ourselves.

MRS. SARAH A. CROW, Denver, Col.

I am glad to bear witness to the healing power of Christian Science, which rescued me from the depths of suffering and despair. My knowledge of the letter of this truth was not sufficient to prevent a breakdown, due to anxiety and the tendency to overdo things.

Many testimonies tell of quick healing in Christian Science, but my experience was just the reverse, though I realize that this was due to my own lack of ability to imbibe its spirit more readily. It required about seven years of determined effort on my part, together with the help given me by practitioners, to overcome the ills from which I suffered, namely, of nervous exhaustion, sleeplessness, and neuralgia. I can compare my experience only to that of one who has fallen into a deep pit and has crawled out an inch at a time; but every effort to obey the spiritual law revealed in the Bible and Science and Health has been rewarded, and has been an encouragement to press on. God has tenderly fitted the back for the burden and tempered the wind to the shorn lamb, and every step of the way has been guided and attended by a greater sense of health and peace, until I have been able to return to my work and find pleasure in it. Life is once more a joy, instead of seeming a dismal dream. Death had not the terrors for me that living on through the suffering had, and I was tempted to end it; but there always seemed to be at least a little ray of light in my consciousness that all

Digitized by Google

of the darkness could not extinguish, and I clung to the thought that, no matter how the storm seemed to rage, man is God's reflection and cannot for an instant be separated from his Maker (as taught us in our text-book), and that discord would be conquered at last. Many times I seemed to slip back and lose much of the ground gained, but it was only a seeming, for each time I rose stronger. To those who may be passing through a like experience, waiting for relief which seems so slow in coming, I feel like telling them never to give up, but to remain firm in what understanding they possess, and deliverance will most surely come, for God, we are taught, "is no respecter of persons," and all may receive His help.

For the knowledge gained in demonstrating and proving my way out of this erroneous condition, I am most grateful, for this understanding is an inspiration for every day. To know that in God is my health and that I do not have to depend upon certain kinds of food, drugs, climate, or anything but an understanding of Him, is one of the joys of those who learn the truths of Christian Science. In my business as a traveling salesman, I find Christian Science of the greatest practical value. Having asked God to guide me, and believing that I am in my rightful place and doing the work which my heavenly Father has for me to do, anxiety about meeting with success has been largely eliminated, for if I do my work faithfully, I am always rewarded by finding some one who needs that which I have to sell. The thought that Mind governs, and that all business transactions should be of benefit to both the buyer and the seller, shows me the folly of what is called "sharp practice" in business, and how unnecessary it is to feel that one has to influence another to do something which will be against his highest interest, in order that he may himself succeed.

I feel very grateful to God, also to our beloved Leader, who by her life and teachings has made it possible for me to gain an understanding of Christian Science. I also wish to express my appreciation of those who have testified in our meetings and through our periodicals. These testimonies and articles have proved to be daily manna, supplying me with just the needed encouragement at the right time. Those who are voicing the truths of Christian Science may never know how far-reaching is their offering, for surely some one is always benefited by the outpouring of the truth. I trust that some will find encouragement in reading this testimony, and that they too will find God a very present help in time of trouble.

WILLIAM H. MARTIN, Chicago, Ill.

I feel that I should be as the nine lepers if I failed to give public expression to my deep thankfulness to God, and my gratitude to Mrs. Eddy, through whom the healing truth has come to me in the teachings of Christian Science. A year and a half ago I had come to feel utterly discouraged, as the drugs, dieting, etc., by which I had tried to keep up my strength for years, all had failed to help me. There appeared to be nothing left to try but a long term in some sanitarium, and even that seemed a doubtful experiment as one eminent doctor had told me that Carlsbad was my only hope.

I knew a little of Christian Science and what it had done for some people, and I decided to try it as a last despairing effort. After the first treatment I felt much better in body and greatly encouraged. For about a month I went to the practitioner twice a week, and at the end of that time was a very different person, both physically and mentally. Then the practitioner asked me if I would not like to remove the eye-glasses which I had worn for nearly nine years. This seemed almost too good to be true, but in less than ten days from that time I was able to lay aside both eye-glasses and the spectacles which I had worn for reading. During the nine years I had had almost constant treatment from oculists of wide reputation. Altogether I had tried four, and had been fitted with many kinds of lenses, but my eyes had gone from bad to worse, until they had become practically useless for any reading or sewing and had caused me great pain. I was told that I had defective vision, a most persistent case of granulated lids, was very far-sighted, and was also developing a very serious disease of the ball of the eye. I also suffered almost constantly and often severely from neuralgia. From all of these troubles, however, I was healed in about ten days, and put away eight pairs of eye-glasses and spectacles. For the last seventeen months I have used my eyes in any way and for any length of time, which was something I had never been able to do with my glasses. As I have always been very fond of reading and using my eyes constantly, my gratitude is too deep for words to express.

Last Christmas eve my fifteen-year-old son injured his ankle very severely. He was in the greatest agony, and his ankle was dreadfully swollen. I telephoned at once to a Christian Science practitioner, and in about half an hour my son was able to go upstairs to bed with slight assistance. He slept all night, and came down to breakfast with only the aid of a cane. The ankle was absolutely normal in size and there was no discoloration. He still complained of a slight soreness, but after a second absent treatment that morning he was able to throw aside his cane and be out all over the neighborhood with the other boys. How different our Christmas might have been had we not known this healing truth, for I have lively recollections of days in bed and weeks of inactivity from less severe injuries.

Upon leaving some guests and going upstairs one evening, I found my other son, aged eight, coughing badly and apparently very ill. His grandmother had taken his temperature and said his fever was alarming. I telephoned to the same faithful practitioner and by half past eleven the child was sleeping quietly and the fever abating. He slept well all night, only waking once to ask for water and saying that he felt "fine." He ate a hearty breakfast and then went out to play all day. Similar attacks had kept him in bed for days or weeks, with a doctor and sometimes a trained nurse. These are only a few of the wonderful things that Christian Science has done for me and mine, but I can gratefully say that the physical healing is the least of all its benefits.

MRS. ELLEN ROSE GIBBON, Los Angeles, Cal.

I wish to pass along to others something of the light, strength, and radiance which Christian Science has given to me and mine. Twice it has raised me from what seemed certain death, the first time from what our family physician pronounced spinal meningitis, the last time from unconsciousness following an operation for gall-stones. The latter time the kind nurse knew of my faith in Christian Science, and when she thought I was gone beyond other help, she spoke in my ear, "You had better try your Science." I heard this, although I had been unconscious to all else, and this thought at once came to me, "Cling steadfastly to God and His idea" (Science and Health, p. 495). I held to this every moment that I was conscious, and then, as the nurse told me later, I passed into a natural sleep.

Almost all the ills of my life were attributed to defective eyes. Finally my case was pronounced hopeless, and I was cautioned to avoid all occasion for trouble, as an operation was the only resort, and that might cause just what they wished to avoid. While naturally of a cheerful disposition, the cutting off of all the desired occupations, together with the constant pain, made me decidedly gloomy. I knew what Christian Science could do, but the opposition of those very dear to me made me hesitate until an avalanche of troubles, physical and financial, forced me to do what I knew to be right, and the reward was very great. I was soon able to lay aside my dark glasses without discomfort, although the winter was unusually bright. In a short time

Digitized by Google

the other special lenses followed, and I seldom even remember the old days and nights of nearly ceaseless pain.

My first vital experience with Christian Science is here recalled, which I think I should have mentioned before. I had been under great mental and physical strain, teaching a difficult school, nursing my mother through an attack of illness, and directing a large household, getting but little sleep, and paying but slight attention to my own meals. Not then understanding the protection and strength which come with loving deeds, a collapse came one morning with no warning. I fainted, and in falling received serious injuries. A time of severe suffering followed, with fainting spells at short intervals, and our old family physician, who was attending my mother, pronounced sentence upon me, though I knew his heart ached for us all.

At my earnest solicitation a Christian Science practitioner was called, and almost immediate relief was gained. At the end of a week I was in my schoolroom again, and in the years since this healing I have never had any return of the trouble. Within the last five years an examination of the vertebræ of the neck disclosed the fact that one had been cracked and perfectly healed. This is certainly an instance of healing by mental surgery of a broken spinal vertebra.

My love and gratitude to our beloved Leader, Mrs. Eddy, grow stronger with each day's living of the rules she so lovingly tested and then gave to the world; but above and beyond the gratitude for the physical healing is the thankfulness for knowing God and having faith in Him, as I did not believe in God before. I am also grateful for Mrs. Eddy's explanation of Jesus' life and his works. Now, as I study the Lesson-Sermon from day to day, it seems very strange to think one could have so long missed finding the way. Truly Christian Science is "the Comforter," which is leading us into all truth, as Christ Jesus promised.

Miss Mary H. Taylor, Minneapolis, Minn.

[Translated from the German.]

Feeling convinced, as I do, that I owe to Christian Science my life and health, I give this testimony with a joyful heart and a feeling of deepest gratitude. Christian Science found me in the worst stage of a chronic nervous trouble. For five years I lay in a state of complete physical and mental inactivity, and suffering pain continuously. In spite of the earnest endeavors of six physicians, who declared my case to be altogether abnormal, and in spite of all the various remedies and modes of treatment resorted to, my condition did not improve, and I was in a state of deep melancholy. After all human help had failed, it dawned upon me that possibly there was a God who might help, and Christian Science came into my experience like a light shining into darkness. I shall never forget the deep impression I received when I caught the first glimpse of the truth during a conversation with a Christian Science practitioner. I was told that God is Love, and that it is not according to His will that His children should suffer; that disease is a false belief, good alone constituting reality, and this was to me a revelation. I felt that it must be true, and today I know through innumerable experiences that it is true. I had found a religion such as I had always longed for, and the question had often presented itself to me: Can anything true be found at all, and is there such a thing as true religion?

Under the protection of divine Love I again took my place among my fellow beings. I was born anew physically and mentally; I was filled with buoyancy, and gradually recovered the faculties which I seemingly had lost. I was again able to stand, to walk, and to think. I abandoned the strict diet which I had followed, and was completely healed of a lack of appetite of years' standing, of continuous pain in and bleeding of the stomach, and was also freed of chronic indigestion. The latter difficulty disappeared as soon as I stopped using material remedies and recognized that it is not matter which heals, but the divine Mind. For years I had been susceptible to changes of temperature, and I was afraid of being exposed to fresh air or to sunshine, as this would cause me a great deal of suffering. However, when I learned that God created man to have dominion over all the earth, including the forces of nature, so called, and that divine Love fills the universe, I overcame the sense of fear. In the summer of last year I went to the seashore for the first time, and on very stormy days the former condition of weakness seemed to return; but with one treatment the evil was met.

My condition has improved with every year, and I have always received in the measure in which I discerned the truth and endeavored to apply it. My healing, which was slow, led me step by step upon the way of moral and spiritual uplift, where I am gradually learning to overcome egotism, ambition, sensitiveness, and self-will. While faithful treatment, given with great patience and in a Christian spirit, meant a great help to me during my first years in Science, now the Wednesday evening testimonial meetings and Sunday services, as well as the reading of the Christian Science literature, constitute my spiritual food, and are a source from which I daily draw inspiring and strengthening thoughts. With but a meager knowledge of English, yet keeping in mind the thought of God as intelligence, I have been enabled to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy; and I shall strive to acquire this treasure of noble and inspiring thought. Whenever I heard music in former years, I would get into a state of terrible nervousness, which made it impossible for me to listen even to the most beautiful tones. With the help of Christian Science this has also been overcome, so that during the last few years I have repeatedly attended the concerts of the Berlin Singing Club *(Berliner Liedertafel)*, where the singing of several hundred men's voices affords me delight only. I have taken up music, which gives me great pleasure, and besides taking piano lessons I am also teaching the piano.

I am grateful to God with all my heart for this infinite treasure, this revelation of Truth which has come to me, benefiting me in a physical and spiritual way. Next to God my thanks and my love belong to our revered Leader, Mrs. Eddy, whose pure life and spiritual attainments made it possible for her to discover again the Principle of our Master's redemptive work, that Principle which is the source of all life. I shall endeavor to let my honest striving for Truth and Love attest my gratitude, so that I may be found worthy to be known as a Christian Scientist.

Elly Graf, Berlin, Germany.

I am very thankful to testify to what divine Love has done for me through Christian Science. For ten years I suffered with extreme depression, manifested in intense grief and crying. A little over a year ago I was obliged to go away from my home, and was on the point of being sent to an institution where I have been four times previously. This I dreaded very much, as I could not bear to think of leaving the ones I loved. When a friend asked me one day if I would consent to see a Christian Science practitioner, I said that I would; though I did not understand what she meant. The practitioner came to see me on the next Sunday, and I shall always bless the day when he explained Christian Science to me and told me I should be in my own home by the next Sunday. I could not think this was possible, but it was quite true. My husband came to see me and brought me a copy of Science and Health to read; but at first I took very little interest in it. I however read a few of the testimonies and wondered if they were really true, though I felt at the same time that even so the healing was not for me.

After my return home we attended the services on

Digitized by Google

Sunday evenings. The practitioner and a lady used to come to see me, and I shall never forget the love and kindness that were shown me. My healing was slow, but I am most grateful for this, as it has taught me every day to understand God better. I am deeply grateful for all the love and kindness that have been shown me by a lady Scientist, who was very patient and who has helped me greatly.

I hope this testimony will be the means of helping some others, and I trust they will also gain the good that I have experienced. Everything is so different now and I wake every morning to find the dawning of a new day. I am deeply grateful for the spiritual understanding that Christian Science has given me, and hope as I go on to know more of this beautiful truth which makes one really free and happy. Such happiness I had not known before, and I am very thankful for "Science and Health with Key to the Scriptures" by Mrs. Eddy, as it helps me in everything. I am deeply grateful for all these blessings and for knowing that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

MRS. MINNIE SPENCE, Lewisham, Kent, England.

[Translated from the German.]

I wish to give thanks for the instantaneous healing which I experienced a few months ago. One day I was taken with pleurisy in a severe form, and suffered terrible pain. As my understanding of Christian Science was not sufficient to meet the condition, I applied to a practitioner for treatment. It was about noon when I dropped her a few lines, and I was suffering terribly at the time, but in the afternoon the pain subsided, and the next morning I felt well, so that I was able to go to the practitioner's and thank her for the help which had come through her. She gave me another treatment, as the sense of stitches in the lungs had not entirely disappeared; but I was perfectly well the following day. Soon after this experience another illness took hold of me, and I again felt that I must ask for help, as it kept me from attending to my household duties. The truth was declared for me, with the result that within a few days I was completely restored.

I am very grateful indeed for the quick relief which I experienced on both occasions, and I shall strive to understand more and more of this truth, and to practise it in my daily life as much as I can, for in this way only are we able to prove our deep-felt gratitude to God, also to Mrs. Eddy for her labors for humanity.

HILDEGARD JUNGE, Dresden, Germany.

[Written for the *Sentinel*.]

"NOT TO THE SWIFT."

WARWICK JAMES PRICE.

LAST night, in the city's heavy heat,
My ears were filled with the weary drone
Of sullen sound from the restless street,
Telling in ceaseless monotone
Of unending struggle for worldly place,
Of the feverish fight for empty pelf,
With the only needs of the headlong race
The wages of sin and the shackles of self.

Tonight the psalm of the pulsing sea
Speaks calm and clear of a duty done,
Fulfilling the tasks of His decree,
With no pause or question, from sun to sun.
No envious, empty effort here,
No human will, perverse and blind,
No man-made planning, no halting fear,
But the power and poise and peace of Mind.

FROM OUR EXCHANGES.

[Rev. Franklin D. Elmer in *Christian Register*.]

Pharisees are poor scholars. Jesus failed to win the learned men of his time because they stubbornly set their minds against a progressive revelation. Their ideal of a Messiah was one who should satisfy ancient interpretations of prophetic Scripture. In his sermon on the mount, where Jesus announces the principles of the kingdom, he repeatedly uses the expression, "Ye have heard . . . but I say." The Pharisees were satisfied to stop at "Ye have heard." The kingdom, declared Jesus, in all its phases of growth is like nature, "first the blade, then the ear, after that the full corn in the ear;" therefore, while conserving the old, be ready to receive that which out of the old becomes new. He also taught his disciples that new truth, because of its dynamic energy, might be expected to break old bottles.

What a sorry world this would have been had the pharisaic spirit prevailed against the progress of truth. The joyful religion of our time is based on the fatherhood of God. "The Lord is my shepherd," sang David; "Like as a father," said the prophets; but in Jesus' confession, "my Father," and in his assertions, "your Father," there burst over the hearts of men a flood of prodigious love not unmixed with a mighty awe which has transformed our thought. Out of this conception of the immanent Father there develops in the Master's teaching the truth of the abundant life which knows no death; as Paul writes, "Who brought life and immortality to light through the gospel." Surely no Christian would be willing to part with this priceless heritage, but we are prone to neglect Jesus' injunction to continue in his school. If he should come now with the truth translated into terms of the day, there would not lack enemies of the truth, to deny, to blaspheme, to kill. "I have yet many things to say unto you." "When he, the Spirit of truth, is come, he will guide you into all truth." "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." To refuse to seek or accept the highest form of truth is sin. We are thereby under the judgment defined by John, "that light is come into the world, and men loved darkness rather than light." Tremendous importance attaches to our attitude toward the instructions of the Spirit. Jesus was careful to say, "I am not come to destroy, but to fulfil." Herein is our permanent test of unfolding revelation. Does that which styles itself new truth fulfil his principles, grow up out of the same stock, appear a branch of the vine?

[*Watchman*.]

In the midst of all Christmas reminders one of the chiefest ought to be that we are not as fully in harmony as we ought to be with the spirit of that song that the peace-loving shepherds reported. If we should celebrate Washington's or Lincoln's birthday in a manner to divert attention from their real spirit and mission, we might gradually fall away from the high ideals of patriotism and freedom that they strove to realize. Are we in danger of putting too much display and of various forms of festivity into our observance of Christ's birthday? The rivalry among the merchants of every class is to make the most brilliant display of their wares and to reap the largest possible financial profit. What is the corresponding rivalry among the churches and Sunday schools? Are we as anxious to give as we are to get, and as eager to impart happiness as to experience it? Such a question might seem ungracious in the midst of all the Christmas cheer. There is overflowing good will on every hand. But this very excess of joy may make us overlook the wretchedness that abounds, and our fondness for the circumstance and

Digitized by Google

pomp of military splendor may make us forget that the Christ was essentially the embodiment of love, and that his kingdom is a kingdom of peace.

[*Christian Commonwealth.*]

There is little doubt that the difficulties of the ministry at the present time are very great. The decline in the church-going habit, the multiplication of all sorts of distractions, make it more and more difficult to carry on the work of the church, while the inevitable theological and Biblical discussions are loosening the hold of many people on religious organizations without always giving them other spiritual anchorage. These difficulties, however, will come to the true minister as opportunities. We believe there never was a more glorious opportunity for the man who is mentally alive and eager for knowledge, who is spiritually in earnest and knows the realities of divine communion, and who is wise enough to keep in close touch with men. "Close to God and close to man" should be the minister's motto. The pulpit is by no means defunct. Some of its old assumptions are gone. But let the man in it have an open, active mind, a heart that touches the depths of human experience, a spirit that at least has moments of that wonderful illumination in which the union of the soul with God is realized, and a lovable nearness to his fellow men, and he will find large numbers still who will seek his help and respond to his appeal.

[Rev. Charles Stelzle in *Christian Work and Evangelist.*]

It should be recognized that the Bible is not a book of mere statements. It is a historical account of certain developments in the life of particular persons and nations, although it does contain doctrinal teaching. It also presents commands and promises which were given by inspired men of old. It should be remembered, however, that the moral and ethical standards of Abraham's time, for instance, would not, in some respects, satisfy God's demands in the twentieth century, with its greater advantages and opportunities. One can readily see that it is not always fair to quote Scripture in order to "prove" that one is right. Fortunately, God has made the way so plain that any man may know what is his duty toward God and toward his fellow man. But frequently it will require the most sincere and the most reverent searching after the truth to know the mind of God. This is not given to the flippant disputant, who has only his own ends to serve. The Bible is a book well worth our most careful study.

[*Christian World.*]

The world is in desperate need of religion today; in need of the power that, entering into every separate man, shall bring his best to the top and keep his worst underfoot; that shall revivify his conscience and secure him courage and comfort in his difficult world. Let the church, rid of its dead weight of incumbrance, fired with a message in which it believes and which it can make others believe, begin again on its campaign; and we shall see it no longer a stand-still in a world of movement, but sweeping through the earth as at once the swiftest as well as the deepest of the forces that move the hearts of men.

[*Universalist Leader.*]

The anarchy of human hate and revenge always lives next door to the man who is annoyed at the prosperity of his brother. The climax of this folly is reached when the moral beauty and goodness of one man only increases the anger of another. Few things reveal a deeper depravity in human experience than the statement of Iago about Michael Cassio, "He hath a daily beauty in his life that makes me ugly." When a man arrives at the point where the sweetness of another soul curdles his own, he is in a desperate condition.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $3.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.25. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25 — £0: 5 s.;	2M.;	Mk. 5.30;	F. 6.45
2.25 — £0: 9 ;	3 ;	9.50;	11.60
2.50 — £0: 10 ;	3 ;	10.60;	12.85
4.00 — £0: 16 ;	5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

"We have twenty Switzerlands in the United States, yet last year Switzerland took between one hundred and fifty and two hundred millions of dollars from tourists, while the United States is actually losing money by not developing its national parks. Last year three hundred and fifty million dollars was spent by Americans abroad. The great resource of a national park is its scenery. The point I want to make is that scenery will pay better than any other asset the parks have. The statesman who remarked that 'the United States is not buying scenery' may have been a mighty good politician, but he was a poor economist. I want the country to understand that one of the best business investments it can make is in national parks," said Enos A. Mills of Estes Park, Col., a lifelong pupil and associate of John Muir, whose special mission in Washington was to ask the government to make a national park of Estes park, a tract of about twenty-five miles in northern Colorado, containing some of the most rugged scenery of the continental divide. Estes park is a government tract situated within a forest reserve and includes about twenty mountain peaks, averaging thirteen thousand feet in height, with great canons between and pine-clad slopes.

Efforts by the forest service to prevent speculation in government timber and to protect the public against monopoly prices are shown in a new plan which has been adopted for making timber sales in national forests. This plan provides for periodic revision of stumpage prices. In view of the general upward tendency of stumpage prices, forestry officials say that long-continued contracts based on present prices would be a strong incentive to speculation. The first bid advertised under the new plan is for seventy-three million board feet in the Tahoe national forest, California, with a ten-year period in which it all must be cut. This deal will involve the construction of twenty miles of railway. In the last fiscal year more than eight hundred and thirty million board feet of national forest timber were sold, and this year, it is estimated, will show a considerably higher total.

United effort will be made during this session of Congress by the war and navy departments to secure some effective legislation for the regulation of wireless telegraphy. The navy especially has been hindered in the development of a wireless system by commercial shore stations. Amateurs are sometimes troublesome when near a naval station, but few of them send with much power. They would be welcome to intercept all the messages they could, but when they invest in one and two kilowatt sending sets they are a nuisance and need regulating as much as commercial concerns.

The Lackawanna railroad is now sending passenger trains over the new "cut-off" which the road has built between Lake Hopatcong, N. J., and Delaware Water Gap, Pa. This "cut-off" is 28½ miles in length and means a saving of eleven miles between New York and Buffalo. The new line reduces the maximum grade of 60.2 feet per mile to 29.04 feet. During the process of construction several foreign governments sent representatives on tours of inspection, for from its inception the "cut-off" stood as a notable example of modern railway construction.

In a paper read before the American Economic Association at Washington, the chief objections to the present immigration system were noted as follows: Too many immigrants, poor distribution, poor or no assimilation, lowering of wages and living standards, increase of crime and pauperism, not a natural but stimulated movement, conscious violation of law by many on entering, no benefit to foreign countries as now conducted. Remedies proposed were: literary test, inspection abroad, physical test, a minimum earning requirement.

The House committee on rules favors a resolution authorizing an investigation of the alleged shipping, harvester, and money combines, to be conducted by a special committee of seven members. "We are convinced," said the chairman, "that all three of the trusts are intimately related."

The public gifts that have been recorded in the last year have totaled $260,810,100, more than double the amount given in 1910 and larger by many millions than gifts in any other one year. The amounts given to churches, educational institutions, charities, and the like would add many millions more.

A fifty per cent reduction in cable messages in plain English rather than cipher is in effect. It was first announced that only messages to Great Britain could be transmitted at the reduced rate, but later it was reported that France and Germany had been included in the zone of reduction.

Details of the ownership of realty in Pennsylvania by Negroes show that Negro men and women and organizations have title to real estate in Pennsylvania valued at twenty million dollars and assessed at thirteen million dollars.

A resolution adopted at one of the branch meetings of the American Economic Association held at Washington, proposes the creation of an international commission to study the cost of living.

The constitutionality of the "full crew" act of Indiana, regulating the size of crews on freight, passenger, and mail trains, was upheld by the supreme court.

International.

Lloyd George, in a speech before a church meeting in Wales recently, said: "Poverty is not the fault of Providence, which provides in abundance. There are millions of men, women, and children in this, the richest country in the world, who through no fault of their own go through life sodden in poverty, wretchedness, and despair. You cannot deal with a problem of this magnitude by mere spasmodic appeals to the charity of the benevolent. That is hopelessly inadequate. You might as well try to run the army and navy by voluntary subscriptions. It is the community alone that can command the resources to drain this morass of wretchedness, so as to convert it into a verdant and fertile plain. I don't agree with the view that the church is concerned solely with spiritual things. Those who take that view reflect on the career of the Master. They repudiate the precepts and doctrines of the greatest disciples, whose first act, on founding a church, was to establish a fund for the care of the poor and the first poor law guardians ever established. And remember the trouble which befell the man who did not fill in his forms properly and who did not give a correct account of his property to the chancellor of the exchequer. One fourth of the population of this country, even in times of prosperity, are living under conditions of poverty thus defined. The national income was five billion dollars. This was revealed income. That meant one thousand dollars a year for every family. Yet one third of that income is received and spent by two hundred and fifty thousand people, one two-hundredth part of the population; or, in families, one fortieth of the population is receiving and spending one third of the income of the country. It is incumbent upon those who have been blessed by Providence to make sacrifices for others."

There is a possibility that Mongolia may split into three separate kingdoms. Eastern Mongolia has already proclaimed independence at Urga. Western and southern Mongolia are preparing to follow suit, with capitals at Kobdo and Uliassutai. A recent despatch said that the princes of southern Mongolia had unanimously resolved to support the imperial government against the Chinese revolutionaries. They declared they would proclaim their independence if a Chinese republic was established.

The government of Portugal has decided to sell all the jewels and valuables found in the royal palaces of Necessidades, Ajuda, and Pena. It has been adjudged that these form part of the crown treasures, which were confiscated by the state. It is understood that part of the proceeds realized by the sale of the crown jewels will be devoted to educational purposes, the remainder being paid into the treasury.

Sun Yat Sen has been proclaimed president of the republic of China. All of the ministers appointed by him are regarded as able and progressive. Dr. Wu Ting Fang is secretary of foreign affairs and Chen Chin Tao, one of the leading financiers of the south, is head of the treasury department. One of the first acts of the President was to change the calendar to conform to that of the civilized powers.

The Swiss government is taking steps to preserve the few eagles which still inhabit the Alps. Only four nesting-places are known to exist in these mountains, and these would soon depart if the birds were not protected. The eagle commits depredations on the flocks of the peasants who live in the valleys, but the peasants are now amply repaid for any damage the birds may do.

Industrial and Commercial.

In spite of some halting in the textile industry, announcement was made in the past twelve months of plans for new cotton mills and enlargements of existing plants in the South calling for 264,890 spindles and 4,780 looms and representing an aggregate investment of more than six million dollars. In printing a summary of these additions the *Manufacturers' Record* notes the continued progress of southern mills in the manufacture of finer grades of cotton goods and in the use of hydro-electric power. Only two of the leading undertakings of the year were yarn mills, all the others being designed for the manufacture of cloth.

Sarawak, a country of fifty thousand square miles, lying between North Borneo and Dutch Borneo, has about five hundred thousand inhabitants. The Chinese are an important element in the population, but semicivilized native tribes form the vast majority. Among the most important products of Sarawak are certain gums from which a very good rubber is manufactured. The following amounts in piculs of 133⅓ pounds passed through the custom house during the year 1910: Gutta jarpkar, 6,507; gutta jelutong, 106,873; gutta percha, 1,651; india rubber, 2,605; plantation rubber, 161; a total of 117,797 piculs, or 15,706,266 pounds.

Upon the recommendation of the Massachusetts highway commission the New England Telephone Company has reduced the price of excess calls in its measured service in certain zones from five cents to three each.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

DOING GOOD WITHOUT LOSING GOOD.

REV. WILLIAM P. MC KENZIE.

THE doing of good ought certainly to have results beneficent to the doer, even as the labor of the sower makes more certain to him a share in the harvest. If no one were to sow, there would be no harvest. If many sow, there will be the more to reap. As a matter of custom, whenever spring days come, the sowers in the morning sow their seed and continue their toil until the dusk of evening, for the time is short, and no one knows which crop is to be sparse and which bountiful. Each worker hopes, however, that his work will have abundant reward. Yet people do not look upon doing good as if it were the sowing of seed from which results would inevitably come.

Should there be (let us only suppose it) an advocate of error, what might he urge upon those inclined to be active in the doing of good, so as to dissuade them from kindness and service to man? He would surely argue that unselfish labor is dead loss; that a man must look out for number one and let his neighbor shift for himself. Furthermore, he would argue that to give good to others is like lifting water from a cistern that soon will be emptied, leaving the owner to thirst unsupplied. And he would falsely forecast suffering, weariness, and collapse through exhaustion, for any one who in loving his neighbor should minister to his needs, tend him in sickness, or watch with him through some long night of sorrow. To the immature mind these arguments might seem to be weighty, and might superinduce a reluctance to be unselfish, liberal, neighborly. But wise men and women down the ages have ever disregarded them, and persisting in their kind and beneficent activities have found it in every way true that "whatsoever a man soweth, that shall he also reap."

The time has come when all men may know the falsity of that customary thinking which links hardship with the doing of good. Too long have men associated the Christian life with deprivation, and believed that to follow Christ meant to deny one's self all good in life,—all spontaneous joy, all merriment, all prosperity. The Master said: "I am come that they might have life, and that they might have it more abundantly." His legacy was peace. He declared, "Your joy no man taketh from you." Christian Science teaches us so to understand life that we enjoy the good of it while we demonstrate its good for others. As a science it reveals the Principle, or source, of all good. If a man is working to unfold eternal truth, what blesses others blesses him first. If a man is making channels so that living waters may reach others, his own life is refreshed first.

There is no hardship, then, in Christian living. There is a wrong ideal, however, which would make life ascetic and vacant of good, because it would put wealth in a pocketbook, the water-supply in a cistern, and strength in a body. Then it commands the man who would do good to deplete his resources, to become poor, thirsty, worn-out, claiming that when thus exhausted of good he wins favor with God. But our God is "a God of truth and without iniquity, just and right is he." We glorify God by making Him known in His true character as giver of good. How can we prove to others that God is the giver of good unless by ourselves having it, and thereby proving that others may have it also?

The false arguments of the advocate for error have been summarily dealt with by Science and Health, our text-book, and as a result there are marvelous changes already in human thinking. Invalids who thought to please God by passivity in suffering, who dreaded any exertion in usefulness because they expected to pay for it by increased sufferings, have found health and strength in the activity which is spontaneous when God is known as the Life of man. Household martyrs who went wearily because they carried a house on their backs, have given up their gloom and found gladness by living in a home wherein they are proving and enjoying the order and harmony of Mind. Philanthropists who had become pessimists because they found themselves so inefficient as personal sources of good, while the greed and dishonesty of mortals was so vast, have been restored to true philanthropy by learning to know and love God first. They have then become able to discern man's true nature, after recognizing his Principle, or Father. Moral perverts who believed that in the way of evil there was satisfaction, who sought personal good by robbing individuals of their wealth, homes of their peace, communities of their welfare, and spent their stolen gains in rioting and bestial living, have speedily been convinced of their folly, and lifted from the wild-animal class into reasonable manhood. Nor have they felt that they lost any good when they relinquished a mode of life which held its own curse in exchange for the healthy living which has in it a foretaste of eternal joy.

These redeemed men and women are now walking joyfully amid the peace and fairness of the valley of humility, wherein they learn that of themselves they can do nothing, but can do all right things by virtue of that Mind which was in Christ Jesus. This host of witnesses to good enjoyed through the doing of good is moving on, an increasing army. The meaning of it all becomes clearer to the world. The proof involved is an accelerating force. When all men know what some now understand, the darkness will be over, for all minds will be enlightened as to God's goodness.

There comes to mind the case of a clergyman who continued his labors for men though often balked by weakness and invalidism. Following a series of services he would be too exhausted even to eat food. The Christian Science text-book was brought to his notice, and he read: "God never punishes man for doing right, for honest labor, or for deeds of kindness, though they expose him to fatigue, cold, heat, contagion" (Science and Health, p. 384). He decided to test the truth of this statement by a trial, and found to his wonderment that there was an actual divine law working contrary to erring human belief; and that if man trusted to this activity of good he could experience a renewing of his strength. By the joyful experience of healing he came to know God anew in the terms that so well describe the activity of Love, namely, "God, our Saviour."

THE UNSPEAKABLE GIFT.

MARY H. W. CARTER.

In his second epistle to the Corinthians, Paul, after exhorting the brethren to bountiful and cheerful almsgiving, closes with the words, "Thanks be unto God for his unspeakable gift." Immediately the human mind queries, What is this wonderful gift for which the apostle so earnestly returns thanks?

Many references are made in the Bible to the gift which God has bestowed upon His children, and according to the measure of spiritual understanding possessed by the authors of the sacred books is the meaning of this gift interpreted. To the Preacher, saddened by his unsuccessful search for wisdom and happiness, the material good which comes as the result of diligent work is this gift of the Father. "Every man," he says, "should eat and drink, and enjoy the good of all his labor, it is the gift of God." "Every man also to whom God hath given riches and wealth, . . . and to rejoice in his labor; this is the gift of God." As spiritual discernment increased, the apostolic writers were, however, led to look beyond the fleeting and the temporal for the meaning of this precious gift. "Every good gift and every perfect gift is from above," said James, and Peter urged the multitude to repentance that they might "receive the gift of the Holy Ghost;" also in his scathing rebuke to Simon the magician, who sought to buy from the disciples the secret of their power, Peter said: "Thy money perish with thee, because thou hast thought that the gift of God may be purchased with money."

In St. Paul's epistles we find the most frequent and definite references to this all-to-be-desired gift. "Covet earnestly the best gifts," is his counsel to the Corinthians; "Stir up the gift of God, which is in thee," is his command to his disciple Timothy, and his epistle to the Romans abounds in passages of similar import. In the fifth chapter he emphasizes the fact that this gift is free, "the gift by grace," and in the following chapter he says plainly and definitely, "The gift of God is eternal life." Reviewing briefly the events of Paul's dramatic career, one recalls the earnestness and zeal which characterized him even when persecuting the early Christians, the vision whose splendor blinded him on the road to Damascus, followed by the overwhelming expansion of consciousness, the realization of life eternal, the revelation of the Christ, the great basic truth of man's immortal birthright: "I live; yet not I, but Christ liveth in me." This, then, was that gift which, transcending the limitations of mortal speech, filled his heart with gratitude and thanksgiving and which he longed to bring to the consciousness of his brethren.

As the great apostle preached this divine message of freedom and deliverance, of joy and peace, of the "unspeakable gift" of eternal life to all, the life which "is hid with Christ in God;" as he labored to destroy the fundamental error of sense-blinded mortals,—that man can exist apart from God,—so does Mrs. Eddy in Science and Health declare this same God-given truth over and over again with impressive earnestness. On page 275 she says: "No life is Life but the divine; no good is, but the good God bestows." It is evident at once that the meaning of "life" as thus used must be widely different from that ordinarily associated with the word. It can have no reference to the human concept of life as inherent in matter. It is inconceivable that this supreme gift of God should be conditioned by material limitations. True life must be the exact antithesis of its material semblance. In that marvelous prayer in the seventeenth chapter of John, Jesus gives the full definition of this transcendent life: "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

This gift above all other gifts, this gift of eternal life, is then the knowledge or understanding of God. Next comes the question, How is this great blessing to be obtained? How can mankind attain to its possession? Jesus answered this same question when it was asked by the young man whom he loved, in his reply: "Go thy way, sell whatsoever thou hast, and give to the poor." That is, in essence, Separate yourself from all that has hitherto made up the sum total of your human existence. Loose your hold upon material things; cease to cling to worldly possessions. The cherished ambition, the secret desire for wealth or fame, the hunger for personal affection—what are these, when weighed in the balance with that abundant life which Jesus came to bring to mankind?

Part with everything earthly that thou hast! Pride of intellect, with its innumerable ramifications—self-esteem, unjust criticism, false judgment, corroding envy and jealousy, mortal beliefs, all must drop from us. And then, being completely shorn of this garment of Phariseeism with which we have so long clothed ourselves, how withal shall we be clothed? "With the garments of salvation," the prophet Isaiah tells us; with gentleness, meekness, health, joy, peace, wisdom, purity, love. To some this may seem an ideal so far removed from our finite sense as to be impossible of attainment, nevertheless the command of Jesus was that we should be perfect, and he would not have issued a command impossible of fulfilment.

Not all at once, however, can we don this "robe of righteousness." It must first be woven, slowly, patiently, trustingly, happily, day by day, hour by hour, moment by moment, with the warp and woof of right thinking. Belief in the reality of things material must be replaced by the understanding that God alone is real; dependence upon the dicta of the human mind must be transformed into absolute reliance upon the one intelligence, the one Mind; the hungry human heart, which has hitherto looked to finite affection for its sustenance, must find its complete satisfaction in divine Love. Then, when the perfect pattern is wrought, when the wedding garment is finished, when the purified and enlightened consciousness is ready to receive this "unspeakable gift," there shall come the revelation of Truth, of "Christ, who is our life," and all sense of inharmony and discord, of ignorance and sin, of sickness and death, shall be swept away, and the true man, emerging from the darkness of error, shall stand forth in the radiant glory of eternal, imperishable being, without beginning and without end, made in God's image and likeness.

CORRECT HYMN SINGING.

FREDERIC W. ROOT.

Complaint is frequently made that in church service the hymns are sung too slowly, that the tune is made to drag heavily along, taxing breath capacity and offending the sense of rhythm. Perhaps the people are exhorted to sing faster, but for the most part it is the organ that is expected to remedy the defect of dragging, and one after another members and committees beseech the organist to keep the singing "up to time."

It is a very easy matter for an organist to play the tunes in exact and prompt rhythm, but if he does this with congregations that are accustomed to drag, and are not instructed, he will play throughout the tune one note in advance of the majority of the singers. Indeed, in the first line of the tune he may have to run quite away from the singers, most of whom, finding themselves left far behind, will stop singing and wait to discover their whereabouts before striking in again. This expedient may give some stimulus to the *tempo;* the tune will be sung through a few seconds sooner and the demands upon the singers for breath and endurance will be measurably less, but this gain involves a loss in two directions. Naturally there can be no devotional thought or exaltation of sentiment in the midst of

Digitized by Google

musical chaos, and the lack of unity between the organ and the singers is great discomfort to a musical ear. Thus the question of hurrying congregational singing becomes a debatable one.

In the printing of hymn tunes, rests rarely occur; the notes represent each melody as an unbroken flow of tone from beginning to end. But, as breathing-places are a necessity, the melody must be interrupted at intervals. To provide these places and manage them properly is to solve the problem of dragging, at least in those tunes with which the congregation is familiar. The rule is to make the note before a breathing place—usually the last note of a hymn line—shorter than its printed value, thus giving time for breath and making it possible to take the first note of the next phrase with no delay. Most of the heaviness and dragging in congregational singing is from the universal tendency to hold these final notes too long. The old German chorales, those models of dignified, scholarly music for worship, frankly recognize and sanction the natural tendency of untaught singers to hold the last note of each phrase and then take time for breath. This they do by printing the sign for a hold over such notes. Number 205 in the Christian Science Hymnal is an example of this. In it the singer is allowed to pause and take a full breath for each line; and where this is done the line can be sung deliberately and thoughtfully with ease.

In some congregations it is the policy to take the tunes as slowly as people are inclined to sing them, so that organ and voices sound each tone simultaneously. In a large church, having a powerful organ to support the singing, the writer has heard No. 195 sung at a *tempo* which gave sixty seconds or more to a verse. Nobody could possibly wish to sing any slower than that, but this is unnecessarily slow, and to most of the singers it makes the mechanical aspect of singing as obtrusive as it is when tunes are hurried through in a scrambling fashion.

"Music in the Church," a recent work by Dr. Lutkin, quotes "a noted authority" upon the traditional rendering of well-known English tunes. Metronome marks are given to show what is regarded as the proper *tempo*. A verse of "St. Anne," for example (No. 215, Christian Science Hymnal), would occupy nearly or quite thirty seconds, when sung, according to Dr. Lutkin, "with dignity and true reverence." He adds: "Some of these marks will doubtless be considered too slow by the impetuous American, whose restless blood clamors for excitement even in the hallowed precincts of the house of God." Though there are some who feel that this deliberate and thoughtful singing of the hymns is the only proper way for church service, and that efforts for the more animated style result in ragged performance and distracted attention, the large majority in our congregations seem to prefer scrambling to dragging. Neither alternative is right; and if the singers can be brought to observe the rule to make the last note of each phrase short enough, much of the disorder attendant upon the quicker singing may be avoided.

It is the modern sense of fitness to take many kinds of music faster than was the custom in earlier times. Those who were familiar with Handel's "Messiah" thirty or forty years ago are often shocked at the rushing speed with which those choruses are sung at the present time. An effort to approximate the ideal in this matter must be made with regard to many considerations. Discrimination must be employed regarding the *tempo* of different tunes. Because a congregation inclines to sing too slowly, they should not be urged to hurry all tunes. Such grand old tunes as Nos. 144, 215, 240, and the Doxology, for example, should be sung at a *tempo* to preserve their dignity. While there is much to be said in favor of the slower *tempo* for hymn tunes, it will generally be found best to try for a greater degree of promptness and spirit in this part of church service. Another quotation from the work above referred to is: "Poor hymn singing is an index of spiritual indifference and stagnation."

THE ALLNESS OF PRINCIPLE.

ADELAIDE F. ROLLINS.

So many times we hear it said, "I cannot get the right idea or concept of God as Principle." One of the first things to be learned in Science is that God is "the great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence" (Science and Health, p. 587). On this same page we find the definition of good as "God; Spirit; omnipotence; omniscience; omnipresence; omni-action;" therefore, God and good are synonymous, and it is many times much clearer and easier to substitute the word "good" for God and in that way get away from the thought of God as the name of a person. In other words, we start in Christian Science with God as the Principle of good, or divine Principle.

Do we ever stop to think what it is that makes the earth revolve on its axis? What it is that causes the stars to shine or the moon and sun to give forth their reflected light? "Why, God," most people would reply. Yes, but is their concept of God and His universe the right one? Christian Science teaches that God, the ever-acting, divine Principle, creates all things spiritually. Divine Principle always has been, is, and always will be, "the same yesterday, and to-day, and for ever." In Luke's gospel we are told of the birth of Christ Jesus. As the record tells, he was born of Spirit; therefore he was started forth in the world with a clearer and higher perception of spiritual things than any other. He grew to manhood with that spiritual insight or perception which none others have had to the same extent or degree.

With us all, however, is some sense of the governing Principle, of right; but, as we matured in the flesh,—until we came into Science,—we matured according to the supposed laws and beliefs of materiality; we grew to know good and evil alike through material sense, and in many instances followed that which pleased us and gave us the best result from our human standpoint, regardless of its being right or wrong from the standpoint of Principle. As Jesus grew up, he naturally followed that which was to his high spiritual sense good. He recognized the fact that his Father was God, good, and he firmly trusted in divine Principle, and so made his many demonstrations. It is our birthright and privilege to recognize and accept the same Father or God, the same Principle of good to govern us; and as we do this we shall be less and less allured by the temptations which come to mortal sense. Christ Jesus said, "Call no man your father upon the earth: for one is your Father, which is in heaven."

If we always stop to make a decision as did Jesus for the good of all and not from any selfish motive or personal gain, this will lead us into more and more of good, and by trusting and knowing that divine Principle is always right, ever acting, and unfailing, we can prove true the promise of the Master, namely, that even greater works than his should be done by his faithful followers. It was not the human Jesus alone that the winds and waves obeyed, but rather the spirit of Truth and Love which his words expressed, his full trust and confidence that the divine Principle of good would be manifested. We have only to become as little children, as we are bidden, and accept divine Principle as our teacher, and then start onward. In our schooldays we did not really rely upon the personality of our teacher in order to add, subtract, multiply, or divide. We did not take our teacher with us from room to room and from place to place. It was the basic law of mathematics

Digitized by Google

which we learned to prove, and with it we worked out our problems; there was absolutely no personality about it. So also it is with God or divine Principle. In Christian Science we do not look to personality, but accept and rely upon the Principle of good.

We must creep before we can walk, in Science, or spiritually, just as we had to do materially; and it is therefore for us to start and use our slight understanding of Principle with the little problems, until we can prove for ourselves its perfect efficiency, and then we shall have fuller and more complete trust and confidence in Principle for the greater demonstrations. Because we cannot now command the winds and waves, are we to become discouraged? Not at all. As we follow in the Master's steps of righteousness, put off the old man (old ways of thinking and living), and put on the new (right ways of thinking and living), we shall leave the creeping stage and find that we are able to walk; and as we walk with God or Principle as our only guide, we shall be able to command the winds and waves of error that attack us.

An example worked out wrongly may be likened to a diseased mortal. Taking both on their own base, we have to start at the beginning with the Principle and work on to a perfect solution of the problem. We find in the one case that there is here and there a mistake in addition, in subtraction, or division; in the other case, a thought of hate, envy, or dishonesty of some kind in the consciousness. We first uncover or discover the errors, and in the first instance change the wrong figures to right ones by the application of the basic law of arithmetic. In the second instance, Truth changes thoughts of hate or dishonesty to those of love and honor and uprightness through the application of divine Principle, good. The result we have in the first instance is a corrected or right example, and in the second a corrected or healed mortal. No personality brought this result in either case; Principle alone did it in both. We thus learn that something above and beyond personality is needed in every case, and in all of Mrs. Eddy's writings she points unwaveringly to Principle for the attainment of right results.

It is only by working according to Principle, that regeneration, the manifestation of rightness and goodness, comes to human sense, and we realize that we are healed of whatever false belief we may have had, whether sin or sickness. We declare man's birthright of perfection and freedom, which we know exists now spiritually, the manifestation and reflection of such perfection coming to us as we do our part in applying Principle in thought and deed.

CROSS-BEARING.

C. F. HACKETT.

"If any man will *come* after me, let him deny himself, and take up his cross daily, and follow me." These words of Christ Jesus signify much to the student of Christian Science. The true meaning of the cross becomes clear in the light of its teachings. The cross which we must bear if we are to escape evil and its dire effects, and gain the pure joy and freedom of good, is the recognition of the nothingness of material selfhood and the rejection of the various forms of false belief pertaining thereto.

How is this most important work to be done? By learning the nature of our true, God-governed selfhood, and identifying ourselves with this at all times. Man governed by God is always good, healthy, joyous, and free. Does the opposite appear true? Then we may reverse this seeming by holding thought steadfastly to the true nature of man. As we daily assume this mental attitude, gladly taking up our cross, the capacity to discern between the true and the false unfolds, the rejection of evil becomes less difficult, and greater mental and physical freedom results. There can be no compromise with evil in true cross-bearing. Complete self-surrender to God, good, is the demand of Science. We must handle the whole brood of sinning serpents by denial and rejection based on the allness of divine Love. There is no excuse for even momentary indulgence of hate, fear, resentment, lust, or pride.

Cross-bearing is not necessarily difficult, for God gives all who truly seek Him the strength and skill to perform their tasks, and what we have the strength and skill to do we do easily, and if we love to do it we have joy also. Perhaps the greatest joy we have in cross-bearing, which after all is only the patient and persistent correction of our thought about God, man, and the universe, is the consciousness that when this work is completed we shall wear the crown of righteousness. There is no uneasiness for the one who wears this crown. Eternal love, joy, and peace are his. The glimpses we have of this blessed state can but encourage us to strive assiduously to bear our ever lightening cross with courage and good cheer.

[Written for the *Sentinel*.]

A SONG OF DOMINION.

MARY J. ELMENDORF.

I hear the calling of clarion voices,
I feel the sweeping of wings,
And the radiant heart of me, leaping, rejoices
And clearly, triumphantly sings.

Peace and plenty in orchard and wildwood,
Music in garden and lea;
And a prayer that I lost in the kingdom of childhood
Comes trustingly back to me.

I greet to the westward a glimmering meadow,
Dewy and placid and cool,
Where willow and alder weave wonderful shadow
By the banks of a berylline pool;

A meadow of quiet, thick-tufted with clover
In blossoms of silver and pink,
That the questing bees of my thought fly over
And deep of the sweetness drink.

Birds in the south and thickets of roses,
Moss and feathery frond,
Winds that wander through mellowy closes,
And the surge of the ocean beyond.

Afar to the northward a mountain arises
In corselet of cedar and snow,
A symbol of power and mighty emprises
That only the valorous know.

Down from its rocks and precipitous reaches
Tumbles the fugue of the pine,
In tune with the thundering surge on the beaches
And the wind on the breast of the brine.

And oh, in the east great curtains of glory
Across the purple are rolled,
Where the angels of sunrise have signaled their story
In flashes of scarlet and gold!

Spirit is welling within and without me;
Loosed is the clutch of the clod;
I know I am master of all about me,
The image and likeness of God.

I hear the calling of clarion voices,
I feel the sweeping of wings,
And the luminous heart of me, lifted, rejoices
And Godward its melody flings.

SELECTED ARTICLES.

[Editorial in *Greenfield* (Mass.) *Recorder*.]

President Taft has modified the regulations as to the practice of medicine in the Canal Zone, under pressure of the Christian Scientists, who were excluded in the first narrow order. This is the new provision:

"Nothing in this order shall be construed to prohibit practice of the religious tenets of any church in the ministration of the sick or suffering by mental or spiritual means without the use of any drug or material remedy, whether gratuitously or for compensation, provided sanitary laws are complied with; or gratuitous service in case of emergency or the ministering of ordinary household remedies."

The modification does the President credit. Beyond the case in hand, it gives ground for belief that he would lend no aid to the restrictive scheme which sails under cover of the bill to establish a national health department. The justification for that measure lies in the use of such a department to infringe upon freedom to employ any manner of healer, and that is very doubtful justification indeed. The states can safely be left to all the medical regulation that is warranted.

[Editorial in *Los Angeles* (Cal.) *Express*.]

President Taft has done a wholly righteous thing in amending his executive order 1420, and correcting its injustice. By that order, issued in October, and effective a little before Christmas, exercising the powers of government over the Canal Zone, wherewith Congress has vested the President, Mr. Taft established certain conditions under which a monopoly of the practice of the art of healing would certainly have been vested in disciples of the allopathic school. If the practitioners of that school possessed a monopoly of knowledge of the art of healing, something might be said in defense of the order. But it is a matter of common knowledge that the percentage of the cures they effect is not greater than the percentage effected by practitioners of other schools, and that, indeed, practitioners of other schools have restored health in cases that have been abandoned by them as incurable.

The order as originally issued by Mr. Taft required all practitioners to obtain a license from the Canal Zone board of health. Inasmuch as that board is composed wholly of allopaths, whose belief in the efficacy of their own healing methods seems to carry with it a disbelief in all others, it is easy to imagine what short shrift it would have given applicants for licenses who belonged to any other school. Moreover, on the Canal Zone, as elsewhere, doubtless there are many who are conscientiously opposed to swallowing drugs, and the effect of the order would have been to deny them, when ill, relief by such treatment as their conscience and intelligence concurred in choosing. That the order was specially aimed at practitioners who heal without using drugs was made evident by the phraseology of section 2. Therein, all who "prescribe for . . . or in any wise attempt to heal, cure or alleviate or who shall in any wise treat any disease," were specifically declared as within the meaning of the order.

Perceiving how unjust and even how tyrannical his sweeping order was, the President has vindicated his reputation for fairness by pulling its teeth. He has issued a supplementary order directing that order 1420 be not construed "to prohibit the practice of the religious tenets of any church in the ministration to the sick or suffering by mental or spiritual means without the use of any drug or material remedy."

The President has remedied a just grievance. In this, and thus far, he has shown himself to be at once courageous and progressive.

[From *Dulwich* (Eng.) *Post*.]

The Christian Science Monitor is a daily newspaper published in Boston, U. S. A. We do not believe that there is a cleaner, brighter, or fuller daily paper in the whole world.

We have always at Bassano House a copy of this magnificent daily journal to spare for any inquirer who may like to see the kind of literature the municipal reform barbarians keep out of our public libraries.

[From *London Daily Chronicle*.]

What shall a newspaper be? Shall it photograph the sins and failures and complaints and horrors of the world? We have enough of them in our own lives, and the ordinary newspaper—one may suspect—recounts the horrors only to profit by their removal. But there comes a paper that refuses to recognize anything but the thanksgiving for blessings received. For three years *The Christian Science Monitor* has steadfastly refused day by day to publish anything that does not tend to cheerfulness. And the Thanksgiving number of Nov. 29 is so full of cheerfulness that it has to come to this office by parcel post. The ordinary halfpenny could not carry the bulk of joy!

[Frederick Dixon in *Sevenoaks* (Eng.) *Chronicle*.]

In a letter on Christian Science, contained in your issue of the 24th inst., the rector of Sevenoaks bears testimony to the freedom from bitterness in controversy of Christian Scientists. This admission makes it all the easier and all the more possible to differ from the critic, who, while maintaining an attitude of strongest opposition to Christian Science, does so in a tone very different from that of many of its opponents. May I say at once that his criticism that Christian Science is anti-Christian and heretical, need not disturb any Christian Scientist very much. The history of Christianity during the Christian era is composed very much of such criticisms as these. The early centuries were occupied with controversies which were commonly solved by an appeal to force rather than an appeal to argument, indeed the methods of the victors remind one more of the opening than the closing lines of the famous epigram in which Sir William Browne replied to Dr. Trapp:—

> The King to Oxford sent a troop of horse,
> For Tories own no argument but force;
> With equal care, to Cambridge books he sent,
> For Whigs allow no force but argument.

Erasmus himself drily told the Franciscans that he could guarantee that they had burned Luther's books, but he could not pretend that they had answered his arguments. In this respect, Luther himself was more fortunate than Huss or Latimer, though it cannot be said that when the disciples of Huss and Latimer came into power they showed more respect for argument than for force.

The truth is that the human mind asserts its own opinions with ever unabating determination, and those who disagree with it are always heretics. The heretic of yesterday is, however, commonly the orthodox of today. Therefore it matters little what labels are applied to doctrines, the essential fact is what the doctrine teaches. Jesus himself made this abundantly clear in his incessant rebukes of the Pharisees for straining at gnats and swallowing camels, and for washing the outside instead of the inside of the platter. He drove this home with emphasis in that unforgettable phrase in which he defined a Christian as the man who repeated the works he was doing. There is no getting away from this definition. Those, he declared, who believed in him, would be able to do the works he did. Men may argue incessantly on points of dogma, and may persecute and murder each other over their dogmatic subtleties, as in millions of cases they have; the fact will remain that in

Digitized by Google

the Bible itself a believer is described as one who is able to repeat the works Jesus did.

Those works, when we really come to consider it, were nothing but the demonstration of the truth of his teaching, the object-lessons by which a world that had difficulty in accepting the fundamental newness of his teaching was brought to admit that the word was with power. Christian Science is, as our critic declared, nothing new. It is the attempt to return in the twentieth century to the Christianity of the first century, with its attendant object-lessons, which the world, during the intervening centuries, has been content to describe as miracles. Miracles they were, in the undoubted meaning of the word miracle. That is to say, they were works of marvelous power to the materialism of the age, and undoubted object-lessons in proof of the teaching they were intended to substantiate. That is all that the Greek words translated miracle ever meant or ever can be made to mean. The idea of the miracle being supernatural was nothing beyond what Matthew Arnold would have termed the Aberglaube of succeeding generations, endeavoring to cover their own spiritual failure with a veil of something beyond repetition.

For forty years Christian Science has persistently denied any such definition. It insists that Christianity in the twentieth century, as in the first century, must be measured by the standard of Christ Jesus, and of no one else. The first disciples were sent out to preach the gospel and to heal the sick. The disciples of that age, and of all countries and ages to come, were told that they were believers in the exact proportion in which they repeated the works of Jesus. The question, therefore, arises, What is the lost element of Christianity, through the disappearance of which, though the preaching continues, the healing has ceased? Jesus himself said, "Ye shall know the truth, and the truth shall make you free." This truth is the knowledge of the absolute, the understanding of God, an understanding described in the Greek text of the New Testament as the full or scientific knowledge of God.

Christian Science comes to insist on the words of Jesus to Nicodemus, namely, "that which is born of the flesh is flesh; and that which is born of the Spirit is spirit." It declares that the spiritual alone is the real, and that the material is nothing but the illusion of the senses. In short, that the only thing which can be called real is God and the spiritual creation, and that only in proportion as this is understood, can men begin to do the works which Jesus did. It was the Mind of Christ, the scientific knowledge of God possessed by Jesus the Christ, which healed the sick in the first century, and it was the realization of this which led Paul to implore the Philippians to let that Mind be in them which was also in Christ Jesus. In proportion as men get an understanding of spirituality, the Mind of Christ, will they gain that scientific knowledge of God which, in making them acquainted with the truth that shall free the world, will enable them to demonstrate that truth in the way it was demonstrated by Jesus.

[R. Stanhope Easterday in *Goshen* (Ind.) *News-Times*.]

The most tragic and touching scene in the eventful career of Paul, that sturdy apostle of the Gentiles, was not any one of his harrowing experiences with the elements, with wild beasts, or with wilder opponents in human guise: it was that soul-stirring episode on Mars' hill, on the occasion when he preached to the philosophers of the Grecian metropolis. The cream of the world's learning was assembled there, and yet among the countless altars there had to be one "to the unknown god." It was characteristic of that people that they "spent their time in nothing else, but either to tell, or to hear some new thing," yet it was necessary for a humble follower of the despised Nazarene to tell them that God was all around and about them and ever available. The pathos and force of the incident, and the thing which most stirred Paul's heart, was their touching ignorance of this essential of man's being and their mute yearning to know, expressed in that significant inscription.

But have we not a reasonable parallel, in our own time? Are not we as ruthlessly buffeted with divers winds of doctrine, religious beliefs and laws of health, so called? Are we not as a people halting today between the extremes of epicurean liberalism, tending to laxity of morals, and stoical conservatism, blinding us to wholesome good? Are we not today, as in Paul's time, in a strait between the innate desire to know good and the prohibitive belief that the infinite is incomprehensible? And does it not all tend to pitiable confusion and despair, rather than to the legitimate hope of peace and assurance offered to humanity in the gospels? Are we not, indeed, still seeking, like the Athenians, some new thing in religion and medicine? The indications are that the answer must be in the affirmative, and yet Solomon has said, "There is no new thing under the sun."

It is innately characteristic of the human mind that, in the hour of direst extremity, when all else has failed, it instinctively calls out, "God help me." This tendency among mortals to make the last and final appeal to the divine source for surcease, a tendency manifesting itself in all classes of people and in all stages of civilization, in the pagan as well as in the Christian, in the degenerate as well as in the man of morals, in the ignorant as well as in the intellectual, irrespective of creed, system, or environment, contradictory and inexplicable as it may seem, is deeply significant. It at once sweeps away both boasted and tentative agnosticism, it establishes irrefutably the idea of an undestroyed and indestructible relationship between God and man, it attests the spark of divinity shining through humanity, and above all else it establishes the fact that despite the blighting influence of prevalent belief, from Adam down to the immediate present, in an existence apart from God or of life as in matter, in which latter there can be no God, simple faith has continued in some faint sense the potent factor in the human economy. In other words, humanity can still, can here and now, breathe at least in the hour of need the prayer, "Lord, I believe; help thou mine unbelief."

But the great Teacher centuries ago gave to mankind the assurance, "If ye had faith as a grain of mustard seed, ye might say unto this sycamine tree, Be thou plucked up by the root, and be thou planted in the sea; and it should obey you." This being true, and the further fact established that some faint spark of faith in God is traceable in the children of men, why should it be thought impossible that an abnormal growth in the human body should be effectually removed through the ministry of faith and prayer? Why should men longer hesitate to claim the prerogative of divine sonship and so petulantly argue, "Can God furnish a table in the wilderness?" If, moreover, we scan in retrospection the eventful and significant life-ministry of the world's Saviour, we find therein a decided preponderance of actual healing over actual preaching. Indeed there is but one short sermon chronicled in the gospels with numberless healings; in many instances, all that were sick in the multitudes that thronged him were made whole. His constant reminder was: "These signs shall follow them that believe," and, "Greater works than these shall he do,"—the latter "works" or "signs following" being our Lord's only criterion of discipleship. Have we indeed, therefore, the slightest justification for doubting either the present-day possibility or necessity of such healing through faith or by spiritual means alone, to the utter exclusion of drugs, manipulation, so-called "suggestion," or other material methods? May we not also reasonably infer that if Christ Jesus, who came to teach the way of salvation and life, did not outline a definite system of drugs or hygiene, such latter are not essential to man's health? It will be recalled that when on one occasion the apostles failed to heal a certain case and inquired of the Master

Digitized by Google

a reason for such failure, he significantly intimated that it was lack not of anatomical or medical knowledge, but of "prayer and fasting" that made them fail. Fasting means abstinence from that which tends toward the material in order that the higher and spiritual may be the better developed, and prayer in its truest sense is constant and intelligent communion with God; yet in the above quoted words are couched the whole of the pharmacopœia of Jesus, "the great Physician," and therein appears no taint of matter, but rather the essence of simple faith. The results, furthermore, of our Lord's practice, and indeed the results of the efforts of his immediate followers and of the early church for some three hundred years, attested the efficacy of this system of spiritual therapeutics.

All down through the ages, moreover, in the lives of patriarchs, prophets, apostles, and modern reformers, there have been evidences of such possibility through faith, and humanity has had its repeated assurance in all of these. In our own age, finally, in the system of divine metaphysics deduced from the Scriptures by Mrs. Eddy, the Discoverer and Founder of Christian Science, and outlined by her in her text-book on the subject, "Science and Health with Key to the Scriptures," we have a revival of primitive, apostolic Christianity. In the operation of Christian Science during the past forty-five years, there has again been heralded to humanity the glad message of regeneration and healing, and the message of Christ is again buttressed by an increasing volume of incontestable evidence in the healing of all manner of human ills through the medium of spiritual understanding or advanced faith in divine power.

The spread of this new-old gospel of "on earth peace" is today characterized, as in the dawn of Christendom, by "good will toward men" as well, so that prevailing forms of religion and medicine retain their legitimate place in the arena of human activity and the countless multitudes of earth-mortals who are not yet advanced, through the process of spiritual growth and development, to intelligent reliance upon spiritual, divine means for regeneration and healing, enjoy as heretofore the unquestioned privilege of professional ministration. When, however, after due process of time all forces operative for good in the earth have by legitimate combined effort consummated the latent ideal of spiritual perfection foreshadowed by Jesus in the command: "Be ye therefore perfect, even as your Father which is in heaven is perfect," then certainly will all forms of human theology and medicine have yielded naturally to the divine order of spiritual law, in which desired consummation all enemies having been subdued, God will be seen as the All-in-all of life. Men will then have awakened from the dream of matter, satisfied in His likeness. Sin, disease, and death thus effectually eliminated from experience, there will be no need for either priest or physician, and the noble-hearted men and women of both these laudable professions will take their legitimate place among their brethren of the laity, and one and all will be "kings and priests unto God and his Christ," man being a law unto himself of health, holiness, and life eternal, "hid with Christ in God."

[Frank Bell in *People's Register*, Chambersburg, Pa.]

My attention has been called to a letter in a recent issue in criticism of a tract entitled "Written by God." In this letter the statement is made that such literature as this tract can only be classed with Christian Science and various beliefs of which the writer of the letter disapproves.

In order that a false impression may not obtain among those of your readers who may have given attention to the letter in question, permit me to say that nothing could bear less resemblance to the teachings of Christian Science than the tract to which our friend objects. It is no less a mistake to refer to Christian Science in connection with "witchcraft," because Christian Science uncovers and destroys superstitious beliefs of all kinds and clearly teaches that there is no power but God. Christian Science differs also from the other forms of belief with which it has been indiscriminately classed by your correspondent, and this difference is vital because each of these beliefs involves more or less of human theory and personal opinion, whereas Christian Science makes its appeal wholly on the basis of individual demonstration.

No one is asked to accept Christian Science because someone else has accepted it, and a reasonable person should not be expected to condemn it because some one else mistakenly believes its literature should be consigned to the flames. "Try it, and see for yourself," is the condition on which Christian Science is offered, and the mere expression of somebody's opinion is no answer to such an offer. An unprejudiced perusal of its literature will convince any fair-minded person that both its aim and its ends are wholly good.

[E. M. Ramsay in *Edinburgh* (Scot.) *Dispatch*.]

I have just read the paragraph on faith-healing in the *Dispatch*, and am much struck by the remarks of the clergyman, as therein quoted: "I truly believe that the time is coming when man will be able to conquer disease by the aid of God, just as, by the aid of God, he can overcome sin." This gentleman holds, we are told, that the world is only just emerging from the dark ages to a period of real knowledge, and that within a few years the reality of the cures effected by mental means will be unquestioned and unquestionable.

There is no doubt that the interest in mental methods of curing disease is greatly on the increase, therefore it is a matter of paramount importance that the public should learn to distinguish one form of mental cure from another; there is great danger in ignorance. Christian Science cannot, correctly speaking, be described as a form of faith-cure, as the term "faith" is usually employed. Christian Science is that scientific understanding of the nature of God and man taught by our Lord and practised by him, his disciples, and the primitive church, whereby the sick were healed and sinners reformed. Accepting the Scriptural declaration that God, good, infinite Spirit, is the only cause and creator, and, perceiving that nothing can be found in an effect which is not to be found in its cause, the Christian Science student recognizes that sin and illness can form no part of God's creation, and hence exist only as Baal and Moloch existed, as nightmares, false impressions, errors to be cast out by the knowledge of the absolute Truth. Thus, in Christian Science, it is God, Truth, Love, that heals, and the most successful practitioner or demonstrator of this Science is the man who has most got rid of self. All other forms of mental healing, so called, rest upon faith, belief, not upon the understanding of Principle. This faith may be in God's willingness to cure, in answer to prayer, a complaint which He is believed to have caused, Himself, or it may be faith in a personality endowed with special powers of healing, or it may be belief in the mysterious properties of a rheumatic ring.

In the case reported in your paragraph, it is plain that the agency employed is mesmerism, animal magnetism, or will-power, since the treatment given exhausted the performer. Prayer, communion with the Father, the source of life, the giver of all good, never exhausts man. While the gentleman referred to has as much right to practise his method of cure as has any one else, he is not justified in calling it Christian Science. The two systems have nothing in common; indeed, they are diametrically opposed. Mrs. Eddy maintains in all her writings that the use of will-power in the cure of the sick is entirely to be condemned; it may seem to benefit, but in reality it is destructive to health and to character. Mrs. Eddy writes: "Man is properly self-governed only when he is guided rightly and governed by his Maker, divine Truth and Love" (Science and Health, p. 106).

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE ESSENCE OF CHRISTIAN SCIENCE.

A FEW weeks ago the *News-Democrat* of Canton, Ohio, did a fine and helpful thing—something that most newspapers would think could not be done in these days when "business is business" and the material rather than the spiritual is thought by so many to be of most importance. It published the sermon on the mount in its editorial columns, and in introducing this masterpiece of Christian doctrine it said:—

"This is the greatest sermon of all time—and for all time—preached by the greatest preacher of all time.

"If you have never read it—read it now.

"If you have read it—read it again.

"Make it your guide in life—your rule of action."

It was a splendid reminder to the readers of this paper that there is extant a code of ethics which is applicable to all the affairs of men,—a rule for guidance not only on Sunday, but every day in the week; a moral standard to be lived up to not only so far as one's religious connection is concerned, but also in his secular or merely temporal relations. It may well be made one's rule of action, for in the sermon on the mount and in all his sayings, as well as by his example, Christ Jesus urged upon his hearers the necessity for proving the sincerity of their faith by their good works. During his whole ministry his works were consistent with his commands and appeals to his followers. It was in this sermon, too, that he rebuked outward profession of fellowship unless substantiated by the works which prove its genuineness, when he said, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven."

As we study the four gospels, that brief chronicle of the ministry of the Master, it is quite evident Jesus appreciated the fact that his words were insufficient to bring home to the dulled apprehension of his hearers the truth of the fatherhood of God and the brotherhood of man which he preached. But when he began to do the works of healing in demonstration of the power of Truth and Love, they could but believe him, and wherever he went the multitudes thronged him, bringing their sick and maimed to be made whole at his word of command. If they failed to understand his teachings, they were quick to avail themselves of their practical application.

No more are mere words sufficient today than in the time of the Master, and Mrs. Eddy has but followed the example of Christ Jesus in proving by demonstration the truth of her discovery of the Science of Mind-healing, the divine Principle which governed the works wrought by the Master and his followers, for she realized that these practical proofs, the "signs following," were the foundation stones without which no superstructure can hope to stand. She writes in Science and Health (pp. 108, 109): "My conclusions were reached by allowing the evidence of this revelation to multiply with mathematical certainty and the lesser demonstration to prove the greater . . . I won my way to absolute conclusions through divine revelation, reason, and demonstration."

It is because Christian Science is combining preaching with practice, is proving its faith by its works, that it is finding its way into the hearts and lives of such a multitude of men and women of today. Its insistence upon Christian works, upon the scientific demonstration of Christianity rather than mere perfunctory assent to its letter, is reinstating primitive Christianity, bringing again to the weary and heavy laden the longed-for Christ-healing of the early centuries of the Christian era. Thus the world is coming to understand and more and more is acknowledging that in their practice of the tenets of Christian Science its followers are but endeavoring to be obedient to the commands of the Master when he sent forth the little band of disciples, bidding them "to preach the kingdom of God, and to heal the sick;" and there is today, all over the civilized world, a multitude of witnesses to the efficacy of the truth discovered by Mrs. Eddy and the faithfulness with which the work she inaugurated is being carried on.

Jesus declared that the Comforter whom the Father would send should teach his followers all things and lead them into all truth, and Christian Scientists are finding this Comforter in the teachings of their text-book, "Science and Health with Key to the Scriptures," the divine Science of which, as Mrs. Eddy declares (Science and Health, p. 174), the sermon on the mount is "the essence," the distinguishing characteristic. They will welcome, therefore, as a hopeful sign of the times, the publication by a daily newspaper of this most wonderful utterance of the Master with the exhortation that it be made the rule of action of those who read it.

ARCHIBALD MCLELLAN.

THE ACCEPTABLE SACRIFICE.

IN studying the Old Testament one is impressed with the frequency with which sacrifice is referred to as a giving up of good for God. While the asserted requirement of Abraham that he slay his son is a striking individual instance, the whole sacrificial system of the Jews gives expression to this thought. The teaching of many of the prophets, as that of Christ Jesus, is opposed to such a concept, but it has nevertheless remained to affect religious habit and history during all the years. It accounts for the asceticism which filled the cliffs of Egypt and Palestine with hermit caves where unnumbered thousands both of the superstitious and the spiritually aspiring have suffered the slow torture of isolation and discomfort, and which still lingers in modified form to shape Christian conduct. St. Francis, so noble in his loving zeal as to warrant the statement of his biographer, Sabatier, that "the only weapon he would use against the wicked was holiness of life," would no doubt have classified both cleanliness and clothing as good and not evil; nevertheless, he thought it fitting to give up both, and to lie in nakedness upon the damp and dirty floor of his chapel at Portiuncula, while wrestling for the attainment of the Mind that was "in Christ Jesus."

The moment one is led in Christian Science to think of God as the infinite good whose constant giving constitutes and supports the life of man, that moment the thought that He demands the sacrifice of anything He has bestowed is necessarily dispelled, and we begin to see clearly that every true giving up for God means the surrender not of good but of evil, of the things which He abhors. Sacrifice is thus seen to effect an invariable gain for the real self, and this because it means the true fast, viz., abstinence from evil. It is an act in which we are making way for good, opening the channels for the inflow of "greater riches." No exercise of virtue can sap its own substance; on the contrary, the activity of good in us always brings about its increase or unfoldment in consciousness, and we are thereby attaining unto the "measure of the stature of the fulness of Christ."

There is, there can be, no divinely impelled sacrifice of any real good, since we are called of God to the continual increase of good. Said Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and

Digitized by Google

he contributed to the realization of this wholeness by those about him, in his every healing, or whole-making work. St. Paul related this teaching to present-day problems when he said, "Present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service;" and yet in these words he expresses a thought for the espousal of which the Founder of Christian Science has been grievously misjudged by many. Mrs. Eddy taught that the present-day consent to decrepitude and death, as having place in the divine government, is wholly opposed to St. Paul's injunction, and it is one of the marvels of our day that the inspiring thought which she pressed upon the world's attention, namely, that heaven is to be reached by more and more *perfect, more ideal living*, and not in any sense by dying; *by the way of health*, and not sickness, has been met by questioning and reserve at the hands of Christian men.

While recognizing that much of the human sense of good must be given up for the reason that it is not good, not of God, Christian Science teaches that every real good is ours to keep, and that forever. It teaches further that the whole material order is a consent to death, and that any sense of sacrifice which makes us the more continually subject thereto is unworthy of those who are called to the realization of ever more abundant life and freedom in Christ Jesus.

JOHN B. WILLIS.

"LIKENESS."

NOT so many years ago, there were not many religious people who ever thought that man's likeness to God was other than a bodily likeness; in fact, they argued that inasmuch as man's likeness to God is declared in the first chapter of Genesis, God must be corporeal, because mortals are so. Some of these good people, indeed, thought it presumptuous or irreverent to claim for man a likeness to God in nature and character, yet no one would question the statement that Christ Jesus expressed the divine nature, and again and again we are commanded to have "the mind of Christ." Christian Science makes it very clear that unless we have the Christ-mind we are not like God. Our revered Leader says, "The substance, Life, intelligence, Truth, and Love, which constitute Deity, are reflected by His creation; and when we subordinate the false testimony of the corporeal senses to the facts of Science, we shall see this true likeness and reflection everywhere" (Science and Health, p. 516).

In meditating upon the subject of man's likeness to God, Christian Scientists naturally and necessarily think of God as Spirit and man as spiritual. This leads to the idea of dominion as the spiritual man's birthright, an idea which was ever in evidence throughout the whole earthly experience of Christ Jesus, in the overcoming of sin, disease, and death, also in his control over the asserted forces of nature. Then the thought of immortality presents itself, since God is "the ever-living One," and knows no death, for "all live unto him." Jesus constantly declared eternal life to all who would accept his teachings, and in raising from the dream of death the widow's son, Jairus' daughter, and Lazarus, he showed the results attained by subordinating sense testimony to the spiritual fact. He also insisted that his followers should do this when he said, "If a man keep my saying, he shall never see death."

It would never be denied that God knows His idea, man, as the perfect reflection of divine intelligence, and this establishes the fact that man must know God, and that as the divine likeness he must reflect all the activity of divine Mind. We are, however, apt to forget, in our eagerness to do, how vital a thing it is to be. This is made very clear in the statement that "the Divine Being must be reflected by man,—else man is not the image and likeness of the patient, tender, and true, the One 'altogether lovely'" (Science and Health, p. 3). "Patient, tender, and true"! How often do we pause to think that our likeness to God must be established by the reflection of these spiritual qualities? And yet each day's service might be unspeakably blessed, glorified indeed, by our holding fast to this spiritual fact.

All through the Scriptures we find admonitions to be patient, which, however, never means to be submissive to error, but rather that we are to wait upon God for the unfoldment of His likeness in us. St. Peter tells us to take patiently the buffetings which may come to us, and a modern writer graphically tells of one who waited patiently through a long night of disappointment "fearing only lest faith should fail." There is not, however, any danger that faith will fail, if we are tender and true as well as patient, for the perfect likeness of God implies the spiritual knowing which sees right eternally established, justice always supreme, Truth forever triumphant, health, harmony, and happiness perpetual. Well might the psalmist say in the olden time, "I shall be satisfied, when I awake, with thy likeness."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CRAWFORD, NEB.

As an indication of progress we are pleased to announce that the Christian Science society of this place has purchased a building lot.—*Correspondence.*

INDIANAPOLIS, IND.

First Church of Christ, Scientist, of Indianapolis, began to hold services in the Sunday school room of the new church edifice, Sunday, Oct. 8, 1911. The corner-stone of the church was laid Sept. 22, 1910. Until the auditorium is ready for occupancy, services will continue to be held in this room. Work is progressing steadily, and when finished the church will be complete in detail of equipment and will be one of the handsome church edifices of the city.

Correspondence.

VIRDEN, MAN.

The corner-stone of First Church of Christ, Scientist, was laid at half past twelve on Monday afternoon [Sept. 11]. There was a small gathering of the members of the church. The ceremony was of a simple kind, consisting of silent prayer followed by the audible repetition of the Lord's Prayer. On the front of the corner-stone facing Ninth avenue the word "Love" is engraved, the word "Truth" being engraved on the side toward Queen street. The copper box placed in the stone contained a Bible, copies of all of Mrs. Eddy's writings and the current Christian Science publications, also a copy of the Virden *Empire-Advance*, Aug. 17, 1911, which contained a brief sketch of the growth of First Church of Christ, Scientist, in Virden.—*Empire-Advance.*

KEY WEST, FLA.

Key West's newest house of worship, First Church of Christ, Scientist, will be open for the first time tomorrow morning [Oct. 1], when Sunday school will be held at ten o'clock and morning service at eleven o'clock. The church is a handsome edifice, of pleasing architectural design and quite out of the ordinary. While there are yet a few finishing touches to be added to the structure, it is practically completed and services will be held in the new edifice regularly from this time on. The church is at the corner of Division and Georgia streets, and the location is a most

Digitized by Google

desirable one. It would have been completed earlier, but the contractors were held up by delayed shipments of material; however, the pleasing appearance of the edifice makes the delays experienced seem worth while.

Key West Journal.

MANISTEE, MICH.

Tomorrow [Oct. 15] the Christian Science Society will hold its first service in Unity Church, the edifice having been cleaned and renovated and put in shape. The first Christian Science services in this locality were held in a private home in a suburb of the city about eight years ago, by persons who are still active workers in the cause, and services continued to be held in private homes until a little over two years ago, when rooms were rented in the Hanselman Building on Maple street. The society was formally organized about six months ago, although an informal organization had been maintained for some time prior thereto.

The Manistee Christian Science Society is thankful to the Unitarian church board for its kindness in giving them the use of the church free of charge, and in appreciation have spent considerable money in redecorating and repairing the building.—*Manistee News.*

POUGHKEEPSIE, N. Y.

The new chapel of First Church of Christ, Scientist, was dedicated Sunday morning [Sept. 24] previous to the regular morning service.

Nine years ago ground was broken for the Christian Science church and in February, 1903, the first service was held. The property of the church is now valued at fifteen thousand dollars and the final payment on it was made last July. It is a noteworthy and remarkable fact that every cent came from free-will contributions by the members. Besides paying the fifteen thousand dollars for the property, the members have also met an annual expense of between four and five thousand dollars. In addition to these expenses the members also made large contributions for the San Francisco and Italian sufferers, the contribution made by this church at the time of these disasters being the largest of any church in the city.

The first public service by the Scientists in this city was held in 1897 and the church was incorporated in 1898. At the time of the first service there were only fifty members, but the membership has since more than doubled.

Poughkeepsie Eagle.

GALENA, KAN.

There was a good attendance at each of the three services held yesterday [Sept. 17] by First Church of Christ, Scientist, at the new church home at 1102 Short street. Although the home has been occupied for some time, the services yesterday were of a dedicatory nature.

In December, 1900, the reading of the Christian Science service was begun in a private home, and in April, 1902, the organization was recognized in the Christian Science *Journal* as a society. The first lecture was given in September, 1904. In February, 1907, the society organized as a church; the assets at this time consisted of seventy-five dollars toward a building fund, an organ, and twelve hymnals.

In July, 1910, the present home, which was formerly the Peter Rice residence, was purchased. The building fund had been added to and three hundred and fifty dollars was paid on the property. Including improvements on the property, the total expenditure has been about twenty-three hundred dollars, which was met in fourteen months by free-will offerings of members and attendants. The increasing attendance gives cause for the thought that ere long there will be need to enlarge the quarters.—*Galena Times.*

THE LECTURES.

SOMERVILLE, MASS.

Before an attentive audience which filled Anthoine Hall, Prof. Hermann S. Hering delivered an instructive and inspiring address on Christian Science last Sunday afternoon [Nov. 12]. The lecture was one of a series of five lectures given under the auspices of The First Church of Christ, Scientist, of Boston, and delivered by Professor Hering in Brookline, Somerville, Newtonville, Winthrop Center, and Jamaica Plain. Professor Hering, who for several years taught electrical engineering at Johns Hopkins university, was introduced by Gardner C. Anthony, dean of the engineering school of Tufts college, who said:—

The desire for protection from evil and for the attainment of a harmonious condition of life has been the motive for the struggle of mankind in all ages. It has been the cause of centuries of wars between nations, as well as a continual struggle between individuals, and, more tragic than these, the ceaseless war with self. And yet the spiritual laws for attaining a perfect state of harmony, which will surely bring peace and good will to men, were definitely stated and practically demonstrated nearly nineteen hundred years ago. At that time Jesus declared that "the kingdom of God is within you," and he and his disciples proved it by healing the sick, raising the dead, and cleansing from sin. After his disciples had continued to practise his teachings for more than two centuries, men began to devise other laws for the attainment of a harmonious life, which, although promising much for some future state, left much to be desired as a present help in solving life's problems. But within our generation all of the teachings of Jesus have been made practical once more through the noble life-work of Mary Baker Eddy, in what she has named Christian Science, which is a scientific statement of spiritual law and "with signs following."

This afternoon it is our privilege to receive instruction in this Science from one competent to speak thereon, one who has left the field of teaching physical laws to teach the spiritual law.—*Somerville Journal.*

LOUISVILLE, KY.

At Macauley's Theater, Nov. 12, a lecture on Christian Science was delivered by Clarence C. Eaton. Mr. Eaton was introduced by Frank L. Robinson, who said:—

Christian Science as a religious movement is of comparatively recent origin, and its growth has been so phenomenal as to attract the attention and awaken the amazement of sociologists and thinkers, who view it from the outside only; from afar off, so to speak. Yet, however wonderful its growth has been, there is another circumstance relative to Christian Science which is even more remarkable, and that is the fact that no individual has ever yet opposed what Christian Science really is. It is true that now and then individuals are met with who oppose what they believe Christian Science to be; yet a little fair-minded inquiry discloses the fact that such persons know really nothing of the meaning of Christian Science.

Bible students are familiar with the story of Saul of Tarsus, who went about persecuting the early Christians, and even found delight in having them condemned to death. Yet, when Saul was touched by Truth he was quickly converted, and under the name of Paul became one of the foremost disciples in the ministry of Jesus. The membership of the Christian Science church is made up, to a greater or less extent, of men and women who opposed, more or less bitterly, what they believed Christian Science to be; yet, when their understanding began to receive

Digitized by Google

impressions of the real meaning of Christian Science, they might be heard to exclaim: "And this is Christian Science! How beautiful it is, and how different from anything I had imagined it to be." No doubt we shall go to our homes tonight with a much better understanding of Christian Science than we have had before, and it is not going too far to anticipate that, as on former occasions of this kind, there are those here who will go away saying in their hearts: "This is indeed the truth for which I have been seeking, consciously or unconsciously, for lo, these many years."

Correspondence.

LIVERPOOL, ENGLAND.

William D. McCrackan, M.A., delivered a lecture on *Christian Science* Nov. 13 in Hope Hall. He was introduced by John W. Doorly, who said:—

Christian Science is today attracting the attention of mankind, not so much by what it is saying, as by what it is doing. To most people Christian Science is known as a religion which heals the sick without any material means, and truly the healing of the sick is important, so important that our Saviour himself made it one of the proofs of his followers' understanding of his teachings. Nevertheless, the healing of the sick is but a small part of the mission of Christian Science, which comes as the Christ came, nineteen hundred years ago, to bring a full and complete salvation to mankind from every ill of the flesh, whether it be sin, disease, worry, fear, poverty, or any other manifestation of evil. There is indeed no trouble from which humanity suffers that cannot be eliminated by a correct understanding of Christian Science.

The whole aim of Christian Science is to give men a correct understanding of the nature of God, for it is this true knowledge of God which alone can give men surcease from evil and its many besetments. We all accept the Bible as our guide to eternal life, and is not the Bible simply a continuous revelation of the nature of God? Have not all those great men in the Bible accomplished whatever they have done, simply by knowing God aright? As Christian Scientists today, we realize that the one important thing, the thing to be sought above all else, is a correct understanding of God.—*Correspondence.*

BIRMINGHAM, ENGLAND.

At the Christian Science lecture given by Bicknell Young in the Birmingham Town Hall Nov. 14, over twelve hundred people were present. H. K. Foster took the chair, and in welcoming the audience said:—

I have the privilege and pleasure tonight to act as chairman of this meeting to listen to the lecture on Christian Science by Bicknell Young. I feel it is hardly necessary for me to ask your kind and considerate attention to the lecturer, as the world in general is now beginning to realize what the message is that Christian Science is bringing us. It is the message of peace and happiness: it is Mrs. Eddy's explanation of the exact scientific method or law by means of which Moses and the prophets, and after them Jesus, and after him his disciples for two or three hundred years, performed their acts of the healing of sin and sickness. I do not propose or intend to give you any instances of healing, but I would like to say that in the dark days when I was groping around trying to find that truth which Pilate spoke of, and that truth which men and women all down the ages have been trying to discover, I was told that sickness and all those terrible ills from which mankind suffer, were sent by God and that we must bear them. I, however, could not accept this, and then, to use an Americanism, I "struck" this Science, and found that God was not responsible for all or any of the sin and suffering in the world; I found that your God and my God is a living God; that nothing imperfect is in His consciousness, and nothing can come from Him that is not perfection; and it is my earnest hope that I may spend all the rest of my time here on earth in perfecting my knowledge of good.

Correspondence.

BUFFALO, N. Y.

William R. Rathvon delivered a lecture on Christian Science Nov. 17. He was introduced by James F. Foster, first reader, who said:—

We have in the Bible the story of one who, having found a valuable and valued thing which she had lost, called together her friends and her neighbors, that she might share her joy with them. In this parable was illustrated the humanly natural feeling which prompts us all, when we have had a wonderful and beneficent experience, to tell others about it.

Tonight the congregation of First Church of Christ, Scientist, in this city, filled with an enthusiasm begotten of wonderful individual experiences, and speaking through one especially qualified and delegated for the purpose, desire to explain to their friends and neighbors their reason for rejoicing in the possession of Christian Science,—an old truth new found, a power always present and now being widely demonstrated,—"God with us." At different times and in different ways we have told our individual stories to those who wanted to hear, and on every Wednesday evening in our church are given testimonies of benefits received through Christian Science,—diseases cured, bad and controlling habits destroyed, homes happified, lives brightened, hope revived, fear destroyed, faith illumined, desire for the kingdom of heaven and its righteousness enlarged, life here and now made worth while. So tonight we wish, as it were, to collect our individual experiences and voices into one message regarding that which has so largely blessed us.—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Albert Lea, Minn.—Willis, F. Gross, Auditorium, 3:30 p.m., Jan. 21.
Champaign, Ill. (Society).—Virgil O. Strickler, Walker Opera House, 3 p.m., Jan. 21.
Cleveland, Ohio (Second Church).—William R. Rathvon, Hippodrome, 3 p.m., Jan. 21.
Corpus Christi, Tex.—Francis J. Fluno, M.D., Durgin Building, 607 Chaparal street, Jan. 18.
Devils Lake, N. D.—Bliss Knapp, Jan. 22.
Fargo, N. D.—Bliss Knapp, Orpheum Theater, 3 p.m., Jan. 21.
Geneva, Ohio.—Frank H. Leonard, The Armory, Jan. 25.
Marietta, Ohio.—Frank H. Leonard, Auditorium, 3 p.m., Jan. 21.
Marquette, Mich.—Bliss Knapp, Opera House, Jan. 25.
Massillon, Ohio.—William R. Rathvon, City Hall, Jan. 26.
Meadville, Pa.—Prof. Hermann S. Hering, Odd Fellows Temple, Center street, Jan. 16.
Morris, Ill.—Virgil O. Strickler, Fraternity Hall, Jan. 22.
North Yakima, Wash.—Clarence C. Eaton, Masonic Hall, Jan. 19.
Orange, N. J.—Virgil O. Strickler, Church Edifice, Cleveland street near Main, Jan. 16.
South Haven, Mich.—Virgil O. Strickler, Scott Club Building, Pearl and Phœnix streets, Jan. 19.

TESTIMONIES OF HEALING.

I wish to offer to the readers of the *Sentinel* the first testimony I ever gave for Christian Science. It was not given in a Christian Science church, nor was it given to a Christian Science audience. While coming into Chicago on a train some time ago, a number of gentlemen swung their chairs round facing one another and entered into conversation. The subject of Christian Science came up, and while some were inclined to ridicule it, one especially was quite free in his condemnation and denunciation of what he supposed to be Christian Science.

After listening to the conversation for a time, I laid down the reading matter which I had, turned round and said, "Gentlemen, I would like to ask a question. Suppose you had a daughter who seemed to possess some talent along a certain line, and who was ambitious to improve that talent and prepare herself for a definite work in life. This preparation would require years of very close application, hard work and study, much self-sacrifice upon her part and practically all your income for the time. You and your wife would be in full sympathy with her ambition, she would take up the work, pursue it diligently, meeting your expectations in every respect; but just when she was reaching the goal of her ambition, when she was beginning to realize upon her efforts and upon your investment, she would break completely down in health, would become almost blind and suffer intensely at all times. You would take advantage of the very best medical assistance of which you knew in Chicago—both physicians and oculists; and they would all agree that she was suffering from a breakdown of the nervous system, partial paralysis of the nerve centers, and that dreaded disease, anæmia, in a very aggravated form. The only encouragement they could offer was that they might give her relief, but they could not cure her; that she would never be well and could never again take up her work. Knowing no other recourse, she would continue this treatment for nearly five years, with varying results; sometimes being apparently very much improved, only to relapse again whenever she attempted to work. But suppose that, while away from your home, in your absence and without your knowledge, she took up the study of Christian Science, and in a short time came back perfectly healed, able to do and actually doing as much work as ever, and now after nearly four years has had no return of her former troubles, is still enjoying good health and is going right on with her work, would you then ridicule, condemn, and denounce Christian Science?"

