In New York the attitude of the state was made ridiculous last year by the decision of a judge that "Science healing" was lawful if performed at the patient's home or in a church and without a fee, but unlawful if performed in an office for a fee. The fee being the crux of the offense, the court's decision seemed to declare that all the methods of Christian Science were unobjectionable, provided no fees were diverted from regular medical practitioners.

Ten states, including such commonwealths as California, Illinois, Connecticut, Massachusetts, and New Hampshire, have enacted such legislation as is now pending at Albany. It would be well to have New York added to the list during the present session.

❖

[Charles W. J. Tennant in *Herts Advertiser and St. Albans Times*, England]

I am glad to comply with the request of the Rev. Mr. —— and answer his questions from the Christian Science point of view. Christian Science replies to the first question, "Does the Christian Scientist say that he has no sin?" by maintaining that man in the image and likeness of God is sinless. This is in absolute conformity with the Bible teaching, "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." This, of course, refers to man in the absolute; but relatively speaking Christian Science certainly does not teach that a mortal does not sin.

Now with regard to the meaning of sin, the word in the Hebrew and Greek means to err, to miss the mark, not to shoot straight. If God is infinite, as the Scriptures declare, to believe in anything else is to miss the mark, and so, in the broadest sense, to sin. The only possible way, therefore, to stop sinning is to see that it is a mistake and cease from doing so. Mrs. Eddy says, "The way to escape the misery of sin is to cease sinning" (Science and Health, p. 327). If one has made a mistake in mathematics, a discordant result follows, and the mistake can be corrected only by a knowledge of the basic law of mathematics. So will a further knowledge of God, divine Principle, Life, Truth, and Love, correct the mistake of sinning.

"Where does the Christian Scientist's mortal mind come from?" In this question our critic asks for an explanation of the origin of evil. I do not think he or anybody else will ever give a satisfactory reply as to the origin of evil, for it has none. Our Master stated this very clearly when he said that the devil, evil, "abode not in the truth, because there is no truth in him." Has that which has no truth in it a real origin? Christian Scientists are engaged in the demonstration of God's allness, instead of wasting their energies in the hopeless task of trying to discover the origin of His suppositional opposite.

❖

[Ora S. Drewry in *Commercial Tribune*, Cincinnati, Ohio]

In a synopsis of a sermon delivered by the Rev. Mr. ——, that gentleman refers kindly to the Christian Scientist, but misapprehends Christian Science when he implies that it teaches that mind transforms and transfigures matter until matter becomes the mere tool to do the bidding of the soul of man.

Christian Science defines God as Spirit; and if man is the image and likeness of God, as the Scriptures aver, man must be spiritual and not material, in spite of what the human sense may say about him. Christian Science teaches that Spirit is Mind, that this divine Mind is necessarily perfect, and knows only perfection; that man, as the image of this Mind, is a divine idea, and therefore a perfect idea. It also teaches that the material man and the material universe are but the illusions of a so-called mind ignorant of God, and not the truth about God and His creation, just as the rising sun and the stars "that climb the heavens and go" are not the truth about astronomical phenomena.

The Bible declares through the exalted thought of John that God made all that was made, "and without him was not any thing made that was made." The infinite creative Spirit could not be expressed in matter or material man, else Spirit would cease to be infinite. As some understanding is gained of God and His spiritual man, the belief in matter, or as St. Paul calls it, "the old man," begins to be "put off," and the spiritual man to be brought out. The Christian Scientist, then, does not transfigure matter and use it as a tool, but denies its reality and struggles to shake off its bondage, and this is the real cross he takes up to follow the Master, in obedience to the great Teacher's command.

Science is the exact, specific, formulated knowledge of a given subject. Christian Science is the exact, formulated knowledge of God and His spiritual universe, and the operation of spiritual law as exemplified in the Christianity taught and demonstrated by Jesus. Recognizing God as the only cause, it is knowledge founded upon an unvarying Principle and governed by immutable law. The unfoldment in consciousness of the scientific knowledge of God is the understanding of the truth Jesus taught, and which he said was for all humanity to know and practise. "He that believeth on me, the works that I do shall he do also," said the Master. This believing, or understanding, is the realization of the allness of Spirit, and the consequent unreality of matter, and gives dominion over all material conditions. It is not "thought at high pressure," as the reverend gentleman affirms, that enables a Christian Scientist to overcome pain,

Digitized by Google

but rather his scientific knowledge of the truth that Jesus taught and which he declared would make men free,—free from all material beliefs.

It was Jesus' knowledge of the truth that enabled him to heal the sick, and the same Mind that was in Christ Jesus will enable his followers to do the works that he did. Just in proportion as the Christian Scientist is able to understand the unreality of material phenomena and to recognize and claim his birthright as the child of God, is he able to overcome the ills of the flesh, including pain. Not "thought at high pressure" has enabled the Christians all down the centuries to overcome the fiery furnace, the boiling oil, the hungry lions, and innumerable other material ills, but their understanding of God, and their conscious unity with Him. Christian Scientists have a demonstrably scientific religion, just so far as they understand, and they are proving their Christianity by their works in the overcoming of sin and sickness and sorrow.

[Frank Bell in *The Tribune*, Altoona, Pa.]

Perusal of the summary of an attack upon the religion of a large and growing element of decent citizenship in your community, as appearing in a recent issue, produces twofold astonishment,—first, that so much misinformation could be expressed within so small a space; and secondly, that these familiar old fables, after so many years of service in so many places and at so many hands, in vain endeavor to stop the progress of Christian Science, could still be regarded as capable of dissuading here and there an inquirer from following his natural desire to ascertain whether that which has accomplished so much for others might not be equally beneficial to himself. There is not in the summary, as printed, a single statement that of itself and as presented would convey a correct idea of any phase of the teachings, practice, or aims of Christian Science. Without exception the statements are either the direct opposite of the truth, or they are mere perverting half-truths.

How completely a half-truth may falsify a situation is instanced in the assertion that Christian Science denies the existence of matter. Standing alone, this would appear to be a doctrine of annihilation. Mrs. Eddy takes pains to explain that such terms as existence, reality, etc., are used by her in both an absolute and a relative sense. Matter as a temporal material phenomenon is not denied. The statements quoted by the critic refer to spiritual creation, and it is unfair and misleading to present them otherwise. When Christian Science through its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, urges the consideration of man as spiritual and not material, it is because of the practical benefit to be derived from cultivating a higher concept of man's identity than that of mere bodily existence. Christian Science therefore means neither more nor less than the Bible means when it says that man lives and moves and has his being in God, Spirit, and that "flesh and blood cannot inherit the kingdom of God."

The assurance gained in Christian Science that sin is not an element of real manhood, in no sense attempts to ignore the part sin plays in the human drama. It distinctly does not refer to mortals, and this is repeatedly stated in the text-book. There is therefore no justification for trying to make it appear that Christian Scientists are taught to "satisfy their consciences" by merely saying "sin is a false belief." The teaching of Christian Science in this respect is no more capable of such an interpretation than is the Scriptural assertion that "whosoever is born of God doth not commit sin." The meaning in each case is identical.

Of course Christian Science denies death. Who does not that considers man to be immortal and life eternal? Disintegration of a material body is not denied, but it is denied that this incident involves the annihilation of anything which is real in man. And so on down through the list of accusations,—not one will bear the light of comparison with correct statements of Christian Science or the experiences of its adherents. For it must be remembered that Christian Science is that which it has demonstrated itself to be to Christian Scientists, and not necessarily that which it may be assumed to be by those who have not even tried to learn and practise it. A practical mathematician, not the scoffer at mathematics, is the person to whom to apply for information as to mathematics.

Finally, all discussion of this subject is beside the point that fails to take into account that Christian Science is not an aggregation of doctrines but a rule or method of living. The statements in the Christian Science text-book are not intended as the constituents of a philosophy, but as the implements of a practice; they are not to be looked at merely, but to be used. And so the Christian Scientist is always ready for the thoughtless critic who says, "Oh, but your propositions are so absurd," and can invariably answer in return, "Absurd from your mistaken point of view, perhaps, but demonstrably correct from ours, as evidenced in the practical results wrought in the hearts and lives of those who accept them." Then the critic, if he be wise and humble enough, may discern that the source of so much good could not be evil.

Since Christian Science "reforms the sinner and heals the sick" (Science and Health, p. 1), since it makes of its adherents better men and women, spiritually, mentally, morally, physically, in every way,—and the evidence that it does all this is world-wide and incontrovertible,—then is it not meeting the test of genuine Christianity as laid down by Christianity's Founder, and is anything worth while to be gained by attempting to stand in its way?

[W. I. Coger in *Rochester* (N. Y.) *Times*]

Taking the misstatements of an evangelist in their order, the first one attributed to him is that "Christian Science denies the divinity of Jesus Christ." In refutation of this claim it is merely necessary to quote from the tenets of Christian Science as found on page 497 of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness;" and again, "We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death."

Christian Science does not say there is no sickness in the world. It is engaged in overcoming sickness wherever it exists. On page 460 of Science and Health Mrs. Eddy states: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." Concerning the assertion that "Christian Science says there is no death, and yet even Mrs. Eddy died," it may be pointed out that on page 426 of Science and Health the direct statement is made that "death will disappear with the disappearance of sin."

Moreover, as to the inferential assertion that Mrs. Eddy expected to remain on this plane of existence, it surely should

Digitized by Google

be sufficient to settle once and for all the absurd charge that she believed her mortal body to be undying, to point out that she made a will. Furthermore, no Christian Scientist with any knowledge of the metaphysical facts, and surely none who adheres to the teachings of Mrs. Eddy herself, believes or pretends to believe in her resurrection on this planet. Her precise teachings on this point may be of interest to those who are in the habit of getting their information by hearsay or at second-hand. On page 74 of the Christian Science textbook we read that one's "return to a material condition, after having once left it, would be as impossible as would be the restoration to its original condition of the acorn, already absorbed into a sprout which has risen above the soil."

✧

[Robert S. Ross in *New York* (N. Y.) *Sun*]

Many people have been led to believe that Christian Scientists are enemies of the medical profession. As a matter of fact, Christian Scientists have the utmost respect for the conscientious physician, and they honor him for his unselfish endeavors to relieve human suffering. Furthermore, Christian Scientists believe that those who desire medical treatment should not only be free to have it, but that they should have the best treatment available. Christian Scientists stand unequivocally for personal liberty.

✧

[S. T. Downs in *Rochester* (Ind.) *Sentinel*]

The report of a sermon by a local minister in a recent issue couples a statement regarding a lack of understanding of God and the Bible today with a reference to Christian Science. The inference is erroneous. Christian Scientists read the Bible daily. Christian Science has made more Bible students and is promoting a greater search of the Scriptures than any movement of modern times; and this fact is well recognized by thinkers and observers of the various religious denominations. Christian Science is the Science of divine Mind, as taught and demonstrated in the life and works of Christ Jesus, and its study, therefore, would be impossible without the Bible.

The first tenet of all Christian Science churches reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). This constant search of the Word of God has reformed, and is reforming, thousands of all manner of sin, and it is one of the greatest influences for good, for purity, that is operating in our affairs today. It has, too, through the larger understanding of God and His laws that Christian Science brings, healed a multitude of sickness and sorrow, including every disease known to mankind.

✧

[E. M. Ramsay in *The Scotsman*, Edinburgh, Scotland]

I have read with interest the account in *The Scotsman* of the address on "Ghosts" delivered by a clergyman in the United Free Assembly Hall. As he introduced some remarks on the subject of Christian Scientists, I should like to say a few words in explanation of our position.

The reverend gentleman said that the mistake of the clergy was in working away from the doctors; the mistake of Christian Scientists was the same. Let them work in harmony with the medical men. To this we reply that the work of Christian Scientists cannot fail to help the doctors. We do not believe that illness is a necessity, that it is ordained of God, or that any form or case of disease can be rightly named incurable. We believe that it is the duty of all men to manifest universal kindness, brotherliness, generosity, courage, serenity, hope, and faith in good; and we are learning how to manifest these qualities to a degree beyond that to which we had attained individually before we became students of Christian Science. The mental attitude of Christian Scientists would necessarily be helpful to a doctor and his patients.

In the matter of psychology, we are ourselves convinced that so-called psychic power is a material force, and therefore as much of a reality as any other form of matter. We believe that it differs from what are ordinarily regarded as material agencies, not so much in nature as in density, as a gas differs from a solid body. But we are equally convinced that a great chasm separates it from the spiritual force of prayer as practised by our Lord and his disciples. We recognize that a man may be a student of psychology and also a professing Christian and devout church-member, just as a skilful surgeon may also be a devout churchman; but, as no one would be prepared to assert that a man who was not a Christian could not be a competent surgeon, so we know that psychic power, mesmerism, hypnotism, are cultivated and practised among non-Christian races to a degree beyond anything known to the West.

Thus our contention is that Christian Science has no connection with psychology, and that therefore it does not follow that because suggestion may be used in connection with medicine, Christian Science may be so used. Further, we maintain that a real combination between Christian Science and medical practice is not possible, because these systems are founded on quite different assumptions as to the nature of man and the nature of disease.

✧

[J. Arnold Haughton in *Bolton* (England) *Chronicle*]

I have read with great interest your report of the Thanksgiving service held by First Church of Christ, Scientist, Bolton, and while fully appreciating the fairness of that report, I should be glad if you would kindly afford me the opportunity of making one or two statements with regard to it, as otherwise some misconception as to the nature and operation of Christian Science is likely to arise therefrom; and I am sure that is far from your intention.

In the first place, your heading, "Bolton Faith Cures," is likely to lead those who are not better informed to think that Christian Science is allied to or perhaps is a species of faith-healing, whereas in fact Christian Science is not faith-healing and is quite distinct from it. Faith-healing assumes many phases, according as the faith implied is reposed in drugs and other human agencies or takes the form of a blind belief in God; but in none of these phases does it resemble Christian Science, which rests solely upon spiritual understanding. This spiritual understanding is the knowledge or understanding of the law of God, which is the law of life, and therefore of health.

In the second place, while you are good enough to state (referring to testimonies) that views on Christian Science are now listened to with considerable respect, you also state that the establishment of a close connection between diseases of the mind and the body has done much to influence this respect. On the contrary, the fact is that it is the healing and teaching of Christian Science which have caused the establishment of that close connection in the minds of leaders of thought along material lines, and not that Christian Science, being found to be in line with an established fact, is therefore entitled to respect. The connection between the diseases of the human mind and body is a small part of the teaching of Christian Science, but standing alone, this fact has no vital operation, except perhaps to cause Christian Science to appear rational to most thinking persons. The divine Mind, God, in whom "we live, and move, and have our being," is the healer in all the ministry of Christian Science.

Editorial

The Entire Gospel

THERE is a popular belief among some of those who have not taken the trouble to inform themselves as to what Christian Science really is, that it is simply a cure for physical ills,—a sort of universal panacea for illness, into which a certain element of religion has been injected, in the way of a saving grace. This false concept of Christian Science is due, of course, to the failure on the part of religion or the church for hundreds of years to lay stress upon the healing work of Christ Jesus and the early Christians as an essential part of the Christianity of all times.

It is because of this failure, moreover, that so many have now come to believe that there is no connection between the healing of sickness and the healing of sin. Religious men and women seem to have become so accustomed to this belief, and so imbued with the popular teaching that Jesus' works were for only a limited time, that they think it presumptuous for any one to attempt to heal in the name of God and without the use of drugs. So successful has Christian Science been, however, that if its entire mission were but the healing of the sick, its Discoverer and Founder would still be entitled to the gratitude of a disease-burdened race; but fortunately this is not all. For nearly half a century now, the sick and the sinning have been healed, just as in the time of Jesus and the apostles, and we must not lose sight of the fact that the healing of sickness is but the "signs following"—the understanding of God which has ever been the goal of Christianity.

The coming of the Christ to human experience must result in the destruction of all evil, all that is unlike God, and it is because of this law of being that Christian Science necessarily includes the healing of sickness in its ministry of destroying sin. In the ninth chapter of Matthew the similarity of sickness and sin, and the identity of their source, is clearly set forth by the Master, in his answer to the scribes who accused him of blasphemy because he had said to the sick of the palsy, "Son, be of good cheer; thy sins be forgiven thee." "For whether is easier," he asked them, "to say, Thy sins be forgiven thee; or to say, Arise, and walk?" In proof of this he bade the palsied man take up his bed and depart to his own house. What wonder, when his command was obeyed, that the multitudes "marveled, and glorified God"!

Webster's definition of Christianity is: "The religion of Christians; the system of doctrines and precepts taught by Christ . . . practical conformity of one's inward and outward life to the spirit of the Christian religion." As to what is the religion of Christians, and what is the system of doctrines and precepts taught by Christ, we do not have far to seek. We find them in the Scriptures in his own words: "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Christian Science is firmly planted upon the entire gospel of Christ Jesus, and this is proved when it is remembered that not all the testimonies that are given to the helpfulness of Christian Science are testimonies of the healing of sickness; neither are Christian Scientists more concerned with the healing of sickness than they are with the healing of sin. It is no uncommon thing at the Wednesday evening meetings for the statement to be made by some one who has related a remarkable physical healing, that his greatest gratitude is for the spiritual uplift and regeneration which Christian Science has brought him.

Mrs. Eddy has said in Science and Health, page 406, "Sin and sickness are both healed by the same Principle;" and on page 404 she declares that "healing the sick and reforming the sinner are one and the same thing in Christian Science." It is therefore the work of the practitioner in his ministry to mankind, to bring to bear such a clear understanding of the omnipotence and omnipresence of God that, whether the problem presented to him be one of sickness or sin, he will be able to speak "as one having authority," and bid it begone. The gospel of Jesus demands that his followers be perfect,—"even as your Father which is in heaven is perfect;" and the understanding and demonstration of Christian Science opens the way to this attainment.

ARCHIBALD MCLELLAN.

❖

Special Pleaders

No one who has had deep religious experiences will deny that the psalms contain profound spiritual teachings. In them the very depths of mortal misery are touched, and then thought is lifted to see the real man's divinely bestowed possibilities. The varied phases of the mortal dream, its sin and suffering, are graphically described, but in the midst of the saddest strains there comes the assured declaration, "I shall be satisfied, when I awake, with thy likeness." Gleams of light are to be found on every page, and in Christian Science we learn how to relate these to their divine Principle. Thus we discover the infinite depths which await the sincere seeker after Truth. Here we may well pause to ponder these words of our revered Leader: "The rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence" (Science and Health, p. 504).

In the seventy-fourth psalm we find a sorrowful plaint that the enemy has invaded the sanctuary and defiled the dwelling-place of the Most High, which spiritually interpreted would mean that mortal mind had, to material sense, usurped the place and prerogative of infinite Truth, and claimed power to rule over men. Then comes the prayer, "Arise, O God, plead thine own cause." In the light of Christian Science we can see that one who is ignorant of the allness of divine power, and who admits that there is power in evil, is wholly unprepared to plead the cause of God and His idea, man. When in the depths of suffering, Job cried out, "O that one might plead for a man with God;" but in due time he learned, as must we, that God never withholds any good thing from us, and that our plea should be addressed to the human sense which is embedded in error, that it may be aroused to see that God is infinite in goodness and power and is ever ready to deliver those who are willing to accept the truth. It thus becomes clear that we do not need to plead with God, but for Him.

Later in the book of Job we read of a special pleader, "a messenger," "an interpreter," who comes to plead man's uprightness as the image of God, and who graciously says, "Deliver him from going down to the pit: I have found a ransom." Then we are told of healing, of uplifting; the poor sufferer learns that God is "favorable unto him," not a stern judge, and so he looks up and with joy sees the Father's face. He has found that there is no profit in sin, and so he forsakes it. This pleader in the book of Job prefigures in a wonderful way the work of the Christian Science practitioner, who is cheered by remembering that "all these things worketh God oftentimes with man,"—not alone in Job's day, in the time

Digitized by Google

of the psalmist, or even in the glorious healing ministry of Christ Jesus, but "oftentimes;" yes, daily and hourly now as the pleaders for God and His law gain a hearing.

Mrs. Eddy says: "Plead with an honest conviction of truth and a clear perception of the unchanging, unerring, and certain effect of divine Science. Then if your fidelity is half equal to the truth of your plea, you will heal the sick" (Science and Health, p. 418). When the Master declared man's divine rights, few words were needed, even though those around him denied and disputed his plea and sought to set it aside on the ground of some technicality, such as the day of the week, though as he told them, they would not have hesitated to save an animal which had fallen into a pit on the Sabbath. His plea, however, based upon divine law, was effective, for it was sustained by the healing; and the same was true in the case of Peter, John, and Paul, who obeyed his command to heal the sick as he had done, thus with invincible eloquence pleading the cause of Truth.

The psalmist, who calls upon God to plead His own cause, adds, "The foolish man reproacheth thee daily." This is exactly what is done by those who deny the changeless and ceaseless operation of divine law, but these denials are proved powerless by the one who pleads for God with the eloquence of understanding and love.

Annie M. Knott.

"My peace"

In the midst of a conflict such as the turmoil and tragedy of human history have never known before, a clangor of arms that would drown all other voices, yes, even the angelic song that ushered in the Christian era, one is led to think upon the Master's seemingly paradoxical teaching as to peace. To his many disciples he said, "Think not that I am come to send peace on earth: I came not to send peace, but a sword;" and yet in his last long heart to heart talk with the twelve he said, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you."

Manifestly his qualified repetition, "my peace," was made advisedly, and conveys a deep significance. Christian Science has made it demonstrably intelligible that the peace of God is not a state of content in and with materiality, it is not sequent, the fruitage of longed-for earthly conditions, but causal, superior to earthly conditions, because it means conscious at-one-ment with spiritual law. To the peace of sense-torpidity, into which the tired are tempted to lapse, there comes Truth's arousing call, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." In the Master this Christ-consciousness was continuous, and its peace enabled him to maintain a perfect poise in the presence of every assault of pharisaical prejudice and hatred. He was not unaware of the tumult and suffering on the fighting line, but though "tempted like as we are," human anxieties and fears were not permitted to pass his threshold. Well, therefore, did he say, "Not as the world giveth, give I unto you." His peace was not the peace of the world, it was the peace of spiritual understanding.

Jesus sent his disciples forth charged with that vital, incisive, uncompromising word of Truth which proves in its effects that "there is no peace . . . to the wicked." To lawlessness, divine law is indeed a flaming sword, and yet of every one who goes forth bearing this sword, it was said of old, "Thou wilt keep him in perfect peace, whose mind is stayed on thee." Thus in the eighth century before Christ did the prophet express the secret of practical Christian Science. The sought-for peace of mortal-mindedness is that state of deadness to spiritual things concerning which Mrs. Eddy has said that to "become educated to gratification in personal pleasure and trained in treacherous peace . . . is the great and only danger in the path that winds upward" (Miscellaneous Writings, p. 9). The sufferings and sorrows of human experience, yes, even of this dreadful war, will make for progress if they but awaken mankind to the fact that civilization cannot advance, and world peace cannot be assured, in so far as diplomacy and international politics stand for subtle selfishness and indifference to right. When nations are altogether frank and fair with each other, honesty will count just the same for them that it does for individuals; meantime the lesson that peace in unrighteousness is impossible, must be learned by nations as well as men, though it be through the suffering of pangs unspeakable.

The world promises peace on condition that dogma shall be unquestioned, that monopoly shall be unresisted, the rule of might unprotested, graft unexposed, sin unrebuked, integrity unreferred to,—in a word, on condition that righteousness shall be tabooed. Christ offers peace upon the single condition that there shall be conformity to divine law, at-one-ment with Truth, and as the saints have ever shown, those possessing it are made superior to any and every human circumstance or experience. The servant is not greater than his master, and upon this plane we will not be excused from labor, not privileged to follow the impulses of human will, not free from burden-bearing, not exempt from persecution; but, whatever our state or condition, if we truly follow him,—note this,—we are to have the Master's own peace, that tenacity and efficiency of faith, that quiet of heart and mind, and that perennial joy which is the unfailing inheritance of those who "know the truth," and which can but make them a source of comfort and of strength to every one they meet.

John B. Willis.

Among the Churches

Current Notes

Toronto, Ontario, Canada.—The opening service of the new First Church of Christ, Scientist, at the corner of Lowther avenue and St. George street, was held yesterday [Jan. 3]. As the building is not yet quite completed, the service was held in the basement.—*Toronto News.*

Altoona, Pa.—During the year 1914, the distribution committee of the former Christian Science Society (church and society united in November, 1914) distributed 8,888 *Monitors*, 1,650 pieces of other literature, including *Sentinels*, *Journals*, reprints, pamphlets, and authorized miscellaneous articles. It placed the *Monitor* on sale at news stands, also on exchange with the four daily papers, and this last action brought forth many favorable comments. It secured the privilege for the Trustees under the Will of Mary Baker Eddy to place works on Christian Science in the Altoona high school library, and also additional copies in the Mechanics library, both agreeing to catalogue these books as follows: "Christian Science, authorized," and all other books on the subject as "Christian Science, critical and unauthorized."

Correspondence.

Englewood, N. J.—The reading-room of First Church of Christ, Scientist, has been moved from the church edifice to 50 Dean street, where a corner store was obtained. This situation is in the business section of the town, and the trolley-car line between New York and the towns of this valley passes the door. The activity of the work is greater

Digitized by Google

than in the former quarters. The Sunday school has outgrown its room, and this makes it necessary to hold sessions in the church.

The distribution committee supplies free Christian Science literature to the neighboring towns as well as to Englewood, by means of boxes placed in the railroad stations, and sends a barrel of literature each month to the Mission Yacht Association. The *Monitor* has been placed in the police station, fire house, telephone rest-room, hospital, barber shop, and Mary Fisher Home, and this work is being extended as fast as practicable. Marked copies of the *Monitor* are being sent out by mail, and the committee is endeavoring to supply literature to all who will accept it.—*Correspondence.*

OGDEN, UTAH.—With the completion of the church edifice begun last year by First Church of Christ, Scientist, another up-to-date place of worship has been added to the many church buildings in Ogden. The church is situated on the corner of Twenty-fourth street and Monroe avenue. It is of modern architecture, capable of seating about three hundred persons, and was built for approximately twelve thousand dollars. The first service will be held on Sunday, Jan. 3.—*The Ogden Examiner.*

❖

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Boston, Mass.

Col. William E. Fell delivered a lecture Friday evening [March 5] under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice, at Falmouth, Norway, and St. Paul streets. H. Cornell Wilson, first reader, introduced the lecturer. Mr. Wilson said:—

In extending to the public an invitation to hear a lecture on Christian Science it is the purpose of this church correctly to present the subject. The world today admits that Christian Science heals the sick, and it is the intention that this lecture shall explain briefly how Christian Science healing is accomplished.

It is recorded that the well-loved Phillips Brooks once said, "I can prove that the Bible is inspired, because it inspires me." Just so Christian Scientists can say that they prove that Christian Science is the spiritual revelation of Truth, inasmuch as it spiritualizes their thoughts and through intelligent recourse to the true God secures freedom from the bondage of disease, sin, and limitation of every kind. It is because, in the words of the Master, the fields "are white already to harvest," but "the laborers are few," that Christian Scientists feel profoundly moved to carry the message of this divine Science lovingly to all who are ready to hear.

Tonight Col. William E. Fell of Leeds, England, will address you. Colonel Fell is a member of the board of lectureship of this church, and comes thoroughly prepared to present to you the subject of Christian Science. I am pleased, ladies and gentlemen, at having the privilege of introducing to you Colonel Fell.—*The Christian Science Monitor.*

❖

Urbana, Ohio

Evan P. Middleton, judge of the court of common pleas, in introducing Bliss Knapp, who lectured on Christian Science, said in part:—

I cannot say I believe in Christian Science, because I do not understand it; and for the same reason I cannot say I disbelieve in it. To believe in a science, one must understand and comprehend it, and no one has the right to disbelieve through ignorance alone. It is the duty of all to investigate and think before forming or expressing an opinion on any subject. If, however, we know nothing more of Christian Science, we know, or at least most of us do, that in less than fifty years it has grown from a very small number to more than a million adherents, more than a million earnest Christians working steadily but unostentatiously for the uplift and betterment of humanity; and that among its adherents are found many of our brightest intellects, greatest thinkers, and most cultured and refined people. These facts alone should be sufficient to claim from us this afternoon our most careful attention to and fair consideration of the thoughts that may be presented to us by the lecturer on this occasion.

Swansea, Wales

At the lecture on Christian Science by Col. William E. Fell the introductory words of T. A. Goskar were in part as follows:—

Christian Science has attracted to itself innumerable people in all countries, from all sections of society and from all vocations. This is because we believe, and practise so far as our understanding permits, the words and promises of our Master, Christ Jesus, who said, "And I, if I be lifted up . . . will draw all men unto me." He also said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Christian Science rests on these and all the promises of Scripture, and offers as its most convincing proof the many thousands of lives which have been freed from sin, sickness, and sorrow through its ministrations.

New York, N. Y.

The remarks of Mrs. Frances Thurber Seal, in introducing Clarence C. Eaton at a lecture on Christian Science given in Second Church, were as follows:—

If one were to ask thinking men and women what is the most important subject for the consideration of mankind at this hour, doubtless the reply of the majority would be peace,—peace for the individual and peace for nations. This is not a new condition. Throughout the history of the world men have been going to and fro upon the earth seeking peace, for it is the necessary preliminary to happiness, success, and prosperity.

The entire social and religious development of the Christian nations is the outgrowth of that marvelous emigration of the children of Israel from the only home they knew, over mountains and across the desert and the sea, seeking a land

Digitized by Google

where they might dwell in peace. They found that land after a long and weary search, but they discovered, as many have learned since, that peace is not a matter of location but a condition of mind, a state of consciousness. Centuries later one who had a clearer vision, gave an unvarying rule by which this heavenly condition may be reached. His message was brief but comprehensive in its instruction to turn to God: "Acquaint now thyself with him, and be at peace . . . Receive, I pray thee, the law from his mouth." Paul said, "The fruit of the Spirit is love, joy, peace." In this age, one who walked with God has written, "Teach them . . . that they find health, peace, and harmony in God, divine Love" (Science and Health, p. 416). It is of little use to tell us to acquaint ourselves with God, unless we are shown where to find Him and how to know Him. This is the mission of Christian Science. It reveals God in all His fulness. It is the word of Truth, which bids men "go in peace, and be whole of thy plague."

Boise, Idaho

On the occasion of a lecture on Christian Science by Bicknell Young, in Pinney Theater, the speaker was introduced by C. M. Wickham, who said in part:—

Since the coming of Jesus of Galilee, the scholars and philosophers of the world have sought to know the secret of his power. Century after century more light has been thrown around the seeming mystery, until less than half a century ago, over in the New Hampshire hills, there came forth a woman who caught a truer, clearer vision of the Christ, Truth, which led her to the discovery of the lost key to the study of the sacred record of that matchless life, and this key she formulated into a book that she named "Science and Health with Key to the Scriptures." The fundamentals inculcated in that book gave Mrs. Eddy a place in the world which accords her the distinction of being the greatest woman of her day. Thus she became the acknowledged Leader of the great movement known as Christian Science. Thousands and multiplied thousands of men and women of today are made to rejoice in the light of this new life.

Lectures to be Delivered

Aberdeen, S. Dak.—Clarence W. Chadwick, Orpheum Theater, 8 p.m., March 26.

Albuquerque, N. Mex.—William R. Rathvon, High School Auditorium, 8:15 p.m., March 26.

Alliance, Ohio.—William D. McCrackan, Columbia Theater, 3:15 p.m., March 21.

Anacortes, Wash.—Jacob S. Shield, Empire Theater, 8 p.m., March 19.

Austin, Texas.—William R. Rathvon, Scottish Rite Cathedral, 8 p.m., March 19.

Baraboo, Wis.—Bliss Knapp, Lyceum Theater, 3 p.m., March 14.

Canton, Ohio.—Bliss Knapp, First Congregational Tabernacle, 2d street, N.W., 8:15 p.m., March 22 and 23.

Charles City, Iowa.—Willis F. Gross, Hildreth Opera House, 3 p.m., March 21.

Chicago, Ill. (Third Church).—Willis F. Gross, Church Edifice, Washington boulevard and Leavitt street, 8 p.m., March 25 and 26.

Claremont, N. H.—Prof. Hermann S. Hering, The Magnet Theater, 4 p.m., March 21.

Coffeyville, Kan.—Hon. Clarence A. Buskirk, Jefferson Theater, 8:30 p.m., March 23.

Colville, Wash.—Jacob S. Shield, Odd Fellows Hall, 8 p.m., March 23.

Del Rio, Texas.—William R. Rathvon, Princess Theater, 8:45 p.m., March 23.

Delta, Col.—Virgil O. Strickler, I. O. O. F. Hall, 2:30 p.m., March 21.

Des Moines, Iowa.—Bicknell Young, Coliseum, 8:15 p.m., March 23.

Dubuque, Iowa.—Bicknell Young, Church Edifice, Ninth and Bluff streets, 8 p.m., March 22.

El Paso, Texas.—William R. Rathvon, El Paso Theater, 8 p.m., March 25.

Fresno, Cal.—George Shaw Cook, White Theater, 8:15 p.m., March 25.

Grand Island, Neb.—Bicknell Young, Liederkranz Hall, 8 p.m., March 25.

Grand Junction, Col.—Virgil O. Strickler, Majestic Theater, 8 p.m., March 23.

Greenwood, British Columbia, Canada.—Jacob S. Shield, Auditorium, 8 p.m., March 26.

Houston, Texas.—Col. William E. Fell, Church Auditorium, Main street and Jefferson avenue, 8 p.m., March 22 and 23.

Kansas City, Mo. (Third Church).—Virgil O. Strickler, Church Edifice, 40th and Walnut streets, 8 p.m., March 26 and 27.

Kinston, N. C.—Bliss Knapp, Court-house, 8:30 p.m., March 25.

Lampasas, Texas.—Col. William E. Fell, Witcher Opera House, 8 p.m., March 25.

Mansfield, Ohio.—Bliss Knapp, Opera House, 3 p.m., March 21.

Monmouth, Ill.—Bicknell Young, Old Library Building, 3 p.m., March 21.

Montrose, Col.—Virgil O. Strickler, K. P. Hall, 8 p.m., March 22.

Nebraska City, Neb.—Bicknell Young, Church Edifice, 8 p.m., March 26.

Nelson, British Columbia, Canada.—Jacob S. Shield, Church Building, 8 p.m., March 25.

Pacific Grove, Cal.—George Shaw Cook, T. A. Work Hall, 8 p.m., March 22.

Redfield, S. Dak.—Clarence W. Chadwick, Armory, 8 p.m., March 25.

Rockville Centre, N. Y.—William R. Rathvon, Rockville Centre Club House, 8:15 p.m., March 16.

San Antonio, Texas.—William R. Rathvon, Beethoven Hall, 418 South Alamo street, 8 p.m., March 22.

San Jose, Cal.—George Shaw Cook, Victory Theater, 8 p.m., March 23.

Seattle, Wash. (Fourth Church).—Jacob S. Shield, The Hippodrome, 5th avenue and University street, 8 p.m., March 21.

Spokane, Wash.—Jacob S. Shield, Auditorium Theater, 8 p.m., March 22.

Statesville, N. C.—Bliss Knapp, Court-house, 8 p.m., March 26.

Tacoma, Wash.—Jacob S. Shield, Tacoma Theater, 3 p.m., March 21.

Tyler, Texas.—Col. William E. Fell, Central Presbyterian Church Building, Bois d'Arc avenue, 8 p.m., March 18.

Virginia, Minn.—William D. McCrackan, Socialist Hall, 8:15 p.m., March 12.

Testimonies of Healing

Several years ago, as I was entering Bombay harbor on board a steamer, a little boy approached me and inquired if I had seen his father. I was not acquainted with the boy's father, but gladly consented to help in finding him; and this small incident led to my learning that "one is your Father, which is in heaven." The acquaintance with the father in question, thus happily begun through a little child, continued as the result of our staying at the same hotel in Bombay, and, becoming friendly, I often went to his room in the evening before going down to dinner. On several occasions I found the boy and his father reading from a small book. This led me to inquire what the absorbing topic was that so interested two people of such widely different ages. As a reply, the book was put into my hands with a recommendation that I should read it. This I did, and seeing from one or two days' brief and disconnected perusal of it that it promised to be interesting, I asked where I might purchase a copy for myself. I was told to go to the booksellers, so "nothing doubting" I went, and purchased at the first bookshop I entered a copy of "Science and Health with Key to the Scriptures," thus unwittingly proving the truth of that wonderful statement on page 494, "Divine Love always has met and always will meet every human need."

Losing sight of my friends shortly afterward, I made little progress in understanding the text-book of Christian Science, as I knew nothing of the method of studying it in conjunction with the Bible and the *Quarterly*. In the following spring, however, I went to Afghanistan, taking Science and Health with me, and there, having plenty of leisure, I read a good deal. Certainly I must have gained some understanding of its wonderful teaching, for while encamped in an orange garden enclosed by very high walls, at one end of which was a small "Zoo," I awoke one morning to hear a deal of confused shouting and the noise of men running about. On leaving my tent, I learned that a panther had escaped from his cage, and some fifty paces away I saw the animal crouching in front of an Afghan soldier, who stood immovable, with his rifle and fixed bayonet in his hands and his back to the wall. One thing stands out clearly in my mind, and that is the absence of any fear, either for my own safety or that of the man, and I laughed at the fears of the guards, who were responsible to the Amir for my immunity from harm, as I was informed. The panther was eventually induced to reenter his cage about two hundred yards away, and nobody was hurt. Since then, in reviewing the incident, the Master's words, "Nothing shall by any means hurt you," have often recurred to me.

Returning later to England, I again met the friend who had told me of Christian Science, visited the city reading-rooms, learned how to study the Bible and the text-book, and subsequently found a church near my home. I soon saw that the teachings of Christian Science threw such light on the Scriptures that it was possible to demonstrate the truth of the Master's promises to the extent of one's understanding, and I had many proofs of the power of Truth. In the cold weather of 1910 I was once again in India, and then experienced a recurrence of an old complaint, being seriously ill with malarial fever and ague. I was not able to overcome the trouble myself, but a fellow student whom I knew in Calcutta gave me treatment. In a very short time I was completely healed, and have had no further attack, though on many occasions the conditions supposedly favorable to its return have been present. I had suffered intermittently from malaria for many years previously, and had never since the first attack been free from it for any very long period. My healing took place several years ago, and I know that I am free through the power of Truth.

In the mean time my little son had been attending the Christian Science Sunday school, and I am deeply grateful for the loving care bestowed upon the pupils by those who so unselfishly give their time to this important part of the work, thus enabling the little ones, by their clear faith and calm trust, to help their parents to destroy erroneous conditions. I give only one instance of the value of this loving work. I was suffering one morning, on rising from sleep, with severe toothache, and while shaving, the pain was so acute that I turned to my little boy and asked him to treat me in Science. The healing was instantaneous! Through the child's steady attendance at Sunday school during my absence in India, my wife was led occasionally to accompany him to church, and subsequently studying the text-book, she soon had an opportunity to decide whether or not to cast the net "on the right side for Truth" (Science and Health, p. 271). Our little son was suddenly taken ill, and knowing that he would not wish for material remedies, my wife decided to rely upon Christian Science, and the answer was in accordance with the divine promise, "While they are yet speaking, I will hear."

I know that mere words cannot convey the deep joy which I experience when I remember that whereas years ago I made more than one attempt to understand the Bible, but without success, I now have a sure and certain means of following the advice, "Acquaint now thyself with him [God], and be at peace." I would like to take this opportunity to thank all those who have so lovingly and patiently helped me to the best of their understanding, and for the encouragement I have thereby received to go forward. My thankfulness to God can be expressed only by the measure of my faithfulness to His Word, in daily endeavor to put into practice the Master's teachings and to be found worthy to obey his commands to "preach the gospel" and "heal the sick." This we are enabled to do through the understanding of Christian Science as found in the text-book, the writing of which was indeed a labor of love on the part of a noble and pure woman, to whom countless thousands today unite in expressing deep gratitude for the knowledge they are gaining of the "peace of God, which passeth all understanding."

J. Douglas Gosney, Kingston Hill, England.

◆

Several years ago I was a physical and mental wreck. Our family physician advised me to undergo an operation, for he said he had discovered fibroid growths. This disturbed me very much, as during the previous ten years I had already passed through three operations for so-called organic diseases. I seemed so discouraged that the doctor said perhaps I would like to consult a specialist; and this I did. His diagnosis was the same, and he advised me to return to my physician and take treatment, as I was nervous and not strong enough to undergo an operation then. On telling all this to a friend, she invited me to go with her to see a specialist who was at a hospital certain days and would see me free of charge. I went there, but was told the same thing and advised to make arrangements right away and have the operation as soon as possible.

I went home very much discouraged, and commenced to make preparations to go to a hospital, when one day I was taken ill on one of the busy streets in New York city. I was so bewildered I did not know my way home, and while trying to collect my thoughts, I noticed I was near a building where I had called with a friend who went to see a Christian

Digitized by Google

Science practitioner. All I knew of Christian Science was that it seemed to be a healing religion, and for this reason it could do me no harm if it did me no good. Armed with this thought I went across the street to the practitioner's office, and I am glad to say I was healed in four treatments.

When I wrote to my brother, who at that time lived in Chicago, that I was healed through Christian Science treatment, he came East as soon as possible to offer his assistance if necessary, as he thought I had lost my mind. He was, however, agreeably surprised in the great change for the better, and gave my testimony in church even before I gave it myself. He is not a Christian Scientist as yet, but is always glad to tell what Christian Science has done for me. My healing took place during Easter week in April, 1909. The study of Christian Science has not only kept me almost immune from physical ailments, but it has purified my consciousness and given me spiritual strength to reject anything that is unlike God, good. I gladly join the multitudes who have had like experience, in saying I am thankful to God, and grateful to our faithful Leader, Mrs. Eddy, and to all those who have been willing to help me.

JULIA ARCHER, Brooklyn, N. Y.

I wish to corroborate my wife's testimony, and to state that Christian Science is truly a blessing to have after years of servitude to the unreal masters, sin and disease. In Science and Health (p. 418) Mrs. Eddy writes, "Stick to the truth of being in contradistinction to the error that life, substance, or intelligence can be in matter." As we continue to read the good taught on each page of this book, we glean the understanding necessary to demonstrate health and harmony.

EDWIN ARCHER.

❖

My attention was first called to Christian Science through the healing of my brother, who had long been a sufferer from a complication of chronic diseases. The healing was so remarkable and so complete as to leave no doubt about the effectiveness of this treatment as a means of relief from physical suffering, but further than to feel grateful for my brother's recovery I had little or no interest in the subject.

From boyhood I had been a church-member, and had occupied many official positions in the church; also had taught in the Sunday school and had been Sunday school superintendent. I was not, however, entirely satisfied with my religion, and many times, while studying the lesson in preparation for teaching it to a class of boys, I would find it impossible to teach along the lines laid down in the authorized "lesson helps." In such cases I would spend the lesson period in telling stories from which some helpful thought could be drawn, and thus would avoid the troublesome doctrinal teaching.

After his healing, my brother talked to me regarding Christian Science, frequently calling my attention to some particularly interesting or helpful article in the *Sentinel* or *Journal;* and it did not take me long to notice how different these articles were from those in the church papers to which I had been accustomed. Gradually, in my Sunday school teaching I found myself using some of the truths which I found in these Christian Science articles, and one evening, at the mid-week prayer-meeting, I read an extract from an article in the *Sentinel*, but without saying that what I read was from a Christian Science publication. Finally I became sufficiently interested to begin the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, but I had no thought or intention of becoming a Christian Scientist.

For more than two years I continued my attempts to mix what I was learning with my orthodox church work, until at last I awoke to the realization that in order to be honest, I must either leave my church and identify myself with Christian Science or give up my study of that subject. I had learned enough, even from my superficial study, to convince me that I had found the truth. To be sure, I did not understand all I read, but I grasped enough to make me desire to know more. I therefore left the church of which I was a member and joined the Christian Science church to which my brother and his family belonged.

This was something over six years ago. Up to that time I had given little or no thought to the subject of healing as applied to myself. After I had been in Christian Science for a little over a year, the opportunity of taking class instruction presented itself, and my wife and I availed ourselves of it. At the close of the lessons I realized that a wonderful healing had come to me. For more than thirty years I had been obliged to wear glasses; indeed, I could not go without them. My eyes had always given me a great deal of trouble and I was subject to severe headaches. After the close of class I noticed that for some reason my glasses did not fit me properly, and upon removing them I found I could see perfectly. Since then I have been able to do all my work without their aid, and can read the finest print without difficulty or inconvenience. The headaches left me at the same time and have never returned. Recently, I have been doing some very close accounting work, using my eyes for long periods, sometimes sixteen hours a day and under artificial light, but have suffered absolutely no inconvenience.

We have had in our family many convincing proofs of the power of Truth. I have gained a larger and more satisfying concept of God, and am endeavoring to prove my understanding by demonstration in meeting the varied problems as they come to me; for our Leader tells us that in no other way can we be sure we really understand the teachings of Christian Science.

I shall never cease to be thankful to God for giving us His healing truth, and grateful to Mrs. Eddy for her life of love and good deeds, which enabled her to interpret for us this message of salvation.

CHARLES L. BOSTWICK, Minneapolis, Minn.

❖

It is now nearly eight years since I attended my first Christian Science service, and I wish to testify to the great help Christian Science has been to me, and the complete change it has made in my mental outlook. I am a teacher, and have found the new light thrown on old truths of the greatest use to me in dealing with children. Then the dominion gained by the activity of right ideas has enabled me to go on with my work without having to lose a single hour through illness of any kind, though before coming into this knowledge I was subject to severe attacks of rheumatism.

Our Lesson-Sermon one week contained the statement that "through immortal Mind, or Truth, we can destroy all ills which proceed from mortal mind" (Science and Health, p. 374), and the truth of this was demonstrated very clearly to me in the following experience. On waking one morning, I found I was entirely blind in one eye, although it was open and looked quite as usual. This was a shock at first, though I would not allow myself to grow really alarmed, knowing that it was only a phase of error and must soon pass. I had recently been through class and thought of wiring to my teacher for help, but remembered that she was out of town. One thing I had learned was that Christian Science consists in making right ideas active. I knew that true sight is spiritual perception, that "God is light, and in him is no darkness at all," and that God's law is a law of perfection in all things.

Digitized by Google

Then I read the Lesson-Sermon for the week and several Christian Science articles from *Monitors* which had accumulated while I was away, all the time combating the mortal thought that reading would, under the circumstances, be bad for me, by the right thought that the search for light could bring only blessing. In a few hours vision had partially returned, by evening there was only a little cloud across the sight, and in the morning my eye was quite normal again.

I feel full of gratitude to God for the new revelation of the Christ-power vouchsafed to this generation.

ELIZA A. SIMPSON, Chingford, England.

Words are inadequate to express my gratitude for what Christian Science has done for me. By occupation I am a locomotive engineer. I suffered for three years from stomach disorder and what was called asthma, affecting the heart. When medicines failed to cure me, the physicians advised change of climate, but this gave me no relief. I also suffered severely, for weeks at a time, from rheumatism in my right shoulder. In addition, I had catarrh of the head to such an extent that I lost the sense of smell and of taste, and when a cold came on I was too ill to work. Good, kind doctors did all in their power for me, and I was relieved at times by taking their medicine, but the trouble came back periodically with renewed force. The physicians finally told my wife that they could do nothing for me, and that I could not live long. I myself felt that I was failing, and my sufferings were so terrible that I wanted to pass away. I had been treated with a serum in which I had much faith, and when this failed to help, I thought all hope was gone, and I contemplated ending it all. Added to the ills named, I had a growth in the bowels, caused by my train colliding with another and jamming me between two cars in such a way that I was disabled and in the railroad hospital for three months. When I left the hospital, my already miserable condition was rendered worse by the agony experienced with every breath.

I had heard of Christian Science about fifteen years before, as my sister, then living in Peoria, Ill., had been cured of chronic asthma. She often wrote to me and sent literature, but I did not believe in the healing efficacy of this religion, as I was a well man then and did not think Christian Science was for me. About a month before taking up Christian Science, however, I asked my sister, who had had class instruction, to treat me. I went out on my engine that evening, and after arriving at my destination I sent word to my sister to discontinue the treatments, as I was afraid to trust Christian Science in my case,—afraid to give up medicine and trust all to God. I suffered more at night than in the daytime, and always dreaded to see the sun set, knowing what the following hours until daylight meant to me. My sufferings were so severe on that particular night, that when I returned home the next day I told my wife that I had come to the point where I was willing to trust Christian Science alone, and she said she wished I would. I was much relieved to have her consent.

My father came for me in a conveyance and took me to my sister's home, but I gave my wife special instructions not to tell any of my friends that I had taken up Christian Science, as they would think I was losing my mind, and perhaps talk about it. They did indeed talk, saying that this was the last, and they would not have me with them long. I began studying Science and Health while at the home of my sister, and she treated me herself, as I would not let her call any one else. I was relieved, and went to work in three weeks, but we finally called a practitioner to treat me for the abnormal growth. After three treatments the growth broke and passed off through the bowels, causing no pain whatever. Any doctor would admit that it is a very dangerous operation to remove a growth of this kind, and it is rarely attempted on account of the danger of poisoning. I was also cured of a bad temper, as well as of the tobacco and drink habits.

In the spring of 1913 I had a serious attack of acute lung trouble. I did not send for my regular practitioner, but tried to work it out with my sister's care. After a few days I went out on my engine and had a relapse. I then sent for the practitioner and was out, perfectly healed, in a week, with but one day's suffering. Before coming to Christian Science I had a similar attack, and under *materia medica* it was six weeks before I was able to go to work, while my sufferings were so great that I was kept most of the time under the influence of opiates.

I am very thankful to God for the spiritual uplift I have received through some understanding of the truth as taught in Science and Health. I took up Christian Science in the early spring of 1912, and today I am a sound, healthy man. I sleep well and eat anything without fear or pain. My wife has also taken up Christian Science and has been cured of several ailments, chief of which was sciatic rheumatism. I hope this testimony may give courage and help to others who are suffering. We can all learn that all things are possible to God, and He will heal us if we put our trust in Him.

ALEXANDER MCLENNAN, Bakersfield, Cal.

[Translated from the German]

I had been suffering for years with a distressing gall-stone trouble, which often kept me in bed for days together. The attacks were so severe at times that repeated hypodermics had to be administered, and a local physician, under whose care I was for quite a while, expressed himself as unable to help me. When on one occasion I again suffered the most excruciating pain, I asked my brother to secure help for me in Christian Science, and a practitioner with whom my brother was acquainted at once took up treatment. There was an immediate improvement, and five days later, four treatments having been given, I was again able to manage my business. Whereas formerly the attacks recurred at intervals of from three to four weeks, I have been free from them till now, and I feel impelled herewith to express my deep-felt gratitude for this great benefit.

MARGARETE BERGMANN, Berlin-Lichterfelde, Germany.

Words fail me when I try to express my gratitude for what Christian Science has done for me. Some years ago I was a wreck physically, and unable to get around without great difficulty. My husband, who was then living and a physician, after a thorough examination advised me to have an operation, as that was believed to be the only way to relieve me or save my life. The physicians who examined me said I would have to make my will; in other words get ready to die, as it seemed to me. I strongly objected to this, and so asked a friend what she would do. She inquired why I did not try Christian Science. Those words were as a ray of light in the darkest hours of my life. I at once went to a Christian Science practitioner who was very patient and faithful in her work.

During the treatments I was delivered of an immense rectal tumor, and was pronounced healed in three weeks. For this I was indeed thankful. I scarcely recognized myself, the change was so great. My husband said to me soon after my recovery, "Your healing was surely a miracle, for no one knew your serious condition as I did." I have been well and strong ever since, thanks to the Giver of all good.

Digitized by Google

During the period of treatment I could see so plainly how I might be saved, and I commenced to work out my salvation, although it was "with fear and trembling."

As our dear Leader says, "Better the suffering which awakens mortal mind from its fleshly dream, than the false pleasures which tend to perpetuate this dream" (Science and Health, p. 196). The spiritual uplift has been great, and it seems more glorious every day. Christian Science has been such a help to me in business, and I have many opportunities to prove its efficacy. If all who are studying will be faithful and obedient, they will be blessed.

MARY M. RUDDLER, Chicago, Ill.

✧

For several years I suffered almost all the time from severe pains for which I had to take continuous treatments. The doctors said I could never be healed, and I was plunged into despair; my life meant very little to me. Then a loving friend, a Christian Scientist, came to visit our home, and finding me in this deplorable condition, urged me to try Christian Science. I went to see a practitioner and began to read and study Science and Health. I had not studied long before I reached the point where I could say, as Jesus did, "Father, I thank thee that thou hast heard me." I am happy to state that I have been entirely healed of these pains, also of a form of sleeplessness from which I had suffered more or less all my life. This affliction simply left me as I grew in the understanding of my true relationship to an all-loving Father-Mother God. I am deeply thankful to God, and grateful to Mrs. Eddy for showing us the way in this truth that does heal, and for all that Christian Science has done and is doing for me.—LYDE K. GOOD, Philadelphia, Pa.

✧

I am truly grateful for Christian Science, which is indeed an ever-present help. I was greatly benefited by it while going through a deep sorrow, when a loved one passed away. This statement from Science and Health (p. 259) met my needs: "Man cannot lose his individuality, for he reflects eternal Life; nor is he an isolated, solitary idea, for he represents infinite Mind, the sum of all substance." With these inspiring words I realized as never before man's oneness with God.

This truth is a healing balm when sorrow seems to come. Words are but feeble expressions of my gratitude for the benefits I have derived both physically and mentally. I shall strive to live the life that unlooses the fetters of mortal sense. I am thankful to God, and grateful to our dear Leader, Mrs. Eddy, who has shown us the way.

ELIZABETH V. WILLIAMS, Denver, Col.

The above testimony as given by my wife is correct, and I must gladly say that the comfort which we have received through the understanding of Christian Science cannot be expressed in words.—SAMUEL T. WILLIAMS.

✧

I am very grateful for the knowledge of Christian Science and for all the blessings that have come to me through it, and especially for help received through Christian Science treatment during an attack of influenza. It was wonderful how well I was in two days. The practitioner worked lovingly for me, assuring me all the time that God was my health and strength, and that He was ever present. I am thankful to God, and grateful to our dear Leader, Mrs. Eddy, who has made possible an understanding of this marvelous truth of which Jesus said, "Ye shall know the truth, and the truth shall make you free."

EMELIE WRIGHT, Auburn, Victoria, Australia.

From Our Exchanges

[*The Christian Work*]

God never says "Peace, peace; when there is no peace." "Think not," said Christ, "that I came to send peace on the earth;" he came to save men from their sins. If they are not willing to be delivered from the power of sin, then peace is for them impossible. The world will enter into peace only when it enters into the purposes of God.

Let us come back to the New Testament, and let us start with the angels' song. Many of us have gone astray at the very beginning. We lost the path the first step we took. We listened to the song of the angels, and there was in it no moral discrimination, no ethical judgment, no lifting of humanity to a rigorous self-examination. It was only a broad and loose benediction thrown out sentimentally round all the world. Read the song again. Peace on earth among men in whom God is well pleased. There is no song, no promise, no benediction for anybody else except those who in their hearts are attuned to the nature of God. Jesus himself lived in the midst of conflict, but his heart was kept in perfect peace. From the midst of the whirlwind of hate which was blowing him toward Golgotha he said to the men who were nearest to him, "My peace I give unto you."

[Bernard Iddings Bell in *The Atlantic Monthly*]

There are many quite intelligent churchmen today who believe that the contempt in which the churches are held nowadays is largely due to their failure to rise to their real duty. The demand that the churches dabble in social service is not nearly so general as many of the neo-Protestant ecclesiologists suppose. There is among us today a great soul-hunger. Let the churches cease their dilettante concern with sociological minutiæ, and, as did the prophets, as did the Christ, let them once more lift their mighty voice in a cry for spiritual regeneration and revolution. Let them reason once more of "righteousness, temperance, and judgment to come," and it is just possible that the world, like Felix of old, will cease to yawn and begin to tremble.

[Rev. William Dayton Brown in *The Christian Intelligencer*]

What are you doing for Christ? Religion is not merely being good; it is being good for something. "If ye love me," said Jesus, ye will "keep my commandments." And then there is another kind of preaching. That is the kind which is proclaimed in every word. The whole conversation is seasoned with the salt of the gospel. Some things will be absent from that conversation,—the questionable story, the suggestive criticism, the underhand insinuation, the ruining of characters by innuendo, the retailing of cheap gossip. The conversation of the Christian whom Christ has gripped will be as chaste as light. It will be as pure as the morning dew, in both subject-matter and language. It will be an inspiration to the listener. It will cheer the distressed, it will encourage the down-hearted, it will inspire the discouraged, it will lift up the fallen. And that kind of a conversation is the best kind of preaching.

[*The Universalist Leader*]

Religion is a spiritual interpretation of the whole of life. That part of life which is the most confusing and bewildering is the immediate present; that part of life which influences man most, is that in which he is most intensely engaged,—the present. Therefore the Christian church must be of the moment. It is unthinkable that this regal function of spiritual interpreter should ever become unnecessary to society.

Digitized by Google

As long as "man shall not live by bread alone," one of his deepest wants shall be an authoritative voice, speaking out of experience of "the way, the truth, and the life." People shall flow unto it as the tides of the ocean unto the moon.

The challenge of our day to the Christian church is evidence of society's need of religion, but of religion in terms of contemporary life; a religion which will be founded upon a twentieth-century psychology and theology; a religion which is throbbing with the dynamic of democracy, a spirituality which expresses itself in terms of humanism, rather than in terms of individualism and mysticism.

[*The Congregationalist and Christian World*]

There is a certain reticence of faith under the usual conditions of life. Faith does not thrust itself into notice; it takes shelter in the inner sanctuary of the soul. From that sacred place it sends forth its divine influence. It prefers to show itself by its results rather than to put forth its own assertions. Its presence is unmistakable, for it gives virility and gentleness, confidence and humility, joy and seriousness to the life in which it dwells.

The light which radiates from faith has no glare. It is a diffused and all-pervading light. You are not dazzled when you look upon the man whose life is "hid with Christ in God." You are strangely attracted. You sometimes wonder what it is that makes that life so beautiful. This is the reticence of faith, in the normal, regular routines of life. This is no sign of weakness; it is the sign of the reserve of an infinite power. But when faith is challenged, it never fails to come forth from its sanctuary. Clad in the whole armor of God, it answers the call. Confident, masterful, it meets its most powerful foes. In the face of difficulties, faith lays aside its reticence and makes a commanding self-assertion.

[*Zion's Herald*]

As the years pass by, the sensible man, while wasting no time in vain regrets or indulging excessively in morbid introspection, will every now and then take a good look at himself, assume a candid and critical yet impartial and sympathetic attitude toward his own performances, confess that the mistakes of his life have been many, and mightily resolve that with the help of God the old sins shall not be sinned over again, nor the familiar follies perpetuated in future practice. It is only by this inquisitive objectification of ourselves—as from time to time we conduct a moral survey (as if from a distance) of our aims, aspirations, and faiths—that we can hope to note what is wrong in our mental or moral make-up, and so register steady progress in the difficult art of true living.

[*The Christian Register*]

Judged by the tests of life, by the results of experience, by the potency made manifest in the history of nations, the prayers of intercession now going up from all parts of the world are just the things which the apostle characterized as sounding brass or tinkling cymbals. They pray who act courageously, and they have wonderful answers to their prayers who put their trust not in any formal intercession, but in the reinforcement from the infinite reservoir of every noble purpose and strenuous effort to help the world on the way to better things.

[*The Christian Intelligencer*]

"Except the Lord build the house, they labor in vain that build it." This inspired utterance admits of the widest application. It lays down the fact that without God we are nothing. Whatever is undertaken without God can never yield permanent success or satisfaction. The moral order of the world is so constituted that to leave God out of account is to sow for a harvest of tears.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY
THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
Falmouth and St. Paul Sts., Boston, Mass., U.S.A.
ARCHIBALD MCLELLAN, Editor.
JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

"Palm kernels and the palm kernel oil trade in Africa have been hard hit by the present war in Europe," says a statement issued by the National Geographic Society at Washington. "Palm kernel oil manufacture has hitherto been among those industries of which the world seldom hears. Modern civilization, however, consumes vast quantities of this article, and its demands for the oil are steadily and rapidly growing. The oil palm is a native of west tropical Africa, and its exploitation has remained almost entirely in the hands of the Germans and the British.

"The West African natives extracted the oil, and used it for food, for toilet purposes, and for barter with the white man. Their method of obtaining it was wasteful and tedious, and in recent years the natives have practically lost all part in the commerce. For a long time palm kernel oil was brought into commerce for the exclusive uses of the soapmaker and the chandler. Today, it has scores of uses, and its field for employment is widening steadily. The annual West African turnover of this little-known business has reached twenty-six million dollars.

"Deodorized by hydrogen, palm oil is used in the preparation of 'nut butters,' while the glycerine constituents of nitroglycerine are being derived more and more from it. It is employed in the arts, and in the manufacture of soap, metal polish, and lubricants. Palm kernel cake and meal, the by-product, has been found to be an exceptionally good feed for dairy cattle. One ton of kernel produces one thousand pounds of oil."

Two discoveries, both of great importance to American industries, are announced by Secretary Lane of the interior department. They are chemical processes, developed after years of research by Dr. Walter F. Rittman, chemical engineer of the bureau of mines. One is expected to enable oil refiners to increase their output of gasoline by 200 per cent; the other makes possible the production from crude petroleum of toluol and benzol, bases for dyes and high explosives, for which the United States and the rest of the world depended almost exclusively upon Germany.

Dr. Rittman has applied for patents upon his processes, to prevent the possibility of monopoly in their use, and will dedicate them to the American people. "These processes," said Secretary Lane, "are fraught with the utmost importance. The Standard Oil Company has had a big advantage over the independents in the production of gasoline, having a patented process of obtaining three times the amount of gasoline from a given quantity of petroleum which the independents now obtain."

Plans for the crops of 1915 include an area, judging from last year's acreage, of 211,000,000 acres. The total crop area of 1914 was 301,000,000 acres. This included 41,000,000 acres of winter wheat, the largest the country has ever sown, and more than 49,000,000 acres of hay lands. These two crops made an area of growing products of 90,000,000 acres, leaving 211,000,000 acres as the area to be planted and seeded mostly during the next ninety days, and practically all before the end of June. This immense area is distributed among thirteen different crops, but more than half of it will be planted in corn. The only crop where acreage contraction is expected is cotton. A reduction of 25 per cent from the area of 36,722,000 acres last year is probable.

Contractors employing alien labor in the construction of New York's new subway decided at a recent meeting to ignore the decision of the United States Supreme Court granting a writ of error in the case to test the constitutionality of the state alien labor law. While the decision was taken virtually to mean that the operation of the law was temporarily suspended, the employers decided, nevertheless, to refuse alien labor employment until the case had been definitely settled by the court, or the law repealed. Hundreds of alien laborers who sought to return to work were refused employment, and according to an official of the Contractors' Association, all work on the subway is likely to be stopped, as the supply of American labor is both meager and unsatisfactory.

Nature societies of Chicago have organized a "conservation council." Outdoor societies within a hundred miles of Chicago are eligible to its assistance. Through the council, members of one society will be invited to attend programs of others. Among the societies represented are the Wild Flower Preservation Society, leader in the movement; the Friends of our Native Landscape, the Prairie Club, the Audubon Society, the Outdoor Art League, the forestry class of the Woman's Club, the Horticultural Society, and the Geographic Society. Signs advising the public to protect the birds and not to pick the flowers may be set up in the suburbs. This is the first work now being considered by the council.

The interstate commerce commission has sent to the Senate its report on the investigation of the finances, rates, and practices of the Louisville & Nashville and allied railroads. It charged the Louisville & Nashville with acquiring competing lines, and with carrying on for years, at a cost of millions of dollars, an elaborate political and publicity campaign to eliminate competition and influence public opinion. Further inquiry and, if possible, inspection of the railroad's correspondence was said to be necessary. The report was written before the Supreme Court handed down its opinion, holding that the commission was without power to force the company to submit its correspondence as well as its records and books to scrutiny.

Massachusetts fire losses for the year 1914 will be recorded as the greatest in the history of the commonwealth. While the official figures have not been tabulated, the total loss will exceed the twenty-two million dollar mark, and may reach twenty-three million dollars. The principal reason for the increase is the Salem conflagration, although the number of fires in the state advanced approximately one fifth last year. The previous record of $21,638,566.78 was established in 1908, when Chelsea was fire-swept. The loss in 1913 was nearly eleven million dollars. Not only were there more fires in Massachusetts in 1914 than there were during the preceding year, but there was an increase in the number of incendiary fires.

The appropriations of the Sixty-third Congress to cover various objects of 1915-16 were approximately as follows: Legislative, executive, and judicial, thirty-seven million dollars; agriculture, four million; foreign intercourse, one hundred and nine million; army and navy, two hundred and fifty-six million; Indian affairs, ten million; pensions, one hundred and sixty-four million; public works, forty-seven million; postal service, three hundred and thirteen million; miscellaneous, one hundred and thirty-one million; permanent annual appropriations, one hundred and twenty-one million, a total of one billion one hundred million. In 1914-15 the total was about twenty million less.

One result of the European war has been greatly to increase the demand for American-made thread, and this has been reflected in an increase in the cut of white birch for the making of spools. The American Thread Company's birch operations in and around Lakeview, Piscataquis county, Maine, are now nearing completion, and the cut is estimated at six million feet of logs and eleven thousand cords of birch wood in four-feet lengths. A crew of five hundred men has been employed, and as the operations were conducted on high land, the rains and the lack of snow did not impede work so much as in the spruce operations.

Maine lumbermen say that they recall no such unfavorable weather conditions in February in forty years as have prevailed during the month just closed. Temperatures have ranged unusually high, and instead of the usual heavy snows there has been a succession of rains, carrying away most of the snow that fell in late January and leaving the logging roads almost bare. The present outlook is, that a considerable part of the cut must be left in the woods.

The monthly report of the department of agriculture shows that there still remain in the hands of the farmers of the 1914 crop of wheat, about 152,908,000 bushels, or 17.2 per cent; of corn, about 910,894,000 bushels, or 34.1 per cent; of oats, about 379,369,000 bushels, or 33.2 per cent; of barley, about 42,889,000 bushels, or 22.0 per cent.

The total attendance at the Panama-Pacific exposition for the first two weeks was 1,035,226, an approximate average of seventy-four thousand a day. The largest single day for the second week was eighty-seven thousand. The first week's attendance was six hundred and twenty thousand, the second, four hundred and ten thousand.

The Minnesota Senate defeated the bill providing for the submission to the voters of a constitutional amendment granting full suffrage to women. Thirty-four votes were cast against the measure and thirty-three for it. The House has not considered the bill.

The great Sara bridge on the Ganges, named after Lord Hardinge, was opened by the viceroy on March 4. The length of the bridge is five thousand nine hundred feet.

Vol. XVII March 20, 1915 No. 29

Recognizing One's Enemy

SAMUEL GREENWOOD

NATURALLY the first step toward defeating one's enemy is to recognize who or what he is, since not to know this enemy is to be in danger of coming under his control. That one's enemies are not persons, was made plain by Christ Jesus when he commanded his followers to love those who manifest enmity toward them. In her illuminating article, "Love Your Enemies," Mrs. Eddy writes, "Simply count your enemy to be that which defiles, defaces, and dethrones the Christ-image that you should reflect" (Miscellaneous Writings, p. 8). We have here an infallible rule whereby at all times we may detect our enemy,—never as a person, but as an evil animus or influence, a false mental argument that, if accepted, would alienate us from our highest sense of good.

The only personal enemy we can have is our own false sense of personality, as Mrs. Eddy points out in the article above mentioned. Others may think they cherish enmity toward us and be willing to do us harm, but that is of less moment to us than our own mental attitude. When we are conscious of entertaining no sense of personal enmity, we have a clear field whereon to meet and defeat the impersonal errors that would invade and defile one's consciousness. Only as these errors are stripped of personality, even of our own, can we see them in their true light and intelligently begin the work of destroying them. Speaking of the enemies whom they were to meet in the land of Canaan, Moses enjoined upon the Israelites that they should "utterly destroy them," and should "make no covenant with them, nor show mercy unto them." This would be wanton cruelty in a literal and personal sense; but when these enemies are metaphysically interpreted as the errors of belief that would keep humanity out of their spiritual heritage, we can see that a less absolute stand would only serve to perpetuate mankind's bondage to evil, as human history testifies.

What is it that would defile, deface, and dethrone the Christ-image in our consciousness? Is it not whatever would rob us of our sense of spiritual good, spiritual love, and spiritual being? Such conditions are designated in Scripture as lusts of the flesh, or the qualities of the so-called "carnal mind;" and on page 330 of Science and Health they are enumerated as "lust, dishonesty, selfishness, envy, hypocrisy, slander, hate," etc. Who has not striven with one or more of these evils, seeking to make consciousness captive! Sometimes we may have failed in the conflict or have compromised with the enemy, only to struggle through shame and self-condemnation to regain our sense of freedom. If we have recognized that these are the enemies we must encounter and overcome before we can fully realize the kingdom of heaven, we have made a hopeful beginning; but to deceive ourselves that one can make progress while showing mercy to or making covenants with them, by careless watching or half-hearted conflict, is a costly mistake.

One thing is certain, that when we have once fairly seen what our enemy is, it can never again enter in the guise of a friend, under the cloak of ignorance, or against our consent. If we have really awakened to the pernicious influence of anger, dishonesty, hate, and all selfishness in defacing our concept of the perfect man, we cannot plead ignorance in admitting them again into thought. If through selfish weakness or lack of moral courage we show mercy unto these enemies, it means that they have us captive, and that we shall have to pay "the uttermost farthing" for our release. Who that has seen, in the light of Christian Science, the absolute depravity of the claim of intelligent evil, in its various aliases, can continue innocently to give these place in the consciousness that should be "holy unto the Lord"?

Students of Christian Science who are practically applying its teachings, should know more of the nature and methods of so-called evil than do others. They should know its hideous deformities, the evidences of its devastating influence morally and physically. Yet so subtle are the claims of error that those who know best what it is, and who are in a measure aware of the demands of Truth, are still tempted day after day to think of evil as a person, to call it by name, to accept its evidence, and to carry out its suggestions. Human thought is ever ready to give intelligence to error by arguing with it as with a person, as if it had voice and consciousness, although the student may persuade himself at the same time that he understands its impersonal and unreal nature. With all our experience as Christian Scientists we are apt, without unwearying vigilance, to walk into the enemy's net by listening to audible error, giving back the angry word as if evil could talk or hear, instead of knowing its utter lack of being there at all, and thus grasping another opportunity to see the perfect man.

The moral of our experiences should be, that the enemy once recognized should always be treated as an enemy, and not that we should again come willingly under its yoke. When, for instance, we have seen the defiling influence of anger, why show it mercy when it again appears? Selfishness may argue that the resentful thought and cross word are easier than loving-kindness, and thus lead us to forget that we are not in this warfare for ease but for salvation. We behave more consistently in worldly affairs, for who would let into his counting-house or store one whom he knew by experience to be a thief? We take precaution against the loss of material things, while we carelessly leave our thought-doors open to every marauding error, as if the preservation of our consciousness were of less importance than the safety of our goods. Surely, if we let such mental conditions as hate, jealousy, revenge, dishonesty, and hypocrisy go on robbing us of our good thoughts, we cannot expect to progress in the understanding of the Science of God. Why, then, do we let these acknowledged enemies into consciousness, when we know that their only possible influence is to deface and defile?

Not to be able to recognize error is of course to be in danger of mistaking it for the truth; but if one knows the truth, he cannot be deceived by its opposite. If we understand, even in part, that man is the image of God, we know that evil is no part of Him, has no relation to Him. Whatever would persuade us that evil is something, or that it is intelligently personal, is our enemy, no matter how relatively

harmless its name may appear. If the peoples now at strife understood that their enemies are not people, they would not use material weapons in fighting them. If they had but known that their only enemies are greed, envy, jealousy, revenge, selfishness, and ambition, instead of persons, and that these wicked thoughts and motives were operating against them, not merely in the consciousness of the opponents but in their own, this terrible conflict would never have occurred. Instead we should have had the spectacle of nations striving with their own errors, whatever their nature, and not with one another, and conquering all evils in the name of Christ, the Son of God. It must some time come to this, and the sooner Christian Scientists actually demonstrate in their own experience the reality and practicability of brotherly love and good will, the sooner will the vision of universal peace dawn upon mankind.

Potency of Truth

ARTHUR OSBORNE

THE protection assured in the words of the psalmist: "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty," and "He shall give his angels charge over thee, to keep thee in all thy ways," was most clearly demonstrated by me, and the twenty-first day of February, 1914, will ever remain a red-letter day in my life. In retrospection, I realize how beautifully divine Love was protecting me, and I am indeed thankful, as well as grateful for the understanding which Christian Science has revealed to me of the omnipresence and omnipotence of good. Early that Saturday morning, I was reading Mrs. Eddy's address on "Obedience" in "Miscellaneous Writings," and it impressed me so forcibly that I took the book to my office that I might specially study these words: "Honesty in every condition, under every circumstance, is the indispensable rule of obedience" (p. 118).

Later on in the forenoon, our cashier having made up the bank deposit, I drew a check for two hundred and fifty dollars, which the secretary of the company endorsed. I put the check, together with the deposit, in the left-hand outside pocket of my overcoat, and it being a wet day, I took the car down to our bank. I went first of all to the receiving teller to make the deposit, and then searched for the check to cash it, but found it gone. For the moment I was surprised, but to make sure that I had taken the check with me, I telephoned to the office, requesting the cashier to look on my desk and see if the check had been left there. She did not find it, therefore I immediately took up the thought that God never made a thief, that nothing could possibly be lost in divine Mind, and that God's perfect man could not be made a channel for error. I did not feel any sense of alarm, but put implicit faith in almighty power. For protection I went to the paying teller and filled in a form for the stoppage of the check, and then went back to my office. On reaching there, the secretary of the company met me and said the paying teller had just telephoned to say that the check had been paid. I said, "We can do nothing," and he replied, "You had better go down and find out if anything can be done." I did so, and saw the check, which had been cashed during the time I was telephoning to the office.

I had marked on the check how I wanted payment,—sixty dollars in silver and one hundred and ninety dollars in gold,—and the one who cashed the check received the money accordingly. I returned to the office, and on reaching there one of the salesmen said to me, "There's been a young fellow here looking for the secretary,—something about a check,—and he's gone out with Mr. —— to try to find him." In a short time a young man appeared. He was very pale, and trembling all over, and it came to me instantly that he was the person who had cashed the check. I went up to him and asked if he wanted to see the secretary, and he replied in the affirmative. I told him that the secretary was not in, but the president of the company was, and he had better see him. I went with him to the president's office, where he told the latter that he had found a check that morning and cashed it. When the president asked why he cashed the check, he answered, "It looked so good to me, sir!" Then I inquired why he did not keep the money, and he replied that he could not. He produced the whole of the money, just as he had received it from the teller, and said, "Thank God, this is over!" I told him that he had done the next best thing to returning the check, and after a few words of encouragement, gave him the lines that I had copied from "Miscellaneous Writings" that morning, as they went to show that through his obedience to the demand of Truth my brother had become honest.

Mrs. Eddy says in our text-book, "Science and Health with Key to the Scriptures" (p. 111), "The Principle of divine metaphysics is God; the practice of divine metaphysics is the utilization of the power of Truth over error; its rules demonstrate its Science." I am most thankful to God that I was enabled to make this demonstration, and grateful to Mrs. Eddy for the revelation of the truth which is able to free us from every limitation of mortal sense.

Love's Power

ALICE FROST LORD

EVEN after the fashion of this world's thinking, much weight is attached to the redemptive power of love. From time immemorial the mother-love has been exalted because of this power inherent in it. It sees perfection in the child where others see many faults, perhaps. Neighbors and associates may find the little one fretful, annoying, selfish, but somehow the mother clothes her child in garments of perfection which she refuses to discard, let others say what they may. Even in later years this love reaches out to erring sons and misguided daughters, and despite society's frown, and possible enclosing prison walls, it turns on a search-light of goodness that uplifts and redeems.

Churches have long availed themselves of these facts in carrying on their evangelical work. The tender tone of mother-love struck by the pulpit orator has again and again touched some hardened heart and awakened a responsive chord. Society today, as illustrated by its prison-reform work, is beginning to apply the same fundamental appeal to the redemption of the erring. In the middle West, for instance, wardens of state institutions report most gratifying results from probationary work and the use of methods which inspire the prisoner with self-respect and place upon him responsibilities and trusts.

Christian Science goes still farther, and finds in the fact that God is Love, the lever by which the consciousness of men is raised to the truth of being and living is exalted to Christlikeness. It declares that God's creation is perfect, and that to the divine Mind, infinite Love, man as God's likeness never errs and never suffers. This spiritual attitude is directly opposite to material belief. Instead of approaching men with chiding for their misdoings and condemnation for their crimes, Christian Science reaches forth with healing touch and inspiring word, and bids them live their true selves, reflecting divine Love and Truth. "Go, and sin no more," was the Master's admonition, and it is the Christian Science call to take the straight and narrow path that leads to

Digitized by Google

eternal life. It comes not with pleading but with gracious command, imparting the knowledge that man, being spiritually perfect, can reflect none other than divine Love. No time is wasted over past errors in consciousness; no weight is attached to hereditary encumbrances; no power is given to evil of any kind.

Free, in the sense of man's perfection as God's child, one begins to realize the truth of the Bible saying that "where the Spirit of the Lord is, there is liberty." In Science and Health (p. 225) Mrs. Eddy says, "Love is the liberator," and she has declared this more convincingly than ever it was declared since Jesus of Nazareth himself showed mankind how this is the way to health and holiness.

Altruism and Healing

B. STANHOPE EASTERDAY

UNIVERSALITY of comprehension and effort has characterized reformers and their work in all ages. Enlarged perspective, even to the point of a universal scope, has made possible prophecy and achievement throughout all history. Looking beyond the narrow confines of local and racial conditions, the patriarchs and prophets were said to commune with Deity, but he who was designated the great Teacher surpassed all others by virtue of his universal compass of human need, past and to come. He looked back through the ages and detected the fallacy of the superstitions which had held mankind in cruel thraldom, and was thus able to astound scholastic theology with the paradoxical assumption of antecedence over Abraham. With clear vision he anticipated history's ponderous unfolding of cycles and set a definite bound upon human ill. He heralded with authority the reign of Truth, and issued, in the promise of the Comforter, a proclamation of universal freedom. He thus frustrated on the one hand the selfish zeal of the chosen people for a restoration of temporal power, and on the other provided a new calendar for the world in the proposal of universal peace. We have a further illustration of this all-embracing compass of thought in epoch-making Paul. From Saul the Pharisee, an intellectual bigot who was dominated and actuated by the spirit of egotism, there was evolved, in a single vision of the Christ, a saint, a brave champion of human rights, who in emulation of the erstwhile despised Master became "all things to all men," that he "might by all means save some."

Had our revered Leader been content with her own initial glimpse of spiritual truth which resulted in a marvelous healing, she would have differed little from other godly men and women known to the world as reformers, and there would not have been evolved from Puritan womanhood an acknowledged world benefactor. It was when with prophetic clarity of vision she saw universal humanity in cruel servitude to evil; when, despite the fact that this same grasp of retrospective and prospective vision included the unpleasant certainty of mortal conflict with false claims to power, she wavered not, that she was able to hear and to heed the divine call to expound to this age a scientific system of spiritual healing.

It is significant in this connection that when the great Founder of Christianity gave the world the model prayer, he couched its every phrase in the plural, so that the prayer, which Mrs. Eddy declares "covers all human needs" (Science and Health, p. 16), is in its inception and in its essence universal. Little wonder, then, that in her present-day attempt to unfold and reestablish the Science of Christianity Mrs. Eddy has outlined, as primarily essential in connection therewith, an appreciation that regenerative and healing prayer is in the last analysis true altruism, containing neither in expression nor in spirit any intimation of an "I," a "me," or a "mine." Of further significance in this connection is the fact that in the prayer outlined for members of The Mother Church, as given in the Manual, she has used the specific singular in dealing with evil and its elimination, but the universal plural in dealing with Truth's dissemination and race salvation. "Prayer in church," according to this same wise criterion of worship, "shall be offered for the congregations collectively and exclusively" (Manual, Art. VIII, Sect. 5). Frequent impersonal healings at our church services attest the wisdom and utility of such comprehensiveness and altruism in the compass of prayer. The apostle James definitely and tersely outlines the essentials of genuine religion as being a universal comprehension of humanity's need coupled with self-purification, and this is further set forth in the Christian Science petition that sin may be ruled "out of me," and that "the affections of all mankind" may be enriched, as stated in Section 4 of the article above quoted.

It will be recalled that according to the Master the fruits of true religion, the healing of the sick and sinning, were to be gathered in all ages. How logical and significant, therefore, was Mrs. Eddy's advice to those seeking surcease from suffering of any nature, that the body, the embodiment of selfish thought and selfish interest, be literally forgotten in the habitual consciousness of good and of humanity's need thereof! Her further benign counsel in this connection, which in itself amounts to a healing benediction, is the inculcation of the golden rule, wherein the true avenues of healing are found to be not avenues of so-called knowledge either of disease or of how to heal disease, but the broad, wholesome, vivifying avenues of genuine, intelligent compassion, conducing to an ever enlarging comprehension of infinite Love, sufficient inspiration whereto is found in the dominant yearning of her own heart as expressed in these words from Science and Health (p. 367): "I long to see the consummation of my hope, namely, the student's higher attainments in this line of light."

Overcoming Error

JOHN W. WATKINS

WHEN I read in the *Monitor* some time ago of an invention which was being tried by a railroad company in Canada for the control of trains with the view of avoiding accidents, the thought came to me that an invention which would sound an alarm on approach of trouble and so avoid disaster and waste in the business in which I am engaged would be a great boon to every one connected with it. Then I recalled an incident which took place only a short time before, and which showed me that the remedy was at hand but was not applied so sedulously as it should be.

For a number of years I have held positions of more or less importance in printing establishments, and being in such positions I have learned that in manufacturing printed matter it seems impossible to avoid blunders and accidents of various kinds. When these occur they cause loss of time and waste of material in one department or another; and this fact has seemingly brought a nervous fear upon many who follow the business. One day, while sitting at my desk, I felt constrained to walk back into the pressroom, a department over which I had no control, and as I passed one of the presses I noticed that a brass rule in the form which was being printed, had worked up and was cutting through the paper, thus spoiling it. I pointed to the sheet, and the pressman stopped the press to remedy the trouble. He remarked that it was lucky I saw it, as his attention was given to other work at the time.

On examination it was found that only four sheets had been spoiled. At the rate the press was running, at least

Digitized by Google

thirty sheets would have gone through the press in the time it took me to walk from my desk to the place where the press stands. What was it that prompted me to go back there among the presses? Was it not the same intelligence that governs and controls all right action? or "angels," as we read in Science and Health, "God's thoughts passing to man; spiritual intuitions" (p. 581)? The impulse was at once obeyed, even without knowing why I was doing it; and it came before that piece of rule had worked loose enough to do any appreciable damage, so that prompt action prevented waste.

When we go humbly about our work, no matter what it is, and hourly and daily put into practice what we learn in Christian Science, no doubt many errors are overcome of which we have no knowledge. The more we obey these impulses, the more we are imitating our great Exemplar. It would seem that the Master was constantly overcoming error of some description. One morning he came to the city of Nain just in time to restore the widow's son to his mother; again, when the stormy waves seemed about to engulf the small craft containing Jesus and his disciples, he proclaimed the presence of peace, and there was a calm.

According to the Master's pronouncement, we are to do the work which he did. In Science and Health Mrs. Eddy says about man, "His birthright is dominion, not subjection" (p. 518). It is therefore our place to overcome error in every form, whether it be business difficulty or physical discord. When Christian Science is applied to daily affairs, it destroys the belief that sometimes things must naturally go wrong, and in place of this belief comes the understanding why it is more natural for all to move in harmony.

Our Church Services

LAURA DUNBAR HAGARTY

ESTIMATING the future progress of Christian Science by the past two decades of its history, one is reminded of our Leader's prophetic statement at the time of the dedication of the original edifice of The Mother Church in 1895: "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name" (Pulpit and Press, p. 22). Is it, then, too distant a goal to vision the whole world finally saved from its woes by the ministrations of Christian Science? A due realization of the magnitude of the work of Christian Science rebukes the trivial, the indifferent, and the complaining attitude of thought, and all that would retard or obstruct it ceases to attract the attention of those who have identified themselves with its stupendous mission.

Among the means provided for furthering the mission of Christian Science are the public services of the church. It is imperative, therefore, that Christian Scientists should guard their thoughts against the intrusion of anything that would tend to obscure their scientific sense of the relation of the church services to the progress of the cause, and it should never be forgotten that healing must always be the keynote of these services. We open wide our doors, not that the public may enter and be charmed with an artistic edifice or delighted with a musical performance; not that the esthetic sense may be gratified, but that through the promulgation of the gospel of our great Master the sick and the sinning may be healed. At this period of our history, when beautiful structures are multiplying and prosperity is attending our efforts, it is well for Christian Scientists not to become enamored with the material. When artistic perfection begins to enthrall, spirituality begins to wane. Wise is he who remembers the crude externals under which the cause progressed in its early days. Such a one realizes that all which makes Christian Science worth while is its transcendent spirituality. In the enjoyment of prosperity it gives mental poise to contrast its rugged beginnings with the finished product of its assured future.

There should always be uppermost the conviction that the public services of the Christian Science church have their *raison d'être* in their healing work, and every church-member should feel the responsibility of clearly realizing this truth during the public reading of the Lesson-Sermon. If each does his whole duty in this respect, he will not have time either to laud or to criticize adversely the personality of the readers or their service. He will be alert to see that in devoting his attention to such subsidiary matters he temporarily interdicts the appearing of Truth in his own consciousness. Either praise or blame of the readers indicates a lapse on the part of the hearer. Thought should be focused upon something immeasurably higher than vocal technique, if the Christian Science pulpit is to give out the word "with signs following." No less obvious is it that readers should discourage criticism of their work from members of the congregation. The reader who loses sight of the spiritual import and efficiency of the word of God in his belief that his reading is exceedingly gratifying to the congregation, makes a stupendous mistake.

So too in the testimony meetings. Until one subjugates self-love, pride, ambition, and the desire to excel, to the selfless desire publicly to render thanks to God for His blessings, his testimony is not likely to bring any inspiration to his hearers. Whoever yields to a disinclination to raise his voice in acknowledgment of the benefits he has received from Christian Science, has not caught the true significance of the movement, nor the intimate relation of the Wednesday evening meeting to the prosperity of the cause. To seek for oratorical excellence in giving one's testimony is to misinterpret the purpose of the meeting. Frequently the most convincing remarks are made by the illiterate, who, shorn of all thought of self, pour forth a paean of praise from hearts overflowing with grateful love. Such speakers always impress the hearer because of their naturalness, the absence of all cant, and their manifest honesty and sincerity of statement.

So great a cause as that of Christian Science may well claim one's all, even the self-effacement that places its work first and personal indulgence last. The lethargic, the indifferent, and the self-indulgent, will be awakened and inspired if they will but study the writings of Mrs. Eddy in connection with their Scripture reading. As one comes to see the devotion exhibited in her life, he is sure to be quickened and strengthened in his own efforts to serve the cause, and evidence is thus given of the possession of a kindred spirit which makes the personnel of the Christian Science movement attractive and impressive to the world. Thus we may bring to fruition, under the stimulus and protection of divine Mind, the purpose of our church services.

❖ ❖ ❖

I found myself, one day!—
  The self God made;
The self He, perfect, planned,
That moves at His command.
  A revelation this,
Naught evil may withstand.

F. MARION RALSTON.

Selected Articles

[Editorial in *Austin* (Minn.) *Herald*]

A few days ago the *Herald* called attention to a bill before the Legislature which would prevent members of the Christian Science faith from practising in the state without a medical license.

The injustice of such a measure is plain to all, and no really loyal American citizen but must hope for its failure. Personal liberty is one of the choicest of American privileges, so long as that personal liberty does not interfere with the rights of others. Those who want a physician are at liberty to have one, and most people do; but if they do not want a doctor and do want Christian Science, they should be privileged to have it.

The Christian Science people all over the land are to be found among our best citizens. They are of notably high moral character. They believe in all the ordinary virtues, like paying their debts, helping the needy, and telling the truth. Most of them have been led into the faith through its healing powers, and they surely ought to be as good judges of its efficiency as those who know nothing about it. From sickness and sin many have come out into fulness of health and strength of character, through what they call Christian Science. Christian Scientists follow the laws of health; they are hygienic and clean in their living; and no state could deprive them of their religious rights without bringing odium upon itself.

❖

[Editorial in *Red Wing* (Minn.) *Daily Eagle*]

It will have to be admitted by all fair-minded people that the opposition on the part of Christian Scientists to this bill is based on good grounds, and is consequently fully justified, because with one fell swoop this bill classifies among the quacks, clairvoyants, and charm-workers, whom it aims to suppress, some of the most successful healers of physical and mental ills that the world has ever known.

That quackery should be suppressed is highly desirable, whether the quackery be practised by means of drugs, knives, or prayer; and in so far as the bill aims to accomplish this purpose, it is commendable. But in its failure to draw the line between humbuggery on the one hand and actual ability to heal on the other,—in this the bill is vicious. The bill provides no other discrimination between the one and the other than the possession of a license from the state board of medical examiners. If the board issues a license, the possessor of the same may go ahead and kill or cure, free from molestation. But if some one not possessing this medical examiners license, through special abilities and qualifications should heal a sick person, the punishment for so doing shall be a fine of from one hundred dollars to five hundred dollars or imprisonment from four to twelve months. Could anything be more preposterous?

The result of this bill, if passed, would be to make the medical board of examiners the lords and masters of all the God-given powers of healing known and practised by men. And who or what is this medical board of examiners which should be vested with such absolute control of God's gifts to humanity? A handful of medical men, as human as the rest of us, and as prone to preferences and prejudices as men in general—and sometimes more so.

That Christian Scientist practitioners should resent being classed among quacks, clairvoyants, and fakers, whose sole aim is to prey upon public credulity, is but natural. With them it is not merely a case of study, as in the medical profession, but also a case of mental adaptation and of personal character. Whether they are practitioners or not, depends solely on their ability to cure by such means and methods as they believe in. If they are unqualified to cure, a license would not enable them to do so, and they would not attempt to practise in any event. If they do cure, their practice is built on that fact and on no other. And no arbitrary law, in the interest of some particular school or schools of practice, should be permitted to bar them—under those circumstances.

The proposed law should either be killed as an attempt at class legislation, or be so amended as to differentiate between quackery and actual healing. In other words, if passed, it should include among those exempt from its operations, such forms of practice as have proved, beyond a question of doubt, curative of disease—which is the sole aim and purpose of the art of healing.

❖

[From *Daily News*, Minneapolis, Minn.]

In its present form, the Gjerst-Sawyer bill to bar all "healers" other than M.D.'s and osteopaths does not deserve to pass. Ostensibly designed as an aid to preventive measures at times of epidemic contagion, it goes so far as to bar all non-medical healers except osteopaths. Particularly would it bar Christian Science healers from practice in any sort of cases whatever.

The appearance of the Minneapolis Ministerial Alliance as an advocate of the bill is unfortunate, when the sweeping character of the measure is considered. If the bill is merely intended as an attempt to make the restrictions against contagious diseases more effective, it is shown upon examination to be so broad that it affects Christian Science in its activities which are in no way associated with contagion. As drawn, the bill bears the flavor of religious intolerance, which its ministerial backers would doubtless desire to disavow.

According to their highest authority, it is entirely consistent for Christian Scientists to recognize those forms of disease for which quarantine is prescribed by law and to cooperate with the public authorities in restrictive measures. If this permission has not been followed by individuals, they should be dealt with as such, and their action should not be charged against the denomination as a whole.

There can be no disputing the fact that Christian Science in its healing aspect has brought relief to thousands of sufferers. Whether or not the belief may seem fantastic and incongruous to outsiders, cuts little figure in view of the positive, incontrovertible results. So long as any considerable number of persons find relief and comfort in the practice of this belief, they should certainly have that privilege. Cases involving contagion are altogether a different thing, and there is no reason why the Christian Science practice in such should not be brought into complete harmony with the quarantine laws.

❖

[Henry Deutsch in *Sentinel*, Dawson, Minn.]

I call your attention to House File No. 513 and Senate File No. 872, bills introduced into the Legislature, which would have the effect and result of depriving persons of the individual right to select the form of healing which they desire. The passage of this bill would exclude all practice but that of the regular medical or osteopathic schools, and would compel a man to accept that treatment or be a party to an illegal act if, after they had found his case hopeless, he should want to turn to Christian Science or some other form of healing.

It is needless to say that the bill is wholly unfair, unjust,

Digitized by Google

and unreasonable, and would have as its tendency the establishment of a monopoly in the healing art. The bill assumes to license the art of healing upon the passing of the examination prescribed in subjects which are of use only to medical practice, and inasmuch as the board of examiners provided therein is composed entirely of one school of medicine, it can be readily seen that a person who was not desirous of practising medicine would stand no chance of passing their examination, however much qualified, for it would require a great stretch of imagination to believe that a board of medical examiners would give a license to a Christian Science practitioner, or to a chiropractor, etc.

In addition to this, the bill is a direct invasion of the constitutional right of Christian Scientists to practise their religion, as the result of which thousands of people have been restored to health and happiness whose cases had been pronounced incurable and hopeless by physicians. If this bill were a law, they would have been condemned to die because they could not be healed by the regular forms of practice. It is to be assumed that opposition to this bill will appeal to every fair-minded person, of whatever religious faith, as the American people are quick and sensitive to any attack on the underlying principle of religious freedom which is embodied in the Constitution of the United States and is the bulwark of our liberty. It would be just as bad to have state medicine as state religion.

It is not apparent that the bill would accomplish any useful purpose whatever, so far as the reporting of contagious diseases is concerned, as under the rules of their Church government Christian Scientists are obligated to comply with all laws governing the regulation of contagious diseases and reports thereon, quarantine, etc. And it is a known fact that Christian Science workers are very particular in these matters.

It is yet to be found that Christian Science has ever harmed any one. Its followers are a peaceful, loving, law-abiding set of citizens, who are seeking only to do good and consistently live in accordance with the teachings of the Bible and the golden rule. It is expected that all earnest, fair-minded people will deprecate this effort to interfere with their religious freedom and raise their voice of protest against this proposed iniquitous legislation.

❖

[From *Daily News*, Minneapolis, Minn.]

Christian Scientists packed the House chamber and galleries of the Capitol to their last foot of standing room last night, only to learn that the bills against which they had come to protest had been withdrawn. Lauding the chairmen and members of the House and Senate committees on public health for their fairness and courtesy, Henry Deutsch of Minneapolis, spokesman of the Scientists, told them that, there being nothing left to object to, they might as well go home. A preliminary statement of this condition by Rep. G. W. Redenberg had already drawn cheers from the gathering. But they cheered again when Mr. Deutsch said:—

"The Sawyer bill in the House, and the Gjerst bill, its duplicate in the Senate, have been withdrawn. Sen. J. W. Andrews, chairman of the Senate public health committee, has assured us that he will so amend his bill on the subject of 'healing' that it will not apply to the practice of Christian Science, or else withdraw it."

The legislators, declared Mr. Deutsch, had shown themselves fair, and he wished to express his appreciation, and the appreciation of those for whom he spoke, for their fairness and open-mindedness regarding the constitutional right of citizens to worship as they pleased.

[Thomas F. Watson in *Visalia* (Cal.) *Times*]

Dr. —— tells us in the *Visalia Times* that "spiritual healing is a fact," and admits that "the church has been derelict in not recognizing truth;" but he insists that "disease and pain must be considered real," and then healed. Disease and pain are real to physical sense; so is darkness. And just as darkness disappears before the light, proving that it is not a reality or entity, so do disease and pain disappear before the Christ-consciousness, or the Mind which was in Christ Jesus. In the first chapter of Genesis, which contains a list of things that God created and pronounced "very good," we do not find sin, sickness, or death mentioned, and we are told in the following chapter that "God ended his work which he had made." The Bible further states that "without him was not any thing made that was made," and therefore God is the only creator. Jesus said, "My meat is to do the will of him that sent me." He destroyed sin, sickness, and death, and this proves that it is not the Father's will for such evils to exist.

The Christian Scientist does not "insist that his metaphysics can exorcise a blizzard . . . or put to flight the many ills that flesh is heir to," but he does know that when Jesus said, "Ye shall know the truth, and the truth shall make you free," he meant what he said; and it is this truth understood and demonstrated which does destroy the false consciousness of sin, disease, and death. In regard to this writer's remarks concerning the "death-rate" affecting "Christian Scientists and other folks alike," his attention is called to the fact that Jesus made no distinction in favor of Christian Scientists when he said, "If a man keep my saying, he shall never see death." Therefore it is no more incumbent on the Christian Scientist than upon others to keep his saying in order that they may not "see death." The Bible calls death "the last enemy that shall be destroyed," and Mrs. Eddy states on page 426 of Science and Health that "sin brought death, and death will disappear with the disappearance of sin."

❖

[S. T. Downs in *Noblesville* (Ind.) *Ledger*]

In a sermon by an evangelist, as reported in a recent issue of your paper, the statement was made that Christian Science "takes away the hope of heaven through the blood of Jesus Christ." It is neither the intention nor the desire to dispute any person's right to think as he pleases on the question of salvation, but it seems well to ask the privilege of making a statement through your columns as to what Christian Science teaches on this subject.

Christian Science gives the understanding that the shedding of human blood could not have been necessary to appease the wrath of God, but that the real blood of the cross is Christ Jesus' proof of the power of Love to destroy hate, of the power of Truth to destroy error, and of the power of Life to annul the belief of death. Christian Science shows that it is in the life, works, and glorious resurrection of Christ Jesus that mankind finds real hope and proof of redemption. St. Paul expresses this in the fifth chapter of Romans: "For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life." Mrs. Eddy, the Discoverer and Founder of Christian Science, makes this very clear in the chapter entitled Atonement and Eucharist, in the Christian Science text-book, "Science and Health with Key to the Scriptures," and the subject is further illumined in her book "No and Yes."

Christian Science shows why a sick body or a sick mind cannot glorify God, and proves that neither exists as the result of the law of God. It sets about to destroy sickness and sin through the operation of the law of good, the law of

Digitized by Google

God, as taught and demonstrated in the life and works of our Wayshower, Christ Jesus. No Christian Scientist, however, has ever claimed to have the understanding of divine Love that Jesus manifested, but present proofs give the positive assurance that we shall finally "grow into that stature of manhood in Christ Jesus" (Science and Health, p. 350) by which we shall be able to fulfil all his commands and emulate him in all things, including the unfailing destruction, even to human sense, of everything that is unlike divine Love.

Christian Science has healed thousands upon thousands of sickness, including every disease known to mortals; and it has released a like number from the bondage of sin and misery. It brings about the destruction of sin or sickness by exactly the same process. It would be impossible to make a man better physically in Christian Science without making him better morally; and by the same rule, it would be impossible to make him better morally without making him better physically.

✧

[Editorial in *The Cambridge* (Mass.) *Tribune*]

The campaign of the regular medical organizations of Illinois to secure ante-election pledges from candidates, binding them to support the doctors' legislative program, aroused strong opposition from numbers of citizens who, though probably not themselves interested in the rival theories of cure, are deeply concerned in preserving the freedom and moral integrity of their legislative representatives. Few things are more subversive of free government than the presence in legislative bodies of lawmakers who are pledged beforehand to further some special interest. This attempt of the organized physicians affords an impressive illustration. Here is a special class seeking legislation which would greatly increase the financial revenues of its members, while taking from many thousands of citizens the legal right to employ the practitioners of their choice.

In every legislative district there are, no doubt, many citizens who believe that they owe their health and lives to some one of the various new systems of cure that the entrenched medical societies are seeking to outlaw. It would seem that the legislator would be morally bound to keep his mind free and unbiased, until he had heard both sides of a question so grave and personal as that of one's right to resort to any curative method which one might select; yet this is precisely what the political doctors were striving to prevent by preelection pledges, which would practically make the legislator the doctors' man and establish a most dangerous and subversive precedent.

It makes no difference that the medical interests claim that the legislation desired is for the public good. Special privilege always, in seeking legislation favorable to itself, makes its plea on the ground of "the general good." But in the present instance the fact that there are in our country hundreds of thousands of intelligent citizens who put their trust in the schools and systems of cure which the proposed legislation would prohibit, made it especially incumbent upon legislators to resent any attempt to place them in a position where they could not consider the issue on its merits, after hearing both sides.

✧

[Harry I. Hunt in *Camden* (N. J.) *Courier*]

Allow me to make a brief comment on the recent decision of a New York court in the case of a Christian Science practitioner, referred to in a recent issue under the heading "Legal Cases of Interest."

The several opinions in this case consume thirty-nine sheets of typewritten paper, but the gist of the whole decision can be put in a few words. Although the present decision is not final, the majority of the judges ruled to the following effect: It is allowable to practise religious tenets which include healing, unless the practitioner provides an office or place for the work and receives payment from those who offer it. If he does this, he must have a license to practise medicine.

It is to be observed, therefore, that this judgment rests wholly upon the alleged impropriety of receiving compensation for service rendered. On the other hand, the former chief judge of the highest court in New York (Edgar Montgomery Cullen) recently said in a public address: "In all Christian churches prayers are offered for the recovery of the sick, and all decent Christians, Friends possibly excepted, believe in supporting their clergyman. The Christian Scientist has exactly the same right to be paid for his service." Which of these views is correct may be debated by judges, but the ultimate right of decision belongs to a larger court. If the present ruling correctly interprets the law of New York, and the statutes thus construed do not conform to the sense of justice held by the people, the law can be changed and will be changed.

A very large percentage of Christian Science healing is done without compensation; and Christian Science has been commercialized to exactly the same extent that Christianity was commercialized in the days of Christ Jesus. When he sent out his disciples to preach the gospel and heal the sick, he said, "The laborer is worthy of his hire." The difference between the compensation which they received pursuant to this instruction and precept is simply a difference in the conditions of human life then and now, there and here; that is to say, a difference in the manner or medium of payment. Christian healing is just as much entitled to compensation when done in an office convenient to Broadway as when done in a Judæan synagogue or at the gates of Lystra.

Sorrow Vanquished

LAURA GERAHTY

THE gate of sorrow swings upon its hinge,
And as it sways with every load of fear
Or gentle waft of joy's expectancy,
I see the Christ beyond, and fain would reach
The outstretched arms in wide entreaty spread.
Oh, tender voice! that moves nor breath nor chord
Upon the broken harp, but with sweet strains
Dispels all weariness and wakes to light
The eyes that long in Stygian night were closed.
Oh, gracious hope! that knows no backward glance,
But points me forward to untasted joys
Of sweet contentment and of untold bliss.
Oh, Love of loves! that reachest out so far
That not one straying lamb miss thine embrace
If e'er so be he longeth for the fold.

. . . . . .

Meantime the gate of sorrow creaks and groans,
While sinners stand without and joy within.
Open, thou rust-grown door! True desire
Is needed only to transform these bars
To silvern strings as fine as gossamer,
So light, so frail, that faith's white hand shall touch
Their brightness in the dark, and I shall see
Only the Christ in all his purity!

Editorial

"Strait is the gate"

If humanity's concept of God and man's relation to Him, during the ages preceding the advent of Jesus, had been correct, and the teachings of our Master had been in accord therewith, he would not have met with opposition, nor would he have been persecuted and crucified. It was because these teachings differed from those which were generally accepted at the time Jesus commenced his ministry, that the scribes and the Pharisees, the high priests and the rulers of the synagogues were disturbed, and plotted what they intended to be his downfall and the suppression of his work. Again, with the same misdirected zeal that obsessed Saul of Tarsus, intrenched scholasticism has in this generation persistently and cruelly misjudged, misrepresented, and persecuted Christian Science and its Discoverer and Founder. Ignoring or rejecting, as did those old-time zealots, the works of healing from sin and sickness by which Christian Science long since justified its claim as the reinstatement of primitive Christianity, these learned critics have unwittingly placed themselves in the category of those of whom it was written, "He hath blinded their eyes, and hardened their heart; that they should not see with their eyes, nor understand with their heart, and be converted, and I should heal them."

Mrs. Eddy's easiest course, from the point of view of the opportunist, would have been to modify her presentation of Christian Science to meet the settled views of those who might be expected to oppose this new gospel. That this temptation presented itself, and that she met and mastered it, is shown in her own words: "The author has not compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth" (Science and Health, Pref., p. x). What is equally to the point, she justified her faith with works which could not be gainsaid. Standing alone with Truth, she gave her message without fear or favor, and left the results with God.

Every Christian Scientist is under the temptation to compromise with prejudices; in other words, to sugar-coat his presentation of Christian Science so as to make it acceptable to his friends; but this is a temptation which must be withstood if mankind is fully to benefit by Mrs. Eddy's work. There is no other way to the attainment of an understanding of this teaching than by individual study and demonstration. Christian Science is an exact science, and as such it must be stated in terms of exactness; otherwise is to dilute or adulterate it. Those who nominally would become Christian Scientists if permitted to alter or dilute its doctrines, could be of no value to the cause for which our Leader labored so unselfishly. They would add nothing but numbers to the Christian Science organization, and numbers at the expense of clarity of understanding would be a detriment rather than an advantage. Mrs. Eddy has said, "Only through radical reliance on Truth can scientific healing power be realized" (Science and Health, p. 167), and in the spirit of this saying we should see that any compromise with matter or with a material concept of God and man would retard the salvation of mankind through Christian Science.

There is but one path in Christian Science, and that one is straight and narrow. Like that way of which the Master spake, it leads "unto life, and few there be that find it," because it calls for obedience, for loyalty, for consecration, for self-denial, for the love that yields supreme allegiance to God and accords to one's neighbor, yes, even that which styles itself one's enemy, the same rights and privileges it seeks for itself. This is the gospel Jesus taught and which he bade his followers teach, and those who are truly his disciples can teach and practise no other.

Those who today would condemn Christian Science and its followers, after practically a half century of demonstration of its truth, are to be pitied for the wilful prejudice which they are allowing to blind them to the vision of joys supernal, —of heaven in the hearts of men and not a future possibility of which they may only dream. There have been many in the past who were unwilling to concede that the sick are healed and sinners brought to repentance through Christian Science, but sooner or later, when some loved one was brought back from the very gateway of death through its ministrations, they could no longer doubt its truth. The day of condemnation of that of which one is unwilling to be convinced because it implies the admission that one has been mistaken in his preconceived notions, is not yet over, but it draws on apace. On Christian Scientists themselves rests the obligation of bringing it to a close. Let us so consecrate ourselves to the cause to which we are pledged, so purify ourselves of everything that might hinder us in the way, that we may win the world for Christ. "Strait is the gate, and narrow is the way," but they who walk therein to the end will find untold blessings.

ARCHIBALD MCLELLAN.

❖

"Be thou clean"

THAT purity is native to the good, the beautiful, and the true, is instinctively discerned. The vision of the morning stars singing together, the bright appearing of the manifestations of the all-creating, all-controlling Spirit, embraces no perception or possibility of "anything that defileth, neither whatsoever worketh abomination, or maketh a lie," to quote St. John, whose exalted sense perceived the divine to be immaculate, and that the attainment of the Christ-mind means the separation of thought from all that is unideal.

Dirt has been defined as "matter out of place," and this recognition serves to quicken sense, since every thing or thought that is out of place, all that makes for disorder or disharmony, must be an offense to law and order, hence to true refinement. In this perception, human aspiration is approaching that at-one-ment with the ideal which gives sure prophecy of the coming of man.

It may be argued by some, however, that filth is but a seeming; that the processes of decay are not less wonderful and interesting to the chemist than are the processes of growth to the biologist. To this we answer, Very true, a seeming it is, and in a far deeper, more significant sense than the physical scientist has dreamed. This is the hall-mark of Christian Science teaching, that all which is unspiritual or untrue in its nature is unreal. It can have no place in the consciousness of God, no place in the consciousness of man, hence it is wholly out of place in our consciousness. Christian Science identifies matter as the projection of false sense, wrong thought objectified; and it therefore teaches that it is only with the coming of the Christ, the immaculate idea, that one's mentality is made clean, all that is lawless, impure, unspiritual,—in a word, all impurity,—being removed thereby.

This passes from didactic statement to concrete experience in the instance of every up-looking man, for he realizes a growing sense of repugnance to every presentation, phase, and aspect of materiality, all that is opposed to the spiritual life. To such a man personal cleanliness comes to mean not only a continuous effort to escape from the unseemly break-

Digitized by Google

down and decay of his body, but he feels in ever increasing degree the longing expressed by St. Paul when he said that in this tabernacle "we groan, earnestly desiring to be clothed upon with our house [our true embodiment] which is from heaven."

As this instinctive desire for purity becomes more and more enlightened in Christian Science, one is led not only to turn away from "all filthiness of the flesh," and all unsavoriness and indelicacy of speech and thought, but from every philosophy and point of view which he cannot unhesitatingly attribute to the activity of Truth and Love. Cleanliness thus comes to be identified with spirituality, with conformity to the order of the divine manifestation, and the Master's words, "Blessed are the pure in heart: for they shall see God," are newly and inspiringly understood,—the absolute separation between the spiritual and the material, the unideality and incongruity of mortal experience, is clearly seen. The impure has come to include all that does not pertain to God's man and his eternal life.

The Scripture exhortation that we perfect holiness is now recognized as a plea for consecrated and continuous effort to attain to immaculate thought, motive, and conduct here and now. This is Mrs. Eddy's persistent contention, that right consciousness, knowledge of the truth, must and will oppose and ultimately dispel everything in us and of us that can decay or die. And this surely is that more abundant realization of life which Christ Jesus said he had come that we might have,—the purity and the vitality which pertain to the dominion of divine law.

The cleanliness inculcated in Christian Science is all inclusive and ideal. Its realization means that we shall be clothed not in the habiliments of flesh, but in the garments of righteousness; not subject to material sense, but free as the children of light. It means that abhorrence of evil and repugnance for impurity shall blend into one, and that aversion for all that is undivine shall compass and correct our living, until we shall come to be "known and read of all men" as indeed Christlike.

JOHN B. WILLIS.

Attainment

IN every department of human endeavor those who make their mark have a distinct goal in view, and their efforts to reach it are characterized by definiteness and persistency. It is very likely that few persons could at the start name the goal which they hope some time to reach, and so they are content to think of it in a hazy sort of way as success. There is nothing wrong about this, but success is never really any one's goal. At most it is a condition which helps to give character to effort, but even this must be forgotten as the goal itself is more clearly seen.

Whether one starts out to acquire wealth, fame, or happiness, he will find himself compelled at each forward step to give up much that he at the start considered essential, and his willingness to do this will prove that he has begun to reach a higher sense of attainment. For example, a young man may begin by bending all his energies to the acquirement of a fortune, and he may at the same time desire to keep his manhood untouched by dishonesty or even the taint of mere money-getting. If he holds fast this determination, the desire for wealth will become secondary to the one vital consideration for every human being, namely, to be what God means that we shall be.

The attainment of perfect manhood is the goal which God has marked for us all, and it should never be lost sight of, whatever avenue of human endeavor one may be following. Wherever we may be, we are "compassed about" with a great "cloud of witnesses," who are waiting to see whether we shall gloriously advance or ignominiously retreat. It is sure to be the latter, unless we have grown wise enough to drop the weights which would hinder our progress, and also have learned how to "run with patience the race that is set before us."

In Science and Health (p. 426) we read, "The discoverer of Christian Science finds the path less difficult when she has the high goal always before her thoughts, than when she counts her footsteps in endeavoring to reach it." Too often are mortals tempted to pause in self-pity and complain that the way is wearisome and the sky overcast with clouds. Even if this were true, what of it? No obstacle can come between us and the goal, unless we weakly admit that evil has power to mar our destiny, for all the time omnipotence is saying, "Let us make man in our image, after our likeness: and let them have dominion." This assuredly means all who are looking Spiritward, to catch the reflection of divinity, and who measure their attainment, their success in all right endeavor, by an ever unfolding consciousness of "likeness" in character, purpose, and aim.

Sometimes it may seem as if the infinite goodness is so far above the human plane that we dare not measure ourselves by it; but we are told that we may be strengthened and gladdened on our way by "looking unto Jesus," who endured all things, yes, met the bitterness of death itself, "for the joy that was set before him." Mrs. Eddy tells us that "Jesus was the highest human concept of the perfect man" (Science and Health, p. 482). In Hebrews he is called "the forerunner," and we read that in opening up the way for us it was at times "with strong crying and tears;" yet he pressed on in unswerving obedience, for thus alone could he become "the author of eternal salvation."

Paul, who says such splendid things about attaining the goal, urges us to keep the Christ-ideal ever before us. He tells us that if we "mind earthly things," we may even become "enemies of the cross of Christ." It is not enough that we avoid missing the way for ourselves, we must see to it that no word or look or thought of ours can so influence another that he shall turn aside from the straight and narrow path that leads to life. Better indeed that we cut off the right hand or pluck out the right eye than that we lose sight of the goal in yielding to mortal instincts. If we are really nearing it, these instincts will cease to influence us, and we shall be, to quote Paul again, "strengthened with all might, according to his [God's] glorious power."

ANNIE M. KNOTT.

Among the Churches

Current Notes

BLOOMINGTON, ILL.—During the year 1914 the literature committee distributed 19,308 pieces of Christian Science literature, among which were nine copies of Science and Health, seven annual subscriptions to the *Monitor*, three to the *Sentinel*, four to the *Journal*, and one to the *Herold*. The public library is provided with fifteen copies of "Science and Health with Key to the Scriptures," and the loan library of the Christian Science reading-room with ten copies. All of these have been in constant use during the year, and important additions were made at the opening of the new year to supply the greater demand.

Increased use of Science and Health through the libraries is accompanied by increased sales of the text-book and all other Christian Science literature through the reading-room, also a larger use of the room as a place of quiet and effective

Digitized by Google

study. The work of the committee has been strengthened and enlarged by gifts of literature to the six libraries in this field, and the generous contribution of money for the use of the committee during 1915 by the Trustees under the Will of Mary Baker Eddy.—*Correspondence.*

LANCASHIRE, ENGLAND.—The great event of the year 1914 occurred in the general acceptance of the scheme of distribution of literature submitted to the churches and societies with the sanction of the Directors of The Mother Church. Distribution committees were duly appointed under this scheme in all the places affected, and the periodical meetings under the chairmanship of the committee on publication, at this office, have proved to be of real value to the field.

A meeting of distribution committees and local assistants, together with the committees on publication for Great Britain and Ireland, was held in London on March 7, and a *Monitor* meeting of historic significance on June 27. At this latter gathering the new district manager was introduced, and he made a good impression on the workers by his description of experiences in the preparation of the Christian Science daily newspaper. On Tuesday, Dec. 15, he came down to Lancashire and addressed a county distribution meeting held at Bolton, which turned out to be one of the most helpful of the series organized thus far.

The distribution returns for the year show a large increase on any previous record, being a total of 109,887 pieces. The special distribution of literature to meet the needs of prisoners of war, granted by the Trustees under the Will of Mary Baker Eddy, has resulted in 1,102 pieces being sent out to concentration camps from this office alone. All this work of distribution is done by the workers in that quiet, unobtrusive way that ever accompanies the coming of the divine idea to man.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Hereford, Texas

The lecture on Christian Science at the court-house drew a good-sized audience. The Hon. C. D. Wright, county judge of Deaf Smith county, in introducing the speaker, Virgil O. Strickler, said in part:—

A year ago I knew nothing about the teachings of Christian Science, but since then I have read "Science and Health with Key to the Scriptures" by Mrs. Eddy. This book teaches us to study the Bible with a new understanding, "to hold hatred in abeyance with kindness, to conquer lust with chastity, revenge with charity, and to overcome deceit with honesty" (p. 405). He who will address you this evening is an advocate of these ideas, and is a deep student of Christian Science, which is synonymous with the Christ-principle. You are thus here to learn what Christianity means from a scientific standpoint. This man is devoting his life to a cause that is trying to bring the yearning, seeking, restless masses back to an understanding of the simple teachings of the gentle Nazarene. Like all real Scientists, he is a soldier for good against unbelief, following Christ's command to "preach the gospel," and trying to make you hear anew the equally imperative command to "heal the sick."

The Hereford Brand.

❖

Pittsburgh, Pa.

Bliss Knapp, lecturing on Christian Science for First Church, was introduced by H. L. Parmenter, who said in part:—

There never has been a time since the beginning of the Christian era when the world has more persistently demanded proof of every religious teaching presented to it than it does today. Christian Science stands as an example of its ability to satisfy this demand. The rapid growth of this religion is not a result of what it promises to its followers at some distant place called heaven, or some future time beyond the grave, but it is rather the result of what it is doing here and now in relieving suffering humanity from sickness and sin, and all the other discords that enter into human experience.

Correspondence.

❖

New Haven, Conn.

Bicknell Young, who lectured on Christian Science, was introduced by William Capell, first reader, whose remarks were in part as follows:—

Thousands and thousands of healthy, happy Christian Scientists owe their health and happiness to Christian Science. Freed from the fetters of fear and disease, they rejoice in the liberty which rightfully belongs to the children of a loving God. Christian Science has rescued multitudes from the depths of despondency and despair, and has given them "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." Not only does this religion heal sickness and sorrow, but through its holy influence it causes the wicked to "forsake his way, and the unrighteous man his thoughts." Judging this religion solely by its fruits, the unprejudiced declare it to be good. Those who have acquired a demonstrable understanding of the subject, know that Christian Science and Christ's Christianity are identical.—*Correspondence.*

❖

St. Louis, Mo.

The Rev. William P. McKenzie, who lectured on Christian Science at Fourth Church, was introduced by William E. Morgan, who spoke in part as follows:—

Students of the New Testament will recall that Jesus commanded his disciples to go forth and preach the gospel and heal the sick; not only the twelve, but "other seventy also." These returned with joy, saying, "Lord, even the devils are subject unto us through thy name."

It is recorded in the Acts of the Apostles that Paul and others—who became disciples of Jesus after his ascension—healed the sick through spiritual means, as did the earlier disciples. It is also commonly accepted that this power prevailed in the church during the first two or three centuries of the Christian era, but that subsequently it was lost, so that in our day the ministry of healing from sin and sickness is performed from two different standpoints,—the one spiritual, undertaken by the Christian ministry, which is divided into sects differing as to method, and the other

Digitized by Google

material, undertaken by the medical profession, which is divided into schools differing as to method. While both of these important agencies, in the conscientious performance of their labors, have rendered mankind great service, the fact remains that sin and sickness have not materially diminished.

The discovery of the Science of the Christ-healing practised by the early Christians, whereby sin and sickness are destroyed by the self-same spiritual power, has been given to this age by that remarkable woman Mrs. Eddy, in her text-book, "Science and Health with Key to the Scriptures," and through the ministrations of that great church established by her, known to the world as The First Church of Christ, Scientist.—*Correspondence.*

❖

Brighton, England

A lecture on Christian Science was given at the Hove Town Hall, under the auspices of First Church of Christ, Scientist, in Brighton. Major Des Voeux, R.E., was in the chair, and in introducing the lecturer, Col. William E. Fell, he said the presence of such a large audience was evidence that there was interest in the subject of Christian Science. It was a subject which was becoming of increasing interest to the whole world. It appealed to thinking people and to practical people, and it was a religion which a man could avail himself of at any moment of any day. It was a religion which, in proportion to his understanding of it, a man could prove to be true. Just now the world was going through a time of stress. It was when they were going through a bad time that people reached out toward something higher. When everything was going smoothly, they were not very much inclined to try to find out more about God.

It was because Christian Science afforded a logical and satisfactory answer to the different problems which affected mankind that people were seeking to find out what Christian Science meant, what it taught, and what it did. These lectures were not given with a view to persuading people to believe in Christian Science. It did not rest on belief, but upon proof, and a man must learn to understand it. These lectures were given lovingly and freely, so that all who wanted to get a right understanding of Christian Science might hear about it from an authoritative source. There were many misconceptions, too, and these lectures were given to correct these misconceptions.—*Sussex Daily News.*

❖

Jersey City, N. J.

The introductory remarks of Frederick Wilson at the Bergen Lyceum, on the occasion of a lecture on Christian Science by Jacob S. Shield, were as follows:—

Christian Science has encircled the globe, comforting the sorrowing, bringing hope to the despairing, and healing the sick. It is not a new doctrine, but the truth taught and practised by the Master when he was here among men. It is a religion of good cheer, demonstrating the fatherhood of God and the brotherhood of man. Christian Science offers so clear an interpretation of the Scriptures that the works of Jesus are understood and made possible in our day. Jesus said, "Freely ye have received, freely give;" and we who know and enjoy the great blessing of Christian Science want to share it with you.—*Correspondence.*

Testimonies of Healing

[Translated from the German]

Jesus said: "Whosoever . . . shall confess me before men, him will I confess also before my Father which is in heaven. But whosoever shall deny me before men, him will I also deny before my Father which is heaven." These Scriptural words, which were familiar to me from my childhood days, came vividly to my remembrance at a desperate period of my life, when I reached out for help.

In 1912 I became ill, and the attending physician had me taken to the hospital, where it was stated that I had gall-stones. The head physician told me that these could only be removed by an operation, and that unless it were performed, I would not live more than seven or eight weeks at the longest. I submitted to it, but went through dreadful suffering, a rupture of the gall-bladder having occurred during the operation, as I was told later, whereby the blood became affected. In about three months' time I had recovered sufficiently to get a dismissal from the hospital, and was then able to work until the middle of January, 1913. From then on the trouble asserted itself again, and became so aggravated that I presented a wretched appearance. I returned to the hospital, but the physician thought it would be dangerous to operate this time, as I was too weak, and when after three months, during which I was under medical treatment, my condition appeared to be unchanged, I was dismissed from the hospital. I now applied for help, as I had done formerly, to the doctor of an association to which I belonged. He showed great kindness and did his best to relieve me, but finally declared that it was beyond his power to help in my case.

In these dark hours, in my condition of hopelessness (for I often wished death might come), I experienced help from above. The glad news that the Christ-power which healed all manner of sin and disease in Jesus' time is still healing them in our day, came to me through a lady who is an adherent of Christian Science and who gave me a few copies of the *Herold* to read, besides explaining to me a few points with regard to this glorious world religion. Through the constant reading of the *Herold* and adequate mental work, the healing and regenerating power of divine Truth gradually dawned upon my sense.

From then on there was daily improvement. My trust was rewarded and my hope fulfilled, according to the words of the prophet, "They that wait upon the Lord shall renew their strength." I asked a Christian Science practitioner for help, which was readily given, and with four weeks' treatment I was completely restored. The doctor of the association, whom I had to see once a week in order to be examined, on account of the financial assistance I was getting, was very much surprised at my changed appearance, and asked what was going on with me. I am seventy years of age and able to attend to all my work, and I have every reason to be grateful to God for all the blessings which I have received in a spiritual, physical, and financial way through Christian Science. I also wish to thank our revered Leader, Mrs. Eddy, through whom the truth was again revealed, and made accessible to all who thirst after it.

Heinrich Behrens, Ottensen bei Lindhorst, Sch. L., Germany.

✧

Our little boy was born in October, 1909, and we are more than grateful to Christian Science, for had we not known of the truth at that time we feel that he would not be with us today. Five years before this a little one was still-born at eight months, and for weeks my life was despaired of. Indeed, I was in a most serious condition. For three years I suffered with bladder, kidney, and female troubles. Then physicians advised an operation, one saying that he could not assure me of ever being perfectly well. While in this state of discouragement and despair, I asked for help in Christian Science. In three weeks I was much improved, but I continued to have frequent attacks of the bladder trouble. I cannot say just when these disappeared, but I began to build up both mentally and physically.

Before the birth of our little boy I went regularly for instruction and help in Christian Science. I studied and read faithfully, and continued in perfect health, with not one sick moment. I did my own housework, and was happier and more contented than I had ever been before, having that spiritual uplift which comes from knowing there is only one power, God, good, and that man in God's image and likeness is perfect. At eight months the same symptoms appeared that caused the premature birth before. There was great suffering, and every indication that labor was at hand. The practitioner stayed with me almost constantly for three days and nights, and her knowledge of the truth that God is our sure deliverer, healed me. In five days I was up and about my usual duties as before, perfectly well and strong, and rejoicing in the lesson we all had learned.

Four weeks from this date the little boy was born with no assistance whatever from the doctor, and practically no pain. The physician made the statement that it was the most normal birth he had seen in fifteen years' practice. I was up and dressed part of the next day, and in less than a week I was taking care of the baby. I have been perfectly well since then, and am deeply grateful to be free from all the effects from which I suffered in my first experience. This little boy is now five years old, and is well and strong. He has never tasted medicine, and the few ailments he has had have been overcome almost instantaneously with the truth.

Another demonstration made with the help of the same practitioner, was in the case of an eruption which came out all over my body and gave me great discomfort. It became so bad that I could not eat or sleep, and the heat from my clothing caused an itching that was almost unbearable. I did the best I could by reading and studying, but the condition seemed so real to both myself and my husband, that to please him I consented to have a physician examine it, and was told it was a form of herpes. I then asked for Christian Science help, and in less than a week was entirely cured, and I have never had any trouble since.

These experiences make me desire to express my thankfulness to God, and my gratitude to Mrs. Eddy, through whom this apprehension of Truth has come. It seems so little just to say we are deeply thankful to God, and grateful to our Leader, but we can show our gratitude by loving obedience to the teaching of Science and Health and by putting it into practice each day, as far as we know.

Grace Wilson Stitt, Lakewood, Ohio.

✧

I am indeed grateful for all that Christian Science has done for me. It has been my daily help ever since I was quite a little boy up to the present time. I am engaged in the works of a firm of electrical engineers, and one afternoon, while taking out the bushes of a bearing on a very large casting, the latter slipped and fell on my foot. A man who was working beside me, seeing what had happened, ran down the works for assistance, and with the help of two other men lifted the casting, and so released me. The pain was intense, but I knew that nothing could injure God's child, for

Digitized by Google

He is always with us and protecting us. The men took off my boot and sock, but were astonished to find nothing more than a slight mark where the casting had struck, for they expected to find that the heavy weight had crushed the foot.

I started home after this, and on leaving the tram, walked a mile and a half to the house without feeling any pain or stiffness. The next morning, much to the surprise of the men who so kindly helped me on the previous day, I went to work, and thought no more about the accident until they asked me how my foot was. This brought to mind our Leader's words, "Accidents are unknown to God" (Science and Health, p. 424), and surely "God is our refuge and strength, a very present help in trouble."

About six months before leaving school I noticed that my sight was not perfect, and I could not read what was on the blackboard. The medical examiner told me that my eyes were in bad condition, and I must have glasses at once. I was accordingly taken to an oculist to have my sight tested. A Christian Science practitioner gave me one treatment, and when the glasses were received from the optician I found that I had no need to wear them at all, as I could see better without them. I have had normal sight ever since. These experiences showed me how Christ, Truth, and the healing power is always with us.

May I be always led to realize the truth of what Jesus said to the disciples, "Whatsoever ye shall ask in prayer, believing, ye shall receive."

Harold Hall Daniels, Ashton-on-Mersey, Cheshire, England.

❖

I am so grateful and happy that I would like to tell others what Christian Science has done for me, and what a wonderful change it has made in my life. A few years ago I was a physical wreck from heart disease, an injured spine, nervousness, a severe bowel trouble, constant colds, besides fear and unhappiness. The belief was that I had not a healthy organ in my whole body, and the future was a dreary picture, full of dark forebodings,—but how different everything is now! All the ailments have vanished, and I am well. The heart disease left me in a few weeks after turning to Christian Science, and all the other complaints disappeared very quickly. The future, instead of being dark, is light and full of the treasures of Truth, for which I am eager to work as well as to search.

I also suffered from asthma for over twenty-four years. I had tried different climates without any relief, and while in Europe had been examined by one of the foremost physicians in Leipzig. He pronounced my case incurable, as he claimed it was caused by the condition of the heart, and said that I must always be very careful to try to ward off the attacks, which used to leave me very weak. Now, however, through the daily study of the Lesson-Sermon and my effort to live up to the truth, this ailment has gradually disappeared, and changes of climate and foggy weather no longer affect me. Does any one wonder that I am happy? But there is a deeper cause for my happiness than being freed from sickness, and it is the knowledge that God is ever present in time of trouble and that there is a power to help us to be purer, more loving, and of more use in the world.

I have been gradually freed from the worry and fear so common among mothers, when their little ones are not well, and as a result my two children are much healthier and better in every way than before we understood about Christian Science. They have experienced very quick healings in cases of colds, fevers, mumps, and injuries, and as a result of their attendance at the Christian Science Sunday school they are learning to help themselves. I have the deepest reverence for Mrs. Eddy, and many times think of how steadfastly she clung to God, that all mankind might be able to understand divine Love as she so clearly revealed it.

My healings have all been permanent. I have climbed mountains, and been able to stand what would to material thought have been severe shocks, without the slightest heart trouble. My little family and myself have been blessed in many ways, and I am grateful to say I now have the privilege of being a member of Fourth Church of Christ, Scientist, in this city, and of teaching in the Sunday school.

Mrs. Charles Werner, San Francisco, Cal.

❖

It is with the deepest sense of love for God, and of gratitude to Mrs. Eddy, that I give this testimony in proof of the healing power of Christian Science. I have been helped many times since coming into Science. I was healed of what seemed a very severe throat affection in about three treatments, and of a slight attack of acute lung trouble in a week, through the spiritual understanding of a Christian Science practitioner.

Some time ago I had the opportunity to prove the efficacy of Christian Science through my own understanding. I was visiting at the home of my brother, and when going from the kitchen into the dining-room, I caught my finger in the swinging door and hurt it badly. I turned immediately from material sense with the declaration, "All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). I knew that if all is Mind, there could be no accidents, because Mind is not subject to material conditions. The sense of pain was overcome instantaneously, and by the next morning there was no trace of the injury. This little incident proved to me that Christian Science heals every sense of error. The physical healing is nothing, however, when compared with the understanding of God which I have gained through the study of Christian Science.

Gertrude Dillon, Chicago, Ill.

❖

[Translated from the German]

Like the psalmist I would say: "Bless the Lord, O my soul: and all that is within me, bless his holy name. Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies." I would link my testimony of gratitude and of healing to these words, for great things have been done unto me by God's infinite love and goodness through Christian Science. I was healed of a severe stomach and gall-stone trouble, which for several years had caused me increasing suffering, together with all its injurious effects. I used to look into the future with a heavy heart. All material methods and means were applied, from the crudest to the most refined; but although they relieved me for a while, they were not conducive to a cure.

In the hour of greatest need, help came through Christian Science. I had heard of this teaching before, through a kind couple, and when the subject presented itself again, I set my trust upon it and was richly rewarded. A dear neighbor went to a Christian Science practitioner, who came at once, and after talking with me gave me treatment. After the fourth treatment I was completely healed. This was almost two years ago, and there has been no return of the trouble. Today I am perfectly well in mind and body. The search after the universal truth as presented in Christian Science,

Digitized by Google

after the universal solvent of divine Love which healeth mankind and bringeth calm and peace, was a big struggle, extending over thirty years, during which time I met with many a hard experience. But this is all a thing of the past and everything has become new. I thank God from the depths of my heart for the benefits received, and am grateful to Mrs. Eddy. May all people attain to the true knowledge and understanding of God!

FRIEDRICH SCHWALBACH, Wiesbaden, Germany.

❖

Several years ago I was a great sufferer, and had been for a year. I spent a large amount of money for medicine, medical treatment, and other material means, only to find myself steadily growing worse and face to face with an operation. A skilled surgeon told me that a mass of cysts had formed on an internal organ, and I was unable to sleep in a natural position. Every night my sleep was broken, and I was a nervous wreck.

Upon the advice of an uncle living in the West, and of a friend who had been healed through Christian Science, I sought a practitioner; and words can scarcely convey an idea of the spiritual uplift, the courage and strength, which that first Christian Science treatment imparted to me. One by one the troubles left me,—the growth, a displacement, and a chronic bowel disorder, as well as hatred, resentment, sensitiveness, and many of the other things that "worketh abomination, or maketh a lie." The healing was accomplished in less than three months.

Now comes a part about which I am reluctant to write. Up to the time my health gave way I was an earnest church worker, and I was advised by my pastor, when he learned of my healing through Christian Science, to consult with one who had been healed through Science but was not a Scientist. I should have known that this was error, but I went and talked with the lady, with the result that I became interested in a form of mental science. The inducement held out to me was that it was easier to comprehend and "just like Christian Science."

A year or so elapsed, and I tried with all my might to progress and be able to make demonstrations for myself and others, but failed; and the more closely I pursued the study, the more confused became my thought. Then to my great sorrow there seemed a return of the old trouble. I at once wrote to my former practitioner, who at that time was living in South America, and no sooner had my plea for help reached her than I was again liberated from bondage; and I have been well ever since. I have become an earnest student of Christian Science, and I am looking forward with pleasure to receiving class instruction. It is my sincere desire that in my daily life I may at all times unconsciously exert an influence for good.—ALICE HURLBUT MARTIN, Beloit, Wis.

❖

Words cannot express my gratitude for all that Christian Science has done for me and my family. I had been leaning on *materia medica* most of the time for eight years, for I suffered from almost every ill that "flesh is heir to." I had headaches which at times were so severe that I would be unconscious for two or three hours. I also suffered from spinal and bladder troubles, bowel disorder, and nervousness in its worst form; and some said that there was a growth on the brain. I had been treated by almost all the doctors in our home town and had consulted some of the best specialists in the state; I had been to three different hospitals and had submitted to one operation. A short time before I decided to try Christian Science I was at a hospital, but was getting so discouraged with life there that I wanted to come home; therefore with the consent of the doctor I did so, after promising to follow his directions. Nothing did me any good, however, so in the fall of 1912, when a cousin was visiting me from Hamilton, Ohio, I talked with her about Christian Science. She insisted that I should go home with her and see a practitioner, and I am thankful that I went.

On Sunday evening my cousin and I attended the Christian Science church, and almost the first thing I noticed was the quotation on the wall: "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). This I proved true. There were only two people present when we arrived, one of whom was a practitioner. I told her of some of the ills from which I suffered, and as I always had intense pain whenever I went to church, I asked if I could leave the room if necessary. She said I would not need to do so, and I did not, for I felt no ill effects and enjoyed the meeting. I therefore made arrangements with the practitioner for treatment, and within a week I was perfectly healed and came home rejoicing. I had been obliged to wear glasses off and on all my life, but when I was healed everything yielded, and I have not worn them since.

I also want to state that one day when our boy was working in the woods, he was stung by a bee. When he reached the house, the swelling was so great that he could hardly be recognized. The practitioner above mentioned was visiting us at the time, so the boy asked for help in Christian Science and was entirely healed within a short while. I could tell of many other demonstrations.

I am thankful to testify that my healing has been permanent, and I look on this great change as an evidence of divine Love and as proof of the promise to those who seek "first the kingdom of God, and his righteousness." Mere words can never express my gratitude to Mrs. Eddy for giving us such a wonderful book as "Science and Health with Key to the Scriptures." I love to read all of the Christian Science literature.—METTIE M. MANGAS, Union City, Ind.

❖

For twenty years I suffered from sciatic rheumatism during the winter months. At times it would be of a mild form and I could keep at work; but other attacks would be so severe that I would have to quit work for several weeks. I was treated by a number of physicians, and while they generally relieved me, they were not able to effect a cure. As I grew older, the disease became more severe and the attacks more frequent. I tried many material remedies, also changes of climate, but relief was only temporary. In February, 1908, I had a very bad attack and was almost helpless for a number of days. I grew steadily worse, and after trying everything we could think of, my wife recommended that I try Christian Science, as she had been benefited by it some time before. I wrote to a practitioner and sent the letter that day. The next morning I had relief, and in two days was entirely cured. The trouble has never returned. We have had many demonstrations of the efficacy of Christian Science in our family since this healing.

I am truly thankful for the help I have received to live a more Christian life; and I am very grateful to our dear Leader, who has been able to show the world that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

JOHN E. WHILT, Missoula, Mont.

I gratefully endorse the above statement as given by my husband.—AMANDA WHILT.

A little over four years ago I first became acquainted with Christian Science through my wife's healing of an illness of long standing. I began to read the text-book, "Science and Health with Key to the Scriptures," and found I had discovered a great prize. I had suffered from a rupture for about five years, and as the symptoms seemed to grow worse I was obliged to consult a Christian Science practitioner. In one treatment I was entirely healed, and my healing has been permanent. I am very grateful for the physical healing, also for the understanding of the unlimited power of Truth.—EMERY F. SAXTON, Newark, N. J.

❖

I wish to express my gratitude for what Christian Science has done for me, in the hope that some other wife and mother, having a similar experience, may read my testimony and find a gleam of comfort in it. I had been an invalid for twenty-five years, and during the last five years was in bed all the time. Hope of ever getting better was gone. I had tried every available remedy, but found no permanent help. Finally, I seemed unable to get even temporary relief; therefore, after being persistently urged by my sister, who had been healed of a so-called incurable disease, to try Christian Science, I turned to it as a last resort. I had not the slightest belief that it could help me, though I was perfectly willing to give it a trial. I felt stronger and better as soon as I began to read the copy of Science and Health which my sister very kindly sent me. Then I secured the help of a faithful practitioner, with the result that today I am well and strong. I have not taken medicine or used material remedies of any kind for over seven years, but have depended upon the great Physician alone.

Christian Science has helped me to overcome fear, which had kept my life full of dark shadows, and has given me peace instead, with a great trust in God's goodness and love to all of His children. It has filled my heart so full of love that my one desire is to learn God's will, and learning it, to have strength to obey. This teaching has been of untold benefit to my family; and in my own life I have daily proof of the power and strength which even a small understanding of Christian Science gives. Words are inadequate to express my thankfulness for all the blessings it has brought me.

MRS. F. C. NORVELL, Steelville, Mo.

[Written for the *Sentinel*]

The Master

MARGARET MORRISON

WHAT vision held those eyes so rapt and true,
That he could walk upon our common earth
And make it blossom in conception new
Of man's divinity,—transcendent birth?

That he could speak unto the blind, the dumb,
The sick, the lame, and those held fast in death,
And with that word to all afflicted come
New sight, new speech, new strength, and living breath?

What heaven of perfected peace and grace,
What love did he command with smile and look,
That from the majesty of that calm face
All evil fled, nor could his presence brook?

Unchanging is the way; in this great hour
'Tis ours to follow, and by works to prove,
In watchful meekness and in patient power,
The Science of his Life in truth and love.

From Our Exchanges

[*The Christian Register*]

The best peace society is a living church. The organizing of many special movements for bringing about universal peace is of doubtful utility. People whose sympathy is clear are disinclined to enter a union which would limit their freedom of action in certain emergencies, and which would commit them to untenable theories of peace. A real church goes to the root of the matter in promoting the growth of dispositions which, if made universal, will assure peace, without which no conceivable pacific engineering will produce peace. There is much confusion of mind about the subject.

No condemnation of war will amount to anything while the causes of war grow unhindered. No peace is conceivable that cannot be enforced against any who dispute it. What prospect for peace can there be, for instance, so long as men of influence keep on declaring that some questions between nations cannot be arbitrated? Until international courts are devised to which all questions would be submitted at the precise moment when arbitration is now declared impossible, behind which powers would be established capable of compelling obedience to their decisions, hopes of peace have the character of prophetic visions of lions and lambs experiencing a change of heart.

[*The Advance*]

In spite of all these arguments which stare us in the face in nature, in human society, and in religion, we meet in the New Testament the emphatic declaration that he that feareth hath not fully learned to love, and that "perfect love casteth out fear;" that man's relation to God is not logically one of fear, but one of loving confidence. The world is just beginning to believe that the apostle John was correct. We are discovering that love is a stronger force in nature than we formerly supposed. We are just beginning to find out that human society is more secure where men love one another than where they confront each other with double-shotted guns. We have not yet learned, but we are beginning to learn, that arbitration treaties are better defenses than armored battleships; that superdreadnoughts soon go out of style, but that faith, hope, and love last.

[*The Pacific Baptist*]

Yesterday we came across an old paper—at least twenty years old. In it we found a fresh paragraph crowded with meaning for today. Here it is: "If there is some one who is noted for judging very strictly of the lacks of others, and who has more serious ones of his own, anger is not the only proper emotion with which to regard him. He is amusing, and we have a right to think of the wonderful waking up which he is always just on the verge of if God is dealing with him. We are also helped out by the realization that we are very much like him ourselves, and that in our strict attention to the narration of his defects we have been delightfully autobiographical to others." We started to write another paragraph upon that as a text, but concluded it would be too unpleasantly autobiographical.

[*The Universalist Leader*]

If high hopes and beautiful dreams are vanity in us, they were vanity in all the prophets and seers of the past. If we discredit our own sense of righteousness, we discredit theirs. If the voices in us which call us to love and to duty speak with the authority of everlasting truth, then the voices in them will ring true to us. All matters of faith, however elaborate and whatever they involve, go back to human nature

Digitized by Google

for their vindication. The church, the book, the Master, must all knock at our door, and must live as vital experiences in us, or die out as echoes of a far distant past, according to our choice of soul or world, of spirit or flesh, of the inner voice or the outer din as our guide through the labyrinth of existence.

Is there not a solution of our problem in the simple fact that at his best every plain man in the great crisis of his life unhesitatingly understands which road leads to the mount of vision? He may choose the valley path. He may act the meaner part. Passion may warp his judgment. Greed may corrupt his choice. But the plain man is rarely in doubt. He knows, whether he acts up to it or not, that the hill path and the great hopes and the noble ideals are worth while, whatever they may involve of tragedy. He may know that his poor, weak will is not just now equal to the task, but he secretly honors the one greater than himself, who cleaves to his soul against all the world.

[*The Christian Work*]

It is devolving upon every Christian, irrespective of his creed, to contribute to reconciliation in the divided house of Christ. In other words, these are the days for Christians to practise Christian ethics and quit suspicious attitudes and unfriendly opinions of each other. This is deadly poison which has been a plague in the church for centuries. Definite progress on the ethical side of Christianity will awaken a growth toward union as nothing else can do.

As this growth continues, new elements will come into religion, as in the acorn all the parts of the tree are not there in miniature, but along the way is the formation and differentiation of the structures and organs not previously existent as such. It is so with thought. It is so in individual experience. It must be so in the church. So that neither absorption nor compromise will have much part in the structure, but in the growth denominational peculiarities will be lost, while the life of Christ will be larger and more evident. Nothing is more hopeful to this end than the increasing emphasis on the person of Christ that we now hear of from all parts of the church. It is this unconscious growth that is lifting the church out of her sectarian boundaries and will be the greatest factor in her permanent growth.

[H. C. Tolman, D.D., LL.D., in *The Living Church*]

Suppose every member of the church of Christ went forth into the world as a real member of Christ's body; that he served as Christ served, loved as Christ loved, was as humble, as kind, as gentle, as true, as pure, as manly, as strong; that in his daily living he was a Christ in business, in the club, in the home, in all his relation to his fellows. Suppose all Christians vied with one another in Christian love and service, that instead of debating over the origin of sin, all energy and power were directed to redeem the fallen and to show forth in the highest degree the spirit of Christ, that Christians at all times and in all places were willing to suffer as he suffered in the beauty of immortality and service,—would not Christianity today be an irresistible power appealing to the highest and manliest sentiment in the human soul?

[*The Congregationalist and Christian World*]

When any considerable number of us are ready to make spiritual concerns dominant in our own lives, and tactfully to persuade others to enter into an experience that is real and good to us, when we have put our church into shape for training men in godliness and for sending them forth on errands of usefulness, then a revival is sure to come to our town.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 65 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY
THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
Falmouth and St. Paul Sts., Boston, Mass., U.S.A.
ARCHIBALD MCLELLAN, Editor.
JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

A recent issue of *Engineering* contains some interesting comments on the mineral wealth of Turkey. Although the present disturbed conditions, it says, for the time being have put a stop to further industrial developments in Turkey, no doubt her rich resources ere long will call for exploitation. The petroleum areas are found almost all over Asia Minor, especially in the provinces of Mossul and Bagdad, in which two districts alone there are a couple of hundred areas. There are also petroleum springs at the Van Lake and at Puck, in Terdschan, to the west of Erzerum. The largest iron ore deposits are located in the mountainous country north of Satim, where the annual production is about three hundred thousand tons, while some thirty thousand tons a year are broken at Ayasmand. The most important coal deposits are those at Ergli, on the Black sea. The quality of the coal varies, but on the whole resembles Newcastle coal. About ten companies are working in that district, a French concern heading the list with an output of five hundred thousand tons a year. The Duysa mine produces one hundred and ten thousand tons annually, the Kurdschi Mining Company eighty-five thousand, and the Zaridscha Brothers Company, sixty thousand. Some smaller companies have an annual output of fifty thousand tons.

The department of agriculture is trying to induce the people of the southern states to grow larger crops of sweet potatoes. There is a steady demand for this vegetable, it is said, and in the South, where conditions are ideal, there is no reason, say departmental authorities, why arrangements should not be made for meeting that demand. Strange as it may seem, the supply of sweet potatoes for the American market is never equal to the demand.

"The sweet potato," says H. C. Thompson, one of the horticulturists of the department, "is one of the most important food crops of the South, and the acreage could be greatly increased without reducing the unit value of the crop. Thousands of southern farmers do not have enough sweet potatoes for home use throughout the year, and very few of the small cities and towns of the South have a continuous or sufficient supply. The small cities of the West and the middle West are not supplied with sweet potatoes, except for a period of a few weeks in the autumn. With the extension of the modern methods of storage, all of these markets could and should be supplied."

Shifting its observations from conditions surrounding laborers in great industrial enterprises, the United States commission on industrial relations has begun at Dallas, Texas, an investigation of the farm lands question. What new tendencies of importance, if any, are arising from the creation by capital, largely from the northern states, of vast farms in the South, is to be one topic considered. Witnesses are expected to tell of agricultural abuses and improvements in the southern states and to describe the possible effects of the poverty of land tenants on the cost of food products, also to throw light upon the allegation that the South's customary credit system for farmers hinders the poorer renters from crop diversification.

Certain districts of the South have already discovered, in regard to intensive farming, that it pays better to cultivate a few acres well than many acres poorly. In one section, the lowest yield of Indian corn per acre worked under the intensive plan was one and one half times the general average for the whole state; the largest yield was five times the general average for the state; the average yield for the intensive farms was three times the average yield for the entire state under the old system of cultivation. In cotton the yield under the intensive system was 1,498 pounds to the acre, nearly three times as much as the general average for the state, including the rich delta country.

The success of the Lincoln highway project is having its effect, and ambitious road improvement plans are being proposed to the people which would have been laughed at as visionary a year ago. In this category is the Lakes to the Gulf highway, or the Cotton Belt route, as it will very likely be called, which is now being put before the governors of the states through which it will pass by the Hoosier Motor Club of Indianapolis. A conference of the governors of the states traversed is expected, at which plans for this improvement will be discussed. This great trunk line will be about thirteen hundred miles in length.

Crews of ships making United States ports after July 1, 1915, will be registered and identified with the federal government by the finger-print system. A regulation to this effect has been agreed upon in conference by officials of the commerce and treasury departments representing the bureau of navigation, the board of supervising inspectors, and the coast-guards, acting under authorization of the recently enacted seamen's law. Arrangements have been made for the examination of seamen at all United States ports by officers and inspectors on board the coast-guard cutters. Each seaman will carry a card bearing his signature and an imprint of his right index finger, a record of which will also be kept on the government books for identification.

In the interest of the growing good roads movement in the three Pacific coast states, California, Oregon, and Washington, a great congress of good roads will be held at San Francisco during the week beginning Aug. 2, 1915, in acceptance of the invitation of the president of the Panama-Pacific international exposition. Participation in this congress, the greatest convention of its kind to be held on the Pacific coast, is by invitation extended to the leading national organizations having for their purpose good roads development, a large number of which bodies have arrangements under way at the present time for attendance at San Francisco.

There are over seven thousand miles of underground tunnels in the anthracite mines of Pennsylvania. The greater part of this large underground mileage is now useless. The water that accumulates in these tunnels must be pumped out to protect adjacent workings and air must be supplied to many miles of unpassable gangway to prevent the formation of gas. For the timbering of the mines the Pennsylvania hills have been denuded of trees, and most of the timber now used is yellow pine from the South. Over five million dollars a year are now spent by the operators for mine timbers and lumber.

The treasury department at Washington, D. C., has received a check from Postmaster-General Burleson for three million five hundred thousand dollars, representing the surplus in the revenues of his department for the fiscal year which ended June 30, 1914. The postal revenue surplus was three million eight hundred thousand dollars in 1913. In acknowledging the receipt of the check, Secretary McAdoo said these payments were the first representing actual surpluses made by the post-office department since 1836.

Thomas A. Edison, it is announced, has opened a factory in Johnstown, Pa., for the manufacture of benzol from coal gas, a process never before developed in the United States. Carbolic acid and aniline dyes are made from benzol, which heretofore has chiefly come from Germany. Since the war there has been a great shortage of this product, and chemists and manufacturers have given much attention to producing it here.

The special correspondent of the Paris *Temps* in Tunis states that the natives are busy sowing the seed provided for them by the authorities. It consists of 123,741 quintals of wheat, 91,474 quintals of barley and 1,271 quintals of beans. The Tunisian administration has also distributed for consumption 48,369 quintals of barley and 96,616 quintals of Indian corn, thus providing for the sustenance of six hundred thousand natives.

The United States court of appeals overruled the decision of the lower court convicting John H. Patterson and twenty-six other officials, or former officials, of the National Cash Register Company of Dayton, Ohio, of violating the criminal section of the Sherman antitrust act, and remanded the case for a new lower court trial.

Secretary Lane of the department of the interior has announced that he has entered into a contract with private interests to build a two hundred and fifty thousand dollar plant to handle the invention of Dr. Walter G. Rittman of the bureau of mines,—a process for the manufacture of gasoline, dyestuffs, and explosives.

Articles of incorporation have been filed with the Massachusetts secretary of state for the incorporation of the Olympia Theaters, Incorporated, with an authorized capital stock of seven million dollars.

The Argentine ministry of agriculture has estimated the wheat, oats, linseed, and rye crops for export to be worth two hundred and thirty-one million dollars against eighty-five million dollars in 1914.

The pension appropriation bill, signed by President Wilson, carried approximately one hundred and sixty-four million dollars.

"What I say unto you, I say unto all. WATCH" Jesus

Vol. XVII March 27, 1915 No. 30

"Your Father's good pleasure"

WILLIS F. GROSS

In a somewhat vague and indefinable way most persons believe in the omnipotence of God. The general religious belief of mankind admits, theoretically at least, that "with God all things are possible." If one were to declare it to be his honest conviction that God does not possess all power, he would at once be marked as one whose religious views are not worthy of consideration.

Human theories are oftentimes very inconsistent, and it may not be readily apparent wherein they fail to acknowledge the omnipotence of God; yet the imputation that they in any way question God's power would be strongly resented. The average person believes he is as thoroughly convinced that the Supreme Being has all power as he is that this Supreme Being exists. It is not God's power that is questioned, so much as His willingness to help humanity. Few persons, if any, would say that God is not able to heal the sick; but there are many who believe He is unwilling to do so. There are some who go so far as to say that God could heal the sick if He were so disposed, and since this work is not accomplished, sickness and suffering must be in accordance with the divine plan. Even when disease results in death, it is believed that this is the divine will, since God could have prevented the fatal result if it would have been for humanity's good.

It is just as necessary for mortals to realize that God is willing to save, as it is for them to understand that He is able to save. It is a fundamental teaching of all Christian religions that faith is necessary to salvation. Jesus frequently said to those who appealed to him for help, "According to your faith be it unto you." Erroneous belief limits the power of God and robs humanity of untold blessings; it also limits God's willingness to help and prevents the enjoyment of the good already bestowed. There was a time when many believed that even though God was able to save all men from sin, He was unwilling to do so. It was an accepted teaching that some were foreordained to be lost, and they could not be saved, no matter how deserving of salvation they might become. This theory as to God's willingness to save some, while He permitted others to be lost, is now almost if not quite generally rejected; but so long as it was accepted it had a depressing effect on the world's spiritual progress. It is now almost universally believed by Christian people that it is God's will that all men shall be saved from sin. There has been no change in the belief as to God's power to save, but simply in the thought as to what constitutes God's will. All will admit that this change of belief has worked out good for mankind, and no one has been injured thereby.

Another change in human belief, just as radical and just as important, is taking place. It has long been believed that God is as able to heal sickness as He is to save from sin; now it is being acknowledged that He is willing to do so. As mortals realize that God is willing to help, they learn to rely on Him to heal their bodily infirmities. So long as they are not convinced that God is willing to heal, they will depend on drugs and various other material remedies. It is admitted that God did heal the sick at one time, but it is argued that this was done for a special purpose, and since this purpose was accomplished, it is no longer necessary that the sick should be healed in this manner. For centuries, erroneous belief has prevented the demonstration of God's power to heal physically as well as morally, but this belief is rapidly giving place to a more spiritual thought of God, and it is becoming understood that salvation means salvation from sickness as well as from sin.

This decided change in human thought is the result of Christian Science teaching and the demonstration thereof. As a rule, mortals are not inclined to question the generally accepted religious teachings of the age in which they live, and so the belief that the healing of sickness is not an essential element of Christianity became a deep-rooted conviction. It seemed to coincide with human experience, and this made it appear all the more reasonable. It was not until Christian Science turned religious thought into new channels that mortals began to perceive the falsity of such a conclusion.

In Science and Health (p. 373) Mrs. Eddy writes, "If we are Christians on all moral questions, but are in darkness as to the physical exemption which Christianity includes, then we must have more faith in God on this subject and be more alive to His promises." Jesus said to his followers, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom." This should have settled the question as to God's willingness to help in every time of need. The kingdom herein referred to includes all good. In how many ways the Master sought to give assurance of God's love and tender care! On one occasion he said: "Are not two sparrows sold for a farthing? and one of them shall not fall on the ground without your Father. But the very hairs of your head are all numbered. Fear ye not therefore, ye are of more value than many sparrows." In the Sermon on the Mount Jesus counsels against anxious thought for food and raiment. He reminded his hearers that the birds do not sow "nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they?" He assured them that if they sought first the kingdom of God, all things needful would be provided.

One need only consult his own past experience to see how fear has prevented implicit reliance on infinite Love and wisdom. The fear was not the result of the belief that God was not able to do all things, but it was occasioned by the thought that for some reason He might not be willing to bestow that which was desired. What comfort and assurance there is in the Master's words, "It is your Father's good pleasure to give you the kingdom"! This being admitted, why should mortals fear to rely on Him and trust all to His keeping? In Christian Science one gains a more spiritual concept of the Supreme Being, and consequently a more correct thought as to what constitutes the divine will. John wrote, "If we ask anything according to his will, he heareth us."

The belief that disease and suffering may be according to the will of God is so deeply rooted in human consciousness that it prevents the natural unfolding of faith, and robs mankind of many blessings they might otherwise enjoy. This

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

belief must be overcome. So long as it is accepted, even as a possibility, it will limit faith and retard human progress. Why do not mortals strive to follow Jesus' example in this respect as well as in other ways? He "never prayed to know if God were willing that a man should live" (Science and Health, p. 369), but he healed the sick as freely as he reformed the sinner. He taught the disciples to preach the gospel as he preached it, and he assured them that wherever the gospel was preached and accepted the signs would follow. The good works promised included the healing of sickness. Nowhere did the Master say, or even intimate, that the time would ever come when the prayer of faith would be less effectual in the healing of sickness than in the overcoming of sin and all discords.

So long as mortals believe that God is unwilling to heal the sick, it will seem to be so, and the results of false belief will be manifest. Some day it will be understood how great is the work Christian Science is doing in correcting this erroneous impression as to what constitutes the divine will. Every case of sickness healed, every discordant condition overcome through faith in God, is an added proof that it is indeed our Father's good pleasure to give us the kingdom. Experience does more than anything else to break the shackles of false belief. When the sick are healed, they are convinced beyond all question that it was God's will for them to recover. This increases their faith and gives them courage to make a practical application of the Master's teachings in all the affairs of daily life. Their efforts at well-doing are no longer impeded by the fear that it may not be God's will for them to succeed, for they are beginning to see that in every undertaking which brings more of good into human experience, God is working with them "both to will and to do of his good pleasure."

Every Hour

MARY A. NEWMAN

In studying the teachings of Christian Science, one of the first lessons unfolded to us is that of a new impulsion to activity, and this is clearly set forth in the following sentence from our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, where we read, "Good demands of man every hour, in which to work out the problem of being" (p. 261). In our previous way of thinking it seemed to some of us as though the demand came from evil, that the problems of human experience with their complex entanglements must be adjusted and arranged for by giving them a degree of reality. But this did not solve the question, nor did the way become clear to us, however loyally one might try to face the difficulties from the standpoint of religious education or some philosophy claiming to give a solution. We felt that things were wrong, but that somewhere surely there must be an answer to the heartfelt longing for light and guidance.

When the truth of Christian Science came to us, we saw that not a grim tyrant, not an overshadowing evil, is holding the government of the universe and man, or a God who permits evil or sends it to His children, but the infinite Father-Mother, Love. Then we began to get a glimpse of what our work is, in response to the demand of this Love: not resignation to an arbitrary will that we could not understand, but a childlike, faithful, earnest, trustful obedience to the demands of infinite Love.

The contrast between the true and the false way is graphically portrayed by our Leader's words where she says, "The looms of crime, hidden in the dark recesses of mortal thought, are every hour weaving webs more complicated and subtle." Then we come to the assurance that "to all mankind and in every hour, divine Love supplies all good" (Science and Health, pp. 102, 494). This is the revelation to human consciousness of man's relation to God, which Christ Jesus the Wayshower exemplified in every act, and practical obedience to this truth is the task which we are to undertake every day. The insistent demands of material sense-testimony and of mortal beliefs may clamor for a hearing, but if we turn humbly to obey the voice "that speaketh from heaven" and let the Christ-spirit rule our thought and daily life, the light will shine upon our way, and every experience will become an opportunity to prove the power of divine Love which at all times overcomes evil with good.

As thought gradually awakens, even in a small degree, to this standpoint of activity, we find new motives, new desires replacing the old habits of trying to put things right. Where before the demand seemed to call for strenuous effort, we begin to glimpse the wonderful truth that God is All-in-all, and that "in quietness and in confidence shall be your strength." The mists of mortal belief begin to dissolve, and the way becomes clearer every hour. Then, too, we feel a deep and increasing sense of gratitude to our beloved Leader, who so steadfastly and lovingly received the things that are of God and gave them to us.

Desire

CHARLOTTE PAULSEN

Holy desire is of God, and to human sense it reaches fulfilment as spiritual truth appears in its progressive stages of unfoldment. Historically, the desire for the appearance of the Christ or spiritual idea reached the zenith of expectancy two thousand years ago. It found expression in the one who shared, with all other Jewish maidens, the hope of a glorious motherhood. Mary's desire was so pure that she clearly perceived God as Father. It was so unadulterated by any personal sense of her relation to God that she was the transparency for a more spiritual ideal to appear to humanity. True aspiration, free from mortal ambition, exalted Mary's human sense of the experience into a pure consciousness of its divine import; she was therefore unashamed to give expression to her promised joy. Spiritual exaltation, in which her soul did "magnify the Lord," lifted her thought so far above the pride and injury to self-love which, tempting Joseph, would have judged her an offender, that her song of praise was unrestrained and her vision of purity undimmed.

Mrs. Eddy tells us that "no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). Does it not help us to know that right desire, whose virtue lies in its at-one-ment with divine will, is above contamination from evil suggestion, above condemnation of unholiness? Its being is the offspring of divine Mind, and its outward expression is a divine impulsion. Constant and compelling in its love, it wins its own respect and right of way. Having its motive in God, it can suffer no perversion or misinterpretation. Such a divine aspiration as that which links man to his Maker, is a quality of Mind so unmistakable that it would be impossible to counterfeit it or name it ambition, for it bears the stamp of His approval. Confidence is not then placed where it can be misplaced. The message is not carried by that which can miscarry, nor can God's purpose fail of fulfilment.

Spiritual aspiration is an emanation from infinite Mind. It establishes the immediateness of cooperation between Principle and idea. It constitutes the substance of spiritual rela-

Digitized by Google

tionship and provides all good. It is known by that serene content, that perfect poise and hopeful trust which holds no sense of anxious fear, while ambition casts a shadow, or elbows, and envies its own mistrust of what it cannot comprehend. Spiritual aspiration looks up and sees the divine intention to bless mankind. Worldly ambition can see no higher than its own finite personal sense; it has no vision to inspire, no gleam to follow. Erring, it believes error and would fain attack its own offense, that it may hide in barren soil its own unhallowed aim. Stripped of honesty and truth, its wanton nakedness brings shame.

Spiritual aspiration knows full well God's loving purpose, and awaits the hour of fulfilment with confident assurance of its rightful place. So plainly has the divine purpose been revealed, that the only sin of presumption is to disbelieve. God's kingdom is a kingdom of fulfilled desires here upon earth. It is a kingdom impregnable, in which all of His children dwell. Here, love "seeketh not her own," but rejoices in the bigness of the blessing shared by all. Here love begets trust, and humbly offers all, to glorify the Giver in a perfect gift. From the view-point of unselfish service or perfect giving the problem of home or church is simplified and solved. At this standpoint Truth eliminates from the human consciousness the belief of personal sense, which seems offensive to the true spiritual concept of right relations. It destroys the errors which would seem to divide human interests and thus interfere with the realization of the one perfect Mind. It makes possible helpful human association, and protects the desire for cooperation, until through spiritual growth the independent spiritual identity is demonstrated.

Honest desire is born of the knowledge of the will of God. It springs into being because man is in contact with divine Mind, and the love of good inspires the desire to express good. It is a direct experience, needs no stimulation from without, but responds to divine impulsion felt within. Love keeps the pure desire of the heart, so that it may wax strong and grow until a waiting world is ready to receive. It fulfils the expectation of divine Love by reason of its honesty. How much more, then, will it fulfil the hope of mankind in its timely appearance and maturity! How fully will it meet the human need; how completely will it satisfy the spiritual longing of our fellow man!

The law of fulfilment is the law of right desire. God both creates and rewards the honest desire. Need and supply meet at the point of fulfilment, in the one perfect Mind. Starting from divine motive, action follows right desire and unfolds completeness to the human sense. As the thought underlying the desire is purified, errors of sense yield to demonstrable truth, and desire becomes true prayer. It expresses itself then in unreserved willingness to surrender personal sense by obedience to divine leadership. Such desire expresses no lack, for there is in it no claim of ambition to create in belief a sense of lack.

The understanding of leadership as an idea in Mind is expressed by man's dependence upon that Mind for direction and protection. In no sense is it the leadership of ambition, expressing its leanness in a gaunt want, a starved affection, or in spent vitality. Love, whose desire is to share its all, to give its all that humanity may drink of the water of life and never thirst again, is the love which eliminates from human desire the belief of leadership and leaves it free to taste fulfilment. This love is justified, no matter what may be its expression to human sense. Its character and individuality remain true to Principle, as did Mary's spiritual concept, even though it is humanly expressed, as was hers. Personal sense has no true intelligence. It cannot understand honest desire. It cannot therefore oppose or interfere between desire and service to mankind. It cannot even hope to thwart the spiritual ultimate, which is the redemption of humanity by its adoption of the Christ-idea, for God keeps what He creates, even unto the end of the world.

Oases

WILLIAM A. BERRY

Being a traveling salesman, my duties bring me constantly in contact with people of almost every kind and condition, and with almost every phase of mortal experience. "Drummers" are generally said to be "hail fellow well met" with all men; and while in the past they have not always enjoyed the most complimentary reputation, I am happy to be able to say that a wonderful change is taking place in this field of employment. Christian Science is largely responsible for this change, for it is rapidly invading the ranks of these knights of the road, and making them a better, happier, healthier, and more successful lot of men.

Perhaps few people realize to what extent traveling salesmen are tried and tempted. They must patiently listen to their customers' "tales of woe," of bad business, of sickness in the family, and of many other discordant things. In the evening at the hotel the general topic of conversation is the worship of the golden calf. Indeed, these men might often "fall from grace" if they had not learned in Christian Science that all discordant conditions are the offspring of mortal or carnal mind, the result of wrong thinking.

In order to keep our own thought clear, and thereby bless those with whom we come in contact, we must constantly turn to the means of grace provided by the wisdom and forethought of our beloved Leader. One of these is the Christian Science reading-room, an oasis in the desert of material thought and turmoil. Here the weary wanderer may drink of the "water of life" and be refreshed. Here is the "atmosphere of Spirit" (Science and Health, p. 590); here is harmony; here is, indeed, a mount of transfiguration, an isle of safety.

The reading-room is truly a great blessing to the salesman who is away from home and friends. We know that God, divine Love, is omnipresent, and that in Him "we live, and move, and have our being;" but even Jesus often sought a secluded spot in which quietly to commune with the heavenly Father in order to be better prepared for the duties before him. These reading-rooms are another evidence of how Mrs. Eddy was led by divine wisdom, because she was ever listening for the "still small voice." In Science and Health we read, "The time for thinkers has come" (Pref., p. vii); and one way provided—and a very wonderful way—to assist us in that thinking, is the Christian Science reading-room.

Scientific Gratitude

JOHN MONTGOMERY TURNER

"Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." Studied, analyzed, and understood in the light of Christian Science, these sentences give the clearest understanding of genuine, effective, healing gratitude. Jesus required not the consummation of his desire before he felt and voiced his deep thankfulness for the understanding, the scientific knowing, that Life is all and death is nothing. The false testimony of the material senses that Lazarus was dead meant nothing to the master Metaphysician. He understood and knew that Lazarus' true selfhood was living, even though his sister had lamentingly declared that he had "been dead four days."

Digitized by Google

The beloved disciple's record of this, second to but one of Jesus' metaphysical achievements, evidences the Wayshower's careful study of how he might best present to the human consciousness convincing evidence that death is but a delusion. Calmly, with infinite patience and confidence, he remained two days where he was, after the news of Lazarus' sickness reached him. When Jesus arrived at Bethany, Lazarus had "lain in the grave four days already." But what mattered four days in the sepulcher, or even four years? Would they render his friend any less the child of God,—the perfect idea of infinite Mind, and therefore indestructible? Jesus could not fear that the interim would render any less effective the healing consciousness which was with him always. It was necessary for him only to speak the word, to rouse mortal mind, as manifested both in patient and spectators, to a sense of the ever-presence of Life; and the more firmly imbued was this consciousness with the belief that the death of Lazarus was a fixed fact, the more impressive would be the demonstration. There was no doubt that in obedience to his command the dead would arise. Jesus was thankful in advance; his thankfulness was scientific. Accordingly, Lazarus "came forth."

No mental process is more helpful, more wholesome, or more conducive to spiritual growth than is honest, unsparing self-examination to determine whether or not we are truly grateful,—the asking of ourselves, Do I recognize as real benefits the things that I possess and the conditions under which I live? The earnest, self-eliminating prosecution of such a search involves a most thorough metaphysical analysis of our every-day thoughts and acts; and when the most is made of the resultant discoveries, we find much is being done toward separating the dross of mortal belief from the gold of spiritual understanding. Mortal mind is prone to forget the benefits which this understanding confers. Who has not prayed over a problem, seen the solution, and then taken the answering good as a matter of course, instead of feeling genuinely grateful to God, the giver of all good? A few moments now and then spent in recounting and recapitulating our blessings will go far toward dissipating the mist of ingratitude which, more than any other attribute of the carnal mind, beclouds spiritual vision and shuts the healing power of Truth out of our consciousness.

Listening to a brother's recital of blessings and gratitude in a testimony meeting, we may be tempted to ask, When shall I be so far advanced as to demonstrate divine Principle as he does? A tinge of discouragement or envy may accompany the query, when we might answer the question by knowing that in a degree another's demonstration is likewise our own; that God has for us the same blessing, if the need is identical; or if the need is different, that it will be met, is met, in the manner and through the channel which will be of the truest benefit. "God is no respecter of persons." "Before they call, I will answer," wrote Isaiah, realizing that God is divine Principle, and that it rests with one to utilize that Principle by knowing his relation to it; that in truth man is its emanation, therefore the legitimate heir to all its treasures, and tributary to all the workings of divine Mind.

It is plain that there exists no room for error in a heart filled with gratitude. Just as the presence of light precludes any sense of darkness, so does gratitude to God effectually shut out any sense of sin or disease. No mental attitude carries with it a clearer realization of the healing, purifying Christ-idea than does that of continuous, scientific gratitude. A quiet restrospect of blessings already received will often dissipate into thin air a seeming ill. More than this, the true Christian Scientist is grateful in advance. "Blessed are they that have not seen, and yet have believed," said the Master to doubting Thomas. In Science and Health our Leader speaks of "the perfume of *gratitude*" (p. 367). Nothing could be more beautifully metaphorical. A perfume pervades a room, a garden, a locality, diffusing its fragrance impersonally and alike on all who come within its purview; and likewise the truly grateful thought blesses any and all who receive it into consciousness. One will never find a "poverty thought" where he finds a grateful man or woman, and conversely, nothing so surely breeds and fosters limitation as does a sense of ingratitude.

Let us express gratitude in small things and for small things. Let us speak the simple word of encouragement where it is needed, thank the "witness" for the good testimony which has helped us, acknowledge the small courtesy in business life, and express it substantially if possible. A copy of the *Monitor*, marked with an observant thought of what will interest, is an excellent token of gratitude for a small favor. It may prove a large return. Let us never admit that we are ungrateful, but stand for the ideal consciousness, and then think of a few of the reasons for our declaration,—renewed health, joy, comforts, strength, and above all the knowledge of that divine Principle which solves every problem and surmounts every difficulty. True gratitude for Science always includes such a sense of the desirability of Truth as to inculcate a yearning for greater spiritual understanding, and so promotes our growth. Imbued with a right, scientific sense of gratitude, we will always be ready to do that which will best advance the welfare of our brother in his heavenward striving, and which at the same time will bring us the consciousness that we are obeying God's will, and so doing God's work.

❖

[Written for the *Sentinel*]

"None good but one"

CAROLINE A. BALY

Hadst thou the power, wouldst thou do aught
But send thy children love,
Fill to the brim the hung'ring hearts
With bounty from above,—
If thou wert God?

Couldst thou lay babe on mother's breast
And, as their joy was born,
Snatch back again that treasure sweet
Or leave the babe forlorn,—
If thou wert Life?

Couldst thou ere birth thy children curse
With heritage of sin,
Build evil in their temple walls
And foul make all within,—
If thou wert Truth?

The law of love is God's one law,
And none need be afraid,
For every child of God by Him
Was in His image made,
For God is Love.

The real man of Spirit born
Is not of Adam brood,
Not earth of earth, not dust to dust,
God's man and God are good,
For God is good.

[Judge Clifford P. Smith in *Boston (Mass.) Post*]

It is well known that the Christian Science movement has made steady progress despite a clamor of opposition. It was hardly to be expected that the representatives of established churches would unanimously welcome this new and potent factor in the field of religious endeavor, but some of them have done so, and many others have shown varying degrees of recognition or tolerance. On the other hand, a few members of the clerical profession have vied with each other in an effort to put the utmost abuse of Mrs. Eddy and Christian Science into their declamations, and into the reports thereof prepared for the press.

Last Saturday [March 6] the *Post* gave space and prominence to a verbal assault on Mrs. Eddy and Christian Science by a local clergyman who has heretofore exhausted the possibilities of language in efforts of a similar character. If his opinions of Mrs. Eddy and Christian Science were just or true, their truth and justice would have been generally known and acknowledged long ago, and he would have been spared the trouble of reiterating them. But his views of Mrs. Eddy and Christian Science are so biased and distorted that they have but little relation to what is actual or true.

The manner in which sectarian bitterness may take possession of a man who has been ordained to be a minister of the gospel, but feels called to undertake the "disagreeable duty" of denouncing Mrs. Eddy, can be illustrated by a paragraph from the published statement to which this letter refers. After speaking of two persons for whom Christian Science failed to cure cancer and heart disease, the reverend gentleman went on as follows: "Who killed them? Mrs. Eddy did, just as surely as if she had stabbed them with a dagger."

Let us test the justice of this condemnation. In the single state of Massachusetts during the last year for which the statistics have been published (1913), the number of persons who succumbed to cancer was 3,526. Although the mortality from this disorder has in recent years greatly increased, few of these 3,526 people, if any, relied on Christian Science. Many of them must have heard of Christian Science, but did not turn to it, even when other remedies had completely failed. Is somebody to be charged with killing these sufferers? Not so; the services rendered them, even though they failed, were praiseworthy. The position of those who practise a system which they believe to be the best is perfectly clear; but much less can be said in behalf of those whose public denial of the healing power of Christian Science, uttered in the very face of the most evident facts, may hinder people from turning to it in the hour of greatest need.

Christian Science has cured cancer in many cases after competent physicians had tried in vain to effect a cure. Ten instances of this character were related in a speech recently delivered in the United States Senate by Senator Works of California, of which any one can get a copy. Other instances of the same kind are not infrequently published in the Christian Science periodicals, although the word "cancer," because of the fear which it may produce, is not often printed.

Adequate statistics of Christian Science healing will not be available until public opinion and public officers are more prepared to perceive and admit the operation and effect of spiritual law. At present, generally speaking, people are apt to minimize the benefits of Christian Science by supplying other explanations for the effects which, in the orderly course of reasoning, would be credited to Christian Science. But as Mrs. Eddy has said, with reference to spiritual causation, "the age seems ready to approach this subject, to ponder somewhat the supremacy of Spirit, and at least to touch the hem of Truth's garment" (Science and Health, p. 170). It is a curious fact, however, that the most intense opposition comes from those who have been specially ordained to be the emulators of him who healed the sick solely by "the finger of God" (the power of Spirit), and said that his followers in "all nations" should do likewise. (See Luke xi. 14-20; Matt. x. 5-10 and xxviii. 16-20; Mark xvi. 14-18; John xiv. 12.)

Christian Science is the restoration of original Christianity, without the limitations which have arisen in human belief; a Christian Scientist is one who accepts the absolute truth taught by Christ Jesus, and scientifically uses the knowledge thus gained in furtherance of human progress; while every Christian Science practitioner is expected by his church to be a missionary to the poor and needy.

[The *Brookline* (Mass.) *Townsman's* editorial comment in connection with its publication in full of the above letter, is so genuine in its recognition of the unfairness of the original attack, that we are glad to give it space in our columns.—EDITOR.]

"We cannot resist the opportunity of publishing below a copy of a letter which appeared in the *Boston Post* on Wednesday [March 10] in reply to a most unfair attack on Christian Science, which appeared recently in the news columns of the same paper.

"When the educated populace of Brookline flock in hundreds to listen to such an eloquent address as was recently delivered in Brookline, and which we have twice printed to supply the demand upon us, surely there must be sound reasoning and good common sense judgment in the theories propounded, and only a distorted mind could find reason for 'mud-slinging' at the most modern factor in the field of religious endeavor."—*Brookline* (Mass.) *Townsman.*

❖

[George Fair Deal in *Daily News*, Dayton, Ohio]

A recent sermon against Christian Science in the tabernacle was most convincing to many. In the main, the things the doctor opposed and denounced are not found in the teachings of Christian Science by those who have given this matter the highest and only true test. All intelligent Christian Scientists condemn and denounce idolatry, "damnable heresies," adding to the Bible, substituting any other book for the Bible, proselyting, lying, falsehoods, denying the coming of the Christ in the flesh, denying his divinity or personality, or making merchandise of the gospel.

The doctor said that Christian Science taught and practised these evils. He thus set up these men of straw and was cheered when he knocked them down. Had the people who cheered known, as do all Christian Scientists through study and demonstration, that he did not oppose Christian Science, but only what he thought it was, they would not have been so ready to applaud. The doctor said Mrs. Eddy declared Christian Science was unchangeable, but that she proved this to be false by revising her book. So it might be said that learned men who have written text-books on mathematics and declared the science unchangeable, have contradicted themselves by revising their books.

For the very best of reasons, all Christian Scientists value "Science and Health with Key to the Scriptures" as the best book in the world except the Bible. This book is not their Bible, but the Bible is the soul, life, and foundation of their text-book. To choose between the Bible and this book is foolishness, is worse than choosing between a house and its foundation, for this book without the Bible would be a poor thing indeed. It is not adding to the Bible, but, as the doctor's sermons should do, it makes the Bible better understood.

Digitized by Google

Because Mrs. Eddy said that God was not a person in common with men and women, but an infinite personality, the doctor concludes that "Christian Scientists worship a God without intelligence," and because she said God is Principle, without the shadow of turning, and being good, all His creations must reflect good, therefore in his opinion Christian Scientists are Hottentots and heathens worshiping blind laws. The doctor settled the fact that God was a person by quoting Scripture showing that God had hands, arms, ears, eyes. Had he quoted the fourth verse of the ninety-first psalm, he might have proven that God had feathers and wings.

The writer for many years was an active minister and honored with the degree of D.D. He often tried as earnestly and honestly to expose Christian Science from the rostrum as did Dr. ——. But he has completely changed, since in 1906 in this city he was healed of a disease in thirty days, through divine power alone, through the understanding of Christian Science, and now apprehends what Christ meant when he said, "Ye shall know the truth, and the truth shall make you free." One of the very best doctors in this city who pronounced the trouble a cancer and strongly urged an immediate operation, when he saw me in just thirty days afterward, said I had better results than the knife could give me, and added, "I am sure of two things: one is, you had a cancer; the other is, you have no cancer now." This is but one of many proofs the writer has had of the truth and power of Christian Science. Science and Health has given him a better understanding of God and the Bible than all other books in his library, and for this spiritual uplift he is more grateful than for the many physical healings he has had. This is the testimony of every true Christian Scientist.

["Public Health" in *New Haven* (Conn.) *Register*]

There is a bill before the Connecticut Legislature entitled, "An Act Concerning the Appointment and Duties of School Physicians." This proposed legislation provides for a large and very definite extension of the system of inspection and examination of school children. Besides requiring every pupil in a city or town of ten thousand or more inhabitants, upon entering either a grammar or a high school, to be examined by the school physician, and thereafter at least annually, it also provides that "backward" pupils, and those showing "defects, etc.," shall receive "special attention," at the discretion of the physician. Advice or orders relative to treatment are to be communicated to the parents or guardians, and further, nurses acting "under the direction of the school physician" shall visit the homes of pupils . . . and assist in executing the orders of the school physician." At the will of the doctor, "investigation of the blood, sputum, bacteria of the throat, and so forth," may be made.

The fact that the boards of health and school physicians are of one school of medicine, namely, the allopathic school, is sufficient reason to foresee opposition to the measure. Parents and guardians who prefer the homeopathic, eclectic, osteopathic, or some one of the various newer systems of treating disease, naturally would object to the constant medical surveillance and examination of their offspring by physicians of the one school of the medical profession represented in the school physician and provided by the state. It is argued by the critics of this bill that confining school inspectors to practitioners of one school of medicine or system of treating disease, constitutes special privilege and class legislation, a violation of constitutional rights, besides being manifestly unjust when it is considered that the adherents to the allopathic school constitute a small minority of the present population of our country.

The purpose of this bill, those favoring it state, is to lessen disease, and in the language of the bill, "to insure better physical conditions of school children." On the other hand, it is claimed, experience has proven that school inspection does not lessen disease, but on the contrary tends to increase it. The experiences of some of our large cities are referred to in order to prove that school inspection has not accomplished what it was claimed it would. It is pointed out that, according to Chicago official tables, children's diseases in 1906 numbered 20,242, and in 1913 aggregated 38,039, and each year showed a steady increase. Another thing which this proposed measure calls attention to, is that physicians are not yet infallible as to diagnosis. Such an eminent authority as Dr. Cabot of Boston, has stated that in only 50 per cent of cases is the diagnosis correct. And it is common knowledge that physicians of the same school are continuing to disagree with respect to the diagnosis of cases.

In view of this, it is considered by many that the state cannot consistently pass laws giving to one school of medical practitioners the entire supervision of the children of Connecticut, and this, it is believed, would be the result if the bill referred to is passed.

❖

[Editorial in *The Tacoma* (Wash.) *Daily News*]

The *News* has received a caustic letter from a Tacoma minister, who probably will think better of it after further contemplation, scoring the city library for accepting a number of books left to the institution under the will of Mrs. Eddy. "Why impose this puerile stuff upon the public?" he asks. "Why set such pabulum before our youth?"

There are several thousand live religious doctrines in this world. Each gives to its exponents more or less inspiration, and each sect is entitled to that which reaches its heart or its intellect. A public library is, or should be, an institution so democratic that everything decent in reading matter should be found there, if it can afford to buy it all. The library is supported by general taxation, and all, whether Jew or Gentile, democrat or republican, radical or reactionary, are entitled to representation in it. Perhaps our incensed friend will find in the library some writings against Christian Science. Certainly that toleration which Christianity demands, and which the federal and state constitutions guarantee, ought to give us all the breadth of vision to see the desirability of having all sides of every important question, so long as the discussions are orderly and presented by responsible authorities.

No matter what one may think of Christian Science as a religious platform, one must recognize that it has thousands of enthusiastic followers whose belief in it has dissipated frowns and put laughter where tears were before. It has served as a first-rate leaven in religious matters. Able men, not Christian Scientists, have insisted that it has been an influence in tempering older views of a somewhat lugubrious aspect. There seems to be room for all religious views, and each has its fond adherents who draw from their beliefs a comfort which cannot be denied them, and they certainly have ample ground for expecting public libraries to give them a fair representation.

❖

[S. T. Downs in *Fort Wayne* (Ind.) *Journal-Gazette*]

A recent issue of your paper reports a sermon by an evangelist in which there are some very incorrect and unjust references to Christian Science. There is absolutely nothing in Christian Science, or in the writings of Mrs. Eddy, its Discoverer and Founder, to justify the statement that Christian Science teaches that sin is a figment of the imagination.

Digitized by Google

Christian Scientists know that sin is responsible for all the sickness, disease, suffering, and death the world has ever experienced; they know that sin presents to human consciousness many subtle arguments about its ever-presence and power; and Christian Scientists know that the understanding of the omnipresence and omnipotence of the law of divine Mind, the law of God, is all that can destroy sin and its effects.

Christian Scientists are very grateful to Mrs. Eddy, but they do not deify her in the slightest degree; and to say that they have built temples to her is absurd. Christian Science churches are monuments of gratitude to God for blessings received, and our brother's erroneous presentation of this, and what Christian Science teaches regarding sin, is ample evidence of his incompetency to present correctly any phase of Christian Science.

Christian Science is based on the life and works of Christ Jesus, our Wayshower, and to say that it is not Christian is like closing our eyes and declaring there is no light. Any one who is at all familiar with the events of recent years, knows that Christian Science is healing all manner of sin and every disease known to mankind after the manner and in fulfilment of the command of the Master that we "preach the gospel" and "heal the sick." It would be almost impossible to find a village or hamlet, however small, or a civilized community, however remote, where Christian Science healings of sin and disease are not matters of common knowledge.

The Christian Science text-book, "Science and Health with Key to the Scriptures," may not agree with some notions as to what constitutes science, but it is absolutely scientific in its declaration that God is the only cause and creator, and it presents in an orderly, intelligible, and practical manner the laws of God by which the universe is evolved, and in which we "live, and move, and have our being." Christian Science is, in other words, demonstrable truth, as is proved by the "signs following" a reasonably sincere effort to put its teachings into practice.

✧

[From *Marysville* (Cal.) *Appeal*]

An English physician, at a recent medical conference, advises his fellow practitioners to exercise a more tolerant spirit toward Christian Science, which "has come to stay," and may some day become "not only the universal religion but the universal healer,"—an extraordinary statement from an orthodox physician whose training has led him as far away from the principles upon which Christian Science is founded as atheism is remote from accepted orthodoxy.

That Christian Science will endure, no one who has observed its development will deny, though doubtless there are those who find it difficult to bring themselves to admit it, much less believe it. It is not essential that its numerical strength should amaze with its growth, since solidity is not necessarily expressed in numerals, though even in that respect it perhaps compares proportionately with any of the established denominations. Indeed, one of its most cherished safeguards is the care exercised in admission to membership, and one of its strictest injunctions the discouragement of proselyting.

In other words, the man or woman who becomes a Christian Scientist does so of his or her own free will. He or she must be convinced of the truth taught by Christian Science, and even demonstrate a knowledge thereof before being duly accepted and given standing as a member. There is no unusual effort made to attract indiscriminately, no specious methods resorted to in the hope of a great harvest. To the Scientist all religion has its place in the world; everything that is, is right, and thus believing, other beliefs are safe from molestation. Not in all Christendom can there be found greater tolerance.

Christian Science will endure not simply because of the principles upon which it rests, but because of the effect of those principles upon those who profess it. Nor is its power to heal the body the secret of its success, though that is a potential factor; rather is it the sense of spiritual security imparted to its adherents, remarks the *San José Mercury Herald*. One may be prejudiced to the point of indignation against the claims of Christian Science, some may attribute its success to a form of hypnotic suggestion, and still others contend it is wholly mental; yet the fact remains that the adherents of no cult or religion manifest the same degree of enthusiasm, the immovable faith in the fundamentals of their religion, and the unbounded optimism in their outlook upon life and its mysteries.

Strip Christian Science of its health and spiritual claims, condemn its dogmatic hold upon what it contends is the truth, call it hypnotic, occultism, or any ism that may be suggested, and you have still left the most vital word in our common language, namely, toleration. Without it no religion is worthy of the patience of intelligent men and women, no sect is capable of regenerating human delinquency. It teaches the infallible truth that within every human soul is the germ of divine power which under development defies human limitations and makes all things possible. This truth every man recognizes every hour of the day, his triumphs and defeats proclaim it, his yearnings for light and leading indicate it, his joys and sorrows, infallibly due to his spiritual condition, whatever it may be, leave no doubt of it.

No, we cannot agree with the view that Christian Science is doomed to failure. Its roots are planted too deep to be cut away and destroyed, either by other beliefs or the antagonism of individuals or professions. It has enough truth to warrant its permanent anchorage, and enough accomplishment to keep fresh and powerful its appeal to mankind.

The English physician may have exposed himself to the anathema of other physicians, but his courage and thoughtfulness deserve commendation.

[Written for the *Sentinel*]

Joy is Thine!

CHARLES C. SANDELIN

Oh, fearful one, couldst thou behold
The life apart from fears and sighs
That Love unfolds to seeking eyes,
Wouldst not with gladness leave the old?

Oh, couldst thou know that Love is nigh
With tender comfort at thy side,
And doth for every need provide,
Wouldst not rejoice and cease to sigh?

There is a refuge from the storm
Apart from error's wilderness;
Scorn not the hand that can but bless
And lead thee to Love's hearth-fire warm!

Oh, couldst thou know as we have known
The bliss of Truth's sweet ministry,
Thy drooping eyes would ope to see
The blessedness for e'er thine own!

So turn away from mortal dreams,
Be they of pleasure or of pain,
No more Love's guidance to disdain,
And greet with joy Truth's healing beams!

Editorial

"He doeth the works"

In the Sermon on the Mount, that epitome of divine instruction which is the "essence" (Science and Health, p. 271) of Christian Science, Jesus said to his followers: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." It will be noted that Jesus did not say, Glorify your own selves, but "Glorify your Father which is in heaven." In making this distinction as to whom the glory belonged, Jesus did not detract in the slightest degree from the honor of those who were doing the works of the Father. He simply pointed out to the disciples that in the last analysis it is the Father who "doeth the works," even though these works are made manifest through the faithfulness and consecration of some particular individual.

The very great difference between Christian Science and all other forms of Christianity is, that in the former the works which our Master said should follow "them that believe," are insisted upon as the true signs of that knowledge, that understanding of God which the Master declared is "life eternal." These signs necessarily must be seen through the works of men, in the healing of the sick, in the transformation of the sinning and the selfish, in the comforting of them that mourn; but there should be no mistake about their origin and the real power behind them.

A leading point in Christian Science is that man has no underived powers; he is, as the record of creation declares him to be, made in the image and likeness of God; he reflects the wisdom, power, and love of the Father. Mrs. Eddy in her definition of man, on page 475 of Science and Health, says that he is "that which has no separate mind from God; . . . that which possesses no life, intelligence, nor creative power of his own, but reflects spiritually all that belongs to his Maker." It is in this sense, this recognition of God as the only creator and from whom all right action springs, that Christian Scientists know that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

Those who are really doing the works of God, the works which Christ Jesus did, and bade his followers do to the end of all time, are doing them, not for their own honor and glory, but for the honor and glory of God. The understanding of this great truth has given many a weak and faltering one courage to labor and to wait. Our Master knew so well this tendency of men to magnify themselves, that he sounded a note of warning which must be heeded by all who would follow in his footsteps. He had endued the seventy with power "over all the power of the enemy," but he counseled them not to rejoice because at their word devils were cast out and the sick were healed, but rather rejoice that through their God-bestowed power they were able to do works which should redound to the glory of the giver of that power and their names thus be "written in heaven." Again, when there arose among the disciples a question as to who should be greatest in this kingdom to whose speedy establishment they were looking forward, how wonderful the lesson in humility he taught! "He that is greatest among you shall be your servant. And whosoever shall exalt himself shall be abased; and he that shall humble himself shall be exalted."

Surely, when she to whose tireless labors we owe all that there is of Christian Science today humbly says of herself and what she had accomplished, that "though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix), there is no reason for her followers to arrogate to themselves any pride of calling or station. We are all children of one Father, even the Most High, and all that we have and all that we are is of His good pleasure. We learned long ago that we could do nothing of ourselves, and the more faithfully we strive for an understanding that shall enable us through the power of Truth to heal the sick, comfort the sorrowing, and reform the sinning, the more do we realize that it is God working in us and through us, and not we ourselves, and that to Him alone belongs the glory and the honor. Let us so strive that we may be able to say with our Leader (Miscellaneous Writings, p. 213), "All that I have written, taught, or lived, that is good, flowed through cross-bearing, self-forgetfulness, and my faith in the right."

ARCHIBALD MCLELLAN.

❖

Science versus Human Will

It is simply astonishing to discover how widely prevalent among professing Christians is the belief in the power of the human will. These people believe that its exercise is not only legitimate but praiseworthy, and with strange inconsistency they insist that the exercise of will-power explains the healing work done in Christian Science, yet they condemn the practice of this Science because it departs from the beaten track of medicine and theology alike. Here it should be said that reliance upon will-power is not endorsed in Christian Science, and its exercise would be a hindrance rather than a help in the healing of the sick. Mrs. Eddy says (Science and Health, p. 144): "Human will-power is not Science. Human will belongs to the so-called material senses, and its use is to be condemned."

Students of Christian Science soon learn that they can grasp and apply the truth only as they turn away from materiality and cling closer each day to divine Principle. Their efforts in this direction teach them to have limitless patience with those who fail to understand the teachings of our text-book, and who consequently misrepresent them, for they know that without the apprehension of divine Principle and spiritual law as therein taught, the problem of life would seem a hopeless tangle. Christian Scientists also know that their past attempts to solve this problem by means of the human will, especially where health and strength were concerned, only complicated it and increased their discouragement, until Truth rescued them from bondage. In Science and Health (p. 185) we read: "A patient under the influence of mortal mind is healed only by removing the influence on him of this mind, by emptying his thought of the false stimulus and reaction of will-power and filling it with the divine energies of Truth."

If a professed Christian were to ask a student of Christian Science on what ground he disclaimed the aid of the human will in the healing of disease or in the overcoming of any other phase of error, it might be answered that the reasons therefor are numerous; that they can be found both inferentially and directly in the Scriptures, especially in the teachings of Christ Jesus, who said in his most crucial earthly experience, "Not my will, but thine, be done." His overcoming at that hour depended upon his ability to prove to mankind, as well as to his trembling and doubting disciples, that he was the Son of God, and this he did to the complete reassurance of his students. Nor is this all, for in the first chapter of John's gospel we read: "As many as received him, to them gave he power to become the sons of God, even to them that believe

Digitized by Google

on his name: which were born, not of blood, nor of the will of the flesh, nor of the will of man, but of God." This is a tremendous arraignment of the mortal belief that the will of the flesh—the will which supposedly has its seat in the brain—has any relation to man as the child of God.

"As many as received him"! As many as received the truth taught and demonstrated by Christ Jesus were freed from the tyranny of the human will, with its direful decrees of sin and sickness, of want and woe, and found the freedom which is the birthright of every child of God. The human will would have things its own way from childhood to old age. It would have the practice of Christian Science under the control of *materia medica*, and its theology colored by the doctrines which have never healed the sick and which are to a large extent helpless before the problem of sin. It insists that sin, disease, and death are real because the material senses support these evils, while Christian Science stands by the declaration that they are unreal because God never made them and His law gives them no authority.

Christian Science makes it very clear that so long as mortals hold to the reality of evil, the most strenuous efforts of the human will can do no more to remove it than would the attempt to propel a vessel by pushing against the mast. What is needed in every case is the divine energy which sweeps away "the mists of earth" and recognizes the divine will as supreme at all times and under all circumstances.

ANNIE M. KNOTT.

❖

Putting Off and Putting On

ST. PAUL describes life-redemptive work as the putting off of the old man and the putting on of the new, and faithful effort in this line would naturally result in sovereignty over fear, sin, and sickness. That this achievement is so relatively rare gives proof, therefore, that despite all these centuries of prayer and preaching, Christians are still in the dark both as to the nature of the old man and of the way to get rid of him. The largest hope of the many seems to be that death will somehow effect that which they know to be essential, but which they do not know how to attain.

To the student of Christian Science the most serious handicap just here is the prevailing false sense regarding man. So long as he is thought of as constituted of both flesh and spirit, and the material order as divine, so long will material sense be classed as an expression of divine law, and only the abuse of material impulse be regarded as out of keeping with the righteousness which God demands. This is the point of view of those who, while trying hard to put off the deeds of the old man, are doing practically nothing in the way of fulfilling the apostle's injunction that we put off the old man himself "with his deeds."

Christian Science recognizes this "old man" as that false material sense defined by Mrs. Eddy as "the common human belief, that life, substance, and intelligence are a unison of matter with Spirit" (Science and Health, p. 294). Hence, in the effort to get rid of him, its teaching fixes attention upon that which brings about the evil habit, rather than upon the habit itself. It declares that spiritual freedom is gained by being rather than by doing, and all this in keeping with Jesus' words, "If . . . thine eye be single [if truth is clearly discerned], thy whole body shall be full of light [understanding]." It teaches that the "old man" is no man at all, but simply a projection of untruth which is dismissed from consciousness, and thus becomes unknown in so far as the truth of being is known.

The putting off of the old man and the putting on of the new is in fact simply the positive and negative aspects of the same event, namely, the awakening to one's spiritual selfhood. So long as the material order is thought of as something, so long must it be assigned a place in the cosmic scheme, be coordinated with other facts; otherwise, the unity of being is at once sacrificed. Material sense must then be reckoned with as a right sense, not to be put off, but to be kept from perversion, and this is the contention of the majority of professed Christians today. When, however, material sense with all that pertains to it is recognized to be error and not of God, we perceive that it is this causal thing in belief, which is to be denied, and that this can be done only as we realize that substance is wholly spiritual.

St. Paul's putting off and putting on is thus seen to be a human phrasing of the metaphysical fact that error is dispelled by and gives place to truth, and the apostle thus gives the true formula for spiritual advance when he counsels us to deny ungodliness, all that is not spiritual, and live righteously in this present world, for the Greek word translated deny means "to affirm not to be."

All this being true, the necessity of working out our salvation still remains, since there can be no harder task assigned one than this same demand that we awaken to truth. In Christian Science, however, we have a supreme advantage, in that the task is entered upon with an intelligent grasp of just what is to be done and of the demonstrably right way to do it. Moreover, he who thus accepts and acts upon the philosophy of salvation expressed in the Master's declaration, "Ye shall know the truth, and the truth shall make you free," is no less sure of his ability to win, than he is that light is able to dispel darkness. The passing of the old man is now registered not only in the health gained through prayer, but in the consciousness that one is parting with the false beliefs about God and His universe which explain both the old man and his deeds.

JOHN B. WILLIS.

Among the Churches

Current Notes

COLUMBUS, OHIO.—With the opening, Sunday morning [Jan. 24] at eleven o'clock, of Second Church of Christ, Scientist, at Park street and West First avenue, Columbus will have two permanent churches for the accommodation of members of the Christian Science church. The seating capacity of the church is more than six hundred, while that of the Sunday school room will be three hundred.

Second Church of Christ, Scientist, was organized about three years ago with a membership of forty-one. The first service was held Feb. 18, 1912, at the U. C. T. Hall, Park and Russell streets. The congregation outgrew this hall very shortly, however, and beginning Oct. 1, 1914, services were thereafter held at a hall at North High and Warren streets. Ground was broken for the church on March 27, 1914. The building covers an area of 66 by 100 feet. The auditorium is 48 by 60 feet, and the Sunday school room the same size.—*Columbus Dispatch.*

SPOKANE, WASH.—On Wednesday evening, Jan. 6, at First Church of Christ, Scientist, I heard testimony given of the cure through Christian Science of cancer, of eczema which covered a man's body, of a broken finger, of hernia of the eye, of drunkenness, and of a child's stammering. These testimonies were given by responsible persons from personal experience, and were received with respect by an audience which filled the church. If these cases had been attributed to *materia medica* and presented in a paper before some medical association, they would have aroused world-wide com-

Digitized by Google

ment. As it was, they were merely a part of the regular Wednesday evening meeting, one of a thousand and more meetings that are being held every week throughout the country, where similar testimonies are being given.

Correspondence.

NORWALK, CONN.—On Jan. 3 the Christian Science Society occupied their new home, at 57 West avenue, which has been redecorated inside and fitted for their needs. On the north side of the building the partition has been removed, making a good-sized room for the Sunday and Wednesday services. On the south side the two rooms are arranged for reading-rooms, where those interested may call and read without being disturbed. The society have really been crowded out of their former quarters, and the congregations have already increased about 20 per cent. They have the best wishes of this community for their success.—*South Norwalk Sentinel.*

MANCHESTER, N. H.—The Christian Scientists of Manchester worshiped in their newly remodeled and refurnished church for the first time yesterday [Jan. 3]. The edifice has been changed completely, and it will now accommodate from four to five hundred members. There were no unusual observances at yesterday morning's service, due to the fact that the dedication will not take place until the building is entirely paid for.—*Manchester Mirror and American.*

WASHINGTON STATE PENITENTIARY.—A Christian Science service, conducted by members of First Church of Christ, Scientist, of Walla Walla, has been held in the library on Sunday afternoons. The average attendance at these meetings is about thirty.—*Our View Point.*

HAMILTON, ONTARIO, CANADA.—The Christian Scientists of Hamilton have purchased two lots on the east side of Burns street, between King and Main streets, on which they intend to build a church some time in the near future.

Toronto Mail and Empire.

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

The Lectures

Palo Alto, Cal.

Bicknell Young, who lectured on Christian Science, was introduced by Harry C. Burbridge, Ph.D., first reader, who said in part:—

Christian Science is to most people a new method of healing, and a very successful one. Others see in it a new religion. They too are correct, for it solves the perplexities of theology, casts away dogmas, satisfies the reason, and gives a faith that is shown by works. Some few see in Christian Science a philosophy, and that view also is right. It is a philosophy based upon absolute premises of properly stated syllogisms and properly drawn conclusions. Christian Science is truly a philosophy, a religion, and a healing method in one. To those who are beginning to comprehend it, it is this and more. It is to them the explanation and the knowledge of existence. It comes not destroying but transforming the universe, and answering the fundamental questions of being that mortals have ever been asking.—*Palo Alto Times.*

❖

Little Rock, Ark.

In introducing Virgil O. Strickler, who lectured on Christian Science at the Kempner Theater, Mayor Charles E. Taylor said:—

I am not a member of the Christian Science organization, but I have had opportunity to note the daily lives of some who are devoted Christian Scientists, and to observe their handling of vexing problems. I gladly bear testimony concerning them that their lives demonstrate that there is in their religion something which brings happiness and peace to the heart and to the mind; otherwise, there would not always be the carefully guarded word and act and the contentment and spiritual growth which are so evident to the close observer. If my estimate of these individual Christian Scientists is correct, then their belief and their religion are well worthy of examination.—*Correspondence.*

❖

Rochdale, England

The remarks of Councilor James Blomley, in introducing William R. Rathvon, who lectured on Christian Science, were as follows:—

It gives me pleasure to be present at this lecture. I frankly confess at the opening that I come here as a student, in order to sit at the feet of an exponent of Christian Science. I do not know much of this teaching, but what I do know is all to the credit of the faith that is held by a large number of people. I have known men, and women too, whose lives have been changed, made better, and the life they are now living is altogether creditable. I believe that religious truth should be evidenced by fruit. The present day is a day when practical men are required, men who will deal with the great problems of life around us; and if I understand the faith that is believed and taught by Christian Science, it is a practical religion. That appeals to me.—*Correspondence.*

❖

Middletown, N. Y.

In introducing Prof. Hermann S. Hering on the occasion of his lecture on Christian Science, the Rev. Stannard Dow Butler of the Universalist church said in part:—

The fundamental contention of Christian Science as I understand it, that all phenomena are but the manifestation of the one power in whom "we live, and move, and have our being," I have long believed. That people still hold there are two antagonistic powers struggling for the possession of a soul is evidence that the polytheism of primitive days is not wholly outgrown. I have observed among those who have become interested in Christian Science, an awakened interest in the study of the Scriptures, a quickening of the spiritual life, good health, and the appearance improved.

There are some claims of Christian Science that I have not been able to accept. Christian Scientists see farther in certain directions than I have been able to see. I have never regarded this as proof, however, that the Scientists are wrong. If ever there was a time when a prayerful comparison of religious claims was in order, that time is now.

Digitized by Google

Some time ago I read a Christian Science lecture. It was so logical, was expressed in diction so choice, and was so enlightening, that I procured the lecture for frequent reading. It is a privilege to present to the open-minded people of Middletown the author of that lecture, Prof. Hermann S. Hering.—*Correspondence.*

Philadelphia, Pa.

At the lecture on Christian Science for Second Church at the Orpheum Theater, Germantown, Miss Violet Oakley, in introducing Virgil O. Strickler, said in part:—

We all stand today in an attitude expectant of great good, of a speedy end to the human methods of brute force and material modes of thinking. These of late have so revealed their weakness and their cruelty, that the world is more than ever ready to look up, and to acknowledge boldly that our only salvation draweth nigh, if we may learn how to avail ourselves of spiritual power. There is a wide confession of the need for the very thing implied in a correct and honest use of the term Christian Science. If for one brief moment we glance at our own inheritance here in this great commonwealth of Pennsylvania, we may see that to its founders surely there was a great force, invisible but available, by which to conquer an enemy, be he ever so strongly equipped with carnal weapons; a force which overcame both his carnal weapons and his carnal mind, thus disarming him fundamentally. They called this force "the inner light;" they claimed for it that it had appeared unto all men, and thus by their faith they ignited this in others.

Today, through the teachings of Christian Science, we know that the light is now so brightly burning within the world's consciousness as to illumine the darkest places of fear, and to heal every manner of mental and physical disease, every condition of discouragement or sorrow, and is inexhaustible enough to destroy all famine and want. To come into an understanding of the Science of this light,—the divine Science of Mind,—is surely the one thing needful.

Correspondence.

Ithaca, N. Y.

Jacob S. Shield, who lectured on Christian Science, was introduced by Prof. L. D. Hayes of Cornell University, who said:—

When my attention was first directed to Christian Science some years ago, there were many, as there are now, whose knowledge of this Science was very limited, but who were known as Christian Scientists; and rightly, too, for their brief experience had definitely committed them to a continuation of its study. Unfortunately all my early knowledge of this Science came through an imperfect channel and resulted in misapprehensions which it has taken years to correct. It is easily recognized that if one is to learn any science correctly, it is very important that his first impressions should come from one whose understanding of that science is clear and full; and in this respect, at least, Christian Science is not different.—*Correspondence.*

Lectures to be Delivered

Attica, Ind.—Prof. Hermann S. Hering, Church of Christ, 8 p.m., April 9.

Belleville, Ill.—Dr. Francis J. Fluno, Liederkranz Hall, 8:15 p.m., April 8.

Clarksburg, W. Va.—Virgil O. Strickler, Masonic Hall Building, 8 p.m., April 9.

Chicago, Ill. (Fifth Church).—Col. William E. Fell, Church Edifice, 4840 Dorchester avenue, 3:30 p.m., April 4, and 8 p.m., April 5 and 6.

Chicago, Ill. (Eighth Church).—Clarence C. Eaton, Church Edifice, Michigan boulevard and 44th street, 8 p.m., April 8 and 9, and 3:30 p.m., April 10.

Cincinnati, Ohio (Second Church).—Virgil O. Strickler, Music Hall, Elm and 12th streets, 8:15 p.m., April 8.

Dayton, Ohio (Second Church).—Jacob S. Shield, Memorial Hall, 3 p.m., April 4.

Decatur, Ill.—Jacob S. Shield, High School Auditorium, 8:15 p.m., April 6.

Testimonies of Healing

[Translated from the German]

Certain experiences in life led me to believe that Christianity must be lacking in one essential element. I missed the absolutely reliable, unchangeable, irresistible, unquestionable authority which would exclude all error and furnish us with firm support in every circumstance of life, preclude the possibility of success without true motives, and cause the upright and honest to prosper. I was in a state of dissatisfaction, but was seeking the truth which would make me free.

A friend told me of Christian Science, and although I began to investigate its teaching with a certain hesitancy, I gradually became convinced that it is what it claims to be, namely, Christianity as taught and demonstrated by Christ Jesus, and my study was attended by an ever increasing sense of joy which dispelled all discontent, the latter being replaced by a sense of peace. Christian Science has become indispensable to me, and has proved an inexhaustible source of blessings for me and mine. We have often experienced its healing and liberating effect in cases of physical disturbance, as well as with regard to problems pertaining to daily life. Thus, through the understanding of the truth I have been completely freed of severe pain in the foot, which necessitated my staying in bed. Whooping-cough in the case of our eldest boy was overcome solely through treatment in Christian Science, and in an instance where a slight was put upon him undeservedly, the declaration of the powerlessness of wrong caused right to prevail and restored the peace which seemed endangered.

Christian Science awakens the desire for nobler and more godlike thinking, and enables us to acquire and maintain such an attitude of thought. It leads to a higher and better understanding of God, omnipotence, omnipresence; toward the recognition of God as Life, Truth, and Love, of the God who satisfies all the needs of humanity, and whom to know, as the Scriptures say, "is life eternal." The truth and divine origin of Christian Science is attested, to my thought, especially by the fact that success follows only when the consciousness has been cleansed of all unworthy motives. Experience shows that success is gained in the measure that our consciousness is freed of all impure and ungodly thoughts through our understanding of the teachings of Christian Science.

Great thankfulness is due to God, and gratitude to that brave woman, the Founder of Christian Science, for having made the source of life again accessible to mankind.

J. Wächter, Basel, Switzerland.

✦

Would that I could tell, in words that would adequately express our gratitude, of all the demonstrations which have been made in our family through the understanding of Christian Science. We first became interested in this teaching about seven years ago, through the healing of my sister. My husband then asked for treatment for his eyes, as he had been unable to get help from *materia medica*. One of our best oculists, who had been treating him, said he had only one third vision in one eye and two thirds in the other. He wore glasses constantly. In spite of the fact that he did not believe Christian Science could cure this trouble, which was of eighteen years' standing, he was entirely healed in three weeks, and has never worn glasses since.

Soon after this healing, one of the children had a skin disease in a most aggravated form. We had tried every kind of medicine recommended to us, with no effect; but this case was cured in less than three weeks through Christian Science. At thirteen years of age my eldest daughter had a most severe sickness. The limbs and feet were swollen, and the abdomen was bloated so terribly that she was unable to wear her clothes. She had every indication of going into a decline, but one week after Christian Science treatment was commenced she was normal in size, and in three weeks was perfectly well. This was a very critical case.

Our fourth child was born under Christian Science treatment. The birth was practically free from pain,—in fact it was the only normal birth I ever had,—and my hip, which had been misplaced since my first child was born, slipped back into place. The second and third births had been instrumental deliveries, and two physicians had told me I could never give birth to another child without the use of instruments. This last time my nurse, who had been in *materia medica* for over twenty years, and had had a wide experience in obstetrical cases before she took up Christian Science, said, "As I entered the room, I stopped in the door just long enough to thank God that I had lived to see the day that children could be born without suffering." I was up every day, and the tenth day walked over a mile to church, with no ill effects. This was six years ago. When this baby was a year old, she had a fever, and such a high temperature that she was delirious. Things looked very serious, but as soon as the practitioner came and began treatment, speaking "as one having authority," the child was healed.

Besides the cases mentioned, stomach and bowel disorders, injured ankle, lumbago, earache, neuralgic headache, and all the diseases which ordinarily come to a family of seven, have been healed through Christian Science. It is no wonder that our love for Mrs. Eddy grows day by day, for these demonstrations over physical ailments are the proof of the truth of her teaching. I am most grateful for the opportunity to express my love and gratitude for all my blessings.

Gertrude Hinds Ely, Cleveland, Ohio.

✦

It is with a heart full of gratitude, and with the hope that my testimony may benefit some one who is seeking the truth, that I tell what Christian Science has done for me. Seven years ago I was afflicted with hip disease, which the family physician said was caused by a fall that I had received five years before that time. After wearing a brace and using crutches for thirteen months the trouble disappeared, but a year and a half later it came back. Then I was in bed with weights for six months, and it again disappeared, only to reappear in fifteen months, when the physician told me I would have to go to a hospital for an operation; and I did so. I was there a month, in which time six specialists examined me, and I was finally told that an operation would do me no good. After I left the hospital one of the specialists said that if I would take the right kind of medicine, strong enough and often enough, I would be well in a short time; but I received practically no help during a month's treatment. The specialist told me I had what is known to *materia medica* as an incurable tubercular hip, that I would be a cripple all my life, and advised me to go to some institution for incurables.

At this point a friend spoke of Christian Science to me. I felt that it would be of no use to try it, but as all material remedies had failed, I consented to do so. I therefore secured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and asked for help from a practitioner. After eleven treatments I was perfectly healed, and the trouble has not appeared in any form since my healing in June, 1911. I was an excessive user of cigarettes and alcoholic liquors, and although to mortal sense I tried very hard to give them

Digitized by Google

up, these habits were not entirely overcome until about a year and a half after taking up Christian Science. It has been proven to me that when this teaching is earnestly and properly applied, it meets human need in any form.

I am very grateful for the Christian Science literature, as it is invaluable, and it has been a daily help to me. I also wish to express my gratitude to Mrs. Eddy for bringing Christian Science so clearly before us.

HUGH J. BIGLEY, Pittsburgh, Pa.

❖

Jesus said to one whom he had healed, that he should go and tell his friends the good things God had done for him; so I wish to tell what God has done for me through a faithful Christian Science practitioner. I was suffering, and had been for almost four years, from a trouble which mortal belief attaches to women of my age. I had hemorrhages continually for the first year, and the other years the trouble continued, with the exception of a few days or weeks sometimes. My son and his wife were coming to make me a visit, but I was taken ill three months before they arrived, and it seemed as if I would never be any better. I had several other troubles also, namely, nervousness, sleeplessness, and a serious stomach disorder something like congestion, and my heart was in bad condition. Then, too, my feet and ankles were very much swollen.

My daughter-in-law, who is a Christian Scientist, asked me why I did not try Christian Science, but like some other people I was prejudiced against it, even to the degree that I would not read about it. I had, however, come to a place where I had entirely given up hope of ever being any better, and as I was very weak and nervous, I was ready to try anything that would help me. I was sure Christian Science would do me no harm, even if it did me no good. My daughter-in-law therefore immediately sent a special delivery letter to a practitioner at Independence, Mo., and the return post brought word that treatment was begun as soon as the letter was received. I had been sleeping very little at night, but that night I slept well, and did not suffer at all with nervousness. The next morning I went to the table and ate my breakfast, something I had not been able to do for three months, and in four days I made quite a trip by train. I have never even had to lie down to rest during the day since then, and I can eat anything.

This was all accomplished with only three weeks' treatment, and I believe with careful study of the Bible and Science and Health we can overcome all of our troubles and sickness and get a better understanding of what God has done and can do for us, and is willing always to do if we seek Him. Christ Jesus has said that whosoever seeks God, finds Him, and He is "the same yesterday, and today, and forever." We must lose our great fear. "Self-abnegation, by which we lay down all for Truth, or Christ" (Science and Health, p. 568), is our weapon against error. We must divest ourselves of pride and self, and thus empty our minds of all error, that we may be filled with truth. I thank God that I am a perfectly well woman, anxious and willing to do anything that He may direct me to do.

MARTHA SHELEY, Auxvasse, Mo.

❖

Gratitude impels me to tell what Christian Science has done for me since I began its study in January, 1911. At that time I was suffering from two diseases, and wearing a surgical appliance. I was reduced in weight, and ate only two meals a day. Then, too, I was in debt and very much discouraged, so naturally quite unhappy. Through the aid of a Christian Science practitioner, however, I gradually saw the nothingness of my ailments; also that I had no need of the appliance, though I had been wearing it for three years under the advice of the physician, who had stated that I might have to wear it permanently. I am now normal in weight, have an excellent appetite, and am in better health than ever before.

To me this was a wonderful demonstration, but wonderful as it was, it was nothing to the peace and joy that came to me through the knowledge that I gained in Christian Science. Heretofore I had been worrying about business affairs, about ill health, and about the future, but when I learned that God is All-in-all, and man His child; that He does care for us, then gradually confidence returned; and I now enjoy a peace and happiness that I never before thought possible to mankind. Through the understanding gained in Science, I paid my debts much sooner than I could otherwise have done; and I want to say, that as a business man, I have been greatly helped mentally, morally, and financially in Christian Science.

For all these benefits, for what the future holds for me in Christian Science, and for the assistance that my friends have rendered me, I am very grateful. I daily give thanks for the good that has come into my life through this wonderful study, and I am deeply grateful to our Leader for showing us the way.—E. H. ARCHER, Long Beach, Cal.

❖

I feel that I cannot longer delay the expression of my gratitude for the numberless blessings which have been showered upon me and mine through the kindly ministrations of loving friends, whom divine Love has sent to me during the past two years.

Christian Science came to me three years ago, when I was in the depths of despair. We were then living in Oklahoma city. I was a complete physical wreck and in deep mental darkness. My husband had been ill for a long time, and was then in the last stage of what physicians called a malignant disease. While he was unable to grasp Christian Science enough to get the full benefit of its healing power, we realized many happy hours together, trying to know more of the "Life that knows no death" (Hymnal, p. 4). Two years ago he passed on, and I was left with three little children to care for, and the "wolf" at my very door, as all our material possessions had been swallowed up in doctors' bills and other expenses incident to illness. Since passing through that bitter experience I have trusted God, ever present Love, as implicitly as I ever trusted my earthly parents. Without doubting or wavering for a single moment, I have followed the Scriptural injunction, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." My heart overflows with gratitude that I can bear witness to the truth and fulfilment of that promise. Though I was left alone in the world, without any person to whom I could look for my supply, and seemingly not strong enough to support myself and my little ones by manual labor, I most humbly and gratefully say that I have never lacked any "good thing." I have been sustained by divine power to accomplish more than I had ever dreamed of being able to do, literally verifying the words of St. Paul, "Having nothing, and yet possessing all things."

On one occasion, when I left my children at home while I attended a Wednesday evening service, the youngest, four years old, cried for a few minutes and then said, "I will not cry any more, for our other Mother is here," meaning our "Father-Mother God" (Science and Health, p. 16). When the older ones told me of this on my return from church, I

Digitized by Google

felt so grateful for having taught them that God is our Father and Mother. This has comforted them many times since, when they have wished for their father, who to their sense had been taken from them.

I have never used a material remedy, however simple, for either myself or my children, since I first learned of the Christ-healing through Christian Science. Through the understanding of this teaching I have had many demonstrations for myself and children, as well as for others. I had suffered for years from chronic stomach and bowel disorder, but was perfectly healed through reading "Science and Health with Key to the Scriptures." Christian Science has also freed me from a great sense of fear, and an overwhelming sense of sorrow, which seemed for a time almost to crush out the last spark of life and hope. My trials have all been stepping-stones, instead of obstacles, in the pathway of Truth, and though the way has sometimes led through the "Red Sea and the wilderness" (Science and Health, p. 226), divine Love has always met my every need. I trust that this testimony may be the means of helping some discouraged one, weary with his load of tears and sorrow.

I am thankful beyond words to express, for the understanding of God obtained through the study of the Bible in connection with the Christian Science text-book, as well as through class instruction, which I have been permitted to receive since coming to Riverside nearly two years ago.

SARAH L. RABY, Riverside, Cal.

✧

I was attracted to Christian Science by its theology, its spiritual and therefore harmonious interpretation of the Scriptures. When I first heard of this new-old truth I was, and had been for eight years, a member of a religious community in one of the western states. After many years of self-sacrifice and toil, with hope deferred and ideals not realized, I felt a longing for deliverance from bondage. About this time the *Christian Science Sentinel* began coming to one of the members. These copies were passed around, and they awakened an interest that brought into circulation a copy of "Science and Health with Key to the Scriptures," which had been received by one of the members some years before as a gift, but had been kept in seclusion until brought forth by this new awakening. The text-book was now circulated, and as a result of the work of these two faithful witnesses this religious association was peaceably dissolved, as quietly as light follows darkness or the day the night, the majority of the members becoming interested in Christian Science.

Two weeks after I began to read the Christian Science literature, I injured my ankle. I tried to meet this problem with the little understanding I had gained of metaphysical healing, but was unable to bear my weight on the ankle the following morning. I persevered, however, and in thirty-six hours after the accident the ankle "was restored whole as the other," without any material appliances or treatment. This was my first practical proof of physical healing as taught in Christian Science, and it was a sweet and satisfying experience of the nearness and potency of divine Truth and Love in meeting human needs.

Since that time I have passed through a deep sorrow, the deepest that can come to the human heart, but I found the truth to be indeed "a lamp unto my feet, and a light unto my path." Out of sorrow's depths I drank of a deeper joy than I had hitherto known. The Scriptural promise was fulfilled, "And God shall wipe away all tears from their eyes." In this experience I gained some apprehension of the nothingness of the occasions of human woe. Many and varied are the experiences in which the truth has been a present help. I am thankful for the privilege of being a member of The Mother Church, and also a subscriber to the church periodicals, including the *Monitor*.

It is over thirteen years since I began the study of Christian Science, and I find it more full of freshness and promise each succeeding year. I am thankful to our heavenly Father, divine Principle, and grateful to Mrs. Eddy, our dearly beloved Leader, for this priceless gift to all mankind.

CHARLES W. SIFTON, Benton Harbor, Mich.

✧

[Translated from the German]

About three years ago I prayed to God for help from the depths of my heart, for I had reached the point where I realized that human help was of no avail. Christian Science came into my life as an almost immediate answer to my prayer, and I have received innumerable blessings through it since. My youngest son, who had been pronounced abnormal by several physicians, has become a healthy, stalwart, normal young man. My eldest daughter was freed, through treatment by a Christian Science practitioner, of a trouble which caused her much pain, and which, according to the statement of a very capable physician, could only be removed by an operation.

As for myself, I have been freed of many ailments since I began the study of Christian Science, such as anemia, headaches, nervousness, and stomach disorder; besides which, constant fear has been replaced by firm trust in God, and a calm that does not leave me even now, in these troublous times. My eldest son has been at the front almost since the beginning of the war, while I have not heard from my youngest son for a long time; but I know that both are under God's protecting care, and I have no sense of anxiety about them.

All my acquaintances are surprised at the change which has taken place in me. Those who wished to know the cause of this change, began to look into Christian Science, and they have become earnest adherents of its teachings. My conscientious endeavor is to assimilate more of this glorious Science through the study of the Lesson-Sermons, Mrs. Eddy's works, and the articles in the *Herold*. I am most grateful for all the blessings which I have received through Christian Science, and I shall strive to radiate love in ever increasing measure, for I know God to be Love, and my true self His reflection.

FRAU JEANETTE HAUENSCHILD, Hamburg, Germany.

✧

I have a great deal for which to be grateful in Christian Science. Prior to my knowledge of it I had severe colds and throat trouble about half the time in winter, the throat difficulty lasting for weeks, even in summer. These ills gradually disappeared. I have had a touch of cold occasionally, however, but it has been overcome quickly by the truth, and was as nothing compared to the condition before knowing Christian Science. A short time ago I had a slight attack of the throat trouble, but it lasted only a day. I read and gave treatment in the evening, and was entirely well the next morning.

Christian Science has proved to me the protecting power of Truth. Once, while getting off a street-car, I fell head first from the platform to the pavement. While falling, there came to me a great sense of safety; it seemed as though something was holding me, I fell so gently. Not for a moment was there any fear, and I got up knowing that I was protected. After reaching home I found my knees bruised, but they had not pained me. This was quite a contrast to an experience I had before coming into Science, when I fell no farther than

Digitized by Google

this yet was laid up for several weeks, and I feel I have every reason to be grateful. It is surely true that "God is our refuge and strength," and "underneath are the everlasting arms."

I am also grateful for the Christian Science literature. On one occasion an article in the *Sentinel* quoted a sentence from Mrs. Eddy's writings which I thought might be of use some time, so I learned it. That night I was awakened with a great sense of suffering. It seemed so intense that it was an effort to think at all, and the only thing I could think of was, "Hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261). This I endeavored to do for some minutes, but without getting any relief. Then the sentence I had learned came to me. It was this: "Thou hast no longer to appeal to human strength, to strive with agony; I am thy deliverer" (The First Church of Christ, Scientist, and Miscellany, p. 132), and the realization of what it meant brought such joy and freedom and gratitude for God's goodness that I must have been healed almost instantaneously. Later I remembered that it was a sense of suffering which had turned my thought to God.

One Wednesday evening a testimony was given about a man who was in a very bad condition being told to go home and "thank God." He did so, and began to think that after all he did have something to be thankful for; and he was healed of the condition. At that time I was much dissatisfied over a problem which did not seem to be working out rightly, and this testimony changed my thought. Whenever I was tempted to be dissatisfied, I would express my gratitude for the many blessings I had, and thus the demonstration was speedily made. This experience has often been a lesson to me since. Now when things go wrong, I know it is because I am looking at appearances, and when I truly turn away from material evidence and recognize the divine goodness, perchance in the singing of a hymn, the help always comes.

For these and the other blessings which Christian Science is bringing me, I am very grateful.

HELEN F. MCCALL, Minneapolis, Minn.

I am indeed grateful for the many blessings received through the knowledge of Christian Science, and for a clearer realization of the truth. By this better understanding of God, instantaneous healings of a severe throat affection and colds have been made. I have always been quickly healed through Christian Science whenever I have had any difficulty of this kind. A terrible sense of fear has gone, and Truth is surely overcoming every sense of lack.

Some time ago, when jumping on a motor bus which was moving very rapidly at the time, I miscalculated the distance and struck my right kneecap upon the top step with such force that for the moment it was quite impossible to say where I had been hurt. Getting inside the bus, the only thing I could do was to repeat the "scientific statement of being" (Science and Health, p. 468). In pondering this truth it came to me so clearly how impossible it is for God's child, the expression of divine Love, to be anything but perfect, that instantly all pain and sickness disappeared. There has not been any discoloration or stiffness since.

I cannot find words to express the deep, humble gratitude for the spiritual uplift, for the joy and happiness, and especially for the daily peace which has come to me; also for all our literature, which is so helpful. I am deeply thankful to God, and grateful to our Leader, Mrs. Eddy, as well as to all my Science friends.

GRETA MACK, Garelochhead, Scotland.

From Our Exchanges

[Rev. Washington Gladden, D.D., in *The Christian Work*]

Surely the old world is calling, with all its voices of horror and grief and agony, for some new idea on which to rebuild its shattered civilization. The old foundations of distrust and antipathy, on which it has been seeking to rest its structures of art and industry, are crumbling; some new principle must be discovered on which to found human relations. Is not the first word that Jesus spoke, the word that the world needs now to hear,—that all the people of all the nations have one Father and are all of one family? If that is the fact, the first thing they have to do is to come together and make a compact which shall recognize and express the fact.

It is an impressive circumstance that the thought of the whole world seems to be moving steadily and strongly in this direction. All my reading shows a great consensus of opinion gathering, that there can be no way out except some kind of league of peace. What would have been sneered at six months ago by the great majority as utterly utopian, begins to be recognized by a good share of the people who think, as the only possible cure for the world's woe. When the great ones of the earth get ready to make the principle of brotherhood the corner-stone of a universal commonwealth, it will perhaps be plain to all the world that Christianity is not a failure. And it may by that time be more evident that the church which bears the name of Jesus Christ can find no better foundation for its life and teaching than the gospel of the kingdom.

[*The Christian Intelligencer*]

Following Christ is a matter of heart and life as well as head. A mind furnished with religious knowledge is of fundamental importance; but a heart filled with love and a will that bends to the Spirit are equally essential. We are ready to confess that many Christians do not take their religious life seriously enough. The clamant calls of spiritual need everywhere find them loafing "on flowery beds of ease." There is no stirring up of the gift within them, no militant aspiration to possess the land for God, no eye to conquest. They suffer the offending eye and hand and give evidence of increasing spiritual impoverishment. Their lives do not count positively for God. However orthodox their intellectual views may be, they are practically heretics and unbelievers.

Christian life must be tested by the example and teachings of Christ. Here is a standard test given by our Lord: "If any man will come after me, let him deny himself, and take up his cross and follow me." Our hearts must feel what our heads know, that Jesus realized Saviourhood through suffering.

[*Western Christian Advocate*]

Elisha said to the widow, "Go, borrow thee vessels abroad of all thy neighbors, even empty vessels; borrow not a few." But when there was "not a vessel more," the oil "stayed." No incident better typifies the giving of the Spirit. He never stays until He fills all the empty space. He is not measured. He is not limited in His supply. If our vessels are not filled with a fulness that overflows, it is because the measure of our faith is small.

God is wanting to do much more for us than He actually seems to be doing. If we were only more open to Him, He would surprise us with the fulness that He would bestow. Malachi tells us that God will open "the windows of heaven, and pour . . . out a blessing, that there shall not be room enough to receive it." God is not small in His way of doing things. He is unmeasured in His giving. It is we who are

Digitized by Google

not large enough to receive. Suppose we as a church should put ourselves in the way of receiving what a good and benevolent God wants to bestow, what might we not expect? In what large way might He not use us? How he would enlarge our coast and widen our fields of service! What power, what influence we would have! As Paul wrote to the Ephesians, may we be "filled with all the fulness of God."

[*The Outlook*]

Words, symbols, and forms of thought have changed; but the truths and facts behind them remain unchanged. A flaming hell no longer terrifies men; and heaven, expressed by material symbols, no longer inspires them to holy living. But heaven and hell are all the more real because we largely fashion them ourselves. That is to say, they are not waiting for us, arbitrarily created as places of reward or punishment according to the deeds done in the body; rather we have been so fashioned that by the play of the laws which God has written in our natures we not only decide whither we shall go, but what shall await us. We no longer say we shall be immortal; we know that we are immortal. Heaven and hell are not only outside but within us; and no man can go to either destination until he has made himself ready by inward preparation. The good man who accidentally found himself in hell would not really be there; and a bad man who might stray into heaven would find it hell by sheer force of contrast between himself and his surroundings. The moral law written in our natures is more inescapable and inexorable than when it was written on tables of stone. No man can escape because he keeps the record himself.

[*The Universalist Leader*]

If the "kingdom" is ever coming, when will it come? We are tired of waiting. Let us venture a prophecy. Let us be egotistic enough to believe that whereas other prophecies have failed, ours shall not fail. We confidently believe that we can set the very day and hour when the old world of pain and suffering and sin shall come to an end, and the new world of joy and spirit shall dawn. It will come when the world wants it. It will come when the heart of humanity passions after it more than for any other achievement,—more than for navies, railroads, wheat-fields, stock exchanges, telephones, and telegraph. The kingdom of heaven does not depend upon the willingness of God to give, but on the eagerness and passion of man to receive it. When the world wants it, it shall come.

[*The Christian Register*]

There are great experts in the art of living. Jesus, for instance, saw God in the faces of little children who flocked about him. He saw God in the act of a brotherly Samaritan and in a poor widow's gift. There are experts in the fine sense of right and truth, as there are experts in beauty and music. But we do not believe in God and religion merely because of what the great teachers say; we come to know for ourselves by trying to see what they see, to do as they do, and above all to live the brave, faithful, and friendly life of the great good will as they have lived it.

[*Zion's Herald*]

Words that help are an offering that every Christian may bring to his Lord. There are times when we may well remain silent, but there are more times when we can speak out cheerfully and helpfully for the Master. To withhold any good word, and to stifle a kind thought or impulse, is to prove recreant to the best there is in us.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, $10\frac{1}{4}$ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x $5\frac{3}{4}$ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.13.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second-class matter.

Items of Interest

Plans for leasing hotel sites, camp sites, store sites, and cottage sites located in the Appalachian national forest in Maine and New Hampshire, are being formulated by the forest service, in compliance with a provision in the new agricultural appropriation bill. This section gives to the secretary of agriculture the authority to lease plots of ground up to five acres, situated in the national forests, for periods of thirty years, to parties desiring to comply with the government's terms. Hitherto it has been possible to lease plots for terms of only one year.

It is expected that within the next few months the title to the land surrounding Russell pond, near Woodstock, N. H., will pass to the federal government. If this transfer takes place soon enough, the forest service will lease plots at rates yet to be determined, to persons desiring to establish summer cottages or camps. Conferences of officials of the service are being held for the purpose of settling matters of detail, most important among which will be the planning of the camps for the best convenience and comfort of all concerned. The headquarters of the forest service for the northern Appalachian region are at Gorham, N. H. The thirty-year leasing clause in the appropriation bill will, it is believed, result in a stimulation of the use of the national forests for recreation purposes.

As a result of the work of the municipal lake shore reclamation commission, created in 1910, the city of Chicago now owns the entire lake front between Grant and Jackson parks with the single exception of the Chicago Beach hotel tract between Forty-ninth and Fifty-first streets. When the commission was named the city was in control of only two small tracts in this stretch, the pumping station tract at Thirty-ninth street and East End park between Fifty-first and Fifty-third streets. Negotiations toward securing the Chicago Beach hotel tract are now well under way, which will give the city also this frontage. The commission was formed to acquire possession of the lake front. It was given substantial support by civic bodies. Through its efforts, scattered attempts to regain the lake shore from individuals were united and the question of title was settled in favor of the city.

The purchase of the Philippine Islands from the United States is suggested in a petition recently presented to Count Okuma, the Japanese prime minister, by Shigemaru Sugiyama and a number of other Japanese who have been prominent in politics. Mr. Sugiyama was formerly secretary to Prince Katsura. The petition sets forth that in view of opinion found in the United States that the Philippines should be given up by that country, the Islands should be acquired by Japan as the best means of solving the "Pacific Question." The signers point out that disagreements between Japan and the United States arise over the question of immigration. If Japan acquired the Philippines, there would be no need of Japanese emigration to California.

On the first day of April the inauguration of the new postal savings banks in the Argentine Republic will take place. Deposits will run from one dollar up to a maximum of three thousand dollars, though stamps will be printed from one to fifty dollars only. Supplementary to this system will be a money-box device with special openings for notes and coins. The key to each box will be kept at the local post-office, where the contents, when desired, will be taken out and placed to the depositor's account. Women and minors will be allowed to open accounts—and presumably to withdraw funds—without it being necessary for them to obtain the permission of their husbands or guardians.

There has been introduced in the California legislature a bill which provides that the state shall assume charge of the old adobe home of Gen. Pio Pico, the last Mexican governor of California. The Pico home, one of the state's most interesting historic landmarks, is at the outskirts of Whittier, between the Whittier boulevard and the San Gabriel river. It is the property of the city of Whittier, whose citizens have kept it in an excellent state of preservation, but who early last year decided at a city election to turn it over to the state. The Pico "mansion" was completed in 1826, being at that time the largest and most ornate dwelling-house in the West.

There are five hundred Chicagoans with incomes ranging from sixty thousand to one hundred thousand dollars who have failed to make returns on their incomes as required by law, according to a statement by the United States district attorney. "The records show," said he, "that last year one third of all of the income tax collected in this country was derived from the island of Manhattan. I am determined that Chicago shall make a good showing. I will prosecute the violators of this law." The collector of internal revenue estimated that fifteen million dollars in salaries is escaping the tax.

Further progress this season in the development of the cottonseed products industry is indicated in the census bureau report on cottonseed, crushed and linters, obtained from the 1914 crops. As 70 or 75 per cent of the total production of cottonseed is crushed annually, it is estimated that the 1914 production of seed will exceed 7,300,000 tons. Its value has not been estimated, but last year's production, 6,305,000 tons, had a total value of $155,500,000 in oil, cake and meal, hulls and linters. The closer delinting of cottonseed has resulted in a largely increased production of linters.

Judges Putnam, Dodge, and Brown in the United States district court last week, handed down an opinion dismissing the bill against the United Shoe Machinery Company. The suit was brought by the United States, under former United States Attorney-General Wickersham, alleging monopoly in violation of the Sherman antitrust act. At the same time there was criminal prosecution against the officials of the company for alleged conspiracy to violate the Sherman act. An opinion was written by each of the three judges, all concurring at the close in a dismissal of the bill.

Dr. Wade, the London expert who was commissioned by the Australian commonwealth government to investigate the geological features and oil-bearing deposits of Papua, has submitted an interesting report, in which he recommends immediate action to develop the oil resources of that island. Evidences of petroleum were found along a coastal belt from eight to twelve miles wide, extending from the delta of the Parari river almost to Yule island, surface indications of the oil having been found over an area of fifteen hundred square miles.

Work has begun on the construction of the irrigation system of Chilecito, in the province of Rioja, Argentine Republic. A law has been passed in which the republic forwards to the provinces the sums required for the construction of waterways, which for a time are considered amortized provincial property. There is an annual list, subscribed to by the landowners and all those deriving benefit from the work, whose amount is in proportion to the cost of building the system on the property of each.

The German minister for public works has announced that the connection between the Rhine and the Weser has now been completed. The locks at Minden between the Weser and the canal have already been opened without ceremony for the passage of the first barges. Experimental journeys are now to be made along the entire canal by loaded barges, the depth of water being reckoned for the present at 1.5 meters.

According to present plans, the Boston Symphony Orchestra leaves Boston for San Francisco on May 9, to give a course of concerts at the Panama-Pacific international exposition. Karl Muck, the conductor, is preparing thirteen programs of regular symphonic music. No engagements are to be accepted on the way, and the men will be back in Boston at the beginning of June.

The contract has been let to drain a certain portion of the lowlands in Leavitte township, ten miles east of Hart, Mich. This will be known as the Beaver drain, and will reclaim eight thousand acres of rich soil. This will make Leavitte one of the best townships in western Michigan for fruit growing or general farming. The total cost of dredging and building two bridges will be about nineteen thousand dollars.

It is announced that the Argentine government is negotiating a loan of one hundred and twenty-five million dollars. The money is intended for public works.

Two thousand delegates from the Dominion of Canada and the United States were present in Toronto, Ontario, last week at the opening of the good roads convention.

The value of the cacao crop in the Guayaquil district of Ecuador is placed at $7,192,692. The average price was 7.8 cents per pound.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII April 3, 1915 No. 31

"As one having authority"

JOHN SIDNEY BRAITHWAITE, M.A.

THE authority with which Jesus rebuked error and cast out evil wherever he encountered it, was decidedly baffling to the rabbis. They had to admit that he spoke with authority, for how else could the results be achieved? The record reads, "With authority commandeth he even the unclean spirits, and they do obey him." It will repay the Christian Scientist to study this question of authority, for if one would have that Mind "which was also in Christ Jesus," he must know whence this authority was derived, whether it is still available, and how it may be exercised in these times in which we live.

According to the dictionary, authority means "power or admitted right to command or to act." There are, one may assume, as many opinions as to what constitutes authority as there are beliefs in law or power. In Science and Health (p. 247) we read that "custom, education, and fashion form the transient standards of mortals," and these are only some of the ways by which mortals have accepted a false and fleeting sense of authority. One thing is certain, namely, that true authority rests only with true law and those who uphold true law. It is found, however, that in all questions affecting the welfare of mankind, whenever authority is vested in a person, or even a number of persons, it generally rests on so frail a basis that at any time and in the most unexpected ways it may be reversed, superseded, or entirely annulled.

Sennacherib sent his messengers to the king of Judah with all the insolence of success in arms and human power,—"Hear the word of the great king, the king of Assyria,"—but through the spiritual insight of Isaiah, reassuring words from a higher authority were spoken to the king of Judah, that this boaster should neither enter the city, nor this claimant to supreme power shoot an arrow there. "By the way that he came, by the same shall he return," were Isaiah's words of assurance, and on that night the opposing army was annihilated, and Sennacherib returned to meet his own doom at Nineveh.

In more recent days Napoleon, the "world ruler," ended his earthly days an exile on a small island off the coast of Africa. Instances could be multiplied of persons who have aspired to power,—as though the serpent's lure "Ye shall be as gods" was forever whispering in their ear,—and who have at length been driven to see the emptiness of their own pretensions through their failure to establish the existence of any law by which they could enjoy security from evil. The Master's statement, "Call no man your father upon the earth: for one is your Father, which is in heaven," really settles the whole question of authority for us, and from the time we perceive the truth of this statement there begins to devolve upon us the laying down of all beliefs in authority derived from any lesser source than the infinite Mind.

Jesus clearly recognized his Father as the source of his authority over sin, sickness, and death, but we find that the arguments in favor of a lesser authority are many and diverse. The so-called human intellect, which is very far from being ready to make way for spiritual understanding, demands that every mental process of man shall be formulated into some theory, creed, and dogma, and nothing is more fatal to the clear-sightedness of the individual than his consent to have his sense of the supreme authority defined in this way. The writer remembers being asked by a clergyman by what authority he accepted Mrs. Eddy's interpretation of the Scriptures as the correct one. He replied by asking the clergyman what in his opinion would constitute authority, whereupon the latter immediately replied that to him the Scriptures, apart from the authority of the church, had no more significance than a book of fairy tales. Having made this confession, he dropped the subject. Here was a clear case in which the traditional and dogmatic interpretation of the Scriptures was allowed to dwarf and practically obscure the individual's own powers of spiritual discernment; and this is by no means an isolated instance.

Christian Science lays very great stress on the necessity that we individually retain our divinely bestowed right of self-government, and he who enters upon an earnest study of the Bible in the light which this Science throws upon it, soon finds his sense of what is right and true, and his power to act in accordance therewith, quickened to a remarkable degree. He now needs no external authority to tell him how he should interpret its teachings, for he has found a sure way of interpreting them for himself, and this is immeasurably more satisfactory.

In Science and Health we read that "the despotic tendencies, inherent in mortal mind and always germinating in new forms of tyranny, must be rooted out through the action of the divine Mind" (p. 225). A tendency is a leaning of thought in a given direction; it is not a law, and it can always be ruled out by the knowledge of what is law. It is knowledge of true law that invests the knower with authority to rebuke and disperse wrong thought-tendencies. According to the Bible record, Moses was the first to see the necessity for a definite rule with which to handle these tendencies, and this rule was embodied in what are known as the ten commandments. The fact that these commandments have survived through many generations and are still the fundamental basis of religion and the administration of justice in our country, is evidence of their close approximation to absolute law. This was the first "letter" of religion, and it served to provide the Israelites with a rule of life which, if followed, would enable them to choose the good in life without the painful necessity of first experiencing the effects of belief in evil. Based on an unswerving honesty and spiritual insight, these commandments have always been invested with an unquestioned and impersonal authority, and the one who observes them becomes, in a degree, endowed with it also.

Christ Jesus spoke of himself as a fulfiller of divine law, the representative of its authority. Materialism was condemned by this law, and mortals were chained with it, needing to be released. Their freedom was to be gained through a knowledge of the spiritual truth revealed in Christ Jesus. On this point St. Paul says, "Now we are delivered from the law, that being dead wherein we were held [false belief];

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

that we should serve in newness of spirit, and not in the oldness of the letter." There was nothing in the law of Moses which could release mankind from the effects of false belief. Jesus added nothing to the letter of these laws, and took nothing from them, but he brought the spirit. He introduced a new element into religion, the concept of God as Truth and Love, whose kingdom is within man.

It is hard for us today to see what an immense change of thought this demanded from the rabbis of that time, and had it not been that Jesus spoke with authority, and that his words produced definite and indisputable results, his teaching must have been lost. One would naturally assume that those who had been so zealous in their obedience to a law which they believed to be the final will of God, would have become more zealous than ever in the freer, more complete, and much more joyous outlook provided by the new concept given by Jesus. But we know that this was not the case, and even those who came nearer to understanding it began to lean so much on the personality of Jesus as to force from him the words, "It is expedient for you that I go away."

In the intervening period between that time and the present, there has been a great advance of knowledge in every material direction; but it cannot be said that religion has advanced in the same ratio, and the explanation of this seems to lie in the more or less general acceptance of the idea already alluded to, that creed and dogma are the proper garb in which religion should be clothed. In Christian Science, however, we have a perfect union of the letter and the spirit of religion, for it presents a full and complete statement of the letter in a form that is logical, scientific, and practical, and at the same time recognizes that all have the ability, and must needs acquire for themselves its spirit. Those who see the truth of these teachings and begin to apply them according to the rules laid down, find that they are becoming endowed with a certain sense of authority which they had not before considered themselves either likely or worthy to possess. But this authority is not a personal influence; it is rather the compelling nature of Truth which rebukes ignorance and false belief. We should not be afraid or ashamed of this power, neither should we confuse it with human willpower, which relies upon dogma rather than upon demonstrated truth for its sense of authority.

A faithful follower of Christ, John Woolman, a Quaker, writing in the middle of the eighteenth century, said, "Therefore to examine and prove ourselves, to find what harmony the power presiding in us bears with the divine nature, is a duty not more incumbent and necessary than it would be beneficial." If one should set aside everything to gain a true sense of this authority, he would be able to appreciate and uphold the authority of existing laws, in other words, to "render to Cæsar the things that are Cæsar's." He would know that Cæsar's authority is the outcome of humanity's effort to check the lawlessness of mortal mind, and it is therefore worthy of respect and obedience from individual members of the community. If this human sense of authority fails to work the greatest good for the greatest number, history has many illustrations to show how quickly it is set aside in favor of another; but this other also is usually that of Cæsar.

To the Christian Scientist such changes appear to be a necessary and continuous overturning in the human consciousness, "until he come whose right it is." He knows furthermore that as each works to maintain his own individual right of self-government, he is doing what is best for the community as a whole. By taking his part in the work of uprooting and casting out the evil that presents itself at the door of his own consciousness, clothed with a false semblance of authority, he is doing much to lessen his neighbor's burden as well. It is his perception of the nature of the authority which Christ Jesus exercised when on earth, that gives him the ability to do this and to follow in some degree in the steps of the Master. Such are perhaps fitly described in the words of the poet Milton:—

> For in their looks divine,
> The image of their glorious Maker shone;
> Truth, wisdom, sanctitude severe and pure,
> Whence true authority in man.

Ministry of Patience

LOUISE KNIGHT WHEATLEY

PERHAPS no characteristic of Jesus of Nazareth was more beautiful than his sublime patience. The gospels are replete with instances wherein he turned with tenderest compassion from his own high view-point of spiritual vision to meet on its own plane some frail, outreaching blossom of thought just struggling into the light. We remember how obediently he left the temple at Jerusalem, where he was "sitting in the midst of the doctors, both hearing them, and asking them questions," and at his mother's bidding went home with his parents, and "was subject" unto them. Even at the age of twelve years he knew more of God and His law than his parents did; but he was willing to wait until they found that out. That they soon understood this fact is evidenced by the words of his mother on the occasion of his first public appearance after that, at the marriage-feast at Cana of Galilee, when she whispered to the servants to do whatever he should bid them.

Jesus never forced an issue. His faith in the omnipotence of good was such that he knew he could well afford to stand aside and await the ultimate adjustment effected by his Father's perfect and unalterable law. He knew that the divine activities were already in operation, even though unseen and unacknowledged by blind material sense for the time being. Yet the deadly dulness of those around him must oftentimes have taxed his patience to the utmost.

Perhaps no incident in the earthly record of the Master is more touching than the scene in the "upper room" when he and his disciples talked together for the last time. For three years they had been his constant companions, listening daily to that dear voice, admonishing, encouraging, rebuking, explaining,—teaching both by example and precept "the deep things of God;" yet the very trend of their questions on this memorable occasion showed how utterly they had failed to understand him. Judas regarded his Master's life of less value than thirty pieces of silver; Peter wondered where he was going; Thomas complained that they could not follow, because they knew not the way; while Philip stupidly demanded, as a final proof of his Messiahship, that he show them the Father. It seemed indeed a sad commentary on those three years of patient ministry among them! One can almost fancy that a little note of wistfulness might have crept into that gentle voice as he replied to the last demand, "Have I been so long time with you, and yet hast thou not known me, Philip?" Yet a moment later we find him praying for them in words of such ineffable tenderness that all aspiring men still listen to them in wonder and amaze.

But Jesus understood, and that is why he could be patient. The man who is patient is always the man who understands. Patience is that which can see another's point of view and make allowances for it. Patience means comprehension. It means faith. It means compassion. It means hope. It is

Digitized by Google

the dove hovering over the troubled waters of mortal mind, waiting to catch its first glimpse of the olive-branch. Not for a moment does it imply a false sense of submission, the meek and supine resignation of a nature too indolent or too weak to rise and overthrow adverse conditions. Rather is it that heaven-born courage which enables one who has already done all, "to stand." Just to stand still is sometimes the hardest thing that any one is ever called upon to do; yet there comes a time in every human experience when it is the one thing that can and should be done.

Learning to wait is a rare achievement. Mortal mind does not like to wait. It wants what it wants, and it wants it right away. It thinks patience means stagnation. It thinks that unless it is hurrying, it is losing time. It thinks that unless it is all out of breath in the effort to make things move, nothing is being done. It has great respect for the soldier who, under stress of excitement, with flags flying and drums beating, may rush up some hill to sudden victory; but it gives very little consideration to the same brave spirit which enables a man to lie in a trench all through some starless night, just waiting. Yet patience is one of the tests of a great man or woman. Every one who has ever truly achieved, in the best and highest sense of the word, has had to learn to wait.

Joan of Arc heard what she called "the voices" long before the time seemed ripe for her to follow where they led. Columbus had to bear in silence the jeers and jibes of his mutinous sailors as he stood day after day, with the sublime courage of the man who knows, looking out upon the western horizon. Galileo, under stress of torture, had to retract a statement made before a stupid world was ready to receive it; but he retracted it with his lips only. Jesus waited thirty years before he began his ministry. Mrs. Eddy conceived the idea of *The Christian Science Monitor* years before the time came to send it forth upon its healing mission.

Let us, therefore, not grow restless if conditions to be rectified sometimes need to pass through successive stages of development before reaching ultimate completion. If we who have turned to Christian Science for help sometimes find, for instance, that our healing is unaccountably slow in coming, let us make the greater effort to meet Love's immutable requirements, knowing, as Mrs. Eddy has said, that "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health, p. 22). Christian Science healing is essentially a purifying process. In fact, it sometimes involves the entire readjustment of a lifetime of mistaken thinking; and this is not likely to be the work of a day.

Not only in our relation to individuals, but in our relation to one another as church-members, this rare gift of patience finds opportunity for gentle ministry. In every organization there must of necessity be some workers who are mentally in advance of the others, and to such the temptation often comes very strongly to force an issue. Evil, coming in the name of good, may even beguile an assertive few into forcing an entire membership to take a step for which it is not yet ready, by means of the time-worn argument, "I am an older Scientist, so I know best." Human will, however, is still human will, even when it calls itself a Christian Scientist. Beloved, let us ponder these things. May not the right thing, done at the wrong time, sometimes become the wrong thing? The wise householder in the parable waited until the harvest before he allowed the tares to be rooted up. He knew that there are some things which time alone can adjust; so he had the patience to wait, knowing that whatever tares were in the field, if given time enough, would finally prove their utter worthlessness in the sight of all men. And this they promptly did.

Does patience, however, sometimes cease "to be a virtue"? Are there limits even to human endurance? That is quite possible, for all earthly things have their limitations. There is no limit, however, to the sublime courage with which one may face any situation when he once recognizes his true identity as a child of God, and manifests the love which, as St. Paul declares, "beareth all things, believeth all things, hopeth all things, endureth all things." Our risen Lord, with the awe and wonder of the resurrection morning still shining in his face, once waited in patient silence while the slow, blundering fingers of a dull disciple searched for the prints of the nails in those wounded hands; and Jesus was the Wayshower. If he could afford to wait while a doubting Thomas found the only sign which he could seem to understand, should we murmur if we are sometimes called upon to do likewise?

To bring every thought into obedience to the law of Christ is not the work of a moment. The sculptor sometimes chisels away at his rough block of marble for weeks and months before the beautiful statue of his dreams shines out in all its resplendent loveliness. "We are all sculptors, working at various forms, molding and chiseling thought" (Science and Health, p. 248). The perfect man of God's creating will be discerned as soon as the wrong thinking which seems to obscure it has been taken away. How long a time this may require, "no man knoweth," not even "the Son, but the Father." It is our work to keep steadily on, refusing to listen to any outside suggestions that these hours of slow, faithful, painstaking chiseling are not accomplishing anything. Sooner or later we will have the reward of our patience. Each day a little more of truth will be gained, a little more of error lost, a little more of God remembered, a little more of self forgotten, until the long looked for moment will come when the Christ-ideal, the perfect man, will stand revealed in all the purity and sublimity of spiritual completeness.

True Coin

ELINOR SPARGUR WEIL

Mrs. Eddy often reminds us that mortal concepts are at most but counterfeits of spiritual realities. On page 148 of Science and Health she says, "Anatomy and theology reject the divine Principle which produces harmonious man, and deal—the one wholly, the other primarily—with matter, calling that *man* which is not the counterpart, but the counterfeit, of God's man."

One day the attendant in our home handed me a coin and asked what was wrong with it, as it had not been accepted when tendered. Upon handling it, I knew intuitively that it was a counterfeit. Upon comparing it with a coin which I knew to be genuine, the difference in form, color, and design was not perceptible, but the more I compared the two the more apparent became the spuriousness of the one and the genuineness of the other. I told the attendant that her coin was a counterfeit, but upon comparing them she could not perceive the difference. I wondered at this, for by this time I could clearly distinguish between the good and the bad. It then came to me that she was a foreigner, a stranger in this country, and had not handled enough of our money to discriminate between the two. So is it with every one who does not understand the Science of real being and calls that man which is the very antipode of the man of God's creating. When, however, we become citizens of the kingdom of God,

Digitized by Google

the realm of Spirit, then we are "no more strangers" but "of the household of God," and we learn to distinguish between Truth and error, between Spirit and so-called matter, between the real and the unreal.

I pointed out to the attendant that it was against the law to tender counterfeit money, that which we knew was not genuine, and the thought then came to me of the great and only Lawmaker, of His law, which we as Christian Scientists learn to follow, and of how often we either tender or accept the counterfeit for the real. This little incident in my household taught me a great lesson. I saw that every time I allowed the five physical senses to bear testimony to error, I was tendering or accepting the counterfeit. I also saw that the real man, God's image and likeness, can bear witness only to the truth.

Tokens of Divine Love

LUMAN A. FIELD

WHEN our revered Leader ordained the Bible and Science and Health as the pastor of the Christian Science church, she in due time also provided a series of Lesson-Sermons calculated to give to the world, through the light of revelation and reason, a more perfect knowledge of the way of salvation. We are told in the *Sentinel* of March 2, 1899, that the subjects chosen follow the order our Leader was accustomed to employ in teaching her classes; and our text-book, "Science and Health with Key to the Scriptures," gives the fundamentals of these sermons in the chapter entitled Recapitulation.

The first of these Lesson-Sermons, very fittingly and of necessity, has "God" as its subject. The second one, "Sacrament," may not seem to be closely connected with the first, but a little study shows that it is the bugle-call to us to declare our fidelity to God, to walk uprightly and work righteousness, thus preparing ourselves for a larger unfoldment of the truth to be presented in the succeeding lessons. The following six sermons, "Life," "Truth," "Love," "Spirit," "Soul," "Mind," unfold in varying ways a fuller concept of the ever-living I AM. The next two, "Christ Jesus" and "Man," deal with the divine idea: its presentation to mankind by Jesus, and the revelation that the divine idea or image is the spiritual man.

The succeeding five sermons, "Substance," "Matter," "Reality," "Unreality," "Are Sin, Disease, and Death Real?" explain spiritual reality and its mortal mind counterfeits, and as if to refute the human belief that such experiences as sin, disease, and death are to be classified as realities, the last named challenges this baseless assertion.

The following six sermons, "Doctrine of Atonement," "Probation after Death," "Everlasting Punishment," "Adam and Fallen Man," "Mortals and Immortals," and "Soul and Body," take up some of the perplexing doctrines of scholastic theology and clearly explain them in the light of Christian Science. The first one reveals unmistakably what is required of us in order to come into at-one-ment with God, and the second unfolds the fact that after the transitional experience called death there still remains the necessity of continuing the work of attaining at-one-ment with God, "till we all come . . . unto a perfect man, unto the measure of the stature of the fulness of Christ." In the third sermon of this group we learn that punishment continues only while sin continues, or we might say that punishment ceases as we come into the realization of man's at-one-ment with God. The fourth discloses the fact that God's man never fell from perfection, and therefore that the real man's at-one-ment with God is forever indestructible and unchangeable, an unimpeachable fact of eternal history. As if more fully to explain this subject, the fifth sermon shows beyond question that God's man is pure and unfallen, while the sixth is a fitting climax, dealing with the great thought of God and His spiritual reflection as coexistent, eternal, and perfect.

The sermon, "Ancient and Modern Necromancy, also Mesmerism and Hypnotism, Denounced," is the only one in the series which has as its specific object the exposure of error,—its subtlety, its powerlessness, and its utter nothingness. Some Christian Scientists labor under the mistaken impression that they do not like this sermon, yet we all should realize that its teachings are very vital, else it would not have been given us. Its importance may be discerned to some extent if we will but remember that Mrs. Eddy was not able to publish the first edition of Science and Health until she had prepared the chapter on Animal Magnetism, as we read in "Retrospection and Introspection" (pp. 37, 38). On page 64 of this same work Mrs. Eddy states, "It is scientific to abide in conscious harmony, in health-giving, deathless Truth and Love," but she immediately points out that "to do this, mortals must first open their eyes to all the illusive forms, methods, and subtlety of error, in order that the illusion, error, may be destroyed;" adding the significant warning, "if this is not done, mortals will become the victims of error." This sermon exposes error and its "illusive forms, methods, and subtlety," to the end that error may be destroyed, its nothingness made plain to us, and we saved from becoming its victims.