The gentleman who had been the freest in his criticisms answered, "I surely would not." "Well," I said, "that has been my daughter's experience." He replied, "If she were my daughter, I would be a Christian Scientist." I said, "I am trying to be." A gentleman who up to this time had not entered into the conversation, quietly remarked, "That was error." I said, "Yes, that was error. Are you a Christian Scientist?" "No," he said, "I am a physician." I asked why then he should say it was error. He said that the physicians had erred in their diagnoses. I asked if he knew Dr.——, naming one of the physicians who had treated our daughter. He said he did. I asked if this doctor was not a recognized authority on nerve and kindred diseases and whether he was not a noted instructor and lecturer on such diseases in some of our leading medical colleges and universities of the West. He said he was, but that he had erred in his diagnosis. I then named one of the oculists who treated my daughter and inquired if he knew him. He said he knew of him, but that he, too, had erred in his diagnosis. "Well," I said, "Christian Science did not err, either in its diagnosis or its treatment."

I can only add that we are very thankful that Christian Science has come into our home and into our lives. Not only are we thankful for this demonstration of the divine healing of physical disease, but we are thankful for a religion that is so consistent, so practical, so helpful, and so satisfying; a religion based upon a pure demonstrable Science, the Science taught and practised by Christ Jesus, hence, the Science of Christianity.

C. M. MERICA, New Haven, Conn.

It was I who experienced the healing above spoken of by my father, and I can truthfully say that my case is not overstated in any way. A Christian Science practitioner gave me a few treatments, also read to me from the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as I was unable to read at that time. I then committed to memory and clung to "the scientific statement of being" (Science and Health, p. 468), and became so filled with joy and gratitude for the concept of being here brought out, that it was some time after the physical healing before I became conscious that it had taken place.

MRS. ESTELLA MERICA-HUNT, New Haven, Conn.

It is a pleasant duty to tell the field of a beautiful case of healing. I was returning home on the evening of Christmas day, 1906, when I slipped and fell with my arm under me. Being taken off my guard, I exclaimed, "The bone is broken!" but immediately realized my mistake in admitting the error. Our Leader's words on page 397 of Science and Health flashed upon me: "When an accident happens, you think or exclaim, 'I am hurt!' Your thought is more powerful than your words, more powerful than the accident itself, to make the injury real." I was near the public dispensary, so asked the surgeon there to set the bone for me. I was kept waiting a little time, and during that time I realized God's presence as never before, and the pain grew less. While the surgeon was attending me he laid down many medical laws, telling me I would most certainly be helpless for some time; but I declared aloud that the "great Physician" would do the work. As soon as he had finished I walked home, and after working for some hours, I removed the bandages, so as to free my fingers. I had two hours of peaceful sleep, and next morning I sent for a Christian Science practitioner. We worked together for some little time, and I then expressed the desire to take off the splints, which was done. By evening I was able to touch my head with that hand, and in about ten days I was able to do everything for myself, including my own housework.

I feel now that this wrist is stronger than it has ever been, and I am indeed grateful to have proved that "God is Love," and "a very present help in trouble." My heart goes out in gratitude to our dear Leader for the truth that makes men free, and I am humbly striving to follow in her footsteps as she follows Christ.

MRS. EMMA THOMPSON, Leeds, England.

[The verification which follows is from a physician of many years' experience, who is now a Christian Scientist. —EDITOR.]

I write to confirm the fact of which Mrs. Thompson speaks in her testimony. I examined the arm a few days after the accident, and at the present time Mrs. Thompson evidently has full use of the limb.

WALTER WILDING, M.R.C.S., R.C.P.

[Translated from the German.]

It is with a grateful heart that I wish to testify to the blessings which we have received through Christian Science. Two years ago our thirteen-year-old daughter was to sense taken seriously ill with a nervous trouble. We consulted various physicians, who declared unanimously that the child would gradually become an imbecile. They advised us to have her live among strangers for a while, as new impressions might prove beneficial; but this was difficult,

Digitized by Google

as she was very shy and would always try to stay alone in a dark room.

We then decided to take her to an asylum at Hanover, and while there she seemed to improve so that we expected to take her home again. On the way home, however, the sense of great fear returned, and although she spent some time with relatives in the country, her condition did not improve. Immediately after Christmas she became worse, suffered terribly with headache, and could not bear the slightest noise. During this time we consulted six physicians and professors, and finally applied to a specialist, who after an examination stated that an operation must be performed, in order to permit of a discharge from the head. This was done and we were in great hopes that our daughter would soon get entirely well, but as a result of the operation there was a constant discharge from the mouth and nose, and the physician advised another and much more serious one, which he thought was absolutely necessary.

In this state of distress our attention was called to Christian Science, but we were not ready to accept this wonderful teaching, as we thought suffering to be sent by God, and therefore that we must bear it patiently. We also thought that Christian Science could not help in such a case. Our fear of the operation being very great, however, we finally decided to turn to Christian Science, and called upon a practitioner, who immediately took up treatment. We attended the meetings as often as we could, and to our unspeakable joy we soon saw a change take place with our daughter, and her condition improved daily. She has grown strong mentally and physically, although she has been under treatment but a short time. She understands that it is the conscious realization of the ever-presence of divine Love which frees us from error, and that God has only thoughts of peace for us and sends us no evil.

For this wonderful healing, as well as for the help which we have experienced in many instances, we are deeply grateful to God. Next to Him we thank our revered Leader, Mrs. Eddy, to whom this wonderful revelation was given, for lighting the way to the recognition of Truth, that we may follow fully trusting.

FRAU EMILIE WILLERS, Gr. Hehlen, b. Celle, Germany.

I wish to add my testimony of gratitude for Christian Science to those in the *Sentinel*. For six or seven years we have had Christian Science treatment in our family, and we have been healed of every ill that has manifested itself. Last winter I had a severe attack of illness. I treated myself for a time, but at last had to call an experienced practitioner. I was then healed in one day and night. My daughter was healed in one week of a broken collar-bone, also of female trouble. She went back to the store in one week from the day that she fell and injured herself. My husband's finger was cut off accidentally, and he was taken to a physician from where he was at the time this happened. The finger was sewed on and he came home. He never felt any pain or soreness, and never lost any sleep. The doctor said he would feel it the ninth day, but all days were alike to him. The doctor could not understand why it did not hurt him or feel sore, but my husband knew and told the doctor it was Christian Science that was healing the finger.

Last summer my daughter had a nervous collapse, which resulted in locomotor ataxia. She could not walk, and her limbs seemed to be dead from the hips to her feet. Her friends thought she would be a cripple for life, but now she is well, walks just as well as ever she did. Christian Science healed her. A Christian Science friend came in one day, and I know she was very much surprised at the condition, but she never said anything. My daughter had been away, keeping books, and came home in that condition, but now under Christian Science treatment she is well.

Since I came into Christian Science I have seen all kinds of wonderful things done through Science, and the understanding of Truth is far beyond the physical healing; the spiritual uplifting, the knowledge of the great fact that God is the only Mind, is more than all. I know that the only way to express my gratitude to our dear Leader is to obey the teachings of the Bible and of "Science and Health with Key to the Scriptures."

MRS. CHARLES WHITTINGTON, Mt. Vernon, Ohio.

I am deeply grateful for Christian Science. It is now two years and a half since I started the study of the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science found me in great physical distress and pain, and saved me from undergoing a surgical operation. For over fourteen years I had suffered from a bowel difficulty, for which I had consulted several well-known physicians and surgeons, and they were agreed that the most they could do was to use alleviating measures. I was always under medical treatment, and obliged to use many material remedies. I also suffered from a chronic heart weakness and dropsical swelling, besides being subject to rheumatism with fever, also bronchitis. When I first heard of Christian Science and our revered Leader, I had three weeks' treatment from a practitioner, with the result that the discharge peculiar to my bowel trouble ceased from the first treatment.

Christian Science has healed me of all these ills, and instead of a sad outlook on life, I rejoice greatly in fine health, all these ailments having vanished before the light of Truth. The understanding of God and man in His likeness is a constant help. For the spiritual satisfaction and uplift gained I am more grateful than words can express. I have had class instruction, and desire to demonstrate the great illumination it has brought me. My daily prayer is for more spirituality and a better understanding of God and His creation.

JANE S. MILLEN, Greenock, Scotland.

It is with a sense of deep love and gratitude that I write this testimony. Over two years ago there came an enlargement on my body which a doctor called a blood tumor and thought it would have to be lanced; but I telephoned to a Christian Science practitioner, and in twenty-four hours I was relieved and it discharged. This healing is just one of many blessings which have come to me through Christian Science. My son is three years old. He has been helped many times. One evening he had a severe cold and bad cough; croup was the thing feared. I called upon the practitioner for help, and the child was healed in two treatments. I am very thankful to God, also to Mrs. Eddy, for these healings.

MRS. FRANK WHEELER, Ft. Dodge, Iowa.

For fifteen years past I have depended upon Christian Science for my healing. During that time I have never taken any medicine, but have asked a practitioner to help me; and I have never failed to receive benefit. Through this treatment I was healed of small-pox in one day, and of many other diseases, which have all been destroyed in a very short time through the understanding of the truth.

RAY E. BROWN, Wahpeton, N. Dak.

I have been healed in Christian Science of a severe attack of illness. At the time I was staying with three children who were very sick, their mother being at a hospital. When I was taken ill a Christian Science practitioner gave me treatment, and I did not stay in bed even a single day after she treated me. At another time I was suffering with my heart, but through treatment I was relieved in one night. Again, about one year ago, I was struck in the temple and

Digitized by Google

knocked down in the street by a baseball. I was thought to be dead, and when conscious I could not move my arm without great difficulty; but as soon as I was treated in Christian Science I could move my arm, and my temple did not show any bruise the next morning. After the second treatment I was entirely healed.

I am in my seventy-fifth year. I love and trust God and daily thank Him for His goodness in opening the eyes of the blind to this healing truth.

Mrs. R. J. Tanner, Richmond, Va.

Like a great many others I came to Christian Science through healing. I was suffering from what the doctors called nervous exhaustion. I had followed the occupation of nursing, and constant work with loss of sleep was supposed to be the cause of my trouble. The doctors with whom I had worked were very anxious to help me, but acknowledged there was little that they could do. They advised me to go to the seacoast; but I did not want to travel, so I decided to rest at home. Perfect quiet, no visitors, no letters, were the orders! This was my condition when Christian Science found me. A practitioner from the South, visiting a neighbor, came to my house one day, and seeing my trouble, spoke words of true comfort and encouragement and handed me a copy of Science and Health to read. Encouraged by her words, I took the book, and read. The chapter on Prayer interested me deeply, and I read it over and over again. In a few days I left my couch and took up my daily duties, and have performed them ever since. I have never had a doctor or taken any medicine since that time. The reading of that inspiring book, "Science and Health with Key to the Scriptures," by Mrs. Eddy, taught me how to pray, and through this prayer I was healed.

Since that time (over four years) I have been proving daily that God is an ever-present help in trouble.

Mrs. Alma B. Hawley, Fort Collins, Col.

[Translated from the German.]

It is with a heart filled with gratitude that I wish to testify to the innumerable blessings which I have received and which I am still receiving through Christian Science. For about ten years I was afflicted with an open sore on the leg and had to secure medical advice. The physicians prescribed for me, but there was no cure. I was also in a clinic for some time, but returned home with my diseased limb just as when I left.

Some four years ago my daughter-in-law from Berlin came on a visit. She drew my attention to Christian Science, and I asked her to treat me. She then sent me a copy of *Der Herold der Christian Science* regularly every month, and gradually, through reading this periodical, I began to see that God is good alone, and that He is Love. For over two years I have been free of the trouble mentioned, so that now at the age of seventy-two I am able to do all my work without experiencing pain or being inconvenienced. I am deeply grateful to God, infinite good, also to our beloved Leader, Mrs. Eddy, for the truth which makes us free.

Ernestine Zingler, Rosenthal, Kr. Bunzlau, Schlesien, Germany.

After a three-years test of Christian Science as a curative system and a demonstrable religion, I rejoice to add my testimony to those weekly appearing in our *Sentinel*. For many years I had been a teacher, and as years rolled on and found me still at the work, I had accumulated many of the physical ills to which people in that profession are supposed to be liable. I had suffered long with a stomach disorder, extreme nervousness, headaches, which often kept me in bed for days at a time, trouble with my eyes, which necessitated the constant use of glasses, with sleeplessness and general weariness. I doctored continually and thus kept at my work, which I loved though it was too often a burden, owing to my poor health.

Finally I resigned my position, and after some months spent in study came to California, hoping that a complete change of climate and conditions would enable me to take up my work again, but the spring of 1907 found me far worse instead of better, and in a seemingly hopeless, melancholy state. I had faithfully tried medicine, dieting, massage, fresh air, change, and rest, and each and all had failed me utterly and completely. I could neither eat nor sleep and had the prospect to face of remaining a burden to myself and, what was far worse, a burden to those dear to me.

In my extremity, like many another hopeless pilgrim, I turned to Christian Science, and I thank our loving Father that I found my help. I went to a practitioner for treatment, and from the first there were enough "signs following" to prove to me the power of Truth, so that I began to feel hope again. The many forms of stomach trouble were relieved, and I could eat without fear. I began to sleep better, and in a short time I put aside my glasses (which I had worn steadily for many years) and have never put them on again. Had I received no other blessing but normal eyesight I should have much for which to give thanks. In spite of all these improvements fear still seemed to hold me in bondage, and for many weary months the conflict went on to conquer the nervousness and melancholy. At times the struggle was so great it seemed as if I could not live any longer, but ever in the darkest hours the blessed sense of Truth and Love, expressed through some devoted practitioner, carried me through the deep waters, added to my stock of hope and understanding, and at last I realized my freedom. Today I am strong and well, happy, and am "rejoicing in the affluence of our God" (Science and Health, p. 1401. I am thankful even for the long and fiery trial that taught me God's way, for had my healing been speedy the calls of materiality might have lured me away and I should not now know the blessedness of daily living in God.

I trust that this experience may help some one who feels discouraged over a seemingly slow recovery from sickness, to trust and to wait patiently, for the help will surely come if we "be not weary in well-doing." Far more than for my physical healing am I grateful for the blessedness and beauty of Christian Science as a religion. The simplicity and glory of the thought of man as "the blessed child of God" (Science and Health, p. 573), is such a daily uplift and inspiration that fear, care, and physical ailments vanish before it and leave me free indeed. I live in daily thankfulness to God for the blessings that have come to the world through Christian Science, and for the life and work of our beloved Leader. It is my prayer that I may ever be a living witness to these blessings.

Miss Ada Noble, Santa Cruz, Cal.

It is a blessed privilege to give a testimony to the healing power of Christian Science, and I am grateful for the opportunity of expressing my joy in being able to take up my bed and walk. I was suffering from two very distressing diseases, pronounced incurable by the medical profession. One disease was left to die out of itself, and I was told to forget the other. This seemed to me at the time to be the bitterest sarcasm, but I wish to state here that I feel only gratitude and love for those grand men who struggled to free me. As a possible outlook I took up hygienic treatment for over two years; but neither of the diseases abated, and in fact one was greatly accentuated.

For quite a while I lost interest in all things, even friends, and in my work, in which I was fast deteriorating. A chance acquaintance with a customer brought to me the thought that there was no necessity for me to suffer. My customer

Digitized by Google

was a Christian Science student, and though nothing further was said on the subject, I confused Christian Science with various "isms." The blessed moment came, however, when I read three chapters from "Science and Health with Key to the Scriptures" by Mrs. Eddy. As I now gratefully recall it, the chapters were Creation, Prayer, and the Preface. I was partly healed while reading the book; then my case was taken by a practitioner, who lovingly treated me, and showed me how to find the bread of life, and I was made free.

How can I help being grateful to that grand disciple who in this age has made known to humanity the healing power of Christ, the perfect concept of God and man. I am *thankful to God* for the privilege of knowing Him in Christian Science, and grateful for the *Journal*, the *Sentinel*, and the *Monitor*, which point to the uplands of thought.—A. CONWAY-PEYTON, Chicago, Ill.

[Translated from the German.]

When I came to Christian Science I was on the verge of despair. I seemed to have left no material remedy untried, besides going to many watering-places—but all to no avail. I suffered with severe neuralgic pain, and in order to make life seem tolerable I resorted to all kinds of drugs, but after I had used each of them for a length of time, it lost its effect upon me, and I would always end by taking an opiate. I took this drug for two years, and then realized that I must quit this detrimental habit. After I had been treated in Christian Science for about four weeks, and on my return home one evening, without premeditation I destroyed what was left of the drug and never again have I taken it.

I used to walk in a rather uncertain fashion, but this has so improved that I can now take walks of an hour's duration without the feeling of exertion. Furthermore, I used to be very much depressed mentally, but this condition has entirely disappeared, and today I am a happy and contented man and live with the joyful trust that with God's help all errors which present themselves will be overcome. I also have found God, whom I never had known before. Through reading *Der Herold der Christian Science* I have overcome my dislike of the English, and am now taking lessons in order to become familiar with this language, besides studying diligently the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which affords me great joy.

For all these blessings I am filled with gratitude to God, also to our beloved Leader, Mrs. Eddy, who through divine revelation was enabled to bring us this glorious teaching.

PAUL ZEIMER, Magdeburg, Germany.

[Written for the *Sentinel*.]

A MORNING SONG.

LAWRENCE BRAINERD.

As we journey on the pathway
Of our course from sense to Soul,
And behold with raptured vision
Love's sure heritage, our goal,
Let us then a gladsome greeting
Give each brother on the way,
Who perhaps may see less clearly
Every blessing of the day;
That his heart may take fresh courage,
And may join us in our song
Which we sing with full assurance
Of deliverance from all wrong.
For our tender God has mercies,
New with every morning breath,—
Sorrow, pain, and burdens lightened;
Love, the victor over death!

FROM OUR EXCHANGES.

[*Christian Intelligencer.*]

An essential condition of healthy religious life in the individual soul or in the church is growth, progress. We may yield too readily and too much to the temptation to repose on our past religious emotions and experiences. These did very well at the time; they were good, and perhaps sufficient then, but they cannot avail for the present. To support the religious life on what was received a year or ten years ago is as impossible as to nourish the body today upon last year's food. There must be constant gain, or there will be certain loss. We need to be reminded year by year that the Christian life is an intensely positive and earnest life. It is represented in the Word of God in the similitude of a race to be run until the goal is reached, or a battle to be fought until the victory is achieved. It grants no one liberty to stay upon the threshold of his Christian profession, or to pause in the middle of his Christian career, and to say to his soul, "Soul, take thine ease; thou hast much goods laid up for many years, the fruit of my past religious achievements." No Christian can find in his Bible a single passage that will justify him in sitting down with folded hands, and so taking his ease in Zion. The desire of the real believer is to go forward, to press toward the mark for the prize of his high calling; for his life is true to the law which is obeyed by all faithful servants of Christ; it is a life of progress.

[*Christian Register.*]

Of all good gifts kind nature has bestowed, honest, true, and spontaneous laughter is the best. In fact, we need a finer and higher civilization which shall bring in those intimate relations between human beings, regardless of externals, that make and keep the heart young by the refreshment of communicated thought and feeling; where friendship gains new luster and love is purified and ennobled, and all the simple, true, human sympathies gain fresh significance and meaning. In our rapid, crowded existence there is often no time for quiet, fruitful converse, where face sharpens face and the nature is refreshed by the enlargement of another's thought and the inspiration of congenial contact. That is indeed the good time that gives value to life. We spend money on our friends. We dine them, entertain them, amuse them. We give them, as we say, a good time; but we have no leisure to give them the best that is in ourselves, and the gift without the giver is not even half a gift.

[*Churchman.*]

What appears to be needed in our own day more especially is to realize that organization and mechanism are not ends in themselves, that parish registers, that diocesan records and general church statistics do not produce life, nor can they guarantee that the message of Christ is being carried out as he would have it carried out. By the production of character, the influence brought to bear in quickening the public conscience toward broader aspects of right and wrong in social legislation, however intangible the results may seem, a parish or a diocese can often do more in bringing about the establishment of the Lord's kingdom among men than if its officers or its people devoted themselves solely to winning adherents among the comfortable classes of society, or were incessantly active in swelling their list of communicants and of baptisms. There lies the true criterion of the state of the church.

[Rev. Lee McCollester, D.D., in *Universalist Leader*.]

Every age has had its voice in the wilderness; its prophet souls. This age needs them, has them, and their number is increasing. But as the call of the world is a new call,

Digitized by Google

so the message and the method of the minister must be new. The prophet who would be heard today must be more than an auctioneer of reserved seats in heaven, more than a defender of ancient creeds, and more than a pretty, prating parson. He must be every inch a man, a gentleman, truth-seeking, man-loving, God-trusting. He must get his sermons out of the experiences and souls of men today. He must preach to men as men, himself one of them, no better, no worse, just a man trying to be useful. He must have all the tools education can give, and all the love God has put into his nature. He must Christianize society, and socialize Christianity. He must be a leader of men in moral and spiritual studies and practices.

[*Christian Commonwealth.*]

Happily, we are getting away from parochial views of religion, and coming to recognize the universality and continuousness of the operation of the great Spirit by whom we live and move and have our being. Few Christians have understood the implications of the profound doctrine of the omniscience, omnipotence, and omnipresence of God. The trouble has been, not that we have believed too much, but that our belief has been small, narrow, foreshortened. "O ye of little faith!" All the best beliefs are true, though the forms of their expression may have to be abandoned for something greater and grander.

[*Zion's Herald.*]

Only in a fresh realization of Christ can warrant for the Christian hope be found. We do not need new doctrines about Christ; we need him. Our problem is not to enshrine him in art, but to represent him in life. We need to get behind the doctrines and the songs and the forms and find a relation of personal love established between ourselves and him. In this way only can we enter into the secret of Christmas, and find the full joy and peace which came with a flood into the lives of those men who said in the beginning: "Unto us is born a Saviour."

[J. Van Der Veer Shurts, D.D., in *Christian Work and Evangelist.*]

Each one of our todays is of great moment, because in each we do constructive work upon our character, and character determines our standing, worth, and power in this world and our destiny in the next. You are what you are today by reason of what you were yesterday: and out of the man, the Christian you are now, must come the man, the Christian you are to be tomorrow.

[Bishop John H. Vincent in *New York Observer.*]

I will this day try to live a simple, sincere, and serene life; repelling promptly every thought of discontent, anxiety, discouragement, impurity, and self-seeking; cultivating cheerfulness, magnanimity, charity, and the habit of holy silence; exercising economy in expenditure, carefulness in conversation, diligence in appointed service, fidelity to every trust, and a childlike faith in God.

[*Advance.*]

The child gets toys, and you smile to think how easily it is pleased; but you will not smile if you stop to think how many toys you have been getting since you were a child, things which you thought would be solid realities, and they were only glued together, glossed with paint, and filled with sawdust.

[*Congregationalist and Christian World.*]

Your best is not gold, frankincense, and myrrh, generously as we may give of these material goods. Your best is to be found in the love and sympathy of your own hearts, in the service and devotion of your finer selves.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound: 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $1; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $9.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $3.00; twelve or more to one address, each, $2.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 8-7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $3.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 93 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Season, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman E. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 70 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under those titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XI indicates the year 1911; XII, 1912. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— £0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.60
2.50— 0: 10 : 3 ;	10.60;	12.85
4.00— 0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Enlarged application of the leasing principle as applied to public domain, especially a liberal leasing law for the development of the mineral resources of Alaska, particularly its coal lands, and immediate consideration by Congress of the whole subject of water-power development and control, are the most important recommendations contained in the annual report of Secretary of the Interior Fisher. "The great public movement for the conservation of our national resources," says Secretary Fisher, "is not in any way opposed to prompt and wise development of the public domain. The essential thing is to see that under the guise of settlement we do not permit mere exploitation, which in the last analysis retards both settlement and development."

Governor Dix of New York, in outlining his opinion as to what should be done to utilize the waters of the state, which he believes up to this time have been wasted, says the reservoirs in the different watersheds should be built at the expense of the power users, and their bonds for the construction of dams should be guaranteed to the state after such users release to the state all of their title to surplus waters. The bonds the Governor would have run for fifty years, after which the property, the water and the power generated, should be the property of the state and continue so forever. The plan is similar to that under which the subways of New York are being constructed.

A nation-wide investigation of the food supply of the United States, with special reference to the increased cost of living, has been inaugurated under the personal supervision of Commissioner of Labor Charles P. Neill. This inquiry, ordered by Secretary of Commerce and Labor Nagel, will be the most comprehensive ever undertaken in this or any other country, and will last for several months. Experts will be sent over the country to visit fields, factories, and stores. Each important article of food will be traced from its beginning to the door of the consumer, and then the department statisticians will prepare a report for the government and the public.

Interesting figures showing a large increase in the amount of customs duties collected last year on passengers' baggage and on post office packages have been made public by the collector of the port of New York. Nearly seven times as many dutiable declarations were received during 1911 as in 1906, and the total receipts last year were $2,399,394, compared with $996,790 in 1906. Notwithstanding a large falling off in immigration, $24,842 was collected in duties at Ellis island—more than twice the amount collected during 1906 and 1907, when the arrival of aliens was double that of 1911.

A confession by a Philadelphia cutlery importer, involving the undervaluation of German cutlery by importers of Philadelphia, New York, and Boston, is said to be in the hands of the secretary of the treasury. Secretary MacVeagh has been offered one million dollars by the importers to effect a settlement, but it is understood that he demands five million dollars, and unless this sum is paid the United States courts will shortly begin prosecutions based on false consular invoices made out to the government by the cutlery importers.

Across the Potomac from Washington there is being erected by the navy department a wireless station capable of sending messages three thousand miles. The cost will be approximately two hundred and fifty thousand dollars. It is the purpose of the department to erect a series of these stations, one at Colon, another on the California coast, another at Pearl Harbor in the Hawaiian islands, another in Samoa, another in Guam, and still another in the Philippines, so that all foreign interests of this country may be in constant touch with Washington by relay.

The Massachusetts gas and electric light commission recommends to the Legislature the following act: "A corporation organized under 'the business corporation law,' shall not, without authority of the General Court, own or control more than ten per cent of the stock of a corporation organized under the general or special laws of the commonwealth for the purpose of carrying on within the commonwealth the business of a gas or electric light, heat, or power company."

Fulton market, after an existence of ninety years, is soon to go the way of other institutions of old New York. The population that the market used to serve has moved north and west and the trade has changed gradually from retail to wholesale. Fulton market was established under the laws of 1817 for the purpose of supplying the "common people with the necessaries of life at reasonable prices." The market was built in 1821.

International.

The building of the palace of peace at The Hague is nearing completion and the structure, designed in that Flemish type of which there are many splendid examples in the Netherlands, will before long be free of its scaffolding. In his "Diplomatic Memoirs" John W. Foster mentions that the second peace conference at The Hague paused in its labors to take part in the ceremony of laying the cornerstone of the palace of peace in 1907 "to be erected at The Hague through the munificence of Andrew Carnegie, an American citizen. The Dutch government accepted the fund given by him, purchased a tract of thirteen acres, beautifully located, at a cost of one million three hundred thousand dollars, and created a commission to erect the building and hold it in trust for the use of peace conferences and the arbitration courts instituted by them."

The completion of the new cable to France, giving two new lines, has permitted of a considerable extension of the existing telephonic communication between England and the capital of the French republic. As a result of this, direct telephonic communication has been established between Paris and some three hundred towns in England, Wales, and Scotland. The completion of the new cable makes six lines in all between England and France, and when the cable which the French government intends to lay is in working order there will be eight lines of communication between the two capitals. A new cable is also in course of construction between England and Belgium.

The head master of Eton has invited head masters of preparatory schools to cooperate with him in providing that boys shall not begin Greek until they have obtained a fair mastery of the rudiments of French, Latin, and English. The head masters of Winchester, Harrow, Rugby, and Charterhouse are in favor of the arrangement mentioned, and are taking steps to have it carried into effect in the schools committed to their charge.

British and Russian legations are said to be supporting M. Mornard, the Belgian ex-director of customs in Persia, as treasurer-general to succeed W. Morgan Shuster, the American who was dismissed from the office of treasurer-general by the cabinet at the demand of Russia.

King George and Queen Mary concluded their durbar visit Jan. 10, sailing for England aboard the royal liner-yacht Medina. The royal visitors were escorted to the landing-place by the Bombay garrison and a large number of local princes and British and native officials.

Industrial and Commercial.

For many years there has been a steady search in European countries for vegetable fibers suitable for cloth weaving, with a view to freeing the textile industries from dependence on the American cotton market and from the fluctuations due to speculation. In 1876 a German commission, composed of prominent chemists, technicists, and botanists, was appointed to investigate the possibilities of the domestic nettle, but the problem was not solved, owing to the difficulties of freeing the fiber from the woody parts of the stem without injury and without too great expense of handling. According to *Prometheus* (Berlin), as a result of private experiments a feasible commercial process has been invented and made public after a two-years testing which gave excellent results. The method of treatment is both simple and inexpensive, yet so rapid and effective as to yield a supply of smooth, bleached, spinnable yarn in about eight to ten hours' time from the green plant to the salable product, and at a price considerably less than that of raw cotton. The nettles are harvested twice a year, at the end of June and at the end of September, with mowing machines. They lie in the field to dry from two to four days, and thereby lose the power to sting, since the stinging hairs are active only while the plant is green. They can now be handled like flax to remove leaves and twigs. The naked stems are then boiled in dilute soda-lye in open kettles for half an hour or so, until the fiber begins to loosen, when it is separated by a revolving brush-machine. The process of refinement is completed by repeated boilings of short duration in the dilute lye under high pressure, and by thorough washing, also under pressure. The product now consists of perfectly clean "degummed," lustrous fibers of a yellowish tint. Proper bleaching methods change this color to a dazzling white, at the same time heightening the natural luster. It is now ready to be treated like other textile threads,—combed, carded, and spun. The finished yarn is as soft and smooth as flax, with only a slight "woodiness" remaining, much less than that of hemp, jute, and the like.

Toledo, Ohio, will have three-cent fares for two hours in the morning and two in the afternoon, six tickets for a quarter and universal transfers the rest of the day, as the result of a temporary agreement, pending franchise negotiations, reached between representatives of the company and the city. This announcement followed closely on the heels of the application for receivership of the company on behalf of friendly interests.

Platinum, of which Russia is the chief producer to the markets of the world, is found in greatest quantities in the Ural mountains. In 1910 the output amounted to 175,720 ounces. The demand for platinum throughout the world is much in excess of the supply, and the price of this metal has now reached about forty-five dollars per ounce, and is more expensive than gold.

The total output of iron ore in the ten principal countries engaged in the industry exceeded in 1909 one hundred and twenty-five million tons.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE FUNCTION OF THE MIRACLE.

M. G. KAINS, M.S.

As popularly regarded, the miracle is a supernatural occurrence, or at least an experience beyond the scope of ordinary known natural causes. Current theology gives it a more restricted meaning by considering it to be an incident in the so-called natural world, but not according to the natural order; an event rendered possible and explicable only because of the intervention and application of deific power. According to Hodge, it is "(1) an event occurring in the physical world, capable of being discerned and discriminated by the bodily senses of human witnesses; (2) of such a character that it can be referred to no other cause than the immediate volition of God; (3) accompanying a religious teacher, and designed to authenticate his divine commission and the truth of his message" (Outlines of Theology).

For the phrase "the immediate volition of God," the Christian Scientist would substitute, "the normal activity of divine law," but aside from this, every thinker will do well to consider carefully this definition. Moses certainly authenticated his "divine commission and the truth of his message" by the performance of wonders which, while discernible "by the bodily senses of human witnesses," could not rationally be referred to any other than the immediate activity of divine law. Elijah, Elisha, Isaiah, and other of the prophets established their right to be considered as God's messengers by performing various wonders which human witnesses of their times could perceive in the ordinary way. In similar ways, Jesus, his disciples, and their followers gave evidence of their divine commission and the truth of their message.

Instances are not wanting in the Bible to show the inefficiency of the human arm and the powerlessness of human efforts. When Hezekiah acknowledged his weakness and prayed to God for deliverance from Sennacherib, and when Jehoshaphat under similar circumstances adopted the same attitude, both were delivered from their enemies. These and many other instances go to show that while a man may seem to possess so-called will-power and be capable of performing notable feats by its aid alone, yet without the assistance of a power above and beyond himself he can perform no really noble work of rectification of palpably wrong conditions, no important creative work; nothing perhaps, we may conclude, that has an important bearing upon the advancement of mankind. To be sure he can harness the so-called physical forces with his intellectual energy and accomplish apparently much, but the ability to discern his duty to his fellow man on the higher spiritual plane, to understand his function in the world as it exists in divine law and order, to grasp and utilize his spiritual potentialities and thus to become a factor for good far beyond the mere physical realm, is acquired only when, like the prophets, and like Jesus and his disciples, he has mastered his human will and become inspired to do according to the law of God and thus usher in the kingdom of heaven—bring it a little nearer to human apprehension by proofs, visible signs, of divine harmony.

From what we can learn in the Scriptures it seems safe to assume that every one of the miracles recorded in the Bible accompanied an attitude of self-renunciation. Examination shows that a complete reliance upon God and an attitude of "not my will, but thine, be done" characterized conspicuously the work performed by Jesus. So thoroughly in keeping is this attitude with the whole tenor of the Bible teaching, that the questions arise, Do miracles result from supernatural causes as popularly believed, or are they "supremely natural" (Science and Health, Pref., p. xi) and only considered remarkable because mankind in general is not accustomed to manifestations of divine law and order?

May we not answer these questions by asking some others? What would the Christian religion be without the miracle? Would it have existed at all? Who would accept the Bible teachings as at all practical were it not that the miracle authenticates them? Would any one believe Biblical statements and adopt Biblical precepts as superior to some human philosophy? Is it not evident that the miracle is the one thing which has enabled humanity to grasp a little more clearly the meaning of what Moses and the prophets, Jesus and the disciples taught? Did not such achievements give power to the words which were spoken in olden time, a power and virility which have lasted to this very day? Did not Christ Jesus himself say, "If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works"?

Unfortunately for the human race the false conceptions of material sense and the necessarily erroneous teachings which grow therefrom, have long since relegated the miracle to a past age when God "intervened in human affairs," set aside His laws or, so to speak, changed His mind like a human being. These misconceptions lead to the absurd conclusion that God, the All-wise, sometimes made mistakes, found it advisable to work against His own order, and showed partiality to certain people, as if an all-wise being could not make a perfect universe and always be "the same yesterday, and to day, and for ever"! These conclusions from generally accepted religious teaching gradually brought the miracle into disrepute among people of rational minds and who became more and more doubtful of the actual occurrence of these wonders at any time, the belief gaining credence that they were merely figments of the imagination, related to induce people to accept certain teachings which might not otherwise be accepted as authentic.

The attitude that if so-called miracles were ever possible they are possible now, is a safe attitude to assume. The mere fact that the unbeliever has not experienced one is no proof that he may not do so. It is therefore safe to assume that miracles are possible whenever men understand God well enough to apply His laws, when they can and do escape from their human impediments and rely utterly upon God to reveal His true nature and law. Every man and every woman who will renounce self and recognize God as

all-powerful may perform miracles in this day and age; they may be so inspired that the divine nature and potency will be manifest in forms of healing and regeneration and thus prove the correct understanding, the authenticity, of the divine commission and the truth of the message. It is essential, however, that the worker of miracles retreat from and rise above self before it is possible to become, as a writer in a current magazine aptly remarks, "a coworker with God in the emancipation of his fellows and the redemption of the world. . . . It is only a great moral passion that can lift a man above fear and give the courage that is born of unselfish devotion to one's fellows and unquestioning faith in God. . . . The miracle which revives the fainting spirit and gives men the heart to go on with patience and hope—the revival of religion as it is sometimes called—comes only when men invoke the presence of God and open their natures to His coming. And here rests the hope of the world; there is no limit to the divine power, and it can always be had for the asking."

Surely nothing could better illustrate and typify the truth of these cogent statements than the miracles of Christian Science which during the past forty-five years have been growing in importance while increasing in number in a geometrical ratio year by year. Were it not for the "signs following" which Christ Jesus declared to be characteristic of his doctrine and the practice of those who understood his teachings, how long would those teachings have been given credence except as an interesting but impractical philosophy? Were it not for the same kind of phenomena presented in the past four and a half decades, how could Christian Science as taught by Mrs. Eddy have gained any ground in this enlightened age? Would the Christian Science church ever have been founded? Would not the teachings of Christian Science have been jeered out of existence had they not been supported by the healing work, had they not presented in tangible, practical form that germ of truth which characterized every miracle recorded in the Bible; namely, the renunciation of self in the acknowledgment and recognition of God's perfect universe and the natural healing of the sick and the regeneration of the sinner?

If, then, despite the non-appearance of more than sporadic or isolated cases during the past fifteen hundred years, if we are to accept the miracles which Jesus performed, as authenticating his teachings, how shall we be able to escape the conviction that the thousands of similar present-day cases of healing correspondingly authenticate the teachings of Christian Science? And if we are willing to admit that like causes naturally produce identical results, how shall we escape the conviction that its teachings differ in no essential respect from those of the Master? Are we not then forced to conclude that the miracles which were the distinguishing feature of the gospel which Christ Jesus preached and which also distinguish the declaration of Christian Science are the characteristic signs which Hodge says are designed to authenticate the divine commission and the truth of the message?

Mrs. Eddy says: "God selects for the highest service one who has grown into such a fitness for it as renders any abuse of the mission an impossibility. The All-wise does not bestow His highest trusts upon the unworthy. When He commissions a messenger, it is one who is spiritually near Himself" (Science and Health, p. 455). Those who have experienced and those who have open-mindedly observed the healing efficacy of Christian Science, are ready to admit that these conclusions are at least plausible. Does it not therefore behoove others who are in trouble, sorrow, need, sickness, or any other adversity, to open their minds and fairly examine the evidence at hand, rather than to cling to mere statements unsupported by evidence that can be verified by present-day witnesses?

LEGITIMATE PROGRESS.

HELEN FRIEND-ROBINSON.

Mrs. Eddy declares that "progress is the law of God" (Science and Health, p. 233), and this law rightfully demands from every individual ultimate spiritual perfection. This goal, however, is not won suddenly either in this world or in the so-called world to come, for we are further told that "universal salvation rests on progression and probation, and is unattainable without them" (Science and Health, p. 291). By taking the progressive steps as taught in Christian Science, the student should advance daily in understanding, so that he may be encouraged to continue his way ever sheltered from the storms and stress of circumstances by God's eternal law of harmony, for we have comforting assurance that this law demands only what can certainly be fulfilled.

It does not matter what the dream is from which Christian Science awakens one, the problem of working out his own salvation should start from the particular point where Christian Science finds him, and unless legitimate progress is made there is a missing link in the chain of his life-problem which needs to be found at once and welded into its rightful place. Surely the best place to seek for this is in ever-renewed and consecrated study of the Bible, in conjunction with its spiritual interpretation as revealed in "Science and Health with Key to the Scriptures" by Mrs. Eddy. If at times the way seems dark and the progress slow, it is only "by patient continuance in well doing" that it becomes illumined with grateful joy, and one's avenues of usefulness are perpetually enlarged. The student who is alert quickly learns that the only place to solve the problem of real advancement is in his own consciousness; in fact, he cannot watch too closely every phase of his own thinking, lest jealousy, criticism, or some other of the myriad forms of error find unsuspected lodgment in this sacred sanctuary. No débris of error should be allowed to collect there, subsequently to block his way; and the prophet's words, "Let the wicked forsake his way, and the unrighteous man his thoughts," should be prayerfully heeded.

Since each one has eternity in which to work out his individual problems, and disregard of the old maxim, "Haste maketh waste," may prove a serious stumbling-block in his way, it is important that the student should early learn not to go too fast by allowing himself to be influenced by the hurry and scurry of mortal existence; neither should he go too slowly by succumbing to the error of self-condemnation and discouragement which would keep him forever at work to retrieve past mistakes. If he does not err by forging ahead with untempered zeal, attempting to do today that which should be left till tomorrow, nor put off till tomorrow that which it is imperative to do today, there will be no avenues of confusion opened through impatience to lure him into dangerous byways, and no appalling accumulations of neglected work for him eventually to surmount.

The danger-signal will cross one's pathway conspicuously if he looks longingly or enviously after a fellow student who he fancies has made strides in advance of his own progress. In his early struggles with his own difficulties, he may not at first realize that no one has preceded him far in Christian Science without having first earned that progress, every step of the way, through faithful, honest work. But progress comes many times from experience, and the beginner soon learns that every student has the same hill to climb, with approximately the same obstacles to meet that at times seem to impede his own progress. He learns, however, that he need suffer for no mistake but his own, and for this only until the mistake is rectified; therefore no obstacle should daunt him, for every difficulty will be gradually overcome just in the ratio that he abides in divine Love and follows meekly the divine Principle of all true progress,

Digitized by Google

as revealed to his awakening understanding through persistent, faithful study. The bright light shining in the distant vista of another's efforts is certainly encouraging, but it will not do one's work for him. He cannot see clearer or reach heavenly heights faster by any doubtful methods, and sure progress is best gained by the one who walks steadfastly in the light of Truth along the path of his individual efforts.

Idleness is one of the greatest foes to progress, and this mental state must be continually watched and guarded against. The student never attains a height upon the steep hill of progress where he can afford to waste any time in illusive day-dreams. There are no convenient stopping-places where he may regard himself complacently and feel that his work is finished. Vain regrets for wasted opportunities in the past will not advance, but rather retard his growth; neither will idle dreams of some grand achievement in the future enable him to ascend the rugged heights more rapidly. The two thieves nailed to the cross on either side of our Saviour, might well typify the past and the future, but these two thieves cannot rob one of his legitimate progress if he watches vigilantly against their first approach to comradeship. "Now is the accepted time," said the apostle Paul, and the student who earnestly desires to advance beyond the rudiments of divine Science is wise if he takes advantage of present opportunities instead of bemoaning the past or looking to the future for redemption.

As one advances, he learns that he cannot begin too early in the day to rise above the mists which would obscure his vision, if he would hear the "Well done" at the close of the day and enter into the joy of well-earned rest. As his day, so shall his strength be, and he may readily prove for himself that the law of progress will never demand, even from the youngest worker, more than he can easily accomplish if he is actuated by a sincere, earnest desire to follow the true way. Patiently surmounting the hills of self-love and self-righteousness, and the valleys of self-pity and self-condemnation, the student of Christian Science eventually reaches a progressive point up the heights, where he obtains glorious glimpses of the spiritual universe. On the way up this steep ascent there is no time to waste in seeking for place and power; there is work enough for all, and each may earn and hold his rightful place without fear of criticism or monopoly.

Although every mountain of vain-glory must be finally leveled and every valley shall be exalted, as one advances to higher planes of activity no hill will be too steep for him to climb safely, nor any valley too deep for him to struggle out of, if he keeps his thought turned steadfastly to the Horeb on whose summit stands the one who has fought the good fight and who, through precept and example, has made practical and demonstrable in this age a full salvation from all the ills that flesh is heir to. The degree to which each one is able, through the power of God, as revealed through Christian Science, "to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free," for himself and others, determines the status of his spiritual understanding, and there is no other way of registering true progress.

TRUE LOVE.

EDMUND K. GOLDSBOROUGH, JR.

PERHAPS the most difficult problem with which we have to grapple in our warfare with materiality, is in recognizing the nothingness of affection which is not based upon spirituality. At best human affection is unstable, and if we lean upon it in the belief that we are supported by a staff, it oftentimes proves a cruel reed; whereas the true love, that which flows eternally from God, divine Love, bestows lasting joy, peace, happiness, and is veritably the real staff of life.

What a lesson we can learn from the experience of Jesus in the garden of Gethsemane, where the absolute nothingness of the mortal sense of selfhood was revealed. When one ponders on the history of this sublime character, of his marvelous life-work, his tender love, patience with and compassion for the disciples, it seems incredible that in this hour he should have virtually been deserted by them all. He was indeed alone to mortal sense, and perhaps this seemingly dreary hour was the one lesson which mankind needed in order to realize the utter inability of the carnal mind to bestow anything. When he found his disciples sleeping, after he had asked them to watch with him, he said to Peter, "What, could ye not watch with me one hour?" Concerning this failure Mrs. Eddy writes, "There was no response to that human yearning, and so Jesus turned forever away from earth to heaven, from sense to Soul" (Science and Health, p. 48).

Sometimes the false, material sense of love has caused us to cling to some dear one and spend months, or mayhap years, in endeavoring to awaken that one to Truth and thereby lift him from the slough of sickness and sin; but if our loved ones are not seeking the light for themselves, would it not be far better to bestow our efforts on the many who are waiting and thirsting for the living waters? A very great deal can be learned from Jesus' treatment of Judas. The Nazarene plainly read the man's thought and knew full well the betrayal which he contemplated. Here was one of his own disciples seemingly subservient to sin and unwilling to part with material sense, notwithstanding he had been one of the Master's immediate followers. What did Jesus do with this mentality? He let it alone, fully realizing that an impassable gulf separated Judas from the other apostles, and that naught but suffering could awaken the deadened thought. Nor did Jesus appear anxious or concerned when he realized Judas' unfaithfulness; he did not plead or pray with him, but left the problem where it belonged, namely, in the hands of God.

In the life of the Nazarene it would be difficult to find a more beautiful lesson than that gathered from the restoring of the ear of the servant of the high priest, which Peter had cut off. Here Jesus was to all appearances in a perfect maelstrom of hate, but it affected his demonstration no more than the mist affects the morning sunshine. The great Teacher was abiding "in the secret place of the most High," and to his enlightened sense Truth and Love were ever present, instead of their seemingly appalling opposites. Jesus refused to acknowledge any false claim of material sense and sin and rebuked Peter for having done so, and as we seek the summits of spiritual understanding it will be well to remember this sublime lesson of love, if we are ever tempted to feel resentment toward a fellow pilgrim.

"DRAW NEARER TO GOD."

FLORENCE HOWELL JOHNSON.

SOME time ago, a friend of mine had an experience which, even as it has helped me, may help others; so I pass it on with that hope. This friend was then living in a small town, and a certain circumstance came up which necessitated quick and decisive action in order to set many conditions right. She was a little puzzled over the question as to what course to pursue, and anxiety creeping in left her at a standstill. She went to a neighboring city to a friend who she felt would give her the needed advice, and on arriving at his office she quickly told all the story. He remarked, "What are you going to do about it?" and she, in the same excited tone, said, "I do not know; that is just what I have come to you for." He looked at her a moment very quietly, and as quietly said, "Draw nearer to God." In speaking of the incident, she said she then felt all the worry, anxiety, nay, more, the responsibility, drop from

Digitized by Google

her, and they talked quietly and discussed the best steps to take.

Many times since I have thought of this incident, when oppressed by a sense of darkness or puzzled over some problem, and vexed with the question, What am I going to do about it? Again there comes, quickly and distinctly, this answer, "Draw nearer to God," and could a better be found? We need not wait until the way seems to clear itself, but right then and there, in the midst of our worry and anxiety, we may draw nearer to God; and in so doing, no matter what our problem may be, we shall find the worry and doubt, doubt of the all-power, all-presence of God, dropping away from us, and we shall know that divine Love surely meets all our needs.

IGNORING VERSUS DENYING.

ROBERT N. ROSS.

IF a child were disturbed by a belief in ghosts and were to cry out in terror at the delusion, the average parent, unacquainted with mental processes and ignorant of the fact that the child was suffering from a false sense of something, would be in a position to offer nothing more than mere human consolation. The alert Christian Scientist mother, however, would under such circumstances tell the child that there were no real ghosts and that he need not be afraid of them, assuring him at the same time that God, good, is ever watching over and guarding His little ones. In the one instance the mother might succeed in temporarily quieting the child, but his belief in the reality of ghosts would be as strong as or even stronger than ever, because the fear of them would be still undestroyed. This would leave the way open for a possible recurrence of the experience. But in the other instance the mother would strike straight at the root of the trouble and destroy it by specifically denying the error and antidoting the fear with the truth of being. This illustration shows the value of knowing the nature of error and how to destroy it.

There are a great many people (perhaps some of them are Christian Scientists) in the world, who are laboring under the false belief that there is no difference in meaning between the words ignore and deny as used in Christian Science. In fact, the writer was at one time in this class, and he invited much criticism of himself after coming into Christian Science by taking the stand that evil—sickness and suffering included—could be ignored with impunity. This brought him many unpleasant experiences. One day, however, while studying the text-book, "Science and Health with Key to the Scriptures," he came across this passage on page 339: "You conquer error by denying its verity." Up to this time, he had been laboring under the belief that merely to declare that God is good and that God is All, was sufficient to solve his problems. The passage quoted above, however, set his thoughts at work in new channels. Turning to the dictionary, he found that, according to Webster, to ignore a thing was wilfully to disregard it; while to deny a thing was, according to the same authority, to declare it to be untrue. Then the realization came that nowhere in her writings does our revered Leader say that we should ignore or wilfully disregard error, but that she does repeatedly exhort us to deny it as unreal, untrue; as devoid of intelligence, law, activity, or power.

To ignore the claims of evil to intelligence and power is foolhardy. To deny them scientifically until we realize entire freedom from the entanglements of the senses, is the part of true wisdom. Jesus, the greatest of all metaphysicians, did not prove absolutely the non-existence of so-called material substance and law until, in what Mrs. Eddy designates as "that change which has since been called the ascension" (Science and Health, p. 34), he rose wholly above all mortal belief about them. Throughout his ministry on earth, however, the Master was continually denying and rejecting the claims of error and declaring the ever-presence of good, and can we hope to improve on the Master's method? As well might the soldier go into battle without arms as for one to announce himself a Christian Scientist and not know how to handle error in its various phases and subtleties. Evil suggestion materially embodied ever seeks to mesmerize Christian Scientists into indifference, or to put them to sleep regarding its means and methods; for its only hope of success in preserving or perpetuating its seeming existence lies in its ability to deceive willing workers. And why should we not be active in working at our task of self-preservation, since the putting into practice of Christian Science, or right thinking, means the certain destruction of all that is unlike God, good!

Jesus said: "What I say unto you I say unto all, Watch." In this glorious battle between Truth and error there is no room for mental supineness. On the contrary, the useful, active Christian Scientist is not one who ignores evil, but he who, armed with the battle-ax of truth and wearing the breastplate of righteousness, attacks and puts to rout every claim that discord, sin, disease, and death make in their efforts to establish themselves or to hold their asserted place and power.

EVIL'S UNREALITY.

JAMES WARDLE.

To understand scientifically the unreality of evil is perhaps the greatest difficulty the beginner has, in the study of Christian Science. The average Christian says he believes in the omnipotence of God, but when the Christian Scientist, building on the premise admitted by the orthodox church, that God is omnipotent, completes the syllogism,—God is omnipotent, God is good; therefore good is omnipotent,—he may find his friend at variance with what he thought he believed of omnipotence; that he is explaining the reality of evil by what he sees around him, the false testimony of the senses.

I have two boys not long started in the study of mathematics, and the first lesson they learned was the difference between the plus and minus signs. In going over this with them I thought what a beautiful example it furnished of the unreality of evil. To the question, "What is the value of the minus sign?" the answer came, "Less than nothing;" but they had to be told that this answer was wrong, because nothing can be less than nothing, for were it possible to conceive of less than nothing, then nothing would at once have some value and become something. However small a decimal figure, it always expresses a part of something; but the figure with the minus sign before it has no reality, it is the supposititious absence of something.

So it is with the Christian Science teaching of the unreality of evil. In the Science of being God, good, only is. In Science and Health (p. 469) Mrs. Eddy writes: "The exterminator of error is the great truth that God, good, is the *only* Mind, and that the supposititious opposite of infinite Mind—called *devil* or evil—is not Mind, is not Truth, but error, without intelligence or reality." Though the truth of this statement is startling, it cannot be doubted, and it is only as we rise in this higher and holier consciousness that we are able to demonstrate in the destruction of sin, sickness, and death the allness and ever-presence of Life, Truth, and Love.

The Holy Supper is kept, indeed,
In whatso we share with another's need,—
Not what we give, but what we share,—
For the gift without the giver is bare;
Who bestows himself with his alms feeds three,—
Himself, his hungering neighbor, and me.

LOWELL.

SELECTED ARTICLES.

[Editorial in the *New York* (N. Y.) *World*.]

Dr. Abraham Jacobi, speaking to the professional staff of the Post-Graduate Medical School and Hospital, criticized President Taft for permitting Christian Scientists to treat patients in the Canal Zone. "He opens the box of Pandora called Christian Science," said Dr. Jacobi, "and allows equal standing and facilities and justification to you and to the quacks alike."

Why should doctors expect the government to protect them from competition and vest a monopoly of the healing art in practitioners of the "regular" school? No such governmental protection is extended to ministers who preach only the orthodox doctrine, or to lawyers. No monopoly is permitted of the manufacture of medical preparations, and nothing prevents a man who is ill from applying at the nearest drug-store for his favorite nostrum and treating himself. Or he may refuse medical relief of any kind, where his illness does not endanger others.

If medical practice according to the teachings of any one school were a hieratic art, if it were even an exact science, the objections of the doctors to the practice of Christian Science or any other healing method on government territory might have some basis of justice. But it is not, and President Taft in permitting any kind of therapeutics in the Canal Zone only applies the principle of constitutional freedom of opinion.

[From *New York* (N. Y.) *Times*.]

Dr. Albert Warren Ferris, who for four years has been president of the New York state commission in lunacy, having given up his office on Dec. 31, when asked last night [Jan. 1] whether he had found that Christian Science had been a factor in insanity, replied that he had never found a case in this state that could be attributed to Christian Science.

"The few cases where we have found Christian Science in connection with forms of insanity have been those where the patient took up Christian Science after insanity had come upon him," he said. "I have never found it a cause in a single case. There are forms of insanity that are accompanied by religious enthusiasm of an abnormal type, and Christian Science is sometimes the form this takes. I should not call Christian Science in any way a cause of insanity, and during the past few years we have studied causes very closely."

[From the *Syracuse* (N. Y.) *Journal*.]

Eugene R. Cox of the Christian Science committee on publication takes exception to the telegraphed statement of Dr. Hollander of London to the effect that Christian Science is responsible for a large amount of insanity. Quoted in denial is an interview with Dr. Albert Warren Ferris, until last Sunday the president of the New York state commission in lunacy, in which he said he had never found a case of insanity in this state that could be attributed to Christian Science. He said further: "The few cases where we have found Christian Science in connection with forms of insanity have been those where the patient took up Christian Science after insanity had come upon him."

[George Shaw Cook in *Austinite*, Chicago, Ill.]

It is quite likely that there were humorists in the time of Christ Jesus who sought to discredit his mission by playing upon the popular sense of humor, but how miserably such efforts failed to hinder the onward march of truth! What, in the light of subsequent events, could be more pitiable than the ridicule of those who, according to the gospel of John, crowned Jesus with thorns, put on him a purple robe, and in mockery hailing him as king of the Jews, "smote him with their hands."

In this time of the reestablishment of primitive Christianity, the Christ-healing is again misunderstood, and those who proclaim its presence among men are misrepresented and the weapons of ridicule are used against them. Nevertheless, there is a growing tendency on the part of the public to treat Christian Science fairly, and little by little the movement is coming to be recognized for what it really is. In confirmation of this fact I quote as follows from an editorial in the Kansas City *Star*, which is one of hundreds of similar editorials printed in the daily press after the passing of Mrs. Eddy:

"Mrs. Mary Baker Eddy was one of the remarkable personages of the long period of time her life inclosed. She was the moving spirit in and the chief exemplar of a religious and spiritual phenomenon affecting in some degree nearly the whole of the civilized world. The Founder of the Christian Science church developed a way of life and a spiritual creed by which many thousands of persons have found serenity of mind and a correlative physical well-being. In her own mind and body she exemplified the value of her teachings. Her long life closed amid the spiritual veneration and love of hundreds of thousands of associated religionists and the kindly esteem of almost the whole world."

Christian Science practice is not, as claimed by the critics, a system of hypnotic suggestion adopted by Mrs. Eddy as the result of her experience with Dr. Quimby. On the contrary, she gained from this experience the understanding that hypnotism, or hypnotic suggestion, is far from beneficial in its effects, and she afterward discovered Christian Science through her search of the Scriptures in the effort to explain her recovery, through divine power, from the effects of an accident which had all but terminated fatally. She first proved the truth of her discovery in healing many who were sick, and then wrote the Christian Science text-book, in which is a complete and demonstrable exposition of scientific Christianity. Reliable persons in every part of the civilized world have been and are being healed of sickness and sin through the study of this book. To them its value naturally is priceless. To those who may be in doubt regarding its value or who for any reason are not ready to buy it, ample opportunity is afforded, in more than one thousand free Christian Science reading-rooms and in numerous public libraries, to read or study Science and Health.

It is not claimed that there are no failures in Christian Science practice nor do Christian Scientists believe that in goodness, spirituality, or works they have equaled the Master. They recall, however, that he said to his followers, "He that believeth on me, the works that I do shall he do also;" and they know that sufficient growth in grace and increased understanding of Christian Science will eventually enable Christian Scientists to do the works which should be done by all Christians. Meanwhile they are grateful for daily proofs of the overcoming of sin and disease in themselves and in those who turn to Christian Science for help.

[Frederick Dixon in *Florence* (Italy) *Herald*.]

It is an extraordinary fact that gentlemen who usually are quite kindly, cannot approach the subject of Christian Science without parting company with their self-control. In this mental condition, they appear to think that *obiter dicta* constitute argument, and that humor is synonymous with execrable taste. The letter in your last issue in which a critic revels in the breathless *ipse dixits* of Mr. —— is an example of this. If your readers will carefully study it, they will discover that from its exordium to its peroration it consists of a torrent of unproved assertions, in sup-

Digitized by Google

port of which not one single argument is advanced. These two Arcadians clearly indulge in the not uncommon but fond belief that everything which they fail to understand is without the focus of common sense. If I may dare, therefore, to offer them a hint, it would be that they should read a certain essay by Huxley, on common-sense philosophers. Provided before they have finished it they have not despaired of Huxley, it may have begun to dawn upon them that there are still some things undreamed of in their philosophy. Let us take an example. Mr. —— evidently regards the teaching of the unreality of matter as beyond the pale. If he were not to be permitted to rely on the evidence of the senses, he would apparently be compelled to take refuge in the phraseology of Wilkins Micawber, "The God of day goes down upon the dreary scene, and—and in short you are forever floored. As I am!" He forgets in his indignation that Mr. Balfour, not many years ago, told the University of Cambridge that modern natural science had not merely explained matter, it had explained it away. He was speaking, of course, of the development of the idealistic theory of Bishop Berkeley, a theory vitiated by the fact that, inasmuch as it declared matter a subjective condition of divine Mind, it lost itself, in the words of one of the greatest of natural scientists, in undiluted pantheism. The teaching of Christian Science differs fundamentally from this. God, Jesus told the woman of Samaria, is Spirit; and that, he told Nicodemus, "which is born of Spirit is spirit." Consequently if, as John writes, God made all that was made, creation, Christian Science maintains, must be spiritual and not material; and matter is nothing but the negation of spiritual creation, and so unreal.

It would be tedious to expose all the misconceptions and misstatements of which this critic is guilty. It must suffice to say that a system of assertion which enables you to reverse an opponent's premises naturally permits of reducing his conclusions to an absurdity. I will not, however, follow him into this wilderness of mere assertions, but will prove the truth of what I say. He says that Christian Science "declares all mind is God," and then qualifies mind as mortal. It does, of course, nothing of the kind. It says that God is Mind, and that mortal mind is the negation of this divine Mind, and is not intelligent. You might as reasonably say that natural science described light as a positive, and then qualified it as darkness—as absence of light, or as a negation.

The simple fact is that if Christian Science were the unadulterated nonsense of the critic's fervid imagination, its teaching could never have spread entirely round the globe, nor could it have gained the adherence of thousands upon thousands of cultivated men and women, nor succeeded in running a great ordinary daily newspaper. While, however, he is wasting his time in futile polemics, Christian Scientists are scientifically demonstrating the absolute truth of their faith, healing sickness and conquering sorrow and sin in every quarter of the globe. Against such proofs, the efforts of such a critic are like the attempt of Dame Partington to sweep back the ocean. She was excellent, says the chronicler, at a puddle, but she had no business to meddle with the elements.

[E. J. Simpson in *Chickasha* (Okla.) *Journal*.]

In a recent issue of the *Journal* the very inconsistent statement was set forth by a local contributor to the effect that a minister in one of the Chickasha churches had characterized Christian Science as "being both unchristian and unscientific," and coupled this with the contributor's conclusion that "there was nothing offensive in his treatment of the subject." Now Christian Science accepts without reservation the Bible teachings as basic, and absolutely believes that our Master, Christ Jesus, meant exactly what he commanded his disciples to do, as recorded in Matthew, namely, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Again the Master's voice is heard admonishing his disciples to carry the gospel of Love to every creature and telling them what signs would follow,—the casting out of evil, the healing of the sick. Christian Scientists do not circumscribe the commands of our Master, nor his promises, nor the ever-presence of the Christ. "Lo, I am with you alway," is the sweet assurance which has comforted the sorrowing, which has substituted love in lieu of bitterness and malice, which has called wanderers away from channels of depraved appetite and passion and clothed them again in their right mind, which has illumined the consciousness darkened by thoughts of death with the glorious apprehension that there is no death.

"Because I live, ye shall live also." These words of our Master mean just what they express, and Christian Scientists believe them; and they are striving to have that Mind in them "which was also in Christ Jesus." The ministry of our Master was a ministry of doing as well as of preaching. He is our Exemplar. His ministry was a demonstrable religion. He proved the efficacy of his teaching; therefore it was scientific. Christian Scientists strive to emulate him, their religion is based on his teachings and practice; therefore it is both scientific and Christian.

Fruitage is the test. "By their fruits ye shall know them." Your contributor says: "They all have suffered before they accepted their present views, and their statements of result I have no hesitancy in accepting." Then if Christian Scientists have turned away from the contemplation of a God of wrath, and have accepted the beloved disciple's statement that "God is love," and this sweet thought has changed their suffering into joy, and has made them better men and better women, has brought consolation and hope in place of disease and depression, why surely the fruitage is good. Then for which of these things do you stone us?

"But," says your contributor, "there is not a single tenet of their remarkable cult that was not hoary with age before William the Norman invaded Saxon England." He could have made this statement very much stronger, for there is no age wherein the Christ-healing and protection have not been available. "Before Abraham was, I am." The Christ has been always, and will be unto the end. Christian Scientists believe this, and it should not be thought a thing unchristian for all who profess to be his followers to entertain the same Christian belief. Understanding the spiritual beauty and sweetness of this, Christian Scientists press on to ultimate victory, confident and optimistic.

[Alfred Farlow in *Christian Standard*, Cincinnati, O.]

Regarding my statement that the criticism of Christian Science is due to an endorsement of material sense as opposed to spiritual understanding, you say, "We measured them with all the 'sense' at our command." Allow me to ask what sort of sense you employ when you accept the teaching, "God is a Spirit." Material sense denies the Master's teaching. It declares, "I do not see any spirit, I do not believe there is any spirit." Setting aside material testimony, however, the Christian endorses the Master's teaching, and it is only necessary to be consistent with this teaching to endorse the whole of Christian Science.

As to the authenticity of the carnal mind or mortal mind, please note the following from St. Paul: "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." God, good, the infinite Spirit, the divine Mind, is Truth opposed to error. The carnal mind, being at enmity with Truth, is properly denominated error or false sense, and this manifestly is the identical thing that Jesus had in mind when he said of the devil that

Digitized by Google

he "abode not in the truth, because there is no truth in him." He evidently meant that Satan has no real existence, does not really abide, because he has no reality (no truth) in him.

Mrs. Eddy's teaching recognizes the human sense of material existence and all that is associated therewith, and considers the fact that sin and disease must be grappled with and overcome in an intelligent manner. It does not ignore evil. However, one cannot be a consistent Bible student and at the same time classify these ungodlike things as a part of the "very good" things which God created. It cannot be successfully contradicted that, when all error ceases in the world and mankind is governed absolutely by righteousness, suffering and discord will cease, and that this is in keeping with the teaching of the Scripture. Again, it cannot be successfully contradicted that wrong-doing is based upon the belief of pleasure or profit in evil, and that therefore deception is directly responsible for all erroneous thought and conduct, and indirectly responsible for all suffering, and that therefore a knowledge of truth practised will end error and its results.

In regard to the ordeal which is called death, we would call our critic's attention to Jesus' declaration, "The damsel is not dead, but sleepeth." Here the Master denied death as pointedly as does Mrs. Eddy in the Christian Science text-book. Thus he affirmed that death was not a cessation of life, but simply a state of being temporarily asleep as to the consciousness of life, and he destroyed this condition according to his promise and presented the damsel in a living condition, just as he did Lazarus.

It is perhaps useless to contend over the question as to the exact effect that medicine has had upon mankind. I will gladly furnish to the editor of the *Christian Standard* criticisms and quotations of eminent physicians who have expressed themselves publicly upon this subject, and who have criticized modern medical practice, if he will take the pains to publish them in his paper as proof of my former assertion. We have no quarrel, however, with the medical fraternity, but honor all honest and well-placed efforts in behalf of human welfare. In any event, it remains true that the most successful physician of the world's history was Jesus Christ. He never lost a case, and he did not administer or recommend medicine. Why not study his system?

[William J. Bonnin in *Rochdale* (Eng.) *Times*.]

According to report the clergyman offered his tribute to the memory of the evangelist Luke, last Wednesday, in the form of an exceedingly violent attack upon Christian Science. There is happily today something about such utterances that marks them as almost out of date, something about their very ferocity that smacks of an outgrown barbarism, something of misplaced zeal in them that is already faintly lavendered.

The preacher appears to have been so occupied with his diatribe, so obsessed with his denunciation of the strange object he erected and deluded himself into believing to be Christian Science, as to omit to tell his congregation what it was that constituted the great event in Luke's life. It is interesting to call it to mind. The admitted authority on the subject is Adolph Harnack, and he speaks of Luke as a benevolent doctor at Antioch, who became a follower of Paul because he saw in Paul's teaching a new and better way to heal the sick and help his brother man. He had been accustomed to apply the various material remedies and drugs of the day to the body to heal it of its diseases; that is to say, to restore, renew, and maintain life against the attack on or limitation of it which is expressed by disease. He had relied upon the unliving and unintelligent agency termed matter, but he saw Paul healing the sick by the Spirit of God alone, and preaching, as he did on Mars' hill, that God giveth to all life, and breath, and all things. He saw him turning to the source of all life, to God who is Life, and achieving results on body, mind, and character which no drug could ever produce; therefore he abandoned matter as the source of salvation and turned to Spirit. He became a Christian.

Now, there are today a great many physicians who to their honor have, on account of the results they have seen following Christian Science treatment, abandoned their old material methods and followed Luke's example in turning to the giver of life for the gift of life. And it is as well to remember that the drug treatment of today is no more scientific than in Luke's day. Based upon the belief that life is resident in matter as a kind of quality or attribute of it, it is still purely empirical. To be sure the choice of the drugs themselves has been continuously changing until almost everything in the three kingdoms has been exploited, each specific in turn having just so long a life and such degree of potency as fashion and fancy may decree, and the discovery of yesterday being forgotten today just as the blessings of today (so fervently eulogized by the reverend critic) will inevitably be discarded tomorrow.

The endeavor to reconcile Christianity and drug-healing invariably lands one precisely where the critic finds himself —in the position of urging that drugs are God-sent. If it is a little difficult to detect a divine blessing in the stupefying action of opium, it is surely an impossible task to conceive an omnipotent and unchanging Deity, of His own will and purpose, inflicting pain on man and then instructing man to ransack the earth to find the wherewithal to counteract the pain He has sent, to outwit Him in His own design. Christian Science shows that to seek to assist omnipotence with inanimate matter, as though God needed anything, is not an act of worship.

The Christian Scientist does not say that to human consciousness there is no sin and no death, but he does affirm steadfastly that sin and death are the negations and not the realities of existence. It is getting inexcusable, except for dwellers in the remoter parts, to continue to circulate this elementary misconception. The outburst of frenzy that it called from the preacher is too regrettable to dwell upon. Perhaps it will suffice to point out that Jesus in branding Satan as a liar declared for all time the untruth, or unreality, of evil, and that Paul in writing to Timothy that Christ Jesus had abolished death was teaching precisely that truth which the critic says is an insult to Christ to teach today.

Christian Science is infallible. But that is not to say that Christian Scientists are so. An infallible rule of mathematics may be wrongly applied. But it is as well to bear in mind that, whereas care seems to be taken to have every case of failure widely advertised, only an insignificant percentage of the ever-increasing number of healings from sin and sickness reach the world. And these cases of failure are, almost without exception, cases that have been given up as incurable, men and women on the very verge of the grave. A literally vast number have under such circumstances been healed. The failure of others surely affords scant justification for the declaration by a Christian clergyman that it is murder to help people in their piteous extremity to turn to Him who healeth all our diseases.

The assertion that Christian Science is a "money-making thing" is a gibe at those who believe that the laborer is worthy of his hire, and accept a modest remuneration in return for their efforts to obey the Christ-command "to preach the kingdom of God, and to heal the sick." It certainly does not lie well on the lips of any one who accepts a substantial stipend for attempting to comply with only the less arduous half of the command. Allow me to conclude with a quotation from the first page of the Preface of the Christian Science text-book, "Science and Health with Key to the Scriptures": "Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

"WHICH GIVETH US THE VICTORY."

CHRISTIAN SCIENCE teaches unequivocally that sin, disease, and death are but different phases of the one evil against which its followers have enlisted, and that, therefore, these would-be destroyers of the peace and happiness of mankind are not to be submitted to, but that a vigorous warfare is to be waged against them to their ultimate overcoming; that this victory is not to be won by the weapons of material warfare, but through spiritual means, through consistent and persistent adherence to the truth of God's omnipotence and allness and an equally forceful denial of any and all claims of evil to place or power.

In view of the beliefs of mankind about life and death, good and evil, which have grown up during the centuries of mortal existence, it is not at all surprising, perhaps, that the world has combated the teachings of Christian Science in these matters. These mortal beliefs, however, are simply the results of education and tradition, and nothing is seemingly more difficult to supplant with truth than the erroneous beliefs which find entrance to mortal thought in these ways. For centuries before the time of Jesus, the popular belief was that death is real, inevitable, and of God's appointing, and notwithstanding the proof to the contrary which our Master gave, this belief has seemed to dominate the affairs of mortals until the present day.

Warning against this widely accepted but no less mistaken view, Mrs. Eddy thus writes in Science and Health (p. 30): "The educated belief that Soul is in the body causes mortals to regard death as a friend, as a stepping-stone out of mortality into immortality and bliss. The Bible calls death an enemy, and Jesus overcame death and the grave instead of yielding to them. He was 'the way.' To him, therefore, death was not the threshold over which he must pass into living glory." Again she writes (p. 45): "Our Master fully and finally demonstrated divine Science in his victory over death and the grave. Jesus' deed was for the enlightenment of men, and for the salvation of the whole world from sin, sickness, and death."

It stands to reason that if Christian Scientists successfully meet and master the first two of this "triad of errors," they will not have specifically to meet the other, which is the sum total or product of these two. In "Unity of Good" (p. 43) Mrs. Eddy points out that "the achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth;" but she does not mean that we are to let discouragement creep in to tempt us, instead of bravely doing our part toward this accomplishment. Every resistance to the temptation to succumb to the so-called inevitable evil, every victory won over sickness and sin, is a step toward the desired goal; by that much has the asserted power of evil been destroyed, its final overcoming assured; and death, which Paul tells us entered the world by sin, will no longer have even an excuse for being when sin has been destroyed.

Jesus' command was to heal the sick, and it is incumbent upon his followers to obey this command both in the healing of themselves and the healing of others. There is no royal road to salvation, and no better place for the accomplishment of this necessary work than where we now happen to be; no more appropriate and convenient time than the present. If death were of God's creation, therefore real, it would be a sin to try to stop its ravages. If it were a friend to usher mortals into a better and brighter state of existence, it would be wrong for them to rebel against it or try to avoid it. What is needed today is a more general and determined refusal to accept the belief that death can do anything either for or against man, and this refusal must be based upon the knowledge and understanding of God and of man's relation to Him as His image and likeness. Directly in line with this is the statement in Science and Health (p. 442) with which every Christian Scientist should be familiar and upon which he should stand, viz., "Christian Scientists, be a law to yourselves that mental malpractice cannot harm you either when asleep or when awake."

Herein lies our encouragement, our assurance of victory. Evil cannot gain entrance where Truth and Love *build the* defense. He who, as the apostle tells us, "*hath abolished* death, and hath brought life and *immortality* to light through the gospel," is our Wayshower, and it is through daily following in his footsteps, steadily and faithfully overcoming evil with good, that we too shall triumph, win our freedom through Him "which giveth us the victory" over sin, disease, and death.

ARCHIBALD MCLELLAN.

SPIRITUAL WORSHIP.

THERE are many who wonder why so long a period should have been given to the moral and spiritual education of the Hebrew nation by means of forms, ceremonies, and sacrifices. It is sometimes argued that these were of divine appointment, as would appear from parts of the Pentateuch, but the book of Deuteronomy lifts thought to a truer apprehension of the divine will and shows that spiritual worship means simply that exercise of the affections which is so grandly epitomized in the words of the great Teacher, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength;" and "Thou shalt love thy neighbor as thyself,"—a statement which called forth from a questioner the admission that to do this was "more than all whole burnt offerings and sacrifices."

All through the Scriptures we find that the word as given by the prophets called for Godlike living instead of ritualism, as witness the declaration of Samuel, "Hath the Lord as great delight in burnt offerings and sacrifices, as in obeying the voice of the Lord?" and again that of Hosea, "I desired mercy, and not sacrifice; and the knowledge of God more than burnt offerings." It may therefore be asked how sacrificial ceremonies ever came to be established. There can be no doubt that when Abraham prepared to sacrifice his son Isaac he believed that he was obeying a divine behest, but his very desire to be obedient at any cost brought the needed illumination, and when his son's life was spared he took another step away from the religion of his forefathers, which had sanctioned human sacrifices.

In the case of the Hebrew nation we must not forget that they had sojourned in Egypt four hundred years, and had to some extent imbibed the habits and customs of the Egyptians, as was evidenced by their later worship of the golden calf and other lapses into idolatry. It is more than likely that Moses found it difficult to lift the thought of his people to a purely spiritual worship, for we find them characterized in his writings as a stiff-necked and rebellious people. He therefore offered them a purer symbolic teaching, a system which demanded an unblemished offering sincerely made, in the hope that it would prove a schoolmaster to bring them to Christ; but, as Paul explains in his second epistle to the Corinthians, "their minds were blinded," and they failed to see that the law of obedience and sacrifice must be written by "the Spirit of the living God," not upon tables of stone, but upon the hearts of men, —the spiritualized consciousness, wherein the motives, affections, and aims turn instinctively to God and delight to do His will.

Digitized by Google

It is true that the sacrifices of the Hebrews typified the giving up of animality in obedience to the demands of Spirit, God, but, as we read in Isaiah, God had no delight in the blood of bullocks, of rams, or of goats. His requirement is forever the same: "Cease to do evil; learn to do well." On the subject of sacrifice Mrs. Eddy says, "Wisdom and Love may require many sacrifices of self to save us from sin" (Science and Health, p. 23); and on page 16 she writes that "a great sacrifice of material things" is needed in order to gain "advanced spiritual understanding."

To the Christian Scientist the healing of the sick in the Christ-way is an expression of true spiritual worship, whereby we draw near to God and realize His allness. This service calls for "absolute consecration of thought, energy, and desire" (Science and Health, p. 3), but "the true worshipers" have the Master's assurance that "the Father seeketh such to worship him," and never in vain shall we draw near to Him who is Life and Love.

ANNIE M. KNOTT.

THE CHRISTIAN GENTLE-MAN.

HE who said that "the true priest and prophet today must be every inch a man and a gentleman," expressed a clear discernment of the world's forever need. Much has been written of late respecting the exemplariness and worth of the life of a noted American. In his wealth of culture, his breadth of view, his capacity for usefulness, and his devotion to the communal interest, he has won recognition as a true nobleman. But in addition to all these virtues it has been said of him by many that he was a true gentleman, that "his heart was as simple as his life and glowed with kindliness;" that "it was a large heart . . . and extended its gentle warmth to all mankind." Here is a quality of greatness which, it would seem, were easily acquired, and yet though it is so simple, so entirely Christian, this association of strength with gentleness, of assertive vigor with unfailing kindliness, is all too seldom found outside of books and apart from the life of the great Nazarene.

We may have seen the fitting symbol of such a character in the giant cypress of the south, whose mighty arms are ever festooned with a haze of silvery moss. It is tremendous in its strength, and yet, clothed upon with grace, it is swayed by the pulses of the softest zephyr. Now and then a writer has framed the ideal in a character as strenuously winsome as "John Halifax, Gentleman," but men, and far too many Christian men, have made the mistake of confusing tenderness with effeminacy. The ambitious, energetic business man, who not only believes every day in doing things but proceeds to do them, may have a great deal more heart impulse than he consents to, but he schools himself to count on the effectiveness of push rather than on the might of love, and thus the gentleness to which men are called not only by the Master's mandate but by the heartache of humanity has not been given place, as it ought, in the home, the counting-room, the street, and this to professed Christianity's shame. Modern enthusiasm over "doing things" has been especially forgetful of that finer philosophy voiced in the perception of the psalmist when he said, "Thy gentleness hath made me great."

Men may have dignity of bearing and refinement of taste, they may show scrupulous consideration for every requirement of good breeding, and yet be altogether wanting in that largeness of heart which distinguishes the true cavalier, and which constantly finds expression in a golden-rule compassion. Indeed, the so-called cultured and refined are sometimes found to be joined hand in hand with sordid selfishness, the champions and supporters of a caste that is inherently selfish and cruel, indifferent to every personal merit, and capable of that contemptuous neglect of another's right which has fostered much of the world's skepticism. They have not yet learned that the spirit of the true gentleman is the spirit of love. Selfishness is the abiding fetter of just and gentle impulse, and this false self-interest is cast out in so far only as the Christ has entered in to rule conduct through a continuous right thought of man.

Today as never before, surely, the human heart is being moved with thoughts of a "comrade-kingdom," a democracy of good, and Christian Science is strengthening its hope by lifting our sense of what becomes a Christian man above the plane of manners, or social requirement, and centering it upon "the sweet amenities of Love" (Manual of The Mother Church, p. 40), upon divine Principle and its manifestation. It is substituting the scientific for the sentimental concept of brotherliness. No man can think of his fellows as he learns to regard them in Christian Science, without being impelled to recognize and honor that divine idea which is but veiled by materiality, and without feeling a compassion for every person and every creature which at once gives birth to a new spirit of thoughtfulness and consideration, and he who purposefully and persistently seeks to conform his bearing and address to the tender impulse of this higher, more unselfish, more Christian sense, will be gratefully remembered as one who

bore without abuse
The grand old name of gentleman.

JOHN B. WILLIS.

AMONG THE CHURCHES.

DETROIT, MICH.

Unique in that the splendid edifice has been erected entirely by "thank-offerings" and through none of the usual ways employed by church building committees to raise money, Second Church of Christ, Scientist, on the East Grand boulevard, just off Jefferson avenue, will open its doors for the first time on Sunday [Nov. 19]. The architecture follows the old Greek temple style, and while it is exceedingly simple in its lines, and without ornamentation of any kind, it is highly imposing in appearance. Situated on ground having about one hundred and fifty feet frontage and the same depth, the building has been placed a goodly distance back from the lot line and with twenty feet to spare on either side of its walls. It is built of cement and white stone and represents an outlay of about sixty thousand dollars.

The seating capacity is about six hundred, all on the ground floor, but this may be considerably augmented by using the foyer, which is connected with the auditorium by glass doors. The interior decorations are in old ivory, white enamel, gold stenciling, with Circassian walnut for woodwork and opera chairs. Beautiful bronze electroliers provide the lighting and soft brown velvet carpet lines the aisles. The reading platform has a background of white grill work, behind which the organ is placed, the instrument being run by electricity.

Second Church of Detroit was formed Jan. 30, 1910, with a membership of sixty-seven, and the members have met since its inception in a small hall on Jefferson avenue near the boulevard. The only other Christian Science church in Detroit is First Church of Christ, on Alexandrine avenue west, whose members helped the second congregation to build its new edifice.—*Detroit Times.*

FARMER CITY, ILL.

On Sunday afternoon [Oct. 15] the members of First Church of Christ, Scientist, held their first service in their own home, the former Presbyterian edifice on North Main street, which they bought in July and gave a general overhauling. A handsome porch was made in place of the vestibule and tower, the building was repainted and given a new roof, and the interior was completely renovated. The

Digitized by Google

main room has a seating capacity of about two hundred and fifty. The Scientists now have a most attractive church and have ornamented its vicinity by their enterprise.

On May 17, 1903, a little company of Scientists who had been holding services in private homes, in company with a delegation from First Church of Christ, Scientist, of Bloomington and a few others interested in Christian Science, met in Farmer City and organized a Christian Science society, to be known as the Farmer City and Mansfield Christian Science Society. It was decided to locate in Mansfield. Accordingly a hall was procured, known then as the Opera House. Here was held the first meeting June 21, 1903. This hall was transformed into a store, so the Ruckman Hall was rented. Here services were held from October, 1903, to October, 1904, when they procured the K. P. Hall and sojourned there one year. It was then deemed best to move to Farmer City, where the Sunday school room of the M. P. church was rented. In this place they also remained one year. They then obtained the Presbyterian church and began services in it in November, 1906, remaining until June, 1909, when that denomination decided to open their church to its own members. After that for a time meetings were held in the Opera House. When the Presbyterians found themselves unable to continue their services, they again rented the church, and on Jan. 23, 1910, the Christian Scientists again took up their abode there.

Feeling that the time had come that they should cease their wanderings, they began to look about for a permanent home. Upon investigation they found this church was for sale, and in July last this was purchased and work begun on it at once.—*Farmer City Journal.*

BALTIMORE, MD.

The corner-stone of First Church of Christ, Scientist, of Baltimore, on University parkway, was laid Monday, Oct. 23, in the presence of the trustees and the building committee. A sealed box, containing the Bible, the works of the Rev. Mary Baker Eddy, the church records, current periodicals, Mrs. Eddy's recent picture, and Sibyl Wilbur's "Life of Mary Baker Eddy," was placed in the corner-stone.

The site, facing Homewood, the new location of the Johns Hopkins University, was purchased Dec. 1, 1910, and is one hundred and twenty-five feet wide by one hundred and fifty feet deep. The location is an ideal one, being in the heart of a newly developed section, fronting on the boulevard on which some of the finest residences of the city are being erected. As it is the highest point in the neighborhood, it is visible for some distance in many directions. The ground was broken for the building in July last. The basement is expected to be ready for occupancy Jan. 1, 1912, and to be so arranged that it will not interfere with the continuous work on the building.

The building is one hundred and six by eighty-two feet, exclusive of a portico twelve by forty-eight feet, and is fifty-five feet high. In the basement will be class-rooms for the accommodation of about six hundred scholars. The main floor is divided into a vestibule twenty-five by forty-one feet, entered from the portico by three doors and divided from the auditorium by openings corresponding to the entrance doors, and the auditorium, unobstructed by columns, seventy-six by sixty-four feet. A gallery to seat over two hundred is located above the front vestibule, giving a seating capacity of twelve hundred in all. The entire building is of fire-proof construction of the most advanced type, the only woodwork being the doors and floors. The building, exterior and interior, is of Roman Ionic design. The exterior is of pure white Baltimore county marble, and the interior of cement and finished in hard wood. The cost, exclusive of the ground, is estimated at about one hundred and twenty-five thousand dollars.

Correspondence.

THE LECTURES.

HYDE PARK, MASS.

Judge Clifford P. Smith lectured on the subject of Christian Science Nov. 5. He was introduced by Frank B. Homans, who said:—

The thought prevails in the minds of many that Christian Scientists claim to be better than other people. This is far from true. Christian Scientists make no claim of being better than others, but they do know that they are better than they were before they became acquainted with the truth as revealed in Christian Science. They are better physically, morally; better friends, better neighbors, better citizens. The claims which Christian Scientists make are subject to positive proof by any one who will investigate. If it were not possible day by day to prove true every statement which Christian Science teaches, it would not be worth a moment's thought. If all the world should say it was good and right, and you and I could not prove it, it would be of little value to us. The only reason that every one does not accept and follow the teaching of Christian Science is because they misunderstand it and hence are unwilling to put it to the test.—*Correspondence.*

WEEPING WATER, NEB.

The lecture at the Christian Science Church by Bliss Knapp Monday night [Oct. 30] was well attended. The speaker was introduced by Troy L. Davis, who said:—

For centuries the world has been striving to solve the problem of truth. The question Pilate asked, "What is truth," has been asked all down through the intervening centuries. Mankind have ever been searching for that truth which would bring them freedom from their sin and suffering. Every day thousands of appeals from hungering hearts go out to our heavenly Father, beseeching His loving care and guidance and asking to be shown the way to follow Him.

Jesus gave a very plain and precise answer to this question when he said, "I am the way, the truth, and the life: no man cometh unto the Father, but by me." And what did Jesus do? He went forth preaching the gospel, healing the sick, comforting the sorrowing, and reforming the sinner. This is what Christian Science is striving to do, and that it is meeting with a great measure of success is evidenced by the hundreds of thousands who have been healed, and who stand as living monuments to the virtue and power of Truth to save from sickness and sin. Truth is unchangeable. God is the same,—"yesterday, and to day, and for ever." The truth Jesus taught and practised over nineteen hundred years ago, on the Judean hills and by the sea of Galilee, is just as available and just as practicable today as it was then, when God's law is recognized and obeyed.—*Weeping Water Republican.*

NEW YORK, N. Y.

Judge Clifford P. Smith lectured on Christian Science in the edifice of First Church Oct. 31. Every seat was taken, all standing-room occupied, and over one hundred people were unable to gain admittance. Richard P. Verrall in introducing Judge Smith said:—

It gives me pleasure to welcome you here this evening in the name of this church, and to tell you how gratifying it is to see so large and representative an audience gathered together to listen to a lecture on Christian Science. Less than twenty-three years ago, in February of 1889, the first lecture on Christian Science ever given in this city was delivered by Mrs. Eddy, the Discoverer and Founder of Christian Science, in Steinway Hall. Since that time the movement has spread so extensively that today a Christian

Digitized by Google

Science board of lectureship, consisting of fourteen members, is kept constantly engaged in responding to calls from upward of fourteen hundred Christian Science churches and societies in this country and abroad.—*Correspondence.*

MARION, OHIO.

The assembly room of the Court House was crowded with an enthusiastic audience Thursday evening [Oct. 26], when Frank H. Leonard spoke on the subject of Christian Science. The Hon. Grant E. Mouser introduced the speaker, and in speaking of the study of Christian Science, said:—

One of the greatest evils of the age is that we forget God and remember only ourselves. Selfishness, bigotry, and egotism have ruined many lives. If Mrs. Eddy has done nothing else in her ministry than to take us out of ourselves, she has made herself immortal.—*Marion Mirror.*

HELENA, MONT.

Virgil O. Strickler of New York lectured last evening [Nov. 3] at the Unitarian Church before a large audience. The lecturer was introduced by Wellington D. Rankin of this city, who said in part,—

If Christian Science is not founded upon Principle and Truth it cannot live. Untruths clearly recognized as such cannot injure. Truths clearly recognized are powerful. If Christian Science be founded upon Principle and Truth, there is not one of us who can afford to fail to recognize its fundamental teachings. We can, then, well listen tonight, without bias and without prejudice, but with fairness, to the lecturer who has come here to tell us authoritatively some facts about Christian Science.

Helena Record.

PALO ALTO, CAL.

A large audience greeted Bliss Knapp of Boston at the Armory last evening [Nov. 6] where he gave his lecture on the teachings of Christian Science. He was introduced by Guy Leroy Stevick, attorney and Pacific coast manager of the Maryland Trust and Deposit Company, who said in part,—

You are anxious, I know, to hear the lecture of the evening; and anything which I may say will be appreciated in proportion to its brevity. I want, however, to take advantage of the opportunity to say one or two things in appreciation of what Christian Science has done for those who are nearest and dearest to me. I am not a Christian Scientist; I say this not because I fear that you may think I am, but because I fear that I may say something which is not scientific and which should be charged not to Christian Science but to me personally.

The first thing to which I want to bear witness is that Christian Science meets every need of the family. It so happens that our family is somewhat larger than the average, and after some years of experience I can say confidently that there is no occasion, no illness, no circumstance which Christian Science does not meet fully and completely. The second thing to which I want to call attention is one that has always appealed to me with particular force. Christian Science is not merely a cure for illness, for physical ailments. Its chief merit to me is its effect upon the thoughts and lives of its people. If I were a Scientist, I imagine I should say that there is no distinction in this; that physical well-being follows mental well-being; or that there is nothing but mental being. I have not advanced beyond this distinction; and the chief glory of Christian Science to me is its effect upon the thought and life of its adherents. It is a religion of hope and contentment as distinguished from a religion of fear and discouragement.

An objection which I have often heard raised to Christian Science is that its followers are disposed to idolize their Leader. We of the twentieth century ought to be the last to raise that objection. This is the age of the greatest scientists the world has ever known; Edison who made a new world of electricity, Bell, Marconi, Maxim, names which will endure for ages; and yet after these names are forgotten the influence of Mrs. Eddy will be felt around the world. California has just given to women some measure of justice; and we ought to be the last to object to giving honor to the woman who is the greatest scientist of the age.

Palo Alto Times.

SALEM, ORE.

At the Grand Opera House Friday evening [Nov. 10] a large audience listened to the lecture on Christian Science given by Virgil O. Strickler. The speaker was introduced by the Hon. F. A. Turner, reporter of the supreme court of Oregon, who said:—

I deem it an honor as well as a pleasure to be permitted to introduce to you the distinguished speaker of the evening. The time has come when men of every creed and men of no creed should welcome truth, come in whatever garb it may. As for myself, I am only one of a great multitude who believe that anything which brings about good results is entitled to the proper respect of all fair-minded men.

It has been well and truly said that Christian Science needs no apology from any one. The old maxim that a grain of proof is worth a pound of argument, is being demonstrated every day in the year by living proof, walking up and down the streets of cities, towns, and villages the world over, in the shape of men and women who have been rescued by divine Love from pain and sorrow, from disease, and from the grave. The great Teacher when on earth gave us one universal rule by which to test religion: "By their fruits ye shall know them." And he said, "He that believeth on me, the works that I do shall he do also." I am in favor of anything that brings happiness where there was sorrow; that uplifts the fallen; that binds up the wounds of mankind; and to me that religion is best which shows the noblest results and can do the most good.

Oregon Statesman.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Akron, Ohio.—Frank H. Leonard, Colonial Theater, 3 p.m., Jan. 28.

Centralia, Ill.—William R. Rathvon, Pittenger Opera House, Jan. 23.

Chicago, Ill. (Fifth Church).—William R. Rathvon, Church Building, 4840 Madison avenue, 3 p.m., Jan. 28; 8 p.m., Jan. 29 and 30.

Dallas, Tex.—Virgil O. Strickler, Church Edifice, Browder and Cadiz streets, Jan. 30.

Detroit, Mich. (First Church).—Bliss Knapp, Detroit Opera House, 3 p.m., Jan. 28.

Fairfield, Iowa.—Virgil O. Strickler, New Armory, Jan. 23.

Grand Forks, N. D.—Bliss Knapp, Church Edifice, Jan. 23.

Grand Haven, Mich.—Frank H. Leonard, Unitarian Church, Feb. 2.

Leeds, Yorkshire, Eng.—Bicknell Young, Town Hall, 3 p.m., Feb. 4.

London, Eng. (First Church).—Bicknell Young, Chelsea Town Hall, Jan. 30.

Manchester, Eng. (First and Second Churches).—William D. McCrackan, M.A., Free Trade Hall, Peter street, Feb. 6.

Macon, Ga.—William R. Rathvon, City Auditorium, Feb. 2.

New London, Conn.—Rev. William P. McKenzie, Lyceum Theater, 3 p.m., Jan. 28.

Rocky Ford, Col.—Virgil O. Strickler, Grand Opera House, 3 p.m., Jan. 28.

TESTIMONIES OF HEALING.

On my way home from a Thanksgiving service I particularly regretted that I had not been among those who had taken advantage of the opportunity to render thanks to God for all the blessings received since coming into Christian Science. Then, like an illumination, it came to my consciousness that there was still a way open, by sending my testimony to the *Sentinel*, which would enable me to sound God's praises throughout the entire world.

When Christian Science was first offered to me, I received instantaneous help in the following manner: I was singing at the time in Australia with a Grand Opera company, and through fear of climate and belief in overwork my voice began to fail me. I was obliged to have the doctor give me electric treatment every time I had to sing. One day (when I was announced to sing Lenore in "Il Trovatore" that evening) I found myself unable to speak above a whisper, and realizing that even the electricity could not tide me over this time, I was in despair and knew I must immediately inform the management.

The wife of our leading tenor happened to be stopping at the same hotel, and she was a Christian Scientist. Hearing of my trouble, she at once came and asked me to permit her to help me by giving me a treatment. She told me I would be in condition to appear that night, and said I need not advise the management to the contrary. I was absolutely ignorant of what constitutes the healing power of Christian Science, as this was the very first time I had ever heard it mentioned; but I remember walking in the park that afternoon with a couple of friends and passing close to a spot where I perceived this lady and her husband deeply engrossed in the study of Science and Health. I jokingly remarked, "Look at those two people there, they are treating me, and think they can make me sing tonight." Upon my return to the hotel this lady came in again to reassure me, and told me not to hold any fear; that she knew divine Love would meet my need. I told her that on the contrary I did not feel the least bit improved, and that she must be crazy if she thought I would risk my reputation by appearing before the public in that condition.

Strange as it seemed to me then, I felt impelled by some unseen power to go to the theater and make up for my part. By the time the orchestra struck up I found myself ready to sing and eager to appear. The performance passed off perfectly, my voice ringing clear as a bell. I forgot to mention that the lady and her husband had remained on the stage, in the wings, and when they came up to congratulate me and began to talk about the beautiful demonstration that had been made for me, I was almost rude to them, and from that time on I refused to listen to anything pertaining to Christian Science. In my ignorance I turned away from the life-giving Principle, and during the following two years I was treated by many eminent European specialists, who pronounced my case incurable, their diagnosis being paralysis of the vocal cords.

I returned to America broken in spirit and without hope in this world. In this condition, about a year later, I turned to Truth as a last resort, and I not only recovered my voice but gained a concept of God as one whom I could love and understand. My healing was slow, but I can honestly say I rejoice in the fact, for it forced me to study and gain an understanding of divine Principle, which otherwise I would not have done. I am now trusting to Truth to solve the greatest problem of my life, but I am standing still, knowing that I shall see the glory of God revealed. My heart is overflowing with gratitude to God, also to our beloved Leader, Mrs. Eddy, for my spiritual regeneration. Words fail to express my gratitude for the Christian Science literature, especially the *Sentinel*, which has indeed been my "manna" day by day.

CECILE LORRAINE, Chicago, Ill.

Before hearing of Christian Science I had been suffering for over eighteen years from cariosity, and for the greater part of that time had been under the treatment of eminent physicians in Europe, who tried in vain to heal that which they pronounced incurable. After having seen many proofs of the healing power of Christian Science, which at first had seemed incredible, I applied for treatment for the carious bone, and having received the assurance from the practitioner that this disease could be cured, I returned from my first visit in a very hopeful state of mind. Every day I expected the healing, but the close examination of the wound, which I made every night, showed no advance; nevertheless I kept on having treatment from time to time. I continued for some three years, but the condition had not improved, and I had left the practitioner and gone to a friend who claimed that I did not work rightly. After some months I learned that I was making the mental impressions of the disease stronger by looking continually at the material state, while Science and Health teaches that we must "look away from the body" (p. 261). Although this was a step forward, my healing came only after I had learned that "now are we the sons of God," as St. John says, and that man is "not material; he is spiritual" (Science and Health, p. 468), the image and likeness of God, the perfect One. Then, as I declared this truth continually to displace the sickly mortal sense or concept which I had entertained, the healing was realized.

While in Holland, not so very long ago, I was swimming, and in diving I struck my head on the bottom. As I had kept my hands at my side, the shock was very severe and I received a sense that all was over with me. But in the same moment I remembered the Science I had learned, and started to repeat the "scientific statement of being" as found in our text-book (p. 468). I came to the surface, and after a short time I managed to get out of the water. I had terrible pain in the neck, chest, and shoulders, so went home at once and began to read from Science and Health, with the result that after three hours' reading I went to bed free from pain. The next day, as usual on Sunday, I went to teach a Sunday school class and did my work as usher without having the least trouble from the experience of the night before. In the evening, sitting alone in my room, I thought of how I had escaped a serious accident, if not death, through the help of Christian Science. At this time I had planned to cross the ocean, also to visit friends in London, but it suddenly occurred to me that I might have received an internal injury, and I began to be troubled about undertaking the trip. This mortal reasoning caused much fear, and the pain returned. In a few minutes I felt unable to move either arms or neck, and I could not overcome this. By the next day I was unable to move the upper part of my body without great pain. I then went to a practitioner, who helped me to see things in the proper light. Learning what had brought on this condition, it was soon overcome by driving away the erroneous sense with the light of Truth, and I have never since experienced any trouble from this source.

It is needless to say that my heart overflows with thankfulness to God, also to Mrs. Eddy for the revelation of this great truth by which man is enabled to have dominion over all things. I once more wish to state that I have not had the slightest trouble or pain from my foot, even during atmospheric changes, which formerly caused me severe pains.

I send with this my father's testimony. He became interested in Christian Science in 1906, when he was about sixty-seven years of age. After being cured of an ailment for which he had used medicine during fifty years, he started to study the English language, for he wanted to read our text-book for himself. The greater part of his spare time he now uses for the study of Christian Science. He is as healthy and active as a man of fifty. It is a great pleasure

Digitized by Google

to send you the statement which he wrote, and which he asked me to send to the Publishing Society together with the other letters of verification.

CORNELIS VAN RENNES, Hoboken, N. J.

In 1887 my son Cornelis, born in 1878, had tuberculous disease of the lungs. His condition improved, but my brother-in-law, a physician in Amsterdam, where my son lived, wrote me that when my son came home I should consult a surgeon. I did so, and the surgeon in consultation with my brother-in-law insisted that my son must have the great toe cut off, but my brother-in-law objected to this. I heeded his advice, and the surgeon took leave in anger. My son was cared for at home, and later I sent him to the country for a year, and still later he went to Germany to take mineral baths. The German doctor assured me that my son would be cured, but although he was better, he was not healthy. At the time my son was a conscript he received a certificate from another surgeon, which I herewith inclose, showing that his toe was not cured. When he came to Christian Science he had treatment, and his toe was much better, but often the wound would open. At last my son had class instruction, and he is now perfectly healed since more than a year.

I also wish to tell what Christian Science has done for me. Fifty years ago I was ill, and continually taking medicine and using other material means. Four years ago I left off taking medicine and had Christian Science treatment. After two weeks the practitioner wrote to me, saying that now I could help myself. I tried to use the understanding I had gained of Christian Science; the result being that I am cured of many ills. An accident to my eye was perfectly overcome at the same time. I know from experience that my strength is in God and not in what I eat, and that "the consciousness of Truth rests us more than hours of repose in unconsciousness" (Science and Health, p. 218). I am more active than when I was much younger, and I never take medicine now. God has helped me!

A. F. VAN RENNES, SR., Utrecht, Holland.

Following is a translation of the medical certificate which Mr. van Rennes mentions.—EDITOR.

Mr. Cornelis van Rennes has absolute anchylosis of the metatarso-phalangeal genricus of the left big toe, resulting from a tuberculous osteomyelitis, whereas at this time the tubercular process in the skin has not quite come to a healing.

(Signed) J. E. VAN DER MEULEN, Utrecht.
Oct. 11, 1897.

I wish to express my gratitude to God, also to our beloved Leader, Mrs. Eddy, for the benefits I have received through Christian Science, as well as for the help it has been to my family. I was healed of severe stomach trouble over three years ago. I have abandoned glasses since coming into Science, and can see to read fine print without them. My disposition also has been changed. Although past sixty I am more active than for years past. I am truly thankful for "Science and Health with Key to the Scriptures." It explains and unfolds the true meaning of the Bible so clearly that I never tire of studying it. The daily study of the Lesson-Sermon is a great help to me.

JAMES JAYNES, Sidney, Mich.

Moved by a genuine spirit of gratitude to Christian Science for the prompt recovery of our child, then aged seven months, from what seemed to be certain death, we most joyously send this testimony. Stricken with acute lung trouble in a most severe form, the child rapidly sank into a comatose condition. With the heightening of fear we hastily summoned help in Christian Science. The practitioner to whom we sent being at that time engaged elsewhere, we were recommended to try another, with the assurance that children were especially responsive to the healing influence of Truth. We sent immediately for the practitioner who had been recommended, and received word that she would be with us in half an hour. The child's condition in the time that intervened had developed to such a degree that we had almost given up hope, and had already begun to nerve ourselves for death's seeming victory, thinking that her visit would be of no avail.

Promptly at the time set the practitioner arrived, her face beaming with love and confidence as she greeted us with assurances that all would be well, and that the baby could not be in better care than that of God. In a little over an hour's time the child was not only well on her way to a speedy convalescence, but there was the most marvelous recovery that we had ever witnessed. It is impossible to express the joy and the gratitude to God which possessed our hearts as we contemplated the wide contrast between this condition and the extreme danger in which she seemed to be but a short time before. She had about four or five treatments after this, but in less than a week she was entirely healed.

Baby is now a fine strong girl, and enjoying perfect and continuous health. We feel profoundly grateful to Mrs. Eddy for having reached the high estate in which such essential and august truths could be revealed to humanity.

MRS. FRANCIS E. GAZZOLA, San Bernardino, Cal.

Although I have been enabled to overcome many ills through Christian Science, and have felt the joy and peace which come from a faithful study of it, I recently became worried and unhappy, in fact the clouds of error seemed to shut out the light of Truth. In that mental condition I became seriously ill with a throat trouble. From Saturday night until Thursday morning I tried to break the cruel dream myself, but when I could not swallow even liquids, and the pain was great, the fever high, my sister telephoned to a practitioner for help. In a short time the fever left my body cool and normal, and a sweet sense of hope and peace came to me. As I realized God's great and tender love for me, suddenly the pain ceased and the swelling passed into the realm of nothingness from whence it came. In just a few minutes the entire manifestation was eliminated from my consciousness, and it seemed that heaven had truly come down to earth.

This experience has meant much to me, as it has made me more watchful of my thought and proved again the efficacy of Christian Science, the Christ-method of healing disease. I love God better than I ever did. I am also thankful to and feel the greatest reverence for dear Mrs. Eddy, our revered Leader.

MISS PAULINE MUIR, Lexington, Ky.

[Translated from the German.]

Sincere gratitude impels me to express the joy I feel for all the good which I have experienced through Christian Science. In February, 1911, I was suddenly taken ill with a hemorrhoidal trouble in a severe form, and I expected a serious outcome at any time. The pain was unbearable, and I was prepared for the worst. All the while I was ignorant of God's goodness and nearness, as I had no idea of Christian Science, never having heard the name mentioned; but, while on my bed of suffering, a Christian Science practitioner came to me with words of comfort and told me that I could recover my health.

Little did I know how quickly I was to be freed of my suffering, but during the following night, which I had been dreading, I suddenly experienced relief and slept for a time. When I awoke I recalled the words of the practi-

Digitized by Google

tioner, and an inner voice told me that I was healed. Next morning I was able to raise myself up in bed without assistance, to the great surprise of the members of my family, as previous to this two persons had to help me whenever I wanted to change my position. After I got up I realized that the pain had completely disappeared. I felt as if newborn, and hardly knew how to give thanks to God for His love and goodness. On that day I was able to do light housework, and on the following day attended to all my duties. From that time on I read the German translations of the Christian Science literature, and my vision of Truth was enlarged through the explanations therein given. Now I know that with God's help nothing is too difficult for accomplishment, and that we may partake freely of His fulness.

I am reading *Der Herold der Christian Science* diligently; it helps me to overcome mental struggles and brings me peace and comfort. After listening to the German reading of the Bible-Lessons in the Christian Science Society in Dresden, I began to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am not yet familiar with the English language, but I apply myself to the task, knowing that God is Love and is man's intelligence and that He is my help. Many are the faults which I have to get rid of, especially a gloomy mental disposition and the belief in limited circumstances, but I know that Christian Science will help me to direct my thoughts on good alone, for thus only can we overcome disease, sorrow, and worry. Words are inadequate to express my gratitude to God for having led me to find healing through Christian Science, which was given again to the world by our revered Leader, Mrs. Eddy.

FRAU HEDWIG WORRESCHK, Dresden, Germany.

Before I became interested in Christian Science I had been a slave nearly all my life to fear and worry, and I do not think two harder masters can be found. Through the understanding which I have gained from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, this bondage has been broken, and I am striving every day to know that these beliefs have no real power.

Before we had any knowledge of Christian Science, my husband told me many times that he felt I would have a very bright crown in heaven, for in our old understanding we thought the greater my ills and suffering, the brighter would be my reward, as lingering sickness was supposed to be a source of purification. Little did I understand that it was all within myself, but thought it was God afflicting me. I truly regret to say how erroneous my concept of God had become, but in those days God had grown to mean very little to me. I had almost ceased to pray (as God had never answered my prayers to be made well and strong); but how different is my concept now, for through Christian Science I have learned to think of God as my dear heavenly Father; as Love, who gives all good, and could not send sin, sickness, and disease, for He knows no evil. If I had nothing else to be thankful for, I could sing a pean of praise to have learned of this one truth, though this is far from being my only blessing.

From childhood I had been troubled with severe headaches, supposed to be hereditary, but through Christian Science I found that I did not need to suffer thus. What a blessing it would be if all mankind could realize that they are freeborn and do not need to suffer from inherited diseases! I know now that fear brought on many of my severe headaches, for in my ignorance of God's law I generally suffered if any asserted health law was broken, the headaches sometimes lasting from four to six days, during which time I had to lie in a darkened room, enduring the most excruciating pain, from which many times my friends thought I could not rally. I was seldom free from the pain, and in addition to this many other ills appeared,—most severe stomach trouble (at one time I lived on dried bread and water for six months), very weak heart, kidney, liver, and bowel affections, and twice I had a complete collapse of the nervous system.

I turned many ways for healing, including travel, all kinds of baths, movements, and diets. But I did not gain health, or at best only a temporary relief, so that when a dear friend begged me to try Christian Science, I could not see any hope, as everything before had failed. When I turned to God, the great and only physician, my healing came, and what a transformation to have health, peace, and comfort given me, none can understand save those who have gone through similar conditions. I can truly say I rejoice that I was not healed by *materia medica*, for I might not otherwise have learned of Christian Science, which has brought the truth to me and mine, and this is more than the physical healing, although I was such a great sufferer.

I thank my heavenly Father, that through Him our dear Leader has been able to give us these words of promise: "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). To me, our daily newspaper, *The Christian Science Monitor*, is wonderful, but it could not be otherwise on account of the high ideal back of it. It is so full of "good things" that it is like a daily magazine, instead of a newspaper. My sincere desire is that all may share in its blessings, its purity and wealth of information.

MRS. VIRGINIA A. WOLFE, Pittsburgh, Pa.

May I be permitted from this most westerly port in India to join in the chorus of thanksgiving and pean of praise resounding through the world and reechoing far and wide the boundless heartfelt gratitude of thousands who have been benefited corporeally and spiritually through the potent instrumentality of Christian Science. This truth reveals the almighty power of God, good, the all-wise, all-loving All-in-all, the ever-present "help in trouble," who did not fail me and mine in time of need, as the following lines will doubtless show.

In December, 1910, I seemed to be completely prostrated for three weeks by a severe attack of bowel complaint. I could not sleep, ate next to nothing, and was reduced to a mere shadow. To please my wife, I called upon a medical man, who gave me some medicine, three doses of which I took with nausea, then threw the rest away, resolving to trust to the Almighty, through Christian Science, for a cure. For a fortnight longer I lingered, suffering and apparently wasting away; but I was praying patiently and confidently for help, through means of Christian Science treatment, in which I was but a novice indeed, all my knowledge being derived from the perusal of the Christian Science *Sentinel* and *Journal*, a few copies of which I was able to procure from a local library. These valuable periodicals proved a perfect godsend, and I determined to become a Christian Scientist. A few weeks later I sent to the clerk of The Mother Church for an application form for membership, and this I duly received.

On opening the packet and reading the letter enclosed I was struck by its tone of sincere Christian charity, friendliness, and generosity to an utterly unknown distant stranger, for the writer said, "I am asking The Christian Science Publishing Society to send you some of our literature," etc. Oh, how thankful I was for that! It was a boon indeed to me, and I shall certainly circulate the copies of the *Monitor*, *Sentinel*, and *Journal* so kindly and gratuitously sent me, and which I have started circulating among those interested in Christian Science. God bless the donors!

On reading the church tenets and rules of The First Church of Christ, Scientist, which were enclosed in the packet I

Digitized by Google

received on that eventful Sunday morning, I perceived their truth, beauty, and Christlike wisdom. I read and meditated on the potent, nay, inspired words of Truth, Life, and Love embodied in those six short paragraphs. One sentence, "We solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus," so pithy and profound, sank deep into my consciousness, and I solemnly promised the same and that I would devote my life to Christian Science with the help of that omniscient, omnipotent, omnipresent divine Mind. I walked about for a couple of hours (a feat in my then weak state), feeling no fatigue and not noticing the flight of time till the calls of hunger made me think of the wants of mortal man. I sat down to breakfast with an appetite, and partook of the best meal I had had for nearly a month.

After having a good sound sleep that night (a most unusual occurrence with me), I was up very early next morning and away for a walk of some four miles. This marvelous cure and sudden restoration to health and vigor I hereby do solemnly ascribe to the blessing of God Almighty through the instrumentality of Christian Science. Other blessings my sons and I have since received, and in token of our gratitude to God, also to dear Mrs. Eddy, we have resolved to become Christian Scientists and loyal members of The Mother Church.

C. J. WADDINGTON, Cincinnatus Town, Karachi, India.

It is with deep gratitude to God that I relate something of what has come to me and my family through Christian Science. In March, 1909, I was suddenly taken with a very severe attack of lung trouble. We had been in Science then about a year and a half, and this was the first time we had to meet what seemed a severe illness. After I had suffered distressing pain and had violent coughing all night and a half day, I was convinced that my efforts were not giving me relief, so I called for a Christian Science practitioner, who treated me at once. I was so relieved by the treatment that I could listen while she talked to me of God's love for His children and of His ever-present help in time of need. She left me with these beautiful thoughts and I had a very good night's rest.

My healing was not as quick as in some cases, as there was a good deal of fear to meet, but I gained both physically and spiritually every day. We have also had many other beautiful cases of healing in our family, through Christian Science, and for all these, as also for the spiritual uplift which I have had, I am deeply grateful to God. I am also very grateful to our dear Leader, Mrs. Eddy, for this blessed truth, which reaches suffering humanity and all who are seeking for the truth.

MRS. S. J. NICHOLS, Kansas City, Mo.

[Written for the *Sentinel*.]

CONSCIOUSNESS.

ALICE HARRIMAN.

ART conscious of the first faint flush of dawn,
When sleepy night draws back the shades of morn?

Art conscious of the first pure shaft of light,
That makes each trembling dewdrop diamond bright?

Art conscious of new life, ambition, hope,
When, hastening onward up the hindering slope,

Thou risest o'er the mists, and lo! the sun
Warms all the world, and thou with God art one?

This consciousness is life. O wakening soul,
Behold the sun of Truth—and thou art whole!

FROM OUR EXCHANGES.

[Rev. Thomas Phillips, D.D., in *British Congregationalist*.]

We are in the midst of a great social movement, and in some respects it compares unfavorably with the evangelical revival of the days of John Wesley. The great leader sought to make the people holy; we seek to make them comfortable. By giving them holiness he to some extent gave them comfort; but if we endeavor to give them comfort without holiness, we shall end by giving them neither. I do not say that the social movement has no kind of conscience behind it, or that there is not an imperative need for improving the conditions of our national life. All I say is that if we put all the emphasis on high wages and short hours and happy homes, and ignore the necessity for a regenerated character, we shall end by giving the people nothing at all, and their last state will be worse than the first. Our appeal to young men and women is this: Your first business is to be true and loyal to the highest and the best, clean and straight, holy and stainless. If you are that, and all that, then comfort and happiness will take care of themselves. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

[*Congregationalist and Christian World*.]

If your own convictions are well based, you need not fear that they will be overthrown by looking into the minds of honorable persons who have reached different conclusions from yours. That which may well alarm you is the discovery of a feeling of resentment against one who has dared to consider something which you have not accepted as true. Especially be on your guard against a desire to silence one who has expressed a religious experience or opinion out of harmony with yours. Such a desire cherished is a sign of advancing imbecility, whether your years are a score or fourscore. No senility is so hopeless as that of one who is satisfied with his knowledge and sure of his opinions. Foster every genuine religious experience. It continues youth of life into farthest maturity of years. To those having the vision of God, the universe is always revealing the new and marvelous, and their eyes have the directness of sincerity and the clearness of childhood. Cultivate this vision. Keep near to God, and resist whatever draws you apart from Him, under whatever guise it comes.

[*Outlook*.]

In our blindness, we talk of a mechanical age, and arraign the wonderful devices and instruments which science has put into our hands as if they were the enemies of our spirits, and do not see the finer uses, the services to the spirit, of these wonderful contrivances in which the genius of the discoverers and inventors finds its inspiring play. We speak of the railway, the steamship, the telegraph, the telephone, the printing-press, as if these marvelous extensions of our senses were conceived in materialism and born in iniquitous greed; and we do not see, until time has interpreted the meaning of these wonders, that they have made the whole world a neighborhood, and brought together men who live at the ends of the earth, and made us aware of the conditions under which women and children live everywhere, and brought home to us through picture and book and spoken word the misery and the injustice in the earth, and, for the first time in history, laid the sorrows of the world on our shoulders, and driven home to our consciences the awful truth that we are literally our brothers' keepers.

[*Christian Advocate*.]

Paul furnishes a good motto for the new year. Here it is: "Reaching forth unto those things which are before." Fear not the future. Our largest and richest interests are

Digitized by Google

before us. The prize of life is in the future. Those who glory only in the past are not to be envied nor imitated. They will never help to make the world better. They declare that the former days were better than these. They are forever talking about "the good old times," disparaging the present and the future. They have no bright anticipations for themselves, for the church, for their country, or for the world. All things seem to them to be going backward. The trouble is they are going backward. Their backs are to the future and their eyes upon the past. No one will ever make satisfactory progress in that way. Such men are blind to the future and must needs stumble. Those who walk backward always stumble. The Christian runs the race of life with his face to the future. He lives a life of anticipation and hope. However good the past may have been, still better days are coming.

[*Christian Register.*]

In many ways we are repeating the experiences of the early Christians. We describe it in a different way, but they who are wise among us know that within the last fifty years we have received new revelations of the divine wisdom, as real and as authoritative as if they had been given on the mount that burned with fire. These revelations have been as revolutionary as any that upheaved the empire of Rome and began a new dispensation of religion in the Gentile world. One thing has greatly changed. The coming of the kingdom of God is announced, but the scene of its triumphs has been transferred from heaven to earth, and our expectations and plans concerning it are transformed into rights and duties which have their ends in things terrestrial and not in the realms of the unseen and the eternal.

[*Christian Intelligencer.*]

A part of the Christmas message is that the gaieties of life are redeemable and that the merry heart need not be hostile to the sense of God's presence and favor. Every relationship of life, every duty, all pleasure and business, is redeemable. We need not fly from the world. We are to be in it, yet not of it. We can mingle in all its affairs and interests, doing our share of the world's work, mingling and doing unto God in the power of the redeeming Christ. Our lives are to be the reincarnation of Christ, begetting everywhere the birthday of a new hope.

[*Universalist Leader.*]

We are sometimes told that a minister ought not to think chiefly of his salary, since it is his business to do good. That is strictly true; but not more true of the clergyman than of the farmer, the mechanic, the merchant, the physician, or the lawyer. All service is divine; every task that ministers to human welfare, whether it be the making of shoes, the weaving of cloth, the writing of books, or the preaching of sermons, is sacred: and whatever our life-work may be, we ought to find our best inspiration in the knowledge that by it we are serving God in making the world better and happier.

[Rev. Andrew Gillies, D.D., in *Zion's Herald.*]

This is the greatest of the Christian centuries. It is the greatest in man's insight into truth, in the application of truth to the life of the race, and in spiritual power and promise. With all its faults, this period is better religiously than was any past period with all its virtues. The gospel of Jesus Christ has been interpreted more clearly, spread more widely, and embodied more completely in the life of the race than ever before since he who proclaimed it came to the earth.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 5 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

4.00	0: 16	5	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

President Taft in a message to Congress tells how millions of dollars annually can be saved in the operation of the governmental machinery by "economy and efficiency." "What the government does with nearly one billion dollars each year," says the President, "is of as much concern to the average citizen as is the manner of obtaining this amount of money for the public use." The President proposes that all administrative officers of the government in the departments at Washington and in the field be put under civil service; be removed from the influence of politics, and that their terms of office be not limited as at present to four years. Such officers should not be appointed by the President with the necessity of Senate confirmation, but upon merit. His message was based upon a report of the economy and efficiency commission created by act of Congress a year and a half ago.

Senator Smith and Representative Bartlett, both of Georgia, are working on a plan for helping the cotton farmers of the South through the regulation of the New York Cotton Exchange. They propose to introduce a bill in Congress, and press for its passage, requiring the exchange to deliver the same grade of cotton that is sold on future contracts in the exchange. The Georgians believe Congress has the power to enact legislation denying the Cotton Exchange and its members the use of the United States mail if they persist in selling one grade and supplying another grade of cotton. Moreover, they believe it possible for Congress to enact legislation that will also deny them the use of the telegraph wires for transmission of their business on the same basis.

Toledo's new Museum of Art was formally opened with dedicatory exercises and an inaugural exhibition last week. The new building is of white marble, the style being Greek Ionic of the Periclean period. It has a frontage of two hundred feet and is located in the center of the city in a grove of forest oaks. The building and grounds represent a total expenditure of five hundred thousand dollars, one half of which was the gift of the president of the museum, Edward Drummond Libbey. The remainder was secured by popular subscription in sums ranging from ten cents to ten thousand dollars. All classes of citizens contributed. The museum will be opened absolutely free from debt.

An appropriation of twenty-five million dollars and a guarantee of a similar amount for steamship securities are requested of the state by the directors of the port of Boston, in addition to the nine million dollars made available for the development of the waterfront and transportation facilities last year. This request is made in order that the directors may take over the railroad-steamship terminals on the harbor and existing connections which they may deem necessary. Three million dollars for a big floating dry dock capable of docking vessels up to a length of nine hundred feet is also asked.

The constitutionality of the employers' liability law passed by Congress in 1908, was upheld by the supreme court of the United States in all cases before it. The court also decided that state courts may enforce that act when local laws are appropriate. This was the second and finally successful attempt of Congress to change the old common law rule that an employee of a common carrier could not procure damages for injuries received in his employment when the injuries resulted from the negligence of a fellow servant.

The activities of J. P. Morgan and George W. Perkins in connection with the organization of the International Harvester Company were urged before the House rules committee as reasons for an investigation of that combination. It was declared that harvesters that cost Nebraska farmers one hundred and thirty-five dollars are delivered in Australia for ninety dollars. It was also alleged that it was controlled by the same forces that dominate the steel, banking, sugar, and other corporations, through "interlocking directorates."

Henry M. Flagler's Florida East Coast railway extension, which for several years has been building out over salt water along the string of Florida keys to Key West, was opened on Jan. 22. The extension is one hundred and twenty-eight miles long, seventy miles of it being carried on concrete viaducts over the water, and it makes the total length of the road five hundred and twenty two miles, connecting all of the Florida winter resorts from Jacksonville to Key West.

At a meeting of the majority of the insular affairs committee of the House to consider the sale of the friar lands in the Philippines, it was voted that a sub-committee be appointed to draft a bill defining the status of these lands as public lands and requiring that they should be sold only in small lots. This action by the committee is due to the reports that American sugar interests are attempting to acquire the greater part of these lands for their own use.

With the exception of the coast between Beaufort, N. C., and Georgetown, S. C., boats drawing not over four feet of water can go by inland waters from New York to the southern end of Florida, and larger vessels can use many parts of the route. The federal government, which controls all navigable waters, is becoming more and more active in making these waters useful to the public, both for business and pleasure.

By mutual consent of all parties in interest, the hearing to be held before the United States court to decide upon a form of decree to be entered in the case of the so-called powder trust, which was some time ago declared a combination in restraint of trade and ordered to dissolve by the court, has been postponed until March 4.

From his experience as register of deeds in Suffolk county, Mass., W. T. A. Fitzgerald has decided that much of the legal phraseology used in conveyances of land may well be dropped, and has filed at the State House a petition asking for legislation to provide for short forms of deeds, mortgages, and other conveyances.

Nearly five thousand persons have signed the petitions of the Massachusetts Peace Society for the ratification of the arbitration treaties with Great Britain and France without amendment. These have been handed in two installments to Senator Crane for presentation to the United States Senate.

International.

Honolulu naval station officials, who planned for the completion of the industrial buildings next June, now say that they may not be finished until September or October. The entire power-house plant, complete, will cost about two hundred thousand dollars, the foundry seventy-five thousand dollars, forge shop fifty thousand dollars, ship fitters, metal workers, and boiler shop, one hundred and twenty thousand dollars, combined wood workers shop seventy thousand dollars, pipe and plumbing shop thirty-five thousand dollars.

The official returns of the census of France taken last year show that the population now numbers 39,601,509, as compared with 36,252,245 at the last previous census in 1906, showing an increase of 3,349,264. The figures show a steady movement of the population from the country districts to the cities, of which fifteen, as in 1906, have populations of more than 100,000. Paris now has 2,888,110 inhabitants, Marseilles, 550,619, and Lyons, 523,796. The population of France in the past forty years has increased only 3,500,000.

Steps are being taken by the Dominion government to provide refuge huts at various points along the west coast of Vancouver island for the use of mariners. Five of these huts will be placed at once. The huts have a window and door, and are provided with a small stove, an axe, and a supply of provisions in sealed tins. In each hut will also be found a chart and directions showing how to get to the nearest point where succor may be obtained. These will be printed in English, French, and German.

Mr. Cairns, chief assistant to Mr. Shuster, former American treasurer-general of Persia, has transferred the department to Mr. Mornard. Mr. Cairns says that his first intimation of this change was a letter from the Persian cabinet shown him by Mr. Mornard, which authorized the latter to take over the treasury immediately and saying that any delay on the part of Mr. Cairns or the other Americans would be followed by their immediate dismissal and suitable punishment.

A number of the minor khans and leaders who originally declared for Mongolia's independence from China have sent a petition to Premier Yuan Shi Kai at Pekin, in which they explain that their proclamation of independence does not mean complete separation from China if the Pekin government will only abolish the oppressive system of fiscal extortion which has been practised hitherto in Mongolia.

The federal government has obtained an injunction against the Standard Oil Company of Brazil, an American institution, which served to stop the construction of the company's warehouses at Paranagua.

Industrial and Commercial.

An amalgamation of some twenty-four fig packing firms in Smyrna has recently been brought about. The new concern, which will be styled the Smyrna Fig Company, Limited, will have a capital of one million dollars. The company is taking over nearly eighty per cent of the fig packing interest and has secured the services of the leading expert packers for the management of its business. Special working arrangements have been completed with the principal native dealers for the purchase of figs in the country, and the company confidently expects to control the bulk of the production.

A gigantic trust with holdings aggregating five hundred million dollars and controlling three hundred Great Lake vessels was partially organized in the autumn of 1911. That it was not completed, the story runs, was due to the government's investigation of the United States Steel Corporation, during which information regarding the alleged trust was gleaned by government agents.

The new fifteen-million-dollar Brier Hill Steel Company is a consolidation of the large independent merchant blast furnaces of the Mahoning valley with a number of finishing mills. For ten years plans have been laid for the organization of such a company.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

COERCIVE GOVERNMENT IN RELIGION AND MEDICINE.

HON. CLARENCE A. BUSKIRK.

IN order that the American citizen may discharge his duty in helping intelligently to preserve inviolate the blessings of our free institutions, it is necessary for him to understand certain fundamentals of government, as the history of this country shows that attempts are made with frequency to procure legislation which is in plain violation of such fundamentals, and that these attempts are made sometimes from selfish and unpatriotic motives and sometimes through ignorance and narrow-mindedness.

Examples of the first class occur when any set of persons seek to procure laws which will confer special privileges or benefits upon one class at the expense of the remainder of the people. If, to illustrate, an effort should now be made to obtain legislation under which a powerful monopoly for the manufacture of breadstuffs could be built up and maintained, it would at once be recognized to be an unmistakable crime against good government. Any false pretenses and plausible sophistries which might be put forward as arguments for such legislation would not now be able to deceive the country. Such an attempt would be foredoomed to failure because American citizens have already suffered too terribly from the disastrous laws procured under deceptive pretexts in the past, which have fostered greedy and insatiable monopolies to gnaw at the vitals of this land and to become a great menace to the purity of our government.

An illustration of the attempt to procure legislation which would confer special privileges or benefits upon a certain class is found in the effort made by the clergy during the last quarter of the eighteenth century to secure the passage of laws for the maintenance of churches by general taxation. This brought on a battle of the giants,—Madison, Henry, Jefferson, and others. It was argued by the clergy that such paternalism on the part of the government would be very useful in checking the increasing immorality of the people which had followed the war period through which the United States had just passed; that there could be no instrumentality so efficacious in counteracting the vicious tendencies of the time as a church supported in its good efforts by the federal government, and this plausible but sophistical argument won to its side for a time a powerful support. Even the great patriot and statesman, Patrick Henry, at first was deceived by it. But others, like Madison and Jefferson, were able to detect the very serious dangers inevitably lurking within all such laws. They were fresh from the Revolutionary war, and this had been not only a conflict of bayonets but also a most useful school for the education of the American people in the old-world evils of paternalism on the part of governments and the unjust and perilous discrimination by law between different classes of citizens.

It was a momentous intellectual battle; the lessons from the tyrannies and mistakes of the past were the mighty weapons of its patriotic logic; and the battle was patiently and sagaciously fought out to a grand conclusion,—a conclusion which ought to establish forever in this land the priceless safeguards of religious liberty. All American citizens, whatever their nativity and whatever their religion, ought to know that any attempt which may be made, directly or indirectly, under any pretext whatsoever, to bring about any union between church and state, smells rank of treason to our free institutions. So profound became the conviction of this truth in the minds of our government fathers, after the question had been thoroughly discussed and weighed, that they were not content merely to legislate upon it at the time, but they carefully embodied their jealous regard for the religious freedom of our country in all its constitutional provisions.

The wise words of Madison (afterward President) cannot become too well known: "The religion of every man must be left to the conviction and conscience of every man; and it is the right of every man to exercise it as these may dictate. This right is in its nature an inalienable right."

Let us suppose that our government fathers had neglected to provide constitutional guarantees of religious freedom. Let us suppose that some religious sect of preponderating influences at the polls be engaged in a persistent and aggressive attempt to obtain special favors and privileges in the way of paternal legislation. Would the absence of constitutional guarantees render such an attempt any less deserving of the sternest opposition on the part of the free American citizen than it is now? Certainly not. It would serve to demand of our law-making bodies a more alert and thoughtful guardianship of our liberties.

It is within the last few years that a particular school of drug practitioners has sought to monopolize the business of attending the sick. At the time our constitutional safeguards of the liberty of the citizen were established, such an effort could not have been dreamed of. History furnished no warning examples, as in the case of religious despotism. The question involved in the menace of religious tyranny is, however, the same as in the menace of medical tyranny. The pretexts employed to obtain legislation are also alike in character. These pretexts in the one case insist that such legislation is needed to promote good morals as well as spiritual salvation. In the other case the pretexts are that such legislation is needed to promote and protect the health of the people. They have a certain sophistical plausibility which renders them the more dangerous when the government is democratic in form.

It is useful in this connection to quote from two great thinkers. Herbert Spencer, for instance, in one of his essays writes: "The enthusiastic philanthropist, urgent for some act of parliament to remedy this evil or secure the other good, thinks it a very trivial and far-fetched objection that the people will be morally injured by doing things for them instead of leaving them to do things for themselves. He vividly realizes the benefit he hopes to get achieved, which is a positive and readily imaginable thing; he does not realize the diffused, invisible, and slowly accumulating effect wrought on the popular mind, and so does not believe in

it; or, if he admits it, thinks it beneath consideration. Would he but remember, however, that all national character is produced gradually by the daily action of circumstances, of which each day's result seems so insignificant as not to be worth mentioning, he would see that what is trifling when viewed in its increments, may be formidable when viewed in its sum total."

It is to be observed that Mr. Spencer refers to those instances where the end in view is unmistakably good when considered by itself alone. Even then, however, the good which might be accomplished by the desired paternal legislation, as Mr. Spencer points out, is more than counterbalanced by the evil. This is upon the ground which is recognized by the courts when they even prefer an exceptional instance of injustice resulting from the operation of a general law which is a good one, to a ruling which would be a bad precedent for future rulings and so lead to a sum total of pernicious consequences far outweighing the exceptional instance of injustice. It is plain that Mr. Spencer's reasoning applies with very great force to those cases when paternal legislation is sought to achieve some result which is either of doubtful good or unmistakably bad. This was illustrated when the clergy sought the union of church and state in our early national history.

In De Tocqueville's "Democracy in America" (a classic in our law colleges as well as in our courts) is to be found a very useful chapter, mainly devoted to the consideration of the dangers from the tyranny of the American majority, which ought to be pondered by every citizen. Space permits only a brief excerpt: "I hold it to be an impious and execrable maxim that, politically speaking, the people has a right to do whatever it pleases. . . . It has been asserted that a people can never entirely outstep the boundaries of justice and of reason in those affairs which are more peculiarly its own; and that consequently full power may fearlessly be given to the majority by which it is represented. But this language is that of a slave. . . . If it be admitted that a man possessing absolute power may misuse that power by wronging his adversaries, why should not a majority be liable to the same reproach? . . . Unlimited power is in itself a bad and dangerous thing. Human beings are not competent to exercise it with discretion. God only can be omnipotent, because His wisdom and His justice are always equal to His power. But no power on earth is so worthy of honor for itself that I would consent to admit its uncontrolled and all-predominant authority. . . . In my opinion, the main evil of the present democratic institutions of the United States does not arise, as is often asserted in Europe, from their weakness, but from their irresistible strength. I am not so much alarmed at the excessive liberty which reigns in that country as at the very inadequate securities which exist against tyranny."

It is apparent that the tyranny to which De Tocqueville refers is the tyranny of an unrestrained majority. It would be well if every American citizen, and especially every American lawmaker and judge, would most carefully read and ponder the solemn words of warning on this subject in "Constitutional Limitations," the authoritative law book to be found in nearly every lawyer's library in this country, which was written by the late profound jurist, Justice Cooley.

The tyranny of an autocratic ruler is no more execrable than the tyranny of an American majority. And the efforts, including the means employed in those efforts, of the allopathic school of *materia medica*, in the last few years, and still persevered in, to procure coercive medical legislation which will aid its business in attending the sick for compensation, in the various states and in our federal government, serve to illustrate and to emphasize the warnings of such thinkers as Spencer, De Tocqueville, and Cooley. When these efforts are scrutinized, they are seen to be arrogant, shameless, unprincipled.

That hand is unholy which puts its grasp upon the capricious lever of politics in the effort to repress the activities of human thought, in religion, in therapeutics, in philosophy, in science. If allopathy were the true and best theory and practice, it would have proven itself to be such, and would not need to be knocking for help at the doors of our lawmaking bodies. Let it stand the tests of competition with other systems, and let mankind get the benefit of such competition. The centuries are forever buried when governments can control the lawful opinions of mankind through coercive legislation under any cunning pretense whatsoever.

If a congressman or state legislator is considering whether he ought or ought not to vote for some proposed medical law (not a law which legitimately provides for sanitation, such as no schools oppose), is it not plain that, according to the genius of our American government and institutions, it will be well for him to consider that human opinions cannot be arbitrarily divided into classes by calling some of them philosophical opinions, some of them social opinions, some of them medical opinions, some of them religious opinions, and so on; and that in repressing by the strong arm of the law and penalizing therapeutic opinions and practices, for example, he is very liable to penalize those convictions of religious conscience which ought to be held inviolably sacred? When the religionists imprisoned Galileo they were guilty of punishing him for his astronomical opinions, and were obstructionists of scientific inquiry. When the materialistic physicians joined in the mob which persecuted Jesus and his followers because of their works in "healing the sick" by methods that were spiritual, they interfered with religious opinions and obstructed religious progress as well as therapeutics.

"Eternal vigilance is the price of liberty!"

To enter the wedge in establishing government coercion in medicine is to enter the wedge for establishing government coercion in religion. To educate the people to tolerate the one is to educate them to tolerate the other, for both are fundamentally akin and both are, and for the self-same reasons, invasions of the most priceless liberties of American citizenship.

Christian Scientists, as a basic part of their religious opinion, belief, and conscience, rely upon all the teachings of Jesus found in the New Testament as statements based on eternal and therefore immutable truth, applicable to all mankind and all the centuries alike. They therefore believe this promise of Jesus to be true and dependable now: "He that believeth on me, the works that I do shall he do also;" and his command to be true and binding now: "And he sent them to preach the kingdom of God, and to heal the sick." They believe that the Master's method of healing the sick and the sinning, according to his example and teachings, is efficacious and trustworthy, as proven in their own lives and homes most abundantly, and that to follow the way pointed out by Jesus is an imperative part of their religious duty.

Christian Scientists religiously and firmly believe that they can be delivered from sickness and sin at the same time and by the self-same process, like the early Christians, not only through their own prayerful efforts to attain the truth which Jesus taught and exemplified would make men free, but frequently through the assistance of those who are called Christian Science practitioners; just as the sinning and sick were assisted in the day of Jesus and his earlier followers; hence they feel fully justified in looking upon any law which would restrict their own efforts in overcoming sin and sickness, or their opportunities for seeking help for their families and themselves according to their religious convictions, to be a most serious invasion of their sacred right to their full and free enjoyment of religious conscience and their pursuit of happiness, as guaranteed by the federal and state constitutions.

"OUR DAILY BREAD."

R. ETELKA HOLT.

WHILE reading in the first epistle of John, the writer came across the familiar verse: "Let us not love in word, neither in tongue; but in deed and in truth;" and was reminded of an experience which not only proved the practicability of the above Scripture, but also showed her that "whatever blesses one blesses all" (Science and Health, p. 206).

One evening, after having suffered all day from a sense of physical inharmony, as I got on the car to go home I was rejoicing that at last I would be alone and have the opportunity to realize the truth about my seemingly inharmonious condition. I did declare the truth as we are taught in Christian Science, but seemed to get no benefit. There was a great sense of confusion on the car, people were coughing and babies crying, and at first it annoyed me, for I had so wanted to be where all was quiet.

I then began to repeat silently the Lord's Prayer, that prayer which seems to embrace every possible need. I repeated the first line, and was thinking about how it began, "Our Father," and also that Jesus gave the instruction, "After this manner therefore pray ye." One was not to pray for himself alone, but for all mankind; and for this reason we were taught to say, "Our Father," not "My Father." We must pray in the spirit of unity and fellowship, desiring for our brethren what we desire for ourselves, for we were given the command to love our neighbor as ourself. I realized then that "our Father which art in heaven" is omnipotent good and is ever present, and that all the confusion and coughing was but a manifestation of the common belief in evil, in a power apart from God, and that it was absolutely impersonal. It did not belong to one particular person, nor was the sense of confusion caused by any one in particular, for evil is impersonal and impersonal evil has in reality no power, for God is all power. I also saw that He is omnipotent, omnipresent good, and so right where the confusion and annoyance seemed to be, right there good was.

Jesus tells us, "Ye shall know the truth, and the truth shall make you free," and so in this case, as in many others, I saw the sense of discord and inharmony disappear before the truth. The whole atmosphere of the car changed, the coughing stopped, the physical inharmony from which I had previously suffered entirely disappeared, and a wonderful sense of peace and quietness reigned. Then the last line of the Lord's Prayer came as a sort of benediction, "For thine is the kingdom, and the power, and the glory, for ever." The Master said, "I can of mine own self do nothing;" and again he said, "All power is given unto me in heaven and in earth," for "with God all things are possible." I realized as never before that Christian Science has indeed opened to us the door of opportunity, and that what we have gained is for the good of mankind, for it is only by giving that we receive.

Christian Science gives us something really worth living for, while material pleasures give no real joy and confer no lasting benefit. Mrs. Eddy tells us that "man's genuine selfhood is recognizable only in what is good and true" (Science and Health, p. 294), and I daily rejoice that we have a religion which thus teaches us to "make channels for the streams of love." When we learn to look on all discord, whether in ourselves or others, as an opportunity to prove the truth, when we strive to think no thoughts but thoughts that bless, we are daily rising into a higher sense of Life, and see before us a glorious future, a life filled with opportunities to prove the omnipotence of divine Love, and our earnest desire is expressed in the words of the psalmist: "Let the words of my mouth, and the meditation of my heart, be acceptable in thy sight, O Lord, my strength, and my redeemer."

"THERE MAKE READY."

DAISY BEDFORD.

IT is interesting to note that nearly every student of Christian Science will, when describing how he first became interested in this subject, use some such words as these, "I remember the first Wednesday evening meeting," or, "At the first testimony meeting I attended," and then go on to describe the particular testimony or feature of the service which arrested his attention and caused him to look more closely into the teachings of Christian Science. Such being the case, it is surely important that every one shall, to quote the words of our Leader, bring to "this banquet of Christian Science . . . what they possess of love and light" (Miscellaneous Writings, p. 149), that no weary and heavy laden one be turned empty away. In Christian Science we know how necessary it is that every detail in its observance should be carried out as perfectly as possible, and we need also to realize the great privilege which is ours in being able to voice at these Wednesday evening meetings our gratitude for all the benefits which we have received through the understanding of Truth.

It has been said that we give our best testimony when we have no testimony to give, but this may prove misleading to the inquirer, and needs explanation. As the healing power of Christian Science unfolds more and more in each individual consciousness, the mists of sickness, sin, and disease begin to dissolve, and eventually they will melt away into their native nothingness. This exemption from discord of every kind should draw from us an unceasing pean of praise and the glad acknowledgment of God's goodness, inasmuch as God's hand has led us away from the rocks of evil-speaking, self-will, envy, and malice, as well as from so many physical ailments which cannot find entry into the consciousness that is filled with Truth and Love. Could we not give testimony at any moment of the day to the beauty of holiness, the goodness and loving-kindness of God, and the innumerable proofs of His all-protecting care? for sorrow overcome either in ourselves or others, for the illumination of some passage of the Bible hitherto meaningless, or the privilege of hourly offering the cup of cold water to those desiring spiritual regeneration and healing? Indeed, one sometimes wonders what holds him back from carrying out the psalmist's exhortation: "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men! For he satisfieth the longing soul, and filleth the hungry soul with goodness."

People will oftentimes ask a practitioner why such and such a discord does not yield to the touch of Truth, and one may sometimes be led to feel that the explanation lies in the failure to acknowledge what has already been done for them. In Science and Health (p. 3) we read: "If we are ungrateful for Life, Truth, and Love, . . . the only acceptable prayer is to put the finger on the lips and remember our blessings." It is well to find out, if possible, what is preventing us from giving thanks. Most frequently it is a fear of criticism, the fear of what others may say about it; in short, personal sense. We need to remember that we are speaking to our Father in heaven, and that mortal mind criticism cannot touch those of whom it may be said: "Their angels [pure thoughts] do always behold the face of my Father which is in heaven."

If our thoughts are dwelling in the high and holy place, then indeed shall we rejoice evermore and be willing at all times to give thanks. Then like St. Stephen our faces will shine with the radiancy of those who have seen the Son of man (the spiritual idea) standing at the right hand of God. Love, humility, meekness, and gratitude,—these should be the foundation upon which to build our testimony.

Many come to these meetings, week by week, to enjoy the good things prepared, and yet fail in their turn to minister to

Digitized by Google

those who have so bountifully dispensed hospitality to them. In the pause which sometimes follows a testimony Truth may ask of us, "Can ye not watch with me this hour?" If we are asleep—lost in the lethargic dream of fear, pride, or personal sense, it may be we shall lose forever the opportunity which has been given us of feeding one of His little ones. Sometimes the one voicing gratitude may be overcome at the seeming impossibility of putting into words the deep overflowing thankfulness which wells up in his heart; the phrases seem faltering, perhaps scarcely heard, and we need to be very careful to recognize the motive which prompts it, and not to criticize the manner in which it is given. Of one thing we may be sure, that no testimony is voiced without meeting some one's need. Our part is to know that the voice of gratitude can never be silent.

EXPERIENCE THE BASIS OF FAITH.

W. H. MC KERRAL.

THE discoveries of physical science are readily accepted because they find corroboration in experience, and the tendency of the times is to demand like confirmation for every theory offered for the acceptance and guidance of mankind. When the question of religious faith arises, the intelligent man of the world is likely to say: "I cannot accept the record of the life of Jesus as historically truthful, because it presents as facts a series of events which find no corroboration in my experience and observation, but which are wholly discredited thereby. This test also informs me that to follow the teachings of Jesus as to the conduct of life and affairs would be to invite disaster. The idea of an overruling 'Father' who is both good and all powerful, I regretfully reject because it is not consistent with such knowledge of creation as enters my experience."

From the materialistic view-point these statements seem so reasonable that one may wonder they have ever been challenged at all. Yet, in spite of their insistency, the gospel record has been a living power in each succeeding century. Men in whom the heart leads the intellect have said, "These things are what should be, and therefore, though experience disowns them, they must be true." Others, likewise unable to reconcile the facts of the gospel to human experience, have in spite of this perceived that, though apparently consistent with nothing else within their knowledge, the life of Jesus was throughout consistent with itself. The thinker knows that such consistency does not arise accidentally or by human invention, and he therefore recognizes the overawing presence of a fact for which his theories must account or be found wanting. In all ages, by such paths as these, the heart and the intellect separately have sought their Lord. Sometimes they have met in the darkness, and from their contact has sprung experience consistent with the gospel story; and sometimes, too, the heart alone has ripened the fruits of faith. But such experiences have been sporadic; their authenticity has been accepted by only the few, and by even these they have too often been regarded as representative of the suspension of law rather than of its fulfilment.

It was the mission of Mrs. Eddy, through the revelation of Christian Science, to interpret the heart to the intellect, that together they might recognize the consistency of the life and teachings of Jesus with the things that are; and that together they might labor to the bringing forth, in certainty, continuity, and order, of experiences consistent with his. The necessity of our times is that Christianity shall find its support, not in theories but in such experience. Christian Science authenticates beyond controversy the story of the life of Jesus by teaching men how to set in motion in present experience the same sequence of cause and effect that constitutes the unique feature of the gospel record. It recognizes the all-powerful, loving Father-Mother God as the single cause, as the one source of all that is or can be permanent in the consciousness of man and in the universe. And it justifies, in the experience of its devoted followers, the wisdom of Jesus in thus honoring God and in teaching that every seeming effect which does not proceed from the one cause is sheer error, which must yield before the word of Truth.

The fact that, now as in Jesus' time, the unlikeness of God does pass from human consciousness and from the realm of visible phenomena when confronted by man's recognition of and obedience to Truth, is the one all-satisfying and altogether necessary evidence of the mission and potency of Christianity.

THE FAN.

CAROLINE GETTY.

IN John the Baptist's announcement of the forthcoming Saviour, he says, "Whose fan is in his hand, and he will thoroughly purge his floor, and gather his wheat into the garner; but he will burn up the chaff with unquenchable fire." These words are truly prophetic of our daily paper, *The Christian Science Monitor*. Mrs. Eddy refers to fan as the "separator of fable from fact" (Science and Health, p. 580), and does not this outline precisely what *The Monitor* is doing? It is sifting the evil from the good, garnering the good men do and rejecting the evil, and showing us that this same work must be done in our own consciousness. Christian Science is the truth which is baptizing us with the Holy Ghost, the Comforter, and it not only separates fable from fact on our present plane of consciousness, but "gives action to thought" (Science and Health, p. 586), sets the world to thinking in one way of righteousness, prepares it for the kingdom of God and His Christ.

Every man, woman, and child can demonstrate the Christ-power today by spreading abroad our periodicals, working prayerfully for them, subscribing to them, distributing and reading them. No one can read our daily paper without gaining a sweeter, saner outlook upon the affairs of the world and a higher sense of his brother man. All honor and gratitude for the far-seeing wisdom that set in motion this fan which is separating from human consciousness all that does not minister to human need and express the nature and activities of the perfect man.

[Written for the *Sentinel*.]

SEARCHING AND FINDING.

WILLIAM SYMONDS.

LONG years I spent in searching after God!
I found Him not in pleasure or in strife;
Perceived Him not behind the chastening rod,
For I believed that matter harbors life.

I thought this human frame contained a soul,
Imprisoned there till death should set it free.
Some future state regarded as the goal:
Nor thought of what I am, nor what shall be.

But now I know man's source is all divine,
And knowing what he is, a son of God,
To voice His will the privilege is mine;
To tread the path that Jesus Christ has trod.

Canst thou, by constant searching, find out God?
Search not; but know that God is ever here.
Unto the hills lift up thine eyes: the road,
By His own revelation, shall appear.

To know that pain and death cannot appall;
To see the nothingness of sin:
This is to learn that God is All-in-all.
Mortal, awake! the kingdom is within!

SELECTED ARTICLES

[Frederick Dixon in *Sevenoaks Chronicle*, Sevenoaks, England.]

In my previous letter I was compelled to select, out of the vast area of Christian doctrine, some touchstone, to borrow a phrase from the text of the New Testament, by which to test the soundness of a critic's assertion that Christian Science was not Christian. I deliberately chose the healing, because the healing was the sign or proof demanded by Christ Jesus himself, of the right to the name of Christian. Another critic who takes up the argument, asks me four questions, questions on every one of which not books only, but libraries have been written, and asks me to reply in a few words. These questions take no less than twenty-two lines of print to state, and I am asked to reply in four words, a yes or no to each. Only a few days ago, one of the most brilliant of English politicians explained how easy an astute or practised heckler found it to frame questions to which it was impossible to reply in monosyllables, and then attempt to gain a cheap advantage through failing to obtain a monosyllabic reply. I do not for a moment wish to compare this clergyman to an astute or practised heckler, but I do wish to point out that he has unconsciously adopted the method.

Now I am not sure that this critic's statement of the fundamental doctrines of Christianity would prove entirely acceptable in his own church. We have most of us seen the Athanasian creed fall into disrepute, and gradually disappear from the liturgy ordinarily used. I remember once hearing a clergyman declare that if the bishop of London insisted on its being read, he would not only read it, he would explain it. I never heard that the bishop did insist on the reading; I am certain he was willing to waive the explanation. I think it was Sir Isaac Newton who declared that if any one else would like to affirm that the Father is infinite, the Son is infinite, and the Holy Ghost is infinite, he was willing to add, yet there are not three infinite, but one infinite.

Then, let us take the phrase in which the critic sums up his conclusions, in the declaration that for nearly two thousand years his propositions have been accepted by all who call themselves Christians; and examine it in the light of the history of the doctrine of the trinity. The trinitarian idea is not a peculiarly Christian one. It was a common idea in the religions of the east long anterior to the Christian era. Egypt itself has been called the land of the trinities, of which the most popular was Osiris, Isis, and Horus. Nor is there anything to prove that the doctrine, as it is popularly promulgated today, had any existence in really primitive Christian theology, beyond a mere process of deductions from disputed premises. One of the most learned authorities on ancient Christian art has gone so far as to argue that not a trace of it is to be found in such pictorial representations as have survived.

I have no intention whatever of plunging into the Arian controversy in the columns of a newspaper, except to point out that the trinitarian dogma was not definitely accepted by the church until after the decision of the council of Nicæa, that is to say, until the beginning of the fourth century of the Christian era (A.D. 325). Even then the majority was still divided between the claims of the tritheists and the Sabellians. The Arians in the council had striven to confine the discussion to the use of Biblical terms and definition. The trinitarians had repudiated this. They fell back on terms which could not be found anywhere in the Scriptures, and closed their own ranks over the adoption of the mysterious word, *homoousian*. Perhaps they were wise in their generation, for some of the phrases on which they would certainly have relied have gone the way of all glosses.

The famous seventh verse of the fifth chapter of the first epistle of John: "For there are three that bear record in heaven, the Father, the Word, and the Holy Ghost: and these three are one;" a verse, the inclusion of which caused such compunction to Erasmus, has been ruthlessly eliminated by the revisers of 1885. While the equally well known verse, in the first epistle to Timothy: "Great is the mystery of godliness: God was manifest in the flesh," is scarcely recognizable as "Great is the mystery of godliness: he who was manifested in the flesh." It cannot, however, be pretended that the revisers were always as frank as this.

Now, having explained, in the most fragmentary and inadequate way, some very few of the innumerable difficulties which beset one alone of the critic's questions, let me proceed to state, with necessary inadequacy, what Christian Science teaches on the subject. Christian Science at the outset absolutely repudiates anthropomorphism in any shape. It insists that the only possible definitions of Deity are those we can take from the New Testament, such as Spirit, which Jesus used in speaking to the woman of Samaria, and Love, which John uses in his first epistle. "What the person of the infinite is," Mrs. Eddy writes, on page 19 of "No and Yes," "we know not; but we are gratefully and lovingly conscious of the fatherliness of this Supreme Being." God then is Spirit and is Love, and He is also Life and Truth, for to know Him, Jesus declared, is life eternal; and this knowledge is again and again admitted, in the Bible, to be a scientific knowledge. Therefore, Mrs. Eddy is perfectly justified in writing, on page 331 of Science and Health, "Life, Truth, and Love constitute the triune Person called God,—that is, the triply divine Principle, Love. They represent a trinity in unity, three in one—the same in essence, though multiform in office: God the Father-Mother; Christ the spiritual idea of sonship; divine Science or the Holy Comforter." And this statement is put with equal clearness and equal simplicity on page 497 of Science and Health in the words of the second tenet of Christian Science: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness."

The Bible is the record of the gradual unfoldment of what the New Testament calls the scientific knowledge of God in the human consciousness. This unfoldment is the ever brightening perception of the Christ, first dimly realized by Abraham in his repudiation of polytheism and Moloch worship, alluded to by Jesus when he said: "Your father Abraham rejoiced to see my day: and he saw it, and was glad;" and blazing into the splendor of its zenith in Jesus' own realization and demonstration of Truth, which made him truly Jesus the Christ. Jesus, however, never claimed for himself anything he did not claim for humanity. Speaking of his own understanding of the truth, his own vision of the Christ, he said, "I and the Father [not my Father] are one." He spoke to Mary Magdalene of "my Father, and your Father;" and in the one prayer which he bequeathed to humanity he taught the world to say "Our Father which art in heaven." Was it not precisely this to which Paul alluded, when he pleaded with the Philippians to let that Mind be in them which was also in Christ Jesus? and is there any other way in which a Christian may say, "I and the Father are one," except through taking up his cross daily, walking in the footsteps of Christ, and so striving to let the Mind of Christ dwell in him?

It was precisely because Christ Jesus' knowledge of God was, as the Bible declares, so scientific, that Mrs. Eddy was able to write on page 313 of Science and Health, "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." This knowledge of spiritual causation taught him to realize the absolute unreality of evil, no matter how real it may have seemed relatively to human sense. This unreality he demonstrated in his

Digitized by Google

various works, commonly known as his miracles, especially in that which Mrs. Eddy has so fitly termed, on page 117 of Science and Health, "his mighty, crowning, unparalleled, and triumphant exit from the flesh." It was through these miracles that he proved himself to be the Christ, as is made quite clear in his reply to the disciples of the Baptist, when they came to interrogate him on the subject: "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them."

There is, however, no hope whatever for the reasoners who attempt to give a supernatural glamour to the miracle. It was simply, what the Scriptures declare it, the divinely natural object-lesson in proof of the gospel of Christ, the sign which Jesus demanded from all those who, in any circumstances, at any time, claimed the name of Christian. Shorn of demonstration, religious theories are dead, faith without works. What made possible the success of Jesus' three short years of ministry was the miracle; what has made Christian Science a possibility again today is the miracle. The world demands the proof Jesus demanded.

This critic will be the first, I think, to recognize the difficulties incidental to attempting to speak of the Science of Life in the limits of a letter. He will also, I think, admit that I have tried to answer his questions clearly, and that, if I have had to question his statements, it has been with a reverence for all that he holds reverent.

[Willis D. McKinstry in *Chanute* (Kan.) *Tribune*.]

From a report of Evangelist Mahood's meeting we note that he continues his attack upon Christian Science by calling names. This is no proof that what he says is true, and misrepresentations will not help in reforming the sinner or aid those who are in need of spiritual help. One might call his doctrine Mahoodism, but this would offer no proof that his teaching was true or false. It is not this kind of teaching the people want; they are demanding that which is true, and there is a saving truth to impart to those who are hungering and thirsting after righteousness. The Science of being is knowable—it is demonstrable—we are living in a day of scientific Christianity.

The Christ-healing as taught by Jesus is a scientific fact—a demonstrable fact when spiritually understood. A spiritual knowledge of the teachings of the Bible enables one to be obedient to the precept of the Master: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." When there arose a doubt in John's mind whether or not Jesus was the Son of God, he sent two of his followers to make the inquiry: "Art thou he that should come?" and Jesus' reply was: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them."

The Christian Science text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy, is a Bible commentary; it illumines the Scriptures and interprets them spiritually. This spiritual understanding regenerates the human consciousness, whereby the divine energy of Truth is made manifest and heals the sick.

[James D. Sherwood in *El Paso* (Tex.) *Herald*.]

In a recent issue of the *Herald* appeared some extracts from a sermon delivered in your city by an evangelist, in which unfriendly mention is made of Christian Science and of its Discoverer and Founder, Mary Baker Eddy.

Christian Scientists are today doing the works that were required by the Master of his followers. They are healing the sick and reforming the sinner without the use of drugs and by purely spiritual means. Christ Jesus said: "Every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." Our critic errs in believing the devil has any part in the healing work effected in Christian Science practice. The devil is not a source of good, nor a doer of good works. The devil (evil) is not a healer. Evil thoughts make a man sick, while righteousness, right thoughts, restores health.

Some theologians in the time of Christ Jesus said of his healing work: "This fellow doth not cast out devils, but by Beelzebub the prince of the devils." When the bitter antagonism of the Pharisees toward Christ Jesus is remembered, the Christian Scientist should not feel discouraged because some theologian today uses the same epithet in decrying Christian Science. The Master said: "Remember the word that I said unto you, The servant is not greater than his lord. If they have persecuted me, they will also persecute you; if they have kept my saying, they will keep yours also."

Christian Science is growing rapidly. Its gospel is spreading all over the civilized world. The sick are being healed by it; the sinner is being reformed by its means. Those who have been restored agree in giving God thanks for their recovery. St. James says: "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

[M. I. Whitcroft in *Clifton* (Bristol, Eng.) *Chronicle*.]

When a certain clergyman speaks of Christian Science as a "new fad," as reported in a recent issue, and classes it with other "new fads" of the time, he quite overlooks or else is ignorant of the fact that Christian Science has been an established religion for nearly forty years. Its growth has been phenomenal, and today there are hundreds of thousands of persons throughout the civilized countries of the world who bear grateful and heartfelt testimony to its healing and regenerating power.

Christian Science has been the means of bringing health, joy, and peace, and a great spiritual uplifting and awakening into the lives of a great company of those who faithfully follow its teachings. If this critic would study "Science and Health with Key to the Scriptures," the text-book on Christian Science, by Mrs. Eddy, he would find that it is founded solely and entirely on the Bible from which he is daily preaching, and that far from being a "new fad," it is but a restatement of the practical truths which were taught by Jesus and practised by his disciples and all those who obediently followed his commands.

[Eugene R. Cox in *Buffalo* (N. Y.) *Times*.]

In a recent issue appears a report of the speech by Dr. James Ewing before a gathering of physicians and surgeons in this city. Dr. Ewing is reported to have inquired, "Doesn't Christian Science rest upon a medieval ignorance and distrust of the efficiency of medical science?"

There are two answers to this question. First, Christian Science is based solely upon the Bible, and is a manifestation of the most spiritual and intelligent application of the life, doctrines, and directions of the Founder and Exemplar of Christianity. The dual command to preach the gospel and heal the sick is literally accepted, though the preaching is rather by living than by word of mouth.

One does not need to go back to medieval times to find distrust of medical science or a reason therefor. In fact the present day shows a more intelligent questioning than ever before. Within the short space of twenty years, the medical profession has turned almost completely from re-

Digitized by Google

medial drugs to preventive therapy. Twenty years ago no layman dared to doubt the remedial effect of drugs. Today no physician dares assert it. In those days, however, doctors were as dogmatic in their assertions and as intolerant of questioning as they are today, although now experimenting with new and untried preventive projects.

Is it any wonder, then, that there is doubt in the intelligent public mind on the subject, and can it properly be referred back to medieval ignorance and superstition?

[Algernon Hervey Bathurst in *Occult Review*, London, England.]

The control of one human mind by another, or anything in the nature of such practice, is the reverse of the teaching and practice of Christian Science, which declares, as did the apostle James, that the same fountain cannot send forth both sweet water and bitter. It requires no explanation from me to show that the human mind, admitting as it does that evil is as real and powerful as good, must be as capable of doing evil as it is of accomplishing good: surely a house divided against itself. On the other hand, Christian Science, based entirely on the Bible, affirms and proves that good alone is real, is, in fact, the only power. Jesus the Christ taught this, and proved the truth of what he said by healing sickness and destroying sin, declaring also that all who understood his teaching would be able to accomplish the works he did.

Now, Christian Science maintains that those commands are just as practical and just as much to be obeyed today as when first taught and practised by Jesus and his disciples. It becomes obvious, then, that the teachings of Christian Science can only be demonstrated to the extent that we are willing to have the Mind of Christ; willing, that is, not to accept evil as a power equal to, or frequently more powerful than, good, but to take our stand upon the declaration of St. John, that "all things were made by him [God, good]: and without him was not any thing made that was made," and to understand, at least in some measure, the unalterable truth that in the perfect creation of God there can be and is no evil, no discord. Sickness is healed and sin destroyed through the realization of this great truth alone, and in no other way.

As, however, the teaching of Jesus was misinterpreted and rejected by those who were unable to discern the true spiritual meaning of his words, so today it is sometimes asserted that the works accomplished by Christian Science are the outcome of some operation of the human mind. Christian Science is, however, a tree known by its fruits, and can be judged only by the results it accomplishes. Because, therefore, its fruits are good, because of the incalculable benefits accruing to humanity through the practice of its teachings, Christian Science will, as Mrs. Eddy has written, on page 383 of "Miscellaneous Writings," "go on with the ages, go down the dim posterns of time unharmed, and on every battlefield rise higher in the estimation of thinkers and in the hearts of Christians."

[H. L. Conger in *Racine* (Wis.) *Journal.*]

We are taught in Christian Science that "the same power which heals sin heals also sickness" (Science and Health, p. 135). Failures in practice are not due to Christian Science, but to the want of it. If our critic wants statistics "showing the percentage of failures to successes," they can be furnished. According to comparison in two states, one in the extreme north and the other in the extreme south, seventy per cent of those who applied for Christian Science treatment during a period of one year had already failed to recover or to receive permanent benefit through medical treatment. Of these, ninety per cent recovered or received permanent benefit under Christian Science treatment.

Our critic might refer to the November, 1907, *Broadway Magazine*. My memory is that it showed that about eleven thousand cures had been wrought by Christian Science in the Empire state, and that most of them were organic, according to diagnoses made by physicians. Our critic also admits our "successes are enough to show that they can banish pain." This admission from a Presbyterian pastor is encouraging and shows that we are headed toward the goal of greater success, if we are content with small beginnings and do not allow our minds to be swayed by unjust and unfair criticism, but hold firmly to Truth (God) and daily be about our Father's business.

Christian Science is founded upon Truth; its only foundation is the Bible and the teachings of Jesus and his apostles, which were absolutely scientific in that they were capable of demonstration. Adverse statements from the pulpit cannot undermine this foundation. The finger of scorn pointed at one of God's "little ones" cannot reverse his knowledge of God's power to heal.

[Frank Bell in *Norristown* (Pa.) *Herald.*]

The author of the sermon partially reproduced in a recent issue so frankly acknowledged the good that is being accomplished by Christian Science in leavening popular thought on subjects of vital importance to mankind, that it is difficult to believe he intended to say that the church and Christian Science have "divided the ministry of faith from the ministry of healing," or that "Christian Science has materialized the ministry of healing;" for if there is anything that Christian Science has not done it is those two things.

"Jesus healed sickness and sin by one and the same metaphysical process," writes Mrs. Eddy in Science and Health (p. 210); and Christian Science is a living protest against trying to heal either sickness or sin in any other way. On page 135 of the same volume, which is the text-book of Christian Science, Mrs. Eddy declares that "the same power which heals sin heals also sickness;" and Christian Science holds that the only real power is God, Spirit. It will be seen, therefore, that instead of attempting to separate faith and healing or to materialize the latter, Christian Science does exactly the opposite.

If, as the good pastor says, the existence of the Christian Science movement is a rebuke to the church, the occasion for rebuke lies not in the failure of the church to work with the drug physician (it is manifestly trying to do that), but in its failure to discern in the teachings of the Master and the lives of himself and his disciples and early followers that the true priest and the true physician are one and the same, both in individuality and in office. The Founder of Christianity was himself the "great Physician." He healed the sick by purely spiritual means and declared that all who believed on him should do likewise. For three hundred years thereafter the preaching of the gospel and the healing of the sick were identical, and Christian Science today is bringing about a revival of this complete ministry.

[From *Franklin* (Ind.) *Star.*]

Some one has kindly subscribed for and is having sent to the *Star* editor for this month the daily *Christian Science Monitor* of Boston. We write this just to let our unknown friend know how much we appreciate it. It is a welcome relief to read the clear, intelligent information in the *Monitor*, to study the advertisements from all world points put together in real typographic art, and to see that a daily newspaper can be interesting and yet eschew publication of murders, suicides, crimes, and alleged "human interest" tales.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

A RESTORER OF HEALTH.

We note in the January *Twentieth Century Magazine* a short article by Dr. Richard C. Cabot, in which he frankly admits that Christian Science is doing a vast deal of good as a restorer of health. As this has not always been the opinion which Dr. Cabot expressed, we can only assume that some comparatively recent experience or observation has tended to change his views. If such is the case, we should be very pleased to have from him the facts which led up to this change. Be that as it may, no one appreciates more keenly than do we the evident high sense of right and duty which prompted this public acknowledgment. The article in the *Twentieth Century Magazine* is as follows:—

Doctors are human—like the rest of us. Their faults sometimes drive us into forgetting that they have any uses. Then we become Christian Scientists or medical skeptics or osteopaths. That Christian Science has done and is doing a vast deal of good, not only as a religion, but as a health restorer and a protest against the short-sighted naturalism of the doctors, we are firmly convinced. Its affirmations are helpful to thousands.

Its occasional and unofficial denials and denunciations of doctors, diseases, and health work outside its own denomination, are its weak side. That's true of all of us, isn't it? We are strong and helpful when we affirm; weak and misleading when we deny.

I believe that there is plenty of room in this country for Christian Science and for scientific medicine; no room for impostors and fanatics of any kind. When doctors try to crush out the practice of Christian Science, we should protest. When Christian Scientists or any other body of people try to obstruct the progress of public health work, and especially of preventive medicine, we should protest.

There need be no conflict. There is opportunity for all sincere, humble-minded effort. Let us have no persecutions and no interference with the spread of truth and light from any source. Indictments against movements as powerful and sincere as Christian Science and preventive medicine are anachronistic. Let us all get busy along our own lines. "With malice toward none, with charity for all," let us bind up the nation's wounds.

In the sense that sanitation means cleanliness, Christian Scientists are in sympathy with sanitation, and not only are they advocates of it, but they consistently practise it. As to so-called "preventive medicine," Christian Scientists make not the slightest objection to its practice by those who desire it for themselves. To make such objections would be to violate the rights of others, and we can say without hesitation that the record of Christian Scientists individually and collectively is free from anything of the kind. They do object, however, to the forcing of preventive medicine, or any other kind of medicine, upon those who do not want it. Dr. Cabot says that Christian Science heals the sick, yet he would, we assume, strenuously (and rightfully) object to its being forced by law upon him or upon any one else whose desire is otherwise. If it is right to do the one, then certainly it would be right to do the other.

As to the legitimacy of Christian Science and the sound reasons which actuate its followers in their adherence to it, the story is a very simple one. Christian Science is scarcely a generation old, and its followers are almost exclusively those who have been healed by its practice, many of them of diseases pronounced incurable, some of them after reputable, learned, and conscientious physicians had given them but a few days or even a few hours to live. These experiences have proved to them the availability of Christian Science as a healing system, and in nearly every instance they have also had proved to them that it is the best "preventive medicine," because it has kept them well.

Christian Scientists neither deny nor denounce the efforts of the physician to ameliorate sickness and suffering, and respect his intention. They only regret that medical practice is so bound down by tradition and custom that its adherents are apparently unable to recognize that possibly there may be a better and more comprehensive system,—the system which Christ Jesus taught and used and bade his followers do likewise; that it is possible, through the enlarged power to heal conferred by Christian Science, to make men "every whit whole,"—sound physically, mentally, and spiritually; and that much more could be accomplished for the general uplift of mankind under these conditions.

Neither do Christian Scientists desire or seek any conflict. They simply ask for themselves the privilege of exercising the freedom of choice which is guaranteed by the federal constitution, nor do they desire to interfere with or prevent the exercise of a similar right by others. If the practice of their religion brings to them health and happiness, they could not, even if they would, refuse to share with all who will accept it the truth that makes free from every phase of the asserted power of evil, for in so doing they are but striving to be obedient to the Master's command to his disciples: "Freely ye have received; freely give."

ARCHIBALD MCLELLAN.

THE TRUTH THAT SAVES.

CHRIST JESUS effectively portrayed both the privilege and the need of mankind in his teaching that freedom and well-being are to be gained by increase of knowledge. His panacea for every human ill is found in his commanding utterance, "Ye shall know the truth."

The moment, however, one begins to think of the saving significance of the educational process, he is impressed with the seriousness of the handicap imposed upon us by belief in the universality and naturalness of that capacity to forget which is constantly wasting our laboriously garnered store. He remembers, too, that whatever the acquired wisdom of his parents, every child has to begin without capital, and learn every simplest thing for himself, so that in a sense human advance must pause and retrace a long, long distance of its course with the passing of every generation. Regardless of all this disability, however, the compass of human knowledge has so wondrously widened in these later centuries, that ground seems to be given for the assumption that racial redemption, the millennium, is rapidly drawing near, in fulfilment of the declaration of the Master that true knowledge is the universal emancipator.

We all know, however, that the spiritual advance of the race has not been coincident with its advance in learning; indeed, the scholastic life has in large part seemed to make its votaries characteristically indifferent to spiritual things. It therefore becomes apparent that the freedom-bringing truth to which Jesus referred is not the wisdom of the schools, and Job must have realized this when he voiced that most suggestive interrogation, "Canst thou by searching find out God?" Subjection to the rule of sin, sickness, and death is, as a whole, no less characteristic of the cultivated than of the ignorant, and this very noticeable fact accounts, no doubt, for much of the pessimism of the erudite.

Upon this vital problem, as upon so many others, Christian Science throws a clear, revealing ray. It enables us to see that the truth of which the Master spake is not an understanding of the facts of material sense experience, nor yet of the abstract truth which is forever wedded in our thought to materiality, however significant such a knowing may be to the betterment of belief, the elimination of the grosser states and superstitions of mortal life. On the contrary, it is that knowledge of real being, of Spirit and its manifestations, which gave Christ Jesus his preeminence and power. It is that scientific understanding of divine metaphysics which he declared to be apprehensible to the childlike in heart. The knowledge of the world has to do only with phenomena and it is always based on hypotheses, while the truth that saves is based on revealed Principle.

Digitized by Google

There was nothing theoretical back of Christ Jesus' teaching and demonstrations, and it is this apprehension of ultimate truth of which Mrs. Eddy has said that it "involves intuition, hope, faith, understanding, fruition, reality" (Science and Health, p. 298). The channels through which transforming truth is gained may or may not be collegiate, but they are always and wholly Christian.

This we all much need to realize, that the saving truth is the gift of heaven. It is a revelation whose light may be reflected in right thought and right living, but its source is that Sun of all being, whose rays enter and illumine every truly aspiring heart. All men may be savingly taught of God, and they alone are freemen who are thus made free.

JOHN B. WILLIS.

THE LORD'S PRAYER.

THERE are no Christian people who give greater prominence to the Lord's Prayer in their devotions than do Christian Scientists, and respecting it their Leader says that it "covers all human needs" (Science and Health, p. 16). This prayer with its spiritual sense, as given on the page just indicated, is included in the "first lessons" which form such an important part of the study of all the pupils in Christian Science Sunday schools, as provided for in the Manual of The Mother Church. Occasionally some outsider asks why any interpretation is necessary, why we do not take the prayer "just as Jesus gave it," quite forgetful of the fact that every one must strive to reach and interpret its meaning, unless he is content with a mere repetition of words.

Certainly nothing could be more important than to grasp the meaning of this prayer as the Master gave it, but do Christians in general do this? It is very significant to find that when little children who have not been taught in Christian Science are asked where heaven is, they almost invariably reply that it is up in the sky, and when they are asked how we can get to heaven, they are likely to say that we shall go there after we die. Now this is surely not what Christ Jesus meant when he taught his followers to say, "Our Father which art in heaven." The infinite Father is forever present, and a clear sense of His omnipresence and omnipotence constitutes heaven, which in Christian Science means "harmony; the reign of Spirit" (Science and Health, p. 587). No one can deny that it must be heaven where God is, and in the Bible we read, "Do not I fill heaven and earth? saith the Lord." It is therefore of the utmost importance that both child and adult should keep constantly before thought the ever-presence of God, and of heaven as taught by Christ Jesus and insisted upon in Christian Science as the great truth which heals sickness and overcomes sin.

It is admitted by nearly all thoughtful people that worry is the source of a large percentage of the diseases which afflict mankind, but why this worry? It certainly never helps to work out any of the problems of human existence, but rather tends to paralyze the energies which should be given fair opportunity to overcome every difficulty that may present itself. Does not all worry spring from the false belief that man is separated from God; that he is held down by material laws and discordant conditions, and that God manifests His power chiefly in afflicting His children for some supposedly good reason which is wholly unknown to them? Under the pressure of such a belief, is it any wonder that worry is intensified and that disease is so often chronic?

Here let us turn for a moment to the spiritual interpretation of the opening address of the Lord's Prayer, "Our Father-Mother God, all-harmonious" (Science and Health, p. 16), and rise to the altitude of our Master's teachings. In Isaiah we are told that an earthly parent might forget the needs of her child, but God says, "Yet will I not forget thee. Behold, I have graven thee upon the palms of my hands." The psalmist also tells us that this loving Father heals all our diseases, yet long after these words were written Philip said to Jesus, "Shew us the Father, and it sufficeth us." Jesus then told him that it was the Father who did all the wonderful works which they had witnessed, and he went on, "At that day ye shall know that I am in my Father, and ye in me, and I in you." Then he said that the Comforter would come and would make clear all his teachings, a promise which is being fulfilled in the spiritual illumination that makes practical the Lord's Prayer and all else that the Master taught. Can any day be darkened by fear or anxiety if we realize the perpetual presence of "our Father-Mother God, all-harmonious"? This infinitely wise and loving parent knows all our real needs, and is ever ready to supply them when we draw near to divine Love, realizing the truth of the apostle's words, "God hath sent forth the Spirit of his Son into your hearts."

ANNIE M. KNOTT.

AMONG THE CHURCHES.

CHICAGO, ILL.

Probably the most impressive structure devoted to religious uses erected in Chicago in present years is the edifice of Eighth Church of Christ, Scientist, just completed at the northeast corner of Michigan boulevard and Forty-fourth street. One of the most impressive features of the building is the dome, filled with twenty-four beautiful golden windows and a novel indirect lighting system which floods the building with light without exposing the means to the audience. The windows are glazed with opalescent glass. There is a great organ, an echo organ and chimes, the combination representing a cost of eleven thousand five hundred dollars. The church has a seating capacity of twelve hundred and fifty and the land and building cost one hundred and forty-seven thousand dollars, including furnishings and organ.—*Examiner.*

VIRDEN, MAN.

A goodly number of visitors and members attended the first services held last Sunday forenoon and evening [Dec. 3] in the new edifice of First Church of Christ, Scientist, Virden, at the corner of Ninth avenue and Queen street. The harmony and beauty of color and outline which characterize the exterior of the church are well maintained in the interior. The walls above the dado are tinted in medium buff, and all the woodwork, as well as the dado, is finished in warm ivory enamel. The pleasing effect of the light color scheme is further enhanced by the abundance of light from the large amber-colored arched windows. In the evening the auditorium was brilliantly lighted by numerous gas brackets around the walls and one pendant over the readers' desk.—*Empire-Advance.*

GREAT FALLS, MONT.

With the regular Thanksgiving day service [Nov. 30] of the Christian Science church the new edifice of First Church of Christ, Scientist, was opened to the use of that congregation. The new building, which has just been completed, is located at First avenue north and Eleventh street, the same having been finished at a cost of three thousand dollars exclusive of the cost of the site. The building is of frame structure, containing a main auditorium with a seating capacity of one hundred and fifty, a directors' room,

Digitized by Google

and a readers' room. The interior is very handsomely decorated, the color scheme being old ivory and brown. The rooms are carpeted in brown and the chairs are of golden oak. The new house is looked upon by the congregation as a temporary church, it being the expectation of the organization to erect a stone building at some time in the future.

The church was organized in December, 1904, and for a time held its services in the Conrad Block. Later the meeting place was changed to Conrad Hall, later to Carnegie Hall, and then to Valeria Hall, where meetings were conducted up to the time of the completion of the new church.—*Great Falls Tribune.*

NEWARK, N. J.

Second Church of Christ, Scientist, is building a church and Sunday school at Second avenue and Garside street, ground having been broken on Oct. 25. The building will be of brick and concrete construction, one story high. It will measure sixty-two feet on Garside street and sixty feet on Second avenue, though a portion of this will be only thirty feet deep. The plot of land measures ninety-six by one hundred and twenty-five feet, which the building committee was authorized to purchase April 17. The interior is finished with a mission effect. There is an entrance on Garside street and another on Second avenue.

The first services of this church were held in Berkeley Hall, 516 Clinton avenue, on Feb. 26 last. The first steps toward erecting a church for the exclusive use of the congregation were taken at a meeting held the following April. Approximately six thousand dollars will be invested in this church and the site cost in the neighborhood of seven thousand two hundred dollars.—*Newark Sunday Call.*

RENO, NEV.

With the purchase of a site at the corner of Granite and Court streets yesterday [Nov. 21], First Church of Christ, Scientist, took the first step toward securing a permanent home in this city. A building is to be erected that will be a credit to the city. The purchase price of the lot, which is one hundred feet square, was six thousand five hundred dollars. This lot is an ideal location for the church, being centrally situated and on one of the best residence streets of the town, just a block from the car line and opposite the Washoe county court house. About six months ago a committee was appointed to look over the available lots in Reno, and after careful consideration it reported to the church at a special meeting of the members Monday night, Nov. 13, that this lot could be purchased. At that meeting the church voted unanimously to buy this lot at once.

The present Christian Science organization in Reno was started in May, 1906, when a few people interested in Christian Science began to meet every Sunday in a private residence for the purpose of reading the weekly Lesson-Sermons. In a few months the attendance had increased to such an extent that a hall had to be secured for the meetings. Harmony Hall on Sierra street was rented and services held there for several months. Meanwhile, on Aug. 5, 1907, a regular church was perfected and incorporated, taking the name of First Church of Christ, Scientist, of Reno. In the fall of this year, the church moved to the Century Clubhouse, where services were held until the completion of the Odd Fellows' Temple. Then the church again moved to the large hall in that building, where it still holds its services.

Although the population of Reno is constantly shifting, the attendance has steadily increased, until now the hall is filled at every service. Many of those who have left Reno have recently sent in contributions to the building fund.

Nevada State Journal.

THE LECTURES.

PARIS, FRANCE.

Bicknell Young lectured on the subject of Christian Science Nov. 9, at Washington Palace, 14 rue Magellan. He was introduced by Captain Génisset in French, the substance of his remarks being as follows:—

I am greatly honored in having the privilege of introducing to you our lecturer and friend, and it gives me much pleasure to do so. I wish to tell you first, since the opportunity is afforded me, how grateful I am to God for leading us here tonight to listen to the religious teachings of Christian Science; for Christian Science is both a religion and a science. It is a religion because it is the practical application of Jesus' teaching, and can be applied at all times and under all circumstances. It is a science because it is demonstrable knowledge. It teaches us the means of obtaining both physical and mental healing, and operates for the regeneration and the salvation of the human race. During the few months that I have had the opportunity of attending the meetings held here every Wednesday evening, I have heard numerous testimonies of gratitude for remarkable cases of healing. I can myself testify to the healing of my dear wife, and wish also to say that I have been much benefited by Christian Science, physically, morally, and spiritually. We owe this, first to the daily reading of the translation from English of a few pamphlets which we read together with great earnestness, and then to the faithful study of the text-book written by Mrs. Eddy, which we strive to understand and which I at present study with the help of the dictionary.

We are very happy today to express to God our deepest gratitude for our health, our life, and for the joy of living contented and in the prospect of seeing God's infinite goodness extended to all those who are dear to us. You can understand, therefore, with what thankfulness we come to church, and with what pleasure we meet there good and sincere friends upon whom weakness can have no hold.

Correspondence.

NEWTONVILLE, MASS.

Prof. Hermann S. Hering delivered a lecture on Christian Science Monday night, Nov. 13, in Temple Hall, Masonic Building, under the auspices of The Mother Church. He was introduced by Congressman John W. Weeks, a member of the national monetary commission, who said:—

This meeting is called to consider one method of following a religious life, and as a preliminary to an introduction which I am to make, I wish to refer to the trend of public thought in such matters. For hundreds of years after the beginning of the Christian era wars were fought, national boundaries were changed, dynasties rose and fell, and mankind was tortured and burned, not because of unbelief, but because there were differences in the views held by men relating to the course to be followed in preparing for future life. Many of these differences were not in any way essential in what goes to make up the Christian man, and could not have had any material influence in determining his final salvation.

To doubt many of the dogmas which were not taught by Christ, but which were the result of evolution, was to be damned, at least by those who did not include those special dogmas in their creed; but we live in better times, religious and other thought is broader and more liberal, and while there are still strict constructionists who take a narrow view of the course to be followed to be saved, and while very many will question the value to be placed on some particular creed or form of worship as a means of salvation, still nearly all men are inclined to minimize form and look

Digitized by Google

to works as the only basis from which to arrive at a correct conclusion as to the value of a life.

The old expression that all roads lead to Rome was not literally true, and yet the final goal in the travels of many people was that center of civilization; and most roads, either by direct course or by many devious and circuitous routes, finally reached that place. It is possible that all denominational roads with which we are familiar may not lead to that goal which all Christians desire to reach, but I have faith to believe that in the eyes of the all-provident One there is very little difference in what way one follows to reach the desired end, provided there is a fixed purpose to reach it by following the well-known rules of morality, with an eye single to living up to a standard which will, bring the desired result.

My reason tells me that if salvation is worth having, it must be based on character and works, not on dogmas or beliefs. We differ in our views as to what course should be followed in some functions relating to our social life. We have different ways of providing for our daily wants and the future needs of our families, and even when we adopt the same way our methods may greatly differ. We argue and dispute about our political courses, although it is fair to assume that most men wish only one result, and that is good government; yet in none of these affairs of life do we persecute those who do not agree with our views, nor do we even deny to them the right to think and believe what they see fit, although in most of these affairs we know what experience has taught, and can mathematically demonstrate what the result of any particular action may be. How much more tolerant, then, should be the position we take relating to the views of others in all matters pertaining to the future life, about the determination of which we cannot bring to bear the same rules of cause and effect which regulate the worldly affairs in which we are engaged.