The next three sermons, "God the Only Cause and Creator," "God the Preserver of Man," and "Is the Universe, Including Man, Evolved by Atomic Force?" may be conveniently grouped together, the last one dealing with the materialistic theory of creation in contradistinction to the two preceding ones, which unfold the great fact that the universe, including man, is evolved and preserved by infinite Mind.

The last sermon of the series is entitled "Christian Science," the "divine laws of Life, Truth, and Love," or the laws governing "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (Science and Health, pp. 107, 583), the laws whereby we can demonstrate man's scientific unity or at-one-ment with God. Thus do the Lesson-Sermons become "God's love-tokens," as we read in the *Sentinel* of March 9, 1899, and they "bring rest to the heavy-laden, life to the dying, and light and joy to all."

[Written for the *Sentinel*]

Peace

GERTRUDE RING HOMANS

On a marvel night, through a wonder-light,
Love led me around the world.
Nor afar nor near was a weapon of fear,
For the banners of battle were furled,
And all peoples sang till the ether rang
A pæan of praise to God
That sin had fled and sickness sped
And death stalked no longer abroad.

Nor in any place was there left a race
That smote with the knife for food,
And children played all unafraid
With the trusting beasts of the wood.
And the vision lives! It is Truth which gives
The promise of Life impearled
With purity, and of surety
Love will govern some day the world.

Selected Articles

[Editorial in *Western Nevada Miner*, Mina, Nev.]

Congress is again in session, and likewise a number of state legislatures. If you will take the trouble to investigate, you will find a bill fathered by state or national medical associations before each legislative body—including Congress—calling for medical boards and compulsory medical examinations. In other words, the doctors of one particular school or practice are, through legislative enactments, endeavoring to form a medical trust, and by tyrannical laws and prejudiced boards, to force down the throats of the people their nostrums and theories, whether or no they believe in them. For, even granting the advancement made in medical practice, it is still theoretical rather than scientific.

The bill before Congress to create a national medical board—against which bill Senator Works is so heroically battling—would virtually mean taking the medical care of the children out of the hands of the parents and putting it in the hands of prejudiced boards, and putting their welfare on a par with the government supervision of the health of pigs, lambs, and calves. We have no quarrel with the medical profession, for we number some of our warmest friends among its membership; but, as with a union of church and state, there is no greater menace to the liberties of the people than a union of any particular school of medicine and the state. Two things that the people must guard with jealous vigilance if they would preserve their liberties under our republican form of government, are medical and religious freedom. The entrenchment of either through legislative enactment is the entering wedge of tyranny and the overthrow of personal liberty.

It will be remembered that only two years ago the advocates of medical freedom had the fight of their lives against the enactment into law in this state of one of the most obnoxious and tyrannical compulsory medical statutes ever promulgated. There is no question but that a like bill will be up at the coming session of the legislature, and it behooves every believer in medical freedom to be on his guard. And do not sit idly by, but get busy with your congressman and United States senators and back up Senator Works in his fight against the national medical tyranny as embodied in the Owen national medical trust measure. Only those are deserving of liberty who would fight to retain it. And do not fail to watch our own legislature.

[Editorial in *Tonopah* (Nev.) *Bonanza*]

The criticisms made by the *Bonanza*, two years ago, of the Kelliher bill, which failed to pass the Nevada legislature, apply also to the Steele bill, Assembly No. 8, introduced a few days ago, the fate of which is now in the balance. This bill, if enacted into a law, would likely be later declared unconstitutional by the supreme court; but in the mean while it would create many misunderstandings and arouse many prejudices. Briefly stated, the bill provides that the teachers in all the public schools shall make physical examinations of their pupils, taking upon themselves the prerogatives and powers of specialists in such matters as diseases and malformations of the eye, throat and nasal cavity obstructions, which result in mouth breathing, imperfections in the teeth, and what not. The teachers have, of course, taken an examination in anatomy, physiology, and hygiene, for which they prepare by skimming over "Steele's Fourteen Weeks in Anatomy," which volume may or may not have been compiled by the author of this measure; but at all events it is not able to afford technical training such as would make the applicant for a teacher's certificate capable of practising either medicine or surgery.

One of the principal demerits of the bill seems to be a covert one, namely, the affronting of a creed which is at variance with modern medicine and surgery, and which has many enemies, as has any departure from long accepted practices. Possibly this measure, together with its predecessor, the Kelliher bill, was inspired by denominational enemies; but it is more than possible that it had an inspiration in a profession that has suffered costly inroads by reason of the sect referred to.

But there is also a certainty that opposition to this measure will be more wide-spread than the denomination that holds it as repugnant and in derogation of its principles of freedom of thought and practice. The act would take from the parent one of his primary functions, that of caring for the physical health of his offspring. It would compel him to keep his children from school or have them undergo surgical and medical treatment, as prescribed by a school teacher whose knowledge of disease was gained from a text-book compiled in words of one syllable. One of the serious demerits of the bill is that, even should the teachers of the state all be capable of making these physical tests, and even should all the parents accept them as final and satisfactory, it is likely that the schoolroom would become more like a consultation office than a place for instruction.

❖

[Editorial in *Elko* (Nev.) *Independent*]

At every session of the legislature during the past ten years, bills have been introduced which are aimed to serve a fatal blow at Christian Science. Not only is this so in Nevada, but in nearly every state of the Union. The source of these bills has been traced to the American Medical Association. During the first week of the present session of the legislature such a bill was introduced in the Assembly, bill No. 8, almost identical with one introduced last session, which was killed after a hard struggle. The very foundation upon which our system of government rests—the Constitution of the United States—guarantees to our people religious liberty, the right to worship God according to our own lights, and any legislation which might curtail or abridge that right is a fatal blow at free government.

In this day of enlightenment it is strange that some men cannot be made to understand that no legislative measure, however cunningly devised, can force a set of people to accept a certain religious creed or doctrine or to depart from the faith of their acceptance. The hundreds of religious wars of the past, with their untold horrors, which inspired our forefathers to provide for religious liberty, seem to hold no lesson for those who would persecute Christian Scientists by attempting to restrict them in their faith; and they fail to realize that it would be as reasonable to attempt to control the tides as to direct the religious faith and practice of mankind by legislative enactment.

Strange, too, as it may seem, no attempt is made to restrict Buddhism, Mohammedanism, or the worship of idols, but all this attempted legislation is directed at a form of religious worship participated in by hundreds of thousands of our best manhood and purest womanhood. Why do alleged Christians of one faith persecute those of another and perhaps larger faith? They both teach the divine virtues that make for happier lives and a better citizenship, and both have their origin in the same holy writings.

The *Independent* has no quarrel with those of any creed whatsoever. Any faith that gives surcease or comfort, and teaches morality and virtue, is good, and he that would

Digitized by Google

deprive any person of the comfort of his religious faith might be compared with one who would take life itself. Nor have we any quarrel with doctors, whether they practise allopathy, homeopathy, or osteopathy. They are all good and have their place. We do, however, deny the right of any one to say that the others shall not exist. There must not be a monopoly created by legislative enactment.

There is no one so much interested in the welfare of a child as its own parents, and there is no one so responsible for it to God and humanity. The right, then, of the parent to select his own doctor, and to teach whatever religious belief he may to his child, must not be interfered with. Parents will righteously rebel against their daughters and sons being subjected to physical examination by certain doctors in whom they have no faith. Nor will they tolerate interference with religious teachings of their children.

The *Independent* is not a disciple of any sect or creed, but believes that all forms of religious worship are good. It recognizes, too, that every person should be free to accept the creed that best harmonizes with his conscience. Assembly bill No. 8 is not only an interference with one's religious liberty, but it is an interference with recognized rights in the selection of his doctor. Moreover, it forces submission to questionable treatment. The bill should be killed.

✧

[Editorial in *Alexandria* (Ind.) *Times Tribune*]

We hold no brief for the Christian Scientist,—he does not need any defense at our hands; but for the benefit of those who are likely to be misled by the denunciations of bigots and self-appointed religious guardians, we wish to say that the foundation upon which Christian Science is built is the living Jesus Christ and an all-loving God. Nothing Antichrist about that, is there?

✧

[Charles E. Jarvis in *Riverside* (Cal.) *Press*]

In an announcement of a lecture on Emanuel Swedenborg appearing in a recent isue of the *Press*, the statement is made that "most of the beautiful spiritual concepts found in Mrs. Eddy's book, Science and Health, are derived from the works of Swedenborg, though their application to bodily health is her own." With due appreciation of the kindly tone of the remark, will you permit me to say that the author is quite mistaken in his assumption, for the very good reason that the Holy Bible was the sole source of Mrs. Eddy's inspiration for the Christian Science text-book, "Science and Health with Key to the Scriptures." To quote her own words, on page 126 of that book she tells us: "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority." Christian Scientists have no differences with those who expound or adhere to other religions, but they prefer that reference to their own beliefs should be correct in statement.

✧

[Henry Deutsch in *The Jewish Journal*, Minneapolis, Minn.]

In an age of skepticism, in its broader sense as "a suspension of judgment pending examination of the evidence of an alleged truth," mankind as a whole has assumed toward all subjects, and particularly the subject of religion, the intelligent attitude of weighing, considering, testing, and proving before passing judgment. Education and experience have taught men that they must work out their own salvation, and that they may not hope to have God in their lives simply through inheritance or contact "in living and work, with their fellow religionists sharing in their weal and woe." Religion is an individual, and not a racial experience, and the demand that men shall give the "reason of the hope" that is in them, requires evidence of religion in its effects in their daily lives and conduct rather than by genealogical charts or in merely social and economic activities.

All monotheistic religions are judged first by their fundamentals, and secondly by the results of their application as shown in the effects on their adherents, and through them upon the world, in advancing the correct knowledge and worship of God and the establishment of His kingdom. The monotheistic religions differ but little in their fundamentals, which may be stated simply as the correct knowledge and worship of God, and a proper understanding of man's relation to Him. What men think about these fundamentals constitutes theology, or human opinions for the exemplification of the fundamentals, crystallized into sects and creeds. These are almost without limit in number and wholly at variance in expression. Each claims for itself superiority over all the others, and in their discussions, exponents too often forget that ridicule and a lofty superciliousness no longer pass as argument or proof, and that when they essay to consider and pass upon the religions of others, it well behooves the professing servants of the most high God to tread lightly and to remember His command to Moses, "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground." This is more especially true when an intelligent consideration of the question demands a knowledge which can be gained only by experience and demonstration, and not merely through superficial opinion or even intellectual proficiency.

A man born and raised in the Jewish faith, who turns to Christian Science and finally becomes a member of that church organization, attracts more interest and is subject to greater interrogation than one of any other faith, largely because of the great gulf that has seemed to exist between the Jewish and the Christian faith. An investigation as to the reason why a large number of Jews have become Christian Scientists has not usually been sufficiently thorough to permit of a proper answer to the question, and too often has been the occasion for hasty and improperly supported conclusions and judgment. Christian Science is no longer an experiment, nor is it a mere passing phase of religious belief or fancy. In the nearly fifty years of its existence it has proven its position step by step, and fair-minded thinkers of all classes extend to it proper credit and recognize in it a religious faith which is entitled to proper respect and consideration.

The Jew, like his many thousand Christian neighbors, turns to Christian Science usually for the mere physical healing. He does this as a last resort, in the hope of obtaining relief from the innumerable physical and mental diseases which have refused to yield to any other form of treatment. He turns to Christian Science not from choice, but from necessity, *in extremis*. He does not consider it as a religion, but merely as a form of treatment, possibly related to some of the psychological methods which sometimes seem to bring relief. At any rate, he is usually in such desperate straits that he is not concerned with the nature of the treatment, but rather with its effects.

Having received his physical healing, and learning that it is but the result of the religious practice of Christian Science, the Jew's natural inclination is to turn from it and spurn it, because it bears the name "Christian," which he has been taught is synonymous with the cause of all the persecution and untold suffering of his race. However, with the physical healing he finds there has come, even though in a slight degree, yet unmistakably, a glimpse of God in action, or Immanuel, "God with us," realized in consciousness.

Digitized by Google

The natural innate human craving for God, peculiarly intense in the Jew, receives indications of satisfaction. Struggling against the arguments of prejudice and passion and lifted into a little clearer light, he learns that the knowledge of God and truth is not a mere matter of name or theory, but is an experience. As thought is gradually lifted, he begins to perceive that Christian Science is not a new religion, but simply a restatement and fulfilment of the fundamentals of Judaism and of Christianity expressed in such terms as "cancels the disagreement" (Science and Health, p. 361) between them, and affords a common ground upon which Jew and Gentile can meet as sons and daughters of the one God.

Christian Science teaches that we all have one Father, and that true religion consists not in mere beliefs, forms, ceremonies, and rites, but in the absolute and undivided obedience to and worship of the one God and the practice of love toward our fellow men. It illumines both the Old and the New Testament, and through their study the Jew learns that the Founder of Christianity was a Jew; that he taught only Judaism, and that the basis of his teaching was the doctrine of love for God and our fellow men,—"Thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might," ultimating in the new commandment, "That ye love one another, as I have loved you."

Jesus formulated no doctrine or creed, but lived and demonstrated the life of a true believer and adherent of the one God, and nothing in what he said forms the slightest foundation for the persecutions which have followed in his name, and for which he is not responsible any more than the doctrine of Judaism is responsible for the persecutions between Jew and Jew which fill the pages of Jewish history, or the persecutions by the Jews of those of their own nation and people who strove to follow the teachings and emulate the example of the Master. In fact, religious hatred is not a matter of religion, but a human propensity not related to one religion any more than another, but usually another phase of the dominant thought that "might is right," as enunciated by the dominant authority.

Jesus' life was one of loving ministration to the poor, the needy, the sick, the lame, the dumb, and the blind. As he said, "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." He taught and preached only the doctrines of the Old Testament and the prophets, and Jewish writers were his only authority. The few instances in which he indulged in rebuke were directed, not at the true worshipers, but against false prophets of the one God who substituted formal prayers and sacrificial ceremonies for true worship as expressed in daily conduct and action. As one reads his words, he finds them extremely mild and moderate as compared with many a sermon that can be heard today in the synagogue.

Christian Science revives in the Jew's consciousness the God of Abraham, Isaac, and Jacob, and affords proof again of the Almighty, who forgiveth all our iniquities and healeth all our diseases,—"a very present help in trouble." He learns that God is not merely a name, but means omnipotence, omnipresence, and omniscience, and that the worship of Him is not merely profession but practice. He finds in Christian Science the potential fulfilment of all the promises of the Bible, and is inspired with a renewed hope in the ultimate regeneration of mankind which shall finally restore the children of Israel to their rightful heritage as the chosen people of God, not in the sense of an individual race or people, but as mankind universally united by a religion of love. The soul-stirring Shema, "Hear, O Israel; The Lord our God is one Lord," becomes not merely an exclamation or mumbled phrase, but a living, inspiring declaration of a present God whose "hand is not shortened." In brief, the Jew finds in Christian Science the fulfilment of all that he has believed and hoped of religion, not merely as a matter of form, ceremony, or belief, but as an immanent power, omnipotent and omnipresent, and capable of use and demonstration not only in the synagogue and in the church, but in every place and at all times, for the solution of all the problems of human experience.

The term "a Jewish Christian Scientist" is a misnomer, the same as would be the term a Methodist, Presbyterian, or Episcopal Christian Scientist. A Christian Scientist is *sui generis eo nomine;* he partakes of no other creed or sect, whether Jewish or Gentile. He combines in his religious faith the fundamentals of all monotheistic religions, and differs from them only in that he discards creeds and doctrines and is required to practise and prove in his actions what he professes rather than merely to talk and expound what he believes.

The Jew who becomes a Christian Scientist, burns his bridges behind him, so far as concerns the synagogue and the rites, ceremonies, observances, and affiliations which today seem to constitute the Jewish religion. He does not, however, surrender any of the fundamentals of his old faith, —he but emphasizes them. Christian Science inculcates in him not only the deepest respect, but the demand for the rigid observance both in thought and deed of the spirit as well as the letter of the ten commandments, and particularly of the first commandment, "Thou shalt have no other gods before me," and that other great commandment, "Thou shalt love thy neighbor as thyself." To him not only the Sabbath but every day becomes holy, in the thought of the ever-presence of God and his activity as God's child about his Father's business. Likewise the other commandments of the Decalogue become not the mere enunciation of ethical rules, but rather spiritual laws, basing all right thinking and acting.

When the Jew goes to the healer in Christian Science, he receives not "foolish talk," but is invited to unite in that prayer to God which is effective in the healing of disease and the dissipation of gloom and discouragement. When the healer does talk, it is to tell him of the wondrous glory and the love of God, the infinite Father, and of man—the real man—in His image and likeness. As the dew of heaven falls upon the parched earth, so upon his heavy heart falls that peace "which passeth all understanding." Religion becomes to him a new inspiration, which incites "the longing to be better and holier, expressed in daily watchfulness and in striving to assimilate more of the divine character" (Science and Health, p. 4), and as he progresses he catches ever broadening and clearer visions of the ultimate fulfilment of the prophecy of Mrs. Eddy, the Discoverer and Founder of Christian Science: "One infinite God, good, unifies men and nations: constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed" (Science and Health, p. 340).

❖ ❖ ❖

All the good law and all the good order which the state or church enjoys today may be traced back over some route to the words and deeds of men who rebelled against the kind of law and the kind of order that they found administered by its "constituted guardians;" of men who dared to appeal from the "keepers of divine truth" to divine truth itself—from the "trustees of God" to God Himself.—ANON.

Relief Fund for War Sufferers

In response to the call for contributions for the relief of Christian Scientists in distress by reason of the present war in Europe, the sum of $82,104.02 has been received by the Treasurer of The Mother Church. Of this amount $77,595.51 has been disbursed to the relief committees organized by Mr. McCrackan in England, Germany, France, and Switzerland, as called for by them. Much gratitude has been expressed by the Christian Scientists in these countries for the help extended to them by their brethren in America.

In addition to the $82,104.02 collected for the relief of Christian Scientists, there has also been collected the sum of $29,154.90 for the relief of war sufferers other than Christian Scientists. This entire amount has been disbursed to relief committees of Christian Scientists in Holland, England, Germany, France, and Switzerland. The total amount received to date for these two funds is $111,258.92, of which but $4,508.51 remains unexpended. As the need for help still continues, this small balance will not last long; therefore Christian Scientists are given the opportunity to continue to send contributions to the Treasurer of The Mother Church for this relief work. For the future it is proposed to maintain but one fund, and from this both Christian Scientists and others will be assisted.

"No other gods"

Since the beginning of the present war, the Christian church has come in for more or less criticism at the hands of the religious press, because the church in the centuries of its existence has failed to put an end to the conditions which have made possible in this twentieth century the most brutal and devastating war in centuries. In considering this criticism it is well, however, to remember that the church is but an aggregation of individuals, and that criticism of the church is not necessarily criticism of Christianity.

The value of any institution must be in the appeal it makes to the individuals who compose it, so to order their daily lives that they will show forth the fruit of their professions. If therefore the criticism to which we have referred will induce Christians to be more consistent with their professions, it will prove its value. Jesus said, "By their fruits ye shall know them," and it is by this standard the world will pass judgment on all who profess to be his disciples.

Mrs. Eddy has definitely stated the fundamental of Christian Science to be the oneness and allness of God. This necessarily requires the keeping of that commandment, of which she writes on page 340 of Science and Health as follows: "'Thou shalt have no other gods before me.' (Exodus xx. 3.) The First Commandment is my favorite text. It demonstrates Christian Science. It inculcates the trinity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

As Christian Scientists we accept this doctrine, and we must be loyal in our allegiance to the "one infinite God, good,"—must have "no other gods" before Him,—if we are to aid in bringing about not only universal peace, but also the overcoming of all that stands for injustice and oppression. Just how this particular war is to end, we may not know at this time, but we do know that the practical application of this commandment by all men will make war impossible. This is the glory and victory of the church foretold by the prophet Micah,—when "nation shall not lift up sword against nation, neither shall they learn war any more,"—and her warfare will not be accomplished until this ideal is attained.

ARCHIBALD MCLELLAN.

Likeness and Revelation

How true it is that what we see and love, that we truly are; that like perceives and can be perceived only by like. This was glimpsed by the wise man who wrote, "Everything the individual sees without him corresponds to his state of mind, and everything in turn is intelligible to him as his onward thinking leads him into the truth." Yet more clearly was it seen by the poet when he declared,—

> We acknowledge Christ,
> A proof we comprehend his love, a proof
> We have such love within ourselves,
> Knew first what else we should not recognise.

These both rightly divined that our nature measures our capacity, the possibilities of revelation to us, and from this we gather the greatness of man, whose abilities must vastly exceed the compass of our present possible thought.

In the light of Christian Science, "like knows like" means essential at-one-ment between the word of Truth revealed and the heart of him who receives it. This fact appears in the words of the psalmist, "With the pure thou wilt show thyself pure," and yet more clearly in St. John's declaration, "We shall be like him; for we shall see him as he is." This is the endowment of that pure and truly poetic sense which finds its quickening, its highest inspiration, in the spiritually ideal. The ability to perceive the manifestations of Truth and Love and to be made strong thereby,—that is, true and loving,—is our divinest possession, and it continually ministered to the insight and advance of the remarkable woman who discerned in the rose "the smile of God" (Science and Health, p. 175), and who gave us the scientific ground of all spiritual aptitude in defining man as the unsullied thought of infinite Mind.

In those wonderful lines which are read at the close of every Christian Science service, the sage of Patmos asserts the scientific fact regarding the true selfhood in the words, "Beloved, now are we the sons of God." He then goes on, in a paradoxical way, to name the contradictory phases of human experience. First there is the recognition of present submergence in that state in which "it doth not yet appear [to us] what we shall be;" in which the mists of mortal mentality exclude the full radiance of revelation, and consciousness is left in that semidarkness recognized by St. Paul when he declared that now we know only in part.

The day dawns, however, and men are awakening, so that though they count not themselves as yet "to have apprehended," they do begin to perceive, yes, "know," in so far as they are demonstrating the truths of being, that "when he shall appear," when all the mud of material belief shall have been cleared away, then we shall be indeed "like him." Recognition of the true selfhood, even in part, has brought recognition of its native possibilities. We enter into a new understanding of the Master's definition of life as Truth-

Digitized by Google

knowing, and envisage the limitless bounty of that spiritual privilege in which it is ours to rejoice evermore. And how wonderful seems this thought of the true selfhood which has come to the world in Christian Science, when put over against that prevailing estimate of mortal sense which expresses itself in self-depreciation, the limpness and inefficiency which forever cries, "I pray thee have me excused."

That like knoweth like, and that this is explained in sameness of nature, is a truth of tremendous significance to the thoughtful. Every instinctive regard for virtue, every native recognition of the worth of honesty and integrity, every love for the beautiful, together with that aspiration for goodness and usefulness which is found in some measure in every man, and which at our best strongly asserts itself in consciousness, —all these impel us to paraphrase Tennyson and say, I am a part of all the good I have met. Likewise they make possible the realization of the truth expressed by Mrs. Eddy when she says in Science and Health (p. 90), "The admission to one's self that man is God's own likeness sets man free to master the infinite idea."

JOHN B. WILLIS.

Divine Science

THOSE who take up the study of Christian Science soon become aware that in Mrs. Eddy's writings much emphasis is laid upon the influence of the Holy Ghost or divine Spirit, also named by Christ Jesus "the Comforter." On page 55 of Science and Health she says, "This Comforter I understand to be Divine Science." As this statement is apt to be startling to those who have only a creedal acquaintance with the manifestation of divinity known as the Holy Ghost, it may help to elucidate the subject if we ponder her further statements on page 127, where we read that "the terms Divine Science, Spiritual Science, Christ Science or Christian Science, or Science alone," are used interchangeably by the author. She then adds, "These synonymous terms stand for everything relating to God, the infinite, supreme, eternal Mind."

It is profoundly interesting to read in the gospels of the outpouring of this divine influence at the beginning of the Christian era. We read that Zacharias, father of John the Baptist, "was filled with the Holy Ghost," and foretold the coming of the Science of salvation through Christ Jesus. We are also told that Elisabeth his wife "was filled with the Holy Ghost," and the angel who announced to Mary the coming of the holy child Jesus, said, "The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee." We also read that Joseph and Simeon were illumined in the same way, and John the Baptist foretold the coming of the one who should baptize "with the Holy Ghost and with fire."

Later we have the words of Christ Jesus himself concerning this divine influence, namely, "He will guide you into all truth." Jesus had proved this for himself when he was led of the Spirit into the wilderness, and in his forty days' vigil demonstrated the powerlessness of mortal mind to hold man at the mercy of matter and material law. Luke tells us that immediately after this Jesus went out "in the power of the Spirit," and in the synagogue at Nazareth boldly announced his healing mission and illustrated it by doing the works of Truth. In John's gospel we find more numerous references to the Holy Ghost than in any of the other gospels, and the Master uses the terms "Spirit of truth" and "Comforter" interchangeably with the first named. He also says of this Spirit of truth, "Ye know him; for he dwelleth with you, and shall be in you."

One of the most vital of these statements, from the Christian Science view-point, is this: "The Comforter . . . shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you," a promise which is being daily fulfilled in the experience of Christian Scientists. In the twentieth chapter of John we read that when the risen Lord met with his disciples, at the close of that most momentous day in human history, he said to them, "Receive ye the Holy Ghost." It would seem, however, that they were not at once conscious of this divine impartation, for in the first chapter of Acts we find a renewal of the promise, with the statement, "Ye shall receive power, after that the Holy Ghost is come upon you." That this was fulfilled is evidenced by the Pentecostal outpouring of the Spirit, and by Peter's fearless defense of his healing work, when called before the Sanhedrin. We also read that Paul received the Holy Ghost and did the healing work commanded by Christ Jesus. We are further told that he questioned some brethren whom he met at Ephesus, saying, "Have ye received the Holy Ghost?" They, however, confessed to ignorance of this divine influence, and were instructed by Paul and spiritually enlightened.

In the second epistle to Timothy we find these words: "That good thing which was committed unto thee keep by the Holy Ghost which dwelleth in us." This is far different from the attitude of those who profess to be followers of Christ, yet deny the presence of this divine influence in the overcoming of sin and disease today; but those who have been healed in Christian Science give thanks for the understanding of God which enables them to realize that the kingdom of God is "righteousness, and peace, and joy in the Holy Ghost."

ANNIE M. KNOTT.

Correction

In the Lesson-Sermon for April 18 the verses given in the first Bible reference were inadvertently transposed. The reference should read: (1) Ex. 29:36, 42, 45.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

YORKSHIRE, ENGLAND.—Your committee on publication has great pleasure in announcing that the year just ended has been one of great growth in every department of this office. The support which the office has received from every church and society in this county during the last year has been most gratifying, and has made not only possible but exceedingly simple, many steps of progress which would without that support have been impossible.

The distribution work in this county, in which this office is privileged to take part, has again shown great progress. Too much importance cannot be attached to this branch of our

Digitized by Google

work. The amount of literature distributed for the year ending Dec. 31 is as follows: *Monitors*, 84,495; *Sentinels*, 18,119; *Journals*, 1,845; miscellaneous, 2,746; *Heralds*, 104; making a total of 107,309 pieces. This shows an increase over the year ending Dec. 31, 1913, of 19,100 pieces. A scheme was also started for placing copies of our Leader's writings in the public libraries throughout the county in places where there were no recognized Christian Science services, and during this year twenty-three copies of "Science and Health with Key to the Scriptures" have been placed in the libraries in these districts. It is hoped to continue this work until every library of importance contains every work of our Leader, as well as a copy of "The Life of Mary Baker Eddy" by Sibyl Wilbur.

In conclusion, the committee on publication would call the attention of the field to the loving and remarkable work that is now being accomplished through the helpful wisdom of the Trustees under the Will of Mary Baker Eddy, who are supplying free of cost all literature that is required for any detention camp, barracks, recruiting office, warship, battlefield, hospital, or any other place connected with the war. Much of this literature is being distributed in the county, and many expressions of gratitude have been received by this office. The unifying effect of this activity can hardly be measured, and as peace is a purely spiritual proposition, it is only in these ways that true peace can be attained. Thus we see how our Leader's substance is continuing to bless mankind in every direction.

From report of Committee on Publication.

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*.
105 Falmouth Street, Boston, Mass.

The Lectures

Princeton, N. J.

Philip Marshall Brown, Ph.D., professor of international law and diplomacy in Princeton University, in introducing Prof. Hermann S. Hering who lectured on Christian Science, said:—

It was once my good fortune to visit the lake of Galilee. I met there a medical missionary, who was respected and loved by all. We sat together one evening, looking across the quiet waters lighted only by the brilliancy of the silent stars. The dim outlines of the opposite shore could be seen, where Christ Jesus often gathered with his disciples.

Our conversation naturally was of the great Master. I asked my friend if he believed that Christ Jesus walked on the waters of this lake; that he healed the sick and even raised the dead in this vicinity; that he communicated to his disciples this power to heal the sick and raise the dead. My friend said he did. I then asked whether he thought this miraculous power had entirely disappeared from the world. After a long pause he replied that he thought this power still existed, and that sometimes in his surgical operations he had the feeling that his hand was divinely guided. We then entered upon an earnest discussion of this strange problem,—why the Christian church for so many centuries has practically ignored *in toto* so vital a part of the Master's teaching. We recognized the credit due to Christian Science in emphasizing anew these truths affirmed in the New Testament.

Whatever may be our personal views on the subject, we cannot fail to be interested in the presentation of the claims of Christian Science, and be led to think more earnestly concerning the foundations of religious belief.—*Correspondence.*

Hastings, Neb.

A large audience heard Virgil O. Strickler lecture on Christian Science at the Kerr Opera House. The speaker was introduced by J. S. McCracken, who said in part:—

If there is one thing which the presence of this large audience indicates more than any other, it is that the Christian religion has not lost its grip upon the world. No, the trouble is not with religion itself; the trouble has been, is today, with the superficial teaching and the yet more superficial living of religion by the so-called religionists. As to the teaching of Christian Science, I claim to know nothing; it is of that we have come here to learn this afternoon. As to Christian Scientists honoring their religion, we all of us know, and a knowledge of their consistent living makes us eager to learn more of their teaching. Surely the message of such a people is worthy of most serious consideration.

Hastings Tribune.

❖

Lawrence, Kan.

Mrs. H. E. Don Carlos, in introducing Clarence W. Chadwick, who lectured on Christian Science in the Bowersock Theater, said in part:—

The Bible teaches that all may find God "a very present help in trouble," that He is "a God at hand." It is the peculiarity of the Christian Scientist that he hourly avails himself of this beneficence, thereby becoming healthier, happier, and holier. Whenever we lift our consciousness to those high, sunny levels of Spirit where we know ourselves as God's loving and beloved sons, in whom He is well pleased, we know that we are well and good and happy, and this knowledge bears fruit in our daily doing, thus uplifting all men in proportion as we are uplifted, spurning the fable that man is sprung from dust and that death is his heritage. The Founder of Christian Science taught that we really know only what we can demonstrate. In Christian Science we have a usable, useful religion.—*Correspondence.*

Chicago, Ill.

Bicknell Young delivered two lectures on Christian Science for Fifteenth Church of Christ, Scientist, of Chicago. Frank H. Leonard, in introducing the lecturer, said in part:—

There is not a person on the face of the earth that does not want to be well. There is no one but what has sought, in the way that seemed right to him, to become well, and in the ways the world has known of has met with failure, until the realization has come that a new way must be found. In the latter half of the nineteenth century there came the realization which is bringing to the world that sense of eternal health and harmony which it is just and reasonable to antici-

Digitized by Google

pate. Mrs. Eddy, in giving Christian Science to the world, taught us what God is; and when we realize what Love is, what Life is, and what Truth is, we find at last we have a foundation on which we can stand, and against which the "gates of hell" cannot prevail. We know that Love does not hate, that Truth does not lie, that Life does not die; and so at last we have found where to look for our health, and know that in looking to God we do not look in vain.

I am sure the speaker of the afternoon in his address is going to tell you enough about this God who is Love, Truth, and Life to gladden your hearts and make you realize that your deliverance is at hand.—*Correspondence.*

❖

Seattle, Wash.

George Shaw Cook delivered a lecture on Christian Science for Second Church in Junction Hall, Ballard. He was introduced by Rupert Eichholzer, a high school teacher of this city, as follows:—

In the seventeenth chapter of Acts we read: "Then Paul stood in the midst of Mars' hill, and said, Ye men of Athens, I perceive that in all things ye are too superstitious. For as I passed by, and beheld your devotions, I found an altar with this inscription, To THE UNKNOWN GOD. Whom therefore ye ignorantly worship, him declare I unto you." In this present age of enlightenment, people everywhere, no longer content with the worship of an unknown God, are reaching out for a larger understanding of God. This understanding is given us in Christian Science, the Christ Science, which comes to us like Paul to the Athenians, with the message "him declare I unto you."—*Correspondence.*

❖

Lake Geneva, Wis.

A very attentive audience listened to a lecture on Christian Science by Jacob S. Shield at the Y. M. C. A. auditorium. The speaker was introduced by Mayor S. C. Ford, who said:—

Christian Science first awakened my interest several years ago, when meetings were being held over on West Dodge street. Since then the movement has been forging ahead all over this broad land of ours, and in our own city as well. Whatever may be our personal belief in Christian Science, the fact remains that thousands of our fellow men and women are today rejoicing in health of mind and body as a result of its teachings, and because of this, it has a just claim upon our thought and consideration.—*Correspondence.*

Testimonies of Healing

After enjoying for seven years the blessings which the study of Christian Science brings, I am at last sending my testimony to the healing efficacy of this teaching. In a large family, all of whom rely on Science for healing, I can recount numerous cases of release from the most alarming conditions, of the subduing of every symptom of contagious diseases among the little ones; and as an agent of harmonious delivery in childbirth it surpasses any material method I have ever tried. My two children who were born under Science treatment manifest such freedom from the laws of limitation as to be remarked by all. Not only have they escaped the numerous ills supposed to be attendant upon infant experience, but their ability to walk and talk with ease was an established fact with them months before the same experience with the brothers and sisters who preceded them could be recorded.

Some time ago my little ten year old son, while walking along a railroad embankment, stepped off into a grassy place where water and marshy vegetation made a likely hiding-place for reptiles such as are common in this locality, and in doing so he was suddenly conscious of having been stung or bitten. He tried to continue his journey to the woods with his playmates, but because of the pain he decided to return home, a mile and a half distant. He was sustained through the trip back by the protecting power of Truth as learned in Sunday school, for none of his companions returned with him. By the time he reached home the pain had become intense and swelling had set in. I was not at home at the time, but the two older sisters were, and one called over the telephone for a practitioner's help, while the other ran for a neighbor who is a Scientist. I came in a few minutes later to find the boy in bed, white and crying from pain, while fear was plainly manifest in those about him.

As soon as I heard the account I declared the truth audibly, comforted the child, then stepped into the next room to do more vigorous work on the condition which to mortal eyes looked ominous. Soon the boy was at peace, and I was enabled to give him further help in Christian Science; nevertheless, he had a bad night, and at about daylight the next morning showed very alarming symptoms. We all declared the truth and held steadfastly to divine protection, and the practitioner was called upon for more vigorous work. In fifteen minutes the boy dropped off into a quiet doze, while the sweat stood out on his brow and body until his night-clothes were wet; but I wrapped him up and did not disturb his sleep, for I saw that his color had returned and his breathing was good. He slept until breakfast time, when he awoke and asked for something to eat.

My son never again showed the slightest sign of sickness, did not lose another night's rest or miss a meal, but signs of inflammation and accumulation of poison began to show about the heel where the wound was and up in the groin. Then the temptation to fear assailed me, but I worked steadily and did not succumb; in fact, I was so uplifted by my work of realizing the ever-presence of God, that I was able to go to church and fill my place as substitute second reader with the consciousness that "the Lord is nigh unto all them that call upon him, to all that call upon him in truth." I knew also that the child was prepared to help himself, after the way he had declared the Lord's Prayer, the ninety-first psalm, and the "scientific statement of being" (Science and Health, p. 468) the night before, for whenever the pain attacked him he instantly strove to repeat one or the other, and with my help he persevered until the end, and always the pain vanished and he could sleep again.

On returning from the church I found all well, but the discoloration was rapidly causing the entire limb to take on a bruised appearance, until it would have terrified any one not a Scientist. The leg was almost black, yet not a sign of fever was to be detected, nor was nausea once felt, although these symptoms are said to be almost synonymous with snake-bite, which was declared to be the trouble by several gentlemen who called to see the boy. The only other outward symptom was the inability to straighten out the leg entirely, but by the use of a stick he could hop about the house when he felt inclined. He was kept out of school only a week, for he was able by Monday morning to put on shoes and walk almost as well as ever. The discoloration gradually disappeared, and on the heel where there was a large blister that we were told would cause the whole wound to rot away and might be months in healing, two weeks later there was a growth of new skin which entirely filled the place where the blister had been.

This was one of the most beautiful healings I have ever witnessed in Science, and my rejoicing is great over it, and over the knowledge that I have acquired of our dear Lesder's wonderful discovery. My heart is filled with thankfulness for our faithful and consecrated practitioners and Sunday school teachers, whose work makes possible these demonstrations of "God with us."

MAUD GERALD-RICHARDSON, Beaumont, Texas.

❖

For some time before I heard of Christian Science, I longed for something, I knew not what. I was a member of a church which was expecting a big revival to begin, and for days I prayed that God would send an outpouring of the Holy Spirit. Soon after the meetings began, I attended one; but what I wanted was not there.

Christian Science was presented to me shortly after this, and although I was very skeptical, I saw that others were benefited, so I thought I would give it a fair trial, as I was in great need of help, both mental and physical. From the first treatment I gradually grew better, but I had a long struggle with doubt and fear—I could not decide which was the right course to take. I prayed that if Christian Science was the right way, God would lead me on, and if it was not, that some obstacle would be placed in my way to turn me aside; but nothing appeared, so I kept on striving. It was six months after my first treatment before I had an opportunity to see a copy of Science and Health, but I read a few of the tracts and *Journals*, and the testimonies in these kept me hopeful, for I felt if God healed others He would heal me. I was cured of neuralgia through the treatment, and when I had the chance to read Science and Health and the Bible, together with the help of the *Quarterly*, I was freed from female trouble of several years' standing.

Since then I have been healed of typhoid fever in its worst form, entirely through absent treatment. Five children and myself were cured of the measles, the youngest child being then only three weeks old. I was in bed only half a day. We did not ask for treatment, but just relied on divine Love and our own understanding to do the work. Since that time we have moved to Chattanooga, where we can attend services. Six of my family, including myself, are members of First Church of Christ, Scientist, here. Neither tongue nor pen can express my joy and thankfulness for the good I have received from attending the church services, and the blessings that have come to my children through the Sunday school.

Digitized by Google

For several years I had an inharmonious condition internally. I did not feel uneasy and did not give it much attention, but the time came when something had to be done. The bowels appeared to be very much swollen; I could eat only a little at a meal, and could walk but a short distance. I then began to read and study more earnestly, and was impressed with the conviction that the trouble was an abnormal growth. The last four days the suffering seemed hard to bear, but I kept trying to do my customary housework. I would lie down and read, declare the truth, then get up and work a while. The fourth day my husband told me I had better get some one to treat me, but I said I would wait a little longer; if there was anything there that did not belong there, the truth would remove it. About two hours later a tumor passed away. The pain ceased in a few minutes, and I felt as if I could almost rise and fly, I was so light and free. For several days such a sense of peace and gladness filled my whole being that it seemed as if I were treading on air. It has been several years since this healing took place, and I am still free and happy.

Some time ago my husband fell backward, a clear fall of fifteen feet. The men with whom he was working carried him to the house. His suffering seemed almost unbearable, so I telephoned a practitioner to help him. In a few hours he was resting well enough to take a good nap. Some of the neighbors told him he would not be able to get out of bed for six weeks or longer, but he was up in less than a week. He could go up and down stairs in less than three weeks by using one crutch.

I have relied entirely on Christian Science for nineteen years, and words cannot express my gratitude for what it has done for me and my family. I am very thankful also for the *Sentinel* and the *Monitor*. They are so much help to me that I pass them on to my friends, who enjoy reading them.

MARTHA L. GANNAWAY, N. Chattanooga, Tenn.

I hereby certify that the above testimony is true.

J. T. GANNAWAY.

✧

Six years ago I came to Christian Science for relief that I could no longer hope to get from *materia medica*. For twelve years I had been under the care of doctors, and had taken medicine until my stomach had seemingly given out. The lower digestive organs were paralyzed from the continued use of material remedies. I also had many hemorrhages of the lungs and a very weak heart. I had not slept on my left side for many years, on account of the rapid and irregular heart action. I believed it impossible to live many years longer, but thought if I could move to a lower altitude I would possibly be able to digest nourishing food, which I was then denying myself.

I had heard something of Christian Science, but laughed at it, thinking it another fad not worth looking into. I knew one or two Christian Scientists, who impressed me as being clean, cheerful, trustworthy, and especially intelligent men, so I was in a receptive state of mind when I made the acquaintance of some dear Christian Science people who sowed the seed when the ground was ready. After a few conversations with them, I called on a practitioner, and in one week's treatment was healed of the long-standing stomach trouble, and have never since taken medicine of any kind. I have never had a hemorrhage since, nor such severe headaches. Today I am nearer normal than I have been in the past twenty years.

I have a large family, and they have all been benefited to the same extent. Christian Science has been our only physician during the past six years. I used to smoke and drink,—in fact I thought it impossible to enjoy myself without the effects of a stimulant,—but this is all forgotten. It is difficult to tell of these material benefits intelligently, and it is even more difficult to explain understandingly the wonderful spiritual uplift, the peace and joy, the increased and purified mentality which comes with a glimpse of light on the truth that frees. My gratitude will be life-long to all those friends who were instrumental in giving me the opportunity to find Christian Science. I thank God for giving us Mrs. Eddy, that inspired expounder of the truth which Jesus taught, and her wonderful book, "Science and Health with Key to the Scriptures." It has given me a respect for and an understanding of the Bible that I never had before. It has taught me how to pray as Jesus taught his apostles so long ago. It was something of a shock to find, after praying daily for over thirty years, that I had not known how to pray. I am trying to be more grateful every day, and to live up to the light I have received.—AUGUSTIN MORRELL, Denver, Col.

✧

It is with a feeling of joy and gratitude that I offer my testimony of the help received from Christian Science. Problems mental, physical, and financial have been solved, always with an increased spiritual unfoldment. At one time when there was an epidemic of mumps in the schools, my seven year old daughter manifested all the symptoms in a pronounced form. A Christian Science practitioner was called, and the child was healed in one treatment, sleeping all night and waking in a perfectly harmonious condition.

My husband also had a wonderful healing. While working at a cannery, one of the boys who was cleaning the tables turned the live steam on my husband's back, so that he was burned from his head to his waist. The pain was intense, but with the help of a fellow worker he was relieved, then rode his wheel three miles to a Christian Science practitioner. In half an hour every sensation of pain had disappeared, and he soon noticed that he was leaning back against a chair with no sense of discomfort. The next morning he went to the cannery at six o'clock and did his usual amount of active work, which included the lifting of heavy boxes above his head. No words can express our gratitude for the blessings which have been gained through Mrs. Eddy's life-work, and for our faithful and unselfish practitioners.

MRS. STOCKFORD WHEATON, Santa Ana, Cal.

✧

[Translated from the German]

About a year and a half ago I became acquainted with the teachings of Christian Science through my sister. I was then in a state of utter ignorance with regard to the nature of God and His power. I rarely read the Bible; in fact I had entirely stopped doing so during the last few years, as I failed to understand most of what I read, and besides seemed to come across contradictions. I suffered severely from nervousness with its many accompanying symptoms, for it resisted medical treatment, to which I had resorted at various times. Frequent headaches set in, and they grew almost unbearable.

While in this condition I became engaged in conversation with a Christian Scientist, who willingly gave me information on the subject in which I was beginning to take an interest. While she lovingly gave me some explanation relative to the all-power and love of God, the pain left me all of a sudden, and was replaced by an ineffable sense of well-being and happiness. Never before in my life did I experience such calm and contentment, and I thought that this must be a condition akin to heaven. I did not then know that when reliance on God, on spiritual Truth, when love toward our neighbor and

Digitized by Google

the hope of complete salvation from sin, disease, and death, is attained, we begin to experience heaven right here on earth.

Later I was freed from neuralgia with two treatments. I have also discarded glasses, which it had seemed necessary for me to wear, owing to an eye trouble said by the physicians to have existed from birth; and I have done so without experiencing the slightest ill effect. On the contrary, I can now see better without glasses, and besides, I feel much freer. Through the diligent study of the text-book, "Science and Health with Key to the Scriptures," and the other authorized Christian Science literature in German, as well as through the explanations which were most willingly given me by the practitioner, I have reached the point where I can believe and say understandingly that God is All-in-all, that "in him we live, and move, and have our being," and that we can never attain the truth which makes free without reliance on God.

I think with love and gratitude of our revered Leader, Mrs. Eddy, through whom the Christ-healing has again been revealed to mankind. I have also attained to where I can thank God from the depths of my heart, and pray for more of His spirit.—L. Reusser, Biel, Kt. Bern, Switzerland.

❖

I became interested in Christian Science a number of years ago, when my mother was healed by it after all material means had failed. She had been confined to the house four years with nervous exhaustion. She was also said to have several organic diseases, and although constantly under the care of physicians, she was steadily getting worse. As a last resort she decided to try Christian Science, and did so, with the result that after five months' treatment she was practically well. Today she is a strong, healthy woman. Since this healing I have relied solely on the truth when I have needed help, and it has never failed. One ailment seemed slow in yielding, but this showed me I needed to study harder, and with the help of a practitioner the difficulty was entirely overcome. A few years ago, when my baby came, the birth was practically painless, and I had a great sense of peace at the time. The child has been perfectly well and strong, and he seems to reflect more love each day.

These are but a few of the blessings I have received through Christian Science, and I am very grateful for them. I have always been grateful for the literature, especially during the last few years, when I have lived where there is no Science service. I am glad that I know the truth, and that no matter where we live, God is with us, caring for us every moment.—Alice C. Taylor, Corning, N. Y.

❖

I write my testimony of what Christian Science has done for me in regard to the tobacco habit, in the hope that it will prove helpful to some one else who wants to be free but cannot see the way, as in my case. I had been a very heavy smoker for at least twenty-two years, and particularly during the two years I was in the Canadian Northwest, having left my home in England when about twenty-two years of age.

A few years ago my wife and I became interested in Christian Science. We both read all the Christian Science literature we could get hold of, the testimonies appealing to me strongly. I told my wife that I intended to take treatment for the tobacco habit, for it seemed to me Christian Science claimed to have accomplished the cure of so many serious cases of sickness and other troubles that this should be very easily handled. I had tried many times to break myself of the habit by will-power, but had always failed. I could force myself to refrain from smoking for a week, sometimes for a couple of months, but I always had the craving and always had been beaten. At that time I was living on the island of Hawaii, and I wrote to a practitioner in Honolulu, about one hundred and fifty miles away, laying my case before her. I enclosed the money for a week's treatment, and promised her that after Sunday night I would not smoke unless I felt that I must, but if the craving was there I would very possibly smoke. All day Sunday I smoked, and until about half past nine in the evening. The next morning, after breakfast, from force of habit I thought I would get out my pipe, but I stopped and asked myself if I really wanted to smoke, and I had to admit that I had not the slightest desire to do so. The morning passed, and after lunch I had the same experience. I can honestly say that from that day to this, a period of more than five and a half years, I have not had the least desire to use tobacco in any form. The craving simply left me, and I did not suffer one moment. I gained greatly in weight, and would not again be in bondage to this habit for anything.

I have received help from Christian Science in so many ways that I am most grateful to Almighty God. I can also join the thousands who are glad to voice their indebtedness to our Leader, Mrs. Eddy, for what she has accomplished in her explanation of the Bible. Before I studied Science and Health the Bible was a great puzzle to me, and I could make nothing of it. Now I can read it with enjoyment, and can see that instead of its being a collection of legendary tales with little or no connection, it is the grandest book ever written; also that the one idea of God as Spirit, and man as His spiritual reflection, is plainly shown, from Genesis to Revelation.—John Hall, Paia, Maui, Territory Hawaii.

❖

I have made many attempts to send an expression of gratitude for publication, but something has always caused the postponement of this duty. The ever present law of Love has, however, gone on caring for me just the same, and now in meekness and with joy I wish to mention some of the blessings that have come to me. Twelve years ago, through the treatment and application of Christian Science I was healed in two weeks of a condition called by the physicians paralysis of the bowels, after having had medical treatment continuously for three years. A growth in the nostril disappeared at the same time. I was subject to an eruption caused by exposure to poison-oak, but was also freed from this trouble, which was very painful and disfiguring.

In a family of three, of whom only one is a student of Christian Science, we have had wonderful health manifested. This only shows what a little of the leaven of love it takes to make us whole. I daily thank our heavenly Father for the example of our blessed Saviour, as revealed to us through the spiritual work of our dear Leader, Mrs. Eddy.

Elizabeth M. Bell, Pasadena, Cal.

❖

Those who do not understand that all disease or inharmony is mental, say that Christian Science might be good for so-called mental diseases, but in a case of broken bones that it is impossible to effect a cure through other means than those employed by a reputable surgeon of the old school. I am a living witness to the power of divine Truth over just such a case.

Some time ago, while working on a scaffold about two stories high, the ladder slipped, and I fell between two buildings to the ground. I landed on my feet, breaking my right leg and spraining my left ankle. Immediately a large crowd gathered and wanted to take me to a hospital, but I persuaded them to take me home. Then I called a Christian Science practitioner, and with her to help me in knowing that in Spirit and Truth there are no accidents or broken bones, and that God is all-power, I was absolutely healed. No

Digitized by Google

material remedies of any kind were used, and the leg was not set by a surgeon, or in any way touched. Words cannot express my thankfulness to God, and my gratitude to Mrs. Eddy, who gave us this wonderful truth. I will strive to thank God by thinking good, and will try to live more and more like our Master, who neither knew nor recognized any power apart from God.—THEODORE SEIFERT, Granton, Wis.

✧

[Translated from the German]

My family and myself have been studying Christian Science for the past three years, and during that time have had many proofs of the love and ever-present help of God. I herewith would like to tell of an instance of healing which we have experienced.

A year ago our then eight year old son was taken ill with acute lung trouble and pleurisy. The physician whom we summoned declared it to be a very serious case. After the child had been under Christian Science treatment for a day, the improvement in the boy's condition was surprising. The healing process went on harmoniously, and the little fellow occupied himself all day, and experienced none of the suffering which usually attends such cases. Four weeks after he left his bed, he joined us on a ten hours' tramp on foot through the Harz, a mountainous region, without getting tired.

The remarkable feature in these cases of mental healing is the attendant spiritual progress, and we have observed in the case of our boy that he manifests much greater kindness and greater fearlessness since this experience. It is so beautiful to know how through earnest work we may discard our false beliefs and come to a clearer recognition of reality as in keeping with the nature of God. In order to partake of the blessings of Christian Science it is necessary to keep one's mind always filled with good and healing thoughts. The daily study of the Lesson-Sermon, which has been greatly facilitated by the translation of the text-book, "Science and Health with Key to the Scriptures," the weekly meetings and Sunday services, as well as the beautiful articles in the *Herold*, are a great help thereto, and make us feel very grateful. We thank God for the discovery of Christian Science in this age through Mrs. Eddy, and for the following which its teachings have found throughout the world.

ANNA EYERMANN, Berlin-Steglitz, Germany.

✧

It is from a heart overflowing with gratitude that I send this testimony to tell of the blessings which Christian Science has brought to me and mine. On July 16, 1911, our little boy, thirteen years of age at the time, was bitten by a rattlesnake. A physician was called, but he could not reach us until three hours later. A second physician was called, and then a third. At five o'clock the following morning the physicians gave up hope, saying that the boy was sinking fast. Knowing what I did of Christian Science, I held to the one Mind and the thought that God is Life. I told the physician that we would "fight the good fight," and he answered, "I have done so, but I seem to have failed." I immediately told my husband to get a Christian Science practitioner, and by six o'clock the lad was having treatment. I shall never forget how beautiful it seemed, for he improved so rapidly. In two weeks he was out and around, playing, and since then has experienced no ill effects, as was feared by many. He has been in perfect health ever since, and is now attending school at St. Louis, Mo.

I am surely grateful for all the healing and spiritual understanding that I and my family have received during the last seven years.

MRS. ANDREW THISTED, Great Falls, Mont.

From Our Exchanges

[*The Outlook*]

Jesus, in his last hours, said to his disciples, "My peace I give unto you: not as the world giveth, give I unto you." And then he went out into the darkness and the tempest, to be deserted by his disciples; to be arrested and brought before a fraudulent tribunal for a mock trial; to pass from condemnation by that court to another trial before a cowardly judge who believed him innocent but dared not acquit him; to hear the voices of the mob crying for his blood; to be scourged, spit upon, insulted; to be crowned with thorns and clothed with purple in derision of his royalty; to see the sword piercing the heart of his own mother, and an unspeakable dread settling down upon the heart of his beloved disciple. And in it all he was the one serene, unperturbed spirit, facing calmly the taunts of his enemies and the torturing sorrows of his friends, speaking hope to the penitent brigand at his side, and comfort to the weeping mother at the foot of his cross.

This was his peace; this the peace which he gave to his disciples. Tell us, O preacher, how, in this hour when the very foundations of Christian faith are shaking, we can possess in our souls the serene, comfort-giving peace which characterized the last hours of Jesus of Nazareth. What was this peace of his? How can we possess it?

[*The Christian Register*]

There is nothing in the times or signs of the times to indicate that Christianity as Jesus taught it, or anything like it, has broken down. Make room for this novel teacher of a novel faith in some corner of the world, and give him a fair trial. The trouble is, we have never made room for Jesus' life and doctrine, but have allowed no end of substitutes to assume canonical power. The social life of Europe was constituted out of a refined barbarism. We want this great man Jesus himself allowed to express himself freely and commandingly at the front of science, art, and literature, as well as the religion of the twentieth century. The Christianity that we need begins not with the assumption of chosen people, chosen either for their virtues or their achievements: it begins positively and clearly with this one doctrine, "On earth peace, good will toward men." It has nothing to do with war but to abolish it. It leads us through life by way of the golden rule, and it ends all obligation by giving our lives for others.

[*The Universalist Leader*]

In respect to our moral conduct, we should resemble an artist who, whatever other rewards he may obtain for his work, finds its best recompense in the realization of his ideal. We should be like a writer to whom the knowledge that his message has enriched other lives with treasures of hope and joy is of more importance than any addition it has made to his own wealth in silver and gold. There is no satisfaction equal to that of conscious faithfulness to the demands of duty; there is no happiness like that of ministering to human welfare; there is no blessedness like that of knowing that our motives and deeds are approved in the sight of God.

[James E. C. Sawyer in *The Christian Intelligencer*]

In order that the Christian life may be a steadily increasing one, continually developing the beauty of the most characteristic Christian virtues, there is essential from the beginning a high ideal of Christian character. Too often those who are young in the religious life have little thought

Digitized by Google

of anything beyond their present peace. There are too few who thoughtfully set before themselves the character of Christ as the model of their own personal character. Too often an effort to attain the full-orbed beauty and strength of a Christian character is prevented by the setting up of some narrow and arbitrary standard of emotional experience, that has no vital relation to the realization of a noble ideal of Christian living.

[*Western Christian Advocate*]

Strength of soul, purity of heart, and tranquillity of speech come to man only as he learns how to withdraw into the silence where his soul dwells, there to commune with himself and have fellowship with Christ. What is this inner world? It is that realm of thought in which one finds himself when this world is excluded and all the avenues of the physical senses are closed. It is our thought world. It is as real as anything we touch and as vivid as anything we see. It is the product of thought and feeling. Continuous thinking extends its boundaries, much feeling and wide emotion enriches its possessions. Its gates and highways are given stability by our faith; tranquillity in all its avenues is secured by our loyalty, and its integrity is preserved from collapse and mortal decay by our trust in its reality. We can so hallow it that joy will sing sweet songs of assurance, and holiness will seal its beauty with a gladness that fadeth not away.

This is the world for which we pray. It stands over against this workaday life and calls us to its inner serenity with a wooing voice that deepens with intonations swelling out of the great beyond. It proffers an other-worldliness with which we become familiar, and gently persuades us into its paths of peace.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

This is what we are here for, to know the love of Christ, which passeth knowledge; this is the eternal wisdom; and all that is, and all that has ever been or shall be, is the love of Christ seeking to reveal itself as God's creatures are able to receive it and respond thereto. Life is nothing other than this, but we fail to understand. The great mystics have always spoken about it in language which has puzzled the rest of mankind. They have told us that there is nothing else worth living for; they have testified to it as a reality surpassing all the power of the mind to conceive,—a piercing pain, a killing sweetness, an agony of delight. We wonder what they can be talking about, what they mean by a bliss that exacts so much in suffering and renunciation; but they stick to their story. The love of Christ, they say, if we could only grasp it, is something so amazing, so utterly beyond all our capacities to describe, that it is to the world as though it were not.

[*American Lutheran Survey*]

In the stress of these times it is necessary for Christians to separate themselves from the affairs of men and to spend time in communion with God. They need to bear their souls up into the realms of the spiritual atmosphere and to think of those things which are real and eternal. Even if we must come back to these earthly things which do demand much from us, our very duty to them drives us away from them for better preparation to deal with them when we return. We will do well to follow, with whole-heartedness, the admonition of St. Paul in his letter to the Philippians: "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents, three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The English walnut is attracting wide interest in Pennsylvania as a commercial orchard tree. Scarcely a week goes by at the Pennsylvania State College without inquiries. These are usually prompted by the knowledge that already within the state there are bearing trees which have proved their ability both to withstand the cold and bear abundant crops of nuts. Because of the interest manifested in these nuts, the department of horticulture of the college has planned a thorough investigation of the subject. It is known that English walnut trees are succeeding in other eastern states besides Pennsylvania. In Delaware, Maryland, and New Jersey are many small groves of such trees. There are also a few in Connecticut, and even in western New York, in the Lake Ontario fruit belt, and on the south shores of the inland lakes.

Testimony that the western railroads, instead of becoming impoverished, have in the last five years earned more revenue than ever before in their history, and put these earnings largely into building and the betterment of their plants, was offered last week at the interstate commerce commission hearing of the forty-one western railroads' petition for higher rates on certain commodities. Appearing in opposition to the railroads' plea that they be permitted to charge rates which will yield them at least ten million dollars a year more revenue, the statistician of the Iowa railroad commission asserted that the railroads, judged by statistics which he compiled, were prosperous.

The secretary of the navy, describing the system of instruction and training of the men of the fleets, says the navy has the greatest school in the world. "Harvard and Yale," he continued, "may be large institutions of education, but they are tiny affairs compared with the naval educational system of the United States, where every ship is a school and every officer an instructor and teacher." The secretary said his rule of abolishing imprisonment in the navy for desertion had worked successfully. He asserted that the banishment of the "wine room" on board ship had resulted in a higher standard of discipline and efficiency, acknowledged now by those who at first had opposed the change.

In an eight hundred page brief filed in the supreme court, attorneys for the Oregon and California Railroad Company asked the court to reverse the decision of the Oregon federal district court forfeiting the railroad's title to two million three hundred thousand acres of land, worth, according to one estimate, fifty million dollars. The government claims forfeiture because of a clause in the grant requiring the railroad to sell the land to "actual settlers" at not more than two dollars and a half an acre. Counsel for the railroad argues that all right of the United States to forfeit has been waived by inaction on the part of the government.

Discontinuance of the free use of railroad terminals by the overseas steamship lines at Boston, at a yearly loss of $1,388,000 to the roads, is asked by the directors of the port in a supplementary report to the Massachusetts legislature outlining a policy of independent transportation development and a comprehensive plan of construction for the future. The directors request the legislature to petition the interstate commerce commission, and Congress if necessary, to prevent this practice, alleging it to be a discrimination against the coastwise lines, which are refused the same rates.

A large plant for preparing for market the fiber of the spear-like leaves of the wild beargrass that grows profusely over a large area of western Texas, has been established in New Mexico. The product is shipped to Chicago, where it is manufactured into rope, cordage, matting, and other products. The available supply of raw material is said to be practically inexhaustible. Up to the time it was discovered that the leaves contain a valuable fiber, bear-grass was considered worthless by the ranchmen. It is now proving a source of considerable revenue.

Suit was filed against forty-one railroads in Texas, seeking to prohibit them from issuing free transportation. Violations of state and federal laws are alleged. The state also asked that the pass privilege be refused all persons except officers, employees, and agents of the railroad issuing such passes. Reference is made to the request of railroads for an increase in freight rates, and it is stated that abolition of free transportation would make the increase unnecessary.

There has been favorably reported in the Massachusetts House of Representatives a bill to develop many of the important highways of western Massachusetts. This is said to be the largest undertaking proposed by the commonwealth in western Massachusetts since the building of the Hoosac tunnel, and it is expected to help toward the solution of the long standing problem of transportation facilities in the western end of the state. It calls for an appropriation of two million five hundred thousand dollars.

Another of the series of suits to recover oil lands under the Taft withdrawal order of Sept. 27, 1907, has been filed in California by the government against the Midland Oil Fields Company, the American Oil Field Company, the Maricopa Consolidated Oil Company, and twenty others. The land is in the [illegible] oil fields and is valued at five hundred thousand dollars. The government also asks an accounting of oil taken from the claims involved. This is estimated at three hundred thousand dollars additional.

Working conditions in five big industries, including the Chicago stockyards, the Michigan copper mines, the Pullman Car Company, will form the basis of an inquiry lasting eight days by the federal commission on industrial relations. These points will be considered: the strikes on Illinois Central and Harriman lines, and commercial telegraphers' disputes with companies. The question of tips will also be taken up in the Pullman company, which employs six thousand porters and two thousand conductors.

About thirty-five thousand hectares of fiscal land in the province of Santiago del Estero, Argentine Republic, were offered for sale at public auction recently at a price of two dollars the hectare. There were no bidders. Purchasers would have had the right to make payment in bonds of the public debt of the province, which can be obtained at a discount of 60 per cent of their face value, so that the price was really the equivalent of about thirty cents, American money, the hectare.

Libraries of the United States and Canada received $3,555,001.61 in gifts and bequests during 1914, according to an announcement by the secretary of the American Library Association. The Carnegie Corporation contributed $1,718,195 of this sum. The largest single gift of the year was $450,000 to the New York public library by a will. The same institution also received $100,000 by another bequest.

The bureau of forestry, which has just completed an appraisement of the merchantable timber acquired by the government in the purchase of land for national forests in the White Mountains of New Hampshire and the southern Appalachians, places the amount at over a billion board feet, valued at three million dollars on the stump. The land, including the timber, was purchased at an average slightly in excess of five dollars an acre.

Bar Harbor, Maine, may soon have a national park. A movement is being made to have the United States government take over a large tract of land, including the mountains which form a background for this resort, and if everything goes as well as is expected, the park may be realized within a year. The offer of these lands has already been made to the government.

Dealing with the question of the Egyptian egg trade in a recent issue, the Egyptian *Gazette* pointed out that after the cotton and cottonseed trade, the egg trade was one of the principal sources of revenue to the country, the shipments during the year 1913 being valued at about two hundred and fifty-two thousand pounds.

The India office has just issued a summary of the financial statement of the government of India, which was presented recently in the viceroy's legislative council. The revised estimate for 1914-15 shows a total imperial deficit of £2,741,600, as against the budget's estimate of a surplus of £1,256,500.

Experimental shipments of frozen beef have recently been made from South Africa with fairly satisfactory results. It is stated that as compared with initial shipments from the Argentine and Australia, the South African beef showed promise.

The first four weeks of March piled up a trade balance of $118,281,094 in favor of the United States. Since Dec. 1 the total balance has mounted to $368,368,469.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII April 10, 1915 No. 32

Man's Heritage

IRVING C. TOMLINSON, M.A.

ONE of the unmistakable signs of an enlightened government is the fact that it insures to its honest citizens the peaceful possession of all their inherent rights and privileges. In a righteous nation, its laws, its courts of justice, and an intelligent public opinion, secure to each the permanent enjoyment of all that belongs to him. The inheritance which he has received, the property he has honestly acquired, the privileges he has honorably won, must not be unlawfully taken from him, nor is he to be disturbed in his enjoyment of them. If one were not allowed to rest secure in his heritage, then law would give place to lawlessness, order to disorder, and peace to war and injustice. The test of a just government lies in its maintenance of the rights of its citizens.

If this be true of an earthly government, how much more true of that government in which God is sovereign! It is His invincible law that all shall retain and maintain every right which He has bestowed upon them. Man is God's child, and every law of the Father supports the son in the exercise of his rights. Man is the reflection of Life, Truth, and Love, and the demands of eternal justice are that he enjoy here and now the peace, prosperity, and dominion which belong to him as an offspring of such a glorious trinity. Because of this birthright he can confidently heed the admonishment in Science and Health, "Be firm in your understanding that the divine Mind governs," and "rise in the strength of Spirit to resist all that is unlike good" (p. 393). If we believe that we have inherited evil, materially, we should understand that through Christian Science we have inherited the power to overcome evil, spiritually.

It will be remembered that from the dawn of history the patriarchs and prophets have looked forward to a land where Israel might abide in peace and plenty. Abraham foresaw "a city which hath foundations, whose builder and maker is God;" and the "new Jerusalem" was in time to be the home of righteous Israel, in which justice and harmony should prevail. The woeful mistake of pharisaism has been to fasten on the minds of mortals the belief that this "city" is not a present possibility, but a distant heaven to which one may at some future time attain. This mistaken and unfortunate teaching as to a post-mortem heaven has robbed men of their birthright here, and has made them content with, or submissive to, wrong and injustice this side of the grave, with the expectation that they are to have hereafter an eternity of idle enjoyment upon "flowery beds of ease." To seek to know ourselves as children of the Most High, and then to claim what already belongs to us as such, is to be at least approaching the goal. George MacDonald wisely writes of one of his characters, "It was truth and higher truth he was always seeking—only one thing could satisfy: the conscious presence of the eternal."

Students of Christian Science are well aware of its life-giving and peace-bestowing teaching. They know that as children of the heavenly Father the heritage which is theirs by reason of the Father's gift is life, health, peace, and comfort, here and now. They realize that the "new Jerusalem" should be their immediate place of abode. As we read the twenty-first chapter of Revelation we find no hint that any one has to die in order to reach this city, for St. John plainly says that he saw it "coming down from God out of heaven;" in other words, the divine ideal was coming down to men. Those who permit right thinking and right living to prevail, do not need to be reminded that heaven is here, because they are already experiencing it. "Now is the accepted time; behold, now is the day of salvation," and mental possessions are the only actual possessions.

Christ Jesus' parable of the sower contains many helpful lessons for those who would protect and maintain their true heritage. The precious gift of sonship is sometimes grasped by one in whom evil desires seem rampant, and like the fowls that devoured the seed sown by the wayside, they snatch away the true sense of God-given heritage. Christian Science helps one to drive off evil thoughts, so that the spiritual consciousness of a priceless inheritance is untouched, and one is set free to enter into full possession of man's divine rights. Again, this patrimony sometimes falls upon what seems shallow earth, and "when tribulation or persecution ariseth," this recipient of spiritual blessings becomes discouraged, and is sometimes tempted to sell his birthright for the proverbial "mess of pottage." Instead of this it devolves upon each one who knows the truth to defend his heritage at every point, so that no foes, either within or without, shall rob him of any part of it. Paul undoubtedly had this in mind when he wrote to Timothy: "Hold fast the form of sound words, which thou hast heard of me, in faith and love which is in Christ Jesus. That good thing which was committed unto thee keep by the Holy Ghost which dwelleth in us."

Here too the instructions contained in Science and Health help one to deepen and enrich the soil, until in place of the shallow, barren earth of mortal opinions, there is the deep, fertile loam of spiritual understanding. Then tribulations and persecutions come in vain, for the roots of true manhood sink so deep into the soil of truth that they firmly sustain and strengthen. At times the good seed seems to be sown among thorns, and "the cares of this world, and the deceitfulness of riches," strive to hinder one from realizing his birthright. But the followers of divine Science are able to uproot the thorns, to overcome the "cares" and "deceitfulness," and so find freedom from the weight of worldly burdens. Thus the revelation of Truth brought to the present age by our revered Leader, will in time make each student like unto him who "heareth the word, and understandeth it; which also beareth fruit, and bringeth forth, some an hundredfold, some sixty, some thirty."

Even in the best of earthly governments it is expected that its citizens themselves will not permit robbery, nor submit to the unjust deprivation of their rights. So in the spiritual kingdom it is demanded that each one shall hold firmly to his God-given rights. He is to know, individually, that he cannot be deprived of that heaven-bestowed heritage which forever abides. He is bidden to retain and maintain every rightful possession, every inherent privilege that is his as

God's spiritual child. Thus will he learn at all times to bear in mind our Leader's counsel (Science and Health, p. 421): "Insist vehemently on the great fact which covers the whole ground, that God, Spirit, is all, and that there is none beside Him."

Love's Thorough Work

AMY C. FARISS

In pointing to the necessity of persistently and thoroughly combating the evil tendencies of mortal mind, Mrs. Eddy makes the statement (Science and Health, p. 407): "Man's enslavement to the most relentless masters—passion, selfishness, envy, hatred, and revenge—is conquered only by a mighty struggle. Every hour of delay makes the struggle more severe. If man is not victorious over the passions, they crush out happiness, health, and manhood."

The importance of dealing unsparingly with the false views which lie at the root of every belief of material existence, the necessity of searching deep into our heart for hidden and subtle error and continuing the quest patiently and untiringly, the imperative demand for bringing to the surface every life-sapping belief in evil and of then making a noble struggle to annihilate it utterly, was symbolized accurately by a circumstance which came under the writer's recent observation. While visiting, she was much surprised to find her friend in the garden with her hands filled with bunches of violets apparently torn from the soil, root and all. Knowing the tender love of the friend for her flowers and her care of every least plant in the garden, something bordering upon amazement was experienced as, glancing along the path, the entire bed of violets was discovered lying uprooted, faces downward, a sorry and bedraggled sight.

Within the ample garden the bright spring sunlight rested on all with joy and warmth. Fountains of the purest water gave freely to each thirsty plant, rich soil abounded, and the violets on a former visit to their bed had appeared thrifty enough. "Then why," the writer asked herself, "why this rude and sweeping disturbance?" Had the gardener's love grown cold? Were the pretty violets no longer worthy of the charming spot they occupied? Was some more majestic plant to be given their snug bed?

Glancing at the face of the gardener for some explanation, the tenderest imaginable eyes were met as an uprooted plant was held in gentle hands. Then, as the gardener resumed her work, the cause of the trouble was seen. Clinging to each tiny root, sapping its life and vigor, were one or more ugly insects. As carefully as possible, the gardener plucked off the pests one by one, tearing the vine here, injuring a stem there. More and more the protecting soil fell away, cruelly exposing the tender roots, but not once did the kind eyes above show anything except love and gentleness, though at times what seemed ruthless work was forced upon the resolute worker. Minutes went by, and hours came and passed, but no rest was given to the foe. Down to the farthest root, up into the very heart of the plant, the determined hand pursued, plucking, striking, scraping, annihilating.

A sorry appearing array of flowers they were when at length they again found themselves back in their bed, but the joy of the gardener was complete,—the foe had been vanquished! In that garden of surpassing richness, with sun and warmth and moisture, the violets would survive their severe treatment. Of this the gardener felt assured, and so it proved. Within a few days a healthier growth began to be manifested; a week, and new life sprang forth in radiant beauty; a month, and the violet bed was the pride of the whole garden.

Only too often is the experience of our little violet sisters necessitated in our lives. Mrs. Eddy tells us that "Science must go over the whole ground" (Science and Health, p. 79), and continually do we find that it is a most conscientious gardener. No stunted growth is countenanced by the divine ideal, no rest given while enemies are in possession of the field. The more fully Truth and Love are given charge of the premises, the deeper goes the uprooting, the less merciful the pursuit of the foe. No outward glow of surrounding will help us in our struggle to free ourselves from the enslavement of mortal tendencies. The violets were not benefited by the sunshine or the fountain, neither were they progressing in the rich soil where their roots found setting. These externals were a blessing only when the hidden foe was brought to light and exterminated,—when each and every destroyer was cast out, driven from the field.

Like the violets, we may well-nigh sink beneath the rigid quest, but our gardener knows wherein we are planted. Divine Love is our tender caretaker, and the sunshine of Truth will heal the deepest wound. After the battle, with the enemy vanquished, our rejoicing at our improved radiance and efficiency will exceed the joy of the violets over their newfound beauty. And like them we may prove to all who come within the radius of our lives, the wisdom and love of divine Truth,—the beauty which belongs to a life freed from impurities and blossoming alone for God.

"Tear or triumph"

MARY I. MESECHRE

In one of Mrs. Eddy's best-loved hymns (Hymnal, p. 238) occur the following lines:—

> So, when day grows dark and cold,
> Tear or triumph harms,
> Lead Thy lambkins to the fold,
> Take them in Thine arms.

To every heart there come dark and cold days, with the temptation to seek relief in some human way from the burdens of the hour. How easy it sometimes seems to drift with the current of feeling that assails our senses, to relieve our overcharged emotions by futile lamentations and idle tears over the vanished past, and to indulge in dire forebodings concerning the uncertain future! Just a little silent dreaming surely could not matter greatly to any one!

On the other hand, how inspiring it would seem to brighten this gloomy outlook by recalling all the past victories we have gained, and by mapping out a telling future campaign against our unwary foes! What a help it would be to plan our attacks, to count our resources, to arrange everything in perfect readiness, that we may be prepared to repel all invaders, and perhaps crown ourselves with glory by a brilliantly executed dash against the enemy! But just here we are reminded that both tear and triumph may harm. Why? First, because neither tears over failures of the past, nor personal exultation over the triumphs, avails anything in the present, and the present alone is ours. "Now is the accepted time; behold, now is the day of salvation." The tears cause us to turn mournfully to the past or doubtfully toward the future, but they blind us to the present, when our great need is to be alert and clear of vision. The exultation over past victories causes us to leave present outposts unguarded, and our dreamy planning for future campaigns may be the occasion of a sleeping sentinel and a midnight assault by an unsuspected enemy in the very heart of our camp.

Another argument against indulgence in "tear or triumph" is, that recourse to either of these means in connection with our problems only serves to make a reality of evil conquered

Digitized by Google

or to be overcome. Our tears denote timidity and fear of failure, not courageous reliance on God; our exultation is likely to beget self-exaltation, not humility and gratitude to God for His omnipotent aid, for His salvation shown to us this day. The apostle Paul declared that he took "pleasure in infirmities, in reproaches, in necessities, in persecutions, in distresses for Christ's sake," and on page 201 of "Miscellaneous Writings" Mrs. Eddy explains how far removed was this pleasure from the self-congratulating spirit against which her hymn warns us. It was Paul's understanding of the nothingness of evil and of "the great somethingness of the good we possess," which enabled him thus to take pleasure as he saw all untoward circumstances set aside by the salvation of God constantly manifest, and this understanding is available to us here and now.

How then shall we deport ourselves when trials come to us, since we must neither lament over our own defeats nor exult over those of our foes? Let the hymn reply:—

I will listen for Thy voice,
Lest my footsteps stray;
I will follow and rejoice
All the rugged way.

So listening, our fears grow still and our tears are wiped away; and so following and rejoicing, we shall rise above every difficulty, solve every problem, and find indeed that all is well.

Christian Science is teaching us to "listen" and "follow and rejoice." It is enabling us to live without lamenting over earthly losses and without exulting over earthly gains, since it shows clearly that such ill-directed activities but serve to emphasize the transitory nature of both. It is proving to our awakening consciousness that we have no time to spend in either "tear or triumph," but that we have all time and all eternity for gratitude and thanksgiving unto God, "which giveth us the victory through our Lord Jesus Christ."

Language

LEWIS R. WORKS

THE spoken and the written word, imparted to us by means of the so-called physical senses, furnishes but a material means of communication, despite the purity of diction in which it may be clothed. In Science and Health (p. 123) we read that divine Science "resolves *things* into *thoughts*." To make a special application of the beautiful words of Paul,—human language is temporal, and forever exhibits the imperfections of the temporal; but right thought behind language is eternal. Considering speech negatively, we remember the saying of Talleyrand, that "speech was given to man to disguise his thoughts," or, in other words, to conceal truth; while, looking at it from the positive standpoint, we have Mrs. Eddy's well-known declaration as to the inadequacy of language as a vehicle for the conveyance of truth: "The chief difficulty in conveying the teachings of divine Science accurately to human thought lies in this, that like all other languages, English is inadequate to the expression of spiritual conceptions and propositions, because one is obliged to use material terms in dealing with spiritual ideas" (Science and Health, p. 349).

As language is practically the sole means of communication between men, in our present state of consciousness its facility for the conveyance of harmful beliefs and of evil suggestion can hardly be overstated. Truly, mortals are slaves to language. The book, the chapter, even the sentence, is not necessary to urge thought into action. The ideas of ages are behind single words and surge forward at their utterance. What opposite but compelling trains of thought are moved forward by the sight or hearing of the word good or of the word bad! The same may be said of hard or soft, of wet or dry, of go or come, or of hundreds of other pairs of opposites; or of many words which travel through the realm of language unattended by opposites. Some of these induce thoughts of the most harmful and damaging character. Every word in language, then, stands for and calls up a throng of thoughts, many of which are evil. These latter should be, and they will be, banished from language as well as from consciousness, when the truth of being is better understood.

Laying aside the idea of positive evil or good, as ordinarily understood, we may take two well-known words, direct opposites, as further example in illustration of our present thought. The word material, standing alone upon the printed page, is far less inspiring and ennobling, far less health-giving, than the word spiritual. Paul says, "To be carnally minded is death; but to be spiritually minded is life and peace;" and the written or spoken word may indicate the state of the mind or may induce its activity.

The meaning and use of words change with the ages, even with the decades, and no such change is wrought but through change of thought. The Christian Science movement has breathed new life into many old words. The word demonstrate, in all its forms, is a striking instance. The change in its meaning is the result of a spiritualization of thought and of a consequent devotion to Truth. The word is gradually taking on a sense which is narrower than its ordinary signification, from the material standpoint, but which renders it broader and grander, more glorious and inspiring, from the standpoint of real advancement. The definition of demonstrate, as given in the dictionaries, is "to point out; to show; to exhibit; to make evident." Mrs. Eddy says, "Christianity is again demonstrating the Life that is Truth, and the Truth that is Life" (Science and Health, p. 97), and it is in the light of this declaration that the words demonstrate and demonstration are taking on an increasing spiritual sense day by day as the cause of Christian Science progresses. It is beautiful to note how frequently these words are used in this new and higher sense, even by those who are not Christian Scientists, but who have come near enough to its borders to appreciate in some degree the benefits to be derived from the practice of its precepts.

When crime, woe, misery, sickness, and death become unknown, when evil itself shall disappear through the demonstration of the truth, the use of the words crime, woe, misery, sickness, death, and evil will cease, and they will fall away from language, vanishing into the nothingness from which they came. All this signifies that language itself must be healed and purified, must be brought to the highest state of which it is susceptible, before the time cometh "when this corruptible shall have put on incorruption, and this mortal shall have put on immortality," and when "shall be brought to pass the saying that is written, Death is swallowed up in victory."

The work of healing and purifying language should not be done alone by demonstrating the nothingness of things or qualities to which given words relate, thus making such words useless and inducing their indirect extinction. Language can be perfected directly by more and more sparingly making use of words, phrases, and sentences which stand for evil things or qualities, thus aiding, at the same time, in the expulsion from consciousness of all thought concerning such things or qualities. To refrain from talking about thieves and murderers, to cease reading about them in the glaring head-lines and vivid text of the daily press, is to aid in the doing away with robbery and murder. To refrain from talking evil, as

Digitized by Google

well as to refrain from thinking evil, is to aid in the destruction of evil. It is not idly that the psalmist saith, "Keep thy tongue from evil, and thy lips from speaking guile;" and again, "I will take heed to my ways, that I sin not with my tongue: I will keep my mouth with a bridle, while the wicked is before me."

What better precept can there be as to the use of language than is found in Proverbs, where occurs the pregnant and beautiful sentence, "A wholesome tongue is a tree of life"?

Strength and Humility

LEWIS HENRY BEESLEY

BEFORE the teachings of Christian Science came to leaven the thought of the world, a man's sense of goodness was often measured by the amount of suffering he endured, and also by the degree to which he could efface himself, in other words, keep himself in the background. It was considered to be a deep state of humility if one kept one's self in a corner without any degree of assertion, and the more one was willing to put up with misery, sickness, and wretchedness, the more manifest his demonstration of humility was considered. The one who mistook the intent of "Thy will be done," attributed all the difficulties of the ages to God, and a willingness to resign one's self brought imaginary views of heaven nearer.

Without implying that the Christian Science understanding of humility is anything but humble and meek, it is to be said that there is in its teachings no sense of accepted weakness, or resignation to the inharmonious conditions which have characterized the attitude of spiritually aspiring Christian believers in the past. A true sense of humility certainly eliminates this mortal self; it puts aside at every turn all its temptations, jealousies, envyings, sickness, etc., the whole Pandora-box of evils, but this only gives place to a noble and inspiring concept of selfhood in the image and likeness of God. As the Christian Scientist learns something of man's God-given nature and capacity, he acquires a sense of freedom from fear; he becomes more alert, courageous, and righteously self-assertive. Relying more and more upon God as his guiding Principle, he puts off the mortal self with its weakness, and puts on that sense of humility which dares to do in Christ's name. This new understanding of humility is strong and vigorous in times of need; it is not lacking or in the background when occasion arises. Jesus expressed a greater sense of humility than has any other man, and yet everything he taught and practised carried weight and effected results, because he always knew that it was God who was at the back of all he did.

In explaining the Christian Science attitude toward prayer, Mrs. Eddy says that Jesus' "humble prayers were deep and conscientious protests of Truth" (Science and Health, p. 12). Jesus did not beseech an unwilling Father to change His plans for His children, but he insisted that man in his relation to God was perfectly and wholly expressed now. He protested humbly that sickness and disease were no part of God's government, and it was his clear, courageous, and persistent perception of this fact that healed the sick. His teachings were fraught with enlightenment and foresight, and many times one word of truth from his lips healed a hitherto incurable disease. We find, however, that even one so humble as was the Nazarene rebuked severely those who sought to materialize religion, so that his humility was able to make error feel the power of Truth to destroy falsity.

In Jesus' wonderful Sermon on the Mount he said of the meek that they should inherit the earth; that is, in proportion to man's understanding of God, he is to gain dominion over all mortal circumstances and conditions, so that the earth will indeed be governed by those who have learned the strength and power of true humility. In "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy says, "More than regal is the majesty of the meekness of the Christ-principle" (p. 149). Surely strength and humility have never been more clearly expressed together than in the coming of the Saviour. He came in the quietness of a manger, in one of the least towns of Judæa, and yet his coming dated the Christian era, the most significant period of the world's history; a period which has chronicled more progress, enlightenment, and spiritual living than all the preceding centuries, and which will eventually bring in the millennium, that state of consciousness where all tears will be wiped away and there will be no more pain, when the man created by God is understood.

Christian Scientists are recognizing now that they need no longer meekly submit to the tortures of sickness, sin, and disease. They are learning that it is just as wrong to be accused of sickness as of sin. They perceive that if the same mental protest is recorded against sickness and disease as that against a wrongful accusation of sin, it need not be part of their experience, since one is no more true than the other. If we enter our protest for our rightful heritage as the sons and daughters of God when inharmony seems to assail us, we are in humility demonstrating that we understand something of God's promise to us. The writer remembers very gratefully that in the course of conversation with an old and experienced Christian Science worker, he made a remark concerning a religious question which was under discussion. The older Scientist immediately replied that it was a good point and that he had not seen it in that way before. Here was a man with years of experience, who was traveling all over the world to convey to others the healing message of Truth, and yet he was willing to learn! The amazement of the writer at the time has since given place to a realization that our strength and efficiency inhere in our willingness to receive the truth "as a little child," even as the Master said.

In a paragraph which to the writer's sense contains one of the most beautiful passages in the English language, Mrs. Eddy says, "The grass beneath our feet silently exclaims, 'The meek shall inherit the earth'" (Science and Health, p. 516). Isaiah also seems to have had the same sense of the healing power of humility, for he says, "In quietness and in confidence shall be your strength."

❖ ❖ ❖

A million torches, lighted by Thy hand,
Wander unwearied through the blue abyss;
They own Thy power, accomplish Thy command—
All gay with life, all eloquent with bliss.
What shall we call them? Piles of crystal light—
A glorious company of golden streams—
Lamps of celestial ether, burning bright—
Sun-lighting systems, with their joyous beams;
But Thou to these art as the moon to night.

Yes! as a drop of water in the sea,
All this magnificence in Thee is lost.
What are ten thousand worlds compared to Thee?
And what am I, then? Heaven's unnumbered host,
Though multiplied by myriads, and arrayed
In all the glory of sublimest thought,
Is but an atom in the balance weighed
Against Thy greatness. Is a cipher brought
Against infinity. What am I, then? Thine.

DERZHAVIN, a Russian poet.

Selected Articles

[Judge Clifford P. Smith in *Omaha* (Neb.) *World-Herald*]

My comment has been requested on a letter from a Lutheran minister which you recently published, in which he announced his discovery that Christian Science denies the deity of Jesus. This discovery could have been made at any time since 1875, when the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was first published. There is no reason why your correspondent should get excited about it now; neither is there any reason why he should quote mere allusions to this point, as though it were obscure or hidden in the Christian Science text-book. It is not. The fact that God is greater than Jesus is distinctly and repeatedly stated throughout the authorized literature of Christian Science.

Whether the position thus taken by Christian Science can be reconciled with the Lutheran creed, or any creed, is another question; and if Christian Science contradicts a creed, or all of the creeds, that fact, if such it be, would not disprove the truth of Christian Science; it should invite thoughtful men to compare Christian Science and the creeds with the Bible. Opposition to Christian Science would quickly diminish and disappear if earnest truth-seekers, instead of taking medieval theology as a criterion, would simply read the New Testament in an original manner in the light thrown upon it by Christian Science.

For Christians, at least, the question whether Jesus is God ought to be settled by what he said. He must have known whether he was man or God, and this point is within the scope of the subjects on which he spoke. If he were Deity, he would have said so plainly and often. The readers of the *World-Herald* are therefore invited to consider the following facts: first, Jesus never said he was God; second, he spoke of himself as a man; third, twice he virtually denied that he was God; fourth, several of his sayings are flatly inconsistent with the theory that he is God. The following citations may be consulted: John viii. 40; Luke xviii. 19; John iv. 19-26, especially verses 22 and 24; John x. 22-39, especially verses 33 and 36; John xiv. 28; John xvii. 16, 22; Mark xii. 28-34, especially verses 32 and 34. Many other citations could be given, but these seven will at least furnish good food for thought.

How, then, did the belief that Jesus is God originate? This question is not answered in the Bible, but the answer is compassed by the force of indubitable facts. Jesus neither taught that he was God nor authorized that belief. It is not affirmed by the authors of the gospels. Although they did not always confine themselves to history, but sometimes expressed their own views, they have nowhere said that Jesus is the Deity. Even the New Testament writers who are commonly quoted as supporting the doctrine in question, wrote just as explicitly, or more explicitly, to the contrary. Take, for example, the epistle to the Hebrews; it contains the statement that Jesus and other men are "sons," "brethren," and "all of one."

How Jesus was generally regarded by the Christians of his day can be inferred from an incident related in the book of Acts. After he had passed beyond the range of human sight and a successor to his betrayer had been chosen, Peter, "standing up with the eleven," and addressing the whole company of believers at Jerusalem, spoke to them of "Jesus of Nazareth, a man approved of God," and throughout the address Jesus is referred to as distinct from God. When all of these facts are fairly considered, but little is left as a basis for the theory in question besides the human tendency to limit man by materialistic beliefs, and the primitive habit of attributing to extraordinary facts a supernatural character.

It should be observed, however, that Christian Science neither deifies Jesus nor reduces him to the general level of humanity. It accepts the Scriptural account of his origin, and attaches much importance to that fact and to his knowledge of his origin. Explicit references to this subject also will be found in Mrs. Eddy's writings; for example, on pages 315, 332, and 539 of Science and Health. The following excerpt is from the page last mentioned: "The divine origin of Jesus gave him more than human power to expound the facts of creation, and demonstrate the one Mind which makes and governs man and the universe." Without the extraordinary proof which he had of God's fatherhood, Jesus might not have been able to say in his youth, "Wist ye not that I must be about my Father's business?" nor able in his later years to perceive and teach the further fact of spiritual being. "Call no man your father upon the earth: for one is your Father, which is in heaven."

Christian Science, in method and in purpose, is essentially constructive. It tears down only to build anew. It challenges a man's belief only that it may offer him a better understanding. The aim of its denials is to make clear its affirmations. Thus it denies that Jesus is the Deity, and it distinguishes between Jesus and his Messianic title and office in order to illuminate the way which he opened for us. We need to know what he was, and to know that his work was spiritually natural, in order to perceive the way of salvation which he showed—that way which was referred to by two of the New Testament writers as the "new and living way," "the way of truth."

❖

[Frank C. Barrett in *Lewiston* (Maine) *Journal*]

A recent issue contains a statement to the effect that Christian Scientists deny the existence of pain and that suffering has a beneficent purpose. Also, the author of said statement implies the futility of treating pain and suffering by the Christian Science method.

Like some others, this gentleman has apparently given Christian Science very little thought, and has never studied it sufficiently to know what its teachings are, although he has not hesitated to publish his misconceptions of it, probably with the best intentions in the world. Therefore it will no doubt surprise our critic, and perhaps also some of his hearers and the readers of your esteemed paper, to know that Christian Science does not teach that mortals do not experience pain, are not sick, sinning, and dying; or that suffering has no beneficent effect.

The following passages from "Science and Health with Key to the Scriptures" by Mrs. Eddy prove what I say: "Sinners flourish 'like a green bay tree;' but, looking farther, the Psalmist could see their end,—the destruction of sin through suffering" (p. 5). "To cause suffering as the result of sin, is the means of destroying sin" (p. 6). "Jesus suffered for our sins, not to annul . . . an individual's sin, but because sin brings inevitable suffering" (p. 11). "Waking to Christ's demand, mortals experience suffering" (p. 22). "The pains of sense are salutary, if they wrench away false pleasurable beliefs and transplant the affections from sense to Soul, where the creations of God are good, 'rejoicing the heart'" (p. 265). "The very circumstance, which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares" (p. 574). Thus it is apparent that we agree with this critic as to the possible good effects of suffering.

It is, however, a very superficial view of the truth of crea-

Digitized by Google

tion which shows God to be perfect and at the same time the creator of imperfection—as though God's immortal, spiritual creation, including man made in His image and likeness, could possibly be subject to imperfection and punishment. But in Christian Science it is not maintained that mortals are perfect, or that they can be. We know, though, that the false appearance will disappear when we "put off the old man with his deeds; and have put on the new man, which is renewed in knowledge after the image of him that created him."

It is true that through suffering and pain mortals are often forced to forsake their errors and seek and find a better way; but that does not prove that God is the author of our ignorance and mistakes, or the consequences thereof. Jesus taught and demonstrated the true way to escape from every form of evil, pain and sickness included; but he could not have overcome or destroyed God's immutable laws or realities. He said he came not "to destroy the law, or the prophets: . . . but to fulfil." He also said, "Ye shall know the truth, and the truth shall make you free." Does truth free from the real and true, or from the unreal and untrue? Nowhere in the Scriptures does Jesus say that suffering and pain are realities sent by God. On the contrary, he spoke of the woman "whom Satan hath bound, lo, these eighteen years." Satan, not God, bound the woman. If Satan was a liar, as Jesus said he was, I respectfully ask if the bond of a liar is true or false? Evidently it was false, because the woman was healed. If her condition had been one of truth and reality, there is nothing which could have prevailed against it.

This is only one instance which proves that when the "syllogism" is rightly stated and carried out to its logical conclusion, the results "of this method of banishing pain," etc., are not so "futile" as this critic would have us believe. When we attempt and succeed by this method taught by Jesus, often after every other means has been found "futile," will our critic then cast the first stone? Only recently a senator presented in the United States Senate, testimonies of some of his personal friends and others who had been healed through Christian Science. Among the diseases healed were mentioned thirty-six varieties of so-called incurables. Before such irrefutable evidence of restored health, manhood, happiness, and homes, critics must find it rather difficult to contend.

Almost every situation has its compensations, and even humorous aspects. This critic says that the mission of pain is to warn us to take care. But he does not tell us how to take care of ourselves when the warning is given, nor does he explain why there is such a terrific warning in the case of a toothache, while some of the most fatal maladies give no such warning. "Consistency, thou art a jewel."

After all, what the people need is something that will make them happy, good, and well. I know of nothing that can fulfil these requirements so well as the teachings of Jesus as practised and exemplified in Christian Science.

✧

[Editorial in *New York* (N. Y.) *American*]

The Thorn bill, legitimatizing the practice of Christian Science healing in New York state, now before the judiciary committee of the Assembly, should be reported by that committee and passed. Twenty-five states of the Union now recognize Christian Science, either by name or implication, as a legitimate method of combating illness. New York stands almost alone in subjecting its practitioners to the persecutions of medical societies taking advantage of a badly worded statute.

The United States government, in executive orders affecting the territories, especially recognizes the right of people to seek and practitioners to offer aid for physical ills by other than material means. The Canal Zone, which we offer to the world as the most perfect example of sanitation ever produced, is governed by a sanitary code from which this is an extract:—

"Provided, That nothing in this order shall be construed to prohibit the practice of the religious tenets of any church in the ministration of the sick and suffering by mental or spiritual means without the use of any drug or material remedy, whether gratuitously or for compensation, provided that such sanitary laws, orders, rules, and regulations as are, or hereafter may be, in force in said Canal Zone are complied with."

Just how many Christian Scientists there may be in New York is not definitely known, but their numbers probably approach one hundred thousand. Their churches, their publications, and their congregations bear striking evidence of their high character. A cardinal precept of their creed is the practice of Christ's injunction, "Heal the sick." To deny them the right to practise this, is to interfere with the religious liberty in which they are protected by the constitutions of state and nation alike. The Christian Scientists have always been ready to obey such sanitary regulations as are prescribed by the state to prevent the spread of disease. In view of this fact, the determined effort to deny them in New York the liberty granted them in most of our states and all of our territories, savors of persecution.

✧

[Robert S. Ross in *New York* (N. Y.) *Tribune*]

In reply to an article entitled "Healing with No License," in a recent issue, permit me to assure you and your readers that Christian Scientists have no desire to amend the medical practice act in so far as that act applies to the practice of medicine, but they certainly have a desire to amend it in so far as it goes outside its domain to place spiritual communion with the Almighty in the same category with drugs and surgery and to drag the law of God down to the level of human codes. God, not man, spiritual understanding, not human knowledge, is the healer in Christian Science.

The attitude of the medical profession toward Christian Science is not unlike that of the Ephesians, when the silversmiths cried for the blood of Paul because his preaching was interfering with their trade of making shrines for the worship of Diana. "Ye know," said Demetrius to his fellow craftsmen, "that by this craft we have our wealth," but "this Paul hath persuaded and turned away much people, saying that they be no gods, which are made with hands."

Your readers will doubtless readily admit that it would be most unjust to require a member of one religious belief to subscribe to the doctrines of another before he would be permitted to worship in his own way, and I assume they will as readily admit that it would be equally unjust to require the Christian Scientist, who of course does not employ medicine, to take an examination in *materia medica* before he would be permitted to practise Christian Science. The Declaration of Independence of the United States affirms that all men are born with certain "unalienable rights," among which are "life, liberty, and the pursuit of happiness." This sacred privilege is as priceless to the Christian Scientist as it is to other liberty loving Americans, and because of this the Christian Scientist has dedicated himself to defend it against every foe.

✧

[Avery Coonley in *Alton* (Ill.) *Times*]

My attention has been called to the *Times* of recent date, in which an evangelist is reported as having ridiculed the contention of Christian Scientists that material things are unreal. In doing this our critic should be aware that he is

Digitized by Google

ridiculing not only Christian Scientists, but also some of the most advanced physical scientists, whose recent conclusions reduce the material atom to "centers of force." Since force is not matter, they have explained matter by explaining it away. With physicists as well as Christian Scientists against him, he is on too uncertain ground to warrant ridicule. He also undertakes to ridicule the payment of "real dollars" for cures involving the unreality of matter. He is apparently more concerned about the dollars than either the practitioners or the patients. If a real cure of serious disease can be paid for in dollars at all, there is but one kind of dollars that would be adequate.

Christian Scientists can extend to the evangelist no better wish than that the beneficiaries of his efforts to do good in the world may have cause for as sincere gratitude as those who in the last two score or more years have turned to Christian Science for the healing of sin, sorrow, or disease.

❖

[Ezra W. Palmer in *Norwood* (Col.) *Post*]

In a sermon recently delivered in your city, the Rev. Mr. —— of Ridgway is reported as having declared that the Founder of Christian Science "would like to do away with the marriage tie," and he intimated that Christian Science sanctioned "free love." No teaching of Christian Science is more emphatic than respect for the marriage contract. Nowhere in her writings does Mrs. Eddy intimate that marriage should be abolished. On the contrary, she teaches clearly that its solemn obligations should be kept intact. "Matrimony should never be entered into without a full recognition of its enduring obligations on both sides. There should be the most tender solicitude for each other's happiness, and mutual attention and approbation should wait on all the years of married life" (Science and Health, p. 59).

The doctrine of "free love" is absolutely at variance with the teachings of Christian Science, and even a slight perusal of the chapter on Marriage in Science and Health, or the article entitled "Wedlock" in "Miscellaneous Writings" (p. 285), would disabuse the mind of any fair-minded person of this unjust accusation. Christian Science purifies the affections, and places marriage on an enduring and firm basis. Those who understand Christian Science, assert without exception that it uplifts thought, prevents separation and divorce, and makes the home happy and harmonious. No person can be a Christian Scientist and be indifferent to the marriage covenant or to the seventh commandment. "Infidelity to the marriage covenant is the social scourge of all races, 'the pestilence that walketh in darkness'" (Science and Health, p. 56). This scathing arraignment of "free love" and infidelity shows conclusively the falsity of the charges made by this reverend critic.

❖

[J. Elmo Robinson in *Klamath Falls* (Ore.) *Herald*]

In your kindly reference to Christian Science, you make the statement that "it is based largely upon the belief that many of the ills the flesh is supposed to be heir to are but vagaries of the mind; that the cultivation of will-power and the creation of beautiful thoughts will tend to alleviate the greater portion of these."

Now this statement includes a very popular misconception of what Christian Science teaches. This religion is based upon the teaching that God is infinite, divine Mind. This Mind is expressed in a spiritual and perfect creation, including man in God's image and likeness, sinless and eternal. The suppositional opposite—for in reality infinite Mind can have no opposite—has been termed by Mrs. Eddy, mortal mind. This so-called carnal, or mortal, mind is made up of beliefs in materiality,—sin, sickness, and death. Christian Science teaches that all manifestations of evil are error, even as in mathematics the belief that two and two make five is an error, a mistake, a supposition that there is a time and place where two and two do not make four.

A mathematician does not employ will-power to overcome a mistake in mathematics. He well knows that the only way in which he can correct a mistake in numbers is by acquainting himself with the truth. Likewise, Christian Science teaches its students that evil, sin, and the ills of the flesh cannot be overcome by the use of the human will. Only through the understanding of God, and man as His image and likeness, can error be destroyed. Jesus said, "Ye shall know the truth, and the truth shall make you free." The practice of Christian Science is, therefore, the practice of scientific right thinking.

Christian Science does not teach one how to bring things to pass, does not teach the "creation of beautiful thoughts," but rather unfolds to human consciousness the beauties of God's spiritual, perfect, and eternal creation. In Science and Health (p. 476) Mrs. Eddy says: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

❖

[Charles W. J. Tennant in *Isle of Man Times*, Douglas, England]

In a recent issue there appears an article on spiritual healing, by Dr. ——, in which he makes a statement with regard to Christian Science which might be misleading to the beginner. He says that the central idea of Christian Science is the complete denial of the actuality of both matter and disease. Now it is quite clear to any thinker that no system can have for its central idea a negative statement or a denial of something. On page 203 of "Science and Health with Key to the Scriptures," Mrs. Eddy writes, "God is at once the center and circumference of being." This is the fundamental basis of Christian Science. Since God is infinite Spirit, the corollary necessarily follows that matter and disease do not exist in the reality of being. Mrs. Eddy again writes (p. 335), "Reality is spiritual, harmonious, immutable, immortal, divine, eternal."

❖

[C. L. Ramsay in *The Scotsman*, Edinburgh, Scotland]

There appeared in *The Scotsman* recently the report of a lecture given by Mr. —— on the occasion of the opening of a New Thought convention in Edinburgh. The gentleman's explanations of New Thought call for no comment from me; but, as reported in your columns, he made a statement relative to Christian Science which evidences such a serious misapprehension of the subject that I cannot let it pass uncorrected.

No Christian Scientist, let me say, regards Mrs. Eddy as his healer, now that she has passed from our sight, any more than he so regarded her when she was with us in the flesh. The Christian Scientist understands God, Spirit, divine Mind, to be the only healer and savior of man, acting through an ever operative divine law, the law which St. Paul describes as "the law of the Spirit of life in Christ Jesus," which, he asserts, has freed him "from the law of sin and death." When apparently on the brink of death, Mrs. Eddy was herself healed by a spontaneous recognition of this divine law, and thereafter it became her life-work to show others how to gain the same understanding of this spiritual power, that they might come under its beneficent operation as she had done. It is for this that Christian Scientists all over the world are grateful to her.

Editorial

"Confirming the word"

NOTWITHSTANDING the general and rapid growth of Christian Science throughout the world, attention is occasionally called to some city or town wherein there has seemingly been little or no progress made in the years in which this religion has been making great strides in near-by places. Such a condition as this has usually caused those primarily interested, to question themselves and others as to the probable reason of this lack of success. Just what has hindered progress in any particular instance is something which might be difficult to determine, but there are some general phases of belief which may well be taken into account by Christian Scientists who are seeking the reason for the stagnation which they see and feel in their own community.

Usually the first among these phases is the belief that there is no "practitioner" of Christian Science in their field, and that no one has the ability or right to do healing work unless he is so labeled. The consequence is that instead of wrong conditions being promptly and effectually met, as they might and should be, little or no healing is done, and the failure on the part of those who are known to their neighbors as Christian Scientists to give signs that their religion is of practical value in surmounting the difficulties of modern existence, is naturally a hindrance to the growth of Christian Science. This seeming inability to practise what is preached, —to bear witness to the sincerity of one's profession,—is a serious matter, and one to which every Christian Scientist should not fail to give earnest consideration. If there are no "signs following" the preaching of this religion, it is at least inferential evidence to the onlooker that there is nothing present but the letter of its teaching.

Jesus said of his followers, "By their fruits ye shall know them," and it is especially incumbent upon Christian Scientists that they show forth signs of the "unlabored motion of the divine energy in healing the sick" (Science and Health, p. 445) which was so distinctly a part of our Master's ministry. Ability to do this is not confined to any one person in any community, since it is certain to follow an understanding of the great truth of being upon which Mrs. Eddy has founded Christian Science. Prophets and apostles alike learned the lesson that "there is no respect of persons with God," and there is no reason why any one today should believe that he may not through faithful study and practice of this Science become a healer of the sick. Our Master's teaching in practical operation, as taught in Christian Science, will inevitably result in the healing of the sick; and it is only through demonstration of the redemptive power of the gospel of Christ Jesus, that the world will learn that this gospel is as available today to meet human needs as it was at the beginning of the Christian era.

Mrs. Eddy writes on page 450 of Science and Health, "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good." It is upon this basis of demonstration, of works as well as words, that every Christian Science church must be established, and it is only through a continuance of demonstration that a fitting superstructure can be reared. The great Teacher counseled, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." It is because of its practical demonstration of "good works" that Christian Science has gained ground so rapidly, for sin-sick, suffering humanity everywhere is ever seeking a helping hand to ease its burden of misery and woe, and it will inevitably turn to that which offers the surest promise of relief.

There is yet need for every Christian Scientist, if he would help to spread the "good tidings" of the coming of him who through the power of Truth healed the sick even as he said "Thy sins be forgiven thee," to follow the directions given by Mrs. Eddy on page 495 of Science and Health, in her answer to the question "How can I progress most rapidly in the understanding of Christian Science?" If he does this, he will soon see the conditions of which he has complained give place to encouragement and success. There is no community where indifference and even hostility to the teaching of Christian Science cannot be overcome through the consistent living of its professed followers, especially those who give evidence of "the Lord working with them, and confirming the word with signs following."

ARCHIBALD MCLELLAN.

❖

Truth's Activity

APART from Christian Scientists there are few who would venture to make any definite statements as to the origin of energy. This does not mean that no opinions are advanced respecting the manifestations of energy as cognized by the physical senses; but as such observations are always limited to materiality, they are of little value to man as a being of infinite spiritual possibilities. The materialist might argue at this point that we are getting away from practical considerations, but the student of Christian Science could tell him that its teachings tend to make one intensely practical in all things, beginning with his religion, which in turn becomes the basis of all his thinking and doing.

Most people come to Christian Science because they need help and have failed to find it through material means or through their concepts of God, and it is safe to say that very few pursue their investigations unless they become convinced that what they need is really available in Christian Science; in other words, that this Science can bring them into close touch with the source of all true energy, namely, infinite Mind. Many sufferers might say as did those in Ezekiel's vision, "Our bones are dried, and our hope is lost," but the promise given them, "I will open your graves, . . . and shall put my spirit in you, and ye shall live," is proved as true today as when the prophet heard it.

Ezekiel's vision of a universal resurrection of humanity presents a wonderful picture of the mighty operation of Truth as realized in Christian Science. The prophet saw a valley filled with "dry bones," and he was asked if these bones could live. Here material sense was silent; its answer could only have been, No. But spiritual sense made its appeal to Spirit, God, and said, "O Lord God, thou knowest." This was the beginning of the healing, the resurrection, and then the prophet was told to declare what God knows, which is never less than life and its perfect manifestation. This may also be said to outline the work of the Christian Scientist. Here it is well to note that the prophet was bidden to declare the truth more than once, for the dead sleep of materialism holds mortals in its grasp until they become in some measure conscious of Truth's mighty activity, and Christ Jesus gives us no promise that anything less than the knowing of the truth shall make us free.

The awakening to life in Christian Science is a wonderful thing: old concepts of God and of ourselves pass away, until "all things are become new," until they are "alive from the dead." We cannot too often ponder that inspiring declaration of our Leader, "Eternal Truth is changing the universe"

Digitized by Google

(Science and Health, p. 255). This divine activity is of course eternal, but until spiritual awakening comes, mankind are unaware of the ceaseless operation of Truth and unblessed by it. They may even be submerged in the belief that divine law supports a destructive energy, expressed in disease and suffering, in storm and tempest and other discords. When God is truly known, all this is changed, and to the human sense the change is progressive; but life has really begun when one knows that God can and will lift him out of the depths and set him upon his feet.

The states and stages of human emancipation outlined in Ezekiel's vision may recall the counsel found on page 485 of our text-book: "Emerge gently from matter into Spirit." If, however, we are really emerging from the grave of material belief, we shall always be conscious of Truth's activity, of the divine energy, and do our part in expressing it in thought, word, and deed. What an inspiring promise is this: "O my people, I will . . . cause you to come up out of your graves." With this awakening to life comes healing, then a recognition of the great change which is going on everywhere through the life-giving energy of Truth. Today the earth may look sere and lifeless, but with tomorrow's rain and sunshine all is changed. At this we are glad, but the change which comes with Truth's springtime is far greater, and it knows no winter. The Master never promised aught less than eternal life, and it is assured to us as we become conscious of Truth's activity and gladly respond thereto.

ANNIE M. KNOTT.

Worship God

MEN have ever sought to propitiate or influence a power which they have not even tried to understand, but which they have greatly feared, and the result has been chronicled in the pitiful idolatries of the world, in the worship of might and money, and many other things. Among the Jews, as among most other nations, worship expressed itself largely in gifts, sacrifices to God; but Christ Jesus taught that the true worship calls not so much for giving as for giving up, the willingness to part with the untrue and unideal; that it is first of all and always an attitude of thought, a grateful reverence which springs from right apprehension and love. We worship God only when we understand Him, honor His nature, are gladly obedient to His law, and gratefully accept the largess of His love. Our concept of God, and the aspiration, the longing which it awakens,—these determine ever the fitness and acceptability of our devotion. There must be a perception of the divine adorableness before the heart can bring a worthy offering; and it is just here that Christian Science effects a great change, both in the way men think of and address God and in the significance of their worship to their own experience.

Defining the purpose of his coming, and of his appeal to his brethren, the Master said, "That they might know thee the only true God." He sought to illumine that he might establish; to purify and idealize the concept, that worshipful response might be spontaneous and wholly spiritual. So too in addressing a people who had erected unnumbered temples so vast and splendid that their ruins are still regarded among the wonders of the world, St. Paul said, "Whom . . . ye ignorantly worship, him declare I unto you." He too sought to initiate a genuine devotion by correcting the thought of Deity; and this is no less distinctively true of Christian Science, which is ever reiterating the counsel of Eliphaz, "Acquaint now thyself with him [God], and be at peace."

Understanding the divine nature and relation to life, true worship becomes instinctive, a constant delight. It is the heart's natural response to that which quickens and inspires it. Normal thought can but pay loving tribute to an all-wise, all-beneficent ideality, the infinite Father, and Christian Science brings the immaculate and immutable perfection of being again into vision. It purifies and enriches the thought of Deity, that men may indeed know Him, and find in the effulgence of divine light no darkness at all, in the allness of good no trace or tolerance of evil.

Moreover, in its recognition of the oneness of Principle and its idea, God and the spiritual universe, Christian Science begets a new, inspiring, and practically significant sense of the nature of true worship. While supreme authority and power, the omnipotence of Spirit, is ascribed to God alone, honor and reverence is due His every idea or appearing. Said the Master, "He that honoreth not the Son honoreth not the Father," and Mrs. Eddy repeats the thought when she says, "Mind . . . must be understood through the idea which expresses it" (Science and Health, p. 467). He who recognizes the divine manifestation in every demonstrable truth, in spiritual affection, goodness, and beauty, has gained a thought of God which brings him occasion for rejoicing and praise every hour of the day. His worship is no longer a matter of appointed times and places, of saints' days and Sabbath services; he has gained something of that right consciousness and that quickened affection toward God which constitutes the true church and the wholly acceptable worship. Loyalty to God now means loyalty to every perceived truth. Every manifestation of the divine wisdom, love, and beauty begets a spirit of reverence and of thanksgiving. Hitherto desert experiences now reveal the flaming bush, and the commonest life has become a court of "the house of the Lord." The stimulus of "stated calls to worship" has now given place to the impulse of that nobler sense of privilege which finds life's chiefest gain and sweetest pleasure in communing with omnipresent good.

JOHN B. WILLIS.

Among the Churches

Current Notes

SANTA CRUZ, CAL.—The distribution committee reports literature distributed during the year ending December, 1914, as follows: *Monitors*, 5,475; *Sentinels*, 1,291; *Journals*, 89; *Heralds*, 61; pamphlets, 20; reprints, 10; other magazines, papers, etc., recommended, 160; making a total of 7,106 pieces. Of these, twenty-two hundred copies of the *Monitor* were remailed locally as "marked copies." Three local illustrated articles were printed in the *Monitor*, and of these over one thousand marked copies were distributed; the rest are accounted for through distribution racks in public places, distribution at the lecture, to hotels, barber shops, etc. Seven annual gift subscriptions are provided by the Sunday school for various public and semipublic institutions and offices. The *Monitor* is on sale daily at a book and stationery store. The *Sentinel* is sent through the mail to individuals, largely.—*Distribution Committee.*

MIAMI, FLA.—The history of the Christian Science Society of Miami began in February, 1909, when a family who were Christian Scientists came here for the season. Missing their church services, they began to inquire if there were not some people interested in Christian Science, who would join them in holding a service at their home on Sunday mornings and Wednesday evenings. These meetings were so well attended that they were continued, and an organization was formed just three years ago.

Through the kindness and cooperation of the Christian Science Society of Cocoanut Grove, six miles south of Miami,

Digitized by Google

a lecture was given in Miami each of the two winters previous to this society's organization. At a cost of seven hundred dollars a free reading-room was opened last Thanksgiving day. The attendance at the services last year was so large as to compel the society to move from its pleasant location in the Woman's Club Building to the Auditorium, on Avenue C.—*Miami Metropolis.*

LEAVENWORTH, KAN.—Christian Science services at the federal prison were begun in March of 1914, and were held monthly until August, since which time they have been held weekly. At first the schoolroom was used, and services were held in the morning, but on account of the increased attendance it became necessary to use the auditorium, and consequently change the hour to half past two in the afternoon. These services are conducted under the auspices of First Church of Christ, Scientist, of Leavenworth, and the readers, the soloist, and the organist of the church act in the same capacity at the prison. During the last few months the attendance has been very large.

The outcome of these services has been an increased interest among the men to know more of the teachings of Christian Science, and accordingly a member of the board of lectureship—Virgil O. Strickler—was invited to lecture there. The lecture was given Jan. 27, 1915, immediately following the regular weekly entertainment, at which the entire population of the prison is assembled. When the announcement was made that only those who desired to hear the Christian Science lecture should remain, and those not desiring to hear it could retire, between five and six hundred men remained. They eagerly and attentively followed the clear, logical discourse, and the hearty applause at the close showed their appreciation.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Kingston, Ontario, Canada

W. R. Givens, editor of the *Kingston Daily Standard,* in introducing Virgil O. Strickler, who lectured on Christian Science, said in part:—

I myself am not a Christian Scientist, and I have no doubt that there are others in this audience who are not. But though this be, we all of us must recognize the wonderful growth of Christian Science and the equally wonderful work it has done and is doing. It has reached into all the world with its churches by the hundreds and its followers by the thousands upon thousands. When I was in Boston recently and attended a service there at The Mother Church, I was greatly impressed with the vast crowd who thronged that magnificent edifice. They were cultured, intelligent, refined, prosperous people, and seeing them, one could not but be impressed with the fact that they were no faddists or followers of a mere cult, but were people of position and standing, who not only had the courage of their convictions but were supremely happy in them.

The Christian Science growth is all the more remarkable when we recall that from many sources comes the complaint that the church generally is losing its influence and its hold upon the people. In the face of this admitted fact, this general decline, it is as amazing as it is significant that Christian Science is adding at an average one new church every three days of each week of the year, and is wielding a mighty influence for good in every part of the world. What the reason for this is I do not presume to say, but it will at least not be amiss to point out that one explanation may be that Christian Science has gone back to the fundamentals of Christianity, since it is following the command of Jesus to the disciples: "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick." In short, as I understand it, this is a practical Christianity, and it believes that Christ's command was no empty one, but was and is to be obeyed. And so we find Science and Science healing everywhere; and also that to its adherents, men and women alike, there come through their religion a peace of mind, a serenity of disposition, and a sweetness and light that are beautiful. That Christian Science has come to stay, and that the world is immeasurably better for it, are facts that can now no longer be doubted.—*Correspondence.*

❖

Pasco, Wash.

Clarence C. Eaton addressed a large audience on Christian Science at Cord Theater. He was introduced by Mayor Zent with the following remarks:—

The birth of an idea is the advent of a mighty power into the world. Ideas never die; they live from age to age, the silent powers that arouse revolutions, defeat armies, and achieve great reforms. According to the Christian Science doctrine, I believe, the ideas of that religion are as old as creation itself, and bore their first visible fruits to mankind in the ministrations of the lowly Nazarene to the sick, the sinful, the maimed, and the miserable. Then through long, dark ages of subjugated mentality and perversion of reasoning, this doctrine lay asleep, till revived by Mrs. Eddy in the century just past. It is a doctrine founded upon wholesome optimism and a confident and abiding faith. It throws away the idea of an angry and vengeful God, and replaces it with a God of love and mercy. Its followers claim there is no disease of the body or error of the mind so malignant that their Science cannot reach and cure it. Surely, such a doctrine is worthy of our earnest consideration and honest thought.

Many times in the history of our world has the earth fairly trembled to the tread of marching armies, and stood aghast and dismayed at the awful carnage when men—thousands of them—met in mortal combat on the field of battle. Contrast to this the never ending brilliant procession of ideas for the enlightenment of mankind, and from somewhere up near the front of the procession, I fancy, you will see the ideas of Christian Science scintillating their brilliant and fascinating light to earnest followers.

During the past summer I had an opportunity to visit a large Christian Science church. It was a magnificent structure, thronged by thousands of eager, happy, apparently care-free seekers of Truth, who were, or at least seemed to

Digitized by Google

be, animated by the powers and possibilities of their belief, which brings to those racked with pain a new relief, to those in despair a new hope. I am told that the church asks no converts and does not seek to persuade, but to instruct. I take it that many present tonight, like myself, are not members of this church, but are here for the purpose of learning further about a creed so tolerant and far-reaching in its effect. For, indeed, we can say this is the age of broad-mindedness, and the hour of pity for the person who becomes so narrow in his belief as to retire from the light of day and commune alone with his own petted dogma.

The Pasco Express.

Bolton, England

With a view to still further enlightening the public on the Christian Science faith, a deeply interesting lecture was delivered to a large audience in the Spinners' Hall, by William R. Rathvon. Keen public interest was taken in the meeting, the lecture being listened to with rapt attention. Mrs. S. Brown, who presided, explained that the Town Hall had been engaged for the lecture, but when the building was taken for recruiting purposes all engagements were canceled. The Spinners' Hall was the largest available building, and they were overcoming the difficulty of reaching a larger number of people by Mr. Rathvon consenting to speak two nights instead of one.

Mrs. Brown proceeded to say that she first came into touch with Christian Science through witnessing its healing work. She had a friend who had suffered from spinal complaint for fifteen years and had been pronounced hopeless by the doctors. She went under Christian Science treatment, with the result that she was restored to health, and was now leading a useful, active life. Mrs. Brown added that she was healed of varicose veins, and this healing convinced her that she had found what she had been seeking. As they were a family of five and one or other of them was always ailing, she began to apply Christian Science teachings to every discordant condition that appeared, and for over ten years Christian Science had been her family's physician. Christian Scientists all over the world were rejoicing in the understanding of the truth that made free, and of the love that destroyed fear, and in proportion to their understanding were proving Christian Science to be the perfect remedy for all ills "that flesh is heir to." The sick were being healed, the sinner reformed, and the sorrowing comforted.

Bolton Journal and Guardian.

Lectures to be Delivered

Alameda, Cal.—William R. Rathvon, Unitarian Church, 8 p.m., April 19.

Aspen, Col.—Clarence C. Eaton, Church Edifice, 100 W. Main street, 8 p.m., April 22.

Baltimore, Md. (First Church).—George Shaw Cook, Church Edifice, University parkway, west of Oak street, 8 p.m., April 23.

Bangor, Maine.—Clarence W. Chadwick, City Hall, 8 p.m., April 22.

Bayonne, N. J.—Virgil O. Strickler, Lyceum, 3:30 p.m., April 18.

Champaign, Ill. (Second Church).—Jacob S. Shield, Park Theater, 3 p.m., April 18.

Chicago, Ill. (Sixteenth Church).—Clarence C. Eaton, Armstrong Assembly Hall, Rogers Park, 8 p.m., April 15.

Englewood, N. J.—Clarence W. Chadwick, Englewood Lyceum, 8:15 p.m., April 19.

Glenwood Springs, Col.—Clarence C. Eaton, Methodist Church, 8:15 p.m., April 23.

Great Falls, Mont.—Col. William E. Fell, Grand Opera House, 8:30 p.m., April 23.

Greensburg, Pa.—Bicknell Young, St. Claire Theater, 8:15 p.m., April 23.

Grinnell, Iowa.—Dr. Francis J. Fluno, Colonial Theater, 8 p.m., April 19.

Guthrie, Okla.—Clarence C. Eaton, Guthrie Opera House, 3 p.m., April 18.

Jefferson City, Mo.—Jacob S. Shield, County Court-house, 8 p.m., April 19.

Junction City, Kan.—Jacob S. Shield, Junction City Opera House, 8 p.m., April 20.

La Junta, Col.—Willis F. Gross, Rourke Theater, 3 p.m., April 18.

Los Angeles, Cal. (Second Church).—William R. Rathvon, Church Edifice, 948 West Adams street, 3 p.m. and 8 p.m., April 10, and 3 p.m., April 11.

Marlboro, Mass.—Clarence W. Chadwick, Universalist Church, Main street, 8 p.m., April 20.

Medford, Mass.—Virgil O. Strickler, Pitman Hall, Winthrop square, 8 p.m., April 20.

Napa, Cal.—William R. Rathvon, Novelty Theater, Randolph street, 8 p.m., April 20.

New York, N. Y. (Sixth Church).—Bliss Knapp, McKinley Square Casino, 775 E. 169th street, Bronx, 3:30 p.m., April 11.

Owosso, Mich.—Bicknell Young, I. O. O. F. Temple, 8 p.m., April 9.

Paris, Ill.—Dr. Francis J. Fluno, Shoaffs' Opera House, 8 p.m., April 22.

Portland, Maine.—Clarence W. Chadwick, Church Edifice, 61 Neal street, 8 p.m., April 23 and 24.

Poughkeepsie, N. Y.—George Shaw Cook, Church Edifice, 111 Market street, 8 p.m., April 20.

Providence, R. I. (First Church).—George Shaw Cook, Church Edifice, corner Prospect and Meeting streets, 4 p.m., April 18, and 8 p.m., April 19.

Quincy, Mass.—Virgil O. Strickler, Wollaston School Hall, 8 p.m., April 16.

Ridgefield Park, N. J.—Virgil O. Strickler, School No. 4, 8:15 p.m., April 22.

Salida, Col.—Clarence C. Eaton, McKenna Hall, 8 p.m., April 20.

San Diego, Cal. (First and Second Churches).—William R. Rathvon, Edifice First Church, 8 p.m., April 22 and 23.

San Francisco, Cal. (Third Church).—William R. Rathvon, Dreamland Rink, Steiner street near Sutter, 3 p.m., April 18.

Sioux Falls, S. Dak.—Bliss Knapp, Colonial Theater, 4 p.m., April 18.

St. Paul, Minn.—Bicknell Young, Church Edifice, corner Summit avenue and Grotto street, 3:30 p.m., April 18, and 8 p.m., April 19 and 20.

The Dalles, Ore.—Bliss Knapp, County Court-house, 8 p.m., April 28.

University of Chicago, Chicago, Ill.—George Shaw Cook, Harper Memorial Assembly Room, 4 p.m., April 15.

Watertown, S. Dak.—Bliss Knapp, Church Edifice, 8 p.m., April 19.

Wichita, Kan.—Clarence W. Chadwick, Forum, 8 p.m., April 13.

Williamsport, Pa.—Clarence W. Chadwick, Lycoming Opera House, 2:30 p.m., April 18.

Testimonies of Healing

During many years, proofs of the healing power of Christian Science have accumulated in my experience, and I know beyond all doubt that scientific right thinking is preventive and restorative.

The first healing resulted in the laying aside of glasses which I had worn steadily for three years. After three weeks' treatment I was able to use my eyes with much greater comfort than when depending upon glasses, and as I gained some understanding of Christian Science, my eyes steadily improved, giving me no further trouble. For a year previous to this time I had been unable to use them for either sewing or reading. This healing occurred over nine years ago, and has been permanent. Since then we have had many other proofs of the healing power of Christian Science. I am especially thankful for its results when applied to the needs of our children, who have been quickly cured of stomach disorder, fever, throat trouble, and other ills to which children seem subject. I am most grateful for being freed from the extreme fear which used to come to my husband and myself when the children were ill. Now, when need for help arises, we know through the many proofs in the past that the Love that heals is unfailing, and that one only needs to be faithful in realizing its presence. Any parent who has been tortured by such a fear, knows how great is my gratitude for this freedom; but even beyond this is my gratitude for a growing understanding of the Bible, especially of the meaning of Christ Jesus' teachings as explained in the text-book of Christian Science, "Science and Health with Key to the Scriptures."

These blessings, and many more, came to me wholly through the teachings of Mrs. Eddy, whose life was unselfish enough to become a channel for this great message to mankind.

HARRIET M. KINNEY, Berkeley, Cal.

✧

It is now over seven years since I took up the study of Christian Science, and I wish to add my testimony in the hope that it may help some one who is suffering as I was. I had been a constant sufferer for fifteen years, under the care of a physician most of the time. I had submitted to various kinds of material treatment, but with little or no benefit; had undergone six operations, and still failed to find relief. I was in constant pain, and confined to my bed for weeks at a time.

When at last I turned to Christian Science, I had been in bed for five months under the care of four physicians, who had done all in their power for me; but still I was no better. One doctor advised an operation, saying it was the only thing that could possibly help me. The others disagreed, saying I was too weak to stand an operation. It was in this condition that Christian Science found me, and it has been truly said that "man's extremity is God's opportunity." Christian Science was presented to me by a friend, who asked me to telephone to another friend who had been healed. I did so simply to gratify those dear to me, for they surely had done all in their power for me. I had no faith in Christian Science, for I knew absolutely nothing of its teachings; but as the testimony of this friend was very convincing, I agreed to have treatment. The result was that I was on the street the third day after calling a practitioner, and was attending to my household duties on the fourth day.

Since that time it has never been necessary for me to spend a whole day in bed. All the ills did not vanish at once, but by degrees they have all disappeared. Where formerly I could not walk two blocks without excruciating pain, I am now able to go several miles with no inconvenience. Many discords have come up in our home since I began the study of Christian Science, but all have been overcome through the understanding of the power of Truth. Both of our children were healed of scarlet fever through the understanding which my husband and I had gained of Christian Science, though we were very young students. Our little boy was also healed of a stubborn attack of croup. I have been able to lay aside glasses that I had worn for fifteen years.

Some time ago I was preparing to make a journey, when I was suddenly called down-stairs. In descending the stairs I missed my footing and fell, striking my back on every step and injuring my foot very badly. My first thought was that I would have to give up the intended journey, but I instantly denied that thought and called to the one waiting for me that I could not come to the door. I then began to realize the truth, and to know that in divine Mind there are no accidents. In just a few minutes I was able to go back up-stairs and finish my preparations. By the time I was ready to put my shoe on, the swelling had disappeared so that I could wear the shoe with very little discomfort. This happened about noon, and I was able to attend to my work in the afternoon, make a call toward evening, take a train at six o'clock, and travel all night. It was indeed a great proof to me of the efficacy of Christian Science.

I am grateful to all the loving friends who have helped me to gain an understanding of the truth, and grateful for all the literature. I also feel deep gratitude to Mrs. Eddy for her untiring efforts in presenting this word of truth to us in a way that we can understand. Above all, I am thankful to God for His loving-kindness.

ROSA M. HARLEY, South Bend, Ind.

✧

[Translated from the German]

It is a very pleasant duty to be able to testify herewith to all the good which has come to me through Christian Science. In April, 1913, I suddenly experienced severe pain in the thumb of my right hand. Having a very slight knowledge at the time of the healing power of Christian Science, I went to a physician, after a sleepless night spent in suffering, and he stated the case to be one of serious infection, which I had contracted in my work as a butcher. The finger was operated on in various ways in the course of three weeks, but it grew worse with every day, till finally the physician told me to go to the hospital. The examining physician then stated that the bone was carious, and told me to prepare to have the thumb removed on the following day.

In my distress I hurried to my relatives who had received many benefits through Christian Science, and the same day we called upon a Christian Science practitioner in Hannover. I shall never forget the hour during which the practitioner explained to me the way leading to Truth, and the nothingness of matter. I left the house like one new-born. Still there was a hard struggle before me; but through reading the text-book, "Science and Health with Key to the Scriptures," and the *Herold*, I gradually gained some understanding of the truth and felt also that divine Love was present with me. After two weeks' treatment the thumb had sufficiently healed to enable me to hold articles, and after four weeks I took a position. There is only a scar left now, and even that is gradually disappearing. I was also healed within one week of an injury above the eye, sustained by a fall while riding a bicycle. For the benefits received through Christian Science I herewith express my deep-felt gratitude, and I also feel very much indebted to Mrs. Eddy, and to all who have helped me to find the way leading to Truth.

KARL BAYER, Gronau, Prov. Hannover, Germany.

Digitized by Google

I was instantly healed through Christian Science of stomach trouble of six years' standing, contracted in the mines, without being interested in or reading Christian Science literature, and after ridiculing the idea of such healing for a year. My suffering became so dreadful that I could bear it no longer, and one day when we were out riding, I said to my wife that something was going to happen when we got home. She replied that I did not have to wait till I got home if I would try Christian Science. I was willing, even anxious, to try anything to get relief, so I cast my all on the altar and was healed then and there.

Ten years have passed and there has been no return of the trouble. I am very thankful to God, and grateful to our revered Leader, Mrs. Eddy, for holding out to mankind the hope of the Saviour's love, for he does indeed save us from sin, disease, and death, when we honestly turn to him to learn the way. I am even more grateful for the benefits that have come from reading and applying what I have understood in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and this proves to my satisfaction that "God is no respecter of persons." Any one may receive a like reward by a willing obedience to all the commandments.

JOHN H. COOK, Champaign, Ill.

✧

I have been deeply interested in Christian Science for the past few years. I came into it first for the healing of extreme nervousness and hysteria. In one week the cure was complete, and since early in June, 1911, I have never attended any other than a Christian Science church. Although I was a member of another denomination, I decided to join this movement. My daughter, when twelve years of age, was healed in ten days' treatment of chronic bowel trouble of life-long duration. With my small understanding of Christian Science I have been able to help myself and family. For these blessings, and many others, I am deeply thankful to the Giver of every good and perfect gift, also grateful to our dear Leader for making the way so clear in her wonderful book, "Science and Health with Key to the Scriptures."

EMMA H. DONNELLY, Asbury Park, N. J.

✧

With deep-felt thankfulness to God, I am glad to testify to the loving help and the benefits I have received from Christian Science. From my school days onward I was seldom well. I suffered from bilious attacks, stomach disorder, and neuralgia, as well as severe colds and coughs. Although numerous doctors were consulted, I never seemed to get permanent relief, and the constant advice to diet, have massage, rest, etc., became very irksome. Matters grew worse as years went on, and I became seriously ill. A specialist pronounced the trouble colitis, and said the only hope of combating it was by a long period of inoculation.

It was then, when everything looked so black, that Christian Science came with its beautiful message of hope and love, and I feel sure that God sent it to me in answer to my prayers. The vaccine had been prepared, but four days before my appointment for the first inoculation, I suddenly decided to ask a practitioner to give me Christian Science treatment, and so postponed my appointment with the doctor. The help was given at once, and in less than a week I was healed, not only of the colitis but of a chronic bowel disorder and other ailments. The physical healing was a great relief, but the sense of joy and peace which came with it gave me convincing proof that God does heal diseases now as in Jesus' time. The Bible from that time became a new book to me. I never before seemed to understand it, although I often tried.

It is nearly six years since this first healing, and during that time I have sought no other help than my heavenly Father's. Pleurisy, lumbago, long-standing catarrh, have all yielded, sometimes instantaneously, to prayer as we understand it in Christian Science. I should also like to mention the wonderful help given in a time of great strain and sorrow. Words are inadequate to express how I was lifted above it. It brought to me a greater knowledge of our Father's love than I had ever realized before, and a stronger desire to prove my gratitude by daily serving Him more faithfully, and conveying this great truth to others as our dear Leader, Mrs. Eddy, wished us to do.

I am indeed grateful to be able to say my healing has been permanent, and my health in all respects is normal. New acquaintances find it difficult to believe I was ever considered in any way delicate.

BETTY S. U. ALLAN, Epping, Essex, England.

✧

It is now some time since I became interested in Christian Science. To mortal belief I suffered for ten years with heart trouble, the attacks being more frequent and severe during the last two years. Doctors could not help me in the least, and I was only too glad finally to try Christian Science, on the advice of a friend. I was suffering intensely when my husband called in a Christian Science practitioner; but I am thankful to say that in less than an hour I was relieved. Since that time I have had no attack, and I have quite dispensed with medical aid and drugs of all kinds. I am most grateful for the blessings received in Christian Science.

MINNIE WEHLISCH, Tonopah, Nev.

✧

From my experience in Christian Science I am realizing more and more each day the truths contained in the Scriptures, with the full assurance all through the Bible that the Almighty will do what is promised, namely, restore health unto us, and heal us of our wounds.

Shortly after I had overcome a severe prejudice against what I believed this teaching to be, and before I had read much on the subject, I was healed of acute lung trouble through Christian Science treatment. Because of all the wonderful "works" I have experienced personally, as well as the healing I have seen accomplished among my friends, I have been convinced of God's ability and willingness to heal "all manner of disease." There are thousands of people all over the world, multitudes in the remotest parts of the globe, singing praises unto God for His "very present help" as taught and demonstrated in Christian Science. The majority of these people have been healed of diseases and conditions which were pronounced hopeless, after every material means for help and healing had been exhausted, thus proving that "man's extremity is God's opportunity."

I have also experienced the healing of a deep sorrow and grief. At that time the head of my former church, desiring to console me, came to me with the words, "It is God's will." I replied that if it was God's will that people should be sick, suffer, and die, it had been quite inconsistent of me to employ twenty-three physicians in trying to prevent God's will from being enacted. From what I have learned and experienced in Christian Science, it is not the will of the Father of Israel to afflict His children, for God is Love, and "underneath are the everlasting arms," uplifting, upholding, guarding, guiding, and protecting those who are obedient to His commands.

Mrs. Eddy tells us in the text-book, "Science and Health with Key to the Scriptures," that "to those leaning on the sustaining infinite, today is big with blessings," and that "the

Digitized by Google

wakeful shepherd beholds the first faint morning beams, ere cometh the full radiance of a risen day" (Pref., p. vii). Those of us who are responsive to these "first faint morning beams," already realize the remarkable sense of that peace which has destroyed for me the grief and sorrow of yesterday and the worry and doubt for tomorrow, and has given me my today "big with blessings."

I am truly thankful to God for our Leader, who was pure enough for the light of Truth to shine through clearly,—that light which is today lightening the human burdens and illumining the whole world.

SIGMUND K. ROTHSCHILD, Detroit, Mich.

✧

[Translated from the German]

About fourteen years ago I became interested in Christian Science through acquaintances. I had a very difficult family problem to solve, which was, however, worked out with the loving assistance of a practitioner. I have attained the conviction that God, the only good, is the law governing me, and it has enabled me to overcome a seeming power named sin. My dear mother, who is eighty-four years of age, was healed in a wonderful way of a sore on the leg with which she had been afflicted for thirty years. In accordance with a medical verdict she expected to have the limb amputated, but having applied for Christian Science treatment, she was healed in a short time. Later on she had a slight stroke, which left her with a weakened condition of the head, but Christian Science also healed her of this trouble. For this blessing, as well as for many others, I thank God with all my heart, and I am grateful to our faithful Leader, Mrs. Eddy, for showing us through her work the way of Life. I am also grateful for the beautiful services and Wednesday evening meetings, and it shall be my endeavor to put more and more of these glorious teachings into practice.

IDA KAEGER, Berlin, Germany.

✧

A few years ago a member of my family to whom a friend had earnestly spoken of Christian Science, half jokingly recommended that I should take treatment. I made a cynical reply; but the startled thought "Why not?" grew in a short time to an intense desire to learn about this teaching, although I had always heard it ridiculed and condemned. At that time I was seventeen years old and had been a semiinvalid since the age of six, often suffering terribly from muscular and inflammatory rheumatism, and spending the greater part of every winter in bed. Constant medical treatment, strict adherence to systems of dieting and drugging, together with the loving and patient care of my parents, to whom my invalidism was a great sorrow, failed to give me strength and health.

A year or so before I heard of Christian Science I had with seeming wilfulness and impatience declared that I would no longer follow all the doctor's directions, for I had no more faith in them. I was a church-member and read the Bible because it seemed right to do so; but at this time I began to think earnestly of the promises and healing recorded in the Scriptures. I prayed every night that God would give me health and strength, and when these did not come I became impatient and bitter, wondering what the Bible was for and whether there could possibly be any wisdom in God's afflicting me, as it seemed to me, so unjustly.

At this period of mental and physical disease came the glorious answer to my prayer, the message of Christian Science. With an independence rather unusual in one who had been so constantly cared for, I called on a practitioner and arranged for treatment. This occurred in the spring, and the following winter was the first in many years which was not spent in suffering and in a constant fight against a stiffened, swollen, aching body. Each succeeding season has brought still greater physical and mental freedom. Now I am strong, active, and happy, rejoicing in the ability to play and work with family and friends, and to take a helpful, busy woman's part in the world. It is good not to be a burden to the dear ones about me, but to be a help, and to take the responsibilities that belong to the oldest daughter in a large family.

When I see older people struggling for peace and understanding in various phases of thought, I am grateful indeed for the knowledge that I am in the right path, and that in the increasing understanding of Truth, as revealed in Christian Science, may be found entire salvation from all discord. The church services, the periodicals, the loving counsel of friends, and above all the writings of our dear Leader, are enabling me to eradicate error from my thought and to assimilate the simple yet profound truths of the Bible, as understood and taught in Christian Science. To all who knew me when I seemed destined to a life of invalidism, my changed condition seems wonderful. I desire to live that I may lead others to God, whom I now know as ever present Love, my Father-Mother, who made man in His own image and likeness, perfect and eternal.—MARY THURMAN, Baltimore, Md.

✧

I wish to express publicly my deep thankfulness to God for the many blessings I have received through Christian Science. Some years ago I had serious heart trouble, and the doctor who attended me said I would never be free from it. I constantly took stimulants to keep my heart in action, and it was only with great difficulty that I attended to business. At that time I lived in Omaha, Neb. I wrote to my brother, who was located in the western part of that state, telling him I was afraid I would have to give up my position and asking if he knew of any outdoor employment I could get in his locality. He replied that he thought he could find something to suit me if I decided to make a change, but said he did not believe it would be necessary for me to do so, and urged me to give Christian Science a trial first. As I knew nothing about this teaching, I scoffed at the idea, but after thinking the matter over for several days decided to give it a test.

After my first treatment I discarded all medicine. In a week I felt wonderfully improved, and I gained rapidly in health thereafter. That was over ten years ago, and I have had no trace of the trouble since. The physical healing is but small in comparison with the spiritual peace that has come to me through the slight understanding I have of Christian Science. I am truly thankful to God for this great blessing, and grateful to Mrs. Eddy, the Discoverer of this healing truth.—HERBERT M. HUNT, Odenton, Md.

✧

A few years ago I came to Christian Science for relief from trouble of a malignant nature, supposedly resulting from injuries received at the birth of my eldest boy, four years before. I had reached the place where I felt sure that *materia medica* had nothing to offer me but further suffering. The Christian Science practitioner to whom I applied for help received me most lovingly, and talked to me of God and His love, of man as God's reflection, of Christ, who came to show us the way of deliverance from sin, disease, and death, and her clear thought of God healed me instantly. All sense of discomfort disappeared. In three days there was no trace of the sores, all nervousness had gone, and from being utterly wretched and entirely hopeless, I was absolutely sure that the trouble had gone never to return, and I

Digitized by Google

have ever since been free from any symptom of the old condition. Many lesser ills have been destroyed by knowing that God made all, and made all good, and that by striving daily to have in us the spirit of Christ, we will be able to overcome any and all discordant conditions.

For two years our baby was treated by reputable physicians for a skin disease. Through Christian Science he was healed in a few weeks, and the eruption has never returned. Our eldest son was relieved of extreme lameness following a broken leg. My husband has been helped in business, healed of asthma in a severe form, and we both have found that Christian Science is the practical religion for parents. We have a greater love and understanding, and this enables us to see our boys in their true individuality as ideas of God; we know that all wrong and sick thoughts are not a part of them, and do not belong to them. When we fail in demonstration we know that the fault lies not in God's love and power, but in our thought, and we keep on, realizing that nothing can hinder God's perfect work. Some time ago I had trouble with my eyes. I truly believe that treatment in *materia medica* would have deprived me of sight, so terrible was the manifestation; but with the help of a loving friend I was again shown God's all-power.

For all these and many other evidences of the power of Truth as revealed to us by Mrs. Eddy's unselfish life and work, I cannot sufficiently express my gratitude. I earnestly hope that this testimony may help some one who is seeking a practical, livable religion; a God who will meet every need, however small.—HELEN P. GARRETT, Lancaster, Pa.

It is a joy to express my gratitude for Christian Science. I love to think of it, in the words of our beloved Leader, as "stately Science" (Science and Health, p. 566). Since Christian Science first came into our home in 1883, the blessings which have been ours cannot be numbered. My mother, a chronic invalid for many years, was healed while reading the Christian Science text-book, "Science and Health with Key to the Scriptures." My father at the same time was cured of what physicians call softening of the brain, and also of a chronic cough. In all these years he has been a wonder to his business associates. As we count time, he is old, but at eighty-three years of age he retains his vigor and freshness, and attends to his business in a way that is surprising to those with whom he is associated.

Many trials and problems have confronted me, but never for a moment have I ever lost sight of the all-good that is taught by our Leader in Science and Health and her other writings. And so, "through the harsh noises of our day," as a loved hymn runs, "a low sweet prelude finds its way" (Hymnal, p. 18), and that "prelude" is the first glimpse I had of Life, Truth, and Love, which has deepened and broadened as the years have rolled by. My gratitude and love for Christian Science, and to Mrs. Eddy, its Discoverer and Founder, is ever increasing. I rejoice in this wonderful truth that is breaking the fetters of all mankind.

MARY PHILBRICK MARBLE, Chicago, Ill.

The testimony as given by my daughter is correct. My healing is permanent and complete.—GEORGE A. PHILBRICK.

God give us grace
Each in his place
To bear his lot,
And, murmuring not,
Endure and wait and labor!

WHITTIER.

From Our Exchanges

[*The Christian Commonwealth*]

The time has certainly come when Christian people ought to set themselves to make Christianity an international force in a sense in which it has never yet been. We must learn to look upon a mere national religion or a mere national church as a contradiction to Christianity; and we must not be so ready to subject the religious view and aspect of things to other considerations. To make the religious view supreme should be the aim of all the churches.

[Claiborne M. Hill in *The Pacific Baptist*]

The modern man is purposeful. He wants to engage in high enterprises and bring things to pass. Can the church satisfy this demand? The answer is found in the aim of the church. We have said that that aim was identical with the purposes of Christ. The aim of Christ was to bring in the kingdom of God. The church of Christ seeks to realize the ideal of that marvelously inclusive petition, "Thy kingdom come." The spiritually qualified choose to come together in an organization whose law is the will of Christ, that that prayer may be answered in its full meaning for themselves and for all men.

A true church seeks not power for itself. It is not an end in itself; it is only a means to an end. It exists not to be glorified, but to glorify; not to be served, but to serve. Pomp and circumstances are unbecoming to it. Simplicity and sobriety best express its true character. It has no magic of ordinances by which it can transform lives, no power of its own to condemn or forgive. It is a democracy of believers who have chosen to band themselves together to live a life, enjoy a fellowship, and proclaim to all men a message of salvation personal and social. World conquest through the moral and spiritual transformation of all men is its program. Surely here is an aim so all-inclusive, so magnificent, and so beneficent that it ought to appeal to the most ambitious and the most efficient minds of the best age of the world.

[*The Universalist Leader*]

There are many who are giving themselves for others in a thousand unseen ways; there are many who are being reviled by those who hate them or are envious of them, who revile not again, but endure in sweetness and patience; there are many who in ways unseen are literally laying down their lives for their children and others, and asking nothing but the privilege of such self-surrender; there are many who are devoting all they are and all they have to some noble cause which embraces human good, who are standing firm for the right and for truth, even though they stand alone. And about all these there is the multitude greedy for excitement, mad with appetite and passion, who think these peculiar people are their foes, and who cry out today, just as they did centuries ago, "Crucify him, crucify him." And they nail their Christ upon the cross because they do not know him.

Nor yet has the presumption of our foolish minds reached its limit, for our eyes are blinded even to the coming of God Himself into this every-day world, coming all the time to all lives, but we do not know Him. We think sometimes we can see Him in the storm, we fear He is in the desolation of disaster, we are quite sure He is at the heart of the great calamity. But how has He come in the beauty and song, in the sweetness and light, in the grace and the glory, in peace and possession, in health and happiness? We were not looking for Him there, we did not expect Him in that form, and He came, but we knew Him not. And He is coming, and

Digitized by Google

coming today as truly as ever in the past, but we do not know Him, because our eyes are holden with selfishness and prejudice, and greed and envy and sin.

There is no better lesson for us to learn, in these days of devotion, than this old, old lesson, repeated through all the centuries, that the Messiah is coming, constantly coming, coming to every life, every day; and alas, we of today, like those of old, are crucifying our Christ, because we do not know him when he comes.

[*Northwestern Christian Advocate*]

The coin of the spiritual realm is as real as dimes and dollars. It may be accumulated without fear of criticism. Indeed, we are admonished to add to our faith virtue, to virtue knowledge, to knowledge temperance, to temperance patience, to patience godliness, to godliness brotherly kindness, and to brotherly kindness love. This is the capital of the spiritually minded. We are to be "rich toward God." We read of the "exceeding riches of his grace," the "unsearchable riches of Christ," the "riches of his glory," etc. In these and numerous other passages we are enjoined to become spiritual capitalists; for there is a great potential traffic in the spirit realm. Mines of truth lie yet unopened; forests are still virgin, fields unturned, rivers and oceans untraveled. The great overseer spurns gold, culture, even learning. "Thy money perish with thee" was said to one who tried it once. The same will be hurled at one who today attempts to purchase his salvation—even his standing in society—by offer of paltry dollars. Spiritual currency for a spiritual realm. It passes here even, though there are few who can detect values, and not infrequently the counterfeit passes.

[*The Congregationalist and Christian World*]

Self-sacrifice, patience, tenacity, unity, and inflexible resolve,—these inbred qualities of the race belong to life as it normally goes on—certainly to the Christian life. They all are within the great circle of ideas around which Jesus' thought continually swung. They all should be the natural outflowering of the life obedient to Christ. Had they been more continuously operative in those who professed and called themselves Christians, the world might have been spared these tragic days through which every nation under heaven is passing.

The need is sore today, but there is yet time to bring to the front these reserves of self-sacrifice,—endurance and brotherliness. He who begins at once, wherever he is and however situated, to foster and display these qualities in his own life, will not only bear his own burden bravely, but will become one of the glorious brotherhood of burden-bearers for the world.

[*The Outlook*]

The man who was asked if he believed in hell, and answered that he was in it, brought out clearly a radical change of thought. The ignorant or literal-minded once thought of hell as a place of fiery torment prepared by an offended God for the future punishment of evil-doers; we know that it is an experience of suffering involved in the very structure of our natures, which begins here and now. The suffering of which men think when they think of hell is of today; it waits for no future, it begins now, and it will continue until the offender is purified.

The issue which every man must face is precisely what it was when Christ faced it in the wilderness,—shall a man save his soul? Words and symbols have changed, but the battle of life is as inevitable, as fateful, as desperate, as it was a thousand years ago.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

In a recent issue of the *Anglo-Norwegian Trade Journal*, a writer states that no country in the world has, in proportion to its population, so large a mercantile fleet as Norway. There is in this country an average of one register ton for each inhabitant, whereas in Great Britain, the next highest of the seafaring nations, there is in this respect considerably less than half a ton for each unit of the population. The mercantile fleet of Norway thus constitutes a much greater portion of the nation's assets than is the case in any other country. It is not the necessities of trade that have been the primary cause of the creation of this fleet; it is really the inherent love of the sea, in association with excellent opportunities of exercising it, that has created the Norwegian seaman, and he in turn may be said to have originally created the Norwegian mercantile fleet, which grew in excess of the needs of the trade of the country and became a kind of public carrier on the sea.

All of the twenty-seven defendants, including the mayor of the city, in the Terre Haute elections fraud case, have been found guilty by a jury. The Federal government placed its claim to jurisdiction in the fact that a United States senator and a member of Congress were being voted for in the election. The indictment, which is in four counts, charges conspiracy to injure persons in their civic rights; conspiracy to defraud the United States by corrupting the election and misuse of the mails. The federal grand jury began its investigation about two weeks after the election of Nov. 3, 1914, and returned the indictment Dec. 24, naming one hundred and twenty-six men. All but ten of those indicted were arrested, and eighty-nine of them pleaded guilty. The trial of the accused began March 8, and the taking of testimony opened two days later.

Norwood, Mass., went under the town manager form of government on April 1, and is the first municipality in the East to adopt this new type of control of public affairs. The town manager is responsible to the selectmen. The office carries a salary of three thousand dollars. The manager is expected to conduct the affairs of the town as though it were a corporation, the selectmen serving as directors. All department heads, except those of the school and police departments, are subject to removal by the manager. He will purchase the town supplies and fix salaries of the officials under him. The town charter has been amended so that he is free to judge workers on their efficiency merits alone. This charter was adopted by the town Oct. 6, 1914, culminating a movement that had been under consideration for five years.

Despite the fact that the Dominion of New Zealand has sufficient land under cultivation to grow more wheat than is required for local consumption, a serious lack of bread became imminent in December, 1914, when a wheat shortage was discovered. The prime minister immediately cabled to Australia and Canada for shipments of wheat. The situation was saved by the arrival of these purchases. It is generally understood that the shortage is due to the action of individuals in holding back their supplies, hoping thereby to secure higher prices, but the promptitude of the government in importing wheat from other countries is calculated to make it unprofitable for speculators and monopolists to hold their stocks.

The average time of transit for steamships from United States Pacific ports to England is about one half what it was before the opening of the Panama canal. Grain ships arriving at British ports from San Francisco and Portland via Panama average forty-eight days. Last season, it is stated, most of the export grain from the Pacific coast was carried in sailing ships whose voyages averaged one hundred and thirty-six days. Of twenty-two cargoes, the shortest time of transit was one hundred and two days, and the longest one hundred and seventy-one days. The average time for steamships was ninety-four days.

It is expected that the crop of winter wheat, planted last fall on the greatest acreage in the country's history, will be six hundred and nineteen million bushels. This is the estimate by the United States department of agriculture, based on the condition of the growing crop on April 1, and it may be increased or decreased according to the changes in condition from that date to the time of harvest. The estimate of six hundred and nineteen million bushels compares with a final estimate of six hundred and eighty-four million nine hundred and ninety thousand last year.

American manufacturers of match-wood may find a market for their product in Brazil, if a sample shipment now being arranged by the United States forest service proves suitable to the Brazilian match manufacturers, whose ordinary supply of Russian aspen has been cut off by the European war. The Brazilian match factories have been using annually about seven million feet of Russian aspen. On the recommendation of American match-woods, a request has been made to the forest service for samples of western white pine, sugar pine, cottonwood and basswood.

There is a bill before the ways and means committee of the Massachusetts legislature appropriating a small sum of money for the further investigation and study of the waterways and undeveloped water powers of Massachusetts. Massachusetts holds second place in New England as regards water-power; she leads a large number of the states of the Union in this respect; but she is lagging behind most others in providing for public conservation, utilization, and equalization of her many streams and ponds.

The United States Supreme Court in the case of the Pennsylvania Railroad against the Puritan Coal Mining Company, decides that shippers are safe in the right to sue for damages, either in the state or federal courts, in the case of discrimination or failure for any reason, in the furnishing of cars, inasmuch as the amendment of the interstate commerce act as to car supply was drawn to secure new rights to shippers and to protect them in all former rights under the common law or the statutes.

Disagreeing with the Senate, the House of Representatives of Connecticut, by practically a unanimous vote, has adopted a bill which would permit a landowner, or his agent, to shoot deer with a shotgun on his own land at any time in the year. The Senate had rejected the bill. Members of the House declare that deer are a nuisance. A conference between the Senate and the House on the bill will seek to devise means to rid the state of hundreds of the animals.

Boston is experimenting on a few of its streets with a new material, composed of wood-pulp powder and pulverized stone, which is designed to take the place of oil and of water in keeping down the street dust. The street is first wet down by a watering-cart and then covered with the powdered material. This is followed by a second watering, and the result is a smooth, clean, firm surface that has thus far given satisfaction.

A proposed constitutional amendment giving women the right of suffrage in Connecticut, was rejected by the House of Representatives, 124 to 106. The amendment had been adversely reported, and the vote was preceded by three hours of debate. Had the amendment been adopted it would have come up before the next legislature for ratification. This action ends the movement for equal suffrage, so far as the present General Assembly is concerned.

According to the annual statement issued by the mines department, 1914 was a record year for mineral productivity in New South Wales, the production for the year, valued at £12,095,084, being the highest in the history of the state. The aggregate value of the minerals produced now exceeds £240,000,000, in which amount coal is represented by about £75,000,000, silver and lead by £67,000,000, and gold stands for £60,000,000.

Government estimates recently completed show that there are six million tons of potash deposits at Searles lake, California, equivalent to a ten years' supply for the United States. A recent statement placed these estimated deposits at only six hundred thousand, but the correct figure is six million tons, it is said.

The Association of Eastern College Newspapers held its third annual convention last week at the Pulitzer school of journalism, Columbia University, New York city. The association now comprises twenty-one daily, bi-weekly, and weekly college newspapers.

Small exhibition farms will be established in the Humboldt, Garfield, and Douglas parks of Chicago this spring, to show the public what can be raised and how to do it. Park gardeners will have supervision of the lots, which are one hundred feet square.

In spite of the density of population being less than one fourth, Argentina already contains one half as many head of cattle as the United States.

The population of the United States April 1, 1915, was estimated as one hundred millions.

Protecting Our Thought

FRANK H. SPRAGUE

CHRISTIAN SCIENTISTS are sometimes held to be narrow in their views, because they confine their study of the Science of being to the authorized literature of the movement, instead of reading promiscuously the works of authors of varying shades of belief. The point would indeed be well taken, provided it were possible to arrive at the truth by consulting data gathered from all sources and allowing one's conclusions to be determined by the aggregate of impressions received. But the argument in favor of this method loses its force when we realize that it is the point of view the individual brings to bear on the material at his command which coordinates the results of his observations, and colors, to a considerable extent at least, his findings; and though his preconceived point of view may change appreciably as he goes on, his judgments are at every stage amenable to its censorship. Just so long as mortals trust finite sense to point the way to the truth, there will seem to be many minds, each seeking enlightenment in its own way and reaching independent conclusions.

Over against this inconclusive, self-contradictory sense of things stands the declaration of Christ Jesus to the effect that there does exist a point of view which reveals God and His manifestation as the absolute, unchanging reality; and furthermore, the Master left a rule by which all men might find and verify this point of view in experience. This view-point was quite overlooked, however, until in the course of events it was discovered by Mrs. Eddy and again made the basis of scientific demonstration. In considering this subject we need to remember first of all that we are dealing with Science in the exact and absolute meaning of the term, and that as such its premises and conclusions are in perfect agreement, its Principle is unchangeable, and it can be demonstrated only by strict accordance with unvarying rules. The astronomer of today does not undertake to enlarge his understanding of celestial phenomena by consulting the treatises of ancient writers who held that the earth was flat and stationary. Notwithstanding the fact that many minor details of the Ptolemaic scheme are corroborated by modern scientific observation, the progressive student would hardly feel justified in giving serious consideration to theories developed from a demonstrably wrong standpoint.

The same is true in a far more vital sense when it comes to the Science of being. The learner is far more likely to find the indiscriminate perusal of works which in their fundamental bearings contradict the Principle of Christian Science, a hindrance rather than a help to his advancement, even though such works may afford occasional gleams of light. As the modern understanding of astronomy turns former theories of solar physics upside down, so Christian Science, with far broader sweep, upsets the basis on which mortal mind has outlined its rationale of existence. The student is obliged, therefore, to begin at once a practical readjustment of his way of facing all questions. Spirit takes the place of matter in his calculations and affections; what he has thought to be right proves in many instances to be wrong. Before he gets far, he realizes that it is no merely off-hand proposition which confronts him, and that it requires constant watchfulness to keep the old, habitual way of looking at things, and the prevalent thought around him, from influencing his attitude. The disciple's chief concern is to become imbued with that point of view which will enable him to demonstrate the truth for himself, to drink of the water that "shall be in him a well of water springing up into everlasting life."

In Christian Science the order of demonstration is from an ascertained Principle to the details of its manifestation; while systems of human devising begin and end in phenomena which afford little understanding of Principle, and leave the student no nearer a comprehension of the problem of being than he was at the start. To assimilate the basic teaching of Christian Science involves far more than a merely intellectual comprehension of the doctrinal features of the system; it calls for constant denial and refutation of material beliefs which, on the one hand, storm the senses with an avalanche of counter testimony, and on the other, entice the unwary thought with subtle persuasions. The points of the compass in the spiritual firmament can be kept in view only as they are constantly verified by demonstration which reaches to the incidentals of daily living. Only as the Spirit "beareth witness with our spirit" do we have the complete assurance that we are holding to the right course. In this respect the Christian Scientist is confronted with a task quite unlike that of other religionists, for so long as his consciousness of spiritual reality is clear and uncontaminated, demonstration of the truth follows spontaneously; but when his consciousness grows hazy, the proof of things spiritual ceases to be forthcoming, and materiality seems to dominate the whole situation. We forfeit the only witness of God's allness when we set the arguments of material sense over against spiritual evidence in an endeavor to weigh their respective claims.

The premises of divine Science and human reasoning are antipodal. Either there is but one Mind, the all-knowing, all-informing, all-governing, and man is the pure reflection or exponent of that Mind, or else, as finite sense would have it, there are many separate, independently constituted minds, divinely endowed with the qualities and prerogatives of self-consciousness and self-government. The Christian Scientist, starting with the tremendous advantage of having already defined for him a point of view which he may verify like the mathematician by practical tests, sets about proving experimentally that Spirit, God, divine Mind, is All-in-all, as against the claim of mortal mentality which denies the logic of spiritually based existence and affects to know, interpret, enlighten, heal, and save on its own responsibility and through its own resources.

By working out examples in the Science of being, one comes gradually to realize that the so-called mortal ego, or self, is after all not an entity or individuality, but a specter conjured up from an unspiritual point of view. Thus it becomes apparent that God has not made and endowed a type of mentality which presumes to find the truth of being by following material waymarks; and because it is not of God, this erroneous sense which pretends to the status of mind, wears

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

itself out, sooner or later, with its vagaries and struggles. As the belief in mortal selfhood wanes, the ground of immortality appears in the reflection of Spirit, and it is seen that the individual consciousness cannot become extinct through the passing of a false sense. In this new birth or spiritual awakening, existence is known to rest on the basis of divine Principle, as Jesus himself declared: "If I bear witness of myself, my witness is not true." "The Son can do nothing of himself, but what he seeth the Father do."

Under the conditions existing at that period, it seemed impossible for the hearers of the great Teacher to understand the truth of being if stated by him in the technical terms of Science. He sought, therefore, to impart to them a knowledge of the truth through parable and metaphor, anticipating with sublime faith the time when spiritual sense, the Comforter, or Christ, would enable mankind to interpret those messages aright. "I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth."

Christian Science is fulfilling this promise, and bringing out the long obscured spiritual significance of Jesus' words and works in a way that enables men again to demonstrate the truth from the standpoint of the Master. This experience of "Immanuel, 'God with us,'—the sovereign ever-presence, delivering the children of men from every ill 'that flesh is heir to'" (Science and Health, p. 107), satisfies the heart's yearnings as relative doctrines can never do. The humble disciple who has touched the hem of Christ's garment and sensed, be it ever so feebly, the quality of eternal life, has no desire to supplement such first-hand knowledge with inconclusive theories which at best offer no tangible proof of a divine origin; for he recognizes the impossibility of gaining greater light by familiarizing himself with works which contradict or misinterpret the Science of being he is already learning to demonstrate in some degree. Thus he comes to appreciate the force of St. Paul's words of admonition to the Galatians: "But now, after that ye have known God, or rather are known of God, how turn ye again to the weak and beggarly elements, whereunto ye desire again to be in bondage? . . . Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage."

❖

By Its Fruits

ELDO STEDFELD

When beginning the study of Christian Science, I was confronted with the fear that this religion might not be right, might not emanate from a good source. I was, however, greatly attracted to its teachings, and kept on trying to comprehend them in spite of this latent fear. After I had been studying for some time, the realization gradually came to me that many changes had taken place in my thought. I became conscious of the fact that certain old and intense dislikes which had long held me in bondage, were no longer influencing me, and that I was beginning to see good where I had believed only evil existed. I realized that a great deal of fear was fading from my consciousness; and this was especially noticeable in relation to my family. As the mother of small children, I had now a means of working out the innumerable problems and anxieties that came to me, a means that I had not possessed before.

My concept of God had also greatly changed. God seemed nearer; I was more conscious of His presence and never-changing love than I should once have believed possible. Then, too, I was beginning to care for the Bible. All my life the Scriptures had seemed contradictory and unauthoritative to me. The seeming contradictions and incongruities were, however, reconciled to my thought by the truth which the study of Christian Science invariably brings forth,—that the Bible is to be spiritually understood and interpreted,—and I found that it is the spiritual interpretation which is logical and satisfying and helpful.

In this way there gradually grew up a great confidence and joy in my heart; a confidence that if, as Jesus has said, "a good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit," then that which had brought about the changes of thought I have mentioned, and many more not mentioned, but all of which made for the good, must itself be good. So I was no longer afraid to study Christian Science, no longer afraid that it could have any but a good source or any but good and pure and uplifting effects.

❖

Springtime

HENRIETTA A. FIELD

It was a warm, sunny day in March, and the brown earth was fairly laughing with joy over its promised release from the thraldom of winter. To many a weary, suffering heart, it had seemed a very real and mighty potentate, in whose train had come misery, death, and disease with rapid strides. But now its reign was well-nigh over, for it could not long resist the secret power of the ever increasing hours of genial sunshine.

Two friends stood by a large upper window that looked out over a busy town nestled in the valley below. One of them had been speaking very dejectedly about a certain physical trouble which had not yet yielded to treatment. "I have been helped by Christian Science in many ways," she said, "and some things have been healed entirely; but this one ailment does not yield a particle," she added hopelessly. A little hush fell upon them, while her companion searched for some message of Truth that would give the needed comfort. Then as her eyes caught the sunlit view beneath, her thought was illumined with the meaning of the marvelous transformation that was going on all about them, and she said:—

"My dear, has it never occurred to you that every springtime is but the symbol and promise of our perfect healing, of the complete and certain destruction of all material error? Just take one long look down that street and see the rapid changes that have been wrought of late! The grass is actually showing green on the southern slopes, the robins are coming back, the crocuses are peeping through the brown mold, and men are walking free and joyous, grateful for the liberty that has come. To be sure, there are still some ugly humps of dirty snow and ice in the fence corners and behind that old barn, and they look very substantial; but we know, beyond any question, that the same sunshine and soft winds which have carried away the rest of the winter's deposit, will complete their work in a little while, and the warm, moist earth will everywhere respond to the thought of life and beauty."

Now what is error but "a long and cold night of discord" (Science and Health, p. 378), a stubborn, chilling "winter of our discontent"? And what are discord and sickness, material pain and pleasure, but the manifestation of mortal mind, the expression of a lack of love and life? To our human sense the material condition may seem beautiful or hideous, delightful or dangerous, but it is never permanent, never a creation of the eternal good. It is only a passing dream, the melting, vanishing wraith of a childhood myth. How then can one be discouraged before such an unreal foe, or doubt its final annihilation; for just as surely as the showers and sunshine melt every atom of ice and replace it with the living reflections of beauty, just so surely will the

Digitized by Google

benign influence of the "Sun of righteousness" ultimately efface every vestige of error from the human consciousness, and replace it with the immortal ideas of God.

In Revelation St. John writes, "He that sat upon the throne said, Behold, I make all things new;" also, "And there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Egoism, Not Egotism

JOSEPH W. REYNOLDS

In "Unity of Good" Mrs. Eddy tells us that "evil is *egotistic*,—boastful, but fleeing like a shadow at daybreak; while God is *egoistic*, knowing only His own all-presence, all-knowledge, all-power" (p. 27). Egotism is a most comprehensive term with which to designate mortal selfhood. Though it is usually regarded as one of the exaggerated phases of this selfhood, it is nevertheless a fact that every manifestation or activity of the belief of mortal selfhood is based upon egotism; and in proportion as egotism is overcome, mortal selfhood ceases to be, for it is the direct antithesis of that true consciousness, or spiritual individuality, which is the reflection of the one Ego, God.

An analysis of the elements of egotism reveals its primary and fundamental claim to existence to be that of assumption. It assumes the power to create a man and set up a kingdom equal or even superior to that of God; that its evil is superior to good and possesses a greater degree of intelligence, because it knows both evil and good, while good knows only good. It is so self-sufficient that it rushes in "where angels fear to tread." It is dogmatic; elated when its views are approved, and depressed when they are disapproved. It limits itself to its own personal view-point, and would circumscribe the activities of others within the confines of its own narrow misconceptions. It is self-conscious, and feels slighted at the least neglect. It has little consideration for the meek in heart, and is proud of its own personal asset, gaging success by place and power, though it is ill fitted to be trusted with responsibilities because of its empty boastfulness. Being self-deceived, egotism argues through self-justification and cloaks itself in terms of truth that it may be considered virtuous. It does not foresee or consider consequences, and would steady the ark rather than learn humility and patience. It makes excuses for mistakes rather than admit them, and so profit by overcoming them. It is the undergraduate who knows more than the college president. If it yields to correction at all, it does so only with resentment and retaliation.

Fear, sickness, sin, etc., may all be classed as phases of egotism. Indeed, though not usually so considered, they are the very height of egotism, because they involve the assumption of a power apart from God. Because opposites do not have the same qualities, it must be concluded that since God has power, that which is the opposite of God has no power; and the belief that it has, can be only an egotistical supposition in which there is no truth. We see that right and wrong, truth and error, something and nothing, are opposites; therefore, since humility, kindness, love, health, etc., are good and true, their opposites, pride, unkindness, hate, sickness, etc., are evil and untrue. It would, then, be only a high attenuation of egotism that would attempt to make these opposites appear real, and so controvert true logic and foist upon man a dual nature. It is egotism, manifested as avarice, dishonesty, lust, fear,—elements of the carnal or mortal mind,—that causes estrangements, individual and national; that impels one to disregard the rights of another, to seek special privileges, and to take unjust advantages. From all this we see that egotism is the trait of mortal mind that would defraud us of the fruits of the Spirit and keep us in the thraldom of personal sense. Therefore, to detect, reject, and overcome the subtle claims of egotism is a prime necessity, if we would gain true peace and security.

The student of Christian Science has learned that prompt recognition of error and a clear distinction between it and truth, its direct opposite, is often the first step toward deliverance from its claims, and aids in taking the further step of discovering the means of excluding or eliminating it from one's mentality. By this method the recognition of the element of egotism, and the detection of its manifestations in assumption, self-justification, and kindred activities, leads thought in its search for a remedy to the apprehension of the opposite mental quality, humility; for only through the deepest sense of humility can we perform the work of compassing the destruction of egotism and the elimination of its activities from our thought-processes. With reference to humility, Mrs. Eddy says on page 356 of "Miscellaneous Writings," "One can never go up, until one has gone down in his own esteem." True humility consists in a yielding of all belief in any being apart from God,—a going down of all sense of mortal selfhood, and an apprehension of the one Ego, God. The attitude of humility attained, we have begun the mental ascension to the right consciousness of selfhood as the reflection of this one divine Ego.

Egoism is to be found in the infinite universe of ideas which portray the "all-presence, all-knowledge, all-power" of infinite Mind. As these ideas are perceived, mortal mind's selfhood of egotism gives place to the egoism of God. This egoism denotes the fatherhood and motherhood of the one divine Ego, and is made manifest in the sum total of intelligence which reflects infinite Mind, Principle. It is that dynamic thinking which enabled Jesus, as guest in a nobleman's house in Cana of Galilee, to convert water into wine, and later to heal the fever of the young man at Capernaum miles away; thus beginning the illustration of that mental might which enabled the man of Nazareth to perform all his miracles, and to prove life to be deathless through his own resurrection, and matter to be non-existent through his ascension. This egoism is reflected in that quality of spiritual thinking which enables the Christian Scientist today to heal the impotent folk at Bethesda's modern muddy pool of sickly beliefs; to quench the thirst of Samaritans from springs which yield the water of life; to reclaim Magdalens, seared in sensualism's flames, with the regenerating purity of holy thought.

As the lieutenants of an army carry out the orders of the commanding general, so do the ideas of God carry out the designs of the Mind conceiving them. These ideas bring their redeeming graces into the consciousness of every one who will receive them. They impart divine power, and have dominion over all the earth. They constitute the blessedness of infinite goodness, and are unceasingly bent on errands of mercy. We open our thought to infinite knowing as we receive the ideas of divine Mind. They enlarge our capacities; they enlighten our consciousness and illumine our pathway; they give us courage, strength, dominion; they teach us patience, forbearance, kindness; they lead us into peace, joy, love; they dissipate ignorance and mystery and make plain the wonders of God and the universe; they impart the consciousness of all that God gives and of all that man can receive. As we grow into the Christ-consciousness we become, here and now, the possessors of the salvation for which the wisest through all the centuries have vainly striven. As we assimilate this spiritual consciousness, we come to understand the egoism of

Digitized by Google

God; and it is then we find it possible now to become so unconscious of mortal self that we may indeed be "absent from the body" and "present with the Lord," know only the divine selfhood, the man who is never apart from God,—who has no intelligence, no thought, no being apart from good, Life, Truth, and Love.

Manly Qualities

MANA WILLIS FISHER

A SUNDAY school teacher was called upon to teach a class of boys of almost high school age who were just beginning to attend the Christian Science Sunday school. During the early part of the week preceding her first lesson, she felt doubt as to her ability to control this class, but after prayerful work on the question she awakened to the realization that it would be impossible for her to control any one, since God governs; that God had much good for those boys, and that a mist in her own thought or in that of another could not come between the class and this good. On Saturday she stopped to exchange greetings with a friend who was also a Sunday school teacher, and who repeated a helpful thought which was expressed at a teachers' meeting she had attended, namely, that a boy is an undeveloped man and has all the manly qualities, which simply need to be unfolded in the right way; his character as a man depends alone upon the qualities manifested. The few moments of conversation furnished the inspiration needed, and the teacher realized that the words spoken were as a message from divine Love.

As the class was faced the following morning, the doubts returned, and the result was nudging, pinching, and inattention; but a prayer silently breathed to the source of harmony brought to remembrance the conversation of the day before. The teacher felt that the precept had been given, and that it was a privilege to put it into practice. The boys were asked to look up the first commandment in the Bible, and the definition of God on page 587 of Science and Health: then the class talked of what God is and of what man is. Order was at once restored, and many manly qualities were called forth by the definition of God as here presented.

After three lessons on this commandment the development seemed remarkable to the teacher. That she might ascertain how much the pupils were grasping and retaining, they were asked to bring to Sunday school an outline containing their impression, first, of God; second, of man as God's image; and third, of manly qualities derived from the infinite Mind. Some of the thoughts expressed were as follows: God is Principle, and man must be the idea of Principle. One manly quality derived from this was given as system or order. In like manner, man was seen to be an idea of Mind, and a manly quality reflected from Mind is thoughtfulness or wisdom. God being Spirit, man must express spirituality, purity; because God is Life, man lives, and a true reflection of Him is found in health; God being Truth, man must be truthful, therefore he reflects honesty and sincerity; since God is Love and man loving, he is kindly, or as the Bible expresses it, has loving-kindness. God being substance, man is substantial and manifests strength; God being intelligence, man must be intelligent, and a manly quality was seen to be alertness.

The manner in which these characteristics of man were found by the boys, brings out a very important point in the by-law on the Sunday school, namely, "They [the children] shall be instructed according to their . . . ability to grasp the simpler meanings of the divine Principle that they are taught" (Manual, Art. XX, Sect. 2). The study of these qualities, connected with the first commandment, put these truths in a simple form that could be used by the boys daily, and it entirely reversed the seeming discord. In "Unity of Good" (p. 20) our Leader says, "We undo the statements of error by reversing them." The belief of superabundance of boyish spirit was reversed in this case by the study of manliness.

Our Wayshower, Christ Jesus, always reversed the error and brought out man's reflection of a divine quality. A few of the many instances given us are referred to here. "A man sick of the palsy," too weak to walk, had been carried to Jesus on a bed, but Jesus, realizing where true strength came from, said, "Arise, take up thy bed, and go unto thine house." The bed had carried the man, now the man was able to carry the bed and manifest the godlike quality of strength. Jesus found Peter's wife's mother lying sick and being waited upon, but when he turned her to the source of all health, the case was reversed, for she arose and ministered unto others. In the Old Testament we read that when approached, lepers were compelled to call out, "Unclean, unclean," but Jesus' words as he brought forth purity were, "Be thou clean,"—clean of thought and clean of body.

Man as God's image must express all the attributes of God. Many times those of greater experience or years are grateful to be near when the vision of Truth is revealed unto "babes."

"Not conformed to this world"

W. S. ILIFF

RECENTLY I had to take a sea journey of two days, and as I had always suffered severely on such occasions before I knew of Christian Science, this experience was of great value and help to me. True, I had already partially demonstrated over seasickness, but on this occasion the wind was blowing almost a gale on the sailing day, and the fear that I was to suffer discomfort seemed persistent, especially as the sea was so rough. However, I took the question to Truth, knowing that there alone could be found the solution of the difficulty, and speedily there came the answer, "Be not conformed to this world: but be ye transformed by the renewing of your mind." Instantly it became quite clear to me that it was not a question of the ship or the sea, nor yet the climatic conditions, but solely a matter of whether I was going to conform to the world's belief in seasickness, or whether, with a slight understanding of the truth, I was going to be transformed by the renewing of the mind, and thereby able to demonstrate what the perfect and acceptable will of God is.

The decision was quickly made, and after thanking our loving Father for this wonderful Science which has made possible such better conditions, I set to work to deny the error and affirm the truth. Very soon a favorite text came into my consciousness,—"The heavens declare the glory of God; and the firmament showeth his handiwork." Before the vessel left the wharf I was conscious that the trip was going to be one of joy and thankfulness, and so it proved, for I was able even to rejoice at the waves.

This experience helped me considerably, not only for the overcoming of the error, but for the proof it afforded of the ever-presence and all-power of Christ, Truth. Mrs. Eddy writes on page 230 of Science and Health, "If sickness and sin are illusions, the awakening from this mortal dream, or illusion, will bring us into health, holiness, and immortality;" and she adds, "This awakening is the forever coming of Christ, the advanced appearing of Truth, which casts out error and heals the sick."

Selected Articles

[Editorial in *The Review*, Ottumwa, Iowa]

It will not do for the uninitiated, the casualist, to pass criticism and present the assumption that there is fakism or superficiality in the doctrine of Christian Science. Nevertheless, there are some things that confront the incredulous which are worthy of consideration as fact. Hundreds of thousands of men and women throughout the world have accepted Christian Science as the right and true way to relieve distress of illness by healing through prayer, also as a means by which man may come into close communion with his creator and find a way to salvation.

Then there are such apparently logical and practical thoughts in the Science way, if one can accept even partially the view of the lecturer who spoke recently at the Grand. We were refreshed by the beauty, the optimism, the persuasive sweetness of the hour occupied by the speaker, who was exquisite in his language to convey thought, correctly poised and delightfully eloquent in dramatic expression, word, and gesture; a forceful personality that carried impressive effect to his audience, which was at once attentive and analytic, and studiously devoted to the theme of its guest.

The event was enriched by the perfect accord of all essentials contributive. In many passages the lecturer made telling scores in support of Christian Science, its benefits, its powers, failing at no period to complete with well-rounded phrase the force of his deduction. With reference to sickness, the confidence with which Christian Science is recommended by the power of prayer is amazing to one not of the belief. Sickness in causation is mind illness. Speaking of prayer to heal, an example to illustrate the necessity for the right sort of prayer was given of two men: one, standing in the street, earnestly implores the bank to give him his money; then the second man, passing into the bank, fills in his check, signs it properly, and presents his claim for his money according to the rules—the science—of doing the thing. So, a person may be earnest and sincere and yet be without knowledge to secure that which he desires. Healing by prayer is possible when an understanding of how to ask for the blessing is possessed.

The heart of the lecture was in the asseveration, first, that ill health is due to mortal mind—cause, for which divine healing may be had in proportion to the degree of comprehension of the meaning of true prayer is offered; secondly, that the salvation of man comes by faith in God based on an understanding of the law of the divine Being. The lecturer contradicted, in a degree, the opinion that God inflicts sickness or visits death as punishment. He also rapped drug medicine hard when he asked which is right, the system of doses used in one generation that is discarded in the next and successively, or the one now in vogue.

[Editorial in *Mankato* (Minn.) *Free Press*]

In *The Lincoln Journal* exception is taken to the attacks of the Rev. Mr. —— on the Christian Scientists. It is hard work for this evangelist to preach a sermon without abusing people. That is not right. In his recent Washington service he attacked the Christian Science faith, and spoke disrespectfully of those who embrace the doctrine of divine healing. In olden times the leper was cleansed, the lame man threw away his crutches, and the temperature of the one sick of a fever at once became normal.

Christian Science tells us that this potential element of physical healing and inward grace is in the world today as full and free as it ever was. Is there any reason why it should not be? If this evangelist is observing, he will have to admit that Christian Scientists are peaceful, law-abiding citizens. They mind their own business. They do not quarrel with other religions. They are more faithful in church attendance than the members of most of the orthodox churches. When reviled and persecuted, they revile not again. If this critic honestly believes that the sick and sore of Palestine, nigh two thousand years ago, touched the hem of the garment of Jesus of Nazareth and were made whole, he should not too fiercely deny the claims of those who believe in this healing. "Lo, I am with you alway," is demonstrably true. Although we Christians are unable to agree on all matters of belief, we should at least endeavor to be kind and courteous to one another, else we are not Christians.

✧

[Harry I. Hunt in *Passaic* (N. J.) *News*]

Your paper quotes a clergyman as saying in a recent discourse that Christian Scientists "absolutely deny the existence of God." It was daring in this critic to add to this astonishing statement the assertion that he had made a study of the subject, for the reason that if there is one thought which underlies and permeates all of the teachings of Christian Science, it is this: God is! Christian Scientists not only do not deny the existence of God, but they consistently and continuously affirm the all-power and all-presence of one infinite God.

Christians of every denomination acknowledge that God is the only cause and creator. So do Christian Scientists. Christians generally accept the New Testament teaching that God is good, that He is Spirit, Life, Love, Truth. So do Christian Scientists. All Christians admit that God is the intelligence which directs and governs the universe. Christian Scientists admit this also, and declare that this intelligence is the eternal Mind, or divine Principle, Love. It must be clear, therefore, that the clergyman's statement is wholly incorrect, both with respect to the Christian Science view of God, and also with respect to his statement that Christian Science is not Christian. The teachings referred to above are those of the Founder of Christianity, and in accepting them and in striving to obey the commands of the Master, Christian Scientists offer proofs of their service in doing the works Jesus said his followers should do.

As for the further assertion, that Christian Science is a combination of pantheism and perverted Hinduism, it is plain that the critic is ignorant of the teachings of this Science. Pantheism fuses or confuses God with matter. Christian Science teaches that as God is Spirit, as the Scriptures declare, matter cannot be the product of Spirit; that intelligence is not to be found in non-intelligence. Christian Science bases all action upon the one Mind, and declares with Paul, that the human or "carnal mind is enmity against God."

In closing, may I add just a word,—that Christian Scientists choose the treatment of Christian Science in preference to that of *materia medica* because they have found it more reliable and more potent to heal.

✧

[Charles W. J. Tennant in *South London* (England) *Press*]

In a recent issue there appears the report of a lecture on Christian Science by Dr. ——. A better designation for the article would have been, "A lecture on what Dr. —— imagines Christian Science to be," which is a very different thing. If one were to reverse every statement the doctor made on the subject, a much more correct view of it would be obtained.

A good example of the doctor's perversion of the Christian Science teaching is given when he says: "If we have accepted Mrs. Eddy's myth that God is all, in the sense that He is

Digitized by Google

everything in time and space, we must conclude, therefore, that God is evil, for evil is a thing in time and space." Christian Science teaches that God is Spirit, and that His universe is spiritual; and since He is infinite, eternal, and immortal, His universe must express these conditions. Time and physical space, being concepts of the finite human mind, the carnal mind, do not express in any way reality in an absolute sense. On page 300 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes: "The temporal and unreal never touch the eternal and real. The mutable and imperfect never touch the immutable and perfect. The inharmonious and self-destructive never touch the harmonious and self-existent."

It is strange that our critic objects to Mrs. Eddy's definition of God as "divine Principle" (Science and Health, p. 115). If he would take the trouble to look up the meaning of the word in any good dictionary, he would find that it means cause, in its widest sense; foundation, source, or origin. Surely it is not difficult to think of God as any one of these. Christian Science teaches that God is Person in an infinite sense, but not in any humanly circumscribed sense. Mrs. Eddy discovered the divine Principle by which Jesus performed his mighty works, and which can be demonstrated by any one to the extent that he has that Mind in him "which was also in Christ Jesus." Today this Science is being judged by its fruits, the healing of suffering humanity, and those who are investigating it throughout the civilized world with an open mind, are being healed as of yore when the great Physician dwelt among men.

Our critic finishes his lecture with the following remark, "I offer to Christian Scientists the God of the Bible, who, in answer to prayer, can and does cure the sick, with or without remedies, as may please Him." Let me say to him that this changeable concept of God is not the God of the Bible, for there we are taught that He is unchangeable, "the same yesterday, and today, and forever;" therefore, if He heals the sick without material means in one generation, He will do so throughout all generations.

✧

[W. C. Williams in *The Star*, Baltimore, Md.]

As you have given space to a statement of the opposition to the bill in the New York legislature legalizing the practice of Christian Science, kindly allow room for a statement from a Christian Scientist. The opponent quoted gave as his reasons for opposing the bill the protection of the public health and the safeguarding of children. It is well known that the health and longevity of Christian Scientists are at least equal to the average, and that of their children far beyond the average.

The Christian Scientist has, as a rule, tried all other systems of healing before turning to Christian Science treatment; after proving its superiority, they would be criminal parents who willingly allowed their children to have other treatment. It is admitted by officials that Christian Scientists are more prompt than the average in reporting cases of so-called infectious diseases. They know as much about diseases as other citizens, and as it is a rule, owing to the present laws, that they give contagious diseases into the hands of physicians, a physician is called to diagnose such suspected cases at once.

This opponent contends that "the only thing the state asks of persons practising medicine is that they have a minimum educational requirement showing their capability of diagnosing disease." This minimum is usually four years' study, plus experience, and according to the recent hospital case in New York, even this does not go very far in diagnosing disease. An investigation of Bellevue hospital showed that 47.7 per cent of the diagnoses of diseases in that hospital were erroneous, and the superintendent said that that was a good showing.

In "Christian Science: Its Legal Status" (p. 31) Judge Clifford P. Smith says: "The teaching of Christian Science concerning the cause and cure of disease is radically different from the theories represented by a board of medical examiners, and it certainly ought to be different if Christian Science is to succeed where other methods have failed. To compel Christian Scientists to study medicine would involve the absurdity of requiring the practitioners of a system which has cured and can cure malignant cancers, inaccessible tumors, and the like, to study the teachings of a system which has no remedy for such diseases." Christian Scientists claim that disease is not real in that it was not created by God, and that God made all that was made, but from the material standpoint disease seems very real to the sufferer.

The critic of Christian Science would lead the public to infer that in most states it is held that the practice of Christian Science is the practice of medicine. The opposite is the fact in most states. The opposing legislator advises that Christian Scientists should study and pass the state medical examination, and use it if they choose. As Christian Science has cured diseases pronounced incurable by physicians, it would be just as pertinent that the latter be forced to study Christian Science before being allowed a license. He cites one case of diphtheria that was lost under Christian Science treatment; he does not state how many were lost under medical treatment. Chief Justice Clark said: "This is a free country, and any man has a right to be treated by any system he chooses."

✧

[Charles E. Jarvis in *San Luis Obispo* (Cal.) *Telegram*]

In a recent issue of the *Telegram*, an evangelist replied to the question, "What is Christian Science?" by rendering a definition which he admitted to be his own opinion about the subject, but in reality it only amounted to a display of blind prejudice and ribald wit.

Assuming that the question was asked in good faith, will you kindly state that Christian Science is a modern term applied by Mrs. Eddy to her discovery that the laws of God as understood, taught, and practised by Christ Jesus were equally available and demonstrable to the solution of present-day problems. Her teaching is preeminently Christian in conformity with the definition of the word in Webster's dictionary, namely, "One who believes or professes or is assumed to believe in Jesus Christ and the truth as taught by him," and it also measures up to the test of a Christian established by Jesus himself in his statement, "He that believeth on me, the works that I do shall he do also." Besides, it is scientific, for it proves every step of its way according to rules as exact and demonstrable as the rules of mathematics.

On page 126 of Science and Health Mrs. Eddy says: "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority."

✧

[S. T. Downs in *Bedford* (Ind.) *Democrat*]

A sincere study of Christian Science is attended by a marked spiritual uplift and moral regeneration which is freely acknowledged and commented upon by all classes of people who are in a position to observe and know. Christian Science, in other words, being demonstrable truth, not only awakens the desire to be more godlike, but it furnishes the positive rule by which one may grow, gradually perhaps but surely, "unto

Digitized by Google

the measure of the stature of the fulness of Christ." It is thus that Christian Science is reforming mankind of all manner of sin, and healing every known disease, and this healing ministry extends to hundreds of thousands of grateful mortals in all parts of the world.

❖

[Charles E. Jarvis in *Long Beach* (Cal.) *Telegram*]

It is not altogether a pleasing spectacle to witness the denunciation of the followers of one Christian religion by another of that faith, even though there may be differences on certain doctrinal points. The report which appeared in a recent issue of the *Telegram*, of an address delivered in your city by an evangelist, contains some very unkind, uncalled-for statements concerning Christian Science, and I am sure you will be glad to offer your readers a brief word of correction.

If memory serves me aright, the Christian church was at one time referred to as the Campbellite faith; and while the law of gravitation has seldom been referred to as Newtonism, it would be quite as logical as to designate Christian Science by the term "Eddyism," a little habit indulged in by the critic in the present instance. The speaker asserted that Christian Science appeals "to those with education, wealth, leisure," as if these were conditions of discord which mankind is seeking to overcome. As a matter of fact, Christian Science appeals to every human being who seeks freedom from bondage to material beliefs.

Just as "God is no respecter of persons," and as Christian Science teaches the truth about God and man's relationship to Him; and as Christ Jesus has promised each one of us who believe in him that this truth will make us free, and as Christian Science is proving daily and hourly that the promise is true,—just so it is that people in every walk of life have found the "pearl of great price" in the spiritual freedom of the sons of God, and they are filled with gratitude and joy over the glorious discovery. Christian Science healing does not imply the destruction of physical discord alone, for that is the least of its accomplishments, and in reality can prevail only when wrong thought-methods have been overcome. Christian Science healing means the overcoming of the entire train of evil, and with its disappearance from human consciousness improved bodily conditions are manifested.

While Christian Science does offer freedom from bodily suffering and disease, and it hopes in time to approximate to a greater degree that understanding of God's law which enabled not alone Jesus but his immediate followers for three hundred years to raise the dead, it does not, on the other hand, dispense with or offer freedom from retribution. Mrs. Eddy tells us on page 36 of the text-book, "Science and Health with Key to the Scriptures": "To remit the penalty due for sin, would be for Truth to pardon error. Escape from punishment is not in accordance with God's government, since justice is the handmaid of mercy."

❖

[David Anderson in *The News of the Week*, Geelong, Australia]

Adverting to a review in a recent issue of *News of the Week*, in the course of which reference was incidentally made to the Christian Science religion as characterized in large degree by an exaltation of thought produced by mental concentration and resulting in a form of autohypnosis, David Anderson writes:—

The teachings of Christian Science inculcate that exalted thought which is a true apprehension of God and of the universe He created; a right understanding of God as infinite, omnipotent Spirit, and of man, made in God's image and likeness, as spiritual and inseparable from his creator. These teachings also make it clear that the state of exaltation which arises from a consciousness of the spiritual facts of being is neither consequent on nor maintained by any form of sense-concentration. Suggestion or belief is no part of Christian Science; and mesmerism or hypnotism, whether induced consciously or unconsciously, is repudiated and condemned in the Christian Science text-book, "Science and Health with Key to the Scriptures."

It may be added that the mental state which tends to the reception of Christian Science is indicated by Mrs. Eddy in the following sentence from page 323 of that work: "When the sick or the sinning awake to realize their need of what they have not, they will be receptive of divine Science, which gravitates toward Soul and away from material sense, removes thought from the body, and elevates even mortal mind to the contemplation of something better than disease or sin."

❖

[Willis D. McKinstry in *Independence* (Kan.) *Reporter*]

The Rev. Mr. —— has a misapprehension of the attitude of Christian Science toward the Bible. Christian Scientists have the deepest reverence for this Book of books, which is given first place at all their services. The teachings of Christian Science are based upon the spiritual truths which the Scriptures contain. The Mosaic command, "Thou shalt have no other gods before me," is a fundamental of Christian Science.

Science and Health, written by Mrs. Eddy, has unfolded to humanity God's infinite law of love as recorded in Holy Writ. It is a Bible help, a "Key to the Scriptures;" and because of its spiritual interpretation of the Bible, unnumbered thousands have learned more of God's omnipotence, and so reflect more of the healing Christ.

No doubt our critic has many Bible helps in his library, and to this no one objects. Then why should it be thought that Christian Scientists are "fooled" because they have a commentary to the Scriptures which enables them to keep the command, "Love the Lord thy God with all thy heart, and with all thy soul, . . . and with all thy mind; and thy neighbor as thyself"?

❖ ❖ ❖

[Written for the *Sentinel*]

The First Commandment

CHARLES C. SANDELIN

One God there is, a God of peace,
Whose watchful care doth never fail.
Truth maketh every ill to cease;
True worship shall indeed avail.

Beware thou, then, lest idols take
Truth's place in thy adoring heart,
Till thou to them thy homage make,
And from the chosen path depart.

When thou dost fear an evil hour,
And turn'st from God to idols vain,
Is there indeed an evil power
To bring to God's own children pain?

Or if thou seem'st in bonds to be
To sin or sorrow, want, disease,
Canst thou therein no idol see,
That thou dost worship on thy knees?

As impotent as gods of stone,
Thou givest them their vaunted strength;
Seek thou the God of truth alone,
And they to earth shall fall at length.

Editorial

"For we be brethren"

NOTWITHSTANDING statements to the contrary which have been made by enemies of Christian Science, the attitude of the followers of this religion toward other churches has ever been one of brotherly love, kindness, and consideration. Those who have been compelled, because of their change of views, to sever their connection with other religious bodies, have invariably taken this step, so far as their own part in the matter was concerned, in quietness and peace, and much in the spirit in which Abram parted from Lot, when he said: "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren."

Again, whenever Christian Scientists have been compelled to define the difference between their own faith and that of other religionists, they invariably have done so in a spirit of Christian fellowship. They have recognized the utter folly and wickedness of indulging in intemperate speech and vituperative argument, and the absurdity of such methods when applied to the settlement of differences of opinion in regard to religious matters. They have taken the peaceful way in their dealings with others, because it is the Christian way, and because it is the only way in which there is likelihood of arriving at the truth of any matter on which individuals hold divergent opinions.

The important question about any religious teaching is, Is it true? and the answer to this question can be obtained only through patient, dispassionate investigation. Christian Scientists do not obtrude their beliefs upon those of other faiths; and while it is true that they are zealous in providing means by which every one may know what Christian Science is, they are careful to do this in such a way as will not offend any one, or give cause for complaint. That others have not always seemed disposed to show an equal consideration, so far as strictures on Christian Science is concerned, is to be regretted; but there has never been a time when any one who has caught the faintest ray of Christian Science, has felt the necessity for doing other than simply to correct the misstatements which have been made about his religion. To make these corrections has not been difficult, because Christian Science is not a hidden mystery, and Mrs. Eddy in her various writings has touched upon every phase of its relation to human affairs. Then, again, Christian Scientists are proving from day to day the truth of their religion through demonstration of its Principle, and in doing this they are content to rest upon the Master's assurance, "By their fruits ye shall know them."

In looking back over the work of the early Christians, we do not find that they were given to a great deal of preaching or talking without "signs following," or that they expected their hearers to be made holy by vituperation and abuse. Those who indulge in such things today might well change their ways, and pattern after the Master, who invariably showed forth the truth of his preaching by "signs following." It was not sufficient for him, nor for the early Christians, that the mere ecstasy of emotion should pass current as the sign that men had been made Christians. In those days men were tried by their works, and Jesus asserted that what he had done should also be done by them that believed on him.

Mrs. Eddy has said, "When these things cease to bless they will cease to occur" (The First Church of Christ, Scientist, and Miscellany, p. 143), and she drained the cup of calumny and persecution to its very dregs, confident in the ultimate triumph of Truth and content to abide its coming. Did not the Master say, "In the world ye shall have tribulation: but be of good cheer; I have overcome the world"? There is only one thing to do, no matter how heavy the pressure of malice and injustice, and that is, to keep on loving—yes, even our enemies! "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind;" and we can well be generous with those who mistakenly pursue the opposite course, for after all is said and done, "we be brethren."

ARCHIBALD MCLELLAN.

❖

Truth's Authority

NOTHING was more marked in the life of the Master, or more astonishing to those about him, than his attitude of command. In the native freedom and fearlessness with which he was wont to face every opposing force, he restaged the story of David and Goliath, took the part of the shepherd boy, and with the word of Truth overthrew, not a single son of Anak, but all the aggregated hosts of evil; so that at the close of the day of Love's world-triumph he could say of his mighty undertaking, "It is finished." Well might both his enemies and his friends marvel as they looked upon this blend of meekness and might, when they saw one whom they knew as "the carpenter's son," exercising an authority which they had thought of as belonging to God alone.

Although we better understand the Master's divine nature, and the naturalness of his achievement, this marvel still remains for us when we remember that the regal sovereignty of Truth was not only the constant theme of his discourse, the crowning fact of his demonstration, but that he unequivocally conferred his authority upon whosoever might become his true disciple—upon you and me, if we merit this name! Surely no namable thing could express a farther removal from the average Christian's expectation and sense of privilege than this fact; and yet it is the design and destiny of Christian Science not only to reimpress this wonder upon human thought, but to make it appear again in human history. "I give unto you power . . . over all the power of the enemy." This is the entirely adequate equipment of authority supplied to every true Christian believer, and this the tremendous use of it which is demanded of him.

But what is authority? We may have rightly thought of it as the privilege of the exercise of power, but how varied its sources in human belief, how conflicting the results in human experience. Every command of world history that has not had the approval of those commanded, has been of the nature of an autocratic imposition, and yet we can readily understand that in many instances this may be the lesser of two evils. In the case of the immature and the unresponsible, the vicious and the depraved, parental or communal authority rightly imposes the rule of a higher sense irrespective of their will. Among the normal, however, the only legitimate authority, aside from that conferred by the free choice of the people upon their representatives, is the authority of the demonstrable apprehension of Truth.

Our Leader says that with "spiritual understanding and the consciousness of man's dominion . . . you can speak 'as one having authority'" (Science and Health, p. 14). This is the authority of light over darkness, of truth over error, and its only effective executor is unselfish good will. This explains the inseparability of Truth and Love. The authority of Truth is always the agent of beneficence. It subserves and can subserve only good, and this is the nature and source of the authority with which we are endowed in Christian Science; it is the light-giving power of the Christ-idea in men.

Digitized by Google

Though small and of modest setting, how instantly and efficiently mirroring surfaces speak and act for the sun!

Subjection to personal authority is sure to become trying if not unendurable. This is the testimony of every parent, guardian, and teacher when he recalls how much of wilfulness and perchance temper, how much of error of judgment and pride of power, has entered into his control of those subject unto him. Even God is likely to be termed autocratic and unjust by those who think of Him in an anthropomorphic way. When, however, He is known as infinite Truth and Love, the rightfulness and desirability of His rule is unquestioned, since, as all know, subjection thereto means present and eternal gain.

This was the authority of Christ Jesus. This the authority of that faith which, as the writer to the Hebrews has said, subdues kingdoms, works righteousness, and out of weakness is made strong. This is the only authority we are commissioned to exercise in Christian Science. The demonstrable Christ, Truth expressed in wisdom's loving way, is irresistibly winsome. It is the "power of God unto salvation."

JOHN B. WILLIS.

Paschal Lessons

As the seasons come and go, we have many reminders that their deepest lessons lift thought out of materiality and bid us lay hold upon things spiritual and eternal. The Easter season has its roots deep in the national existence of the Hebrew people, to whose religious literature we owe so much. In Science and Health (p. 559) we read that the bitter herbs eaten at the Paschal meal by the Israelites symbolized their experiences in seeking their freedom, and "prefigured this perilous passage out of bondage into the El Dorado of faith and hope." This reminds us of their marvelous deliverance from the most terrible bondage, when the faith of their ancestor Abraham sprang up anew in the consciousness of Moses, who led them to freedom. It is scarcely possible to overestimate the greatness of his achievements, for Mrs. Eddy says (Science and Health, p. 200), "Moses advanced a nation to the worship of God in Spirit instead of matter, and illustrated the grand human capacities of being bestowed by immortal Mind." He it was who, after his communion with God in the desert, inspired his people to seek their freedom in reliance upon divine aid, and it is little wonder that after long centuries the passover is still commemorated by the Jews and by others of related faiths.

Christian Scientists gladly acknowledge their debt to all who have helped to open up the way from sense to Soul, and with deepest reverence trace the footsteps of those who have won spiritual victories and recorded their struggles and triumphs for the guidance of others who should come after them. As we read the story of that first passover, mere credulity must give place to faith in man's divinely bestowed possibilities when acting under spiritual law. In Exodus we read of the flight of the people on foot, six hundred thousand men, besides children, also their flocks and herds. We are told of the pursuit by Pharaoh and his army, his "six hundred chosen chariots," with "captains over every one of them." Need we wonder that when the people looked back toward their pursuers, they cried out that it would have been better for them to have perished in Egypt than to have sought freedom at such risk. But Moses trusted Truth, and he bade them have no fear; and as no one ever trusts God in vain, their deliverance came, so that they could sing with joy, "Who is like unto thee, O Lord, . . . glorious in holiness, fearful in praises, doing wonders?"

As the years rolled on, it would seem that each passover must have meant more and more to the people, that their grasp upon freedom would have grown more vital because it was becoming more spiritual. But such was not the case, save for the faithful few in all the centuries who toiled to keep the light of Truth burning. When Christ Jesus came he offered real freedom to all mankind, but his own people rejected it, declaring they were not in bondage, though a foreign despot ruled over them, and, worst of all, sin, disease, and death held them in hopeless subjection. Great as was the deliverance at the passage of the Red sea, it meant vastly less to the race than did the healing work of the Master, which, as understood in Christian Science, brings to each one healed a sense of man's priceless birthright of health, holiness, happiness,—in a word, real freedom!

The earthly culmination of Jesus' career gave a new meaning to the passover, to all things indeed, for it lifted thought to ever present divine reality, which needs no symbol for its interpretation. To the Christian Scientist, Easter tells of the forever triumph of Life as God and His reflection, and bids us measure ourselves anew at each recurring anniversary, that we may find to what extent we have "risen with Christ" above the belief of mind submerged in matter, and subject to evil either through love or fear of it. That professed Christians have to a large extent missed the lessons of Eastertide offers the strongest reason why Christian Scientists should prove their love and loyalty to the Master by heeding more earnestly Paul's counsel to "seek those things which are above."

ANNIE M. KNOTT.

Among the Churches

Current Notes

SCRANTON, PA.—The beautiful and imposing new home of First Church of Christ, Scientist, on Vine street, was used by the congregation yesterday [Feb. 14] for the first time. Formal dedication of the church will take place after it is completed in every respect and all the bills are paid, a rule of the Christian Scientists being that no church shall be dedicated until it is free from incumbrance. The new church, which was built at a cost of eighty-five thousand dollars, is undoubtedly one of the finest edifices in the city. It is located on the site of the old Scientist church. The main auditorium has a seating capacity of four hundred and sixty-five, but sliding doors permitting the use of the vestibule, increase the capacity to seven hundred and fifteen. A Sunday school room of equal size occupies the basement, adjoining the library, conference-rooms, etc.—*The News.*

ALASKA.—There is a regular local meeting of Christian Scientists in Valdez, and it is perhaps the strongest numerically and financially, with one exception, of any of the four religious organizations that meet regularly. Its personnel is made up of the very best element residing in Valdez. Judge Brown is the first reader, and a graduate of a musical conservatory of New York city is the soloist. The congregation one Sunday recently numbered twenty-eight. The services are held regularly every Sunday morning and Tuesday evening. The hall where the services are held is rented on Wednesday evening, and for that reason the testimony meeting has to be held on Tuesday.—*Correspondence.*

PORTLAND, MAINE.—Services will be held for the first time in the auditorium of the new fifty thousand dollar Christian Science church edifice, 61 Neal street, next Sunday [March 7]. The dedicatory service will not be held until later, as it is a rule of the denomination not to dedicate church edifices until they are paid for. The seating capacity is about six hundred

Digitized by Google

and fifty in permanent pews. By an ingenious arrangement the partition between the foyer and the auditorium can be raised up under the gallery, thus opening the foyer into the auditorium and providing space for about one hundred more seats.

The first public Christian Science services in Portland were held in the Cahoun Block, corner of Myrtle and Congress streets, in 1894, although First Church of Christ, Scientist, was not organized until 1896. Soon after this, Second Church was organized, holding services in the Perry Block, near the corner of Congress and High streets. In July, 1903, Second Church disbanded and joined with First Church. Larger quarters were soon required, and Kotzschmar Hall was secured, where Sunday and Wednesday evening services were held until 1910.

The site at 61 Neal street was purchased March 31, 1908, and ground was broken for building June 21, 1909. The service at the laying of the corner-stone was held Jan. 1, 1910. On Sunday, July 1, 1910, the Sunday school room was opened for church services and has been used for church and Sunday school up to the present time. Work on the superstructure was commenced during the latter part of July, 1914.—*Portland Express-Advertiser.*

CEDAR RAPIDS, IOWA.—We will all have to take off our hats to our friends the Christian Scientists, for they have built the prettiest church edifice in Cedar Rapids so far. It looks so good outside that some will be tempted to look inside.
Cedar Rapids Republican.

OKMULGEE, OKLA.—Christian Scientists have purchased a lot at the corner of Eighth and Seminole, the deed being made today [Feb. 26].—*Okmulgee Democrat.*

❖

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Montreal, Canada

At Windsor Hall, Virgil O. Strickler delivered a lecture on Christian Science. He was introduced by the Rev. Mr. Poulson as follows:—

Although not a member of the Christian Science church, but a deeply interested student thereof, it was with pleasure that I accepted the invitation from First Church of Christ, Scientist, to introduce the speaker of this evening.

If there is one star in the religious world today that is attracting more attention than any other, it is the star of Christian Science. The rapidity of its rise, its magnitude, and the brilliancy of its light, have caused a general leveling of the most powerful glasses upon it. It is not my purpose to enlarge upon this teaching; but let me say that the success of Christian Science lies almost solely in the fact of its being an active religious organization in which to believe is not enough; there must be "signs following." The churches of today are all ready and only too faithful to obey the divine command to preach. There is no lack of preachers of high standard, trained and educated. Money, time, and energy in abundance are spent in the production of preachers; but why the latter part of Christ's command should be censored by the churches, is a mystery,—"Heal the sick, cleanse the lepers, raise the dead, cast out devils." Surely the church does not mean to say that there are no sick to heal, no lepers to cleanse, no dead to raise, no devils to cast out.

Mrs. Eddy, the Discoverer and Founder of the Christian Science church, was enabled to see, and that in no uncertain way, that the power exercised in Christ's time is unchangeable, and has not only proved by her own life, but also by the lives of thousands of her followers who have studied her teachings, that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Jesus Christ is "the same yesterday, and today, and forever," and this fact is proved by thousands, who gladly and willingly testify to sickness healed, hopes revived, despair dispelled, and that great bane of human life, fear, banished by the power of Truth.

The purpose of this lecture is not to debate or yet to abuse other systems of religious thought and belief, neither is it a sheep-stealing expedition. Christian Science neither believes in nor practises any of these. No, the lecture is to state the truth of Christian Science honestly,—what it is and what it stands for.—*Correspondence.*

❖

Ossining, N. Y.

A lecture on Christian Science was given by Prof. Hermann S. Hering at the Parthenon Theater, and there were about four hundred persons present. Henry Israel, editor of *Rural Manhood* and secretary of the county work department of the international committee, Y. M. C. A., introducing the lecturer, said:—

It is a real pleasure to refresh my mind with the delightful memories of my stay of two years and a half in Concord, N. H., as secretary of the Young Men's Christian Association. Particularly outstanding is the vivid recollection of the godly woman, Mrs. Eddy, who demonstrated her benevolent spirit, while on a visit to her home, with a check of five hundred dollars to the association building fund. Upon a further request she supplemented this gift with another generous contribution. I am also glad on this occasion, as a member of an evangelical church, to testify to the splendid demonstration of the healing power of faith and prayer with which I was impressed. I am sure that evangelical Christianity will do well to recognize more fully that healing element of the teaching of our Lord to which Christian Science gives such emphasis.—*Ossining Citizen.*

❖

Indianapolis, Ind.

At a lecture on Christian Science by Bicknell Young in Second Church edifice, the Rev. Frank S. C. Wicks of the Unitarian church introduced the lecturer as follows:—

I accepted with much pleasure your invitation to be here this evening to introduce the one who is to address you. It is to be hoped that we have come here with only one motive,—a real desire to learn the truth; with the faith that could we but know the truth it would set us free,—free from all the evils that pursue human life. The man-made walls of sectarianism disappear when we no longer

Digitized by Google

recognize them, and we stand united by our common desire to find the truth and incorporate it into our lives. My appearance here as an individual has little importance, for as an individual I am but a grain of sand on the shore of the infinite sea; but my appearance here as a symbol is of significance, since I symbolize the new spirit that has entered into the relations of church to church.

We recognize three stages in the history of the relations between churches of differing convictions. The first stage was that of antagonism, when each sect claimed that it alone had the truth, and all others were in error. Thus it was that bitterness, hatred, and persecution followed in natural course. This stage gave place to the era of toleration. Against the black background of bigotry, tolerance seems to shine as a virtue; but in the white light of today, it is seen but as the step toward a virtue. That brings us to the third stage, which is just beginning,—sympathy between religions. This sympathy is based upon the recognition that Truth is infinite, and in seeking to reach and bless mankind it takes many channels. We know now that our one channel cannot contain all the waters of life.

I am glad to feel that it is not sympathy alone that binds you and me. As a Unitarian I stand with you on what I believe is your fundamental faith,—the belief that there is but one Principle in the universe, and that Principle is good. Neither of us finds it necessary to bring in a devil to explain what is called evil. We do not find a bit of earth large enough for a devil to stand upon. Each of us explains the universe in terms of goodness.

In introducing the speaker of the evening, I can pray only for the grace of an open mind. Let us divest ourselves of all prejudice and prepossession, and listen for the truth with the conviction that the truth will make us free.

Correspondence.

Lectures to be Delivered

Appleton, Wis.—Willis F. Gross, Congregational Church, 8:15 p.m., April 30.

Arcata, Cal.—Clarence C. Eaton, Pettengil-Minor Theater, 8 p.m., April 29.

Barre, Vt.—Clarence W. Chadwick, Howland Hall, 8 p.m., April 27.

Bay City, Mich.—William D. McCrackan, Washington Theater, 8 p.m., April 27.

Bloomington, Ind.—Jacob S. Shield, Crescent Theater, N. College avenue, 8 p.m., April 26.

Brooklyn, N. Y. (First Church).—George Shaw Cook, Church Edifice, New York avenue and Dean street, 8:15 p.m., April 26 and 27.

Butte, Mont.—Col. William E. Fell, Auditorium, 8 p.m., April 24.

Testimonies of Healing

The advent of Christian Science into the life of a young man, especially at an early age, is the greatest experience he can have, for it is of more value than all the other things he may gain. If this saving truth is put into practice and faithfully demonstrated day by day, it will keep him in the straight and narrow way, and he will turn neither to the right hand nor to the left.

I would like to tell how Christian Science healed me physically. When a very small child I suffered intensely from a skin disease. At this time we knew nothing of Christian Science. Every known material remedy was used to effect a cure, but without success. As I grew older this condition gradually left me, and I was free from it for a time, but when about eighteen years of age it came back with renewed force. In the mean time my mother had been healed of rheumatism in about three weeks by Christian Science, after years of suffering. She immediately took up the study of this Science, but I did not, as I was young and did not feel the need of it. When this trouble returned, however, I asked for Christian Science treatment, knowing that material remedies could do me no good. The eruption was so bad that it almost covered my body, with the exception of my face, and the lady with whom I was boarding at the time told me after I was healed that she had no hope I would ever get well.

I was away from home when I had this trouble, and I have since learned that several persons who were with me at the time have taken up the study of Christian Science as a result of seeing me healed. My healing was slow, but it was complete, and I have never had a trace of the disease since. This was about twelve years ago, and I am now happy, rejoicing in the goodness and power of divine Truth.

We never fail to receive healing in Christian Science if we are honest and sincere in approaching the throne of grace. We have had in our family many demonstrations of the power of God to heal, and I speak from experience when I say that the healing Principle of Christian Science is "the same yesterday, and today, and forever," for it is God Himself who forgives all our iniquities and heals all our diseases.

RALPH EVERSOLE, Maryville, Mo.

✧

The benefits I have received from Christian Science within the past four years have been so many that I feel I must express my thanks to God for them. I was brought into Christian Science while suffering from an aggravated attack of nervous exhaustion, and I obtained relief in two treatments. Three months later I discontinued the use of glasses after having worn them for several years. I have been healed of neuritis, rheumatism, and a chronic bronchial cough, from which I had been a sufferer as far back as I can remember. At one time I was severely injured by being thrown from a trolley-car; in fact I was picked up unconscious, with my face badly bruised from the fall. Through the help of friends in Christian Science, however, I was able to attend a Wednesday evening meeting within a week, with no ill effects apparent except some discoloration about the eye, and this disappeared very soon.

Some time ago I was suddenly taken with pain so violent that I could scarcely keep from losing consciousness before the practitioner came. When he arrived my body was cold and blue to the finger-tips, but I was relieved within thirty minutes and was resting quietly. I have also been healed of hemorrhoids, from which I had been a constant sufferer for over twenty years, and this to me was most wonderful, since I obtained relief in twenty-four hours. More than all this, Christian Science has brought happiness, contentment, and harmony into my life, where before there was nothing but fear and worry. I strive each day to live the life that can come only through the knowledge of the truth, to pray each day that I may be led along that straight and narrow path that leads to God, to know God's will, not mine, and to put my trust in God alone.

I derive daily comfort and strength from the Lesson-Sermons and all the Christian Science literature. "Science and Health with Key to the Scriptures" by Mrs. Eddy has become my constant guide, and the words of the Bible have never seemed so beautiful as now, while I am learning what it means to journey from sense to Soul. I am thankful to God for the blessings I receive each day, grateful to our dear Leader for the healing truth she has brought to light for us, and also to the dear friend and practitioner who so patiently guided my faltering footsteps when I was entering this upward path.—FRANCES SILVERSTEIN, Atlantic City, N. J.

✧

[Translated from the German]

I wish to express my gratitude for the many blessings which I have received through Christian Science. For a great many years I suffered with dreadful headaches, general debility, and impaired heart action. My condition grew worse with every day, and finally I had to be taken to the hospital. Other troubles were added, and I was bedridden for six months, till one day the physician informed me that I must submit to an operation. This had to be performed without the use of anesthetics, on account of the heart trouble. For about two months I felt a measure of relief, but gradually all the old symptoms returned. I then had magnetic treatment for several months, and while no cure was brought about, I experienced improvement, though it proved to be only temporary. The ailment was then pronounced incurable. In this desperate condition my attention was called to Christian Science. I asked for help, and was freed in a comparatively short time.

After I had been in Christian Science for a length of time, I was suddenly taken ill while staying at the home of strangers. The physician who was summoned stated I had typhoid fever, and I was taken at once to Hamburg, where the case was pronounced very serious by another physician, who recommended my removal to the hospital. I at once sent a telegram to the Christian Science practitioner, and on the next day the quick and favorable change in my condition was a matter of surprise to the physician. On the second day I was able to go out and felt well and strong.

I am grateful indeed for this physical healing, but I must mention that aside from this I have become a very different woman. I believed in God formerly, but mere faith failed to help me. Now I understand better the import of the Scriptures through the study of "Science and Health with Key to the Scriptures," and I have drawn nearer to God. I feel happy and contented, and deeply grateful for having found Christian Science.

AGATHE BARG, Hamburg, Germany.

✧

I wish to express my gratitude for the many blessings Christian Science has brought to me. All my life I had suffered from stomach disorder and throat trouble; in fact I was always considered a very delicate child, and for several years I had been subject to attacks of appendicitis. I married, and after the birth of a son my health seemed completely gone. Then came another severe attack of appendicitis, and

Digitized by Google

our family physician said an operation would be necessary in order to save my life. I had a horror of hospitals and operations, and as my mother had been healed through Christian Science fifteen years before, I decided to give it a trial, although I knew little or nothing about it. While I was still in bed a practitioner was asked to take up treatment for me, and I was completely healed of both appendicitis and stomach trouble in a very short time. Three years have passed, and there has never been the return of even a symptom.

I am very thankful for the physical healings, but I believe the overcoming of the fear of disease and the knowledge that God is "a God at hand, . . . and not a God afar off," "a very present help," not only in sickness but in every need, is even more wonderful. To learn that God is our source of supply and happiness was another beautiful thing to me. Mrs. Eddy's statement, "The enslavement of man is not legitimate" (Science and Health, p. 228), has helped me in many ways. My little son knows no other remedy save Christian Science. He has always been a healthy child, but there have been occasions when it was thought wise to ask for Christian Science treatment for him. He was healed of croup in less than twenty minutes, whereas under *materia medica*, before we took up Science, we worked half a night with him.

I am so thankful to our Leader, Mrs. Eddy, for giving to the world such a practical religion, which meets every human need.—Grace Knight Teepell, Mattoon, Ill.

✧

I wish to express my gratitude and thankfulness for Mrs. Eddy's writings, which have made so clear to me the Science of Christianity taught by Jesus and recorded in the Bible. This understanding of the Bible and of the life and works of Christ Jesus, as revealed in Christian Science, has met my need in many times of trial and difficulty. I shall always feel grateful for the help of the faithful practitioner through whose work I have witnessed the power of Truth in many ways, so that what seemed insurmountably sad and heartbreaking vanished as mist before the spoken words of Truth and Love. Attacks of illness have been overcome, often instantaneously, both in myself and my children. I cannot express in words the gratitude I feel for the teachings of Christian Science.—Alice M. Brown, Bedford, England.

✧

I desire to express my heartfelt thanks for all that Christian Science has done for me in the last eight years. It has brought peace and joy into my life and has made my home much happier. It has given me an understanding of God as Love, and that His image and likeness does reflect Him.

The morning that I read Science and Health for the first time, I was healed of stomach disorder which I was supposed to have inherited, and from which I never expected to be free; also of the belief of inherited lung trouble and heart disease. I had always suffered with my eyes, and I could not enjoy reading or doing any work which required close scrutiny for any length of time. I had worn glasses for years, but I still had severe headaches, said to be caused from the other ailments and from a fall which I had many years before. The eye trouble had become so serious that according to medical opinion I was fast losing my sight; nevertheless I found one morning that I had forgotten to put on my glasses and had been reading Science and Health all the forenoon, yet I had never been so free from pain. I have not had a return of any of the ills which disappeared that day. At that time I was, and had been for several years previous, almost starving because I could eat only very light food; but that day I ate whatever I wanted and have been perfectly free to eat anything ever since.

Words cannot express my gratitude to our dear Leader, Mrs. Eddy, and to all who have helped me to learn of God. I am much more grateful for the spiritual uplift than for the physical healing. I am grateful for the Christian Science periodicals, especially for the *Monitor*, which supplies daily food and always meets some particular need. I am indeed thankful to our Father-Mother God, and shall try so to live that my light may shine for the glory of God.

Olive A. Spencer, Kansas City, Mo.

✧

I wish to express my gratitude for the benefit I have received through Christian Science in the healing of a rupture, from which I had suffered since birth. I had grown quite discouraged with the thought of not being so strong as other boys, and not being so tall as I thought I should be. My mother heard of Christian Science from a friend who had been healed of chronic bowel trouble. She wrote to a Christian Science practitioner and asked her to treat me. Then we went to see this practitioner and inquired what she wanted me to do. She said that I should take off the support, but we both declared I could not do that, so she told me to remove it as soon as I felt that I could. In about ten days I took it off and found I was entirely healed. I could do all kinds of farm work and ride on horseback, something I had not been able to do.

My healing has been permanent, as several years have passed and I am still strong and healthy in every way, and thankful to God, through whom I was healed. I am grateful to Mrs. Eddy for giving us this wonderful truth, which is healing and blessing all who come to it with a sincere desire for good.—C. R. Richmond, Dallas Center, Iowa.

✧

When I was only a beginner in the study of Christian Science, while moving a large sofa my side began to cause me great pain. I was in Constantinople at the time, and after a day or two a letter was sent to a practitioner in London, asking for help. Then, becoming frightened as the pain grew worse each day, I went to a doctor, who said that several ligaments were torn. After bandaging me he said I must be patient, as it would be some weeks before I would be well. Next morning, however, when the letter reached the practitioner, instantaneous healing came to me. It seemed good not to feel any pain. The doctor was much surprised the following day to hear that I was well.

Some time later, while still in Constantinople, I fell from a ladder and dislocated my knee. I received treatment from the same practitioner for ten weeks, and during this time was able to go up and down stairs as usual and do all my work. There were some days and nights when I was entirely free from pain, though at other times the pain was acute. There was much discoloration, with a swelling on the inside of the knee, and the leg was bent, causing me to walk with a limp; but I was absolutely healed through Christian Science, without any material remedies whatever being applied, and the bone slipped back into place one night. This was all very wonderful to me then; but what is far more wonderful to me now, is the transformation in my moral nature, which began during the treatment for my knee. Fits of depression, bad temper, selfishness, headaches, etc., began to leave me. My whole outlook on life became changed; from being miserable and ailing, I became strong and happy.

I find that always, when faithfully applied, the truth as taught in Christian Science does meet all our need and heal

Digitized by Google

sin and disease. I have not needed to ask for help since, so clearly was the truth shown to me. Often during the past few years, words written or spoken have helped me over rough places, though at the time they only made me angry, because they were not understood. I am indeed truly grateful to have come thus far. I am thankful to God, and grateful to Mrs. Eddy, as well as to all who have so lovingly helped me. While I am conscious that there is much to be overcome morally, I know it will all be mastered through divine Love.—Arabella M. Jones, London, England.

✧

I wish to express my sincere gratitude for the many blessings which Christian Science has brought into my life. About ten years ago, when everything seemed dark and I did not know which way to turn, a copy of Science and Health was placed in my hands, and after a few weeks' reading I was healed of heart trouble, chronic liver complaint, and severe headaches, from which I had suffered since childhood. During the years since then I have depended entirely on Christian Science in every need, and am happy to say it has never failed to give me relief, most of the time through my own earnest study of Science and Health and our other Christian Science literature.

About a year ago I fell and injured my ankle very severely, the pain being intense. I seemed unable to help myself, so the next morning I telephoned to a practitioner for treatment. The pain was all gone soon after calling for help, and the swelling left. In three days the ankle was perfectly well. I am thankful for the physical healing, but most grateful for the spiritual uplift, and for the new understanding Christian Science has given me of the Bible.

Caroline Porter, Los Angeles, Cal.

✧

A little over six years ago Christian Science came to me. At that time I was weary, heart-sick, and discouraged. I sought comfort from different religious beliefs, but found none. A dear friend told me about the wonderful help to be found in Christian Science, and I was induced to attend a Wednesday evening meeting. At that meeting (although at the time I did not realize what had taken place) I found my heavenly Father, and went home with such a sweet sense of peace that it was a glimpse of heaven. I have had many proofs of the healing power of Truth, but these do not mean so much to me as the spiritual healing and uplift.

I was born, it was said, with a malformation of the eyes, and I do not remember one day free from pain after the age of seven years. For twenty years I wore glasses, and it was with difficulty that they were made so that I could see. During that time I was treated at various hospitals and clinics, also by specialists, but no one held out any hope of saving my sight. The right eye was much smaller than the left and the lid drooped very badly.

I was so happy in my new-found joy in knowing I had a tender, loving Father and could prove His love for me, that I did not think of the physical healing. A few months after I came into Christian Science, a friend told me that sight was spiritual discernment, and my eyes were to see through and not with. From that moment the fear of becoming blind left me, and I was indeed free. Some time later I went through class, and the healings for myself and family were many and beautiful. Then came my test, and I had to make my choice according to the Scripture command, "Choose you this day whom ye will serve." I had until this time worn glasses; now I seemingly could not see with or without them. I now took my stand on the side of Truth, and day by day I could see better, until finally my eyes became normal and the sight has been much improved.

This was about two years ago. I had one week's treatment, then the work seemed to be my own. As I learned to see the truth, the correct vision was manifest, and now I can read, sew, and look at rapidly moving objects without pain. I see things in their natural form and position, and I had never done so before. The healing was completed while I attended business, without losing a day. This proof of the healing power of Christ, Truth, has been the means of giving hope to others in many instances.

My heart is filled with thankfulness to God, and with gratitude to the many kind friends who helped me on the way. My prayer is that I may live faithful to the teachings of Christian Science, and so ease the weary and heal the broken-hearted. This is indeed a blessed privilege, and and we who know the truth rejoice in doing it for the Master.

Emily Oneill, Newark, N. J.

✧

I would like to record the healing through Christian Science of my son, a young man twenty years of age, from a severe attack of pleurisy. He had been ill for several days and was apparently growing worse, so at last I telephoned to a Christian Science practitioner, as I feared acute lung trouble was developing. At that time he was in a high fever, suffering from a severe cough, pain in his side, etc.; moreover, he had eaten nothing for several days. I called up the practitioner at one o'clock in the afternoon, and at three o'clock my son was feeling much easier and asking for food; at six he had a good dinner. He slept well all night, scarcely coughing at all, and in the course of a few days was better than he had been before his illness. No medicine or outward application of any kind was used. I am very thankful to God for Christian Science.

Kate Proude, Remuera, Auckland, New Zealand.

✧

I wish to express my gratitude for the healing power of Truth as taught in Christian Science. In the year 1909 rheumatism asserted itself to a very painful and alarming degree. I was unable to straighten my back, and walked with a cane for support. Finally the heart also became affected. For a period of eight months I tried every possible thing recommended, but without beneficial results.

When Christian Science was called to my attention, I took up treatment and began to improve at once. In two months I was healed and again at work. My healing has been permanent, and ever since then Truth has been the only physician in our family of five. A large, healthy boy has been born to us under the care of Christian Science. I am grateful to Mrs. Eddy for giving us a better understanding of God, also to those who have faithfully assisted us.

Oscar E. Olson, Seattle, Wash.

✧

It has been nearly twenty years since I first heard of Christian Science. When my sister, who had become interested in it, explained some of its basic truths to me, I was deeply impressed, and they have never left me. I owe my life and all my happiness to Christian Science, and am more grateful than I can express to that noble woman, our beloved Leader, Mrs. Eddy, for her great gift to mankind, "Science and Health with Key to the Scriptures."

In April, 1909, I was taken with erysipelas in its most severe form. For several days I could not speak, except at rare intervals, and it was impossible for me to swallow even water. Besides this, there was high fever. None of my

Digitized by Google

family or those around me were Scientists, but nevertheless they called a practitioner. In four days the fever was gone, though I was still very unsightly, as my face and head were badly swollen and discolored. I was in a delicate condition at this time, and was quite fearful, but the practitioner soon allayed my fear. Every day friends urged me to call a physician, but I felt all confidence in the one Mind, and in a week I was able to handle my own case.

One night in November, when our little girl was born, I awoke my husband at eleven o'clock, and he went for a practitioner. When she came she told him that we would call him when he was needed, as we had also spoken to a physician. At two o'clock she called him, and he then telephoned to the doctor, but the babe was born in fifteen minutes and I did not have any pain. This seemed hardly believable, as I had had a severe time at the birth of my first child. The baby was plump and fair, although many people told my relatives that the child would manifest the condition with which I had been affected prior to her birth. She has a very clear skin and is a growing little Scientist.

MARY H. BOICOURT, Minden, Neb.

❖

Before learning of Christian Science I suffered from asthma for a number of years. Dust and foggy atmosphere caused severe attacks, so that the nights were sure to be sleepless. Whenever I went to a town about twenty-six miles distant, the trouble would come on with the night, so that I would be glad to return home the next day. As soon, however, as I commenced to read Science and Health and apply its teachings, I began to receive help for this condition.

One Wednesday evening, after sweeping and dusting all day, I started for church. It was very foggy, and by the time I reached there I could scarcely breathe; but during the meeting some one told of an article in the *Journal* that had been very helpful to her. I procured a copy of this periodical, and on reaching home read and studied that article, searching for the truth which Jesus said would make us free. I rested comfortably all night, and the next morning while reading the Lesson-Sermon the truth was revealed to me. On page 14 of Science and Health we read: "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well." This is just what happened to me, for instantly all sense of hard breathing left me. Later in the day I went for a drive, and although the weather was still very foggy, it had no effect on me, and has not had since.

I have had many other healings in the five years during which I have depended on Christian Science, such as the overcoming of defective eyesight, stomach and liver troubles, as well as severe head colds; but the greatest blessing that has ever come into my life is the understanding of this truth, for it enables me to apply the Principle to every problem which may be mine to solve. I am indeed grateful for Christian Science, and am realizing more each day what Mrs. Eddy has given to mankind. I now enjoy good health, and am glad to testify to the healing power of Truth.

HATTIE A. JACKSON, Syracuse, N. Y.

❖ ❖ ❖

Whene'er a noble deed is wrought,
Whene'er is spoken a noble thought,
Our hearts in glad surprise
To higher levels rise.

LONGFELLOW.

From Our Exchanges

[*The Christian Register*]

A day is coming sooner or later for the regeneration of nations, to bring new life and hope to exhausted and heart-broken peoples. It cannot be done by wailing and gnashing of teeth, or by lugubrious prophets who go up and down crying that the world is soon to come to an end. It is to be done by faith, hope, and charity, and a new spirit of trustfulness and courage. We can all help in the creation of that spirit. It cannot be generated by bitterness, hatred, and mad rivalry, but by patience, tolerance, and mutual forgiveness. The wounds will be long in healing, but new wars and fiercer struggles will fail to accomplish that end. The day is coming when an enlarged sense of brotherhood will dawn. We can all help in bringing in that day. Not by preaching the judgments of God wrought with fire and sword will the day of the new era dawn, but by trying to live as if we were already citizens of the kingdom of heaven. Peace and joy and hope and service are the elements of that kingdom, and the air is good and salubrious for the healing of wounds and the binding up of broken hearts.

[*Western Christian Advocate*]

Ever the pulpit must lift the vision of the people beyond the immediate constructive task to the ultimate goal that is to be reached. The preacher must get into the heart of the Master until he can speak with authority concerning the fundamental changes in the social order which the gospel demands. His task is not simply to develop new social machinery, but to bring new life into the social order. Everywhere men of affairs are admitting the essential wrongness of our industrial life; everywhere they are feeling and expressing the burden of sin that lies heavily upon those of Christian conscience; everywhere they are longing to do something to make business more Christian. This conviction of social sin must be increased until it becomes a great driving force to action. This desire for improvement must be led into definite paths, and must not be allowed to stop short of the complete reorganization of life on the basis laid down by Jesus.

[*The Living Church*]

Some of us have been wondering whether the searchings of conscience that have come with commercial problems growing out of the European war may not indicate that there is near at hand a recognition of the significance of our Lord's words, "Seek ye first the kingdom of God." Whether they shall be seen to have the particular application just hinted at, or not, at any rate they mean subordinating business to something higher. They do not, of course, mean that we must be absolutely indifferent to the uses and value of possessions; they mean that we must learn to put first things first. It is the most searching test that can be put to the business men of today,—even more searching than whether they shall be willing to aid and speed the transition to industrial democracy,—to put first things first; the higher before the lower.

[*Zion's Herald*]

It is well for all of us who are blessed with the privilege of working, to look into our hearts very often to see what there is there. The success of our day's work, as well as the comfort and well-being of those with whom we work, depends not a little upon what we find there when we look. Many a man's work has been marred, and his friends and fellow workers have suffered keenly, because of the unlovely things which have been in his heart. And if his refusal to take inventory

Digitized by Google

of the things in his heart has been persisted in, the warped and distorted years of his life have been a lasting testimony to his unthinking wilfulness in refusing to take account of what he has been harboring in his inmost self.

[*The Outlook*]

When Christ helped men, he always gave them something to do. He told the paralytic to stretch forth his hand, and in stretching it forth it was healed. He told the impotent man at the pool of Bethesda to take up his bed and walk, and power came with his getting up. He told the lepers to go to the temple at Jerusalem and report to the priests, and as they went they were cured.

And before Jesus finally left his disciples he gave them their mission and laid on them their responsibility. "As my Father hath sent me," he said, "even so send I you. . . . Whose soever sins ye remit, they are remitted unto them; and whose soever sins ye retain, they are retained." What is this but saying to us: You are to do the work. The world will be what you make it. You can purify the world if you will. If you do not do it, it will not be done. What is this but repeating the message of Isaiah: "They that wait upon the Lord"—not wait for Him, wait on Him, are His servants, do His work—"shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." "God helps those who help themselves."

[*The Universalist Leader*]

We cannot all obtain vast possessions or acquire vast learning or achieve a fame that shall cause the world to hold our genius or virtue in undying remembrance. For all such achievements the needed gifts or opportunities may be withheld. It may even be that while we would gladly consecrate our lives to the service of all mankind, there are few things we can do to promote the happiness of those who are dearest to us. But this one thing we can do,—we can keep our honor unstained, our justice inviolate. We can achieve the "beauty of holiness" by absolute faithfulness to our ideals within the circle to which our activities are limited, however narrow it may be; and that is all that moral sense demands and the will of God requires.

[*American Lutheran Survey*]

When we make it possible for people to live in comfort in the country and there enjoy the fruits of our best civilization in God's own garden, as it were, we find the environment under which the gospel, through its regenerating and sanctifying power, will produce the best type of Christian citizen, and we will have a chance to work out our serious slum problems, which are steadily growing more grave under present conditions.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

The men who led Israel, the men who made and saved Israel, were first and foremost men of God, men who believed with all their hearts that they were divinely chosen instruments to great spiritual ends. Naturally, such men were able to do amazing things, and amazing things were done so often in Israel's heroic days that we take the record of them for granted without fully realizing its unique character.

[President Woodrow Wilson in a public address]

Wars will never have any ending until men cease to hate one another, cease to be jealous of one another, get the feeling of reality in the brotherhood of mankind, which is the only bond that can make us think justly of one another and act righteously before God Himself.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LABOR TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The Seward-Fairbanks route has been officially selected for the United States government railway in Alaska, setting in motion many plans for the further development of resources in that territory. The property of the Alaska Northern Railway Company from Seward over the first stage of the journey has been purchased for one million one hundred and fifty thousand dollars. The government system will include a thirty-eight mile branch to tap the Matanuska coal fields. The estimated cost of the system is given at twenty-six million eight hundred thousand dollars, and Congress provided not to exceed thirty-five million dollars.

Secretary Lane said construction work would be begun at once, and that probably forty miles of the extension of the Alaska Northern from Ship Creek would be completed this year. Construction will be carried on under contract, individual contractors building separate units of roadway. In one of the orders signed by the President, the Alaskan commission was instructed to guard conditions about the men at work and to adopt a system of compensation similar to that in force on the Panama canal.

The interior department statement said in part: "The route adopted is known as the Susitna route, and extends from Seward, on Resurrection bay, to Fairbanks, on the Tanana river, a distance of four hundred and seventy-one miles. It is to be a standard gage road. The Alaska Northern has been purchased for a price less than its physical valuation, as estimated by the Alaskan engineering commission and by the engineers of the interstate commerce commission. Under the contract approved by the President, the road is taken over free from all debt or obligation of any kind."

The nation-wide study of the lumber industry, which is being made jointly by the department of agriculture and the department of commerce, and the other industrial and technical investigations and experiments which have been carried on by the forest service in the last two years, were under discussion at a conference of forest service officials at Madison, Wis., last week. The forest service laboratory, the Washington office of industrial investigations, and each of the seven national forest districts were represented at the conference by specialists. Among the subjects for discussion were: Cooperation of the forest service with industries, lumber distribution in the United States, utilization of low grade lumber and mill waste, adaptation of manufacturing and grading to specific classes of consumers, unification and standardization of lumber grades, study and development of general markets for national forest timber, mill scale studies, including technical methods, tallying, etc., lumber depreciation, and the collection and compilation of lumber price data. The information already collected by the forest service under some of these headings includes the most exhaustive data on the mechanical properties of wood ever collected by any agency in the world, and already has resulted in practical reforms and big savings to several of the important wood-using industries.

Water from the Apennines was distributed last week for the first time to the provinces of Bari, Foggia, and Lecce, Italy, through the Apulia aqueduct, which was begun in 1905 and is said to be the largest in the world. More than two million persons now are assured of a supply fresh from mountain streams, brought through 1,875 miles of pipe. The territory served has suffered for centuries from lack of an adequate supply. For the construction of the aqueduct, the cost of which is estimated at thirty million dollars and upon which four thousand workmen have been engaged fifteen years, the course of the Sele river has been diverted. A collecting basin has been built at its source, 1,370 feet above the level of the sea, whence the waters are conveyed by tunnel for seven and a half miles, penetrating a watershed, and then through the aqueduct, which is 155 miles long. While the most important parts of the aqueduct have been completed, it will take a year longer to finish all the minor details.

Reporting on the trade of the consular district of Bangkok, the British vice-consul mentions that during the year a law was introduced relating to the care of forest woods and of all forest products other than teak. A measure for the conservation of teak forests in the north, the report states, was introduced some years ago and has been carefully carried out, but it is now generally admitted that the matter was not taken in hand in time. The new law, however, has been introduced, while the forest products of Siam, with the exception of teak, are practically untapped; and while giving power to the minister responsible to issue permits for the felling, burning, or destruction of timber and for the obtaining of forest products, it expressly stipulates that such permits shall not exceed one tenth of the forest land in the country.

Sets of sixty-four samples of commercially important woods of the United States, together with maps showing regions in which each species grows, and short statements as to their uses and physical characteristics, have been prepared by the forest service of the United States department of agriculture for loaning to schools, libraries, and other educational institutions. Charts and tables showing forest products by states, the rise and fall of the lumber industry, and the percentage of lumber supplied by the different regions of North America, accompany the exhibit of woods. The entire exhibit covers a wall space about four feet high by thirteen feet long. It is loaned for short periods, under the agreement that the borrower shall pay the transportation charges.

Public subscriptions for the purchase and preservation of the Bennett-Boardman house in Saugus, Mass., erected about 1650, and one of the least altered and best examples of the type with overhanging second story, are being urged by the Society for the Preservation of New England Antiquities. The old house is now held by a trustee subject to an option to the society, and unless money enough is raised to purchase the old dwelling before June 1, it must takes its chances in an unrestricted sale. A minimum of four thousand dollars is needed to buy the house and land and make necessary repairs.

The year 1915 is to be important for Portland, Oregon, in point of public improvements. A report which has been prepared by the municipal department for public works, at the request of the mayor, indicates that there are proposed for this year improvements to cost $6,095,900. The report shows that the department of public works expects to supervise the construction of 83.83 miles of pavement during the year. It is estimated that 18.10 miles of streets will be graded and provided with cement sidewalks. The total cost of public structures to be started during the year is put at $2,329,980.

The interstate commerce commission has announced the discontinuance of its investigation into the rates and practices of the telephone and telegraph companies. The investigation, carried on intermittently for several years, was begun on the commission's initiative. Many specific complaints laid before the commission have been settled, and the understanding between the American Telephone & Telegraph Company and the department of justice last year is said to have made further investigation unnecessary.

The Panama-Pacific exposition has issued a statement of its operations from Feb. 20, the opening day, to March 21, which shows a net income for that period of $85,410.64. The statement shows a total income of $823,882.07 and total expenditures of $738,417.43, which includes a twenty thousand dollar reserve for contractual obligations. Total admissions for the period were 2,024,704.

At the recent annual meeting of the board of directors of the Missouri, Kansas & Texas Railway Company of Texas, the expenditure of one million five hundred thousand dollars for the purchase of forty-two locomotives and reballasting was authorized. It is stated that thirty-five freight-engines and seven passenger-engines will be purchased at a total cost of nine hundred thousand dollars.

The ship-owners of all the great passenger lines on all the Great Lakes have informed the department of commerce that they propose to form a wireless company and establish stations at Chicago, Buffalo, Detroit, Cleveland, Milwaukee, Duluth, and other points. This decision has been reached because of the excessive rental charges by the Marconi Company.

The earnings of the Panama canal in March were the largest of any month since it was opened. They exceeded by about one hundred and forty thousand dollars the previous record made in January. March earnings were $566,784. The receipts in January were $419,037.

The area in New Zealand now planted in apple orchards has a value of two million five hundred thousand pounds, producing apples to a value of fifty thousand pounds yearly.

A bill authorizing the founding of normal schools in Cuba has passed the lower house of Congress. A foreign educator may organize the schools.

A Universal Sermon

REV. WILLIAM P. MC KENZIE

A SERMON is a discourse based upon a Scripture passage, and if successful, gives both instruction and inspiration. The preacher is usually trained for his work, no one in his audience assuming to be equal to the task. He then is the assumed thinker and the church-goers are the listeners. The fact that there are many sects, shows that preachers do not think alike, and that audiences therefore listen to diversified teachings. Could there be one preacher—but who could dream of such a possibility—how feeble would one human voice be to reach mankind, how insignificant the strength of a human life before such a task! But the things impossible to human sense are possible to Mind. Sunday by Sunday throughout the world today one sermon is preached, and the listeners are the thinkers who, it may be said, preach the sermon to themselves. Through the week, day by day, they have been students of the sermon, and while the teaching is made audible at the service by the voices of readers, they who listen are thinking in accord with the teaching, and by it are truly edified.

The students of the weekly Lesson-Sermons published in *The Christian Science Quarterly*, form regiment after regiment of thinkers who, without visible bond or control, are coming into a unity no army on earth ever acquired, namely, "the unity of the faith." There is the multitude apparent, assembling on the Sabbath day in halls and churches throughout the world to hear a preaching of the gospel which is unencumbered with traditional dogmas, philosophic guesses, and caste theories. But there is also a great multitude who are students in private, listening to this teaching as individuals, and finding themselves guided and inspired thereby. This is the truly democratic preaching, available "for all peoples." To be rich or poor, to be high or low, does not count in this new era, for, as Mrs. Eddy announces in her Preface to Science and Health (p. vii), "the time for thinkers has come."

In an address delivered in 1895 Mrs. Eddy said, "The Christianity that is merely of sects, the pulpit, and fashionable society, is brief; but the Word of God abideth." In the same address she made this statement: "Our Publishing Society, and our Sunday Lessons, are of inestimable value to all seekers after Truth. The Committee on Sunday School Lessons cannot give too much time and attention to their task, and should spare no research in the preparation of the *Quarterly* as an educational branch" (Miscellaneous Writings, pp. 111, 114).

The valuation which the Discoverer and Founder of Christian Science set upon the impersonal preaching, and her vision of its universal application, is ably set forth in "The First Church of Christ, Scientist, and Miscellany" (p. 178): "Your Bible and your text-book, pastor and ethical tenets, do not mislead the seeker after Truth. These unpretentious preachers cloud not the spiritual meaning of Holy Writ by material interpretations, nor lose the invincible process and purity of Christianity whereby the sick are healed and sinners saved."

On July 3, 1898, the first Lesson-Sermon prepared for the present series of subjects was publicly read. The subject was "God;" the golden text, "God is love; and he that dwelleth in love dwelleth in God, and God in him." In that same year Mrs. Eddy had established The Christian Science Publishing Society by a Deed of Trust where she made perpetual provision for the issuance of "The Christian Science Quarterly Bible Lessons." She also provided the list of twenty-six subjects to be used in preparation of the Lessons by the committee appointed by the Publishing Society. These subjects are repeated twice during a single year, but the Lessons are in every case newly prepared. The illimitable resources of the Bible and the Christian Science text-book are illustrated in the fact that year by year these Lessons are being studied with deepening interest by those who have been students from the first, and that constantly enlarging numbers of new students find similar satisfaction.

As the Lesson-Sermon arranged for any particular Sunday is one and the same for every branch church in the world, it is necessary that the *Quarterly* be issued in time to serve both Boston and its antipodes. The Lessons are therefore prepared several months in advance of the date for their public reading, by a Lesson committee whose personnel is large enough to provide for sufficient criticism of every Lesson. Prior to each meeting of the committee a draft of the Lesson to be then considered is made in its entirety by one member, and sent by mail to each of the other members for examination and private study. At the meeting there is discussion of the Lesson by the committee as a whole, and correction or emendation is made, so that the final arrangement and selection represents more than individual choice. It is the result of the demonstration and agreement of a small congregation of workers, offered for the service of larger congregations.

The sermon itself is composed of "Scriptural texts, and their correlative passages from our denominational text-book," as the Explanatory Note in the *Quarterly* prefaces. The references from the Bible give Scriptural record, prophecy, teaching, parable or story, bearing on the topic of the section; and as the Christian Science text-book is entitled "Science and Health with Key to the Scriptures," the first selected passage therefrom in a section may be expected to reveal the topic, and those that follow to develop the scientific teaching in regard to it. There are not more than five references from either one of the books in a section, hence one hand may hold them open while the student turns from one reference to the next, reading them in sequence over and over again, until the coherent teaching becomes vivid. Many people arrange to read the whole Lesson each day, while others prefer or are able to read only a part, or a single section; but all are thus able during the week to make complete preparation for the Sunday service.

The study given to the Lesson-Sermon during the week makes the student familiar with the Bible phrases and the

commentary thereon from Science and Health, and also discloses to him some vision of spiritual life. Then when he joins in worship and silent prayer with a group or congregation on Sunday, and the Lesson is read by those who have agreed to the requirement of the Manual of The Mother Church to "keep themselves unspotted from the world,—uncontaminated with evil,—that the mental atmosphere they exhale shall promote health and holiness, even that spiritual *animus* so universally needed" (Art. III, Sect. 1), it is not unnatural that his thought should be lifted into vision and apperception, so that he is delivered from a narrowing past and ancient milestones are left behind. Through this vision life appears with wider range and higher aspiration, and with motives more pure.

An occasional visitor to a Church of Christ, Scientist, said that he still liked his own church because he needed its ritual to bring him into a religious frame of mind. He said that the thoughts he entertained during the week were very far from being religious, and it took a good deal to release him from the hold of these thoughts so that he could enter into what he called a religious mood. In answer, it might have been said that the gaining of a religious frame of mind on Sunday which had no influence upon mental conditions during the week, could not be looked upon as effective in the line of true religion; but the answer made was, that those who are gaining good results from the universal but never stereotyped services in the Christian Science churches, are those who make a daily preparation through the week for each Sunday. Thus an influence was at work, not a mere stirring of the emotions due to sweet sounds, odors, or colors, but something from a different source, being in fact that preparation "of the heart in man" which we are told, and understand, is "from the Lord."

The "hearing ear" and "understanding heart" result from that daily study whereby in silent meditation there can come a clearing of thought and a subjection of life to the guidance of demonstrable truth. After six days spent in restoring intuition, reviving courage, rebuilding hope, reforming character, reestablishing faith, and being replenished with love, the Sabbath becomes a day of rest indeed, glorified with gratitude because of progress made. Thus the thinkers are enabled to "put on the new man, which is renewed in knowledge after the image of him that created him;" and this progressive creation is seen to be not only in accomplishment good but "very good."

As the disciples of old were found "with one accord in one place," so are there gatherings on all the continents today in the name of the healing Christ, Truth,—the Christ not withdrawn, not absent, but present and effectual. No wonder that it is a usual thing for those attending such Christian Science services to be healed. As in days whereof Luke the evangelist speaks, so it might be said of many an occasion in these days, that "the power of the Lord was present to heal." What a psalmist said in prechristian times is found to be enduring truth, changeless through the centuries: "He sent his word, and healed them, and delivered them from their destructions."

Is it any wonder, then, that people who come to know about these deliverances which Christian Scientists are experiencing, are saying from a new standpoint what the prophet Zechariah foretold would be said, "We will go with you: for we have heard that God is with you." They come to the services, those whose thoughts are downcast and dreary, who feel themselves outcast and discouraged, grief-stricken and world-weary, to find that in reality they are hungering and thirsting after righteousness; and listening to the truth proclaimed from the sacred Scriptures, and interpreted in the Christ-method for its practice, they find to their own wonderment the truth of that text which Mrs. Eddy chose for the dedicatory sermon at the opening of The Mother Church: "They shall be abundantly satisfied with the fatness of thy house; and thou shalt make them drink of the river of thy pleasures."

Faithfulness in Well-doing

ALFRED FARLOW

Our Leader writes: "'Learn to labor and to wait.' Of old the children of Israel were saved by patient waiting" (Retrospection and Introspection, p. 79). St. Paul expresses the same thought when he exhorts us after "having done all, to stand." There is a mechanical appliance called a ratchet, which may be turned forward but cannot be turned backward. Every Christian Scientist should be like it in his adherence to Truth. He should go forward whenever an opportunity is afforded him, but he should never allow himself to retreat. He should preserve his sense of Truth at all times, and thereby keep himself always in line, using every opportunity for a forward movement, even though it may be only a short advancement now and then.

To wait, in the sense in which Mrs. Eddy uses the word, implies that we should keep on doing our work faithfully, irrespective of the question of reward and even in the face of an apparent lack of evidence that our work is counting for anything. Our chief care should be that we are working in the right line. The old saying, "Be sure you are right, then go ahead," implies that there is no end to the going ahead until the desired end is reached, and here we do well to recall Mrs. Eddy's interesting testimony: "The discoverer of Christian Science finds the path less difficult when she has the high goal always before her thoughts, than when she counts her footsteps in endeavoring to reach it" (Science and Health, p. 426).

If the Christian Scientist does not remember the spiritual fact of being which he has learned, he forfeits the advantage that his new sense of being has given him in his effort to overcome in order that he may "inherit all things." While the children of Israel were mending the breaches in the walls of Jerusalem, it is said that they worked with a trowel in one hand and their weapon of defense in the other. The Christian Scientist has the foe within as well as without to contend with; in other words, he has his own shortcomings to overcome, also the error from without which would intrude itself. His weapon of defense is his consciousness that he is always defended by the ever-presence of divine Love, and to make the best possible use of his time he must keep this weapon ever available; he must dwell constantly in the fact of the ever-presence of God, while laboring to improve his own condition and at the same time defending himself against any intrusion which might make the breaches worse than they now are, or cause him to retreat from the advanced position that he has gained from time to time.

It is evident that if the warfare seems arduous and there is a temptation to grow "weary in well-doing," one has the evidence that although he may be laboring, he is not waiting. In other words, he is living in the consciousness of the struggle, rather than maintaining that consciousness of spiritual Truth which will not only enable one to overcome the things against which he labors, but to overcome the struggle itself,—that is, to rise above the consciousness of trouble.

The writer remembers very distinctly that when he was a schoolboy, while working over the difficult propositions in mathematics he often found himself whistling a tune; and if a schoolboy can thus whistle, or sing, while laboring

Digitized by Google

over his most difficult propositions, the Christian Scientist should be able to retain an abiding and grateful sense that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), as he struggles to overcome "the world, the flesh, and the devil." Only by so doing can he be immune from the sense-weariness which would seek to weaken Christian effort.

Christian Scientists are firm believers in Christian Science. Hence they must accept the teaching of Science that good is the reality, and that evil, being no part of the "very good" things which God created, has no real existence. If they do truly entertain this belief, they will find nothing to disturb or annoy, but will be able to say, as did the Master, "The prince of this world cometh, and hath nothing in me." Christian Science is practical. It brings peace and harmony. It maintains health and joy, but like mathematics, it does not work by itself; it must be understood and practised. Moreover, we must not entertain the thought that the struggle is hard and long, but adhere consistently to the assurance that God is able "to do exceeding abundantly above all that we ask or think, according to the power that worketh in us."

Spiritual Being

JANE L. VILAS

THE common credence given to corporeality, the belief that a physical body expresses the real identity of man, has become so tenacious in its continued acceptance that it constitutes a reason why it should seem to offer a strong resistance to spiritual facts and take a stand against every advance of the truth. Mortal belief entirely ignores the spiritual priority of man as stated in the first chapter of Genesis, when "the earth [matter] was without form, and void." Having entrenched itself behind all kinds of false barriers, it would defy the testimony of Spirit and cry out, "Art thou come hither to torment us before the time?" The accepted theory of creation would have God, the all-pure, the all-powerful, stoop to express Himself, to bring forth His own perfect image and likeness, through the lowest impulses and propensities of mortals. In order to strengthen its position, mortal mind fancies itself the partner of divinity and, supposedly with divine sanction, multiplies its own concepts of being and reality.

Working wholly on the material plane, all the resources of "the carnal mind," which is "enmity against God," are brought to bear upon the subject in our schools and other places of learning. The product of this false theory is akin to a vacillating weather-vane, influenced by the veering winds of human opinion and subject to its ever shifting rules. It is a conglomerate mass of human beliefs, a wretched arena for conflicting emotions. At one time it is buoyed up by the false hope of relief in matter, and at another dashed to the abyss of despair by pain, or it may be by sin. Is it any wonder that the psalmist cried, "Behold, I was shapen in iniquity; and in sin did my mother conceive me." "Fearfulness and trembling are come upon me, and horror hath overwhelmed me. . . . Oh that I had wings like a dove! for then would I fly away, and be at rest." Later, however, "wings like a dove" were vouchsafed him in a glimpse of the pure spiritual creation. Then it was that the heavenly vision gave him rest, and he uttered the song of exultation so beautifully embodied by Mrs. Eddy in one of her hymns, "Only with mine eye can I behold the snare, the pit, the fall" (Hymnal, p. 240).

In that wonderfully lucid and elucidating book, "Science and Health with Key to the Scriptures," we find that matter is nothing more than a name given by mortals to the supposititious qualities opposed to Spirit. Since it is true that there can be no reality in whatever seems to oppose Truth, because Truth and reality are one, then there can be no truth in matter; neither can there be any life in it. Without life or truth, it is plain that matter can have neither intelligence nor power to propagate itself. Life is neither corporeal nor structural, and growth is not the heaping of nothing upon nothing, but is spiritual unfoldment. On page 186 of Science and Health it is declared that "mortal mind is ignorant of self, or it could never be self-deceived. If mortal mind knew how to be better, it would be better." Mrs. Eddy's pure consciousness leads distraught humanity out of this maze of false concepts, into a truer perception of the loving all-Father and a higher sense of human relationships.

In the faithful study of this priceless volume we discover that the belief in a material creation brings forth nothing but a belief in the division and subdivision of physicality, that is, the antipode of unity, the supposititious opposite of the all-sufficient, self-existent Mind, the Mind which is God. In Christian Science, the real man is the representative of Spirit, the correct presentation of God. He is the "witness," the evidence of omnipresent good, and of nothing else. Following this line of thought, we gradually perceive the truth of being, and rise to an apprehension of the male and female of God's creating, until we finally see that pure characteristics symbolize the activities of the one Mind. This idea is most beautifully woven into all our Leader's writings.

The spiritual qualities, such as love, purity, unity, nobility of purpose, fidelity, tenderness, forbearance, patience, etc., are urged as alone conducive to harmony and completeness, and productive of their own characteristics. A thorough study of Science and Health elevates human consciousness to a perception of the true sense of all human relationships and their obligations, which must eventually result in a higher type of humanity. Christian Science at length leads us all to find our birthright in the arms of infinite Love, and there we find rest and surcease from turmoil and suffering in natural, healthful growth. In this true union of Principle and its idea, perfect purity of thought and action prevails, or in the words of Mrs. Eddy on page 536 of Science and Health, "The divine understanding reigns, is *all*, and there is no other consciousness."

Changing Concepts

LUCIA C. COULSON

IN Christian Science we learn that our individual concept of God largely determines our life, our experience, and our influence. Before coming to Science, many have been led to think of God as a tyrant, whose purpose can never be understood. The writer well remembers the time when the words "It is God's will" filled her with dread, as they were invariably connected with some disaster.

Then came the dawn of the realization that God is Love. Nevertheless, human sense continued to argue that there is much to be given up, that God demands sacrifices, that it is a hard task to please Him. But bit by bit, as we advance in the understanding of Christian Science, as we ponder our Leader's writings and mark the loving compassion of those who are following in her footsteps, there dawns upon consciousness the thought of God as Mother,—that fuller revelation of Him which Christian Science gives us. This point being reached, there pours into thought some sense of the blessedness of true being, and we begin to understand why Jesus said, "Except ye . . . become as little children, ye shall not enter into the kingdom of heaven."

Digitized by Google

It is true that we must conform our will to God's will, not because He is a taskmaster, but because we cannot choose well enough, and in His tender love He would choose the very best for us. With the revelation of the motherhood of God there is born in some degree the childlike quality of trust. The true child, the child to which Jesus pointed when he set a little one in their midst and bade his disciples become as such, has a complete and happy confidence in all its mother does. In crossing a crowded street it may seem to the child that its mother is taking it into untold dangers, but clinging to her hand it feels safe. Thus,

> the feeble hands and helpless,
> Groping blindly in the darkness,
> Touch God's right hand in that darkness
> And are lifted up and strengthened.

Again, it is a mother's greatest happiness to give her children joy. She would take from them only what is harmful, and she rejoices in giving all that will add to their enjoyment and well-being. So the infinite Mother would have us give up a false sense of life and of good in order that we may be ready to receive the riches of Love's bounty. It is so easy to trust when we really cling to the fact that divine Love, which is also clearest wisdom and all-power, is tenderly leading and guiding us.

As this truer concept of divine Principle becomes ours, something of the old fear and distrust drops away, and in its place there is gained the spirit of the little child. Jesus said, "In heaven their angels do always behold the face of my Father," and Mrs. Eddy tells us that "angels are pure thoughts from God, winged with Truth and Love" (Science and Health, p. 298). What, then, are these thoughts or qualities that so specially bring us face to face with God? Surely they are the childlike qualities of joy and trust, of humility and receptivity, and what greater reward can we have than the spontaneous happiness which comes when we begin to see God as Father-Mother and are really ready to become as a little child!