Briefly, these are my views of our relations to one another in the religious life of a community. I am connected with a church in which I was brought up, with the practices, methods, and beliefs with which I am in sympathy; but that does not make me blind to the virtues of others, or to the good work they are doing for the community, as well as for their individual adherents and communicants. I welcome all agencies for good, including the Christian Science church. It presents in a new form some of the great fundamental truths, and reaches many who might not be reached in other ways. It is for this reason, and because I have many dear friends allied with it, that I came here tonight to take part in this meeting and to listen to one who has earned a right to be called eminent among you.

Correspondence.

SANTA ROSA, CAL.

An able exposition of the meaning and teachings of Christian Science was embodied in the lecture at Woodmen's Hall on Thursday night [Nov. 9] by Bliss Knapp. Despite the heavy rain of the evening there was a large audience present. The Hon. John Tyler Campbell was the chairman of the evening. In his introduction of Mr. Knapp he said:—

We meet this evening to hear a lecture upon a subject that appeals to all. It is apparent that the earnest, thoughtful, and intelligent people of this community are interested in Christian Science, and I am pleased to assure you that you are privileged to hear a correct, authentic, and instructive statement of the simple yet profound truths of a doctrine now no longer a theory, but a well-established fact. Christian Science is a scientific truth that has been tested and proven. Its teaching is as old as Christianity and is the message of the Saviour of the world: Heal the sick, heal all manner of sickness and all manner of diseases; and the assurance is given, in the words of the Saviour, "He that believeth on me, the works that I do shall he do also."

Christian Science was first promulgated by him who spoke as never man spake, and was taught and practised by the Saviour and his disciples in their mission on the shores of Galilee. In the hundred years following the tragedy of tragedies, it is estimated that more than fifty thousand followers of the meek and lowly, the "man of sorrows," were put to death for promulgating and practising the religion of Jesus. In Gibbon's "History of the Decline and Fall of the Roman Empire," it is stated that in the second century the followers of Jesus taught and practised divine healing. Through the dark ages we have no account of it, and it lay practically dormant until Mrs. Eddy formulated the doctrine of Christian Science as we have it today. While Mrs. Eddy is the undoubted Founder of Christian Science as we have it, it is not a new theory, as she expressly follows the teachings of Jesus. The doctrines she sets forth in the Christian Science text-book, "Science and Health with Key to the Scriptures," are as old as Christianity, and the book is one of the most wonderful collections of living truths in all literature, excepting only the Book of books.

Press Democrat.

VANCOUVER, B. C.

A lecture on Christian Science at the Opera House yesterday [Nov. 12] was delivered by Virgil O. Strickler to a great audience, scarcely a seat being vacant. J. E. Bird, chairman of the meeting, in his opening address said that the audience which was present, despite the inclemency of the weather, was a testimony to the prevalence of religious feeling, a sentiment which was the greatest and strongest thing in the world in all times and in all ages. There was an increasing tendency today to seek for an interpretation of a creed more nearly in touch with the ordinary man's intelligence. It seemed impossible that an all-wise God could allow the laws of nature to be set aside in a moment at the whim of a mortal being, in the view of a large section of thinking people regarding those phenomena which have received the name of miracles. Hence had arisen many doubts and fears to disturb religious life. He had pleasure in introducing the lecturer, who was a deep student of matters touching the spiritual life, and who would expound to them what many believed to be the solution of such doubts and fears.—*Province.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Birmingham, Ala.—William R. Rathvon, Bijou Theater, 3:30 p.m., Feb. 4.

Cocoanut Grove, Fla.—Virgil O. Strickler, Congregational Church, Feb. 8.

Harvey, Ill.—Frank H. Leonard, Coliseum, Center avenue, Feb. 1.

Independence, Kan.—Bliss Knapp, Beldorf Theater, Feb. 6.

Jackson, Miss.—William R. Rathvon, Church Edifice, North State and Fortification streets, Feb. 8.

Jacksonville, Fla.—Virgil O. Strickler, Duval Opera House, 3 p.m., Feb. 4.

Kingston-on-Thames, Eng.—Bicknell Young, Assembly Rooms, Surbiton, Surrey, Feb. 2.

Lincoln, Neb.—Bliss Knapp, Oliver Theater, Feb. 4.

Los Angeles, Cal. (Churches and Societies).—Prof. Hermann S. Hering, Third Church Edifice, 734 South Hope street, Sunday afternoon, Feb. 4; Second Church Edifice, West Adams street, Feb. 5 and 6.

Manchester, Eng. (First and Second Churches).—William D. McCrackan, M.A., Free Trade Hall, Peler street, 7:30 p.m., Feb. 6.

Miami, Fla.—Virgil O. Strickler, Fair Building, Feb. 5.

Mobile, Ala.—William R. Rathvon, Battle House Auditorium, Feb. 5.

Superior, Wis.—Frank H. Leonard, Grand Opera House, 3 p.m., Feb. 4.

TESTIMONIES OF HEALING.

These words of Christ Jesus, "Ye shall know the truth, and the truth shall make you free," were proved true by my healing eleven years ago in Christian Science. I was said to have been very ill in infancy and was never considered very strong. Upon graduating from school I was taken to Europe to study art, and at the end of a year of hard work my eyes began to fail. I consulted an oculist who had the reputation of being one of the best in Europe, and was told that I had defective vision. He ordered glasses, which I wore continually while studying, but received no benefit. After three years I returned to America, and again had my eyes examined. My glasses were changed many times, but no improvement resulted. I would often be obliged to go to bed on account of very severe headaches, and my eyes grew gradually worse, until finally I became almost helpless unless I had my glasses on. I then decided that the only way in which I could obtain relief at all was to be operated upon; but no cure could be guaranteed.

My general health at that time was steadily failing. I was unable to walk more than a few blocks at a time, unless under the influence of a drug. The many physicians to whom I went did their best to help me; I tried various kinds of treatment, but all to no avail; the attacks of suffering came more frequently and lasted longer each time. As I received no benefit from medicine, it was deemed best that I should undergo an operation. My father wished me to try Christian Science, but I was not inclined to do so as I was much opposed to what I believed this teaching to be. I was a member of an orthodox church, but did not feel satisfied. There were so many denominations, so many conflicting opinions as to what is right and what is wrong, that the question arose in my mind what God is. I read many religious books, hoping I might find an answer, but not until I read "Science and Health with Key to the Scriptures" by Mrs. Eddy did I understand God aright.

While in this condition a friend invited me to spend a week with her. She said, "I have a book, Science and Health, which I have not read and do not know anything about; will you read it?" I replied that I would do so. She did not know, nor did I, that by reading this book I might be healed. I went on a Monday morning to visit her and had taken my medicines with me. I read the book that afternoon, but did not seem to understand it; still I could not leave it alone.

After spending three days reading this book, and other Christian Science literature which had been loaned to my friend, on the fourth day a Scientist called, and I talked with her for several hours. During the conversation I learned that the teaching of this book is true, that God is Mind, and man, made in the image of Mind, must therefore reflect Mind and not matter. It all became very clear to me then that I had believed man to be something which he is not, and I exclaimed, "I see; my real self never was sick, therefore I am well." With this realization conditions changed immediately, and I knew that I was healed. The coming of Christ, Truth, to consciousness awakened me from this mortal dream, illusion. I had touched the hem of the garment of Truth, and was made whole. "This awakening," Mrs. Eddy tells us, "is the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick" (Science and Health, p. 230).

I asked the Scientist for treatment, as I thought this necessary in order to remain healed, and she replied, "You do not need it;" but upon my insisting, she complied. I took off my glasses and found that I could see without any difficulty, which proved to me that sight is mental and that I had been groping in mental darkness, which was my blindness. St. Paul said to those of his day that their minds were blind, not their eyes; and my mental confusion, or the confusion of human doctrines, had darkened my vision, but I began at once to apply my understanding of Christian Science to every problem. Not long after a boil formed on my finger. I had had this trouble before, and usually it was several days before I could use that hand, but this time I overcame the difficulty through my understanding of Christian Science. I took the text-book and declared the truth, and while making the declarations I did not look at my finger. When I did examine it later, no boil was there; it had disappeared, and only a slight redness remained to mark the place where it had seemed to be. Again Christian Science had proven the supremacy of Mind, also the truth of Mrs. Eddy's teaching that what the truth heals never returns.

I have not worn glasses or taken any kind of medicine since my healing; I have relied upon Christian Science only, and it has never failed me. To gratify my friend I sought Christian Science for physical healing, but deep in my heart I sought it to find God. Every other teaching had failed—Christian Science did not! My healing was so pronounced that it attracted other seekers after Truth to me, asking for help through my understanding of the Word. My time was soon fully occupied in the God-given work of healing, and I never resumed the study of art. My gratitude to our Leader, Mrs. Eddy, is great. I thank her for leading me to the Wayshower, Christ Jesus, and for showing me how to know what Life, Truth, and Love are.

LILLIAN M. BARTELS, Chicago, Ill.

[Translated from the German.]

Sincerest gratitude impels me to testify to the rich blessings which have come to me through Christian Science. In 1906 I was taken ill with a severe lung trouble. Although I consulted various physicians, the affliction steadily grew worse, so that it became impossible for me to attend to my household duties. Besides having a terrible cough, I was afflicted with asthma.

When this ailment was at its height and I had given up all hope of ever improving, a friend called my attention to Christian Science, and I immediately went to see a practitioner in Hannover. After the first treatment I felt so much better that I was able to sleep quietly, and in the measure of the growth of my trust in God, my cough disappeared, until I acquired the unshaken certainty that our only help is in God, who heals all our diseases, for the psalmist assures us that he who dwells in the secret place of the most High, abides under the shadow of the Almighty—sin and disease cannot touch him. After four weeks' treatment I was able to resume my work, and in three months' time I was completely healed of the lung trouble. The physicians had also told me that I would have to submit to an operation after childbirth, but in this experience, too, Christian Science has been my help.

After I had received such quick help, my husband applied to the practitioner who had shown so much loving-kindness in my case. He had been suffering for ten years with a very painful stomach and bowel trouble, accompanied by great loss of blood. Many were the physicians whom he had consulted without success. Although he had not been allowed to eat other than soft food for five years, his condition was such that at times he would be laid up for weeks. We now knew that with God all things are possible, and my husband set his hope on the great Physician. The disease gradually disappeared through treatment, and my husband now is not only able to eat any kind of food, but is also completely healed of this disease of years' standing.

Our little daughter also has experienced great help. At the age of nine she was taken ill with measles, accompanied by cramps which sometimes lasted for hours and were so severe that we expected death at any time. In our great need we asked the practitioner through whose ministration

Digitized by Google

so much good had already come to us, to give the child treatment. She responded to our call for help, and the divine power became manifest again; the child became quiet immediately, the cramps did not return, and she now is strong and healthy.

I am thankful to God with all my heart for what has come to me through Christian Science, and grateful to Him for the Leader who has shown us the way to Truth.

KAROLINE BUSSE, Steinförde (Hannover), Germany.

My gratitude for Christian Science is very great, far greater than I can put into words. Over three years ago a copy of Science and Health was placed in my hands, and as I read the book I knew I had found what I had long been searching for. I shall never forget the joy I experienced, as the truth dawned on my consciousness. I began to realize what Jesus meant when he said, "Your joy shall be full." Later I proved the truth of his other words, "Your joy no man taketh from you."

I was brought up by good and loving parents, and I often thank God for that upbringing and for the high ideals which were upheld in that home, but when the burden and heat of the day came, the old teaching seemed inadequate to give me the peace and help that I longed for. But from the day I gained that peace through Christian Science teaching, our text-book has been my constant companion, a daily help and comfort. Fear, anxiety, worry have been in a large measure destroyed, and now when trouble of any kind arises it is such peace to know that "in the secret place of the most High" there is a panacea for all ills, a help which never fails. No need now to turn to any human personality for sympathy, when the God whose name is Love has proved so sure a friend.

I have had many satisfying proofs that the law of healing which Jesus demonstrated nineteen hundred years ago is still in operation. Our youngest child, aged three, had been subject to convulsive attacks, which caused us much fear and for which we always called in a doctor. Not very long after we commenced the study of Christian Science, she had the usual symptoms, but the attack was slighter. I held to the truth of being through the night, but in the morning she was still in a high fever. I left one of the other children with her, reading the ninety-first Psalm, and went down to my work. Presently I picked up the New Testament, and came across these words, "Fear not, believe only: and she shall be made whole." Soon afterward I went upstairs and found the child quite recovered; the fever had gone, and she was bright and smiling, instead of dull and unnoticing. She was dressed and came downstairs, declaring she was quite well, and has never had an attack since.

Another time our eldest girl was brought home to me, having received a severe fall from the breaking of a rope while she was in a hammock. From her appearance I judge that she had received a severe shaking up, and she also complained of her back: but I do not remember having the least feeling of fear. I put her to bed and sat beside her reading aloud the week's lesson, which I had been studying at the time they called me. In about five minutes she told me that her head felt all right. I went on reading, and she presently interrupted me again to tell me that her back felt better. She said, however, that she could not sleep, and I advised her to lie still and just thank God for the relief she already had. Ten minutes or so afterward she was quietly asleep, and awoke in the morning bright and well. She suffered some pain from her back for two or three days, and seemed unable to lift anything, but after that no more was heard of it. This experience gave me a wonderful sense of God's immanence, an actual proof that He is a very present help in time of trouble.

If I were asked by any one what I feel most grateful for, I should answer that it was for the larger knowledge of God which the teaching of Christian Science has given me. This is worth more than all the physical healing and bodily well-being which I have experienced since becoming a Christian Scientist. Many times have I been brought into a fuller light, when clouds gathered round me, by a practitioner's faithful help. The periodicals continually cheer and encourage, while the Lesson-Sermons seem well-nigh priceless. Words fail me when I would express my gratitude for the Leader who was commissioned to awaken this generation to the truth which long lay concealed, and who has so faithfully fulfilled that commission. My only ambition is humbly to follow her as she has followed Christ.

EVELYN M. CARR, Virden, Manitoba.

About twenty-two years ago, while living out West, I was in a railroad accident. I was conductor at the time, and the train was running at the rate of fifty miles the hour when we went down the embankment. I jumped off and the result was an injury to my leg, so that I suffered terribly from varicose veins for twenty years. In 1901 I was in another accident, this time receiving a fractured skull. A surgical operation was considered necessary, but it was followed by the wreck of my whole nervous system. I had rheumatism and bowel trouble the entire twenty years and in the last eight years stomach trouble was added. Truly I was in a dreadful condition. My family were instructed never to leave me alone. I became unable to do work of any kind and could walk only a very short distance, because of the pain and swelling in my leg. I had the best medical attention that could be had, and took large quantities of medicine, yet I was not benefited and was waiting to go on the operating-table as soon as my regular physician came home from his vacation.

I had given up all hope of ever being well, but I had a sister who had been healed of lung trouble through Christian Science, so I commenced to think of it, and as a last resort and with the least faith possible I called on a Christian Scientist for help. I was greatly benefited by the first treatment, slept well that night, and for the first time in years forgot my tobacco. In four days I walked five miles, and my leg did not swell or pain me. In ten days I went to work in a large wholesale grocery, and have since then worked harder than I ever did in my life. My leg never swells, I do not get tired, there is no pain, and I can walk like a boy and sleep like a baby. The rheumatism has vanished, also the stomach and bowel trouble, and last but not least I have been healed of intense hatred.

I feel that the very stones would cry out if I withheld my gratitude to God, and to His faithful messenger, Mrs. Eddy, for I have been lifted from the very depths of misery into health, happiness, and good will toward men.

M. W. MARTIN, Lexington, Ky.

It is with a heart filled with gratitude and love that I tell of my experience in Christian Science healing. Over two years ago I was bound fast in chains of disease by a peculiar throat and lung affection. I had tried numerous physicians and changes of climate, but the only relief obtained, and that was temporary, was when in a much higher altitude. As soon, however, as I returned to a lower elevation I would lose my voice and even breathing was a great effort. I had not been able to speak aloud for some months past, had lost weight, and my courage was fast going, as doctors gave me little if any hope and *materia medica* failed to relieve me even for a short time; so the days seemed very dark to me.

One day a dear friend told me of a wonderful experience in Christian Science healing. His appearance substantiated all he said, and he asked me, as a personal favor, to try Christian Science just once. I consented, and he at once

Digitized by Google

telephoned to a practitioner for an appointment the next morning. I went merely to please this friend, also several other friends and business associates who had for some time past urged me to try Science. As I had heard a great deal against Christian Science, I asked this practitioner many questions, all of which she answered to my entire satisfaction. I then asked her to treat me. When I left her home I could speak as clearly as I do now and my breathing was perfectly natural and without effort. I fear that had I not received healing immediately, I should have cast Christian Science aside and have been deprived of the joys which I now receive. This healing occurred over two years ago, and I have never since had a return of the affliction.

I am a business woman, and have been able to go to my office every day since that time, and while I am so truly grateful for my physical healing, I am even more grateful for my present understanding of Truth and Love. I have found Christian Science to be practical Christianity. It helps us in business and in all our dealings with our fellow men. It gives us the blessed understanding of God as ever present help, and shows us that Love gives us abundance,—spiritually, physically, and financially. I hope this testimony may help some others to see the way in which we may enjoy all the blessings that are for us. I thank God for all these things, and am grateful to Mrs. Eddy, who has shown us the way to apply this truth as demonstrated by Christ Jesus.

MINNA M. GLEASON, Los Angeles, Cal.

With deepfelt gratitude I send this testimony of healing. The evening following Thanksgiving day, 1909, I had a fall which seriously injured my hip bone. The condition was at once so very critical that it seemed impossible for me to realize the truth myself, so a practitioner was sent for who faithfully stayed at my side all night. When morning came I was so far improved that I could realize the almighty healing power of Truth and Love, and I did not cease to declare this.

Although the condition grew better each day, it was at first most difficult and painful for me to move at all when trying to stand on my feet, and the same when lying down, but daily I could move better. I however became somewhat disheartened when at the end of the second week the improvement was not more marked, for the nights were very distressing. The practitioner was constantly doing very faithful work for me and no doctor or surgeon was assisting on the case. One night I was awakened with pain which it seemed almost impossible to bear. When at last it ceased, I knew that the healing was accomplished, and I improved rapidly.

I can hardly tell how grateful I am to God that He has again sent this healing truth to mankind through our beloved Leader, Mrs. Eddy; also to her for having made it known to us, for which we owe her endless gratitude.

EMILIE HERGENROEDER, Baltimore, Md.

Over two years ago I came in touch with Christian Science. My first visit to a practitioner made me feel like a new being. Several years before this time I had fallen and injured my hip, and had seven different doctors treat me. They helped me somewhat, but I had to keep right on taking their treatment in order to be able to get around at all. Besides this injury, my back was in a bad condition, and for ten years I had had headaches during the warm weather and was very nervous. I had Christian Science treatment for five weeks, and was healed of all these ailments. Since then a baby boy has been born to us, and Christian Science was a great help at that time. The child is strong and healthy, and since my healing I have had many proofs that a realization of the allness of God causes sin and sickness to vanish.

Words cannot express my gratitude for all the help which myself and family have had in Christian Science. I am thankful to God, also to our Leader for the healing, also thankful for the *Sentinel* and the *Monitor*, and grateful to all who have helped me to a clearer understanding of this wonderful truth.—MRS. MINNIE BROCKMAN, Vassar, Mich.

I came into Science through the healing of a relative, for whose sake I read "Science and Health with Key to the Scriptures" by Mrs. Eddy. Although I had never belonged to any church, I had for a number of years attended churches of different denominations, assisting with the music, and had often been urged by friends to become a member. I had tried to feel that I really wanted to go to some church, and to believe what was taught, but somehow to me there was always something lacking for which I was seeking. When, however, I read Science and Health I found what I longed for, and it was a revelation indeed. All my questions and doubts were answered, and I knew that God is ever present and not so far away and inaccessible as He had always seemed to be.

Since then I have had many proofs of the efficacy of divine Science as applied to any problem which may present itself. Not only have I been healed of physical ailments, such as severe attacks of headache, stomach trouble, catarrh, etc., but Christian Science enables me daily to do more and better work, both mentally and physically, and it has given me a peace of mind and happiness which can only be found as we grow into the fuller knowledge and understanding of the fact that God is the only creator and all that He creates is good; therefore evil is not real and has no power.

For all this, and for the privilege of church-membership and class instruction, I am truly grateful to God. I also feel that we, as Christian Scientists, must be thankful indeed, every minute of the day, to our dear Leader, Mrs. Eddy, for her untiring labors in behalf of suffering humanity.

MRS. F. J. MALEY, West Bend, Wis.

I have long felt a desire to show my sincere gratitude for the many and great blessings which Christian Science has brought me. About twenty years ago I was confined to bed for over three months with a spinal fever, partial paralysis, and St. Vitus' dance. I was under the care of doctors all the time, and they said there was but little hope for me; that if I ever did get up from my bed, I would have no use of my spine, as it was so seriously affected. I had about lost all hope in material means, and felt as if God was my only help.

One day a dear friend came to visit me and asked me why I did not try Christian Science. I asked her what it was, and she related to me how she had been healed of a malignant disease through the help of Christian Science, and she said she knew I could be healed. I asked where I could find a Christian Science practitioner, and when she told me I was taken to one for treatment. In less than a week I was healed of my afflictions, one and all. I read Christian Science literature, but did not then understand it and never took any interest in it. I had been healed, and with that I was satisfied! A short time afterward I was taken with a severe stomach affection which troubled me for more than four long and weary years. I continually took treatment from different doctors, some of whom said that an operation would have to be performed before any relief could be had.

At this stage Christian Science was again brought to my notice, and I took treatment for about six or eight weeks

Digitized by Google

and was healed once more. I have never taken any material remedies from that day to this, nor had any in the house. I have made Christian Science my daily study ever since, and I have been able to demonstrate the truth for myself and family for the past eight years. Over a year ago I had a severe attack of a throat and lung trouble. I called in a Christian Science practitioner, and in two weeks I was all right and was able to attend the services. Words cannot express my feelings of gratitude to God for the wonderful healing power of Christian Science. I am also thankful to our dear Leader, Mrs. Eddy, who has shown us the way to health and a more spiritual life. May many others see the great light as I have seen it.

MRS. SALLY A. BUELL, Mexico, Mo.

I wish to express my gratitude for what Christian Science has done for me. I have received many benefits from this teaching, but realize I have by no means risen to its highest possibilities. Christian Science enables us to discern the real, it gives us moral courage, and the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, contains explicit rules which, if understood and properly applied, will overcome all the ills that can enter into human experience. I have found that the way in Christian Science is the easiest way; truly its ways are pleasantness, and its paths are paths of peace. To me all other literature fades into insignificance before it, all desires fade before the paramount one to know the truth which makes us free.

I am very grateful to God, also to our Leader, Mrs. Eddy, through whose teachings I have gained an understanding of life in Spirit, which had been to me heretofore a mystery. Gratitude wells up in my heart like an ever sparkling fountain, and I humbly trust that now, "forgetting the things which are behind," I shall press on to a higher demonstration and understanding of Christian Science.

MRS. E. B. SUMMERS, New Orleans, La.

[Written for the *Sentinel*.]

THE DAUNTLESS HEART.

ISABELLE W. PEMBROOK.

DEEP in my consciousness I feel a pulse
Of energy undying,
That beats in ceaseless rhythm to the law of Life,
And bids me up in arms to meet the strife,
While from my inmost heart of hearts there comes
A strong replying.

I would not sluggish be, but forward move
Along my path:
And joyfully I'd enter in upon the strife
To do a valiant battle on the field of life,
Till I might know, at last, that full reward
Obedience hath.

"To him that overcometh," Truth has said;
A watchword fit!
No idle dreamers they who gain the height,
But those who conquer wrong and win the right,
While for reward upon their Lord's right hand
In heaven they sit.

So would I keep unswervingly the great command:
No gods but Thee:
True to the pulse of Truth that beats within,
Strong in the power of Love that conquers sin;
Nor lay my armor down till I shall win
The victory!

FROM OUR EXCHANGES.

[*Christian Work and Evangelist.*]

Mayor Gaynor talked very frankly the other night at a dinner of the Congregational Club of New York. He wonders how much good the ministers are really doing. They expect the mayor to shut up the saloons, close the gambling-houses, and stop every vice and social evil within twenty-four hours, and they criticize him if he does not do it. But, he says, they have been preaching thousands of years to get the Ten Commandments obeyed, and they have not succeeded very well yet. "How far," said the mayor, "does your influence extend? Do you reach out among the people? You can preach intellectual discourses, but how far does your influence in the community extend? Do you reach out among the unfortunate and the lowly and those who want to be lifted up? Or are your churches so finely decorated and cushioned and carpeted that a poor man will stand at the door and be afraid to go in? Does the great heart of Jesus throb in you—the one who took all the lowly by the hand and said, Come unto me and I will help you? You must answer that question for yourselves. When I go to the churches, one quarter filled, in this city, and look at the fine pews and carpets and cushions and the absence of anybody who has on his hand the signs of toil, I wonder whether all this is a failure after all. We meet in our little coteries and think we are very good, but is the spirit of Jesus among us? In the last analysis of everything we have to answer that question. How much good are you doing? Are we growing in spirituality and virtue, or not?"

[*Christian World.*]

Plainly the activities of the external life, however fast and furious, however magnificent their apparent result, do not satisfy the human problem, do not fill the human soul. And this seems to carry with it the conclusion that they were not meant to satisfy. And it is precisely here that the cosmic order appears once more to show its hand. It hints at depths of life to which our surface labors do not reach; at objects of our being that are beyond their sphere. We pause in our rush to ask, "Where, after all, is the reality which is our true possession?" Then we are reminded of another push which nature gives us in that direction; that of what we call evil, sorrow, suffering. Sorrow is one of the universals. Joy is a perhaps; suffering is a certainty. The world's evil has been the corner-stone of skepticism, the rock on which atheism builds its church. To us all it is the everlasting perplexity. . . . But is there no solution that is not confused, or contradictory, or despairing? The suffering, the weariness, the decay, the oncoming death, which beat through all our successes, find their way behind all our outside achievements: have they no meaning but a cynical one? Are we not rather pushed to the conclusion that their purpose lies in the deepening of life; nature's further thrust at us to push us back from the surface things; to compel us upon some center within?

[*Living Church.*]

The brotherhood of Christians has hardly been realized in fact, and the principle of love has not sufficiently dominated the Christian nations to enable them to dispense with huge standing armies, or to beat their spears into pruning-hooks. International and even domestic peace seems still to be a conquest of the distant future. Has, then, Christianity been a failure? It is useless to hide from ourselves the seriousness of the inquiry.

The gospels give us no certain indication of the length of the probation period which is granted the church for the conversion of the world. The superficial view of the first Christians was that their own generation would witness the end of all things. Again and again, in later history, has the

Digitized by Google

time for the end of the world been proclaimed, now by one and now by another; yet the old order has not changed. In some ways—so little has been accomplished—it would seem as though the Christian dispensation has hardly commenced. The nations have not been converted to Christ. The Christian nations, so called, have hardly received more than a veneer of Christianity. We are yet discussing what is the kingdom of God and where it is to be found, and Christians have not learned to love one another.

[Rev. Marion D. Shutter, D.D., in *Universalist Leader.*]

This is an age of machinery; but it will have to be finally judged, not from the standpoint of increased and easier production, but from the kind and quality of human beings it develops. The final test of a civilization is not its fabrics of cloth or steel, but its men and women. If machinery binds upon us additional fetters, it is evil; if it releases more time for the higher pursuits of life, as it ought and as it might, it is a blesssing. If it narrows the horizon and holds us more closely down to the material, it is doomed; if it opens the gateway of larger and nobler opportunity, it is vindicated. After all is said and done, after every monument of material grandeur shall have been laid prostrate as the temple at Jerusalem, not one stone remaining upon another, the only things that will survive from the activities and industries of earth, from its railroads and mines and mills,—will be the results they have wrought in the human soul.

[*Western Christian Advocate.*]

The cry of "back to Christ" for reality in religion has resulted in such a scrutiny of the records which concern Jesus as has never been given to any other prophet. And however men may view the church, Jesus stands today as real, and his views of truth, of God and man, are as satisfactory to the intellect as to the soul of man. Not only is this true, but somehow despair is lifting. With God alive and Christ real, there seems to be hope for the brotherhood of man. Our problems are still many and solutions are exceedingly so—but there is a changed attitude toward all these problems which concern the soul and the related life of man. Hopelessness has changed to hope. The first tenth of the new century should cause every man to face the new year with unbounded gratitude that he lives in an age of triumphing democracy, of growing knowledge and unbounded hope.

[*Standard.*]

Happily, the old spirit of exaggerated exclusiveness has passed away. Our tents—they are still individual habitations, not promiscuous dwellings—are placed nearer those of our brethren of other denominations, the same source of Bible truth serves as the well into which our buckets side by side are plunged. More frequently this supply is now brought right into different homes by the same pipes, although we shall still continue to use our own filters, and our own particular make of faucet, for certain kinds of filters still admit germs of error. This spirit of cooperation is lending itself more frequently to the use of the word "kingdom" where once we would have insisted upon "denomination."

[*Christian Advocate.*]

We would have a great many more prophetic preachers if we had more homes where the sense of God and His presence and His purposes possessed the minds of fathers and mothers. The men and women who have seen the vision and the splendor of the purposes of God for men, are sure to talk with wondering eyes of these things to their children, and eyes filled with wonder will look back again into their own. So the light never seen on sea or land will shine on Christian childhood, and from such childhood men of prophetic fire will rise up to bless the world.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States, Canada, Mexico, and Cuba,** single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: **Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.**

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: **For the United States** (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the **rate of $3 yearly is required.** When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the *Lesson-Sermons* which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 20 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 35 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Three new national bird reservations, two in Alaska and one in Nebraska, have been created by President Taft and placed under the department of agriculture. On Forester island, one of the Alaska reservations, the rhinoceros auklet breeds. This island, which is the most northern home of that bird and one of its few breeding-places, contains one of the most extensive bird collections in southeastern Alaska. "The Nebraska reservation is in the heart of the prairie chicken country and furnishes the only refuge which has been established for this fast disappearing game bird," says Dr. Henshaw, head of the biological survey. "It will be tenanted also by sharp-tailed grouse and quail and offers conditions suitable for a satisfactory range for big game." This makes a total of fifty-five bird reservations established to date, eight of them in Alaska.

Although a further extension of time to Feb. 14 from Jan. 31 has been allowed for hearing the arguments on the demurrers to indictments standing against five officials of the United Shoe Machinery Company on the charge of conspiracy in violating the Sherman act, it probably will not be necessary to go into court on such a proceeding, as the company has practically reached an agreement with Attorney-General Wickersham whereby the criminal charges against the officials of the company and the dissolution suit will be abandoned. It is understood that when the case is finally settled the company will be conducting its business in accordance with the interpretation of the Sherman act.

District Attorney Whitman has decided to investigate the butter business in New York to find out whether or not the men who control the butter market, if there are such, are guilty of a conspiracy in restraint of trade. Witnesses will be called who will tell the grand jury who controls the butter situation in New York. Then an information will be laid before a police magistrate, as was done last summer when the price of ice went up during the hot spell. The case will be in the same hands as conducted the prosecution of the live poultry trust last summer which resulted in thirteen convictions.

A petition to dissolve the American Telephone & Telegraph Company on the ground that it is a monopoly in violation of the provisions of the Sherman law, has been made. According to the petition the company, which controls the Western Union Telegraph Company and eight subsidiary telephone companies in various parts of the United States, is one of the largest financial concerns in the world, having a capital of nearly one billion dollars, and it now dominates the telephone business of the country and practically bars all competition.

According to a preliminary report on the cost of production in the steel industry by Herbert Knox Smith, commissioner of corporations, unreasonable profits are made on iron ore in the lake region; excessive earnings flow into the treasury of the United States Steel Corporation from its ore transportation facilities, which suggest the necessity, from the standpoint of public policy, of segregating the ore railroads from the giant corporation; and large inter-company profits are made by consolidated ore, iron, and steel companies.

Promoters of fraudulent schemes who had obtained seventy-seven million dollars from the public through fraudulent use of the mails, were put out of business during the fiscal year ending June 30 last. Of the five hundred and twenty-nine individuals who were indicted on the charge of using the mails in furtherance of schemes to defraud, one hundred and ninety-six persons were tried and one hundred and eighty-four were convicted.

Powerful influences are said to be working against the Congressional inquiry into the "money trust." It was learned that, acting upon the advice of the big banks, hundreds of little banks in every section of the United States are writing in to the congressmen representing their districts, urging them to exert pressure to stop the investigation.

But ten years ago the highest percentage of bad roads was in the Southeast or Southwest. This condition no longer prevails. From being a fad, good roads have become in the Southwest a public passion. The bicycle led the way in the new movement and the motor car is completing it.

United States District Judge A. C. Angell has denied the motion made in behalf of the Colwell Lead Company of New York to quash the indictments in the government's criminal case against the "bathtub trust." This reinstates the case. There are about two score defendants.

International.

The Canadian minister of public works outlined in the House the other day the system of public highways upon which the government proposed to guarantee a loan of ten million dollars, which sum will be available for the towns and municipalities of the province on the payment of half the interest rate of two per cent. He said that the project included the macadamizing of four highways between Montreal and Quebec, two on the north and two on the south shore, of a highway from Quebec to the United States boundary by way of Sherbrooke and Beauce county, of a highway from Quebec to Gaspe, and of a highway from Quebec to Tadousac. Continuing, he added that they contemplated a macadamized roadway from Montreal to Sherbrooke, one from Montreal to Ottawa, and another roadway from Montreal to the American border. In addition to that there would be funds for the building of two hundred miles of road in the Lake St. John district, and it was estimated that even then there would be funds for twelve hundred miles more of macadamized roadways, mostly in the vicinity of Montreal. He said that the ten million dollars which was to be placed at the disposal of municipalities of the province would enable them to construct thirty-three hundred miles of roads.

The royal commission on taxation, in reports to the provincial Parliament, recommends that British Columbia adopt the single tax. The commission, which conducted a thorough investigation of taxation in the province, advocated the abolition of the poll tax, personal property tax, and the tax on improvements. The single tax is already in operation in the city of Vancouver.

The younger princes of the Manchu dynasty of China have carried their point, it is said, against abdication of power by the throne. Yuan Shi Kai, who has been acting for the throne, has resigned and has been succeeded by General Yin Tchang, who is reported in favor of resuming war with the revolutionists at once.

The long-talked-of amalgamation of the electric tubes and railroads of London with the London General Omnibus Company has been finally carried through. The properties owned by the companies concerned in the new amalgamation represent a value of one hundred and seventy-five million dollars.

According to the annual report of the director of public instruction in the Bombay presidency of India for the year 1910-11, the number of persons under instruction, taking all institutions together, rose from eight hundred and fifty thousand to eight hundred and sixty-nine thousand.

Industrial and Commercial.

Sir Joseph Ward, in the course of some remarks dealing with industry in New Zealand, said: "I am of opinion that it is of great importance to the country that we should encourage the production of iron from our ores and iron sand and have it supplied at a rate to our manufacturers that would enable them to compete successfully in the work of manufacturing articles against competition from beyond New Zealand. If such a work is put in hand, I should expect in a few years to find at least ten thousand men employed in a great industry of the kind. Should private enterprise not be attracted to the iron industry, the government will consider immediately the expediency of developing the iron resources of the dominion."

The first and most important part of the great scheme of improvements and extensions to the London docks, which is being carried out by the port of London authority, will be taken in hand in the early spring. This is the construction of a new dock to the south of the Royal Albert docks. The provisional cost of the scheme is estimated at about two million five hundred thousand pounds and the work is likely to occupy several years. The dock will be forty-six hundred feet long, giving a quay length of ninety-two hundred feet. The water in the dock will have a depth of thirty-eight feet and cover an area of as much as sixty-five acres. The land on which it will be situated was purchased some ten years ago by the port of London authority.

Trade of the United States with China in the calendar year just ended approximated fifty-five million dollars in value, of which about twenty-three million represented the value of exports to and thirty-two million that of imports from China. Cotton goods, illuminating oil, flour, iron and steel manufactures, and lumber are the principal articles of export from the United States to China, and from China the United States imports annually from twenty to forty million pounds of wool, three to five million pounds of silk, about ten million pounds of goat skins, about thirty million pounds of tea, fifteen to twenty-five million pounds of rice, and about thirteen million square yards of mattings.

Authority is to be asked of Parliament by the Eastern Canada Power Company to wipe out from the topography of the St. Lawrence river the Coteau and Cedar rapids and divert the whole flow of the waterway nearly half a mile from its present course. Niagara has an electrical potentiality of about six hundred thousand horse-power. The new Canada company plan would be capable of producing nearly twice that amount. It is capitalized at one hundred million dollars.

A wealthy syndicate, comprising, it is reported, United States and Canadian capitalists, has been formed with the purpose of inaugurating a Brazilian beef trust. It is stated that nine million acres of land in Brazil have been acquired for the purpose of rearing cattle and competing with the great Argentine cattle-rearing industry.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

EVIL IMPERSONALIZED.

CLARENCE W. CHADWICK.

THE apostle's declaration that "we wrestle not against flesh and blood" touches upon a subject of vital import to the disciple of Truth, to wit, the impersonalization of error. A correlative thought from Science and Health (p. 71) is that evil "is neither person, place, nor thing." These two statements, understood scientifically and followed to their legitimate conclusion, help to lead mortals out of sense into Soul, the land of promise.

The holding of thought to finite personality, *alias* flesh and blood, is the error which would shut out the recognition of Christ, Truth, and so prevent the overcoming of evil with good. Our Leader's counsel is that Christian Scientists "think, speak, teach, and write the truth of Christian Science without reference to right or wrong personality in this field of labor" (No and Yes, p. 7). There is abundant evidence of assurance that the whole world is beginning to awaken to an impersonal sense of evil, or error. It is slowly but surely accepting and adopting the teaching of Christian Science, that the only devil there is or ever will be is the evil thought in human or mortal consciousness. To be sure, this evil thought claims a personality from which it is inseparable; but this claim does not and cannot make evil something which it is not, viz., a person or a thing. All will admit that when Jesus cast devils out of people, these people manifested an improved mentality, thus proving that the so-called devils were so many evil thoughts or beliefs.

When evil thoughts are conquered, one's sense of personality has changed. When the Christ-idea finds expression in individual consciousness, the I or Ego ascends to the Father, and the admission of a supposed selfhood separate and apart from God is no longer made. The sense of corporeality is then placed under the control of Spirit, the one Mind, and the process of overcoming the human or relative with the divine or absolute is begun. This is transformation by the renewing of the human mind, rather than annihilation. Should the conscious control of Spirit be lost sight of at any time, and evil or wrong thought be allowed to find expression, such thought is no longer associated with man's true individuality. There is no longer the ignorant admission that man is either sick or sinful. In other words, the belief that man is sick or sinful can no longer be admitted, even as a sick or a sinful man's belief, for there is no such man. The real man, the image and likeness of God, reflects only the nature of God, good. The false claim, therefore, that man is expressing something which is unlike God, is purely an impersonal claim of impersonal evil or error. First and last it is but a belief without a believer. When seen as such and separated from all that constitutes real manhood, healing takes place, regeneration ensues.

This teaching is by no means a license to the mortal to continue in sin under the assumption that his sins are not his own sins. The line of righteous demarcation is between sin and the real man, not between sin and a false sense of personality called mortal man. "Whatsoever a man soweth, that shall he also reap," leaves no avenue of escape for the wrong-doer. Not until he recognizes the metaphysical fact that a false belief is the only sinner there is (see Science and Health, p. 393), and begins to discern man's true selfhood apart from corporeality, can he begin to escape the penalty of wrong-doing. Punishment ceases only when the sin ceases, and sin ceases only when sin is recognized to be a non-intelligent impersonal belief and in no manner related to God's man.

To call one a sinner does not solve his problem for him. It does not save him from the further commission of sin. It does not heal him of a single disease that flesh and blood are heir to. But to know that the real spiritual man is an individualized reflection of the one perfect Mind, and that what the so-called physical senses call a man is but a mortal counterfeit of the real individuality of man,—this understanding of the spiritual facts of being enables many to begin the all-important work of putting off "the old man" (which the world calls personality, with all that constitutes sin, disease, and death) and of putting on "the new man" (the understanding of spiritual individuality, with all that makes for goodness and perfection). *Materia medica* says that some one is a sick man, and this admission betrays at once an ignorance of the real man and of his relationship to God, as well as the wholly experimental nature of medication. Old theology fails to correct *materia medica's* mistake, and it attaches one more lie to its belief about man by calling some one not only sick but sinful, which absolutely shuts out any recognition of the healing Christ, Truth, the Master's only remedy for both sickness and sin. Thus it is that we find *materia medica* and false theology locked arm-in-arm in their erroneous concept of man, and both powerless to demonstrate the impersonal nature of evil.

Christian Science steps into the arena of mental activity and offers a reasonable, rational, and scientific analysis of the human problem. It begins by telling the seeker after Truth that sickness and sin are no more a part of the real man than they are of God; that they are impersonal beliefs of the so-called mortal or carnal mind, and that if he will begin to exercise man's God-given power to eschew evil and to love good, he can awaken here and now from the Adam-dream of a supposed selfhood separate and apart from God, to find his true selfhood as an immortal child of God. He begins a prayerful study of the Christian Science textbook in connection with his Bible, and little by little a wonderful transformation takes place. It comes naturally and gently, like the bursting petals of a beautiful flower. He finds that there is something near at hand abundantly able and ready to save him from the contemplation of corporeal personality with its aches and pains, its foibles and follies, but which cannot be grasped by the personal senses. With a heart full of gratitude for a glimpse of the healing and redemptive Christ-idea, he begins for the first time to heed the Master's injunction to take no thought for the body, and from then on his one sole aim is to gain an impersonal sense of everything and to retreat from the discords of

sense into what has been termed Mind's internal heaven of peace, health, and happiness.

The student of Christian Science will derive much helpful instruction from a careful study of our Leader's article in "Miscellaneous Writings" (p. 307) entitled, "Deification of Personality," which concludes with these significant words: "To impersonalize scientifically the material sense of existence—rather than cling to personality—is the lesson of today."

TO GOD'S GLORY.

A. L. C. LUMSDEN.

THE command given by Christ Jesus, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven," is one which the Christian Scientist should ever keep in thought; also the psalmist's injunction to "do all to the glory of God." He who has the privilege of knowing the truth, must always be striving to make use of his knowledge to benefit himself and others, and so bring its marvelous Principle and the rules of harmony before the world. He will find it his greatest joy to accomplish his daily task in such a way as to show that all things do "work together for good to them that love God," to those who follow the leadings of Truth. All things indeed work together for good; no matter how small some may appear, each has its part in Truth's economy, and harmony results in proportion as Christ's commands are heeded. That which seems "first" will often be "the last," and the last, or least, may appear of paramount importance when we have progressed beyond the present point of view.

While we think from a material standpoint, errors of judgment are bound to be innumerable, but when Truth's guidance is sought the true path and duty are revealed. Thus it is that the Christian Scientist does not have to await his opportunity to do his work for God, good, for this opportunity will be ever before him. It lies not alone in the great deeds to be accomplished by some, or by becoming prominent in the world's eyes, but in the little things of daily life one can always reflect the light of Truth. There is a scientific and harmonious way of doing everything, however insignificant it may appear, and it is in doing these small things that the Christian Scientist fits himself for greater works. There is progress always, so if one begins aright and keeps to the right path, the simplest things will lead upward and onward. Without the small beginnings, however, no progress can be made at all.

The Christian Scientist must make sure that his acts are not for self-glorification, nor to win the praise of men. He must watch that his thoughts and acts manifest that Mind "which was also in Christ Jesus," no matter whether they are of great or small importance from a worldly standpoint. In order that this Mind may be manifested in him and to him, the Christian Scientist has but to turn to Truth. He knows that God is Truth and is ever present. Resting his thoughts continually on God, the true path is revealed and the objects before him appear in their true light. This is inspiration, and through it the Christian Scientist will avoid the suffering which results from following the dictates of the human will. In perfect confidence he will go on doing what he has been taught, not seeking his own ends, but working his best for the glorification of the truth revealed to him.

No work can be so trivial as to require less than our best efforts, or of such small importance that it can be neglected or done in a slovenly way. It is only as we put forth our best that we can improve, and find more good to do and ability wherewith to do it. We must improve our present work to the uttermost before we can possibly advance to a higher plane. Only as we make a habit of turning out our best work, even in the smallest things, can we succeed in any occupation, and especially in Christian Science, thus letting our reflected light illumine the wayside for the benefit of others. If we pick and choose as to what things have to be done well and what can be neglected, we shall in time find ourselves in the position of the Pharisees of old, who left undone things of great importance for the sake of doing something which was not of any real value. We can rest assured that if we have left undone the lesser things, such as the kindly word of encouragement, the forgiving thought, and the helping hand, we shall have to retrace our steps before we can progress. The careless worker accomplishes nothing.

In working for the glory of God we are bound to succeed, since true success is man's heritage and right, for God gives the ability and opportunity to attain it. We have only to make use of the truth we know in such a way that we may manifest it to others and so help them. Our efforts may seem endless, but the Christian Scientist finds his rest in action. If we work for the glory of God, we must always be improving and doing more, for as our understanding grows we find new opportunities awaiting us. We can trust God to provide means in which our understanding may be made to bear fruit, and we shall also become beacon-lights to cheer and encourage those who follow after. Moreover, each success will urge us to better our own efforts, and there will always be some room for improvement. To put off the time for improvement ends in disappointment, as the imperfect can never give satisfaction, especially when we see already that a better and more perfect result could be obtained.

In no place and under no conditions must we forget that it is our duty to work for the glory of the divine Principle which we profess to obey and demonstrate. In periods of difficulty and when mortal mind may be whispering "failure," it is then that our light has the opportunity to shine out the clearest. As we work loyally to glorify our Father in heaven, strength according to our needs will be given us, we shall be able to persevere until we overcome, however great the difficulty. Calm and strong by reason of this faith, the Christian Scientist will always command respect from those around. When we are "trusting Truth, the strong deliverer" (Science and Health, p. 226), we can await the decrees of good with perfect confidence and peace, although far and near tumult and terror may seem to reign. Thus do we glorify God, and in keeping up a constant and consistent warfare with error we are bound to receive our reward, while around us will gather those desirous of sharing our freedom from worry, anxiety, and fear. Energetic and confident, we are enabled not only to keep our position and at the appointed time to advance, but also to light the path for the weak, and guide those who ask for help up to Truth and Love, that source of light from which all blessings flow.

KINDNESS.

H. DAVIES.

ST. PAUL, who wrote under the guidance and inspiration of divine Mind, laid strong significance upon kindness as a particular phase of Love's manifestation, for he does not rest satisfied in declaring the fact to the Corinthians, in that wonderful thirteenth chapter of his first epistle to them, where love is analyzed with such a wealth of profound apprehension, but we find him repeating the admonition, with unmistakable emphasis, to the church at Ephesus: "Be ye kind one to another, tender-hearted, forgiving one another, even as God for Christ's sake hath forgiven you;" and again, when he exhorts the Christians of the imperial city to "be kindly affectioned one to another."

When any one is described to us as kind, there looms before the imagination some one who is constantly performing kind acts, deeds which spring from a spirit of kindly

Digitized by Google

solicitude for other people. We should expect to find such a one ministering to the welfare of all with whom he comes in contact, whether it be at home, at the office, in society; wherever, in fact, mankind foregather. A kind word, a smile, a kindly hand in assisting, as some one has aptly said, "lame dogs over stiles,"—of what incalculable service these kindly people are in the fierce strife of mortal existence. The very roughest place upon life's pathway may be made smooth by kindly sympathy, if only it is sympathy of the sterling sort,—encouragement and good cheer afforded to the forlorn and broken-hearted.

Perhaps, however, one of the most important ways, and none the less weighty because not ordinarily recognized as such, in which we can be kind one to another, is by punctually keeping appointments, being in our right place at the right time. It is, though we may not care to face the fact, one of the commonest, the most subtle forms of selfishness to keep other people awaiting our good pleasure. Lack of kindly regard for the feelings of others in this respect is manifested in a hundred ways. For instance, whole households are frequently thrown into confusion and much extra work is incurred if any member of the family is not at home at the appointed time for meals, or makes only a dilatory appearance at table. An endless amount of friction might be spared all round if the kindly habit of punctuality were more conscientiously cultivated.

Another method of showing kindness, particularly to tradespeople, who endeavor to serve their customers to the best of their ability, is not to wait until the telephone wires are blocked and overcrowded to give our orders, when the execution of them is almost beyond human possibility. It is unkind, nay it is callous, to treat others "like dumb driven cattle," when by a little kindly forethought on our part the work that has to be gotten through in a few harassed hours might be evenly distributed over other portions of the working day. Then there is the question which relates to our correspondence,—private letters, invitations, business communications, etc. Do we, in so far as we are able, pay nice regard to the feelings of others in these matters? To keep creditors waiting for moneys rightfully due to them, longer than can be avoided, is, we should bear in mind, neither kind nor Christian. It is not kind or courteous to delay either to accept or decline an invitation as soon after we have received it as possible. And to keep friends in anxious suspense, or to neglect some dear one, away perhaps in a distant land, because we are too lethargic or too much immersed in our own selfish pleasures to find time to write, is to be guilty of greater unkindness than we most likely care to admit. For who indeed among us has not at some time or another experienced what it means to watch and wait with hungering heart for home news which tarry so long by the way; but when, at last, they do arrive, they cheer and lighten the lonely banishment as nothing else can.

Or it may be we are at the library or reading-room, and although we are perfectly well aware that another is expectantly waiting for the book, magazine, or newspaper which we are reading, nevertheless we retain possession of it until we have selfishly gleaned its contents to the very end. Such wanton disregard for our neighbor, who very probably has neither so much time or leisure at his disposal as we have, but who is entitled nevertheless to an equal share of every communal privilege just as much as ourselves, is to cast aside St. Paul's binding admonition altogether. Ah, yes, now that we come to think of it, the ways we have of being kind or unkind to those we love or should love, surpass numeration. Their action covers the entire course of each day, and fills its passing hours with the glad sunshine of achievement or the dismal shadow of wasted opportunities.

In respect to those so-called small amenities of life, would it not be just as well if we paid more obedient heed to the great Teacher who said to his followers, "Watch and pray, that ye enter not into temptation." The temptation to err in the foregoing instances may seem almost too trivial for serious attention, but we ought prayerfully to see that we are not used as the channels of mortal mind, for the human mind is inherently selfish, and ofttimes so self-centered as to be altogether oblivious to the demands of Love, the divine Mind. Our revered Leader says: "If selfishness has given place to kindness, we shall regard our neighbor unselfishly" (Science and Health, p. 9); that is, we shall never injure or hurt any one, even in the very smallest particular, and we shall be unfailingly found doing to others as we would that they should do unto us. "After all, the one meaning of life is to be kind," said Abraham Lincoln, one day to a friend when at the zenith of power. Perchance the noble liberator spake more truly than he understood, for God is Love and Love is kind, and God is All-in-all.

To think kindly of those around us is to look in the right direction, but if our kindness stops short at that, we may be certain that it is insufficient in God's sight. Divine Love requires more, a great deal, at our hands than this. An active Principle demands active service, and there is but one way of being kind, and that is never to allow the chance of doing a kind action to escape us. This is to fall into line with the divine activity, for Love would not that even the least of His little ones should suffer. The poet sang,—

> Kind hearts are more than coronets,
> And simple faith than Norman blood,

and every Christian Scientist surely should live in agreement with this noble sentiment.

APATHY OVERCOME.

JOHN M. DEAN.

APATHY is the most dangerous foe with which every good movement is called upon to contend, and error would love nothing better than for those who are opposing it to become careless and indifferent toward their obligations.

An indolent Christian Scientist is an impossibility, and yet unless we are watchful the temptation to rest on our oars comes often at a time when it requires constant pulling to weather the waves and reach the shore. Evil whispers the insidious lie that our help is not needed to take care of a certain work, or that it will get along successfully with the momentum already received, or that in some mysterious way it will be taken care of without work. This last argument is a travesty on faith, for faith is never blind and a living faith is always accompanied by works.

The old adage, "God helps them that help themselves," is certainly true, and success is never achieved by simply shutting our eyes and going to sleep while trusting God to do a work in which we are unwilling to assist by the use of the spiritual means at our command. Mrs. Eddy tells us that "a self-satisfied ventilation of fervent sentiments" (Science and Health, p. 7) will not suffice; but when these sentiments are expressed in work, then and only then have we any right to expect an answer to our prayers. It is true that God does all things, but as we are His agents or representatives we cannot expect Him to accomplish good things with us which we are too lazy or too indifferent to appreciate. All power comes of God, but it can be effective with us only as we avail ourselves of His beneficent bounty. As one of our hymns has it,—

> 'Tis He that works to will,
> 'Tis He that works to do;
> His is the power by which we act,
> His be the glory too.

Mrs. Eddy speaks of "perfunctory religion" (Science and Health, p. 316) in such a manner as to sound a clear note of warning against the perfunctory practice of Christian Science, if such a thing were indeed possible. This warning

Digitized by Google

should keep us constantly on the alert to discover and destroy every inclination to do our work mechanically or to think that mere abstinence from drugs coupled with membership in a Christian Science church and fairly regular attendance upon the services constitutes a Christian Scientist. Paul gave Titus to understand that the followers of Christ must be "a peculiar people," and if a professing Christian Scientist fails to earn this distinction he is not manifesting those things which the world is looking for and has a right to expect of him.

The careful student will note, however, that this peculiarity does not consist in some special oddity of appearance, of speech, or of dress, but simply in the all-too-rare distinction of being "zealous of good works" in the healing of both sin and sickness. This latter peculiarity must not be lost sight of by those who believe that Christ Jesus came preaching and demonstrating a full salvation from errors of every kind, and it is certain that we can attain and retain the right to be called Christian Scientists only as we make this salvation operative with ourselves and others. Thus the pioneer in Christian Science cannot relax his efforts nor shift his burden to the shoulders of others, and he finds that it requires continuous striving to retain a hold on that which he has already striven to attain.

A motto which is hanging in many business offices throughout the country reads like this: "Keep everlastingly at it," and this is certainly applicable to our work in Christian Science. Sometimes, with victory almost within our grasp, we hear the voice of the so-called "god of ease" in its efforts to lull us to sleep, so that an almost earned reward will be snatched from us. The reward that is only "almost earned" is never earned. In taking a journey we never reach our destination until the last mile is covered, and the last mile means more than the first. It must be remembered, however, that the intervening miles have to be traveled before the final one is reached, and this should teach us the lesson of patience in striving. Activity is the logical consequence of spirituality, and only through the continuous expression of spiritual activity can we promote our individual growth and at the same time accelerate the growth of the great Christian Science movement.

"UNFETTERED BY HUMAN HYPOTHESES."

JULIUS MORITZEN.

DURING the recent Thanksgiving day service in The Mother Church, the testimony of one among the many who expressed their heartfelt gratitude for the blessings received through Christian Science, brought home to the writer the wonderful receptivity of little children to the truth. A mother arose and said that on behalf of the little ones she desired to voice her gratitude because the truth could be realized so completely by them. She said that recently her little girl, only three years old, came to her and voiced something that might indicate a physical ill. "We will take this to God," the mother told her little girl as she made ready to treat the child. Instantly came an answer from the little one, expressive of her perfect trust that God is "here now," and with that she was off to play. To this mother, such abounding confidence in the power of the Word must have come as an overwhelming proof of the efficacy of Christian Science. The moment the truth was expressed, all sense of discomfort on the part of the child had departed.

Mrs. Eddy tells us in the explanatory note, to be read before the Sunday lesson, how "the canonical writings, together with the word of our text-book . . . constitute a sermon . . . unfettered by human hypotheses" *(Christian Science Quarterly)*. It may be truly said that in the case of this little girl there were no human hypotheses to fetter her mentality. Her faith in God was all abounding. Many present in The Mother Church must have felt with the writer that here the seed was sown in fertile ground, ready to bring forth rich fruit in its season, with attendant blessings for the family concerned and for the good of the cause of Christian Science.

IMMORTAL FRIENDSHIP.

JOSEPH G. MANN.

As God is ever-presence, our truest friend is never absent. The flitting shadows of sense in no way affect this eternal verity of Soul. Mortals may come, and mortals may go, but the true man reflects God forever. And so true friendship exists forever. A dear one is not necessarily here when he or she is personally present; nor is a friend separated from us by his or her personal absence. Human loss and separation are the falling petals of the transient blossom whose fading out points to the fruitage which is imperishable and spiritual. Friendship and true relationship exist not in mortal mind or in the flesh; they are not the fruits of human personality; but they obtain in spite of personality, as evidence and proof of Principle. The sun shines, not by reason of the cloud, but in spite of it.

Jesus said: "If I go not away, the Comforter will not come unto you." Here the Master teaches plainly that consolation comes not from any personal presence, and that even the most Christly person must give place before the dawning of the consciousness of the Comforter that shall abide; namely, the Christ-principle. A friend is a friend only in so far as he or she represents Principle instead of self; and such a friend can never be absent, for to use the Master's words: "Though he were dead, yet shall he live." The immortality of true friendship is attested in that no human circumstance, condition, or relationship can affect it.

Earth's pressure of evil beliefs may seem to force the pilgrim to a crucial point of experience, as a phantom frightens into swooning the timid child, and this human crisis in the way heavenward may seem to the unspiritual to be death; but as to God there is no death, so in Science to man there is none. What seems to be death is apparent only to the lookers-on. The individual who knows and loves God, in the transition supposed to be dying may be more than ever living, living more in Mind and less in matter. When the so-called dead have passed the rubicon of suffering which is supposed to kill them, and to human sense they are seen to be dead, they are not dead; and, as to the Arctic explorer who has reached the pole, or the point on the earth farthest north, there is no north and he can only look everywhere south, so the to-our-sense dead, having passed the highest point of possible human suffering, find that there is no death, but instead only the dawning of a new and divinely enforced sense of Life.

At the pinnacle of belief in death, death itself vanishes, and the new sense that only Life is, or can be, appears. Death is not something that can destroy Life. Death can only destroy itself, that Life may more than ever appear. Not darkness, but light, is real; and the light is not even conscious of the darkness it dispels. Whatever really is can be found in the light. The *ignis fatuus* is dispelled by the light; and seeming death no more disrupts life and its unfolding heavenly friendship than the momentary closing of the eye extinguishes the sun or hinders its everlasting radiation.

New conditions have arisen—are coming to view every day—requiring entirely new methods, possibly a new set of men. Our God is making "all things new," and we show but little cooperation with His radical changes by so venerating time-worn procedures as to play the obstructionist.—GEORGE W. SAVORY.

SELECTED ARTICLES.

[Algernon Hervey Bathurst in *Nottingham* (Eng.) *Express.*]

I notice, in the *Express*, an account of the visit of the Bishop of Southwell to Holy Trinity Church, Nottingham. In reply to a question put by the bishop, Canon Holbrook is reported to have said that some of his parishioners had ceased attending the church owing to their having become interested in Christian Science, the reason given by the canon being that they "imagined they have been cured of various things." May I be permitted to point out that even if these good people had been suffering from merely imaginary ailments, it would surely be cause for gratitude that they should now be free from them.

The fact is, however, that Christian Science is daily healing innumerable cases of disease which had been previously carefully diagnosed by thoroughly competent physicians. In such cases there is clearly no imagination necessary, and the healing of these cases by Christian Science is merely the practical and inevitable result of an earnest and conscientious study of the teachings of the text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy. It is true that many complaints may be classed under the heading of hypochondria, and it is well known that *materia medica* has little to offer by way of relief for such cases, while Christian Science includes among the long list of diseases it has healed, many cases not only of hypochondria, but of functional and organic disease as well.

If, as Canon Holbrook pointed out, one or two of his parishioners who have ceased attending his church were "helpful workers," would it not be justifiable to assume that they were intelligent citizens, capable of forming correct conclusions? and, if so, it would hardly seem reasonable that they should be considered so lacking in sound judgment as to become interested in Christian Science except for a good reason. Christian Science is based wholly on the Bible, and proves with irrefutable logic that the healing of sickness and the destruction of sin must be the inevitable outcome of a correct understanding of and willingness to practise the teachings of Christ Jesus. Here, then, is the reason why so many thousands of men and women throughout the world are grateful for Christian Science.

[Frederick Dixon in *Brixton Free Press*, London, England.]

The vicar of Brixton's announcement of his intention to hold Christian Science services at his church during advent (as reported in our last issue) has created considerable interest and criticism. We do not propose to publish any communications dealing adversely with the vicar's convictions, but the following critical and learned dissertation, addressed to the editor by Frederick Dixon, a distinguished Christian Scientist, will be read with interest by all who are interested in the subject:—

To the Editor of the *Brixton Free Press.*

Sir:—The new departure taken by Mr. Waldron with respect to mental healing and chronicled in your issue of the 1st inst., is so interesting that I am sure you will permit me to allude to it. First, may I say that every Christian Scientist will welcome every endeavor to heal the sick by reliance on prayer rather than on drugs. At the same time, this clergyman, I am afraid, will find the patients relying more on the doctor than he has yet any idea of. It is not hostility to doctors; it is not contempt of what medical science may have done for those who have believed in it in the past, that has caused Christian Scientists to rely on Truth alone. A great metaphysical fact is at stake, and I think that after some months of experience the gentleman will begin to realize more perfectly in practice than he has ever been able to do in theory, what this means.

Now, may I take entire exception to his statement that Christian Science healing is manifested through a mixture of faith and mental suggestion? To begin with, faith, as I imagine he would define it, is entirely opposed to mental suggestion. Faith, from whatever point of view it is considered, must, in Christian teaching, be that first partial glimpse of the omnipotence of Spirit which is to lead into a knowledge of the whole truth. It is thus, if it is really Christian, based on a perception of the spiritual, to the elimination of the asserted power of human thought.

The action of the human mind, no one will deny, is made up of a belief in the power of good and evil, and probably the power of evil predominates. It is exactly this which is alluded to in the book of Genesis as the fruit of the tree of the knowledge of good and evil, and it is there exposed as ultimating in death. Anybody who thinks can see that this is necessarily the case. A belief in good and evil is a belief in sickness and health, in sin and purity, and under what is known today as physical law, is bound to ultimate in death. Death, Paul says, entered the world through sin; it therefore follows necessarily that sickness, which is usually the preliminary stage of death, must have entered the world the same way. Now, if a man should understand that good only is power, he would eat only of the tree of life. All thought of evil and sin would be banished from his mind, and he would gain that knowledge of truth which was summed up by Jesus the Christ in the phrase, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

The early teachers and leaders of the Israelitish people grasped this lesson in one sense fully; that is to say, they saw the danger of believing in both good and evil as power. No human being has ever pretended that the carnal mind is anything but impure. The very best that can be said of it is that it accepts good and evil as power. The consequence is that when the theory of mental suggestion is brought into practice, the result follows that the claim to be able to do good is coupled with the claim of being able to do evil. There is no question whatever of this fact. Every one knows that the hypnotist or the mental worker who can suggest health, can as easily suggest sickness. The wonder-workers of the east, in the early days of the Hebrew people, were quite conscious of this, and practised those mental arts summed up under a dozen or so different *aliases* in the Old Testament. The consequence was that there grew up that war between them and the leaders of Israel which ended in the attempt of the latter to stamp them out, if necessary by the process described as "cutting them off."

As a matter of fact, the destruction of the body does not destroy human thought or human opinions, and so, in spite of all the efforts to destroy the wonder-workers, wonder-working survived in the shape of magic, exorcism, and innumerable other forms after the birth of Jesus of Nazareth. The nominal antagonism of the priests still went on against the wonder-worker, but it was an antagonism which was very far from genuine. At the same time, it was to the knowledge which the people held of the old efforts of their leaders to suppress occultism, that they appealed when they wished to denounce the healing done by Jesus, summing up their protests, in the language of the day, in the declaration that he cast out devils by Beelzebub. The reply of Jesus at once denied this, and exposed the connivance of the priests with the exorcists. "If," he said, "I by Beelzebub cast out devils, by whom do your children cast them out? therefore they shall be your judges." In plain English, he denounced the power of the human thought to heal sickness, while reminding the priests that they were themselves giving license for this healing.

It was not, however, Jesus' habit to be satisfied with a negation, and he went on to explain that Christian healing was done through a reliance upon good alone, making use of the expression that if he with the finger of God cast out devils, then the kingdom of God was come upon men. The

Digitized by Google

kingdom of God never came to any man through mental suggestion from a mind torn with all the lusts and passions of the world. It comes to him precisely as he realizes the unreality of such things, and proceeds to gain the Mind which was in Christ Jesus. It was the Mind which was in Christ Jesus that healed the sick in the first century, and it is the Mind which was in Christ Jesus that is able to heal them today. It is obvious from this, therefore, that in order to make a man whole, in the old Biblical sense, you must make him holier, and probably everybody realizes by this time that in the days when the word was first used there was no difference between the two.

Jesus himself, referring no doubt to the passage already quoted from Matthew, declared that a house divided against a house could not stand; in other words, that healing from a mind believing in good and evil could never produce holiness. All it does, and all it can produce, is to manipulate thought in a way liable to relapse at any moment. This is not healing. Healing consists in giving a man that understanding of the power and omnipotence of good which will enable him to begin to destroy his belief in the power of evil. That evil is not real and is not power, Jesus made abundantly clear, especially in that famous sentence of his in which, personifying it after the manner of the day, he likened it to the devil and declared that he abode not in the truth because there was no truth in him. Change the sentence from the eastern phraseology of the first century to the western phraseology of the twentieth, and what does it amount to but a declaration of the unreality and powerlessness of evil, and the consequent omnipotence, omniscience, and omnipresence of divine Mind? That was the gospel of Jesus the Christ, and that is the teaching of Christian Science today.

[C. J. Waddington in *Sind Gazette*, India.]

Kindly permit me to reply to Mr. ——'s uncalled-for onslaught on Christian Science, published in your issue of the 12th instant. Sincere Christian Scientists need neither apologists nor pulpits, but are ever ready to defend their rights and stand for their Principle. Slowly, surely, and silently, Christian or divine Science is working its way into the Christian world, dispelling the shadows of sin, error, and evil, healing diseases and ailments both mental and corporeal, acute and chronic, without medicine, and greatly benefiting millions of the human race today, socially, morally, physically, and intellectually, the world over.

The clerical critic says: "They [Christian Scientists] talk of wonderful cures and emphasize them." Thank God, well they may, I humbly say. "Let [him or] any clergyman try to cure his friends by their faith in him. Will that faith heal them? Yet Scientists will take the same cases and cures will follow," says Mrs. Eddy (the Founder of Christian Science) in her great work "Science and Health with Key to the Scriptures" (p. 359). She has healed infidels whose only objection to her method of healing was that Mrs. Eddy "as a Christian Scientist believed in the Holy Spirit while they, the patients, did not." That thousands of wonderful cures are daily wrought by the almighty God who is Love, Life, and Truth, through the humble agency of Christian Scientists, is a solid fact and not fiction.

Will this critic or any interested inquirer kindly write to me, and I shall willingly send him copies of the *Christian Science Sentinel*, *The Christian Science Journal*, or *The Christian Science Monitor*. The last is a daily illustrated paper of twelve or more pages, treating on various topics of general interest. The two former contain accounts of several cures in each issue, signed and authenticated by those who were themselves healed. They give their names and addresses fearlessly, as a small token of gratitude to God for their moral and physical healing through the spiritual agency of Christian Science, by spiritual, not material means; for Christian Scientists take no medicine and administer none.

Surely the clergyman knows not all this, or he would not have so drastically treated Christian Scientists by animadverting on the little he has heard so casually about them, as it seems. Let him but read "Science and Health with Key to the Scriptures" by Mrs. Eddy. The mere reading of that book has been under God the vehicle of wonderful cures everywhere, even in my own family on several occasions. In December last, I was healed within twelve hours of a severe attack of dysentery, which had prostrated me for three weeks, by simply reading and meditating on the religious tenets of Christian Science, to which every Christian Scientist subscribes his name and solemnly promises to observe. A few weeks later, my three sons, one after the other, were attacked by some eruptive disease. They were cured without any medical attendance or the application or taking of any drugs, but solely, thanks be to God, by the reading of Science and Health or by having it read to them. Last month, I was bitten by a bull-terrier on the arm. The marks of his fangs are still visible. I simply washed the wounds and put no application nor bandage on them. The reading of Science and Health, slowly, thoughtfully, meditatively, again cured me.

Please note, it is not the bare perusal of this golden book that heals the sick, but the thought upon and the practice of its precepts, cherishing its counsels, and realizing its truth and wisdom, which bring the blessing of God, through the knowledge of Christian Science, upon the sick and ailing, but faithful and zealous reader. "Thousands of letters could be presented," says the inspired author herself, "in testimony of the healing efficacy of Christian Science, and particularly concerning the vast number of people who have been reformed and healed through the perusal or study of this book" (Science and Health, p. 600).

In conclusion, I say that within the last thirty-two years nearly thirteen hundred Christian Science churches and societies have been organized. "By their fruits ye shall know them," said Christ Jesus. Christian Science is built on the "rock of ages," based on Truth, and breathes naught but love to God and man—His image and likeness.

[Nellie M. Johnson in *Omaha* (Neb.) *Bee*.]

An article in the Sunday *Bee* quotes from "a book" (the title not given), written by an unnamed "professor," who seeks to discredit Christian Science and its Leader by repeating allegations too often refuted to be considered seriously by an enlightened public. In the limited space of a brief paragraph this anonymous "professor" incorrectly classifies Christian Science, condemns his own misconceptions of its methods, catches a glimpse of its purpose, but obscures his vision by denouncing its Leader.

The superficial observer may deem all mental methods identical, but the honest investigator soon learns that no analogy exists between Christian Science, based upon the divine Mind as the only consciousness, and other metaphysical systems, dependent upon the human mind and its modes. Christian Scientists understand that in exact ratio of their obedience to God are they freed from human despotism; consequently they deprecate personal control and eschew esoteric methods. The life and work of the Leader of Christian Science is a true index to her character, and any attempt to impugn her motives or acts must prove abortive. Her insistent admonition to follow her only as she follows Christ is a sufficient denial of the accusation that she demands obedience to personal requirements.

The Christian Scientist is not "compelled to be a book agent," but he is inspired by gratitude to recommend the inquirer to a careful study of the literature which opened his own eyes to man's God-given dominion over evil. He assuredly regards the healing of sickness and sin as the

Digitized by Google

"be-all and end-all of human life," for this work, already begun by Christian Science, will be carried to completion; discord of every nature will be eliminated, harmony reinstated, and God's kingdom will be established upon earth. Whosoever will, may prove to his satisfaction the availability and adaptability of Christian Science to every human need.

[Ida Hodnett in *Birmingham* (Ala.) *Ledger*.]

It is reported in your columns that a revivalist in your city said in an address he was sure Christian Science was of the devil. In your fair-minded attitude and desire to be just, you will no doubt courteously permit a reply from the Christian Science side.

"The works of the flesh," or carnal mind, which are named in Galatians (v, 19-21), are admittedly works of the devil, and the apostle graphically shows the contrast between these works and those of the Spirit. The first named are admittedly wrong; the last, admittedly right. In the text-book of Christian Science, "Science and Health with Key to the Scriptures," a book which has unlocked for its students the treasures of the Bible, the following may be found on page 448: "It is Christian Science to do right, and nothing short of right doing has any claim to the name." Again and again its students are enjoined to break the bondage of the carnal mind, the slavery of passion, selfishness, envy, hatred, revenge, deceit, and so on, and its teaching shows them how to do so. The lives of genuine Christian Scientists are open to the inspection of all. While aware of shortcomings and that they have not reached the heights of perfection, they are conscious that the desire grows stronger to obey the injunction of the apostle Paul: "Let this mind be in you, which was also in Christ Jesus." They endeavor to be honest, just, and true in dealings with their fellow men; to be kind, sincere, and courteous in social relations; and to live in peace with all men. "By their fruits ye shall know them."

Without reference to the physical healing to which the reverend gentleman objects, the moral uplifting of the adherents of Christian Science—making them better citizens, better fathers, mothers, husbands, wives, bringing out clean and joyous lives—this effect alone stamps their religion as of God, the divine Mind, and not of the carnal mind, or devil. It may be said, however, of the physical healing, that physicians of all schools have admitted that the state of mind has much to do with the recovery of the sick.

Regarding the statement of the revivalist in a previous address that "a real Christian Scientist cannot pray," the following is the actual fact: Christian Scientists now pray as they never prayed before they gained the clearer knowledge of God which the study of Christian Science has brought to them. Moreover, the genuine Christian Scientist longs for still greater ability to pray—desires to come into closer and more constant communion with the infinite "Father of lights." To pray aright, to know God aright, is the crying need of the human race. Jesus clearly explained what it was to pray amiss. Our desires or prayers need purifying, and when purified it is inevitable in spiritual law that "he shall give thee the desires of thine heart."

The whole trend of Scriptural teaching is to show the human race how to stop being children of the devil (the carnal mind), and to become sons of God (divine Mind). This was the object of Jesus' human sacrifice. His sacrifice or spiritual offering was far more wonderful than the human mind can at present conceive, and for it we owe boundless gratitude and obedience. Christ Jesus is the Exemplar, the pattern by which we must fashion our lives. To avail ourselves individually of that great sacrifice, we must ourselves first bring the sacrifice of a contrite heart; then, laying aside "the works of the flesh," we must, if we would become sons of God, grow into that Mind "which was also in Christ Jesus." The beloved disciple John says, "But as many as received him, to them gave he power to become the sons of God." To receive him is evidently to receive his teachings and act in accordance therewith. It is thus that we believe on his name, on the Christly nature, which gives us "power to become the sons of God." This is practical reformation. Through thus finding our sonship, we become "heirs of God, and joint-heirs with Christ."

Christian Scientists do not decry the efforts of evangelists and others who endeavor to rouse the sinner to purer desires, motives, and aims. This is a great work and means much. If methods differ, we may give each other credit for the desire to be good and do good, and thus work in peace. When the disciple complained to Jesus that another was casting out devils in his name, Jesus replied, "Forbid him not."

Mrs. Eddy well says, "Whatever inspires with wisdom, Truth, or Love—be it song, sermon, or Science—blesses the human family with crumbs of comfort from Christ's table" (Science and Health, p. 234).

[Olcott Haskell in *Healdsburg* (Cal.) *Enterprise*.]

The devil, as a deception, a lie, or personified evil, is indeed frequently spoken of in the New Testament, but it is significant that the methods described for his overthrow are wholly mental. St. Paul writes: "For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places." And he enumerates truth, righteousness, peace, faith, the word of God, and prayer, as weapons in this warfare. Such are not weapons for the destruction of a creature with hoofs and horns, or a being of any sort.

A recognition of the distinction between the mortal counterfeit, or the man of dust, and the true man described in the first chapter of Genesis as created "in the image of God" is essential to an understanding of Christian Science, but as a newspaper article is hardly the place for an extended explanation of this Science, and those of your readers who so desire can obtain full information by reading Mrs. Eddy's work, "Science and Health with Key to the Scriptures," I will not pursue the discussion further.

[Written for the *Sentinel*.]

LIFE ETERNAL

WILLIS E. BLOOMFIELD.

Mortality is but a transient seeming,
Which some day shall be swallowed up in Life
When we awake from dreaming
Of matter, pain, and strife,
And grow into sure consciousness
That being in its perfectness
Is knowledge of man's Principle, of Love,
In which we live and move.

There is no death, for all that seems to perish
Has never lived, and is not known of God.
This seeming life we cherish
Is kindred to the clod,
And must return to dust from which it sprang:
But, ere the morning stars together sang,
Man was—and must forevermore exist,
Else God were unexpressed.

God is our Life; and so we cannot be
The thralls of death, and subject to decay:
Only the sense of death can pass away,
Our life abides in God through all eternity.
Mortality awhile may hide the light,
Or erring sense the perfect vision dim;
But man was fashioned by the infinite,
And some day all shall know and be like Him.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

IMMORTALITY.

No greater hope dwells in the breast of mankind than that of immortality, and no clearer statement of the possibility and modus of immortality was ever made than is afforded by the words of Christ Jesus when he said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." He did not look upon immortality as a far-off and uncertain state of the future, but commanded his disciples to preach the immanence of the kingdom of heaven, the availability of good works in the preparation of mankind for the recognition of this kingdom, and the certainty of this recognition as the result of such good works.

It is clear, then, that to know God aright, to know Him as "the only true God," and His Son Christ Jesus as one with the Father, is the gateway through which we may enter upon eternal life, or immortality. It was through his knowledge or understanding of God that Jesus was able to do the many wonderful works which he declared they that believed on him—understood the Principle through which these works of healing were wrought—should likewise be able to do,—bid the evil spirits depart from those who were grievously tormented, and the sick to be made whole; and that the ability to do these works should be the badge of their discipleship.

It is their acceptance and demonstration of this teaching of the Master that differentiates Christian Scientists. They are taught to have faith in all the promises of the Master, and to prove their faith by their works,—know and declare the omnipotence of Truth and Love to heal and to save, and be confident of the results; as was Jesus when at the grave of Lazarus he said, "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." He was holding out no vain hope to Martha when he declared, "Thy brother shall rise again;" he knew that Lazarus would come forth at the word of command, because of his confidence in the power of God to raise again those seemingly dead.

Christian Scientists, then, are but endeavoring to follow in the footsteps of the Master, in their efforts to overcome sin, disease, and death, and they have demonstrated the possibility of a present-day fulfilment of his commission to his disciples "to preach the kingdom of God, and to heal the sick." Christian Science takes an advance step, therefore, in its declaration that the "power of the word" is equally available for the salvation, the saving, of the sick and the sinning; and that every sin overcome, every sickness healed, is a step toward that supreme overcoming, the victory over death, when mortality shall put on immortality.

The difficulty which seemingly stands in the way of this overcoming is the general belief that while God still saves from sin, He has left mortals to work out their own deliverance from sickness through material means. Christian Science makes no distinction in its declaration that both sin and sickness are unreal and no part of God's creation; that to fear, submit to, either of these evils is "to misunderstand the power of Love and the divine Science of being in man's relation to God,—to doubt His government and distrust His omnipotent care" (Science and Health, p. 231).

There can be no evasion of the duty which appertains to the true soldiers of the cross, those who have enlisted for a daily overcoming of evil in its every phase,—a daily putting off of "the old man with his deeds," and a putting on of "the new man, which is renewed in knowledge after the image of him that created him;" an attainment of that knowledge of "the only true God," of Him who is able to deliver us from all evil because He is "infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17), which is the life that knows no death—immortality.

ARCHIBALD MCLELLAN.

TRUTH RETAINED.

IT needs but little argument to convince a truly thoughtful man or woman that those experiences alone are worth remembering which lift us above the mortal sense of things with gleams of light that hint at immortal realities, and it matters little what these "gleams of glory" cost us in the mental throes which prepare us to see the light. The vital consideration is that we do see it, and at least momentarily know what it means to live. Some one has said that such experiences are too good to last, not because God is a hard Father, "fond of disappointing His children," but rather because "intensity and endurance cannot coexist in the human economy." This would, however, amount to the same thing if God is responsible for man's tendencies and possibilities. It is therefore encouraging to learn what our revered Leader has to say respecting the permanence of the spiritual idea with us. In Science and Health (p. 598) we read: "One moment of divine consciousness . . . is a foretaste of eternity. This exalted view, obtained and retained when the Science of being is understood, would bridge over with life discerned spiritually the interval of death, and man would be in the full consciousness of his immortality and eternal harmony."

The words just quoted recall very forcibly those of the great Teacher, who said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." There is a profound significance in this thought of retaining the truth after it has been obtained, and thus abiding in the Christ-consciousness. Peter had a glimpse of this when, on the mount of transfiguration, he desired to build three tabernacles and remain there. Well might he say, "Lord, it is good for us to be here." It may be that he had not then seen the possibility of retaining all that the spiritual vision had brought them and of carrying it into the healing work, where the illumination was so much needed, but later he tells us of "the word of God, which liveth and abideth for ever."

As we read the accounts of the transfiguration given by Matthew, Mark, and Luke, we find that Christ Jesus was ready for the problem which presented itself when he and the three disciples came down from the "high mountain." A sorely afflicted boy and his unhappy father had in vain sought healing from the other disciples, and were then in the midst of a questioning if not a mocking multitude. We cannot tell what Peter and James and John might have done for the lad, but we read that in spite of the fear and apparent failure of the other disciples, and the seeming aggravation of the symptoms, Jesus rebuked the error "and healed the child." Christ Jesus "kept," he "retained," the word of Truth, and the arguments of error could find no place in his consciousness. He even went so far as to say, "If a man keep my saying, he shall never see death." He also said, "He that followeth me shall not walk in darkness, but shall have the light of life"—shall have this light not intermittently but perpetually, for the light of Truth abides if we hold our gaze steadily toward it.

We mount for vision, but below
The paths of daily duty go;
And nobler life herein shall own
The pattern on the mountain shown.

ANNIE M. KNOTT.

"YE ARE GODS."

NOTHING of all Jesus said was more irritating to the Jews than his self-identification with God, and though manifestly impelled in their cruel determinations by pride and prejudice, this was their avowed reason to Pilate for demanding his crucifixion. "He ought to die," said they, "because he made himself the Son of God."

Misapprehension of the Master's teaching with respect to this matter not only confused the Jews, it has injected confusion and strife into every period of Christian history. While Jesus was customarily very considerate for the capacity of his hearers to understand him, now and then he voiced the truth with apparent deliberation, and with a seeming disregard for its exciting effects, though he must have foreseen the turmoil and antagonism it would beget; and this was especially true of what he said respecting his relation to God and to the salvation of the world.

Christian Science makes it clear however that in these statements Jesus was simply expressing that deeper spiritual and metaphysical truth which, as he taught, is to be realized by his every follower. What seemed presumptuous effrontery to the Pharisees is found to be the heart of the gospel and the most glorious and inspiring word ever spoken to men. "I and my Father are one." "All things that the Father hath are mine: therefore said I, that he shall take of mine, and shall show it unto you." The tremendous significance of these words may well startle thought, and especially when we remember his other saying, "He that believeth on me, the works that I do shall he do also." And yet, to the rising protest of human doubt Jesus said: "Is it not written in your law, I said, Ye are gods?"

Manifestly, our Lord claimed nothing for himself which does not pertain to every child of God, and this is the consummate word of Christian Science respecting the meaning of Immanuel, "God with us." The knowledge, the authority, the power of the Wayshower,—all these belong to the Christian man, the ambassador of God today, even as they did to the Master and his disciples; and it is upon this unequivocal Scripture teaching that Mrs. Eddy grounds her contention that the healing of sickness by the spiritual means which Jesus employed is the duty and privilege of every Christian believer; and that when our Lord commissioned his disciples, saying, "As my Father hath sent me, even so send I you," he was but repeating that most significant word of God to Moses: "See, I have made thee a god to Pharaoh."

In Christian Science the naturalness of man's privilege and power is revealed in the fact that he reflects the divine nature. The true mirror does not alter or deflect the rays of light, it simply transmits or conveys them in all their purity and perfectness, and the realization of this truth explains the confidence and efficiency of Christ Jesus and his disciples. "I knew that thou hearest me always;" this was the secret of the Master's masterful life, and from his point of view every reflector of Truth becomes a plenipotentiary of heaven whose relation to the realm of error is so august and authoritative that he could say to a disciple, "Whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven."

Well may Christian believers bow their heads in humility when they contrast their past achievements with the dignity and power attached to their ministry by St. John, when he said, "Beloved, now are we the sons of God;" and well may we as Christian Scientists think hourly upon these spirit-quickening and sense-rebuking words. So to speak and do, aye, so to think moment by moment, that the perfect word of Truth may be expressed in our daily living.—thus and thus only can we honor the Christ, and enter into the larger freedom and joy of our exalted privilege.

JOHN B. WILLIS.

AMONG THE CHURCHES.

BOSTON, MASS.

The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the new church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading Rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite Post Office; open daily, except Sunday, from 9 a.m. to 5:30 p.m.

ORANGE, N. J.

The following resolution, received by the Board of Directors of The Mother Church, is given publicity because of the uncalled-for notoriety thrust upon the church at Orange a few weeks since through a misapprehension on the part of the press:—

At this, our first business meeting in our newly completed church edifice (Jan. 9), we, the members of First Church of Christ, Scientist, in Orange, New Jersey, desire to reaffirm our allegiance to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., of which this church is a branch. Mrs. Eddy, being guided, we believe, by divine wisdom, vested in the Directors of The Mother Church and in its Manual the authority necessary to the safe conduct of the material organization, and we desire to go on record as being loyal to these provisions of our revered Leader. Jesus said, "By their fruits ye shall know them;" and St. Paul explained that "the fruit of the Spirit is love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance; against such there is no law."

BALTIMORE, MD.

First Church of Christ, Scientist, which has been holding its services for a number of years in Heptasoph's Hall, will commence having services in the new church building on University parkway, opposite the new Johns Hopkins University grounds, tomorrow [Dec. 24]. The church building when completed will have a seating capacity of twelve hundred, and the Sunday school room, where the services will be held until the edifice is finished, seats about the same number.—*Baltimore Sun.*

SAWTELLE, CAL.

The new Christian Science church being built at Seventh and Colorado avenues, is almost ready for occupancy. The new edifice is about forty by sixty-four feet. The completed structure is estimated to have cost about two thousand dollars. Members of the Christian Science society of this city are planning to hold the dedication exercises in the church on Christmas day. At this writing it is not positive that the new edifice will be ready for occupancy on that date. Considering it was only a short time ago that the Christian Science society was formed in this city, these church people have made marvelous progress.

Sawtelle Veteran-Enterprise.

CALGARY, ALBERTA.

First Church of Christ, Scientist, Calgary, held their first service in their new home, on Sunday, Dec. 31. Though the structure at present erected is only a part of the basement of the church as it will be when completed, it has the appearance of a finished building, being built above the ground, which lies low at that end of the lot. The location

Digitized by Google

on Fifth street West, facing Eighteenth avenue, is in the best residential part of the city, a short block from two street car lines. The present edifice is constructed so that it can easily be enlarged as the congregations increase. The seating capacity is at present about two hundred.

Correspondence.

CHRISTCHURCH, NEW ZEALAND.

In the *Sentinel* of Feb. 5, 1905, there appeared "A Letter from New Zealand," which told of an effort being made to establish "the stately operations of Christian Science" (Science and Health, p. 561) in Christchurch, New Zealand. A meeting for the study of the Lesson Sermon was then being held in a private house. In 1903 a society was formed, this being the first Christian Science organization in New Zealand. Since then Sunday and Wednesday meetings have been regularly held. Though being isolated from other fields and unknown to other workers, we have only recently been able to unite with The Mother Church. This enabled us in July of this year to form First Church of Christ, Scientist, in Christchurch. We rejoice that through the healing power of Truth, as taught by our dear Leader, Mrs. Eddy, in "Science and Health with Key to the Scriptures," our church has been established and that the truth is rapidly spreading throughout this fair land.

THE LECTURES.

BERLIN, N. H.

Tuesday night [Nov. 14] a large and representative audience of Berlin citizens was privileged to hear a most interesting lecture on a live topic of the day. The lecture, under the auspices of the local Christian Scientists, was given in the Gem Theater, and the address was by Frank H. Leonard. The speaker was introduced by Principal Fred S. Libby of the Berlin high school as follows:

Nearly two thousand years ago the shepherds and wise men came to Bethlehem to worship the child so humbly born there. This child grew in wisdom and brought to the world not a new God, but a new interpretation, a new conception of the God who is the same yesterday, to-day, and forever. At first his interpretation of God and God's teachings was not generally accepted. No great progressive movement has ever been inaugurated without opposition, and opposition always strengthens the truth: so Christ's doctrine survived the opposition of ignorance and superstition, and lived to revolutionize the world's civilization. Not even yet, however, has the human mind with its varying degrees of spirituality been able fully to agree upon the interpretation of Christ's teachings; hence the great number of different religious beliefs and creeds. Each new belief has established itself only after strenuous opposition and criticism by the existing order of things, and each form of religion exists to-day because it has something in it of good, something of truth that has benefited the world.

Religious teachings, like all others, actively exist only so long as humanity feels that it is being benefited by them. When the old fails to satisfy, or fails to meet human conditions, then the new appears. About thirty-six years ago a woman, Mrs. Eddy, intelligent and more than ordinarily developed spiritually, gave to the world in "Science and Health with Key to the Scriptures" a new interpretation of Christ's teachings, the most wonderful revelation of modern times. Her interpretation, like its predecessors, has met with determined opposition and ridicule, and because it ignorance of its real teachings has suffered from gross misrepresentation. However, it still lives and moves and [illegible] gives evidence that it deserves to live.

content and unhappiness, and some who had been the subjects of physical suffering, were relieved of the former and healed of the latter. We wondered, and inquired where they went and what for, and what it was that wrought the changes which in some instances seemed to be a transformation. We were told that it was due to Christian Science, said to be the greatest movement of the age.

We are to hear something about Christian Science this evening from one whose personal experience, whose many years of deep and thorough study of the matter, and whose long and close association with that noble and good woman, Mary Baker Eddy, Discoverer and Founder of Christian Science, eminently fit him to treat the subject.

Correspondence.

SANTA ANA, CAL.

A lecture on Christian Science by Bliss Knapp was delivered Nov. 14. He was introduced by Dr. C. O. Fletcher of this city, who spoke as follows:—

Christian Science is a subject that is attracting the attention of the whole world. It is a religion simple and pure: it comes to us open-handed with a message of love and truth, the same truth that Jesus taught and demonstrated to the world centuries ago. It comes, as the Scriptures say, "with healing in his wings." It is the same truth of which Jesus said, "Ye shall know the truth, and the truth shall make you free." It brings surcease from sorrow and suffering, and gives to us instead joy and peace and happiness. An unfoldment of this truth in the consciousness of men heals sickness and sin today as it did in Jesus' time.

After seventeen years of the study and practice of medicine and surgery, I have learned from the earnest study and application of the truth as taught in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that it is more potent to heal than any other agency. It has proven efficient in every instance where it has been honestly applied. My family and myself have been healed by Christian Science of many afflictions, both acute and chronic, after *materia medica's* complete failure. Christian Science is the religion of love. It teaches us how to love our neighbors as ourselves. It also teaches us how to love our enemies, and that is one of its greatest benefactions.—*Evening Blade.*

PARIS, TEX.

Willis F. Gross lectured in the High School auditorium Nov. 17 on the subject of Christian Science. He was introduced by W. B. Connor, who said in part,—

Jesus once said to his followers, "I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth." I say to you, my friends, that this "Spirit of truth," as Christian Science, is come now, and that it is lifting humanity into newness of life, changing its doubts into certainty, its sickness into health, and its sorrow into joy. We have but to look about us, and dismiss our preconceived opinions, to see that never since the days when Jesus of Nazareth, the great Wayshower, walked the rugged pathways of earth, has there been exerted such an influence for good as is being exerted today; and to see further that this influence is the power of Truth over error, and of Love over hate and fear, as taught by Christian Science and as practised daily by its followers.

No directing hand other than the one God—omnipotent, omniscient, omnipresent good—could have been the guide of Mrs. Eddy, the Discoverer and Founder of Christian Science, who was pure enough to perceive so sublime a truth, who was good enough to live it in the face of a scoffing world, and who was loving enough to pass it on to her fellow men through her incomparable book, "Science and Health with Key to the Scriptures."

This book, which is the text-book of Christian Science, must be true, because through the study of it a grateful people are learning to put into practice more perfectly the great command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first great commandment. And the second is like unto it. Thou shalt love thy neighbor as thyself," and in doing this they are being led into lives of greater usefulness, nobility, unselfishness, Christlikeness. It must be true, because through the study of it many have been healed of wrong thoughts, of evil habits, and of hopeless disease, and many more are gaining such an understanding of God as Life, Truth, and Love as to be able to demonstrate, not only for themselves, but for others as well, the present possibility of that promise of the Master, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Beaumont, Tex.—William R. Rathvon, Woman's Reading Club, Magnolia avenue, 3 p.m., Feb. 11.

Belleville, Ill.—Frank H. Leonard, Liederkranz Hall, Feb. 15.

Chicago, Ill. (Third Church).—Frank H. Leonard, Church Edifice, Washington boulevard and Leavitt street, Feb. 8 and 9.

El Paso, Tex.—Bliss Knapp, Church Edifice, Montana and Stanton streets, Feb. 9.

Glasgow, Scot.—Bicknell Young, Queen's Rooms, Feb. 26.

Hartford, Conn. (Second Church).—Frank H. Leonard, Parsons Theater, 3 p.m., Feb. 11.

Jackson, Miss.—William R. Rathvon, Century Theater, Feb. 8. (Note change.)

Jacksonville, Ill. (Second Church).—Frank H. Leonard, Grand Opera House, Feb. 16.

Marlboro, Mass.—Frank H. Leonard, Universalist Church, Feb. 13.

Palm Beach (West), Fla.—Virgil O. Strickler, Woodman Hall, Jefferson Building, Feb. 9.

Phœnix, Ariz.—Bliss Knapp, Arizona School of Music, Feb. 15.

San Francisco, Cal. (First Church).—Prof. Hermann S. Hering, Dreamland Rink, 3 p.m., Feb. 11.

St. Petersburg, Fla.—Virgil O. Strickler, Auditorium, Feb. 10.

Tallahassee, Fla.—Virgil O. Strickler, Leon County High School Auditorium, Feb. 13.

Tampa, Fla.—Virgil O. Strickler, Tampa Bay Casino, 3 p.m., Feb. 11.

Tucson, Ariz.—Bliss Knapp, Church Edifice, 20 E. Pennington, Feb. 12.

University of California, Berkeley, Cal.—Prof. Hermann S. Hering, High School Auditorium, Feb. 8.

Wells, Minn.—Frank H. Leonard, Opera House, Feb. 20.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

TESTIMONIES OF HEALING.

In the light of recent experiences it has come to me that I have a simple duty to perform, an offering to place upon the altar of Truth, the flower and the firstfruits of love. In gratitude, then, would I testify to what Christian Science has done for me during two years past. My thought reverts to the morning of Oct. 1, 1909, when I wakened to the cry of "Fire!" to find myself homeless, in straitened circumstances financially, seemingly a physical wreck, out of employment (my profession being that of teaching), and with an altogether hopeless outlook for the future.

I had chronic rheumatism in my hands, arms, shoulders, and chest, the latter to the extent of affecting the heart action, a physician said. I suffered inexpressibly from the worst form of a stomach disorder with all its attendant ills, being greatly reduced in weight and unable to eat more than barely enough to sustain life, which could not have endured much longer under existing conditions. Two of the best physicians of our city said I must immediately submit to an operation, the one pronouncing my malady appendicitis, the other deciding after a careful examination that I had gall-stones. On consulting a third medical practitioner of high repute, located in a neighboring city, I was informed that I certainly would have died on the operating-table, owing to the condition of my heart and kidneys.

But "man's extremity is God's opportunity," and divine Love sent me to a Christian Science practitioner, whom I knew very slightly and to whom I appealed and not in vain, for of her it may be truly said, "I was a stranger, and ye took me in." Yes, into her own home, where she gave me comfort and counsel, ministering wisely, tenderly to my spiritual needs, and in three treatments I was restored to health. Within as many weeks I had found employment, and was rejoicing in a saving and sustaining knowledge, a knowledge of the truth which makes free indeed. Well do I remember going out into a steady downpour of rain, fearless of rheumatism, the glow within precluding all possibility of taking cold, and my delight next morning at the utter inability of a driving east wind (till then my *bête noire*) to cause me even annoyance, much less pain.

I read eagerly "Science and Health with Key to the Scriptures," "Unity of Good," and "Miscellaneous Writings," by Mrs. Eddy, one after the other. I was a thorough Bible student, and as I read Science and Health and correlative passages of the Bible were recalled to mind, I would exclaim aloud, "It is the truth! It is the truth!"

In January, 1910, I lost my beloved mother. After this experience I crossed the continent to Oakland, Cal., returning, after a five-weeks stay with friends, into the wilds of Nevada, where I learned what it means to walk "alone with God." In the midst of seeming danger, sixteen miles from a post office or railroad station, and forty miles from a physician, I learned that "perfect love casteth out fear." At an altitude of fifty-five hundred feet I was able to overcome all belief in climatic effects on the system, walking quite a distance to and from my school four times daily, doing janitor work at the schoolhouse and caring for my room at my boarding-place, besides giving personal care to a little girl who would otherwise have been deprived of school privileges.

When my mission of teaching was fulfilled deliverance came, and I was again back in my old home town, teaching at an advanced salary, in the same position of which ill health had deprived me two or three years before. My good health is now an established fact, and as God is the "health of my countenance," my improved appearance is the cause of frequent comment among my friends. I may say in all sincerity that I have overcome sin, disease, and even the fear of death, for I know that in Love there is no separation. I am now enjoying daily demonstrations of truth, and above all the joyous privilege of ministering to others. From a heart overflowing with love and gratitude I thank God for the priceless gift of Life, Truth, Love; and for the beautiful consecrated life of our Leader, who was accounted worthy to give Christian Science to a long-suffering humanity.—ALICE C. BARTOW, Sandusky, Ohio.

It is with a heart filled with gratitude that I send this testimony of the blessings received through Christian Science. For about twelve years I had periodical attacks of gall-stones, and could find no relief whatever. About six years ago, when I had the first attack since beginning the study of Christian Science, I sent for a practitioner, who came and gave me a treatment, and before she left the house I was perfectly easy. I have since had one attack of the same disease, but was able to overcome it myself.

I have had many proofs of God's power, and have learned to turn to Him in every trial. My little girl was healed of a fever in less than two weeks, and I could not begin to tell all the benefits we have received; but what I am most thankful for is the better understanding of Love as revealed to us through the life and writings of our Leader.

MRS. AMY BOOKER, Lexington, Ky.

Several years ago I suffered greatly from stomach trouble and material remedies utterly failed to relieve me. One morning, when the suffering was very severe, my father urged me to take the first train for Lexington (we then lived near there) and have Christian Science treatment. I insisted that I was not able to go, that I could not catch the train, but he would take no excuse. So I went, though feeling wretchedly. It was Memorial day, and I was expected to play in a band that afternoon, but I felt that it would be impossible for me to do so. I found the practitioner, and she explained the truth to me, and gave me a treatment. She also told me to make my arrangements to join the band that afternoon, and to the great surprise of my parents, at three o'clock I was marching with the other boys, and healed of my stomach trouble. I was also healed of one of the worst possible attacks of lung trouble. In two weeks I was able to be out. A physician recently had occasion to examine me and pronounced my lungs all right.

I am truly thankful for these proofs of the power of divine Love, and hope this testimony may be the means of helping some one to see that God does heal the sick now just as He did centuries ago.—JOE BOOKER, Louisville, Ky.

It was through sorrow and sickness that I was led to Christian Science. Ten years ago it was recommended to me in time of need. We had an invalid daughter who had been ill and was healed through this truth. Afterward I was taken ill with hemorrhages of the bladder. A Christian Science practitioner treated me, and I was healed in one week of that malady. My daughter was also taken ill at midnight with hemorrhages of the bowels. She suffered violent pain, and a telephone message was sent to this same practitioner. In fifteen minutes all pain had ceased and the hemorrhages also; in a half hour my daughter fell asleep, and all was harmonious.

Later, my son was taken ill with very high fever and a cough. Two treatments were given him by the practitioner, and he was healed and able to be out of doors the second day. Our youngest daughter had a fever, but in one week's time she was entirely healed. She was able to be about all the time, and ate the same food the family did after the first day. All these demonstrations of Truth's power were beautifully and promptly made.

I have much to be thankful for,—thankful to our Father-

Digitized by Google

Mother God, also to Mrs. Eddy. I have received many blessings through the teachings of Christian Science, the truth which was given us by our dear Leader, through her untiring labor for mankind.

LYDIA HARTMAN, Williamsport, Pa.

I am indeed grateful for what Christian Science has done for me. It healed me after six doctors had failed. My days were very dark when Christian Science came to my home; I was without hope and almost without God. I tried to pray, but all seemed dark; I tried to read the Bible, but could not understand it. I used to look at the three little children who seemed to need me so much, and think that if Jesus were now on earth I was sure he would heal me for my children's sake, for he loved little children. With these thoughts I sent for a Christian Science practitioner, who came and talked with me so encouragingly that the whole room seemed filled with sunshine. I told her my fears about leaving my children, and she said that I need not leave them; that God is all Love and Life, and that He did not send me this sickness. I was healed of a complication of diseases, and also lifted out of poverty, which was one of the results of my illness. I am truly grateful that I know God as Love, and as we grow in this understanding our every need is supplied. If there are any to whom the way seems dark, I would say, Just watch and pray, and God will reward you. I have had many beautiful demonstrations to the power of Truth with my slight knowledge of Christian Science, and I do pray every day to be more worthy to be called a child of God.

I would like to tell of a recent demonstration with our fifteen-months-old baby. He was troubled with a summer complaint, and I treated him very faithfully myself for two days, but he did not improve quickly, so I telephoned to a practitioner. The child was then in a high fever, and other symptoms were alarming; but I feared no evil, for God was with me. I prayed earnestly for strength to stand to the end of this trial. The answer came to me that the child in his true being was an idea of God, and as such had always lived and always would live. The following day my husband stayed at home from work, and we read the whole of that week's Lesson and studied the Bible and Science and Health all day. Instead of our baby passing away, as had been feared, he showed a complete change and commenced at once to get better. For this and many other beautiful demonstrations we are very grateful.

MRS. JENNIE JAMES, Buffalo, N. Y.

I wish I had words wherewith to express adequately my gratitude to God for Christian Science and all its benefits to me and my family. When this truth found us we were in dire need of help, and through its influence we have been lifted out of many and serious ills. In February, 1909, my mother, who is one of the family, was stricken with paralysis. She was completely helpless, except that she could move her head a little; but under Christian Science treatment she regained the use of her body and limbs in three weeks. The so-called after effects seemed obstinate, and the ligaments of one limb were drawn up so that it was much shorter than the other; but this difficulty was overcome in a short time. Then bloating set in, but that also was overcome. In July she was able to walk about town, and she has continued to be well ever since, though she is over seventy-five years old. She had always been considered a delicate woman, and for that reason her healing seemed more wonderful.

A short time after we began the study of Christian Science, my son cut his finger, and removed the ring which he wore to the other hand. This finger began to swell, the ring being too small, but he thought it would be all right though he could not get the ring off. His finger pained him all night, and in the morning was badly swollen. He went to a jeweler to have the ring filed off, but the jeweler said it would injure his finger dreadfully to attempt such a thing. So his father telephoned to a Christian Science practitioner, telling her of the conditions, and in a very short time the swelling had disappeared and the ring was removed from the finger. Many who had seen his finger before the treatment were amazed when they saw how quickly the difficulty was overcome.

One Sunday morning I found my son very ill with fever, with severe pain in his head and a badly affected throat, but by persistent denials of error and affirmations of the truth, he came out of it beautifully and was able to be about his business by Tuesday morning. These demonstrations are some of the very many proofs of the power of Truth to overcome error which we have had in our home. Every day brings fresh proofs of its efficacy to overcome disease, sin, and inharmony. We have been able to work out of many business tangles by the aid of Christian Science, and best of all, this truth is bringing the sweetness of hope and peace into our lives, making us better Christians with purer thoughts, and we are more careful of our words. In short, it is leading us from the material sense of life, with all its weight of care and anxiety, up to the spiritual, where we meet Christ, Truth, and commune with Love. We thank God every day for this blessed truth as revealed in Christian Science.—UNA S. CHAMPION, Fort Scott, Kan.

For over two years we have relied on Christian Science for help in every need, and it has always been most successful. I have been healed of weak lungs of years' standing, of neuralgia, also of ovarian trouble. Our little boy has been healed many times through Christian Science, the first ailment being boils, which the doctors failed to cure, but which were quickly met in Science. Since then different children's diseases have been healed, such as measles, an obstinate cough, also a bad fever. All of these illnesses were overcome in less than a week, excepting the cough, which we neglected to get help for at once.

Some time ago our little boy was in what might have been a very serious accident. He was knocked down by a motorcycle, and was picked up unconscious. I at once telephoned for help, and he soon was brought out of a terrible fright and of a partially unconscious condition. He was as well as ever the next day, with the exception of slight discoloration and a few surface injuries; but all evidence of these disappeared within a week.

I feel more grateful to God than I can express in words, also to our Leader for the truth that has helped me.

EMMA OHRBERG, New York, N. Y.

Having witnessed the above healing, I wish to corroborate my wife's statement, and would like to add my own experience to it. Over two years ago there appeared upon my forehead a sort of eruption, which troubled me, as it interfered with my business. I tried different remedies, but all in vain. I finally yielded to my wife's advice that I try Christian Science, and to my great astonishment, after only a few treatments I found myself not only cured of the skin disease, but also of a stomach disorder from which I had suffered for many years. Shortly after this I noticed that my hearing had become somewhat dull. This alarmed me greatly, and although I had experienced such wonderful healing, I never dared to hope that my hearing would again be perfect. Through the patient work of a practitioner, however, the healing was accomplished, and today, thank God, my hearing is as keen as ever.

I am trying to be grateful for all these blessings.

WILLIAM G. OHRBERG, New York, N. Y.

Digitized by Google

With the hope that my testimony may help some one who is in doubt, as I once was, whether Christian Science can cure hernia, I wish to submit my testimony. I became interested in Christian Science through the healing of my sister, and at that time I was very badly ruptured on both sides, wearing the strongest support made, which was not removed even at night. This had been my condition for over twenty years,—in fact from the time I was a very small child, and the doctors told me I never could be healed. When my sister's healing took place I knew absolutely nothing about Christian Science, but I inquired if it had ever been known to help a case like mine, and I was told that it had. I then called on a practitioner, and at the first treatment was instantly healed. I took off the support I was wearing and have never had it on since. This healing occurred over four years ago.

Up to this time I had also been a constant sufferer from colds, the outcome of which was an aggravated form of catarrh. To gain relief from this I had tried different doctors and spent a great deal of money, but with no healing. As my understanding of God increased, this condition gradually and entirely disappeared, as did also stomach trouble of a severe nature, rheumatism, cold-sores, and many other minor troubles. I also laid off my glasses, and was healed of an attack of acute lung trouble.

Naturally I am truly thankful to God for these healings. I was one of those unfortunate individuals who, before having any understanding of Christian Science, took large quantities of medicine, thinking this necessary in order to live. Now I know that when any discordant condition appears, it is because I have not kept close to God; and that to obtain relief I must look to Him only. To Mrs. Eddy, through whose life-work I have been permitted to obtain the understanding of God which I have, I am also deeply grateful, and my prayer is that I may receive more of this knowledge.

MRS. ALICE BRUBACK RANDOLPH, Los Angeles, Cal.

I have been a beneficiary of the teachings of Christian Science since the spring of 1907, at which time I experienced, in Los Angeles, Cal., an instantaneous healing of an acute condition from which I had been suffering for several weeks and which had not been relieved through the medical remedies given me by a physician. I was somewhat interested in Christian Science at the time, as one of my sisters had become a Christian Scientist, but I had not felt that I needed it, as I was satisfied with the religious belief in which I had been brought up, and especially with the philanthropic work, in which I took an active part. I was, however, so grateful for my healing, and had such a sense of indebtedness, that forthwith I felt it almost an obligation to begin the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and strive to understand the truth it taught.

I lost all desire to return to medicine, although for years I had been an almost constant patient of head and throat specialists; but since my healing in Los Angeles I have depended on Christian Science treatment for the relief of all discordant physical conditions. I did not accept Christian Science gladly, for it reversed all of my dearest beliefs and theories, but I had a conviction that it was the truth and that my accepting it or not accepting it would not affect this truth one iota, though it would affect me very seriously; consequently, I determined to adhere to it. My progress has been very gradual. I had much to weed out of my consciousness, and I am still at work, for there is yet much to overcome and consequently all ills have not yet been met. I can say, however, with entire honesty and sincerity, that I love Christian Science and all it has taught me, and that I desire nothing so much as to abide in and by its teachings and to glorify God in my thoughts, words, and deeds.

For Mrs. Eddy there has been an ever increasing love, and a deep thankfulness fills my heart that through her God could speak to us and reveal again the truth concerning Himself and man. I am very grateful for the Christian Science literature, and it has been my happy experience that whatever my need, or special line of thought, I have always found some helpful article pertinent to the problem with which I was working. The testimonies have also been a source of great encouragement and inspiration to me, for in reading of others' experiences I have many times been helped in my own. For the help given me in Christian Science I feel the deepest gratitude, and in return for all the blessings God has showered upon me through the knowledge of the truth, as I am daily learning it in the study of Christian Science, I pray that I may ever be a loyal and faithful Christian Scientist.

JOSEPHINE ROBINSON, Indianapolis, Ind.

Having just read a most helpful article written by our revered Leader, Mrs. Eddy, I am impelled to express the great joy, and the gratitude which I feel toward God, and also to the Discoverer and Founder of Christian Science. The forcefulness and authority of her words is ever inspiring, and gives the peaceful assurance and realization of the apostle's declaration that "now are we the sons of God," and that now we may claim our inheritance as the offspring of God "if so be that the Spirit of God dwell in us." Christian Science has done everything for me in comforting and showing me the truth during some recent trying experiences. We feel the blessed assurance that the activity of man as the reflection of God is continuous.

I have experienced convincing proofs of the healing power of Christian Science, such as the healing of a badly injured finger, even after what was called "infected flesh" had set in; the overcoming of a tendency to the ill effects of ivy-poisoning; the instantaneous healing of the sting of a bee, and healing in several severe attacks of illness. I am very thankful for what understanding I have of Christian Science, and shall strive to know and reflect more of our divine inheritance as the immortal offspring of God.

ROBERT COLLYER BARKER, Chicago, Ill.

An editorial in the *Sentinel* upon the value of our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, reminds me of my debt of gratitude for this book, which has come to the world in fulfilment of prophecy. Over thirteen years ago I came into Christian Science through the impersonal teaching and the healing influence of Mrs. Eddy's writings. I was seeking the kingdom of God, hungering and thirsting for righteousness, and the teaching of these wonderful books answered my prayer.

I was then a very discordant woman, mentally and physically, having suffered for years from frequent agonizing attacks of neuralgia, but the "still small voice" of Truth, as I gained the spiritual understanding of Christian Science, healed me and so uplifted my thought that I was able to keep my family well, so that for over five years I had no help for myself or for my children from a Christian Science practitioner. I am more than grateful that even in the darkest hours I was never afraid to trust divine Truth as made known through our Leader's books. Thus have all my problems been solved, day by day; my family kept well and happy, while I gained a higher understanding of divine Love's power and presence, and of Truth's unfolding. I also gained a deeper, richer, fuller joy in helping others to overcome their sense of ignorance, fear, and sin, and their injurious effects upon the body.

I am more grateful than words can express to the dear woman who so unselfishly shared her wonderful revelation of Christian Science with the whole world, and that she has given it out so clearly and practically, for thus we may

Digitized by Google

gain an understanding of Truth and prove it by bringing out the healing, as our great Master said this should be the sign of our discipleship.

MRS. ELIZABETH P. TURNER, Memphis, Tenn.

The time has come when I feel I must tell of a few things Christian Science has done for me and mine. My husband has been relieved of a trouble which began when he was four years old. While looking through the *Journal* one day, I found the name of a practitioner in St. Augustine, and sent him for treatment. On the following day he was able to work, which surprised me very much. This same practitioner took care of me in a case of obstetrics. My baby is fine and has never had any drugs.

On one occasion my mother was ill and in so much pain that we thought she could not stand it. I went a few doors away to telephone, and called up a practitioner. On returning to my mother, I found her better. My two brothers also had attacks of fever; but these were overcome in a few treatments. My father is not a Christian Scientist, but always wishes us to have Christian Science treatment whenever any trouble comes, for he knows the disease will be quickly eradicated through this wonderful truth. We are grateful to God for Christian Science, and to our dear Leader, Mrs. Eddy, for all those who help us to know the truth which is bringing peace on earth.

MRS. LULA COUVER, Palatka, Fla.

It is with a grateful heart that I tell what Christian Science has done for me. For a great many years I was affected in many ways. I was ruptured when a young man, and suffered from it for forty-seven years. Then I was ruptured in another place, which troubled me for seven or eight years. I also suffered from stomach and bronchial trouble, and asthma and rheumatism, for twenty-five to thirty years.

In 1899 Christian Science was brought to my notice by some friends, and they prevailed on me to give it a trial. I called on a practitioner and took treatment, and in three days I noticed that the rupture which had troubled me for forty-seven years was healed, and the other was also healed in a few days more. All of the ailments were healed one after another, and today I am well. I am truly grateful to God for His blessings, and to Mrs. Eddy for showing me the way.—ANDREW M. JONES, Kansas City, Mo.

[Written for the *Sentinel*.]

HOLD ON!

ROSE HENNIKER HEATON.

HOLD on, O sailor, to the broken mast,
Hold fast!
Grip tight, though both your hands grow numb and cold
Still hold!
Though blinded by the spray—your strength nigh gone,
Hold on!
For lo! no farther than you floating buoy
I hear the bosun's cheery—
Ship ahoy!

Hold on, O thou by earthly care distressed
And sorely pressed,
Torn though thou art by fear and deadly sin
Without—within!
Tossed by the seething waves of grief and doubt
Within, without!
Hold! For above the roar, your ears that fill,
I hear the voice of Truth,—
Love's Peace, be still!

FROM OUR EXCHANGES.

[*Living Church.*]

It is certainly true to say that our Lord came to reveal God; that his action in and on the world is rightly called revelation. But it is equally true that this revelation, the setting free in human life of the divine Spirit to a degree and in a manner before unparalleled, needed, in order that it might become the practical way of life (that is, of thinking, willing, loving) which he designed, to be correlated, coordinated with man's intellectual, emotional, and social past. The revelation of God and the way of life through the world to him, needed to be stated, not only as Jesus himself stated it, in terms peculiarly adapted to his own time, but in terms of the intellectual, emotional, social life of the Gentile peoples who so speedily appropriated the Christian revelation.

The task of theology, therefore, has been a necessary task—the embodying of revelation, of religion, in practical, workable terms of the thought, feeling, and social life of the actual age. The task of theology is never complete, and in ages of change or revolution it presses hard upon the church. It presses insistently in our own day, when, through the actual discoveries of physical science and the almost demonstrable hypothesis of evolution, a real body of knowledge has been contributed that profoundly modifies many of our intellectual notions.

A new theology does not mean, however—could not mean so far as it were a true theology—the loss of one item of Christ's revelation, but only a fuller understanding of truths to which the Scriptures, the creeds, and the continuous and ever-developing life of the church witness.

[*New York Observer.*]

Work and worship are not to be kept apart as two separate aspects or activities, but are to be blended into one life. Our work is to be pervaded and molded by the spirit of worship so that all its affairs will be carried on in accordance with God's wisdom and will. Any business which is inconsistent with the perfect truth and justice and goodness of God is equally inconsistent with our own highest good, and is to be cast out of our lives. Competition must therefore be tempered and controlled by brotherly regard, and the stronger must ever consider the rights and needs of the weaker. Business must be transfigured into brotherhood, and become a means of doing our fellow men good. Our work is thus literally transformed into worship, and when we buy or sell we glorify God as truly as when we pray or sing praises. On the other hand, our worship should be our work, conducted with the same ability and painstaking care, interest and enthusiasm, as our making and marketing of goods. Our worship should be no more a matter of convenience and caprice, of the weather and the wardrobe, than our business, but should have put into it the same regularity and habit and faithfulness.

[Rt. Rev. Theodore N. Morrison, D.D., Bishop of Iowa, in *Churchman*.]

To say Bible is Bible and to quote detached passages, taken here and there, from this book or from that, in order to harmonize its teachings or to prove a point, is not only to mislead the judgment and to bring confusion into the Bible, it is an ignorant use of the Bible and absurd as a method of Bible study. The Old Testament has nevertheless the greatest value. . . . The modern Christian would suffer serious loss if he neglected the Old Testament Scriptures, but he reads them to find how in one great nation the religious consciousness was developed, how a matrix was formed for Christian ideas, and how the way was prepared for the incarnation of the Word of God. . . . He sees the great religious evolution going on, the mighty tide of hope, of yearning, of anticipation, of conviction that a deliverer

Digitized by Google

would finally appear, that a Messiah would come, setting through Jewish history, like the great Mississippi through this valley, seeking the sea, and the majestic cadences of the most wonderful book in all the world are music to his ears: its splendid imagery and its teaching as to God and man's relation to God and his fellow man are the illumination of his understanding, and its great thoughts light to his soul, seeking an expression for the thoughts and desires he finds in his own heart, which he cannot utter for himself.

[Rev. W. H. Fitchett, LL.D., Melbourne, Australia, in London *Public Opinion.*]

Any pessimism as to the future of Christianity is contradicted by the whole trend of civilization, and by the silent and universal authority which Christian ideals are establishing over human life. Science again—in a degree and in forms which are not adequately recognized—is coming into rhythm with religion. The proof of the new friendship is revealed in the fact that the new science makes any materialistic reading of the universe impossible. Matter itself is resolved into terms of force. A generation ago science was busy among the immensities; man seemed to shrink; and Christianity—which has the greatness of man as its central truth—threatened to become incredible. Of the certainties of the future, in the judgment of the present writer, is a new authority which Christian faith will take, largely as the result of science which, like Kepler, will learn "to think God's thoughts after him." But this new authority of religion may express itself in terms which at first the churches may not recognize.

[*Western Christian Advocate.*]

It is the mark of all men who see man as Christ saw him, to believe in the moral recovery of man. The church with spiritual insight will see not only the possibilities in man, but the power in God. Seeing the inability of man to escape God and the hunger of God for man, such a church will attack the spiritual problem of its own community with confident boldness. There never was a religious survey made of any community where a spiritually enthusiastic, seeing, confident church was found, that it was not recognized by the community as a force for righteousness and spiritual healing. When the community is dead spiritually, it is usually found that the religious life of the church there is without passion, vision, or confidence.

[*Congregationalist and Christian World.*]

We believe a warmer atmosphere in all our churches, a firmer faith that God can here and now change the lives of men, would retain in affiliation with orthodox churches some who now drift into Christian Science or are allured by the so-called "new thought." Such persons say they have discovered new sources of peace and happiness, and those who live with them bear witness that their testimony is true.

[E. M. B. in *Christian Register.*]

Handsome and homely mean but little when describing a face, not much more than when describing a platter. No manner of empty platter can satisfy hunger. Every soul while here on earth hungers for kindness and sympathy. A handsome face filled with selfishness and denying comforts no one. A homely face brimming with kindness grows lovelier and lovelier as the years go by.

[*Universalist Leader.*]

Why is it that so many men and women whose only real offense is that they love human liberty and justice, must freeze and starve and rot and die in the hell-holes of this earth? And why is it that so often the name of God is on the lips of those who crush their fellow men? And why is it that the history of human progress is the story of the martyrdom of man?

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy. Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *VERSUS* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE. June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25—£0: 5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0: 9 : 3 ;	9.50;	11.90
2.50— 0: 10 : 3 ;	10.00;	12.85
4.00— 0: 16 : 5 ;	16.50;	20.00

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Scientific management at the Watertown (Mass.) arsenal has resulted in a substantial saving of money for the government and increased pay for the employees, and everybody concerned is well satisfied with the working of the new system, according to a statement prepared by General Crozier, chief of the army ordnance bureau. The machinists came in for the largest profit, some of them increasing their pay as much as thirty dollars per month, and the general average increase of the men in the machine shops being twenty-six per cent. Seventy-five per cent of the molders were put to work in December under the new system, with the result that the average pay increased twenty-two per cent, some of the men adding twenty dollars per month to their pay envelopes. The cost to the government of molding elevating arms for the six-inch disappearing gun-carriage was reduced from $42.35 to $24.87 each, a reduction of forty-one per cent, yet the molders on this work increased their wages from $3.50 to $5 per day, or forty-two per cent. An extreme case was in the making of plugs for the hydraulic cylinders of the gun-carriages, the cost of which was reduced from sixty-one cents each to nine cents. At the same time the man on this job increased his pay from $2.80 to $4.18 per day, or forty-nine per cent.

Unless unforeseen difficulties are experienced all that is left of the old battleship Maine will be floated out of Havana harbor by March 1 and sunk in the deep waters of the Gulf of Mexico, a few miles off the north coast of Cuba. About a third of the ship has already been dumped into the sea without attracting attention. The metal has been cut up by oxy-acetylene jet into half-ton fragments, which were placed in scows and deposited about a mile off shore. The after turret of the ship has been unbolted from the deck and is ready for transfer to the shore. It has been given to the city of Havana and is to be erected as a monument in a public park. One of the masts is now at Governor's island and the other is aboard the collier Justin awaiting transportation to the National cemetery at Arlington, where it will be placed over the graves of the victims of the Maine.

The National Civic Federation has made public an analysis of sixteen thousand answers received by it to a series of questions concerning the Sherman law. The analysis of the answers is summed up by the federation as follows: "The replies indicate little sentiment in favor of the unconditional repeal of the Sherman law. On the other hand, it is shown that there is practically no desire to abolish large combinations. The public have no desire for government ownership, on one side, or unrestricted and unregulated private or corporate control on the other. They will accept large combinations adequately regulated." The questions were sent to editors, political economists, lawyers, publicists, statisticians, manufacturers, merchants, bankers, and the officers of commercial, labor, and other organizations.

The constitutionality of the Hepburn law for the regulation of interstate commerce was reaffirmed by the United States supreme court in a decision in the cases of the Union Pacific, Great Northern, and Northern Pacific railroads. The court also held that the order of the interstate commerce commission reducing rates on lumber from points in the Northwest to eastern points was valid.

The United States government has begun a national inquiry into the alleged egg pool which the authorities assert exists in every large city. The investigation is being made by the department of justice. Dissolution proceedings begun in Chicago by the federal authorities against the Chicago butter and egg board is believed to have started the national investigation.

In the answer filed in the United States district court at Trenton, N. J., for itself and its subsidiary companies, the United States Steel Corporation denies the government's contention that it is an illegal combination in restraint of trade and marvels that it should have conducted its business for ten years before the charge was brought against it.

A bill to remove the compulsory vaccination requirement for public school pupils is to be presented to the Massachusetts Legislature by the state branch of the American Federation of Labor, which, it is said on good authority, will do its best to secure adoption of the measure.

A preservative to prevent the deterioration of smokeless powder in the ammunition of the United States army and navy is being successfully used by the American war department. Such deterioration has been the cause of a number of disastrous explosions on warships.

Governor Bass and his council have taken the final steps, so far as they have power, for the taking of Crawford notch for a reservation by the state of New Hampshire. The taking is by the right of eminent domain.

Conferences looking to a settlement of the government's suits against the United Shoe Machinery Company without a protracted contest in the courts began at the department of justice in Washington last week.

Postmaster-General Hitchcock is preparing to recommend to Congress acquisition by the government of the telegraph lines of the United States and their operation as a part of the postal service.

The United States government, through Secretary of State Knox, has intimated to Cuba that intervention might be necessary again unless the constitutional guarantees are carried out.

International.

Last year 359,836 estates in France paid in succession duties on five billion three hundred and twenty million francs, about one billion, sixty-four million dollars. The greatest number of estates were between four hundred and two thousand dollars in value, but those between two and ten thousand dollars provided the greatest taxable amount, about nine hundred and seventy million francs. There were five hundred and sixty-four estates which exceeded a million francs in value, twenty-nine that amounted to between five and ten million francs, and ten between ten and fifty million francs. There was none higher than the last-named amount.

A recent consular report refers to the thrifty plan following in the province of Hannover, Germany, of planting the roadsides with fruit trees, the product of which is sold at auction for the benefit of the local government, the revenue thus obtained going a long way toward the upkeep of the roads. Hannover has some seven thousand miles of country highways thus bordered. This year some of the roads yielded a revenue, from this source, at the rate of five hundred and ninety-five dollars a mile. The fruit is protected by law, and during the season of ripening the roads are patroled by mounted watchmen.

According to Chinese despatches the revolutionaries propose that Yuan Shi Kai shall be President of the republic; Sun Yat Sen, Vice-President; Tang Shao Yi, premier, and Li Yuen Heng, minister of war. That he may be able to maintain order before the abdication of the throne is announced, Yuan Shi Kai is bringing troops into Pekin, where there are now eleven thousand at his disposal.

The final reballotings in the German Reichstag elections show the Socialists in the possession of a strength of which they have dreamed for many years. They now hold one hundred and ten seats, and are the strongest single party in the German national Parliament. They held fifty-three seats at the time that the Reichstag was dissolved in December.

A resolution protesting against the British government acquiescing in the Russian action in Persia, was adopted by acclamation at a crowded meeting in the Opera House at London, called by the Persian committee of the House of Commons.

The oversea population of the British empire is 371,102,000. The bulk of this is in India, 314,955,000.

Industrial and Commercial.

Trolley, freight, and express service in Boston by the Boston Elevated Railway Company, has been authorized by the Massachusetts railroad commission. This overrules the action of the Boston city council, to which the Elevated had applied for a permit. The commission certifies that public convenience and necessity require that the Elevated company should carry freight in Boston and prescribes the rules under which it may perform such service. Special stations and cars are to be used and there is to be no interference with the passenger service.

The Pennsylvania Steel & Iron Company operates a plant at Lebanon and another at Reading, Pa. At the Lebanon works gas coal slack from the Pittsburgh district is dried and pulverized and fuel is driven into the furnaces by an air blast, producing complete combustion and eliminating smoke. The company says it spent from eighty to one hundred thousand dollars in experiments and installing the system, and the plant saves each year in fuel bills a sum equal to the cost of installation.

At the international sugar conference in Brussels all the delegates except the Germans expressed themselves in favor of acceding to Russia's request to increase her export of sugar to three hundred thousand tons and the continuation of the present arrangement for another five years, with the additional proviso that Russia be permitted further to increase her export in the event of another dearth of sugar, as in 1911.

Consolidation of the Metropolitan Steamship Company, Maine Steamship Company, and Eastern Steamship Company into one corporation under one management is one of the important events in Boston transportation circles. These properties will be owned by the Eastern Steamship Corporation.

Three million miles of artificial silk thread, made of wood pulp or cotton fiber by patented processes, are produced daily in the world's factories. At the present time about twenty per cent of the world's consumption of silk yarn is the artificial product.

Germany is the largest potato producing country in Europe; its yield last year was one billion six hundred million bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"WHOSO HEARKENETH."

BLANCHE HERSEY HOGUE.

We are told in the book of Proverbs that whoso hearkeneth unto God "shall dwell safely, and shall be quiet from fear of evil." The students of Christian Science are being lovingly persuaded, by the demonstrability of the Christianity and the Science revealed to them in the Scriptures as interpreted in our text-book, "Science and Health with Key to the Scriptures," that they have found a usable, provable, all-satisfying way of hearkening to God.

Through the statements of Truth peculiar to the teaching of Christian Science, thinkers are being made aware of the all-power, ever-presence, and ever-beneficence of God, of His nature and law, and of His unfailing availability to man. They are shown how to open their thoughts to His presence, and how to preserve unbroken unity with His thinking by themselves thinking the divine thoughts which link them to Him. In "precept upon precept, line upon line," they are shown the processes of spiritual thinking and how they may be adopted by men to displace material thoughts and desires. The way to listen to God is made plain, it only remains for us to want God, to search for Him, to give Him first place in the affections; we are to hearken, in short, at all times to His law and to His commandment.

Human reasoning may concede logically that God is All-in-all and that evil is correspondingly neither true nor eternal. We may want to be healed, want less trouble, want more ease and comfort; we may even believe that Christian Science is the way through which these good things appear. None of this, however, is necessarily nor of itself "hearkening" to God; and no true peace or healing comes rightly and permanently to us until we find the difference between the letter and the spirit of Christianity and learn to distinguish intellect and selfishness from the humble desire to become mentally one with all that is divine. Really our thoughts are not wholly hearkening to God so long as any earthly thing can divert us from the search for God. We naturally give most attention to the things most dear to us. Listening honestly for the voice of God is too often a secondary matter. And this accounts in large part for the slow and roundabout progress many of us make.

Manifestly we are either listening to God or to something contrary to Him. If our thinking is not animated by the true ideas which have their source in God, then we are mentally linked to suggestions not from Him. There is no half-way position. If thought that "hearkens" to God is one with God, then correlatively thought that listens to evil is for the time being one with the evil. The listener is one with the fear, the discouragement, the gossip, the criticism, the evil or painful symptoms to which he lends his ears or his tongue; one with the impurity so long as he entertains it. The promise that he "shall be quiet from fear of evil" is not to him who lives mentally with evil, but to him who contemplates steadfastly true existence in God.

A Christian Scientist once said to a sufferer: "It is not a question of how you feel; it is what you are listening to that counts." Where were his thoughts at the moment? Agreeing with the pain, or united through faithful effort to the divine understanding which casts out pain? This would determine the speediness of his recovery. In the conditions of sin and sorrow, all the unnecessary self-condemnation, all the lingering woes of yesterday and all the besetting fears of today, must be in like manner severed quickly and cleanly from our thinking if we are to attend mentally upon the presence of our God. We cannot listen to good and to evil, to the divine and to the human, at the same moment; but each instant we are permitted to choose the better part.

Christian Science sets before us the right idea of existence and teaches us how to heed it. The truth about God and man and the universe is revealed to us and we are shown how to lift our thoughts into Truth and to consider its demands upon us. Our birthright of a spiritual nature is made plain to us, and in the discovery and appropriation of it we may hope ultimately to lose the mortal nature with all that it involves. Understanding and obeying God is the sum of salvation. To hearken to God, then, means to be continually attentive to all that we understand of God; to search for His will at any cost to self; to love His way of thinking better than any human ways. It means refusing to associate mentally with evil; dealing promptly with our own belief in evil; cutting loose from all wrong mental habits and rising hourly into closer association with God. Evil is not uncovered to be either ignored or deplored, but to be cast out. It cannot be destroyed successfully, however, so long as thought blends with it. Mentally forsaken, evil destroys itself; for it must be supported by thought in order to appear at all. In the last analysis, truly it is not what we know about evil, but what we have unmasked and discarded of evil and what we know about God, that heals and saves.

It remains, then, that he who is hearkening to divine Love, to all that divine Mind is imparting to man, cannot long fear evil. He knows too much—too much about God—to be stampeded by the threats of evil. He shall indeed be quiet from all that evil may suggest, for his continual contemplation of the ways of God establish with him glorious confidence in God. He shall come into oneness with the goodness of God, and look out from this stronghold with a tranquil heart. Just to the degree he acquaints himself with divine thinking and thinks in accord with it, he is serene. Just so much as he keeps his thoughts spiritual, he has dominion over all the things of the earth. Nothing can disturb the happiness of him who joins himself mentally to the infinite thought-processes; for as he takes refuge in God-governed consciousness he cannot be followed there by anything unfit to enter heaven. From the infinite point of view, repeated in his own spiritually right thinking, he sees evil only to destroy it, never to experience it. Indeed, he who "hearkens" rightly must dwell safely. Enough of Truth admitted into the thoughts of men can do no less than save them.

Oftentimes, perhaps, it is with much stumbling and with many lessons painstakingly learned that the Christian Scientist comes into a saving attention to the ways of God, that he grows to hear the voice of God despite the call of the world. As he learns, however, to what he should listen, good experiences displace evil ones, wholesome experiences sick and unhappy ones; and this because we draw to ourselves that which we must regard and heed. With truth, indeed, the prophet Isaiah declared: "Thus saith the Lord, thy Redeemer, the Holy One of Israel: I am the Lord thy God which teacheth thee to profit, which leadeth thee by the way that thou shouldest go. O that thou hadst hearkened to my commandments! then had thy peace been as a river, and thy righteousness as the waves of the sea."

THE CURE OF WANT AND FEAR.

REV. RICHARDS WOOLFENDEN.

WE had met an old friend in the park, where the beds were ablaze with the loveliest tulip blooms it had ever been our lot to see in the smoky manufacturing town where we live. It was in the week preceding "tulip Sunday," when the gardeners would look with pride upon the perfection of their handiwork, and the public would be present in crowds to admire these "floral apostles," "hieroglyphs of Deity" (Science and Health, p. 240), speaking to them messages they too seldom hear above the din of loom and shuttle.

Our thoughts naturally turned, in the conversation that followed, to the beauties that redeem the otherwise humdrum surroundings of busy industrial life. We spoke of the charm that often meets us, unexpectedly, amid the commonplaces of daily occupation, and quoted the familiar lines,—

> Old friends, old scenes, will lovelier be,
> As more of heaven in each we see.

But the thoughts of our friend, a dear old-time companion, were set upon the scene he anticipated on the exchange in the great cottonopolis toward which he was hastening, and where in another half an hour he would meet the men whose faces bore the marks of fierce competition and told of the strain of modern business pressure. He told us that the strain was greater today than he had known it for thirty years, and that men whom he had known during that period seemed to carry more care as the years went by. "And how is it," he asked, "when most of them have amassed a competency, and have quite enough to keep them for the rest of their life?" Then, as if answering his own proposition, he remarked that the modern tendency to provide themselves with luxuries kept men in constant fear of the next week in the market, and trade was crippled and finance involved because men were ever seeking something more than the necessaries of comfortable existence.

It was evident that our friend was carrying a large share of this fear, more perhaps than he would be able to eliminate before the day was over. So it fell to our lot to tell him that we often find what we are looking for; that men seem fierce because we are going to meet them on the grounds of bartering and bargain-driving; that the same men would wear a different expression when we met them in their home circles or at their favorite recreations; that the same hard-featured business men had thoughts above the pelf that lay at their feet, and doubtless many of them had just come from their flower-beds and their fresh green lawns, to which they would eagerly return at the end of the working day. And so our thoughts returned to the tulips again, and by a natural and easy transition to the application of the words of the Nazarene, who had said so long ago to men like ourselves, too apt to get bowed down, "Take therefore no thought for the morrow."

As we reverently quoted these time-honored words, a smile we had so often seen resting there before lit up the features of our friend, who as he hurried away to catch his train called out, so that his brave deep voice rang down the street, "Yes, that is the better way;" and we turned into our office rejoicing inwardly that an opportunity had been given to recall the spirit of youth, for as Wordsworth puts it,—

> The fountain of youth, like the kingdom of heaven, is within us.

Then came the thought crowding in upon us, that herein lay the Master's sovereign cure for want and fear.

Jesus knew the hard conditions of our daily life. He knew what burden-bearing means. He was always meeting men and women whose faces bore the look of fear, and oftentimes there came to him afflicted ones whose condition spoke more eloquently of want and worry and woe. But with a sublime confidence in the omnipotence of goodness, he met them all, and turned to them, and said, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom." And as if this were not sufficient, he could meet the man whose case was typical of that which our friend was quoting,—the case of unsatisfied desire which the conditions of modern civilization have caused to abound, and say to him in words that give a new direction to his thoughts, "Son, thou art ever with me, and all that I have is thine." The teaching of Jesus is reinforced on every hand today. A distinguished educator has said that "the sovereign cure for worry is religious faith," and another writer says, "Worry is something that may be transcended, and the power by which you transcend it is trust in God and the service of man."

But it is only when we come to the greatest modern textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that we truly learn what is meant by "religious faith," and catch a glimpse of what is intended to be conveyed by the easy-sounding commonplace, "Trust in God." These phrases are illumined with the light of a new meaning, redeemed through their setting in a new context, by that hand which holds the master-key of all spiritual instruction and interpretation. The man and the woman who have prepared their thought for the day's work by a few moments' earnest study of this book will go forward with a cheerful step to meet all the hard conditions of shop, market, or exchange. And their number is multiplying rapidly. The friend with whom we had this brief talk in the park this morning little knows, as yet, how the number of Christian Scientists who daily meet on that same exchange has been growing in these last few years. But they are known to each other, and the little company is increasing, and every time they meet together there is some new story told of how the kingdom of heaven has come to take possession of their business.

Then, one day a gentleman experiences a great surprise. Some one has accidentally, so it seems, left a copy of a newspaper in his path, and as he picks it up and opens it out, a new title meets his gaze, and he reads *The Christian Science Monitor*. He turns it over till his eyes fall on a page entitled "Home Forum," and there he finds an article that puts truth in a new setting. He begins to read. Suddenly the whole paper is pushed into his pocket. He looks round to see that he has not been watched, as he hurries off to his next engagement. Perchance before that man has reached his home at night he has found a new cure for fear and worry, and then his wife learns for the first time what "clean journalism" is doing.

In this way the debt we owe to our beloved Leader, Mrs. Eddy, finds acknowledgment, while the world wakes up to recognize the greatness of the Discoverer and Founder of Christian Science. Thus it is that the teaching of Jesus is coming to be better understood, while in his unique example we find the solution of every pressing human problem that material sense maintains. "Consider the lilies of the field," said he, "how they grow; they toil not, neither do they

Digitized by Google

spin: . . . Wherefore, if God so clothe the grass of the field, . . . shall he not much more clothe you, O ye of little faith?" Mrs. Eddy points the same lesson in these incomparable words: "There is but one way to heaven, harmony, and Christ in divine Science shows us this way. It is to know no other reality—to have no other consciousness of life—than good, God and His reflection" (Science and Health, p. 242).

"ABIDING IN THE FIELD."

A. B. FICHTER.

IN the second chapter of his gospel Luke gives us a simple little narrative of which one never tires, interwoven as it is with one's earliest recollections of childhood joys and of the great anniversaries of Love's festival with its lights and universal cheer: "And there were in the same country shepherds abiding in the field, keeping watch over their flock by night. And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid. And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Saviour, which is Christ the Lord. . . . And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men."

The few words which give to the story the atmosphere of glory and wonder, seem an adequate setting for the record of the birth of him who was the fulfilment of the prophets' hope and who opened up as never before the way of salvation. The very familiarity of the text seems to keep one from considering it from any other standpoint than that of childlike acceptance and of satisfaction and gratitude for its benediction, the cheer and comfort of its heavenly radiance. It does not seem to have much importance historically, since the recognition by the shepherds of the new-born child as the promised Messiah finds no further expression or notice at the hands of the gospel writer. In a way it seems to fit in with Jesus' first public utterances: "Blessed are they,"—"the poor in spirit," "the meek," "the pure in heart,"—for of all the many classes of inhabitants of Bethlehem, to none was the vision of glory vouchsafed except to these shepherds.

A few men keeping watch over their flock by night, simple, devoted to duty, faithful over the little things, evidently were more open and more alert to the revelation of God's love than many others whom the pleasures and cares of this world had absorbed beyond the possibility of being reached by the portent of the occurrence. The historical and ethical aspects of the Scriptures, however, are not all there is in them, and with the key to its spiritual treasures applied we find that their historic statements stand for universally possible experiences. In our own favored time of the second coming there are in that same better heavenly country of which we read in the epistle to the Hebrews,—the country which is the desire of strangers and pilgrims, the country into which all can enter,—even today there are shepherds "abiding in the field."

In the field, which Jesus said was the world, these shepherds are faithfully abiding, ever ready to answer any call for help, lovingly watchful and alert to every need, consecrated workers in the one great cause, the regeneration of the world. And they, too, abiding steadfastly in their understanding of the ever-presence of Love, keep watch over their flocks, "stand porter at the door of thought" (Science and Health, p. 392), lest anything unfit enter to disturb the peace of Truth's fold. Error's night still makes it necessary for the faithful shepherd to keep watch, and to him who has faithfully guarded his thought, the angel of the Lord does appear, new light does come to the receptive heart, revealing more and more of the glory of the Lord through the illumination of Christian Science, until the influx of truth fills the newly awakened sense with awe at its magnitude and majesty.

As of old the message begins with the reassuring admonition, "Fear not; for, behold, I bring you good tidings of great joy." The greatness, majesty, and power which awakened awe, these are also the source of joy. They reveal the wonders of Truth, its universality available for us and for all. In this "forever coming of Christ" (Science and Health, p. 230), this ever unfolding, ever new and greater development, even in this day, the God-idea continues its healing mission. Every new realization awakened, every consciousness of good, brings with it a glimpse of the infinitude of Love. The message is "suddenly" surrounded with the multitude of the heavenly host. Surely no one whose footsteps along the ascending line of a prayerful application of the teachings of Christian Science have brought to them that wondrous experience, can fail to gain something of that peace which passes understanding, that gratitude which wells up spontaneously in a higher, sweeter, new song of praise to the eternal good, "glory to God in the highest."

The presence of the Christ, destroying and annihilating all the beliefs of mortal sense, brings peace on earth, even in our human experience. It comes with healing in its wings, and brings as of old God's good will to men.

A GRATEFUL TRIBUTE.

HELEN FRIEND-ROBINSON.

JUST as Moses led the children of Israel triumphantly through the wilderness into the promised land, so Christian Science, in this age, is leading humanity gently, lovingly through the great mental desert of human hopes and fears, up to the glory which God hath prepared for them that love Him. That blessed manna which God rained down from heaven to feed His chosen people and wean them from the fleshpots of Egypt, is again raining down, through the heaven-sent literature of Christian Science, to feed humanity with the bread of life and wean it from the fleshpots of materiality.

The Christian Scientist is very grateful for the many blessings which have come to him as a result of the life and works of Mrs. Eddy, the beloved Founder of the Christian Science movement, and he cannot be too vigilant in watching for opportunities of expressing that gratitude in deeds which will prove to the world that "her works do follow her." His cup of gratitude seems full as he contemplates the many ways, through the Christian Science periodicals, in which he may spread abroad the "glad tidings" to those who are waiting now, as he once waited, for the dawn of this higher hope. Through the *Journal* and the *Sentinel* (with their bugle-calls for renewed activity and more consecrated effort) he may send forth messages which give hope and courage to the downtrodden, comfort to the sorrowing, and health to the suffering; thus proving to these hungering hearts that man doth not live by materiality, "but by every word that proceedeth out of the mouth of the Lord doth man live."

How the hungering have been fed and added to the ranks of Christian Science through these avenues for dispensing the bread of life, can be computed in a measure by those who have been active in spreading the beneficent influence of these periodicals. In addition to these far-reaching avenues for good, the Scientist today has still another medium through which to express his gratitude. Our Master taught his disciples to pray: "Give us this day our daily bread," which our Leader has interpreted thus: "Give us grace for today; feed the famished affections" (Science and Health, p. 17). The heart's desire of Mrs. Eddy to

Digitized by Google

feed the famishing multitudes with the spiritual bread which satisfieth, has given to the world *The Christian Science Monitor*. Truly the cup of the Scientist runneth over, and he rejoices in the advent of this messenger which is knocking so gently at the portals of humanity, radiating its daily message of good cheer and clean news.

Mrs. Eddy says: "Whatever inspires with wisdom, Truth, or Love—be it song, sermon, or Science—blesses the human family with crumbs of comfort from Christ's table, feeding the hungry and giving living waters to the thirsty" (Science and Health, p. 234). By utilizing the *Monitor* to satisfy the human craving for better things, the Scientist can make this paper almost universal in its scope of loving usefulness. He not only recognizes the *Monitor* as the pioneer of clean journalism, but he soon looks above and beyond even this wonderful mission, as he witnesses the redeeming and enlightening work going on about him through this channel of purity. And can he sacrifice enough, or give too much, for the glorious privilege of feeding the multitude with this daily manna?

Even the youngest student will soon learn that he need not limit the giving of material things in paving the way for more spiritual giving. God works in wondrous ways, and the bread cast upon the waters of humanity's sea must eventually return unto him, blessed of the Father just in the proportion that he has obeyed the Christly injunction to feed the lambs with strengthening food from the table of Christian Science. The short article on Christian Science on the Home Forum page of the *Monitor* offers a splendid opportunity of winning advocates to the truth taught in this Science, without fear of proselyting, and through this channel prejudice is rapidly eliminated from the minds of many people whose only knowledge of Christian Science heretofore has been obtained through distorted criticism. Numerous instances where the *Monitor* has been a blessed missionary in these ways could be cited, but one such instance proves beyond cavil that this paper is entitled to our everlasting gratitude and support.

By way of illustration an incident is cited which recently came into my own experience. I became acquainted with the wife of a clergyman who was engaged in philanthropical work. Giving to her of my material supply to meet the needs of some of the objects of her solicitude, I obtained some wonderful spiritual returns that I had not in the least anticipated. It was indeed the "open door" that enabled me to supplement the giving of material things with the real "bread" for which she had long been hungering and thirsting. Soon I was privileged to give her a year's subscription to the *Monitor*. It was a most welcome gift, and her thanks included also the glad assurance that it should be carefully read by herself and husband and then placed in a large school for their daily enlightenment. Later on, another dear friend and coworker gave them the *Quarterly* and I loaned them a copy of the text-book; but only after she and her husband had both expressed a desire to study deeper into a religion which enabled its adherents to show such brotherly love.

Surely the gratitude expressed so beautifully in a letter received from this lady, in which she says, "God sent you into my life at the time when my spiritual hunger needed just the nourishment that I have faith to believe is gradually being supplied," is the little leaven that must eventually leaven the whole lump of thought that comes under the influence of her sphere of work, for she wrote further that others besides herself are becoming intensely interested in the Christian Science church and its great work. In writing of the *Monitor* she says: "They are three days on their way, but they come a wonderful beam of light." Again, she writes: "The gems on the next to the last page could never be affected by time. We promise never to let an article on Science remain unread, and I doubt if a single editorial escapes my eye even during my busiest day." Referring to the daily study of the Lesson-Sermon she adds: "I always feel that as we must take time for our physical meals three times each day, much more should we demand for our spiritual selves the time for feasting to satisfaction; so the Bible and your text-book are sure to find their place in my life."

O for the quick discernment that will always feed the hungering heart from this great storehouse of spiritual supply! I am filled with joy and gratitude for this particular opportunity of spreading the glad tidings and feeding the receptive heart with this blessed bread from heaven.

THE SPRINGTIME OF TRUTH.

F. MAUD BROWN.

A FIRST winter in Canada has shown us many new wonders, and we are more than ever grateful for Christian Science, which deepens our love for all that is beautiful and good, and teaches us to grasp some of the spiritual messages which nature brings to us. Some time ago we stood by a small lake at sunset, rejoicing in the first breath of spring. The ice had melted away from the shore, but it lay farther out, a solid, floating field, full of strange green lights. As we watched, a wind sprang up and slowly the field of ice began to move toward the pier on which we stood. At last it struck with a crash, and great cracks ran through it; then we saw that the ice which had seemed so solid was honeycombed with holes, a mere skeleton. Still the wind blew, and the foremost blocks of ice were relentlessly flung against the pier by those behind them, falling crushed into splinters, disappearing into nothingness, these made way for others to be destroyed and to disappear in their turn. This slow, inevitable destruction continued until at last the lake was free, every ripple joyously reflecting the sunlight.

Surely this scene was symbolic of the destruction of all error. Mankind may seem to be held in the viselike grip of passions and false material laws; evil may seem to present as solid a front as the ice, but already it is hollow and honeycombed by the power of Truth. Every time we deny a so-called law of matter and realize the truth of God's omnipotence, we make one more tiny hole in the bonds with which error binds mortals; and thus quietly and inevitably we weaken the tyrant's power and hasten its final destruction. False reports, material laws, evil works,—all these may fling themselves against the rock of Truth; but that rock stands firm, while they are flung back upon themselves, revealing their weakness until broken, dishonored, and finally destroyed. Thus human consciousness, like the lake, finds freedom, and reflects with joy and gladness the light of Love.

[Written for the *Sentinel*.]

PRAYER.

KATHARINE J. SMITH.

I CROSSED a road where wild pathetic roses fell
At feet of fleeting June, whose fingers magical
  Drew resinous charm from flow'ring Gilead's balm;
I mourned that I had missed the petals' full-blown grace,
    Yet on a tide of summer air,
    Faint attar, presence-like and rare,
Breathed that the rose hath life beyond her rooted place.

Take, with thy hope, the road where prayers like petals fall,
Choose noonlit hours, or go when cumbrous shadows pall;
  Not suppliant tears, but radiant thought endears
The likeness that doth prove thee child of Him all-wise;
    Thy orison doth need no ear,
    Some deed of thine shall find Him near;
From hearts like thine and pure, do prayers like incense rise.

SELECTED ARTICLES.

[From *The Christian Science Monitor.*]

[A correspondent of *Mont Blanc*, a journal published in the valley of Aosta, Italy, contributed to the issue of Dec. 29, 1911, the following article, the inspiration of which was *The Christian Science Monitor*. The accompanying English translation of the article is published as showing in some measure the interest the *Monitor* is awakening in all countries.]

One of our correspondents writes: It appears that the *Journal de Geneve* has afforded considerable pleasure to its readers by publishing an article criticizing in a most impartial manner the Italian-Turkish war. Whoever is able to read a little English can derive this same pleasure by scanning the well-filled columns of *The Christian Science Monitor*, published in Boston, America.

It is refreshing for the eyes and for the intellect—at this moment when the European press is crying in a general chorus, "Shame to Italy," while at the same time shedding crocodile tears over the sad fate of poor Islam—it is refreshing at such a time to read an opinion free from prejudice, to read these words of conciliation and of peace; of truth also—of truth courageously uttered which reveals to us our own weaknesses and helps us to correct them. It is like a puff of purest air from the highest summits, encountered as one leaves an overheated room. And when one realizes how many erroneous conceptions these words and well-balanced statements will correct, how many false points of view they will change, how many opinions based entirely and solely upon narrow self-interest will be shaken, it is impossible not to be filled with gratitude to that intelligence which has started this organ and which sustains it in its grand work.

The press today is proud of its unquestionable power, but how far it is still from understanding its responsibilities and duties. It is not necessary to be a professed philosopher in order to realize that instead of leading the masses in the direction of progress and peace, the majority of the innumerable journalists seek only to gratify the more degraded tendencies of human nature. The headlong race for the sensational is one of the most striking evidences of this tendency, and the mania for inciting class against class, people against people, is one of the most disastrous results of it.

But the future belongs to that journal which will have proved its utility to society in general by trying to elevate the thought of its readers toward everything that is honest, just, pure, intelligent—in one word, toward that which can benefit humanity. The pessimist sneers at such a thought, while the optimist dreams of a newspaper which will deal neither with politics, finance, nor with business . . . and the practical journalist shakes his head and says to himself, "Not feasible in this modern age; it would not pay." Nevertheless more than one successful attempt has been made in this direction, especially in the large centers, but the newspaper which has left all its *confrères* in this new departure far behind is without any doubt *The Christian Science Monitor*, which I have referred to above. This newspaper points to its own existence and to its increasing popularity as sufficient answer to sneers or criticism; it thoroughly fulfils its duty as a newspaper by offering to the public the most correct information with regard to the important events of the day, the state of the market, the conditions on the bourse, publishing at the same time a variety of articles on sport or science, travel, domestic economy, and even fashions and cooking receipts. With regard to its financial success, there is no room for doubt on this score if you but glance at the masses of advertisements which occupy every available space. It is sufficiently significant that the *Monitor* has been referred to by the English press as the marvel of modern journalism.

But one will say, In what way does this journal differ from the large periodicals with excellent reputations managed by men who know their business? In the first place, the *Monitor* is supported neither by a political party nor by a group of financiers seeking large returns. The ambition of this paper is to improve humanity, and it does not deviate one inch from the road it has marked out. All that is useful, beautiful, good, is welcome in its columns. Readers who revel in the accounts of crime, scandals, terrifying details of disaster, those with Chauvinistic tendencies or filled with prejudices and one-sided opinions, or those who adopt dishonest methods whether in business or in politics, will be wasting their time in reading such a paper. On the other hand I have heard fathers of families representing all classes of society express their joy at having found a paper that they can leave without fear on the family table: the child will find in it nothing that can disturb his innocent thought, even if he wanders beyond the page specially reserved for children. The religious title of the paper is justified by the daily publication of an article on religion, which does not seem to offend the ultra business tendencies of America or the conservatism of England. There is nothing astonishing in this when one sees how dogma and superstition are both equally kept at arm's length, and one is further able to understand how this journal now has readers all over the world; while it is beloved of the Americans because of its enlightened patriotism.

One of the editors of the *Daily Chronicle* said a short time ago, referring to the subject, "The *Monitor's* censorship is insistent. It prints nothing but good news . . . and when you have read all the disasters and crimes of the world you may look through the *Monitor* and take your antidote of cheerfulness." Yes, there is the secret of this marvel of journalism. It supplies a want which society, tired of its superstition and hypocrisy and fictitious aims, materialism and sensuality and egoism, was severely conscious of without admitting it. This paper turns human thought away from all that is degrading, and turns it to a more encouraging outlook. It teaches you how to look for the good side of everything and in every being, how to find the good things in life by making life good. This paper enlivens the family circle by instructing both old and young and leaves its mark by having elevated thought, by having given a strong sense of courage and by having better equipped its readers to engage in the struggles of life. Is not this the true mission of a paper?

The honor of having founded the *Monitor* is due to an eminently philanthropic woman of whom America is proud. The first issue of this world newspaper appeared Nov. 25, 1908, and it is about one year since Mrs. Eddy, its founder, passed peacefully away, almost a nonagenarian. On this occasion some of our newspapers and those of other countries, not having obtained their information from a proper source, published some insane remarks about this noble woman, remarks which would have made the authors blush to the very roots of their hair and on account of which they would still blush if they had opened even one or two of the numerous American newspapers and the best of the English periodicals which were unanimous in rendering homage to the more than remarkable intelligence, penetration, breadth of view, and above all to the purity of the life of that eminent woman—although the majority of these journals declared that they in no way shared her religious views.

It is precisely in this paper, founded by a woman, that I had the pleasure of reading a few months ago the finest page that has ever been published by a foreign newspaper on the occasion of the fiftieth anniversary of the union of Italy, and I have pointed out above how the statements full of moderation and impartiality which this paper publishes on the present war contrast with the general tone of the press on the same question.

Digitized by Google

Mrs. Eddy had realized the paramount importance which this periodical has taken among our modern institutions, and she had established a newspaper which was to go to the right and to the left to save and to rejoice humanity. The *Monitor* is faithfully accomplishing its mission.

May the *Mont Blanc*, which has not been able to benefit by the advantages to be gained in the great centers of thought, but has endeavored to make a breach in the rock of unenlightened ignorance in order that the way of progress may be opened, continue with courage its career, difficult indeed, but nevertheless glorious. The friends of the valley of Aosta living abroad follow your movements with the greatest interest. Therefore do not be caught in the snares which the enemy is continually trying to set for you. Take no notice of the pebbles on the way, but reserve your powder for the purpose of blasting rocks and the tenacious roots which bar the road. Your enemy has been known for many ages, idolatry, paganism, barbarism, hypocrisy, capitalism, clericalism, and many other isms—and they are only the disguises which have been assumed one after the other by the old serpent who has attacked humanity for centuries with poisoned darts. Progress finds it everywhere on her road. Progress knows no obstacle, and one day, thanks to the double-bladed sword of Truth, she will deliver the human race from its old enemy.

May the *Mont Blanc* continue the work for humanity, remaining at the same time sincerely patriotic; then if the storms burst let them burst, your flag will be easily lifted above the clouds as is the peak of your majestic namesake.

[Editorial in *Medical Brief*, St. Louis, Mo.]

The spy system has never been in much favor with Anglo-Saxon peoples. It may be necessary, in certain cases and under certain conditions, to employ it for the detection of crimes and criminals; but it is always regarded, by right-thinking persons, as being at best a sort of necessary evil, only to be made use of when all other means fail, and in which no right-feeling man or woman cares to take an active part. It is, in short, in the mind of the decent citizen, a species of dirty work, only to be employed where absolutely necessary to circumvent equally dirty work with its own weapons.

All of which we have said before in these pages, and are led to reiterate by certain events which have recently occurred not a hundred miles from the office of this journal. The spectacle of a city health officer hiring paid decoys to induce a Christian Science practitioner to render advice to a presumably sick person for which the decoy made payment with a marked bill, as though he were entrapping a suspected embezzler or forger; thereupon dragging the practitioner—a lady—to the police station and subjecting her to the indignities of disrobing and searching her like a common thief; such a spectacle, we say, is not calculated to inspire any great respect, either in the public or the professional mind, for organized medicine. Such a procedure is justly regarded by all right-minded persons as an outrage upon common decency, and quite naturally arouses public sympathy upon the side of the victim of such brutal methods. In the case in question, the prosecuting attorney declined to issue a warrant for the Christian Science healer, we think, very rightly. And we are sure that the entire medical profession repudiates with disgust and indignation the uncalled-for action on the part of the health officer.

Aside from the natural disgust that such third-degree methods arouse, in the minds even of those who discountenance what they believe to be the mischievous activities of Christian Science and similar cults, it should be pointed out that they defeat the very ends to which they are supposed to be directed. Nothing furthers an obscure or struggling cause like persecution. It serves only to arouse public sympathy and respect, even for people and causes who are not in themselves deserving of sympathy and respect. In cases such as the one we have cited, the original issue is entirely lost sight of in the overshadowing spectacle of oppression and persecution of the weak by the strong. By all means let us expose what we believe to be the fallacies and evils of these health cults, so far as they are fallacious and evil; and use our utmost efforts in a legitimate fashion, to protect the public against their delusions. But let us confine ourselves to the limits of common decency, and avoid the foolish mistake of fanning into more vigorous life, by the winds of persecution, the flame which it is our purpose to quench. As a general proposition, we should say, the efforts of the medical profession in this direction should be confined to educating the public. Legal prosecutions would better originate with the public who are injured by irregular and unqualified practitioners.

[Samuel Greenwood in *Vancouver* (B.C.) *News-Advertiser*.]

The gentleman who conducts "The Listener" in the Sunday *News-Advertiser* apparently labors under a misapprehension regarding the Christian Science movement and its methods, judging by his remarks in the issue of Nov. 19, for I respect his sincerity too much to believe he would deliberately misrepresent a cause whose sole object is the good of mankind, even to provide some entertaining paragraphs for the readers of your paper.

I might say for his information that the expense of the lecture mentioned, as well as others that have been given from time to time, was borne entirely by the local Christian Scientists; and the fact that they are willing to provide these lectures in "the most costly house in Vancouver," without so much as passing a collection plate, would hardly be considered a subject for adverse criticism. It is rather lame logic, to make the best of it, to conclude because they go to this great expense, and are willing to spend of their means for the welfare of others, that it is a sign of love of money. The critic's "smile" was, at least, untimely if it was prompted by such an argument. Does this gentleman think the Christian Scientists should have rented a cheap hall and charged an admission fee? Would that, according to his sense, have been the more unselfish way? If such a course had been adopted the criticism in all probability would have been that the motive was mercenary, a conclusion which, in the present case, seems to have been drawn from an opposite premise.

His thinly veiled sarcasm respecting the wealth and prosperity of the Christian Science denomination leads me to wonder what this critic expects the Christian church should be if not prosperous and abundantly supplied with the funds necessary for its work. Would an unprosperous, poverty-stricken church appeal to him as presenting the best evidence of faithfulness to the Master's teachings? Does he believe Christ Jesus expected or desired his followers to wander through life as homeless waifs and with such "a supreme contempt for money" that they must depend upon the charity of unbelievers for support? The Christian church should be at least as deserving of success as a private individual or business firm, and as entitled to prosperity according to its usefulness; but one would almost imply from this critic's attitude that poverty is a sign of divine favor, and, therefore, that the poorer churches and Christians may be, the more closely they are following their Master.

The prosperity of the Christian Science church, like that of any other, consists of the good it is doing; and because its members and adherents—who, by the way, are drawn from the humblest as well as from the highest walks of life—take loving care that it is not hampered for lack of funds, and this without recourse to begging or other money-raising schemes, is hardly a thing to be sneered at. So long as money remains the recognized medium of exchange, the Christian Science denomination will not differ from other religious or philanthropical organizations in using money in the carrying on of its great work for humanity.

Digitized by Google

This gentleman himself acknowledges that the Christian Science movement is prosperous, but what has made it prosperous? Does he realize what a sorry conclusion he arrives at when, after admitting the prosperity of this movement, he denies that it has brought the world "one fraction of a step" nearer the wiping away of tears pictured by St. John? Is it possible that he believes this prosperity has resulted from the promulgation of Christianity as a scientifically practical religion, without in any degree making good its claim? When a religion devoid of all sensational features, with nothing of a nature to attract the worldly mind, and resting its claim to public attention solely on its practical helpfulness in the stress and trouble of life,—when such a religion, nearly half a century after its establishment, is acknowledged to be prosperous, even by its opponents, what does it signify? That it has done no good, or fulfilled none of its promises? How long, think you, would an automobile manufacturer prosper whose machines failed to go? Or how long would people resort for water to an empty spring? This critic should know, without being reminded, that the Christian Science movement would long ere this have been as dead as the belief that the earth is flat, if it had not proved itself a blessing to those who have adopted it. The fact of its remarkable growth, and that this growth continues unabated after years of practical test, should satisfy any unprejudiced thinker that something more tangible and satisfying than theories has been given its beneficiaries.

Is the author of this criticism a pessimist of such hopeless type that he cannot foresee any freedom for the race from sin and suffering and death? Is humanity never to reach the beginning of the fulfilment of the Master's promise: "If a man keep my saying, he shall never see death"? That his word has not yet been fulfilled is not because it is not true, but because its condition has not yet been complied with; but it surely will, since the trend of human thought is toward good, not evil. Our Master's teachings remain for mankind to understand and practise, not to quarrel about; and the fact that Christian Science is helping its believers to that end should be cause for gratitude rather than condemnation, even on the part of those who may differ with its point of view.

[Frederick Dixon in *Morning Advertiser*, London, England.]

A story on the subject of Christian Science has been communicated to the press which is a very good specimen of the way in which prejudice is manufactured. It is to the effect that a Christian Science practitioner in Switzerland has been sent to prison and fined, and an order made for his expulsion from the canton for practising the treatment adopted by that movement. To anybody acquainted with Christian Science the details of the case proved that the particular person had no connection with the movement, and careful inquiries made in Zurich and in Geneva, whence the information is supposed to have come, have proved this to be the case. Not only was this man not a Christian Scientist, but he was not even known to the Christian Scientists in the country. Furthermore, Christian Science itself was not as much as named during the trial.

The fact is that he was what is known as a nature-healer. He prescribed baths, drafts distilled from herbs, and other herb decoctions. In these circumstances, it is obvious that his practice was far more like that of the ordinary medical practitioner than the Christian Scientist. I shall be very much obliged if you will give publicity to these simple facts.

[Editorial in *Pomona* (Cal.) *Times*.]

In rescinding his order for the exclusion of the practice of the rite of healing by the Christian Scientists on the Isthmus of Panama, President Taft did a thing that all broad-minded people will feel impelled to denominate as just and timely. What led the President to give the restraining order is not known to the writer, but the lifting of the embargo by the chief executive is an acknowledgment of an afterthought that impressed the President that his former course was not free from criticism and perhaps not entirely in accord with the spirit of freedom and religious tolerance. Without the slightest attempt to defend the belief or practices of the Christian Scientists, we feel constrained to say that their rights to the practice of the teachings of their belief and their choice of the kind of treatment that shall be accorded them in times of illness, cannot be denied them. If the liberties of the people are to be preserved, it will be necessary to stand firmly for such principles as are involved in this case. No matter if we subscribe to our neighbor's belief or not, we must respect the rights guaranteed him by the same document that gives us our own, and unless we do we may awaken some day to the realization that in failing so to do we have lost our own.

[From *Boston* (Mass.) *Times*.]

The only Christmas feast that is lasting is to eat the bread of understanding and to drink the wine of divine inspiration. Whatever action is most conducive of spirituality and goodness is more beneficial, for these are the only possessions over and above that which we already have that can be of real and lasting benefit. There is to each individual a standing invitation to come up higher, and the feast of spiritual things is constantly before us and is to be had without money and without price. Solomon said, "With all thy getting get understanding." It is probably a good thing to have a special day set apart when we may remember the invaluable gift of God, but we shall always remember our blessings and every day will be Christmas by and by. The time will come when we shall all be completely filled with a satisfaction that is infinite and will never need to be replenished. This state, however, can only be reached through the mighty struggle which overcomes carnality and enthrones spirituality. The birth of Jesus was an absolute necessity to the salvation of mortals, because it was essential for "the man Christ Jesus" to prove the divine power and demonstrate what could be done by one who was entirely governed by Spirit. His life was one of perfection. He conquered in every instance, thus presenting to the world the highest human ideal. As a person, therefore, he was and is the only correct example. Following him understandingly from birth to ascension, we are led up to a true conception of ideal being. Mortals through Christian Science understand the mentality of the man Jesus, and this is to them the "second coming," that coming which is "unto salvation," that which constitutes the way whereby we may follow in the footsteps of Jesus and reach our spiritual or heavenly estate even as he reached his.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

A SURFEIT OF CIRCULARS.

We are frequently asked by our friends in the field to write editorials dealing with this or that subject of general or special interest. As one of the subjects on which we have frequently been requested to write has already been covered in an editorial that appeared in the *Sentinel* of July 4, 1908, we are republishing the editorial in question, which was as follows:—

The innumerable advertising circulars with which those whose names appear in the directory of practitioners published in *The Christian Science Journal* are being constantly deluged, would seem to indicate that a general confidence has been established in the minds of many people who have "something to sell" that Christian Scientists have at last solved the much-discussed yet somewhat elusive "financial problem" which has at times clouded the horizon for most of us, whether we be plain citizens, captains of industry, or the framers of political platforms.

A few persons, we suppose, are so familiar with money that it may seem ridiculous to them for any one to turn to a dictionary for a definition of the word. We have found, however, that Webster's Dictionary is a good thing to have at one's elbow, and just now it is particularly useful because it informs us that money is "whatever . . . is used as a medium of effecting exchange of property," and we are thus enlightened as to the object of the circulars which have gone so far toward filling the waste-baskets of many Christian Scientists. The problem is very simple, and can be stated in about this way. You are a Christian Scientist and are supposed to have money. I may or may not be a Christian Scientist and I want money. I send you a circular, offering to sell you a gold-mine or a gold brick. You send me the "medium of effecting exchange of property" and the deed is done, the "financial demonstration" is made.

A striking thing about this circular surfeit that has been forced upon Christian Scientists is that it has seemed to have certain cycles or seasons or fashions. At one time our "dear brother in Truth" (we quote from the circulars) was anxious to confer upon us the great favor of making us stockholders in the most profitable gold-mine that ever existed within or without the imagination of mortals, and to do this he (the dear brother, etc.) was willing to make us a present of one or more shares of preferred stock with every share of common stock,—provided, of course, that the "medium of effecting exchange of property" accompanied our order for the common stock. Later, another "dear brother" who desired to lubricate life's pathway, and incidentally to accelerate the movement of our dollars, loomed large upon the scene with his offer to make our everlasting fortune in oil; but notwithstanding the fabulous number of "barrels per day" of which the author of the circular discoursed, the oil vogue was short-lived and comparatively inexpensive. To borrow a phrase from the fashion papers, waste-baskets were "worn large" during this period.

But why catalog all the subjects of the circular and all the changes in fashions? Suffice it to say that almost everything above the earth, under the earth, and upon the earth has been made the inducement for us to part with the "medium of effecting exchange of property," and our waste-baskets have done faithful duty; but just at present books, both in prose and in verse, are greatly in fashion with those who are so solicitous that Christian Scientists shall not miss any of the good things of this earth, including, of course, the opportunity to part with their surplus small bills. Hamlet said, "The play's the thing," but our "dear brothers" disagree with him most emphatically and declare, "The book's the thing," and the book it is just now.

Is there no way to stem the tide of these effusive attentions? There is, and we shall follow it—not read said circulars, but drop them into the waste-basket.

ARCHIBALD MCLELLAN.

WAR AND PEACE.

Though named in prophecy "The Prince of Peace," and thus heralded at his birth by angelic choirs, Christ Jesus frankly declared that he came "not to send peace, but a sword;" and with his own trial and crucifixion there was inaugurated a world-strife which has left its record upon every page of history, and which today is seething to a tidal crest whose threatenings can but seem alarming to the timid and tired of heart. Moreover, what was true of Christ Jesus has been true of all who have maintained the Master's spirit of loyalty to truths which were opposed to educated opinions and vested interests. Thus the stand taken by Socrates and Savonarola and many another outspoken reformer has invariably precipitated a bitter and ofttimes cruel resistance to a redemptive idea.

It is thus seen that the mortal stir and show of malicious opposition which has been awakened by Mrs. Eddy's virile restatement of the Christ-teaching is but a part and parcel of the phenomena which have always attended the rebuke of materiality by spiritual sense. Indeed, it witnesses in a way that should rejoice all aspiring hearts, to the vital worth and efficacy of this statement; it speaks for the presence of that divine truth which in uncovering false belief seems to smite it into writhing antagonism. If Christian Science had not been at variance with prevailing convictions, as all corrective ideas must necessarily be; if it had not brought to light the inherent error and ill effects of long-honored teaching, it would have engendered no turmoil, and it would have accomplished no good. It would have proved inutile as well as inoffensive.

This fact, that the championship of an advanced ideal always precipitates contention in the realm of mortal mesmerism, makes it clear that the peace prophetically associated with the Christ-coming is something quite different from the mere absence of material conflict or the passivity of unprogressive contentment. The true Christian is enlisted for a tremendous fight, and Jesus frankly told his disciples that they would be subject to untold trials and tribulations; nevertheless, he said to them: "My peace I leave with you." This is not the peace which mortal sense longs for, it is not unmolested opportunity for the satisfaction of material desire, it is rather the unshaken confidence, the undisturbable repose of him who knows that he has found the truth and is demonstrably attaining to at-one-ment therewith.

We do well to think upon these things today, and to remember that though error vauntingly goes forth to war, Truth, the eternal good, alone is intelligence and has power. Error's Goliath-like assertiveness always foretells its fall, provided it is met with David-like faith and humility, that moral courage which knowingly rests in the entire ability of Truth to take care of itself, and to rescue its followers from every menacing evil, even as it did in the days when Saul, "breathing out threatenings and slaughter," was halted on his way to Damascus, and made to help that which he had planned to hinder. Momentarily mindful of these things, and constantly alert to the claims of error, the true Christian Scientist will win without by overcomings within. He will be so genuine, so watchful, so wise, so loving, and

Digitized by Google

so trustful, that, though troubles may seem to multiply on every side, he can continually rejoice in the abundance of peace.

JOHN B. WILLIS.

BELIEF AND UNDERSTANDING.

IT is often observed by those who are not Christian Scientists, that students of Christian Science place considerable emphasis upon the word "belief." As used by them it seems to have a different significance to that generally accepted, and yet it is not likely that Christian Scientists and non-Scientists would disagree as to the mere definition of the word. Among other definitions given by the dictionaries are these: "Assent to a proposition or affirmation or the acceptance of a fact, opinion, or assertion as real or true; partial or full assurance without positive knowledge or absolute certainty." Belief is also here defined as "conviction; confidence;" and again, as "the belief of our senses." The last is sometimes employed by Christian Scientists to express the thought of disease or discord, which of course means the acceptance of sense evidence, irrespective of the spiritual fact. In the Bible, however, the word "believe" generally has a higher meaning and points to some measure of faith in God which leads to spiritual understanding.

Mrs. Eddy says that the text, "Believe . . . and thou shalt be saved," "demands self-reliant trustworthiness, which includes spiritual understanding and confides all to God" (Science and Health, p. 23). She also tells us (p. 297) that "a belief in Truth is better than a belief in error," but she adds that "until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine." This explains why that which is called faith so often suffers shipwreck. Its sense of revelation is opposed to reason, and yet reason, not alone faith or belief, must be applied to the working out of our human problems. If our present belief does not meet the demand for progress, it is surely reasonable to seek a basis for a better belief, one which will impel us toward the truth, but unfortunately mortals are apt to let many erroneous beliefs solidify and then these take for them the place of realities. This was long the case with mankind at large. They refused to believe that the earth is a sphere, and false belief held otherwise brave mariners from venturing out upon the deep, until at last the truth was known, not merely believed.

A far more vital issue is, however, involved in the erroneous belief that man is material and governed by material law, one which vitally concerns every human being. Long ago Paul said to the Philippian jailer, "Believe on the Lord Jesus Christ, and thou shalt be saved, and thy house." We read that Paul and Silas then instructed this man and the members of his household, with the result that he "rejoiced, believing in God with all his house." This must have meant much more than is grasped by any limited sense of faith or belief, or of what it means to be "saved." It involved the giving up of material belief, which is bondage always, and the gaining of the spiritual understanding of God and man which is freedom. To believe on Christ Jesus meant in this case to believe and accept what he had taught and what he had wrought. He himself had said, "If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works."

This larger sense of belief in Christ Jesus comes to all who accept Christian Science. They renounce their former belief in the power of evil,—"the world, the flesh, and the devil,"—to make room for whole-hearted loyalty to the Christ-ideal which Jesus of Nazareth declared, lived, and demonstrated at every step of the way, the truth which brings the freedom he promised and which is reaching its full fruitage through the inspired teachings of Christian Science. Well may each one of us challenge everything which offers itself for our acceptance, that we may believe only the good and the true, for thus alone can we realize the harmony which the understanding of Truth bestows.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

NAMPA, IDAHO.

Plans for a church home of the Christian Science society have been accepted and a lot fifty by one hundred and forty feet secured. The church is planned to seat two hundred people, and will cost approximately three thousand dollars.

Correspondence.

LOS ANGELES, CAL.

A new Christian Science church building is soon to be erected by First Church of Christ, Scientist. The location is a commanding site at the junction of Alvarado street and Alvarado terrace. The style of architecture will be Italian Romanesque and the building will occupy practically the entire quadrangle formed by the intersection of the streets. Plans and sketches as prepared provide for a circular porch of artificial stone, with stone balustrades and walks on each of the four sides. The construction will be of reinforced concrete, with brick exterior walls, tapestry brick facing, and terra cotta trim. The capacity of the main auditorium will be thirteen hundred, a Sunday school room, seating six hundred and fifty additional, bringing the capacity up to nineteen hundred and fifty.—*Los Angeles Tribune.*

MEMPHIS, TENN.

The contract for the completion of First Church of Christ, Scientist, at Dunlap street and Monroe avenue, was let Thursday afternoon [Jan. 11]. When completed the new structure will take its place as one of the finest church edifices in the city, representing a total investment of nearly one hundred thousand dollars, including the value of the site, about twenty thousand dollars, and the cost of furnishing. The cost of completing the church, exclusive of furnishings, will be approximately forty-four thousand dollars. The Sunday school rooms were built several years ago at a cost of eighteen thousand dollars, and the congregation has used them since as a temporary place of worship, as well as for Sunday school purposes. The temporary roof over these rooms is arranged to permit a continuation of this plan, pending the construction of the remainder of the building.

The construction will be of buff brick, with stone and terra cotta trimmings. The seating capacity of the main auditorium and balconies will be about seven hundred. In accordance with the conservative policy of this denomination, the church will not be dedicated until it is entirely free from debt. The congregation reserves the right under the contract to halt the work before the interior finishing is done, though hope is expressed that the building will proceed without interruption.—*News-Scimitar.*

ROCKY FORD, COL.

The local Christian Science organization is planning on erecting a church home. At the regular annual meeting of the organization, held Tuesday evening [Dec. 5], a committee was appointed to select a building site. As soon as they have decided on a site, plans for building the church will be taken up. There has been a substantial increase of membership during the past year, and interest in the

Digitized by Google

teaching of Christian Science has not only been evidenced in larger attendance at services and a greater enrolment at Sunday school, but also in the increased number of subscriptions to the *Christian Science Sentinel*, *The Christian Science Journal*, and *The Christian Science Monitor*, a daily newspaper maintained by the Christian Scientists in the interests of clean journalism. These are the official organs of the church. The librarian's report shows a steadily increasing demand for the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, about two hundred copies of this work having been sold since the organization of the work in this field.

Rocky Ford Tribune.

YONKERS, N. Y.

First Church of Christ, Scientist, held a special service of thanksgiving and dedication of their church edifice yesterday morning [Nov. 30]. Christian Scientists do not dedicate until entirely free from debt and the service was one of true thanksgiving. After the usual service with the subject "Thanksgiving," a history of the movement in Yonkers was read by the second reader of the church, as follows:—

The inception of the Christian Science movement which resulted in a permanent organization in Yonkers, began in a parlor, at Hastings-on-Hudson, N. Y., June, 1903, and continued there for a short time, when it was decided to transfer to Yonkers, as being a larger field for activity. The first Christian Science service held in our city was in December, 1903, in a small studio at 498 South Broadway. There a society was organized. In September, 1904, it was again necessary to move into a larger room at 502 South Broadway. Here the Sunday school and reading-room were first established, also Wednesday evening meetings were instituted, which were for the purpose of bearing witness to the healing efficacy of Truth, as revealed in Christian Science.

The steady growth of the movement called for greater facilities, and in October, 1905, a change was made, bringing the work nearer the center of the city, in a large room in an office building at 12 North Broadway, where in March, 1906, First Church of Christ, Scientist, was incorporated. The necessity of securing a permanent place of worship presented itself here, and a fund was started; later a committee was appointed to find lots for this purpose. In September, 1907, five lots were purchased in the old residential section of Yonkers, which were held at the disposition of the church. The need for a home became more evident, as divine Love urged the onward and upward course, and not yet having sufficient funds to build, and unable to obtain a room or hall suitable, the problem took on the semblance of a difficulty, when the fulfilment of the words of the prophet Isaiah was at hand: "Remember ye not the former things, neither consider the things of old. Behold I will do a new thing: now it shall spring forth; shall ye not know it? I will even make a way in the wilderness and rivers in the desert, and it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear."

Through a very unexpected channel, this lovely chapel, with grounds and furnishings, having a seating capacity of about two hundred and fifty, was offered. At a meeting of the church held September, 1908, it was unanimously voted to sell the five lots then in the possession of the church and purchase the chapel. An offer was made and accepted for the lots which enabled payment for the church property, with the exception of a small mortgage. The papers were signed and delivered on Thanksgiving eve, and First Church of Christ, Scientist, of Yonkers, N. Y., held the opening service in the newly acquired church edifice, on Greenvale avenue, Thanksgiving morning, Nov. 26, 1908.—*Yonkers Herald.*

THE LECTURES.

DRESDEN, GERMANY.

A lecture on Christian Science was delivered by William D. McCrackan, M.A., at the Neustädter Casino, König str. 15, Dresden, Jan. 8, under the auspices of the Christian Science Society, Dresden. There was a large, attentive, and earnest audience, whose sympathetic attitude toward the distinguished lecturer revealed the interest in the subject of Christian Science. Moritz Weber from Roseburg in western America introduced the lecturer as follows:—

Although our lecture on Christian Science is to be given in the English language, I have been asked to introduce the lecturer in the German language, and I can only assure you that as a German American it affords me great pleasure to welcome the lecturer here on German soil in the German language. The theme, however, of his lecture stands far above all limitations of nationality, knows neither east nor west, neither north nor south, a theme that speaks in the tongues of all countries to the receptive heart and may be understood by the receptive heart—the theme of the Christian religion.

Let me assure you from the start that it is not the object of this lecture to try to convert you to our concept of the Christian religion, or to make adherents of Christian Science out of you. I even venture to say that it is not the object of this lecture to convince you of the truth of Christian Science. Nevertheless, we appreciate the great value of a calm, clear, and authentic presentation of Christian Science to an intelligent public, and enjoy greatly an occasion like this, for you will readily understand that a religion which in a few decades has spread all over the world, which in a material age like ours assigns to the spiritual the highest place and teaches how not only the sinners but also the sick may be freed from their bondage through God, Spirit, and which stands firm in its affirmation that Christian Science has nothing whatever to do with suggestion, hypnotism, spiritualism, occultism,—I say you will readily understand how such a religion has been subjected to many misunderstandings and prejudices, yea, even oftentimes to unwarranted attacks. To clear away these misunderstandings and prejudices and to forestall these oftentimes well-meant but unjust attacks is also one of the purposes of this lecture. I therefore ask your undivided and unbiased attention for the lecturer.—*Stranger's Guide to Dresden.*

OAKLAND, CAL.

An unusually large audience greeted Judge Clifford P. Smith, who spoke again on Christian Science at Washington Hall in East Oakland last evening [Nov. 28]. Judge Smith was introduced by Samuel P. Lovett, who said in part,—

In behalf of Fourth Church of Christ, Scientist, of this city, I am glad to welcome you here this evening, because I know you will hear something that will do you good. There is no subject occupying more attention in our land today than that of the relationship between God and man. Christian Science shows us how to make this relationship of practical use in solving our daily problems, and at the same time it points the way to life eternal.

Oakland Enquirer.

JAMAICA PLAIN, MASS.