❖

Springtide

EZRA W. PALMER

THE return of spring is a season of rejoicing. Then all nature awakens to activity and sings aloud, reflecting the abounding love of God, which is manifested in all His universe. How gently and quietly spring comes! The sharp winds of winter gradually cease, the days of alternate warmth and cold intervene. At times little or no advance can be seen, but gradually, almost imperceptibly, a change appears: icy streams are unlocked, and their laughing echoes fill the valley and the woodland; brown fields and hills are covered with green; flowers spring into being, and the songs of birds are heard in the meadows. At length the transformation is complete, a banner of green is flung over the land, and the wonder of spring, which has thrilled men in all ages with its freshness and beauty, is upon us.

To him who ponders the ways of God, springtime has profound and beautiful lessons. What a type of man's growth in spiritual understanding! When the light of Christian Science first comes to us, how barren our lives, how cold our hearts, how fruitless our best endeavors! But gradually, gently, quietly, the sunshine of Truth pouring into our consciousness does its perfect work. Storms of sense may rage and the cold winds of selfishness, passion, and pride may blow, but the leavening influence of divine Science is ever at work. The storms abate, the harsh winds of hard-heartedness and self-righteousness are tempered by the gentle zephyrs of selflessness and purity. Thought rises to higher levels, ideals of life are clarified, and the laws of God are unfolding to the thought, revealing the divine purpose and coordinating man and the universe in unity and harmony. Then does the uplifted consciousness sing in the springtime of its joy, and the purified aspirations of the human heart soar upward in praise to the Love divine which upholds, guards, and enriches the universe.

How simply and yet profoundly did the Master impress upon his disciples the beauty of spiritual unfoldment! He said, "Consider the lilies of the field, how they grow; they toil not, neither do they spin." Let it be noted that Jesus in his illustration of the lilies first pointed out their need of growth. During the long months of fall and winter the bulbs of the lily are quiescent, gathering strength, vigor, and energy. No time is wasted. Then the call of nature is heard, and the lilies, ready and waiting, seek the sunlit air. Steadily and surely, through storm and sunshine, darkness and light, the growth goes on. At length the glory of the flower is revealed, its whiteness, purity, and beauty so wonderful that "Solomon in all his glory was not arrayed like one of these."

What hope and courage and upspringing joy is there in the springtime growth of the lilies! To unnumbered multitudes down the ages the lesson which the Master taught has uplifted faith and strengthened confidence in God: "Wherefore, if God so clothe the grass of the field, which today is, and tomorrow is cast into the oven, shall he not much more clothe you, O ye of little faith? Therefore take no thought, saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? . . . But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

How typical of the life of our Master is the growth of the lilies! For thirty years he pondered and meditated in obscurity, laying hold on the great truths of God as taught by patriarch and prophet, and enriching his thought in communion with the Most High. Then the time came when thought must be manifested in action and the riches of his inner life given to fructify the lives of all men. How nobly, graciously, and generously that work was accomplished all the world knows, a work blessed of the Father when a voice from heaven said, "This is my beloved Son, in whom I am well pleased." So also our revered Leader, Mrs. Eddy, devoted years to preparation for the work God gave her to do. She says: "God had been graciously preparing me during many years for the reception of this final revelation of the absolute divine Principle of scientific mental healing" (Science and Health, p. 107). That she was faithful during those years of preparation is evident from the healing and spiritual blessedness that have gone forth to the nations of the earth because of her consecrated devotion.

What a joy at this time to be a Christian Scientist, and thus to know the meaning of spiritual unfoldment! The one who has the sanctified experience of being a living witness to the transforming power of Truth, which clothes the human consciousness with the vesture of righteousness, rejoices to see that with the steady gain in the spiritual unfoldment of God's gracious laws, the cold, cruel beliefs of the carnal mind, manifested as sin, sickness, and death, disappear never again to reappear.

"Spring is here!" Mrs. Eddy says in "Miscellaneous Writings" (p. 332), "and doors that closed on Christian Science in 'the long winter of our discontent,' are open flung. Its seedtime has come to enrich earth and enrobe man in righteousness; may its sober-suited autumn follow with hues of heaven, ripened sheaves, and harvest songs."

Selected Articles

[Frank Bell in *Germantown* (Pa.) *Independent-Gazette*]

During the past fifty years it has occurred at times to a number of otherwise well-informed individuals to aver, as did a clergyman quoted in a recent issue, that Christian Science is not entitled to its name; that its adherents are deceived; that its teachings are unsocial, etc. Some of these gentlemen have caught the significance of the fact that increasingly large numbers of their fellow men have arrived and are arriving at conclusions directly the opposite of theirs. Others have not discerned this as yet. Happily, mankind as a whole has not been oblivious to the impelling logic of the fact that the opposition to Christian Science is all words, and its justification all deeds. On one side is assertion, on the other demonstration; on one side creed and dogma, on the other the manifest results of applied Christianity.

Of what avail is it to try to make people believe Christian Science is unsocial, when its constantly reiterated ideal is the golden rule; or that it is deceptive, when it asks no one to accept anything that cannot be proved in individual experience; or that it imperils the community in case of contagion, when not an epidemic has been traced to it in half a century of practice; or that it is unchristian and unscientific, when it produces all the fruits of Christianity through the application of demonstrable knowledge? Christian Science is making notable progress in comparison with some other phases of religious endeavor, and one reason for this is that it offers not the mere promise of good, but the good itself.

[Editorial in *Kingston* (N. Y.) *Leader*]

Critics of Christianity are fond of referring to the present war as a demonstration that Christianity has failed. It is quite possible that Christianity has failed to accomplish all that it might, but to hold it responsible for the European catastrophe is absurd. All wars and strifes from the beginning of time have been due to the ignorance, selfishness, and brutality of mankind, and it is quite possible that these very evils have permeated Christianity and prejudiced its work and operation. It is well known that evil has been wrought under the guise of religion, but in essence and principles Christianity is a civilizing influence in the world. The world has progressed infinitely since the birth of Christianity. Incidents can be cited where men and organizations professing Christianity worked evil; but this was not the fault of Christianity, but of men who utilized its forms to accomplish their own selfish purposes. Yet with all the violence that has been done to Christian principles, they remain today the standards of life and conduct for both individuals and nations.

The Sermon on the Mount and the golden rule are as full of vitality and just as applicable today as when they were uttered. When the nations at war cease their warfare and seek to establish lasting peace, Christian principles remain as a sure foundation upon which to erect the fabric of national life and world harmony. Indeed, there are no other principles upon which to base such beneficent work. Christianity has not been superseded by any modern discovery. It perhaps may be criticized for not having attained to such influence as to make the present war impossible, but the vastness of its task should not be forgotten when making this criticism. Rather, it should be a matter of wonder and a cause for rejoicing that Christianity has been able to accomplish so much.

In Christianity mankind possesses the vital element of human progress and happiness. Wherever this element has been given scope and encouragement, enlightenment, humanity, and virtue have increased. May not the present war be the last great onslaught of the evil of ignorance, selfishness, and false pride, against the humane and benevolent as represented by Christianity? It should be obvious to the world that the motives and teachings which inspire war are a failure, while the doctrines of Christianity remain in the ascendent. There are doubtless false prophets and false disciples of Christianity,—evil men who wear the cloak of religion for their selfish ends,—but the world has no other resort than to Christian principles when it desires to proceed along the paths of peace, progress, and happiness. The teachings of Christ remain the last word for the guidance of men and nations in their relations with each other.

[S. T. Downs in *The Logansport* (Ind.) *Pharos-Reporter*]

The statement that "no reference can be found in the Scriptures wherein Jesus ever claimed to be God," made by a Christian Science lecturer and reported in your paper recently, does not deny the divinity of Christ, and the conclusion that it does, can be only as a result of false reasoning or lack of information as to Christian Science teaching. In Christian Science a distinction is made between the humanity of Jesus and the nature of the eternal Christ; and because the Christian Science view differs from that of orthodoxy, the erroneous presentation of the subject in the letter published in a recent issue is undoubtedly accounted for.

Christian Science teaching is based on the spiritual interpretation of the Scriptures, and it declares that Jesus was born of Mary, and his own reference to himself as the "Son of man" confirms this statement; but he presented the highest concept of man that mortals have ever beheld. The tendency for many centuries has been toward worship of the physical man Jesus; but Jesus expressly forbade this, and he directed thought in contemplation of an entirely different nature than his physical body when he said: "Why callest thou me good? there is none good but one, that is, God." Again, when dull human perception would have deified his humanity as containing within itself the power to perform the works he was doing, he said, "I can of mine own self do nothing," "but the Father that dwelleth in me, he doeth the works." These sayings show how clearly Jesus declared that he was not God.

On page 583 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy gives this definition of Christ: "The divine manifestation of God, which comes to the flesh to destroy incarnate error." In this definition Mrs. Eddy gave to the world a priceless gem in divine metaphysics. By studying her discovery further, we learn that "Principle; Mind; Soul; Spirit; Life; Truth; Love" (p. 587), are synonyms for God, and through his understanding of spiritual law and its operation, Jesus so manifested God to mankind. It will be seen that the Christ was not and could not be the physical man Jesus.

The terms Christ Jesus and Jesus the Christ were titles rather than names, and mean Messiah or Saviour. "Christ Jesus . . . signifies the Godlike" (Science and Health, p. 333), and St. Paul had a firm grasp on this truism when he referred to the presence of the Mind "which was also in Christ Jesus." We find, then, that it was the presence of Mind, Life, Truth, Love, Principle,—the presence of God destroying incarnate error,—that constitutes the divinity of Christ Jesus; just as that same presence in us constitutes our Christianity.

Through this understanding of the fruth about the Master, our Wayshower, Christian Scientists are beginning to know the meaning of his promise that "these signs shall follow them that believe; In my name shall they cast out devils; they

Digitized by Google

shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." That we shall "grow into that stature of manhood in Christ Jesus" (Science and Health, p. 350) wherein we shall enjoy the full fruitage of "the sons of God," is evidenced by present demonstration. Through the teaching and practice of Christian Science, the sick are healed of every disease known to mortals; the sinner is turned into the pathway of the true and good; the business man is finding refuge from the care and strife of the business world; poverty and human misery give way to the law of Love; and "the kingdom of heaven, or reign of harmony" (Science and Health, p. 592), is declared unto all mankind.

❖

[J. M. Baker in *The Tampa* (Fla.) *Tribune*]

We note in a recent issue, in a report of Evangelist ——'s meeting, a very unfriendly and seemingly unnecessary criticism of Christian Science, in which he classes it with spiritualism and other isms, and refers to it as a system of false religion.

Our critic recognizes in mankind a universal longing for a better and higher life, and he deplores the fact that people are turning from the churches and going to Christian Science. If this is a fact, the logical conclusion would be that they are failing to find in the church that which satisfies the universal longing in the heart of man for a "higher and better life." Their remaining with Christian Science is proof of the fact that they find something which satisfies, which meets their needs; that they find present salvation, as promised in the gospel. Christian Science insists on the full and undivided gospel of faith and works. "Show me thy faith without thy works, and I will show thee my faith by my works," said St. James.

Jesus and his apostles taught and demonstrated a gospel of present salvation from sin, sickness, and all the other ills that flesh is heir to. That same gospel was taught and the people were healed and saved for three hundred years after the Master's ascension, and its Principle was discovered and put into practice by Mrs. Eddy nearly fifty years ago. Since that time there have been hundreds of thousands who have put that same gospel to the test as taught by Christian Science, and this teaching has spread from state to state, and from country to country, until it embraces the earth. The growth of Christian Science was greater in 1914 than during any year previous. There was a time when criticisms on Christian Science were common, but now its methods of healing and the lives of the Christian Scientists are so well known among intelligent people, that there is very little excuse for any misrepresentation.

❖

[F. Elmo Robinson in *The Telegram*, Portland, Ore.]

In contradistinction to a blind belief in an absentee God, a belief which has been tried for ages and found wanting, Mrs. Eddy has taught that "God is understandable, knowable, and applicable to every human need" (The First Church of Christ, Scientist, and Miscellany, p. 238). Our Saviour said, "This is life eternal that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Thus we see that Mrs. Eddy has taught, in conformity with the words of Christ Jesus, that God and His Christ may be known, understood. In order to distinguish this teaching from scholastic theology, which has made God and the Christ objects of a blind faith, she has designated it as Christian Science, Christian knowledge, or knowledge of the Christ.

Our critic reminds us that Christian Science is one of those "false systems" against which "the Bible warns us in at least fifty places." Our great Master gives us the rule by which we may test all religious teachers and their teachings. He said, "By their fruits ye shall know them," and "a good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." Although Christian Science may not accord with the doctrinal beliefs of our critic, its fruits prove that it stands the Master's test. Christian Science does not offer, as an evidence of its Christlikeness, a doctrinal platform supported merely by "proof texts," but furnishes a multitude of living witnesses to its healing and regenerative power.

While its enemies are hurling at it their violent invectives, Christian Science moves among the suffering and sin-sick multitudes,—here breaking the shackles of vice and evil habit for one, and there lifting the burden of hopeless invalidism from another, and to all proclaiming, "The Lord God omnipotent reigneth." Today, of the Christ in Christian Science, it may well be said, as of old, "Many good works have I showed you from my Father; for which of those works do ye stone me?"

❖

[From an editorial in *The Philadelphia* (Pa.) *Inquirer*]

A certain evangelist has ventured to attack the Christian Scientists, but any one at all familiar with the teachings of their faith cannot fail to recognize that it is founded on Christ as the Wayshower. If they believe in Christ, why does this gentleman feel called upon to interfere? Here is a religion that is concededly spreading in a wonderful manner all over the world. Those who practise it explain that they are attempting nothing new, but are merely striving to get back to the days of Christ and to follow his precepts day by day. They claim to have what they call a "demonstrable" religion, and point to practical results as their proof. Christ healed from both sin and disease. It is their contention that his command for his disciples to go and do likewise—to follow in Christ's footsteps—is in force today just as it was centuries ago. The evangelist may not believe this, but the Christian Scientists do, and in one of the most remarkable speeches ever delivered on the floor of Congress, Senator Works of California not long ago discoursed on this injunction, and gave instance after instance of most astonishing results obtained by putting faith in it. The evangelist might be broadened somewhat, and perhaps feel less inclined to criticize others, if he would get that speech, delivered early in January, and read it.

❖

[Robert S. Ross in *Buffalo* (N. Y.) *Express*]

In a recent issue of the *National Sunday Magazine*, in an article by a medical doctor entitled "Call the Mind Doctor," I find a statement concerning Christian Science. This critic asserts that he has discovered three laws, each dealing wholly with the operations of the human mind, and that these "are the basis of every system of mind-cure, prayer-cure, and faith-cure. They underlie all psychotherapy. They give whatever success is achieved by Christian Scientists, 'new thought' healers, and similar cults."

With the reference to mind, prayer, faith, and "new thought" methods I have no statement to make. With the reference to Christian Science I desire to point out that the doctor is completely mistaken, presumably through ignorance of the subject itself. At no point and in no way does Christian Science depend upon the human mind for its results in the healing of sin and sickness; in no way does it operate through what is known as faith-cure, and it has not the slightest alliance with psychotherapeutics, mental suggestion, or any similar material mental methods whatever. The doc-

Digitized by Google

tor enumerates his "laws" as the ability to replace one train of thought by another, and by other similar devices.

Christian Science depends wholly for its action upon the healing effect of the divine Mind. It places no reliance upon material methods of any sort, but declares these to be absolutely at variance with everything it stands for in the line of the spiritual treatment of both sin and disease. In support of this statement I quote directly from the authorized text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In this volume will be found the only accurate and authorized teachings of the religion that fulfils the twin commands of Jesus of Nazareth to preach the gospel and heal the sick. In the Preface (p. xi) will be found this statement: "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

It has been a continuously futile effort to attribute the hundreds of thousands of cures of all forms of disease—organic and inorganic, so-called incurable and curable, mental and physical—effected in Christian Science, to some vague power of "mind over matter." The chief advocates of this method are physicians and others untaught in the spiritual qualifications that are necessary to a proper understanding of Christian Science. While they are active in their attempted explanation of the method employed, they utterly fail to explain why, if the matter is so simple, they do not accomplish like results by the methods they bring forward.

The healing of disease in Christian Science is a sequent effect of the practice of its religious tenets, and the one is impossible without the other. In a word, the healing of the sick in Christian Science is the result of an adequate understanding of the religious teaching involved, and the only proof of the possession of an understanding of this teaching is the ability to heal the sick.

❖

[Harry I. Hunt in *The Iron Era*, Dover, N. J.]

A critical article which appeared in a recent issue of *The Iron Era* is obviously not based upon any accurate knowledge of Christian Science. Even a cursory examination of the Christian Science text-book, "Science and Health with Key to the Scriptures," beginning with the title, would have shown our critic that Mrs. Eddy's book does not claim to add anything to the Bible, but it is in very fact the "Key" which throws open to human understanding the spiritual truths contained in the Bible.

To compare Christian Science with Mormonism, because each has its own commentary on the Bible and uses it constantly as an aid to the study of the Bible, takes one nowhere in his quest for truth. Every other denomination has its own commentary or commentaries on the Bible, and Christian Science is no exception to the rule. What really does count is, that Christian Science has again made available to humanity the healing taught and practised by the Master.

Our critic says: "Now the great theorem of Mrs. Eddy's position is, that 'God is All-in-all.' But we point to the open grave, that God cannot be All-in-all." Christian Science plants its teaching upon that of the Master, who said, as we read in the eighth chapter of John's gospel: "If a man keep my saying, he shall never see death." Then the Jews said to him: "Now we know that thou hast a devil. Abraham is dead, and the prophets; and thou sayest, If a man keep my saying, he shall never taste of death." Here we have the Jews presenting the same argument that our critic puts forth, to refute Jesus' statement concerning the unreality of death. And in the fifty-fifth verse of the same chapter, Jesus classified these same men as liars, because they did not know God sufficiently to understand the truth of the Master's utterance.

Indeed, nowhere in the record of Jesus' ministry is it shown that he looked upon death as chargeable to his Father, of whom he said, "He doeth the works;" while of himself he said, "I can of mine own self do nothing." Jesus stated distinctly: "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." In the discharge of that mission the Master forgave sins, healed the sick, and raised people from the dead through his understanding of divine law; and as final proof that no partnership existed between the grave and the Father that did the works, he overcame the seeming power of death, and left an empty grave as an all-convincing proof that his Father, God, is All-in-all—that He is All-power, and that He is manifested in all that He creates.

The understanding of the law of God under which Jesus certainly did his mighty works, enabled him to heal people of sin and disease as readily as to raise the dead. Yet he said that he came, "not to destroy, but to fulfil"—surely a contradictory statement, unless the destruction of sin, disease, and death were in fulfilment of God's law. Mrs. Eddy says, "Truth destroys only what is untrue" (Science and Health, p. 143). Jesus, possessing a full understanding of Truth, must have recognized the untruth, the unreality of all that he destroyed. For if sin, disease, and death were really true or eternal, sent or permitted by God, their destruction never could be said to fulfil the law. To say that one believes in an infinite God who is good, who is omnipotent, omnipresent, and omniscient, and then to give equal power to that which contradicts God's goodness and infinitude, is like saying one knows the multiplication table, and proving it by saying two times three equals seven.

Christian Science is consistent in its teachings; it is the religion of the Bible. Christian Scientists are eager and constant students of the Scriptures, striving and praying for that Mind "which was also in Christ Jesus,"—that Mind which certainly was filled with divine ideas, with a full knowledge of the truth about God and man. Christian Scientists are earnestly and honestly striving to emulate their Master, to love their neighbors as themselves; and in proportion to their understanding of Jesus' teachings they are obeying the twofold command to "preach the gospel" and "heal the sick."

Christian Science is a demonstrable religion. If this were not so, it would be a religion of faith without works. "The tree is known by his fruit," said Christ Jesus. This is the test which Christian Science asks the honest investigator to apply to its teachings.

❖ ❖ ❖

The step ahead I do not need to see;
O Love divine, I leave it all to Thee.
Though dangers lurk, and to my sense 'tis night,
I will not fear, for Thou wilt guide aright.
Thy Holy Word my beacon-light shall be
O'er rocky paths; I know it shines for me.

Editorial

True Charity

Critics of Christian Science have sometimes assailed it as "a rich man's religion," because they have noticed that the attendants at the Sunday and Wednesday services held in the Christian Science churches are, as a rule, well dressed and even prosperous in appearance. These critics also delight in calling attention to the fact that, notwithstanding this seeming prosperity of its adherents, the Christian Science church does not maintain institutional charities similar to those maintained by many other religious bodies. The object of these criticisms is, of course, to create the impression that Christian Scientists are selfish, unfeeling, and lacking in that virtue of which Paul said, "The greatest of these is charity."

That the followers of Mrs. Eddy, who in this as in all other good deeds led the way, are not without this great virtue, has been amply proved by their prompt, well-organized, and generous response to every call that has been made for the relief of those in all lands who have suffered by fire, flood, famine, or war, and all this has been done in addition to the private charities of practically every individual Christian Scientist. What these latter amount to will never be known, but suffice it to say that they are in proportion to the means of those who bestow and the needs of those who receive. The fact that institutional charity is not lessening poverty is so well known, that Christian Scientists may well be pardoned for dispensing their charity in "a more excellent way," for besides giving money, food, and clothing to those in need, Christian Scientists are doing the greater work which will, in the end, abolish poverty.

Several years ago, the well-known social worker of Chicago, Miss Jane Addams, wrote that scientific investigation of poverty and its causes had proved "that intemperance ranks only third in the causes of poverty. . . . Sickness and accidents both have had greater effects on the working man and on mankind in general in reducing him to lower straits financially. Sickness has played a surprisingly large part, and outdistances intemperance, while accidents also take precedence over intemperance." This may be a surprising statement to many, but those who have passed through long years of invalidism will not doubt its truth, nor should those who have remarked the generally prosperous appearance of Christian Scientists be surprised to learn that in curing these people of disease Christian Science has at the same time rescued many of them from poverty.

When it is understood that each week the testimony of several thousand persons is given at the Wednesday evening meetings held in the Christian Science churches throughout the world, largely to the effect that Christian Science has healed sickness which medical treatment had failed to cure, also that it has cured hopeless cases of intemperance, and quickly relieved others from the results of accidents, it will be seen that this Science is the most efficient cure for poverty that the world has ever known. That it has turned drunkards and helpless invalids into strong and efficient breadwinners is a fact to which thousands have testified, and that it has done this through its mastery of the three greatest causes of poverty is justification of the course which its followers have pursued.

Mrs. Eddy writes on page 1 of Science and Health, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love;" and on page 201, "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death." It is by these prayers and these sermons that Christian Scientists are helping their fellow men out of all manner of affliction in a most practical way. When the cripple at the temple gate begged an alms of Peter, he was given that which was far more than money—the ability denied him from birth to help himself. "Silver and gold have I none," said Peter, "but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk."

The world has too long tried to eradicate evil in its multiform phases by dealing with effects instead of the cause, and charitable and penal institutions continue to multiply. Christian Science furnishes a concrete illustration of the opposite method of treatment. Health, happiness, and prosperity are but the outward manifestations of a renewed mind, of a thought so filled with love for God and one's fellow men that evil, be it disguised never so cleverly, can find no entrance. This is the love, the true charity, that "seeketh not her own," but finds its greatest joy in helping others to help themselves.

Archibald McLellan.

❖

"Patient waiting"

One of the most difficult lessons of humanity, from childhood up, is to wait patiently for any desired good. A child is clamorous for the granting of its desire and brooks no delay, but with the discipline of years and experience, the adult finds that he must wait for what he wants, whether he will or no, although this is not often done with a good grace. In many cases, alas, "hope deferred maketh the heart sick," and disappointment takes the place of desire; but this can never result if we are "trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). If we are waiting patiently upon God, and gaining a clearer sense of the divine will, our purified desire will be growing radiant with faith, hope, and trust, for the good which God is keeping for us is far beyond any mortal sense of it. "The things which God hath prepared for them that love him" are surely well worth waiting for.

In the olden time Jacob declared, just before his departure, "I have waited for thy salvation, O Lord," and soon after the dawn of Christianity Paul wrote to the Thessalonians, "The Lord direct your hearts into the love of God, and into the patient waiting for Christ." When the ever-presence of the Christ is realized, we have salvation, and it is well to remember that this means health of mind and body. Jacob had "glorious glimpses" (Science and Health, p. 333) of the salvation for which he waited. After his wrestling at Peniel, when spiritual sense triumphed, the long feud between his brother and himself was healed, and little wonder, for did not the angel say to him, "As a prince hast thou power with God and with men, and hast prevailed"?

There had been long years of waiting before the brothers were ready for this triumph of Truth and Love, but when it came there was no selfish grasping after goods and chattels, but princely giving; for the one good, Love's reflection, was seen to outweigh all material things. Later, Jacob waited over twenty years in sorrow, because he believed that Joseph was dead, and when joy at last dawned upon him, he thought it too good to be true. But as mortal blindness cannot always obscure spiritual sense, Joseph was restored to him, and so noble withal that even his high estate paled before his spiritual achievements. In Joseph we see a beautiful type of "pure affection blessing its enemies" (Science and Health, p. 589), and his years of waiting, even those

Digitized by Google

spent in a prison, serving an unjust sentence, were not wasted, for a splendid manhood was being unfolded, made ready for the highest service to men and nations.

Some one may ask here if it is necessary to wait years for healing in Christian Science. Such a question would assume that disease and sin possess, to some extent at least, reality and identity, but this is a mistake. Many ailments are due to fears implanted in infancy, and assiduously cultivated as the years go on, through a prevailing belief in laws of disease, wrongly named health laws. The real problem of humanity is to prove that man as God's likeness is spiritual and governed by spiritual law. If we accept the demonstrations of Christ Jesus, we cannot deny the correctness of this proposition, especially as the ministry of Christian Science is daily multiplying proofs, in ever increasing ratio.

As the Master declared, Truth makes free, and Truth is not conditioned by any time element. God, however, demands faith, for the Bible says that "without faith it is impossible to please him." Truth also demands purity and love and forgiveness, and as these seem to grow very slowly in the soil of material belief, we must wait, not idly but patiently, upon divine Love for the unfoldment of the spiritual qualities which link man consciously to his divine origin. As we learn thus to wait, the sense of suffering vanishes, and according to promise we renew our strength, finally to "mount up with wings as eagles," no longer faint or weary.

ANNIE M. KNOTT.

❖

A Little Candle

ONCE there was a man who had the habit of being very kind and pleasant to everybody. He was a man of large affairs, was brought into contact with a great number of people, and all of them came to know him as a dear good fellow and friend. It was altogether natural for him, on entering into conversation, to say some cheery, encouraging thing, which was always flavored with love and ofttimes with fun. He knew people of every class and kind, from bank presidents and railway builders to coal stokers and bootblacks, and each and all speedily discovered that he not only thoroughly enjoyed making other people happy, but that he was a genius in the multiplicity and simplicity of the ways he found to do it. His religion was distinctly good-natured, brotherly, and continuous; his creed was written all over his face. It read, "Let us be friends, let us be happy, and let us do the square thing."

That such a man should prove winsome goes without saying. He was remembered as we remember a bit of good news, a happening that we dwell upon and love to talk about. His kindliness was so habitual, so elemental, and so spontaneous, that there could be no question as to its sincerity and its all-inclusiveness. You knew you had come upon a genuine brother man who, without mentioning the subject, presented a concept of righteousness that seemed very companionable and altogether attainable, and who led lots of people that never thought of going to church, to wish they were like him. And so the largeness of his helpfulness might be said to have been determined by the littleness of the things which afforded him opportunity to give his brother man that little lift which ofttimes proves a benediction.

He was never ecclesiastically ordained, yet he was always preaching, and the secret of his success was found in part in the fact of humanity's hunger for just this good cheer. He led all to see that "simple kindness is the brightest jewel in the crown of character," and gave every one a better understanding of the psalmist's saying, "Thy gentleness hath made me great." He constantly reminded people of him who was a past master in the art of winning men, the Man of Nazareth. He brought the Christ-life into one's field of vision, and thus illustrated the Master's words: "And I, if I be lifted up from the earth, will draw all men unto me."

This man was an earnest student of Christian Science and greatly adorned its doctrines. He had found it possible to make his life and the lives of others sweet and eventful by putting into daily practice Mrs. Eddy's counsel when she says: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name" (Science and Health, p. 570).

Many people have gained the impression (and very possibly from you or me) that it is hard to be a true Christian; but for those who believe in good, God, and in good alone, it can but be natural and easy to obey the Master's one great law-fulfilling commandment, "Thou shalt love." This is what the world longs for, the charity or spiritual affection that, as St. Paul has said, is "kind;" that "envieth not;" that "vaunteth not itself, is not puffed up;" that "seeketh not her own, is not easily provoked, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth."

This is the loving life which it is ours as Christian Scientists to live in greatly simple ways. And think of what it would mean to the world today if every representative of this movement were thus impressing those about him! Like the music student, we must of course master the technique of our art by the constant practice of simple exercises. The lady who found Phillips Brooks in a back-alley tenement telling stories to an invalid child while its tired mother went out for a bit of air and sunshine, discovered the secret of his wondrous power to inspire men. He had learned to reflect divine Love in little things, and this fact gave conquering qualities to his every sermon. Said the immortal Shakespeare:—

> How far that little candle throws his beams!
> So shines a good deed in a naughty world.

And he also said, " 'Tis a kind of good deed to say well."

JOHN B. WILLIS.

Suburban Lecture

Under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., a free public lecture on Christian Science will be given by Clarence W. Chadwick, C.S.B., of Omaha, Neb., a member of the board of lectureship, at Waltham, Mass., in Asbury Temple, Central square, Monday Evening, April 26, 1915. The public is cordially invited.

❖ ❖ ❖

Among the Churches

Current Notes

HALIFAX, ENGLAND.—First Church of Christ, Scientist, has just completed negotiations for the purchase of the property known as "Savile Lodge," situated at the corner of Savile road and Well Head lane. At present only slight structural alterations will be made to the building, but later it is the intention of the members of First Church to erect a church edifice suitable for their needs. The progress of the cause of Christian Science in this district has rendered necessary the acquisition of this property.

The Halifax Guardian.

PORTLAND, ORE.—On Jan. 1, 1914, the union extension committee, consisting of three members from each of the five Christian Science churches of Portland, began the second

Digitized by Google

year of its work of holding services in the jails of the city and suburbs. The first year had been rich in experiences for the committee, with many healings reported among the prisoners. During this last year the studied methods of appealing to human sympathy, which are so subtle, were met with a greater wisdom than ever before, both by the committee and by those asked to attend the services. The continued requests of the prisoners for the committee to intercede for them and get them out of what they tried to make us believe was unjust confinement, have about ceased, as the men begin to realize what the help which we come to give them really is,—the awakening of the Christ in human consciousness, to change their thoughts from hatred to love.

During the past year we have exercised more care than ever before in helping the men materially. We have been more certain than ever that the spiritual food given these men each Sunday through the service, and by means of the literature, was the silver and gold that the men really needed. We have labored to find the good soil among the rocks and rubbish of human woe, and we have not sown in vain. The thought was expressed that in giving the men board and room on coming out of prison, and trying to place them in good positions before they had risen mentally above their former habits, we were doing them a wrong, because Truth goes to them right where they are, and leads them step by step, as they are willing.

During the year the committee has visited practically all the homes and charitable institutions with a view to holding services. During the latter part of this year services were begun at the Multonomah County poor farm, to be held each month. Many have been found there who were interested in Christian Science and they are reading the text-book and our other literature. At the last service the attendance was eighty. About four months ago the Linnton Rockpile was closed, as it was needed no longer. Soon afterward, the fifty-eight prisoners at Kelly Butte were transferred to the county jail, and the Butte was closed on account of lack of funds. At present, services are held at the county jail in the court-house every other Sunday afternoon in the men's ward. A marked change in the personal appearance of the women prisoners attending these services has been noted. The gradual breaking down of prejudice among the officials, and the increased interest of the men, has been gratifying. The men are now attentive, even joining in the hymns, and the meetings are seldom disturbed.

Services have been held every fifth Sunday at the penitentiary, cooperating with the Salem church. A marked change has been noticed there in the general atmosphere.

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Kansas City, Mo.

Three lectures on Christian Science were given by George Shaw Cook for Second Church. At the first lecture, E. A. Krauthoff in his introduction said:—

Job asked, "If a man die, shall he live again?" Plato taught that the sum of human knowledge was to know one's self. Hegel is said to have expressed the thought that the problem of human existence was the effort of man to be at-one with God. In this state of the so-called human mind, Christian Science comes with its message of cheer and hope and points a way out of all doubt, fear, despair, disease, sin, and even death itself.

At the second lecture H. D. Yoder said:—

The text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, contains the tenets of Christian Science, and the first tenet affirms that "as adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (p. 497). Many students joyfully testify that our text-book has been in fact the "Key to the Scriptures," unlocking the treasures of Scriptural truth to waiting mankind. Mrs. Eddy also declares that "the best sermon ever preached is Truth practised and demonstrated" (p. 201). The fruitage of the Christ-power understood and practised by those who understand the Principle and rule of scientific Christianity, or Christian Science, is manifested in the healing of disease, fear, discord, the reformation of the sinner, and increased righteousness in all walks of life.

At the third lecture Eugene Jaccard said:—

About nineteen years ago, at the request of my wife, I attended my first Christian Science service. She knew a little of Christian Science, but I knew only what I had read in the newspapers, which was mostly inimical, and as a result I was very much prejudiced against it. The first time I went with her, I went only as far as the door of the church. I cannot tell just what feeling came over me, but it was such that I did not go in. After hearing my wife's report, I went with her the following Sunday, and was greatly impressed with the service, especially with the silent prayer and the spirit of love manifested by the members toward the strangers. I became a regular attendant at the church, and a student of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and through the reading and study thereof I was healed of chronic diseases of from nine to twenty-seven years' standing. Since that time the only medicine used in our family of six has been the Holy Bible and Science and Health.

My opposition and prejudice was not against Christian Science itself, but against my erroneous impressions and false concepts of it.—*Correspondence.*

❖

San Francisco, Cal.

The remarks of L. C. McAfee in introducing Virgil O. Strickler, who delivered a lecture on Christian Science at Dreamland Rink, under the auspices of Sixth Church of Christ, Scientist, were in part as follows:—

Why are the audiences of the Christian Science lectures so large? This great assembly emphasizes that question. Simply as a witness, merely one among thousands, I will give my reason for being present here. For years I was an invalid. The culmination was paralysis, said to be the result of a clot on the brain. The careful attention of good friends and faithful physicians restored me to moderate activity, but I suffered from epileptic spasms. These became so

Digitized by Google

persistent that I feared to enter an office building for the first time, lest I should be taken with one. This illness lasted for many years. My principal physician pronounced my disease incurable. Nevertheless, I stand here before you well.

It is two years since I had a recurrence of this trouble, and the cure is incontrovertibly proved to be due to Christian Science. Christian Science brings its followers into personal fellowship with omnipotent God. Is any man so rich or so great that he can spurn such friendship, or so poor or heavy-laden that he cannot be reached by the comfort of the heavenly Father?

With all the aspirations of a business man, I have and want no greater ambition than friendship with the Christian Science God, which, as stated in Science and Health (p. 140), "changeth not, and causeth no evil, disease, nor death."

Correspondence.

❖

Edinburgh, Scotland

Miss Lilias Ramsay, in introducing William R. Rathvon, who lectured on Christian Science, said in part:—

Christian Science is preeminently glad news. Truth comes to us today as it came to the shepherds of old, bringing a message of comfort and hope, of joy and peace, to all who are willing to receive it. When this message was brought to me, now many years ago, I had ceased to expect that things could be put right in this world, and I tried to content myself with the hope that in some unknown future state we should witness the triumph of good over evil. The first hope held out to me by Christian Science was that of physical healing, and I thought if I could attain to perfect health, that would be enough to ask. I found this health and strength; but these became established as the result of an understanding of the naturalness and absolute supremacy of good, God, that I had never thought to gain. "Will God in very deed dwell with men on the earth?" said Solomon. This question, which expresses the deepest longing of the human heart all through the ages, is answered for us today in Christian Science.—*Correspondence.*

Lectures to be Delivered

Akron, Ohio.—George Shaw Cook, East Market Street Academy, 3:30 p.m., May 2.

Alhambra, Cal.—Bliss Knapp, High School Auditorium, 8 p.m., May 7.

Altoona, Pa.—Bicknell Young, Jaffa Temple, 8 p.m., May 6.

Anderson, Ind.—Clarence W. Chadwick, Grand Opera House, 8 p.m., May 2.

Ashland, Ky.—Jacob S. Shield, First Christian Church, 8 p.m., May 6.

Brockton, Mass.—Dr. Francis J. Fluno, City Theater, 4 p.m., May 2.

Camden, N. J.—Bicknell Young, Towers Theater, Broadway and Pine street, 3:30 p.m., May 2.

Carthage, Mo.—Col. William E. Fell, High School Auditorium, 8 p.m., May 3.

Chico, Cal.—William R. Rathvon, Majestic Theater, 3 p.m., May 2.

Chicago, Ill. (Ninth Church).—Jacob S. Shield, Woodlawn Masonic Temple, University avenue and 64th street, 3:30 p.m., May 2, and 8 p.m., May 3.

Cincinnati, Ohio (First Church).—Jacob S. Shield, Music Hall, 8:15 p.m., May 7.

Columbus, Ga.—Virgil O. Strickler, Chase's Conservatory, 8:30 p.m., May 6.

Elmira, N. Y.—William D. McCrackan, Colonial Theater, 3 p.m., May 2.

Eureka, Cal.—Clarence C. Eaton, Church Edifice, 8 p.m., May 2.

Exeter, Neb.—Prof. Hermann S. Hering, Auditorium, 8 p.m., May 7.

Florence, Ala.—Virgil O. Strickler, Court-house, 8:15 p.m., May 7.

Green Bay, Wis.—Willis F. Gross, Church Edifice, Monroe and Cherry streets, 8:15 p.m., May 3.

Jonesboro, Ark.—Virgil O. Strickler, Empire Theater, 8 p.m., May 4.

Kansas City, Mo. (Second Church).—Col. William E. Fell, Church Edifice, Troost avenue and Thirty-first street, 8 p.m., May 4, 6, and 7.

Lodi, Cal.—William R. Rathvon, Beckman-Thompson Hall, 8 p.m., May 1.

Long Beach, Cal.—Bliss Knapp, Auditorium, 8 p.m., May 6.

Los Angeles, Cal. (Fifth Church).—Bliss Knapp, Woman's Club House, 7078 Hollywood boulevard, 3 p.m., May 2, and 8 p.m., May 3 and 4.

Marinette, Wis.—Jacob S. Shield, Church Edifice, 8 p.m., May 4.

Mechanicsburg, Ohio.—Clarence W. Chadwick, Main Street Theater, 8 p.m., May 3.

North Yakima, Wash.—William D. McCrackan, Masonic Hall, 8 p.m., May 7.

Ottawa, Ill.—George Shaw Cook, Church Edifice, 8 p.m., May 7.

Pontiac, Ill.—Virgil O. Strickler, Folks Opera House, 8:15 p.m., May 3.

Potsdam, N. Y.—Bicknell Young, Town Hall, 8 p.m., May 3.

Puyallup, Wash.—William R. Rathvon, I. O. O. F. Hall, 8 p.m., May 6.

Testimonies of Healing

Words are inadequate to express a tithe of my heartfelt gratitude for Christian Science, and all that it has done and is doing for me. I have been studying this teaching about six years, and in all that time I have not taken any drug or medicine whatsoever; my only remedy is, and has been for that period, the truth which Jesus taught, and which our beloved and revered Leader, Mrs. Eddy, discovered for us in this age.

Christian Science as a healing agency has never failed me, whatever the problem has been, physical or moral. I have proved that it is the truth which makes us free. This was brought back very forcibly to me a few years ago, while I was spending a short holiday in Germany. I was quite suddenly taken very ill indeed. The symptoms became so distressing that my cousin, with whom I was staying, implored me to see a doctor. I consented to this, with the understanding, however, that he should only diagnose my case and that I would not take his treatment. The doctor examined me and said that the heart was seriously affected. He also said that I must lie down at once, and not walk at all; if I did not follow his directions, he would not answer for the consequences.

Late that night I telegraphed to a Christian Science practitioner in England for treatment, and followed the doctor's orders only so far as to go to bed, since I really felt incapable of standing up any longer. The doctor had sent me a drug, in case, as he said, I should have any very bad attack that night, and before my cousin left me to rest, she placed the drug by my bedside, hoping I would take it if necessary. The attack came, but from the first I had not the slightest temptation or desire for the drug. I knew that God was my only real help and healer, and that He could not fail me. During the night, as I battled with the intense pain, I opened Science and Health and tried to read, and lastly I opened the Bible at the twenty-seventh psalm, and read these words: "Wait on the Lord: be of good courage, and he shall strengthen thine heart: wait, I say, on the Lord." With those words a great sense of peace came to me, with a wonderful realization of the presence of the Christ, and I fell asleep.

Two days later I got up, dressed, and walked down-stairs into the garden, where I lay all day, and in the evening I walked up two flights of stairs to my room. The next morning the doctor called, and was simply astounded at the change in me. He examined my heart and found it perfectly normal. Again and again he reiterated his astonishment at this wonderful change. Within about a week I was traveling back to England alone, and although the doctor told me I would always have to be very careful and never take any violent exercise, I have played golf frequently, as well as lawn tennis, and have taken every sort of violent exercise. A doctor in England has since examined my heart, owing to the wish of a near relative, and he found it perfectly sound. This all happened three years ago, and I am quite free.

Every day brings to me some fresh blessing, some added proof of the healing power of the Christ, Truth; and I am proving, with the slight understanding I have, that God never fails, and whatever the problem, it is always surely and unfailingly met, when I am faithful to the demands of divine Love. If I wanted to tell of all that I have received through the power and protection of divine Love, there would be no end to my writing. I can only tell of some of the bigger things—the things which at the moment seem to stand out.

I have found Christian Science preventive as well as curative. My sister and I proved this in time of sudden danger. We were traveling in an electric car, when suddenly, without a moment's warning, the floor beneath our feet blew up. The force of the explosion sent our feet up into the air and forced my umbrella out of my hand. Afterward, we climbed along the seats of the car and picked our way over the wreckage of the floor, for we were absolutely unhurt and there was no sense of shock. We were on our way to the Sunday evening service, which we attended with hearts full of gratitude and joy for this wonderful proof of the ever protecting power of divine Love.

MARGUERITE SCOTT TILL, Brighton, Sussex, England.

I would like to say that I was in the tram with my sister at the time of the accident, and I would also like to express my gratitude for God's wonderful protection. Our hearts were filled with thankfulness as we realized that evil had not been able to harm us, and it taught us to know with more certainty that divine Love is ever present and an everlasting protection. I have much cause for gratitude. For the last nine years Christian Science has been "a very present help" in any difficulties that have arisen. It has helped me in a time of great trouble, and has filled my life with a new understanding of God and His creation, bringing with it joy never before known. I am deeply grateful.

KATE E. ANDREAE, Brighton, Sussex, England.

❖

I wish to tell about my healing in Christian Science, as some one in a similar condition may be led thereby to seek help from the same source. On March 4, 1910, I went to the Soldiers' Home (being a veteran of the civil war) for the sole purpose of placing myself in a position to be buried by the government. I had given up all hope of ever being able to overcome the drink habit, as it seemed impossible for me to get along without having liquor with me day and night. I also had a stomach disorder in its worst form, and in addition to this my heart was badly affected. Twice I had fallen in the street, and I was afraid I would do so again. In fact, I was a wreck both morally and physically. I had left my family, and my only wish was to be out of the way until the end should come.

On the morning of the fifth of March I awakened with my right side paralyzed, so that I was unable to walk or feed myself. I realized there was nothing known in *materia medica* that could cure me, for I had seen many a poor man thus afflicted who had tried all kinds of remedies with no good results. One day I met a lady who inquired what my trouble was, and on telling her, she asked if I wished to get well. My answer was not very civil, for I said, "Most any fool would." She advised me to get "Science and Health with Key to the Scriptures" by Mrs. Eddy from the library, and not only read the book but study it, and said I would be cured. I thought she was mentally unbalanced and did not take her advice, but again I met her and this time promised to do as she said. On the twelfth day of June I began to read, but was not much interested. Again I went over the book, this time in connection with the Bible, giving the same deep study. I also read "Miscellaneous Writings," and as I continued with my study, I became more interested. One day I went to dinner without my cane, as I discovered when I was ready to return to my quarters quite a distance away, and fear arose as to how I should get back. Then the thought came that as I had come without any material support I could return the same way. It was then I realized that I was healed, and since that time I have needed no material support.

Digitized by Google

After all the physical healing, however, there is nothing to compare to the spiritual uplift and happiness that has come to me, the understanding of God and of our Master's teaching. This was all accomplished in three months through reading and studying Science and Health. I had no help from any other source, no treatment whatever; and I would advise any one, whatever the trouble may be, especially if it is the curse of liquor in any form, to study that book in connection with the Bible, for it will cure him. I can now meet my fellow man with love and see him as God's child. Christian Science has also helped me in my business, for I go about my work with confidence, knowing that I am right. I left the home a well man on Sept. 16, 1910, and went to work at my trade, plastering, which I am following yet. I will be glad to answer any questions any one may wish to ask, well knowing that the understanding of God, gained through the teachings of our dear Leader, will heal all ills, both mental and physical.

BENJAMIN F. DEITRICK, Los Angeles, Cal.

❖

On the evening of June 19, 1911, our son, fifteen years old at the time, was taken ill at supper, and we did not know what was wrong with him. We had never had much sickness with our children, and were both frightened. My husband called in a neighbor, who said the boy had a fit and we had better send for the doctor, as he might have other attacks. The doctor came about ten o'clock that night and said the trouble was caused by his stomach. He came again the next day, but the boy grew worse. He had as many as eight spasms every day for a week, then they stopped, but what was called "meningitis" set in. We thought several times that he would pass away. On the fifteenth day he was able to sit up, and three weeks later I took him to visit my sister, as she had been so kind to us when he was sick. The doctor was also kind and did all he could for my son, but he said we must be careful about what he ate, and if he had another attack to send for him.

When we got home from my sister's the next day, my son began to have spasms again and they were more severe than ever. We telephoned for the doctor, who shook his head and said we had let the boy eat too much. He came for two or three days, and then we thought of changing doctors, as I was in a nervous state myself. I, however, said to my husband that the boy could not last long with that treatment, and I was going to have a Christian Science practitioner as soon as I could get one,—I had wanted one all the time, but he would not consent. I therefore wrote to a practitioner in Muncie, Ind., and she came the twenty-seventh of July and stayed one night. The next morning the boy got up and ate a hearty breakfast. We threshed that day, and he was out with the men most of the time. They all just looked at him, for every one had thought he would die, but instead he improved and put on flesh very fast. In four weeks the spells commenced again, but we wrote to the practitioner, and she treated him. He went to school every day and made good progress in his studies, but would have the attacks at night. I got so I could not stand it any longer. Accordingly I went to see another practitioner, who said it was my fear that was keeping him from getting well. That was in September of the same year. We stopped treatment until the next May, when I asked the practitioner to treat us both, which she did. He has had no attack since, and can do anything any other boy of his age can do.

I myself have been greatly benefited, and my little girl was healed of a severe cold. I can therefore say to all: "Do not give up. If your healing is slow, it will come; just rejoice." The help comes from God. We learn that we have something besides matter to lean on. I hope my testimony may be the means of helping some one who has suffered as I have. I am very thankful for this blessed truth that makes us free.—BERNICE BELL, Dixon, Ohio.

❖

Christian Science has done so much for me in bringing peace, joy, and good into my life, which before seemed beset with discord, despair, and evil, that words cannot express my thankfulness to God, and my gratitude to our revered Leader, Mrs. Eddy, through whom God revealed to this age the divine Principle which heals all our diseases.

My attention was directed to Christian Science through a younger brother. At first I was antagonistic and did all I could to discourage his interest in the subject. I was not long, however, in discovering that my efforts were in vain, and soon I began to realize that there were many good points in this religion. At this time I had been out of college for about a year, having failed in two colleges on account of poor health and irregular living; but I did not seem to be having any more success out of college than I had while there. In fact, things seemed to be steadily growing worse, and I was in any but a happy state of mind. Among other things I was a slave to cigarettes and drink, and these habits interfered with my business to such an extent that success seemed impossible. I was unable to earn sufficient money to meet my expenses, and the result was that I was heavily in debt and constantly getting in deeper. Then, too, for a number of years I had been taking treatment from different physicians for an eruption which appeared on my face and which was very unsightly and annoying, but nothing relieved this condition; indeed, it seemed to be steadily growing worse.

I was a member of a church, but attended its services only on rare occasions, and then merely to please my mother or some other member of the family, for I could not believe all of its doctrines. I never believed that God created man capable of committing sin and then consigned him to eternal punishment for doing that which He had given him power to do; and I am grateful for the proof which Christian Science gives us that sin is not power, and is not real, for God is All-power, and God is good; therefore man, as the image and likeness of God, knows no sin.

Finally, I found myself under medical treatment for a number of ailments, on a strict diet, and losing weight rapidly. I was told by the physician that if I continued to lose flesh I would soon have lung trouble. He did not seem very hopeful concerning my case, and I was greatly discouraged. Again it was proven that "man's extremity is God's opportunity." I went to a Christian Science practitioner and asked for treatment. The help was given, and I began to improve at once. I then took up the earnest study of the Bible, and of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and have been diligently studying ever since. I also began to attend the Christian Science services regularly.

My healing was slow, for error seemed to be very tenacious in some respects, but the advance has steadily continued, and with each step false beliefs have been overcome. For several years I have been entirely free from all desire for drink, and the smoking habit was destroyed at the same time. The eruption on my face has been completely healed. Likewise, a measure of success has come to me in my business which I never before knew, and for which I cannot be too grateful. I have also gained in weight, and am now well, strong, and happy.

I am deeply grateful for these physical and substantial

Digitized by Google

benefits, but I am even more grateful for the understanding of what God is, and of man's relation to Him, all of which I have gained through the study of the Bible and Science and Health, and for the knowledge that God "is a very present help in trouble." I am now able to face the problems of each day with confidence, and with the knowledge that God is ever present and all-presence. I am also able to help others to realize this truth, and this means much to me. These are only a few of the many blessings which have come to me in Christian Science.

I give this testimony in the hope that it may help free others from the bonds of error. Jesus said, "Ye shall know the truth, and the truth shall make you free," and this truth has been proven for me and a multitude of others many times in Christian Science.

J. Hazlett Griffith, Pittsburgh, Pa.

✧

I have received so much benefit from the testimonies in the *Sentinel* that I send mine in the hope that it may cheer some struggling heart. My interest in Christian Science was first awakened about two years ago, when I was healed of female trouble through treatment from a faithful practitioner. I have been helped mentally, morally, and physically; but the greatest blessing of all is the spiritual uplift which has enabled me to know that God is both able and willing to care for His children, if we are but willing to do our part and bear the cross, which may at times seem heavy, but always brings a sure reward. The Bible is a new book to me. I now see what Jesus meant when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." I am thankful to God, and grateful to Mrs. Eddy for giving us this truth.—Mrs. J. W. Parker, Wayne, Okla.

✧

Sufficient time has elapsed since the first beneficent influence of Christian Science came into my life to prove that its effects were neither illusory nor transient. I graduated from college with an entrenched conviction that any step in human progress must emanate from the experimental laboratory,—if not the biological or physical, at least the psychological. In fact, my scholastic training had left me scant respect for the deductive method of reasoning in general. Therefore the first cases of healing in Christian Science which came to my attention I dismissed as psychological phenomena,—presumably due to overstimulated imagination.

Immediately following my marriage there began the thorny path of suffering which ultimated in the rending of the garment of self-deception with which I was clothed. Beginning with malaria in an aggravated form, I passed successively through surgical operations—resulting from difficulties at the birth of my children—and nervous breakdown, until I found myself an almost complete wreck physically, and scarcely better off mentally and financially. Self-pity, and bitterness toward those whom I deemed not sufficiently sympathetic with my unhappy state, dominated my consciousness, until I was a source of distress to family and friends. Christian Science was offered to me at this point, but I rejected it contemptuously, convinced that these ills were not "imaginary." It was my privilege to accept the alternative, and I did so. This alternative was three more years of wretchedness.

One day I met a friend whose condition I had known to be in every respect as bad as my own, but behold, she appeared to be perfectly well, and what was more surprising, perfectly happy. She told me that Christian Science had healed her. This gave me food for thought, and ultimately led to my reluctant consent again to read "Science and Health with Key to the Scriptures," this time more conscientiously than my former critical state of mind had permitted. At first I got but little enlightenment, however, so deep was my prejudice against what I considered was Mrs. Eddy's illogical method. The style, moreover, was not what I considered appropriate for a text-book. When I expressed this feeling to my Scientist friend, she gave me a copy of "Unity of Good," also by Mrs. Eddy, possibly thinking that my prejudice against another volume might be less insistent. Whether or not this was the cause, at any rate it was this book which gave me the first glorious glimpse of that truth which was to free me from every one of my miseries. I then turned to Science and Health with a receptive mind, and from that hour to the present one my life has been constructive, hopeful, and to a greater or lesser degree useful to others.

Although there are daily problems to be worked out, as there must be until what Mrs. Eddy calls the "passage from sense to Soul" (Science and Health, p. 566) has been finished, despair has forever given place to confidence, ill health to physical well-being, and mental unrest and doubt to a reliance upon God as the only cause and creator. It has been five years since any material remedies have been used in our household, which includes four children. During this time scarlet fever, measles, whooping-cough, acute lung trouble, burns, fractures, and many minor ailments have put in an appearance only to be banished by the application of Christian Science. Some of the healings were practically instantaneous, others were slower, but all were ultimately accomplished. My last baby was born under Christian Science treatment with so little discomfort as to be negligible, whereas my previous experiences, as I have intimated, were such as to take me into the "valley of the shadow."

Grateful as I am for these physical benefits, it is only as they are signs following the mental and moral regeneration that they are significant. It is not in the spirit of doing penance, but rather is it with the desire to be as just as I was formerly unjust, that I make public expression of my gratitude to Mrs. Eddy for what she has done for mankind, only one sample of which is my own case. By making the Bible and Jesus' teachings comprehensible to me, she pointed the way to God, and no greater service can be conceived. If my life as well as my words shall bear witness to my gratitude, I shall be satisfied.

My healing has been permanent. I am in better health and more full of joy and peace today than ever before. In fact, my testimony hardly gives an adequate sense of the marvelous betterment in all my affairs which the study of Christian Science has brought to me.

Agnes Morley Cleaveland, Berkeley, Cal.

✧

In Science and Health we read: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more" (p. 3). The writer had been a great sufferer for fourteen years and had exhausted all known medical skill, but a few weeks' treatment in Christian Science brought the realization that he had been healed of a painful stomach disorder, also of sleeplessness.

After the first good night of refreshing sleep, I said to the practitioner the next morning that I wanted to give up business and go out through the country to help the suffering. The practitioner then kindly explained that it would be much better for me to remain at my work until I gained more of this truth, meanwhile letting my light shine, and that if I were "lifted up" through the study, I would be able to help others. Acting upon this advice, I began earnestly to study

Digitized by Google

the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," and have never ceased to do so since. Having procured a *Quarterly*, I started to study the Lesson-Sermons, and I also subscribed for and read all the literature. In reading the Bible for the first time, I saw a passage from the gospels wherein we are told that after the master Christian had healed a man, the one healed asked permission to follow him. The Master's reply was, "Go home to thy friends, and tell them how great things the Lord hath done for thee." Immediately upon reading this I thought of the wisdom of the practitioner; for if I had given up business and gone into different cities to try to help my fellow men, it is very likely they would not have believed that I had been healed through Christian Science.

By studying earnestly, and gaining a little understanding of the truth which the Master said would make us free, I have been able to help several of my employees, and they are now subscribing for the literature regularly. It was easy for them to believe, for they knew that for years I had been seeking to regain my health through *materia medica*, change of climate, and hygienic treatment; also that I had dropped all this and had been healed through Christian Science.

I have persistently cultivated within myself the habit of mentally expressing my gratitude. For example, I never read an article or a Lesson-Sermon or a copy of the *Monitor* without first thanking God for it, and also for the mentality which has become the channel for its expression. At the Wednesday evening testimony meetings, the Sunday services, and the lectures, I never fail to declare that the word which goeth forth shall not return void, but shall prosper in the thing whereunto it is sent, as we read in the prophecy of Isaiah. I find that this attitude of thought is very helpful, and one that is easily cultivated. I can never be grateful enough for all the blessings that have come into my life these past four years in the way of moral betterment, spiritual understanding, and physical help. I have never turned aside one moment for any other help since my first treatment in Christian Science, and I find it meets my every need at home, in social duties, and in business. In my office I am never without a dozen or so of pamphlets, which are always ready for inquiring friends.

My conception of how best to show my love and gratitude to Mrs. Eddy for all these blessings is to study daily Christian Science and try to live what I learn, so that others will see my light shining, and they too will glorify our heavenly Father.—A. Warendorff, New York, N. Y.

❖

I turned to Christian Science a few years ago, and I wish to express my gratitude for what it has done for me. By reading "Science and Health with Key to the Scriptures" I was healed of stomach trouble. I also had rheumatism for several years and it was growing worse, but I was healed through absent treatment. My husband, too, was healed in Christian Science, and is now stronger and in better health than he ever was. We are both striving to gain more of this blessed truth which makes men free.

Lucy Orr Parmeley, Potosi, Mo.

I have been healed through Christian Science of a catarrhal affection of the throat of fifteen or twenty years' standing, also of kidney trouble from which I had suffered for thirty years, of rheumatism, and a bowel difficulty. For several years there was a large wen behind one of my ears, and it was growing very fast, but this has disappeared since I took up the study of Christian Science.—Cyrus Walker Parmeley.

From Our Exchanges

[Rev. Alfred J. Cardall in *The Universalist Leader*]

Carlyle once gave expression to the passionate longing of countless men and women in the despairing wish that God would speak again. In the earlier days he thought he could hear the voice of the infinite in the speech and life of great souls.

"The longing of men." Why this expression of Carlyle; why this longing of men? That it exists, we ourselves, possibly, find true in our own yearning. Analyzing it, it reveals two conditions: a sense of need, also a recognition of man's absorption in the things of the world. Is it not out of a sense of need that this longing arises? There is something lacking, something being called for by the very nature of man himself. He is not satisfied. With all the progress of the age, with all the refinements, with all the increase of earth's varied store, he yet yearns for something apparently beyond his reach. There is something wanting in his own life. There is a keen sense of need.

Then, too, this longing of man may come from a recognition of man's absorption in the things of the world. So engrossed do men and women become in the activities of daily life that they hear not the voice of God in the common places or the uncommon places, in the messages of men, or in the duties of life. So loud are the calls from elsewhere, that the voice of God is not heard. Like Carlyle, men have felt, and do feel, that the voice was heard in the earlier days, when at least the speech and action of great men reflected the utterances of the infinite for the guidance of their fellows and men were reminded that God was still in the world and in the conduct of life. Even when some great soul does arise to give a message of God to the sons of men, they are so absorbed in the intense activities of the day that it comes only as a moment's stir.

[*The Christian Intelligencer*]

Christ revealed the reality and the beauty of the moral and spiritual world. He illustrated by his own life what human life at its best should be. His ideals show what objects it is worth while to pursue. The spirit and principles by which Jesus lived are the true regulating motives of worthy living. If every one tried to live as Jesus lived, the countless miseries of man would be rapidly reduced and finally wiped out. To look at life as Jesus looked at it, to adopt as life's supreme aim what Jesus commands, and to be faithful in all the details of daily life to the quest of the best, are the vital items in the program for making this world the kingdom of our Lord and Saviour Jesus Christ.

As Jesus looked out upon men he saw that they were not realizing the true end of life. His heart was deeply touched by the lack of unity in the purposes of the lives round about him. "But when he saw the multitudes, he was moved with compassion for them, because they were distressed and scattered, as sheep not having a shepherd." It was from his own intimate knowledge of what life is given us for, and from his deep understanding of the pain caused by motives other than the highest, that he said, "But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

[*Zion's Herald*]

In this conspicuous failure of the disciples who were so near to the Master, there is a profitable lesson for those of us who are inclined to relax our endeavors when success seems unduly delayed. Especially steadying and stoutening should this

Digitized by Google

incident be to the youthful Christians who are eager for prompt achievement to crown their efforts. To know that Peter and James and John, who had seen the face of the Christ transfigured so short a space since, met with failure in their attempts to heal the sick boy, encourages us, as it did the disciples, to seek the cause of our ineffectiveness, and to talk with the Master apart about it. And when we do this, we will be likely to discover that Jesus' words, "This kind goeth not out but by prayer and fasting," have become the touchstone for our lives as they did for the disciples.

Particularly heartening is the incident in the light of what was wrought by the disciples later on. Their impotency dropped from them and they were clothed with power, and were enabled to do mighty works in the name of the one whom they served. In those later years, when they came to see the spiritual beauty of the plan which the Master had perfected for their lives, they must have looked back on those early strivings, so marred by failure, and thanked God for the times when there was brought to them the knowledge that "this kind goeth not out but by prayer and fasting."

[*The Christian Work*]

The fundamental law of nature on which the gospel is built up is that no man liveth to himself alone—or can live to himself alone should he try. Taking this as a basis, both Jesus and Paul rear the great structure whose one central principle is the free, spontaneous, eager acknowledgment that one belongs to a society, and that the life both of the society and of himself rests on his faithfulness to this principle. There are men who teach that the individual has a right to his own life regardless of others, but there is no vestige of such teaching in the New Testament, neither can one find it in the great teachers of the ages. For they, with their Master, have seen, as any one must see who stops and thinks, that there can be no society built up on that principle, no civilization. We are just witnessing great civilizations tumbling to pieces because nations have been living by that philosophy. If the war stops and nations go back to this same antichristian basis, it will all come again. It must come. It comes among individuals whenever the law of strict individualism prevails.

[Rev. A. H. Moncure Sime in *The Christian Commonwealth*]

Religion is life. The only religious value of any belief is its life-value. If a belief has no life-value, no real effect on daily conduct, if it does not spontaneously transmute itself into action, it is no essential element of religion. Liberal religion maintains that, while belief profoundly affects conduct, yet conduct in turn is the true test of belief. Our deeds reveal and justify or condemn our creeds. Thought is good, dogma is legitimate, but life is better, and he is the most likely to lead a worthy life who has the clearest and most catholic vision of truth and is most faithful to his ideals.

[*The Outlook*]

He who out of his own experience can tell his fellow men how they can keep the love of God in their hearts, how they can find a divine joy in earthly sorrow, how they can maintain a serene spirit in the midst of the tempest, will give to his congregation the message which congregations are eager to hear.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

The true religion is always something of a mystery; it is easier apprehended by the heart than comprehended by the mind, better expressed in a life than in a statement. It is not what can be rationally formulated that provides its inspiration, but what never quite can. It advances by believing a thing which every one says is impossible.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" (Peace on Earth), a new German pamphlet containing translations of three articles on this subject is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman P. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

Make all remittances payable to The Christian Science Publishing Society.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post office as second class matter.

Items of Interest

At a meeting of the Society of Antiquaries for Scotland, recently held in Edinburgh, George Macdonald, LL.D., F. S. A. Scot., gave a communication on "A Fresh Survey of the Roman Wall from Inveravon to Falkirk," explaining in his opening remarks that he had been engaged on this work for some years, aided by a grant from the Carnegie research fund. On the farm of Mumrills, midway between Falkirk and Inveravon, the site of a forgotten fort had been discovered and its approximate dimensions ascertained. From the bank of the Avon to Rosehall, in the heart of the town of Falkirk, the line of the wall had now been laid down with practical certainty, and it was so satisfactory that the results of the present inquiry were being adopted as an official record by the ordnance survey.

The second communication, by the director of the museum, described the excavations conducted by the society on Traprain Law, south of East Linton, in 1914. About one hundred feet square had been excavated, yielding harness mountings and other objects of bronze, quantities of hand-made pottery of native fabrication, and many pieces of Roman ware of late first-century date, also coins of Trajan, Hadrian, and Antoninus Pius, indicating an occupation into the Antonine period during the middle of the second century, were found, as well as molds of stone for ingots and segments of armlets of colored glass and jet. The relics have all been presented to the National Museum by A. J. Balfour of Whittingham, on whose property the hill is situated.

In denying a motion filed by the Kellogg Toasted Corn Flakes Company against the government's petition for an injunction to restrain the company from fixing the resale price of its product, the United States circuit court of appeals, in a decision just filed in the district court at Detroit, rules that the owner of a patented carton cannot dictate the selling price of the goods which the carton contains. The government's petition, filed in December, 1912, attacked the selling plan of the defendant company, stating that it specified the price which the jobber, the wholesaler, and the retailer should charge for its product. Arguments in the case were heard last July. In its motion to dismiss the government's petition, the Kellogg company contended that its ownership of a patent on the carton in which its product was marketed gave it the right to fix the price of the product.

In its decision the court of appeals says: "The general rule is well settled that a system of contracts between manufacturers, jobbers, and retailers by which the manufacturers attempt to control the price for all sales by all dealers at wholesale or retail, whether purchasers or sub-purchasers, eliminating all competition and fixing the amount which the consumer shall pay, amounts to restraint of trade and is invalid both at common law and so far as it affects interstate commerce under the Sherman antitrust act. It seems entirely clear that the defendant's selling plan here in question goes beyond any protection afforded by the patent on the carton, and is in its essential principles violative of the Sherman act."

A most important hearing on the proposal to require the railroads to report their operating expenses separately for freight and passenger traffic will be held by the interstate commerce commission on May 21. A possible order from the commission to this effect is opposed by the railroads on the ground of expense, and is supported by the railroad brotherhoods on the ground that it will furnish data essential to wage arbitration cases. It is stated that more than 60 per cent of the railroads already keep separate accounts of their freight and passenger traffic. By the establishment of a uniform requirement, however, it is pointed out that the truth about the annual outlay for labor in the freight and passenger services of the roads would be easily available, thus greatly facilitating arbitration proceedings. If the order is granted, it will probably require the roads merely to report separately their outlay for passenger and freight locomotive engineers and firemen. Passenger rate schedules and freight rate schedules would be affected alike.

The amount of telephone wire in use in the United States increased from almost 13,000,000 miles in 1907 to more than 20,000,000 in 1912, or by about 54 per cent, while the number of miles of commercial telegraph wire, including ocean cable, increased during the same period from more than 1,624,000 miles to nearly 1,882,000 miles, or by 15 per cent. The Bell Telephone system in 1912 controlled nearly 75 per cent of the total wire mileage, and over 58 per cent of the total telephones in use. It also controlled nearly 51 per cent of the public exchanges maintained by companies with annual incomes of five thousand dollars or over, and handled 66⅔ per cent of the calls made over the lines of such companies. Wire mileage of the Bell system increased from 8,947,000 in 1907 to 15,135,000 in 1912, or by more than 69 per cent. During the same time the wire mileage of all other systems combined increased from 4,032,000 to 5,115,000, or by a little over 26 per cent.

The Pennsylvania Railroad has announced that it would go into the open market for twenty million dollars' worth of new material for cars and locomotives which it will build in its own shops. The invitation for bids indicates the first big buying movement by the Pennsylvania Railroad for more than a year. The company's present program includes the construction of one hundred and forty-four new locomotives, seventy-six of the standard type and sixty-eight shifting locomotives; one hundred and forty-six all steel passenger cars, and ten thousand freight cars. The locomotives will be built in the Altoona shops. Of the passenger cars ninety will be built by the lowest bidders, while the remaining fifty-six will be constructed by the company. Bids will be asked for 7,648 of the freight cars, which the company plans to have built by outside companies, and on materials for 2,102 freight cars to be built at the Altoona shops.

A big increase in the production of meat in the federal forest ranges this year is predicted by the bureau of forestry. The figures show that forests will furnish forage for 1,867,775 cattle and horses, 8,747,025 sheep and goats, and 64,640 swine. This is an increase over last year of 92,656 in the number of cattle and horses, but a decrease of 120,881 sheep and goats. The belief is expressed that the recent high price of beef has encouraged many farmers and former sheep men to go into cattle raising. It is estimated that the federal treasury will be enriched to the extent of about one million two hundred and fifty thousand dollars, or an increase of two hundred thousand dollars over last year, by receipts from grazing permits.

Women attorneys of Chicago have organized the Public Defenders League for Girls, to defend girls brought into the morals court. Half of Chicago's sixty women attorneys have offered their services. The league has the indorsement of the judge of the morals court, Judge Arnold C. Heap. "Few of the women who come before me are supplied with legal counsel," he said. "I feel the organization has a place in this court."

William C. Van Antwerp, governor of the New York stock exchange, says: "American business activity is today built on more solid foundations than ever it was; its moral framework is based on character and the golden rule as never before. I firmly believe that the next ten years are to be the best years of our lives,—best because freest from greed and selfishness; best because fullest of moral and material profit."

The gates of lock 17, on the Warrior river near Birmingham, Ala., were placed a few days ago, completing a twelve million dollar government project that provides a six-foot channel from Sanders ferry to Mobile, a distance of five hundred miles, and opens up to barge traffic vast lumber resources in northern Alabama.

The Western Union Telegraph Company's standard message rates between New York and San Francisco, and its cable rates from New York to points in England, have been pronounced by the interstate commerce commission as not unreasonable or unjustly discriminatory.

Another Louvain professor is coming to Harvard, announcement being made at the university that Professor de Wulf of the Belgian University will give a course during the first half-year on the history of scholastic philosophy. Professor de Wulf is one of the greatest of present-day medievalists.

President Blackton of the Vitagraph Company of America said that for 1913, two hundred and seventy-five million dollars was paid by the public for admission to motion picture houses.

Mayor Blankenberg of Philadelphia has signed the resolution passed by the city council authorizing the taking of the liberty bell to the Panama-Pacific exposition.

The coronation of the Emperor of Japan is officially fixed for Nov. 10 at Kyoto.

Vol. XVII May 1, 1915 No. 35

Spiritual Education

WILLIAM D. MC CRACKAN, M.A.

Progress in right living is dependent upon improvement in right thinking. Humanity is being educated out of its false beliefs into better conditions of thought through the power of Truth operating as the law of God. This process must necessarily be educational. Earnest seekers after this truth would be less impatient with delays, checks, and hindrances, would feel less inclination to cherish grievances or self-pity, could they recognize their trying experiences as connected with a process of education. The verb to educate means to lead out of; therefore spiritual education is synonymous with that pilgrimage from sense to Soul mentioned by Mrs. Eddy on page 566 of Science and Health.

Spiritual truth comes to the individual consciousness to lead it out of evil into good, from mortality into immortality, from material believing into spiritual understanding, from death into Life, from fear, lust, greed, to divine Love, universal and impartial. The Christ-teaching educates humanity out of the grasp of self-will, self-justification, and self-indulgence, into wisdom, purity, and spiritual power; out of sin, sickness, and death, into holiness, health, and life eternal. This education need not necessarily cause sorrow or suffering; no law of God imposes pain as the price of progress. The growing pains of material childhood need not afflict the pilgrim on the heavenly road that leads to the "secret place of the most High." Yet if resistance to Truth, and fear, which is the belief of life in matter, assail that pilgrim, he will not murmur, but will press forward in spite of every obstacle, knowing the goal of his right desire to be surely attainable.

The public at large is being educated out of unquestioning reliance upon material means for destroying human ills into a growing perception of the power of God as Mind, Spirit. The healing and saving words of Christian Science, which can no longer be doubted by fair-minded investigators, have caused many to reach a condition of doubtful waiting for more light, and others to advance boldly into the sunshine of Truth. Whereas, some years ago, Christian Science attracted the attention only of restricted circles, single communities, today the legislative bodies of great states are inquiring into its practice, and even into its teachings. A wider educational area has developed with the expansion of the cause of Christian Science. While some of these efforts to apply legislative measures for the restriction of Christian Science practice at times take on the appearance of persecution, there is really no need to regard them in any other light than as opportunities for further spiritual education.

It is not possible to overestimate the good accomplished by bringing legislative bodies into touch with the actual fruits of Christian Science. Men who have never had the least inkling that there was any power outside of matter, find themselves face to face for the first time with facts which prove the omnipotence, omniscience, and omnipresence of God as divine Mind. They are thus educated to understand that scientific Christianity is not quackery, but is in very truth the one and only method of healing the sick which is stable and unvarying. Ignorant intolerance and inherited bigotry are rebuked, and the fears of self-interest are shown to be groundless. The inevitable uncertainties of material medicine and of *materia medica* diagnosis are laid bare. So also the futility of trying to classify diseases as preventable and non-preventable, as contagious and non-contagious, is exposed, for Christian Science proves that all disease is preventable through the consciousness of Immanuel, "God with us," and that disease acts in a contagious or a non-contagious manner according to human belief, and not according to immutable law. These occasions likewise present admirable opportunities for warning the public of the danger to human rights and progress inherent in any legislation which savors of state medicine.

Nor is there any reason to suppose that this spiritual education concerning the practice of Christian Science will stop at the portals of the smaller legislative bodies. There have already been indications that Christian Science is engaging the attention of national legislatures, and the time may not be distant when this spiritually educational process may become of international scope. Earnest students of Christian Science do not rebel at the ways and means which humanity seems to require for its education out of the false self into the true, out of hopeless materialism into the joyous realization of spiritual being. Every cry, "Come over into Macedonia, and help us," translates itself into a call for spiritual education which deserves a glad response, and so, as Mrs. Eddy writes on page 574 of Science and Health, addressing the reader of her book, "The very circumstance, which your suffering sense deems wrathful and afflictive, Love can make an angel entertained unawares."

All true spiritual education, however, must of necessity begin at home, in the individual consciousness. When the closet of thought is shut against the would-be intruder, that carnal mind which is in reality no mind at all, and is opened to Christ, Truth, then spiritual education is going on unhindered. In those quiet hours of heavenly assurance the Christian Scientist is learning to save the sinner by excluding sin from his own thought, and to heal the sick by destroying his own belief in the reality of sickness. While wrestling with error until it ceases to have any seeming power or presence or be any person at all, the valiant Christian is laying the foundation which is preparing him to answer the cry from Macedonia, to bring the good news that saves and heals to a wider public, to the city, the state, the province, the nation, and eventually to the confederation of the nations of the world.

There is no limitation placed upon the efficacy of righteous thinking proceeding from a fixed Principle and obedient to divine rule. No mortal can set bounds to the ever-activity of an idea emanating from divine Mind, for unto such an idea is given authority and power, dominion and glory, from the source of all greatness and victory, whose is the kingdom and who is "exalted as head above all."

God is the creative Mind. His power and His law are never really questioned when once recognized. Human

thought demands a central Principle in control of the universe and man, and Christian Science explains the character of this Principle, God, to be wholly good and beneficent. Moreover, God is expressed in that which resembles Himself, in good, not in evil. The would-be critic of Christian Science, or the practitioner of material medicine who is fearful of the inroads of a different method of healing, or the theologian who sees some of his cherished doctrines challenged, or the legislator who in his ignorance thinks he is protecting the public by forbidding it to pray aright,—all these are ready to respond to the proper spiritual education at the proper time. They will gladly welcome Christian Science in behalf of themselves and others when the glorious perception dawns upon them that the God who is honored in Christian Science, is the very God they have been unconsciously worshiping, the Principle they have been instinctively hoping would some day, as in Bible times, become available again to heal as well as to save.

True Understanding

KATE W. BUCK

To possess spiritual understanding is to find one's self in touch with that which is wholly mental, and therefore spiritual, eternal, and complete. The creative Mind expressed in its ideas, each idea being complete in itself, is wholeness, entirety, rhythm, and unity, "God and His creation, harmonious and eternal" (Science and Health, p. 472). To come into some realization of this is spiritual understanding, for since Mind, the creator, is Spirit, then all Mind's ideas must be spiritual and cannot be anything else; consequently, spiritual understanding is the only true understanding there is.

Many people when beginning the study of Christian Science are in the habit of wanting first everything else there is to have which seems good, without giving much thought to the spiritual side of things. When they glimpse even faintly the great truth for which it stands, they come to realize that there is something to ask for that is higher, perhaps, than anything they had ever dreamed of, namely, spiritual understanding.

Awakening to this need, their next thought is how to get it, and more or less earnestly they seek for it. To desire is certainly the first step, but with that goes the admonition, "Ye shall seek me, and find me, when ye shall search for me with all your heart." It takes some of us a long time really to know just what that means. Some will say, "I do want spiritual understanding above all things else, because I know it is the only thing worth while," but even so, they are not willing to seek "first the kingdom of God." Still looking for happiness in material things, and very busy about it, they do everything else first, and then, if there is time, it may be at the tag end of the day, they study or read the word through which alone this blessed understanding comes. Going on in this way for a while, they wonder why their needs are not more quickly met, and this sometimes continues until, weary of waiting for what seem delayed blessings, sick of material attractions, disappointed at every turn in their fruitless search for happiness among the "flesh pots," they at last cry out, baffled and confused, "They have taken away my Lord, and I know not where they have laid him."

When mankind look for their "Lord" in distractions; when they allow thought to be vagrant, instead of fixing it upon that which "fadeth not away,"—they learn through stress and turmoil that the Christ, Truth, is indeed not there; he has risen, and so must they too, if they would find him. "Disappointments and ceaseless woes," Mrs. Eddy writes, "turn us like tired children to the arms of divine Love. Then we begin to learn Life in divine Science. Without this process of weaning, 'Canst thou by searching find out God?'" (Science and Health, p. 322). On the next page she tells us that in striving to know the truth we must "endeavor to forsake error of every kind and to possess no other consciousness but good." Willingness to let go of all belief that there is any real joy or freedom to be found anywhere except in good, to seek first to do the will of God and acknowledge no other, to desire spiritual understanding so thoroughly that everything else becomes secondary,—this is the only way to the acquirement of that which to have is to possess all things.

"With all thy getting get understanding," says the proverb. Its possession brings freedom, dominion, and a joy that, even in the midst of seeming shadows, stands strong and sure. Even a small realization of its power and might, just to begin to let go of other things in order to get it, makes one eager for what lies beyond, a fuller, clearer unfolding, day by day, of the things which God has promised to them that love and serve and seek Him with all their hearts. Those who acquire slowly, sometimes recall so vividly some of the rocks which loomed large and dark in their own pathway, that seeing others stumbling over the same obstacles they seize the opportunity to warn them off these darksome places and so help them to quicker results, if they will but listen.

One stumbling-block that is often a serious hindrance to students of Christian Science, however earnestly they strive to know, is an effort which many make to have its teachings correspond to and coincide with some of their own preconceived ideas and theories, sometimes even to the point of saying, "But this does not sound reasonable; it is not consistent." Consistent with what? With a belief in the reality of matter, its laws and evidences! Yet that very belief is the essence of inconsistency, since the infinite creator (Spirit) could not create anything unlike Himself. No one would claim that there is anything godlike in matter; then God did not make it, that is sure, and who did, God being the only creator? Emerson writes: "A man is the façade of a temple wherein all wisdom and all good abide. What we commonly call man, the eating, drinking, planting, counting man, does not as we know him represent himself, but misrepresents himself. Him we do not respect, but the soul, whose organ he is, would he let it appear through his action, would make our knees bend." To "let it appear" is indeed to be triumphant over fallacies, but we so pride ourselves upon our human reason. How firmly we believe in it, but of what avail is it when we are bowled over?

A consciousness of ever-present good, then, its allness and exclusiveness, is undeniably to be won as a result of spiritual understanding, when one truly desires it above all things else, forgetting indeed that there is anything more needed. When the belief in materiality passes out of consciousness, it ceases to exist for the individual who has so attained, and thus he is free to follow continually after good, for he knows nothing else. It is so supremely satisfying to know that every need of every child of "the most High" is already met, and that the child has but to awaken to a knowledge of this fact. Nothing can interfere with or overthrow God's plan; it goes steadily on to its fulfilment. What is required of each one of us by our Father-Mother, we are ultimately bound to accomplish. So there is no place for fear or the discouragement brought about by some self-centered thought, since He "moves to His great ends unthwarted by the ill."

One does not need to think of himself as a sinner any more than as a sick person, for is not that forgetting about the man that God made in His image? The false belief is not only testifying wrongly about the image, but about the great original, since one could not exist without the other, any more than there could be a reflection of a person in a mirror

Digitized by Google

if the person himself did not stand in front of it. We often need to go back to the fundamental fact that God makes everything that is made; that there is one creation, and that good, spiritual, because God the producer of it is Spirit. As for evil, it is the business of one who tries to follow and adopt the Science of Christianity, to stand for the good as a constant manifestation of God, and deny the reality of evil because it is no possible part of Him. A lie has no power unless it is believed in, and never becomes true however much it may be repeated; it has no origin except in some so-called mind apart from God, for God is Truth. There is no mind apart from God, and so the whole flimsy fabric crumbles into nothingness, no thing at all.

A deep spiritual thinker has well said, "It is no proof of a man's understanding to be able to affirm whatever he pleases; but to be able to discern that what is true is true, and that what is false is false, this is the mark and character of intelligence." God exists, and He alone, and man is not a separate personality tossed about at the mercy of every wind that blows, but one with Him, insulated, enfolded, and sheltered in His love. One must therefore let go the thought of self, the fear of self, and self-conditions, for that is the counterfeit, the product of mortal thought, and must cling to the real, the product of immortal thought, perfect and eternally harmonious. Only so can we trust; drop our broken reeds upon which we lean only to fall, and be at peace. God is taking care of each child of His love, whether the child knows and admits it or not; but once positively admitting and accepting it, we can rest in the consciousness of it as securely as a baby bird nestles under its mother's wings.

Peace

PETER S. JOHNSTON

BEFORE taking up the study of Science and Health and reading the Bible in its light, the writer often wondered what this seeming life was all about. Nothing between the cradle and the grave gave any definite knowledge of the why and wherefore of existence. Even the rush for material wealth, the incessant desire for pleasure, and the love of worldly things in general, seemed to lose their attractions sooner or later, and it was found that all is "vanity and vexation of spirit."

When attending the last services for a friend who had passed on, the familiar words came forcibly to mind, "Earth to earth, ashes to ashes, dust to dust," and I found myself utterly at sea as to what constitutes eternal life. There came a time, however, several years ago, when a member of the family was very much in need of help, and Christian Science was recommended and tried, with the result that restoration to normal health soon followed. Some years later I began the study of Christian Science earnestly, and soon there came into my consciousness a peace greater and sweeter than any before experienced, and this peace was yet increased when the long-cherished belief was recalled that one could enter heaven by keeping out of hell. Now I am trying to prove Jesus' teaching—"This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent"—by daily practice.

On page 213 of Science and Health Mrs. Eddy says, "Mortal mind is the harp of many strings, discoursing either discord or harmony according as the hand, which sweeps over it, is human or divine." If the divine hand is allowed to sweep this harp, peace and harmony will be attained. If we permit ourselves, with all confidence and trust in the power of divine Love, to be led like little children away from the environments of this world, we begin to see, though faintly at first, the light of Truth, and we are reminded of the star which led the wise men of the East to the new-born Saviour. As we follow this light, leave the darkness, and press onward, we find that the mists are being dispelled and this new-old idea is appearing plainer, until we seem to be close to the fulfilment of St. John's prophecy as found in the twelfth chapter of Revelation,—the destruction of "the great dragon, . . . that old serpent, called the Devil, and Satan," by the daily application and practice of truth and love in word and deed, the sum total of harmonious thought.

Not one iota of truth can ever be destroyed by error, but one true thought will destroy every error which is brought to the bar of judgment. Then what other effect can the ever-present, true, pure, and peaceful thoughts of thousands—yea, hundreds of thousands, in all walks of life and in all nations—have upon the seeming discordant condition of the world, than to destroy gradually, yet surely, all manifestations of error and discord, and finally enable all mankind to realize that the harp of many strings is being touched by the divine hand, and harmony, heaven, reigns on earth,—rules in the individual consciousness?

At the present time considerable is being said and done in the interest of permanent peace among the nations of the world, and much is still to be done before that happy day, as foreseen by the prophets, becomes a reality. The promise has been made that "nation shall not lift up sword against nation, neither shall they learn war any more." We know that every divine promise will be fulfilled, and it is our duty to hold these promises before our thoughts, that they may be manifested to the world. The gospel of "on earth peace, good will toward men," must first be preached to every creature, and mortal man must be shown, not by words alone but by deeds as well, that evil has no power; that on the contrary all its boasted power is naught when confronted with the almighty power of Truth.

When we begin to loathe sin and error, with all their ill effects,—disease, suffering, discord, death,—and begin to desire better things, reach out for God and His reflections of honesty, justice, mercy, purity, righteousness, etc., our constant thought will be to bring these into our consciousness. If our thoughts of peace and love extend to and help all,—the Esquimaux of the North, the native tribes of Africa, the prisoners in the dungeons, as well as those who sit on thrones,—we shall inevitably become better, and peace within will be realized. Such a state of consciousness must have its influence on the world. The peace and harmony thus found will be so manifested in our daily deeds that others, seeing, will reach out for the same, until the ideal of perpetual peace in individual consciousness, in communities, in nations, and in the world, shall have become a reality.

Angel Reapers

EVA S. W. WILLIAMS

ONE of the deeply significant declarations in the parable of the tares is this: "The reapers are the angels." On referring to James Hastings' "Dictionary of the Bible" I found the following interesting statement regarding the special design of this form of teaching which was so frequently used by our Lord: "In the parable two different planes of experience were brought together, one familiar, concrete, and definite, the other an area of abstractions, conjectures, and possibilities. At the points of contact it was possible for those who desired to do so to pass from the known to the unknown. Imagination was exercised and the critical faculty appealed to, and sympathy was enlisted according to the merits of the

Digitized by Google

case presented. A moral decision could thus be impartially arrived at without arousing the instinct of self-defense, and when the parallelism was once recognized, the hearer had either to make the desired application or act in contempt of his own judgment."

Until human consciousness becomes receptive, spiritual teaching is far too high for acceptance, and plain speaking in the form of rebuke is apt to arouse, as stated, the instinct of self-justification. Nathan's story of the ewe lamb, spoken to David, had the desired effect of drawing forth a judgment upon his own action from which David could not escape, nor did he desire to justify himself when the parallelism had been pointed out to him. Perhaps all who listened to our Lord's parables on the sower, the tares, the hidden treasure, etc., gathered some faint glimpses of the lesson underlying each; but only to the disciples could it be said, "Blessed are your eyes, for they see: and your ears, for they hear." This saying is very encouraging to all who honestly desire to see and to hear, for it must have been this desire on the disciples' part which drew forth the Master's commendation.

Their comprehension of his meaning was only partial, as is shown by their answer to the injunction given to them on the very last day of his presence among them: "Lord, behold, here are two swords;" but at least they were willing and eager to receive instruction. For this reason, on the day of Pentecost a much fuller measure of understanding was attained by them, and proofs were many in their healing and life-restoring "signs" of the knowledge they had gained of the Principle underlying their Master's works, and this knowledge they were also able to pass on to others. But later on came a long period of centuries during which literal interpretation took the place of spiritual perception. The Bible was in men's hands (not always in the hands of the laity), and both the words and works of Jesus were familiar; but in spite of the interpretations given they failed to understand the parables, and the so-called miracles were regarded as individual manifestations of power, instead of demonstrations of the divine Principle of healing.

Forty years ago, through the spiritual readiness of a noble and gifted woman to receive the divine message and transmit it to the world, "Science and Health with Key to the Scriptures" was written by Mrs. Eddy, and since then the realization of Truth's power has been possible for those with ears to hear and with eyes to see; but willingness is as essential as it was in the days of Jesus of Nazareth. Because its lessons are well-nigh infinite in their compass, the text-book of Christian Science needs to be studied with great patience and perseverance. Then the reward is great. As spiritual meanings unfold to him, the honest student finds that he is able to make practical application of them to his own and the world's need in proportion to his dependence upon divine intelligence for understanding. He finds, too, that the parables of the Bible come to have more and more of helpful meaning for him. One difficulty that attends their interpretation lies in the fact that there is no symbol for nothingness, unreality, and consequently use had to be made of material symbols for things which from the spiritual point of view have no existence.

Thus, in the parable of the tares the householder sowed good seeds, and his enemy sowed, really, nothing! For God, good, being the only creator, and the whole universe His idea or creation, there is in His kingdom no devil, no serpentine misteaching or myth. Since, however, mortals are faced by conditions of sin and fear, with their ultimates, sickness and death, the tares serve as types of these. Side by side with man's spiritual consciousness there seem to be such thoughts as produce mortality, and these can no more be ignored than the tares of the parable could be ignored: the latter had to be cut down, tied together, and burned.

The term adversary means "one who opposes, denies, disputes, not one who constructs and sustains reality and Truth" (Science and Health, p. 580), and the sowing of tares is equivalent to the sowing of what opposes good. Here it may be asked, When and how does the task of separating the destructive agencies called sin, sickness, and death from the constructive agencies of Spirit begin? The completed harvest will be "the end of the world;" but now, wherever the need of truth is felt, there the field is "white already to harvest," and we are to pray that there may be laborers ready to take up the work. All right prayer is answered before it is consciously offered, and we know in Christian Science that the reapers, God's thoughts, are present everywhere, and that as they are applied to individual problems or to world-problems, the sickle is indeed put in. Every pure thought excludes a sinful one, every thought of health destroys the belief of sickness, and in this way the tares are destroyed and the wheat is gathered into the barn. Mrs. Eddy tells us on page 72 of Science and Health, that "mortal belief (the material sense of life) and immortal Truth (the spiritual sense) are the tares and the wheat, which are not united by progress, but separated."

"Consider the lilies"

ISABEL A. MADGE

I HAVE been impressed many times with the silent sermons preached to us by our sweet flower friends, and I have surely learned that they are messengers of good. As Mrs. Eddy says in Science and Health (p. 240), "The floral apostles are hieroglyphs of Deity." Too often their quiet example is unheeded by hurrying mortals, but occasionally, as in the following incident, the lesson is too clear to pass unnoticed.

We had a daffodil bulb which bloomed freely during the winter, giving us all much pleasure. When, however, all signs of blossoming were over, we relegated it to the cellar, thinking it of no further use. Some weeks later we chanced to look at it, and were surprised to discover a beautiful flower. This brave blossom had come to perfection in a dark place, deprived of fresh air, light, and water. About that time I had come to a place in life's pathway where failure and disappointment, among other troubles, loomed very large and seemed very real, overshadowing the truths taught in Christian Science, and seeming to render them vague and unreal. It seemed as if my blossoming for the time being had been cruelly checked, when this little flower aroused me to the truth. It seemed silently to say, "If I, shut off from what are considered three great essentials of flower life, can grow to such a sweet result, need you falter?"

The lesson was learned. Discouragement vanished, and I felt a fresh sense of gratitude for Christian Science. This lesson brought a new blessing, proving true our Leader's words (Science and Health, p. 60), "Soul has infinite resources with which to bless mankind."

Let us then, untiring, bury
All our idle feuds in dust,
And to future conflicts carry
Mutual faith and common trust;
Always he who most forgiveth in his brother
is most just.

WHITTIER.

[Editorial in *Portland* (Ore.) *Telegram*]

Senator Works of California is in the habit of indicting the entire tribe of medical gentlemen who train in the old, hard-shell school. The senator is a Christian Scientist, and in view of that fact we would not expect to find him aiding the old-style medico in his political aspirations. But Senator Works hits hard now and then; and one of his body blows was delivered recently in the showing before the Senate that the federal public health service is given over entirely to one school of medicine.

A portion of the senator's indictment is worthy of quotation: "The allopathic, or old school of medicine, called by themselves the 'regular' school, is made the standard mode of healing, and is supreme. No different method is recognized or even considered. No citizen in time of existing or threatened contagion or epidemic of disease is allowed to exercise his individual belief or conscience as to the manner or mode of preserving or restoring his health. He must submit to the rules and regulations of the health department, eat and drink what it dictates, swallow the vile drugs it prescribes, and live where and as it commands. The service maintains a press bureau and sends broadcast over the country, at public expense, literature, mostly doctors' opinions, about microbes and causes of disease and how to circumvent them, that breeds fear which in turn produces and fosters disease, and cures or saves none who is unwise enough to read it."

The senator expresses just what the average man would say when he stops to think seriously of this official health business. It amounts to a curious class monopoly and tyranny, fostered in a most peculiar way. It touches important matters of conduct and vital beliefs in the every-day life of the people; but there is submission to its arbitrary decrees, as there would not be if mandates of similar import were to be issued by any other department of the government. But after Senator Works has finished with his indictment, after we have carefully considered it, approved it, and said that every word of it is true, as we are apt to do, what then? What is to be done about it? How break through the exclusiveness of this one school of medicine that has taken charge of the government and through the government has established its supremacy over the people,—will Senator Works tell us that?

[G. S. Paine in *Nevada Democrat*, Reno, Nev.]

In a recent issue were several paragraphs speaking of the opposition by Christian Scientists to legislation requiring medical examination of school children. In this connection I wish to explain to your readers that Christian Scientists simply feel that it is no more logical to compel school children to submit to a medical examination than it would be to compel every member of the legislature or every candidate for admission to the bar, for instance, to undergo such medical inspection. They consider themselves at least thoroughly competent to look out for the health of their own children, and feel that this responsibility logically belongs with the parents and not with teachers or other public officials. Any one who wishes his own children examined may take them to a physician, but he should not desire to force every one else to do likewise. The whole matter is one for individual decision and not for legislative enactment.

It is interesting and important to note that this opposition to the medical examination of school children in this state, as elsewhere, comes not only from Christian Scientists but from parents and teachers of every denomination. I can assure your readers positively that the Christian Scientists of this state, like those of every other state, have as individuals supported only those measures which they individually have considered right, and opposed only those which they individually have considered wrong. They have never in any way tried to "trade" their support of or opposition to certain measures for any consideration whatever. The matter of supporting or opposing any bill is always one for individual decision. Christian Scientists are not engaged in making "trades" to compass any legislative result.

On page 276 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy says: "I am asked, 'What are your politics?' I have none, in reality, other than to help support a righteous government; to love God supremely, and my neighbor as myself." The Christian Scientist has no antagonism toward any man, whether a candidate for a political office, a doctor, or any one else. Christian Science teaches that every man must live and act in accordance with his highest conception of right and leave every one else free to do likewise.

✧

[F. A. in *Detroit* (Mich.) *Free Press*]

I noticed an item in the *Free Press* giving a synopsis of the remarks of the pastor of the North Woodward Methodist church on the subject of the Christian Science doctrines. I do not belong to the Christian Science church, but I am closely associated with some of its members and have given their doctrines some study, and I find that they build more fully on the promises of Jesus Christ than any other denomination that I know of. They are the happiest and most contented people in the world, and as a body the most prosperous. I always supposed that it was one of the principal duties of a minister of the gospel to try to make people happy. Does criticism of the Scientists make them happier? Does it make the members of the North Woodward Methodist church better citizens by trying to prejudice them against their neighbors?

✧

[Editorial in *Philadelphia* (Pa.) *Inquirer*]

Following the custom of his predecessors, the director of public health has just issued the usual weekly "health bulletin." But why label it "health"? Why not "disease"? since it is disease that is always discussed, not health. This time we are treated to a lecture on germs. If we do not do this or do that, we shall catch germs of one kind or another, and then dreadful things will happen. This is the month of March, and it seems that poor suffering humanity is especially liable to be germ-inflicted just now. But in April we will be told the same thing, and in May and June, and throughout the other months of the year. All of which leads to the natural query, Haven't we gone germ mad?

In the olden days of our grandfathers such terrible enemies as germs were unknown. For that matter, neither were many of the diseases of present-day medical development. Something new is bobbing up all of the time, bent on our destruction; the germ happens to be the latest. So nowadays we are told that we must bend every effort to fight the germ. It is to be found on all sides. It lurks in milk, in water, in the food we eat, in the air we breathe. If we were to believe everything that has been said about germs, we would be afraid to walk the streets, afraid to go to bed, afraid to go to sleep, and most assuredly we should starve to death, because we would not dare to eat or drink.

Germs are becoming quite fashionable with our medical men. They do not know just what a germ is, because if a germ appears, it must be the effect of some preceding cause. Now, if they could only find the cause and suppress that,

Digitized by Google

what a splendidly germless world this would be, to be sure! Medical views and methods are constantly changing. It is considered essential now to begin with the infant and preach disease through life. From the cradle, through the schools, and into after-life there is no let-up. The harassed human is never permitted to go without a reminder that disease is to be expected, whereas health is really the natural thing. The idea seems to be that if we would escape disease we must be frightened so that we shall stand in constant fear of it. Hence, we are continually bombarded with disease warnings.

We wonder if the world would not be brighter—and healthier—if our health directors and school superintendents, and medical experts generally, would only try the experiment of preaching health just for a change, instead of so much disease.

✧

[Editorial in *The Chicago* (Ill.) *Tribune*]

The *Tribune* expresses no opinion on the eugenics measure endorsed by the city council, for the reason that the *Tribune* does not know any more about the ultimate desirability of such a law than do the members of the city council, the committees before whom the law will be discussed, the members of either branch of the legislature, the governor who will be asked to sign it, or the judges and juries before whom violators will be taken for sentence.

This measure is typical of many of the growing number of criminal statutes. It is a law proposed for the governance of the whole people, and undoubtedly is meant for the benefit of the whole people, but it is to be put on the statute-books by a small minority of the people. Perhaps the most significant development of our government is that laws are not made by the people or by the representatives of the people, but by small cliques tremendously energized over particular questions. These cliques are determined to force their views on such questions upon the multitude, oblivious of the fact that other cliques are engaged in forcing views on other questions upon them.

The number of new ways of getting a man into jail is startling, and the question does not seem to be asked whether the offenses against the community are half as bad as the penalties imposed. There seems to be a positive mania to find new ways of imprisoning American citizens, and yet there is hardly any one thing that can be as bad for the individual or the nation as a man in jail who can possibly be kept out.

✧

[Avery Coonley in *The Citizen*, Cairo, Ill.]

A news item from Belleville, in an issue of recent date, has been brought to my attention, in the head-lines of which are the words, "Child dies as result of Christian Science," a conclusion which I am sure is not correct. The principal facts related in the article,—which describes, by the way, a St. Louis case,—namely, that a child died, that it had Christian Science treatment, and that a coroner's investigation was called, I have ascertained to be correct. The facts, however, do not warrant the conclusion that the treatment caused the death. In fact Christian Science, which employs no other power than that of God, could not be the cause of death. On the contrary, it has in countless instances averted death, and hundreds of people who had been condemned to die, by the most advanced medical knowledge, have been restored to health and usefulness through its ministrations.

The parents of this child called a Christian Science practitioner for no other reason than that their experience had led them to have more faith in God and His power to heal, as preached and practised by Jesus and his followers, than in any earthly agency, even the most learned physician. There is nothing in the facts to prove that anything else could have done more than was done, and I am reliably informed that even the coroner's physician expressed it as his opinion that it was doubtful if the child's life could have been saved had a physician been called.

By a strange coincidence there came to my desk, only a day or two in advance of the account in question, a clipping from a Belleville paper giving a very different account of a very similar tragedy in that locality. Here, however, three children were sick instead of one, and here, as in St. Louis, the parents sought the help in which they had the greatest confidence as a protection for their little ones. Their faith, however, was placed in a physician of the orthodox school. Was the physician able to save the children? No, not even one of them. Despite his best efforts, all three died between Tuesday and Friday.

Was this fact widely telegraphed over the country? No; it got little except local publicity. Were the parents investigated by the coroner and held up to public condemnation because they had not adopted some other form of treatment? No; they were left in Christian charity to dry their tears as best they might. And was the physician charged with causing the deaths he was not successful in preventing? No; his honest efforts to save the little ones were respected by all. And why the difference in the two instances? The St. Louis parents are paying the penalty for nothing but for failing to be "orthodox." Had the child's death occurred under the "regular" school of medicine, so called, no breath of criticism would have been raised, and yet the great Physician, the only one in whose record there is no failure, was not of that school.

Christian Scientists are humbly endeavoring to follow in the footsteps of the Master, and in the last forty years they have given proofs innumerable of those "signs" which he said should "follow them that believe," by the healing of disease both acute and chronic, both functional and organic. Although only in its infancy, this spiritual method of cure has, on its record, come to be accepted as one of the world's greatest healing agencies, which, on the basis of its benefit to mankind, is entitled to the same fairness and the same consideration accorded other methods.

✧

["The Man in the Street" in *The Herald*, Avondale, Pa.]

The speech made by Senator Works of California in the United States Senate was head-lined in the daily papers as an effort to obtain a government recognition of Christian Science. The speaker's aim was not sensational; it was merely to file a sincere protest against the organization or administration of the department of public health in such a way that the curative powers of Christian Science are not recognized, and Scientists are required to submit to regulations and practices inconsistent with their religious beliefs. One does not need to be a Christian Scientist in order to sympathize entirely with their protest in this matter. Here is a body of people, steadily increasing in numbers, whose religious beliefs involve the principle that divine Love is the true source of all healing. Is it consistent with our ideas of religious freedom to say to them: You can worship and believe as you choose, but we shall reserve the right to vaccinate and fumigate you as often as we please, and if need be we shall make you drink our medicine.

Whatever opinions we may individually hold as regards the relative efficiency of prayer and paregoric, we are at liberty to evidence by our own practice; but when we seek through governmental regulations to force our ideas literally down unwilling throats, we do not show much advance from the position of our forefathers, who employed the stocks and

Digitized by Google

the ducking-stool to discourage opposing convictions. No one who has taken the trouble to investigate the facts can doubt that many persons have been restored to health by Christian Science. This being true, there seems to be no reason why it should not be taken into account by health officials. The senator's position is well taken, and his protest should be heeded. If you do not agree, reverse the situation. Ask yourself how you would like to be obliged to submit to Christian Science treatment.

✧

[H. E. Chandler in *The Post-Standard*, Syracuse, N. Y.]

As a welcome respite from war topics, I note your excellent newspaper is giving some space to the discussion of "How to Make the Church Entertaining." This subject has received the attention of earnest religionists everywhere, and it would be unjust to say that "modern" methods have failed, even if, as claimed, the apparent results are not commensurate with the effort put forth.

As a traveling man, and one who has attended the services of many religious denominations all over the country, it appears to me that the one Christian body which seems to have no trouble in filling its churches is the one that has the simplest form of service and offers none of the "modernist's" attractions in the form of orchestras or elaborate musical programs or ceremonials. I refer to the Christian Science organization. While all that this body teaches may not gain immediate universal acceptance, it does seem to offer something which the victims of this high-pressure age need,—a present lightening of the load of fear and worry and a heaven here and now.

✧

[S. T. Downs in *The Kokomo* (Ind.) *Dispatch*]

In the first chapter of Genesis we learn that man is the image and likeness of God; and Christian Science gives the understanding of God as divine Love, Mind, and that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). It will be seen from this that because Love is All-in-all, human hatred cannot be a part of God's creation, and man, in the likeness of his Maker, can neither give out nor attract anything but love.

If God did not create hate, envy, jealousy, or any unloveliness, where did it come from? some may ask. To this question Christian Science gives the positive assurance that such is but the suppositional opposite of God, divine Love. It is mortal mind, "the carnal mind" with its deeds, as St. Paul calls it; it is that which Jesus called "a liar, and the father of it;" and Christian Science uncovers its nothingness and destroys every belief about it and its supposed power through the law of Truth, the law of God. Christian Science shows that hate and its accompaniments have no more power than we give them, that mortals bestow upon them all the power they have. Mrs. Eddy made this very clear in an article entitled "Love Your Enemies," in which she said, "Even in belief you have but one (that, not in reality), and this one enemy is yourself—your erroneous belief that you have enemies; that evil is real; that aught but good exists in Science" (Miscellaneous Writings, p. 10).

Divine Love is All-in-all, and man, in reality, expresses His qualities. Divine power can neither know about nor coalesce with anything that is human, because the human must give way to the divine; all hate, envy, jealousy,—all evil,—must yield to the law of divine Love. As we prove this fact in our daily lives by constantly watching for and walking with God in an endeavor to be more like Him, we find these positive qualities of divine Love surely governing, guiding, and directing all our affairs, step by step. Through this understanding we learn the truth of the Christian Science teaching that "clad in the panoply of Love, human hatred cannot reach you." (Science and Health, p. 571), and we learn further that this means it cannot reach us by being manifested toward others from within, nor can it influence us or our affairs from without. Thus we learn how to obey the first commandment, and the two like it that Jesus gave, by ceasing to make gods, through wrong thinking, of a belief in the reality and power of the opposite of divine Love, and by loving our brother as the expression of Love that is infinite Principle; by filling our consciousness with the knowledge and understanding of the reality and power of the one supreme, infinite God.

✧

[Charles E. Jarvis in *Los Angeles* (Cal.) *Tribune*]

In Pastor ——'s sermon recently reported in the *Tribune*, the gentleman referred to Christian Science as a "confusing teaching" containing "fragments of truth and masses of error,—brought forward by the adversary with a view to leading people away from the truth." All of this has a familiar ring to it. In fact, it sounds very much like a passage in the Bible, wherein it is recounted that those who failed to comprehend the words or works of Jesus, accused him of accomplishing his results by the aid of Beelzebub, the prince of devils. This opposition, however, did not hinder our Master's progress, nor were the utterances of the Pharisees taken very seriously by those who had been healed, through Jesus' spiritual understanding, of blindness, lameness, deformity, and "divers diseases and torments."

Just so it is in the practical age in which we live today. The world is demanding results in every line of activity, and judging from the growth of the Christian Science movement during the past four decades, its followers have, in a degree at least, measured up to the test of a Christian established by Jesus in these words: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Instead of a "confusing teaching," Christian Science has in numberless instances proved to be the pathway from mental and moral confusion to the liberty of "the sons of God." Until its critics can present similar demonstrable proof of their doctrines, it might be well for them to consider these lines of a familiar hymn:—

'Tis in deeds we serve the Master,—
Words are idle, empty prayer;
All our Christian life a pretense,
If the deeds are wanting there.

✧

[Lloyd B. Coate in *Dayton* (Ohio) *News*]

If your paper has correctly reported Dr. ——, his statements show a lack of careful and honest investigation. Christian Science has been the means not only of healing sickness, but of destroying the desire for the use of tobacco, intoxicating drinks, and profanity. Even though in the first instance patients sought relief only from physical ills, yet it is a very common occurrence for them to acknowledge that with the relief from suffering the desire for these sinful habits was overcome. The very teaching this critic condemns has been the means of increasing the patient's faith in God and in the religion of Christ Jesus. Every instance of healing in Christian Science, and every case of reformation, is due to the Christian Scientist's faith in the divinity of Jesus' teachings.

In the ranks of Christian Science may be found ministers, graduated physicians who have found in Christian Science a better way of healing the sick, men of large business interests, judges, lawyers, teachers,—men and women in all vocations, including many in the common walks of life.

Digitized by Google

Editorial

A Sure Foundation

THE series of articles appearing in *The Christian Science Journal* under the title "Progress of Christian Science," discloses the fact that only a few years have elapsed since practically all of the churches whose history is there given were composed of but the Scriptural "two or three" gathered together in the Master's name. Surely the promise that the Christ would be "in the midst of them" has been kept!

That so many and such flourishing churches should have grown up in this short space of time is remarkable, and that this progress is largely due to the healing work done by those who have given their time and energies to this consecrated ministry, cannot be questioned. That other little companies will enjoy equal prosperity so long as they put forth the same efforts in behalf of humanity is to be expected, and it is legitimate for every group of workers who come together and hold services, to hope that they may prove to be the nucleus of a large church.

In order that this hope may be fulfilled as speedily as possible, it will be the part of wisdom for them to lay a foundation which will uphold and be in keeping with the larger organization into which they expect to expand. This does not mean, however, when a few have gathered together for the purpose of holding regular Christian Science services, that they should form an organization upon lines suitable to the needs of a church with several hundred members; but they should lay a foundation which is simple, solid, and sure, like the granite base on which the superstructure rests.

Whatever the form of the organization, however, it should be definite and with such rules as will tend to the orderly transaction of business, permit of the growth of the society, and safeguard the rights of the individual members. People may meet and organize as a society just as they would call a meeting and organize for any other purpose, and if each step be taken rightly at first, much friction and misunderstanding will be prevented. In many places where confusion prevails, it is simply because of the lack of knowledge of the requisite steps to be taken, and a lack of orderly methods. Briefly stated, the essentials to be remembered are:—

1. A society which is not in conflict with the state law governing the formation and conduct of religious societies.

2. A set of rules or by-laws which conforms to the requirements of the state law, and which provides for the election of additional members, the dismissal of members, the election of readers and such other officers as are necessary; also for the holding of regular and special meetings, and the orderly conduct of the Sunday services and Wednesday evening meetings. The fewer and simpler these rules are, the better it will be for the society; but this should not be understood to mean that anything indefinite or inadequate is advocated. As the society grows in membership and importance, other rules may be added, but they should be only such as the growth of the organization calls for, and their object should be to simplify the administration of affairs, rather than to establish an intricate and cumbersome code of procedure.

3. A complete and adequate roll of membership, a legible and correct record of the proceedings of the society at its business meetings, and a strict compliance with the rules and by-laws, especially those relating to the election of officers.

We know of course that rules and by-laws do not of themselves make a Church of Christ, Scientist, but if they are definite and adequate, and are lived up to in both spirit and letter, they will certainly tend toward the realization of harmony, and thus add to the effectiveness and prosperity of the society as well as to the peace and happiness of the individual members. Another point to be remembered is that a large number of weak and struggling churches, the members of which are not giving the visible evidence of the efficacy of our Master's gospel, would not add to the strength of our cause, but constitute an element of weakness. We therefore counsel Christian Scientists to be conservative in the matter of establishing a branch church or society in a city where there already is a church, until overflow makes it a necessity.

The foundation of every Christian Science church or society must be the healing of the sick, and unless this work has been well done, so that popular interest is aroused, it will be much better not to precipitate an organization for holding public services. The same counsel holds good when it comes to the giving of a lecture on Christian Science. People sometimes think a lecture would be the best way to bring Christian Science before the public, but this is not so. There is nothing that will soften the hardened soil of prejudice and unbelief like an unquestionable case of healing in Christian Science.

Perhaps the most necessary preliminary to organization is that those about to take this step should be familiar with the Manual of The Mother Church, so that they will not do anything in conflict with the spirit or letter of its by-laws. Especially should they be careful, in the choosing of church readers and officers, to conform to and govern their conduct by Section 1 of Article VIII. Willing obedience to this rule will obviate many difficulties which otherwise might arise. It was not without reason that our Leader made the monthly reading of this by-law an integral part of the church service.

ARCHIBALD MCLELLAN.

❖

The "more excellent way"

MUCH is deservedly said these days of the heroism and faithfulness of those who in the crowded field hospitals are working day and night to do what they can to relieve the ever increasing army of brave men shot down in the tragic stupidity of war. The devotion of army surgeons has always been noted, and the betterment they bring to the sufferers ofttimes seems quite wonderful. A helper in a Paris hospital writes of an instance in which a dreadfully mangled man, having been operated upon, recovered to the astonishment of all who knew the nature of his hurt. He adds, however, that after his recovery the soldier indulged an appetite for drink, and had just died of delirium tremens!

This case well illustrates two facts,—the seemingly unlimited possibilities pertaining to material belief, and their utter failure to reach the seat of the trouble. Here was a man who might be said to have been marvelously healed, and yet nothing whatever was accomplished for him save that he was given the opportunity to die an ignoble death. When one thinks of the tremendous size and persistence of these tragic human issues, that the patient may be said to be the population of a planet, that the varieties of ailments are innumerable, and that at their best all material means can do absolutely nothing to make men immune from sickness or to remove the fundamental reasons for their wretchedness,—when one remembers all this, it seems unbelievable that the question of causation should have received so little attention at the hands of those who are striving so earnestly to help the race.

It is doubtless true that selfish considerations, the desire for gain and for the eminence of a distinguished reputation, may have impelled the many. Some may even recognize

Digitized by Google

appreciatively that in the nature of the case *materia medica* fattens upon its failures. The continuous appearance of new diseases, and the equally constant flux of the panaceas used, —these two facts enlarge and keep up its practice since, if the claim that it is a science, that there is an unchangeable law and relation governing drug therapeutics, were true, the discovery of unfailing remedies would inevitably react to the financial disadvantage of the profession.

Nevertheless there is a vast number of unselfish physicians, men of Christian convictions, who are deeply touched with humanity's unspeakable need and who are devoting their lives in a splendidly unselfish way to the effort to relieve it. These men know how little their greatest successes contribute to the "saving health" of mankind, and that physical betterment gained by material means does not necessarily bring any increase of knowledge, any establishment of virtue, or any advance in spiritual life whatever, while as in the case cited it often renders possible the further indulgence of sinful impulses. They know that they are not removing the final cause of sickness and death in any least degree, and that in this respect utter failure epitomizes the facts with respect to what has been named "the greatest philanthropy." How strange that intelligent, Christian-minded men can be so deadeningly content with its hopeless futilities!

Over against this saddening situation, we may recall that in his healing work Christ Jesus directed attention first, last, and all the time, to the fact that sin, a mental state, is the cause of all sickness and inharmony, and that genuine and permanent healing is to be brought about only through the redemption of consciousness, the knowledge and utilization of divine Truth. It was just here that Mrs. Eddy took her eventful stand for what she named "Christ's Christianity" (Science and Health, p. 271), for the healing means and methods which he and his disciples found to be yea and amen as solvents of the human problem.

It is for this philosophy of salvation, this original and unchanging right way of curing sickness, that Christian Science makes its appeal, and the world is full of rejoicing witnesses today, that no human hurt can prove an insurmountable obstacle to the activities of divine law, as it is apprehended in Christian Science, and that there is indeed "none other name under heaven given among men, whereby we must be saved."

JOHN B. WILLIS.

✧

"Thy will be done"

THROUGHOUT all Christian lands unnumbered thousands daily offer up the prayer, "Thy will be done in earth, as it is in heaven," but few perhaps realize its tremendous significance or the scope of its inclusiveness. Quite apart from all doctrinal distinctions, this petition presupposes, on the part of each one who prays, a heartfelt desire that he himself shall do God's will, today, as it is done in heaven,—that his thoughts, words, and deeds shall all reflect the will of infinite wisdom and Love. This being granted, it would devolve upon each to take Paul's advice and "examine himself," so as to discover to what extent "the will of the flesh" has been responded to and his prayer thus rendered ineffective. This is indeed a vital question, for the prayer as given by Christ Jesus shows that God's kingdom will be established on earth when God's will is done as it was by the Master.

The spiritual interpretation of this petition, as found on page 17 of Science and Health, reads: "Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme." It is this knowing which enables one to do God's will in the way that Jesus did it, for unless the supremacy of Spirit is known and acknowledged we shall have the unending strife of warring human wills, that take no true account of either God or man. Alas, that so many should be fettered by the false belief that the doing of their own will can bring pleasure and satisfaction, when the fact is that it never brings aught but disappointment, with sin, sorrow, and sickness, until the meaning of God's will illumines thought and the Sun of righteousness arises "with healing in his wings." Then comes true joy, the joy which nothing can take away, when with the psalmist one can say, "I delight to do thy will, O my God: yea, thy law is within my heart."

This shows the fulfilment of another promise, that God would write His law upon our hearts and minds, and Christian Science is showing us how we may at once avail ourselves of it. It shows us that the false belief in material laws of sin and death must be erased by truth, that the divine law may have its rightful and honored place. Jesus, who knew the Father's will, said, "It is not the will of your Father which is in heaven, that one of these little ones should perish,"—not even one poor straying sheep.

The psalmist tells us of the wonder and glory revealed to him when he looked up into the starry heavens and saw written there something of the divine order and all-pervading harmony. Then he asked himself, "What is man?" and it were well for us to compare the working out of the divine will in our own lives with what our revered Leader says in "Retrospection and Introspection" (p. 87), where we read: "The poet's line, 'Order is heaven's first law,' is so eternally true, so axiomatic, that it has become a truism; and its wisdom is as obvious in religion and scholarship as in astronomy or mathematics."

Much of the failure experienced by mortals is due to their lack of order either in things temporal or things spiritual. The impelling thought back of all effort should be spiritual, which always makes demand for perfection; and if order be made the "first law" of our activity, we shall do the right thing at the right time. This would of course mean that the spiritual shall have priority in all things, and if we begin with the spiritual, that which is true, honest, just, pure, lovely, and "of good report," following St. Paul's classification, the lowliest duty must be well done, because God's will is done. If we would "make our lives sublime," we must never lose sight of the will that ever makes for good. Tennyson says, "Our wills are ours, we know not how;" then he goes on, "Our wills are ours to make them thine." As this desire becomes the controlling influence in our lives, we shall lose sight of doubt and fear in keeping close to omnipotence, and knowing that "none can stay his hand."

ANNIE M. KNOTT.

CONCORD, N. H.—Governor Spaulding has approved House Bill No. 410, an act providing for the practice of medicine. In the act is the following clause, exempting Christian Science practice from restrictions: "Provided, however, that this act shall not be construed so as to interfere in any way with the practice of those who endeavor to prevent or cure disease or suffering by spiritual means or prayer."

The bill was proposed and offered by the legislative committee of the New Hampshire State Medical Society, through Prof. Charles F. Emerson of Hanover College, a member of the House. Dr. Duncan, state chemist, represented the Medical Society at two hearings before the House committee on public health, at which there was pronounced opposition to the bill in its original form. The amendment offered by the Christian Scientists of New Hampshire, through counsel, was finally agreed to by the promoters of the bill, and its passage through the House and Senate was accomplished without further delay. The bill as signed by the Governor is satisfactory to the Christian Scientists.—*Correspondence.*

ALAMEDA, CAL.—The Unitarians and Christian Scientists of Alameda have arranged for joint occupancy for a time of the fine building of the Unitarian church. Each church has one service a day, and for the present the Scientists meet in the morning and the Unitarians in the evening. The spirit of Christian fellowship is cordial, and pending the time when they will be ready to move into their own quarters, it is probable that the cooperative arrangement will be continued.

Pacific Unitarian.

HEREFORD, TEXAS.—There have been distributed in this community of only two thousand for the entire city and county: 169 *Sentinels*, 15 *Journals*, 753 *Monitors*, 194 reprints from daily and weekly papers, 6 Christian Science lectures, 12 *Quarterlies*, 5 copies of Science and Health, 2 of "The First Church of Christ, Scientist, and Miscellany," 3 of the Manual, 1 of "Unity of Good," 6 of Mrs. Eddy's other works, making a total of 1,166.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Fort Worth, Texas

The remarks of J. F. Wellington, in introducing Jacob S. Shield, who lectured on Christian Science in the Chamber of Commerce auditorium, were in part as follows:—

I believe that the great desire of mankind today, the world over, is for a religion at once simple, reasonable, practical, demonstrable, spiritual; a religion not so much concerned with getting men to heaven when they die, as in bringing heaven, harmony, to men while they live; which teaches that God, good, is indeed with men, and He dwells with them; that they are His people, and He is their God. You know that this age is intensely materialistic; but materialism never has satisfied and never will satisfy the final longings of the human mind. Above the rattle and rush and roar of industrial activity, in the midst of the wild dash for wealth and fame and power, and amid the crumbling creeds and the loosening hold of the churches on the masses, I believe there are more people than ever before who are saying down deep in their hearts, "Oh that I knew where I might find him [God]!"

To such an attitude of mind Christian Science comes with its message of healing, proclaiming the allness of God, good; His all-power, all-presence, all-intelligence; that He made man in His own image, and gave him dominion over all the earth; that He is Principle, and the source of all life; that He is Life, Truth, and Love; and because God is all this, there is no other power or mind, and sin, sickness, and death have no real basis or law, but are mistaken beliefs of human consciousness. What Christian Science teaches and what it does for humanity are best set forth in our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. However, for the benefit of those who wish to see and hear a personal witness, Mrs. Eddy many years ago wisely established a board of lectureship, and we have with us this afternoon one of its members, who is well qualified to discuss this subject.—*Correspondence.*

❖

Kearney, Neb.

A good-sized audience listened to a lecture on Christian Science by Virgil O. Strickler, at the Opera House. The lecturer was introduced by Frank W. Brown, editor of the *Times*, who said:—

I feel deeply privileged to find that I am to introduce the lecturer of the evening. Though I am not a Christian Scientist, almost times without number it has been my good fortune to come in contact with Christian Scientists and the work they are doing; and because of the words of the Master, "By their fruits ye shall know them," I have learned to have a deep love and respect for them. It speaks well for them that in a few short years the movement has grown from nothing to be the sustaining religion of unnumbered people. The wonderful woman who discovered the age-old truth has had the satisfaction that comes to the reaper as he stands among the garnered sheaves. As times goes on more and more people will doubtless learn of the truth that is theirs for the asking.—*Kearney Morning Times.*

❖

Nottingham, England

Under the auspices of the Nottingham Christian Science Society, Col. William E. Fell delivered a lecture on Christian Science in the Albert Hall. There was a large audience, and Lady Victoria Murray officiated as introducer. She said:—

Christian Science is of enormous interest and importance to every one. Everybody wants health, happiness, and peace, and Christian Science teaches us how we can attain these blessings here in this present world. For centuries men have looked into matter for these blessings but have not found them there. Though only on the threshold of Christian Science, I have experienced many of its blessings, and it is a great privilege to bear testimony to what the new-old understand-

Digitized by Google

ing of the Christ has done for me; and what it does for one it will do for all, since "God is no respecter of persons." More than twenty years ago I was healed of serious diseases when *materia medica* had failed to cure me and I had before me the life of an invalid. Instead of invalidism I have been enabled to lead a useful and happy life, and I owe this entirely to the study of the Christian Science text-book "Science and Health with Key to the Scriptures" by Mrs. Eddy. Through the reading of that book I gained some knowledge of God, and I am still studying it. Christian Science has been my only physician these twenty years.—*The Trader.*

❖

Taunton, Mass.

A large and attentive audience listened to a lecture on Christian Science in Odd Fellows Hall by William R. Rathvon. Representative Joseph E. Warner introduced the speaker as follows:—

The American public is distinguished for its intelligence and for its fairness. It digests considerations of much magnitude; it carefully weighs the passing affairs of the world in general. It has ceased to be intolerant, and with open mind welcomes the diffusion and dissemination of doctrines calculated for wholesomeness of mind, body, and spirit. Within two generations a wonderful ethical movement, the basic principle of which is righteousness, has deeply appealed to the "rank and file" of the thinking public. This movement, Christian Science, which has enlisted the devotion of myriads of Americans, is worth not only cursory review but careful consideration.

Of Christian Science I observe that it teaches its apostles to think; that it banishes many ills and much mental disquietude; that it purposes a high type of citizenship; that it illumines life with the thought of ever present Deity; that it urges quiet example in place of pharisaical display; that it regards the spirit and not the letter; that it places Principle above person, and prefers practice to profession. It will be a pleasure, then, for us to listen attentively to an exposition of Christian Science.—*Taunton Gazette.*

Lectures to be Delivered

Aberdeen, Wash.—William R. Rathvon, Grand Theater, 8 p.m., May 10.

Alton, Ill.—Jacob S. Shield, Temple Theater, 3 p.m., May 9.

Batavia, Ill.—Clarence W. Chadwick, First Baptist Church, 8 p.m., May 11.

Big Timber, Mont.—William D. McCrackan, Auditorium, 8 p.m., May 14.

Birmingham, Ala. (Society).—Willis F. Gross, Lyric Theater, 3 p.m., May 9.

Bloomington, Ill.—George Shaw Cook, Church Edifice, Monroe and Prairie streets, 8 p.m., May 14.

Bridgeport, Conn.—Dr. Francis J. Fluno, Lyric Theater, 8 p.m., May 9.

Cadillac, Mich.—Prof. Hermann S. Hering, Congregational Church, 8 p.m., May 10.

Canton, Ill.—George Shaw Cook, Princess Theater, 8 p.m., May 11.

Chicago, Ill. (Fifteenth Church).—Virgil O. Strickler, Masonic Temple of Austin, Central avenue and Fulton street, 2:30 and 4:30 p.m., May 9.

Conneaut, Ohio.—Jacob S. Shield, City Hall, 8:45 p.m., eastern time, May 14.

Detroit, Mich. (First Church).—Prof. Hermann S. Hering, Arcadia Hall, corner Woodward avenue and Stimson place, 3 p.m., May 9.

Dixon, Ill.—Jacob S. Shield, Peoples Church, corner Hennepin avenue and Second street, 8 p.m., May 10.

Elmira, N. Y.—William D. McCrackan, Colonial Theater, 3 p.m., May 2.

Goshen, Ind.—Jacob S. Shield, Jefferson Theater, 8:15 p.m., May 11.

Grand Rapids, Mich.—Col. William E. Fell, Powers Theater, 8 p.m., May 11.

Hamilton, Ohio.—Bicknell Young, Jefferson Theater, 3 p.m., May 9.

Hoopeston, Ill.—George Shaw Cook, Church Edifice, Third and Washington streets, 8 p.m., May 10.

Independence, Mo.—Col. William E. Fell, Lewis Theater, 3 p.m., May 2.

Kalamazoo, Mich.—Col. William E. Fell, Church Edifice, 8 p.m., May 13 and 14.

Kirkwood, Mo.—Clarence W. Chadwick, Church Edifice, 3:30 p.m., May 9.

La Grange, Ill.—Clarence W. Chadwick, Church Edifice, corner Cossitt boulevard and Catherine avenue, 8:15 p.m., May 14.

Lexington, Ky.—Willis F. Gross, Woodland Auditorium, Woodland Park, 8 p.m., May 11.

Los Angeles, Cal. (Fourth Church).—Bliss Knapp, Highland Park, Ebell Club House, 131 Avenue 57, 8 p.m., May 8, and 3 p.m., May 9.

Morrison, Ill.—George Shaw Cook, Auditorium, 3:30 p.m., May 9.

Muskegon, Mich.—Clarence W. Chadwick, Woman's Club Building, 8 p.m., May 13.

New Castle, Ind.—Bicknell Young, Alcazar Theater, 8:15 p.m., May 14.

New York, N. Y. (First Church).—Dr. Francis J. Fluno, Church Auditorium, 96th street and Central Park West, 8 p.m., May 14.

Oroville, Cal.—Clarence C. Eaton, Exposition Building, 8 p.m. May 14.

Portland, Ore. (Fifth Church).—Clarence C. Eaton, Edifice of Second Church, E. 6th street and Holladay avenue, 3 p.m., May 9; also Princess Theater, Arleta, 8 p.m., May 10.

Salem, Ore.—William R. Rathvon, Grand Opera House, 8 p.m., May 13.

Seattle, Wash. (First Church).—William D. McCrackan, Moore Theater, 2 p.m., Church Edifice, 8 p.m., May 9.

Springfield, Ohio.—Bicknell Young, Fairbanks Theater, 8 p.m., May 10.

St. Joseph, Mo.—Col. William E. Fell, Church Edifice, Twelfth and Felix streets, 3 p.m., May 9.

Traverse City, Mich.—Prof. Hermann S. Hering, Grand Opera House, 8:15 p.m., May 11.

University of Michigan, Ann Arbor, Mich.—Bicknell Young, Sarah Caswell Angell Hall, 8 p.m., May 11.

Victoria, British Columbia.—William R. Rathvon, Pantages Theater, 3 p.m., May 9.

Warsaw, Ind.—Jacob S. Shield, Circuit Court Room, 8 p.m., May 13.

Wheeling, W. Va.—Willis F. Gross, Court Theater, 8:15 p.m., May 7.

Winchester, Ky.—Willis F. Gross, Opera House, 8 p.m., May 10.

Yreka, Cal.—William R. Rathvon, Peters Opera House, 8:30 p.m., May 8.

Testimonies of Healing

All that I am and all that I have I owe to Christian Science. Many years ago I was healed in a short time of a form of lung trouble which develops very rapidly, and I was in the last stage of this disease when I began to have Christian Science treatment. I have also been cured of the liquor and tobacco habits in their worst form. The understanding of God as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is showing me how to "put off the old man" and "put on the new man," and in doing this I find my disposition is just the opposite from what it used to be. I have learned that evil is impersonal and unreal, and I am therefore able to love those whom I could not love before, and with a love that helps them.

Christian Science has never failed me when I have done my part, as our text-book teaches us to do. I have proved to my own satisfaction that God is all-power and all-presence, that He is able to and does supply our every need, and that there is no limitation in Truth. Our Leader says, "Remember, it is personality, and the sense of personality in God or in man, that limits man" (Miscellaneous Writings, p. 282). I try to know each day that there is no material poverty or material wealth to separate me from true substance, which is spiritual and not material. Jesus once told his disciples to be "wise as serpents, and harmless as doves," and this is what Christian Science has taught me to be: to be wise, and first of all to see whether it is truth or error that is influencing me, but never to fear evil, rather to rejoice ever, because I have enough understanding of Christian Science to do the work that comes to me each day. It also teaches me to be harmless in my thoughts toward every one. Is it any wonder I am grateful? I find more to be grateful for each day, and thankful always to God and to His faithful and loving messenger, Mrs. Eddy.—Ralph Myers Wilson, Chicago, Ill.

❖

One of the greatest privileges that Christian Scientists have is the opportunity afforded them to acknowledge through the *Journal* or *Sentinel* the benefits they have received from the teachings of Christian Science. About five years ago I was one of the most miserable persons the sun ever shone upon. To outward appearances I was all run down, as some express it, and our family physician, also my parents, thought I needed a tonic. My parents did everything they could think of to make me happy, but I now see that nothing, save being at-one with God, satisfies. The tonic was taken, but the misery continued; it was peace of mind for which I was hungering, and material remedies could not give it.

I talked with ministers and other good people, seeking light, feeling that surely there was a religion which could be understood, that could be applied to our daily lives and would be a support in every trying circumstance. These dear people tried to lead me in the path of righteousness as they saw it. They did comfort me somewhat, and I am truly grateful for their efforts; but I did not find peace, the peace "which passeth all understanding," until I began to interpret the Bible in the light of the teachings of Christian Science.

Since coming into Science I see that Jesus' command to "preach the kingdom of God, and to heal the sick," cannot be divided. In fact, when the truth is preached it heals the sick, for the psalmist says that God "sent his word, and healed them." The same word is as powerful today as it was nineteen centuries ago, when voiced by Christ Jesus. Jesus said, "Ye shall know the truth, and the truth shall make you free." The truth that he knew and spoke did free from both sin and sickness, and the same truth is here today, fulfilling its mission. This "pearl of great price" is plainly taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. An unprejudiced perusal of this book is sure to make one love the Bible, and study it with a greater joy and satisfaction than ever before. I am deeply thankful to God for the gift of Christian Science to this age. We love Mrs. Eddy for being brave enough to stand against the world and give to us in simple words the truth revealed to her through the study of the Scriptures. As God is the giver of every good and perfect gift, I feel entirely safe in relying on Him for health, for since I began the study of Christian Science attacks of sickness have come up only to be banished by the word of Truth, the power of God.

For physical health I am indeed thankful, but for spiritual awakening I am more thankful, and for the knowledge that these two are inseparable I am most thankful. I send this testimony in the hope that some one hungering and thirsting after righteousness may find peace and health as I have found them.—Vivian Sanders, Weldon, N. C.

❖

As I read in our periodicals each week the gratitude expressed for the relief which Christian Science brings from trouble and disease, a longing fills me to tell something of the great benefit this religion has been to me and mine. I became interested in Christian Science some ten years ago, not so much through the physical healing (although I had heard and seen that it did heal the sick), but through the truth lived by the Christian Scientists with whom I had become acquainted. Here let me say that my gratitude is very deep to those faithful witnesses who helped to start me on my upward journey. I had never found much comfort from religion, and there were times when I even doubted the existence of God. My little girl was then nearly three years old, and she was beginning to question me about God. I felt that a serious problem faced me, for how could I teach her what I myself did not understand or believe? I therefore began the study of Christian Science for a better understanding of God, and now it seems impossible to express the joy and thankfulness I feel for the daily unfolding of this glorious truth, which comes from a study of our Leader's writings, together with the Bible.

With this light thrown upon the Scriptures, and a right concept of God, have come the "signs following." We have had many instantaneous healings of colds, burns, headaches, and bilious attacks, and many times our little daughter has had the symptoms of some contagious disease only for it to pass away to its native nothingness before it had time to cause much suffering, thus proving the promise that God's loving protection will never fail us. All my life I was considered delicate, but now I am strong and well; indeed, we all enjoy wonderful health. We know it is ours to realize here and now something of that peace which comes from sin forsaken, hence forgiven. We have found a religion which can be used in every detail of our lives, and which, if we honestly apply its teachings, will purify every condition of human existence. Christian Science has never once failed to heal all our diseases and bring us comfort in times of trouble. There is nothing this world could offer for which I would exchange this truth, which frees us from human bondage and teaches us how to help others to be free.

Beatrice M. McKay, London, England.

❖

It is with much joy and gratitude that I ponder the thought of what Christian Science has brought into my life. In every time of physical illness I have turned to Christian Science for help, and have never failed to receive it. Of far

Digitized by Google

greater value to me, however, than any physical healing, has been the spiritual illumination which has come to my consciousness through the continual study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

While seeking for employment in the summer of 1913, I experienced through my application of the teachings of Christian Science, a convincing proof of the nothingness of the material sense of limitation, and for this I desire to express my sincere appreciation, in the hope, too, that some other seeker for employment may be strengthened by knowing of my experience. At the beginning of the summer vacation from college I applied at various places for work in my own line during the next few months. Every employer told me that business was bad, that he could hardly afford to keep the men he had already, and that the hiring of new men was out of the question. In most places they said they could not afford to employ new men for so short a time. They also maintained that my university training would have very little value in a practical way, and that I would therefore have to start at the bottom, and receive a very low wage.

During the two or three weeks which I spent in this way, I was trying to know that there was a right place for me, but I was not freeing myself from the host of limitations that were constantly knocking for admittance at the door of my consciousness. One day, when I was trying earnestly to solve the problem, the thought came to me very clearly that these seeming limitations had no foundation in Principle, or in the spiritual facts of being, and that they were not in any way performing any function of Love. I knew then that they could not hinder me from obtaining the employment which would be the best for me to have. The result of the mental illumination thus gained was that the next company I applied to gave me a job, which proved to be better than any I had formulated for myself, and they paid me higher wages than I had asked for from any other concern. I feel very grateful to know that even though we seem to be held on every side by limitations, we can still turn our thought to God, the divine Principle of all, and He clears the way.

I give the full credit to Christian Science for whatever my services may be worth today. It has given me my highest aim in life,—to know God, and to demonstrate His eternal laws.

Selden L. Stebbins, Champaign, Ill.

In September, 1910, while at Ocean Grove, N. J., the power and presence of divine Love was proven to me by the healing through Christian Science of injuries received from a fall. My ankle was badly sprained; it quickly became discolored and swollen, and I was unable to bear the slightest weight on it, while the pain was very severe. A Christian Science practitioner was notified, and she began her loving work for me at once. In less than twenty-four hours the pain had left, never to return. My arm was also seriously injured, so that it was completely helpless; from the shoulder down it was quite black from the bruised condition, and much swollen. I was pillowed in a chair, unable to move without intense suffering. The pain was overcome in a few hours, but I was not able to raise my arm freely for some weeks. Friends feared I would never have the use of it again, but through the knowledge of God as revealed in Christian Science, I was perfectly healed, and have never experienced the slightest inconvenience or discomfort from it since. I am very thankful to God, and grateful to Mrs. Eddy, who has given us this beautiful truth.—H. M. Souder, Vineland, N. J.

[Translated from the German]

Among the many blessings and benefits that have come to me through Christian Science, there is a demonstration which I remember with special gratitude on account of the lesson it conveyed. About four years ago I found myself facing a serious business difficulty, and as there seemed to be no way out of it, humanly speaking, I made up my mind to work out the problem in Christian Science. I asked a member of the Christian Science church for advice and help, but when after a week conditions seemingly grew worse, I refused her assistance and sought for light and guidance in the Bible. I saw that whenever Jesus' disciples failed in a case, the Master would rebuke them for their unbelief, and I held fast to the thought that divine Love is all-power and that Truth would do the perfect work.

I spent weeks and months in earnest prayer and meditation, and endeavored to keep my thought in harmony with Truth and express truth by my actions, while trying to exclude the testimony of material sense. A creditor threatened to annul a contract signed by me (relative to a piece of land which I had been influenced to purchase through false promises made to me by a land-agent), by which I was bound to make payment, unless I fulfilled my obligations at an appointed time. All my endeavors to obtain the necessary sum remained unsuccessful. I had spent all my time, had worked and used the rest of my property, in improving the land and converting the place into a nice home, and now it seemed that I must lose it all. This certainly could not be the will of God. I tried to find a buyer, but new difficulties arose, as the buyer was not able to give full satisfaction to my creditor, and I received the letter informing me of the annulment of my contract.

No human help could preserve my home, and feeling that my understanding was not equal to the situation, I applied to a Christian Science practitioner, who promised assistance. When I left her, and while on my way home, my consciousness

I used to doubt the statements of the apostles, prophets, and great men of the Bible, wherein there was any claim of miraculous events, although it was not in accord with the teachings of my church to question these things; but I loved the achievements of these great men.

A few years ago I moved to the country, where my church was not represented, and I felt quite isolated. It, however, seemed that God came to me through the finding of a *Christian Science Quarterly* tucked in a drawer of a piece of furniture I had purchased, and I began to study it daily, as it seemed to fit a need. I already had a copy of "Science and Health with Key to the Scriptures," but I had read it as I would read Aristotle or Emerson, as a philosophical work. Now the new light of religion illumined its pages, as well as those of the Bible, and I have become an earnest student of Mrs. Eddy's wonderful scientific statements of the truth about God and man.

Formerly I was obliged to recline on a couch most of the time on account of the pain I suffered, but I am now well, happy, and strong, helping others instead of always applying for help. I know the change is due to my obedience to the immutable laws of God as revealed to us by our dear Leader, Mrs. Eddy, and I feel deeply grateful. It is three years since I found her teachings to be practical and of every-day use. I have been healed of chronic bowel disorder and an internal rupture. I no longer use drugs or material remedies of any kind, but apply Christian Science as occasion arises, and I have never failed to get relief.

Lydia S. Sheets, Los Angeles, Cal.

Digitized by Google

was suddenly illumined, and the words came to me as an admonition: More faith, more gratitude for the good received, is needed. I felt the spiritual uplift and knew that I was being helped. Two days later, when I was expected to appear at the lawyer's office, I was informed that everything had been adjusted and that my creditor would accept the terms which the buyer was able to make. The lawyer handed over to me the sum deposited by the buyer. This experience taught me that no problem, no matter how difficult it may seem, ought to make us feel discouraged; that "with God all things are possible," if we but set our trust and faith in Him and gratefully remember the blessings already received.

David's words in the Psalms, "I have been young, and now am old; yet have I not seen the righteous forsaken, nor his seed begging bread," have always greatly impressed me, but much more so since I have been able through Christian Science to demonstrate the truth of this assurance. I have been helped frequently when, according to human sense, no possible means of help and no supply was in sight. About two years ago, when I settled in a new locality and started a little business of my own, I received among other orders one without prepayment from an unknown customer, living outside the place. I filled the order, and a week later received word from the lady that the goods were satisfactory, but that her husband had been suddenly taken ill, and she would have to be excused for a while with regard to the payment. As Christian Scientists we know that man who is God's idea, or image, reflects the qualities of God, and I tried to realize this truth in connection with the above case.

I heard nothing more about this customer until three months later, when it was mentioned incidentally by acquaintances that these people had the reputation of making purchases on credit but did not pay, and that even in cases where creditors had claims upon them, they were very adroit in evading their obligations. I immediately replaced this suggestion with the declaration that man as God's idea can never be dishonest, unjust, or selfish, that God is the only activity and power, and that man can do nothing of his own self, neither could a person of his or her own self make or withhold payment. At the same time I sent in my bill to this customer with the remark that I would be pleased to have the matter adjusted. No answer was received to this letter, and I left the matter in God's care, putting all recollection of it out of my thought. About two weeks later I found myself under financial stress, and turned to divine Love, the only source of supply, for help. In about three days a letter came, the writing of which seemed familiar to me, and upon opening it I found, to my great surprise, that it contained a money order in payment of the goods delivered. I am not personally acquainted with the people in question, nor have I ever seen them, but one thing was sufficient for me to know,—that man as God's idea reflects His qualities, and that divine Love is the only and never failing source of supply.

Crescentia Van der Does, Spokane, Wash.

I wish to express my gratitude for the many blessings which have come to me and my family through Christian Science. I became interested in this teaching, not because of physical healing, but because I was hungry for the truth. I have learned during the short time I have been studying it that God does heal the sick and sinning, and restore peace and happiness where there is discord; that divine Truth destroys fear and discouragement, and is surely "a very present help in trouble."

I will tell of one incident out of many which prove to me that God is ever present and heals. My little daughter fell on the lawn-mower and cut the end of one finger nearly off. I was frightened for an instant; then I remembered that God is our life, that He is always present, and I need not fear. Very soon I was calmed, and the child also. I bound the finger in place, and in less than ten minutes she was on the floor playing blocks with the other children. Through the work of a faithful Christian Science practitioner the finger was soon healed. There was no inflammation or suffering, and no time was lost from play during this experience.

I also desire to express my gratitude for the privilege of sending my children to the Christian Science Sunday school, where they are learning the truth about God and man. This will mean everything to them in the years to come. My little boys have gained a very clear understanding, so that they were able to help me one day when I was taken with a severe pain in my side and unable to help myself. I am indeed thankful to God for this great truth which is making us free, and grateful to Mrs. Eddy for her untiring efforts in behalf of mankind. My highest desire is to be a loyal Christian Scientist.—Mrs. R. A. Whitney, Alhambra, Cal.

If I were to attempt to tell of all the blessings I have received since I became interested in Christian Science, they would cover considerable space in our *Sentinel*, so I will mention only a few of the most important healings. When Christian Science was first brought to my notice by a very dear cousin, mortal sense declared that it would be far easier to lay off this miserable existence than to try to drag on any longer, for I had been afflicted several years with rheumatism, severe headaches which lasted a couple of days at a time, painful felons every few months, very serious abscesses, and many other ailments. These all disappeared while I was reading Science and Health, and they have not returned in the five years I have been studying this Science. While I am not entirely free from one ailment which hinders my getting around as I would like to do, I am sure that in time I shall be all right. I am indeed thankful that I have been freed from fear.

I have been healed morally as well as physically, but my greatest blessing has been the spiritual uplift. For over forty years I had not looked into the Bible; now it is my daily companion, and I find it the most interesting of books. Words cannot express my thankfulness to God, and my gratitude to our beloved Leader, Mrs. Eddy, who gave to this age the true religion that was taught by Christ Jesus over nineteen centuries ago. My daily prayer is that I may live worthy to be called a Christian Scientist.

Frances C. DeCelle, Portland, Conn.

In March, 1913, I was taken with a sudden and to mortal sense critical illness, which might easily have terminated fatally, according to the beliefs held previous to my acquaintance with Christian Science. At the time of this illness I had been a student of Christian Science for five and a half years, having first become interested through the benefits derived from it by my daughter, who was the only surviving member of my family besides myself. As I had liberally overlapped the "threescore years and ten," the presumption, according to average mortal thought, was largely adverse to a successful combat with such a sickness.

Being an ardent Christian Scientist, I had no medical diagnosis, but the discord appeared to be a sort of acute asthmatic bronchitis, which made it impossible for me to breathe in any other than an upright position, and even then with the greatest difficulty. One phase of the experience was that my right

Digitized by Google

hand, with which I am now writing, became entirely useless. There was no sensation whatever in it, and on attempting its use, it crumpled up like a withered leaf.

One night, physical life appeared to be hanging by a thread. I was propped up near the fire, while my daughter read continuously to me from Science and Health for three hours, from twelve midnight until three in the morning, and life returned. The next day my hand began to feel normal again. The Christian Science practitioner who had helped us at other times was absent during my illness, but we got in telephonic communication with her and her treatment was prompt and effective, for it resulted in restoring to my consciousness God's gracious healing of all the discordant conditions, and brought about a resumption of normal health within a week from the time of my first attack. I have since continued to have robust health and vigor.

Some were inclined to regard my healing as remarkable, but it did not seem so to me. On the contrary, I regarded it as the most natural and logical result of an effective trust in God and of claiming man's inherent birthright. I am very thankful to almighty God for His gracious dealing with me and mine, and also very grateful to Mrs. Eddy for her practical exposition of primitive Christian truth, and its application to our physical and spiritual experience and consciousness.—FITZHUGH DIBBELL, Sea Cliff, N. Y.

I am glad to certify to the truth of the testimony sent you by Fitzhugh Dibbell. The experience occurred as he has related it; and if Science and Health had not contained the truth concerning man's relation to God, my father would not have lived through the night of which he tells, for to mortal sense it seemed that every breath he tried to draw must be his last. I am the daughter who read to him its words of life.

EDNA MAY DIBBELL.

❖

I feel that in gratitude to God I ought to acknowledge what Christian Science has done for me. I was a partial invalid for a great many years, frequently lying in bed for six months at a time, and often never stepping outside of the house for a year, sometimes a year and a half. The doctors said my condition was due to female weakness, and at times they would advise an operation; then again they would think I could not survive one.

After my husband passed on, my son, then a young man, thought we had better move to Toronto. I had lived there about two years when a friend asked me why I did not try Christian Science. I replied that I had never heard of it. She inquired if she should send a Christian Science practitioner to me, and I said certainly, for if there was anything which could help me I wanted it. I took treatment just three months and was perfectly healed. That was nearly eight years ago, and I am truly thankful to God and grateful to Christian Science for the health I enjoy today. I have been cured of several ailments since then, and my son, who still resides in Toronto, has been healed of some very serious attacks of illness, one being typhoid pneumonia. His family of three children have been helped many times. We have both taken class instruction and are helping others as well as ourselves. For this I am indeed thankful to the Giver of all good and perfect gifts.

EMMA AINSWORTH, Belleville, Ontario, Canada.

❖ ❖ ❖

Duty is duty, conscience is conscience, right is right, and wrong is wrong, whatever sized type they may be printed in. "Large" or "small" are not words for the vocabulary of conscience.—ALEXANDER MACLAREN.

From Our Exchanges

[*The Advance*]

Christ did more than teach a doctrine; he lived it. As the teaching of Socrates is mightily enforced by the calmness with which he awaited death, conversing the while of immortality, so, and far more significantly, the teaching of Jesus found reenforcement in what he did regarding life and death, and in his authoritative assurance of a continued life. Did Socrates die confident that he would live in another world? Jesus died confident that he would live eternally in the lives of those he loved; that his life, still present, would be in them a mighty influence for righteousness.

[*The Standard*]

The religion of too many Christians is little better than ancestor worship. We look back to Palestine instead of looking up to heaven. We think of Jesus as he was nearly nineteen hundred years ago and forget that he is with us today in an even more real sense than he was with the disciples then. It is not the dead Jesus of Matthew Arnold "in some lone Syrian town," but the living Christ who reigns by the right hand of God that should be brought to a waiting, hopeful church at Eastertide.

"The living Christ" may, of course, become an outworn phrase, like many other stock expressions the frequent use of which often robs them of their meaning and significance. It may be used with no more content than a general observation which includes Jesus in the general immortality of the race, or it may not even go so far as that, but simply refer to the posthumous influence of Jesus as one of the world's greatest teachers.

In a very true sense every great character of the past continues to work in the world after he dies, through the truth he leaves either in written form or, what is far better, in the lives of his disciples.

[*Northwestern Christian Advocate*]

So hardened has the age become that serious doubts are entertained whether the natural order was ever penetrated by divine forces and heavenly visitors actually came within earshot or pressed feet by the side of earthly graves. Many believers in a divine Christ have stopped their ears to such stories as mere babbling of vision-possessed. And thus the world goes on, content to reason that in all probability there is a light supernal on the other side of the universe, that there is a spirit world which we some day shall enter, but which until then we cannot see or hear or feel. And it is susceptible of proof that this divorcement from spirit is comparable with the spread of materialism as exemplified in the ideals of the age. That is why the sons today are farther removed from mysticism than their fathers.

We are in a material age. We have no time for poetry; no leisure for contemplation; no disposition for quiet waiting with our windows opened toward heaven. From morning to night we fasten our gaze upon a growing materialism. We figure; we count; we weigh; we measure. Our young men see no visions; our old men dream no dreams. We are outwardly rich but inwardly poor.

With our accumulation of wealth, our acquisition of scientific knowledge, the deeper revelations of life are gone. We have all but crushed the soul. Like the dog in the fable, we have dropped the meat to grasp the shadow in the water because it seemed bigger, and found it was but a shadow. We are attempting to form a philosophy out of this materialism that gives meager room for the play of divine forces.

Digitized by Google

We have excluded the very thought of a superforce, content in the belief that the human mind is well able to master the situation and solve the riddle alone.

But it is all so disquieting, it is all so unsatisfactory. The age possesses little peace or happiness. Our ideals have brought us into the most stupendous materialistic conflict of all time.

[*The Christian Register*]

Every brave and hopeful person is a prophet of God,—or shall we say, of good. The neighborhood that has the largest number of these inspiring people is a good neighborhood, a fine place to live in. It is spiritual ozone that we need. These cheerful inspirers have a great work to do in the world, especially at this time. As the sky grows darker it is their duty to radiate more light. They counteract the sodden, depressing temperaments who are sure everything is going to immediate destruction, who see not the sunshine except through fog, and are cold and clammy even on the warmest days. As days grow darker and our spirits are more and more racked by sympathy, we can only share at arm's length in the safety of good homes.

We have one paramount duty, and that is to look on the sun-illumined side of the great shield of destiny, and to go so far in trusting God as to believe not that He is on the side of the heaviest artillery, but of the bravest, most enduring, most courageous souls, who with Luther can sing, "A mighty fortress is our God,"—souls that flinch not and fail not in the hour of dread disaster. Not in the spirit of vengeance does God sit in the judgment-seat of the universe, but to make manifest those great, glorious, unconquerable qualities of human nature that are the glory and the priceless heritage of the race.

[*The Living Church*]

It is one of the commonplaces of human life that we are prone to one-sidedness. The history of Christianity has been, on its intellectual side, largely a clash of partial views. One group saw one truth and insisted upon it; another group saw another truth and maintained it with like insistence. One age has exaggerated one aspect of Christianity, another age another aspect. The nineteenth century was an age of individualism; the twentieth bids fair to be a socialized age. The Christianizing of the social order had scarcely been attempted in the former; the sanctity of individual life, the necessity for a deep personal experience in religion, may easily come to be crowded out by the stress laid—and rightly laid—upon social religion today.

Similarly have we wavered between partial conceptions of the scope of our religion. The enemies of Christianity taunt us with caring only for another world. We are lukewarm—so we are told—concerning the things that tend to improvement in this earthly life.

[*Zion's Herald*]

There is hardly an individual whose life is so prescribed that there is not the possibility of doing better tomorrow. The battle may have gone most wretchedly today—we may have been driven from the field most ingloriously, and our colors may even now be torn and trailing in the dust; but what of that? There is to be a tomorrow—we may do better tomorrow.

A tomorrow is always fraught with marvelous possibilties. Today has written its record; tomorrow's portion is a clean page whereon each one of us may write nothing but courageous deeds and noble efforts. Tomorrow may be the best day we have ever lived!

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Friede auf Erden" (Peace on Earth), a new German pamphlet containing translations of three articles on this subject is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $5. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Sixteen thousand union carpenters in Chicago, striking for an increase of five cents an hour, were under the ban of a lockout order by their former employers a few days ago. Painters, lathers, plasterers, and sheet-metal workers found themselves in similar circumstances, and enough allied trades were affected to bring the total of idle men beyond seventy-five thousand. Contracting painters and decorators have decided to substitute strangers for nine thousand union men who were locked out, because three thousand of their number struck in protest against the antistrike agreement which all members of the Building Constructors Employers' Association were pledged to exact from all building crafts. Work was virtually tied up on building operations valued at thirty millions of dollars. The strike, ordered by union leaders, was declared after a demand for an increase in wages from 65 to 70 cents an hour had been refused by the Building Constructors Employers' Association. The association had offered the men an increase of two and a half cents an hour for the last eighteen months of the three-year agreement. Contractors estimated that the amount of building operations which would be affected by the extended strike will reach a figure close to one hundred million dollars.

In connection with the water-power leasing bill, which was passed by the national House of Representatives during the last session of Congress, but which failed to pass in the Senate, Secretary of the Interior Lane states that the bill will again be introduced immediately upon the convening of Congress, and expresses the hope that it will be speedily passed. As showing the necessity for such legislation to safeguard the public interest, he calls attention to the rumor of consolidation of the Western Water Power Company in Colorado, Utah, Idaho, Montana, and Washington, and points out that if consummated it will place under a single corporate control about 50 per cent of the developed water power of the western states. Such a consolidation, involving widely separated power plants, inter- and intra-state transmission lines, and federal questions beyond the scope of state utility commissions, he says, emphasizes the necessity of federal control and regulation in the interest of the people. It is apparent, the secretary says, that if the water-power sites of the West are allowed to pass into private ownership without restriction, it will be practically impossible to regulate or control monopoly in this important resource or to regulate this product in the interest of the consumers.

Up to March 1 the earnings of the Panama canal fell short by $261,098, or 10 per cent, of meeting the expenses of operation and maintenance. During March, however, there was a considerable increase in the number of vessels using the canal, with the result that on April 1 the loss was only about one hundred and twenty-five thousand dollars, or 4 per cent. These figures cover the nine months the canal has been in operation. From July 1, 1914, to March 1, 1915, eight months, the total expenditure attributed to operation and maintenance was $2,595,613.33. The total earnings during the same period were $2,334,515.24.

The operation and maintenance items, as figured in the official accounts, include all the expenditures necessary to keep the canal open and in order, and the work of handling vessels through; and to such expenditures have been added a prorated part of the expenses of the civil government, of the sanitary work, and of general administration. These three latter items have amounted to $574,570.82 during the nine-month period.

The annual inquiry of the Canadian government as to the stocks of grain and other crops remaining in the hands of farmers on March 31, and the proportion of the harvested crops which turned out to be of merchantable quality, shows that of the total estimated yield of wheat last year, 12 per cent, or 20,247,000 bushels, remained in the hands of the farmers. At the rate of one and three quarters bushels an acre for seeding, this quantity will allow the sowing of about 11,570,000 acres this spring, or 1,522,000 acres more than were sown last year. This estimate is independent of the quantities stored in elevators, a portion of which is likely to be returned for seeding purposes. The quantity of wheat remaining this year in the hands of farmers is smaller than in any previous year on record. Last year it was 38,858,000 bushels, in 1913 it was 50,234,000, and in 1912 it was 62,188,000. Out of last year's wheat crop of 161,280,000 bushels, 150,793,000 bushels was of merchantable quality.

Three hundred and twenty miles of shade-trees on a highway circuit, starting and ending in Boston and passing through fifty-seven towns and cities of Massachusetts, is the aim of a movement to be launched by the Massachusetts Forestry Association at a conference in Worcester May 8. Much of the distance is already improved state roads or city streets, and sections of the roadsides are already planted with shade-trees. The association aims to connect these sections by planting trees in the intervening distances. At the conference will be delegates from the fifty-five cities and towns, city and tree wardens, representatives of local women's clubs, boards of trade, and granges.

Complete preliminary estimates from all internal revenue collection districts, received at the treasury department, indicate that the individual and corporation income tax this year will not only come up to the original estimates of eighty million dollars, but probably will exceed that sum. It is understood that the year will show more individual taxables than last year, when about three hundred and fifty-seven thousand persons paid. Secretary McAdoo and Commissioner of Internal Revenue Osborn have made it clear that they propose this year to pursue all persons suspected of tax dodging, and this is believed to have had an effect.

Following its policy of completing as rapidly as possible the trunk routes of state highway that are most used by road travelers, the highway commission of Massachusetts has recently let a number of contracts, which when finished, will add several more all-macadam main routes to those which are already available. The regular appropriations amount to $2,150,000, which with the special appropriation of $2,000,000 and the $500,000 from the counties, if the western roads bill goes through, will make available a total of $4,650,000 to be used on the roads this year, the larger part of it being for construction work.

Massachusetts farmers won a distinct victory when the House passed to be engrossed the bill authorizing the incorporation of farm land banks in the commonwealth. It provides that ten or more persons resident in the state who have associated themselves by a written agreement with the intention of forming a farm land bank for the purpose of promoting rural mortgage credit, may, with the consent of the board of bank incorporation, become a corporation upon complying with all the provisions of the proposed act.

The Illinois legislature is considering linking Chicago with the Mississippi river by means of an eight-foot channel utilizing the Illinois river and the old Illinois and Michigan canal. If favorable action is taken, barges with a capacity of from seven hundred and fifty to one thousand tons will be able to load on the Chicago water-front and transship at New Orleans to any points desired. Engineers estimate the cost of the connecting link between Chicago and Utica at $8,075,000, mostly for dams and locks.

Within a short time the railroads entering Indianapolis, Ind., expect to have a large number of men at work on the track elevation project. The plan is to raise the tracks of the steam lines, to convert a natural watercourse into a cement-cased drain, and to enlarge the passenger train sheds. The whole plan, as entered into by the city and the various transportation companies, involves the expenditure of seven million dollars, and cannot be completed under three or four years.

In 1913, it appears, two hundred and seventy-five million dollars was paid by the general public in the United States for admission to motion-picture houses throughout the country. In the same year twenty-five million dollars was paid for rental of films. More than one hundred and twenty million dollars is invested in motion-picture theaters in the United States, and eleven million persons visit those places daily.

The canalization of the Magdalena river and the Loba and Mompos branches, in Colombia, is to be undertaken, and two engineers of known reputation are to be engaged for that purpose.

The third annual conference of the American Association of Agricultural College Editors will be held at the University of Wisconsin on Thursday and Friday, June 24 and 25.

Motoring will be permitted in Yellowstone national park, beginning Aug. 1, thus opening the last of the great government reserves to automobiles.

The coinage of two million dollars in silver of the denomination of one peso has been decreed by the government of Colombia.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII | May 8, 1915 | No. 36

"If ye abide in me"

ROBERT NALL

THERE is nothing more beautiful in the Scriptures than the records of the Lord's supper, the spiritual breakfast, and the unfoldment of truth to the disciples on the way to Emmaus. "Did not our heart burn within us, while he talked with us by the way"? they said to one another. These were times of refreshing from the divine presence. It is on such occasions that faith is uplifted and strengthened, that the "tabernacle of God" seems indeed to dwell with men, and that the asserted power of evil and sin wilts before the glory and goodness of infinite Mind.

One can readily suppose that these early disciples of the Master were thinking that if Jesus would only be with them in person always, guiding them by his example, his life, his words, his manifestation of power in healing, how easy it would be to follow him, and in the strength of the Spirit to be faithful, obedient, loving, and sincere sons of God! Yet how much better, after all, was his personal disappearance, since they soon learned by revelation and experience that the Christ, the Comforter and Wayshower, never left them! Their eyes were opened and they saw, and seeing, they rejoiced in spiritual ascendency and power, as we read time after time in the letters to the churches. Not spasmodic, not here today and gone tomorrow, but simply and surely, as the tithes of love and gratitude and fidelity and receptiveness were brought into the storehouse, the Father fulfilled His promises, full and rich and free, in making them valiant, Christly ambassadors, stalwart representatives of their Master's teachings.

Were these men more favored than we of today? Because Truth is always being revealed to humanity, are we not better able to apprehend many things relating to God and man? Each one who is gaining that consciousness of spiritual selfhood which is salvation from sin and death, is adding to the sum total of the only knowledge that can redeem humanity. This is the knowledge of divine Principle. Now it is impossible to conceive of Principle as being intermittent; if it were, then there would be moments when men would be hopelessly astray and the theory of an absentee God would be proved true. It is the glory of Christian Science that, humanly speaking, it has brought God nearer to men, and though the ministry of the divine allness and omnipresence is sometimes misunderstood, it is making its sacred appeal to the world with such an insurgent and joyous force that it must inevitably dispel ignorance, displace false concepts with truth, and ultimately transfigure every human purpose and endeavor.

Thoughts such as these came to one at least at the close of a communion service. We had sung, with deep gratitude, our Leader's "Communion Hymn" (Hymnal, p. 212), and rejoiced once again that in and through Christian Science we had found Truth, bringing to us such wonderful freedom "in the life and the love of our Lord." We had touched the very holy of holies in some realization of our spiritual integrity in God, so that we could say from our hearts in the words of another hymn (Hymnal, p. 194):—

> And as we rise, the symbols disappear;
> The feast, though not the love, is passed and gone;
> The bread and wine remove, but Thou art here—
> Nearer than ever—still my Shield and Sun.

"Thou art here"! Shall we not learn to say this always? Is it not the secret of power and progress in abiding in Love? Was not this just one of the greatest lessons Christ Jesus taught: "If ye abide in me, and my words abide in you,"—what then?—"ye shall ask what ye will, and it shall be done unto you." Was this promise ever known to fail? What is abiding? Is it not knowing that we have our being in God, infinite good; that He is our Life; that because of our eternal individuality nothing can separate us from Him; and that when the tempter comes with the suggestion of failure or relapse or discouragement, we have a sure defense in God's word? How one remembers those vital, heart-searching questions that our Leader asks in the chapter on Atonement and Eucharist in our text-book, "Science and Health with Key to the Scriptures"! They are a trumpet-call to the highest devotion, based upon her experience of the uplifting and sustaining power of Truth.

The Lesson-Sermon had exemplified the fertility of spiritual ideas, multiplied as they always are by divine Mind. From consecration, as exemplified in the basic truths of the first verses of the twelfth chapter of Romans, beginning with the appeal to "present your bodies"—or as one translation gives it, "your faculties"—"a living sacrifice, holy, acceptable unto God, which is your reasonable service," we had been lovingly counseled to be obedient to the Master's commands, to be sincere, to be prayerful; to rest on demonstration rather than profession, if we would progress; to be pure in heart and in deed, if we would "ascend into the hill of the Lord" (the place of divine holiness); to apprehend that the way of Life is by self-abnegation and by self-examination, that we may be worthy of our high calling; to be spiritual lights, burning clear and bright; and last of all, to be grateful for every blessing, that we may be ready to receive more. To those who had come "with the upper chambers of thought prepared for the reception of Truth . . . to receive into their affections and lives the inspiration which giveth victory over sin, disease, and death" (The First Church of Christ, Scientist, and Miscellany, p. 156), there was a sense of quietness and peace that, added to mental exaltation, made one of those Elims by the way that God, infinite good, provides for those who love Him.

We could not remain there, however. Hope may perhaps tell a flattering tale about the diminished formidableness of error; but error's pseudo claims are craftily exerted, sometimes in a manner which gives us a shock, unless we are on the watch-tower. It was good to have been on the mount, but we must descend to the plain, where for the present our work lies. We have to magnify good everywhere, but in doing so, we shall go through a testing time. Would we be spiritually rich? Then how much are we giving

Reflection and Reflection

[illegible]

Lessons of Every Kind

[illegible]

Digitized by Google

live. We assumed that the people around us did not want Christian Science, so there was no use in taking the trouble to hold services. We lived a very Utopian kind of life, and thought we were blessed in having such an existence allotted to us; but it gradually dawned upon us that our Utopia was, in plain parlance, positive laziness, a lethargy that mortal mind was holding over us, keeping us from doing our part, no matter how small, in the vineyard where the work is so abundant and the laborers are so few.

We at last awakened from this self-satisfied sleep and held services in the schoolhouse for over a year without missing a Sunday. There was never a service without some one in attendance, although the congregation was always small. We had to go a mile through snow and storm to hold these meetings, had much opposition from some sources, and were annoyed in every way possible by certain phases of mortal mind; but we also had some beautiful demonstrations during the time, and were repaid an hundredfold for the effort made. We found that it was not to others we were doing the most good, but to ourselves; for the work imposed on us by having to prepare the services, the Bible readings to correspond with the Lesson-Sermon, the hymns to fit the Lesson, took all our spare time, and many nights we worked late in our study. How we grew, and how we grasped the meaning of the Lessons, as we had never done before in our years of lethargic study with no incentive but our own advancement! When we had to read to an audience, we were put on our mettle, and made to feel that we must understand the subject presented, if the truth were to be understood by those who listened. We found, too, that the Church Manual must be studied so as to have the service correct, the benediction must be fitting, and in fact everything must be harmonious. As our Leader has pointed out to us, "We must form perfect models in thought and look at them continually" (Science and Health, p. 248).

Our whole life in the quiet little place became one of happiness and of busy effort, for we desired to excel in our work, even if our audience was small, and we found there was plenty of work "for willing hands to do" when the hands were once awakened to the need of effort on their part. In spite of the small surroundings, there were opportunities for good that had been lying idle through some years of lethargy. Thus we have found by experience that it matters not how far one is removed from the busy world, how small are his surroundings, how limited is the apparent field for his labors, there are always those who are reaching for the truth, hungering for a kindly thought, waiting and longing for some one to hold out to them the hand of fellowship; and our Master said that to give a cup of cold water to the least of these would be to do his work.

To any sincere Christian Scientist we would say: No matter how narrow your surroundings appear to be, how few people live in your community, or what opposition there seems to be to your efforts, let it not hinder you in any way. Do not permit any form of evil to have power over you, but just do the work carefully and knowingly, following the Manual as closely as if one were reading to a thousand in a church. Thus you will find, as Christ Jesus said, that "where two or three are gathered together in my name, there am I in the midst of them," and that your bread when cast on the waters will return to you, though perchance after many days. It is not necessary to fall into the lethargy of believing one's self isolated from others by small or narrow environments, for there is no narrowness in Mind, no smallness in Truth, and no place where love is not needed. We must remember that there was a time when our Master was alone, so far as human companionship counts, and our Leader also was alone, without a helping hand or thought (except from above); but there is nothing to show that either of them shrank from their task. Let us then emulate their example. Let it be said of us all, as Mrs. Eddy writes in "The First Church of Christ, Scientist, and Miscellany" (p. 355), "Their thoughts are upward; their way is onward, and their light shines."

Spiritual Demand

AGNES MORLEY CLEAVELAND

In talking with an older student, one who had just turned to Christian Science for the solution of his problems remarked: "If my supply is from God, I do not see how God is going to pay my rent and my grocery bill. I must have material things so long as I am in the flesh." It was the statement that supply is spiritual which led to this expression that a spiritual supply could not meet a material demand.

This question was fully answered by Jesus of Nazareth. In the sixth chapter of Matthew one finds a clear, positive statement of this question and its answer. Mankind has read this teaching for sixteen hundred years or more, and yet has closed the Bible only to go back to the old joyless struggle for what is termed "a living." And only when Mrs. Eddy with spiritual vision saw the true import of Jesus' teaching and declared it to the world, did men begin once more to prove the truth of his words. Mrs. Eddy shattered the fallacy which had obscured the truth, by her revolutionary statement on page 468 of Science and Health, where in answer to the question "What is substance?" she says: "Substance is that which is eternal and incapable of discord and decay. . . . Spirit, the synonym of Mind, Soul, or God, is the only real substance. The spiritual universe, including individual man, is a compound idea, reflecting the divine substance of Spirit."

It is because mortal man has been indulging in the Adam-dream that he has misconceived the spiritual universe and called both it and himself matter. When we seek to apply this to our particular problem as to how we are to meet our apparent material demands, we see at once that the only real demand is that we shall reflect God's image and likeness; not that we shall "make a living," but that we shall spiritually live; that we shall be what God means His children to be. Is it conceivable that God's demand is not eternally met? Certainly not. Man as God's image and likeness is already the recipient of all godliness or goodness, but this man is not the Adam-man which Mrs. Eddy characterizes as "an inverted image of Spirit; . . . the usurper of Spirit's creation" (Science and Health, p. 580).

What, therefore, is the process whereby we can solve our immediate concrete problem of food, clothing, and shelter? It is by applying the truth as taught in Christian Science, and thus discerning the spiritual fact, no matter what may be the material evidence. It is learning to know God, and thereby to recognize one's self as His idea, governed by spiritual law, and to unsee one's self as mortal and material. As we do this, "here a little, and there a little," we begin to find ourselves freed in some measure from the tyranny of the miscalled material demand, and at the same time in possession of more of the things of the spirit, or the spiritual sense of things. We are in this way laying up for ourselves "treasures in heaven," we are seeking "first the kingdom of God, and his righteousness," and therefore may claim the promise that all these material needs will be supplied. When we thus stand firmly on the metaphysical fact, human thought

Digitized by Google

will give up its sense of lack and will accept the evidence of reality in terms of its own comprehension.

A sublime expression of this truth on page 494 of Science and Health reads, "Divine Love always has met and always will meet every human need."

❖

Light in Our Dwellings

GUSTAVUS S. PAINE, PH.M.

In spite of darkness so thick that it was felt for three days throughout Egypt, the land of bondage to false conditions, the Israelites, as we are told in Exodus, "had light in their dwellings." In Science and Health Mrs. Eddy speaks of the children of Israel as "those, who through earnest striving followed his [Jacob's] demonstration of the power of Spirit over the material senses;" and again she refers to them as "governed by divine Science" (pp. 309, 583). Thus all who are striving to be governed in every activity by the Principle of Christian Science and to prove the power of Spirit over the testimony of the material senses, should let their light shine—should be able to show to the whole world that they too have light in their dwellings.

Christian Science is proving that many who have been in bondage to discord in their households, to petty jealousies, limitations, disorderliness in details, can receive such divine illumination and guidance as to dispel all these beclouding faults. The light of God's loving-kindness replaces any sense of morbid depression, irritation, or selfishness, with the expression of intelligence, the right idea of activity, wholly unselfed endeavor. When any human desire turns toward the light of Truth as revealed in Christian Science, the manifestation sooner or later is freedom from friction and ability to work with quiet rejoicing. Light and joy are the gift of God to *all* who sincerely seek the essential and reject the non-essential.

The light in our dwellings must, of course, ultimately shine for the benefit of others as well as for ourselves. In proportion as we prove daily that Christian Science heals disease, or better still, prevents it, and makes us more loving, happy, and amiable, we are letting our light shine, and we are approaching the time when the reluctant permission, "Go ye, serve the Lord," shall be given by even those who have most strenuously resisted the demands of Truth. Every temptation to relax somewhat the practice of genuine Christian Science must be overcome before we can hope for perfect harmony. Coughs, colds, headaches, mental or physical laziness,—to none of these do we have to submit and for none do we need mere human sympathy. All we need is the practical understanding that the normal activity of reflected intelligence takes the place of the particular belief in inactivity or overactivity which we call a physical ailment or any other trouble; and then we may go about our work of helping others with freedom and joy.

The way out of seeming turmoil is first of all upward into the light above the clouds, and the help needed for the ascent is always mental,—the knowledge that "wisdom in human action begins with what is nearest right under the circumstances, and thence achieves the absolute" (Miscellaneous Writings, p. 288). Thus, if others who seemingly turn away from Christian Science are sick or in distress of any sort in the household, the Christian Scientist may find that it is wisdom for him simply to free himself from all doubt or fear and then lovingly do for the others whatever may seem humanly necessary. For such the Christian Scientist has that truest sympathy which heals the sick and removes his fear, knowing all the while that the real man is the expression of infinite intelligence, which causes no sickness or trouble. Only by unlimited kindliness in every situation in which we may find ourselves can we hope to overcome prejudice and bring others to the light.

Man's eternal dwelling-place is the boundless divine consciousness, of which so-called mortal mind, with its beliefs of lack, discord, sickness, and discouragement, knows nothing. It is truly reassuring to know that the divine Mind is the only consciousness, and that in it man can dwell securely. Man, dwelling "in the secret place of the most High," rejoices in the endless unfolding of the ideas which reflect divine Principle, and thus is altogether harmonious. To live wholly with God is man's glorious privilege; and certainly whenever mortal thought turns toward good, the manifestation must be that of brethren dwelling together in unity, in a peaceable habitation, the all-inclusive consciousness of Love.

I remember that once on a stormy night on the top of a high mountain in the Sierra range, we were cheered by a glimpse of a tiny light from the cabin of a sheep-herder. The light meant to us warmth, comfort, peace,—all mental qualities primarily, for the appreciation of good is always mental. At another time we ourselves spent the night in the little observatory embedded in the rocks at the very summit of this mountain; and here, though again storm and darkness were all-encompassing, we had light in our dwelling. By the light of the lamp we rested after our climb of six thousand feet; and as we rested, thought turned naturally to the wonderful rock-founded truth which we call Christian Science. With the wind howling outside and rattling the flat rocks piled up around the cabin, we yet saw the truth so clearly that we felt no sense of discord could ever trouble us again.

Truly it had been good for us to be on the mountain top; and just as the sheep-herder's light had cheered us in the previous experience, and just as the lamplight was now shining out through the storm to cheer whosoever might see its ray, so the clearer light of spiritual understanding would go out to the world below us. We had to go down in the stormless morning to use in the world what we had learned on the mountain, realizing how good it is to dwell in the consciousness of Truth forever.

So it is that in Christian Science the light of Spirit transfigures every human experience which seeks this light; and the Christian Scientist whose experience has been softened and transfigured should rejoice day by day that he has the light and can reflect its radiance.

Divine Causation

MINNA MATHISON

Not from the soil doth spring the glowing rose,
But from th' eternal source of beauty.—Hark,
What harmony emits the mounting lark,
As music forth from music's fountain flows!

The rippling woodland stream, the whisp'ring tree,
The tinted pageantry of field and glen,
Reflect the perfect love of God to men,
For those who, seeing, hear, and hearing, see.

Not from the human bosom, falt'ring, rise
The ministries that bless the needy earth;
Divine abundance gives them gracious birth
Whene'er the fitted channel ready lies.

Oh, for the seeing eye, the hearing ear,
Attuned to sense the higher harmonies;
For in Truth's seed the perfect blossom lies,
And answer is enfolded in true prayer.

Selected Articles

[Judge Clifford P. Smith in *The Scoop*, Chicago, Ill.]

The reprinting by *The Scoop* of an article from the *National Press Reporter* containing a harsh criticism of the Christian Science Board of Directors, the directors of The First Church of Christ, Scientist, in Boston, has been the occasion for no little surprise. The article in question was published by the *National Press Reporter*, and reprinted by *The Scoop*, without any inquiry to ascertain the facts of the case from these persons, and there is no basis in fact for the aspersion which it contained.

The Christian Science Board of Directors have neither made an objection, nor caused an objection to be made, to the presence in a public library of any book whatever. They know full well that there are books in circulation which are openly or covertly hostile to the welfare of Christian Science, but they have not attempted the impossible task of putting bars between these books and the people who may want to read them. They have simply endeavored to make it possible for inquirers who may desire to read an authentic biography of Mrs. Eddy, or authentic literature on Christian Science, to get it.

The purpose of the Christian Science church is to restore original Christianity with its spiritual power over evil, including disease. For this purpose, a correct presentation of this subject to all who may become interested is naturally of the utmost importance; and the printed word is the means chiefly employed. Therefore the works on Christian Science written by Mrs. Eddy, as well as certain other books and periodicals, are published under the supervision of the church which she founded, and they are furnished to public libraries free of charge.

All that any person who is authorized to speak for this church has asked of libraries is that the literature thus provided shall be catalogued or designated in such a manner that it can be found by the patrons of libraries who look or inquire for the authorized literature of Christian Science. Surely no one can justly complain of this plan. It has been adopted by the librarian of Congress, and by most of the libraries to which it has been presented, including the Chicago public library.

Individual Christian Scientists have sometimes objected to the acceptance by public libraries of certain books, particularly those containing wilful misrepresentations of Mrs. Eddy, and those whose authors pretend great loyalty to Mrs. Eddy or her teachings while trying to tear down what she built up. It is hardly to be expected that Christian Scientists, knowing the actual character of such impositions on the public, will always refrain from protesting against their circulation by public libraries. Such protests, however, have been comparatively few, and in most instances they have been made where these obnoxious books were pressed upon the attention of persons who did not ask for them. This was the case in the single incident specified by the *National Press Reporter*, and this fact was plainly stated in the published letter which was the pretext, rather than the reason, for its article.

Mrs. Eddy was a religious leader who learned to work and to wait. She had faith in God. She was ever confident of the ultimate triumph of good over evil. She believed in the intelligence and the justice of the people. The affairs of the church which she founded are conducted in accordance with the policies which she determined. Its directors are men whom she proved and approved. They are likely, therefore, to know what she meant, and to heed what she said, in one of her messages to The Mother Church (The First Church of Christ, Scientist, and Miscellany, p. 130): "Correct the false with the true—then leave the latter to propagate."

[Ezra W. Palmer in *Cripple Creek* (Col.) *Times-Record*]

Pamphlets misrepresenting Christian Science have been extensively circulated recently in your city, and I beg the courtesy of your space for brief comment. The method of attack will hardly commend itself to fair-minded persons. To attempt to poison the public mind by innuendo and far-fetched insinuations, with no personal responsibility for the falsehoods circulated, will hardly bear the test of the golden rule.

A favorite mode of attack of these pamphleteering critics is to compare isolated passages of Scripture with extracts from Mrs. Eddy's writings removed from their context, thus attempting to convey the impression that Science and Health perverts the teachings of the Bible. The unfairness of this proceeding is apparent to every unbiased thinker. Such a parallel can be employed to show that the Scriptures themselves are contradictory. The honest investigator strives to grasp the spirit and intent of the writer, not to distort his meaning by tearing statements from their context in order to bolster up a preconceived interpretation.

Another of these circulars asserts that Christian Science denies certain propositions deemed orthodox by the writer. Christian Science does not deny the personality of God, the atonement of Jesus Christ, or the efficacy of prayer. Beyond doubt, Christian Science presents a different concept of these fundamentals of the Christian life from the views held by the writers of these pamphlets, but that does not necessarily prove Christian Science to be false.

Christian Science denies the reality of matter, the reality of sin, and the reality of Satan, or evil. Hostile critics frequently stumble on the meaning of the term reality as employed in Christian Science, assuming that the term includes that which seems real to the corporeal senses; whereas it applies the term only to God and His creation, the spiritual universe, including man. "Reality," Mrs. Eddy writes, "is spiritual, harmonious, immutable, immortal, divine, eternal" (Science and Health, p. 335). Are matter, Satan, and sin "spiritual, harmonious, immutable, immortal, divine, eternal"? By no means; they are the antipodes of these attributes. Matter, sin, evil, are discord, chaos, without law and without order. They have not a single attribute of reality as defined in Christian Science, and are what Jesus declared the devil (evil) to be,—"a liar, and the father of it." On the other hand, God and His creation embody all the attributes of reality as defined by Mrs. Eddy.

Since God is infinite Spirit, the creator of all things, His creation is like Him, spiritual, and alone has reality. The carnal mind, the belief of life in matter, of a creation separate from God, evil, sin, poverty, death, are erroneous human beliefs, which a right understanding of God first rightly classifies and then destroys.

[George A. Law in *New Haven* (Conn.) *Union*]

The fees which Christian Scientists pay to their lecturers may be a proper subject of friendly interest, but there is nothing connected with it which can be distorted into an occasion for adverse comment. The insinuation that Christian Science lecturers may not be sincere because of what they are paid, would impeach the sincerity of every man or minister who is paid for first-rate ability. If your correspondent's

Digitized by Google

argument were justifiable, it would prove too much. None of the Christian Science lecturers ask or often receive one hundred dollars for a lecture, but they are men who made good in other vocations before entering upon this work. They earn what they receive, and their work is done for the benefit of the whole world. No one is obliged to hear our authorized lectures, but the life of many a man has been transformed for the better by reason of what he heard at one of these lectures, and cases of immediate healing are not unusual among those who attend them.

Since your correspondent who shrinks from disclosing his name has seen fit to quote an unfavorable opinion of Christian Science by a minister, the results of another minister's inquiry into this subject must be in order. If it is worth while to mention the fact that one minister or many ministers are as yet hostile to Christian Science, surely it is more significant that other ministers have adopted Christian Science in preference to their former beliefs. The following public statement was recently made by a clergyman of Brunswick, Ga.:—

"I have been an earnest student of Christian Science for something like three years, and have been gradually and increasingly convinced that it represents the true interpretation of Biblical Christianity. I have exercised the right which belongs to every man in a similar situation, to keep my own counsel during the period of investigation, and not to sever my connections with the old until I had become thoroughly convinced of the truth and value of the new.

"As I pondered the situation during the last few years, it has become increasingly evident to me that true and vital Christianity requires the healing of the sick by spiritual means, as well as the casting out of evils or devils, the overcoming of sin, and the preaching of the gospel. The command of Christ Jesus to his disciples to do the one was quite as explicit as it was to do the other. If any modern Christians are under the impression that this command of Jesus applied to only his immediate followers, and could be successfully obeyed only by those who lived while Jesus was with them in the flesh, modern Christian Scientists, under the instruction and leadership of Mrs. Eddy, who derived her knowledge of Christian Science wholly from a close study of the Bible, have proven by their works the utter falsity of any such impression.

"I am persuaded that there is no known form of disease, whether classed as organic or inorganic by the medical profession, which has not been healed by the administration of the power of God through Truth as realized in Christian Science. To the fuller and more practical administration of Christianity, as brought to the attention of the modern world by the Christian Science text-book, 'Science and Health with Key to the Scriptures,' written by Mrs. Eddy, I have determined henceforth to devote my thought and work."

❖

[Avery Coonley in *The Beacon-News*, Aurora, Ill.]

In *The Beacon-News* of recent date Captain —— includes in his remarks some observations regarding Mrs. Eddy and Christian Science, inspired by what he admits to have been a superficial reading of her works. In recommending that Christian Science and *materia medica* be fused "into one harmonious system," he has evidently not stopped to consider either the remarkable record made by Christian Science as a healing agency in less than fifty years, or the fact that a science is not susceptible of adjustment to suit individual preferences. It is either true or it is not science.

The most uncompromising demonstrator of God's omnipotence was Jesus, the great Physician, the only one in whose record there is no failure, and Christian Scientists have unbounded confidence in the wisdom of following his example. In striving to do so, they have had abundant proofs of God's ability to heal all manner of diseases, as well as sin, sorrow, and misfortune, and have experienced such manifold blessings that they are not tempted by proposals to compromise. Such proposals serve to show rather an increasing realization of the soundness of Mrs. Eddy's declarations, on the part of the proponent, than any need for readjustment of that Science which is proving that the promises of Jesus were intended to apply not "a million of years" hence, as your contributor intimates, but here, now, and always. As Mrs. Eddy pointed out, the realization of the absolute supremacy of Spirit is not a question of years, but wholly one of understanding and demonstration.

❖

[S. T. Downs in *Rockville* (Ind.) *Republican*]

The evangelist whose meetings are reported in a recent issue of your paper did not state what in his judgment constitutes a Christian, so it is not possible to see why he says the word should be dropped from the term Christian Science. Christ Jesus said his followers should "preach the gospel" and "heal the sick,"—not preach alone, but both preach and heal,—and in the last chapter of Mark's gospel, healing the sick is given as a sign that "shall follow them that believe."

Christian Science has healed every disease known to mankind through the Science of divine Mind as taught and demonstrated in the life and works of the Master, and it is turning men from sin of every nature by creating in them a desire to be more godlike. These are its proofs of discipleship: They show that the writings of Mrs. Eddy correctly present Bible truths, and in the language of an early defender of the faith, Christian Science says, "Show me thy faith without thy works, and I will show thee my faith by my works." The belief that Christian Science is limited to healing certain forms of physical or mental disorder only, is simply a notion of those who have not taken the trouble to investigate.

The line of reasoning that would preach the gospel to the world and confine the healing of the sick to the one spot where the Master performed some of his works, is extraordinary, to say the least. It certainly would have been too bad if the thousands upon thousands who have felt the healing ministry of Christian Science had been compelled either to continue in their suffering or journey to the pool of Bethesda, as our brother suggests, to learn of God as omnipresent, omnipotent, divine Truth, Life, and Love, and man in His image and likeness.

The growth of Christian Science seems phenomenal to the average person, and it seems to bother some of the leaders in the orthodox church considerably; but it should be remembered that this growth has not been brought about through any form of soliciting, urging, or in any way striving to get people to accept its teachings. Christian Scientists are anxious to give a reasonable, rational opportunity to every person who wants to learn the truth about God and man, and beyond this Christian Science simply points the way to a feast of inexhaustible divine Love, and whether we partake or let it alone must be decided by each individual for himself.

[W. J. Tucker in *Richmond* (Ind.) *Journal*]

In a recent issue you record under large heading the death of a child in Philadelphia from diphtheria, and the heading states that the death was "due to Christian Science," because the child had been under Christian Science treatment. Not long ago a lady of my acquaintance died, after having diphtheria, from the effects of the antitoxin used, according

Digitized by Google

to the physicians who administered it. No public statement was made that her death was "due to regular medical treatment," although consistency would have so required, if it is the proper thing to lay every death to the means employed in trying to save the patient.

In your same issue you record the death of a Virginia gentleman following an operation performed in Baltimore, and state further that at the time of the operation he had been in apparent good health. Why did you not head the article, "Death due to modern surgical methods"? Every system of healing extant records some failures, due to the inability of the practitioner of that system to bring out its fullest possibilities, although they may do the best they can.

A few years ago the New York *World* published a list of all the deaths in the United States of children under Christian Science treatment that it could rake up for a period of thirteen years. The total was thirty-two, of which ten were due to diphtheria. During one year there were in New York city, under the care of doctors, 1,715 deaths from diphtheria, nearly all of whom were under fifteen years of age. There was no record made in the papers of these deaths being due to regular medical treatment, or of any arrests of parents or physicians because they did not use some other method of healing.

We may not and do not all think alike, but we can be and should be tolerant and just to the other man's convictions.

❖

[Editorial in Minneapolis (Minn.) *Jewish Journal*]

I wish that every Jew would heartily endorse the plea of Henry Deutsch, made by him in the daily press, for "the equal right of every individual to worship and practise his religion as it seems best to him, without harm or injury to, or interference with, his neighbor." I wish that every Jew would stand by him in his efforts to defeat the attempted legislation in our state capitol against Christian Science healers.

The law should not interfere with any man's belief, especially as in all matters the Christian Scientists are law-abiding, and comply with all prescribed sanitary measures, as vouched for by Mr. Deutsch. In my humble opinion Christian Scientists are the most consistent Christians, and it ill becomes the Christian members of the legislature and other Christian gentlemen to interfere with them. If any one wishes to be an honest follower of Jesus, and in his name to "cast out devils," and "speak with new tongues," and "take up serpents," and "drink any deadly thing" without being hurt, what right have we to hinder him?

❖

[Anna Rasch in *Hamar Stiftstidende*, Christiania, Norway]

The Rev. Mr. —— some time ago criticized Christian Science in a way that causes me to ask for space for a brief correction. He says that "it is difficult to understand how a movement containing so much error and humbug has been able to enlist so many," but he entirely fails to explain the nature of this error. He very correctly says that "Christian Science is healing by knowledge," and it is by the correct knowledge of God, according to Jesus' own words: "Ye shall know the truth, and the truth shall make you free." What must mankind be delivered from, if not from sin, sickness, and death, and of what did Jesus' works consist?

Christian Science is an interpretation of the religion taught and practised by Jesus, a spiritual understanding and a practical application of his teaching. Jesus commanded that all people should be made his disciples, telling them to "preach the gospel" and "heal the sick," and the healing should prove the understanding of his teaching: "And these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." Christian Science has taken the full consequence of Jesus' teaching, and declares that preaching and healing must follow each other and not be separated. This healing is not founded on will-power or suggestion, but on the absolute truth of divine law and power.

The mission of Christian Science is not primarily to produce the physical healing, but the physical healing is an effect of the spiritual, the result of a higher understanding of God and the Christ. Thousands of thinking men and women in every walk of life have joined this movement, and all these people have come because of spiritual and physical healing. Unnumbered people owe life and happiness to Christian Science, having failed to get relief through any other means.

❖

[F. Elmo Robinson in *The Oregonian*, Portland, Ore.]

In *The Oregonian* of recent date a writer makes a very misleading reference to Christian Science. Our friend conveys the impression that Christian Science teaches us to ignore "warfare, crime, poverty, and suffering" because they are declared by this Science to be unreal. The word unreality, as used in Christian Science, has reference to that which is not God-created. The Scriptures teach that God made all things good, and further, that he is "of purer eyes than to behold evil," and cannot "look on iniquity." From the divine standpoint, therefore, all forms and phases of human discord are unreal, even as from the standpoint of the science of numbers the statement that two and two make five is non-existent—unreal. The mathematician progresses not by ignoring his mistakes, but by correcting them, and a clear perception of the truth is the means by which they are corrected. Christian Scientists do not ignore evil and discordant human conditions, but they endeavor to correct them by knowing the truth about God, and man in His image and likeness.

In regard to the question of war, the Christian Scientist's attitude is well expressed by Mrs. Eddy. She says: "For many years I have prayed daily that there be no more war, no more barbarous slaughtering of our fellow-beings; prayed that all the peoples on earth and the islands of the sea have one God, one Mind; love God supremely, and love their neighbor as themselves" (The First Church of Christ, Scientist, and Miscellany, p. 286). Again, on page 279 of the same book she says: "God is Father, infinite, and this great truth, when understood in its divine metaphysics, will establish the brotherhood of man, end wars, and demonstrate 'on earth peace, good will toward men.'"

From what has been set forth in this article concerning God and His creation, it may be seen that Christian Science teaches that "God's will" is always good; that He never wills nor sends evil or suffering upon any living creature. On page 140 of Science and Health we read: "The Christian Science God is universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death."

❖ ❖ ❖

The love of beauty which exalts the poet; that devotion to the One and that ascent of science which makes the ambition of the philosopher, and that love and those prayers by which some devout and ardent soul tends in its moral purity toward perfection,—these are the great highways conducting to that height above the actual and the particular, where we stand in the immediate presence of the infinite, who shines out as from the deeps of the soul.—PLOTINUS.

Editorial

Orderly Progress

In view of the present rapid growth of Christian Science and the interest taken in it by people of all classes, it is well to remember that the formation of churches and societies for the promulgation of this religion is the means which Mrs. Eddy provided for the orderly progress of her work, and for the extension of her teachings to as many as should be ready to receive them. The organization and maintenance not only of The Mother Church, but of branch churches as well, are very definitely provided for in the Church Manual, and Mrs. Eddy herself has said it is in the by-laws and rules laid down in this book that we shall find the "help that must be supplied to maintain the dignity and defense of our Cause" (Miscellaneous Writings, p. 148); therefore the importance of church organizations subject to these rules and by-laws cannot be too greatly emphasized.

It is self-evident that in the forming of such a church as is contemplated by the Manual, divine Principle must be the basis of organization; and that all self-will, all exaltation of personality, all strife and emulative ambition should be put aside. There can be but one legitimate reason advanced for the new organization, namely, to provide for the community that is ready for it, a more thoroughly organized presentation of the gospel which is "designed to commemorate the word and works of our Master," and "which should reinstate primitive Christianity and its lost element of healing" (Manual, p. 17). A Church of Christ, Scientist, stands for the promulgation of Christ's Christianity, for the preaching of the Word and the healing of the sick through the teachings of the Master, whose "great commission" was given to his followers for all time.

This church also stands for the manifestation of divine Love in the affairs of men, and for that unity of action and harmony of purpose which always accompany consecrated effort to do the will of the Father, even as it was done by the Master. A church organized on this basis is certain to be a power for good in the community in which it is formed, and as time goes on it will prove to be a part of "that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick" (Science and Health, p. 583).

The sturdy growth of a church properly organized can but tend to the increase and prosperity of the cause of Christian Science and of its individual members, and it is incumbent on every member of such a church to give his best efforts to its upbuilding, so that it may amply fulfil its mission. When this is done, when through the healing work and the consistent living of its members, it is demonstrated that the practice of Christian Science does make for better citizens, better fathers and mothers, more upright youth and more obedient children, then the time will surely come when such a church will be unable to accommodate all who wish to attend its services, and it will be time to consider the question of organizing another church in the same community. This should not be done, however, until there is a legitimate and well-defined need; otherwise, instead of having one strong and prosperous church, there might be two weak and struggling ones, neither of them able to meet the problems which present themselves in every church and in every field of labor, and which call for united and vigorous action if the church is to maintain that prestige and influence for the uplift of humanity which is its rightful office.

On page 226 of Science and Health, Mrs. Eddy, in writing of her early experience in Christian Science, says: "I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged." It is this same faith which must animate those who would take part in the work of serving their fellow men through their membership in a Christian Science church. The history of Christian Science and of its churches certainly proves that such faith in God is still extant.

ARCHIBALD MCLELLAN.

❖

"In deaths oft"

ST. PAUL'S statement of various experiences through which he passed, as found in the eleventh chapter of II Corinthians, includes these startling words: "In deaths oft." Now it is commonly believed that we can only die once, yet Paul seems to challenge such a belief; and as his words deal with vital truth, it is surely worth while to seek their meaning. The ordinary reasoner would probably say that Paul meant he had ofttimes been in perilous situations where death was imminent, but it is very evident that his words have a deeper meaning than this supposition would convey. He tells of "weariness and painfulness," of vigils, of "hunger and thirst," of "cold and nakedness;" nor is this all, for he tells of shipwreck, imprisonment, of "stripes above measure." But this heroic recital of things endured for Truth's sake, is given because the apostle evidently desired others to know what were the experiences in which he gloried.

From the view-point of Christian Science, man as God's idea, His reflection, never dies; and very few thinkers would venture to dispute this statement, although few if any outside of Christian Science would say it in this way. They would be more likely to say that an intangible something called the soul lived on when the body died. Mortals, however, do not claim to know much about this immortal essence, or substance, and defer their acquaintance with it as long as possible, though all the time aware that sooner or later they must face either spiritual existence or extinction. The great mistake is in supposing that spiritual things are unsubstantial, when only Spirit and things spiritual are substantial, indestructible, and they alone represent life without beginning or ending. On page 491 of Science and Health, Mrs. Eddy says, "It is only by acknowledging the supremacy of Spirit, which annuls the claims of matter, that mortals can lay off mortality and find the indissoluble spiritual link which establishes man forever in the divine likeness, inseparable from his creator."

Reading Paul's epistles in the light of Christian Science, it becomes very clear that he had proved in his most crucial experiences the supremacy of Spirit and the continuity of life; indeed he learned in this way what he could not have learned so quickly when the belief of life in matter was undisturbed by the insistent demands of spiritual law. That Paul did not cling to the belief of life in matter is evident from his declaration, "I die daily;" and again, "For to me to live is Christ, and to die is gain." In other words, he willingly gave up the belief of life in matter for the Christ-life, and this demanded of him, as it demands of us, the forgetting of the things that are behind, and a constant reaching out for spiritual realities, wherein alone is life.

When Paul healed the lame man at Lystra and fearlessly proclaimed the divine Principle of this cure, some heeded the message gladly, until they were confused by certain Jews,

Digitized by Google

who persuaded them to stone Paul. When they did this, leaving him for dead, then it was that he proved the truth of his Master's words, "If a man keep my saying, he shall never see death," and from that hour he might well say, "I live; yet not I, but Christ liveth in me." We are told that the other disciples, who also knew the life-giving power of Truth, stood around Paul as he lay there apparently dead, and soon he rose up and went with them into the city, not mourning over this test of his understanding, but confirming them in their faith and exhorting them to continue in it.

Our revered Leader speaks of Jesus and Paul as "colossal characters" (Miscellaneous Writings, p. 360), and adds, "Philosophy never has produced, nor can it reproduce, these stars of the first magnitude—fixed stars in the heavens of Soul." Both taught and demonstrated the life which is spiritual and which knows no death. Paul gloried in his Master's achievements, and also in his own, for when mortal mind would have overshadowed him with "deaths oft," he sought and found life "more abundantly," and that strength which was made perfect in his weakness. In this he gloried, as shall we when the flesh is dominated by Spirit.

ANNIE M. KNOTT.

"The Lord is my rock"

PERHAPS no symbolism of the Scripture writings is more forceful than that attached to the word rock, which stands first of all for demonstrable Truth, the Christ-idea. It is also frequently used with the personal possessive to express the individual realization of this idea, and the distinction between the two measures the contrast between preaching and practice, between conviction and conversion, between the perception of truth and the acceptance and utilization of truth, between seeing and doing.

The writer was much impressed recently, in talking with a doctor of divinity, a man of noble nature, to find how promptly and fully he endorsed the great fundamental truths of the Master's teaching as apprehended in Christian Science, and how insistently he maintained propositions which are entirely at variance with these truths. He unhesitatingly averred that God is infinite Spirit and wholly good, the only source and support of being, and that man is His image. Nevertheless he declared for the reality of matter, and that man is constituted of both flesh and spirit. The infinite Truth and Love was recognized as the rock basis of Christianity, and yet in the realization of the healing power of this verity he frankly expressed regret that he had no part. He could say unhesitatingly that God "is the Rock, his work is perfect;" but he could not say, "The Lord is my rock, and . . . my salvation," in the logical and saving sense which floods St. John's great declaration: "As many as received him, to them gave he power to become the sons of God."

The perception of divine Truth is great, but the realization of Truth is effectively greater, for this alone solves the life-problem. This is the heart of the gospel, the good news which Jesus preached and practised, and this is the distinctive teaching of Christian Science, that "the substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin" (Science and Health, p. 241). Any faith that does not measure up to this ideal certainly falls short of that of St. Paul when he shook off the viper into the fire "and felt no harm." It falls short, too pitifully short, of the pressing human need. All truth is ours potentially, but it becomes ours kinetically and effectively only as it is embraced in consciousness. God is "my God," only in so far as the divine life and law are manifest in and through me. Only as we "know" God do we "lay hold on eternal life." Moreover, this alone establishes the Science of Christianity, and saves men from professionalism and prejudice.

We know that nothing ill or unseemly can belong to the infinite Artist's work, to man as God-created, and yet we have been educated into the belief that many a contradiction of good belongs to us. Sometimes men even pride themselves upon the fact, and this universal habit of self-identification with sin, disease, and death gives hint, through reversal, of the true attitude toward Truth. How intimate has been our averred relation to certain distinctive ailments and imperfections! We have called them ours,—our cough, our temper, our poverty,—and would find it rather difficult to think of ourselves as separate from them. We have talked about and coddled them in lust for pity, and thus wrought them into the very texture of our sense of self—and now what transformation would be chronicled were we to acquire this habit with respect to all that distinguishes man, the focus and fact of the divine radiation! What a stupendous gain, what uplift of thought and possibility of well-doing, would be realized by you and me if God thus came to be "our God," if Truth became our wisdom, our inspiration, and our command, if Love became our companion, our impulsion, and our joy, if Life became our strength, our freedom, and our delight!

This is the endowment and end of Science: to attain to true self-consciousness, to apprehend all that for which we are "apprehended of Christ Jesus." This is our calling and election, to give up voluntary self-identification with the unideal, with imperfection, weakness, and want, and link our selfhood to the infinite good. This is the travail of aspiring sense, the urgency of that faith which rejoicingly and prevailingly cries, "The Lord is my rock."

JOHN B. WILLIS.

Among the Churches

Current Notes

EL SEGUNDO, CAL.—Although their building is not quite complete as to paint and cement work, the Christian Science Society of El Segundo held the first service in their new chapel, corner of Concord and Mariposa streets, last Sunday morning [Feb. 21]. A few people interested in Christian Science held the first service in El Segundo last September at a private residence, and immediately made arrangements to rent the reception room of Hotel Grand for services Sunday and Wednesday evenings; but it was soon necessary to plan for more commodious quarters. The lot upon which the chapel stands was very kindly donated for this purpose by the El Segundo Land and Improvement Company. The building is of redwood, chalet roof, 24 by 32, with an addition in the rear for a reading-room, which it is expected will be opened in the near future.—*El Segundo Herald.*

DETROIT, MICH.—Kenilworth Hall, 2120 Woodward avenue, has been leased for five years by Third Church of Christ, Scientist, for its church home, and the former quarters of the organization at 1495 Woodward avenue have been vacated. This hall has a seating capacity of six hundred and eight, while the old home seated but three hundred.

Detroit Journal.

CINCINNATI, OHIO.—The Christian Scientists are organizing a church in Norwood. First Church on Park avenue, Walnut Hills, has been overcrowded, necessitating an overflow. The new organization starts out under the happiest auspices and will hold its first service Sunday morning [Jan. 31] at Ideson Hall, South Norwood.

BROOKLYN, N. Y.—Today [March 21] the congregation of the new Christian Science church, Third Church of Christ, Scientist, of Brooklyn, will hold opening services. This church has been formed because of increased overcrowding at the services of First Church, New York avenue and Dean street. Because of this overcrowding, the church decided at a special corporate meeting on March 1, that all of its members who lived in the Flatbush section should withdraw so as to form Third Church. A committee of arrangements was appointed, and it reported that tentative arrangements had been effected to hold services in the Fourth Unitarian Church, Beverly road and East Nineteenth street. The services will be held at three o'clock in the afternoon and at eight in the evening, as the Fourth Unitarian church holds its own services at eleven o'clock in the morning.—*Brooklyn Citizen.*

COLUMBIA CITY, IND.—Articles of association for First Church of Christ, Scientist, of Columbia City, were filed for record Saturday [March 13] in the county recorder's office. This association some time ago purchased the John Adams property at the corner of Chauncey and Jefferson streets, which is at the present time being fitted up as their headquarters.—*The Columbia City Commercial-Mail.*

SAN BERNARDINO, CAL.—At the fifth national orange show held Feb. 17-24 inclusive, a booth for *The Christian Science Monitor* was maintained under the auspices of First Church of Christ, Scientist, of this city. Many hundreds of pieces of literature were distributed. The booth was also provided with conveniences for those who wished a few minutes' rest or desired to read. How well the public appreciated this, was attested by the fact that the booth was constantly filled, and visitors seldom left without expressing gratitude for the privilege.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

The Lectures

Fresno, Cal.

In the White Theater, before an attendance of one thousand people, Clarence W. Chadwick spoke on the topic, "Resurrection and the Life." The speaker was introduced by Ernest Klette with the following remarks:—

When Jesus trod this earth nineteen centuries ago, one of his greatest works, if not his greatest, was that of healing the sick. The gospels are filled with recitals of where he healed mankind of all manner of sickness and disease. The great powers expressed through him were also expressed, although to a lesser extent, through some of his disciples, and even St. Paul, living more than half a century after the time of Christ, was able to heal the sick. After about three centuries the great power of healing expressed through Christ and his immediate followers was lost to the world, and the world came to look upon it as belonging to Christ and his immediate followers only.

However, in our own day and age there lived a great student of the Bible who believed that the command of Christ to his disciples to go forth and "heal the sick, cleanse the lepers, raise the dead," did not apply to that day and the disciples alone, but that the command was given to all mankind for all ages. She believed that the statement of Christ Jesus, "He that believeth on me, the works that I do shall he do also," was not an idle one, but meant what it said, and that he who believed in Christ could do the Master's works. Mrs. Eddy believed that if the disciples, who before becoming his followers were but plain, simple men from the humble walks of life, could do the great works which they did, so all mankind that believed and understood could do the same; and believing these things, she set about to demonstrate them. That she did prove to the world that our Lord's message of healing was a message for all mankind and for all time, is today established by hundreds of thousands of authentic cases of healing. The world owes to Mrs. Eddy a debt of gratitude for the discovery of the great truth of Christian Science.—*Fresno Republican.*

❖

Chambersburg, Pa.

A good audience assembled in the court-house to hear the lecture on Christian Science by Virgil O. Strickler. George A. Fleming, editor of the *Mercersburg Journal*, introduced the lecturer. He said:—

Christian Science is no longer considered a fad or a fancy; it has become an established fact. This splendid audience warrants these statements. Everywhere mankind are seeking the truth, and Christian Science is helping them to find it. The Christian Science Principle of metaphysical healing is divine, and this is daily being proved by the fact that the percentage of cases healed is greater than in any other known system practised for the healing of disease.

Public Opinion.

❖

Cincinnati, Ohio

George Shaw Cook delivered two lectures on Christian Science in the edifice of First Church. At the first of these, Frank Ottermann, first reader, in introducing the lecturer, said:—

This opportunity of again partaking of the uplifting and healing tone of a Christian Science lecture is appreciated by a number of us. With their simplicity in imparting the word of Truth, and their freedom from the sense of worldly promotion of the activities of Christian Science, these lectures give a convincing answer to the earnest seeker of the truth.

The wisdom of our revered Leader, Mrs. Eddy, comes to our realization more and more when we contemplate the full scope of a Christian Science lecture. For one who is qualified to do so, it is the opportunity to correct any misunderstanding of the workings of Christian Science; while it leaves with any community a broader impression of the aims of this Science, and arouses a deeper interest in the question "What is God?"

At the second lecture Miss Lilian Carroll, second reader, in her introduction, said:—

Many centuries ago there came to listening humanity those wonderful words: "Glory to God in the highest, and on earth peace, good will toward men." That message was the key-

Digitized by Google

note of the selfless life of him who said, "Heaven and earth shall pass away, but my words shall not pass away." He performed many great works, but he truly gave all glory to God, in that statement fraught with so much meaning: "I can of mine own self do nothing;" and the legacy he left for all mankind is summed up briefly: "This is my commandment, That ye love one another, as I have loved you;" "Peace I leave with you, my peace I give unto you." The world has not heeded that admonition, and as a consequence is still sighing for peace and seeking a panacea for its numerous ills. But there is an ever increasing number all over the earth today who with humble, grateful hearts are learning of the fatherhood of God and the brotherhood of man, and this knowledge is a transforming power in their lives.

Some one has said that sorrow makes the whole world kin, but all who are treading this pathway of victory over evil conditions have found that there is no bond of unity like the joy of living and expressing good.—*Correspondence.*

Brooklyn, N. Y.

The remarks of Miss Clara S. Hill in introducing the Hon. Clarence A. Buskirk, at the lecture on Christian Science given in First Church, were in part as follows:—

In the gospel according to Luke it is related that on a certain Sabbath day Jesus went into the synagogue at Nazareth, "and there was delivered unto him the book of the prophet Esaias," from which he read: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." And Luke continues, "He began to say unto them, This day is this scripture fulfilled in your ears."

Christian Science is reiterating the Christ-message; it is fulfilling the Christ-mission. When the great Teacher was bidding farewell to his disciples, he promised that the Father should send "another Comforter, . . . even the Spirit of truth," who should teach them all things. Thousands of grateful hearts all over the world bear loving testimony that the ministrations of Christian Science have proven to them that the Comforter has indeed come, for whereas they were once in bondage to fear, disease, sin, or sorrow, they now enjoy to a large degree the blessings of health, happiness, and prosperity.—*Correspondence.*

Lectures to be Delivered

Ashland, Ohio.—Bicknell Young, Opera House, 8:15 p.m., May 21.

Batavia, N. Y.—George Shaw Cook, May 20.

Battle Creek, Mich.—Hon. Clarence A. Buskirk, Masonic Temple, Main street, 8 p.m., May 13.

Billings, Mont.—William D. McCrackan, Babcock Theater, 3:30 p.m., May 16.

Bisbee, Ariz.—Bliss Knapp, Orpheum Theater, 8 p.m., May 18.

Bloomfield, Neb.—Clarence W. Chadwick, Pospeshil Theater, 8:30 p.m., May 20.

Chicago, Ill. (Tenth Church).—Clarence W. Chadwick, Rosalie Hall, 5704 Harper avenue, 8 p.m., May 17 and 18.

Danville, Ill.—Clarence W. Chadwick, Armory, 3 p.m., May 16.

Detroit, Mich. (First Church).—Prof. Hermann S. Hering, Arcadia Hall, corner Woodward avenue and Stimson place, 4 p.m. and 8 p.m., May 9.

Dunkirk, N. Y.—Prof. Hermann S. Hering, Drohen Theater, 8 p.m., May 14.

Fort William, Ontario, Canada.—Hon. Clarence A. Buskirk, Orpheum Theater, 3:30 p.m., May 16.

Hackensack, N. J.—Virgil O. Strickler, Oritani Hall, 8:15 p.m., May 17.

Hagerstown, Ind.—Bicknell Young, I. O. O. F. Opera House, 8:15 p.m., May 13.

Hornell, N. Y. (First Church).—Col. William E. Fell, Woodbury Universalist Church, 8 p.m., May 20.

Testimonies of Healing

I do not think it possible to find any one whose antagonism to Christian Science was more pronounced than was mine; in fact, I was really afraid of people who called themselves Christian Scientists, for I had heard ridiculous stories, flavored with spiritualism and hypnotism, and so I preferred to keep at a distance from these people. The first time, I visited their place of worship much against my wish. I was with one who was having treatment and could not go alone; but I would not go without a third party, as I feared I would need protection. I therefore persuaded a friend who was also antagonistic to what we thought were the teachings of Christian Science, to go with us. The hymns, we admitted, were very beautiful, and a great sense of peace filled the auditorium; but when the readers started the Lesson-Sermon, and we saw a little lavender ribbon falling down under the desk (it was used by the second reader to mark the places where she was to read), we both thought this most significant, and became quite nervous, watching for developments. After the service we were greeted by so many intelligent looking people that we were surprised.

I accompanied the same patient to the practitioner's office day after day, where I heard some of the beautiful quotations of the Bible explained so differently from my former teachings, that I agreed there was more real Christianity in Christian Science than I had supposed. After I had followed this course for some time, I was seized with an old trouble, which usually caused me to be in bed for hours with hot applications. As I could not get a substitute to accompany the patient, I decided, though with an air of defiance, to ask the practitioner to relieve this great suffering before treating the patient, thinking I might thereby learn something of the mystery surrounding these people.

On entering the office, though with assistance, on account of intense pain, I found many patients ahead of me, so I tried to bear my suffering and say, "I am not sick," repeatedly, as I understood Christian Scientists did. In a few minutes one of the visitors came over to me and asked if I believed in Christian Science. She said she was desperate, and had decided she might as well end all and get out of this world. I was touched at her grief, yet I did not know how to answer her question. I said that I knew very little about this teaching, but from what I could gather in hearing the practitioner's explanations, Christian Scientists believe that God is our life; we cannot end it; that He is our strength; He is divine Love, and "in him we live, and move, and have our being." I talked to her until the busy practitioner had time to receive her, and to my astonishment my own pains had disappeared. I told the practitioner of this, and asked how I was healed. He smiled and said, "By giving out love." This sounded beautiful, but was not satisfactory, so I decided to read the text-book, "Science and Health with Key to the Scriptures," myself.

Soon after starting to read the book, another of my former ailments appeared in the form of a rectal abscess, which caused much pain and discomfort. This seemed to be an opportune time to test absent treatment, so I called the practitioner by telephone, and mentioned the condition, telling him that I must lie down, although I had been informed that patients were not permitted to do so. I was surprised when he said, "Make yourself comfortable and rest in divine Love. There is nothing impossible with God," etc.; and before I left the telephone the pain had vanished. This convinced me of the healing power of Truth, so I then asked for treatment to eradicate the trouble which the doctors had diagnosed as hemorrhoids, and had operated on months before, but could not cure. I am thankful to say that after a few months' reading of Science and Health, with help from the practitioner, this ailment also disappeared entirely.

I was very thankful for these proofs, by which all doubt and antagonism were replaced with perfect faith in Christian Science, and a desire to know more of the healing power of Truth. After studying Mrs. Eddy's book in connection with the Bible for several years, I was impelled by Truth to remove an artificial support which I had been unable to be without for fifteen years, and which had become very uncomfortable and painful. I had it removed by the same physician who adjusted it and who had said I would never be able to go without it; but I have not needed it since. I have relied on God, as revealed to me through the study of Christian Science, for the overcoming of all discord, and I have found in this teaching a "sovereign panacea" (Science and Health, p. 407).

Words are inadequate to express my gratitude, and I advise all sufferers to try Christian Science, which is the law of God that governs man and the universe harmoniously, and which teaches us how to apply divine Principle in our daily experiences.—Mattie P. Garber, Wilkinsburg, Pa.

❖

In June, 1909, the teaching of Christian Science was unfolded to me when I was greatly in need of help. For many years I was a semiinvalid and tried physicians of different schools, as well as hygienic rules. I also went to a sanitarium, where the doctors were sure they could relieve me, but utter failure followed their efforts. I was then brought to the hopeless thought that there was no relief for me, and that my earning days being past, I was about to become a burden on my adopted children. I called one of our best physicians, and asked him to give me a careful examination and freely and fearlessly tell me the result, saying that he need not fear, for if I knew that I could go to sleep and never wake I would be happy. He informed me that I had organic heart disease, which could not be cured, also bowel, stomach, and liver troubles. This I thoroughly believed, and felt that any one of them was of such a character that I might pass away in consequence. A few days later he said there was no use in my coming again, as he could not help me.

At this time a Christian Scientist called, and as a result of her call she sent me a list of the Christian Science practitioners in Pasadena, and after about two days I managed to get to the telephone and ask for treatment from one of them. A few hours later a practitioner came. The result was that all symptoms of heart trouble were overcome, and the healing has been permanent. All the other ill conditions have also been healed, and I am a vigorous, healthy man at sixty-eight years of age. Different ailments have now and then presented themselves, but they have been promptly banished.

I have been, and am now, free and happy, and grateful beyond any words at my command. I have been healed of imperfect hearing, and my sight is much improved. I had worn glasses for several years, but now I use them only for very fine print, and not always even for that. My healing from a severe attack of acute lung trouble was most interesting. At noon on Wednesday I was very weak, and the congested condition and high fever induced a friend to insist on my calling a practitioner, who came and was with me about two hours. I said, "This is Wednesday, and it will be the first Wednesday evening meeting that I have missed since I came into Science." The reply was, "Your place is at the meeting." About twenty minutes after the practitioner and my friend had gone, I got out of bed, dressed, got myself

Digitized by Google

something to eat, then took the street-car and went to Pasadena. I took my place as usher in church and gave my testimony of the healing. The next morning I was at my place of business.

This testimony is given in grateful recognition of the loving care of our heavenly Father, and as an expression of my gratitude for the understanding of the healing truth as given to us in Science and Health.

RICHARD T. GREENE, South Pasadena, Cal.

[Translated from the German]

For years I have received blessings through Christian Science, and I feel it is high time that I gave expression to my gratitude. I became acquainted with this teaching through my mother's healing, for with three treatments she was completely cured of the effects of a very serious stroke, which she had had about three years previously. When we came to Christian Science, my mother was almost entirely paralyzed; her thought was darkened, and she often seemed unable to follow our conversation, but after the practitioner's first visit she walked around the room, and after the third visit she was able to attend a Wednesday evening meeting. Her strength quickly returned, and with the help of Christian Science she overcame all other ailments which tried to manifest themselves as formerly.

When Christian Science found me, I was a grieved and unhappy woman, as there was a very difficult family problem to be solved. In Christian Science, however, I found comfort and peace, for which I am very grateful. I have also been healed of physical ills through the understanding of God's love and omnipotence. Three years ago serious poisoning manifested itself on my hands, making it impossible for me to use them. Our dear helper treated me, and after six weeks had elapsed I was completely healed of this distressing condition. Christian Science also healed me two years ago of inflammation of the middle ear, and has proved a constant help in my business dealings. I wish to give special thanks for the translation of our text-book, "Science and Health with Key to the Scriptures," which makes plain to us the teachings of the Bible and leads us to discern the nature of Truth and of man.

For all the benefits received I am deeply thankful to God, and grateful to our dear Leader, Mrs. Eddy. It is my sincere desire that I may gain a constantly increasing understanding of Christian Science.

FRAU LUISE SCHMERBACH (née ZÜHLSDORFF), Berlin, Germany.

Gratitude impels me to write of my experiences in Christian Science. Many years of my long life, now nearing eighty-seven years, were spent in active service in an orthodox church. In common with many others, I suffered from physical ailments, with their whole brood of ills, in the belief that they were sent upon me for my good; yet notwithstanding that belief, I resorted to medical treatments in connection with physical exercises to bring better health. It was all of no avail, however, as was to be expected if the difficulties were sent upon me by a higher power. I had long been trained to place my trust in but one half of the great Master's teaching,—that of possible salvation, without the healing. With others, I "indulged a hope" that some time in the far-off future state I should be saved, drop my ills and rejoice.

Then Christian Science came to my notice. At first it was misunderstood, and did not appeal to me, but a member of my family who had suffered much, and been operated on in a hospital with only partial relief, was healed very quickly and permanently through Christian Science, and this led me slowly but surely to consider its teaching. Some other remarkable cures fixed my attention, so I began to read, study, and finally took treatments. My healing came slowly but completely. I thank God, and am grateful to our revered Leader and guide, for good health, entire relief from the old ailments, and for some knowledge of Truth, Life, and Love, bringing to me heaven here and now,—no longer indefinite and distant, to be hoped for or pleaded for, but tangible, cheerful, worth living for; not something which one must longingly wait for and finally die to realize.

I am indeed thankful for the healing, but much more so for the spiritual uplift, for my almost complete immunity from fear of impending evil. A knowledge of divine Principle as ever present fills me with joy unspeakable. I have passed through the "dark ebbing and flowing tides" (Science and Health, p. 566) of affliction, but my daily prayer for health, strength, and courage sufficient for the day, always brought an abundant supply. I know that God is my life, my health, my strength, for I have proved it beyond a doubt. Prayerfully I strive daily to attain to the Mind that was in Christ Jesus. The reading of the Scriptures was formerly more or less intermittent, with comparatively little real understanding and relish; now the Bible and our text-book, "Science and Health with Key to the Scriptures," are my daily companions.

Our beloved Leader, under divine inspiration and guidance, together with her loving obedience to God's requirements, her devotion to the truth that makes free, and her love for humanity, has accomplished a work for a suffering world's uplift unequaled since the time of Christ Jesus. Unnumbered thousands are today, as a result of her inspired teaching, in the enjoyment of "health, holiness, and harmony" (Science and Health, p. 392). I thank God, and revere Mrs. Eddy's memory, for the truth she has so clearly and lovingly placed before the world. I am not yet a member of the Christian Science church, but having stated my present spiritual convictions to the membership of my former connection very frankly, and asked for such a dismissal as their rules would permit under the circumstances, I have received a remarkably kind release, and so I trust that in due time I shall, if found worthy, become a member of the church in which my affections are already centered.—B. F. QUINBY, Los Angeles, Cal.

Several years ago, while I was studying at the university in Oxford, England, with some American friends who were Christian Scientists, my physical condition, never strong, grew worse, until I finally came to the conclusion that I would have to return home or seek relief in the warmer climate of southern Italy. Knowing my friends had great faith in Christian Science, I hesitated to say that on account of my health I would have to leave them, lest they should recommend that I have treatment, and this I did not want to do, so I postponed my decision from day to day.

After three months of concealed misery I knew I could not go on longer in that way. I would have to leave my friends and let them think that I wanted to leave them, or if I went without trying Christian Science, that I considered them foolish for relying on it. I had the most intense distaste for what I thought this teaching to be, and the mental struggle was fierce until a "still small voice" whispered "obstinacy." Relieved to find something I could meet, I knew that if obstinacy had anything to do with my reluctance I should and could settle that at once, and within an hour I was on my way to the home of a Christian Science practitioner. As I went I planned to depart from England the last of the week, feeling that now I could go without hurting

Digitized by Google

my friends; the thought that I might be helped was not entertained at all. In spite of this, I was helped immediately, and with the physical freedom came the inward assurance that God was the healer.

I was astonished beyond words that there should be so much more to Christian Science than the wisdom of the world had credited. In three days I was cured of chronic ailments, backache, bowel disorder, and kidney trouble, whereupon I began the study of Science and Health. This turned me at once to the Bible, and with the reading of the well-known verse beginning, "No man can serve two masters," the spiritual interpretation came like a shining light, the assurance that the Bible was and always has been true, that Jesus meant exactly what he said. This could only mean that the world for centuries had failed to interpret him aright,—an almost incredible fact, but I felt it to be undeniably true in the light of proof and revelation. Absolute reliance on the understanding of God, spiritual power, to overcome material conditions, I saw to be not only possible but imperative, here and now.

For years, lack of health had spoiled both work and play, and chastened me until I helplessly prayed, "Thy will be done;" yet after all this I was still resisting the truth. Now I can see how I was being led aright, and in accord with Mrs. Eddy's prayer, I am "glad for every scalding tear" (Poems, p. 4). I have spoken particularly of the struggle which led me to Christian Science, for its lesson made a deep impression on me,—the lesson we all must learn,—that in spite of human resistance, divine Love is directing and guiding every step of our way. God's work is already done, and done perfectly; we have only to set aside our own plans, or our own doubts and barriers, to find this eternally true. Christian Science teaches us to know we are not helpless, that "we have strength in proportion to our apprehension of the truth," and that "truth is revealed. It needs only to be practised" (Science and Health, pp. 80, 174). This understanding should and does make the happiest people on earth.

I want to express my deep gratitude for Mrs. Eddy's consecrated life-work, and for all earnest Christian Science workers.—Mabel Kelly, Sioux City, Iowa.

Since I have been a student of Christian Science I have had more peace and joy than in all my previous life. I am truly thankful to God and to Christian Science for the healing of one of my children. One Saturday, shortly after midnight, my little girl was taken quite ill with severe stomach trouble. Her fever seemed very high, and there was continuous vomiting. Early Sunday morning I called a practitioner, and by noon the child was resting comfortably and had no fever. About seven in the evening she fell asleep and slept soundly all night, without once awakening. The next morning she arose without being called, and went to school bright and happy. She was perfectly healed. Her quick recovery was certainly wonderful to me, as before knowing of Christian Science I had seen her in bed at least a week with this same ailment. The child was not only healed physically but spiritually, for she was left with a pleasing disposition, which she had never had before. I am very grateful for this.

One Wednesday, just before the evening meeting, I was taken quite ill with all the symptoms of influenza, but I did not call a practitioner until about eleven o'clock. I was treated that night, and by the next day was feeling all right and went about my work as usual. In the old way of thinking, I had often had this same trouble and been confined to bed a week or more, suffering very much. I am thankful for this quick healing, and for many others. Christian Science has taught me to know more of God, and has made me a different woman toward everybody. I have been able to overcome many ailments myself, and have learned to trust God in all my daily work.

Margaret Mettler, Mattoon, Ill.

During the past fourteen years Christian Science has been a great help to me in many ways. I write this testimony in the hope that it may help some one who is having experiences similar to mine. In Science and Health (p. 231) Mrs. Eddy writes, "Unless an ill is rightly met and fairly overcome by Truth, the ill is never conquered." This statement was proven to me.

About seven years ago I gradually became deaf. There was a discharge from the ears, and I was unable to hear any ordinary conversation. A Christian Science practitioner worked faithfully for me, but though my hearing was better at times, the trouble would always return. I had, however, received so many proofs that Christian Science could and did heal "all manner of disease," that I did not doubt I could be healed. This went on for two years, while I continued to take treatment and study Science and Health, together with the Bible.

In the fall of 1908 another problem presented itself. It was the question as to whether I should stay and work for the man by whom I was then employed, and where I felt well satisfied, or whether I should take a position where I seemed to be more needed. This problem seemed so important to me that I asked God to show me the way. I made the change, and at the same time I formed a resolution that I would obey the "still small voice" which spoke to my conscience, and fear nothing. From that day I ceased to worry, and my thoughts were ever that I was going to work for God. In less than two weeks my hearing was restored, and I have had no further trouble in this respect. I have been a free man in every sense of the word. For this I am very grateful. I have also been healed of stomach disorder and a bowel difficulty.

Christian Science certainly is a demonstrable religion. To all those who are studying it and who do not seem to understand it at once, I would say that if you will trust God, He will lead you to understand all His ways; and His ways are beautiful, though they may seem altogether different from what we expect. I thank God, and am grateful to Mrs. Eddy for this wonderful truth.

A. A. Kuehl, Milwaukee, Wis.

It is nearly three years since I became interested in Christian Science, and I wish it were possible to tell to all the joy, peace, comfort, and health which result from this new understanding of God and His manifestations.

Several years ago I slipped on an icy sidewalk, and in trying to prevent a fall I threw out my right arm, but at the same time twisted my back with such force that bones in both my back and shoulder were misplaced. The physician who was summoned, diagnosed the case as a bad sprain and recommended complete rest, rubbing, etc. After about six weeks I was able to be about, but could do only light work, as any sudden stooping would cause a catch in my back which would result in extreme suffering and confine me to bed for days at a time. It was impossible for me to raise my arm above my head; in fact, it was practically useless.

This condition lasted for three years. A number of physicians were consulted, but I received little and only temporary relief. Finally a specialist in another city put the bones in their proper places, and for a few weeks I was

Digitized by Google

greatly relieved. Then one day I raised my arm and the bone in the shoulder again slipped out of place, and the suffering was greater than ever. The specialist adjusted the bone a second and a third time, but finally informed me that the condition could not be cured, as owing to the long misplacement, another groove had been formed into which the small bone would easily slip.

At this time I visited a friend, and was greatly surprised to find Christian Science literature on her table. I glanced through a little pamphlet and found it contained the most beautiful thoughts I had ever read. I borrowed a number of pamphlets and read them through carefully. The desire to know more of God as explained therein grew rapidly, and led me to the Sunday services. For a number of weeks I attended these services only, fearing that to hear testimonies of healing which I could not believe would destroy my desire to know more of God as explained by Christian Science. When I did attend a testimony meeting, the honest gratitude so lovingly and convincingly expressed, destroyed the thought that this healing was "too good to be true," and assured me that it was our divine right. I sought a practitioner, and in about three treatments was entirely healed. I have also been able to lay aside heavy glasses, which had been used for street wear from the age of six; indeed, it was impossible for me to venture on the streets alone without them.

For these demonstrations of the healing power of divine Love I am truly thankful, but I am even more grateful for the spiritual enlightenment. To know that God is an ever present help in trouble, that He is all Life, Truth, Love, all powerful, omnipresent, and hence that evil is not real and can have no power,—this is indeed to know the truth that makes men free. For the new understanding of the Bible which I have gained I daily thank God. I am also deeply grateful to Mrs. Eddy for her loving help to all humanity, as given through the text-book, "Science and Health with Key to the Scriptures," and her other writings; and also to all those who have so lovingly and patiently helped me.

ELSIE KNOBLOCH, Cleveland, Ohio.

[Written for the *Sentinel*]

"But Love alway!"

AMY SMITH

I WANDERED in a garden sweet,
Whose quaint old-fashioned flowers
Let fall their petals at my feet
In soft and scented showers!

I paused beside an old sun-dial
And watched the sunlight shining
Upon its upturned face, the while
I marked the day's declining!

I pondered what the legend said,
And marveled at its power.
"Light and shade by turns," it read,
"But Love alway!" each hour!

"But Love alway!" I said aloud,
"No matter what the weather,—
If it be sun or rain or cloud,—
Go Love and I together!"

The sun-dial marks the hours that shine,
Dark ones are noted never,
But, sun or shadow, Love divine
Abides with us forever!

From Our Exchanges

[Rev. A. T. Bannister, M.A., in *The Christian Commonwealth*]

The ministry of the church means piloting the teeming, many-sided life around us over an unknown sea to a land which God will show. And if we are to accomplish this mission, the ship must be piloted by prophets,—men "of hope and forward-looking mind," who will set their face to the future rather than to the past, who in the years immediately to come will count it the chiefest of their religious duties single-mindedly to work for peace between the nations, between the Christian sects, and between capital and labor; men who are prepared fearlessly to apply the principles of Christ to civic and industrial life; men who will never forget that religion cannot be separated from politics any more than the individual can be separated from society.

We have had, for the present, enough and to spare of individual Christianity; enough also of institutional Christianity. What we shall need after the war is international Christianity, civic Christianity, political Christianity, which is a very different thing from ecclesiastical politics. When the Christian churches cease from their internecine strife about antiquarian issues, and begin intelligently to direct the overmastering power of religion toward the creation of a righteous human society, the kingdom of God will not much longer delay its coming.

But some timid soul may say, Will not this social emphasis in its teaching bring the church into trouble? Undoubtedly at first it will. We shall meet with that bitter antagonism and angry denial which are the higher and rarer forms of popular applause. If we are faithful and fearless, we shall rouse a storm of furious opposition and frenzied denunciation. All the vested interests which have anything to lose by social and national righteousness will be up in arms against us. We shall be opposed, too, by many genuinely good and earnest men who not only temperamentally dislike new wine, but are devoted to the very form and color of the old bottles; and some of these will quite sincerely think that they are doing God service in striving to suppress such teaching. Yet only so can the Christian church become the prophetic guide of the people, the embodied conscience of the state, the organized center of all the forces and principles which make for righteousness, which help toward social progress. Very shortly now the church must decide whether it will wholeheartedly lead the ethical revolution which must come with the new time, or whether it will make the great refusal.

[*The Christian Register*]

Bearing in mind all we read in the records about the life and ways of Jesus, and all he was remembered to have said about immortality, we try to imagine what he would say about it if he were to appear here on an Easter day. We do not have to draw upon our own opinions at all to hear what he would say. What he did say, tells us. "Why do you single me out? Whosoever does God's will belongs to Him. You are the salt of the earth. God's angels shall gather His elect from the four winds, from one end of heaven to another. I know no more than any,—no one knows the day and the hour; but God knows, and His kingdom is within you all. Think of all the faithful company who have shown His kingdom in their spirit and their life. You cannot number those who have taken up their cross in the same spirit which sustained me under mine. They are where I am."

We claim for such an interpretation of Easter the finest consistency with Christianity. It fits with the universal nature of the gospel, and with the purpose of Jesus to draw

Digitized by Google

all men to himself. But if this interpretation be questioned and refused, we fall back on our own experience as the great sufficiency. Interpretations are disputable, but lives are facts. Faiths are contingent, but goodness is actual. The past is dim, but the present is clear. Christ is far away, but the men and women whose lives do most to assure us of him have been, and are, near us. Every day they disappear, leaving each some precious hold on those who remain to persuade them that their vanishing is of the flesh, and not the spirit. From a thousand tombs the stone is rolled away and shapes of light come forth.

[J. E. Hinds in the *Pasadena* (Cal.) *Star*]

If each generation of men as it passes could and would faithfully transmit to the generation next succeeding on the scene, to take up the work of life and the cares and management of the affairs of the world, the full knowledge they have acquired and the conclusions they have drawn from their experiences, it would be safe to say that in two or three generations, at the most, mankind would discover the utter futility of all forms of war, of dishonesty, disloyalty, immorality, dissipation, sensuousness, avarice, and injustice. For if men learn any lesson at all in passing through this world, it is that an indulgence of the baser passions inevitably brings, sooner or later, its own punishment, and that of a surety "the wages of sin is death;" that ill-gotten gains never bring a satisfaction or reward commensurate with the sacrifice of conscience, or afford any compensation for the injustice and the soul-withering avarice so often manifested in the acquirement; that a sincere cultivation of the principles of "the fatherhood of God and the brotherhood of man," "with malice toward none, with charity for all," and a broad spirit of love, and a desire to live a clean, useful, wholesome life, bring the greatest return in all ways and in all things. Would not this be the conclusion of the man who had led an evil life as a result of the natural punishment and the tortures of conscience which his course had brought upon him, and of the just man from the satisfaction derived and the rewards received from having lived in accordance with the laws of God and nature?

[*The Christian Work*]

The spiritual commonwealth is a grand democracy, and has a direct, immediate, responsive approach to the infinite. Spirit with spirit can meet; there are constant openings for our prayers and hungerings; we are always in touch with the throne. This communion has manifestly ennobled the race; the skeptical temper which doubts its genuineness is silenced by the character it has created and controlled, frequently in those who were aforetime godless and wicked. Out of it arises the possibility of worship, for we must needs revere the highest when we see it; and worship implies a common spirit, sympathy, and aim, a focus where the will to be good blends with the eternal purpose.

[*The Universalist Leader*]

There are none so foolish as not to recognize conditions as a real factor in the development of men and events and institutions; and just now from the standpoint of the Christian church, we face conditions which are beckoning with opportunity. We have missed the point entirely when we say Christianity has failed, because of the chaos into which civilization has fallen. The mighty truth is that civilization without Christianity has failed, and having failed, is bound to turn again to Christianity for salvation. Conditions therefore, frightful as they are, are not to depress and discourage Christian workers; rather do they beckon with opportunity.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The following pamphlets, originally published in English, later as a French translation, are now issued with the English and French versions on opposite pages:—

"Christian Science: Its Advantage to Mankind" (Christian Science: Son Avantage à l'Humanité), by Edward A. Kimball, C.S.D.

"Christian Science: The Comforter of Promise" (Christian Science: Le "Consolateur Promis"), by Frank H. Leonard, C.S.B.

"Christian Science: A Religion of Progress" (Christian Science: Une Religion de Progrès), by William D. McCrackan, M.A., C.S.B.

"Christian Science: The Gospel of the Kingdom" (Christian Science: C'est l'Évangile du Royaume), Judge Clifford P. Smith.

"Christian Science: Its Principle and Method" (Christian Science: Son Principe et Sa Méthode), by Bicknell Young, C.S.B.

These pamphlets are now on sale at the regular prices shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman P. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

The merchantable timber acquired by the federal government in the purchase of land for national forests in the White mountains of New Hampshire and the southern Appalachians amounts to more than a billion board feet, worth upward of three million dollars on the stump, according to an appraisement by the forest service. Plans for cutting some of this timber in accordance with scientific forestry methods have already been prepared, and in a few localities operations have been started. In some places it has been found necessary to remove mature trees in order to give the young growth a chance. This work is being done largely by local residents, who have bought the stumpage and are converting it into lumber. The construction of roads and trails is making more and more timber accessible to lumber operators, but the principal use of these improvements at present is for local communication, fire protection, and to open up the wild land for recreation use.

A great deal of the forest land within the purchase areas was cut over or culled before the government acquired it. Nearly all of this class of land, however, is covered now with young growth, and even the abandoned farm acreage, which forms about 2 per cent of the whole, is slowly reverting to forest. Of mature timber which could be placed on the market at once, the eastern national forests contain a total of about one billion one hundred million board feet, which includes all the common eastern hardwoods, together with much spruce, a good deal of hemlock, and some pine.

The latest business-aid service instituted by the government is a wood-waste exchange. It enables lumbermen and manufacturers in the various wood-using industries to utilize each other's waste to mutual advantage, aiming to effect a large saving in forest material as well as in money. The wood-waste exchange is being conducted by the forest service of the department of agriculture. More than forty manufacturers of wooden articles already have asked to be listed as having certain kinds of waste wood for sale, or as desiring to obtain their raw material in the rough or in semifinished form from mill or factory waste. Twice a month the exchange sends out a circular headed, "Opportunities to Buy Waste," containing the names and addresses of factories having waste wood for sale, with exact information as to species, sizes, forms, and quantities. Similarly, another circular headed, "Opportunities to Sell Waste," gives the specific requirements of wood-using plants which desire to buy waste material.

One of the first waste problems solved has been that of a furniture maker in Michigan, who wrote to the forest service asking how to dispose of sugar maple blocks and sticks which were cut off in the process of furniture making and which he had to sell merely as fuel. Samples were obtained from him, and the forest service then located a scrubbing-brush manufacturer who used small maple blocks for brush backs. The result was that the furniture maker was enabled to sell his waste at a much higher price than it had brought as firewood, while the brush maker was enabled to buy brush-back material in suitable sizes at a much lower figure than it had been costing him to buy maple lumber and cut it up.

The first daylight message from the naval radio station at Darien, in the Panama Canal Zone, to the navy radio station at Arlington, on the south bank of the Potomac, was received on Friday, April 30. It was the first official message between these two links in the chain of high-powered radio stations that the navy will have in operation between Washington and the Philippines next winter. Prior to April 30 all messages from the navy department to the Canal Zone had to be sent at night, and also relayed. In the future these messages will be handled day and night by way of the new Darien station.

The distance from Arlington to the Canal Zone is two thousand miles. The sending and receiving radius of the new Darien station is four thousand. The opening of direct communication will affect a material saving to the government in cable tolls, as it is expected that in a short time all official telegrams of the government to the Canal Zone will be handled by the Arlington-Darien radio route.

Sweden's waterfalls are being made use of to an ever increasing extent, and during 1914 not less than forty thousand horse-power, not including the great Porjusfalls for the electric railways in the very north of Sweden, was employed for various purposes. At the same time new stations, which will have a generating capacity of twenty-seven thousand horse-power, are in course of construction, and the great establishments at Trollhättan near Gothenburg are also being enlarged so as to increase their generating power. The total amount of horse-power at modern establishments is estimated at seven hundred and sixty thousand, and if to this is added the stations which are at present being erected, it brings the total to nine hundred and fifteen thousand horse-power, which is about 15 per cent of what can be generated by the Swedish waterfalls.

In presenting the budget to the House of Commons, the chancellor of the exchequer, David Lloyd George, estimated that if the war lasted during the whole of the fiscal year, Great Britain's expenditure in that time would be $5,682,170,000. He also estimated that the total revenue for the year 1915-16 would be $1,350,910,000. This is an increase of $218,190,000 over the total of last year. On the basis of a six months' war, the chancellor continued, expenditures for war, apart from advances to the Allies of Great Britain, would rise to $10,500,000 daily, and the net deficit would be $2,571,730,000. On the basis of a twelve months' war, the net deficit would be $4,811,660,000.

Recent rains have affected every river and stream in Maine, the water, which up to a short time ago had been very low for the season, being now up to freshet pitch. When the storm began, the depth of the water flowing over the Bangor dam was not much more than three feet, but this has increased to nine feet, with the pitch constantly rising. The lumbermen had begun to despair of getting out the brook drives when the rain began, but now there is water enough and to spare everywhere, the only question being as to whether there will not be too much for safety.

The international railway bridge connecting the Bangor & Aroostook railroad on the American side of the boundary with the Canadian Pacific, international and national transcontinental lines, which traverse northern New Brunswick, was formally opened to traffic May 1. The bridge extends across the St. John river, between Van Buren, Maine, and St. Leonard's, N. B., and is 875 feet long. It was built by the Van Buren Bridge Company at a cost of two hundred and fifty thousand dollars.

There are eight strawberry districts of unusual commercial importance in the United States,—central California, Tennessee, Maryland, Delaware, southern Louisiana, North and South Carolina, Virginia, and the Ozark region of Missouri and Arkansas. The shipments for the country in 1914 aggregated 14,553 carload lots, not counting innumerable shipments of smaller quantities than the carload. Central California led with 1905 carloads, and the Ozark district came last with 748 carloads.

Governor Lister of Washington has written the governors of the other eleven states represented in last year's conference of western governors at Denver, proposing May 18 to 20, inclusive, as the dates for this year's conference at Seattle. Land and irrigation problems peculiar to the western states probably will form the chief subjects for discussion. The states are Washington, Oregon, California, Idaho, Utah, Nevada, Arizona, Montana, Wyoming, Colorado, New Mexico, and South Dakota.

The Ohio statute which prohibits an employer from discharging an employee because of the membership of the latter in a labor union, was held unconstitutional in a decision handed down by the state supreme court. In reaching its conclusion the court quoted a recent decision of the United States Supreme Court in a Kansas case.

The Indian budget proposes to allot only eight million pounds sterling to Indian railway development during the coming year, which is four million short of the minimum which a committee found to be absolutely necessary if the economic and industrial progress of the country was not to be unduly retarded.

Shipments of 2,651,882 barrels of apples from Atlantic ports for the 1914-15 season, which came to a close in April, surpass by about nine hundred thousand barrels that of 1913-14.

Canada's trade in the fiscal year ended March 31 totaled $1,078,175,000. The showing is regarded as particularly favorable, considering the war conditions.

With wireless stations powerful enough to reach vessels in all Chinese waters, the government of that nation will establish a typhoon warning service.

The Chinese government has accepted the demands in an ultimatum made by Japan.

The True Preventive

CLARENCE W. CHADWICK

MUCH is being said at the present time about preventive medicine. It is a subject which Christian Scientists are interested in, and one concerning which they will have something to say before the present discussion is ended. They are glad to see human thought emerging from the troublesome dream of life in matter. They, however, will not permit any half-way position in dealing with this subject of prevention, for the quest for knowledge must extend far enough to take hold of spiritual causation before it can find the true preventive.

The belief in the reality and substantiality of matter is one of the great failures of human existence. Old and young, rich and poor, learned and ignorant, have played with it for centuries, and it has failed them one and all. It has made fair promises but has not fulfilled them. It has held out innumerable inducements but has signally failed to do what it promised. Still humanity is loath to forsake it, and would, after centuries of the most heartrending disappointments and disastrous failures, even try to find somewhere within its crumbling depositories a preventive for the very difficulties for which the belief in matter is responsible. If matter has failed for centuries to solve the perplexing problems of mortal existence, the belief in it must be a mistake and not the truth of being. This point is conceded outside of Christian Science.

Christian Science is on earth today to arouse slumbering humanity from its age-ridden dream in the reality of matter, and to turn its thought into channels of spirituality whence emanates all good. Ask any Christian as to the source of everything that is good, and he will acknowledge that it proceeds from God, who is Spirit, according to Christ Jesus. But the chances are that the one questioned does not understand spiritually what is meant by his admission. Not knowing that Spirit and matter are opposites, he is wont to think that God expresses Himself through matter. Believing thus, it is perfectly consistent for him to pay homage to matter and to try to get the most out of it. Only when failure after failure stares him in the face is he willing to let Christian Science instruct him in the "more excellent way."

Truly saith the apostle, "The law was our schoolmaster to bring us unto Christ." The furnace fires of affliction do their work slowly but surely; they never leave a mortal where they found him. There is just one way of quenching these fires, and that is to give up the belief in matter for faith in God, and to learn that God uses no temporal medium through which to bestow good upon man. When the true nature of God and His mode of expressing Himself are grasped, mortals are ready to forsake materiality and to find out for the first time man's true relationship to God. A human being can hardly be blamed for believing man to be mortal, so long as he imagines matter to be the product of Spirit, or God.

In Christian Science, Spirit is declared to be the sole cause of existence, the author of a perfect spiritual universe; and the only man of Spirit's creating is God's own image and likeness, coexistent and coeternal with Him. Spirit being supreme, it is the controlling power of the universe and man. How to get in touch with Spirit, God, and to utilize spiritual power, will solve the problem of prevention, and it cannot be solved in any other way. Whatever proceeds from Spirit can never be set aside in time or eternity. Whatever does not proceed from Spirit can be prevented in just one way, namely, by knowing that Spirit is the only cause, and that Spirit can only be spiritually expressed, never materially. On page 412 of Science and Health Mrs. Eddy says, "To prevent disease or to cure it, the power of Truth, of divine Spirit, must break the dream of the material senses." This accepted, a glad awakening comes to health and harmony.

How do we approach Spirit? The master Metaphysician said, "If any man will come after me, let him deny himself." In other words, let him forsake materiality; let him learn its unreality, its falsity, its treachery; let him see it as a mistake, a failure, a tragedy, and he will turn away from it forever, and never again have "other gods before me," Spirit. The moment one is willing to deny a selfhood that is unlike the perfect spiritual nature of Deity, that moment he opens the door of consciousness to receive holy, uplifting thoughts; and as these crowd into his thinking, the transformation of the body by the renewing of the mind is taking place. There is no mystery about this evolutionary process from matter to Spirit. It is a divinely natural experience, destined to come to every human being before he awakens to spiritual existence here or hereafter. God is ready to make His presence known to any human being the moment he forsakes matter for Spirit, but not until then. Darkness is not a medium for light, nor is matter a medium for Spirit.

The would-be reformer and humanitarian should take cognizance of this teaching, if he would not be weighed in the balance and found wanting before the bar of twentieth century consistency and enlightenment. He must awaken to know that no human discord can be successfuly avoided or prevented until the true nature of causation is recognized. Cause and effect are one. If there is cause for discord, there is no law by which its occurrence may be prevented. If there is no cause for it, the knowledge of this in Christian Science is the only sure preventive.

Herein lies the secret of Christian Science healing. If it were not primarily and distinctively preventive, it could not eradicate the mental images of disease entrenched in mortal consciousness. All that faith in any so-called material remedy can do is to bring about a change of human belief. It cannot produce a result any less material than itself; it cannot deal with or influence the eternal verities or facts of being. A non-intelligent drug can make no appeal whatsoever to man's higher or spiritual nature; it cannot touch anything above the level of blind human belief. Strictly speaking, a drug is not remedial or preventive; it is little else than a human toy, and those who play with it long enough will some day let it fall upon the rock of Truth, to be shattered beyond human recognition as a remedy.

However elaborate or popular it may be, a treatment

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

which does not deal intelligently with spiritual causation, is neither remedial nor preventive. The ounce of real prevention is worth more than the pound of cure,—it is the cure itself. Hasten the coming of the "day of God," when all mankind shall realize that the only cure for sin and disease is that scientific knowledge or understanding of Truth which alone can prevent their occurrence.

❖

Reason and Revelation

MABEL BROSTROM

IN Science and Health (p. 110) Mrs. Eddy tells us that as the truth of being dawned upon her, "reason and revelation were reconciled;" and this has been the experience of thousands who have accepted the teachings of Christian Science. Twice in my experience as a practitioner I have been asked the secret of applying the truth as we understand it in Christian Science. The first time the question came from a physician who had been observing the results of Christian Science practice, and who realized that Christian Scientists were healing those whom he and other physicians were unable to heal. He had also observed that, as he thought, the mind controls the body in some cases, and he wished to know something of its workings, that he might use it in his practice. After a brief explanation he was able to see that this was impossible, as he was working from an opposite basis to that of Christian Science, and that the two methods could not be combined.

The second inquiry came from a clergyman who was struggling with his congregation in the effort to bring them to church, but they would not come. He was also trying to get them to study the Bible, in which they had no apparent interest, and all his efforts seemed fruitless. Meanwhile some of his congregation had become Christian Scientists, and he immediately observed a deeper interest in religion on their part, and in Bible study. To him this seemed miraculous, after all his efforts, which had met with no response. One of these former members who had become a Christian Scientist took him an article on prayer one day, and after reading it the minister remarked that it was very fine, but added that there were similar articles in the papers of the church with which the Scientist had formerly been connected. This the gentleman admitted, but said that he had not read them or felt any interest in them.

The minister then wished to know the explanation of the change, and can any of us tell? Can it be put into words? No. We can only say with the blind man, "Whereas I was blind, now I see." Those who have come to the truth know the secret; they know that they never really understood life until they came to know the vital truth taught in Christian Science, of man's actual relation to God. They know that they did not understand the Bible until they read Science and Health. They realize that they now have an every-day religion which can be applied to every problem in life, whether it relate to one's business or his health, and that the answer is always there. They study the Bible because they understand it, and attend the Sunday service because they love it. They go to the Wednesday evening meeting to tell others of the truth which means so much to them, and to hear of the health, happiness, and goodness which others have received through Christian Science.

All our devotion to Christian Science is an expression of gratitude for the good which we have received, and which we know others can receive if they will but turn to God with a whole heart. In the Christian Science text-book, "Science and Health with Key to the Scriptures," we read, "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (p. 1). In Christian Science we gain a demonstrable understanding of God. We know that it is lawful and right to have all good things, and that there is no mystery connected with its healing work. In the beautiful Foreword of "The First Church of Christ, Scientist, and Miscellany" by Mrs. Eddy, the first reason given for the success of the cause is that it was established "on a sound basis by healing the sick and reforming the sinner quickly and completely" (p. v). These words should be pondered by every worker in the cause, that he may give his best efforts to the undertaking, until the whole world shall come to know the secret of this great salvation.

❖

Man's True Constitution

VIOLET KER SEYMER

CHRISTIAN SCIENCE comes with a message of hope to those individuals who from childhood upward have been handicapped by what is termed "a poor constitution." Their state of health, though perhaps not reducing them to actual invalidism, has nevertheless interfered with their legitimate enjoyment of life and prevented them from embarking upon any definite career or profession. Christian Science directs the attention of such as these, as well as of all sufferers, toward the Scriptural assurance that God's creation is the only one that really exists, and that it is "very good." These individuals are not suffering from a poor constitution, but from a mistaken view as to the real nature of their constitution. In proportion as this false belief is corrected, they will manifest more of the true health than those who believe that they have found it in flesh and blood.

"Understanding," Solomon says, "is a wellspring of life unto him that hath it." Even a small perception of Christian Science enables one to drop some of the fears that are burdening him, for fear is always and only the result of ignorance of God or of false notions about God, and this ignorance and these false notions are alike remediable. Humanity's age-long tendency has been to look for health in matter instead of in Spirit; in hygiene, drugs, and diet, which merely serve to divert attention from the true source of health in Spirit. Man's life is no more at the mercy of flesh and blood than is God, and the baseless assumption that innocent individuals are doomed from the hour of their birth will one day be found void, for it is a man-made belief or invention and not a God-made law. In Christian Science we learn and are able to prove that "any so-called law, which undertakes to punish aught but sin, is null and void" (Science and Health, p. 441). In order to compass our legitimate freedom, a radical readjustment of one's habit of thought is required, and the way to do this is made plain in Christian Science.

Many an individual has resigned himself to the verdict that he is physically handicapped on account of the sins of his forefathers; but it is the duty of every Christian to reject and repudiate any and every evil legacy, on the ground that it does not come to him from God, to whom alone he is to look for every actual inheritance. This revealed method, carried out with divine energy and wisdom, is destined to burst the bands of evil and dissolve all the fetters of sin and suffering on earth. When Christ Jesus healed the blind man, he was thus questioned: "Master, who did sin, this man, or his parents, that he was born blind?" Instantly he rebuked this attempt of evil to handicap either generation, and replied, "Neither hath this man sinned, nor his parents: but that the

Digitized by Google

works of God should be made manifest in him." To the disciples this seemed an occasion for condemnation,—that well-nigh ineradicable habit in mortal mind,—but to Jesus it presented an opportunity to prove the immanence and availability of Spirit as the almighty friend of man.

The rejection of error must be based upon something more than mere blind faith or the desire for release from discordant bodily conditions. This denial rests upon the allness of God, and the clear perception that "the substance, Life, intelligence, Truth, and Love, which constitute Deity, are reflected by His creation" (Science and Health, p. 516). The real and only creation being spiritual, the less an individual concerns himself with a mortal body, and the more he inquires into the health which springs from spirituality and right thinking, the better it will be for him in all ways. To the cultured rabbi, who was evidently looking to matter as the origin of man, Jesus said: "Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God." This new birth, or renewal of the mind, brings to light our real constitution, our true spiritual status; it leads us to combat false theories and base our every hope upon the presence and the dominion of Spirit.

From the time of his conversion St. Paul took a radical stand on the side of Spirit, and conferred no more with flesh and blood as constituting his origin. The disciples were bidden to turn away from any material sense of origin or kinship in matter, and look to God alone as the author of all real being. This does not warrant the neglect of filial affection and duty, for it will be remembered that Jesus made loving provision for Mary during the very hour of his ordeal on the cross. The standard of perfection enjoined by Jesus will never be reached until the same radical stand is taken on the side of the spiritual creation, and against the belief in matter as a creator and in a contaminated inheritance. True health being an attribute of God, it can be found in God alone; and when found, it will be seen that it has never been invaded or in any degree threatened by disease. Nothing has ever altered the fact that there is but one health, one constitution, one life, all based on Spirit, not on matter.

Possibly one of the most striking results of this view of man's constitution is its effect upon what we call our future. The average individual would not presume to say whether his present good health would be likely to extend into the future or not; and if he wanted to find out his prospects in this direction, it is to a medical man that he would turn for the information. The answer given him would then be based upon the results of a purely physical investigation. Now, in the degree of his understanding, the Christian Scientist will be able to reply with humble confidence that health will be his so long as he walks rejoicingly in the straight and narrow way that brings him into at-one-ment with his Maker, the one Life. Under no pretext is he duped by the fallacious argument that God can be the author of sickness as well as of health; and the earnest Christian who is striving to rise above the errors of sin, materialism, and superstition, finds himself emerging by sure degrees into the light and harmony of divine reality, and he is content in striving "to be absent from the body, and to be present with the Lord."

Christ Jesus had the true understanding of creation. He knew that spiritual man is the idea of divine Mind, and that all that proceeds from God is as indestructible as God Himself. This spiritual perception of the reality of being enabled him to triumph over the "last enemy," for nothing could defeat his understanding of life eternal. It should be noted that his mighty victory in the sepulcher worked such a change in his thought that it also altered his appearance beyond recognition, and that within three days. Jesus knew for certain that man's true being is imperishable, and his triumph over the belief in death is explained by his knowledge that the Son is one in nature with the Father. He was so closely allied to the Christ that in his ascension was exemplified the everlasting fact that, as Mrs. Eddy says (Science and Health, p. 316), "Christ presents the indestructible man, whom Spirit creates, constitutes, and governs."

Reaching the Hilltop

CAPT. GEOFFREY WILKINSON

MANY of us have had the experience of climbing a hill and imagining, as each new gradation was surmounted, that the next would lead to the summit. The latter, however, evaded us again and again, until finally no further climbing remained and the highest point was reached. When passing through an experience of this nature last summer, the writer thought how closely it resembled one's onward progress in Christian Science, especially during the earlier stages. Just as the pedestrian sets before himself an imaginary summit as the goal of his endeavor, so the beginner in Christian Science has frequently one object alone in sight, namely, his own physical healing. Sooner or later this is achieved, but he finds that this is only a fraction of the work that must be done. Fresh problems present themselves, and in the solution of each he attains a higher point.

Again, in the same way that difficulties are met with from time to time in the ascent of a mountain, so in the student's progress from sense to Soul, situations are presented—such as the overcoming of some long-cherished sin or of some apparently deep-seated fault of character—which demand all the courage and determination he can bring to bear upon them. Left to his own resources, he would indeed be in a hopeless situation; but in proportion as he perceives and is obedient to the truth of man's being as taught in the Bible and reiterated in Science and Health, he is made free from the seeming thraldom of the senses. If at such times his progress should seem a veritable path of thorns, he will do well to remember the cheering utterance of the Hebrew prophet, "Rejoice not against me, O mine enemy: when I fall, I shall arise; when I sit in darkness, the Lord shall be a light unto me;" or to comfort himself with our Leader's timely reminder that "the warfare with one's self is grand" (Miscellaneous Writings, p. 118).

"When the destination is desirable," Mrs. Eddy says elsewhere (Science and Health, p. 426), "expectation speeds our progress;" and if the climber is urged forward by the certainty of the glory of the outlook from the summit, he will find that obstacles cease to daunt him, and he will go serenely forward until at last he reaches his goal, and attains "unto the measure of the stature of the fulness of Christ." However dark and difficult the way may seem at times, if he has grasped in any way the spiritual fact of being, he will know that above it all is the eternal sunshine.