Under the auspices of The Mother Church, Prof. Hermann S. Hering delivered a lecture on Christian Science Nov. 16 at Eliot Hall. He was introduced by Elisha B. Seeley of Roxbury, who said:—

There is probably no one present so unreasonably opposed to what he conceives Christian Science to be as I was twelve

Digitized by Google

years ago, for I took up the reading of Science and Health for the express purpose of proving that while my wife was well after resorting to Christian Science treatment, she could not have been healed by any such nonsense, since years of medical treatment had failed even to relieve her more than temporarily. Like many another, the reading of the first hundred pages of the text-book changed my views, and ultimately I became absolutely convinced of the correctness of this teaching, subsequent experiences confirming this first impression.

A year or two later I was taken down with a most aggravated case of typhoid fever. Under the care of a Christian Science practitioner one after another of the phases of this disease presented itself, to be as quickly destroyed; with the result that the nurse who was called when I went to bed was needed for only one week and complete recovery followed rapidly. Since that time I have laid off a truss which I had worn for fifteen years, have been healed of the tobacco habit, which had been indulged for a dozen or more years and which I had made many unsuccessful attempts to overcome through will-power, and I have not spent a day on a sick-bed since that healing ten years ago. More than this, Christian Science has changed my entire thought of existence, has given me an ideal of life that is both practical and worth while, has given me "beauty for ashes, the oil of joy for the spirit of mourning, the garment of praise for the spirit of heaviness."

Because of the practical results which accompany the practice of this most practical Christianity, it differs from religious teaching which does not attain like results, and it is therefore more or less misunderstood, misrepresented, and maligned by those who do not comprehend its teaching.

Correspondence.

POMONA, CAL.

An audience that filled every seat on the main floor of the Fraternal Aid Opera House and occupied a large part of the gallery, heard Bliss Knapp's lecture on Christian Science, yesterday afternoon [Nov. 19]. The Rev. P. M. McReynolds, of the Unitarian church, introduced the lecturer with the following words:—

That so large an audience has come out to this lecture on a warm Sunday afternoon is proof of the undying interest of man in the idea of God. Especially when a man or a people is thought to be able to bring God down from the heavens and reveal Him in the work-a-day lives of the people, do the people show interest such as is manifested today. This our Christian Science friends have done, preeminently in one department of life. Time was when God was regarded as an absentee landlord, who had little to do with most of the trials of His people—visiting them only occasionally. This idea Christian Science has done more to dethrone perhaps than has any other influence.

I have been asked to introduce the speaker, I suppose, not because I agree with him in his views, but because in many points I disagree with him; and so disagreeing, do at the same time insist on his right to be heard, and it is our duty to hear of such a movement from its friends.

Pomona Review.

BRISTOL, ENGLAND.

Interest in Christian Science is evidently on the increase, for the Lesser Colston Hall was crowded to its utmost capacity on Thursday evening [Nov. 23], on the occasion of a lecture on the subject by Bicknell Young. The chair was occupied by the Rev. Donald Fraser (David Thomas Memorial Church); who said he had been asked by the local committee to take the chair, but he was not what was technically known as a Christian Scientist. Although he might not believe all they believed, and although they might not believe all he believed, they would be in agreement on some points, and in the opinion that the world to a large extent was what they made it. God made them, and He expected them to express in the best way they could the divine Spirit. As far as they agreed with him (the speaker) he was in sympathy with them, and as far as they did not agree with him he thought they were entitled to their own opinion.

Clifton Chronicle.

CINCINNATI, OHIO.

Music Hall was well filled with Cincinnatians the night of Nov. 21 to hear the lecture on Christian Science by Virgil O. Strickler. The lecturer spoke under the auspices of First Church of Christ, Scientist, and was introduced by A. J. Thorne, first reader of this church, in the following brief address:—

Christian Science is every year bringing happiness and contentment into thousands of lives formerly filled with fear and doubt, showing that it is a religion of progress, a religion of hope not of despair, of joy not of sorrow, of love not of hate, of life not of death; it is the modern protest against the slavery of the ages. To some of you (and I imagine that there are many here making their first visit to a Christian Science lecture) it may seem strange that the sick can be healed today as in Jesus' time, without any material means; not by blind faith, will-power, or hypnotism, but in strict accord with divine law. But it is really no more strange than that a seed planted in the springtime should develop into a beautiful flowering plant in the summer; it only seems more strange because it is more unusual. Through the understanding of Christian Science we are enabled to carry out the commands of our Master to go into all the world, to preach the gospel, and to heal the sick, for today all over the civilized world there are Christian Scientists who are carrying out this command by healing the sick and comforting the sorrowing.

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Alton, Ill.—Frank H. Leonard, Temple Theater, 2:30 p.m., Feb. 18.

Amarillo, Tex.—William R. Rathvon, Grand Opera House, Feb. 19.

Brooklyn, N. Y. (First Church).—Virgil O. Strickler, Kismet Temple, 92 Herkimer street, Feb. 20.

Fort Worth, Tex.—William R. Rathvon, Byers Opera House, 3 p.m., Feb. 18.

Knoxville, Tenn.—Virgil O. Strickler, Central Presbyterian Church, West 5th avenue, Feb. 15.

London, Eng. (Fifth Church).—Bicknell Young, The Camden Athenæum, Camden Road, London, N., Feb. 29.

Luverne, Minn.—Frank H. Leonard, Opera House, Feb. 23.

New York, N. Y. (Fourth Church).—Virgil O. Strickler, Wadsworth Theater, Wadsworth avenue and 181st street, 3 p.m., Feb. 18.

Pittsburg, Pa. (Second Church).—Virgil O. Strickler, Carnegie Music Hall, Ohio and Federal streets, North Side, Feb. 19.

Prescott, Ariz.—Bliss Knapp, Elks Theater, Feb. 16.

Princeton, Ill.—Frank H. Leonard, Telephone Building, 437 South Main street, Feb. 19.

Richmond, Surrey, Eng.—Bicknell Young, Castle Assembly Rooms, March 1.

Richmond, Va.—Willis F. Gross, Academy of Music, 4 p.m., Feb. 18.

Roswell, N. M.—William R. Rathvon, Armory Building, Feb. 20.

Stockton, Cal.—Francis J. Fluno, M.D., Auditorium, Feb. 15.

Swansea, Wales.—Bicknell Young, Central Hall, 7:30 p.m., March 4.

TESTIMONIES OF HEALING.

If my expression of thanks will [illegible] other pilgrim on his way, I shall indeed be glad, and I am happy to express something of what I feel toward this regenerating truth. So, accepting Longfellow's advice, "Give what you have; to some it may be better than you dare think," I am impelled to speak of some of the benefits that have come to me since five years ago, when I began, carefully and without prejudice, to study Christian Science. The three members of my family attended its services, and I had the alternative of going with them or remaining at home alone. I will say frankly that this was my only motive for going, and just as frankly do I say that at the first few Wednesday evening services I did nothing but scoff at what I heard, and I wondered if the people who testified really believed what they said. By degrees, however, so omnipotent is Love, I began to grasp something of this saving truth, and instead of going to the service to scoff I gave earnest heed. From that stage to the beginning of the study of Christian Science was but a step, and the result was inevitable; I accepted unequivocally its teaching and have indeed found it to be the law of Life to humanity.

Various physical ills have been healed by the treatment of a practitioner, but it was alone through the understanding which came from the reading of Science and Health that I was enabled to lay aside glasses which I had worn for nine years and which the oculist said I would always have to wear, as he had pronounced mine an unusually serious case of defective vision. It is now over three years since I discarded the glasses, though my work as a church reader and in other vocations calls for considerable use of my eyes.

The demonstrations of physical healing in my husband's case have seemed even more wonderful than my own. Several times in the past five years he has been healed in a few days of well-developed attacks of acute lung trouble, a disease which had kept him in bed about two months at one time, when he had turned to *materia medica*. My mother and sister, too, have received much help from Christian Science. Infinitely more, however, than the physical benefit derived from a study of Christian Science, is the uplift in character and ideals, and the fact that it gives one a purpose in life—a purpose which one can neither shirk nor indolently postpone till the future, but which is a vital and present work, and this purpose is to eliminate all selfish motives and to work alone for the furthering of the cause of good. To do this one must faithfully and conscientiously follow the leading of Principle. Instead of leading one in the "line of least resistance," the path which mortal mind would suggest, it involves the bearing of a cross; but the cross must be cheerfully, gladly borne, if the crown is to be won.—JUANITA W. PORTER, Joplin, Mo.

In the year 1893 I visited the World's fair in Chicago, and while there was taken with a fever. Leaving immediately for my home in Detroit, Mich., I arrived there with a well-developed case and was confined in bed for weeks under the care of a physician. The fever left me weak and emaciated, and in this condition a severe attack of inflammation of the bowels manifested itself, with great suffering. Owing to the severe pain, and also because I was so weakened from fever, the physician gave no hope. Christian Science was then offered me by my dear mother, who had been a Scientist for a number of years. A practitioner was called, treatment was begun, and there was immediate relief, the pain leaving entirely inside of an hour, never to return. This was an instantaneous demonstration of God's healing presence, and recovery from the fever and the inflamed bowels was so rapid that in two weeks I rode on horseback thirty-six miles in very inclement weather.

But even this experience did not seem to draw me to Truth, and for years afterward I continued to tread the paths of sinful pleasure and careless living until again I felt the need of God's sustaining power. About four years ago I turned in earnest to Christian Science, in search of the spiritual comfort and mental peace which this truth brings to its faithful followers. The bondage of bad habits has been broken and, though progress in other ways has at times seemed slow, owing solely of course to the persistent assertion of self, it has been made plain to me that if we approach divine Mind intelligently, understandingly, and with no excuses or self-justification, the way becomes clear, giving at least a partial realization of the allness and power of God, divine Love. Excuses are only obstacles to progress and are prompted by "self-will, self-justification, and self-love" (Science and Health, p. 242), those foes to one's progress in business, in his home, and in the understanding of Christian Science. Whenever we seem to fall short of a successful and perfect demonstration in any line, it is not so likely to be because of outward conditions as it is of some fault within ourselves. We just need to acquaint ourselves more fully with God and His way, and to correct our own erroneous judgment in meekness and humility.

The protecting power and ever-presence of God, divine Principle, has been made manifest to me on many occasions, and I know that He governs and controls His universe and man in His image and likeness. I can truthfully say that I have been healed physically and morally through Christian Science. I am gaining a little more faith and understanding each day, and I know that as my thought dwells less on self and more with God and my fellow man, blessings will accrue in the same proportion. When I stop to contemplate the magnitude of God's power, ever available for the protection of the righteous man, it makes me feel very humble and very grateful for all I have received.

W. C. WHITCHER, Kansas City, Kan.

I have long desired to give a written statement of the benefits which I have received through Christian Science; but they are so great and so numerous that no words of mine can fully describe them. For many years I was a constant sufferer from an acute stomach difficulty, bowel trouble accompanied by hemorrhages, rheumatism, and fainting spells; in fact, there seemed to be no end to my numerous ailments. About six years ago I was stricken with paralysis in my right side. This affected not only my limbs, but my speech and mentality. My husband consulted first one doctor and then another, and spent every dollar that he could afford on the treatments which they advised. This continued for four years; and by that time symptoms of locomotor ataxia had developed. My condition was so wretched that I contemplated ending my life.

I had been brought up among religious surroundings, and had been compelled, when a child, to memorize a good deal of the Bible; but I never had any love for religion, and for many years had been a confirmed agnostic. I had heard occasional mention of Christian Science, but regarded it as not worth thinking of. But in August of 1908, when I had reached the very depths of misery, a young girl in Chicago told me what Christian Science had done for her mother, and advised me to go to one of the reading-rooms in that city and find out what Christian Science is.

I cannot describe the awakening that came to me, as I read its illuminating literature; it seemed as if I had never lived before. I borrowed a copy of "Science and Health with Key to the Scriptures," for at that time I could not afford either to buy the book or to engage a practitioner. I drew from the bottom of a trunk a Bible which had been lying there for years, but which is now my constant companion. I had to return the text-book in two weeks, and did not possess one of my own till the following January, but I memorized as much as I could of it, during the two weeks,

Digitized by Google

and continued the study of the Bible in the light of Christian Science, praying night and day for that Mind "which was also in Christ Jesus." In a short time I began to enjoy my food, with no distressing after effects; then my articulation improved, and little by little my limbs regained their strength. In about six months I was perfectly well.

Later I was healed quickly and thoroughly of a badly sprained ankle. The fear of poverty has been destroyed, and my one desire is that I may reflect in some measure the divine Love which has done so much for me.

MRS. ALLAN KELLY, Cincinnati, Ohio.

It is with great pleasure that I write this testimony, but I feel that I have not words adequately to express my appreciation of Christian Science. The practitioner to whom I went gave me freely of that sense of Love which fills the universe. I was to mortal sense suffering very severely from an eruption all over my hands and body, which was very distressing. I began treatments at once with a practitioner, but with practically no results. This continued for six months, and in the mean time I tried two or three different practitioners, but could not seem to be cured. I then learned of another, and sought help from her. From the time of the first treatment relief was experienced, and in two weeks I was entirely healed. Since this experience I have sought help for various ailments, and always with good results.—AGNES LIND, Rolfe, Iowa.

I would like to express my gratitude for Christian Science by telling through the channel of our literature something of the light which has come to me through the study of this wonderful truth. I did not come to Christian Science for the healing of any so-called incurable disease, but for the reason that I was ill at ease and so disturbed mentally with questions that perplexed and annoyed me, that I became very nervous and greatly troubled with sleeplessness. My parents were God-fearing people, my father having been for years a church deacon. In childhood I was happy and content, but when I grew older I tried to reason things out, tried to reconcile a God of love with one who knew and permitted such dire suffering and calamity. My heart rebelled against this teaching, and heart-hungry I cried out for a religion I could understand and which would give me some peace of mind.

A friend loaned me a copy of Science and Health, and when I had read the first page of the Preface I seemed to know that I had found the truth for which I had so long been looking. I commenced a thorough study of the book, and enough of its grand teaching was understood by me to convince me of the truths it contained, and in this study I was healed of both the nervous trouble and of the sleeplessness. Some few years before I knew of Christian Science, I was taken ill very suddenly with inflammation of the bladder, and for five weeks was confined to my bed with most acute suffering. I shall never forget the kindness of our family physician, who came two and three times a day to see me, so one can judge how ill he thought me to be. Some time after I came to Christian Science, while out riding one afternoon, I was just as suddenly attacked with this same trouble. I immediately tried to realize the truth for myself, but it seemed as if I never could get home, the suffering was so intense. I however kept steadily at work, and when I did reach home I commenced to read in Science and Health. In a few hours I retired and slept well through the night, and the next day fully realized that the error had been overcome and that I was healed. I have never had a return of this trouble.

My heart goes out in profoundest gratitude to almighty God for this great revelation of Truth, and also to the dear revelator, that brave woman of whose unselfish work and love for all mankind the world knows little. I would also like to add [illegible] ful I am for all our Christian Science liter[illegible] on-Sermons, and for everything and to every[illegible] as helped and is helping me in my journey fr[illegible] Soul. Most of all am I grateful for the spiritual realization of the allness of good and the nothingness and impersonality of error.

MRS. MARTHA T. BEEBE, Brooklyn, N. Y.

I suppose that each student of Christian Science finds it one of the most difficult things to express his deep gratitude in words for all that this truth has done for him. I did not come to Christian Science for physical healing, but for relief from the most acute mental depression and unceasing worry. Everything that appeared to human sense to make life worth living had been taken away from me—there seemed nothing left but a condition of hopeless despair. Like Elijah, my one prayer was that I might die, and on looking back I feel sure that if it had not been for Christian Science I should have died from sheer lack of desire to live. I had always loved the church of which I was a member, had striven to follow its teachings, and to practise them in my daily life, though with very small results; but now it could not comfort me or lift the veil of gloom of which I was ever conscious. Then Christian Science was presented to me,—and I shall never forget my first service! What impressed me most was the silent prayer, and the happy, bright, peaceful faces of those present. I had searched everywhere for Truth, and studied practically every form of religious belief extant, but never had I seen anywhere the joy, the peace, and the love which was reflected by the students of this Science.

From that moment I began to study Christian Science as I had never studied anything in my life, and I can honestly say that in a measure which I could never have imagined possible I have come to comprehend "what is the breadth, and length, and depth, and height; and to know the love of Christ." I was healed almost instantaneously of a lifelong habit of worry, and a fear of evil which from quite early days seemed to dog my footsteps. Physically I have been healed of a weak heart, short-sightedness, a sensitive throat, with a predisposition to severe coughs and colds, nervous exhaustion, and sleeplessness. For all this I am most deeply grateful, but as every student of Christian Science knows, it is for the spiritual regeneration, for learning if only in a small degree how to bring every thought into conformity to the Mind of the Christ, which causes us to rise up and call her blessed who has shown us the way.

Mrs. Eddy speaks in Science and Health of the tenacity of evil and of sin's obduracy (p. 569), and it is only as we progress in the understanding which comes to us through the study of our text-book that we are enabled to realize the truth of these words, and see how much there is to be overcome in consciousness. This overcoming may oftentimes prove a rough and stony path, but one has ever the encouragement of our Leader's teachings to support and strengthen. It is my daily prayer that I may be privileged to break to others the bread with which I have been so lovingly fed, and to offer the cup of cold water to Christ's little ones, thus living the gratitude I am unable to express.

MISS DAISY BEDFORD, London S. W., England.

One day I came to the city to see a doctor, but could not as he was out of town. At the time I was suffering so very much that a relative advised me to try Christian Science treatment, but I told her that I knew nothing about it. She then explained it to me, so I consented to send for a practitioner.

The lady came and gave me treatment, and in ten weeks I was a well man and have been ever since. My disease was what some one might call incurable, and the Scientist told me to tell no one of my healing; but I could

Digitized by Google

not keep from telling others of th[illegible]d done me so much good, and several to whom I n[illegible]d it have since experienced its healing power.

S. C. WILLIAMS, St. Augustine, Fla.

Christian Science came into my life over four years ago. I had been suffering from stomach troubles for more than a year, had consulted several doctors, had taken all the medicine which they had prescribed, and had followed all the advice given me. The last doctor advised me to go to a hospital for a thorough examination, and an operation if necessary. After a two-weeks stay at the hospital I was sent home to try the effect of rest-cure, dieting, and some more medicine; but my state of health grew continually worse, and I soon found myself in a perfectly helpless condition. I commenced to lose all faith in material means, as it seemed to me that they were only experiments.

I had read of Christian Science, but was at that time very antagonistic to everything in religion. I never could understand the orthodox Christianity, and the Bible was a closed book to me. I had little or no hope that anything in the line of religion could help me, but I wanted to get well, and as it did not seem that Christian Science could do me any harm, a practitioner was called to the house, and I found out that its teaching was something entirely different from what I had thought it to be. At the first treatment I realized that I had found the truth of being, and that the understanding of this Science would make me a well man again. Within a week I was back at my work, and have never lost any time on account of illness since then. After the first visit of the practitioner I ate everything I liked without its making me ill. The road has been rough at times, especially at first; but I have found out that if we only trust in God, as taught in Christian Science, divine Love will always take care of us.

Christian Science has been the only remedy in our family for the last four years. My wife has been enabled to overcome several ailments of long duration through the understanding of Christian Science, and our two children are healthier than they ever were before. Ailments that have come up have been quickly met, without fear and suffering. It is not only the physical healing that we have to be thankful for, but Christian Science has brought peace and contentment into our home. I had a very bad temper, and was always full of worry and anxiety, but Christian Science has taught and is teaching me to overcome all of this. I have learned that Christian Science is not blind faith, but a religion which we can understand, a practical religion that we can apply every day, and I am indeed grateful to Mrs. Eddy, for again giving this truth to us, the greatest blessing that could have come to mankind.

C. M. HANSEN, Chicago, Ill.

I feel it my duty to acknowledge the benefits I have received through Christian Science. I had undergone three operations for tubercular disease, but it continued to trouble me. It has, however, all disappeared with the understanding of the truth, also a severe condition of the heart, which at times made me helpless. In the winter of 1909 I had an attack of deafness, so that I could not hear the clock, but with one week's treatment in Christian Science the difficulty was overcome.

I have had many beautiful demonstrations with my two children,—a bad case of toothache being overcome in about ten minutes, never to return; also several attacks of fever. Once a spotted condition of the skin developed with my little girl, but I have been able to help them in all these ailments without the aid of a practitioner, for all of which I am very grateful. My children have not been absent one day from school on account of sickness. I can truly say that my daily work is a pleasure to me now, whereas it used to be a burden and a trouble. I am never tired now, because I do my work with a different feeling. I have learned that it is not the work that hurts, but the feeling with which it is done, and I am satisfied from day to day to know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I am indeed grateful to Mrs. Eddy for this truth as taught in Science and Health, which is truly a "Key to the Scriptures."

MRS. C. M. HANSEN, Chicago, Ill.

Through the heartfelt desire to acknowledge what Christian Science has done for me, I must say with the psalmist, "Many, O Lord my God, are thy wonderful works which thou hast done, and thy thoughts which are to us-ward: they cannot be reckoned up in order unto thee: if I would declare and speak of them, they are more than can be numbered." I am indeed thankful to God, "who so loved the world" that He has given us this Comforter, Christian Science. As students of this wonderful truth we can best show our gratitude and love to our Leader, Mrs. Eddy, by doing as she requests in Science and Health (p. 495), "Study thoroughly the letter and imbibe the spirit."

Christian Science was brought to my mother and myself by a great need of health on the part of the former, and she has been helped out of many ills, although to material sense the demonstration has been slow. The joy of overcoming these ills has been grand and her spiritual understanding of God has lifted her out of the valley of doubt and despair. I am thankful for our church services and the Wednesday evening meetings, also our literature. The daily study of the Lesson-Sermons fills a want which nothing else ever did. Although I was a member of an orthodox church, still the hunger to know the only true God made me restless and dissatisfied with my concept of life. Now, the knowledge which Mrs. Eddy has given to the world, of God as Life, satisfies. May this testimony help some other hungry pilgrim to find the "bread of life," and may the rich blessings of God continue to rest upon all the true followers of our Leader.

MRS. EDITH HALL EVERSOLE, Santa Ana, Cal.

Gladly do I add my testimony to the healing influence of Truth and Love, to that of my daughter, Mrs. Eversole. Only those who have suffered from ulcers can understand what it means to be free from this form of bondage. When the practitioner who was called to my bedside after medicine had failed to relieve the pain which had been intense for many weeks, said to me, "God can heal you," all remedies were laid aside to let the power of God be made manifest on the flesh, and slowly but surely the ulcers on both of my ankles disappeared. It was nearly a year before they were gone, but the peace and joy which I realized helped them go.

I hope this may meet the eye of some sufferers, giving them a ray of hope, since God is no respecter of persons (or age), for I am past three score years and ten. Only Christian Science, given by inspiration to our wise and true Leader, Mrs. Eddy, could do these works of the Master.

MRS. ANNA HALL, Santa Ana, Cal.

I wish to express my gratitude for what has been done for me through Christian Science. In April, 1908, I had what the doctors called facial paralysis. The mere thought of it distressed me greatly, but I immediately turned to Christian Science for help. When I went to the practitioner my fear seemed very great and my faith correspondingly small; but after the first treatment I felt encouraged. Within three weeks the fear was destroyed and my face was perfectly healed. This was my first experience with Christian Science.

In February, 1910, I was healed of acute lung trouble.

Digitized by Google

My recovery seemed impossible, since the disease was said to have taken a strong hold on both lungs before a practitioner was called. But the healing was wonderful, and within four weeks I was able to resume my position as a milliner. I went to work without any fear and felt perfectly well and strong. I was also cured of a hernia for which I had worn an abdominal belt for four years. At the time, I was being treated for what seemed to be a severe rupture, which had suddenly appeared. This made it impossible for me to wear any tight clothing, and because of the great pain which I suffered, when standing on my feet, I was kept from doing much walking. I am now perfectly well, and am rejoiced to have done away with the abdominal belt which physicians had said I must always wear.

This has been my experience of the healing power of Truth, and I am truly thankful to God for my deliverance through Christian Science.

MRS. ADA SPARROW, Malden, Mass.

Like a great many others, I have good reason to be deeply grateful for Christian Science, and many times I have hungered to express my gratitude through the *Sentinel*. I was raised from despair and various forms of disease, my physician telling me frankly that I had serious lung trouble. Three or four weeks after this verdict a friend said she had a book which she would like to have me read. I replied that I had given up all reading and would not promise to read it, but after she left I opened this book that I knew nothing about, and these words caught my eye: "Mortal existence is a dream of pain and pleasure in matter, a dream of sin, sickness, and death" (p. 188). Quick as thought I closed the book, feeling that I wanted no more of it, but as wisdom bade Moses go back and pick up the rod, I again opened the book, but this time I read: "Glory be to God, and peace to the struggling hearts" (p. 45). If I should try to express the feeling of joy which came to me, I would say it was like the coming of a great light in which I saw "God and his Christ," and I was free!

This was over ten years ago, and I am still reading not only Science and Health and our Leader's other writings, but also the *Sentinel* and *Journal*, and I rejoice to know of the many who have been brought into the glorious liberty of the children of God as I was.

MRS. L. M. MCGREGOR, Exeter, Neb.

Last winter I had a felon on my thumb which caused me a great deal of pain and several sleepless nights. I finally sent to a Christian Science practitioner for treatment, and the pain was instantly stopped. I went for a couple of present treatments, but had no further trouble, and was healed very quickly.—I. MARIE JORGENSEN, Grant, Fla.

[Written for the *Sentinel*.]

ASCRIPTION.

ROBERT DE BRUCE.

PRAISED be the God of love, of light divine!
Be praised, thou Spirit of abundant life
Whose noon is now, whose dawn was when the Christ
On earth the real in the ideal did blend!
To Thee, whose light streams forth from realms of light
In glorious joy, fulfilling hope, and with
The radiant force of Truth's all-healing power
Dost flow into our lives, revealing each
Like Christ, Thy child, fair, upright, pure and free:
To Thee be might, dominion, majesty!

FROM OUR EXCHANGES.

[Rev. Joseph H. Bradley, D.D., in *Christian Work and Evangelist.*]

As never before the followers of Jesus are realizing the meaning of the promise of God that the kingdom of heaven must come on the earth, and that His will shall be done here. . . .

The church of Jesus is now waking up to the necessity laid upon it to wage the warfare of this conquest. It has become a mighty army, and able to exert an irresistible force for the overthrow of Satan's power and the pulling down of his strongholds. Through the providence of God the gleam of a new day is brightening the horizon, and brings encouragement to the hearts of those who have pledged a loving fealty to Jesus, to stand up and go forth valiantly to war against every foe to righteousness. Today the heart of the whole civilized world is throbbing with the hopes of freedom from every form of slavery and oppression in the chains of the powers of darkness. It is the business of the church of Jesus to encourage this hope and put itself boldly and in the front of the world's struggling multitudes and lead them to the victory which is according to the will of God and the triumph of His Son Jesus.

[*Universalist Leader.*]

We face a world absorbed in material interests which leave no time for reflection and little for religious services. Men and women have absorbed enough of the scientific and critical literature to destroy much of their reverence for the old, and now lack the leisure or inclination to build anew upon a broader foundation.

What voice will cry out in the darkness as a guide toward the light, if that of the liberal church is hushed? The old has lost much of its power and is still losing it rapidly. The old cannot come back; its day has gone and its sun is fast sinking. Other voices must make themselves heard. We hear the loud clamor for material readjustment. But we know we cannot live in a godless world; we cannot work out any kind of salvation in a universe of chaos; we cannot build a permanent human society on any other foundation than that of justice, integrity, and comradeship.

And yet these are orderly virtues, and can only thrive in a well-ordered environment. No human interest can stand the test of time which is purely materialistic in its nature. The larger that "self," as selfishness, is written in any transaction or relationship, the smaller will the soul shrivel behind it. So we are coming to recognize human relationships in our doctrine of race solidarity.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

The life eternal, the life that God lives, the life that is life indeed, is the life that has no selfishness in it; it is the life of self-expression by self-giving, and every fetter has to be broken that hinders us from entering upon that life. "They that are Christ's have crucified the flesh with the affections and lusts." "I am crucified with Christ; nevertheless I live; yet not I, but Christ liveth in me." This is the great law of which my text is an illustration. If you would attain to the eternal blessedness, you can only do it by entering in at the straight gate of self-renunciation and treading the narrow way of the denial of everything that would come between you and your divine goal, which is to become a perfectly flawless manifestation of the love of Christ which passeth knowledge.

[Prin. P. T. Forsyth in *British Congregationalist.*]

We are entering the greatest war for peace that the world has ever seen. We are winning a new sense of moral values in public things, a new sense of national honor, a new conception of social weal. Do not let us squabble about the credit due to the churches or to the church; let the praise

Digitized by Google

go to the gospel of the cross, and let our gratitude look also to what is to come. There is more to do than is yet done. We have but the promise of his coming. Dawn is but fair upon the hills. But it is his coming. The Lord is at hand. We know his foot on the great stair and the music in it. Many things speak—nay, sing—of hope and courage amid rumors of wars, foreign and civil.

[*Christian Register.*]

Thanksgiving for all the good things of life we have had so abundantly, that is all well; but, after the days of our feasting are gone about, let us take to heart the truth that there are finer things than these for which to be grateful: life, life at its best and highest and truest, that it is which we are to seek most earnestly and persistently, and the harvests of nature will be enriched ten thousand times by the harvests of the spirit. Job had his days of feasting with his sons and daughters; but, when they were gone about, came the sanctification of life, so that, when all his riches had departed, the spirit of gratitude burst forth in words of supreme faith.

[*Christian Intelligencer.*]

The sooner Christians cease to concern themselves so much as to their outward relationships, or as to the manner of pronouncing the "shibboleth" of their particular church, and turn their energies, their gifts, and their prayers into wise and earnest cooperation for the extension of Christ's kingdom at home or abroad, the sooner will come the day and the hour when our common Master and Lord shall "see of the travail of his soul and be satisfied," because that, through the loving service of his people, "the earth shall be filled with the knowledge of the Lord as the waters cover the sea."

[*Zion's Herald.*]

The church today is under fire. Its most serious enemies are its own members. The threatening evil is within. The weak spot is the inconsistency and indifference of the people who make up the church. If the entire church-membership were downright religious and the true followers of the Master, sin of every kind and name would be ashamed of itself, and open defiance of gospel truth and the shameless winking at the laws of good society would cease to be, or hide away from the gaze of men.

[*Watchman.*]

Similarly there is an insight gained into the truth and truths of the gospel through just such pondering as Mary gave to the events that occurred in her experience. Pondering is a spiritual digestion of the truths and facts of the gospel, in which they are apprehended in their fulness of meaning and their values appreciated. To wonder is to stand outside the truth and merely gaze at it with superstitious or superficial feeling. To wonder is to be in mere simplicity of mind as to the truth.

[*Congregationalist and Christian World.*]

Men do not attend church in these days unless they find there something that they want. Worship, fellowship, instruction in their relations with God, the revelation of the divine ideal, inspiration to realize it—these are things which men in normal conditions want. The church which provides these things liberally need not fear that it will be deserted.

[Rev. John H. Acton, D.D., in *Pacific Christian Advocate.*]

All power is but weakness, and all wealth is but poverty, save as these are honestly won and virtuously used, and the man who searches for power or riches with any other design is but a highwayman, preying upon the means and morals of others.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Annual subscription price, payable in advance, postpaid, for the United States, Canada, Mexico, and Cuba, $2.00; six months, $1.20. Single copy, five cents; 25 copies to one address, $1.00; 50 copies, $1.80; 100 copies, $3.00.

For all other countries add 50 cents to the annual rate, for postage. Single copy, six cents; 25 copies, one address, $1.25; 50 copies, $2.25; 100 copies, $4.00.

For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL will begin with the first of the month, and include all issues for the month named as expiration date on the wrapper. XII indicates the year 1912; XIII, 1913. The receipt of the periodical by the subscriber and the notation on the wrapper will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

$1.25— 60:	5 s.: 2d.;	Mk. 5.30;	F. 6.45
2.25— 0:	9 : 3 ;	9.50;	11.60
2.50— 0:	10 : 3 ;	10.60;	12.85
4.00— 0:	16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

Bequests aggregating one million five hundred and forty-five thousand dollars for philanthropic, charitable, and educational purposes, are made in the will of Mrs. Caroline W. Neustadter, just filed in the surrogate's office at New York. Of this amount one million dollars is to form a corporation to bear the family names of the testatrix and use the income to erect and maintain "model homes" within a radius of thirty miles from New York for the use of families of moderate means. The trustees of this fund are empowered to cooperate, in their discretion, with public-spirited persons who are interested in charitable and communal work to aid in carrying out the plan.

Thirty-two indictments have been returned at Indianapolis, Ind., by the federal grand jury against union labor officials and agents whom the government holds criminally responsible for the perpetration of more than one hundred dynamite explosions in cities from Massachusetts to California in the last six years.

The art treasures of J. Pierpont Morgan, which are scattered at various places in London and on the continent, are to be collected and brought to America and placed in the Metropolitan Museum of Art, New York. The entire collection is valued at sixty million dollars, according to a conservative estimate.

Contributions from prominent men throughout the United States, it is expected by the board of overseers, will start the two-million-dollar fund for the erection of a library building at Harvard College which is to have a capacity of two million three hundred and seventy thousand books.

The indications are that there will be a thorough investigation of the department of agriculture in relation to the exploitation of Florida Everglades lands, millions of acres of which have been sold throughout the country by syndicates.

President Taft in a special message to Congress urged an international inquiry into the high cost of living and also made his long-promised recommendations regarding Alaska and the public domain in general.

Up to Jan. 1 the grand total of excavation from the Panama canal amounted to 198,092,940 cubic yards, leaving to be excavated 37,230,439 cubic yards, or about one fifth of the entire amount for the completed canal.

Resolutions against advertising that is knowingly untrue or calculated to mislead, were unanimously adopted by the retail trade board of the Boston Chamber of Commerce.

The Democratic convention for nominating candidates for President and Vice-President will meet at Baltimore, June 25.

International.

The Empress dowager of China issued an edict last week instructing Premier Yuan Shi Kai to establish a republic in cooperation with the southern republicans. The edict was not made public until Feb. 12, in order that sufficient troops might be massed in the city to assure protection to the royal family. Yuan Shi Kai is now endeavoring to persuade the Nanking government to hand over the control of affairs, to enable him to carry on the administration of the whole empire until the national convention appoints a permanent government and adopts a constitution.

Work on the Loetschberg tunnel, the latest to be constructed through the Alps, is rapidly nearing completion, and of the total length of over nine miles only about half a mile now remains to be lined and about a furlong has still to be excavated. Work on the approach lines is making good progress and there is reason to believe that the line from Spiez, through the tunnel, which is to connect with the Simplon line, will be ready, as promised, by the spring of 1913.

Calgary, Alberta, is ambitious to establish a university in that city and affiliate it with the University of McGill. Altogether, cash donations amounting to six hundred and fifty thousand dollars, and gifts of land amounting to seven hundred and sixty acres, have been donated for this purpose. A university charter has been secured from the Legislature and a senate and board of governors elected.

Negotiations between the powers in reference to a joint agreement on the Chinese situation, are proceeding on the initiative of the United States government. It is believed that the governments are endeavoring to reach a general agreement, pledging themselves to take no step in China unless all act together.

It is announced that an important colonial bank is now in course of formation at Lisbon to assist in the development of the Portuguese colonies, especially those in Africa. The government is lending its assistance and the capital will be derived from both Portuguese and foreign sources.

An astonishing development has taken place in South Australia in recent years in the direction of opening up new areas for settlement. The area under cultivation in 1885 was two million three hundred thousand acres and in 1910 four million one hundred and forty-two thousand acres.

A Tokio despatch to the London *Times* says that a council to consider administrative reorganization is sitting there under the presidency of the premier, Marquis Saionji. It is believed that it will recommend reforms which will effect a saving of fifteen million dollars.

To enable the University of Goettingen, Germany, to retain the supremacy claimed for its library as a continental center for American and English literature, J. Pierpont Morgan has given fifty thousand dollars to the university, at which he was a student.

German women are becoming actively allied with the movement against bird destruction. Many have been influenced by Professor Schillings' challenge to wear no more osprey, bird of paradise, or similar feathers in their hats or in their hair.

Winston Churchill, first lord of the British admiralty, spoke in Belfast, Ireland, last week to eight thousand Nationalists in a tent with twelve thousand others gathered around, in favor of home rule. He was enthusiastically applauded.

Industrial and Commercial.

The value of the slate produced in the United States in 1910 amounted to $6,236,759. More than usual attention has lately been given to the use of the waste material from slate quarries, which amounts to about eighty per cent of the slate quarried. A Pennsylvania firm has been making from waste slate a roofing for flat roofs or roofs with but a slight incline. Such a roofing is no longer in an experimental stage, but has been used successfully on large buildings, such as factories, train sheds, office buildings, power-houses, apartment houses, and private dwellings.

It is stated in a volume of scientific reports issued by the Imperial Institute of England that the rubber-planting industry is now in a transition stage. Reference is made to the value of the seeds of the Para rubber tree as a source of oil. The kernel of this seed contains nearly half its weight of oil, and this is easily removed from its thin shell. This oil resembles linseed oil, and is the same as those which are used in the manufacture of paints, of linoleum, and other materials. It is believed that this oil will be a substitute for linseed oil.

In countries where the date furnishes a large percentage of the food supply for the populace, as in northern Africa, the stones, or seeds, accumulate in vast quantities as apparently unprofitable rubbish, says *Scientific American*. We learn from *Touche à Tout* that a way to utilize them has recently been discovered in south Algeria and Tunis. By a prolonged process of soaking the integument becomes soft enough to enable them to be used as fodder for camels, mules, etc. Their value as food material is proved not only empirically but analytically.

An international banking company with a capital stock of twenty million dollars, to be known as the North and South American Banking & Commercial Company, Limited, has just been organized by twenty leading capitalists, ranch owners, and other prominent men of Buenos Aires, Argentina. The purpose of the new corporation is to conduct a general banking and foreign trade business between North America and South America, particularly Argentina.

The Canadian Northern railway has plans in hand for entering Montreal by a quick and direct route under Mount Royal. The tunnel will cost twenty-five million dollars, but the company expects to recover the cost by the opening for occupation of the valuable and sightly locations on Mount Royal, which will now be provided with quick transportation to the heart of the city.

The minister of agriculture, province of Saskatchewan, has wired the American government at Washington from Regina stating that there are twenty million bushels of unthrashed wheat, all tough, and twelve million bushels, wet and tough, which must be shipped at once or be a total loss. The Canadian railways have refused to ship this grain to Duluth and Minneapolis except in foreign cars.

At the close of 1911 there were in Alaska four hundred and sixty-five miles of railway, compared with three hundred and seventy-one miles in 1910. This mileage is distributed between nine different railways from five to one hundred and ninety-six miles in length.

A thousand cords of white birch will be turned into toothpicks at Strong, Me., this winter. The toothpicks made there are shipped practically to every civilized country on the globe.

Exports of automobiles from the United States were valued at more than twenty-one million dollars in 1911.

The value of Alaska's mineral production for 1911 is estimated at $20,370,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE POINT OF VIEW.

WILLIS F. GROSS.

THE intelligent reader desires to be correctly informed, and he always seeks to gain the view-point of the writer. He realizes how difficult it is to make one's self understood, especially if the ideas advanced are new or contrary to individual experience; therefore, for the time being, at least, he tries to consider the subject in the light in which it is understood and presented by another.

Many persons fail to realize the importance of considering the author's point of view. From the reader's standpoint of belief the conclusion may appear to be decidedly erroneous, but before he gives expression to his opinion in the matter he should consider whether the conclusion is incorrect when regarded from the point of observation of another. That which is reasonable and consistent to one person, may appear to be inconsistent and unreasonable to another; and this is not because one is more intelligent than the other, but because the beliefs and experiences of the former have been unlike those of the latter. That which compels the readjustment of opinions, and especially the renunciation of long-cherished theories, is not always kindly received, for while mortal man is always delighted when it is proven that he is right, he is seldom well pleased when compelled to admit that he is wrong.

Christian Science has been misunderstood and misrepresented because its teachings have not always been correctly stated by its students, and even when correctly stated they have not always been rightly interpreted. The standpoint of the student is not considered as it should be, and so the impression which is gained is sometimes far removed from that which it was intended to convey. These false impressions must be corrected. "Precept upon precept; line upon line, . . . here a little, and there a little," is necessary, in order to give to the world the true idea of the teachings and practice of Christian Science.

"Science and Health with Key to the Scriptures" is the only authorized text-book on Christian Science. It is evident that Mrs. Eddy, the author of this book, regarded life and its problems from a point of view which was decidedly different from that entertained by other thinkers, or she would not have been able to give to the world a book which was so new to modern thought and at the same time so completely in harmony with the teachings and practice of primitive Christianity. For this reason the reader of Science and Health must, in justice to others as well as to himself, endeavor to gain that intelligent sympathy with the author which will make it possible for him to interpret her writings correctly. Mrs. Eddy tells us that the Bible was her only text-book, and she claims no other authority for her writings. In her study of the Scriptures she earnestly endeavored to gain the understanding of spiritual truth which the sacred writers sought to impart. Christians generally believe the Bible to be inspired, and Mrs. Eddy writes in Science and Health (p. 319), "The divine Science taught in the original language of the Bible came through inspiration, and needs inspiration to be understood." In line with this statement are the words of Elihu to Job and the three friends who had come to console with him in his afflictions, "The inspiration of the Almighty giveth them understanding."

It becomes evident that those who recorded spiritual truth were able to do so because they were influenced by divine Mind, and the sacred writings can be rightly interpreted only as men are guided by this same infinite intelligence. Spiritual teachings cannot be interpreted from a material basis; they must be interpreted spiritually if one desires to gain their practical import and application. The effort to harmonize spiritual teachings with material beliefs has rendered these teachings null and void so far as their having any application to present human activities is concerned.

Peter declared that "holy men of God spake as they were moved by the Holy Ghost." These men were holy because they had a realizing sense of God's presence and power, and it was their delight to live in obedience to His law. With them the idea of God was not a vague, indefinable something, altogether beyond human reach or recognition, for they knew in whom they had believed and they had the assurance that the things which are not seen are more real and more enduring than the things which are seen by the senses. In Science and Health (p. 308) we read: "The Soul-inspired patriarchs heard the voice of Truth, and talked with God as consciously as man talks with man." The inspired writers had gained the true idea of God, and it was from this standpoint that they wrote concerning the things which pertain to humanity's present as well as future well-being. A demonstrable understanding of the inspired writings is gained only as the reader is able to attain in some degree the spiritual condition of the writer. Even though the persons lived in different centuries, the writings of those who were inspired must of necessity agree, since Truth is infinite and eternal. There must be a fundamental unity and harmony in the writings of all those who "spake as they were moved by the Holy Ghost," and there will always be unity and harmony among those who understand the sacred writings sufficiently to give present proof that they have read aright and that their conclusions are correctly drawn.

Science and Health has been rightly named the "Key to the Scriptures," and the students of Christian Science have learned from experience that it has enabled them to comprehend the deep spiritual meaning of the sacred writings sufficiently to make a practical application of these teachings in healing sickness and overcoming sin. They are able to understand the Bible better because Science and Health has given them a higher and consequently a more spiritual thought of God. Whereas they were inclined to interpret from a material point of view the words of those who wrote concerning Spirit and spiritual things, now they see that "the natural man [*i.e.*, material consciousness] receiveth not the things of the Spirit of God: . . . because they are spiritually discerned." Spiritual sense only can

Copyright, 1912, by The Christian Science Publishing Society.

Digitized by Google

understand spiritual things and deliver humanity from the bondage of material beliefs.

Even the world's greatest Teacher was not always understood. Perhaps no person has ever been so misunderstood and his teachings so misinterpreted and misrepresented as was the great Nazarene. The multitudes were so materially-minded and many were so completely satisfied with their observance of the letter of the law, that they could not comprehend his point of view. Even his simplest statements were perverted and used as arguments against him. He was accused of being in league with evil and of doing his works through Beelzebub. He was the exponent of divine Love and power, but those whom he came to help would not receive him. Notwithstanding his reception, he continued to teach the eternal verities of being, speaking mostly in parables. When he found those who were ready to receive him and could understand what he taught, he spoke to them plainly of the things of God. From the beginning to the end of his public ministry he did not cease to teach the people by his works. He healed the sick, cast out devils, and even raised the dead. These works were the practical results of his teachings. When, on one occasion, even his disciples were unable to comprehend what he would impart to them, he said: "Believe me that I am in the Father, and the Father in me; or else believe me for the very works' sake." It was by his works that he hoped to make it possible for the people to comprehend his point of view and understand his teachings. Those who would not receive his works as the demonstration of God's love and power, never accepted his doctrine and never acknowledged that the word of prophecy was fulfilled in him.

Christian Science is healing sickness, overcoming sin, and delivering humanity from all forms of evil, but its teachings are not always comprehended even by those who are blessed by the good works which are accomplished in its name. The position and intent of the Discoverer and Founder has not always been understood, because the people were unable to comprehend her point of view. She was misjudged and misrepresented, yet she did not falter. She claimed nothing for herself, but she did claim all for God. When questioned concerning the origin of her teachings, her reply was always the spirit of the Master's saying: "The words that I speak unto you I speak not of myself." It was her conviction that Christian Science would be accepted for the works' sake, and she always urged her students to be faithful in the demonstration of what they had been taught. The workings of Truth are giving men a new view-point, and they are beginning to understand that God is man's helper in every time of need.

STEP BY STEP.

MABEL REED.

In Psalms we read, "The steps of a good man are ordered by the Lord." The importance of the word "steps" in this sentence is corroborated by the fact that all through the Bible each achievement of the prophets and of the disciples is shown to have been accomplished by steps. In the vision of Jacob, the angels of God were seen ascending and descending a ladder composed of steps, indicating that even the angels, "God's thoughts" (Science and Health, p. 581) do not precipitate themselves upon us, nor do we reach them by spontaneous soaring, but by being obedient in taking the steps which eventually bring us to spiritual heights.

In analyzing her own attitude, the writer has been amazed at the stumbling-blocks which would effectually conceal steps of progress. We ourselves place or allow to be placed these stumbling-blocks, and then we either stumble over them and go on an impeded way because we do not see clearly, or we sit down behind them for an indefinite time where we cannot see. Perhaps the step is just the righting of a wrong thought which we have cherished. If so, the daily prayer found in Psalms, "Create within me a clean heart," will help to dispose of this obstacle. Or perhaps we have withheld something of our time, our love, or our substance, which should have been given, either through fear of lack or a selfish desire to retain and thus increase our own supply. Both of these erroneous beliefs are rebuked in the story of the widow's experience in supplying food to Elijah, who assured her that the "barrel of meal shall not waste, neither shall the cruse of oil fail," and the verity of his words was proven.

The writer has been a member of a small but growing Christian Science church for the past few years, and for a long time failed to see the advantage and importance of attending regularly every church service, unless prevented by some other duty. When she finally did see that this constituted a step in progress, and began to act accordingly, she was enabled to render a small service to the cause by being given a duty to perform regularly at each service, that of playing the hymns. About a year ago she was called upon to take charge of a Sunday school class, but again failing to recognize it as a step, she declined, offering as an excuse the lack of time to prepare. She paused behind this obstacle for some time, unconsciously allowing it to influence her progress in other directions, until recently, when she was again invited to teach in the Sunday school, she was very glad of the opportunity to respond assentingly, having been awakened to the blessing of service. In so doing she has learned that there is plenty of time to prepare for the lessons and do other work besides, and so, in the words of our hymn,

> Step by step since time began,
> We see the steady gain of man.

It lies with each one of us to move forward, overcoming as we go all obstacles of discouragement, doubt, fear, or whatever would impede, and running "with patience the race that is set before us." It is only from the vantage-point of a step taken that we can see to take the next step, and each advancing step is surely "ordered by the Lord."

THE TRUE CONCEPT OF HAPPINESS.

HENRY L. UPTON.

In ancient Rome the vast multitudes who assembled in the arena to witness the fierce combat between the gladiators fancied that they found delight in that barbarous amusement. The more cruel and merciless the engagement, the more pleasure they seemed to derive from it. This kind of pastime, in the modernized form of bull-fight, existed in Mexico until recently, and may still be seen in Spain. In our own country the prize-fight with its attendant evils is the present-day gladiatorial conflict.

The inebriate who seeks self-gratification in drunkenness or in the indulgence of evil passions and false appetites, does so that he may find pleasure in them. As he sinks deeper and deeper in sin, and it becomes more and more his master, he learns through sad experience that the punishment for wrong-doing far exceeds the transient sense of satisfaction therefrom, and he has only to learn the true meaning of happiness and the way thereto, to turn from his former course with loathing. The man of wealth, who has spent years and every means at his command to amass a fortune, learns that happiness is not to be secured in that way, for at any time the fluctuation of the market or failure of a bank may sweep it from him. At its best, money will not buy health, peace, contentment; instead, it is often a burden, and sometimes it fastens selfishness on one, thus bringing a state of discontent and unhappiness. Many have realized the fruitlessness of such endeavors, and have tried to make amends for the avarice and greed thus expressed by giving vast sums for educational and charitable purposes.

Digitized by Google

Some have imagined that by delving in the subtilities of philosophy or diving into the mysteries of material knowledge the way to happiness might be revealed and a solution to life's problem attained; nevertheless, after years of research, study, and experiment, the conclusion is reached that material hypotheses are constantly changing, and what is supposed to be true today will have to be altered, revised, or wholly abandoned tomorrow. Furthermore, many who are leaders in human opinion admit that they have lost faith or confidence in God, thereby separating themselves from the only true source of happiness.

Much of the religious teaching of the past and some of today has taught that happiness must be sacrificed or relegated to a state beyond the grave. The best Christian and most devout worshiper was, according to this teaching, the one who went about with the longest face and the most serious mien. The declaration of American independence states that we have a right to the "pursuit of happiness," but as to the possession of it here and now, there seems to be some doubt. This is due to the fact that happiness is so generally regarded as material or mundane rather than spiritual. The world has tried to gain happiness from without, when it can only be gained from within. The concept of God as a material or human personality has led mankind to look to matter for happiness. Pleasure has been accepted as happiness, and doubt, discontent, and distrust have followed.

Let us pause a moment to consider the difference between pleasure and happiness as explained by Mrs. Eddy in Christian Science. Pleasure is generally taken to mean the gratification of the senses, self-indulgence, having one's own way, but in Science and Health (p. 57) we read, "Happiness is spiritual." This involves the denial of the senses, self-sacrifice, letting God's will be done, giving up one's human desires that God may reign. Yet Mrs. Eddy tells us that "pleasure is no crime except when it strengthens the influence of bad inclinations or lessens the activities of virtue" (Miscellaneous Writings, p. 362). There are many pleasures that can be enjoyed without harm, for they have no bad effects. The true concept of God as Life, Truth, Love, leads to the true concept of happiness as an abiding consciousness of the divine presence and power which ever broadens, deepens, heightens, brightens, as we gain a clearer understanding of our heavenly Father. Jesus, the master Christian, taught that true happiness does not depend on outward conditions or circumstances, for he whose earthly life held little of what the world terms happiness, said, when he was about to be betrayed and crucified, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full." Happiness to him meant constant communion with God, to "abide under the shadow of the Almighty." Long ago Moses said, "Happy art thou, O Israel: who is like thee, O people saved by the Lord, the shield of thy help."

Christian Science teaches that true happiness is gained by obeying God and loving Him supremely, also loving one's neighbor as one's self. The first step is to gain an understanding and realizing sense of God, and the second is to live it in our daily life. To give and forgive, to bring out in our dealing with men such virtues as a ready smile, kindness, forbearance, charity, patience, honesty, simplicity; to be undisturbed by the annoyances and cares of the day, to lift up the fallen, to bind up the broken-hearted, is to experience an abiding happiness which cannot be taken away. Indeed, it is to reach that condition in which we can say with Paul: "I have learned, in whatsoever state I am, therewith to be content." The highest and sweetest, the most refined enjoyment from the purest affection known as blessedness is in serving others, and this leads to a still more exalted delight or heavenly peace called bliss. Truly says the psalmist, "Happy is that people, whose God is the Lord."

WILLING AND OBEDIENT.

H. VICTORIA CAMPBELL.

In the prophecy of Isaiah we read: "If ye be willing and obedient, ye shall eat the good of the land." This promise, which has been handed down throughout all ages, still holds good for each one of us today. "The good of the land" is here and now, waiting for us to take it, and the conditions given are that we should be willing and obedient.

To be willing implies great humility; we must gladly give up all cherished plans, all preconceived ideas as to what constitutes "the good of the land;" all hard-earned knowledge gained from the material senses, and become as little children, waiting to be led, not anxious to lead. So often we are willing to be obedient in our own way, but how seldom are we willing to obey in God's way—willing to "tarry . . . in the city of Jerusalem" when we are longing to strive for right in the great highway from sense to Soul. Sometimes, however, God has work for us to do in the byways, where there seems no great opportunities for us as Christian Scientists, where perhaps we feel alone and that our efforts are not understood or appreciated.

Then comes a sense of discouragement, which brings in its train those numerous questionings as to "Why am I here?" "Why am I not made ruler over many things?" Then, if we are honestly working in Science, we face these suggestions of evil with the question, "Am I willing and obedient?" and we then realize that God has given each one of us work that must be gratefully and lovingly done, and that until this work has been well done we are not ready to "go up higher"—nor are we ready to appreciate "the good of the land."

Mrs. Eddy, on page 116 of "Miscellaneous Writings," gives us this illuminating definition: "Obeying the divine Principle which you profess to understand and love, demonstrates Truth. Never absent from your post, never off guard, never ill-humored, never unready to work for God, —is obedience." Let us then work willingly to obey God's will in every detail of our lives, joyfully knowing that our reward is in His hands and that "he is faithful that promised."

BRINGING IN THE TITHES.

ELIZABETH A. ROSS.

An editorial which appeared some time ago in the *Sentinel* pointed out very clearly the error of looking upon certain members of branch churches as professional readers, whereas, all of the members should have in mind the thought of preparation for a call to the duties and responsibilities of readership. The thought then came to the writer that the same error manifests in many of the branch churches with regard to professional testimony-givers. Fear, lack of sense of the imperativeness of this duty, and oftentimes a sense of bewilderment as to how to go about the telling in public of that which can be so easily and glibly recited in private, seems to be the root of this difficulty. Many persons try very hard, and at times apparently without much success, to overcome this growth-retarding state of mind.

A lady once entered the office of a certain practitioner, and saw before him upon his desk a typewriter. He informed her casually that he had been preparing a testimony to be given at the Wednesday evening meeting. She opened her eyes at this, and exclaimed, "Why, I thought when you gave a testimony you just got up and the Lord filled your mouth, according to the way that Jesus instructed his disciples to do!" He answered, "The conditions are different in this instance. Besides, why may not divine intelligence just as well instruct me here and now what I shall say, as later? This gives me an opportunity to clothe my statements in the clearest and the most fitting,

Digitized by Google

the fewest and the simplest words in which it is possible to convey the ideas, and so makes the testimony more effective."

This thought regarding the giving of testimony is worth considering. Suppose we have seen that it is our duty to give a testimony; let us see how we are to go about it. First, we should be clear as to our motive. This should undoubtedly be the desire to reach any in the audience who may be laboring under a sense of sickness, sin, sorrow, or disaster, similar to that from which we were delivered by means of the declared word of God, as we are taught to declare it in Christian Science.

Our motive clear, next in order is the subject-matter of the testimony. There may be several incidents which we would like to relate, but it is usually wiser to confine ourselves to one experience, saving the others for later testimonies. The testimony generally should be confined to a statement that we had suffered from this or that disease, or such and such discordant condition, and that these conditions had been destroyed by Christian Science. It does not matter to our listener what we said or what some one else said about the matter, or what were our personal emotions or conditions at the time it happened. We should remember that we are giving this testimony for the benefit of our hearers.

If we are not used to public speaking, why should we not follow the example of the aforementioned practitioner? Why should we not first write down our testimony, clothing it carefully in the fittest, simplest words and eliminating all superfluous language or incidents. When we have written the testimony to the best of our ability, it might be well to keep it for a while, until the gist of the subject-matter is well established in our thought. Then, when the right time comes, let us rise to our feet with a prayer that the one intelligence may use us as a channel through which the pure streams of divine Love may reach the consciousness of some wayworn and weary one within the sound of our voice. Divine Love will do the rest. We may not seem to remember a word of our carefully thought-out statements; no matter, the ideas are there, clearly defined in thought, and there is no danger that we shall fail of expressing those ideas for lack of words.

This kind of a testimony carries with it conviction, because it is the truth; it is sure to reach the need of some one in the audience, because the object in giving it is a selfless one. The peace that cometh of obedience will be ours, and this is our sufficient reward. "Preach the gospel," "Heal the sick," are commands laid upon all professed followers of Christ, and a convincing testimony is an effective way of preaching the gospel. Does all this preparation seem too much for a few minutes' talk? I once heard a Christian Science lecturer say that if the lecture he was about to deliver should be the means of turning one person in that great audience to Christian Science, he would feel amply rewarded for the effort expended. And then he proceeded to talk for over an hour, giving out carefully prepared statements of the truth which were unquestionably more or less committed to memory.

Jesus was about his Father's business when he was but twelve years of age, but he did not begin to give his message to the world until he was thirty. There is an old adage that what is worth doing, is worth doing well; and what is more truly worth doing well than even the smallest duty pertaining to Christian Science work? Again, we should not be satisfied with giving one testimony, of our first healing perhaps, and then feel that we may sit down and fold our hands, satisfied that we have done our duty for all time. Suppose all who attend the Wednesday evening meetings should do this? If we are working, and growing in grace and understanding, we are constantly being liberated more and more from bondage to the false beliefs of the senses; therefore we must have constantly new experiences, some of which may properly be shared in public at the testimony meetings. "Bring ye all the tithes into the storehouse,"—even a tenth part of the many blessings received,—and divine Love will surely pour us out a blessing that we shall not be able to hold it. If this is done, the testimony-giving will be more evenly divided among the worshipers at the Wednesday evening meetings, and a greater general growth in grace cannot fail to manifest itself.

[Written for the *Sentinel*.]

THE FISHERS.

PRISCILLA C. GOODWYN.

SEA-BEATEN, weary, toiling through the night
The "children" came, grief-burdened with their loss.
Had not the Master suffered on the cross?
Had he not yielded to the Sanhedrim's force?
Where now the promised kingdom of his might?

Peter, who could not still the throbbing pain
Of deep remorse for his denials three,
Had said, "I go a-fishing." "So go we,"
The others cried, and launched upon the sea
Humbly to cast their fishers' nets again.

Wearied with rowing as they face the breeze,
Hopes disappointed and with vain regrets
(Against the vessel's side the sea foam frets),
While from the deep they draw their dripping nets
With no return their hunger to appease.

But as the morning dawns, with hearts contrite
And gaze uplifted to the approaching main,
They look into each other's eyes again,
To see that brotherhood doth yet remain,
And turn with steadier courage to the light.

And on the waiting ear there falls a voice
Vibrant with love, harmoniously sweet,
That cries, "My children, have ye any meat?
Cast to the right." A blessing so replete
Was gathered in as made each heart rejoice!

And as they draw to land with glad increase,
They see One standing, full of truth and grace,
A light from heaven falling on the place,
The smile of overcoming in his face
And on his brow an everlasting peace.

"Bring of the fish that ye have caught," he cries,
"And children, come and dine, the feast is laid—
Enough for each and all. Be not afraid!
Freely partake, the full price has been paid!
The night is past, the day-star doth arise!"

And then they knew the Lord, the Master dear,
And once again he breaks for them the bread!
"If me thou lovest, feed my sheep," he said,
"And bring the little lambs beneath the shed;
And follow me," he cries, "afar, anear!"

Then did he bless them, and arose from sight!
While they returned with joy upon their way,
In glad humility to watch and pray,
To do God's will while it is called today,
For no man works in darkness of the night.

"Hearts chastened," "pride rebuked,"* repentance, grace,
Mile-stones of earth that mark the way to heaven!
The benediction of the Christ is given
To those who hear his voice and see his face!

* Science and Health, p. 35.

SELECTED ARTICLES.

[Frederick Dixon in *Hampstead and Highgate* (Eng.) *Express.*]

The lecture on Christian Science given by the Rev. W. J. Ferrar, as reported, manifests such a desire to discuss the matter without prejudice that it is a pleasure to reply to him. The lecturer explained that he found Mrs. Eddy's writings contradictory and illogical. That, however, is a charge which is brought against most fresh systems of thought, and most old ones for that matter. The ones which escape it do so, as a rule, by reason of their shallowness. It is a charge, moreover, which is sometimes due to the failure of the critic to master in a reading the subtleties of thought incidental to all close reasoning. As a matter of fact, there is no book against which such an accusation can be brought more easily than the Bible. There are, as every one is aware, two apparently contradictory accounts of creation, in the first two chapters of Genesis, to say nothing of two equally contradictory accounts of the flood immediately afterward, and half a dozen other historical contradictions before the book closes. While, if it comes to logic, what is to be said of the exegetical possibilities of a text which permits such discordant deductions to be drawn from it as Roman Catholicism and Anglicanism, Presbyterianism, Lutheranism, and Calvinism, to say nothing of every phase of dissent from these, trailing off into the doctrines of the Anabaptists and the Ranters? Now, Christian Science is founded entirely on the Bible. Mrs. Eddy says, on page 126 of Science and Health, "I have had no other guide in 'the straight and narrow way' of Truth;" and it is the claim of Christian Science that every word of its teaching can be made good from the pages of the Bible.

Then the lecturer went on to insist that Mrs. Eddy's teaching was "opposed to the thought of the best minds;" but could anything be more opposed to these best minds than these best minds are to each other? From the time men began to think down to today these minds have been, and are continuing to differ fundamentally, so that it has been said, almost in the words of Mr. Gilbert's sentry in "Iolanthe," that every infant born into the world is either a little idealist or else a little materialist. Plato did not exactly agree with Aristotle, any more than Anselm did with Abelard, or Locke with Berkeley. Even in our own time we have seen two of "the best minds" in all the world contending somewhat warmly, in the pages of a certain review, over what one of them was pleased to call "the Gadarene pig affair." Perhaps, however, the best example of this opposition of "the best minds" to each other is to be found in the famous letter of Leibnitz to the Princess of Wales, in which he took a drily sarcastic exception to the theories of Locke and Newton themselves.

To show that "the best minds" have contradicted each other as emphatically as they are supposed to have contradicted Mrs. Eddy is not difficult; nor would it be difficult to show that these contradictions of Mrs. Eddy have their *lacunæ*. It must be admitted that the teachings of Christian Science have roused a certain class of critics into attacks more violent and more venomous than Paul experienced at the hands of Tertullus, or Darwin from the pulpit of Shrewsbury. These attacks, however, were frequently delivered because the speakers were too ignorant to appreciate how often the deepest thinkers were in accordance with Mrs. Eddy.

Let us take an example from Berkeley, the father of modern idealism, and an admittedly great thinker, whose theory of matter is confounded with Christian Science teaching when it suits the critics. Matter, said Berkeley, had no real existence. All that appeared as matter was a mere mental phenomenon, a subjective condition of mind. Now, if this is so, all disease is mental, and consequently to proceed to cure a diseased mental phenomenon, not by altering the cause producing it, but by the use of another phenomenon called tar-water, which, as Mr. Balfour says, Berkeley promoted from the humblest position in the pharmacopœia to that of a universal panacea, is what a Christian Scientist would call "idealism run mad." The logical, the only reasonable course is to change the cause, and this is the method of Christian Science, which maintains that disease, being produced mentally, must be mentally destroyed.

This was, scientifically, the practical fallacy of Berkeley's theory, and it converted him, in the words of Huxley, into a "mired logician." It had, however, another difficulty on the religious side, for it landed the bishop in "undiluted pantheism." Since, if all effects proceed from one cause, and that cause is God, spirit and matter, good and evil, sin and purity, are all constituents of the one divine Mind. It was just these pitfalls Mrs. Eddy logically avoided in Christian Science. She described matter as the subjective condition of mortal mind, and insisted that its ills must be treated wholly mentally. Advanced, however, as this position was, she cut herself loose at this point from the idealism of the schools and proclaimed the idealism of the gospel, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." In other words, the only reality is the divine Mind and its spiritual ideas, of which mortal mind and its ideas, or physical phenomena, are simply the negations.

Here is the true version of the Christian Science teaching of the unreality of matter—that the material is simply the lie about the spiritual, and, as you cannot tell a lie about nothing, that every material phenomenon is the counterfeit of some spiritual fact. If Christian Science stopped here with a mere assertion, it would only have added another dogma or speculation to the welter of the religious and scientific kaleidoscope. It is just, however, at this point that it accepts the burden of proof as demanded by Jesus of Nazareth in the saying, "He that believeth on me, the works that I do shall he do also." It insists that the miracle is exactly what the Greek words so translated mean, a mighty object-lesson in substantiation of the truth of Christian theology. This object-lesson is, of course, not confined to sickness or disease, but is extended to every deviation, without exception, from the absolute. "Now, as then," Mrs. Eddy writes on page 150 of Science and Health, "signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world." What is this but another way of putting that mighty statement of the Science of Christianity, "Ye shall know the truth, and the truth shall make you free."

["Seeker after Truth" in *Edinburgh* (Scot.) *Dispatch.*]

The leading article in the *Dispatch* of recent date and the letter from Dr. Hollander, London, to the *Daily Express*, quoted in your columns, on the above subject, I have perused with interest. I am one who, on reading such criticism, was led through curiosity to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am not a member of the body, and do not claim to be able to represent their views. There is one thing clear to me, however, both in your article and the letter referred to, and that is, that it is assumed Christian Science is an emotional religion. It is no such thing. Its teaching and tendency is to allay excitement and to appeal to intelligence—Mind. One has only to hear and read the testimonies of those who have been benefited by Christian Science to know that it can and does soothe mental turmoil.

The doctor writes as a mental specialist, and he says he had several patients, adherents of the Christian Science doctrine, who had become insane. There are many thousands of Christian Scientists in London, and surely the

Digitized by Google

"several" cases do not constitute a peril. It has been said we are all more or less insane. Does the doctor suggest that because Christian Scientists "have such a deeply rooted antagonism against medical and psycho-therapeutic treatment" they are more prone to insanity? Dr. Johnston, surgeon to King William IV., said: "I declare my conscientious opinion, founded on long observation and reflection, that if there were not a single physician, surgeon, apothecary, man midwife, chemist, druggist, or drug on the face of the earth, there would be less sickness and less mortality." Dr. Good, a learned London professor, said: "The effects of medicine on the human system are in the highest degree uncertain; except, indeed, that it has already destroyed more lives than war, pestilence, and famine all combined."

Many other quotations from men at the head of the profession to similar effect might be made. Had these men got any "extra stimulus" to "turn them off the mental balance"? Christian Scientists hold that the teachings of Jesus Christ are as true today as they were at the time they were said. "These signs shall follow them that believe: . . . they shall lay hands on the sick, and they shall recover." The doctor says: "There is no disease that Christian Science can treat which cannot be treated by a qualified physician. Their great cry is that they make pain disappear without medicine, but so can physicians who like myself practise therapeutic suggestion."

It seems to be admitted by even this strong antagonist that disease may be treated successfully by Christian Science. "They make pain to disappear without medicine" is not their cry. They claim nothing for themselves. The healing is done by divine power alone.

[Howard C. Van Meter in *Salem* (Ore.) *Statesman.*]

In disparaging the Biblical account of creation given in the first chapter of Genesis, as the basis for Christian Science, the critic no doubt satisfies a leaning toward skepticism as to the whole trend of Christian effort. The believer in Christian Science is obtaining direct and satisfying results from this teaching, which takes this account of creation as the true one which is to be recognized today in working out of the belief that evil is real either as included in the nature of the creator or permitted by Him to exist. It means much to the Christian Scientist what kind of a foundation he builds on.

The critic's statement that the prayers of the entire Christian Science church will not heal diphtheria or pneumonia, indicates a lack of information as to the method or extensiveness of the healing. It is not the collective prayer of any church or churches in this denomination that is resorted to, but rather the individual understanding of the presence and power of God. Many cases of the above mentioned diseases have been healed in this way. Knowing many instances of similar experiences, I can only regret that our critic should feel impelled to use his pen to discourage the hope of those who are looking for practical results from reliance upon God.

[Translated from the Dutch, Marie Hartmann in *Eendracht*, Scheveningen, Holland.]

A few days ago it was just three years since a daily newspaper was founded in Boston, U. S. A., bearing the name, *The Christian Science Monitor*. Like the other Christian Science publications it owed its existence to the initiative of Mrs. Eddy, and was the result of her desire to give the world a daily paper which should help and encourage, and carry nothing that could harm or injure any one. Love toward her fellow men was the inspiration of the *Monitor's* foundation. Clean journalism only is represented in its pages, and no articles which through their perversity or incorrect statements could harm the public, can be found in it, because reading of this kind only leads to undesirable conditions.

Is it not strange that so many do not seem to understand that it is our duty toward the great public to guard good? It was the full comprehension of man's responsibility toward his fellow man that induced Mrs. Eddy to publish *The Christian Science Monitor*, a daily paper that will serve mankind in emphasizing all that makes for good in the world. Sensational and objectionable news is not published in the *Monitor*. In leaving that kind of reading out of its pages it leaves plenty of space for articles of educational interest. The paper has its correspondents all over the world. It gives the political news of its own as well as of foreign countries, statements of economics and commerce. It always keeps its impartial standpoint and really stands above any party interest. Besides the pages devoted to public instruction, art, literature, sport, there are articles for the housewife on cooking, fashion, etc. In fact, every person will find something suited to his taste, and the paper can be placed without fear in the hands of young people and children.

Knowing its value as an agent between employer and employee, it gives its readers the opportunity of free advertisement and because of this naturally is of immense value. It also is a great factor in the world's peace movement. Through its good news from all over the world it brings the nations closer together and makes them feel more brotherly toward each other. A short daily article excepted, the paper is not devoted especially to religion, but people will find that good thought is the inspiration of every word printed in it, and that men cannot separate religion from every-day life.

And now the practical side of its aim! When the *Monitor* was founded, three years ago, there were many who prophesied it would exist but a short while; but instead, the number of subscribers is constantly growing, and the publishers are not troubled about its future. The history of the *Monitor* has proved that the taste for the good still exists in the world, and that trust in God and striving for the highest will always have its reward.

[From *St. Louis* (Mo.) *Mirror.*]

To me Christian Science is—well, I shall not say it, because I don't want to read the letters I'd get, if I did say it, from the efficient and irrepressible publication committee. But for all that, it seems to me the height of absurdity, or maybe the depth, for the authorities to prosecute Christian Scientists for practising medicine without a license. Whatever the Christian Scientists practise, they don't practise medicine. They do not claim to cure. They only say that faith in Christ will cure. They do not profess even to give one that faith. One must have it in and of one's self. They cannot be said to deceive any one. They only encourage faith and hope in those with whom they deal. How much of just such encouragement of faith and hope is the real capital of many practitioners of regular medicine? In so far as Christian Science is a religion, it should not require a license to practise it in this town. In so far as it is a theory of health and illness it is not a thing to be prohibited. One may defend the cult as to that on grounds of free speech. Prayer cannot be either a crime or a misdemeanor. I cannot see that the government, state or municipal, has any well-founded right to prevent healing by Christian Scientists. If it be said they don't heal, the answer is, that often the practitioners of medicine don't heal. They do heal in some cases. Even the doctors of medicine admit this, and further than that, they, the doctors of medicine, sometimes apply Christian Science methods, without either Christianity or Science.

[Charles K. Skinner in *Detroit* (Mich.) *Free Press.*]

With all due respect for our clerical critic, I must take issue with him on the statement in his sermon which was reported as follows: "Today we have a flood of speculation

Digitized by Google

under the guise of . . . and Christian Science. These things even have their jargons and phrases which are far from harmless, because they obscure conceptions of God, tend to raise doubts as to His existence, and question individual immortality."

Our brother cannot have given Mrs. Eddy's various writings on the subject of Christian Science the unbiased thought which he would have done were he attempting the solution of a problem in physical science, or he would hardly have made so drastic a statement. The fact that so many men and women of most estimable character and religious sincerity, and from every church affiliation, including his own, have found a nearness to God which they had never before experienced, and a realization of omnipresent Love about them daily and hourly, could not fail to put to flight any possible doubts in their consciousness as to God's existence and the individual immortality of man.

When the student realizes the four cardinal points in Christian Science, first, What is God? second, What is man? third, What is man's relation to God? fourth, What is his birthright by virtue of that relation? he has laid the foundation of a clear understanding and application of the teachings of the Christian Science text-book, "Science and Health with Key to the Scriptures;" he has discovered that Mrs. Eddy was not talking in riddles or meaningless phrases, but that she was teaching the spiritual and perfect creation of man and the universe,—man's birthright here and now.

The apostle John wrote, "All things were made by him; and without him was not any thing made that was made." This is the teaching of Christian Science, that there is but one God, and He is omnipotent, omniscient, and omnipresent; that there is but one Christ, and the words, "Lo, I am with you alway, even unto the end of the world,"—to heal, to strengthen, to uplift, and to comfort,—are true and available every moment.

[E. M. Ramsay in *Dundee* (Scot.) *Telegraph.*]

My attention has been called to a paragraph in the *Evening Telegraph and Post* of Friday [Dec. 22], in which you quote a sentence or two—Christian Science is neither Christian nor scientific—from the *Daily Express*, which, I feel sure, do not commend themselves either to your judgment or to the good feeling of Scotsmen in general. Through long centuries we gave of our bravest and best to win the political and religious freedom which we now enjoy, and I am greatly mistaken if we are now prepared to surrender these priceless possessions.

Britons would indeed be in a sorry plight if sane people of full age were denied the free selection of minister and physician, and were to be subjected to drugging and dosing at the instance of a grandmotherly government. Christian Science is fully entitled to its name: it is wholly founded on the teachings of the gospel, and is an earnest and thoughtful endeavor to obey all the commands of the Saviour, including his injunction to heal the sick. That it has been highly successful is self-evident. The bitter opposition with which it has been met is provoked by the striking results obtained by the ever increasing numbers who are joining its ranks, and by the marked changes in public opinion which it has effected. It is scientific because it is wholly logical, being entirely deduced from the Scriptural definitions of God as the only cause and creator; as infinite, all-wise, ever-present good; as Life, Truth, Love, Spirit.

Far from nourishing the neurotic tendency of the age, it is the one and only thing which will wholly eradicate this tendency, as it insists upon the paramount necessity of self-discipline, obedience to law, courage, and cheerfulness. It corrects credulity by training its students in logical thought, by removing God from the realm of mystery, and by bringing the men of the present day into such close relationship to the Supreme Being that they too may learn in their heart of hearts to call Him Father, and to recognize with joyful humility His controlling love guiding them through the perplexed paths of our complicated modern life, as it once led Israel across the desert sands of the simple old world. I myself and hundreds of others have been healed by Christian Science after failing to get relief from some of the kindest and most eminent physicians the country possesses.

[Editorial in *Riverside* (Cal.) *Enterprise.*]

President Taft has revoked the order which barred Christian Scientists from treating sick people in the Panama Canal Zone. That was sensible. There may be many differences of opinion as to the merits of the respective schools of healing, but when a faith has hundreds of thousands of believers, and among them eminent men in all walks of life, it would be ridiculous for a government to ban its efforts to aid afflicted people.

Doctors disagree the earth over. More and more a puzzled and disappointed world turns away from the mere empirical and the specific cure to the great causes of disease and evil. More and more a cut-up population refuses to submit to the knife at the dictation of the experimental surgeon. A good doctor is the best friend a man can have. He is a pillar of strength, a rock in a weary land. When illness comes like a thief to steal the loved ones, when the specter of pain lays its heavy hand on one, or a new soul knocks at the portal of life, the true and tried physician is a minister of the creator, a conservator of being.

But there is no monopoly of knowledge nor of method. Today the allopath, the homeopath, the osteopath, the chiropracticiaa—a half hundred members of physical schools dispute with the hundred variants of mind cures. There can be no doubt that a belief in Christian Science, and the efforts of its practitioners, has lifted thousands from sick-beds and from the slough of despond. As in the case cited by United States Senator Works, it has saved many from themselves, enabled the victims of drink and narcotics to abandon their habits and to be free and well men and women. That is warrant for allowing Christian Scientists to prescribe mentally for the ills of mankind, always reserving the rights of the majority under the law. There is room for all honest and intelligent efforts in the direction of health.

[Editorial in *Fresno* (Cal.) *Herald.*]

No one who knows anything of the good accomplished by Christian Science, the marvelous increase of spirituality and Christian forbearance displayed by those who have come within its scope, can deny that Mrs. Eddy, a born leader, a victim of calumny and misrepresentation, accomplished greatly, lived nobly, and left for her monument a religious creation of enduring good. It is given to few people, men or women, to discharge life's tasks so as to call forth from all lands under the sun such words of gratitude and loving admiration as were voiced on the occasion of Mrs. Eddy's passing. They alone constitute an enduring memorial which all may envy.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

THE LAW AND THE GOSPEL.

As a basis in explanation of the efforts put forth each year to obtain legislation which will prohibit the practice of Christian Science, the proponents of such legislation usually try to show two things, first, that Christian Science does not heal; and second, that it is a menace, because, as they allege, Christian Scientists do not obey the laws in regard to the reporting of so-called contagious diseases. The persistence with which the first of these charges is preferred is unexplainable in view of the fact that it has been and is so easily disproved. Such a claim was perhaps excusable twenty-five years ago, but scarcely so today, when it is so well known that a very large proportion of the unnumbered thousands of the adherents of Christian Science continue to practise its tenets because they have been benefited by this healing truth; many of them, indeed, after years of fruitless doctoring, and not a few after they had been pronounced incurable by their physicians and given but a brief span of existence. Helpless and hopeless, from the standpoint of *materia medica*, these despairing ones turned as a last resort to Christian Science, there to find new life and hope, surcease from mental and physical ills; and these witnesses to the efficacy of Christian Science healing can be found in every community.

As to the second charge, that the practice of Christian Science is a menace to the community at large, because its adherents disregard the rules and regulations of the boards of health, we have no hesitation in saying that it consists entirely of allegation which has not been substantiated by proof. If it were true—and to claim that it is means the setting at naught of the testimony of multitudes of reputable witnesses whom Christian Science has restored to health and happiness—the courts would have been kept very busy trying and sentencing Christian Scientists who it is so freely alleged break these laws; but if there have been any such trials and convictions, they have not been reported in the newspapers of the country. Such cases as do occasionally find their way into the newspapers are largely of the kind recently reported in St. Louis. In this instance a Christian Scientist was called to see a man who claimed to be sick. She was then arrested, searched, and otherwise treated as a criminal. On learning that the alleged sick man was merely acting under orders from the health officer, and that the whole case was but a trick, the state's attorney refused to prosecute. It is scarcely conceivable that such a travesty of law and justice, such elaborate trickery, would have been resorted to if genuine violations of law could be found.

This second charge likewise seems unnecessary and uncalled for, in view of the fact that wherever Christian Science is established, fair-minded and unprejudiced members of the community openly admit that Christian Scientists are to be classed as respected and law-abiding citizens. It is but common justice to the Discoverer and Founder of Christian Science to say right here that Christian Scientists have deservedly obtained the reputation of being law-abiding because of their endeavors always to govern themselves in accordance with the advice and encouragement to right doing which Mrs. Eddy both taught and practised. In *The Christian Science Journal* (Vol. XIX, p. 3) she writes: "I believe in obeying the laws of the land. I practise and teach this obedience, since justice is the moral signification of law." She also wrote in the *Sentinel* (Vol. III, p. 392): "On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law-abiding. . . . Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results."

These terse yet comprehensive statements leave no doubt about Mrs. Eddy's views on the subject of obedience to the law. They were prompted by that good citizenship which recognizes obedience to the law as essential to the peace of society, also by the knowledge that reforms must come about by lawful means and not through breaking of the law. Even Jesus submitted to the customs and observances of his time, saying, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness," in the confident assurance of a future when these laws and practices would be unnecessary because the omnipotence of God would be freely known and acknowledged among men; and so may Christian Scientists, following in the footsteps of their Leader, respect the rights of others by obedience to the laws of the land, asking for themselves only the lawful right to call for and receive healing through the Christ-method, a system which has been proved efficacious in all manner of diseases.

ARCHIBALD MCLELLAN.

PONDERINGS.

IN Proverbs we read: "Ponder the path of thy feet, and let all thy ways be established." We also read that "the Lord pondereth the hearts." Now to ponder means to weigh, as in a balance, and to our present human sense this may mean that we shall place the material over against the spiritual, in order to decide which shall have the most influence in our own lives or in the affairs of the nation. The Christian Scientist, however, does not need to do this if he turns to Principle first of all, for he knows that Spirit and spiritual things alone are real. Isaiah asks who it is that "hath measured the waters in the hollow of his hand," and weighed "the hills in a balance?" He answers that it is God, Spirit, and then he tells us that all these, all nations, "before him are as nothing." Mrs. Eddy brings to us the same thought in her article entitled "The March Primary Class," where we read, "You have come to be weighed; and yet, I would not weigh you, nor have you weighed. How is this? Because God does all, and there is nothing in the opposite scale. There are not two,—Mind *and* matter. We must get rid of that notion" (Miscellaneous Writings, p. 280).

To reach the spiritual altitude where the allness of divine Mind is to us the one fact, we need to ponder deeply the things of Spirit, and in doing this we shall very likely be surprised to find how much there is of material belief on the scale of our consciousness. It will seem to have weight and to influence our decisions, unless we take time to acquaint ourselves intelligently with the spiritual facts involved, and it is well worth while to do this, for not otherwise can we set right the tangles of mortal belief, till "the crooked shall be made straight, and the rough places plain."

It were well for us if we always took the wise man's advice, and pondered the path of our feet until all our ways were established. We read in the second chapter of Luke that the Virgin-mother did this; that all the wonderful occurrences connected with the appearing of the divine idea expressed through Christ Jesus were reserved for the hours of communion with God. The record says, "Mary kept all these things, and pondered them in her heart." In the same chapter we read that she kept in her heart all the sayings of Jesus, even though they were not fully understood by herself or Joseph. Too often do we hasten to tell some one of an idea of Truth which is just dawning upon us, when it were better far to await its fuller unfoldment; and even then its best expression would be in deeds more than

Digitized by Google

in words. So, too, when difficulties seem to present themselves, if we would always ponder our problems alone with the divine Mind, we would learn how true it is that God giveth wisdom "liberally, and upbraideth not," and this not alone to a favored few, but to "all men."

A word may be said here as to the best way to interpret the teachings of the Bible and Science and Health. As we ponder the passages which seem obscured by the materialistic interpretations of our earlier days, the most wonderful help can be gained by taking a Bible concordance, also the concordance to Science and Health, and following up the statements which deal with the idea involved. Take, for example, some passage of Scripture which deals with man, then look up in Science and Health some of the many statements which have the word human, or humanity, and we shall soon discover the ascending path of human consciousness. It is not enough to stop with one or two statements, but to go on until a broad and impersonal view of the subject of our inquiry is gained and a more accurate sense of demonstration reached. Mrs. Eddy says (Science and Health, p. 559), "Read this book from beginning to end. Study it, ponder it." Thus doing, fewer questions will be asked, for we shall learn that God is His own interpreter.

ANNIE M. KNOTT.

"WITH WHAT MEASURE YE METE."

THE discovery that a very common twentieth-century habit occupies a prominent place among the things which in the book of Deuteronomy are branded as an offense to God, makes it clear that in the realm of human selfishness there is little new under the sun. The wrong referred to was a petty method of business unfairness, and the phrasing of the law of Truth respecting it reads: "Thou shalt not have in thy bag divers weights, . . . Thou shalt not have in thine house divers measures, a great and a small. . . . For all that do such things, . . . are an abomination unto the Lord."

To the letter of this requirement the most of us may have done no violence, but when we impose upon others an ethical demand, or a test of character to which we do not daily subject ourselves; when through prejudice we fail to take all the facts into consideration and express opinions respecting a fellow man which were gained from an unfair point of view; when we condemn the representative of a race or class without knowing anything of his individual merit or demerit,—in every such instance we are guilty of this same old sin. We are meting out our thought and doing with a measure that is shaped by personal impulse, and not with the one true measure of golden rule fairness. This is the great social and economic wrong of Christian history, its unbrotherliness, its indifference to the rights of many, and it is the clearer recognition of this wrong which gives force to the present world-wide demand that every man have a fair chance. When men have been killed, perchance by some concrete phase of injustice, all are ready to say, "Poor fellows!" but while they are here with us how easy to be selfish toward them, or to repeat the stigma of somebody's thoughtlessly unkind remark about them! How easy to rest content, though we know they haven't half a fair chance.

"With what measure ye mete." These words are written over the portals of that judgment-hall which no man may pass by on the other side, and they remind us that true self-interest is never at variance with righteousness, with the interests of good, a fact which the illuminations of Christian Science help one mightily to perceive. The error which would blind us is subtle. It speaks largely of personality, it champions the conventional, the exclusiveness of caste, and would have us forget the Master's "Judge not, that ye be not judged." It would have us rejoice in our comforts and opportunities, and not be anxious or unhappy about the struggle of the millions; in a word, it would have us crucify the spirit of the Master afresh. Christian Science at once makes demand that error, all stumbling, whether wilful or not, shall be separated in our thought from personality, and that we shall have such sincere and intelligent compassion toward all men, such a love for them, as will lead us to use a just measure in our every relation to them. When we are awakened to the fact that we are all subject to the assault of a common enemy, the seemingly more serious serfdom of some can but make stronger appeal to our kindly instincts, and we shall see, as we have not before, that he alone is truly fitted to judge who is able to heal.

Here we need to remember that ye are yet more likely to use an unfair measure when dealing with the community as a whole, than when dealing with a single individual. Many a man who could not be tempted to rob his neighbor would evade the customs or profit by municipal graft without a qualm, and this fact vastly increases the significance of that inculcation of Christ Jesus which every Christian Scientist is imperatively called upon to honor today, namely, that we be downright honest and fair in all things, and toward all men regardless of their rank or condition, and that we express no judgment of our fellows which is not thoughtfully framed in righteousness and truth.

JOHN B. WILLIS.

AMONG THE CHURCHES.

PALO ALTO, CAL.

As an evidence of the growth of the sect in Palo Alto, the Christian Scientists of this city have announced the purchase of a fine lot, on which will later be commenced the erection of a new church. The ground is the corner lot situated at Bryant street and Forest avenue, having frontages of one hundred and one hundred and twelve and a half feet respectively.

The members of the Christian Science church, whose place of worship is located in the edifice formerly occupied by the Presbyterians at Waverley street and University avenue, will concentrate their efforts toward the raising of a building fund. As yet no plans have been drawn up for the building, but it is known that a model structure is contemplated by the local congregation.—*Palo Alto Times.*

CENTRAL POINT, ORE.

Construction work on the new Christian Science church building on West Pine street is progressing rapidly, and it is expected the building will be completed in time for the members of the society to hold their annual Thanksgiving service in the new structure. The building will be a decided credit to the city when completed, and, although modest in proportions and style of architecture, it is pleasing to the eye in external appearance, while the interior appointments are all strictly modern. The building is thirty by fifty feet, built along the California bungalow style, and the exterior walls and roof are shingled. The color is in creosote stain, natural wood finish. Inside the finish is beaver-board panel work. The main room is about thirty by forty-two feet in size and will comfortably seat about one hundred and seventy-five.

The Christian Science work was begun in Central Point some seven years ago, when four persons, who had become interested in the subject through the healing of one of their number, began meeting occasionally in each other's homes to study the new religion; and from that small beginning has resulted a regularly organized society of the church,

Digitized by Google

with some twenty-five members. An active Sunday school is also carried on. The new church, which will cost when completed and furnished, exclusive of the lot, sixteen hundred and fifty dollars, has been built without the solicitation of one dollar of money, the entire cost being met through voluntary donations to the cause. The lot also, which is a valuable one, was donated by a member of the society.

Central Point Herald.

EDINBURGH, SCOTLAND.

First Church of Christ, Scientist, of Edinburgh, was dedicated Jan. 7. The address delivered by the president, Charles Tennant, was in part as follows:—

Some sixteen years ago Christian Science was introduced into Edinburgh, and its beginning was like unto the parable of the "grain of mustard seed, which a man took, and sowed in his field: which indeed is the least of all seeds: but when it is grown, it is the greatest among herbs, and becometh a tree, so that the birds of the air come and lodge in the branches thereof." Thus gradually there gathered a little group of people on whose consciousness had dawned the light of a new inspiration—whose hearts had heard the call to awake from slumber and its dreams of sense, and to press forward toward the light of Life.

Some of these had felt the touch of the Christ, healing them from bodily infirmities, and all were eager to employ their new-found energies in bringing the glad tidings to others, and so on the 26th of November, 1899, eight who had become members of The Mother Church in Boston, Mass., all resident in Scotland, met together and organized themselves as First Church of Christ, Scientist, Edinburgh. A fortnight later, on Communion Sunday, seven others joined the little church. Sunday and Wednesday services were held at 18 Duke street, where reading-rooms were also opened. As the cause developed and the need for larger accommodations was felt, suitable premises were found at 14 Queen street, where services were held for two and a half years. Another forward step was then found necessary, and a lease of the hall at 88 Pitt street was taken in 1906. At the end of three years the number attending the services had so greatly increased that it was not thought advisable to renew the lease. Just then the present site came into view, and on April 2, 1909, the members decided to take it, and there erect a church edifice of their own. Building operations began on May 2, 1910, when the first sod of earth was cut, and on July 1 the corner-stone of New Hampshire granite was laid. On receipt of a cablegram sent to Mrs. Eddy after the laying of the corner-stone, she cabled the reply, "God speeds the right." Just a year later the opening services were held, on Sunday, July 2, 1911; and now today, after an interval of six months, we are assembled together to acknowledge with gratitude the completion of the work.

It may be asked what it is that has enabled such a comparatively small body of people to build this church and to dedicate it in so short a time, having paid every account as it was presented without resort to any of the usual methods of raising money. The answer is to be found in the fact that their understanding of Christian Science has enabled them to realize the meaning of "Immanuel" or "God with us," which means that the giver of all good is with us, the infinite source of all supply is with us, enabling us to carry out every right endeavor. Thus we gain actual proof of the truth of Jesus' words when he said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Christian Scientists, their hearts overflowing with love and gratitude for all that God has done for them, are always able and willing to help each other and the cause; and so today we humbly acknowledge that our church building is the expression of loving and grateful hearts far and near.—*Correspondence.*

THE LECTURES.

BOLTON, ENGLAND.

If any proof were needed that the day has passed when Christian Science was merely a subject for ridicule, it was provided on Sunday afternoon [Nov. 19], when an audience which crowded the Grand Theater in every part—large numbers were turned away—listened with rapt attention and interest to a lengthy exposition of the doctrine by one of its chief professors. It was the desire to know that drew such a crowd, and which led to its listening so carefully to the lecture, in which were stated the broad fundamentals of a religion which professes to teach men how to approach the source of life for the gift of life. The lecturer was William D. McCrackan, M.A., who is just completing a tour of the world, having spoken at many places in the east, and through Australia and South Africa. Another circumstance adding interest to the meeting was that the chairman was a gentleman who had previously been in medical practice locally, Walter Wilding, M.R.C.S., L.R.C.P., of Manchester, and formerly medical officer of health for Hindley. His address, dealing with personal experience of the new doctrine, had been keenly anticipated, and in the large audience were several members of the medical profession.

After extending a welcome to the large gathering, the chairman said they were met to speak about the truths of Christian Science which had been so misrepresented in the press. At one time he was prejudiced against this religion, because he did not understand it. He was then a doctor practising medicine not many miles from that theater, and though he had spent nearly twenty years in the study of it there was much sickness in his home which he could not cure by medical means. His three children were all delicate. His eldest, a girl, was wasting away with tuberculosis of the hip-joint. Everything had been done; medical science could do nothing more for her. "My sister, who was then living in California," the chairman continued, "begged me to try Christian Science, as through this treatment my father had been saved from a very serious operation and restored to health. At first I would not listen, but eventually I turned to it. It was then practically unknown in the north of England. At my request a Christian Science practitioner came from London to my home, and the outcome of her prayer was the healing of my daughter. I did not give up medical practice then. I continued to practise for more than a year, but at the same time I studied Christian Science, and at times recommended Christian Science to those patients who were beyond my medical aid. In that way I witnessed several cases of wonderful healing of otherwise incurable disease. Gradually as I studied I realized that the healing work in Christian Science was based upon an understanding of law, of law that is eternal, 'the law of the Spirit of life in Christ Jesus, which makes free from the belief or material sense of law that results in disease and death. After giving up medical practice ten years ago, I continued to study Christian Science, and am striving to understand and practise this 'law of the Spirit of life,' and am daily finding it more effective, more health-giving, more joy-giving, and more life-giving. I could never go back to the old way."—*Bolton News.*

JERSEY CITY, N. J.

Prof. Hermann S. Hering lectured yesterday [Nov. 19] before a large and attentive audience at the Orpheum Theater. Forrest A. Heath, who introduced Professor Hering, said in part,—

The first time that my attention was seriously called to Christian Science, was about nine years ago, when I received word from home that my mother, who had been

Digitized by Google

an invalid for seventeen years, was going to try, as a last resort, the application of its teachings. I distinctly recall the shock it gave me—the feeling that she was indeed beyond hope of recovery when there was nothing but Christian Science for her to turn to. Her condition was the result of blood-poisoning, following vaccination, according to each of the many physicians consulted. There were operations and long periods of helplessness, and each physician in turn gave up the case. I had occasion a few months later to go to the home of my parents and see what had occurred. Instead of the dull look, the chalky cheeks, the spiritless gait of the years of misery and suffering, there were bright eyes, a hopeful countenance, and the glow of returning health—such a look as one wants to see on one's mother's face.—*Jersey City Journal.*

HALIFAX, ENGLAND.

Under the auspices of the Halifax Christian Science Society a lecture was last evening [Nov. 21] given in the Mechanics Hall by Bicknell Young. Colonel Fell, one of the leading workers in the movement in the north of England, presided. The hall was crowded in every part.

Colonel Fell said this was the first occasion upon which a lecture on Christian Science had been delivered in Halifax, and in a few years' time that would be looked upon as an important event in history. That was a little prophecy for them. The numerous attendance showed what a keen interest there was in Christian Science, and that was not surprising when they came to consider what the promise of Christian Science was. It was nothing less than the destruction of sin and sin's consequences—sickness and disease. So great indeed were the claims put forward by Christian Science that it would seem to be the duty of every man, woman, and child to ascertain the truth about it through the study of Mrs. Eddy's books, in conjunction with the Bible. Lectures on Christian Science were instituted to meet a special need, and that need was to rectify misrepresentations and misconceptions that got abroad respecting the subject. Therefore the board of lectureship was instituted, and the lecturer, a member of that board, was fully qualified to tell them about this freedom-bringing truth.—*Halifax Courier.*

MT. VERNON, N. Y.

Frank H. Leonard delivered a lecture yesterday afternoon [Nov. 26] in the Crescent Theater on Christian Science. The theater was filled to the doors. The lecturer was introduced by Attorney Joseph S. Wood, who said in part,—

I am not a Christian Scientist. Why my Christian Scientist friends asked me to preside today, my vanity suggests, but my modesty forbids me to utter. On the other hand, I had an object in accepting the invitation. I realized that there would be many in this assembly who like myself are not Christian Scientists, and I wish to say to them that the men and women in this community who are Christian Scientists are among the best and most highly respected citizens of Mount Vernon. In social affairs, political affairs, business affairs, and in everything which relates to the public good, we regard their judgment as of the highest and most reliable character. When such men and women adopt a religious belief, it is entitled to careful study and deep respect. It is not reasonable to hold that the judgment of such men and women in religious matters is entitled to little or no consideration, while their judgment in all other matters is worthy of most favorable reception.

It is true that we non-Christian Scientists believe that the Christian Scientists have faith in the impossible. I am frank to say that it is impossible to define the impossible, but that which was the impossible yesterday is the commonplace matter of fact today. Let us, then, in the light of the past and the wonders of the present, reason together. Let us prove all things, and hold fast that which is good.

Daily Argus.

MOBILE, ALA.

An audience of between four and five hundred people gathered in the Battle House Auditorium last evening [Dec. 3] to hear Clarence C. Eaton lecture on Christian Science. He was introduced by C. D. Henderson, who said:—

Christian Science is a subject pertaining to man's highest interest, and worthy of candid unbiased consideration. Within a comparatively short period its growth has been remarkable, and it is very properly regarded as one of the great religious movements of the world. Steadily and surely it has made its way into every land, and demonstrated that it has come to stay. It has made good.

Mobile Item.

MANILA, P. I.

William D. McCrackan, M.A., lectured to several hundred Manilans last night [Aug. 3] at the Grand Opera House. The audience was large, considering the bad weather, and the very closest attention was paid to the distinguished lecturer, who spoke over an hour. The Hon. Charles B. Elliott, secretary of commerce and police, introduced Mr. McCrackan by saying:—

I find myself this evening in very delightful company. I am, nevertheless, a little out of my element. I am not a Christian Scientist, but I recognize this great movement as one entitled to the respectful consideration of all serious people. The speaker tonight is a gentleman of distinction in scholarship and literature, and I know you will all hear him with great interest.—*Cablenews-American.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice it is assumed that the lecture will be given in the evening.

Dover, N. J.—Virgil O. Strickler, Assembly Hall, 24 Blackwell street, Feb. 26.

Englewood, N. J.—Virgil O. Strickler, Armory, Engle street, Feb. 27.

Hagerstown, Md.—Willis F. Gross, Court House, Feb. 29.

Kansas City, Mo. (First, Second, and Third Churches).—Frank H. Leonard, First Church Edifice, 9th street and Forrest avenue, Feb. 26 and 29; Second Church Edifice, 31st street and Troost avenue, Feb. 27 and March 1.

Lancaster, Pa.—Willis F. Gross, Colonial Theater, 3 p.m., Feb. 25.

Marshall, Mo.—Frank H. Leonard, Methodist Church, Marion street, 3 p.m., Feb. 25.

Nyack, N. Y.—Virgil O. Strickler, Church Edifice, 3 p.m., Feb. 25.

Pasadena, Cal.—William R. Rathvon, Church Edifice, Oakland avenue, 3 p.m., March 3.

Paterson, N. J.—Virgil O. Strickler, Orpheus Hall, Feb. 23.

Salt Lake City, Utah (Second Church).—William R. Rathvon, Salt Lake Theater, Feb. 25.

Sterling, Ill.—Virgil O. Strickler, Academy of Music, March 1.

Toronto, Ont. (Third Church).—Willis F. Gross, Church Building, College and Elizabeth streets, Feb. 26.

Wakefield, Yorks, Eng.—Bicknell Young, Music Saloon, Feb. 27.

Waukegan, Ill.—Bliss Knapp, Parish House, 410 Grand avenue, Feb. 29.

TESTIMONIES OF HEALING.

With a grateful heart I acknowledge the multiplied blessings I have received through the teachings of Christian Science, especially from the study of the text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy. It occurs to me that we should not withhold our gratitude for the blessings we have received, but should herald them abroad, knowing that our experience will bring a ray of blessed sunshine to some one who may be in darkness.

While I have known of many who owe their happiness to Christian Science, it was brought home to me most forcibly when three years ago my dear wife was saved from what seemed to be impending death. She had been in bed for three months with various ailments, and I had employed several physicians, but they gave me no hope at all. A friend of our family, a Christian Science practitioner, was then asked to take the case, and, thank God, the result was that my wife was healed. The doctors said it would be months before she could walk, but contrary to their expectations, she was out in a week and walked two blocks.

Another instance of the power of divine Love occurred in October, 1909, in Grand Junction, Col. My wife and little daughter were taken with an ailment which the physicians were unable to diagnose, but which was finally pronounced to be small-pox. This was not decided until my mother and myself came down with the same symptoms, and the city physician was called and diagnosed the disease as above stated. We were placed under quarantine, but called a Christian Science practitioner who gave us treatment. We did not take a drop of medicine or use any remedy whatever. All we had was divine Love, and this was all that we needed. Neighbors were surprised to see no physicians call, and in passing by would see us at the windows, for we were quite as well as usual. To those not in Science this healing was a marvelous thing, and not one scar was left upon our bodies.

This testimony is only to express our gratitude for God's unbounded love, also our love to our dear Leader, Mrs. Eddy.—CHRISTIAN E. ENDERICH, Newmire, Col.

With a desire to help others, I gladly tell of my healing through Christian Science. For many years I suffered from a stomach and liver complaint which much medicine and many physicians had failed to cure, and I had at last given up all hope of recovery. Then, in January, 1905, I was attacked by spinal meningitis and after weeks of suffering was able to be about again, but the attending physician said I would never entirely recover, that I was liable to another attack at any time; and two months later I again came down with this disease. After three days of intense suffering, I turned to Christian Science for help, and was instantaneously healed of the spinal disease, also of stomach, liver, and bowel trouble, the latter of twenty years' standing. I continued the Science treatments for some time, as I had other ills to overcome, and I am indeed glad to say that the truth has destroyed them, every one. I also had worn glasses for several months, and was able to lay these aside without special treatment, and have had no need of them since.

Through my wonderful healing my family came into Christian Science, and we have had so many beautiful proofs of what the application of its teachings can do, that with the psalmist we can say, "Who is so great a God as our God?" While deep gratitude is with me for the healing of the physical ills, yet I count my greatest blessing in the spiritual understanding I am gaining through the daily study of the Bible and Science and Health. Words fail me to express my gratitude to God, also to our dear Leader, Mrs. Eddy, but I shall endeavor to let my life and works testify for me.—MRS. ALICE E. OBER, Santa Ana, Cal.

Some ten years ago Christian Science healed me of an abscess which had formed where I had been operated upon for appendicitis the year before. At that time the practitioner requested me to learn the "scientific statement of being" as found on page 468 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I mention this healing gratefully to show how true are the words of our loved Leader, when she says on page 111 of "Miscellaneous Writings," "Leaving the seed of Truth to its own vitality, it propagates: the tares cannot hinder it."

Shortly after this healing, however, I began to allow one thing and another to crowd out my study of the Bible and Science and Health, until I finally stopped reading them altogether and began to wonder whether Christian Science had really healed me of anything. I had never been very strong, and from this time my health grew steadily worse, until I was operated upon by two of the best surgeons in this part of the country, who honestly and faithfully used all their skill to relieve me of my suffering, but their work was of no avail. I gained some strength, but constant pain continued, and will-power seemed my only help. When this failed utterly, and the suffering seemed beyond human endurance, whisky and morphine were resorted to.

At this time I was employed as teacher of piano and pipe organ in a conservatory of music, and was doing some organ concert work, when I suddenly lost the use of my right arm. This calamity, added to the mental and physical anguish I was undergoing, was too much for me. I had left the school one noon, determined to make an end of it all, when suddenly there came to my consciousness, as though some one were speaking directly to me, the words, "Christian Science helped you once, and it will do it again." I soon procured a Bible, Science and Health, and *Quarterly*, and returning to the school I literally drank in the truth contained in our inspired text-book. I asked for treatment, and in three weeks was using my arm freely. In six weeks I was completely and permanently healed of the trouble for which I had been operated upon.

My joy was boundless for this healing, but I was soon made to see that I must prove my way step by step, and in the healing of inflammatory rheumatism, which seemed to cling to me persistently for the two years following, I was led to see little by little the forever fact that God is good, Life, Truth, and Love, ever present and all powerful, and that my real self is His image and likeness. This glimpse of the truth of being began at once to heal all discordant conditions. As I was made to see the nothingness of personal ambition, I began to love my home and to be a more practical home-maker, a better wife, friend, teacher, and member of the community. It is not surprising, therefore, that I cannot find words adequate to express my gratitude to God, also to Mrs. Eddy, the inspired woman who has so faithfully followed Jesus in pointing out the way, and to all who have helped me on thus far in my journey from sense to Soul. I can truly say, in the words of the psalmist, that Christian Science "has brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings."

MRS. PHŒBE S. HAMAN, Cedar Rapids, Iowa.

Fifteen years ago Christian Science came into my life through my mother's healing from severe illness. Several years later I was healed of a fever in less than a week. This proof was instrumental in bringing my father into Science, and from then on this beautiful truth has freed us from many ills.

I was fortunate in attending a school whose principal and teachers were all faithful Scientists and the pupils the children of Scientists, which meant much in cultivating a desire for the truth. I found that its application made easier the working out of many a difficult problem and made

Digitized by Google

my school days very happy. In my own home Christian Science is giving us a basis for right living, and daily we find some new proof of its efficacy.

Recently I was most wonderfully sustained while passing through an experience which might have meant great sorrow, but I know that Christian Science does overcome disappointment as well as all physical disorders. As Mrs. Eddy has so beautifully expressed it, on page 307 of "Miscellaneous Writings," it is the " 'Peace, be still' to all human fears, to suffering of every sort." For the beautiful "bow of promise" that Christian Science has brought into our home, I am most grateful.

ADELAIDE OBEAR FILL, St. Louis, Mo.

Thanks to our heavenly Father, I have been shown the way to health and happiness in Christian Science. Words cannot express my feelings of gratitude for the many blessings that I received daily through reading the text-book, "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy. Over five years ago I was badly afflicted with heart disease, with which I had been troubled for about forty years. At this time I was so bad that the doctor gave me up and said there was no help for me; that my time was short. I then turned to Christian Science and was healed. I hope this will be of help to some poor sufferer, as the truth has been to me.

LEVI ROBINSON, Montela, N. Y.

One day in the fall of 1909, while I was standing on a step-ladder it slipped from under me, and I fell, striking my head on the cement floor. I was picked up unconscious, and a doctor sent for. He said the injury to the spine and the brain was very serious. I had convulsions and was unconscious for about twenty hours; then I was unconscious at times for four days, and seemed to be growing worse. The doctors held a consultation and said they could not do anything for me, that my heart and kidneys were bad and there was nothing to build on.

Then my sister, who had heard a little about Christian Science, thought perhaps that would help me, and sent for a practitioner. I had not been able to retain any food for those four days, but before the practitioner left the house I called for something to eat and enjoyed it. In ten days I was able to walk four blocks to the car line, and go to the practitioner's office for the last treatment. In two weeks from the time the doctors gave me up, I went back to my work at the hotel, and I have remained well ever since.

I am very grateful for this healing, and for knowing something about Christian Science. The day before the doctors gave me up, the thought kept coming to me of the woman mentioned in the gospels, and I felt that if I could only touch the hem of Christ's garment, I, too, would be healed. This prayer surely was answered in Christian Science, and I am very thankful to God for it, and for our Leader, Mrs. Eddy.—LYDIA GAYMAN, Pasadena, Cal.

Christian Science has brought much joy and peace into my life, and I feel a great desire to express through the *Sentinel* a few words of gratitude, though no words can tell what Christian Science is to me. To have found a remedy for all the woes of the mortal, a Comforter that never fails in time of need; to have found the way to love —far above the human sense of love, is to have found the joy that "no man taketh from you," and "the peace of God, which passeth all understanding."

Christian Science has delivered me from many distressing conditions. Simply by the reading of Science and Health I was healed of chronic throat trouble, also of a bowel affection of some years' standing. Car-sickness, that had always made even a short journey perfect misery, left me at the first reading of the book. Lately, I have been lifted out of the thought that I could not hear over the telephone. This may seem a little thing, but little things often appear to hold us in bondage, and would rob us of our birthright, dominion. At the time I took up the study of Christian Science, in addition to the physical ills, there was discord in every direction to be overcome; a financial problem was hanging over me like a dark cloud. Now I see that my own sins, and not those of others, deprived me of the blessings of God's goodness. The days were sometimes dreary, but little by little, as I have discerned the true way,—as I have grasped the right understanding of God, and man's relation to Him,—peace and harmony have taken the place of doubt and fear.

I am thankful for every experience that has helped and is helping me out of the old selfish, mortal sense of existence. I can truthfully say that every abnormal condition in my life has been changed for the better through Christian Science. I am deeply grateful for the good that constantly comes to me through our publications. To be loyal to the teachings of Christian Science, and to strive each day for more of the Mind of the Christ, I feel to be the best way to express my love and gratitude to our revered Leader, Mrs. Eddy, who has lovingly pointed the true path through our text-book and her other writings. As we gain even a slight understanding of Christian Science, we see the harmony that is ours when we obey God's law, when we truly seek the light. Mrs. Eddy tells us that "thus will a life corrected illumine its own atmosphere with spiritual glow and understanding" (Miscellaneous Writings, p. 356).

MISS LILLIAN F. GOODWIN, East Orange, N. J.

It is over four years since I became interested in Christian Science. I had some time previous begun to doubt whether there was a just God, as I had tried to live right, but it seemed an almost impossible thing to do. Since, however, I began to get some understanding of what man is, it has opened up a new heaven and a new earth to me. Whereas I was blind, now I see! I was a miserable slave to the use of tobacco; it was my company before I ate breakfast and after meals; it was first and foremost at all times; yet I did not quit it, but the desire for the weed left me while I was reading Science and Health. I feel that we can never love and reverence too much our dear Leader, who has brought the truth again to this sin-sick world of ours. God bless her, is my humble prayer, and I thank God for His great love for His children. I am truly grateful to all who have been instrumental in bringing this truth to me and I hope to let my light so shine as to prove myself worthy to be called a child of God and a follower of the Founder of the Christian Science movement.

I write this with the hope it will be the means of helping some one who may have the same depraved appetite that I once had. It struck me very forcibly during my reading there was an idol that I needed to get rid of, but the desire for tobacco left me so quietly that I hardly knew when it disappeared. For this and other benefits I am truly thankful to God, also to Mrs. Eddy.

S. MCWASH, Altus, Okla.

Like many others, I can gratefully say that I was healed through Christian Science. Paralysis of both arms and nerve exhaustion was the medical diagnosis of the trouble, one of the doctors being a prominent nerve specialist, who said the first-mentioned trouble was the worst case of its kind he had known. I sought relief in various ways under the doctors' instructions, but two years brought no permanent results for the better.

For some time I had been urged by relatives (though they were not Scientists) to try Christian Science, but a misunderstanding of it kept me from doing so. Finally I

Digitized by Google

yielded, agreeing to postpone a change of plans for two weeks to make the experiment, though feeling quite sure it would prove a failure, and secretly almost hoping it would, so that I would hear no more about Christian Science. There was, however, decided improvement from the beginning of the treatment, and within eight weeks the cure was complete. I immediately resumed my work, something I had not expected to be able to do again. The cure was also permanent, for over five years have since passed without a return of these troubles.

I wish I could tell as easily of the other and more important ways in which Christian Science has helped me. It is constantly taking from me a sense of criticism, doubt, fear, discouragement, limitation, etc., and giving abundant good, health, and happiness in return. I am very thankful that Mrs. Eddy has made it possible for all to share in the results of her discovery, and thankful for all the means she has so carefully and wisely provided toward this end.

MRS. EVA MIRIAN PERLEY, Bisbee, Ariz.

My uncle was healed in a few weeks, under Christian Science treatment, of a trouble which he had had for years, with the best medical attendance he could get. When he told us about it we did not give it much thought until my father and I were taken with a fever. We then employed the best doctor we could get, and he did all he could for us, but after two or three weeks in bed, with drugs, we were no better. When the doctor came again he wrote out prescriptions for me, but I told my mother she need not have them filled, for I was not going to take them. A Christian Science practitioner was then sent for, and she arrived about twelve o'clock on Sunday. After she treated me I was hungry for the first time in two weeks. She told me I could have anything I wished for, so I ate a very hearty meal. In one hour after she came I was up and dressed. She came to see us on the following Tuesday, and I went with her eighteen miles on a visit. My father, who also took treatment, was up in a few days, and we are well and happier today for this proof of a great truth. We read in Acts the prophecy of Joel: "And it shall come to pass in the last days, saith God, I will pour out of my Spirit upon all flesh: and your sons and your daughters shall prophesy, and your young men shall see visions, and your old men shall dream dreams." Now I can understand and sing better than ever. I am told that the understanding of "Science and Health with Key to the Scriptures" by Mrs. Eddy will keep me well, and I have a copy which I am going to study.

MRS. MARIE SMYLY THIGPIN, Hastings, Fla.

Christian Science found me when I was a great sufferer from a complication of diseases, the most acute, however, being what is known as "Bright's disease," in its last stage; but, thanks to a loving Christian Scientist, through the power of God I was healed in a short time. Were I to attempt to enumerate the many blessings which have come to my family during the past twelve years, I should utterly fail. Science is everything to me: it brings harmony where all else fails.—MARY S. NEVINS, Santa Ana, Cal.

I wish to tell of the healing which I received through Christian Science in a case of acute stomach trouble. I awoke one night with a severe pain, which I could not overcome; so I called to my husband, who as soon as possible applied hot baths, as had been my habit; but they brought no relief. Finally I asked him to telephone to a Christian Science practitioner, which he did, and in less than an hour I was sleeping very quietly. I feel very grateful to divine Love for the help that this truth has been to me in many other ways.

MRS. VERTIE SAMPSON, Portland, Me.

Three years ago our baby boy was healed of hip disease by my rudimentary knowledge of Christian Science. It was an object-lesson to me, so I concluded to drop medicine entirely and rely on the "great Physician." I had depended upon medicine for a dozen years, but I brushed it aside forever and with the Bible in one hand and Science and Health in the other I started the fight for freedom. Not only was a chronic bowel disorder put to flight, but colds, inflammation, fever, limitation, daily problems, fear, accidents, and all sorts of mortal ills were placed in the unreal column.

Being an actor with an uncertain income, life heretofore had been a guessing contest; now, there is no thought of the morrow. My wife and two children have had their needs provided for; we are living in the now with the knowledge that God provides for those who go to Him faithfully and with understanding. Peevishness, resentment, and anger are being gradually subdued, love for my neighbor is taking the place of censure, for I know that the real man is God's perfect child. Before embracing Science I always made it a point to go to some church for Sunday service, but the warmth of a member's hand-clasp to a stranger visibly relaxed when it was found that I belonged to the theatrical profession. How different it is in a Science church or reading-room! As soon as I make known the fact that I am connected with the stage, a gleam of gladness and welcome crosses the countenance of the one addressed, and I am certain that the commandment, "Love thy neighbor as thyself," is being faithfully carried out.

Language will not express my gratitude to Mrs. Eddy for discovering the way by which I have been enabled to realize that man is God's reflection.

STANLEY FELCH, Chicago, Ill.

I am truly grateful for what understanding I have of Christian Science. I have been cured of a stomach disorder and was able to put aside glasses which I had worn for three years whenever I had any reading or fine sewing to do. Over a year ago, with the aid of a Christian Science friend, I was able to have five or six teeth extracted, the thought of which operation, up to that time, had always been a dread to me.—MAUDE H. KNISKERN, St. Augustine, Fla.

I want the readers of the *Sentinel* to know what Christian Science has done for me and mine. My little grandchild was taken sick in November, 1909. She began to complain of her limbs, and gradually grew worse, till her parents called a physician. She continued to get worse for a week, then after having several different doctors, they were advised to take her to a hospital. This was done, and she was there six weeks, but all that kind doctors and good nurses could do proved of no avail, and the child gradually grew worse, till she became paralyzed in her lower limbs. I then brought her to my home, but the trouble increased till she became paralyzed all over. I will not go into details, but we had her at our house eight weeks in that helpless condition. There was also an eruption all over her body, her hands and feet were badly swollen, and she had kidney or bladder trouble with all the rest.

At last I went to see a Christian Scientist and asked her to help the child. I knew nothing about Christian Science, but the lady told me that nothing is impossible with God, and that He is the "great Physician." She said she was not a practitioner, but she would do what she could for the child. From the first treatment there was a gradual improvement, the bloating disappeared, as also did the rash and soreness; she began to lift her hands and arms; then was able to turn over; and how happy she was to be able to roll over on a quilt on the floor. In four weeks she was

Digitized by Google

able to walk, and she is now well and happy, lives on a farm and romps all day with her brother.

Now that I have told some of the things which were done for my grandchild, I must tell what Christian Science has brought into my own life. From the time the child began to take treatment I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been troubled for forty years with a bad foot, had used crutches at times, and could not walk any distance without intense pain. If I attempted to walk a half mile, I was afterward laid up with that foot. I had taken medicine for years for a bowel disorder, but now it is all different. Both troubles have been overcome and I have thrown out all my medicine. I can walk and do all of my own work, and I am well. My seven boys and one girl have all experienced the healing effects of Christian Science in one form or another.

These are some of the physical benefits I have derived from the truth, and now I must speak of the spiritual. I was always a searcher for Truth and tried to live a good Christian life, but felt that the effort was a failure in many ways. Now I know I am in the right path, by the "signs following." I have a clearer apprehension of the Bible than ever before, and now "I know in whom I have believed." I know that God is "a very present help in trouble," and for all these blessings I give praise to Him "in whom we live, and move, and have our being." My heart goes out in gratitude to the one who has made it possible for us to gain the understanding whereby we "may lay hold on eternal life."

MRS. MINNIE HAHN, De Witt, Iowa.

I wish to express my deepest gratitude for all that Christian Science has done for me. It has given me a better understanding of the Bible, which with the text-book, "Science and Health with Key to the Scriptures," is my daily guide. I have been in Science over two years, and I never doubted it from the very first. I have been healed of many trifling ills, but the most wonderful healing was the overcoming of sorrow at the sudden passing on of my husband. He was on night duty, and the sad news came to me at midnight; but I immediately declared the truth and knew that in God, Truth, there is no separation. Then I called a Christian Science practitioner and asked for help. She came and gave me treatment, and helped me for about a month, when I realized that the burden had been lifted and I felt free and ready to trust God more in the future.

I owe my life and work to Christian Science, and I thank God for our Leader, Mrs. Eddy, who has brought to us this blessed healing truth. I trust that my testimony may be a help to many others who are striving to know the truth and to gain the understanding of divine Love. My daily prayer is to know more of this truth that destroys all error.

MRS. CALLIE MASON TURNER, Capitol Heights, Md.

[Written for the *Sentinel*]

LOVE'S LIGHT.

EDMUND K. GOLDSBOROUGH, JR.

Love's light is here, though storms may seem to beat
And clouds to hover o'er the rugged way:
Yet Truth's pure beams reveal the perfect day,
And we may rest forever at Christ's feet.

Love's light is here, the path grows sweet and fair;
Time melts before eternity's grand glow.
The streams of Life can never cease to flow,
For God's own harmony is everywhere.

FROM OUR EXCHANGES.

[*Universalist Leader.*]

The profoundest note of human experience in the Bible as well as in the soul is where one stands spiritually naked in the presence of the great "I AM." How our shut-in worship and our narrow round of spiritual exercises shrink when we compare them with the great moods of the makers of our sacred Book. It is not the details of the report of what happened in Chaldea or Midian or on Sinai that is the center of the story. Though every commandment of the Decalogue should suffer the mutations of the vicissitudes of time, as they have not, yet that interview of a great soul with the eternal God is one of the sublime epochs in the progress of the human spirit toward the light. And yet if the true atmosphere is preserved, even Moses never was familiar with the source of life. He was a stranger and a pilgrim on the earth.

There is something in the life of Jesus that strikes a higher key of experience than the lofty awe of the ancient seer. There is no better name for this fine mood than familiarity with God. The soul of Jesus is at home in the world. He is no pilgrim in an alien land. He is no stranger amid the phenomena of life. There is in him a sense of intimacy and fellowship with the spirit of the universe. He does not peer out into the dark, wondering where the path leads. Wilderness and mountain have no terror for him. He walks abroad with a serene consciousness that this wonderful place where he lives is his Father's house. It has other rooms. It is filled with beautiful things. Here are uncaged birds and sun-kissed flowers and laughing children, but they all belong here and they belong to us. They are the gifts of a bounty that is infinite.

[Samuel McChord Crothers, D.D., in *Christian Register.*]

That which is the trouble with us when we pride ourselves on what seems our worth, is that after a little while we become apologists for ourselves. The man has not reached the point where he has the moral courage to say: "Yesterday I tried to do the right and I blundered. I tried to speak the truth, and I committed myself to this idea, and I was mistaken." Few men have that capacity frankly and without equivocation to say, "I was mistaken. I blundered." And yet, if a man has not that capacity, what does it mean? It means that every year he lives he becomes less of an idealist, more of a materialist, less of a believer, more of a pessimist. And why? Simply because, in order to avoid personal pain, he has laid the blame of his shortcomings upon the universe or upon his own ideals. He has lowered insensibly his ideals to the measure of his achievements. I care not what he has achieved or knows, if he is the victim of his own self-conceit, his mind is being hardened, narrowed, as the days go on. I care not what he has accomplished in the moral world, the man has become an apologist for himself, he has been losing insensibly the clear vision of ideal right and truth. You see how that goes on a large scale where the besetting sins of men are "writ large" in institutional life. You see perfectly what happens to the Christian church because of its continual readjustment to the new life of each generation.

[*Congregationalist and Christian World.*]

To begin with, What makes a man an outsider? Certainly not my label nor that of any church. It is not for me to penetrate into the recesses of any heart. The other evening I accompanied a group of children as they sang Christmas carols from house to house along the village street. We paused in front of a dwelling where lives a non-churchgoing family. As the sweet strains of, "It came upon the midnight clear," sung by childish voices, rose into the frosty air, the owner of that home, a splendid type

Digitized by Google

of New England manhood, came out and leaned against a pillar of the porch while the hymn was sung. What thoughts of God and of Christ came to him in the quiet moonlight, I could only guess—what memories of the little child who died long years ago and concerning whom he can never speak to me without quivering lips. As I watched him there under the Christmas stars, I could not help believing that the kingdom of God is broad enough to include a large variety of individual religious experiences. And was it my business, although a churchman to my finger-tips, to place this man either within or without the Christian fold?

[*New York Observer.*]

Hospitality is the perfume of the church. The Christian church was once a real family. This it was that first struck, then attracted, the Gentile observer. I fear she has lost quite a little of that early morning fragrance. There is too often a stiffness, a stereotypedness, an unnaturalness,—a stuffiness, shall I call it?—about many of our churches today which prevents the average working man from taking good long deep breaths and feeling at ease. There is a lack of homeliness. And it must be recovered: the loss is too serious. There is great need today in the church, we are being told, for hospitality to new ideas, but this is hospitality to old ideas. This is getting back to the primitive order. Rich and poor must meet together, as in apostolic times, on an equal footing. Men cannot love the place unless it is a home. Class distinction is the greatest enemy of the cross.

[*Christian World.*]

When criticism has done its uttermost there remains to us the life and teaching of Jesus, a life and teaching which are far more than history; they leap upon us as an irresistible appeal to our soul today. Divest the story, if you will, of everything so-called supernatural; its energy is there, working upon you, compelling you from the low to the high, revealing the innermost depths of your own soul in the light of this divinest soul. But that is not all. Christianity, as a divine incoming into our race, is part of a process which has been continuing ever since and it is at work upon us now. It has an origin in history, but it does not live on history. Its motive force is a living experience. Its bottom fact is God, who revealed Himself in the gospel, and who waits to reveal Himself today in us. And it is at the bottom of their own souls that real believers eventually find Him. There they feel the pressure of a love that will not let them go.

[Frederick Lynch in *Christian Work and Evangelist.*]

We believe that the world is even now beginning to be dissatisfied with things. A hunger for the things of the Spirit is coming upon it. Perhaps the great revival is close at hand. We believe we feel the first faint whisperings of the mighty wind of God. Happy that man who with prophetic soul can help lift this age up out of the slough of materialism into the world of the Spirit, where love and sacrifice shall again become the law of life, and where men shall walk again with God, and where honor and purity shall consume vice and lust, where the home shall be sacred, where poets again shall sing, and all the earth be filled with the knowledge of the Lord.

[*British Congregationalist.*]

Once Jesus met with certain men who were eager to follow, but were not single-hearted. The story is in the gospel—the story of his stern dealing with them. "Let the dead bury their dead!" "No man, having put his hand to the plough, and looking back, is fit for the kingdom of God." It was no hour for trifling. It is no hour now for trifling. They who have no heart for the conflict, for the sacrifices and the adventures of the kingdom, had better go home quietly. There may be fewer who remain, but they will be mightier than battalions of the half-hearted.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by Mrs. Eddy to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Digitized by Google

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. One hundred copies, $1.25; foreign postage additional.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to twelve books (cloth only) to one address, each, $3.00; twelve or more books to one address, each, $2.75. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, each, $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, each, $4.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large sized book), single copy, $6.00; twelve or more to one address, each, $5.75. Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $1.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

The first structure formally sanctioned for erection on the proposed site of the Panama-Pacific exposition will be a tower. It is to be eight hundred and fifty feet in height above the ground level, and, with the single exception of the Eiffel tower in Paris, will be the tallest structure in the world. Private capital is to be utilized in building the tower, which will cost about one million five hundred thousand dollars. It will be of steel frame construction with outer walls of marble or terra cotta. The base of the tower will be two hundred and thirty-two feet square and one hundred and twenty feet high, containing a great memorial hall. Four express passenger elevators will be enclosed in this main shaft. It is intended to utilize the tower for a meteorological observatory and wireless station, and to install a light which under favorable weather conditions will be visible one hundred miles out at sea.

Charging that the water-power trust is "exerting its enormous interest" to pass the hydro-electric bill introduced in the House of Representatives granting certain rights in the Mono (Cal.) national forest, Gifford Pinchot, through the National Conservation Association, has issued an urgent appeal to Congress to defeat the measure. "If the bill should pass," Mr. Pinchot said, "it would set a dangerous precedent for giving away public property to the water-power interests forever for nothing."

The land of the Massachusetts Hospital for Dipsomaniacs and Inebriates at Foxboro will soon be turned into a bird propagation plant, for the purpose of increasing the game and insectivorous birds of Norfolk county. It is proposed to use state land for the plant and to have a posted zone of about five thousand acres immediately adjoining and enclosing the hospital grounds. Here the birds can make their home and have runways unmolested by hunters.

The United Shoe Machinery Company, under indictment for maintaining a conspiracy in restraint of trade, in its defense relies largely upon the patent laws, asserting that the government has given them the right, through each separate and distinct patent, to combine and monopolize trade and commerce in the several groups of shoe machinery.

The Massachusetts fish and game commissioners have purchased at Sandwich a new fish hatchery which will have a capacity of two million fish a year. It will be developed with the forty thousand dollars appropriated last year and will be used entirely for the propagation of trout.

The tentative plan of the commissioner of public works to put the pumping station for the proposed Boston high pressure water service upon the Boston Common called out at once a flood of protests from individuals and associations, as also did the proposal to use a part of the Public Garden for this purpose.

A proposition is under consideration to establish a sewerage system and fill in land in South Boston, which would render available for use nearly four square miles of land. The cost is estimated at three million dollars.

International.

After nearly thirty-five years of almost continued effort and disappointing and arduous work, says *Scientific American*, the great railway enterprise for connecting the republics of Chile and Argentina has recently been brought to a successful completion. This engineering feat is one which will rank among the most remarkable achievements of the world. It is the first transcontinental railway line in South America from the Atlantic to the Pacific and forms one of the four outlets by which Chile, separated completely by the natural formation of the territory from most of her sister republics, will be able to communicate freely and at all times of the year with the world at large. The inception of the Transandine line dates back to 1872. The line to Mendoza was finished in 1886. The Transandine tunnel lies at an elevation of about ten thousand five hundred feet, nearly fifteen hundred feet higher than the highest carriage road in Europe, that over the Stelvio pass, and more than thirty-five hundred feet higher than Mont Cenis, St. Gothard, and Simplon passes.

The British government, it is understood, has under consideration a comprehensive scheme for the reform of London government as a whole, to include, it is said, the following provisions: The enlargement of the boundaries of the county of London to include "Greater London;" the control by an enlarged London county council of all public services such as are at present under its jurisdiction for the county of London; local jurisdiction in essentially local matters, with delegated powers such as are now exercised by the metropolitan borough councils, by local authorities, the smaller bodies, if necessary, to be amalgamated; a further application of the principle of equalization of rates to be made throughout the whole of the new area; uniformity in and centralization of valuation and assessment; control of poor law institutions and expenditure to be vested in a central poor law board with a unified poor rate, local administration to be left to committees of local authorities for general purposes.

An animated discussion on the proposed scheme for amalgamating the Underground Railway Company of London with the London General Omnibus Company took place at a meeting of the shareholders of the Omnibus Company, which had been called for the express purpose of hearing the details. A writ asking the court to grant certain injunctions has been served upon the Omnibus Company and upon some of the directors, which for the present ties up the negotiations between the companies.

The proper utilization of Australia's magnificent waterway, the river Murray, by means of the construction of locks and weirs, has been the subject of considerable negotiations between the governments of South Australia, Victoria, and New South Wales. The result has been the drawing up of an agreement relating to the matter between the three states. That no time is to be lost carrying out South Australia's portion of this great national work is shown by the employment already of a consulting engineer.

The Japanese House of Representatives has passed the budget, which shows the following estimates: Revenues—Ordinary, $251,277,902; extraordinary, $3,643,035.50; which include the surplus from the previous year of $7,512,867. Appropriations—Civil list, $22,500,000; foreign, $23,035,590.50; home, $16,614,508; ministry of finance, $113,450,152.50; war, $45,725,315; navy, $36,318,655.50; justice, $6,562,533.50; education, $5,249,280; agriculture and commerce, $8,017,465.50; communications, $38,923,497.50.

The Chinese National Assembly, on Feb. 15, unanimously elected Yuan Shi Kai president of the republic and then decided that the provisional capital shall be Nanking. Dr. Sun Yat Sen's resignation of the presidency of the Chinese republic was accepted by the National Assembly on condition that both he and the present cabinet hold office until the new president and cabinet take over the duties. There was a touching scene in the Assembly when Dr. Sun handed in his resignation.

The destruction of a twenty-mile wall, seventy-five feet thick and thirty feet high, partly surrounding the city of Canton, China, has been begun by soldiers of the republican government. It is proposed to construct a boulevard out of the stone and mortar of the wall, which was built about 200 B. C.

What Canada lost through the rejection of reciprocity with the United States is to be the subject of an investigation by a special committee of the Canadian Senate.

Industrial and Commercial.

A loss of nine million dollars in wages, thirty-five hundred dollars in fighting federal injunctions, about three thousand dollars in railroad fares, stationery, etc., and at least five lives was the toll paid by former employees of the Harriman lines on the strike last autumn, according to published figures. In addition the Illinois Central and Yazoo & Mississippi Valley railroads, forming part of the Harriman system, have lost $4,040,155 in net earnings owing to the strike. These amounts do not cover the total loss to the railroads due to the strike, which was placed at seventeen million dollars in a recent conference of railroad men. Combining the cost to the railroad with that borne by the men the total is estimated to exceed twenty-six million dollars.

According to the *London Standard* another step has been taken in the perfection of the turbine. This is a new reversible steam turbine. The reversing is effected by synchronized discs rotated by screw spindles extending outside the turbine casing that are made to open or close by nozzles which give the steam a left or right direction upon the blades. Designs are now being prepared for the construction of a two-thousand-horse-power machine on the new principle.

One hundred and eighty-five machinists and helpers employed at the Watertown (Mass.) arsenal have petitioned Gen. William Crozier, chief of ordnance, that he abolish the stop-watch and premium features of the "Taylor system." Two weeks ago General Crozier, in a report on the system to the congressional committee, said every one was satisfied with it and making more money.

Improvements calling for an expenditure of over thirty-five million dollars to care for the unprecedented increase of business on the lines of the Grand Trunk system which now lead into New England and will terminate in Boston if the Massachusetts Legislature so authorizes, are either in process of construction or awaiting the signing of the contracts, according to officials of the road.

The international sugar conference at Brussels has reached a decision on all important points. All the powers agree to renew the convention for five years on the same conditions as governed the previous convention, and to authorize Russia to export an additional one hundred and fifty thousand tons during the current year and one hundred thousand additional in subsequent years.

The cost of the mill strike at Lawrence, Mass., during the month that it has continued, is estimated at a million dollars. This includes loss of wages to workmen and expenses in maintaining the militia.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

ABOVE THE FOG.

M. G. KAINS, M.S.

THERE had been five days of rain and fog, and the morning of the sixth day seemed to present only a repetition of the dismal weather. Several friends who had planned to make a little excursion that day, arrived at the appointed place of meeting arrayed in waterproofs and rubbers and carrying umbrellas. Various members of the group suggested postponing the trip until some more favorable day, but since some of the visiting members of the party must return the following day to their distant homes, postponement would mean abandonment. It was therefore decided to continue in spite of the mist. The last person to join the group immediately became the butt of raillery, in view of the fact that she had neither waterproof nor umbrella, and was dressed in a garb more suited to sunshiny weather than to the fog. True she did wear rubbers, but she had made no other provision against wet weather or walking. When given a chance to explain her peculiar folly, as it appeared, she merely said, "I think it is not going to rain today. Indeed, if I am not much mistaken, the fog will begin to lift in a couple of hours, and by noon we shall have a clear sky. At any rate, I have come prepared for fine weather, and I even expect to carry instead of wearing my rubbers home."

As it was known that she had some knowledge of meteorology and was given to studying the weather, she was only chaffed a little about prophesying, because if she made a mistake they would not let her hear the last of it; to which she replied that if she were correct, she supposed they would not refer to the subject again. As to the outcome, suffice it to say that the fog did lift, the sky did become cloudless, and those who came prepared for rain found it less convenient to carry a waterproof and umbrella than if they had a small package containing only a pair of rubbers.

This incident recalls two passages in Science and Health; one (p. 122) where Mrs. Eddy says, "The barometer,—that little prophet of storm and sunshine, denying the testimony of the senses,—points to fair weather in the midst of murky clouds and drenching rain;" the other (p. 169), "Whenever an aggravation of symptoms has occurred . . . I have seen the mental signs, assuring me that danger was over, before the patient felt the change; and I have said to the patient, 'You are healed,'—sometimes to his discomfiture, when he was incredulous. But it always came about as I had foretold." This recalls the words of Christ Jesus, "Ye can discern the face of the sky; but can ye not discern the signs of the times?"

The healing of the sick by Christian Science is so at variance with popularly accepted methods that people are slow to believe it possible. Appearances are so seemingly real that opposing statements are doubted and challenged. This is perhaps only natural when we consider the experience and the training of the doubter. Every one who has not been trained otherwise has become accustomed to believe unquestioningly what his senses tell him. He is likely to consider the person who would have him believe otherwise as somewhat unbalanced. Not until he begins to challenge these senses and to prove for himself that he is constantly making mental corrections, does he begin to realize that appearances cannot always be trusted, and that behind them there is an actual condition which is true in spite of what the outward show seems to declare.

The dawning knowledge that such is the fact is of signal service to the novice, who with open mind really desires to know the truth about Christian Science. It enables him to accept the teaching of Christian Science that all true law is spiritual law, and that when one takes advantage of such law he will naturally and necessarily experience the effects of the operation of that law. The appreciation of the power of a natural law (that is, a law of God, for only God's laws are truly natural) is the greatest joy that any one can experience. It has a steadying effect that establishes confidence in place of doubt, faith in place of fear, reliance in place of wavering.

Any one, every one, may experience this power. To do so, perhaps the first step is to set aside any prejudicate opinion concerning Christian Science, and resolve to read its literature with as open a mind as possible. Doubtless many statements will be met which do not appear to be clear, many which the reader may think somewhat erroneous, and perhaps some which he will feel like contradicting flatly. Never mind. Let him persevere. When he has reached the end of Science and Health, let him start at the beginning and read the book through again, and he will be surprised to find that things he did not understand in the first reading are now clear, and things he doubted he will see in a different light. Perhaps he may even become aware that some physical malady which has afflicted him, or some habit which he could not previously conquer, has disappeared. If so, he will experience the great encouragement which comes from observing the operation of a natural law, even though he may not understand at the time, or perhaps for some considerable subsequent time, how this law has been set in operation.

The fact is that human beings, until they gain at least some glimmer of Christian Science, are in a dense mental fog. They accept the testimony of the senses and the mistaken opinions of authorities who are no better qualified to form opinions than they themselves, because the point of view is wrong. With the awakened understanding which Christian Science brings, there comes the knowledge that things are not what they seem to be; that above the fog is the clear sky, and that in due time, if one is persistent in holding to and applying what understanding he has, he can prove for himself the harmony of God's universe. Then the fog will disperse. In due time he will learn to deny, or rather to reverse, the testimony of his physical senses, and to put in practice the counsel Mrs. Eddy gives on page 261 of Science and Health; namely, "Look away from the body into Truth and Love, the Principle of all happiness, harmony, and immortality. Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

WILLING SERVICE.

MAY BELCHER.

THOSE who are living in homes in which the occupants are not all students of Christian Science, often find it very difficult to know just how far it is necessary to make concessions to the more material thought surrounding them. In our zeal to uphold the teaching of Christian Science in all its purity, we are sometimes tempted to forget the point of view of others, and thus unthinkingly cause suffering and annoyance which could easily have been avoided had we really carried out in spirit and deed the golden rule, "As ye would that men should do to you, do ye also to them likewise."

All through her writings Mrs. Eddy has enjoined upon us the utmost consideration for all with whom we come in contact. Over and over again she has pointed out that we should never wound another's feelings unnecessarily, and we know that the very essence of the Christian Science teaching is love and charity to all men, no matter what their creed or profession. If it is our privilege to do a helpful action for others, we need to see that the true spirit of love accompanies the deed, or it will be absolutely valueless. Mere outward conformity is of no use at all. No matter if the deed is one quite foreign to all our own convictions, if we go about it in the right way, and purify our own thought from any sense of self-righteousness or criticism, we can bring so much love and charity to bear that we not only help our brother but ourselves also.

Often we fear that by making an outward concession to material beliefs we are hindering our own growth, and so a selfish thought creeps in, and we either refuse to give the material help, or we do it so reluctantly that the recipient feels the unwillingness and lack of love, and we have again missed an opportunity to receive the blessing which is promised to one who "seeth his brother's need and supplieth it" (Science and Health, p. 518). How different is all this from the boundless love and charity which was taught by our Master in that wondrous sermon on the mount, which has been rightly said to contain the whole of Christianity. There we read: "And whosoever shall compel thee to go a mile, go with him twain." This is no mere outward compliance, but the whole-hearted love which gives help and service generously, wherever and however the help is needed.

When the multitude were hungry, Jesus did not give them mere abstractions or theories; he knew, and had demonstrated, during his forty days' fast in the wilderness, that food was not necessary to man's life; but he also knew that the multitude before him were not ready to understand this, so he gave the practical help which they needed and provided them with the food which at that time seemed necessary to their well-being and comfort. We also learn from the gospel narrative that Jesus not only supplied their bodily need, but also that he had compassion on their weakness and would not send them away fasting, lest they should faint in the way; and it was this divine compassion and the loving desire to serve which enabled Jesus to help and heal all the sick, sorrowful, and sinning. Whatever we are called upon to do for others we can do fearlessly, knowing that we can always hold in thought the true concept of God and His perfect spiritual creation. If it is necessary for us to take part in what may seem very material and mundane proceedings, we can silently uphold the Christ-ideal wherever we go, and thus all who are brought in contact with us will feel the healing touch and rise into a higher and purer condition of thought because of it.

We need to realize the absolutely practical nature of Christian Science and the infinite scope of its healing work. Although it may not seem possible at the present time for some to give up all material work and devote their whole time to taking patients, there is no need to be discouraged. To strive to put what we understand of Christian Science into practice every moment of our daily life is also to have our part in the healing and redemptive work. If we have a room to dust, or a dinner to cook, or a home to make happy and bright, we can carry into those homely every-day duties such a sense of perfection, harmony, and dominion that the perfectly dusted room, the beautifully prepared dinner, and the happy well-ordered home will prove to others the practical nature of our religion and the joy of our willing service. It was once pointed out to the writer that the initials "C. S." stand also for common sense, and the hint has been very helpful, because common sense does contribute very much to our own happiness and also to that of others.

"Let your moderation be known unto all men" is a precept which no student of Christian Science should ever forget. If we were to remember that single wise admonition, and do nothing which could in any way be an unnecessary cause of suffering or offense to others, it would break down a great deal of prejudice and show the world that Christian Science is not a mere ideal or a narrow sectarian religion, but that it abounds in practical loving help for all humanity.

CLASS DISTINCTION.

COL. W. E. FELL.

CHRISTIAN SCIENCE is engaged in breaking down many social injustices and abuses, and its success in this line of endeavor is ever receiving a wider recognition, which points to the ultimate abolition of what is called class distinction. This false sense of things is probably more pronounced in England and Europe than in republican America, although it exists in some form or other in every civilized country. It can however be handled only by the manifestation of much tact and sympathy, that is, by much wisdom and love.

Both ends of the social line must work for the uplifting of all mankind. He who has the privilege of birth and education, which after all is merely what may be termed an improved belief, must clearly understand that there is but one Mind and one model, the Christ-ideal, and he should at all times and under all circumstances regard his fellow man, be his station in life what it may, as the manifestation of this Mind. This mental attitude will raise little by little those who have not had the advantages which he himself enjoys. Birth and education are a great responsibility and it behooves a Christian Scientist to make proper use of them. On the other hand, those who are held in the trammels of a sense of lack of education and refinement must demonstrate the equality of man by rising in education and general bearing to the level of those who do not labor under this cramping belief. Today Christian Science has opened out an opportunity to rise in the social scale by affording a liberal education and a standard of refinement to all who have the sense to avail themselves of it. I refer to *The Christian Science Monitor*. One instance of the value of the *Monitor* as an educator is illustrated in the following incident: A young woman who had, through the ministration of Christian Science been healed of mental weakness, and so completely as to have become a bright and intelligent member of society, told the writer that she had been sent to school more for the sake of the companionship of the other girls than in the hope that she could learn anything. After Christian Science treatment, however, which restored her faculties to a normal condition, she was confronted with the necessity for commencing her education at a time when most other girls had completed theirs. This feat she accomplished to the satisfaction of herself and her friends through the study of the *Monitor*. The plan she adopted was to sit down every day with an English dictionary, an atlas, and carefully study its columns. When confronted by words she did not understand, her dictionary was re-

Digitized by Google

ferred to, and in like manner the atlas for localities mentioned. What was possible of accomplishment in her case is certainly possible in all cases.

The attempt to rise in the social scale when one is urged thereto by ambition or any other unworthy motive is doomed to disappointment and much heartburning. Nothing is accomplished in this way, the previous condition still remains, it is not fairly and scientifically overcome. To push oneself to the front in a material, personal way was denounced by Jesus in the parable of the feast. The "thruster" (a term well known in England) is an offense to all, and his methods cannot further his advancement, but merely beget a sense of antagonism against himself. According to Jesus' teaching, how much better is it to take the lower place and wait in patient perseverance and humility for the call, "Friend, go up higher."

We can all meet on the basis of a common interest in our church and in our work for the cause, and for the rest it matters not at all. The writer when taking his first steps in Christian Science made great friends in a social kind of way with some persons whose station in life was not the same as his own. He flattered himself that he was busy breaking down class distinction, but the result was certainly discouraging in the extreme. On telling of this experience to a Christian Science friend, she replied, "Yes, but there are no class distinctions in Christian Science." The writer was too astonished to reply, and it was months before he realized what was meant, for had he not been breaking down this very class distinction? Then it dawned upon him that his conduct had caused his humble friends to make a class distinction, and egotism, the root of all the trouble, was rebuked. So we see this is a matter for demonstration and not experimentation.

The socialism of Christian Science can be attained only through a leveling up, and not by a dragging down of any to a lower level. Whatever others may say to the contrary, Christian Scientists know that ignorance, poverty, and want of refinement are not virtues; there is no merit in them at all; they are diseased conditions from which the sufferer must arise through a better understanding of God and what He has done for man. In Jeremiah we read: "Let not the wise man glory in his wisdom, neither let the mighty man glory in his might, let not the rich man glory in his riches: but let him that glorieth glory in this, that he understandeth and knoweth me, that I am the Lord which exercise lovingkindness, judgment, and righteousness, in the earth: for in these things I delight, saith the Lord."

Christian Science has not come to place persons in positions which they cannot sustain, nor does it give them more to meet than they have the strength and understanding to meet. There is an equality, an equality of spiritual understanding, which ever points to perfection, and the nearer humanity attains to this the sooner will all false sense of class distinction fall to the ground, and the reign of one Mind, one Love, one Truth, be found supreme.

Meanwhile let our conduct be characterized by consideration for other people's feelings and by a brotherly love which shall break down all barriers existing between man and man. If we love God supremely and our brother as ourselves, the rest may safely be left to divine guidance.

WHERE DO WE STAND?

W. ALBERT BOSWELL.

THERE are two statements in the Bible, viz., "He that is not with me is against me," and "He that is not against us is on our part," that have always seemed to me rather contradictory; but on studying them more carefully I was able to understand them better, and it may possibly help some one else if I give the result of my studies, or still better, may encourage them to make their own.

To get at the true meaning of a text, it is important to consider the context, to see how the text affects the general sense of the teaching, and how the general sense affects it. In Mark ix Jesus is dealing with the dispute among his disciples as to who should be greatest, and takes a little child as an illustration of the right mental attitude of those seeking the kingdom of heaven. Now an ordinary healthy child delights in learning anything practical; it is imitative, and if left to itself will try to do something like that which the grown-up people about it are doing,—it likes to help in the work. Doubtless the man who was casting out devils was doing so in this spirit. He had seen Jesus casting out devils and had heard his teaching, and with childlike eagerness and faith had thought, "Why should not I also try to do good in the same way?" Then he had tried, and had succeeded. The disciples, however, saw it differently. They were more ready to condemn him, because he did not do exactly what they considered right. Possibly a little jealousy may have crept in here also: especially if he was able to cast out devils more successfully than they were—so they "forbad him."

Jesus, on the other hand, recognizing that the man was working in the right spirit, said: "Forbid him not: . . . he that is not against us is on our part." Evidently he was referring to the rightness of the motive that was behind the action,—"in my name" (this is the point); and he went on to show that the slightest thing done in that spirit had its reward, but that the opposite condition of mind, namely, jealousy, hatred, etc., involved suffering until here or hereafter it was corrected—for corrected it must be, at whatever cost to personal sense or treasured traditions, before harmony could be attained.

The text in Matthew occurs under very different circumstances. There, instead of the childlike thought anxious to do good, it is a case of the pharisaical spirit, ever ready to condemn and to find evil. It is to this spirit Jesus seems to refer when he says, "He that is not with me is against me." He had just healed "one possessed with a devil, blind, and dumb;" but the Pharisees accused him of casting out devils through Beelzebub the prince of the devils. Jesus shows the fallacy of this argument and continues with that remarkable statement about the sin against the Holy Ghost, which, taken by itself, has filled so many people with an awful dread lest they should have committed this mysterious and unforgivable sin. If, instead of taking an isolated statement and building theories of eternal damnation upon it, they had quietly and prayerfully tried to understand the real teaching running through the chapter, they might have learned a useful lesson, good for all time, viz., that in things pertaining to religion it is well to use one's highest intelligence and to reason at least as carefully and logically as one would about other things, instead of allowing oneself to be swayed by blind prejudice and accordingly to attribute the casting out of devils, the healing of sickness and sin by the one operation, to some evil power, instead of recognizing in such work a manifestation of the goodness of God.

Jesus showed clearly that this illogical mental attitude, that of attributing good fruit (or consequences) to an evil tree (or cause), could never result in harmony (would never be forgiven), either now or at any time. This was the mental attitude of the Pharisees in those days, and it was unsparingly condemned by Jesus. It would be well if some of the strict religionists and other well-meaning but short-sighted people paused to consider whether in opposing Christian Science, in condemning its teaching and works, they are indeed followers of him of whom it was prophetically said: "A bruised reed shall he not break, and smoking flax shall he not quench, till he send forth judgment unto victory;" or whether, rather, they are merely treading in the footsteps of the Pharisees. Surely all professed Christians desire to be found on the side of the Christ-teaching, which ever leads nearer to God.

"WHO TOLD THEE?"

W. TAYLOR STONE.

To most of us, in our first introduction to Christian Science, there has probably been nothing which has caused us more perplexed thought and tripped us up more frequently than the question of sense testimony, the evidence or appearance that confronts the physical or material senses. This confusion is caused mainly, no doubt, through our having been taught to accept as true and reliable all the evidence which comes through these channels, as well as to believe that the record of creation as given in the second chapter of Genesis was the detailed account of how God had made man. To the human mind this account seemed more get-at-able; whereas the more spiritual record found in the first chapter could only be understood by spiritual sense.

When Adam gave as his reason for hiding in the garden that it was fear caused by the belief that he was naked, the voice of Truth put the question to him, "Who told thee?" He might well have replied that it was only sense testimony, for he could not have gotten that kind of evidence or consciousness from God. All through the ages this question has been asked. At times it has been almost inaudible, unheard, but today it is ringing out clear and strong in Christian Science, as Truth asks, Who told thee that man is material? Who told thee thou art sick or diseased? Who told thee thou art blind, deaf, or lame? Who told thee thou art dying of an incurable disease? Who told thee thou art a poor wretched sinner? Who told thee thou art in difficulties, with a problem that thou couldst not meet? To each question the Christ Science replies, "Sense testimony alone, which discerns not the truth of being."

How exceeding glad we should be that this glorious truth has been discovered. Is it any wonder that there are thousands upon thousands who are grateful that one was found spiritually-minded enough to receive this wonderful revelation? How one could wish that he could have gone to Adam and awakened him out of the illusion that life is in matter, and so saved his progeny from perpetuating the lie. How rejoiced we should be that we too have been shown the way of escape from it, and that when our mentality is receptive we may receive that revelation of spiritual understanding which will enable us not only to answer the question but to destroy this false evidence and the fear it produces, both in our own consciousness as well as in the mentality of others, by the realization that man in divine Science is not naked but "clothed, and in his right mind;" or, as Science and Health so beautifully puts it (p. 171), "Through discernment of the spiritual opposite of materiality, even the way through Christ, Truth, man will reopen with the key of divine Science the gates of Paradise which human beliefs have closed, and will find himself unfallen, upright, pure, and free."

THOUGHTS.

HELEN P. BLAKE.

In the prophecy of Jeremiah we read: "For I know the thoughts that I think toward you, saith the Lord, thoughts of peace, and not of evil, to give you an expected end." It is also our duty to know our thoughts, whether they be of peace or of evil; whether they are the thoughts which heal and bless all mankind. If we were constantly to think only right thoughts, we should find sin, disease, and death lessening in an amazing degree. It is not that we do not always know right thoughts, but that we do not always exclude evil thoughts. We are apt to listen to and discuss in detail some case of sickness, sin, or death, yet how great would be the blessing if we promptly denied each claim of evil with the understanding of its nothingness. For, after all, whether the case be that of sin or sorrow, pleasure or pain, it is the result of the belief of life and intelligence in matter; hence we should be more earnest in declaring, as did Paul, that man lives, moves, and has his being in God.

Mrs. Eddy says: "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good" (Science and Health, p. 450). What would we think of the enlisted soldier who in time of war refused to meet and repulse the attack of the enemy? It is no less our duty to overcome the enemy,—the material thought which gives place and power to the belief of evil in every form. Our battle-ground is the entire round of human thought, and "the weapons of our warfare are not carnal, *but mighty* through God to the pulling down of strong holds." It is also good to recall often the cheering words, "Be *not* afraid nor dismayed by reason of this great multitude; for the battle is not yours, but God's."

We must at all times bear witness to the truth. Our good may be evil spoken of because it is not understood; but it surely is a blessed privilege to be misunderstood for the cause of Truth. To be always ready with the denial of the power of error in whatever form it presents itself,—to overcome evil with good,—is to think "thoughts of peace" which must bless and heal. Let us therefore resolve to take up the duties of each day, guarding well the avenues to our thought, and thereby expressing our love and gratitude to God and to our dear Leader.

[Written for the *Sentinel*.]

RECOMPENSE.

EMMA GOODMAN.

Dark the night with cloud of sorrow,
With tear-dimmed vision of tomorrow,—
So much of joy and hope had fled:
When unto me the still voice said,
Read thou the Word.—"She is not dead"!
'Tis but a darkling dream. Be led
By Truth, until its dawning day
Shall flood with light thy future way.

Thus did I pray for dawn of light;
Like Jacob, wrestling all the night
With false beliefs and many fears,
And reading on through blinding tears,
Searching the Word which heals and cheers,
Lo, sense dreams vanish, light appears;
The mist of error clears away—
Far spent the night; 'tis dawn of day!

In righteous paths Love leadeth me
To pastures green. Ah, now I see
I must be led: I fain would choose
A flowery path and rainbow hues.
This is the way, Love cries; else lose
The promised heights and grander views.
Love heals my sense of grief and tears,
And bids me hope and stills my fears.

Thou art my shepherd, Love divine,
Forever guarding me and mine.
The storm is spent; now all is calm
Beside still waters, where the palm
Of peace sheds o'er me healing balm.
And lo, uplifted by this psalm,
Light dawns on my once darkened sense,
And I have gained sure recompense.

SELECTED ARTICLES.

[*Army and Navy Journal*, New York, N. Y.]

The following letter from Secretary of War Stimson appeared in the *New York Sun* of Jan. 19:

Editor of the *Sun*.

Sir: One item in the letter which appeared in the *Sun* of Jan. 14 discussing the recent executive order regulating the practice of medicine upon the Canal Zone calls for comment to avoid any possible misapprehension.

The writer pertinently asks whether the public should not be "at least protected against contagion and infection from unreported and unguarded diseases." Most decidedly it should, and the order promulgated by the President carefully secures such protection. It is particularly essential upon the Canal Zone to preserve sanitary safeguards and a rigorous control over contagious diseases. To that end sanitary rules have been drawn up under the expert advice of Dr. Gorgas, and others will be enacted as experience from time to time prompts. Obedience to these sanitary rules and regulations is exacted at the pain of criminal prosecution of every practitioner, whether medical or Christian Science.

The recent order, which in effect exempted reputable Christian Science practitioners from the necessity of being licensed as doctors of medicine, merely followed the legislation of a large and important number of states, as well as the tropical territory of Hawaii. But the exemption is specifically allowed only on condition that "such sanitary laws, orders, rules, and regulations as now are or hereafter may be in force in said Canal Zone are complied with." In other words, the existing laws amply continue the rigorous control of infectious and contagious diseases upon the Zone. No change in this policy will be made except to strengthen if anything the humane and effective control which Dr. Gorgas and his men are exercising upon the Zone for the health of the canal, and therefore for the whole world.

HENRY L. STIMSON, *Secretary of War.*

Washington, Jan. 18.

[Frederick Dixon in *Surrey Comet*, Kingston-on-Thames, England.]

May I draw attention to the fact that there must be something much more than "curious" in the teaching of Christian Science, if it can appeal to the spiritual hunger of mankind. The simple fact is that, no matter what critics may say, Christian Science is the return to primitive Christianity. It is new, inasmuch as it is a revolt from what the speaker himself termed the husks of the dogmas of which men are wearying; but it is old indeed, inasmuch as it is merely a return to the gospel preached by Jesus in the first century of the Christian era, a gospel which was itself the culmination of the knowledge of the Christ which had been coming to humanity through the monotheistic religion of the Hebrew people for centuries previous.

Jesus of Nazareth said of the father of the Hebrew people, "Your father Abraham rejoiced to see my day: and he saw it, and was glad." It is obvious that Jesus did not mean that Abraham had seen the son of Mary; what he did mean was that Abraham had that vision of Truth, that dim perception of the Christ, which manifested itself in his revolt from the hideous polytheism of the surrounding nations, and his proclamation of monotheism. This perception of Truth was manifested when he crushed back the instinct which the influence of the old Moloch worship would have led him to in the proposed sacrifice of Isaac, substituting in its stead the ram caught by its horns in the thicket. This was Abraham's vision of Truth, a vision which constituted him the father of the people of Israel, who remained alone the chosen people, until the day came when the Christ was accepted by the Gentiles also.

The vision of Abraham was perpetuated by the patriarchs and by Moses, in those stern provisions of the law which, in a rude age, repressed the sensuous and fierce passions of the people within bounds approaching more nearly to Principle than the unchecked license of their fathers. It was Moses who showed the people that the God of Israel was manifested through that supreme intelligence which separated the Red sea before the hosts of Pharaoh, and brought the water from the rock in the wilderness. This vision of the Christ as gained by Abraham, and perpetuated and enlarged by Moses, was necessarily an ever-broadening one, and was expressed by the prophets in their revolt against burnt sacrifices, particularly in the well-known words voiced through Isaiah, "I delight not in the blood of bullocks, or of lambs, or of he goats." So, little by little, the truth grew, and the light became brighter, until there came the forerunner of the Christ, the man who preached the gospel of the baptism of water. And then, at last, there came that full illumination of Truth, when the baptism of John gave place to the baptism of Jesus, who baptized not with water, but with fire, and with the Holy Spirit.

The baptism of water had been the type of moral purity. The baptism of fire was that renunciation of self contained in the stern demand that the followers of Jesus the Christ should deny themselves utterly and take up their cross and follow him. Only as these disciples learned to deny themselves utterly, could they claim their spiritual selfhood, could they begin to perceive the depth of wonderful meaning in the saying to Nicodemus, "That which is born of the flesh is flesh: and that which is born of the Spirit is spirit." As they began to understand this utter denial of the flesh, they began to understand why it was that Jesus claimed for them, equally with himself, the title of sons of God. He was indeed Jesus the Christ, because in him the vision of the truth about God, which in the Greek text of the New Testament is expressed in the phrase, the scientific knowledge of God, was manifested in its full force. This was why Paul bade the Philippians let that Mind be in them which was also in Christ Jesus; for so surely as the Mind of Christ is manifested, does the man in whom it is manifested walk in the footsteps of Christ, deny himself utterly, take up his cross, and demonstrate his sonship with God.

Those, Jesus said, who believed in him would be able to do his works. It was the Mind of Christ which in the first century enabled Jesus to heal the sick, to cleanse the sinner, to raise the dead, and to overcome all the phases of materiality, conquered in such incidents as walking on the water and feeding the multitudes.

It is surely, then, just what Jesus and none other than Jesus, declared it, the proof of a man's Christianity that he should do the works he had done; and this brings us to the second reference to Christian Science in your columns, a defense of vivisection and denouncement of Christian Science. It is the belief of the critic that the beasts of the field and sinning humanity are equally the creation of God. It is his belief that God has placed certain material conditions in the hands of humanity for its own help. God, wrote John, is Love; yet, according to this critic, divine Love has fashioned dogs and rabbits that they might be tortured and subjected to pain and anguish for the amelioration of the diseases of men, brought about through human sin; for it is through sickness that men die, and, in the words of Paul, it is sin which brought death into the world.

Christian Science denies this utterly. It says that the creation of God is spiritual, for God, as Jesus said to the woman of Samaria, is Spirit, and the image and likeness of God is spiritual. In God's kingdom is nothing but harmony and joy, for God is Love. The kingdom of God, Jesus said, is within you, and here and now, as man lets the Mind that was in Jesus Christ dwell in him, will he enter the kingdom of God, walking forward in the footsteps of Christ, until he gains, though never through death, the knowledge

Digitized by Google

of life eternal. "This is life eternal," Jesus said, "that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Jesus was the way. He gained, through the overcoming of death, the consciousness of life eternal, and those who believe in him and do his works, will gain first that understanding of the kingdom of God within which will lead forward to the final demonstration over death, which Jesus made first for them on Calvary.

[Samuel Greenwood in *Victoria (B. C.) Times.*]

I beg the privilege of saying a few words in reply to an editorial on Christian Science in the *Times*. I might say at the outset that I have been a student of this subject for a number of years, but I have met with nothing in the teaching of Christian Science, or in the experiences of Christian Scientists, that would in any degree justify such charges.

It seems to me that the whole question resolves itself into one of actual results, in accordance with the Master's teaching that a tree is known by its fruit. It is now generally conceded, even by its opponents, that much good has been accomplished by Christian Science, and that its influence upon the character and conduct of those who practise it is beneficial in a high degree. In view of these facts, the charge that Christian Science is "a menace to rationality and even to life," and that Christian Scientists have the liberty to practise their faith only "because their unconverted fellow citizens look after the public health," is somewhat astonishing. It would make strange reading to lay such a charge against the Methodists or the Presbyterians or the Episcopalians, and yet it would be as reasonable in one class as in the other. You must have a grotesque idea of the habits and mode of life of Christian Scientists, but I can assure you they are practically the same as other people. They believe in the best methods of sanitation, wholesome food, cleanliness in all things, and take as good care of the body in every way as do others. They believe in reporting cases of contagious disease to the proper authorities, and do so as a rule when the occasion arises. What more are their fellow citizens doing to conserve the public health? Of course it is true—and this may be what has caused alarm—that they do not take medicine when they are sick; but why should they? Many of the most successful physicians are prescribing less medicine all the time, some going so far as to deny that it has any virtue whatever. I venture to say that if your own experience had proved to you beyond a question that you enjoyed better health or recovered more rapidly from sickness, without the use of drugs, you would consider it the most common-sense course to leave them alone.

It is true, also, that Christian Scientists are learning to rely upon God alone for their healing when sickness overtakes them—and why shouldn't they? Is there anything in the Scriptures, or in the creeds and doctrines of "the great historic churches" you refer to, which would disparage one's Christianity on that account, or that would deny the Christian the privilege of trusting God with all his heart and soul and mind and strength? Is there anything in the Master's teachings which would impugn the wisdom of such a course? It must be true beyond question that God is worthy to be trusted with all we have, and that Christ is worthy to be followed and obeyed in all ways and all the way. Else, wherefore so much preaching and praying and church-going? I have seen the famous Dr. Osler quoted as saying that hope is the best medicine one can take; then, if hope is so good for the health, faith must be better, while the knowledge of God as the life of man is even more to be commended. One would imply from this editorial that a man's religion should be a matter of sentiment rather than of practice; and that no matter how earnestly we may be exhorted in the Scriptures and from the pulpit to have faith in God in time of trouble, it is dangerous and irrational to take these exhortations too seriously. What can Christianity be for if not to enable mankind to overcome evil of every kind?

It is a rather gratuitous misjudgment of Christian Scientists to say that "if it [Christian Science] had the power, it would leave us at the mercy of disease-producing microbes and put an end to the investigations of laboratories." They rejoice in all that makes for human progress, and would put an end to nothing which others believe is necessary to their welfare, even if they had the power. It is their desire to protect others in every possible way. It is surely neither rational nor Christian that a man's confidence in God's protecting care should go to pieces before a microbe, especially when one remembers that sweet promise of *Christ:* "Behold, I give unto you power . . . over all *the power* of the enemy; and nothing shall by any means *hurt* you." Christian Scientists are just old-fashioned enough to believe that Jesus' words, and the wonderful assurance of safety in the divine presence voiced in the ninety-first Psalm, are applicable to their own every-day life, and will continue true to the end of the Christian's conflict.

When you say that Christian Science "flourishes only in minds from which the great ideas that carry on the world are shut out," I am tempted to regard it as a joke. It is so at variance with the facts. It would seem from this that when one becomes a Christian Scientist he is straightway metamorphosed into a human shellfish, and withdraws from the world and its affairs. Christian Scientists are today filling positions of trust in practically every branch of service; they are represented on the judicial bench, on the faculty of universities, at the head of banking and other commercial institutions, and even in the newspaper editorial chair.

The practice of Christian Science is nothing more or less than the utilization of the power of good to overcome evil; and there is no mysticism in that. The fact of the matter is, the truth of Christian Science is so simple that its critics, as a rule, stumble all over it without seeing it, because they are either trying to understand the spiritual from the standpoint of the material, or to reconcile the spiritual truths of the New Testament with the theories of materialism. It should be noted that the fundamental teachings of Christian Science, such as the infinity of God, His omnipotence, omnipresence, omniscience, the perfection of His work, and the supremacy of His law, are embodied in the doctrines of practically all the churches of Christendom; then why chide Christian Scientists for endeavoring to hold fast to these truths, rather than surrender their faith before the arguments of a materialistic philosophy which denies these essentials of Christianity?

[John S. Clarke in *Newcastle* (Eng.) *Weekly Chronicle.*]

It is quite two years since my name appeared among the contributors to "Open Council." During my wanderings I have visited many of our most important cities and industrial towns, and in many of these latter I have heard great lamentation from the clergy, who appear to be universally afflicted with the one complaint—empty churches. For some years there has raged an epidemic of microscopic congregations, and numerous discussions, both in and out of the press, have sprung up throughout the country as to the cause of it; but many of the reasons given are far from satisfactory to the thinker. Principally is urged the church's lack of sympathy with the working masses. Some venture the assertion that the destructive criticism of the "higher critics," combined with the steady and increasing power of the rationalistic and socialistic movements, is producing the effect. Whatever be the cause, the fact is there, and the incessant bewailing on the part of the clergy and interested laity seems to have little effect.

One thing appears to have been entirely overlooked in

Digitized by Google

these discussions; that is, that while it is desperately true that church attendance has diminished by leaps and bounds, yet there is no indication of a corresponding diminution in the spirituality of the nation. How to account for this perplexing state of things, this anomaly of anomalies, is the problem we have to tackle. Personally, I believe the solution is not far to seek. The church has been too slow in seizing its opportunities to bring its theology into correlation with advanced thought. In other words, the teachings of the church are too antiquated to be compatible with the modern trend of thought, and consequently all thinking people are seeking elsewhere for their spiritual food. . . . That true spirituality, far from decaying, is enjoying a rapid ascent and receiving fresh impetus each day, will be made apparent to any one interested enough to study the rise and development of such purely metaphysical movements as theosophy and Christian Science. That is specially true of the progress of the latter, as it is of more recent origin and is certainly more spiritual in its essence.

Let me add that I am not a member of that body, but speak merely as one who has investigated its claims as an advanced religion. In my opinion, it has proudly vindicated itself from the unjust and totally unwarranted accusations of the materialistic and theological schools of criticism. Preeminently it stands as a magnificent demonstration of divine Christianity—the religion which was metamorphosed into a farce centuries ago by Constantine. I have attended services in many a place, but nowhere have I seen the spirit of Christ manifested as it is in the tiny "Science" church. The metaphysical interpretation of the sacred writings appeals more to the thinking classes of today, and it is neither to be wondered at nor deplored that people are breaking from the primitive ideas of our forefathers. Rather does it herald a healthier and purer age.

[Editorial in *Tipton* (Ind.) *Advocate.*]

The *Advocate* has recently been receiving on its exchange table a daily copy of *The Christian Science Monitor*, which is published at Boston, Mass. The paper is a seven-column, fourteen-page publication and compares favorably with the best metropolitan papers of the country. It has been published for almost four years and has a nation-wide circulation. While its pages contain little if anything regarding Christian Science religion, it is an example of clean journalism which is quite refreshing. It stands aloof from sensationalism, as murders, suicides, etc., are omitted from its news columns. Politics is given attention in its editorial columns, which are evidently in the hands of most capable writers. There is a page devoted to popular sports, such as football, baseball, and automobile racing, but prize-fights are given no consideration. The financial world is reviewed daily and a considerable amount of space is devoted to the home circle, making *The Christian Science Monitor* a modern and at the same time a wholesome newspaper.

[From an editorial in *Los Angeles* (Cal.) *Journal.*]

Daily experience is fast demonstrating that no one school or system can truthfully lay claim to the exclusive right of way in a field of activity so broad and far-reaching in its sweep as is that of the treatment and cure of the sick. It is not to be doubted that through the practice of Christian Science thousands have been cured of diseases which have baffled the best skill of other systems of treatment. To deny this is unjustly to discredit the concurring testimony of thousands of people whose reputation for veracity and for intelligence is beyond criticism.

In view of its remarkable record of successful achievements in treating and curing those afflicted with disease, Christian Science merits the gratitude of humanity.

[William J. Bonnin in *Rochdale* (Eng.) *Times.*]

The Rev. —— informs your readers that he would not like to stand before the throne at the end of the world if he had taught, as Christian Science does, that "one sacrifice, however great, is insufficient to pay the debt of sin." Yet why he should mind doing that, or indeed anything else, if he is confident that one sacrifice has paid the debt of all sin, is not quite obvious. Christian Science sees Christ Jesus as the Wayshower. It sees in his crucifixion the type and symbol of the sacrifice of the material, mortal, and fleshly beliefs that each one has to make in working out his own salvation. In such a sacrifice it sees a gradual spiritualizing of thought that in a corresponding degree brings one into harmony, at-one, with spiritual reality, with the divine Mind. This is, in brief, the spiritual truth that Christian Science discloses to be the essential meaning of atonement.

The gentleman does not, by the way, mention which one of the many current explanations of the doctrine accepted today by orthodoxy, he himself is in favor of. His apparent content simply to notify your readers of his displeasure with the Christian Science teaching recalls his remarks on infallibility. The Christian Scientist is satisfied with the infallibility of Christian Science, usually through his own experience, and is concerned only to demonstrate it as far as he may be able, without discussing or condemning the religious beliefs of those who differ from him. This attitude is a widely different one, though this critic seems hardly to have appreciated it, from that induced by such a belief in infallibility as will persuade one, without the slightest provocation, to denounce as fools and heretics those with whose religious beliefs he may be at variance. The allusion to "glass houses" is, under the circumstances, a little inept.

The reverend critic's contention that the reference to anointing in the passage from James establishes the fact that material means are requisite, raises the question, What is the actual healing factor? Is it the ointment, or is it God? James says that "the prayer of faith shall save the sick, and the Lord shall raise him up." He doesn't say anything about the ointment raising him up. Is not the ointment to be regarded as a symbolical element, necessary at that day, introduced to mark the occasion as one for devoutness and consecration? If it is seriously contended that it was the ointment which should heal, it is at least strange that the composition of it has not been preserved. If, however, it is argued that for ointment we are to read the latest discovery or device of medicine or surgery which medical science declares to be effective, with or without any appeal to the Deity, then that is to argue that God reserves His healing for the infinitesimal minority which can obtain such medical ministration; and, moreover, that His chosen servants for the work are a class who do not necessarily admit Him to exist and who do not professedly accord Him any power whatever. Christian Scientists do not believe that God needs to, or in fact does, employ any material means at all, or that He requires any such agents.

The critic's letter concludes thus: "If the apostles, early Christians, and John Wesley did without (Christian Science), so can we." The apostles, the early Christians (and, in a certain degree, John Wesley) healed the sick without using material means. Their Christianity was a practical, saving Christianity. To reintroduce it is the one object of Christian Science.

The truth which another man has won from nature or from life is not our truth until we have lived it. Only that becomes real or helpful to any man which has cost the sweat of his brow, the effort of his brain, or the anguish of his soul. He who would be wise must daily earn his wisdom.—DAVID STARR JORDAN.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

IF THINE EYE BE SINGLE.

CHRIST JESUS declared the infiniteness, the allness of God's kingdom, and evil's consequent nothingness and powerlessness, in the closing sentence of that wonderfully comprehensive prayer, so full of significance today to Christian Scientists, which he taught his followers nineteen centuries ago: "Thine is the kingdom, and the power, and the glory, forever." It was in his exposition of this prayer that he exhorted his followers to seek "first the kingdom of God, and his righteousness; and all these things [the so-called essentials of existence] shall be added."

There could be no more pertinent illustration of this teaching than is briefly set forth in the chronicles of King Solomon. We are told that he "loved the Lord, walking in the statutes of David his father;" and that when he was bidden to ask of God a gift, his prayer was, "Give therefore thy servant an understanding heart," a request which was so pleasing to God that He bestowed upon Solomon not only the wise and understanding heart he desired, but the things he had not asked for,—riches and honor and length of days. This, then, is the "kingdom of God" we are bidden to seek first, to desire above all other things, the wisdom and understanding whereby we may lay hold on the knowledge of God's omnipotence and ever-presence, through which is made manifest the supremacy of Truth in the overcoming of sin, disease, and death; and in so doing lay up for ourselves not only the promised "treasures in heaven," the boon of eternal life, but find, in recompense for all that is given up in the way of worldly possessions for the Master's sake, "an hundredfold now in this time."

Following in the Master's footsteps, Mrs. Eddy writes on page 183 of Science and Health, "Divine Mind rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty." From this it should be clear to Christian Scientists that for them there can be no halting between two opinions, no divided service; they must not "expect to work equally with Spirit and matter, Truth and error" (Science and Health, p. 167). There must be a definite and emphatic adherence to Principle in all ways, if the kingdom which Jesus said is within is to be made manifest in the lives of men. Loyalty to Principle must appear in thought, word, and deed. Behind every great achievement there must be a singleness of purpose, an absolute consecration of endeavor, and there is no higher, holier end, no endeavor worthier of the best that is in us, than a whole-hearted devotion to the work inaugurated by the Master,—the establishment of God's kingdom in the hearts of men, that reliance on the power of Truth to deliver from all evil, before which all the asserted power of the enemy shall go down like stubble before the consuming fire. Only through thus striving can we hope for that spiritual illumination which shall manifest to the world that we are children of the light, and bring down upon us the floodtide of riches and honor and glory that is man's divine heritage.

Jesus did not tell his followers that they were to seek the kingdom of God in order that "all these things" might be added unto them. Far from it! The first and only motive of the seeking must be to find the kingdom, and with its finding would come the realization that the things which were to be added were but incidental to this seeking, and that they paled into insignificance beside the spiritual riches of the heavenly kingdom. So it must be with those who come to Christian Science. The teachings of this religion offer to mankind the knowledge and understanding of God which necessarily includes a like knowledge and understanding of man, the image and likeness of God; therefore the perfect God and perfect man become manifest in human affairs, and the sick are healed.

In other words, we must seek the kingdom, not for the loaves and fishes, but with a clear realization that an unselfish hungering and thirsting after righteousness is the essential thing, and its own reward, for it is promised that they who thus hunger and thirst shall be filled, shall become so imbued with the power of Truth and Love that the healing of both sin and sickness must follow, even as the light of dawn dissipates the shadows of night. He who has enlisted in the service of the kingdom will find that in doing good to others he has wrought his own,—that his every need will be "abundantly satisfied" when he seeks the kingdom with an eye single to the glory of God.

ARCHIBALD MCLELLAN.

"BE YE THEREFORE WISE."

THE higher meaning which attaches to the Scripture word wisdom, identifies it with that spiritual understanding or knowledge of Truth referred to in the familiar proverb, "Wisdom is the principal thing; therefore get wisdom." Christ Jesus also used the word to express that practical foresightedness and discretion which is able to meet the human situation in a masterful way. To fulfil our Lord's hope that we his disciples be "wise as serpents, and harmless as doves," is to be governed in every hour and event by alert and illumined good sense; it is to be saved from the stupidity which is forever inopportune, which is given to the sacrifice of a noble end for the gratification of some whim of pride or impulse. To be wise is to be well poised, considerate for all, free from the dominion of prejudice and self-interest, capable of looking at a question from all points of view, and that quickly enough to take advantage of circumstances which brook no delay. As Christian Scientists we cannot too frequently remind ourselves that it is peculiarly incumbent upon us today to have and exhibit both these riches of wisdom. If found lacking in either spiritual understanding or practical good judgment, we are sure to dishonor our profession and prove, in so far, a hindrance to the cause we would advance.

St. Paul may not have exceeded the other apostles in the emphasis he placed upon the necessity of being "rooted and grounded in love," but his broad knowledge of men and things gave him a keen sense of the need of putting on "the whole armor of God," of having that all-round sanity and sobriety of judgment, that control of temper, largeness of view, and wholesomeness of statement which he so earnestly commended in his letters to his "dearly beloved son" Timothy. No one can read these words of fatherly advice and exhortation without recognizing the significance he attaches not only to one's vital grasp of spiritual truth, but to the faultless mastery, the technique of its expression. "Study," he says, "to show thyself approved unto God, a workman that needeth not to be ashamed." The manner of doing the right thing must be no less ideal than the spirit of the deed. The genuineness of our stand for Principle is determined not only by our willingness to die for it if need be, but by the studious thoughtfulness of our effort to live for it, ideally. No man can take Christ Jesus' uncompromising stand for Truth without offending the pharisaism of those who are zealous defendants of error; but if he have sufficient "wisdom," he can be so circumspect as to avoid grieving his fellow believers, or repelling any aspiring, broad-minded person by his declarations of truth.

It sometimes happens that those who have a correct understanding of the letter of truth, and an altogether good intent, are nevertheless wofully lacking in wisdom, and in her "Miscellaneous Writings" (p. 360) Mrs. Eddy

Digitized by Google

has said that this needed wisdom is inspired by meekness. This describes a mental attitude which is always humble and teachable, free from the assertiveness of conceit. The truly meek do not speak as though they knew respecting a given matter, concerning which they only believe; they do not intrude unnecessarily upon the convictions and prejudices of others, nor make disparaging allusion to the things which a hearer may hold sacred,—in a word, they do not approach those whom they would influence in that tactless way which spells defeat from the start.

In the ninth chapter of his first letter to the Corinthians, Paul enlarges upon the fact that he had adjusted himself to the point of view and peculiarities of every type of human make-up, become "all things to all men," in order that he might win for Christ. It is scarcely possible for the ideal to be humanly expressed without suffering some disability, but thoughtful purpose and studious effort will do wonders toward effecting our escape from the prejudice and pride, the vanity and presumption, the discourtesy and dogmatism which account for the unwisdom of much that is said and done in Christ's name.

JOHN B. WILLIS.

THE ALLNESS OF GOOD.

EVERY sincere student of Christian Science would admit that the "scientific statement of being," given on page 468 of Science and Health, is the basis of all right reasoning, inasmuch as it posits as fundamental truth the allness of God and the consequent nothingness of error. No other religious teaching save that of Christ Jesus has taken this position and consistently followed it to its logical conclusion, namely, a denial of the reality of sin, disease, and death, whatever be the evidence before the material senses as to their verity. Christian Science declares in this "statement" that "there is no life, truth, intelligence, nor substance in matter;" and here it should not be forgotten that while Christian Scientists have to deal with the belief that evil has certain manifestations, these have no substance, and belief in them has no intelligence; hence evil, or error, is without reality to the one who accepts and understands the truth of being.

It is well for us, however, to guard against the mistake of attempting to drive error out of the physical realm, while leaving it entrenched in the mental, the plane of mortal belief. To illustrate, a student of Christian Science would hesitate to say, "I have a headache," because he knows that no discord exists to God, or to the real man who is God's likeness. If, on the other hand, he were to say, "I have a belief in a headache," he would be making the matter worse, for he would be giving the error a place in his consciousness, from which all error should be expelled by the truth. He might of course say that a non-Scientist had such a belief, but he could hardly say it of one who claimed to know the truth. Here we may with profit recall the Master's words, "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil."

It sometimes happens that students of Christian Science give undue emphasis to error by insisting that every manifestation of disease must be classified and attached to some special phase of sinful belief. It is true that Mrs. Eddy says, "A moral question may hinder the recovery of the sick," but she also says that "we must deny sin and plead God's allness" (Science and Health, pp. 419, 15). This means that we must not dignify evil by making it either cause or effect, for the uncovering of sin by divine Truth (not by blind conjecture) means its annihilation. Our text-book says, "Truth should, and does, drive error out of all selfhood" (p. 538). Christian Science teaches us that we should neither fear sin nor love it. We must not even admit that error can resist the demands and the activity of God's law, for it cannot. If it could ever have done so, we should not have the glorious records of Truth's omnipotence which enrich the pages of the gospels,—not only in the mighty works of Christ Jesus, but in his declaration to his followers: "I give you power . . . over all the power of the enemy: and nothing shall by any means hurt you;" a promise which is grandly fulfilled in Christian Science.

We need to guard closely the rich treasures of Truth revealed by Christian Science, and to guard against using, in our effort to build upon the Christ foundation, the "wood, hay, stubble" of mere theories which spring, even at best, from partial or personal views of divine Science. The sacred canon of Scripture closes with a warning against adding to or taking from the inspired word, and Christian Scientists must be wise enough to avoid the mistake of adding mere personal opinion to the message given to this age through their beloved Leader. We must ever strive to maintain for ourselves and others the "right to the tree of life," and leave "without" our consciousness whatever would deny the allness of God and His manifestation.

ANNIE M. KNOTT.

AMONG THE CHURCHES.

HONGKONG, CHINA.

Our new church will be ready for services in January. We have had all our needs beautifully met, and have raised the amount necessary for lot, building, and furnishing, nineteen thousand dollars. The white marble floor comes from Ipoh federated Malay states, the carpet from London, and the beautiful windows from Birmingham; San Jose and Los Angeles, Cal., Chicago, St. Louis, New York, Boston, and London have all forwarded substantial contributions, and we are thankful to God for having given us the fine symbol of His loving-kindness.—*Correspondence.*

WELLINGTON, KAN.

The little frame building at Seventh and Jefferson streets which for some time has been used by the Christian Scientists as a place of worship, has been moved to the rear of the lots and the ground is being cleared preparatory to the erection of a neat brick structure, which is to be put up at once. The new building will be of vitrified brick, modern in every respect, and will seat about two hundred and fifty people. The entire cost will be in the neighborhood of three thousand dollars. The Scientists have an elegant location for their new church building and the improvement will add greatly to the general appearance of that community.—*Wellington News.*

DALLAS, TEXAS.

The congregation of First Church of Christ, Scientist, of Dallas, held services for the first time, yesterday morning and evening [Jan. 14], in their new church edifice, corner of Browder and Cadiz streets. The church, which has a seating capacity of about nine hundred, including balcony seats, was comfortably filled. At both morning and evening there was communion service.