Scientific Unfoldment

CASSIUS M. LOOMIS

FOR a long time the writer has been a close observer of the changes taking place in educational methods. One has but to look back for a period of fifty years and the difference is most noticeable. Perfunctory teaching, the enforced learning of hard and fast rules, etc., was then in vogue, but during the last decade, signs have appeared which go to show that the educational system of the future must rest upon a more metaphysical basis. Man, seen in his perfection, is not a

Digitized by Google

creature of limitation; hence every child at his best is surely endowed with the faculty for acquiring all knowledge. Education should therefore be a progressive and rational unfolding of the child's inherent capacities, rather than an effort to inject into his mentality information acquired by another. One instinctively expresses the truth according to the degree of his spiritual unfoldment. Such a worshiper needs little tutoring; and if educators were aware that an unlimited inheritance of wisdom, which comes direct from the Father's exhaustless store, belongs to every child, they would seek to awaken the learner to a realization of what he has, rather than to put a competitive premium upon what he can get.

The child Jesus affords a striking example. In Biblical history we have no record that he was taught as were other children of his time, but it is manifest that he was more spiritually awake than any person of whom we have any knowledge. Awake to what? Awake to man's inheritance of wisdom. At a tender age he was found discussing serious problems with learned doctors, the sages of his day. Throughout his ministry his words were of the Spirit and highly intelligent. Love gave him power to heal, and his teachings startled the then known world. It was asked, "How knoweth this man letters, having never learned?" Thus did the Jews marvel because a child who had been reared among them was found fully equipped, even in childhood, to preach a gospel of deliverance to the captives of sense.

Our Leader tells us: "Jesus was the offspring of Mary's self-conscious communion with God. Hence he could give a more spiritual idea of life than other men, and could demonstrate the Science of Love—his Father or divine Principle" (Science and Health, p. 29). Do not these words strike a chord of vital import to teachers? Along with the Master's wisdom came his demonstration of the Science of divine Love and Truth; certainly a very essential accessory to any and all spiritual attainment. Let the world love more and worship worldly wisdom less, and a higher order of intelligence will find natural access to the consciousness of those who "hunger and thirst after righteousness" and wisdom.

Prodigies have from time to time appeared who have startled the most trained ears in the musical world. These seemingly abnormal children were in fact more nearly normal than those who have to delve long to attain the same ends; and when educators accept the fact that the native endowment of the child is limitless, and only needs to be given an opportunity to unfold, even as the bud unfolds its bloom, then will greater strides be made, because more rational educational methods will be pursued.

Let us consider the matter of imitation. The growing child imitates what appeals directly to his most developed talent. Suppose this same child were sufficiently awake to evince the possession of every worthy talent, then he would not be an imitator, but would manifest a bent of mind perhaps wholly new to those around him; he would be a prophet who disclaims all precedents and strikes out into new fields of truth. The world says such a child is a genius. So he is: but since every one of God's ideas is a cosharer of all the riches of Truth, ought not each succeeding generation to produce a higher type of intelligence, a more normal race, truly awake and spiritually able to manifest the Christ by intuitive unfoldment rather than through the so-called culture of mental accretion?

Christian Science comes with fan in hand to sift the chaff from the wheat and clarify every department of thought. If the first impression of man conveyed to the child is that of perfection as his forever birthright, and he is taught in harmony therewith, then metaphysical and scientific culture is sure to be gained. When this thought of wisdom-getting shall have become the rule rather than the exception, uplifted sense will "emerge gently from matter into Spirit" (Science and Health, p. 485), and the process of unfoldment will go on naturally, without resort to the hard and fast educational order of the past. What a call and incentive to originality this thought brings us! It speaks for the possibility of a redemptive awakening from sense-apathy to lay hold upon the as yet undiscovered truths in God's kingdom. Originality, the kind for which the world pays so liberally, is but the thinker's closer touch with the wonders of the universe as they now are and ever have been.

It is of course important that we separate our thought from the belief that the talent we evince lifts us above our fellows. All of God's children are wondrously endowed, though mortals are not awake to this undeniable truth. Theory, however, never makes so indelible an impression upon the formative consciousness as practice. Note the readiness with which children absorb the truths of Christian Science. The demonstration of Truth, whether in the home or out of it, includes the healing of all erroneous concepts; and to this end it is necessary to build spiritually word on word, until our structures are sufficiently reinforced to stand every attack from without. What greater service can we render than to recognize that "every good gift and every perfect gift is from above,"—all is included in our common inheritance!

These are things worthy of careful study. Every teacher in our schools can point out this or that pupil who acquires almost without study. If education is of the Spirit, spiritual, as worship is spiritual, does not the incoming of our era of spiritual study and growth promise much? The learned student may reason clearly and outline the written law profoundly, but the alert and intuitive though perchance untutored thinker may hit upon a discovery that startles the world with its originality and force. In this day, when change is going on everywhere, even the simplest teaching of the master Christian finds new adaptability and is ever an incentive to nobler activities. As every physician should be a good Samaritan, so every educator should be a master metaphysician, capable of opening up that wealth of wisdom which every child inherits from God, and of which no human being is lacking in his true selfhood.

[Written for the *Sentinel*]

Realities

ABBIE FOSDICK RANSOM

The way I cannot see,
But this I know,
My hand in Love's must be,
Where'er I go.

Though smooth the path or rough,
Sunshine or rain,
Love giveth strength enough,
Peace to attain.

Grief, sickness, death, and sin,—
Illusions these;
Truth, Love, and peace within,—
Realities!

Truth thus will surely meet
All need of mine;
Where'er I set my feet,
Love's light will shine.

Selected Articles

[Judge Clifford P. Smith in *Kansas City* (Mo.) *Post*]

Pastor —— was quite right in assuming, when composing the discourse which was published recently, that Christian Scientists are not averse to truthful criticisms. It should be noted, however, that a criticism may be sincere but not intelligent, and honest but not truthful.

The clergyman's main criticism of Christian Science centered about the statement that Mrs. Eddy "settled all doctrinal differences with the dictum that there is no evil, no sin, no death; that what have been so called are merely errors of the mind." In short, he tried to make Christian Science absurd by reducing it to a set of denials. It would be as fair as this to say that the Christian teaching of man's origin rests on the negation of human fatherhood. Christ Jesus did say, "Call no man your father upon the earth;" but if these words alone were put forth as his teaching on the subject to which they relate, he would be misrepresented. The denial which they expressed was based on the affirmative truth, "For one is your Father, which is in heaven;" and the denial without the affirmation would not be understood. So also a criticism of Mrs. Eddy for denying the absolute reality of evil, without reference to the basis of her denial, is unfair and misleading.

In what manner, then, did Mrs. Eddy deal with the mystery of evil? She consistently accepted the monotheism of the Bible. "You must begin," she has written on page 275 of Science and Health, "by reckoning God as the divine Principle of all that really is." A more complete statement of her reasoning, yet short enough to be quoted here, is the following from page 472 of the same book: "All reality is in God and His creation, harmonious and eternal. That which He creates is good, and He makes all that is made. Therefore the only reality of sin, sickness, or death is the awful fact that unrealities seem real to human, erring belief, until God strips off their disguise." It may be added that the mystery of evil is most clearly dispelled when some item of it is destroyed, and cast out of one's experience, by the spiritual understanding which Christian Science confers.

The clergyman also denounced Christian Science with several harsh adjectives for teaching that God is omnipresent, and said that "nothing in the Bible so declares;" again, "An omnipresent God is not a person." These quotations contain his reasons without his epithets. As I read the Bible, it distinctly declares that God is everywhere. (See Psalms cxxxix. 7-10; Jer. xxiii. 23, 24; Acts xvii. 27, 28.) As for the word "person," it has too many meanings for unqualified use with reference to the Deity. Christian Scientists do not believe that God is like a human person. They ask with Isaiah, "To whom then will ye liken God?" They understand, as did Solomon, that God is infinite—"the heaven and heaven of heavens cannot contain him." Christian Scientists do, however, hold that God is personal in the highest and truest sense of that term. He is the deific, infinite, omnipresent Person; and as a scribe said with the Master's approval, "there is none other but he." The word "Principle," and the term "divine Principle," as used in Christian Science, have been found helpful in getting rid of finite conceptions of Deity and gaining the infinite idea of the infinite One. During this unfoldment there is need to remember continually, as Mrs. Eddy has written on page 275 of Science and Health, that "God is Love, and therefore He is divine Principle."

The clergyman was also mistaken when he said that Christian Scientists attribute their healing to "a supernatural power." The power by which Christian Science healing is done is both spiritual and natural. It is, as Jesus said, the "finger of God," which is to say, the power of God. According to the book of Genesis, the law of our creation and being includes the decree, "Let them have dominion,"—dominion "over all the earth." This is one of the natural rights of man, and it is one that exists in all its fulness as an idea to be apprehended and realized, even though the average man manifests more subjection than dominion. Christian Science declares that man's birthright of dominion is not the power to interfere with the true order of the universe, nor is it the power of one person to impose his human will on another. On the contrary, man's God-given dominion is the power to overcome disorder, to subdue discord, and to reflect the divine Life.

The acts of power done by Christ Jesus were spiritually natural. They were the demonstration of divine law. They were his answer to his own question, "Is it lawful . . . to do good, or to do evil? to save life, or to destroy it?" (See Luke vi. 6-10.) The claim that the power to do as he did was supernatural, abnormal, or peculiar to himself, was anticipated and refuted when he said, "He that believeth on me, the works that I do shall he do also;" and, "These signs shall follow them that believe." A personal and supernatural sense of the power exercised by Christ Jesus is the chief hindrance to the fulfilment of these sayings.

The clergyman criticized the publishers of Christian Science literature, and did so in a very censorious manner, on account of the prices for which this literature is sold. It can be safely said, however, that this cavil was not expressed by reason of a desire that Christian Science literature should be made more accessible to the public; hence the propriety of the criticism is at least doubtful. Christian Science literature can be obtained for a substantial price, or it can be obtained for nothing, by any one who wants to read it. It is published without profit to any person or group of persons; the difference between what it costs and what it sells for is devoted solely to maintaining and developing the ways and means by which "good tidings of great joy" shall be made known to all people. The use of the profit which accrues from the sale of Christian Science literature can be illustrated by the fact that its publishers, during the last five months, have delivered, free of charge, three hundred and thirty thousand periodicals and pamphlets of this literature, in several languages, to the armies and navies which are now at war.

❖

[F. Elmo Robinson in *The Oregon Journal*, Portland, Ore.]

In view of the wide-spread and earnest study of the Bible which has resulted from the publication of "Science and Health with Key to the Scriptures" by Mrs. Eddy, it has no doubt seemed strange to many of your readers that an attempt should be made, as in the case of the reverend gentleman of Vancouver, to prove that Science and Health and the Bible disagree. The reports of this gentleman's sermons, appearing in the *Journal*, contain so many erroneous statements concerning Christian Science that I am asking the courtesy of space in which to reply. While Science and Health does not agree with all of the conclusions of scholastic theology, it is in thorough accord with the spirit and purpose of primitive Christianity. It has illumined the Bible and proved it true, thus saving it from the destructive higher criticism. It is not offering humanity a doctrinal platform for acceptance, but a present salvation from sin and disease, and hundreds of thousands of grateful beneficiaries bear witness to the fulfilment of its promise.

The reason our brother seems to find disagreement between the Bible and Science and Health is due to his failure to compare "spiritual things with spiritual." It is impossible to

Digitized by Google

harmonize spiritual things with material science and human philosophy. In the case of Jairus' daughter, for example, material sense-testimony and material science declared that she was dead, but the Master said, "The maid is not dead." When Mrs. Eddy in Science and Health denies sin, disease, and death, she does it in precisely the same sense as Jesus and his apostles did. She denies that they are God-produced, and teaches that therefore we should deny them a place in our thinking. Christian Science does not teach us to ignore material conditions, but in the words of Science and Health (p. 254), "to abandon so fast as practical the material, and to work out the spiritual which determines the outward and actual." Christian Scientists accept the entire New Testament narrative of the earthly career of Christ Jesus, including the virgin birth, his wondrous healing and redemptive works, his crucifixion, resurrection, and ascension.

In concluding one of his sermons, our brother offered five "suggestions," to which I shall briefly reply. The answer to the first question—"If she founds her system on the teachings of the Master and the lives of the prophets and apostles, how does it come that they conceded the reality of the things she denies?"—is, that the Master, the prophets, and the apostles did not concede the reality of the things she denies. Mrs. Eddy denies sin as Paul teaches us to deny it when he says, "Denying ungodliness and worldly lusts, we should live soberly, righteously, and godly, in this present world." Mrs. Eddy, in accord with Bible teaching, maintains that sin, disease, and death will be eliminated in the degree that we let that Mind be in us "which was also in Christ Jesus."

In answer to the second question,—"Is it unlocking Scripture to deny its fundamental truths?"—I would say, Christian Science is unlocking Scripture not by denying its fundamental truths, but by making practical and available those very truths which scholastic theology long ago relegated to the dim and distant past.

In reply to the third question,—"Through what sense did Mrs. Eddy read the 'inspired page' to enable her to have a different understanding from that of the Saviour?"—it may be well said that Mrs. Eddy must have read the "inspired page" with something of the same Mind that was in the Saviour, else the fruits of her understanding, witnessed in the healing and regenerative works of Christian Science, would not so closely parallel the fruits of primitive Christianity.

In his fourth statement, our brother expresses himself as unable to see how the mystery of godliness can be revealed through Christian Science without subjecting the Bible to an "eliminating process." Critics have been mystified by the wonderful growth and spread of Christian Science. Since it is not in harmony with their particular doctrinal beliefs, they have concluded that it must be contrary to the Bible. Beginning with this assumption, they are, of course, unable to account for its almost unparalleled progress. Here is the secret: Instead of discrediting or making less of the Bible than formerly, Christian Scientists are making more of it; instead of denying the personality of God, they are declaring for His infinite personality; instead of believing in the Christ-power to save from sin alone, they are proving that the divine Christ saves, here and now, from sin and disease. Christian Science is not taking away from its adherents anything real or good; it is not iconoclastic; it has not come "to destroy, but to fulfil."

In answer to the fifth question,—"Does her system bear the marks of Jesus Christ when tested by the light of truth, science, and philosophy?"—permit me to say, Christian Science bears the "marks of Jesus Christ" when tested by his standard. The grave mistake our brother has made in this discussion is, that he has attempted to test the spiritual idealism of Christian Science by material science and human philosophy, instead of by our Master's rule. The Master said, "By their fruits ye shall know them." Nothing fundamental is repudiated by Christian Science.

In agreement with the Scriptures, Christian Science declares that the so-called material universe, and all that goes with it, is fleeting, temporary, and therefore unreal. Of it the Bible says, it "shall be dissolved," "Heaven and earth shall pass away," and "The things which are seen are temporal." Certainly things which are temporal, things which shall be dissolved and pass away, cannot be expressive of the eternal God, for what He does, the Scriptures declare, shall be forever. Therefore we look for the real and abiding, not in the material but in the spiritual sense of things which reveals the new heaven and the new earth "wherein dwelleth righteousness." Paul says, "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things." This Christian Scientists are earnestly striving to do.

❖

[Ezra W. Palmer in *Limon* (Col.) *Express*]

The comment in a recent issue, in which the legislature was praised for refusing to outlaw different schools of healing, is endorsed by all liberty-loving citizens. The state has no business to have medical opinions, Professor James long ago pointed out. Certainly the state should not attempt to favor one school of healing at the expense of others. The individual in the pursuit of health should be free to adopt that system of healing he prefers, so long as its practice does not interfere with the rights of others.

Your comment, however, does not adhere strictly to this doctrine when it advances the proposition that Christian Scientists should not be allowed to have their children treated by Christian Science. If Christian Science is beneficial to the adult, why not to the child? A parent who had been healed by Christian Science when other systems failed, would naturally rely on it. He would therefore reasonably desire it for his family; and that his desire has a safe basis has been repeatedly demonstrated by the healing through Christian Science of the ills of children when all other means had failed. Can any just reason be advanced why the state should interfere and force a system of treatment distasteful to parent and child, with perchance distinctly unfavorable results?

The weak sentimentality which vents itself in tears and threats over alleged cruelties to children under Christian Science treatment has no genuine foundation. The vociferous expounders of this cruelty to children fabrication are usually those who, through prejudice or self-interest, desire some check to be placed upon the growth and prosperity of Christian Science. Beyond question, Christian Scientists are convinced of the value of Christian Science treatment, and if this to them is the road to "life, liberty, and the pursuit of happiness," who is there to deny them this priceless privilege.

❖

[S. T. Downs in *Hartford City* (Ind.) *News*]

Faith without works has ever cried "devil" at proof of faith through works; as, for instance, when Jesus was proving the power of spiritual law to reform the sinner and heal the sick, he was charged with casting out devils through Beelzebub. His clear and logical answer to this charge showed the impossibility of casting out devils through the chief of devils, because a "house divided against itself" cannot stand. Jesus explained that he cast out devils through the law of God. It will be seen from this that the statement by an evangelist

Digitized by Google

that Christian Science is of the devil, as reported in a recent issue, and other unjust and untrue statements made by him, but repeat the charges the incredulous have ever made against the power of divine Mind, God, to heal the sick and every discordant condition, as well as sin.

Christian Science teaches that God is Mind, divine Love, and declares His omnipresence, omnipotence, and omniscience. It has put this teaching into practice by healing thousands upon thousands of sickness, including every disease known to mankind. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, explains spiritual law as set forth in the Word of God in an orderly and understandable manner, and each one may determine the accuracy of its teachings for himself. Christian Science is the opposite of suggestion, and Mrs. Eddy's writings set forth in unmistakable terms that the practice of suggestion would prove one's inability to heal through the law of God.

Christian Science teaches that because God is "of purer eyes than to behold evil," and cannot "look on iniquity," He cannot know sin or sickness, and that man as His image and likeness cannot sin or be sick. Christian Science teaches further that all the sin and sickness the world has ever known is from wrong thinking about God and man, and shows why a sick body or a sick mind cannot glorify God, because neither exists through the law of God. Christian Science sets about to destroy sin and sickness through the operation of spiritual law as taught and demonstrated in the life and works of our Wayshower, Christ Jesus. No Christian Scientist, however, has ever claimed to have the understanding of divine Love that Jesus manifested, but present proofs give the assurance that we shall finally "grow into that stature of manhood in Christ Jesus" (Science and Health, p. 350) by which we shall be able to fulfil all his commands and emulate him in all things, including the unfailing destruction even to human sense of everything that is unlike divine Love.

Christian Science gives the understanding that the shedding of human blood could not have been necessary to appease the wrath of God, but that the real blood of the cross is Christ Jesus' proof of the power of Love to destroy hate, the power of Truth to destroy sin, and the power of Life to annul the belief of death. Christian Science shows that it is in the life, works, and glorious resurrection of Christ Jesus that mankind finds real hope and proof of redemption. St. Paul expresses this in the fifth chapter of Romans: "For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life." Mrs. Eddy makes this very clear in the chapter entitled Atonement and Eucharist, in Science and Health, and the subject is further illumined in her book "No and Yes."

✧

[J. Arnold Haughton in *Blackburn* (England) *Times*]

In the review of certain books in a recent issue, the statement is made that Christian Science "is founded upon theories over which philosophers have quarreled for ages," namely, the theories relating to the "construction of mind and matter and their relation to each other."

That Christian Science is not so founded is clearly stated by Mrs. Eddy on page 269 of the Christian Science text-book, "Science and Health with Key to the Scriptures," in these words: "I therefore plant myself unreservedly on the teachings of Jesus, of his apostles, of the prophets, and on the testimony of the Science of Mind. Other foundations there are none."

Christian Science is not a theory, but the truth, the truth of which Christ Jesus was a living example, and of which he said, "Ye shall know the truth, and the truth shall make you free." It teaches that matter is a manifestation or concept of the human mind, or the "carnal mind," as St. Paul has it. The adjustment of the human mind to the divine Mind, God, naturally affects the conception of the human mind, named matter, and results in the healings effected by Christian Science. This process of adjustment is Scripturally described as being "renewed in the spirit of your mind," and ultimates in the realization of what is even now an absolute fact, namely, the allness of the divine Mind and the consequent nothingness of matter. It is true some philosophers have discerned the mental nature of matter, but none have seen that the human mind itself is a falsity to be "put off," for, as St. Paul says, "the carnal mind is enmity against God."

With regard to the criticism of the testimony adduced in support of the claims of Christian Science, it is now generally conceded that Christian Science has established its claim to heal the sick as well as to save the sinning, and the general body of that testimony is not affected by isolated cases which, because of inability to perceive the infinite possibilities of God's power, seem to some persons "to make large drafts upon one's credulity." As Mrs. Eddy says (Science and Health, p. 135): "There is today danger of repeating the offense of the Jews by limiting the Holy One of Israel and asking: 'Can God furnish a table in the wilderness?' What cannot God do?"

[Written for the *Sentinel*]

The Statue

SAMUEL JOHNSTONE MACDONALD

As servants plowed his fields one day,
Yussuf Ben Orem came that way,
And stood and watched their sturdy toil
As they upturned the fertile soil.

When, lo, one plow-share struck a stone,
That, when uncovered, seemed to own
Some grace of figure, which the man
Begged for the master's eye to scan.

He had the stone removed to where
It might be found if figure fair,
Obscured beneath the clinging soil,
Would issue from the cleanser's toil.

With patient zeal and loving care,
And tenderly lest they impair
Some line of beauty or of grace,
They toiled, the dark stains to efface.

And lo, at last, their toil complete,
A statue, fair from head to feet;
Whose beauty, form, and grace amazed
The eyes of all who thereon gazed.

Yussuf Ben Orem looked, and thought:
Nay, am I not then gently taught
That thus, by patient daily toil,
Ourselves we cleanse from mortal soil?

Until, revealed, we joyous scan
The statue of a perfect man;
And never should our hearts despair,—
The perfect man is ever there.

Editorial

Spreading the Gospel

MUCH is being said and done these days, through the press and other public propaganda, to exploit the healing of the sick by material means, and to foster the impression that only through such expedients can they be healed. The injustice of such a claim is apparent when it is remembered that for a half century the sick and the sinning in ever increasing ratio have been finding relief from ills of every kind and nature through purely spiritual methods. It surely is time, therefore, for Christian Scientists to increase their efforts to bring to the attention of the public the fact that there is a more certain and efficacious way, a way practised by Christ Jesus himself, and which therefore bears the stamp of Christianity.

The healing practised by our Master was purely mental and spiritual. That he healed even one case in this way, breaks down the assertion that material means are necessary to the cure of the sick. The same is true of the beneficent works accomplished in Christian Science. "The physical healing of Christian Science," Mrs. Eddy writes in the Preface to Science and Health (p. xi), "results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation." When, relying upon the Principle which she believed governed the healing wrought by the Master and his followers so many centuries ago, Mrs. Eddy healed her first patient in Christian Science, she broke down forever the wall built up through long ages of unbelief, and proved that Immanuel, "God with us," is "the same yesterday, and today, and forever." The fact that thousands are being healed today through Christian Science, unquestionably proves that the work which the Founder of Christianity did and commended to his followers, was not simply a miraculous interposition in behalf of a limited number and for a limited purpose.

The prominent place which the healing work occupies in the New Testament, justifies the emphasis given by Christian Scientists to the need of similar effort today, and is a sufficient answer to those who criticize the amount of space which our periodicals devote to testimonies of healing. That Jesus gave so much time and attention to this work, and his unqualified commission to his followers "to preach the kingdom of God, and to heal the sick," leaves no room for doubt as to his estimate of the importance of spiritual healing as an integral part of his gospel and essential to the Christian life. His answer to John's messengers can be construed in no other way than that by his mighty works he hoped to establish the truth of his claim to be the long-expected Messiah.

The testimonies published in our periodicals are the voluntary expressions of gratitude from thousands of persons who have learned through experience that the healing of the sick is again being made a part of Christianity; and that Christianity in this regard is as certain in its effects today as it was in the first three centuries of its existence. When we say that Christian Scientists should increase their efforts to bring a knowledge of this fact to the public, we do not mean that they should offensively or inconsiderately thrust their views upon those who are not ready to receive them, but we do mean that they should actively support and make use of the various means which our Leader has instituted for the spreading of the gospel of Christian Science.

Christian Science must establish by practical work its right to be considered apostolic Christianity, and it is the privilege of its adherents to make known to a needy world the "fruits" of this teaching,—the sick that have found surcease from suffering, the sinning from whom the shackles of evil habits have been stricken, the sorrowing who have been comforted, and those who have found love, joy, and peace where hatred and strife once held sway. Mere intellectual or perfunctory theology is not doing and never can do the work of Christianity; something more and better is needed if humanity is to be saved. "There is but one way to heaven, harmony," Mrs. Eddy tells us, "and Christ in divine Science shows us this way" (Science and Health, p. 242).

Christian Scientists have learned that this work of spreading abroad the gospel of healing can be done, and they avail themselves of every legitimate means of carrying this message to their fellow men. The *Sentinel*, the *Journal*, and the *Herold* contain in every issue testimonies of those who have been healed through Christian Science, and every Christian Scientist can easily find opportunities for more widely distributing these periodicals, established one after another by our Leader for the dissemination of the truth that heals and saves. Let us one and all be obedient to her counsel (Science and Health, p. 570) to give to the "weary wanderers, athirst in the desert . . . a cup of cold water in Christ's name."

ARCHIBALD MCLELLAN.

❖

God's Ever-presence

No Scripture promise is more comforting than that which reads, "My presence shall go with thee." Indeed, Christianity would be well defined as the realization of and reliance upon this single word of God. Few men have lived a more spiritually sovereign life, one which proved a greater blessing to mankind, than did John Wesley, and the secret of both his saintliness and his song was made plain when he said, in the earthly twilight hour, "The best of all is, God is with us."

The moment one begins to think of this assurance of God's ever-presence, he is impressed with the wonder of it, since "us" so often stands for unideality, imperfection, contented and ofttimes presumptive ignorance,—and what possibility is there of any fellowship between God and these factors of the mortal make-up, between Truth and error, Spirit and matter, wisdom and stupidity, light and darkness? The answer of Christian Science to this question is unequivocal, namely, that there is no such fellowship; that there is no truth in error and no error in Truth. On page 282 of Science and Health, Mrs. Eddy points out that "eternal Mind and temporary material existence never unite in figure or in fact."

That opposites are mutually exclusive is fundamental to science; there can be no association of them, either in God's nature or in man's. Their association belongs not to divine consciousness, but to imperfect human sense. As a seeming, however, it is tragically serious. The sense of disharmony and the desire for salvation from its rule is universal. In the exigencies of experience the heart of all mankind cries out for God, even as the little child calls for its mother in every instant of need. How wonderfully interesting the fact, that the call for an ever present God is as continuous as racial life; it is both universal and imperative. Who is there that in his hours of trial has not sincerely longed for the strength or wisdom, the guidance or protection, the affection or inspiration, which he recognizes that God alone can supply? And who in the conscious possession of some such good has not said, "Thank God"?

The proof of the divine presence, however, is by no means measured by or confined to the possession of what are commonly called blessings. Love is no less surely, no less benefi-

Digitized by Google

cently present in the rebuke of habit, the correction of false sense, the supply of our educational needs, than in the giving of the corn and the wine. Our Leader says, "Trials are proofs of God's care" (Science and Health, p. 66), and the deeper meaning of her statement begins to dawn when we realize that in the maintenance of His unvarying integrity, in refusing to compromise with unideality, God is most kind of all. The test of Truth is applied to every desire and undertaking, and in this test Truth's immutability is the supreme fact, its realization our richest possession.

Our nearness to God is measured by our sureness of His available nearness to us, and ofttimes this nearness is made manifest in our cross. To one who is instructed in Christian Science, the things that seem hardest to bear may bring a mighty increase of assurance,—yes, and of joy,—since in our loyalty of struggle it is being proved to us that God is indeed our friend, the truly faithful teacher who will not consent to our retention of any least fault. Truth is forever true, forever sovereign and safe, and in this right consciousness of being we are in that immediate touch with the infinite which when thought upon will bring uplift even in the most depressing experience. Though the causal relation between the unvarying divine law of Love and some specific test of faith may be quite beyond our ken, we can rejoicingly realize and say, as did Job at his best, "I know that my Redeemer liveth."

This is the lesson: that the exactions of divine requirement, the protests of our highest ideal, no less certainly witness to God's ever-presence, to His mindful love, than do His bestowals of humanly named good. This surely is the heart of the meaning of St. Paul's declaration that "God is faithful, who will not suffer you to be tempted above that ye are able," and this comes to be the helpful significance of much that would otherwise prove to be unendurably painful and profitless experience.

JOHN B. WILLIS.

Remembrance

A GREAT deal is said in the Bible about remembering and forgetting. Sometimes God is called upon in poetic strain to remember His covenant with His people, and more often they are bidden to remember all the goodness which has passed before them,—the triumphs of spiritual law and divine power over all the threatenings of evil. We sometimes find stern warnings, as when Jesus said to the caviling Pharisees, "Remember Lot's wife." This woman perished because she persisted in looking back to conditions from which she and her family had been bidden to flee. It may be that she had forgotten the command given by the angel: "Escape for thy life; look not behind thee, neither stay thou in all the plain; escape to the mountain, lest thou be consumed."

When the great Teacher bade the Pharisees remember Lot's wife, he was outlining the struggles of humanity when the demands of God's kingdom are pressed upon them. He made it very clear that any clinging to materiality in such an hour would cause one to lose his life, whereas he who was willing to surrender the mortal sense would preserve his life. Mrs. Eddy says (Science and Health, p. 261): "We should forget our bodies in remembering good and the human race. Good demands of man every hour, in which to work out the problem of being." In his second epistle St. Peter makes a stirring appeal to the followers of Christ to rise to the heights reached by their Master. He reminds them that all things pertaining unto life and godliness had been bestowed upon them, so that they might even be "partakers of the divine nature, having escaped the corruption that is in the world through lust." He urges them to add to their faith virtue, knowledge, patience, godliness, and other Christian graces, and says that he who lacks these things has forgotten what it means to be "purged from his old sins." His appeal is very touching, for even then the shadow of martyrdom was falling upon him. He says, "I will not be negligent to put you always in remembrance of these things," and he assures them that if they are diligent in this spiritual endeavor, they will neither fail nor fall.

Christian Scientists undoubtedly remember spiritual realities and spiritual obligations in a way they never deemed possible before they learned, through Mrs. Eddy's teachings, the truth of their own being,—that man is a partaker of the divine nature, as the apostle assures us. This fact is brought to their remembrance each time they essay to overcome evil, whether manifested as sin or sickness. If their task ever seems difficult, it is because they have burdened themselves with many things which should have been forgotten, and have not remembered daily, hourly, the blessings which divine Love has provided all through the years. Thus Whittier says,—

> O Love divine, whose constant beam
> Shines on the eyes that will not see.

The children of Israel were bidden to remember all their wilderness experiences, how even when like many of us today they were stiff-necked and rebellious, Love was leading them and blessing them with priceless spiritual lessons. Do we often enough, when "in a dark place," turn back in thought and give thanks that for us the eternal day has dawned and that the day-star of Truth has arisen in our hearts? Do we give thanks daily for the spiritual victories won by prophets, saints, apostles, and above all by Christ Jesus, not in formal utterance of gratitude, but in heartfelt thankfulness which inspires us to link our lives closer to the truth that makes all good possible?

Christ Jesus promised that the holy Comforter would bring to our remembrance all that he had taught, and Christian Scientists are daily experiencing in some measure the fulfilment of this promise. They are also satisfied that this Comforter is divine Science, revealing constantly to the one who loves Truth the things of God, and St. Peter again and again bids us to "have these things always in remembrance."

ANNIE M. KNOTT.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by Jacob S. Shield, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Friday evening, May 21, 1915, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

WINNIPEG, CANADA.—Of the Winnipeg churches none is more noteworthy in many respects than that of the Christian Science denomination, known as First Church of Christ, Scientist, now located on the corner of River avenue and Nassau street. This church, from a small beginning, has gradually made its way against difficulties that might be expected in pioneering a new religious movement, until it has become permanently established as a worthy factor in the community. Whatever one's preconceived views of Christian Science may be, the personnel of the congregation of this church, and of Christian Science churches generally, is such as to compel favorable regard and to halt any hasty adverse criticism regarding Christian Science itself.

Digitized by Google

The movement started in Winnipeg in 1894, when the first meetings were held in a hall on Main street. Two years later a church organization was formed, with twenty-two members. The work continued under varying conditions, but gradually progress was made. In 1907 a church reorganization occurred under a special government charter, under which the church has since continued. When it became obvious that the growing congregation would soon make it very difficult and inconvenient to hold services longer in auditoriums then available in the city, it was decided to erect a suitable edifice. For this purpose the corner lot where the church now stands was purchased in 1909. A year later construction work was begun on the building, which was brought up to its present state of completion in March, 1911. Since then it has been the church's permanent home.

The building as it stands at present contains, besides the necessary accessory rooms, the permanent Sunday school room, which is being temporarily used for church services. It is the intention soon to complete the building by erecting the main auditorium above the present portion. The additional portion, after providing space for organ, entrance hallway, and private rooms for the persons conducting the services, will comfortably seat about one thousand persons. The cost of the building and land up to the present has been about sixty thousand dollars, and it is expected that seventy-five thousand dollars more will be required for completion.

Farmer Tribune.

SEATTLE, WASH.—The Christian Science literature distribution committee of Seattle, Wash., reports the following distribution of literature from Jan. 1 to Dec. 31, 1914: 90,223 *Monitors*, 19,852 *Sentinels*, 2,459 *Journals*, 320 *Heralds*, 31 paid subscriptions for the *Monitor*, 32 copies of Science and Health, 2 complete sets of Mrs. Eddy's works, 8 copies of "The Life of Mary Baker Eddy" by Sibyl Wilbur, 14 copies of "The First Church of Christ, Scientist, and Miscellany," 3 copies of "Miscellaneous Writings," etc.—*Correspondence.*

SAWTELLE, CAL.—The necessary legal papers have been completed, whereby the Christian Science Society of Sawtelle becomes First Church of Christ, Scientist. Since the organization of a society at this place, the interest in the cause of Christian Science has grown steadily. The society was organized with about eighteen members, and the first services were held in Hanson's Hall, North Second street. From there the society moved to a more central location in Thayer's Hall, North Fourth street, and services were held there a short time, until the attractive church edifice on the corner of Seventh and Colorado streets was completed.

With the establishment of a church home, the congregation gained in attendance and the church in membership. When the meeting was called to organize a society, twenty-five persons responded to the call, but not all of them became members. Now the church has an average attendance of about one hundred.—*Veteran Enterprise.*

The Lectures

Hot Springs, Ark.

Virgil O. Strickler addressed an audience of more than six hundred people at the Princess Theater on the subject of Christian Science. The speaker was introduced by Judge C. T. Cotham, who said in part:—

Truth is progressive. To each generation the honor is given of producing some tall, sun-crowned men and women who live on the mountain tops and catch the first glimpses of truth as it radiates from the throne of God, and transmit it to a grateful posterity. Some such great soul, as thousands of earnest and intelligent seekers after truth scattered throughout the civilized world today are ready with much confidence to declare, was the product of the nineteenth century in the person of Mrs. Eddy, Discoverer and Founder of Christian Science.

Dating back to 1866, the year of Mrs. Eddy's great discovery, Christian Science has had a wonderful growth, and now commands a position of wide influence and power. Today this denomination has churches and communicants in every civilized country of the world, and numbers among its adherents the high and the low, the rich and the poor, and seems to make a special appeal to those engaged in the more intellectual pursuits and vocations of life. Such a denomination or creed, taking into consideration its marvelous growth, power, wealth, and influence, cannot fail to command our respect, and entitles the exponents and teachers of its principles to a patient hearing and a fair consideration of its doctrines.—*Hot Springs Sentinel-Record.*

❖

Harrisburg, Pa.

Virgil O. Strickler, who lectured on Christian Science in the Majestic Theater, was introduced by Roy E. Bignall, first reader, who said:—

Over nineteen centuries ago Jesus of Nazareth taught and demonstrated the truth about God and man, healing the sick and the sinning. His followers carried his teaching and practice into the third century of the Christian era. From this time on the truth has been hidden from the minds of men by creeds and dogma, and mankind has been hampered and limited by educated beliefs and theories based upon materiality. In the year 1866 thought was again awakened to a spiritual understanding of the truth through the discovery of Christian Science by Mrs. Eddy, and today this healing Christ-truth is again offered to the world as a practical, demonstrable science. Thousands have accepted its teaching, have proved its efficacy, and have been healed of their sicknesses and cleansed of their sins.—*Correspondence.*

❖

Silver Creek, N. Y.

Frank H. Ehmke, counselor at law, in introducing Col. William E. Fell, who lectured on Christian Science, said:—

For many years I have studied intermittently and more or less earnestly the teachings of Christian Science. During some of this time I studied philosophy and Biblical literature, with the hope of discovering arguments or a system of philosophy that would silence this faith which has spread to all parts of the earth and won hundreds of thousands of adherents. I did not like the idea of characterizing Christianity as a science, and would have smiled scornfully at any one who would have dared claim for it the exactness of mathematics.

Mathematical principles are absolute and universal. The product of two given numbers is constant and unchangeable. The equation two times three equals six was true yesterday, is true today, and will be true tomorrow, not only upon the earth but in all parts of the universe, for all thinking beings who have intelligence enough to understand the basic law of multiplication. Mathematical principles are absolute because they are deductions or products of mind. They exist in mind, and only in mind. All geometrical figures are objects of mind. You never saw a straight line, a triangle, a square, a circle, a sphere, or any other geometrical figure except with the mind's eye.

Digitized by Google

The point I want to impress upon you is this: If our laws of mathematics are so exact and absolute, what conclusion are we justified in drawing with reference to the laws of an omniscient God? what conclusion must we reach in regard to the laws of the all-knowing Mind? or, in other words, must we not of a necessity expect the divine Principle to be absolute, exact, and universal? The reason why we are unable to demonstrate with scientific certainty the laws of God is that we have become subject to our belief in the laws of matter and have silenced our spiritual senses, through which alone we are able to gain a knowledge of God as Spirit. Jesus the Christ, the most spiritually-minded man who ever lived, understood God's laws and proved them at all times to be swift and sure. As in mathematics the fundamentals unfold only through patient demonstration, so in the Science of Christianity we rise to the understanding of God only through the demonstration of His laws. I can conceive of nothing of more value to man than to possess such an understanding of God as will enable him to demonstrate God's allness; for in the possession of such an understanding man unifies and identifies himself with the Almighty, and in it God does indeed become his Father, the creator of all that was made, including man in His own image and likeness.

It took me a long time to remove my burden of prejudice against Christian Science, although I knew that no student is fully prepared to investigate or pass judgment upon any subject in which he is influenced by prejudice, for he cannot accurately gage the truth of his investigations or formulate a fair judgment. Light enters only the open eye; Love, the open heart; Truth, the open mind. I plead with you, therefore, to listen to the message of the speaker with honest candor and openness of mind.—*Correspondence.*

Lectures to be Delivered

Albion, Mich.—Bliss Knapp, Eagle Temple, 8 p.m., May 25.
Bath, Maine.—Bicknell Young, Music Hall, 8 p.m., May 28.
Bellevue, Ohio.—Bicknell Young, High School Auditorium, 8:15 p.m., May 20.
Boston, Mass., The Mother Church.—Jacob S. Shield, Church Edifice, Falmouth, Norway, and St. Paul streets, 8 p.m., May 21.
Boston, Mass. (Second Church).—Dr. Francis J. Fluno, Whiton Hall, Centre street, Dorchester, 8 p.m., May 27; Fauntleroy Hall, Wenonah street, Roxbury, 8 p.m., May 28.
Bradford, Pa.—Jacob S. Shield, Women's Club, 8 p.m., May 18.

Testimonies of Healing

[Translated from the German]

I am filled with joy and gratitude for the privilege of testifying herewith to my healing of a trouble of long years' standing through the power of God in Christian Science. After the birth of my daughter, now thirteen years old, I was left with a paralyzed condition of the left side, which was declared to be very serious by both physicians in attendance. Fifteen weeks later I managed to get up, though with great difficulty. The improvement was only of short duration, however, and as soon as any problem confronted me, the old trouble would manifest itself, and I had to be under medical treatment almost constantly.

Four years later I experienced a hard blow, in that I became a widow and was left with six children who were not provided for. As a consequence, my circumstances were not such that I could call in a physician whenever one was needed. Indeed, the daily hard work for a living, as well as sorrow and worry, caused the trouble to manifest itself very severely. Dizziness and spasmodic pain often kept me in bed; briefly, I went through dreadful suffering. My dear ones would often anxiously watch me, for the fear was held over us, as the result of a physician's statement, that complete paralysis might set in ultimately. This, of course, cast a shadow on all of us.

I then heard of Christian Science, and the first time I was able to attend a Wednesday evening meeting I heard a wonderful testimony given, and it became clear to me at once that I too might find healing. I listened intently to the elucidation of the teachings, and the reading of the *Herold* helped me much in gaining understanding. After a very short while the old trouble set in with renewed force. This time I knew that God is my life, that I need not fear anything, and I held fast to the truth which I had apprehended. I realized that the love of God is the only presence and power of the universe, and that we can never be separated from the fulness of joy that God bestows. When we remain steadfast and trust God unreservedly, the evil must disappear, be it worry, sorrow, or disease; it must yield to divine power.

I may truthfully say that I have been healed through Christian Science, for a whole year has elapsed and I have not been reminded of the trouble, whereas formerly I had these attacks every month. Great benefits have also been bestowed upon my family by divine Love. We are all grateful to know that God's power is a never failing help to us, and we are thankful to our dear Leader, Mrs. Eddy, for explaining to us anew the teachings of Jesus.

Frau Lucie Block, Schwerin i.M., Germany.

❖

It is several years since I became interested in Christian Science, and I wish I could tell all the wonderful blessings I have received through the study of Science and Health. I had been sick a great deal, and had taken all kinds of drugs, but in August, 1910, I gave up; I could not keep around any longer. I went to a doctor, who told me my condition was serious, with hemorrhoids, chronic bowel trouble, rheumatism, and dropsy, but by treatment and the taking of different kinds of medicine I could be cured. I kept this treatment up for eight weeks, but was getting worse all the time, and was unable to sleep either night or day on account of the pain. I went to another doctor on Oct. 1, and he said I would have to be operated on at once. I asked him if all the pain would be gone, and he replied that it would. I had suffered so terribly and so long that I was willing to try anything to be free from it all, and I went to a hospital to be operated on. For a few days there was no pain, but before I left the hospital it came back. I was taken home, but seemed to get worse, and nothing I took did me any good. The doctor then told me I would have to stay in bed and have my limbs bandaged, as I had inflammatory rheumatic gout. I had to diet, and every day go through a painful treatment which I was warned not to neglect.

In January I had a nervous breakdown and suffered as much in mind as in body. Then my husband brought Science and Health home and asked me to read it. I did so, but thought it did not help me. I had a good many friends in Science and I questioned them, until one day a lady came who gave me the first clear light I had ever had. This was in March. I was having hemorrhages every few days, also terrible spells which the doctor could not relieve, and the remedy used was as bad as the pain. On March 19 they worked over me five hours and finally gave up. I could not stand the treatment any longer. I had been in bed for five months, and in that time was unable to sit up at all.

I then asked my husband to call a Christian Science practitioner, and he did so on April 8, 1911. I sat up all the next day, and on the twentieth I went down-stairs to dinner. I have been gaining in health right along; every ailment has been overcome by Science, which is my only help and physician. This teaching has given me an understanding of the Bible which I have longed for all my life. The more I read, the clearer the truth becomes to me, and I know that "God is All-in-all" (Science and Health, p. 468).

My healing has been permanent in all respects, and I am more grateful every day for the great benefits received from a knowledge of Christian Science, not only in a physical sense but in the spiritual uplift.

Mrs. G. A. Benedict, St. Louis, Mo.

❖

In grateful recognition of what Christian Science has done for me I offer this testimony for publication. For many years I suffered from chronic and acute stomach trouble; I do not remember that I was ever free from it prior to my healing in Christian Science. A severe case of typhoid fever, treated under *materia medica*, left me in even worse condition, so that digestion meant suffering. Nearly all of my life has been spent in a mining town in the mountains of Colorado, and my work as a miner was doubly hard because of this disorder.

One cold November night I tossed on a bed of pain. Outside, the snow drifted against the window, the wind shrieked, rattled stovepipes, and threatened to blow the house away. The severe spasmodic pains seemed bent on keeping in unison with the storm without. Opiates had been used for several days, but they afforded only temporary relief. Christian Science treatment was then recommended, and a practitioner in Denver, one hundred and ten miles distant, was called over the long-distance telephone from a house several blocks away. Afterward I learned that the message was simply that I was dangerously ill from severe stomach pains. Perhaps forty minutes elapsed before the practitioner was reached, and I despaired of receiving help from that source.

I was alone in my room when a wonderful change took place,—all pain melted away like mist before the morning sun. The aching head, the throat trouble, all pain and swelling, disappeared. I was healed; and as beautiful as the physical healing, there came into my consciousness the understanding that God had healed me through the prayer of a

Digitized by Google

devout Christian Science practitioner. On bended knee and with gratitude expressed in tears, I knew that my longing for many years had also been answered by my healing in Christian Science.

I had longed for some understanding of the nature of God, and to know what relationship exists, if any, between God and man. There was ever present an earnest desire that God would, in some manner that I could understand, prove to me that He loved and cared for me. My healing in Christian Science brought this proof very clearly, and I knew and accepted it, although I knew only a little of Christian Science. I do not find contradictions in the Bible when read in the light thrown upon the sacred pages by our beloved Leader's writings; indeed, I now love to read and study the Scriptures.

About four years ago one very dear to me passed through the dark valley. At times I would be overcome with a smothered grief and would blame some person or persons for what had taken place; but Christian Science healed me of this condition of thought, and now a lasting, peaceful love for the departed one abides with me always.

I dearly love the sweet, simple Christian Science church service, free from personality, symbolism, creed, and ritual, because these services satisfy and fill a cup that was empty many years. Our publications are indeed helpers in the journey from sense to Soul.

JOHN G. GOODIER, Breckenridge, Col.

❖

When I first heard of Christian Science I had been afflicted for over fifteen years with a very painful disease known to physicians as carious bones, also with rheumatism and neuralgia of the liver. The latter caused the most terrible pain for a year, and had driven me to despondency and hysterics. These ills, together with the effects of an operation which had never been properly attended to, have all been healed through Christian Science in the last two years and a half. We bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and what a revelation it is and has been to me, together with the Bible and most of our Leader's writings.

No words can express my thankfulness to God for the many blessings I have received since coming into Christian Science, or my gratitude to Mrs. Eddy for bringing to us this revelation of the truth. Not half has ever been told of the good which comes through Christian Science. I now know that the truth does set us free.

DORA B. THOMSON, Portland, Ore.

❖

It is with a deep sense of love and gratitude that I write this testimony of my healing through Christian Science. The subject was first brought to my notice by a dear friend in the summer of 1907. A year later, when in sore need of help, I went to a practitioner and asked for treatment, which was most kindly given. I was then advised to purchase a copy of Science and Health and told to read the "scientific statement of being" on page 468. This was about three o'clock in the afternoon. I read the book till evening, and then retired. When I arose the next morning a great load of fear had been lifted, and I realized that I had been healed of colds in the chest, as well as catarrh of the head, from which I had suffered many years. The joy of that morning cannot be expressed in words; it can never go out of my life. I was also cured of the tobacco habit, to which I had been a slave for twelve years; and although I did not enjoy liquor, I never had the moral strength to refuse when asked to take part in drinking, but thanks to Christian Science that weakness has been overcome.

For all these healings, and many others, I am truly thankful to God, and grateful to our dear Leader. In 1913 it was my privilege to receive class instruction, for which I am deeply grateful. As I study the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am convinced that Christian Science is a practical religion, and that it fulfils every one of its beautiful promises. I am grateful for membership in the Christian Science church and for the help I have received at the reading-rooms. Finally, I want to express my thankfulness for all our publications. The *Sentinel* has been my true friend and companion for nearly seven years.

AXEL W. LEAF, Chicago, Ill.

❖

I am very grateful for the many blessings Christian Science has brought into my life. For many years I suffered from stomach disorder and heart trouble. The doctor said I also had an abnormal growth and should be operated on, but I feared to have this done. In 1904 Christian Science was brought to our notice, and we borrowed a copy of Science and Health, which we read and reread. Then we purchased one for ourselves. We also attended the church services, although there was a long flight of stairs to climb. My husband had almost to carry me up, and even with his assistance I would have to stop to rest two or three times. In 1908 I had a severe attack of stomach disorder, different from any I had experienced before. After six weeks or more, during which I tried to help myself without success, I asked for help from a faithful Christian Scientist, and it was lovingly given. With a few treatments I was entirely cured.

In 1909 I was healed of severe heart trouble in three or four treatments. The abnormal growth has vanished into its native nothingness. A few years ago I was greatly troubled with black spots before my eyes when I read or sewed. I asked for help from the same practitioner that had treated me before, and now these spots are a thing of the past. While I was taking treatment for the eyes, a sore on one of my hands disappeared, after being there at least five months, and I had not mentioned it to the practitioner. I am now well and strong. I am thankful to God for His loving care, and grateful to Mrs. Eddy for giving this living truth to the world.—LAURA B. HARRIS, San Jose, Cal.

❖

It is about eleven years since Christian Science was first presented to me. At that time I was under the care of a physician, and had been for several years. God had been absent from my daily thoughts for many months, as my prayers for health had not been answered, nor had my supplication for death to relieve me of the trying days and nights which my mental and physical condition made unbearable. When the Christian Science text-book, "Science and Health with Key to the Scriptures," first came to my notice, it was read with avidity, for there I discovered a different idea of God and of prayer. Very soon I realized that my prayers had been misdirected, because my concept of God was not that of a loving Father.

A three months' course of medical treatment was just drawing to a close, and the physician informed me that he had found complications which would necessitate three months more of his treatment. I resolved to rest for a month before continuing, and said so. I fully intended to return to him, but never did, because I began to read Science and Health, together with the Bible, and at the end of a month was com-

Digitized by Google

pletely healed, being without pain for the first time since I was a child of ten years.

I wish to state that when I began to read Christian Science literature I did it purely from a desire to find out more about God and the Bible; I had no idea of being healed in this way. My reading revealed to me that I had not been a Christian at all, because I had failed to follow the Christ-teachings. Resentment, hasty judgment, criticism, temper, and sensitiveness had held sway in consciousness until they had been "imaged forth on the body" (Science and Health, p. 411). St. Paul said, "Be ye transformed by the renewing of your mind," and as my thought began to change and these faults were diminished or exterminated, these words were proven absolutely to me, and I was transformed by the renewing of my mind.

Since that time my earnest desire has been to tell the "old, old story" to others as it was told to me.

LAURA R. JOSLIN, St. Paul, Minn.

This is to certify that the statements made by Mrs. Joslin are to my knowledge correct, and that since this healing took place our home and daily living have been more harmonious than ever before.—BENJAMIN J. JOSLIN.

✧

About five years ago, while living near Summit, N. J., I took a Christian Science treatment of a practitioner in that city for the liquor habit, to which I had been addicted for more than twenty-five years. Only one treatment was necessary to rid me so completely of the desire for drink that I have never since had the least inclination for it. At the time, I was suffering from what is known as southern malaria, in chronic form. I had been doctoring for it for years without benefit, and had given up all hope of being rid of it, often wishing when I went to bed at night that I might never wake up. Rheumatism of the right arm and shoulder was also added to my other afflictions. I had not expected to be relieved of these ills by Christian Science, but soon found myself a new man, physically and morally. I took on flesh and gained strength, and am today a living testimonial of the power of Truth to heal disease and overcome evil.

I have also to record the fact that my wife was cured of severe headaches, and many minor ailments, through a faithful study of Science and Health. My brother-in-law was cured in one treatment of asthma in its worst form; and a sister was freed from the same disease after many physicians had failed to help her. Needless to say, my gratitude for what Christian Science has done for me is most profound.

W. C. WILLIAMS, City Point, Va.

I wish to confirm all that Mr. Williams has written concerning his own healing and the other cures under Christian Science; also to express my thankfulness for benefits received.—SARAH A. WILLIAMS.

✧

It is nearly ten years since my first healing in Christian Science. I was living in morbid fear of a disease which had held me for four years, attacking me intermittently. The last attack persisted for nine months. The physicians gave the ailment no name, as it came under no particular classification, but seemed to partake of the nature of both eczema and erysipelas. They were finally agreed that there was no permanent healing for me. Then I had about six weeks' treatment in Christian Science, and in all these years have had no return of the disease. What is becoming clearer to me is the fact that the healing came through no understanding of mine, but entirely through the thought of the faithful practitioner, who was herself healed of a malignant growth many years ago. The sweet sense of security that this healing brought, carried me through many years without any serious work on my part. During this period many discordant conditions, among them a sense of bereavement, were overcome by treatment from some one else.

A few years ago I suffered from a throat affection for several days, and although a practitioner was visiting me, I seemed to grasp the fact that at some time I had to grapple with material sense myself, so I went to work to realize the truth expressed in the "scientific statement of being" (Science and Health, p. 468). In less than five minutes I received a flood of light and was able to declare myself healed. Later a severe burn was healed without blistering, and in a very short time.

In the spring of 1913, a little daughter came to us, and many discordant conditions which assert themselves at such a time were proved nonentities, the child being born harmoniously and quickly. Many minor ailments have been overcome for the little one, such as the widespread belief of colic, colds, and inaction of the bowels.

To say one is grateful seems trite, but sometimes I try to imagine what this century would be without Christian Science, which is indeed "the salt of the earth." Every individual, whether he calls himself a Christian Scientist or not, is more indebted to it than he realizes for the changed beliefs about heaven and hell. I used to wonder what sin of mine or of my progenitors it was for which God was punishing me. Now I know that the divine Principle is unchanging Love, and that any belief whatever, through which I may suffer, must at some time and in some way be pronounced unreal. All the world will some day recognize the fact that no mortal sense could mold so heroic and calm a life as that of Mrs. Eddy, and that no human philosophy, but divine revelation alone, could make the life of Jesus so perfectly intelligible.

DAISY HORTON LUTZ, Clairton, Pa.

✧

I wish to state what Christian Science has done for me. For a long time I had suffered great pain from a third attack of what my physician had diagnosed as appendicitis, and an operation was said to be necessary. I greatly feared to undergo such an operation, and in conversation with a friend who had been helped by Christian Science, it was recommended that I try this method of treatment. I did so, and in less than three weeks was entirely healed. I have also been helped by treatment for toothache and neuralgia. I am very grateful for what Christian Science has done for me.

EARLE W. SMITH, Atlantic City, N. J.

✧

About the first of June, 1910, I had signified my willingness to submit to an operation for an internal growth, since a surgeon deemed it advisable. He believed it had taken on a malignant condition, and told me that unless removed it would cause my death in six months. Upon the day set for my entrance to a hospital, at the loving solicitation of a friend I decided to turn to Christian Science for healing. I knew nothing of this religion, and for several years had been a member of another church, but nevertheless I secured a practitioner. After a talk and one treatment from her, there came to my consciousness a great desire to search for my healing in the Bible, with the help of the Christian Science text-book, "Science and Health with Key to the Scriptures," and by doing so I found the greatest blessing of my life's experience.

Inside of a month after commencing to read Christian Science literature, I found my fear had lifted to such an

Digitized by Google

extent that I paid no attention to the symptoms which had alarmed me sufficiently to turn to a surgeon, and within eighteen months I was entirely healed through my study of Christian Science. I am truly grateful that the opportunity was large for very continuous study during this season, but most grateful that I was ready to improve my opportunity, for I have found happiness, and peace "which passeth all understanding." It is a joy to prove this demonstrable religion in the healing of my own physical condition, and to be able to understand the allness of God sufficiently to help others.

In the years since I found this "pearl of great price," I have had the privilege of becoming a member of The Mother Church and a branch church. I have also received class instruction, and last but not least, I have the great privilege of teaching a Sunday school class. Truly do I give thanks to God, and gratitude to the consecrated woman who gave to the world this new-old religion, for I have found, as our Leader says on page 293 of Science and Health, that "Christian Science brings to light Truth and its supremacy, universal harmony, the entireness of God, good, and the nothingness of evil."—JANE C. ELSTON, Seattle, Wash.

✧

Several years ago I had a fibrous corn on the bottom of my foot. For a year I experimented with material remedies, and finally went to a doctor, who said I must be idle at least a month and give the foot a complete rest. At this time I asked a Christian Science practitioner for help, and the foot was completely healed in a week's treatment. This corn had caused a great deal of inconvenience and suffering, as I had to be on my feet while at work. Later an abscess developed in my ear, and if it had not been cured immediately would probably have resulted in loss of hearing. I went to a doctor for a time, then remembering how readily the corn yielded to Christian Science treatment, I again asked a practitioner for help. In three days all evidences of the abscess disappeared, and my hearing is normal.

We have had considerable Christian Science work in our family for the last seven years. During that time I have put on flesh, and I ascribe my improved physical condition to a better mental outlook. We feel that we owe a great deal to Christian Science.—E. S. HOUGHTON, Cleveland, Ohio.

✧

For the healing that came to me four years ago, when I was freed from a very stubborn skin disease by Christian Science, I am most thankful. A hopeless case for medical specialists, it finally yielded to the power of Truth after a year of daily treatment.

I would also like to add my word of gratitude for the good the *Monitor* is doing throughout the world. It is a great pleasure to be able to hand on one's paper to persons of various nationalities, confident that therein each individual will find interesting news regarding his own particular homeland. Sailors who have journeyed around the world are glad indeed to read an open-minded presentation of the entire world's news. In our home we regard it as a daily magazine, with its excellent accounts of recent literature, the stage, art, and household helps; and used together with an atlas it broadens one's geographical horizon.

For the spiritual uplift of Christian Science, I am grateful above all else.

JOSEPHINE MARTENS KILPATRICK, Sulzer, Prince of Wales Island, Alaska.

✧ ✧ ✧

There is as yet no culture, no method of progress known to men, that is so rich and complete as that which is ministered by a truly great friendship.—PHILLIPS BROOKS.

From Our Exchanges

[*Northwestern Christian Advocate*]

We made a kite for a little four-year-old the other day—we had not forgotten the art of old. From the pine board we fashioned the sticks, bound them with string, covered them with paper, adjusted the bridles, attached the tail and string, when our flier was ready for the ascent. We sought an open field, where we could run if need be, and the kite go up if it took the notion. The wind was fitful, and our patience bordered on despair, when finally she caught the steady upper current and stood as though suspended from above. Then we turned everything over to him who had followed us up and down, shouting his glee or crying his disappointment as the "white flier" rose or fell. "Here, my boy; you may hold it now."

He grasped the string and danced with intense delight; he almost screamed his emotion. And to more than one passer-by he called: "Look at me, will you, flying my kite! Look! look!" And as we stood and looked at him we thought of the hour or two of application to kite construction, and the additional half-hour spent in inducing it to stand in air. And then to hear him call out, "Watch me fly my kite," we could not refrain from thinking of children of older years—men, if you please—who lay claim to the things of God, and then call upon the world to take note of their accomplishments.

The farmer pours shelled corn into the lid of his corn-planter, drives leisurely back and forth across his field, and at evening he boasts of the accomplishment. "Think of the corn I raised," he calls. "I did it; it is mine." That's the boy again calling to his mate to watch him flying his kite. What did the farmer have to do with the seventy bushels per acre, anyway? He simply poured the corn into the hopper and drove his team back and forth, while God did all the rest. While he slept God watched over it, watered it with the dews of heaven, fanned it with His gentle breezes, and warmed it with His gentle sunlight. God was the tender of the field. God was the ripener of the corn, and when the golden ear bowed under the weight of maturity, the farmer went out with his wagon and hauled it to the granary.

But all this we fail to appreciate. Like children we eliminate the unseen, the divine factor, and magnify our own impotence into the controlling power in our individual lives. Could we but see the hand that fashions for us, that sows, that tends, that reaps, we would then in some appreciable measure understand the psalmist's declaration: "It is he that hath made us, and not we ourselves."

[*The Advance*]

There are a number of passages in the New Testament where the word way ought to be spelled with a capital. It is a proper noun. It was the very first name which the Christians gave their new religion. The prophets had spoken of a great high way. The disciples, when they first realized themselves as constituting an organic body, spoke of their religion as "the way." They did not define their faith in terms of a creed or a ritual; they merely said they were of "the way." Jesus himself gave them this term and gave them also its definition. "I am the way," he said.

The life of the gospel of Jesus is an open road. It is a safe and plain highway. It is not a labyrinth of some scholastic creed; it is not the dubitable conjecture of an esoteric cult; it is not a tortuous path through experiences abnormal to the human soul. It is a road. Jesus spoke of it once as a "narrow" way, and contrasted it with one that is "broad"

Digitized by Google

and easy to find. Beyond any doubt the contrast is a true one, for the way of duty is one of real, severe difficulty, and often to choose the easy method is to follow the wrong. The path of virtue is far from being the line of least resistance. Only as we struggle do we gain strength.

[*The Watchman-Examiner*]

Christ's accurate knowledge of human nature did not disdain to appeal to its hidden springs of action when he said, "Judge not, that ye be not judged." Our imputation of guileful motives to our opponents naturally arouses in others a suspicion of our own familiarity with such incitements, and unfair measure is likely to be meted out in return for our own. This is a warning. But how much higher an appeal is that other command of our Saviour, "As ye would that men should do to you, do ye also to them likewise."

It is this beautiful reciprocity of brotherly kindness and love that alone can help the followers of Christ to dwell together in unity. Thus only can they be strong in one another against the assaults of God's enemies. And so impressed are we with the importance of this matter to the growth of our churches in grace and in the favor of God and man, that we believe the one most essential requirement of Christian intercourse in our day may be expressed in two words,—generous judgment. Even men of the world have an intuitive perception of this necessity in their mutual dealings, and men, at all events outwardly, grant to one another integrity of motive. To the needs of human nature add Christ's word, and the spirit of judgment cannot fail to be that of magnanimity.

[*Zion's Herald*]

There is hardly an individual whose life is so prescribed that there is not the possibility of doing better tomorrow. The battle may have gone most wretchedly today; we may have been driven ingloriously from the field, and our colors may even now be torn and trailing in the dust,—but what of that? There is to be a tomorrow—we may do better tomorrow. A tomorrow is fraught with marvelous possibilities. Today's record has been written; tomorrow's portion is a clean page whereon each one of us may write nothing but courageous deeds and noble efforts. Tomorrow may be the best day we have ever lived!

[*The Christian Register*]

Great hopes are the roots of great endeavors; holy desires are the seeds of heroic deeds; and out of great endeavors and heroic deeds come the litanies of prayer and praise, the hymns and psalms of victory. The lamentable error of the accepted representatives of religion and the church is the same as that which Jesus noted in his time, that of the men who recite long prayers, thinking that out of them will come holy lives; whereas in the true method the prayers and psalms are the outflowing of the spirit of praise and gratitude which follows the influx of the divine life.

[*The Universalist Leader*]

A revival of true religion means simply the relating of the principles of Christianity to the life of today; it means that through politics, as through every other instrumentality, religion works for good. There is no such thing as postponing the action of true religion; to be is to act, and in proportion as it is, so does it act. A genuine revival of the religion of human brotherhood would not only transform politics but make politics efficient for peace and for every good thing.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: The Resurrection and the Life," a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing. Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $2.50.

Morocco slip case to hold pocket edition of Science and Health, Quarterly, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01361 x. Large type Bible, 7½ x 6⅛ inches, 1½ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The Improved Index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 152 pages with index. Paper covered, 35 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco $1.40; full morocco $2.50; levant $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ My Refuge," 75 cents; "Love," 40 cents; Communion Hymn, "Shall Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "Still Waiting Harp-strings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Shall Ye My Saviour?" (Boots), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch mount 12 x 16, $1; 12-inch mount 15 x 20, $2; 16-inch mount 21 x 28, $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with margin on Japanese vellum, size 18 x 24 inches, $5; on India paper without margin, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproductions of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.35; with purse, $1.60.

ALUMINUM LESSON MARKERS. Set of three, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges. Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 85 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post-office as second class matter.

Items of Interest

Secretary Lane of the department of the interior, in his statement of classification activities of the department for the month of March, shows that during this month the lands restored to entry exceed those withdrawn by more than one half million acres. The total restorations for March were 623,799 acres, and the total withdrawals 120,464 acres. The principal restorations were of lands heretofore held in coal and phosphate reserves. Nearly one hundred and twelve thousand acres in Colorado, more than three hundred and fifty-two thousand acres in Montana, and twenty-eight thousand five hundred acres in Utah were released from coal withdrawals and restored to unrestricted entry. Twenty-one thousand five hundred acres in Idaho and one hundred and six thousand acres in Wyoming, that had been held in phosphate reserves, were classified as non-phosphate lands and were likewise restored to unrestricted entry. Minor restorations were those of two thousand acres in Idaho and one thousand acres in Utah, that have been held heretofore in water-power reserves. The principal item in the withdrawals for the month of March was the creation of a reserve of one hundred and nineteen thousand acres in the Black Rock desert in Nevada, to be withheld from entry by the government while it continues explorations for potash that have been authorized by Congress. These lands have no agricultural value, however, and the creation of the reserve therefore does not affect agricultural development.

The net result of these actions has been to reduce the total area included in withdrawals to a little more than fifty-eight million acres; but of this total more than fifty-five million five hundred thousand acres are in coal, oil, and phosphate reserves on which agricultural entry may be made with a reservation of the withdrawn minerals to the government, so that less than three million acres are actually withheld from settlement.

Extensive deposits of alunite, a potash-bearing mineral, have been discovered near Marysvale, in southern Utah. They are high up in the Tushar range, outcropping on the crest of a ridge that leads from the main divide at an elevation of approximately eleven thousand one hundred feet above sea-level and extends down to about nine thousand nine hundred feet, the lower end being four thousand feet above the railroad at Marysvale. Capitalists recently have filed upon these deposits and are preparing to develop them; thirty-five thousand acres of potash lands have been taken up by one company, the filing fees amounting to three thousand dollars. Another company has several thousand acres in the same district.

A recent report of the United States geological survey states that outside of Germany there is no known commercial supply of potash salts. The importation of these salts in round numbers for the three years of 1912, 1913, and 1914, has averaged six hundred and thirty-five million pounds in quantity, and eleven million dollars in value. These figures, however, represent only a part of the potash salts entering the United States, as they do not include the imports of salts used as fertilizers. The quantity of this class of material imported for consumption in the United States during the same period has averaged about seven hundred thousand tons, valued at four million three hundred thousand dollars, annually.

Speaking at the annual meeting in England, of the Birmingham and District Allotments and Small Holdings Association, Frederick Impey, who presided, referred to the good results which had issued from the allotments and small holdings act of 1908. From last year's report, he said, he was pleased to notice that two hundred thousand acres of new small holdings had been secured by the act of 1908. That would equal a strip of land three miles wide extending from Birmingham to London, or nearly half the area of the county of Worcester. There were fifteen thousand tenants, and at least sixty-five thousand had their circumstances improved in consequence of the working of the act. He was glad to note, from the reports of the various county council land agents, that the unanimous view was that in almost all cases the land was better tilled and yielded more because of it being cut up into small holdings.

Recently there have been interesting tests in Washington, D. C., of a new searchlight, which it is possible the United States coast and geodetic survey may adopt for its triangulation work in the survey of large areas of land. The light is said to present several new and important features, and to be marvelous for the distance at which its concentrated rays are visible. It is also said that it develops a minimum of fifty thousand candle-power at the burner, and can be made visible for triangulation work at a distance of one hundred and fifty miles, provided it is raised sufficiently to overcome the curvature of the earth. The apparatus weighs only forty pounds, fully equipped. The gas used is a mixture of oxygen and acetylene, dissolved and compressed in tubes. The source of the light is a pastil of rare earths, which become incandescent and are reflected by a mirror through a frontal fresnol lens.

To obtain the cooperation of the public in preventing forest fires, which are doing a great deal of damage in the East this spring, the United States forest service has prepared the following ten "dont's" to be observed in the woods:—

Don't throw your match away until you are sure it is out. Don't drop cigarette or cigar butts until the glow is extinguished. Don't knock out your pipe ashes while hot or where they will fall into dry leaves or other inflammable material. Don't build a camp-fire any larger than is absolutely necessary. Don't build a fire against a tree, a log, or a stump, or anywhere but on bare soil. Don't leave a fire until you are sure it is out; if necessary, smother it with earth or water. Don't burn brush or refuse in or near the woods if there is any chance that the fire may spread beyond your control, or that the wind may carry sparks where they would start a new fire. Don't be any more careless with fire in the woods than you are with fire in your own home. Don't be idle when you discover a fire in the woods; if you can't put it out yourself, get help. Where a forest guard, ranger, or state fire warden can be reached, call him up on the nearest telephone you can find. Don't forget that human thoughtlessness and negligence are the causes of more than half of the forest fires in this country.

Russia continues to bear testimony to the good results following its prohibition of the sale of vodka. The imperial order forbidding the sale has now been in effect about six months. A statement of the sale of vodka by months from July to October, 1914, in Moscow, compared with corresponding months in 1913, shows the decrease: July, 1913, 612,686 gallons; July, 1914, 359,124 gallons. August, 1913, 667,926 gallons; August, 1914, 23,373 gallons. September, 1913, 759,947 gallons; September, 1914, 7,314 gallons. October, 1913, 707,588 gallons; October, 1914, 2,913 gallons. Labor has become much more productive than before. Formerly at the Moscow mills many workmen did not appear on Monday, and a number of those who did appear were unfit for duty because of their Sunday excesses. This, it is said, is no longer the case, as both the quality and the quantity of labor have improved in a wonderful way.

It is said that in a few years the largest walnut packing and cleaning house in the world will be in operation in California, where walnut culture has been making great strides forward for some time. The crop of that state has exceeded twenty million pounds a year for a number of years, and in one section of the state twenty-two hundred acres are just now beginning to bear, while a large additional acreage is being planted. Imported walnuts are dutiable at two cents a pound not shelled, and at four cents shelled. Imports of the unshelled totaled twenty-eight million pounds, and of the shelled nine million pounds in 1914. Their total value was four million three hundred thousand dollars.

With the opening of spring in the West, brief inspection tours were made of the different sections of the new national parks highway, the great automobile highway from Chicago and the Great lakes to Spokane and the cities on Puget sound. On May 15 the cities and towns all the way from Chicago to Seattle took part in a simultaneous inspection of the 2,315 miles of road. Trial runs were to be made from the fifty cities in the different road districts. In one month the formal dedication of the trail will take place, with appropriate ceremonies, conducted by good roads associations in each of the districts.

A million dollar peach crop in the famous Brandsville district of the Ozarks, Missouri, is predicted. It will equal if not surpass the record of 1913, when fifteen hundred expert packers and pickers harvested enough Elbertas to keep eleven hundred and twenty cars filled and moving East.

Negotiations of the Argentine government with New York and London bankers for a loan of approximately fifty million dollars in gold are progressing favorably, and it is expected a contract will be signed soon.

Vol. XVII May 22, 1915 No. 38

Disease Not Real

SAMUEL GREENWOOD

THE teaching of Christian Science, that disease is not real, is not always hospitably received, even in quarters where it is most needed; yet it is the best friend of the sick, for it offers them the only means of escape. If disease were real in the way that love and goodness are, it would indeed be a sad outlook, for mankind would forever be attended with its haunting fears and pains. If it were real, it would be useless to doctor it, since there is no process that can destroy reality. Christian Science, however, heals disease on the basis that it is not real, and it takes this ground because disease is not of divine origin.

It may be asked here why Christian Scientists treat disease at all, if they do not believe in its existence. It may be answered that, strictly speaking, they do not; they treat only a false belief in disease. For example: A gentleman who had lived in the South once told the writer that tomatoes, at that time called "love apples," were regarded as poisonous, and had been known to cause serious and even fatal illness. Now, would an enlightened physician, having to doctor such a case, regard the illness as a reality or as a false belief?—that is, would he set himself to antidote the imaginary poison or to dispel the patient's hallucination? From a purely physical standpoint, could a person be made ill by partaking of a suppositional poison? If man is a materially organic being, as is generally taught, how could the poison that was not there, poison the person who did not eat it but who thought he did? On the other hand, if a wrong thought caused the illness, why should not the right thought heal it and be the natural and only remedy therefor? Then if it should be discovered that wrong thinking causes all disease, would not right thinking be the rational and only effective remedy?

Let us suppose that a person in a state of delusion tells us that his house is on fire, and we know it is not: would we call out the fire-brigade in order to convince him of his mistake, or would we endeavor to dispel the delusion by proving that his house was intact? In other words, would we treat the fire, or the false belief in it? From our knowledge of the facts, would we regard the fire as real, or as unreal? Again, let us suppose that, instead of his house, this person believes his body to be on fire with fever. The doctor is called to put out the fire, and falling in line with his patient's belief, he proceeds, figuratively speaking, to turn on the hose. This was not Jesus' method. The doctor, accepting the same material sense of being as his patient, attacks the fire that, according to the spiritual truth of omnipresent good, is not there at all. The Master, understanding that God's ideas are always perfect, "rebuked the fever;" that is, condemned it as having no place there, and we read that it left the patient immediately. It is plain that Jesus did not treat the fever as a reality, but as a false belief; and he was preeminently the most successful physician and the wisest teacher the world has known.

So-called material sense, claiming that life is separate from God, affirms many falsities concerning man, and disease is one of them. It affirms that mortals become sick from natural causes and in accordance with divine law; whereas the Master said of the crippled woman, that she was bound by Satan, and Satan, or evil, he defined as having no truth in it, as "a liar, and the father of it." He thus clearly implied that disease is a lie begotten by a sense of evil, and that God has nothing to do with it. Then, since God made all "that was made," the only right conclusion is, that disease has no maker and therefore never was made; in other words, it is not there at all, any more than poison was in the tomatoes. In view of all this, Christian Scientists could not treat disease as being real without acknowledging that a power exists besides God to make it, and an intelligence besides God to feel and see it; and this no Christian can consistently do.

In the light of Christian Science we learn that the so-called mortal mind and body are one, and that this one is neither God nor His manifestation. The individual mortal consciousness, educated to believe that its identity consists of a physical body, naturally depicts its thoughts about itself upon that body. The unenlightened mortal sees only what he believes himself to be, and not discerning spiritual man, he sees only his belief in the physical. His thoughts are therefore full of the things of material sense, and he sees and feels from that standpoint. This unspiritual sense of man, being essentially untrue to God, is untrue in itself, and in all it includes or manifests. The Scriptural teaching that man is the image of God, Spirit, is not taught either in medical or religious schools, hence their inability to appreciate the fact that sin and disease are healed on that basis, and that it embodies the only truth about man today.

The so-called mortal man is educated from birth to believe himself to be wholly material, and that he suffers and becomes diseased under certain prescribed conditions; hence, when these conditions arise, his belief of physical good health changes to a belief of physical ill health. It is certain that if one believes a lie about anything, all that he sees as real is that lie, because its acceptance thereby hides the truth from him. So, if one believes himself to be a physical being, he is on that account blind to the truth that man is a spiritual being. Obviously, one sees and accepts what he holds in mind as true. Looking at himself as purely physical, believing in physical law and sensation, regarding evil and its effects as real, the frightened mortal naturally gathers to himself, according to changing circumstances, the experiences of disease, sin, and death, until he eventually awakens to a knowledge of the truth and learns "that the spiritual real man has no birth, no material life, and no death" (Science and Health, p. 288).

On the other hand, if one knows the truth about anything, he does not believe what is false about it. When the sick appealed to Jesus, he did not believe as the sick did about themselves, else he could not have healed them. His knowledge of God and the perfect man declared the impossibility of there being a sick man. Having only the perfect man in mind, he could not at the same time entertain the picture of a diseased man or admit such a condition to be real, and this enabled him to prove to the patient's consciousness the truth

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

about himself. He destroyed the illusion of disease because he saw it as an illusion, not because he believed its evidence. Would any one contend that this was an improper proceeding, or that the same method is improper today in the practice of Christian Science?

Acknowledging absolutely that God is the only creator and governor of man, and that there is no other power, Christian Scientists quite logically take the ground that if God does not put pain and disease in a man's body, the pain and disease are not there. What God, the All-in-all, does not do, is not done; therefore if the divine Principle of man's being does not make him sick, does not make man capable of sickness, it can never be true that he is sick. Disease proves by its very nature that it is not a product of eternal Truth, and can pertain only to an erroneous, self-deceived sense of things.

Mrs. Eddy, the author of Science and Health, long ago made the discovery that false belief is the only cause of disease; and the application of the remedy in Christian Science, as taught by her, laid the foundation of this great movement, which is rapidly spreading to all parts of the earth. In every land today the application of right thinking is being proved the only effective remedy for all wrong thinking and its effects. If there is a God such as Christianity teaches, it is surely practical and eminently wise on the part of Christian Scientists to have such full faith in His infinite love and goodness as to look upon disease and all evil as an unreal belief, and to treat it accordingly.

❖

Thought Gardens

RUTH INGRAHAM

ONE spring morning I stood with a friend in a garden which her tireless and loving industry had made beautiful in a remarkably short time. I complimented her especially on the velvety lawn which clothed a formerly bare and weedy space. "It seems incredible when I think of how this place looked a few months ago!" I exclaimed. "How did you accomplish such results?" I asked.

"By keeping right at it," my friend replied in her brisk and practical manner, stooping even as she spoke to pull a weed out of the grass.

"That's an innocent little thing," I remonstrated, "and you pull it out as mercilessly as you would a thistle. Surely chickweed never did any harm."

"Do not believe that," returned my friend. "Look here," and she pointed to the place where the frail root had had its hold, whence the tiny plant had radiated its creeping branches. I did so, and saw that the grass was yellowish white over a circle of five or six inches in radius. "It may not absorb much from the soil, but it keeps off the sunshine," she said, "so it can have no abiding-place in my garden."

The symbolism was so evident to us both that we scarcely needed to speak of it just then, but I have pondered it many times since. How often in the garden of thought, having weeded and watered to our satisfaction for the day, we tolerantly leave some tiny error which has come up in what seems such an inoffensive way as not to challenge particular attention. It may be an incipient cold, an ache or a pain which we are only vaguely aware of, and to which we pay no heed. It may be a small sense of self,—self-righteousness, self-love, self-will, self-justification, self-pity, self-condemnation,—there are an indefinite number of plants belonging to this family, and they are pernicious weeds, every one. It may be an infinitesimal grievance not yet developed into a grudge, or a little criticism of a kind that affords us amusement and so seems to justify its existence, or perhaps a clinging tendency toward some form of materiality. Can we afford to let such thoughts, however small their beginning, find an abiding-place in our garden? Whatever their seeming weakness or inoffensiveness, they are occupying the place where only the true growth should be, and are shutting out the sunshine of Love.

The logical ultimate of leaving these weeds would be to have our fair garden overrun with them. Unless we countenance such a result, we must at some stage of their progress destroy them. Then why not do so at once, before they have usurped the place of worthier things, before we have a double work to do in first removing them, and then repairing the damage they have wrought? Even the amateur gardener knows that weeds do not die of neglect, but flourish thereby, and in the realm of metaphysics, errors seldom disappear because ignored, but rather gain strength and place, until one is forced into the recognition of their presence. Then comes the struggle to cast them out, root and branch, and a mental battle ensues, the necessity for which would have been eliminated by earlier action. Sloth, inertia, the unintelligent resistance of mortal mind to the divine activity, is the one reason why we do not take up these errors as they arise and utterly destroy them with the proper application of the truth. There is never a time to be slothful, to lapse into mere existing.

"But I was too much concerned with a graver problem to correct these errors when first they came to my notice," one may say. In the words of the Master we reply, "These ought ye to have done, and not to leave the other undone;" and a co-relative passage from our text-book "Science and Health with Key to the Scriptures," reads, "We are all capable of more than we do" (p. 89). The gardener engaged in cultivating a favorite plant will nevertheless find time to pull the weed he sees starting close at hand. Seldom, indeed, has he to search for weeds; he discovers them in the course of his constructive work, and their immediate uprooting is a part of his larger purpose. He knows, furthermore, that it would be an unprofitable task merely to keep the weeds down. The lasting remedy for weeds is a healthy growth of some good thing in the place that they would otherwise occupy. Another point for the gardener to bear in mind is that no one is required to cultivate more land than he can properly care for, or to undertake unsolicited the care of his neighbor's land. Again, if his own allotted task at any time seems too great, he is privileged to have help until he finds that it is once more in hand.

Scientific gardening does not involve worry or discouragement. We are not responsible for weeds which have not yet appeared, and we are not to borrow trouble in trying to do tomorrow's work today. However, we save ourselves much labor if we instantly cast out by denial each seed of error, each unscientific suggestion voiced by those who are still under the influence of false theology, *materia medica*, or any other mode of the old thought. As related in the parable of the tares and the wheat, it is to be remembered, it was while men slept that the enemy came and sowed the tares: and the moral is obvious. We must be ever alert, obedient to the wise by-law in the Manual of The Mother Church (Art. VIII. Sect. 6), which requires us to defend ourselves "daily against aggressive mental suggestion," whether it seems to come from without or from within, whether in its nature it is malicious, ignorant, or sympathetic.

Throughout our text-book we are admonished to meet and master error at its first appearing, thus giving it no opportunity to develop in thought. "Science must go over the whole ground, and dig up every seed of error's sowing," we

Digitized by Google

read (p. 79). While we are engaged in this (for the present) incessant labor, let us remember that perfect activity expresses the divine Mind, and that when we learn to work as God works we shall know no weariness. We shall also learn that no resistance of mortal sense can deter us from recognizing and uprooting error of every name and nature, until naught remains that is unworthy of having a place in our consciousness, which should be as the "watered garden" of Isaiah's prophecy.

❖

"Skyward flight"

CAROLINE SHREWSBURY

One day, while walking, I was attracted by a small bird that was flying away from a dog. The dog pursued the bird and was gaining on the tiny fledgling, which was but a few inches from the ground; and although flying at a good speed, as long as it continued on a level with its pursuer, just so long the dog followed it.

I watched the flight of the one and the chase of the other until a corner of the street was reached, and turned with them in order to watch the outcome, being interested in the bird's safety. Suddenly the little navigator of the air darted straight up and away from any possibility of being caught by its pursuer. The dog stood still, gazing upward; but as he was unable to proceed in the direction the bird had taken, he presently trotted off, leaving the winged creature free and safe in its upward flight. It seemed as if the bird had suddenly become conscious of its ability to rise and so escape the danger that threatened it, and this recalled Mrs. Eddy's words on page 261 of Science and Health, where she says, "Fixing your gaze on the realities supernal, you will rise to the spiritual consciousness of being, even as the bird which . . . preens its wings for a skyward flight." Again on page 260 she says, "Distrust of one's ability to gain the goodness desired and to bring out better and higher results, often hampers the trial of one's wings and insures failure at the outset."

Our safety always lies in rising up into the spiritual heights of Mind and dwelling there in conscious understanding of the allness of God. In Paul's epistle to the Colossians we read, "Your life is hid with Christ in God." Error cannot enter this domain of Spirit.

❖

"I AM"

JULIA WARNER MICHAEL

In the third chapter of Exodus we read: "And Moses said unto God, Behold, when I come unto the children of Israel, and shall say unto them, The God of your fathers hath sent me unto you; and they shall say to me, What is his name? what shall I say unto them? And God said unto Moses, I AM THAT I AM: and he said, Thus shalt thou say unto the children of Israel, I AM hath sent me unto you."

The significance of the fact that the appellation "I AM" belongs to God and not to man is worthy of careful consideration. We are led by both reason and revelation to see that since there is but one God there can be but one "I AM," and that one not mortal but immortal, not imperfect but perfect, not human but divine. The truth then is the truth now. Man as the reflection of God cannot, therefore, think or correctly speak of himself as having existence independent of God, but rather as the expressed image and likeness of "I AM." So far, however, has this right relationship between God and man been forgotten, that one constantly refers to himself as present being, while God is thought of, perchance, as relegated to a remote indefiniteness. Mortality's misappropriation of this great name to itself has brought into familiar use many utterly false statements, as, for instance, I am sick, I am poor, I am afraid, I am a sinner, I am discouraged, I am dying, etc. It becomes evident that such phraseology is inconsistent, when one remembers that "I AM" is the synonym of God, good. There is no partnership between good and evil, hence only the quality, activity, law, source, condition, and existence of good can be properly associated with "I AM." Unmindful of this truth, how continually has mankind been breaking the commandment, "Thou shalt not take the name of the Lord thy God in vain."

In Science and Health we find the following definition of "I AM": "God; incorporeal and eternal Mind; divine Principle; the only Ego" (p. 588). Confirming the Scriptures, this definition comes with power to the human consciousness, acting as a purifier of thought and speech, redeeming us from a perverted sense of self, and rendering unto God the name that is God's. Because "I AM" is Spirit, God, the being which is "holiness, harmony, immortality" (p. 492), man is clearly seen to be its individual likeness in multitudinous forms. There are then in reality no common men, no illiterates, no degraded ones, no sick, no sinners, no dead; but all true individualities are the perfect expressions of the one ever perfect "I AM."

To see and acknowledge this divine fact of equality among men in the absolute, will help us to live it relatively in far greater degree than before. Pride and prejudice fall before the glory of this truth. Remembering it, criticism and cant fail for lack of utterance; theories and therapeutics wax old and decay; and the true spirit of brotherhood, or the brotherhood of Spirit, obtains and abides among men.

❖

"To whom shall we go?"

CARL E. HERRING

In the sixth chapter of John's gospel we find it recorded that many of the disciples of Jesus "went back, and walked no more with him," and that when Jesus asked of the twelve, "Will ye also go away?" Simon Peter replied, "Lord, to whom shall we go?"

There are many pathways leading toward truth, even though there be but one truth, and one of the most beneficent teachings of Christian Science is that which rebukes arrogance and makes us mindful of the fact that the order of our own entrance into truth is not to be forced upon our brother. Truth can be reached by any one of three processes, —first, the inspirational, by which it is realized without the intervening footsteps; second, by daily experience, which brings us nearer and nearer to the goal; third, by the process of elimination, which through many years of hard experience finally reaches a conviction of the utter uselessness of material means of salvation. The last method might be considered of the lowest order, and yet when one has been brought from sickness to health through Christian Science, after having exhausted every remedy offered by the schools of medicine, this fact furnishes an additional safeguard when trials come and for the moment faith refuses to look upward.

From childhood to middle age, the writer suffered from a throat trouble in its most aggravated form, both sides of the throat being affected every winter, with three weeks or more of most intense suffering. It is needless to say that no alleged remedy was left untried, externally, internally, and as it seemed eternally. With the exception of infrequent trifling recurrences the cure was complete in Christian Science, and if asked the question, "Will ye also go away?"

Digitized by Google

with the memory of drugs and gargles he could give but one answer, "To whom shall we go?" Christian Scientists do not rest their faith upon the fact of having experimented with and found futile all of the error in the world, but having gone through some of the experiences of human methods and found their utter uselessness in time of need, they do look forward, confident in the power of divine Love to heal any ill that may beset them, and rejoicing that they do not have to add to their troubles and suffering by longer experimentation with drugs and lotions.

Our Leader constantly points out that regeneration comes through suffering or Science. By this it is not meant that we should do or suffer evil that good may come, but it does mean that through experience we gain a firmer hold on the things which are eternal. Mrs. Eddy explains not only that suffering has an educational value in making for greater stability, but that "the sharp experiences of belief in the supposititious life of matter, as well as our disappointments and ceaseless woes, turn us like tired children to the arms of divine Love" (Science and Health, p. 322).

We should be grateful if the discipline of suffering has turned us to the fountains of eternal Truth,—that our blind efforts for relief, our drugs, our habits, our passions, our worship of self, our fear, have driven us away from materiality to spiritual reality, wherewith we build a bulwark of confidence in the truth revealed to us, that makes for constancy in the hour of trial. If the road ever seems weary or heavy, let us ask ourselves, What is there to take its place? Let us say in paraphrase of the words of Luther: Here I stand; I can do no otherwise, for Christian Science is the word of God. It is demonstrable truth: I have demonstrated it. Even if I would look back, there is for me no other pathway, so help me God. Amen!

❖

Sincerity

HERBERT ARTHUR HUTCHINSON

In the fifth chapter of Matthew, which gives a portion of the Sermon on the Mount, the last verse reads: "Be ye therefore perfect, even as your Father which is in heaven is perfect." Another rendering of the word here translated "perfect," is "sincere," and sincerity is one of the fundamental requirements of Christian Science.

In our problems in business, in church work, in our ministry of healing the sick and the sinning, if sincerity be lacking, our demonstrations are likely to be protracted and difficult, perhaps impossible. The minimum of truth does wonders, but surely we want the full radiance and not just the merest glint of good. In our daily life we must learn to say what we mean as well as to mean what we say, for one of the commonest and subtlest temptations of evil is to get us to say something so as to convey to another's thought that which is not quite true. The idea of good is incapable of plotting or of guile of any sort.

Human policy is often tainted with selfish motives; it is too insincere to be at all trustworthy. If, however, we are in earnest, sincere in our desire to let God rule, we shall receive those spiritual intuitions which always direct us aright. If we hold anything wrong in thought against a brother, we are bound in all justice to go to him and present the matter in accordance with the rule given in our Church Manual, or the accusation must be sternly wiped out of consciousness in our own thought by realizing the truth about man. To hold another in condemnation without doing all we lovingly can to remove the charge against him, is sheer mental malpractice, and is forbidden in Christian Science.

We all desire peace, but we must be careful to heed our Leader's warning in "The First Church of Christ, Scientist, and Miscellany" (p. 211) against "a false, convenient peace." We cannot possibly be at peace with error, and we must handle the situation mentally and with intelligence, or the situation will handle us and make us do the work of evil. A sincere desire to have God first and foremost always, come what may, will bring us safely out of temptation, and enable us to avoid pitfalls and snares, often unseen ones.

Sincerity, innocence from guilty motives, always overcomes guile, worldly policy. As Mrs. Eddy has told us (Science and Health, p. 462), "self-denial, sincerity, Christianity, and persistence alone win the prize, as they usually do in every department of life."

❖

Our Church Singing

KATE J. BRAINARD

Some time ago I read in *The Christian Science Monitor* an interesting and helpful article on "Keeping Time in Congregational Singing." It has been my privilege and pleasure to attend several Christian Science churches, and I was impressed by the heartiness with which the congregation sang, and also in some instances by the lack of time. In every congregation there are many good singers, also those who can readily read music and who know better than to take the time from one note and put it on another. For instance, in our beautiful Communion Hymn,—"Saw ye my Saviour?" (Hymnal, p. 212),—the last three measures are often sung so much more slowly than the rest of the hymn that the beautiful, flowing melody of these measures is sacrificed. "Whatever is worth doing at all, is worth doing well."

Our beloved Leader tells us that to understand Christian Science we must "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495); and so it should be with our church singing, which is such an important part of the service. Time makes tune. What would the hymn "In atmosphere of love divine" mean to us, or "Eternal Mind the Potter is" (Hymnal, pp. 84, 98) and many other dear old favorites, if sung out of time? Time is one thing and tempo another; and no matter how slow or fast the tune or a certain measure is sung or played, the time should not change. Also let us remember that holds, rests, and dots have a certain time or significance that goes to make up the beautiful, harmonious, and perfect whole.

The congregation should listen to and sing with the organ, and then they will not need a "precentor with his baton" or an "electrical device" of any kind, to make them keep in time or rhythm. To quote again from the *Monitor*: "If after the organ has played the music through in correct rhythm, the congregation takes it up in exactly the same time . . . there will be unanimity without these devices." In I Corinthians we read: "I will sing with the spirit, and I will sing with the understanding also."

[Written for the Sentinel]

Angel Reapers

ROBERT E. KEY

O Lord of harvest, when the seed
Is swaying into ripened grain,
Take from its side the stubborn weed—
The sin, disease, and pain;
And on the happy harvest morn,
When reapers greet the quiet day,
Let glory gild the golden corn
With Love's celestial ray.

Selected Articles

[Duncan Sinclair in *The Annandale Observer*, Annan, Scotland]

You were kind enough to find space in a recent issue for a letter of mine dealing with one or two points raised in a review in the *Observer* of earlier date. I notice that a note follows my letter, in which several new points are raised to which I should like to make reference.

The writer of the note admits—to use his own words—"that God did not create evil." We should have thought that the admission would have been sufficient to warrant the deduction which Christian Science makes, that evil is unreal. "And God saw every thing that he had made, and, behold, it was very good," is a statement of absolute truth from which it is impossible to deviate without stultifying the name of the altogether good and perfect Being, the omnipotent and omnipresent Mind, or Spirit, whom men call God.

But the writer of the note goes on to say, referring to the man created by God, "To make man in His image and likeness is to make him free, and the gift of freedom implies the possibility to sin." That is to say, he believes that God did not create evil, but that man, whom He did create, is capable of knowing that which was not created. The position needs only to be stated to show how utterly untenable it is. Since God is infinite Mind, all that really can exist is the manifestation of Mind; and consequently the only will that exists is the divine will. Since man exists in God, as Jesus implied in his words, "I can of mine own self do nothing;" "the Father that dwelleth in me, he doeth the works," the only "free will" possessed by man is in doing the will of God, which is precisely the same as saying that there is no freedom in the belief in and practice of evil; the only freedom is in the knowledge and practice of good.

Perhaps the Christian Science position with regard to evil might be illustrated to make it clearer. Everybody admits that two times two are four. It is a simple mathematical fact. But two times two may be believed to be five or six or any other number. No matter, however, what any one, be he child or man, believes it to be, there is only one thing true about it,—that the two numbers added together make four. Now, every error with regard to the simple truth is unreal in a way strictly analogous to the fact that evil is unreal. Again, not so many years ago the general belief held by people was that the earth was flat; but the world is practically a sphere, as everybody now admits. Was there a trace of truth in the false belief that the world was flat, which so many formerly firmly adhered to? And it is the same with every form of error you like to take. Evil was not created by God; it does not therefore exist as a reality. It is the understanding of the omnipresence and omnipotence of good, the consciousness that discerns, amid the illusions of the "carnal mind," the unreality of all unlike good, which heals sickness and sin.

Christ Jesus did not need to save man from aught that God had created; but he did require to teach men how they could be saved or healed of the falsities to which they were bound. Jesus referred to evil in unmistakable terms when the Jews tried to corner him by a quibble. He said, "When he [devil or evil] speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." The "father" of lies is the denial that God is infinitely good; from the denial springs every imaginable form of evil.

When men allow themselves to dwell on the spiritual fact that Truth and Love are ever present, that God is ever in their midst, blessing them with His ineffable presence, in proportion as they do so "evil" becomes less and less of a reality to them. As they reflect the qualities which are good, sinful desires vanish away. A sound moral character is the character of one who is knowing good and practising it. In "Unity of Good" Mrs. Eddy, the Discoverer of Christian Science, writes (p. 6): "Sooner or later the whole human race will learn that, in proportion as the spotless selfhood of God is understood, human nature will be renovated, and man will receive a higher selfhood, derived from God, and the redemption of mortals from sin, sickness, and death be established on everlasting foundations."

[Avery Coonley in *Chicago* (Ill.) *Tribune*]

A communication to the *Tribune* from a gentleman in Iowa severely arraigns Senator Works for sending out under his frank, in accordance with a custom of long standing, copies of a speech delivered by him in the Senate. This speech, which the contributor characterizes as "purely a harangue in favor of Christian Science," was, in fact, a speech upon the federal Public Health Service. I have read the document, and practically two thirds of it has nothing to do with Christian Science.

The speech was a protest against forcing upon all the people of the country through a branch of our national government the theories of one school of medicine to the exclusion of every other method of curative practice. In doing so the senator stated that other systems, now ignored, excluded, and restricted by the government, were healing the sick in direct contradiction of the favored theory, and pointed out that the one among these excluded systems for which he could personally vouch was effecting remarkable cures. In proof of the statement he submitted fifty-six carefully authenticated cases of healing through Christian Science, many of them having been pronounced beyond help, according to the governmental system.

The senator also showed that the theories of a single school of medicine, to the exclusion of all other systems, are being sent out through the mails at public expense by the Public Health Service, not once, but over and over again. If it is the principle to which your contributor objects, by far the most flagrant example, that of the Public Health Service, was overlooked in favor of a relatively negligible instance which happened to offend his prejudices. The franking privilege itself may some day be withdrawn, but if it is, it will be taken from all legislators alike, and not granted or withheld as a result of individual preference or prejudice.

[Robert S. Ross in *The Sun*, New York, N. Y.]

The view-points of *The Sun* and of the Christian Scientists, regarding the constitutional right of the individual to employ the practitioner of his choice, differ so widely that I feel sure you will be glad to give space to a reply to the article entitled "The Christian Science Amendment to the Health Law," published recently, even though you may not be willing to admit the soundness of its claims.

In 1907 the medical interests of the state got together, drew up a bill to regulate the practice of medicine, and introduced it into the legislature. The bill was so sweepingly restrictive in its provisions that it aroused considerable opposition, particularly among the Christian Scientists. When it came up for a hearing, the opposition of the Scientists was so strong that all hope of passing it in its original form was abandoned. A conference was consequently arranged between the representatives of the medical interests and of the Christian Scientists. Although the latter asked for a specific exemption, the wording finally adopted was that nothing in the act should be construed to affect "the practice

Digitized by Google

of the religious tenets of any church." It was understood by all, the legislators included, that the foregoing clause was inserted expressly as a saving clause for the practice of Christian Science.

As soon as the bill had been passed and signed, a representative of the medical interests is quoted as having said that one had been "put over on the Christian Scientists." In other words, he believed the medical interests had succeeded in having a clause inserted in the bill that would not stand the test of the courts. In order to prove it, several law-abiding citizens, Christian Science practitioners, were arrested on the charge that they were practising medicine without a license. The saving clause, it was claimed, would not protect them. One of these cases has been in the courts continuously since 1911.

In 1914 a bill intended to give Christian Scientists the consideration which the legislature of 1907 intended they should have, was passed by both branches, but vetoed by the Governor for reasons best known to him, but not made plain in his veto message. Still believing that they were entitled to a saving clause, the Christian Scientists caused the Thorn bill to be introduced in the 1915 legislature. This bill provides that nothing in the medical practice act shall be construed to affect "the practice of Christian Science for the relief of the sick or suffering, provided that no drugs or other material remedies are employed, and provided further that no quarantine or sanitary regulations are violated."

Now, if Christian Science were the practice of medicine, Christian Scientists would be only too glad to submit to medical regulations and control; but *The Sun*, and many others none the less sincere, seem not to understand that Christian Science and *materia medica* are opposites. One is wholly spiritual, the other wholly material; one depends upon the power of God to heal the sick, the other upon drugs, surgery, and kindred treatment. Why contend that all who profess to relieve human suffering should be compelled by law to submit to medical regulation? Why contend that medicine offers the only way by which one can find relief, when history shows that the one who practised the only infallible system of healing known to mankind employed no medicine? Furthermore, Christ Jesus taught others to heal by the same method. Gibbon records that for three hundred years Christian healing continued, and that the art then seems to have been lost.

Christian healing was certainly based on a demonstrable Principle, and it was this divine Principle which Mrs. Eddy claims to have discovered and explained to the world in her book, "Science and Health with Key to the Scriptures." Through the study of the Scriptures in the light which this book throws upon them, thousands are daily being healed of mental, moral, and physical deformities generally believed to be incurable.

Medicine does not enter into the practice of Christian Science, and if Christian Scientists were compelled to take a medical examination, they would forthwith have to unlearn what they had learned about medicine, in order to fit themselves to practise Christian Science. The absurdity of such a requirement would be immediately apparent, if an attempt were made to compel medical students to become Christian Scientists before they should be permitted to practise their profession. Many medical students who are members of other religious denominations would seriously object to such an arrangement, and justly.

If Jesus and his disciples received compensation for their services, why all this objection to the Christian Scientists receiving it? Is not the workman worthy of his hire? I doubt if those who are healed by Christian Science could be persuaded to withhold compensation, any more than the grateful patient of the conscientious physician could be persuaded to withhold a similar expression of his gratitude. However, Christian Scientists are ready to work "without remuneration" whenever the physicians are ready to work without it.

Much has been said of the great sanitary work that has been done in Panama. It should not be forgotten, however, that when Mr. Taft was President, he issued a special executive order recognizing the right of Christian Scientists to practise in the Canal Zone. Diagnosis may be an effective way to detect disease, but what the public is more interested in is how to get well. Christian Scientists do not pretend to be medical diagnosticians; nevertheless, there are no records in the Canal Zone or elsewhere which show that Christian Science treatment fails to cope as successfully with diseases of all kinds, at least as efficaciously, as other systems.

Christian Scientists are not at war with the medical profession. They have the deepest regard for the conscientious physician. They honor his unselfish labors for human betterment. Nevertheless, Christian Scientists fail to see where they lack consideration for the medical profession merely because they choose to turn to a system which in their personal experience they have found more efficacious than medicine. Sentiment should hardly be permitted to interfere with progress.

✧

[Ezra W. Palmer in *Alamosa* (Col.) *Courier*]

An evangelist in your city has been making persistent attacks on Christian Science, apparently with the intention of creating in the minds of the public a feeling averse to this church. To attack, pervert, and abuse the religious convictions of other Christians is hardly a recommendation for a religious leader who comes presumably to upbuild the kingdom of Christ Jesus on earth. In fact, a device well known among disputants is to attack another vigorously if your own case is weak. Christian Scientists have no occasion for attacking and criticizing other denominations. They can consistently point to the growth and progress of Christian Science as demonstrable evidence that if the true idea of God is presented to the people, they will rally to its support, and this without railing against the religious views of others. "And I, if I be lifted up from the earth," said Jesus, "will draw all men unto me," showing that divine Love when trusted is sufficient for all the needs of humanity.

In attempting to justify his attacks on Christian Science, this evangelist is reported to have declared that "Christian Science is not a Christian denomination." It would be interesting to know by what authority this critic thus reads Christian Scientists out of the Christian fellowship. Does he do this according to the standards of his particular creed, or by authority of the Founder of Christianity? Jesus provided a test of Christianity when he said, "By their fruits ye shall know them." Christian Scientists are willing to be judged by this test, since they have in their own lives proved that God is able here and now to heal all manner of disease and destroy all forms of sin. A classification of Christians on any other basis than that of results is wholly artificial and without Scriptural authority.

The critic did not hesitate to cast aspersions upon the Discoverer and Founder of Christian Science, Mrs. Eddy. Fair-minded people cannot agree that difference of views on religion constitute a reason for abuse or ridicule. This critic indulged this propensity of personal abuse frequently during his stay in your city. Mrs. Eddy's place in history, her blameless life, her remarkable achievements for the uplift of

Digitized by Google

humanity, are too well known and too strongly supported by enduring benefits to mankind to be set aside by partizan attacks. The constructiveness of good works, not the destructiveness of evil, marked her career, a standard of life and character her critics might ponder upon and emulate with profit.

❖

[Henry Deutsch in *Proctor* (Minn.) *Journal*]

A discussion of Christian Science necessarily involves going to the original sources of information and studying them in the light of the interpretation thereof prescribed by the Discoverer and Founder, Mrs. Eddy. Therefore the writings of Mrs. Eddy must be interpreted spiritually, as also she insists must be the Bible; and while logically the premises established by Mrs. Eddy can be followed to a conclusion that is beyond cavil and cannot be disputed, yet Christian Science must be discerned by spiritual sense and not merely through intellectual apprehension. Mrs. Eddy has defined Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

The premise of Christian Science is that God is Spirit, and the creator of all; that He is Love, omnipotent, omniscient, and omnipresent. Therefore His creation must be spiritual and not material. Further, by reason of His omnipotence there can be no power opposed to Him; by reason of His omniscience He is the only real intelligence and knows all; and by reason of His omnipresence He is infinite and fills all space, therefore there is no room for any other presence, power, or intelligence.

This is also the doctrine of all other religious sects and creeds, the distinction being that Mrs. Eddy insists upon logical conclusions from these premises, and that those conclusions can be realized in daily practical experience. It follows that if "in him [God] we live, and move, and have our being," logically, when man reaches the right understanding of God and his relationship to Him and actually dwells "in the secret place of the most High," he becomes free of the discords of life,—sin, sickness, disease, and death,—and attains to the real freedom of the son of God. "Ye shall know the truth, and the truth shall make you free." Again, "Beloved, now are we the sons of God."

Christian Science has withstood for the whole of its existence of a half-century a volume of ridicule, criticism, attack, antagonism, hostility, and persecution that is paralleled only in the history of early Christianity, and like it has thrived thereon and stood unshaken, a beacon-light and a haven of rest and refuge to thousands upon thousands, who have found in its statement and practice the rest, peace, and comfort which was foretold by the Master in that beautiful promise, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

The Master never theorized about his religion or doctrine. He demonstrated the correctness of it by the proof, and that proof was always in the form of the healing, so-called miracles, or, in other words, those demonstrations of divine power which surpassed human experience. Likewise, Christian Science is not a matter for argument or controversy, but of proof by test. Were it simply a question for discussion and debate, or the exposition of a new doctrine to be analyzed and compared with those other three hundred or more sects of Christianity, it would long since have lost its force and strength and have been relegated in its proper category with the others. Instead, the fact that it is pressing steadily onward and constantly enrolling within its ranks hundreds and thousands who have been unable to find that for which they sought in other systems of religion and have found their appeal answered in it, and the fact that it is proving the promises of the Master in just the manner that he signified they should be fulfilled, indicates that it is indeed the revival and restoration of the primitive Christianity taught by Jesus, which fulfilled its claims of divine mission by the proof in "signs following."

Christian Science is neither seeking nor soliciting recognition from the mere standpoint of dialectics or intellectual analysis. It says to all, "Ho, every one that thirsteth, come ye to the waters," and it proves that its teachings are indeed the "water of life" by demonstrating their results to all who earnestly and conscientiously imbibe its fundamental teachings and practise its rules.

It would be just as sensible to study Christian Science and the life of its Leader, Mrs. Eddy, from the works of those who have written simply for the purpose of tearing down and condemning, as it would be to study the Bible from the standpoint of Ingersoll, Paine, and the other agnostics and unbelievers. The full statement of the Principle and rules of Christian Science is contained in the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and in other works by the same author. In "The Life of Mary Baker Eddy" by Sibyl Wilbur, is found a correct biographical statement of one who has been acknowledged by the highest authorities as the most wonderful woman of this age, if not in all history.

The question for each person to determine is, whether he desires to receive the benefits from Christian Science which he can find manifested in the lives and experiences of any number of his best neighbors and friends and in thousands upon thousands of people all over the civilized world, or whether he simply desires to indulge in the questionable intellectual recreation of finding something to criticize as an opportunity for exploiting a self-cherished opinion of his own wisdom. To the former, Christian Science holds out the hope of promises fulfilled in the salvation from pain, suffering, disease, and discord of every nature, the redemption from sin, and that ultimate regeneration which makes for oneness with the Father and His Son, Jesus the Christ.

With the latter class Christian Science is not concerned, except in the sense of a great compassion and pity that they should willingly shut themselves off from the light and classify themselves with those of whom the Master said, "This people's heart is waxed gross, and their ears are dull of hearing, and their eyes have they closed; lest at any time they should see with their eyes, and hear with their ears, and should understand with their heart, and should be converted, and I should heal them."

[Written for the *Sentinel*]

Gratitude

LOUISE ELIZABETH LITZSINGER

For Truth that has dawned upon error's long night,
O'erspanning the cloud with its rainbow of light;
For Love ever present, dispelling the gloom,
Transforming earth's drought into freshness and bloom;
The balm of the healing Christ ever at hand,
Supply all-sufficient for daily demand;
For hope growing brighter, calm trust that sustains;
For strength in the conflict, sweet peace which remains;
For loved ones now walking this same narrow way,
Whose fellowship cheers in the heat of the day;—
For all the sweet joys which my footsteps attend,
I thank Thee, dear Father, redeemer and friend.

Editorial

Uncompromised Truth

CHRISTIAN SCIENTISTS, in their endeavor to present the teachings of their religion in a way which will not too violently conflict with the views of those with whom they may be talking, are sometimes unconsciously under the temptation to color their statements or modify their practices to suit the previous concepts of their auditors. They are quite unaware that in so doing they are making a concession from the absolute line of Christian Science, a temptation they would do well to resist, even as Mrs. Eddy resisted a similar suggestion at the time she was writing Science and Health. She knew the truth she had discovered involved too radical a departure from the dicta of theology and *materia medica* to meet with ready acceptance from their exponents, but not even to enlist their interest would she or could she concede an iōta of what she had tested and found true. Hence her frank statement (Pref., p. x), "The author has not compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth."

In our efforts to overcome this temptation to compromise the truth, should it beset us, we will be helped if we remember that Christian Science is an exact science, a science which proceeds from divine Principle and therefore must be expressed in words and deeds which are in harmony with this Principle. This does not mean that we should talk of Christian Science in terms which are beyond the comprehension of those whom we are addressing, but rather that we should in many cases refrain from making explanations of Christian Science that we can readily see will be misunderstood.

When Jesus told his disciples it was expedient for them that he should go away, he also told them, "I have yet many things to say unto you, but ye cannot bear them now." He preferred to say less than he otherwise might have to these faithful followers, rather than to tell them something which they could not understand at all or which they would have misunderstood. Certainly such a course was fairer to them and to himself than to have "compromised conscience to suit the general drift of thought," and to have left them with the belief that his teachings were other than they were.

No doubt there are many today who would call themselves Christian Scientists if they might be permitted to alter the teachings of this religion to conform to their opinion of what these should be; but to give way to their desires would not make Christian Scientists of them, nor would it bring the world nearer to salvation. If the world's opinion is that Christian Scientists are narrow because they conform strictly to the rules of what they have proved to be an exact science, it is much better for all concerned to let this opinion prevail, at least temporarily, rather than to adulterate Christian Science by consenting to a misstatement of it.

We may set it down as a fair inference that where concessions of this kind are sought, it is because the whole truth is unpalatable. If we are Christian Scientists in deed as well as in name, we will have left behind us forever our long-cherished beliefs in matter and all that pertains to it, because we have proved for ourselves that "there is no life, truth, intelligence, nor substance" (Science and Health, p. 468) in what we so long believed had power to bring upon us the so-called ills to which mortals think themselves victims. That is where the crucial struggle comes, and until we are ready to recognize these beliefs for the delusions they are and treat them accordingly, we cannot hope to progress far in our endeavor for the kingdom of God.

There can be no compromise with error, no mingling of the spiritual and the material. We need not look for physical relief while we hold to the practitioner with one hand and the pills and powders of *materia medica* with the other, any more than we can hope to gain salvation by outward profession and an inward clinging to "secret faults." We are bidden to love God with all—not a part—of our heart, mind, and strength, and we are not obedient to this, are not true Christian Scientists, until we are ready, as Mrs. Eddy tells us (Science and Health, p. 141), "to set aside even the most cherished beliefs and practices, to leave all for Christ." Thus only may we claim the Master's promise: "If any man serve me, him will my Father honor."

ARCHIBALD MCLELLAN.

"A thousand years"

THROUGHOUT the Scriptures the phrase "a thousand years" is many times used symbolically, sometimes to contrast the mortal sense of time with the spiritual idea of eternity. Thus does the psalmist say of the Almighty, "A thousand years in thy sight are but as yesterday when it is past;" then, after some mournful reflections upon the briefness and uncertainty of mortal experience, he prays, "So teach us to number our days, that we may apply our hearts unto wisdom."

Those who study physiology in the effort to become better acquainted with man, soon learn that a thousand years of mortal history has made practically no change in the corporeal structure of the race; indeed what change there is, indicates decadence rather than development. It is admitted by students of biology that the eye and the ear of the civilized man are inferior to those of the savage, to say nothing of the physical body in other respects, and that on the animal plane men have less endurance, strength, and agility than many four-footed creatures. From the view-point of materiality we may well ask with Mrs. Eddy, "Of what avail is it to investigate what is miscalled material life, which ends, even as it begins, in nameless nothingness?" (Science and Health, p. 550.)

Christian Science, however, neither begins nor ends with a negative view of things, whatever may be supposed by ill-informed critics of its teachings. It goes at once to the vital truth that one day of actual spiritual experience counts for more than an ordinary lifetime, thus holding by the Scripture declaration that one day "with the Lord" is "as a thousand years." There is nothing more certain than that many days and many years are wasted because men do not see that they must work with God in order to accomplish anything of value to themselves or to humanity. This does not mean that one is to do his work with the thought of pleasing a deity known to him only through creed and dogma, but that he should realize in all his activities the presence and power of the Mind that governs the entire universe.

In Revelation we read of a church, that of Sardis, which had a goodly name among men, but which, judged by spiritual sense, was dead, and the sentence against it was this: "I have not found thy works perfect before God." Could such a church have a history of a thousand years? No, for it requires true living and true activity to stem the tides of mortal sensualism and rise above them as did the ark above the deluge. It matters little to individuals, churches, or nations that they have name and fame among men, if their works are not "perfect before God," for He is the real arbiter and His decrees cannot forever be disregarded. Christ Jesus commanded all his followers to "watch," and the charge against Sardis was that it had not been watchful; but even with the solemn warning of impending doom there came a glorious promise to those who had "not defiled their garments."

Digitized by Google

Two thousand years have gone by since St. Peter wrote his remarkable words respecting the significance of one day "with the Lord," and while we may ponder them deeply, it is not for us to pass judgment upon those who have lived and wrought in the intervening centuries. It does, however, most deeply concern us to measure our own achievements each day by the divine standard of perfection, ever remembering that "with God nothing shall be impossible." Whatever our aim, whether it be the overcoming of disease or sin, or the advance of the race toward righteousness, peace, and prosperity, we shall do well to remember that although a thousand years of human theories and material experiments accomplish nothing in the way of real progress, yet, as we are assured on page 504 of Science and Health, "the rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously."

Each man's work is to be tried as by fire, St. Paul tells us; therefore we must make the moments count, so that the days shall each be marked by distinct spiritual victories, which can never be wrested from us because they are wrought in God and have their place in the realm of Truth and Love.

ANNIE M. KNOTT.

Love's Protest

WHO has not felt a shuddering recoil upon discovering that the heart of a rare, sweet rose has become the banquet hall of a loathsome worm,—that into its perfumed chambers has come this hideously stupid creature, bent solely upon the satisfaction of a grossness that with consuming leisure enters the matchless halls of a palace of purity, and leaves them reeking with foulness and decay. The pitiful helplessness of the exquisite blossom thus invaded, and the blind indifference to everything save its maw which marks the gorging beast, impel one to visit swift vengeance upon the intruder and to turn away with mingled disgust and sorrow of heart.

The incongruity of such a fact, its assault upon every sense of fitness and of right, provokes instant and abiding protest, and one pronounces anathema upon the situation with a kind of despairing gusto. It is all so outrageously wrong,—he knows that; and yet he knows he has but touched a fact which is coextensive with physical nature, and as seemingly ineradicable as instinct. What can a man do to right these things that make his heart ache every hour of the day? The query is deep, and for the many quite unanswerable, and yet all know that the wrong has no right to be, and that in God's kingdom, in that ideal which at their best all recognize, it cannot be.

But if one is thus shocked and saddened over the tragedy disclosed in the heart of a flower, who can describe the intensity of one's feeling when he finds a kindred desolation in the heart, the inner thought and habit of, perchance, a dearly loved friend or brother? Once an aspiring man was thus unexpectedly called to enter the secret place of an individual life of which he had thought as approaching the ideal. He knew abundantly that this friend expressed the noblest sentiments, that he was altogether winsome in bearing and address, given to the constant doing of the most kindly, most unselfish deeds, a lover of the artistic and the beautiful, spontaneous in his generosity and goodness, faithful in his friendships, respected, trusted, and beloved as are the few. Yet there was found in the "holy of holies" of this life, a fleshly indulgence that has ever brought degradation and death to the home and to the finer instincts of human sense. He looked into what he had thought of as a temple of Truth, only to find therein a slow-feeding monster of falsity, and when he turned away it was with a grief too deep for utterance.

It is after such an experience that one begins to pray with the psalmist as never before, "Plead my cause, O Lord, with them that strive with me: fight against them that fight against me . . . rescue my soul from their destructions, my darling from the lions." Christian Science identifies this protest, this appealing outcry of the higher nature against the base brutalities of material sense, with the reappearing of man. It is the glowing insurgency of the Christ-idea in human consciousness, and it speaks for the possibility of human redemption. It is the truer self wrestling in every man, as it did in Jacob, for the overcoming of all that is ungodlike and untrue.

It was rightly foresaid of the Master that he was "a man of sorrows, and acquainted with grief," and this is surely explained in part when we remember that he came to his own, to the chosen people of God, to find their heritage of Truth and Love a mockery of desolation. And yet, knowing the falsity of Satan, of all evil, the Master foresaw its overthrow. To the Magdalen he brought Love's forgivingly redemptive word, and the fair fields of her nature, which had been trampled upon by thieves, were made sweet and clean; and watered with the tears of her contrition, they again blossomed as the rose. The "light of the world" came to her repentant heart, and it dispelled a dreadful darkness.

There is "none other name;" this dawning of Truth is the only hope for humanity, and this saving word is again being preached and proved true in Christian Science.

JOHN B. WILLIS.

"Well done"

IT is with sincere regret that the Board of Directors of The Mother Church comply with the request made by Mr. McKenzie in the following letter, and they wish to avail themselves of the opportunity it affords to express publicly their appreciation of his long and efficient service on the board of lectureship. Mr. McKenzie's service has continued from the inception of the lecture work in 1898, he being one of the five men first appointed to the board, as it appears in the February, 1898, *Journal*. The letter follows.

To The Christian Science Board of Directors:—

The demands of my work in connection with The Christian Science Publishing Society make it increasingly difficult to meet the calls that come to me as a lecturer. So, to be freed from this service, I ask that I be not reelected as a member of the board of lectureship; and I should be glad if a notice were given to the field, that correspondence in regard to lectures would no longer come to me.

I ask release from this work of the platform regretfully, for it has been sustained by the friendly kindness and good will of the churches, for which I shall remain grateful.

WILLIAM P. MCKENZIE.

Among the Churches

Current Notes

PHILADELPHIA, PA.—When Mary Baker Eddy passed away there was much speculation as to the future of the church which she founded. The passing of the Founder of Christian Science was viewed as so irreparable a loss to the denomination that it was believed its congregational bodies would show a lessened rate of growth, at least for the years immediately following. But a continuous development of the Christian Science organization has marked each succeeding year, and today there are more followers of Mrs. Eddy's teachings in Philadelphia than ever before.

Outside of First Church, at Fortieth and Walnut streets,

Digitized by Google

the congregations worship in rented halls and auditoriums, but plans are being prepared for building on the lot in Germantown which Second Church of Christ, Scientist, purchased last year. The one religious edifice which they maintain, however, speaks for the prosperity of its congregation as well as for the local advancement of this religious body. Only a few years ago First Church was housed in the old Beth Eden church at Broad and Spruce streets, whence it had removed from the old Tabernacle church property which formerly stood on Chestnut street above Eighteenth, on the site which the Belgravia apartments now occupy. Before that time and within recent memory, the earlier and smaller congregations were wont to assemble on Sundays at the Mercantile Library Building on Tenth street.

The success of First Church has served to extend Mrs. Eddy's teachings. Within two years after its establishment, the second local congregation was formed; a third church came into existence last fall, and the members are now considering the forming of a fourth congregation. All told there are probably from four to five thousand followers of Christian Science now in Philadelphia, although it is difficult to fix the exact number. Whatever the appeal this teaching makes to its followers, whether it be based on the reliance upon faith and the cultivation of the hope of mankind in the mercy of God, whether part of it rests upon the democracy of its church gatherings and the semi-Quaker atmosphere which surrounds parts of its services and ritual, the local congregations have shown a continuous growth in a period when some of the older denominations have complained of the difficulty of obtaining new members.—*The Evening Bulletin.*

CHICAGO, ILL.—Fifteenth Church of Christ, Scientist, has signed a contract for the purchase of a lot 100 by 189 feet, with residence thereon, on the northeast corner of Central avenue and Fulton street, Austin, for the purchase price of twelve thousand five hundred dollars. Services are at present held in the Masonic Temple of Austin, which has one of the largest auditoriums of any church or hall in this vicinity, if not the largest. Fifteenth Church is, however, rapidly outgrowing its accommodations, and so it was deemed wise to prepare for a larger home of its own.—*Correspondence.*

The Lectures

Sing Sing Prison, Ossining, N. Y.

Since May 11, 1913, Christian Science services have been held in Sing Sing prison, Ossining, N. Y., every week, under the auspices of Second Church of Christ, Scientist, New York city. Much Christian Science literature has been distributed to the inmates, with the result that a great many cases of physical and moral healing have taken place. So much genuine interest in Christian Science has been expressed by the men, that a lecture on the subject was delivered by Virgil O. Strickler on Dec. 27, 1914. The speaker was introduced by Charles E. von Heitman of New York city, who said:—

The object of our gathering here this morning is to hear a lecture on Christian Science, the purpose of which is to give us a better understanding of the fatherhood of God and the brotherhood of man. That Christian Science is succeeding in its purpose of making clear to mankind the great truths of the Bible, is evidenced by the fact that throughout the world today thousands of intelligent, dependable people are publicly acknowledging the benefits they have received through it. I am going to avail myself of this opportunity to say that I know from my own experience that Christian Science heals the sick, and restores hope and happiness here and now to any one who will earnestly study and practise its teachings.

It has been wisely said that the point or place at which we find ourselves is of little importance compared to the direction in which we are going, and we all know that if we follow the dictates of our highest sense of good, nothing can by any means divert us from the right course. It is a great pleasure to be present at this lecture, and I wish to thank the authorities for the privilege of holding it.—*Correspondence.*

❖

Middletown, Conn.

A very attentive and interested audience listened to a lecture on Christian Science by Bicknell Young at the Middlesex Theater. The lecturer was introduced by the Hon. Samuel Russell, Jr., a member of the Governor's staff, who said in part:—

The Middletown Christian Science Society has invited you here this evening to hear an address on a religious subject which for the past half-century has been discussed, criticized, believed in, and disbelieved in, perhaps more than any other Christian faith. While Christian Science has been scoffed at by many, it has gradually and steadily grown, until now it extends to nearly every part of the globe. Considering all the opposition which this religion has had, it is marvelous to see how its advocates are still moving onward, giving health and strength, in their quiet and kindly way, to mankind in general.—*Correspondence.*

❖

New York, N. Y.

Col. William E. Fell lectured twice on Christian Science in Fifth Church of Christ, Scientist, New York. At the first lecture he was introduced by Edmund F. Burton, who said:—

In one of his parables Jesus said, "The kingdom of heaven is like to a grain of mustard seed, which a man took, and sowed in his field: which indeed is the least of all seeds: but when it is grown, it is the greatest among herbs, and becometh a tree, so that the birds of the air come and lodge in the branches thereof."

Forty-nine years ago, from a verse in the gospel of Matthew, there fell into the thought of a frail woman in New England an idea. The ground was good ground, having been prepared by years of looking and listening to God; and the seed was endowed with the vitality of eternal life. The first offshoot was the instantaneous restoration to health of the woman, who was suffering from what had been regarded as a fatal injury. The later growth from this planting has proved to be a tree whose leaves are for "the healing of the nations," for since that time hundreds of thousands of men, women, and children in all parts of the world have been healed in body, mind, and estate through its fruits. This woman was Mrs. Eddy. The seed was the practical understanding that the life of man is immortal, since man's life is God, eternal Life. The tree is Christian Science, the gospel of salvation and healing here and now.

At the second lecture, Warren C. Klein in his introduction said:—

The world may never record what is said here, but it can never forget what Christian Science has done and is doing in our age. You will agree that this is the day of efficiency in all things. Only those discoveries which are resultful, practical, and good are given a permanent place in the economy of man.

The practical good that this Science of Christianity is achieving is evidenced in healing, and in the irrefutable

Digitized by Google

abolition of sin, sickness, fear, bondage of every name and nature, from the experience of its sincere students. If you were to ask any of them how this emancipation is being accomplished, they would undoubtedly say that they are inheriting it as a direct result of a demonstrable understanding of the teachings of the Master with respect to God, man, the incorporeal Christ, and the universe, which Christian Science is imparting to them. They are experiencing now with a measure of joy the fulfilment of the Master's great declaration, "Ye shall know the truth, and the truth shall make you free." Among the manifold blessings which have come to them, one of the greatest is the understanding of God as Father-Mother. Men have been accustomed to regard God as a mighty potentate of infinite power,—stern, unapproachable, and far distant; but through the teachings of Christian Science they are learning that God is divine, ever present Mind, who is Love,—tender, solicitous for and careful of His people. It would seem natural that this happier and more constructive concept of the creator as all-powerful Truth and all-loving Love should come through a pure woman's intuition, and this is the way it did come.—*Correspondence.*

❖

Winona, Minn.

Virgil O. Strickler, who lectured on Christian Science, was introduced by C. M. Morse, who said:—

Because I am not a member of the Christian Science church I consider it a particular honor to be asked to introduce the lecturer this evening. The mind of man is becoming more and more willing to welcome the truth, from whatever source it may come, and in a like frame of mind we are glad to offer our own particular creed of belief for the consideration of our brother, with the hope that he may find in it that which will be of help and comfort to him. That many have found such succor in Christian Science is evidenced by the large and earnest membership in its churches. Any agency that adds to the peace and happiness of mankind deserves every man's commendation, and to listen to an able exposition of this agency should be a pleasure and a privilege.—*Correspondence.*

Testimonies of Healing

I first heard of Christian Science several years ago, when I was given a copy of the *Sentinel* by a friend. Every word that I read seemed good and true, and as I had greatly desired for several years to find a true religion, I felt that here was something which seemed more substantial and better than I had ever heard of before. In reading the testimonies I had a deep longing to be able to understand this new religion. I decided to pray to God to show me, or prove to me in some way, that it was a right religion, and that I might investigate it further; but more than a year passed and my prayer had not been answered. I had almost given up hope of any more knowledge of Christian Science, when on Feb. 2, 1911, one of my children, a boy of eleven years, was stricken with convulsions just as he stepped out of bed to get ready for school.

The child had retired the night before in good health, and this terrible attack could not be accounted for. Two doctors were immediately called in, and they did all they could. The child remained in this state for about two hours, and the doctors told us that there was nothing to do, as his tongue was paralyzed and he could not swallow the medicine, also that he was unconscious and would pass away in a little while. When I heard this, I told my daughter to telephone to a Christian Science friend, the one who had given me the *Sentinel* to read. She came immediately. The boy was still in convulsions, but one of the doctors administered an anesthetic and his body soon became still, like death. I asked a doctor, "Must my child die?" He answered with tears in his eyes, "Yes, and it really will be better, for if he lives he will be an invalid." I then went out to my friend and asked her to come in and look at my boy, saying that he would soon pass away. She said that she would rather not go into the room, but that she would try to realize for him the truth of being. I did not understand this, but left her to herself. I went back to the boy, and with friends and other members of the family was awaiting the end, when to our surprise the little fellow opened his eyes. He seemed bright and was without pain, and he raised his left hand and motioned to me to come close to him. He was perfectly conscious, but could not speak a word, and his right arm and side were paralyzed. My friend asked me if I wanted a Christian Science practitioner, for if I did she would get one, but I told her I knew my husband would not consent.

The child remained in the care of one of the doctors for four weeks, and at the end of that time we were much discouraged, and told the doctor so. He summoned another physician and held a consultation. We were then told that the boy was suffering from infantile paralysis, and it would be at least two years before he would be any better; that he would probably not have any more schooling, and that there was nothing to do but wait and let time bring the healing. The physicians were discouraged, for I knew that the help we in my mind had received came through the faithful prayers of my Christian Science friend, and I asked my husband if I could have a talk with a practitioner. He was very kind about it, saying that I might if I believed anything could be done. The following day I had an appointment with a Christian Science practitioner. I asked if she could do anything for my child, and she replied, "Not I, but God can." Her faith in God seemed most beautiful to me. Everything she said about God I believed and accepted. I told her, however, that I did not altogether understand, but would have all to God, and go home and await results.