The Scientist church building has been under construction a year and a half, the corner-stone having been laid in August, 1910. Attractive features of the new building are the delicacy, beauty, and modesty of the decorations, the novel and pleasing lighting scheme, by which there is no garishness because of the lights being concealed. The immense and splendidly toned organ is another pleasing feature. While there was no special musical program at yesterday's service, the quality and capacity of the instrument was very evident. A set of chimes occupies a promi-

Digitized by Google

nent part in the construction of the instrument, and an echo organ located near the roof is under construction, this feature being built in Dallas.—*Dallas News.*

MILWAUKEE, WIS.

A little over two years ago Third Church of Christ, Scientist, Milwaukee, was organized by those leaving First Church of Christ, Scientist, as the result of an overflow, and has since been holding services in Plankinton Hall, Milwaukee Auditorium Building. A building fund was started soon after the church was organized, and about a year ago the trustees commenced to look around for a suitable site on which to erect a church edifice as a permanent home. Jan. 25 negotiations were completed, and Third Church of Christ, Scientist, came into possession of a lot one hundred and fifty by two hundred and forty, on Highland boulevard, ninety feet directly west of 27th street. This is a fine location, surrounded by handsome homes and in a very prosperous neighborhood. Three different lines of cars crossing the city are within easy walking distance, and one cross-town line, intersecting all east and west lines, passes within ninety feet of the lot.

Correspondence.

ROCKY FORD, COL.

The Christian Scientists of Rocky Ford will erect a church building at the corner of Eleventh street and Maple avenue, directly across from Library park. At a meeting of the members of the society Friday evening [Dec. 29] the offer made by the owner of the lot was accepted and the property will be transferred immediately. The price paid was one thousand dollars. The lot is one hundred feet square and the location one of the best that could be secured.

The society expects to build this spring. Plans for the construction of the church building have not been completed as yet, except that a building of the mission type has been agreed upon. It probably will be constructed of brick or stone, and will contain an auditorium seating at least two hundred and a reading-room which will be open to the public. In addition to this there will be a Sunday school room. The tentative plans the members of the society have agreed upon will be turned over to an architect at once, and as soon as he completes his work the society will take up the question of building.—*Rocky Ford Tribune.*

MOLINE, ILL.

First Church of Christ, Scientist, of Moline, Illinois, has recently purchased ground for building purposes, which makes the first step toward a permanent church home. The lot has one hundred and fifty-four feet frontage, with a depth of one hundred and twenty-five feet, on Eighth avenue, looking down Eighteenth street, and is centrally located, being within a short distance of all car lines. The site will cost approximately six thousand dollars. It is a beautiful spot, at the foot of the bluff overlooking the city and the Mississippi river, with the Iowa hills beyond, and will form a restful background with its grassy slope and grand old trees, which will not have to be disturbed when the church is built.

The present organization began as a society in November, 1901, but was incorporated as a branch of The Mother Church in January, 1903. With the exception of two years it has met continuously in the Unitarian church. Its growth has not been rapid, but it has been steady, and at all times it has been loyal and true to the teachings of its revered Leader, Mrs. Eddy; and many blessings have come through the earnest work of those who strive daily to know more of that Truth which is the "source and condition of all existence" (Science and Health, p. 181).

Correspondence.

THE LECTURES.

SEVENOAKS, ENGLAND.

The Club Hall, Sevenoaks, was crowded on Friday evening [Nov. 24] when a meeting was held in connection with the Sevenoaks Christian Science Society. Algernon Hervey Bathurst presided, and the lecturer was Bicknell Young. In opening the meeting, the chairman said they had met there that evening to learn something more of a subject in which the world today was taking a greater interest than ever. On all sides they had heard of people who were healed of some physical complaint as the inevitable result of a conscientious study of the text-book of Christian Science prepared by Mrs. Eddy. On all sides, too, they had heard of people who were anxious to obtain more information of the subject which had become such a power in the world. It seemed almost incredible to him, but there was a time when he thought he had no need of Christian Science. It had, however, cured him of many a trouble. Christian Science had taught him, as it had taught thousands and thousands of other people, how to overcome mental, moral, and physical troubles, which were supposed generally to form an inevitable part of human existence. The reason for that ever-increasing desire to learn more of Christian Science would be readily understood when they realized that Christian Science was based on absolute truth, preeminently practical and demonstrable.—*Kent Messenger.*

NEW YORK, N. Y.

A lecture on Christian Science was delivered in Second Church of Christ, Scientist, by William R. Rathvon, Nov. 24, to an audience that completely filled the auditorium, many standing throughout the lecture and others unable to gain admittance. The lecturer was introduced by Henry L. Gwalter, whose remarks were in part as follows:—

This church has done me the honor to permit me to bid you welcome, an honor which, looking upon this vast and earnest assembly, I deeply appreciate. Your presence betokens that deep in the innermost consciousness of men there is felt a need which talks to each of us in our quiet moments when we cannot help but hear it, a need ever present wherever we are, the need for something higher, better, holier than the world can give, the need of getting closer to God, to imperishable good, to Principle, upon which we can lean and in which we can trust. Human achievement, learning, and philosophy have not supplied it, and even Christianity, dimmed by dogmas and creeds and misunderstood, has seemed to put off its attainment until a future life. And yet the suffering sense needs peace now, the famished heart needs love now, the fearful need assurance now, the oppressed need relief now, we all need heaven now, and Christian Science has come as the revelation of man's God-given right to heaven and harmony now.

Correspondence.

WILLIAMSPORT, PA.

A brief presentation of the fundamental teachings of Christian Science, set forth by Willis F. Gross of Boston, Mass., in the Y. M. C. A. Auditorium last evening [Nov. 27], was listened to with marked interest by a large and attentive audience. The introductory remarks by the Hon. C. E. Sprout of this city were in part as follows:—

We live in a tolerant age, and I am glad to say we are a tolerant people. When I glance around at this large audi-

Digitized by Google

ence of cultured, thinking people, including some of our most representative citizens, I am convinced of the interest in the subject of Christian Science. It is said that men will fight for religion, they will work for it, they will die for it; in fact, do everything but live for it. This cannot be said of our friends the Christian Scientists. Several years ago it was my good fortune in a foreign city to be thrown with a family who subscribed to the teaching of this faith. I lived with them, I worked with them, I motored with them, I worshiped with them, and a happier, more unselfish, optimistic people it has never been my lot to meet. I gained much from this association. It was an inspiration to me, and I can say I am a better man because of it.

Gazette Bulletin.

ADRIAN, MICH.

There was a good attendance at Croswell Opera House last evening [Nov. 27] to listen to the lecture on Christian Science by Prof. Hermann S. Hering. The speaker was introduced by the Hon. James W. Helme, who said:—

When the history of the first twenty years of this century shall have been written, some centuries hence, it will be designated as the age of revolution. In all the activities of human life the old is being discarded for the new. In law, our President says we must throw aside the precedents of a hundred years and adopt new methods. In government, revolution from old methods and ancient policies is world-wide. In medicine, even the doctors are teaching us that there is more virtue in right living than there is in drugs and potions. Truly, as the poet says,—

> New occasions teach new duties;
> Time makes ancient good uncouth.
> They must upward still, and onward,
> Who would keep abreast of truth.

In this age of revolution it behooves every American citizen to occupy in all fields the attitude of the seeker after truth. It is such an attitude I apprehend that a majority of the audience, including myself, maintains toward the subject to be discussed tonight.—*Adrian Times.*

BALTIMORE, MD.

Virgil O. Strickler lectured on the subject of Christian Science at the Lyric, Sunday, Dec. 3. He was introduced by William Cunningham, who said:—

It is perhaps hardly necessary to say that Christian Science is not a new religion. It is, in fact, the very oldest of all the Christian religions. Christian Scientists, by the tenets of their church and in healing of the sick, are simply trying, with their human limitations, to follow the example set them nineteen hundred years ago by the shores of Galilee, on the hills of Judea. For the first three centuries of the Christian era the disciples of Christ Jesus followed his injunction to go out into all the world to preach the gospel and to lay hands on the sick, that they should recover. After that time this method of healing appears to have fallen into disuse, until its revival about half a century ago by Mrs. Eddy, who gave to the new-old religion the name of Christian Science.—*Correspondence.*

SACRAMENTO, CAL.

Judge Clifford P. Smith lectured on the subject of Christian Science in Clunie Theater Dec. 4. He was introduced by Dr. J. P. Dargitz, a former physician and clergyman, who said:—

This is a progressive age. Never before were men and women so inclined to do their own thinking. This is true in politics, in medicine, and in religion. In politics we have the burning questions of capital and labor, both organized and each claiming its own. In medicine we have those who ascribe seeming omnipotence to the microbe and those who claim that the microbe is a result rather than a cause. In religion we find all shades of belief, even among Christians, ranging from the grossly material to the refined—the spiritual. Religion has been defined as something good for women and children, but not sufficiently scientific to be attractive to men. In the past there was perhaps more or less occasion for such a statement. Now, however, since a scientific basis for religion has been found, there is no longer room for such a criticism. When we see lawyers and physicians, ministers of the gospel and judges of the courts embracing Christian Science, is it not fair to presume that here is the long-sought scientific basis of religion, one that is worthy of the attention of all men and women?

The various churches have made commendable efforts to win mankind to the cause of truth and righteousness as they saw it set forth by Jesus of Nazareth, and these efforts have met with more or less success; but it remained for a woman, Mary Baker Eddy, to give to the world through "Science and Health with Key to the Scriptures," such an illuminated view of the real and demonstrable religion taught by Jesus that it appeals to all men everywhere. Christian Scientists do not importune men to accept this teaching, the utter simplicity of which would attract no attention but for the overwhelming truth and demonstration that accompany its understanding. Once or twice a year, however, a public lecture is given for the purpose of instruction, of correcting misapprehensions of what Christian Science is and what it teaches.

Politically we know men as reactionary or progressive. The orthodox churches know them as saint or sinner, spiritual or physical, while Christian Science knows men as real or counterfeit, and we are here tonight to hear about "The Real Man and His Relation to God."—*Correspondence.*

LECTURES TO BE DELIVERED.

Unless otherwise stated in the notice, it is assumed that the lecture will be given in the evening.

Baltimore, Md. (First and Second Churches).—Willis F. Gross, Lyric, Mt. Royal Plaza, 3:30 p.m., March 3.

Berkeley, Cal.—Prof. Hermann S. Hering, Church Edifice, Dwight way and Bowditch street, March 8.

Blackpool, Eng.—Bicknell Young, Public Hall, St. Annes-on-Sea, Lancashire, 3:15 p.m., March 3.

Chicago, Ill. (Auspices ten churches).—Bliss Knapp, Auditorium, Feb. 27.

Conneaut, Ohio.—Virgil O. Strickler, Republic Theater, Feb. 29.

Guernsey, Channel Islands, Eng.—William D. McCrackan, M.A., New Market Hall, March 1.

London, Eng. (First Church).—Bicknell Young, Latchmere Public Baths, Battersea, 8:30 p.m., March 2.

New Orleans, La.—Willis F. Gross, Athenæum, St. Charles avenue and Clio street, March 5.

New York, N. Y. (First Church).—Willis F. Gross, Church Edifice, 1 West 96th street, March 1.

Santa Cruz, Cal.—William R. Rathvon, Knights Opera House, March 8.

Seattle, Wash. (Fourth Church).—Prof. Hermann S. Hering, Moore Theater, 2:30 p.m., March 3.

St. Louis, Mo. (Second Church).—Virgil O. Strickler, Church Edifice, 4234 Washington boulevard, 3 p.m., March 3.

Wichita Falls, Tex.—Frank H. Leonard, Opera House, 3:30 p.m., March 3.

TESTIMONIES OF HEALING.

I wish to express my gratitude for what Christian Science has done for me and my family. I had been an invalid for eleven years, and had taken all kinds of medicine, but got no relief. My husband brought me South in 1905, and I was operated on in a hospital in January, 1906, and again in May, 1908, but I only became worse. I was in so much pain that I longed for death. I could not sleep unless I took an opiate, and my life seemed a burden, so that many times I thought to end it all. I belonged to a church and thought I knew the Bible, but I did not until I read "Science and Health with Key to the Scriptures." How I bless the day it was laid in my hands and I found the glorious truth of being.

Before this truth came to me, my husband took me out West in 1909, thinking the climate would do me good; but I got worse and had lung trouble and a growth in my side. The doctors in the West said I had only two months to live. I was distracted many times from the suffering, as I also had a malignant growth on my foot. I had the best doctors we could get, but no hope was given, so we left Texas, and I came home to die.

While we were waiting for our train at Houston, Texas, a lady came up to where I was lying and asked me if I had ever heard of Christian Science. She tried to tell me about God, but I told her God did not want to have anything to do with me, or He would not let me suffer as I did. She gave me some papers to read, and while I was on the train I read them. Oh, what a joy, for when I had finished I went to sleep, and it was the best night's rest I ever had! It gave me hope, and as soon as we arrived at Montgomery, Alabama, I looked up a Christian Science reading-room. God bless the ladies who met there that day, for they were very kind and explained Christian Science to me.

I got a copy of the text-book and went to work, and when I had read to page 16, where it tells of "our Father-Mother God," it gave me gleams of heavenly light. I stopped to reason, and remembered the teaching of Jesus, and the truth of man's spiritual being dawned on my consciousness. I realized that I was not subject to mortal law, as I had been taught all my life. I could not explain how I knew this, but I knew it. Through Christian Science Mrs. Eddy had given me what I had longed for all my life, a perfect concept of Deity. I know now that nothing satisfies but divine Love. All the years of bitterness, hate, fear, and sin melted away, and that day my health began to come back. I am strong and well, mentally and physically. There never came a doubt; I knew that Christian Science was and is the truth. I went to work, watching and praying for the Mind of Christ, and I bless the Lord who sent His word and healed me. Christian Science has brought to my consciousness the truth that makes free.

MRS. IRENE LITTERST, Memphis, Tenn.

Over a year ago, while watching a baseball game, I was struck by a batted ball which fractured my jaw-bone. A physician was called, also a Christian Science practitioner, who said she would treat me absently. I knew very little of Christian Science at that time and did not have much faith in it, so I was glad when the physician arrived. I went with him to a dentist's office to have the needed surgical attention, but before we reached the office the pain which had been very severe had entirely ceased. This surprised me so much that I told the physician, and he said that in the morning it would be worse than ever. It never came back, however, and that part of the healing was almost instantaneous.

Being free from pain, I was quite cheerful and told the dentist how to put the wires on, which was done in a short time. I had positive instructions from the doctor to take my food through a tube for two weeks, and for the next two weeks to eat only soft foods, and then to start very gradually to eat more solid food; at the end of six weeks I could try a little meat, but I was to leave the wires on even longer. I left the office feeling very well, and not knowing exactly why. I saw the Christian Science practitioner the next day for the first time, and had a long talk with her (that being Sunday). I went to work as usual on Tuesday morning, and on the following Sunday I cut the wires off myself and was eating everything, including meat. I have had no pain or bad effects from the injury since, and no one could tell that my jaw had been fractured. One doctor examined it and could not understand how it had healed so perfectly, as he could not tell where it had been broken.

This healing is only one of many blessings I have received through Christian Science, and words can hardly express my gratitude to God, also to our dear Leader, Mrs. Eddy, for showing us this sure and painless way out of our troubles. Christian Science not only cures our diseases, but it has brought peace and harmony into my life and home, which I consider a greater blessing than the physical healing. I attend church regularly and read the Bible every day, something I had not done in eighteen years, and my one thought is that humanity at large will speedily come to Christian Science and see the truth as I have seen it, the truth that our Master said would make us free.—H. H. GAGE, Chicago, Ill.

Fourteen years ago I became interested in Christian Science through a friend who had been healed of various complaints, one of which was liver trouble. My own healing was slow, but this was all the better, as it compelled me to study our text-book, "Science and Health with Key to the Scriptures," which probably I would not otherwise have done, as religion was something which I did not especially care about at that time. When a child I had had a severe attack of illness, and after it my throat seemed to be in a very weakened condition, as the physician had said it would be, as a result of the illness.

At the time I became interested in Christian Science, I was being treated by *materia medica*, but found no relief, all material remedies having failed. Christian Science is now our only physician, and we have found this truth a positive remedy in every case. In a family of six (four of whom are children) ills and accidents of various kinds have come up, but as we have applied this healing truth these ills have been promptly overcome.

I thank God that Christian Science has been brought to us. Toward Mrs. Eddy I have always felt that the more obedient I am to God's law, the more gratitude I shall show.—MRS. SOPHIA PETERS, Chicago, Ill.

It is with a heart overflowing with gratitude that I send this testimonial. I first became interested in Christian Science about five years ago, through the healing of my mother, who had been an invalid for over thirty years. She said that God had healed her through her understanding of Him as gained from "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was very anxious to know how the healing was done, and borrowed a copy of this book. I became so absorbed in its study that I did not like to be interrupted. I hurried through my morning duties, and could hardly wait to begin reading again. I knew I had found that for which I had been longing all my life,—a positive proof that the teachings of Christ are true. I had always looked upon the Bible as merely an ancient history and did not understand it at all, but since studying it in connection with Science and Health I have a clearer understanding of God, and can truly say with Job, "I have heard of thee by the hearing of the ear; but now mine eye seeth thee."

Digitized by Google

After my first demonstration in healing, I no longer doubted, but have proof that the healing power of Christ is the same today as it was nineteen hundred years ago. There is never a day that I have not some proof of God's loving care and protection, and I would not part with the knowledge I have of Christian Science for all the treasures on the earth.

I am indeed thankful to God for the demonstration made at the birth of my last child. The absence of all fear and sin, confusion, etc., was so different from what I had experienced before that I felt as though I had not a care in the world.

When I first came into Science I did not like to study the Lesson-Sermons, but now this is my greatest pleasure and I have been healed of many ills by the reading of the lesson.

MRS. ROSA GROCE BERLETH, Houston, Texas.

The truth that has been revealed to me through Christian Science is the answer to a life-long prayer, an unutterable longing to know God. From the years of early childhood to womanhood, I was a source of great anxiety to my mother, because I could not accept her view of the Bible, or rather what she had been taught, for I do not think that deep down in her heart she believed the generally accepted teachings any more than I did. The evidence of sin, disease, and death, which was prevalent on every hand, saddened the whole of my young life, and I was in this wretched mental state, over three years ago, when husband, love, and home were swept from me in one blow, which seemed more than I could possibly bear. My health was broken, and there seemed nothing to live for; in fact, I was praying daily for death to come and end, as I thought, my suffering.

A position I had filled years before, as a traveling auditor, was again offered me at this time, but my physicians strongly advised me against taking it and frankly told me I would not live a month if I gave up medical treatments (three a week) and took up such work. I replied that if going would hasten my death, I would go at once; which I did. The first month of traveling seemed to benefit me, then the tide turned and I grew worse. The third month I was just on the point of sending in my resignation and going somewhere to die, when by chance, as it then seemed, "Science and Health with Key to the Scriptures" fell into my hands. I took the book to my room, and though I had not been able to read at night, on account of my eyes, I was still reading the book at one o'clock in the morning. I could hardly get to my room quick enough at night after this, to read it again. My eyes had troubled me from childhood, and I had worn glasses for years, being told by a well-known specialist that I would never be able to go without them; but they did not trouble me then, and I now believe they were healed the first evening I read Science and Health, though I did not discard my glasses till some three weeks later. I have never had them on since then, and my eyes seem perfectly normal.

Two weeks later I was sent to a little New England city, and my first Sunday there I asked the lady with whom I was stopping if the Christian Science people had a church in that city, and she directed me to one two blocks away. I had visited churches of every denomination (except the Scientist) in the different cities I had been in, seeking for the spiritual light,—for even a crumb of comfort,—but I had found none. I had mingled in the crowd till the churches would be almost empty, and sorry I am to say it but it is true that I seldom got a handshake, though all could see that I was a mourner and in trouble. Not so, however, in this little Science church; one would have thought I was some long-lost friend, and the welcome brought tears of joy. My experience after this service was indescribable. My heart seemed fluttering within, as if it would burst its bonds and come out to the flood of sunshine that greeted me.

A few evenings later, I met at their reading-rooms one of the members of this church, who kindly explained to me more of the teachings of Christian Science. The joy of that evening will last I think through eternity. After this explanation I asked why we had stumbled on in darkness all these years and never found the light of Truth before. It seemed so simple now, the very thing I had hungered for from childhood; and I drank long and deep at that well of "living water" and found there health, happiness, and the peace that passeth understanding. I thank God daily for all these blessings, and each day becomes a true thanksgiving. My daily prayer is, that I may follow so closely in the footsteps of our beloved Leader, Mrs. Eddy, as to be worthy the name of a Christian Scientist.

MRS. A. C. COLLARD, Oakland, Cal.

I cannot say enough in praise of Christian Science. It has done wonders for me. I had what the doctors called paralysis, was an invalid seven years, and was healed in Christian Science over four years ago. I am now doing my own housework, and do all kinds of work without harm to myself. The Bible and Science and Health are the only books I read with interest.

I took treatment for six months or more, and by the time I had been treated two months I could see that I was getting well. I thank God for helping me in Christian Science.—MRS. SARAH BENSON, Troy, Pa.

I suffered many years with a severe form of stomach trouble, being unable to eat what I wished or when I wished, without severe suffering. I tried all the different kinds of drugs that *materia medica* had to offer me, without being helped. While on my vacation in the summer of 1909 the stomach trouble grew so much worse that I called a local physician, but could get no relief. At this time Christian Science friends invited my wife and myself to dinner with them. As I was very hungry, they told me to eat what I wished, and that through Christian Science help it would not harm me. I did not believe that I could do this without suffering for it, but I decided to try as my friends requested. So I ate a hearty dinner, but experienced no ill effects, which was the first time in many years. This seemed so wonderful to me that I decided to investigate Christian Science, and began taking treatments from a practitioner, with the result that I have been perfectly and permanently healed of this chronic stomach trouble.

I was also so badly troubled with rheumatism that it was difficult for me to do my work. Many times a day I had to stop because of the pain in my feet, but I now work all day without fatigue or pain, although my work keeps me constantly on my feet. I have never had any return of either the stomach trouble or the rheumatism, although I have been very active. I have gained in weight, have not taken any drugs since I became interested in Christian Science, and have never felt so well in my life.

I was not a religious man, and thought I was particularly opposed to Christian Science; but now I have a better understanding of God and man, when reading the Bible through the help of "Science and Health with Key to the Scriptures," and for this I am grateful to Mrs. Eddy.

JAMES C. HERRING, Cambridge, Mass.

After my husband's healing in Christian Science, which seemed very wonderful to me, I decided to take treatment for myself, having suffered many years from very painful rheumatism. I cannot remember the time when I did not have to take material remedies for a bowel difficulty, but both of these ills were perfectly and permanently healed during two weeks' treatment.

Digitized by Google

Some time after this healing I was suddenly taken, while away from home, with a severe attack of illness, and had chills and fever. I could hardly walk home, and felt very ill indeed. As soon as I reached home a Christian Science practitioner was called, and in one treatment I was healed so that in the morning I was down to breakfast with the family.

We have not used any material remedies in our family since we were healed in Christian Science more than a year ago, and we are very grateful for our freedom from the use of drugs. I feel very grateful for all the help we have received through Christian Science,—grateful to God, also to His messenger in this age, Mrs. Eddy, for my healing.

Mrs. Addie Herring, Cambridge, Mass.

On the 2d of June, 1910, I followed the advice of a friend and went to see a Christian Science practitioner. On the 27th day of August, 1910, I was discharged healed and have so continued ever since. By occupation I am a scrub-woman (though I am confident that God will soon lift me out of this sort of work), and have had to support a sick husband and several children for many years. Some years ago I developed what is commonly called a milk-leg, which, as I had to be on it at all times from four or five in the morning until late at night, became very bad. It was swollen and there was a constant discharge. I was treated for years in different New York hospitals with no good result whatever. I also tried everything that was known to me that was within my means, but all to no avail.

Finally I went to see a Christian Science practitioner. I could only go to his office once a week and sometimes not that often, so my treatments were mostly absent. I had to continue at work all of the time, for so many seemed to depend upon me. The healing was gradual, but steady from the very first treatment. First the pain, which had been for years excruciating, left me; then the discharge gradually stopped; then the wound healed up, and at last the swelling disappeared, with the discoloration; today, thanks to God, I am perfectly well, bodily and mentally. This healing was done without any charge on the part of the practitioner, though it was my wish to pay him; but he considered that my circumstances were too strained to allow of any charge. However, I expect, so soon as I have been advanced to a better position, to show my appreciation for what he did in the way that seemed quite a necessity.

To say that I am grateful is a very inadequate way to express myself. I hope my life will show, by the love and kindness and tolerance and thoughtfulness I extend to others, how grateful I really am.

Mrs. Annie Gorman, Brooklyn, N. Y.

I have had very much to be thankful for since my healing, nearly eleven years ago. We have had many proofs of God's loving care, and the following ailments have been healed through Christian Science treatment,—chronic stomach and bowel trouble, catarrh, severe headaches, whooping-cough, measles, and a disease of the throat of serious type. The case was medically diagnosed, and in one day and night the child was healed.

My husband had what seemed a most severe accident over seven years ago. He was crushed between the cab window on the engine and the coal chute at the mines. As the engine moved past the chute, he was pressed through a place a few inches wide. A doctor who was called before they brought him home, said he had little hope for him, saying the internal injuries were very severe. We however began treatment in Christian Science immediately and my husband rested well that night, in three days was up, and in ten days was back at work on the switch engine.

I had a most wonderful proof of divine Love's ever-presence and care at the birth of my youngest daughter. It was to me a great unfolding of the truth and a great change from such experiences before I knew of Christian Science. I am truly grateful for this. I was also in a railway wreck on the 16th of February, 1909. I was taken out unconscious. My injuries were pronounced to be internal. The railroad doctor said I had serious injuries at the base of the brain and to the right arm.

I feel that if it had not been for my understanding of God, as taught in our text-book, Science and Health, I should not have recovered, but I constantly held to the idea of God as Life, even in what seemed my unconscious hours, and certainly proved this to be true. In a short time I was entirely free, and in only a few weeks was able to do all my housework for a family of four children and my husband.

We also experienced the healing of a very severe attack of fever in the family. The case was healed in ten days' treatment.—Mrs. Lizzie Douglas, Carbondale, *Ill.*

One time it was my pleasure to stand in the bow of a boat going up Georgian bay, when the wind was blowing and when we were racing with a thunder-storm. The lightning flashed and the long feathery fingers of the storm-cloud reached far down, but with perfect confidence in our pilot we greatly enjoyed weaving in and out among the islands until at last the storm was left behind. Thus it is when our lives are guided by divine Truth, which pilots us safely through the storms of error into peaceful waters and we realize that the one Mind rules all.

No words or deeds of mine can express the gratitude I feel toward God for having been thus guided. We have always had the same God, but His power was unknown to me until Mrs. Eddy's book, "Science and Health with Key to the Scriptures," opened the way to an understanding of the Bible. From having been a weak, nervous woman, bowed down with fears of inherited disease, the truth thus revealed has made me free to live and work and enjoy man's God-given dominion.

Miss Mayte A. Robinson, Columbus, Ohio.

"Bless the Lord, O my soul: and all that is within me, bless his holy name. . . . Who forgiveth all thine iniquities; who healeth all thy diseases." How many times these words of the psalmist have been repeated, but with what an imperfect sense of all they actually mean to us. We all like to hear the expression of gratitude, but the debt which we owe to God, good, for what is ours by divine right, far transcends the ordinary definition of the word gratitude. We need to live it, not express it by words only.

In return for such understanding which has come to me since I first learned of Christian Science I feel it is time that I added my testimony to the long list of those already published, in the hope that it will help some others to seek and to find the truth. In the first place, through that belief of superabundance of knowledge so common among mortals, I thought of Christian Science and those connected with it as hardly worth consideration, but I knew nothing about it. At that time, my eyes were closed utterly to the greatness and goodness of our Leader who, standing alone, has proved to the world what it means to love one's neighbor.

About seven years ago I met a young student through whom I first got a true glimpse of the divine Principle of Christian Science. The result was that the scales fell from my eyes and the light of Truth shone as I had never known it before. For many years I had tried to solve various problems,—to make "things" coincide with "reason,"—but I always found myself exactly where I started from. I knew there must be an answer somewhere, for I could never

Digitized by Google

make it seem reasonable that God could maintain good and evil on substantially the same basis. It was the conflict within between truth and error, but truth was conquering daily the false material beliefs, and it was with intense delight that I found the answers to a great number of questions coming to my consciousness daily. I was beginning to learn the meaning of Jesus' words, "Ye shall know the truth, and the truth shall make you free." With this speech of the "new tongue," I was completely deprived of the ability to believe much that I had believed, and great was my joy and relief that something of the truth had been revealed to me. From that time I have daily gained more understanding, until now I see how utterly false and hopeless are the commonly accepted theories ever to free any one from bondage.

I did not become interested at first through physical healing, although I have had occasion to prove the efficacy of divine Love to heal. An irregularity of heart action was healed in one treatment, after I had doctored for it for two or three years, finally getting to the point where I was taking a powerful drug, but not being helped by it. That was a glorious revelation. Later I had a severe attack of what appeared to be boils which were exceedingly ugly looking; and while they did not disappear immediately, by having help from a practitioner I was enabled to do each day all that was required of me, and enjoyed a relief from pain which under the old treatment and former belief would have been very great. Other cases of healing have I had, but a steady mental healing is going on, for which I am more than thankful, as therein lies the true healing.

When we know more of man's relation to God, that He is everywhere and never makes discord of any kind, when we rise into that higher state of consciousness which reveals to us the true source of our strength, to dwell "in the secret place of the most High," we shall find more of man's birthright made manifest and experience the glorious truth of his God-given dominion. It is much to be thankful for, this revelation in our day, that the power of Truth is just the same and as great as it was in Jesus' time, and can be used in the same way, as thousands can testify who have been as it were snatched from the grave.

I am indeed grateful that, through the teaching of Mrs. Eddy, this revelation has come to me, as it has to a daily increasing number. She has rolled away the stones of both the old and the modern theological teaching, dispelling the obscurity that has pervaded it for centuries, and thus enabling us to know more of man's true relation to God, to know something of Him as He is. The prophecies are fulfilled in Christian Science, and Christ's coming is continual to our awakening consciousness, not delayed until some distant day in the future. Time has no future, for it is the eternal now. Surely what some have found, all may find, for God is no respecter of persons—those who seek shall surely find.—WILLIAM A. ELDREDGE, Boston, Mass.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

FROM OUR EXCHANGES.

[Rev. R. J. Campbell, M.A., in *Christian Commonwealth.*]

Where Jesus differed from his critics was when he maintained that no kingdom was worth having which did not imply in every man simplicity and humility of heart, and a willingness to find one's true joy in the service of the whole. He wanted individual men to stop thinking of themselves apart from human society or from God, and to see instead that they had no life worth calling their own until it was given freely and fully in the service of the common good. Even today that teaching is ahead of human perceptions, although we are beginning to see that it is true, and that nothing less than this will ever break our chains and set us free from all the ills of life. Jesus managed to live it himself. From first to last his career moved along that line, and when it closed in death it was only because those who killed him could not understand his greatness. They would not kill him today, perhaps; but do not imagine that they would understand him much better than the Jews and Romans of nineteen hundred years ago. Few would believe, to begin with, that he was really sincere. If he undertook a public ministry, as he did then, we would begin to question his motives; we would pick holes in his character; would laugh at him, call him a visionary, a rogue, or a fool. If the force of his personality made it impossible to ignore him, we would begin to get angry. If he pointed out with unerring finger the unrealities and inconsistencies of our ideals and practices, as he did with the Pharisees, we would plot and scheme to get rid of him or discredit him in the eyes of the public. Try to imagine a perfectly unselfish, high-souled being, with a clear vision of the wrongs and sufferings of the time, and the will to right them, and you have Jesus. Thank God, we have had a fair number of people who have caught the spirit of Jesus, but never one, as far as we know, who was so utterly lost and absorbed in the good of mankind that he might be said to have no life but the whole. Yet such was Jesus, if we are to believe what tradition says of him. A life like that, conjoined to the driving force of a transcendent personality, was sure to produce an explosion. It would do so even now.

[*New York Observer.*]

To the first Christians the Holy Spirit came as the Spirit of truth and the Spirit of power. And it is in that twofold function that we, too, need Him. In this crucial hour—in face of all the new thought with which the last half century has enriched our minds—a restatement of many Christian tenets is urgently called for. As things are, the minds of many earnest thinkers are disquieted within them, religious life often languishes, and even ministers do not preach the gospel of Jesus Christ with the power and conviction that should accompany its proclamation. And this is, possibly, because we have for the moment lost that glow of conviction which burns doubt and sin as devouring flame. Surely we need, in this our day, the Spirit of truth, that kindly light which leads amid encircling gloom. And we need power also—power to realize our ideals in character and service, to keep our faith free from the blight of despair and our hearts untainted by an encroaching worldliness—power to dream large dreams, frame spacious programs, and make heroic sacrifices for the interests of the kingdom of God. "Ye shall receive power when the Holy Ghost is come upon you."

[Rev. Charles R. Brown, D.D., in *British Congregationalist.*]

And when Moses came down the mountain side his face shone, and he caused the Israelites to see something, to feel something of the splendor of righteousness. It was the place of great privilege. Yet just then, as they were seeing

Digitized by Google

the glory, there came the command, "Ye have dwelt long enough in this mountain, turn ye and go."

It is one thing to be a hearer of the word, but quite a different thing to be a doer. It is a great thing to see a vision, it is a higher and finer thing to carry the vision into deed. It is to this that the divine voice is summoning men in their hours of high privilege. If those great hours at Sinai were to mean anything, then the Israelites must come down from the mountain and plant fields and build homes, and work out those activities and institutions that had to do with ordinary life. If Israel was to become a great nation, and if in its expanding life all the nations of the earth were to be blessed, then Israel must come down and in ordinary concerns work out those great principles which she had seen and heard there on Sinai. At the heart of everything that is worth while, there lies a vision, a dream, an insight.

[Peter Cook in *Independent*, New York.]

To scientific men today life is a greater mystery than it ever has been to mankind in the history of the world. All the new knowledge which the scientific laboratories have brought us has simply shown us how insufficient and utterly untenable all our theories concerning life are. We admit its existence as a reality, but we have not an adjective to qualify it. We know it is not a force in any ordinary sense of the term. It cannot be weighed or measured in foot-pounds, it is not an energy, exerts no pressure, cannot be converted into anything else, has no dimensions and no mass. It is not a chemical affinity. It is mere illusion to regard it as ever so tenuous an emanation of matter. It adds no new quality to any atom or molecule. It cannot abrogate, change, or oppose any chemical or physical law. Yet it guides and directs both chemical and physical forces, exhibits purpose and will, and in its higher spheres also sensation and consciousness. It is a pointblank contradiction and very nearly a philosophical impossibility in scientific systems.

[*Churchman.*]

The desire that all communions should speak as having "full authority to speak for Jesus Christ" is a massive and commanding expression of what the missionaries are feeling throughout the world as they face the thousand millions who do not know, of what all workers for righteousness in the home field, in city and slum and rural district, in the social and political world, are feeling as the terrible needs of sinning and suffering humanity are faced. There is the need of the power to speak with authority. There is the need of the power to speak the truth. There is the need so to speak the truth with authority that the liberty of the sons of God shall result. For there is such a thing as truth, there is such a thing as authority, there is such a thing as liberty, though the whole world rose to deny it. Institutionalism has failed, individualism has failed, latitudinarianism has failed, but the social principle of the family of God, organic unity, is winning its way as the rainbow of hope for a divided Christendom.

[*Outlook.*]

The substitution of Biblical theology for scholastic theology, and especially the concentration of the thought of the church in the life and character of Jesus Christ, which characterized the nineteenth century, has made the church as well as the state more humane. Punishment, whether by the state or by God, is regarded less as an expression of vindictive wrath, human or divine, and more as an expression of love seeking through penalty to save men from their evil courses.

[*Christian Register.*]

Religion is seeking a new, efficient hold upon the people. Dogmas have become dust in the mouths of millions. A new basis of faith in God is ardently sought, but it is hopeless to suppose that anything will attract the masses which does not include justice for all, a manifestation of a new public conscience, and, above all, the quelling of the

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER OF MRS. EDDY'S WORKS.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

SOME OF MRS. EDDY'S WRITINGS originally issued in pamphlet form are now to be had in pocket and library editions. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume, "Poems by Mary Baker Eddy" is specially bound; 79 pages.

In accordance with instructions given by *Mrs. Eddy* to her publisher on Sept. 13, 1910, an edition of "Rudimental Divine Science," printed in the New York point system of type for the blind, has been prepared and is now on sale. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE EDITOR.

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

FROM THE SOCIETY.

The lecture entitled "Christian Science: Its Principle and Method," by Bicknell Young, has been translated into both Swedish and French and is now ready for sale in pamphlet form. Another French translation recently made is the lecture "Christian Science: The Comforter of Promise," by Frank H. Leonard, which is also printed in a new pamphlet in French only.

A new pamphlet has recently been issued entitled "Christian Science *vs.* Finite Sense," a lecture given by Francis J. Fluno, M.D. 32 pages.

A lecture by Willis F. Gross, entitled "The Gospel of Freedom," has been published in pamphlet form. 32 pages.

These pamphlets will be found listed on the opposite page, with prices for single copies and quantities.

FROM THE CLERK OF THE MOTHER CHURCH.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

The Christian Science Journal

Published Monthly.

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. SALE PRICE: Single copy, 20 cents. In all other countries add 40 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published every afternoon, except Sunday.

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly.

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science Churches. Improved and enlarged in 1919.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries, $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of *questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 43 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.50; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York draft or money order, to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

4.00	0: 16 : 5 ;	16.90;	20.60

Entered at the Boston, Mass., post-office as second-class matter.

ITEMS OF INTEREST.

National.

It is proposed to bond the state of Pennsylvania for fifty million dollars to be used in constructing highways connecting county seats and other important points. General T. Coleman du Pont, president of the Du Pont Powder Company of Delaware, asks permission of the Legislature to construct and give to that state a two-million-dollar boulevard. It is estimated that work on improved roads and bridges in Wisconsin next year will reach about one million two hundred and fifty thousand dollars in value, and that at least five hundred and thirty towns in the state will be benefited. Governor Plaisted of Maine has practically indorsed a two-million-dollar bond issue by the state to build roads, the receipts from automobile taxes to take care of the interest and provide a sinking fund.

The supreme court of the United States, in a unanimous decision, refused to declare contrary to the federal constitution the initiative and referendum provisions in the state constitution of Oregon. The court does not go into the merits of the question raised, that the Oregon provisions establish not a republican form of government, as guaranteed by the federal constitution, but a pure democracy. It simply denies its own jurisdiction, asserting the question to be political and therefore within the reach of action by Congress, and not by the courts.

President Taft has submitted to Congress the report of the employers' liability commission and the commission's proposed employers' liability and workmen's compensation bill, accompanied by a message urging the enactment of the measure. The President sets forth that the proposed law not only would insure to employees of railroads engaged in interstate commerce quick adjustment of their claims for damages, but also would relieve the courts of a vast amount of work and enable them to administer judicial affairs with greater despatch.

General Ospina, the Colombian minister to the United States, notified the state department at Washington that the visit to Colombia of Secretary of State Knox would be inopportune, owing to the fact that Colombia's claims in connection with Panama had not yet been arbitrated. His action is said to have been personal and he has been recalled by his government. Secretary Knox is making a visit to all the governments of Central and South America bordering on the Caribbean sea.

That "tightened organization" in the forestry service saved the state one hundred and ninety-two billion feet of lumber in 1911 was pointed out recently at the annual meeting at San Francisco of the forest supervisors stationed in California. The lumber saved, which represents the difference between loss by forest fires in 1910 and 1911, is valued at three hundred and seventy-eight thousand dollars.

Twenty-seven thousand five hundred dollars was recently paid at an auction sale for a copy, upon paper, of the famous Gutenberg Bible, the first book printed from movable type. At the same sale the Huth copy of the Gutenberg Bible in London brought twenty-nine thousand five hundred dollars. Only twenty-seven copies on paper are known to exist.

Plans are being prepared for the three-hundred-thousand-dollar home of the Harvard Club of Boston on Commonwealth avenue. The building will be seventy feet high and it will have five stories in front and an extra elevation in the rear for sleeping rooms. The value of the site is approximately two hundred thousand dollars.

Twenty-one million chinook salmon trout will be planted soon in streams tributary to the Columbia river by hatcheries of the state of Washington. As the state now rears the fish to a size sufficient to escape the trout, it is expected that a much larger percentage than ever before will reach the ocean.

A roadway, seventeen hundred miles long, passing through six states and touching two nations, will be completed from Winnipeg, Man., to Galveston, Tex., by next summer, according to the secretary of the Meridian Road Association, which has charge of the work.

The Metropolitan Museum of Art of New York has received an unconditional gift of twelve hundred shares of the stock of the New York County National Bank, valued approximately at more than one million dollars.

Of the states of the Union only Pennsylvania and West Virginia are out of debt. Debts of other states range from one hundred and fourteen million dollars for Massachusetts to forty-nine thousand for Iowa.

Uniform rates for season tickets throughout the state, according to distance traveled, and half fares for students, are favored by the railroad commission in a report submitted to the Massachusetts Legislature.

Baurat Wendemuth, the German expert on the development of harbors, is in Boston making an examination of the possibilities of the extension of the facilities of the port.

International.

In the last sixteen years the National Trust of Great Britain, formed to acquire the most beautiful scenes and historical buildings of the country, and to preserve them for the permanent enjoyment of the citizens of that country, has justified its existence by the acquisition of many beautiful places and buildings, and has come to be recognized as the champion and defender of the nation's beauty spots. Half of its council is nominated by such bodies as the British Museum, National Gallery, Royal Academy, Royal Institute of British Architects, the principal universities, antiquarian, botanical, and etymological societies and so on. The trust is in touch also with local archeological societies and field clubs throughout the country. Many are affiliated to it, and local correspondents keep the council informed of any projected defacement of the scenery in their neighborhood.

One of the first questions of importance that will come up before the new Reichstag will be the extension of military armaments, and on this question it is probable that the Center will take sides with the Social Democrats, which would form an overwhelming majority over the Conservatives and Imperialists. The Center has ever been more or less opposed to the massing of armaments and has been characterized especially by an anti-military spirit.

The opium convention, which consists of twenty-five articles, has been signed at The Hague. The convention met for the purpose of deciding what steps could be taken to prevent the export and consumption of opium and other drugs. It has now been agreed by the powers that laws shall be enacted by which the production and distribution of raw opium shall be regulated.

It is announced that the special commission appointed by the Turkish government has urged the acceptance this year of the chief part of the great Mesopotamian irrigation scheme drawn up by Sir William Willcocks. The cost of this work is estimated at some three million pounds, and it is expected that the Turkish government will sanction the project.

At a French cabinet council held at the Elysee, the ministers discussed the steps which should be taken to suppress the speculation in food stuffs which has occurred on the produce exchange, causing the price of certain commodities to rise.

Yuan Shi Kai has prepared notification to the powers of his election as president of the Chinese republic, at the same time requesting their recognition of the republic.

Industrial and Commercial.

Sugar consumption in the United States in the calendar year 1911 exceeded that of any earlier year. The total quantity consumed was seventy-six hundred and seventy million pounds, or an average of 81.78 pounds per capita. While exact figures of domestic production in 1911 have not yet been completed, the latest and best available estimate puts the production of beet sugar at eleven hundred and five million pounds and that of cane sugar at seven hundred million pounds. Approximately one fourth of the sugar consumed in the United States is of domestic production, another one fourth is brought from the noncontiguous territories and the remainder from foreign countries, chiefly Cuba, from which the importations in the calendar year 1911 were thirty-one hundred and ninety-three million pounds of a total of thirty-seven hundred and thirty-two million pounds from all foreign countries.

At the National Shawmut Bank, Boston, there has been put into effect a pension plan applicable to every employee in the bank under the grade of cashier. Any clerk who has served the bank for fifteen consecutive years will be entitled to an annual pension of thirty per cent of the salary paid at the date of retirement. The optional date of retirement is placed at sixty years and the clerks become automatically retired at the age of sixty-five years unless by special vote of the directors.

In 1900 the United States imported an aggregate of 995,000,000 pounds of cement and exported 38,000,000 pounds. By 1911 imports had fallen to less than 100,000,000, while exports had risen to 1,101,000,000 pounds. In 1900 the country imported 135,000,000 and exported less than 1,000,000 pounds of tin plate. In 1911 imports had decreased to 32,000,000, while exports had advanced to 138,000,000 pounds.

A preliminary draft of a proposed bill for the establishment of a minimum wage commission and providing for the determination of minimum wages for women and minors, was the subject of a public hearing at the State House, Boston, recently.

In two years Colorado has jumped from an inconsequential production of marble to fourth place among the states of the Union. The Colorado product is said to be competing successfully with the Carrara marble of Italy in every part of the United States.

The value of the gold output of the Transvaal in 1910 amounted to £31,930,000; of western Australia £6,246,000; southern Rhodesia, £2,568,000; Victoria, £2,422,000; Canada, £2,101,000, and Queensland, £1,875,000.

The British exports for the year 1911 reached a record total of approximately $2,271,412,300. Imports for the year totaled $3,402,795,875, which is only $11,510,755 over those of 1910.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A FEW WORDS ABOUT PANTHEISM.

HON. CLARENCE A. BUSKIRK.

THE Founder of the Christian Science movement has so effectively pointed out the unreason and the dangerous sophisms of pantheism, that there might seem to be little excuse for saying anything further on the subject. But it is possible that these words may reach the eyes of many readers who for one reason or another have not studied what Mrs. Eddy has written respecting the belief in pantheism. The notion seems to be quite extensively entertained, even by educated and thinking people who are not Christian Science students, that somehow the religious philosophy taught by Mrs. Eddy is pantheistic, and this mistaken view has been frequently affirmed and still more frequently intimated in certain religious periodicals.

The writer recalls an instance which illustrates this. A New England clergyman, a few years ago, offered to read *him* a short paper which had been prepared for the purpose of introducing a Christian Science lecturer. After a number of amiable remarks about Christian Scientists, the clergyman had evidently deemed it his duty to try to qualify what he had thus far said by declaring that he was opposed to Mrs. Eddy's teachings because they were pantheistic. It was evident that he was a well-intentioned as well as an intelligent and educated gentleman, and on being asked where he found pantheism in any Christian Science literature, he admitted that he was not familiar with such literature at first hand, but had formed his opinion from the editorial columns of his denominational periodical. After several passages had been read to him from Mrs. Eddy's book, "Science and Health with Key to the Scriptures," he frankly expressed his surprise and chagrin, and eliminated from his paper all he had prepared on that point. In conversing with many persons the writer has been amazed at the extent of popular misconception in respect to this as well as other things which are mistakenly associated by really intelligent people with Christian Science.

There is no ground for wonderment that pantheism is such a bugbear to every Christian clergyman who is capable of logical reasoning, since it forces him into a dilemma from which he can find no logical escape except by denying either the omnipresence, omniscience, and omnipotence of God, or by denying that God is good and that all which He does is likewise good. This is the dilemma, indeed, of every person who affirms the reality of a material universe. Christian Science removes the dilemma, and thereby eliminates a perilous and well-worn byway to atheism. Pantheism is "the doctrine that the universe, taken or conceived of as a whole, is God" (Webster).

Since Christianity was largely materialized, under Constantine, some fifteen centuries ago, the Christian clergy have been teaching the reality of things material; in other words, that the seen universe is not a mere phenomenon, but noumenon, or substance and truth, notwithstanding the logic of the works and words of Jesus. What logically follows? It follows that the omnipresence of God implies the presence of God in matter, which is but another phrasing for pantheism; and the vague and roundabout evasions have not only been unsatisfying to Christian thinkers, but they have encouraged irreligion. It also follows that if God is the animating principle of materiality, He is responsible for the San Francisco earthquake, for the destruction of Messina, and all like disasters which have occurred. This forces the inevitable question: Is God, then, good?

Moreover, by the stress of reasoning pantheism would nullify God, since it renders Him finite instead of infinite. For God, if in matter, would be limited by the finiteness of time and space. Hence those Christian believers who still adhere to the old doctrine of God manifest in the material universe are as surely pantheists as they can be. The doctrine of the reality of matter has been the hopeless labyrinth of Christian theologians quite long enough. Its sure outcome is pantheism, and pantheism surely leads to self-contradictory concepts concerning God. These theological fogs are dispelled by the Christian Science concept of God as infinite Spirit, Mind, the governing intelligence of the universe and man.

The fact that the latest teachings of the natural sciences about matter, to wit, that it is merely phenomenon, not reality, parallel the teachings of Christian Science, and they ought speedily to dispel the materialistic view so long entertained by Christian clergymen, and destroy their pantheistic bugaboo. Never again, probably, will it be possible for history to repeat itself in any such incident as that of Amalric of Chartres, a theologian of the twelfth century, who was forced to recant his unanswerable argument that the omnipresence of God and reality of the material universe lead irresistibly to the conclusion that God is in matter. This way of refuting what could not be refuted by fair argument is no longer practicable; and Mrs. Eddy said the final word on the subject when she wrote (Messages to The Mother Church, p. 8): "Christianity as taught and demonstrated in the first century by our great Master virtually annulled the so-called laws of matter, idolatry, pantheism, and polytheism. Christianity then had one God and one law, namely, divine Science. . . . Christianity, as he taught and demonstrated it, must ever rest on the basis of the First Commandment and love for man."

FAITH AND UNDERSTANDING.

MIRIAM ORMONDE SMALLWOOD.

IN writing to the Romans, St. Paul says: "Israel, which followed after the law of righteousness, hath not attained to the law of righteousness. Wherefore? Because they sought it not by faith, but as it were by the works of the law." The objection of many who come as a last resort into Christian Science for the healing it promises, and who, as is readily understood, have not yet awakened to its spiritual import, is that it offers them nothing tangible upon which to rest. "I believe in prayer," they earnestly affirm, "and I have perfect faith that with God all things are possible; but I want to see that something is being done."

Here surely is the faith that demands a sign. If such a thing were that one had never beheld the trees before the winter frosts had dried and denuded them—if one had never known them to be in any other condition than this, with what degree of faith would he look for the marvel of spring's unfolding? Who that has gloried in this regeneration of nature can say that he ever saw anything tangible happening? Of a sudden the wonder is wrought, and thus too we know that God is Life because His work bears witness to it. "All that God imparts," Mrs. Eddy tells us, "moves in accord with Him, reflecting goodness and power" (Science and Health, p. 515). If in the flowers of the field we may find the pledge and fulfilment of divine goodness and power, as Christ Jesus taught, how incomparably greater should be our faith that the supreme manifestations of His divine purpose stand certain of the perfect regeneration which Spirit unfailingly confers. The trees of the forest, the flowers of the field, unquestioning, raise their heads in perfect accord with infinite law, and speak as Jesus taught, for the presence of infinite Mind, its beauty and truth.

We to whom the promise is made for the simple consideration of faith, may "be still, and know" that in the innermost of our being the change is wrought by Truth silently at work, surely raising, surely healing, surely quickening our mortal body by His Spirit, which dwelleth within us. We know that in asking a sign we place the shadow before the substance, "for the things which are seen are temporal; but the things which are not seen are eternal." He who came to demonstrate the power of faith demanded it in every instance. "Believe ye that I am able to do this?" "According to your faith be it unto you;" and whithersoever faith be directed, the law holds good.

In Paul's pregnant saying, "Faith is the substance of things hoped for, the evidence of things not seen," we have a wonderful definition of the power which shall remove mountains. It is a positive affirmation of realization through faith. But even when followed by works and obedience faith is not always productive of right results unless it be merged into understanding. If it be turned unfalteringly to God, the healing result is sure, and faith in God must in very truth be unfaltering, for if it split on the rock of doubt or uncertainty it degenerates into mere belief, which, quick to slip into the breach, sways the mortal thought again and falls on the side of error. Until we lay hold of our wavering confidence and bring it uncompromisingly back to Truth, the healing work is retarded.

Christian Science holds out the golden promise to all who accept its terms, namely, entire fealty to the unchanging law of God, with an abiding faith that with Him all things are indeed possible. This is that wisdom of which Solomon said, "Length of days is in her right hand; and in her left hand riches and honor."

"THE UPWARD JOURNEY."

JAMES WARDLE.

In the twenty-fourth chapter of Exodus we read: "And the Lord said unto Moses, Come up to me into the mount, and be there: and I will give thee tables of stone, and a law, and commandments which I have written; that thou mayest teach them." To the Christian Scientist, in his earnest search for Truth, what a wealth of teaching there is in the above command, and with what rapidity it brings to memory other Scriptural declarations, with correlative passages from our text-book, Science and Health.

Action and activity are first suggested,—"Come up to me;" "Awake thou that sleepest," from the belief in sin, disease, and death, from the dream of materialism; "Rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393)—to the knowledge of God as the only creator, and His creation perfect, harmonious, and eternal; "Work out your own salvation;" "Come up . . . into the mount." It is ours to do our own work, for God's work is finished, and we notice throughout the Bible promises, a condition attached to them, which in all cases implies a reaching out on our part. "Thou wilt keep him in perfect peace," is the promise; "whose mind is stayed on thee," is the condition. "Ye shall know the truth, and the truth shall make you free," said our Master, but he prefaced this glorious promise with the condition, "If ye continue in my word."

From the pleasant and exhilarating exercise of hill or mountain climbing we may draw lessons most helpful to us in our journey upward from sense to Soul. We start out to climb what seems but a small hill, but when we get to the top we see a higher one, and as we go on mountain ranges come into view; but it is only on the higher plane on which we now stand that it is possible for these to be seen. In our spiritual journey we early started to get to the hill-top, to know God as our healer. And this we reached with but little difficulty. When, however, we got to this point, we found that we had only started on our journey, for we saw in the distance, with its top reaching right up to heaven, the mountain-peak which stands for divine Principle. We further found that the way to its summit lay over other peaks,—God is the only Love, the only Truth, the only Life, the only intelligence, the only Mind. This need not discourage us, for with the glimpse of Truth we have had, and the purer air we now are breathing, we shall be able to go on, knowing that this was the pathway Moses trod, such were the heights where Jesus stood, and it is also the pathway the Christian Scientist must tread.

"Come up to me into the mount;" "*I am that I am*,"—omnipotence, omniscience, and omnipresence! The difficulties to be overcome are many; we pass under huge boulders of materialistic belief, having no foundation, therefore ready to fall; the lightnings of mortal mind are playing overhead and round about us, but we press on, for ever and anon we get a glimpse of the mountain-peak,—"God is All." We find the pathway a beaten one, and realize that Moses had many followers; and all along the way many of them have planted finger-posts, with instructions specially adapted to the more dangerous parts. In some of the darkest ravines, David has left us instructions respecting the unfailing lamp of Truth,—"The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid? . . . He shall hide me in his pavilion: in the secret of his tabernacle shall he hide me; he shall set me up upon a rock."

On nearing unstable or slippery ground, another of our forerunners has left us his experience: "He shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone;" and Moses, speaking with the experience of one hundred and twenty years, said, "And the Lord, he it is that doth go before thee; he will be with thee, he will not fail thee, neither forsake thee: fear not, neither be dismayed." We journey along a rugged road, but one made easy by the vast army of witnesses who have trod the pathway before us, and so we go forward with light step, knowing that we are obeying the divine command and are following the path our Master trod right up to the top. The command to "come up" was followed by a second, "And be there." Before this they had been told to wait upon the Lord; to "stand still, and see the salvation of the Lord."

This waiting does not suggest inaction, but rather that waiting which signifies mental activity and alertness. So far, Moses had done his part, and now he was to wait for further orders. It is in this attitude of waiting that we

Digitized by Google

must be to realize the truth of Isaiah's words, "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." And what was the message delivered to Moses on the mount? The law and commandments. Taking the commandments and spiritualizing them, we find them to contain the same message as was delivered to the watching shepherds on the plains of Bethlehem. The first four relate to our duty to God—"Glory to God in the highest;" the latter six to our duty to man, and obedience to them cannot fail to bring "glory to God in the highest, and on earth peace, good will toward men."

Later, when Jesus was going about on his ministry of healing and teaching,—speaking from the spiritual altitude to which he had reached, that exalted spiritual condition which knew God as the only Life,—we find when he was asked by the lawyer what was the great commandment, he answered, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself." So it is with us. The higher we rise, the nearer to God we get, more and more do we realize the allness of God and know man as His idea, His likeness, therefore perfect.

With the fuller understanding which Christian Science brings to our study of the Bible we see that the message delivered to Moses on the mount was a message of the omnipotence of Love, adapted to the understanding of the children of Israel at that time, and an analysis of the law given with the commandment is beautifully summarized by Jesus in his sermon on the mount: "Whatsoever ye would that men should do to you, do ye even so to them." The "scientific statement of being" (Science and Health, p. 468) gets us away from the pantheistic belief of other times, also those of the modern thinker, and lifts thought to God as the All, the Only; and when we recognize man as His image and likeness, we begin to know something of the brotherhood of man governed by the law of Love.

THE SPIRITUAL IDEA

MARY THORN.

IN the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy writes: "So shall the spiritual idea guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God" (p. 566). We also read, in the same text-book: "God creates and governs the universe, including man. The universe is filled with spiritual ideas, which He evolves, and they are obedient to the Mind that makes them" (p. 295). As we apprehend these ideas through spiritual sense and cast out the finite concepts of material sense, we enter into conscious communion with God, Spirit, and see the unreality of material belief and fear. Every form of discord and disease is but the outward expression of an erroneous concept of good. To heal the discord it is necessary to correct the mistake; that is, to uncover and cast out the erroneous belief and establish in consciousness a correct sense of good or the spiritual idea.

This point is clearly illustrated by the problem of supply, which presents itself to all mankind for solution. It is necessary to know at the beginning that money is not supply, neither is it the substance of supply. God, Spirit, is the one and only source of all good. Man in obedience to God is found serving Him and reflecting divine Love and intelligence, ever manifesting the omniaction of divine Mind. This condition being fulfilled, there is no sense of lack, and therefore no problem of supply to meet; but the false sense of intelligence called mortal mind admits a material belief of limitation, and is therefore always in want. Some of the fruits of this false sense are ignorance, inefficiency, inadaptability, self-condemnation, self-depreciation, resentment, envy, hatred, failure, poverty. Now, God being no respecter of persons, divine Love and intelligence are available to all, and the power to reflect this intelligence and Love is also impartially and freely given to all the sons of God; therefore every individual is able to serve God by reflecting love to his fellow men. This service is the foundation stone upon which rests all legitimate business, from that of the grocery store to the international business of a large corporation. This active obedience to God, made manifest in service, brings one into conscious harmony with his divine Principle, sets him free from a limited sense of intelligence and brings to light his God-given ability to reflect infinite Mind and demonstrate dominion over all the earth.

We may be assured that the demand governed by a right desire cannot exceed the supply, if the student holds fast to the scientific fact expressed by Jesus, "Your Father knoweth what things ye have need of, before ye ask him." The loving Father does not mock us by lifting our thought to higher desires and then failing to satisfy those desires. To desire harmonious surroundings, expressing cleanliness, order, and beauty, is normal, and to demonstrate that God can meet this need and provide us with such surroundings is perfectly natural. This is no miracle, it is the simple right of every individual who is obedient to divine law. It is the great privilege of every one who bears the name, a Christian Scientist, to prove the power and truth of the words of the Master, "Ask, and ye shall receive."

The children of Israel, wandering about in the wilderness for forty years, were cared for by the same God who had led them out of Egypt. We read in Nehemiah, "Thou gavest also thy good spirit to instruct them, and withholdest not thy manna from their mouth, and gavest them water for their thirst. Yea, forty years didst thou sustain them in the wilderness, so that they lacked nothing; their clothes waxed not old, and their feet swelled not." Elijah during a season of famine and drought dwelt by the brook Cherith and was fed daily by ravens. When the brook failed, he did not sit down to die of thirst, but listened for the word of the Lord, which commanded him to go to Zarephath. There he was led to a widow woman who was about to bake her last handful of meal into a cake, that she and her son might eat it and die. The spiritual beauty and significance of this Scriptural passage keeps it ever fresh and inspiring. We do not tire of reading how the mother, facing starvation with her child, heeded the prophet's request to bake him first a little cake. Can we marvel that such loving obedience opened to them the spiritual sense of substance which faileth not! When Jesus perceived the need of the multitude who had followed him up the mountain side, he failed not to give thanks for a few loaves and fishes, though thousands were waiting to be fed.

How often we look into our purses and say, "I cannot afford to meet this demand of Love, because I have only so much money." When we learn that Love meets every demand, we shall reflect more of Love and will then be able to give more. The money to give, if money is needed, will not be lacking; neither will the obedience and wisdom, so much more needed, be lacking. To have but caught a glimpse of the truth taught in the Christian Science text-book, and to have demonstrated just that glimpse, is the greatest blessing that has ever been bestowed on mankind. This is the day foretold by prophets of old, and now is the promise of Jesus fulfilled: "I will pray the Father, and he shall give you another Comforter, that he may abide with you for ever."

Can we not as students of Christian Science rise to that consciousness wherein we shall esteem it a privilege and joy to support all the activities of The Mother Church and

Digitized by Google

the branch churches of which we are members, instead of looking upon this opportunity as a heavy burden to be borne? Can we not turn from the thought of self long enough to give praise to God at our Wednesday evening meetings for the blessings which Christian Science has brought into our lives? If all the testimonies of healing that are related by Christian Scientists during the week could be brought together and brought into our Wednesday evening meetings, the very walls would echo with the joyful tidings. Is it not as great a privilege to bear witness to the truth that heals and purifies, when we are "all with one accord in one place," as it is to tell these blessings to a small circle of friends and acquaintances? Can we not gain the right idea of church-membership, and having gained it, shall we not find that it is easy to lay down all for Christ, Truth, because of the revelation of divine Love which comes to us and repays us a thousand times for anything we may think we have given up for Christian Science?

JESUS THE CHRIST.

DAVID FRANCIS THOMPSON.

NOVICES in Christian Science need to be on their guard against the notion that their new-found freedom of thought gives them license to discuss grave theological problems in a flippant manner, and in no other matter is greater care needed, on the part of beginners, than in speaking of Christ Jesus.

Mrs. Eddy in the chapter on Atonement and Eucharist has clearly indicated how Christian Scientists should regard Jesus. She speaks for every true Christian Scientist in the sentence, "We adore Jesus" (Science and Health, p. 26); and surely if ever there was an occasion when speech would be silvern and silence golden, when "mere smatterers in Science" should put off their sandals of "superficial and cold assertion" (Science and Health, p. 460), it is when we whose demonstration lags a long way behind intellectual assent and words, find ourselves tempted to speak of the beliefs of others in terms which are likely not only to awaken surprise, but to bring offense to those who do not understand Christian Science teaching.

The Pharisees would no doubt have commended the man born blind had he listened to their admonition to "give God the praise." They said, "We know that this man [Jesus] is a sinner;" but the healed man saw through this perhaps the subtlest of all the temptations from his former friends which needs to be met promptly and effectually by the neophyte in truth. What the Pharisees had to learn was that in this material world devotion to Principle involves reverence toward its highest idea and persecution as penalty for this discipleship; for the highest idea and its followers are always the "despised and rejected" of those who seek the "upper seats." Christian Science never countenances any thoughts which fail to recognize the sacredness of Christ Jesus' character, even in its human manifestation. While many professed Christians hold a narrow and material concept of Jesus, Mrs. Eddy speaks of him as "the highest human concept of the perfect man;" and again as "the highest earthly representative of God" (Science and Health, pp. 482, 52). Seen from the chaos of mortality, he may appear only as a human being, though indeed the most exalted, but to the Christian Scientist he can never seem less than the Wayshower, the uplifter.

It is only a question as to which way we look, whether from God, and this is the only standpoint from which reality is viewable; or from chaos, from which view-point all is out of focus. Christ Jesus' followers may rejoice in knowing that "he is not ashamed to call them brethren," as we read in Paul's epistle to the Hebrews. They are also addressed by him as "the light of the world," sharing the glory of unison with the one Father, God. Again and again during the earthly ministry of Christ Jesus did Truth bear witness to his reflection of the divine idea, and we do well to hear only and ever the voice pronouncing from on high, "This is my beloved Son."

LIGHT PERPETUAL.

CLAIR D. VALLETTE.

THE often quoted words, "Believe nothing you hear and only half you see," carry more truth than one at first thought generally believes, if applied to material things,—the things we are taught to believe are real,—the things of this world. We are so accustomed to think of pain, sickness, sorrow, sin, death, as well as all the seemingly material objects, as real, actual, and true, that when we first hear them explained from the view-point of Christian Science as illusive and unreal, we are apt to rebel, or we at least grasp very imperfectly the meaning of the statement.

One evening a student of Christian Science noticed an electric light shining brilliantly in a room a short distance from him and illuminating its surroundings; but as he looked it seemed to become dim and the room was correspondingly darkened. This was repeated several times. It seemed as if the electric current was partially cut off at times and entirely so at others. A few moments' study and observation, however, showed that smoke drifting from a near-by chimney had intervened between the observer and the light. The light had not been dimmed, but an illusion had been produced whereby the observer had been deceived. In this case the observer had but to walk toward the light to discover the deception and to find the truth. Had he believed even half of what he saw, and had turned away, he could not have presently discovered the truth, although the light was shining all the time.

The true light forever shines forth to all men. Any seeming separation from the light, any apparent dimness of it, any lessening of its radiance, is caused by intervening views, wrong beliefs, mere deceptions, the inventions of mortal mind finding lodgment within human consciousness and obscuring the "true light" that cometh from above. Men are self-deceived when they believe that the things which they see with the mortal eye are real, and that the things unseen by mortal sense are unreal because they are seen only in mind. When we look from the things temporal to the things eternal, as we are taught to do in Christian Science, we see that the true light, the light of Truth, forever shines forth.

[Written for the *Sentinel*.]

"IT SUFFICETH US."

LAURA GERAHTY.

I SEEK for Thee, O Truth, I seek for Thee!
As thirsting creatures to the fountain fly
And earth-dimmed eyes strain for the cloudless sky,
So my heart longs its need to satisfy.
I seek for Thee, O Truth, I seek for Thee!

I look to Thee, O Love, I look to Thee!
What need I other than Thy mute caress?
Where else to turn for truth and tenderness,
When all earth's loves are turned to bitterness?
I look to Thee, O Love, I look to Thee!

I turn to thee, dear Christ, I turn to thee!
What though an angry world should scoff or frown?
What though we bear a cross? We know the crown,
The sin forgiv'n, the healing, are thine own,
And come, dear Christ from thee, alone from thee.

SELECTED ARTICLES.

[Frederick Dixon in *Weekly Budget*, London, England.]

John Ruskin once said that he never wrote an anonymous letter in his life, because he never wrote one to which he was ashamed to put his name. As the critics of Christian Science commonly never write anything but anonymous letters, the conclusion is obvious. One anonymous contributor explains that some years ago her brother, whose case had been pronounced hopeless by the doctors, accepted Christian Science treatment for an incurable complaint. Her grievance is, not that the case has not been cured, that could hardly be a grievance for an incurable complaint, but that her brother is devoted to Christian Science, and has paid for treatment at a decreasing rate, the maximum having apparently been three shillings a treatment. I have before me a letter received this morning from a gentleman who has undergone treatment by a medical practitioner who combines drugs with hypnotism. This gentleman's bill amounted to one thousand pounds for four months' treatment. At the end of this time the patient, being no better, applied for Christian Science treatment, and was healed.

The real mistake of the attack on Christian Science, however, has been an absolute failure to comprehend that it is aimed at the greatest movement of modern times. When from one side of the world to the other millions of people are living who have experienced the help of Christian Science, physically, morally, and mentally, who have seen those who are dearest to them restored to life and happiness and manhood, or who number among their friends those who have had such experiences as these, it is a little pitiful to see the attempt being made to kick against the pricks. The Christian Science movement is barely half a century old. It has spread, during that time, from one end of the American continent to the other. It has its churches in Europe, it has taken possession of the British empire. Twelve years ago, not a Christian Science church had been formed in Europe; today Christian Science services are read throughout the length and breadth of England and in the principal cities on the continent, from Paris to Florence, and from Moscow to Christiania. In Australia it is a growing power; throughout the South African dominion its text-book is being read and its Lesson-Sermons studied.

Not long ago, I had the opportunity of talking to a descendant of one of the old Dutch families in the Orange Free State, who told me that Mrs. Eddy's book was to be found in a very large number of the scattered homesteads of the country. It has spread northward from here, amid the tiny white population of Bechuanaland, and it has devoted adherents in the cities of Egypt in the north. Members of the movement are scattered along the shores of the Persian gulf; throughout the great empire of India; in the cities of China, and in the islands of Japan. Among these people are to be found men who have their seats in the legislatures of the world, distinguished officers of the army and navy, leaders in the profession of the law; business men who have proved that they can control vast commercial undertakings; men whose lives have been devoted to the study of art, of literature, and of science; not a few who once practised medicine, or who were ministers of orthodox religions; to say nothing of thousands upon thousands of capable, intelligent, and cultivated men and women, of all nations and of all classes, as the nations count classes.

In Boston, the buildings of the Christian Science movement are, perhaps, the most beautiful in the city. From the publishing house there come, not only the works of Mrs. Eddy, and the smaller publications of the movement, but the monthly *Journal*, the weekly *Sentinel*, the German *Herold*, and, youngest, but not least, the daily *Christian Science Monitor*. A movement which owns an ordinary daily paper, circulating entirely round the world, is no trifling collection of religious fanatics. It is against this movement that an attack is launched which dismisses it as a mercenary fraud, sustained by ignorance and charlatanism. It is not the first time in the history of the world that prejudice and ignorance have set themselves to stamp out something, the little finger of which, they have lived to discover, is mightier than their own thighs. It is not the first time that governments have been urged to take up arms against opinions, in other words, to embark on persecutions, but the people who do these things seem to forget nothing and to learn nothing. The Roman emperors who sat, crowned with roses, amid the howling pagan mobs on the tiers of the Coliseum, found it easier to get Christians killed by lions than to dispose of Christianity. The Roman inquisition, which imprisoned Galileo for asserting what every schoolboy today knows to be a fact in natural science, found it easier to lock his body in a cell than to lock up the science he taught. When the inciters to persecutions can stop the world from thinking, persecutions may achieve something. Until then they will only prove the narrow intolerance which would stop everybody from seeing farther than they can see themselves. Thousands of people have been murdered for denying the teaching of the "Christian topography" of Cosmos Indicopleustes, that the earth was a quadrilateral plain, enclosed by mountains on which the sky rested. But beyond those mountains sailed the ship of Columbus; over them reached the telescope of Galileo, and through them today runs the steam-engine of Stephenson.

History repeats itself. The critics of Christian Science invariably adopt the methods by which the Pharisees sought to silence those who were healed by Jesus. They have two stock phrases—first, that the people who are healed have not been sick; or, if any healing has taken place, it has been through suggestion. The number of wrong diagnoses made by doctors in the case of patients who have been treated by Christian Science is enough, if the claim of these doctors is true, to discredit medical practice for the rest of its natural term. It would appear that every patient who has ever been healed by Christian Science, after receiving medical treatment, has had his case wrongly diagnosed. Again, it would be interesting to know, since we are always being told that these patients were not as bad as they thought they were, how on earth any human being knows how bad his neighbor thinks himself. When the man who was born blind was healed by Jesus, the Pharisees took the regular course. First of all, they went to the man's parents and suggested that he thought himself worse than he was, or that a wrong diagnosis had been made. They said to them, "Is this your son, who ye say was born blind?" and they were, as usual, greatly disconcerted by the reply, "We know that this is our son, and that he was born blind." Failing in this, they fell back on the charge of suggestion.

A knowledge of mental suggestion has always been common in the east. In the Bible it is known under a score of *aliases*, generally summed up under "healing by Beelzebub." They suggested then, as they suggested on other occasions, that the healing of the man was through Beelzebub. The reply of the patient was as disconcerting as the reply of his parents, "Whether he be a sinner or no, I know not." This appears to have somewhat nettled them, but not so much as what came afterward. "One thing I know, that, whereas I was blind, now I see." That settled the question. Beaten at argument, they fell back on physical force, "they cast him out." There is the inherent weakness of the champion of the lost cause, the cry is always, "Cast him out." The demand that Christian Science shall be cast out is the last angry shout of hopeless defeat. The triumphant argument of the man born blind has survived, however, to come ringing down the centuries, "One thing I know, that, whereas I was blind, now I see." In the healing of Christian Science it is being perpetuated again today.

From a million voices there comes the declaration, "Whereas I was sick, now I am well."

Over the northern door in the great cathedral of St. Paul's, there is cut the famous epitaph of Wren, *"Lector, si monumentum requiris, circumspice."* The cathedral of Christian Science is the world, a world peopled with men and women healed through the teaching of Mrs. Eddy, and if the student of Science and Health wishes to know what the author of it has done for humanity, then let him repeat for himself the words, "Reader, if you seek a monument, look around you."

[E. M. Ramsay in *Kelso* (Scot.) *Chronicle.*]

My attention has been drawn to the account of a sermon on Christian Science reported in the *Kelso Chronicle*. I am sorry that I did not see this account in time to comment on it in the following issue of your paper, but as the subject is little understood, though often discussed, it may interest your readers to hear something about the Christian Science doctrine of the unreality of evil from one who has been greatly helped by this very doctrine. By way of preface, I should like to state that I approached Christian Science from the standpoint of the Church of England, and did not accept its teachings till through prayerful study I became convinced that they were not only logical but also entirely Scriptural.

Looking around us we see a world more or less pursuing the same objects—satisfaction, happiness, health of body, and peace of mind. We see that good men in all the churches and outside the churches, as well as good men in every political camp, desire these things not only for themselves, but for the whole human race. At this point, however, agreement ceases, for men differ widely as to the nature of good, and still more widely as to the methods to be adopted in its pursuit. Every thinker deplores the small amount of good accomplished by the toil of centuries, by a vast expenditure of energy, thought, wealth, and good will. Should we then complain when presented with a radically different method of overcoming evil, a method so old that it appears to be quite new, the very method, we are convinced, which the Saviour employed? If, as the Bible declares, God is infinite, all-powerful, ever-present good, Love, Spirit, Truth, Life, the only creator, then it follows that evil, disease, and sin are opposed to the divine nature, can form no part of God and cannot in reality form an integral, essential part of His creature, His effect, man; for like produces like.

In order to separate the reality of man's being from that which is no part of him, we must cease to look upon the outward appearance or to think of the human personality with all its infirmities and imperfections, and, turning with strong desire to God, dwell upon the thought of His sinless, spiritual nature, His infinite love and tenderness, sustaining, supporting, encircling with His everlasting arms His spiritual creation. As thoughts such as these begin to flood our consciousness, a new sense of humility, purity, gentleness comes with them, and we begin to perceive that the weak, sinful, unworthy thoughts and characteristics are losing some of their power, attraction, and inevitableness. Gradually the truth dawns upon us that evil is not power; that it is a delusion, a belief in a vacuum, a lack, a false sense which implies that Love is not infinite, that Life is not spiritual and eternal, that there is some place where God is not. We discover that the good thoughts we express constitute the man of God's creating, and that by constantly maintaining in thought that the God qualities alone possess power, reality, attraction, and satisfaction, we find ourselves getting freer from sin and enjoying better health than we did in the days when we regarded these evils as real, powerful, and natural.

It has been well said that people commit sin not because they think there is nothing in it, but because they think that there is something in it, something of satisfaction and pleasure to be derived from it, or because it seems so powerful that they cannot resist it. Surely it was some transcendent perception of the power, reality, and naturalness of holiness which broke the mesmerism of sin, which revealed the powerlessness of evil, and transformed Mary Magdalene into a saint of God. "Ye shall know the truth," said the great Teacher, "and the truth shall make you free."

[Lloyd B. Coate in *Englewood* (Ohio) *Enterprise.*]

The writings of Mrs. Eddy have brought about an increased interest in the study of the Bible. It is a very common occurrence to hear the beneficiaries of Christian Science (and the number is quite large in this city) testify *that the* one thing beyond the physical healing most highly prized, gained through a demonstrable understanding of the Christian Science text-book, is a better understanding of God with increased faith in Him, a better understanding of the mission of Christ Jesus with a greater desire to follow in his footsteps, a better understanding of the Bible with a greater love for God's Word. If a sermon in which some explanation of the Bible is made results in awakening an interest in Bible study, and the minister is referred to as a Christian worker, what shall be said of Mrs. Eddy's interpretation and explanation of the Scriptures, especially so when it brings healing—physical, moral, and spiritual? Jesus taught that judgment should be made according to the fruit the tree bears.

Many denominations have Bible helps or commentaries on the Scriptures. "Science and Health with Key to the Scriptures," by Mrs. Eddy, is the Christian Science commentary. Through the study of the Bible in the light of Science and Health many people have been healed of sin and disease, many drunkards have been reformed, and many people have been lifted out of infidelity and agnosticism, and have been able to gain a brighter glimpse of God, infinite good, divine Love.

[Frank Bell in *Norristown* (Pa.) *Herald.*]

The author of the sermon partially reproduced in the *Herald* so frankly acknowledged the good that is being accomplished by Christian Science in leavening popular thought on subjects of vital importance to mankind, that it is difficult to believe he intended to say that the church "and Christian Science" have "divided the ministry of faith from the ministry of healing," or that "Christian Science has materialized the ministry of healing;" for if there is anything that Christian Science has not done it is those two things.

"Jesus healed sickness and sin by one and the same metaphysical process," writes Mrs. Eddy in Science and Health (p. 210); and Christian Science is a living protest against trying to heal either sickness or sin in any other way. On page 135 of the same volume, which is the text-book of Christian Science, Mrs. Eddy declares that "the same power which heals sin heals also sickness;" and Christian Science holds that the only real power is God, Spirit. It will be seen, therefore, that instead of attempting to separate faith and healing or to materialize the latter, Christian Science does exactly the opposite.

If, as the good pastor says, the existence of the Christian Science movement is a rebuke to the church, the occasion for rebuke lies not in the failure of the church to work with the drug physician (it is manifestly trying to do that), but in its failure to discern in the teachings of the Master and the lives of himself and his disciples and early followers that the true priest and the true physician are one and the same both in individuality and office. The Founder of Christianity was himself the "great Physician." He healed the sick by purely spiritual means, and declared that all who believed on him should do likewise. For three hundred years in the Christian church preaching the gospel and healing the sick were identical, and Christian Science today is bringing about a revival of this complete ministry.

[Editorial from *The Critic*, Portageville, Mo.]

The question is asked over and over again, "What is Christian Science?" As far as I am concerned, I cannot tell you. You might as well ask, "What is mathematics?" and expect to be answered so you can understand without first applying yourself to the science of mathematics. The man or woman who wants to learn anything, can never expect to know until he applies himself to the subject he wants "light" on.

I know this, that Christian Science is a science, and science is truth. If you are not acquainted with truth, and are not willing to learn what truth is, you will always be "believing" a lie; but knowledge is truth. I know this, however, that while I at one time had fully made up my mind to die, that Christian Science disillusioned my mind and snatched me from that snare, and I now live,—live in happiness and a reality of life. I care not what you think you are weighed down with, whether it is tuberculosis (consumption), paralysis, or what not, I know that Christian Science will disillusion you and set you free.

I believe that all who know me, believe me,—believe that I know whereof I speak,—as you have never caught me in a lie in my writing. The only reason I write this is to help you to help yourselves, and set yourselves free, that you may become useful and happy men and women. I have no other motive.

["Reader" in *New York* (N. Y.) *Tribune*.]

Dr. Jacobi ought to be cognizant of the fact that if the physicians practising according to their various schools of *materia medica* were infallible, or were even successful in a majority of cases, there would be no such great demand for Christian Science treatment as exists today. Or does he claim for his fraternity of drug givers "divine right" to practise medicine according to their school and none other?

Will he still maintain, notwithstanding strong evidence to the contrary from members of his own fraternity, that his patients do not endow the drugs prescribed for them with the magical powers of Middle Age witchcraft, based on superstition, which powers inert matter cannot possibly possess except in the imagination? Can any observant, thinking, wide-awake human being profess to ignore this (Christian) Science as the greatest moral force of the century?

[R. Stanhope Easterday in *Terre Haute* (Ind.) *Star*.]

We are inclined to believe that the critic failed to appreciate the essential discrimination made by our Saviour in referring to his dual personality between the Christ, the Son of God, and the man Jesus, or the human, corporeal sense of God's man. This necessary distinction is made by Christendom generally, and should not have been overlooked by our critic.

Our critic takes exception to the Christian Science contention that God is all, and that matter has no real existence. He should read carefully the first chapter of Genesis and John's account of creation in the first chapter of his gospel. He can find therein no trace of matter or of anything unlike God. So far as cyclones, floods, fires, earthquakes, etc., are concerned, suffice it to recall that the ancient prophet failed to find God in any of these, but rather recognized the divine presence in the "still small voice" that brought peace to his troubled soul.

Christian Science teaching makes the spiritual personality infinite and divine, the very basis of its reasoning. We fear that our critic had in mind a corporeal sense of deity, which, indeed, Christian Science eschews, in conformity with Scripture. The gentleman takes exception to his own formulated statement as to the Christian Science teaching about the nature and origin of the devil. Jesus himself said in plain words of the devil, "He is a liar, and the father of it," and himself destroyed "the works of the devil" with his word, the truth.

In short our critic is criticizing, not Christian Science, but what he thinks Christian Science to be, and we readily agree that if Christian Science were in any sense what he evidently thinks it is, it should and certainly would cease to be recognized by thinking people.

[Charles D. Reynolds in *Manchester* (N. H.) *Mirror*.]

If Christian Science is the scientific interpretation of the teachings of Jesus, its future needs no particular human personality to keep it true or to bring it before the world. The only function of a church under such circumstances is to assist and provide the practical means by which this truth shall be properly brought to the apprehension of mankind in its practical and not merely theoretical aspect. The claim that this will not be properly done unless you or I are chosen to be at the head of it as the leader, would without doubt be taken as an evidence against us and prove our unfitness. In his third epistle, John writes concerning one such, by name Diotrephes, who he says "loveth to have the preeminence."

From the Christian Science point of view, religion is something that every man may understand for himself. No one can work it out for another. Every one has his own spiritual consciousness to cultivate through the study and application of Jesus' teachings respecting the existence, nature, and attributes of God, and his own stability of character to build up from this basis. In the very nature of the case, one who has not taken Mrs. Eddy's explanation of what God is, and made that his ideal and guide to daily living, will not understand what is meant when Christian Scientists say that the Christian religion does not rest on personality but is a fixed Principle to which all men have free access and cannot be monopolized by any person or organization. The Bible with Mrs. Eddy's great exposition or commentary thereon, "Science and Health with Key to the Scriptures," will if studied make this point clear.

[Editorial in *San Diego* (Cal.) *Herald*.]

When Mary Baker Eddy passed away it was predicted by many that the Christian Science church had reached its greatest influence and would, by reason of her absence, decline as rapidly as it had risen. Such a prediction may have been intended as a tribute to the personality of Mrs. Eddy, but the fact that the organization is growing faster now than at any time in its history is evidence of the truth on which the church was founded.

This demonstrates one of two things: either the truth is so great that it will flourish regardless of the individual, or those selected to carry on the work begun by Mrs. Eddy were wisely chosen. Let it be what it may, surely the cause of Christian Science is rapidly advancing.

ADMISSION TO MEMBERSHIP IN THE MOTHER CHURCH.

The next admission of candidates will be May 31, 1912. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before May 13, 1912.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1911, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
Falmouth, Norway, and St. Paul streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

SEEKING AND FINDING.

It is worthy of note that the first declaration of the mission of Christ Jesus to the children of men, as recorded in the New Testament, is that "he shall save his people from their sins;" and as we follow him through his brief ministry it is made clear that the primary purpose of his coming was the awakening of mankind to universal salvation, to a recognition of the at-one-ment of God and man, and the leading of humanity through progressive steps to that knowledge of God which he said was "life eternal." In taking these progressive steps the Master gave great prominence in his ministry to the healing of the sick, not because this was the ultimate of his teaching, but because the perfection of God and man in His image and likeness, the truth of being which he taught, was diametrically opposed to the false concept of man as sick, sinning, and dying. The knowledge of God and man which he imparted destroyed these false beliefs, and the individual, being no longer under their dominion, was healed.

John the Baptist, the forerunner of the Messiah, had preached repentance and the coming of the kingdom of heaven, and Jesus reiterated this preaching, coupling with it, however, in demonstration of its truth, the healing works that made their appeal where the doctrine of salvation from sin fell upon ears that heard not. How close was the connection between the preaching and healing is shown in the instance of the man sick with the palsy. The scribes accused Jesus of blasphemy when he said to the afflicted one, "Thy sins be forgiven thee," but there was no room for doubt as to his God-given power when at the word of command the palsied man "arose, and departed to his house."

There is no disputing, therefore, that the healing of sickness was important in the work of Jesus, and inasmuch as the teachings of Christian Science are based on the words and works of the Wayshower, Christ Jesus, it has and should have an important part in the work of Christian Scientists today. Our Master's answer to John's messengers shows that he considered this healing indisputable proof of the truth of his teachings and the reality of his Messiahship, but it must also be remembered that his exhortation was not primarily that men should come to him to be healed; it was that they should repent,—seek first the kingdom of God, and find health, happiness, all good, as the natural consequent of this seeking.

The claim is sometimes made that Christian Science is merely a system of healing, and not a religion; but throughout her writings Mrs. Eddy makes clear the parallelism between the teachings of Christian Science and those of the Master, and there is no intent to belittle the function of the healing works in her declaration that, beneficent as is their mission, they are "only the bugle-call to thought and action, in the higher range of infinite goodness" (Rudimental Divine Science, p. 2); for she but emphasizes thereby the dominant purpose of Christian Science, namely, the restoration of primitive Christianity, the truth of being as preached and demonstrated by Christ Jesus in the healing of both the sick and the sinning, in her further declaration that "the emphatic purpose of Christian Science is the healing of sin."

It is quite apparent, therefore, as we study these teachings, that what is aimed at is the elevation of the human race, both morally and spiritually, and that as a necessary factor in the process of such elevation, the sick are healed; nor must it be forgotten that these moral and physical proofs of the efficacy of the Christ-science are the object-lessons which force home the argument with the scoffing and indifferent as no words could do. It behooves us, therefore, as professed followers of the Master, soldiers loyal to the cause in which we have enlisted, to fit ourselves for the demonstration of Christian Science in the healing of the sick and the sinning as a means of rousing them to gain for themselves the higher guerdon which is promised the earnest seeker after Truth, that higher understanding which is life eternal to him who finds it. Mrs. Eddy points the upward path, the unchanging law of progress, in one terse sentence in "Rudimental Divine Science" (p. 11): "Sickness is the schoolmaster, leading you to Christ; first to faith in *Christ;* next to belief in God as omnipotent; and finally to the *understanding* of God and man in Christian Science, whereby you learn that God is good, and in Science man is His likeness, the forever reflection of goodness." There is no question as to the surety of the fulfilment of God's promises to those who seek His kingdom first, for seeking we shall find.

ARCHIBALD MCLELLAN.

LIFE AND ACTIVITY.

Not many years ago, Professor Drummond, admittedly one of the brightest intellects of his day, wrote: "Nature cannot say what spiritual life is. Indeed, what natural life is remains unknown, and the word life still wanders through science without a definition." Of course the dictionaries have supplied definitions of the word, but Professor Drummond doubtless meant that none of them was adequate or defined life *per se*. The Standard dictionary gives the following definition: "The state of being alive; that condition in which animals and plants exist, etc.; the animation of the body, in animals and man, by the vital principle or animal soul; the condition or time between birth and death." These and other definitions, however, fail to present life as cause, and deal with it only as effect materially viewed, although Spencer and some other writers hint at life as apart from the thing which lives; but even these have little or nothing to say as to life itself.

In view of this failure to explain life, Christian Scientists have great reason to be thankful for the teaching of Christian Science on this all-important subject, for it tells us that Life is God, the divine Principle of the universe including man. Mrs. Eddy says that "Life is Mind, the creator reflected in His creations." She also says: "The divine Mind includes all action and volition, and man in Science is governed by this Mind" (Science and Health, pp. 331, 187). From our text-book we also learn that Life is not blind force, but divine intelligence, and that its manifestations are not material but spiritual. Mere movement is not a manifestation of Life, but intelligence, goodness, and spirituality are Life's manifestations, and these include health and holiness.

Here it may be asked wherein this teaching differs from the ordinarily accepted theories, to which it may be answered that, like the teaching of Christ Jesus, it is intensely practical. He said he had come that men "might have life" and have it "more abundantly." He also said that in order to live we must know God, and in his marvelous healing work he showed beyond all question that he understood Life to be God. Now disease is not a manifestation of Life, and neither is sin; hence, as he awakened in those who sought his aid the consciousness of Life, sin, disease, and death vanished before his declarations as darkness flees before light. Well might John say, "In him [the eternal Christ] was life: and the life was the light of men,"—a light intense enough to pierce even the darkness of the tomb, and the denser darkness of mortal belief, when Lazarus responded to Truth's puissant "Come forth."

Today we gladly heed the Christ-command, "Walk while ye have the light," and give thanks that this light has come

Digitized by Google

to us with the same healing power as in the first Christian century, and has added to the physical healing that understanding which John tells us, at the close of his first epistle, is eternal life. Not so long ago it was believed that inaction, styled the rest-cure, could restore health, but Christian Science maintains that inaction or stagnation is unknown to Life. Paul must have felt this when he said, "I can do all things through Christ which strengtheneth me." The recognition of the ceaseless activity of the law of Life results in health and strength, but it demands absolute purity in thought, word, and deed as the normal condition of its manifestation. The Master said, "My Father worketh hitherto, and I work." This was when he had been challenged for working on the Sabbath, and he evidently meant that true activity is ceaseless. It manifests Life and is life-giving, and it rests with us to throw off any thought which would obstruct the perpetual outflow of the divine energy which renews our whole being day by day.

ANNIE M. KNOTT.

TRUTH'S REDEMPTIVE RANGE.

WE are living in the "wireless age," when the known flight of electric impulse through the vastness of space gives us firmer foothold for faith, since it makes a limited sense of the amplitude of Truth's redemptive radiation seem the more incongruous and out of keeping. We are being impelled to give greater compass to our confidence and expectation that, in the measure of our faithfulness and consistency, truth and goodness will run and be glorified.