That night I went peacefully to bed, as I had not done for four long weeks. The next morning, while I was preparing breakfast, he got up and dressed himself and remained up all day. On the third day I notified the practitioner that he was healed. He has remained in perfect health ever since, and has attended school every day. He has finished the grade school and now goes to high school. My heart is full of gratitude to God for this proof of His love and power; it convinced me that Christian Science is the truth. I am truly thankful for the many blessings that have come to me and mine since that time, and that I have learned to trust God with all my problems. It gives me great joy to spread the glad tidings of what Christian Science can do, if it is rightly applied and understood.

CELIA ISAACSON, Mattoon, Ill.

✧

It was not because of physical healing that I first became interested in Christian Science, but a few of its fundamental teachings were told me, and I was immediately convinced that it was the truth, and that one only had to apply it to everyday experiences in order to prove all that was claimed for it. This was followed by the reading of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy; and no book I had ever read brought such satisfaction. Here was irresistible logic, and the much sought for solution of the origin of evil.

Among many experiences of help obtained through a knowledge of Christian Science let me relate one. During an epidemic in Heidelberg, Germany, where I was then living, I was suddenly seized with all the symptoms of the illness. My position was a difficult one, for a conflict arose within me between the desire on one hand to obey the regulations which would necessitate my being isolated, and on the other side my firm conviction that I could be healed rapidly without submitting to a lengthy quarantine. A telegram on my behalf was sent to a Christian Science practitioner in London, who began treatment directly. After three days the great fear left me, and I recovered very quickly. I understood that the laws of infection had no foundation, as they were no part of God's government. During the four days spent apart, no one of the household but a Christian Science friend knew anything of my suffering. This was a wonderful example of the power of Truth; indeed, we can always be sure that if there are still difficulties in our lives and surroundings to be overcome, and subtle problems to be solved, it is never Science which is at fault; Principle is all-sufficient, and every error will in time be rooted up.

Words seem quite inadequate to express one's gratitude to God for this revelation of Truth, this present-day understanding of Christianity. Only a consecrated life can testify to our thankfulness. What must have been the courage of the brave pioneer, Mrs. Eddy,—what purity and selfless devotion were hers! May we be steadfast in keeping the faith and upholding the cause as she has taught us.

ANNIE T. HAIG, Cambridge, England

✧

For more than thirty years I have been in the practice of dentistry, and as a consequence I was thoroughly imbued with the potency of material medics. My most intimate friends have always been members of the medical fraternity, and I looked upon Christian Science from that point of view. While I had never given it any serious study, I had thought it might be good perhaps for those who thought themselves ill or for nervous people.

On Aug. 12th, 1911, I was stricken with what was called

Digitized by Google

the physicians "acute gastritis," and after suffering intense pain for several days, I became jaundiced. I was constantly under treatment by different physicians, most of whom were personal friends and rated as the best in their different communities; but I got worse with recurring acute attacks, which left me weaker every time. I was put on the strictest diet, and the slightest deviation from it would cause one of those painful attacks. As a last resort I left Alaska and started for California, my physicians advising change of climate and consultation with specialists in some of the larger centers.

I arrived in Los Angeles on the twentieth of November, after a week of pain under medical treatment in Seattle. I seemed to gain a little for a very short time, then the attacks returned. My physicians advised an operation, having diagnosed my case as gall-stones, and at last I reluctantly consented to have one performed. I was, however, told I should have to wait until I was strong enough to undergo the ordeal. While in this condition I was advised by a friend, a Christian Scientist, to allow her to send up a practitioner who had helped her, and I gave my consent, for my physician had refused to call any more, saying he could do nothing for me except administer an opiate, that being the only thing which would relieve me of the terrible pain.

Accordingly, on Feb. 12, 1912, at three o'clock in the afternoon, the practitioner called. I was lying on my bed almost helpless. After the practitioner had been told the history of my case, he gave me a treatment, then he bade me think of my true selfhood as God's perfect man, and he also advised me to get up and eat a hearty dinner. I knew right then that I could, and I did, and from that time to this I have eaten anything I wanted. I have not had a pain or a symptom of the old trouble, and in four months I had more than regained the flesh lost during my illness.

I am told daily that I never looked so like a picture of health as I do now. I have not taken a drop of medicine of any kind since I turned to Christian Science, nor has my wife. Through my healing there have been many inquiries by my friends and patients, many of whom were familiar with my condition before I left for California, and I have been told by dozens of them that they never expected to see me alive again after my departure. I have to tell the story of my healing almost daily, and in several of the outlying towns and villages which I regularly visit we have started little societies that meet to go over the Lesson-Sermon weekly and read the authorized literature.

While I am thankful for this healing, it is but a trifle as compared to the spiritual benefit and uplift I have had from the study and application of Christian Science, so far as I can understand it. The course of my whole life has been changed. Through the understanding I am gaining of man as the image and likeness of God, and of the divine Principle which governs all, I am striving daily to assimilate more of the divine character. Many old habits have been put off. Among other things the desire for smoking has been entirely overcome, and although a heavy smoker for over twenty-five years I have not used tobacco in any form since May, 1912, and have absolutely no wish to do so. My desire now is to grow in a knowledge of God which will enable me to help others as I have been helped.

LOUIS S. KELLER, Skagway, Alaska.

❖

Christian Science has done so much for me that I wish to tell something of the good I have received through its teaching. Early in the fall of 1911 I suffered from what appeared to be a general breakdown. I was examined by two physicians, who agreed that it would be advisable for me to take the tubercular cure. I began this treatment at once, and seemed to improve a little at first. It was not long, however, before I broke down completely with nervous exhaustion, and from that time on I received no help or relief from any material remedies. I was in bed three months during my illness. I suffered so much from nervousness, pain, and lack of sleep, that when Christian Science was recommended to one of the family by an acquaintance, we were glad to try it, although we knew almost nothing about it. We secured the services of a practitioner, and I experienced immediate relief, but my complete healing covered a period of several months.

For fifteen years previous to my illness I had suffered a great deal with my eyes. I was never able to use them in the evening, and could do so very little in the daytime. I invariably sat in the dark at night to avoid the pain occasioned by the light. After I began taking Christian Science treatments and was able to read a little, I put my glasses on, but I found them so uncomfortable that I took them off, and have never put them on since. I cannot express my gratitude for being free from all trouble with my eyes.

I had all my life been closely associated with an orthodox church, and had taught in the Sunday school for a number of years, but for some time before my illness I felt very dissatisfied and longed for a more practical religion. When Christian Science was brought to me and I began to understand its teachings, I realized that my desire had been fulfilled, and since then I have enjoyed better health and greater happiness than I have ever known before. I can but feebly express my thankfulness to God for this truth, and I am most deeply grateful to Mrs. Eddy that she has made it available to us in this age.

LULU MATZENBACH, Petaluma, Cal.

❖

[Translated from the German]

I would add my testimony of gratitude for the blessings which we have received through Christian Science. Though disease was not what led us to find this teaching, we have experienced God's love and mercy in every other way. About a year ago my wife and a friend called upon a Christian Science practitioner, who received them kindly and gave them information on the Christ-healing. I shall never forget the hour when, upon their return, they told me of a loving God who never sends evil or disease upon His children. It was as if a great change had come over us; we felt regenerated, as it were, and turned to God and to Christian Science with all fervor and confidence.

Christian Science has brought a sense of great unity and happiness into our home, and God's love is manifested everywhere in our domestic life as well as in our business dealings. The one thing that makes us feel sorry is that there are so few adherents of this religion in this part of the country, and that it is not possible for us to attend a Christian Science church or a meeting. But the frequent visits of a dear practitioner, who lovingly strengthens our faith and with whom we come together in the spirit of unity, helps us to cling to God and His idea, and results have been apparent in several instances.

On one occasion, one of our children became unable to walk with his shoes on, because of his foot being swollen; and when the swelling extended to the whole leg, we feared a serious condition and applied to the practitioner for help, which was given immediately. On the afternoon of the following day the little fellow was jumping around, and nothing ailed him. We also have a little boy who was afflicted with double hernia since birth, and the dear child wore a truss

Digitized by Google

until he was four years of age. After we became acquainted with Christian Science and understood its teaching that man in the image and likeness of God can only be perfect, also had availed ourselves of a practitioner's assistance, the truss was discarded, and the child is free, as the trouble has not manifested itself again.

Are not these proofs of the power of divine Love for which we owe much gratitude? May the reign of divine Love be established in us! We are deeply grateful to our revered Leader, Mrs. Eddy, for helping mankind to find the right way, and we join the psalmist when he sings: "Bless the Lord, O my soul: and all that is within me, bless his holy name."

FRIEDRICH CHRISTIANSEN, Seth per Tondern, Germany.

In Hebrews we read much about the word faith, but until I was practically forced to accept Christian Science several years ago, for the healing of an inflamed bladder, kidney trouble, fibroid growth, and milk-leg of fourteen years' duration, I realized but little of the true meaning of this word; it was brought to mind by some remarks of a niece five years old. She and her mother were living with her grandmother, a Christian Scientist. While I was suffering "many things of many physicians" and had been confined to my bed for weeks, this little girl came tripping in one day and stood looking at me. Finally she asked why I did not get up. I replied that I could not; but she said I could if I would read Christian Science. Only through this blessed truth as taught in Christian Science do we come to realize why Jesus loved little children and held them up as an example. I thank God now for the lesson of faith, loyalty, love, and purity expressed in those few lisping words spoken twelve years ago. My healing has been very slow, but all the ailments except the milk-leg have vanished, and the condition of the leg is greatly improved. I still have much of self to overcome, but I am more than thankful to divine Love for the knowledge that all things are possible with God.

When I first began to attend the testimony meetings, I always felt sorry to hear those giving their testimonies close with the remark that the physical relief was not to be compared with the spiritual uplift which had come through Christian Science. At that time I did not believe any one could be more thankful for anything than for freedom from physical suffering, but now I know that if I had not had that spiritual uplift I would long ago have fallen under the cross, for times without number it grew heavy. I always found much comfort in reading of other Scientists who had gone some distance ahead, and were calling to those still struggling with some tenacious error to come on, for it was beautiful up where they were now standing. Then I would realize that I needed more faith in God's allness.

It is surely a pleasure to testify to the efficacy of Christian Science. I only pray that I may give out as much as I receive from the testimonies of others. This is the first time I have publicly acknowledged the manifold blessings that have come to me through the applied knowledge of Christian Science. I would say with the apostle, "Let us offer the sacrifice of praise to God continually, that is, the fruit of our lips giving thanks to his name."

I would like to tell of one demonstration which has been a great blessing and lesson to me. I had been struggling with self for some time, trying to overcome resentment, but finally, realizing I was not making any headway, I went to a practitioner for help. I told her my story and thought she was feeling very sorry for me, but finally she asked, "Have you told me all?" I replied that I thought so; and I thought she was about to say I had surely been abused, when to my great surprise she said, "You are not a Christian Scientist." She gave me a treatment and said she would see me the next day. I returned home feeling sure she would not, if she was going to talk to me in that way when I needed sympathy. This was in the morning. The remainder of the day I heard nothing but those words ringing in my ears,—and how they rankled!

Next morning it was the same thing, and I sat down to cry over it; then the thought came that crying was not the scientific way to work out this problem. At the same time I was suffering great pain. Those words repeated themselves again, coming louder than ever: "You are not a Christian Scientist." At last, however, I was awake to the truth, so I turned on the lie, and said from my heart, "Yes, but I can be and will be." Then it grew so light; and oh, the love that I felt for that kind practitioner who wounded only to heal. Needless to say, the pain had disappeared, and I went gratefully on my way to thank the practitioner for telling me the truth.

I am learning to be thankful for all things, and to understand what Jesus meant when he said, "I tell you that, if these should hold their peace, the stones would immediately cry out." My heart goes out with great love for Mrs. Eddy.

PHEBE E. HUNTER, San Francisco, Cal.

For many years I was a miserably unhappy man, owing in great measure to my failure to find in the various denominations that religious comfort for which my soul craved. Like the dove which Noah released from the ark, I could find no sure foundation for the sole of my foot, and being absolutely without hope in the present, and seeing nothing but despair in the future, I sought the agency of liquor as a quick and certain means, as I then believed, of ending my misery in death.

Living such a shocking existence, no one could possibly have needed Christian Science more than I; but notwithstanding this fact, like the Jew "wailing in the wailing place," I fought against it for nine long years. During all this period one of my daughters was a member of the Christian Science church here. Although Christian Science was presented to me quite frequently, and while I was, like Job, continually crying, "Oh that I knew where I might find him!" it was the last thing on earth I deemed essential to stem the tide of my troubles.

On the afternoon of Sunday, March 6, 1910, I left a lovely home for the last time, as I verily believed; but even in this terrible condition of mind the everlasting arms were still beneath me, and they gently drew me back again in the evening of that most momentous day. Next morning brought the dawn of the "red-letter day" of my most turbulent life. It was the end and the beginning; the shadow of death was changed into the morning of light. Starting out as usual to go to my office, I got as far as the hall door, where for a moment I hesitated, again sought my room, and to the members of my family who had assembled there I said: "It is all over. I am ready for Christian Science or anything else. I'm through."

Quickly, like a turning of the hand, I had faced about to walk in the opposite direction, and called upon God. That evening I went to see a practitioner, with the result that for the first time in my life I was overwhelmed with the nearness of divine Love. "Beauty for ashes" was tendered me, with "the oil of joy for mourning," and I left that house, clothed and in my right mind, blessing the practitioner and praising God that at last the light of Christian Science had broken in

Digitized by Google

upon my clouded mind. I was profoundly impressed that in accepting this wonderful teaching I had struck the "vital spark" which kindled the "heavenly flame," and that now the saving truth for which I had been searching ever since I was a boy was in my grasp.

I have been cured of the liquor habit, that most terrible of all afflictions. Christian Science has also enabled me to tone down a hasty temper; to say with a very contrite heart, "Thy will be done;" to love my enemies, and in much humility ask that my debts be forgiven me only as I forgive my debtors, for "Love is reflected in love" (Science and Health, p. 17). It has brought peace to a family in which, before, war seemed a favorite pastime. I am deeply grateful for a clearer understanding of the spiritual sense of Life.

Some time ago I was greatly blessed by two experiences, the first of which was brought about by having portrayed before me a distressingly sad scene of want and woe; and right there I could not refrain from offering up a fervent prayer that some day I might be found worthy enough to visit just such cases as this and minister to their need. Strange as it may appear, the very next day an old and extremely disagreeable ailment seemed to force itself upon me, but I knew that God did not send this error. Then these thoughts came to me: "You want to heal the sick. How can you expect to heal others if you cannot first heal yourself? Here is your opportunity. Begin."

I at once accepted these hints, and frequently during the day, even while I seemed to be laboring under a sense of severe suffering, I declared vehemently the nothingness of sensation in matter and affirmed that God is All-in-all. Like a flash the pain vanished, and the trouble which on previous occasions it had taken weeks to dispel, disappeared next day. I learned from these experiences two great and good truths,—that God is not only omnipotent, but that at the very time when we need Him most, He is omnipresent. With this invincible armor of fact securely buckled on, I know surely that divine Love will never fail. The full realization of the spiritual sense of Life will obliterate all consciousness of the existence of matter, or error, and reveal God's ideal, spiritual man. The pathway to heaven is harmony, and Christ, Truth, is the Wayshower.

Words are always ineffective to express the heart's gratitude, so I am singing my praise to God, and to His servant, the dear woman who opened the seals of the word of Truth for me that I might read and live.

MATTHEW NELSON, Cincinnati, Ohio.

[Written for the *Sentinel*]

Guidance

EDITH L. PERKINS

O GUIDE unfailing, always art Thou here!
Though earth's obscuring mists would intervene,
Through consciousness uplifted Thou art seen,
By Truth revealed in Spirit's atmosphere.
To lives Love-lighted Thou art ever near,
Abiding constantly; we dwell serene
In blessed certainty that naught can screen
Thy presence, which the Christ hath shown so clear.

Father, we thank Thee that where'er we go,
Whether the journey lead by day, by night,
Though steep or rough or smooth the path may show,
When clouds are circling low or lost in light,
Whate'er betide, this truth rejoicing brings,—
We rest within the shadow of Thy wings.

From Our Exchanges

[*The Christian Commonwealth*]

"I know that he shall rise again in the resurrection," says sorrowing Martha. "I am the resurrection," says her Lord. In other words, life in Christ is life ascending to the eternal throne, a rising up and going forward of all that has been precious and helpful in our earthly lot. There is no cessation of life, none whatever; properly speaking, there is no death; there is no suspension or destruction of any good we have ever enjoyed on earth,—there is, maybe, a temporary suspension or interruption of our apprehension of it, but only that we may possess it again on a higher and securer level. Christ bears it upward, as it were, and calls us to follow; or rather, he gently separates us for a while from the object of our regard, that he may purify the relationship from all earthly dross, all admixture of what is selfish and unworthy; and then he bids us rise in him to where it awaits us in the eternal morning, never again to be subject to death, corruption, or decay. Christ thus is himself the resurrection of all the blessing and joy we have ever dreamed of. He leaves nothing precisely as it was, no matter how good or how desirable to our yearning souls. He makes it rise again, gives it back to us, taking nothing from it, nor suffering it in any wise to be diminished, but adding immeasurably to it and rendering it immune to all assaults of evil and pain forevermore.

[Rev. A. T. Bannister, M.A., in *The Christian Commonwealth*]

In the gospels, theology and organization are scarcely to be found. We have there the pure gold of religion alone, with the very minimum of theological or institutional alloy. And to this simplicity of religion we shall perchance return, when the purifying fires of this sorrowful time have had their perfect work. Some, perhaps, there will always be to whom, whether orthodox or heretic, the faith will remain a creed, a doctrine, a dogma, a tangle of history and terminology, of subtleties and reasonings about abstruse theological truth. But to most of us, after the war, it will be first and foremost a direct revelation of present-day human duties, personal, social, and national; an enthusiasm of humanity, permeating the whole of life and dominating every department of it.

This religion is built on a rock; it cares more for duty than for dogma, more for conduct than for creed. It is never bitterly pious, because it looks at things bigly and kindly, and keeps alike the world and the church from narrowing it. To it Catholicism and Protestantism are trifling matters compared with the tremendous fact that God is, and that we may call him our Father. Many even of our Christological controversies become of little more than speculative interest, as against the demonstrable fact that the spirit of Jesus is today at work in the world, that alone saving it from corruption.

[*The Advance*]

The movements of the present day, no less than those of nineteen hundred years ago, testify to the life of God in the world. We are not content to prove that God made the world; it is little matter who made the world if God is not still making it. We deal with processes still in operation.

The channels of truth flow into one, but they have many sources. The Old Testament prepared the world for Christ, and just so surely also did some other systems, imperfect, but noble, that lifted the soul of men upward. The processes continue. Natural science, compelling us to seek unity of design and purpose, forces us to a merciless monotheism, which we must indeed accept, but with love and pity learned

Digitized by Google

from the gospel. Modern humanitarianism that will not consent to count any man hopeless, that pities the criminal and seeks to uplift the fallen, that feels the burden on the back of labor and poverty as its own burden,—this is a part of the message of the gospel.

True religion is gaining ground. It is said that creeds decay, and that venerable institutions pine, but the true church of God, which is larger than any one sect or all sects together, grows with the process of the suns, and evermore shall grow.

[*The Christian Register*]

The great motive for the extension of a religion is not one's convictions, but one's instinct of helpfulness. It is less allied to arguing people into agreement with us than to offering them a neighborly share in what we have found serviceable. The instinct is not one of meddlesome interference with other people's ideas, but of friendly sharing with them of our ideas. There are great areas of human society into which one longs to let a little light, only because it is so plain that they need nothing so much as light. Everything is so shut in that the first thing a visitor in such regions wishes to do is to cut out a vista and open up a horizon. The way people take their pleasures there is most melancholy; their languid absorption in walled-in interests; their pitiful lack of contact with the very things their means command, and with vastly more that money cannot command; their childlike pushing aside of everything disagreeable, and childish delusion that they can mold the world of their own desire, and ignore death, —all this, when we see it, sets us to dreaming how any sort of gospel could possibly penetrate such wildernesses. There is no sunrise, no sunset, no mountain of vision, no valley of hope, no sound of rivers seeking the sea. The justification of speaking of the heathen, and of pagans, is not found in the mere fact that peoples afar off need civilizing and enlightening; it is found much more in the thoroughly pagan character of large sections of people in the most civilized communities. Education does not reach it, nor culture, for in these often are the fastnesses of paganism. The great challenge to religion is that it shall preach to spirits in prison.

[*Northwestern Christian Advocate*]

How many points of opposition would come into apposition if only we could appreciate the other's standpoint. One tells of exuberant religious experiences that resemble a Georgia spring day; while the other, because he lives in the Northland of cold reason, where the sun's congenial rays strike obliquely, stands off and scoffs. There is plenty of room for freedom of thought and expression in the human life without violating truth, if we only gave recognition thereto. Thomas, o'ercast with reason, doubted his Lord's return from the grave; but when he stood face to face with him he exclaimed, "My Lord and my God." A vast amount of criticism and of consequent heart suffering is due directly to misunderstanding, or rather lack of understanding. There would be many more sun-spots in human hearts if we were more willing to give the sun a chance.

[*The Universalist Leader*]

The need of religion was never more felt, never more manifest, in the history of the world, than in this day and generation; the people seem willing to take anything in the form of religion that has even the promise of service or the suggestion of a truth, and will put up with all sorts of eccentricity so they get a fraction of what their hearts and souls crave. And in these existing conditions is the challenge to our church.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING. Printed in Dutch only.
CHRISTIAN SCIENCE: A RELIGION OF PROMISES. By WILLIAM D. MCCRACKAN, M.A. Printed in French and Swedish, but not in English.
CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. By BICKNELL YOUNG. Printed in French and Swedish, but not in English.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, Quarterly, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the Journal.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01501 x. Large type Bible, 7⅝ x 6¼ inches, 1⅝ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 152 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTACTION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated. 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco $1.40; full morocco $2.50; levant $3.50; pocket edition, size 4⅝ x 6⅝, $5.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ My Refuge," 75 cents; "Love," 40 cents; Communion Hymn, "Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8 inch (mount 12 x 16), $1; 12 inch (mount 15 x 20), $2; 16 inch (mount 23 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure post-cards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.35.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

With the completion of the Dalles-Celilo canal, which removes the last barrier to the free navigation of the Columbia river and its tributaries from the Pacific ocean 479 miles inland to Lewiston, Idaho, the people of the Columbia basin have just commemorated the importance of the event in a series of celebrations which are participated in by government and state officials, representatives of commercial, agricultural, and civic organizations, and the citizens of all the communities along the great waterway.

Beginning at Lewiston, Idaho, on the Snake river, on May 3, the official party, on a fleet of steamers, started on a voyage to the mouth of the Columbia at Astoria, Ore., participating in local celebrations at all points, and reached their destination May 8. The formal opening of the Dalles-Celilo canal took place Wednesday, May 5, on the arrival of the party at Big Eddy, Ore., under the auspices of United States government engineers, officials of the northwestern states, and commercial organizations. The importance of good roads was featured in connection with the opening of the canal, and recognition was given to the Pacific, Columbia, central Washington, and central Oregon highways, emphasizing the relation between these routes and the open river.

The watershed of the Columbia river and its tributaries embraces an area of approximately two hundred and fifty thousand square miles in the United States, and an additional fifty thousand in British Columbia, making a territory larger than the German empire. The two most important tributaries of the Columbia in Oregon are the Des Chutes and Willamette rivers. The Willamette drains the valley of that name, a district about the same size as Belgium but having less than one tenth the population of that country. It is rich in undeveloped opportunities. With the completion of the canal the Columbia river and its tributaries will have approximately 2,136 miles of water navigable for river craft, most of which lies in the United States.

From the head of Priest rapids, the present head of navigation on the Columbia, to Arrowhead landing, a distance of 488 miles, there are 255 miles of navigable river, 118 navigable at favorable stages, while only eleven miles are considered unnavigable. The Columbia is navigable for deep-draft, ocean-going vessels as far as Vancouver, Wash., 106 miles from the sea, and for lighter-draft ocean vessels forty miles further. Above Bonneville, Ore., navigation is limited to river steamers of eight-foot draft, and above The Dalles to Priest rapids on the Columbia and Lewiston on the Snake, only light-draft steamers can be used.

Owing to a falling off since Aug. 1 of nearly 30 per cent in shipments of creosote from England and Germany, whence comes all but a small part of the imported oil used by wood preserving plants in this country, American manufacturers have taken steps which it is estimated will increase production of the domestic article by about 25 per cent. The imported oil ordinarily forms about 65 per cent of the total used in the United States, where creosote is considered the most important wood preservative.

In 1893 there were fifteen wood preserving plants in the United States; in 1914 there were one hundred and twenty-two plants of all kinds, one hundred being of the pressure-cylinder type. Ninety-four of these plants last year used more than seventy-nine million gallons of creosote oil, more than twenty-seven million pounds of dry zinc chloride, and nearly two and a half million gallons of other preservatives, such as coal-tar and crude oil, treating a total of nearly one hundred and sixty million cubic feet of timber, an increase of about seven million cubic feet over 1913, and of thirty-five million cubic feet over 1912. The most important consumers are the large plants in which railroad ties are treated. The preservatives materially lengthen the ties' period of service, lessen the labor cost involved by renewal, and decrease the drain upon the forests due to tie-cutting. In Germany and other European countries, practically all cross-ties laid by the railroads are treated with chemicals or preserving oils. In this country, but 30 per cent of the ties purchased by the railroads are subjected to such treatment. The number of poles treated in this country is a very small per cent of the total in use.

Under the auspices of the University of California, with the cooperation of the United States government, Prof. Charles F. Shaw has embarked upon a reconnaissance of all the agricultural land in the state of California. This soil survey of the 158,300 square miles of California land is part of a broad movement undertaken by the university for the benefit of the farmer, the settler, and the land buyer.

Professor Shaw, who completed a similar survey of the soil of Pennsylvania just before going to California, has compiled the results of five years' work in that state in a bulletin of the Pennsylvania State College, describing the study of the soil of an area aggregating forty-five thousand square miles. The surveyors found, among other interesting facts, that there were forty-seven series of soil in the state of Pennsylvania, and that the farmers of the state spent upward of seven million dollars annually for fertilizer, largely without any accurate appreciation of the requirement of their particular soil in the way of fertilization. It was found that widely diverging regions had identical soil, and that while the same soil was highly productive in one region, it was considered unprofitable in another district, the difference being traced to the difference in the crops or the manner of fertilization. By putting this data at the disposal of the farmers, it was found that, with the adoption of new varieties of crops or fertilisers, or different methods of preparing and cultivating the soil, the same profitable results were obtained in one district as in another.

A steel that will neither rust nor tarnish has been discovered, and it is being made commercially in the United States. The loss of steel through rust in this country has been estimated at one million tons a year, valued in the crude, semifinished state at from thirty to forty million dollars. The new stainless steel need not be plated or otherwise coated, and it stays bright under all conditions of weather and usage. For years, scientists have been seeking such a metal for tableware, pocket-knives, watch-cases, for certain parts of typewriters, guns, sewing-machines, automobiles, bicycles, and for countless other uses. Table-knives forged of this metal can be used to cut acid fruits with no fear of stain, and the knife will remain bright without the incessant scouring that is a bugbear to every household.

This metal, according to *The Iron Trade Review*, was developed in the famous Sheffield steel district in England by an investigator who was endeavoring to produce a steel for pump-rods that would resist the attacks of the damp air in English coal mines. The American rights have been acquired by the Firth-Sterling Steel Company, McKeesport, Pa. The steel may be forged and worked like ordinary metal, but it cannot be welded. It is tenacious, with a breaking strength double that of ordinary bridge steel, and it may be hardened or tempered to suit many different purposes.

A concern of New Haven, Conn., has recently taken two forestry contracts of importance. One is for one hundred thousand three year old white pine and red pine transplants for the municipal water department of Fall River, Mass. The trees are to be planted about the city's reservoirs. The other contract is for one hundred and twenty thousand white and red pine transplants, three years old, for the New Haven Water Company, which supplies New Haven's municipal water.

Instances of the tremendous proportions which avoidable inefficiencies and wastes have attained in the industries of today were presented to a group of people who gathered at the Twentieth Century Club of Boston a few days ago to form the possible nucleus of an association which will examine, verify, and attempt to correct such extravagance. It is figured from authentic sources that a total of $105,628,000,000 is wasted annually in the United States because of inefficiency.

The directors of the World's Columbian exposition met at Chicago last week and formally dissolved the corporation. Since it was formed to direct the world's fair of 1893, the board has spent a total of twenty-eight million dollars. The remaining assets, forty-seven thousand dollars, were voted for the purchase of a reproduction of the statue representing the Goddess of Liberty which stood in front of the administration building on the fair grounds.

During the year 1914, 2,801,016 carats of diamonds were produced in the Union of South Africa of a value of £5,487,194. In 1913 the weight was 5,163,546 carats, valued at £11,386,807. The value of the 1914 output was distributed throughout the various provinces of the Union as follows: Transvaal, £1,162,031; Cape, £3,544,072; Free State, £781,091.

Girls who had worked in shops and became servants at the solicitation of the state labor department of New York have proved more satisfactory than girls who have only worked as domestics. The girls carried their shop training into the homes, increasing their efficiency.

Vol. XVII May 29, 1915 No. 39

Man Not Separate From God

WILLIS F. GROSS

According to the teaching of Christian Science the statement "I and my Father are one" had reference to the real man's unity with God. On one occasion Jesus prayed not only for his immediate disciples "but for them also which shall believe on me through their word; that they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us." Jesus understood man's relation to God, and when he prayed for the exemplification of this scientific unity he asked no more than would surely follow if his teachings were understood and put into practice. Mrs. Eddy says (Science and Health, p. 18), "Jesus of Nazareth taught and demonstrated man's oneness with the Father." Even the discoveries of natural science contradict sense-testimony and demonstrate that the material concept of things is far from correct, and humanity has lost nothing by learning that the finite sense of things is not to be depended upon. Christian Science demonstrates the falsity of material theories concerning God, man, and the universe, and the greater good revealed far outweighs that which seems to have been taken away. The mortal sense of man is no more correct than his material belief about God.

One of the fundamental errors of mortal existence is the belief that man has conscious being separate and apart from God; that he possesses a life and an intelligence which are not godlike, and by reason of which he is able to think and act according to his own material inclinations. In harmony with this concept of things is the belief that he exists independently of his creator and revolves in an orbit of his own. A mortal's thought of existence seems so completely separated from God that in some cases he is inclined to doubt whether there is a God.

So long as the material theory of man's origin and existence is accepted as true, it is impossible to understand the Scriptural teaching that man is created in the divine image and likeness and that he lives, moves, and has his being in God. The declaration of Jesus that he could do nothing of himself, seems incomprehensible to material sense. Mortal man believes he is able to accomplish so much in his own strength and through the exercise of his own intelligence, that he is altogether unprepared to accept the statement that man can succeed in no undertaking without God's help. He is content to believe in his own power, and he experiences great delight in the contemplation of what he is pleased to call the work of his own hands; and so long as his efforts are successful he sees no need of turning to God for help. He seeks to impress the world with the thought of his intelligence, greatness, and power.

The material sense of existence is ever declaring in thought and deed, if not in words, that a man thinks, acts, and even exists independently of God. While it is generally admitted that up to a certain extent one may be dependent upon God, yet it is believed that the thoughts and actions of the individual originate with himself, and he alone is responsible for them and is entitled to all the credit for whatever has been accomplished. Mortal man is content to follow his own inclinations, rejoicing in his own power to will and to do until this false sense of intelligence and power begins to fail him. Then he asks in all earnestness, What is God, and what is man's relation to Him?

All the discords of earth are directly traceable to a false sense of man's relation to God. Sin and sickness and death are the result of the erroneous belief that man has existence apart from the Supreme Being. It is demonstrable that results can be effectually and permanently overcome only by removing the cause, and since a false sense of man's relation to God has seemed to make man a sinner and an invalid, the only remedy for these evils is the understanding of what constitutes real being.

All that Jesus taught concerning God and man is of most vital importance to men and women in all ages, as it was to the people of his day. He knew God as no other has known Him. He understood what man is and what is man's relation to the Supreme Being. It was this understanding which enabled him to speak with authority and to prove by his works that the way he pointed out is the only way of escape from the ills of mortal existence.

The immediate result of obedience to the Master's teachings is a more spiritual thought of God and a clearer realization of man's true being and his relation to the infinite. It is the aim of all human theories and practices to make a man better; in other words, to make him more of a man. These theories are based on the belief that man is mortal and material. It is expected that he will some time escape from his material environments and become spiritual and immortal; but the starting-point is wrong, hence the results are not satisfactory.

In the practice of Christian Science material theories are set aside and spiritual understanding becomes the basis of demonstration. In Science and Health (p. 490) we read: "Human theories are helpless to make man harmonious or immortal, since he is so already, according to Christian Science. Our only need is to know this and reduce to practice the real man's divine Principle, Love." On page 202 it is clearly set forth that "the scientific unity which exists between God and man must be wrought out in life-practice, and God's will must be universally done." Man's oneness with God must become more than a theory; it can be understood only in practice.

Christian Science reveals glorious possibilities, and it requires much of those who would experience its benefits. Those who are willing to labor and sacrifice whatever of material belief is necessary to meet the divine requirements are being enriched beyond measure. The demonstration of man's oneness with the Father—infinite Life, Love, and Truth—is lifting heavy burdens, dispelling the dark clouds, and bringing into human experience the "liberty of the children of God." The joy and freedom of harmonious being becomes man's conscious possession, when he learns in Christian Science what is his true relation to God, and that in real-

Digitized by Google

ity he is not and never was in bondage to evil. The sick are delivered from hopeless invalidism; sinners are saved from their belief in the pleasure and power of sin; the discouraged and downhearted are inspired with hope and faith, and many other "infallible proofs" bear witness that man is one with God.

The Road to Damascus

JOSEPH G. ALDEN

In the book of Acts we read that "Saul, yet breathing out threatenings and slaughter against the disciples of the Lord, went unto the high priest, and desired of him letters to Damascus to the synagogues, that if he found any of this way, whether they were men or women, he might bring them bound unto Jerusalem." We may readily suppose that there was dread among the Christians in Damascus when it became known that Saul, a powerful member of the great Sanhedrin and an uncompromising enemy of the Christian sect, was on his way to the city to arrest such of them as he could find evidence against, to take them bound to Jerusalem, there to be tried before the ecclesiastical court. Accustomed though they were to the sneers and taunts and indignities heaped upon them by the people of Damascus, many stout hearts doubtless quailed before the announcement of Saul's approach. His reputation for unbending judgment had preceded him. He came armed with a high priest's commission and accompanied by a soldier band. He spared none and granted no quarter.

The day appointed for Saul's arrival came and went in Damascus, but Saul was not seen. The Christians paused as they met, to question each other of the probable cause of his non-appearance. Had he abandoned his proposed trip, or had he simply stopped on his way to visit swift vengeance upon some other city in his path? Had he been detained in Jerusalem, or had some more important duty claimed his first attention? Was Damascus to be spared now, only to receive the dread visitation at a later time?

One day there appeared in the synagogues of Damascus a new disciple of the Nazarene. Unheralded he came; yet he had the air of one in authority. His face glowed in the reflected light of an inner vision. Upon his brow sat dignity and learning. His speech was golden with words of truth and soberness. His bearing was that of one accustomed to be obeyed, but in his look there was kindness and justice and mercy. When he spoke, he commanded quick attention, for his message burned with earnestness and power. It was Paul, the ambassador of Christ, come to Damascus on a mission of peace and good will!

Paul departed from Jerusalem the proud defender of an empty ritualism; he came to Damascus the humble expounder of a living faith. Yesterday he bore the haughty title of Pharisee; today he wears the simple livery of the humble Nazarene. Once he breathed out "threatenings and slaughter" in the name of Judaism; now he brings the blessings of peace and cheer in the name of the Lord. The meaning of this change is explained by Mrs. Eddy on page 326 of Science and Health, where she says: "Saul of Tarsus beheld the way—the Christ, or Truth—only when his uncertain sense of right yielded to a spiritual sense, which is always right. Then the man was changed. Thought assumed a nobler outlook, and his life became more spiritual . . . in humility he took the new name of Paul."

Between Jerusalem and Damascus still stretches the way which Saul traveled. It leads from the place of empty creed to the place of living faith. Along its way still shines the light of Truth which transformed Saul, the proud Pharisee, into Paul, the humble follower of Christ. Going down to Damascus today, the traveler may again hear the voice of Truth speaking to his inner consciousness; and to obey the call is to share with Paul the wonder of a new birth and attain with him the reward which comes to him who has "fought a good fight," and finished his course with joy.

At Damascus there waited the little company, possibly dreading a persecution which never came, and thus making real for the time being an experience which God never ordered and which divine Love transformed into an occasion of blessing and a mission of peace. Saul never reached Damascus! This was the needful lesson for the Christians of that city, and it is the needful lesson for us of today which is thus distilled from the story of the Damascus road.

"Now is come salvation"

FRANK M. SELOVER

One of the richest fruits of Christian Science is its revelation of the practical working out of divine law as applied to human existence. Through its interpretation of the Scriptures we are able to realize that the atonement on Calvary was for the world's present benefit; that Jesus drank the bitter cup that redemption might be of instant avail to repentant sinners, and that divine forgiveness and all the joys of at-one-ment with the Father might be experienced by those who truly seek. Are we not told by Christ Jesus that those who seek shall find, and to those who knock it shall be opened?—not only in "the world to come," but in the world that today is, the world that is our heaven if we but ask and are ready to receive.

Science and Health makes it very plain that regeneration need not be delayed until the last trump; that the new birth is possible to the individual today just as it would have been possible to Nicodemus of old, had he been able to understand the words of the Master; and that this new birth accomplishes all we had hitherto assumed to be deferred until the soul had been released from its mortal habiliments. In this new aspect our every-day life becomes the embodiment of peace and happiness. We put off only the discordant; we take on the harmonious. We still have an active interest in the better phases of worldly affairs; only sordid passions and erroneous beliefs have lost their appeal. Now we search the Scriptures because it is a pleasure rather than a duty, and each precept and promise reveals new significance.

In other days we found in the beatitudes much that appealed to us, and recognized at once the exquisite beauty of the words. Yet perhaps we failed to grasp their real import, or to accept their repeated offer of blessings for the noble qualities that distinguish the meek, the righteous, the merciful, the pure in heart, the peacemakers, and those who are persecuted for righteousness' sake; and so on through those three chapters of the gospel of Matthew which from the earliest days of Christianity have been guide-posts to eternal life, but which were given a limited application, owing to the material dulness of human comprehension, until Mrs. Eddy's spiritual analysis disclosed the boundless heights attainable through our Lord's teachings.

Religious doctrine, from the first centuries of the Christian era until the date of Mrs. Eddy's discovery, ignored Jesus' command to "heal the sick;" and failure to abide by this instruction was accompanied by a general disposition to treat lightly other of his admonitions. It is not strange, therefore, that the whole religious structure at times seemed cold and comfortless. Now the Christian Scientist is daily proving that we may safely "consider the lilies of the field"

Digitized by Google

and the "fowls of the air," and "take no thought" for material things, while we devote our sole attention to our Father's work. With equal readiness has the Christian Scientist heeded Christ Jesus' warning that evil thoughts are quite as pernicious as evil deeds; and as his consciousness is kept pure and undefiled, he is able to reap the sweet reward of greater understanding. The nearer the approach to the Ultima Thule expressed in the decree, "Be ye therefore perfect, even as your Father which is in heaven is perfect," the more exalted becomes the Christian's ideal; and it is a feeling of absolute security in the promise, "With God all things are possible," that enables one to appreciate the new-old meaning of salvation. Thus we touch the key-note of divine Science; and thus do our mortal ears catch the first awakening strains of the inspiring song from on high,—a song that tells of Life, Love, and Truth as the everlasting realities before which human weakness, disease, sin, and death, vanish away.

Christian Science is a message of cheer to every discouraged heart, and to all it is freely offered. Indeed, it has been available to mankind since it was first carried to the people of Israel by the patient Nazarene; and as it was by them rejected, so has a more friendly Christendom been slow to understand. Jesus cautioned the disciples, "Ye are the salt of the earth: but if the salt have lost his savor, wherewith shall it be salted?" These words were prophetic; for the time came, not long after the disciples had themselves ceased their earthly labors, that Jesus' doctrine, as taught, lacked an essential element. For nearly nineteen hundred years Christianity was preached in its imperfect, unseasoned form, the vitalizing truth being hedged about with denials and apologies. Now these errors have been uncovered, now is Christ's word once more accepted in its entirety, now are his servants ready to do his bidding, even though they meet with persecutions and revilings; for, as John foretells in his vivid record of Revelation: "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ."

Guarding Our Thought

MARY LOUISE FERGUSON

THE most essential thing for the true Christian Scientist is to guard his consciousness, carefully and steadfastly, so that no unkind, erroneous thought may find entrance. This means unceasing watchfulness, else, like the foolish virgins in Jesus' parable, one may be found sleeping when "the bridegroom cometh." In one of her beautiful addresses Mrs. Eddy says of this attitude, "Your means of protection and defense from sin are, constant watchfulness and prayer that you enter not into temptation and are delivered from every claim of evil" (Miscellaneous Writings, p. 115).

The necessity of this was once shown to the writer in a way which she can never forget. One afternoon, while bathing in Lake Erie, she got beyond her depth, and in spite of all her efforts was carried farther and farther away from shore. Her strength began to fail, and she went under several times. None of the friends who were with her could reach her, and although she tried to realize the truth, her thought was becoming so dulled that she could not do so. Finally, when her strength was almost gone, and she felt that she could keep up no longer, like a great flash of light the error which was holding her was revealed. She remembered that less than an hour before she had become very angry with a friend, and she had been cherishing resentment until it entirely governed her. Thanking God that she had been shown the error, she closed her eyes and began to declare against the anger and resentment which were overwhelming her. A feeling of peace and confidence came over her, and it is a notable fact that from the moment the error was uncovered she did not sink again. Some minutes later, when she opened her eyes, she saw her brother beside her, and he helped her to shore. All sense of fatigue and lethargy was overcome in a very short time, and that evening she took a walk of several miles.

"Watch, work, and pray" should be the watchword of Christian Scientists, and if we faithfully strive to obey Jesus' instructions on this subject, we shall rise above the downward tendencies of belief in material law. We shall also make practical the truth taught by our Leader when she tells us that "there is divine authority for believing in the superiority of spiritual power over material resistance" (Science and Health, p. 134), and that every wrong thought overcome, every selfish or uncharitable impulse allayed, will bring us nearer the universe of Spirit.

Gaining Reality

MARGARET OSTERTAG

A RECENT effort on the part of the writer to conquer a false sense of humility was rewarded in a most unexpected manner. Considering the teaching of the Master, and dwelling upon the outward expression of his knowledge of the Father, I was awed by the strange contrasts his life presented; and while analyzing his humility, in order truly to understand the nature of humility and thus uncover the error of my own belief, I was led to examine his other virtues, and the result was astonishing. In the search to discover the realities behind this remarkable life, I saw that we have just begun to understand the nature of goodness, and that for many this discovery only points out their mortal misconceptions, and has not yet led them very far into the realm of actuality.

Christ Jesus was tolerant because of his great wisdom. The world has never understood this tolerance, and it cannot until a better understanding of the Father is gained. Majesty was the expression of his humbleness and simplicity, the unconscious expression that clothed him like a garment. It seems strange to us to think of humility and majesty as at-one, but certainly they were thus manifest in the life of Christ Jesus. Patience was the expression of his far-sightedness, and loftiness the flower of his meekness. Tenderness, compassion, sympathy for the multitude, all sprang from his high courage.

Misgivings assail us as we attempt to reach the source of human virtues. They lead us such a little way! They take us too often to the wrong source, and show us why they fail to accomplish what they might, and why their expression is oftentimes meaningless and futile. Jesus asked, "Do men gather grapes of thorns, or figs of thistles?" Unless tolerance is born of wisdom and not of arrogance or ignorant and indifferent acquiescence with error, it cannot do the work or accomplish the end that tolerance must some day achieve; for it was one of Christ Jesus' greatest virtues. "Notwithstanding, lest we should offend them," he directed the payment of the tribute money, thus revealing wisdom great enough to "render to Cæsar the things that are Cæsar's," while demonstrating a law far beyond the ideal that Cæsar's law embodied. "Neither do I condemn thee: go, and sin no more," came from an understanding of sin, and was followed with an admonition which uncovered its nothingness but did not judge its victim. If our dignity is the child of pride, if we are patient because we are asleep, lofty because of superior advantages, or tolerant only because we are weak, then we may be sure the plant is not of the Father's planting,

Digitized by Google

and will be rooted up in due season, when all things shall pass away that are not from the beginning.

To gain a realization of our inheritance in Christ, of the things that are "the same yesterday, and today, and forever," we shall have to learn to detect the unreal and forsake it, with the prayer that "the deep things of God" may be revealed to us. In Science and Health (p. 3) Mrs. Eddy says, "To understand God is the work of eternity." As we work toward our ideal, we should be glad that the source of true greatness is deep beyond our present conception, and that to perseverance and prayer "there is nothing covered, that shall not be revealed." Surely there is no searching of God's understanding. To live the commandments is the way to greater understanding. "No man cometh unto the Father, but by me," said Christ Jesus, and Truth offers us no other doorway into a full comprehension and utilization of the divine forces which were behind his remarkable life, than the doorway of love to God and love to our fellow men.

Divine Reflection

HORTENSE L. WHEELER

In explaining to his disciples the unity existing between God the creator and His creations, that tender protection which divine Love ever gives to its own, and also to emphasize the necessity for love and obedience on the part of man, the Master chose as an illustration the relationship of father and son, the tie between parent and offspring being the highest earthly conception of love and protection.

Thus a concept of divine Love and guidance founded upon the human sense of relationship, was established by the Master to awaken in the human heart the dormant sense of spiritual unity. This use of the human to explain the divine has come down the centuries, and is accepted and applied today by all exponents and followers of Truth; but as human sense through Christian Science becomes more spiritual, and we thus ascend the scale of being, we shall lose sight of fleshly ties, of an anthropomorphic God, and the scientific significance of the term reflection, which Mrs. Eddy says "few persons comprehend" (Science and Health, p. 301), will be understood and accepted. It will be realized, through the application and demonstration of spiritual law, that God and man coexist, and that God being infinite Life, Truth, and Love, and man having no existence, intelligence, or love apart from his Maker, loving obedience is a part of the divine order of reflection. According to the Scriptures, man lives for a holy purpose, to manifest his creator; but the nature of this reflection needs to be apprehended in order to overcome the deflection of mortal sense.

The call within the heart of all to attain to this manifestation of God, that they may thus express the true individuality, has existed throughout all the ages; but never perhaps in the history of mankind has it been so universally felt, or the spiritual goal so nearly attained, as at the present time, because of the dawning on human consciousness of the impersonality of the saving truth as understood and demonstrated through Christian Science. Never since the days of the Messiah has there been such a clear realization of man's at-one-ment with his creator, whereby he reflects divine wisdom, power, strength, health, and harmony. Although in the past the true individuality has been theoretically cognized, it was not until the coming of the Comforter, in Christian Science, that the separation between the material sense of man and man in the likeness of God was so clearly made as to enable believers to grasp, retain, and manifest true sonship.

Through the unfoldment of spiritual truth in human consciousness the Christian Scientist is learning that all things are still possible "to man *as God's reflection*" (Miscellaneous Writings, p. 183); that his real selfhood can be made manifest here and now through conscious unity with God. He is learning also that without this unity nothing is possible that is worth while; for all there is of real existence lies in the reflection of Life and Truth and Love. He finds that there is and can be nothing in his life, either here or hereafter, of such vital importance as the possession of a purified mentality. He perceives that before this perfect mentality is won, and he can reflect the beauty, holiness, and harmony of the divine Mind, a great revolution must take place in the mental home where he is now living; that all reliance upon any supposed power apart from God must give place to loving confidence in ever-present Love.

All spiritual identities or individualities have their place and purpose in the divine creation, and however infinitesimal one's place or parts, they are sacred; for if in His infinite wisdom God found it essential or for His "good pleasure" to bring into manifestation a given idea, then its importance cannot be questioned, though it may seem to be least among many. Back of every externalized right thought lies a divine idea, and this idea is apprehended only as consciousness becomes wholly subject to divine Mind. Herein lies the necessity for gaining mental purification. Not until one recognizes the purpose of his being can he attain to its perfect fulfilment.

Every sincere follower of Truth feels more and more the divine urgency to seek and manifest his own true individuality, and every true Christian Scientist responds to this call, for having once heard and obeyed the voice of Truth, and having gained the attendant blessing, nothing less than perfect attainment will ever satisfy his spiritual longing. Speaking of this individual reflection, our Leader says, "Each individual must fill his own niche in time and eternity" (Retrospection and Introspection, p. 70). No other person can live our life, bear our cross, work out our problems, or attain to the fulness of Christ for us. It is ours to work out our own salvation. Sometime, somewhere, each must recognize and manifest the divine purpose of his existence.

[Written for the *Sentinel*]

Love's Guidance

CHARLES C. SANDELIN

Naught that the erring senses say
Can e'er our trusting hearts dismay;
Nor should a doubt or fear obscure
This thought: In Love we dwell secure.

Nay, not apart in loneliness;
Love's presence doth each moment bless,
And when there falls the seeming night,
With precious hope the heart is light.

With Love, our Father-Mother God,
Need we in fear or sorrow plod?
How kindly He each child beholds!
What gracious bliss each hour unfolds!

Could we a better guidance take
Than Love's? He never doth forsake.
Yea, when the path seemed dark and lone,
Love's guiding hand the way hath shown.

[Judge Clifford P. Smith in *The Kingston* (Jamaica) *Chronicle*]

My attention has been drawn to your report of a sermon delivered at Philadelphia in which the speaker jeered at Christian Science. Since the healing of Naaman, who was afflicted with leprosy, as related in the fifth chapter of II Kings, was contrasted in the sermon with Christian Science healing, I trust you will permit me to reply accordingly.

It is to be observed that Naaman expected Elisha to use a ceremony or rite as the means of healing, and he was not content with less than an outward act which typified his cleansing. So also the minister who spoke against Christian Science at Philadelphia, appealed to the popularity of material habits of thought by deriding the possibility of healing by "absent treatment." The method of Christian Science healing is, indeed, wholly spiritual and invisible. It requires neither physical act nor personal contact. It invokes solely the power of God, and acts only through divine law. But this does not mean that it is ineffectual; and for Christians these facts should be consistent with the presence, power, and activity of the healing agent which Christ Jesus defined as "the finger of God."

I am able to say, moreover, that the question whether Christian Science is equal to the cure of leprosy can be answered by reference to particular cases. As long ago as 1891, G. W. Barrett, M.D., then residing at Kansas City, Mo., was cured of this disorder by Christian Science. He was himself a practising physician of thirty years' experience, and his diagnosis was confirmed by a consultation of physicians. Accounts of his healing were published in the daily papers, and the case afterward attracted renewed attention by reason of a reference to it before a legislative committee. More recently N. C. Bishop of Ianthe, Mo., and Mrs. E. A. Land of Carmi, Ill., have been cured of leprosy by Christian Science treatment.

Another interesting case is that of Mrs. David Oliver of Chicago, who was cured with Christian Science of an organic disease similar to leprosy. It was diagnosed by five well-known physicians as "generalized blastomycosis." One of these physicians examined Mrs. Oliver after she had been healed, and reported the case in the *Journal of the American Medical Association* (issue of July 27, 1907). A part of his report was as follows: "The following case is reported because it is, I believe, the first instance recorded of recovery from generalized blastomycosis." When this report was made, the physician who made it did not know that Christian Science had been employed. Mrs. Oliver thought it best to let him make an examination and draw his own conclusions; but when the report appeared without credit or reference to the only method by which "incurable" disorders are frequently cured, her husband issued a statement of the complete facts.

❖

["A Presbyterian" in *The Inquirer*, Philadelphia, Pa.]

The clergymen and ministers must have thought there was something radically wrong with the churches of Philadelphia, else they would not have united in inviting an evangelist here. What is it that is radically wrong, and can this evangelist effect a cure? I fear not, since he offers nothing more than the ministers themselves have been offering. The Christianity that he and they preach is only half-way Christianity. They but partially accept the teachings of Christ Jesus.

I am not throwing a brick of infidelism at this man and the ministers; far from it. I would not cast an obstruction, even so trifling as a peanut shell, in the evangelist's path. If he can bring one person, to say nothing of a considerable number of persons, to a better way of living, I shall be more than glad. He is earnest and, so far as he goes, thoroughly believes in what he says. His God is a God in physical shape, casting human beings into a physical hell, to be tortured by a physical devil. It was Jesus who taught that "God is a Spirit: and they that worship him must worship him in spirit and in truth;" however, let that pass. This evangelist appeals to his hearers through fear. Fear is not in itself repentance. Whether through fear many of his hearers may not be led into Christianity is not my issue; but if they are, and join the churches, will they find lasting peace and contentment there, under existing ministrations?

I was brought up in the Congregational church of New England. Of late years I have been associated with the Presbyterian faith in Philadelphia, but have not been satisfied. I have listened to this evangelist and have read a good many of his sermons; still, I am not satisfied. Why? "By their fruits ye shall know them." The fruit of the churches is scarce. There is some grave trouble. What is it? The evangelist does not remedy it. Throughout the gospels much space is given to the actual doings of Jesus. He went about doing good. He healed the sick. He cleansed from sin and disease. He combined the two, and naturally, since disease and sin are frequently synonymous. He cured the ills of the body so that the human mind might be open to divine truth and understanding. Not only did he do this, but he commanded his followers to do likewise. "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." He impressed upon them that they should "heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Jesus proved the divine origin of his teachings by his works —"miracles," the evangelist and our good ministerial friends call them; but these same miracles were performed by his disciples and by his followers long after Jesus had gone "unto the Father." For three centuries, as I read, these miracles were wrought, hence the curing from disease and sin was not intended to be confined to the brief career of Jesus on earth. The command was for all the years to come. Time after time have I listened to sermons wherein it was stated that if we had faith like unto a mustard-seed, we could remove mountains. Time after time have I listened to the prayer of the preacher, calling for divine interposition to save a church-member from the sickness which afflicted him. Have such prayers been answered? If not, why not? Is it not because the preacher was lacking in something; because, while he believed in God and professed Christ Jesus, he did not really believe in Christ's very plain teachings?

The evangelist seems to be on very intimate terms with God. I do not mean to be irreverent. His prayers, delivered in a conversational style, give that impression. But has he ever cured the sick, healed of disease, actually snatched a single man, woman, or child from the clutches of disease? Yet there is the injunction to go forth and do that very thing. So must I not believe that there is something radically wrong with this evangelist? He freely consigns to damnation, but does he cleanse the leper; does he do the work that Christ Jesus did? And yet the command is staring him—and the ministers—in the face every time he and they open the Bible. Now this is just where the teachings of the evangelist and of the ministers fall short. They accept only a portion of the Christ-creed, and this is why I say that they are only half-way Christians. There is need for a great change. When the ministers get us back to the religion taught by Christ Jesus, then indeed will there be no necessity for re-

Digitized by Google

vivals, for the churches will be crowded, because the truth of the living God will be demonstrated.

Ah! brother, if you can bring yourself to grasp the Christ-methods, the Christ-religion, then shall you bring, not a few thousands of fear-stricken men and women to your feet, but you shall summon a whole city to repentance. And you, faithful ministers,—faithful to one side of the Christian religion taught by Christ Jesus, but so sadly and disastrously lacking in the faith of the early Christians,—demonstrate your teachings as Jesus and his disciples demonstrated theirs, and then shall you minister to the multitudes. That you must do if you would fill your churches. We have gone far afield from Christ Jesus, and until we can get right back to him, all of the revivals that this evangelist or any one else may conduct will fail to satisfy—at least me.

❖

[Campbell MacCulloch in *Rochester* (N. Y.) *Union and Advertiser*]

May I request sufficient space in which to correct a statement in an editorial in a recent issue? You refer to the bill introduced at Albany to admit Christian Scientists to the practice of their religion in this state as if it were intended to abrogate or break down the safeguards that have been thrown about the medical practice act, and admit to practice in this state those "who have not had proper medical training."

May I point out that it is mere assumption that the only method of healing disease is purely material. Only long custom has brought about such a conclusion, and in point of fact the first healing of disease was spiritual, as Biblical history plainly shows. Moreover, the command of Jesus to preach the gospel and heal the sick was one command, and not separable; that it was so regarded; that it was fulfilled for three hundred years after the ascension of Jesus Christ, is plainly related in Gibbon's "History of the Roman Empire," which indicates that there was nothing miraculous or in the nature of a special dispensation about it.

Christian Scientists are not asking for the right to practise medicine in this or any other state; they are willing to leave that field to those competent to practise medicine. They are desirous of following the tenets of their religion, which the present medical practice act assumes to grant, and which provision was placed in the act of 1907 after consultation with the medical fraternity for the express purpose of not interfering with Christian Science practice.

The assumption that Christian Scientists, who heal the sick by spiritual means and without the use of medicine or any material means whatever, could be benefited by a course of medical study, is as absurd as would be the proposal on the part of gas engineers that, in order to engage in the profession of lighting buildings, electrical engineers should be required to take a course of gas engineering. The two systems have nothing in common save their ultimate purpose. Suppose the situation were reversed: would you regard it as reasonable to require those desiring to practise medicine to undergo a course in Christian Science?

Moreover, I should like to contradict flatly the unwarranted assumption on the part of the medical profession that the public health and the practice of medicine have anything in common, or that the public health is dependent on medicine. This is a gratuitous assumption on the part of the medical fraternity; it has nothing whatever on which to base itself other than a desire to gather in under the medical egis the practice of sanitation; to reap rewards that have come from sanitary engineering, which, I may state, has the full endorsement and cooperation of Christian Scientists everywhere. That the United States government recognizes this is shown in the federal order governing sanitation on the Canal Zone, admitted to be the most perfectly sanitated district in the world, wherein, while proper sanitation is provided for, the practice of Christian Science is guarded and admitted on an equal footing with that of *materia medica*.

Your statement that Christian Scientists would be fortified by the knowledge of the ordinary school is entirely a mistake; for there is no point in which the two methods are not wholly and diametrically opposed, if we may except the object of the treatment, which is to get the patient well.

❖

[S. T. Downs in *Terre Haute* (Ind.) *Star*]

The notion that Christian Science is based on suggestion could be held only by those who are misinformed or misinformed as to what Christian Science teaches, because Christian Science is the opposite of suggestion.

Suggestion, of which hypnotism, mesmerism, psychology, and their like, are but modifications, is based on the theory that man exists separate and apart from God; it is the Adam-dream of many minds, and that one human mind governs another human mind; it is the belief of life in matter, and that man is controlled by conflicting forces or laws. Our brother, whose statement calls forth this letter, points out that suggestion can be used for both good and evil, and Christian Science boldly declares that for this reason the whole thing is evil and not of God, and its use for any purpose can bring no permanent benefit. Mrs. Eddy, the Discoverer and Founder of Christian Science, has brought out in many different ways the thought expressed on page 103 of Science and Health: "The malicious form of hypnotism [suggestion] ultimates in moral idiocy."

Christian Science reveals the great truth that God is Mind, and that the real man is the reflection or expression of Mind, and is governed only by the law of Mind; the same Mind to which St. Paul referred as being in Christ Jesus. Christian Science is capable of no misuse, and its teaching and practice uplift, purify, and benefit all mankind. An understanding of God as set forth in Christian Science destroys the seeming power and evil results of suggestion.

The new student of Christian Science soon learns how and why the practice of suggestion is a sin, and that an attempt to use it would destroy one's power to heal after the manner commanded by the great Teacher of Nazareth. Even the casual reader learns that Mrs. Eddy knew suggestion, hypnotism, mesmerism, and the like, to be such grievous wrongs that she grouped them all together under the general term "animal magnetism," and laid bare their subtlety and harmful effects on mankind in the chapter entitled Animal Magnetism Unmasked, of the Christian Science text-book, "Science and Health with Key to the Scriptures."

❖

[Ezra W. Palmer in *The Fraternal Union*, Denver, Col.]

The kindly tone of the editorial on Christian Science in your February issue is appreciated by all Christian Scientists who read the article. The writer of the article, however, confuses Christian Science healing by prayer with autosuggestion, or hypnotism, with which it has nothing in common. In Christian Science, the healing of sickness and sin is accomplished through the power of God, the same as Jesus and his disciples healed.

Autosuggestion, or hypnotism, is the belief that the human mind is a healer by means of which one human mind can rob another mind of its individuality and thus dispossess it of the errors of thought which may be depleting the body. Upon reflection it will be granted that no human mind is absolutely

Digitized by Google

pure and free from sin and evil, so that the mind that projects its thought into the consciousness of another may be, and usually is, crowding out one erroneous state of thought only to have another, and perhaps greater, take its place. The process is merely a battle of conflicting and erroneous thoughts, the stronger retaining the field, the weaker pushed into the background but not destroyed. Since this is accomplished through the force of human will, a relapse inevitably occurs as soon as the external pressure is removed, and "the last state of that man is worse than the first."

Christian Science relies upon the human will not at all. Through spiritual understanding thought is lifted above the ills of mortal existence, and the healing is accomplished not through the mesmeric sway of the mortal or carnal mind, but through the power of God, the ever present infinite Mind. Jesus, when charged by the Pharisees with healing through Beelzebub, through the power of occultism, or mental suggestion, which was well known in his time, repudiated the accusation and declared, "But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." Christian Science teaches reliance on God alone in healing the sick, and makes it clear that autosuggestion has no value as a curative agency.

❖

[Marie Hartman in *Kerkelijk Weekblad*, The Hague, Holland]

The kind words which a critic adds to my answer of his criticism, encourage me to draw the attention of your readers once more to the subject of Christian Science.

The "Emmanuel movement," of which little seems to be heard in America nowadays, is not a fruit of Christian Science, but originated a few years ago in one of the older American churches. The great growth of the Christian Science movement seems to have opened the eyes of these people to the possibility of healing through spiritual means, and they tried, with the help of the medical doctors, to procure it for their adherents. They, however, overlooked the fact that physical healing is not the primary object in Christian Science, but only the spontaneous result of a better understanding of Truth; for without this understanding true spiritual healing is not possible.

As Christian Science acknowledges God to be perfect, immutable, eternal Truth, it teaches that in this Mind, which includes all reality, there can be no room for a destructive element like evil. Through communion with God, which is prayer, man becomes more and more conscious of the eternal truths, and finds herein a refuge and protection from evil. As there can be no evil in God, and He alone created all that exists, Christian Science concludes that evil cannot belong to the eternal, indestructible order of things, although it does not deny that to the limited, human view, evil seems very real indeed. Christian Science considers evil as a false belief, which must vanish before a knowledge of the truth. Does not Habakkuk say, "Thou art of purer eyes than to behold evil, and canst not look on iniquity"? Would supreme wisdom see less or more of reality than a mortal?

Christian Science does not deny that drawing near to God makes one realize intensely how far one has strayed. It says, on the contrary, that a knowledge of God, and of His great, ever sustaining love, which Jesus the Christ has revealed, shows the necessity and the possibility of putting off the old man,—all the wrong beliefs concerning God's image. Christian Science does not forget the place of repentance in the process of the new birth, but it teaches us that repentance alone is not sufficient. In Science and Health we read: "Sorrow for wrong-doing is but one step toward reform and the very easiest step. The next and great step required by wisdom is the test of our sincerity,—namely, reformation." Again: "Every pang of repentance and suffering, every effort for reform, every good thought and deed, will help us to understand Jesus' atonement for sin and aid its efficacy; but if the sinner continues to pray and repent, sin and be sorry, he has little part in the atonement,—in the *at-one-ment* with God,—for he lacks the practical repentance, which reforms the heart and enables man to do the will of wisdom" (pp. 5, 19). It seems to me that the foregoing is not so very far removed from the critic's idea of regeneration, although Christian Science specially draws attention to the fact that repentance is not all that is required of mankind.

Does the critic actually believe that for the Christian Scientists a "heavenly smile" is a sufficient help in life, and enables them to overcome the difficulties and the suffering pertaining to mortal existence? If so, in these times this remedy (?) might be recommended to many. Their study of the Bible in the light of Christian Science brings to the Christian Scientists an ever increasing knowledge of the Father, who surrounds and sustains and blesses them with His rich love, and they learn better to understand and follow the Saviour, who said: "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full."

I am convinced that I speak in the name of many whom one would not as a rule charge with being superficial, when I say that Christian Science has shown me a way to solve the great problems of life by the aid of the Scriptures. Of course it is not possible to give a detailed explanation of Christian Science in a short article, but earnest study and the demonstration of what Christian Science has taught one ever bring to light new treasures. I suppose these would satisfy even our critic.

❖

[Robert S. Ross in *Rochester* (N. Y.) *Express*]

In justice to Christian Science and a misinformed public, permit me to state that the attack on the Christian Science bill, referred to in a recent issue, was wholly unwarranted, for the reason that not once in the forty years during which Christian Science has been practised in New York state has a Christian Scientist been found guilty of contributing to an epidemic of disease, Assemblyman Hinman's charges notwithstanding.

It is well known that Christian Scientists are more careful than any other class of people to observe all reasonable sanitary and quarantine regulations. Not long ago Dr. Ernest Lederle of New York, in a published statement, said: "Violations are promptly and quickly prosecuted, but I have yet to find an instance where the lawbreaker was a member of the Christian Science church." Dr. Frank E. Allard of Boston writes: "From an experience of twenty years of active practice in the city of Boston I do not recall a single case, nor has any been brought to my attention by a colleague, in which a Christian Science practitioner has failed to report promptly contagious diseases to the board of health; in fact, of late years I have found them rather more conscientious in this matter than some of the physicians themselves."

On the other hand, the records of the department of health of the city of New York show, according to Doctor Emerson, that no fewer than one hundred and twenty regular physicians have in recent years violated those sections of the sanitary code which refer to quarantine and isolation. Reference to these violations is made, however, not to attack or ridicule the medical profession, but merely to show that Christian Scientists are, to say the least, as law-abiding as some of the physicians who opposed the bill.

Editorial

Christ's Christianity

SOME time ago an editorial writer on one of the denominational organs of a leading Christian church presented the following interesting views:—

The non-Christian has a right to expect that the Christian will be more than an average man in goodness. He has a right to expect that we who claim to be followers of Jesus Christ will exhibit the spirit of our Master in all the relations of life.

This is not a demand for perfection, but for clear evidence that perfection is our aim. Sometimes we are "overtaken in a fault,"—stumble in the way where we are walking. It is not the occasional weakness of the Christian that causes others to stumble, it is our persistent refusal to apply our Christianity to every-day matters. It looks to those who are watching us as if our ideals for common duties were no higher than their own, as if our religion exhausted itself in creedal concept and outward forms.

Probably this is not the case with any great number of Christians, but it is unfortunate that we should convey such an impression. If Christianity does not make men more honest, more unselfish, more considerate than they would otherwise be, it is not the Christianity of Christ.

What the writer has here said is very much to the point, and no one will say "Amen" to his sentiments and assertions more readily than do Christian Scientists. They would, however, go somewhat farther than has this editor, for they would add an unqualified recognition of the fact that Christ Jesus devoted much of his time and attention to the healing of the sick, and promised that those who believed on him should continue to do these mighty works. In other words, the Master not only pointed out the Christian's duty in this regard, but he gave his hearers reason to believe through his words that such works of healing as he had done were a component part of Christianity, and should continue to furnish certain proof that his doctrines were understood and believed.

In no respect were Jesus' teachings and practice more closely interwoven than in the healing of the sick, and for this reason the world has a right to expect of every one of his followers that they shall at least attempt to do the works which he did, and which his early followers continued to do for three centuries after his ascension. That so large a portion of professing Christians fail to see at this time that the duty of healing the sick through the same means employed by Christ Jesus is incumbent on them, is to be regretted, particularly when the need of mankind for help and solace is admittedly so great as it is at the present moment. Everywhere there are sick and suffering ones to be healed, mourners to be comforted, sinners who acknowledge their need of salvation yet know not a way to escape from their bondage to evil habits. That the Christian church is not awake to its opportunity for helpfulness in this crisis is no ground for discouragement, but rather is it an incentive for Christian Scientists more diligently and faithfully to square their works with their professions, so that he who will may see that primitive Christianity in all its purity and efficiency is again restored.

Writing forty years ago, Mrs. Eddy made this pertinent comment: "In the record of nineteen centuries, there are sects many but not enough Christianity" (Science and Health, p. 224). No one will deny the present-day applicability of this statement, and that there is need for a more active and efficient preaching of Christianity upon practical lines; but this cannot be accomplished unless the full gospel of the Master is understood and practised. Fortunately for mankind, Mrs. Eddy has shown us how this may be done, and it is because of her discovery that an ever increasing number are realizing that God is not the author of sin or sickness, and that there is no other God beside Him.

We would commend to the thoughtful consideration of every Christian man and woman the question so lovingly put by Mrs. Eddy on the page above quoted: "A higher and more practical Christianity, demonstrating justice and meeting the needs of mortals in sickness and in health, stands at the door of this age, knocking for admission. Will you open or close the door upon this angel visitant . . . ?"

ARCHIBALD MCLELLAN.

Eternal Youth

PERHAPS no question has received more attention at the hands of the race than that as to the nature of life, and yet even educated Christian thought about life has for the most part always embraced a palpable contradiction, and is still contending for it. People have been led to believe that in a universe of divinely supported life, decay and decrepitude have legitimate place. A perfect cause is said to have begotten imperfect effects! Thus wedded in belief, life and death have been wedded in experience, and the extent of humanity's bondage to this false sense is indicated by the seeming strangeness and far removal from possible experience of the teaching of Christian Science, which declares for the unbroken continuity of life; that "except for the error of measuring and limiting all that is good and beautiful, man would enjoy more than threescore years and ten and still maintain his vigor, freshness, and promise" (Science and Health, p. 246).

The beginning and growth of this enslavement are distinctly traceable. Children are conceived and brought forth in the shadow of fear. The possibilities attending their birth often beget a state of trembling in their parents, for weeks or months before the event, and as in the instance of every other material concept, the babe begins to die the moment it begins to live. This fate is contributed to and assured by belief in heredity, whose blighting effects are chronicled in unnumbered weaknesses, disfigurements, and imperiling predispositions from which mortal sense knows no escape. Furthermore, all are taught that life has its inevitable accompaniment of sickness, and that the law which decrees its termination is irresistible because divine; that life cannot continue unbroken, though its immediate support is "from everlasting to everlasting"!

Over against this hopelessly confused sense of things stands the instinctive and ever increasing resistance of humanity to its influence and effects,—a resistance which has given *materia medica* and its experimentations such a large place in human history. In his vain search for the fabled elixir, Ponce de Leon but gave spectacular emphasis to that universal longing expressed in the saying from the book of Job, "All that a man hath will he give for his life." Hence the pertinence of Jesus' words, "I am come that they [mankind] might have life, and that they might have it more abundantly."

Denial of the authority and power of death to destroy or even influence anything that is "of God," was one of the great distinctive teachings of Christ Jesus, as it is of Christian Science. He declared that to know God is to find the fountain and freedom of eternal youth; it is to unknow death, and thus to separate experience from it and all that pertains to it. To Nicodemus he fittingly spoke of this escape as a new birth, concerning which Mrs. Eddy has said: "The new idea, conceived and born of Truth and Love, is clad in white garments. Its beginning will be meek, its growth sturdy, and its maturity undecaying" (Science and Health, p. 463).

Digitized by Google

Could there be a greater awakening, a more entire conversion, than that experienced when one comes to a demonstrable realization that the understanding and exercise of this exemption from all that makes for decay and death is the natural state of man, and that to be a Christian means to begin to attain thereto here and now? Think of what an entire transformation of thought this effects. The bulk of all our education, observation, philosophy, and experience, is at once recognized as out of keeping with and wholly discreditable to Christian faith. Instead of being absorbed in the interminable struggle to prepare to live in a future which all have been striving assiduously to postpone, we now begin to think of life as a state of right consciousness on which we have already entered or may enter at once, the water of Life having been again brought to men in the restatement of the healing power of divine Truth.

For those who through the demonstration of Christian Science have entered into this realization of the eternal sunshine of life, the prophecy of Isaiah is surely being fulfilled: "Thy sun shall no more go down; neither shall thy moon withdraw itself: for the Lord shall be thine everlasting light, and the days of thy mourning shall be ended."

JOHN B. WILLIS.

❖

Witnesses

IN Isaiah's prophecy we read, "Ye are my witnesses, saith the Lord," a declaration which all Christian people would do well to ponder daily, since Christ Jesus announced to Pilate that his mission was to "bear witness unto the truth;" that he came to the world for this purpose. After Jesus' personal departure, the beloved disciple testified concerning him that he was "the faithful witness, and the first begotten of the dead," these two statements being closely related to each other. In Christian Science we can see that because Jesus always bore witness to the truth, he was prepared to meet and master, first for others and then for himself, the dire delusion of death which, as Mrs. Eddy tells us on page 113 of Science and Health, denies "good, omnipotent God, Life."

In the fourth gospel we are told that John the Baptist "came for a witness, to bear witness of the Light," and we are also told that "the life was the light of men." The Master said to his disciples, after his resurrection, that they would receive power, when the Holy Ghost came upon them, to be his witnesses even "unto the uttermost part of the earth;" and our deep desire most surely is that such witnesses may be found today in every land, bringing the light of Truth and Love to all "that sit in darkness and in the shadow of death." Those who know Christian Science can never plead ignorance as to the nature of the testimony which they should give in all their human relationships.

It is well to remember here that in all courts of justice the character of a witness is what gives weight to his testimony or discredits it. At first Jesus' students were not regarded with much favor by the rulers of their time, who simply thought of them as ignorant men, but Peter's boldness and eloquence caused them to marvel, and the reason for it was that he "had been with Jesus." Another unanswerable argument stood beside the apostles, namely, the lame man who had been healed. The rulers were even forced to say of this healing, "We cannot deny it," but they proceeded to devise means whereby all such work should be stopped. In spite of their threatenings, however, the common people rejoiced and glorified God for this evidence that God is with His own and supports them in their work. The characters of these men, moreover, were daily becoming more Christlike, hence their influence with all who were ready for the truth was greater and greater.

Peter had been with his Master when he went to awaken Jairus' daughter out of the sleep of death, when those who accepted the material evidence "laughed him to scorn" because he denied this evidence. The all-power of Truth was, however, proved by Christ Jesus, and later there came a day when Peter himself was called to bear witness to the truth in the same way his Master had done. Word was sent him that Dorcas, a noble Christian woman, had died, and her friends desired him to come without delay. Faith and fear were strangely intermingled, as it seemed, when Peter appeared on the scene, but he put out the weeping friends, and kneeling down prayed to the God who had raised Jesus from the tomb. Then when he bade Dorcas arise, in witness of the truth of his prayer, she did so. Need we wonder that when this was known throughout Joppa "many believed in the Lord."

The record of this witness-bearing, as found in the Bible, stands unquestioned, but sad to tell, many of those who contend for the sacredness of the book deny the availability in our own day of the truth it contains, and so doing they practically ignore the demand expressed in the words, "Ye are my witnesses, saith the Lord." If we do not witness to Truth by our own truthfulness, we are not ready to do it in the Christ-way. Neither mockery nor threats hindered Christ Jesus from proving the omnipotence of God, whatever the opposing evidence, and the time soon came when his followers boldly challenged the belief that God either can not or will not do all for man. Paul asked, "Why should it be thought a thing incredible with you, that God should raise the dead?" Then he told how he had been called to be "a minister and a witness" of the very things he had once denied,—the spiritual facts which are always contrary to material evidence. He, like the Master, was a faithful witness, and it is our high privilege to be the same, to prove that God is the Lord and beside Him there is no Saviour.

ANNIE M. KNOTT.

❖ ❖ ❖

Among the Churches

Current Notes

MONROVIA, CAL.—Although not planning to build at once, the members of First Church of Christ, Scientist, have determined to improve their recently purchased building lots, in advance of the actual erection of the church. Consequently they have fenced in the two lots, which are situated on East Palm, directly south of the high school, and have cultivated the ground and sown it to wild flowers. The most recent improvement is that of planting fifty rose-bushes and eight ornamental trees. From two unattractive, weedy lots the property has been transformed, and it will soon be covered with varicolored bloom.—*Monrovia News.*

HERMOSA BEACH, CAL.—Gratifying growth has been experienced by the Christian Science Society. Though only recently organized, the society has increased in membership so rapidly that already the chapel and reading-room on Sixteenth street is proving inadequate to care for the needs of the congregation.—*Hermosa Beach Review.*

BELLINGHAM, WASH.—The building fund of First Church of Christ, Scientist, has now grown to such an extent that an announcement has been made to the effect that a new church will be built next year on the lots owned on Broadway street. The building will cost somewhere between seven and ten thousand dollars.—*Journal-Progressive.*

CINCINNATI, OHIO.—During 1914 the distribution committee of First and Second Churches placed gift books, subscriptions, and renewals as follows: 18 copies of Science and

Digitized by Google

Health, 2 of "The Life of Mary Baker Eddy," 3 of "Miscellaneous Writings," 18 of "The First Church of Christ, Scientist, and Miscellany;" 8 subscriptions to *The Christian Science Monitor* and 55 renewals; 1 renewal to the *Sentinel*, 22 renewals to the *Journal*, 22 renewals to the *Herold*.

Copies of the *Monitor* containing special articles to the number of 15,295 have been mailed, while there have been distributed through other means 26,563 *Monitors*, *Sentinels*, *Journals*, and *Heralds*.

The committee maintained a booth at the Hamilton County fair at Carthage, where 1,000 *Monitors*, 1,000 *Sentinels*, and 50 *Journals* were distributed.—*Correspondence*.

KENTUCKY.—In 1906 the law establishing the present board of health and regulating the practice of medicine in Kentucky was enacted in a greatly amended form. The bill as originally drawn, and in the form in which it was about to be put on its passage, prohibited the practice of Christian Science healing under severe penalties, unless the practitioner had first proved his qualification "to practise medicine" to the satisfaction of an examining board of physicians and obtained from them a license to practise medicine.

Almost at the last moment, as it seemed, I heard some one casually say that the Louisville doctors were all going to Frankfort next day, and I immediately informed myself as to what was transpiring. The chairman of the committee before whom the bill was pending refused to permit the Christian Scientists to appear before the committee at all. Finally, upon going to Frankfort and making a personal appeal to him, he said the Christian Scientists could have fifteen minutes in which to state their case to the committee, and named the day and hour. I immediately notified the Scientists over the state to be in Frankfort on the day and at the hour named, and particularly urged a few that I knew had been healed in Christian Science of serious maladies to be on hand. After listening to some of the testimonies of healing, the committee inserted in the bill the words, "But this act shall not apply to the practice of Christian Science."
Report of State Publication Committee.

❖ ❖ ❖

The Lectures

Boston, Mass.

Jacob S. Shield of Chicago, a member of the Christian Science board of lectureship, delivered a lecture Friday evening [May 21] under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice at Falmouth, Norway, and St. Paul streets. H. Cornell Wilson, first reader, introduced the lecturer. Mr. Wilson said:—

To Christian Science is allotted the task of reinstating primitive Christianity. In the light of the New Testament this means, if it means anything at all, that Christian Science shall reestablish spiritual healing. We see that Jesus left no room whatever for doubt as to the important part spiritual healing must have in saving humanity from sin and disease. Indeed, he taught and practised spiritual healing as an inseparable part of his mission. He instructed his disciples to "preach the gospel" and "heal the sick." He pointed directly to his own works of spiritual healing when John the Baptist inquired concerning his Messiahship, and used no other argument in reassuring John on this important point. The disciples of Jesus and Paul are reliably credited with healing everywhere.

Christian Science is successfully fulfilling its task of reestablishing spiritual healing. Men, women, and children may be found all over this earth, to the number of hundreds of thousands, who give grateful testimony and undeniable proof of this significant fact. Here let me read from page 150 of "Science and Health with Key to the Scriptures," Mrs. Eddy's chief work on Christian Science, what she as the Discoverer and Founder of this Science has to say on the subject of healing: "Today the healing power of Truth is widely demonstrated as an immanent eternal Science, instead of a phenomenal exhibition. Its appearing is the coming anew of the gospel of 'on earth peace, good-will toward men.' This coming, as was promised by the Master, is for its establishment as a permanent dispensation among men; but the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

All Christian Science churches provide occasional opportunities, such as the one we have this evening, for the public to hear authentic statements concerning Christian Science. It is earnestly hoped that you who are in attendance on this lecture will gain some comprehension of what the purpose of Christian Science is, and the means it employs for serving mankind.—*The Christian Science Monitor.*

❖

Washington, D. C.

William D. McCrackan delivered a lecture on Christian Science at Poli's Theater before an audience of more than two thousand persons. He was introduced by Hiram W. Hayes, committee on publication for the District of Columbia, who said:—

Whenever a new discovery is announced to the world, whether in the field of natural science, art, or exploration, information concerning it is eagerly sought. If this information is in line with popular beliefs, it is accepted as true without question. If it is contrary to these beliefs, proof of its truthfulness is at once demanded. What is true in natural science and exploration is equally true in the way of religious development. When Jesus came teaching a new way to think about God, thousands sought knowledge of his doctrine; and so it was that he went about all Galilee preaching the kingdom of heaven at hand. His works proved the truthfulness of his teaching, although many refused to accept them as such.

In this day and age Christian Science has come as a new discovery,—a new discovery of an eternal Principle; and information concerning it is just as eagerly sought as in the days when Jesus and his disciples practised Christian healing. That is why we are here today,—to hear one who is able to set forth clearly and concisely what Christian Science can do and is doing for mankind. If proofs of his words are demanded, they may be found on every hand, and they are continually increasing.—*Correspondence.*

❖

University of Minnesota, Minneapolis, Minn.

Prof. Hermann S. Hering delivered an address on Christian Science at the University of Minnesota. He was introduced by E. G. Lorenzen, a member of the law faculty, who said:—

There is no problem confronting mankind of such far-reaching importance as the relation of man to his creator. This fact is acknowledged by the great men of all ages and

Digitized by Google

by the thinkers of all times. As members of a university community which is desirous of expressing this best type of citizenship and the highest type of manhood and womanhood, we are especially charged with the duty of working out this problem; for how necessary it is that the intellects of men and women, sharpened through long training and study, should be directed by hearts attuned to the laws of God, to the laws of the spiritual universe, so that they may be used for unselfish ends, for the betterment of the world, and for the uplifting of the human race. Our Master possessed such a perfect knowledge of this relationship existing between man and God, and had such a perfect understanding of the spiritual laws, that he was thereby enabled to live the purest life man has lived; to destroy all sin, to heal all diseases, and to overcome death itself. This understanding he taught to his disciples, and they in turn imparted it to their followers, with the result that for two or three centuries men were freed through the Christian religion from the bondage of sickness as well as of sin. The power to heal was lost only when the church became an institution of the state and religion assumed a materialistic form.

It was not until our own time, about fifty years ago, that these spiritual laws which Jesus demonstrated were discovered and applied by a New England woman, Mrs. Eddy, who has set forth her discovery in a text-book, "Science and Health with Key to the Scriptures." Since that time, Christian Science churches have encircled the globe. Hundreds of thousands of adherents to this faith are proving daily in their lives that the least understanding of the metaphysical laws, as taught in Christian Science, is sufficient for the banishment of all fear, for the overcoming of all sense of want, and for the destruction of all ills and discord, and will confer a sense of security, a joy and peace such as they had never known before.

Many of us did not come into Christian Science for physical healing, but because we found in its teaching a satisfying religion, based not upon faith and dogma, but upon the understanding of exact spiritual laws, which any one may learn and apply to all his daily problems.

Correspondence.

Lockport, N. Y.

Col. William E. Fell delivered a lecture for Second Church of Christ, Scientist, in the Universalist church. The pastor of this church, the Rev. H. M. Wright, in introducing the lecturer, said:—

Several months ago I had both the honor and the pleasure of introducing to an audience in this city William D. McCrackan of the board of lectureship of The Mother Church. He delivered a masterly lecture on Christian Science, a religion which has commanded the attention and respect of the civilized world. It is with equal pleasure and anticipation that I come here tonight to greet and present the speaker of the evening. I am much inclined to believe that this cause which my brother represents is helping the Christian world to receive an answer to the prayer expressed in a familiar hymn, which sounds forth the desire of multitudes of the human family, since it asks for a "faith that will not shrink," even though "pressed by every foe," and that "will not tremble on the brink of any earthly woe." Is not this the faith that we all need? And do we not feel that the gospel of Jesus is able, when rightly applied, to endow us with such faith?

Let us have an open mind. Let us not forget that this age, above all past ages, is going to afford the opportunity for much of marvelous fulfilment along the lines of Christian achievement. Let us learn, let us consider, let Christ direct our minds, as we listen, if perchance we may catch a new vibration in that great harmony of the divine plan, and thus be led on into a richer, fuller appreciation and enjoyment of that grace of Christ which is sufficient for all the needs of body, mind, and spirit.—*Correspondence.*

Poplar Bluff, Mo.

A lecture on Christian Science by Virgil O. Strickler was given at the Fraternal Opera House. The introductory remarks by A. A. Miller were as follows:—

One of the purposes of the Christian Science teachings is to point out or make plain to men that Christ Jesus was truly the Wayshower; that today the same way is shown, the same teachings are just as true, the same demonstrations are just as possible as in the day when the Master said, "He that believeth on me, the works that I do shall he do also." Christian Scientists believe that the proper interpretation of Christ's teachings and commands are not covered by the simple profession of a belief in them, but that the work, the result, the demonstration, must obtain in order that they be truly applied as intended. By many people the commands, teachings, and sayings of Christ Jesus are being taken and used at their true value, and that value is infinitely great. It should not be considered a thing strangely and mysteriously out of the ordinary that one should believe all things possible to God, and that all of Christ's teachings are true for us; Christian Scientists have those beliefs and are trying to use them.—*Correspondence.*

Lectures to be Delivered

Ashtabula, Ohio.—Clarence C. Eaton, Lyceum Theater, 8 p.m. (central standard), June 11.

Carrollton, Mo.—Hon. Clarence A. Buskirk, Circuit Court Room, Court-house, 8 p.m., June 8.

Erie, Pa.—Clarence W. Chadwick, Masonic Temple, 8 p.m., June 4.

Gloucester, Mass.—Bicknell Young, City Hall, Dale avenue, 8 p.m., May 29.

Greenwich, Conn.—William R. Rathvon, Havermeyer Auditorium, 8 p.m., June 11.

Hackensack, N. J.—Virgil O. Strickler, Oritani Hall, 8:15 p.m., May 27.

Haverhill, Mass. (First Church).—Col. William E. Fell, High School Hall, 8 p.m., June 1.

Hoquiam, Wash.—Hon. Clarence A. Buskirk, Church Edifice, 8 p.m., June 3.

Kingston, N. Y.—Dr. Francis J. Fluno, Kingston Opera House, 3 p.m., June 6.

Leominster, Mass.—Prof. Hermann S. Hering, Municipal Building, 3 p.m., June 6.

Malden, Mass.—Jacob S. Shield, Centre Methodist Church, Pleasant street, 8 p.m., June 1.

Testimonies of Healing

It is from a heart overflowing with gratitude that I bear testimony to the healing and uplifting efficacy of Christian Science. I had been a great sufferer for more than twenty years; in fact I had almost every disease poor mortals are heir to, such as lung trouble, neuralgia, organic heart disease, kidney, stomach, and bowel disorders, also female trouble, from which I suffered constantly for twenty-two years. A noted physician claimed that nothing but an operation could give me any relief, and this could never be performed on account of the heart trouble. I had taken the strongest remedies for many years, had been addicted to the almost constant use of an opiate for over four years, and also used snuff. We had spent everything we had; we had tried change of climate and every known material remedy, but there was not a ray of hope left; all was dark despair.

I had been a Bible student for many years, and during the three years when I was confined to my bed, the Bible was my constant companion. I always found peace and joy from it, and in passing through great sorrow the Holy Spirit was my Comforter; but for several months prior to taking up Christian Science it seemed that God had forsaken me. There were times when everything was blank. I felt that my time on earth was short, but I had reached the place where I did not want to die, and I prayed earnestly to be made reconciled to go if it were God's will. I had always been taught that when all material remedies failed it was not God's will for us to live, and we should be submissive to His will. My greatest desire was to do what He would have me do, yet the clouds seemed to grow darker and thicker each day.

This was my condition when Christian Science found me nearly seven years ago. I shall never forget my first treatment. The practitioner's countenance, beaming with love and compassion, brought me a glimpse of the kingdom of heaven. She told me of a God who is Love, who is ever with His children and gives them only good. My whole consciousness was flooded with love, and one by one the shackles fell and man's rich heritage as a child of God was revealed. I could tell of many demonstrations in our home, but suffice it to say that Christian Science meets our every need. Our home used to be quite an apothecary shop, but now our medicine is divine Mind, and I can speak in the language of the psalmist when he said: "Bless the Lord, O my soul: and all that is within me, bless his holy name."

If any one who reads this testimony should be in like bondage, let him take courage, for what God has done for me, He will do for all. To say that I am grateful does not express my feeling, for words are inadequate. I am trying to prove my gratitude by letting that Mind be in me "which was also in Christ Jesus." I am grateful to our revered Leader for her loving life, and that there was one whose thought was pure enough to receive God's message and give it to a sin-sick and dying world.

MATTIE C. ADLETA, Dallas, Texas.

❖

It is with an ever increasing sense of gratitude that I can testify to the healing efficacy of Christian Science. More than nine years ago I was most wonderfully illumined spiritually by the reading of "Science and Health with Key to the Scriptures." Many physical ailments and sinful habits were also overcome, some by the reading of the text-book, others by the help of a practitioner. Before I became interested in this religion I lost much time from my employment because of physical illness, but since then I have lost no time in this way.

In addition to this, I was, after making many voluntary changes of employment, again confronted with the seeming necessity of finding a place. My growth in the understanding of Christian Science had been sufficient to lessen the fear to a large degree; nevertheless it seemed necessary to take about a week's time for special study of the Bible and Science and Health, with a constant realization of the allness of God and His omnipresence, and man the perfect reflection, before I could with sufficient confidence take the needed steps. After this time I felt sure that my reasonable efforts would be rewarded, and I then started to find my place. It was plain to me that my footsteps were directed by divine Love.

It was necessary, however, to put down all sense of doubt as to the way I should take, and to know that guidance in each step would be supplied. With this in thought I was able to tread upon every serpent of suggestion that would cause fear or mislead, and so was enabled to go without delay to the place where I was wanted; and I have now held this position about two years. The place has proven to be one rich in opportunity to see and know how to reflect gentleness and kindness, which was my greatest need, although this was not realized at the time I sought employment.

The lessons from this experience have been most helpful, for I have learned that the true motive for our work is not a selfish one, but that we should work to reflect Principle, and that it is necessary for us to take our place mentally in the divine activity to bring out the perfect reflection.

IRA BOTTS, Los Angeles, Cal.

❖

There seems to be a general belief that Christian Science is unable to cure deafness, so I am sending my testimony as proof that this is untrue. When I was a small child I had catarrh very severely, and it settled in my ears every winter, causing me a great deal of pain. About fifteen years ago I had scarlet fever, and when I recovered I was unable to hear with my right ear. After that I was kept out of school most of each winter on account of severe pain in both ears, and was unable to play out of doors, as it was thought if I did I would take cold in my ears and head.

I had an operation for nasal growths, which the doctors claimed made me deaf, but this did not help me. About five years later I was again operated on for the same reason, and I will say that I have not had any trouble in breathing since the last operation, which was about eight years ago. The deafness, however, was not helped in the least. Two specialists told my mother there was no cure for me, as the ear-drum was ruptured.

I have been interested in Christian Science more or less for several years. In the spring of 1912 I seemed to have considerable trouble with my throat, and as I had decided to have Christian Science treatment for the deafness, I also asked help for this condition. About three days after the practitioner began to treat me, the throat trouble entirely disappeared, and one morning I remarked to my mother that I felt just like putting the receiver of the telephone to my right ear when I talked. She told me to do so, but I seemed to have quite a little fear, and did not. When she went out that evening she telephoned to me to use that ear. I did as she requested, and could hear with it for the first time in fifteen years. I was so glad I nearly cried for joy. From that time on I began to have a natural feeling in the ear and the glands on that side of my head. Within a week after the practitioner began treatment, my mother had an opportunity one day to whisper in my right ear. She was greatly surprised to have me answer her question, and then exclaimed, "You have heard me whisper for the first time

Digitized by Google

in over fifteen years!" I have not had the least trouble with my ears since.

I thank God from the bottom of my heart for awaking me from this dream, as it was only a dream in which mortal mind had stupefied me. In Science and Health (p. 243) Mrs. Eddy says, "God is 'of purer eyes than to behold evil,' and matter has neither intelligence nor sensation." I had been allowing false sense to rule me. I now understand that man is the reflection of spiritual strength and power.

I have taken off glasses, which I wore for three years when reading or sewing, and it is with pleasure that I study the Lesson-Sermon each day, striving to learn more of God, as explained so simply and beautifully in Christian Science.

ADA M. BURTON, Hamilton, N. Y.

❖

Several years ago I came to Loveland, Col., mentally and physically ill. I had spent all the money I had on physicians, when a friend asked me to try Christian Science. Today I am a well, strong man, and very grateful that this blessed truth came to me. I suffered from asthma, lung trouble, and stomach disorder for four years, and had tried every remedy and climate possible. Though I was not healed at once after taking up Christian Science, I was greatly benefited and able to do some work; but as I grew to understand, love, and obey this truth, all the physical ills disappeared.

About a year after I turned to Christian Science, while at work in Estes Park, I had a severe attack of acute lung trouble, with hemorrhages. I was living in a hotel, and in a town where every one opposed Christian Science and tried to force me to use material remedies. I was treated by a practitioner thirty-two miles away, and in five days was freed from all the serious forms of this disease. In three weeks I was up. Considering my former physical condition, my age and surroundings, I think this a wonderful healing, and a proof to those around me of the efficacy of Christian Science. I was also healed of the tobacco habit, after using the weed for forty years.

I was given treatment a great deal of the time for two years but was unable to pay for it, as I was then living on borrowed money; nevertheless the practitioner willingly helped me always, and I was grateful. I have since then paid her, and have also paid all my other debts, so it is with much joy that I send this testimony. On one occasion I met with a serious accident in which four ribs were broken, but I was healed in six weeks without the aid of a physician. I have since been examined by a physician, and he said the healing was perfect. Christian Science also freed me from a sense of great grief and bitterness. It has healed me mentally, physically, financially, and spiritually.

I thank God for Mrs. Eddy, and for all who have helped me to gain this freedom. I want to add how greatly I love "Science and Health with Key to the Scriptures." At first I had to borrow a copy, but now I have my own. The Bible and our text-book are often my only companions in the lonely winter months in these mountains.

MILTON KROUT, Estes Park, Col.

❖

[Translated from the German]

I wish to reiterate my expression of deep gratitude through these columns, after having frequently testified in Wednesday evening meetings to the benefits received through Christian Science. My appreciation of its teachings, upon becoming acquainted with them, was feeble as compared with the sense of gratitude that now fills me as I grow in understanding. It would take too long to tell in detail of the diseases which in the course of years made of me an unhappy, discontented, life-weary woman; I will therefore confine myself to mentioning a few. For twenty-five years I was afflicted with an incurable form of stomach trouble, according to medical opinion, and my family were afraid that it might be tubercular disease. Every means of cure, including a six weeks' stay at a hospital, under the supervision of two professors, failed to bring about the slightest change in my condition. An abdominal complaint then set in, and I was told by the physicians that I must lie down a good part of the time. I did so, as I believed in the necessity of following instructions. None of the operations which were performed proved a help. Eighteen years before this, I had contracted whooping-cough with my children, and it left me with a throat affection which became chronic. According to the statement of a specialist, deep grooves had formed in my throat, and neither cauterizing nor injecting would relieve me, much less cure the trouble. A very sensitive spot in the throat, which could be reached neither by gargling nor by the brush, often kept me from finding rest at night. To this was added a severe nervous condition, accompanied by sleeplessness.

When I say that Christian Science has completely freed me of all these ills, every one will realize my deep sense of thankfulness to God, whose truth has made of me a healthy, happy, and contented woman. I may say that I am even more thankful for the spiritual gain than for the physical healing, and words are inadequate to express my gratitude to Mrs. Eddy, who through faithful, self-sacrificing, and selfless love has helped us to discern the truth which makes us free. I believe that I can best express my gratitude by the endeavor to assimilate more of the truth and by praying daily for the Mind "which was also in Christ Jesus." I shall always be deeply grateful for the great patience shown and the assistance which Christian Scientists have lent me.

FRAU LUISE ROSENTHAL, Hamburg, Germany.

❖

My first introduction to Christian Science was during the early spring of 1889, at which time I was suffering from a severe attack of rheumatism. I took about three treatments, and as I did not notice any improvement I dismissed the practitioner, and with her all thought of Science. After that I used material remedies, and in the course of time got seemingly well.

About nineteen years later Christian Science was again forcibly brought to my notice. At this time it was recommended to my wife, who had been in very poor health for a number of years, by an aunt who had been wonderfully helped through the study of Science and Health. My wife concluded to try it, as all medical and surgical skill had been exhausted, so she purchased a copy of Science and Health and began its study. Her health improved so rapidly that I became interested to know what there could be in a book that could work such wonders. I therefore started to read, as I had come to the conclusion that if it could help my wife so much, it surely could not hurt me; and if there was any good available, I wanted it. I had not read more than a month or two when I threw away all my medicines,—and I had a lot of them, both at home and at the place where I worked, for while I did not have any so-called serious ailments, I nevertheless had a lot of excuses for taking medicine. This was over five years ago, and I have not used any remedy of a material nature since.

Three or four months after beginning the study of Christian Science I was cured of the tobacco habit. I had used tobacco for years, yet all desire for it left me, and it was no effort at all to quit. About four months afterward I lost all desire for intoxicating drinks, and I have not used any-

Digitized by Google

thing of that kind since. I had a large boil on my hand, and I experienced no pain and but very little soreness from it. On two occasions I have had severe attacks of stomach trouble, which some claimed was ptomaine poisoning; but in both cases the difficulty was overcome in a few hours through Christian Science treatment. At another time I had a bad attack of rheumatism, and about a week after this came on, I was taken ill with acute lung trouble. A Christian Science practitioner treated me all night, with the result that this ailment was overcome inside of twelve hours. While the rheumatism did not yield quite so quickly, yet in five weeks I was back at work.

I am employed in the city fire department, and shortly after returning to work there was a big fire. I worked all night, or about eight hours, with wet feet, and although the weather was extremely cold, I did not experience any bad results. On another occasion, while working at a fire where a crime had been committed, the criminal, who had remained in the house after setting it on fire, struck me down with some sharp instrument. The wound was in the left ear and had seemingly seriously penetrated the head. After striking me the first time the man left me, but he soon returned and again attacked me as I lay on the floor. I realized that in my weak condition I was no match for him in his frenzy, so I placed my entire trust in God, knowing that God is all-power and that I as His image and likeness reflected that power; and by the help of God I was enabled to hold the man off until relieved by the police. I was then removed to the police station, where the wound was washed and a stitch taken in it; after that I was sent home. A practitioner was called and Christian Science treatment taken up, with the result that the wound healed perfectly. It seemed for a time that I would lose the hearing in that ear, but treatment was given for that fear, and I soon could hear as well as ever.

To say that I am thankful for all these blessings is putting it very mildly; but I am yet more thankful for the spiritual uplift, for the knowledge I have gained of God, and of man's relation to Him. My wife and I have both had the privilege of class instruction, and are thus enabled not only to help ourselves, but also to help others. For all these blessings I thank God every day of my life. I am grateful to our revered Leader for Science and Health and all her other writings, through which she has thrown such a clear light on the Scriptures that all who wish may understand and apply the golden truths which they contain.

HENRY C. JAACKS, Omaha, Neb.

With a heart full of love and gratitude to God for the truth that has come to me through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I offer my testimony. I took up the study about five years ago, and since that time I have had many proofs of the sustaining power of Truth. I am grateful to find that God is our Father in the fullest sense, and that man is the image and likeness of his heavenly Father,—not subject to man-made laws or material conditions, but governed by the divine law of good. I had suffered with a skin disease for ten years before I turned to Christian Science, and had tried some of the best physicians and many material remedies. After reading Science and Health about six weeks, I was entirely healed, and I have never had a return of the eruption. I have been cured of rheumatism in a serious form, of heart trouble, lame back, and a paralytic condition of the arms, as well as of fear and many other ills.

Some of these healings have been slow, and have taken many treatments, but I am grateful for the gain which adherence to Truth has brought me. It has given me a great opportunity to learn more of my relation to God and my fellow men. Christian Science is enabling me to cling more closely to God, and we are proving the power of Truth daily in our home. My husband has had many proofs of this protecting power. I am thankful to God, also grateful to Mrs. Eddy, our revered Leader, who was ever listening for the voice of God, and for every declaration of Truth that has been made in my behalf. I can sing with the psalmist, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." Most of all, however, I am thankful for the peace and contentment that are mine. I hope I may bring to some one a ray of sunshine, and my desire is so to live that I may be worthy to be called a Christian Scientist.

MARY B. JAACKS, Omaha, Neb.

◆

Nearly five years ago I went to visit relatives who were living in the Bronx, New York, and who were readers for the Christian Science Society there. Prior to that I knew practically nothing of Christian Science. Although I had twice attended service in one of the Chicago churches, I must confess I was not in the least impressed with the mode of worship, because of the fact that I did not have the slightest knowledge of Christian Science or what it meant. I never again thought of the subject until I visited these relatives; then I decided that I would study all I could and keep my eyes and ears open to find out if there was anything in this teaching.

My first experience came one Sunday soon after that. I had been ill all day. My people had gone to evening service, and being left alone in the house I had ample time to think. I then made up my mind that I would never again consult a physician or have anything to do with *materia medica*. As time wore on, however, I felt that I was a very sick woman, and that something must be done, and done quickly. When my relatives returned and asked me whether they should call in a physician, I told them I wanted Christian Science treatment. My answer was a surprise to them, as I had been so much opposed to this teaching; but I was given treatment at once. I had been in bed all day, and it was then ten o'clock in the evening, but I had not yet closed my eyes. I thought that if Christian Science helped me, I would think there was something in it. I was soon fast asleep, and I awoke in the morning feeling well.

I kept on studying, and then came the second proof. I had been a sufferer with pains in my ankles off and on for years, although my husband was a physician and had tried every remedy within his reach, with no good results. I had a severe attack one night, and had lain awake nursing my ankles until two o'clock, when I left my bed, went to the door of my sister's room, and asked for help. She told me to go back to bed; that all would be well. I did as she advised, and in about fifteen minutes was asleep. I had a slight attack some six months later, when I again had Christian Science treatment, and over four years have passed since, with no return of the trouble.

All this time I was doing a lot of studying and some deep thinking. I wanted to be fully convinced that Christian Science was the right religion before I took a decided stand, and the convincing proof came not long afterward. I had been a great sufferer from hemorrhoids, in fact had undergone a very painful operation, which helped me for a time; then the difficulty returned in a more severe form. I had always said, since my husband passed on, that I would never submit to another operation; yet I could see no relief but in death. After suffering for several weeks, I again asked for

Digitized by Google

help in Christian Science, and it was lovingly given me. After three or four weeks' treatment, I realized that this difficulty also had left me. There was a slight return, about six months later, but I have been entirely free from this trouble for several years. This last experience was a great help. I had said all along, while being treated, that if I were cured of these ills I would be a Christian Scientist; and now, besides these physical healings, I have been brought to know God and His Christ. I fully understand how good God is to His children when they draw near to Him.

In the winter of 1913 I had another convincing demonstration. I had been well all winter, but one afternoon, while calling on my next-door neighbor, whose husband is a physician, I suddenly experienced a feeling of numbness. I realized that I was fast becoming irresponsible, using words out of place, etc., and finally my tongue became partially paralyzed. My first thought was to get home and out of the doctor's way. I put on my wraps, and on reaching the cold air, seemed to revive. I therefore stepped over to the post-office for my mail, for I thought that if anything should happen to me, I would have it. Just then school was out, and wishing to avoid the crowd, as I feared I might create a scene, I quickly took my mail and went home. How I entered the house I do not know. I felt that some one ought to be called at once, but no one was in sight. I could not utter a sound, and being unable to attract the slightest attention, I seemed cut off from every avenue of human help. I sat down, and then "Help yourself" came to my thought. Immediately I declared the truth that I was not alone, for God—Life, Truth, and Love—was with me; and I just clung to that thought, knowing He was the only power.

As nearly as I can judge, it must have been about eight o'clock when I crept into bed. I do not remember that I secured the doors or cared for the fire or did anything else; but I recall saying that if my neighbors should find I had passed on during the night, I would not have been alone, for God was with me all the time. I do not remember waking during the night, but in the morning I awoke feeling well and strong. I resumed my usual duties and never felt another symptom of the trouble. To me that was a wonderful demonstration of the loving Father's constant care.

For all these blessings I am indeed thankful to God, also grateful to our dear Leader, who discovered this new-old truth.—Marie Josephine R. Kay, Lansing, Mich.

❖

With much gratitude in my heart, I want to tell of one of the instances we have had in our family of the proof of God's care. In the summer of 1912 our little summer home was struck by lightning, the frame of the door being pushed out about six inches from the wall, while its top board was sent clear across the room and a great ball of fire shot through the wall at the side. Although I was sitting beside the closed door, I was unharmed. Another member of the family was lying down in one of the upper rooms, and the bed on which she was lying was struck, two of the casters being knocked off, but she was not harmed. Many articles were blown from their places and a lamp was overturned, but nothing was broken except a few panes of glass.

Before this seeming visit of error, one of us had been declaring the truth, and we had just heard the lesson on Life. This is only one of the many convincing proofs we have had of Love's protecting power. Among the physical ills met and mastered, I may mention neuralgia, croup, nervous exhaustion, and a growth on the breast. These have all been overcome by a knowledge of Truth as revealed in Christian Science.—Mary E. Boyd, Washington, D. C.

From Our Exchanges

[*The Pacific Baptist*]

A true church seeks not power for itself. It is not an end in itself; it is only a means to an end. It exists not to be glorified, but to glorify; not to be served, but to serve. Pomp and circumstance are unbecoming to it. Simplicity and sobriety best express its true character. It has no magic of ordinances by which it can transform lives, no power of its own to condemn or forgive. It is a democracy of believers who have chosen to band themselves together to live a life, enjoy a fellowship, and proclaim to all men a message of salvation personal and social. World conquest through the moral and spiritual transformation of all men is its program. Surely here is an aim so all-inclusive, so magnificent, and so beneficent, that it ought to appeal to the most ambitious and the most efficient minds of the best age of the world.

[*The Watchman-Examiner*]

We lift our hearts to God in profound gratitude for the age in which we live. And yet one thing makes us inexpressibly sad, for one cloud has shaped itself from the very brightness of the cheering prospect. Men are forgetting that the church has been the nursing mother of philanthropy, and that Christianity has furnished the very life-blood of all movements for human betterment. In the admiration of the fruit, men are forgetting the tree upon which the fruit has grown.

The apostles of humanitarianism are now asserting that love to man is love to God, and that a kind and noble bearing to one's fellow creatures in this world is all-sufficient to entitle one to whatever consideration he may need in the life to come, if, indeed, there be any such life. There is danger of so exalting humanitarianism that our relation to God shall be ignored or forgotten. The love of God and the love of our neighbor—these two contain "all the law and the prophets." A true love to God manifests itself in a generous and fruitful love to man. Love to God is the root from which all the noble and beautiful relations of humanity have grown. Christianity has not only furnished the love, the inspiration, and the sense of duty from which modern philanthropies have sprung, but in large measure the multitudes of workers in social and philanthropic movements count the church their nursing mother.

It is Christian people who have poured their gold into these movements for the uplift of the world. Until the spirit of Christ took hold upon the hearts of men there were no concerted movements for human betterment. We would not have these movements under the exclusive direction of the church, but we would be glad if philanthropy would acknowledge Christianity as its mother. Too many charity workers and social reformers, who are contrasting the activities of the churches with the activities of these extra-church organizations, are ignorant of the fact that these organizations had their origin in Christian love, and that in large measure they draw their support from Christian beneficence.

[*The Christian Register*]

The consecration of sacrifice and cross-bearing is sometimes carried too far. Things are called the will of God which would better fit the will of a devil. The torture may call out bravery and fineness of spirit on the part of those who endure it, but if it calls out no effort to stop it, the waste of consecration comes close to being blasphemy. The main fact about the cross was that it was a disgraceful form of

Digitized by Google

barbarous cruelty, an ingenious invention of fiendish malignancy, which ought never to have been inflicted. That it was consecrated in the bearing does not consecrate its infliction. Woe to those who laid it on the shoulders of Jesus as much as though his spirit did not rise triumphant over it!

Woe always to those who lay avoidable crosses on human nature! While discipline may gain under the necessity, and graces be won in the suffering, there is enough opportunity for spiritual training in the suffering that cannot be reached, without submitting to the suffering that could be stopped and thus helping its continuance. We can imagine circumstances —we might, unhappily, recall them—in which tolerating crosses out of the sense of duty is complicity with crime. The conscience on the subject is nowadays being felt, and more keenly now than ever. It ought to be aroused more definitely and widely than ever. The first and best way to bear undeserved suffering is to do something to stop it.

[*Zion's Herald*]

There are those who ask God to help them so to endeavor that they will not meet with failure, and who stop there. They neglect to ask that wisdom be given them to help them to make their failures mean something to them. While no one of us should court failure, we should strive to make the most of it when it does come; and making the most of our failures means turning them into stepping-stones to success. The man who has failed once, or twice, or more, is immeasurably better equipped for success than the man who has not known the steadying and stimulating effect of having gone down to failure through overconfidence or lack of preparedness. To have failed is, many times, to have been forearmed. He is indeed a dullard and a laggard who has not been stirred and enlightened when he has had to yield the ground he would call his own. For him who has failed, success should not be far removed; for to have failed, should mean to have learned how to succeed.

[*The Universalist Leader*]

There is a way to get the gospel to the people in all its strength and purity, and it is not a new method, for it is but the method of the Master himself, who gave himself with his message, and the common people heard him gladly because he was in the message he gave. He did not shut himself away behind lofty walls, and then try to toll the people in with winsome music or spectacular display to consider his philosophy as he discoursed through a dull half-hour; he went out to the people as they were in his day, to carry life and hope and joy and worth and health and happiness. Today his method would be subject to variation, because he was a wise man; but who can imagine him today drawing a large salary and living in luxury while the people perish for the bread of life, and the cause for which he gave himself centuries ago suffers defeat?

[*The Outlook*]

Trial is not only a challenge to put forth courage and faith, but it is an expression of confident love. Trial is always man's greatest opportunity for moral and spiritual development. It is when an earnest man has been through hardship that he begins to discover the love of God. The love which indulges and coddles is destructive; the love which challenges is creative, and such love is not only self-sacrificing, but self-repressing, holding back constantly that which it would fain give, and giving by holding back. The love of God is virile as well as compassionate, insistent as well as repressive; the very reverse of a great deal of human love which in its short-sightedness wrecks that which it would save and destroys that which it would build up.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The proposal to establish an approximation of the single tax in Denver, Col., was defeated in the recent election by more than two to one. According to unofficial returns, the vote was 27,125 to 7,988. The election was held under a provision of the state constitution, which permits charter cities to exempt personal property and improvements on land from taxation (excepting one mill) for city purposes. The city tax rate in Denver is now 5.744 mills. To make up the revenue that would have been lost by reducing this tax to 1 mill on personal property and land improvements, it was proposed to raise the tax on land and public utility franchises, and the rate on land, it was estimated, would have been about 11.5 mills.

The latest annual tax on land and franchises was given as $1,018,769, and on personal property and improvements as $1,270,196. If the amendment had passed, these figures would have been changed, it is estimated, to $2,097,-931 on land and franchises, and $221,834 on personal property and land improvements.

Pittsburgh, Pa., long known as "the smoky city," is gradually eliminating its smoke nuisance. Experts at Mellon Institute have studied causes and conditions and proposed ways and means of meeting the difficulty. Careless firing was found to be the chief contributing cause of the nuisance, and experts proceeded to teach the city how to fire properly. In consequence, there is said to be little indifferent firing now. A year ago it was estimated that Pittsburgh was spending at least ten million dollars annually in trying to keep clean. The annual soot fall in the city was as high as 1.95 tons to the square mile. Visibility in the city was reduced to one tenth of that of the open country, and active sunlight was reduced by one half. Practically all this has been changed, and the city now has a sky-line that stands out clear and distinct. There is much natural beauty about Pittsburgh, because of its rugged topography. It is built upon hills that are surrounded by other and higher hills. These have been obscured, but now they can be seen.

The state department at Washington has issued in pamphlet form the preliminary program of the second Pan-American scientific congress, which will be held there, beginning Dec. 27 next and ending Jan. 8. The congress will hold its sessions in the building of the Pan-American Union, and attending it will be delegates from all the countries of the western hemisphere excepting Canada. From 1898 to 1905 three Latin-American scientific congresses were held at various South American capitals, and the fourth was fixed to be held at Santiago, Chile, in 1908. The plans for this fourth congress had not proceeded far when it was decided to make the congress Pan-American instead of Latin-American, and an invitation was accordingly sent the United States to send delegates, which it did.

The work of the congress will be divided into general subjects. Among them are the following: astronomy, meteorology, and seismology; conservation of natural resources, agriculture, irrigation, and forestry; education; engineering; international law, public law, and jurisprudence; mining and metallurgy, economic geology, and applied chemistry; transportation, commerce, finance, and taxation.

A proposed new waterway from the upper end of Lake Erie to the lower end of Lake Michigan, to be cut through the northern part of Ohio, Indiana, and Illinois so as to enable barges of the type that will operate through the New York state barge canal to pass from New York to Chicago, has been approved at a meeting of representatives of New York, Boston, and Buffalo commercial organizations. Members of a board of engineers appointed by the war department in 1912 to survey the route of the proposed canal, explained the progress of their work, a report on which they are soon to submit to Congress. The proposed canal, starting at or near Toledo and ending at Chicago, would shorten the present route between those cities by way of the Great lakes. Its capacity would be ten million tons, and its cost one hundred and thirty-five million dollars.

Since the reclamation act became a law, June 17, 1902, the United States government has expended $112,756,079.71 in the work of putting water on arid and semiarid lands in the western states. The total allotments made, bring this sum up to $122,735,721.84, showing that the unfinished work at the present time will cost in the neighborhood of $9,989,642.13. Thus far the great work has been done, and the rest of it is to be done, without any large direct outlay of cash by the government. The act provides that the proceeds from the sale of government lands in the West are to be turned over to the reclamation fund, which was started in 1902 with about three million dollars on hand. Since that time the sales year after year have considerably enlarged it and kept it going.

The ninth annual meeting of the American Peat Society is to be held in Detroit, Mich., Sept. 20-22. The association has been formed for the purpose of encouraging the larger use and application of peat for industrial and economic purposes in the United States, whose peat deposits form one of the country's most important natural deposits. American peat swamps cover large areas in the region east of the ninety-seventh meridian, which runs through western Minnesota, and north of the Ohio river. These swamps also occur along the Atlantic coast as far south as Florida. On the Pacific coast, peat-beds have been reported from southern California northward to the Canadian boundary.

Hawaii, with an area of only 6,449 square miles, and an estimated population in 1914 of 207,743, has increased its trade with the United States and foreign countries from $40,000,000 in 1904 to approximately $76,600,000 in 1914, making its per capita commerce $369. The trade of Hawaii has rapidly increased in the period since the annexation of that territory to the United States in 1898. Shipments thereto from this country have grown from $6,800,000 in 1897, the year preceding annexation, to $21,800,000 in 1914, and imports from foreign countries from $900,000 to $6,000,000. The shipments from Hawaii to the United States during the same period grew from $15,000,000 to $48,300,000.

Among the important subjects to be discussed at the Latin-American financial conference, called at the instance of Secretary McAdoo in Washington this week, were: direct exchange between the United States and South American countries; establishment of branches of United States banks in South America; longer credits to be given by United States exporters, to meet the business custom of European exporters; establishment or rehabilitation of transportation facilities between the United States and South America; extension of markets in the United States for the products of South and Central American countries.

Gray Herbarium at Harvard, which has recently been remodeled by the installation of concrete floors and steel cases for the specimens collected by Dr. Asa Gray between 1838 and 1850, is now officially open to the public. Since American botanical studies are regarded as largely founded upon the Gray collection, it has long been a matter of concern with botanists that it should be properly housed and stored. Until this change, the specimens were largely in wooden cases standing on wooden floors.

Record-breaking cargoes passing through the Panama canal in March, according to war department statisticians, would have filled approximately eighteen hundred freight-trains of twenty cars each. These trains, it is estimated, would have totalled two hundred and seventy-five miles in length, or filled five parallel tracks from Panama to Colon. Had this freight been transported across the Isthmus in freight-trains, it would have required a train every forty-eight minutes.

After months of investigation, a Peruvian corporation is ready to announce that the agricultural possibilities of southern Peru have heretofore been underestimated, and that in view of the Arica-La Paz railway affording a much shorter entrance from the Chilean coast to Bolivia, the Southern railway of Peru would do all in its power to encourage local agriculture and traffic in that part of the country.

The trade returns for the first three months of the year show that the tonnage of vessels entered at ports in the United Kingdom from foreign countries and British possessions amounted to 8,040,670, as against 10,915,858 for the corresponding period in 1914. The tonnage cleared during the same periods amounted respectively to 10,180,219 and 16,250,057.

Massachusetts had more fires and suffered a greater loss in 1914 than ever before in its history. The total loss in the commonwealth last year was $26,194,270.57, as compared with $10,995,580.03 in 1913.

During March the United States exported $61,545,000 worth of breadstuffs, as compared with $8,900,000 worth during the corresponding month of 1914.

Nearly one million five hundred thousand bushels of potatoes are still in the hands of the farmers in Aroostook county, Maine.

Prayer That Heals

WILLARD S. MATTOX

"Are we benefited by praying?" Mrs. Eddy asks on page 2 of Science and Health; and she answers, "Yes, the desire which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void." This scientific statement of the quality and characteristics of the prayer that heals the sick and reforms the sinful is so clear that it cannot be mistaken for the conventional and formal sense of prayer. "Ye ask, and receive not, because ye ask amiss," says the apostle James. If our petitions to God are not answered, there must be a reason for the failure. The fundamental requirement, as indicated by Mrs. Eddy's words, is an unselfed yearning to be good, without which our human desires are unavailing and fruitless.

If the sick desire only to be relieved of pain or suffering, if the poor and indigent wish only to acquire an increase of supply, if the unsuccessful pray only for success, is it strange that they have no answer? If, even unconsciously, the longing of the heart of man is for unworthy things,—for the gratification of sordid and selfish aims, for material things only in order to have material things, for a surcease of discord or pain only because one wishes to be relieved of the penalty for believing in a life apart from God, for something or anything to satisfy the human self,—then such desires are not that "hungering after righteousness" referred to by Mrs. Eddy, which is always answered. If the desire to be cured of disease, or to be helped out of human deficiency or failure, is not born of a humble purpose to improve one's self, it must necessarily fail in securing those happy results which follow an earnest and honest desire to grow in grace, to "put off the old man" with his material thoughts and deeds, to be more godlike, and to demonstrate in one's life the scientific unity of idea and Principle, of man in the image and likeness of God.

When Jesus said, "Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them," it is not to be supposed that he did not discriminate between an honest desire and a superficial wish to be benefited. In the case of the blind men who "followed him, crying, and saying, Thou son of David, have mercy on us," he made it plain that faith and a receptive thought are necessary adjuncts to spiritual healing, which follows a righteous plea for divine aid. The account goes on: "Jesus saith unto them, Believe ye that I am able to do this? They said unto him, Yea, Lord. Then touched he their eyes, saying, According to your faith be it unto you."

A request to be saved is not prayer. We may be willing to profit by prayer, but that is not enough. The dilettante or trifler can never understand the mission of prayer, nor the faith and sweet humility of thought which must always accompany it in order to gain the ear of divine Love. To plead with God is not to pray to Him. The divine Mind is not convinced or impressed by an insistent petition. Jesus' parable of the judge who yielded to the frequent appeals of the woman who said, "Avenge me of mine adversary," because he feared she would weary him "by her continual coming," was intended, no doubt, to expose the mockery of trying to use prayer as a means to gain a personal advantage. On the contrary, nothing but faith and honesty can open the way for an appeal to the loving Father, who knows what we have need of before we ask Him. Coleridge says,—

> He prayeth best who loveth best
> All things both great and small;

and a well-known hymn contains these lines:—

> Prayer is the soul's sincere desire,
> Uttered or unexpressed.

"Love never faileth," Paul declares (Rev. Ver.). The "sincere desire" to be good never considers the possibility of failure. In a single sentence Mrs. Eddy gives an incomparable description of the ideal prayer: "Spiritual sense is a conscious, constant capacity to understand God" (Science and Health, p. 209). Such an understanding can never be persuaded to be impatient or petulant, if prayer is not answered at the instant when imperious mortal will expects a reply. Prayer is "God with us," positive spiritual knowing which excludes all doubt, uncertainty, or lack of faith.

Some one has said that "expectation is achievement." Prayer is that positive and expectant state of mind which is able to realize the ever-presence of answer. Paul refers to "the faith of Abraham; . . . who against hope believed in hope," and with this agrees Montgomery's recommendation, "Hope against hope, and ask till ye receive." True prayer is so loyal to God, and so faithful in its patience, in its unshakeable trust and confidence, that it is never disturbed or discouraged by what may seem to be a delayed answer or an apparent failure. Time does not enter into the divinely mental processes of prayer. The ever-presence of good is the answer to prayer, and this omnipresence eliminates all consideration of time and space. That is why the answer may be, and so often is, instantaneous.

Gratitude is one of the notable characteristics of true prayer. It has ever been easy for mortals to appreciate healing, after the sense of disease has yielded to the utterance of Truth. It was easy for the dubious Thomas to believe that his Master and friend had risen from the dead, when he saw Jesus in the flesh, but it was no credit to Thomas that he reluctantly admitted Jesus' victory over death. It is equally discreditable to those who today are saying in effect, Heal me, and I will be grateful; but I must see results first. Such a state of mind may have prevailed in those places of which it is recorded that Jesus "did not many mighty works there because of their unbelief."

Patients who come to Christian Science today with an unbelief in a treatment that cannot be perceived by the senses, do not so readily respond as do those who are quick to apprehend that the essence of prayer is gratitude. Cases are on record of the healing of so-called incurable disease when suppliants have risen to the point of confident anticipation, where they could say, as did Jesus before the tomb of Lazarus, "Father, I thank thee that thou hast heard me." In spite of all the evidence of the mortal dream, the apparent reality of death and disintegration, there was one man in the throng that stood about the open tomb who knew enough about

eternal life to be able to say, even while the dead seemed to be dead, "Father, I thank thee that thou hast heard me," and then, as we read, he "cried with a loud voice, Lazarus, come forth. And he that was dead came forth, bound hand and foot with graveclothes: and his face was bound about with a napkin."

It was the superb consciousness of the omnipotence of ever present Life which enabled Jesus to speak with authority, and which made it possible for him to be grateful for a perfect healing before there was any material evidence to confirm such an expectation. The materialist believed when Lazarus came out from the tomb, but Jesus' understanding equipped him to know in advance and without confirmation from matter that the demonstration of life is eternally accomplished. That is why the invalid who is believed to be sick, has a right to be grateful and to thank his heavenly Father for perfect being.

The desire for more light, a clearer vision of things as they are, a more definite understanding of spiritual being, reveals to man's consciousness the ever present good which is just at hand and always available. This is what prayer meant to Jesus; and mankind is learning today something of the majesty and beauty of the Saviour's outlook on life. To pray means to cleanse the consciousness of whatever thoughts may tarnish the pure affection which instinctively reaches out to divine Love for comfort and solace. The prayer that heals was illustrated in the daily practice of Jesus, and it is clearly described in the following passage from page 476 of Science and Health: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

The One-talent Man

LOUISE KNIGHT WHEATLEY

PERHAPS one of the most seemingly paradoxical statements which have ever puzzled the earnest Bible student is this: "Unto every one that hath shall be given, and he shall have abundance: but from him that hath not shall be taken away even that which he hath." These words occur in the parable known as the ten talents, wherein we are told that the master of the house, having divided his goods among his three servants, went on a journey, and upon his return required from each an account of his stewardship. It is related that the servants who had received five and two talents respectively had doubled them in the master's absence, while he who had received but the one talent returned it, untouched and unharmed, to its owner. At this point, however, the average reader feels an uncomfortable sense that something is beginning to go wrong, for the rebuke to this overprudent servant appears to be out of all proportion to the wrong committed. "Thou wicked and slothful servant," the master says to him; and then the command is given, "Take . . . the talent from him, and give it unto him which hath ten talents." Thereupon follows the remarkable saying quoted above, which has proven indeed a stumbling-block to theological thinkers for centuries.

One's natural sense of justice seems offended. How can it be right that the man who already has little shall be deprived of that little for no reason, apparently, except that he who already has much shall be given more? While it is true that the man had not gained anything with his one talent, he certainly had not lost anything. Does he deserve no credit for that? He may have been overprudent, but at least he took no chances. In pondering these questions, however, we remember that the story was told by our loving and compassionate Master himself, and hence we know that when rightly understood it will be found to contain not the smallest hint of injustice to any one. To understand it, therefore, we must go beneath the surface of things; we must grasp the deeper meaning of the Scriptures in the way which Christian Science teaches; just as those who seek for rarest pearls must go far below the rippling of the purposeless waves into the still, clear depths where only those who have the perseverance to seek, may find.

To such a one this seemingly incomprehensible statement, from the old point of view, will become a pearl of such priceless purity and beauty that he may well count it a joy to find it added to the treasures of his mental home. He will find that beneath the rich metaphorical diction of the Orient there lies hidden a gem of vital metaphysical truth; also that the man with the one talent was compelled to lose it by reason of a law as inexorable, as irrevocable, and as unalterable as the law which holds the planets in their courses. For he had made some serious mistakes, this man of long ago; his whole process of thinking was wrong, and it led him just where wrong thinking always leads.

In the first place, this servant began by being afraid, which is about the worst thing that a man can do, if he wishes to succeed at anything. It is no wonder that trouble quickly followed, for when one is afraid he is in a mental state to invite almost anything to happen. He is like the man who looks out of his cozy home upon a blinding snow-storm, and after crying out, "I'm so afraid the snow will get into the house!" straightway proceeds to throw open all the doors and windows. Job said, "The thing which I greatly feared is come upon me." Is it any wonder that the man who began by being afraid, lost his talent, despite his precautions?

Then the man made another mistake. Being overcome with fear, he hid away his talent in what he evidently considered was a good, safe place. He dug a hole, and buried it. This is exactly what every man does who is afraid; he immediately puts a stop to any activity which might otherwise be in operation, for it is self-evident that so long as the talent lay buried it was useless. While the servants who had received five and two talents respectively were busily engaged in making these talents bring them in some return, he was deliberately, if unconsciously, depriving his one talent of even the little value which it already had. When put into circulation, passed from hand to hand, it had a certain specified purchasing power; it could buy something, be something, do something; it represented a given amount of activity. But so long as it lay buried it was just the same to him as if it had no purchasing power at all. One may have a million dollars in the bank to his credit, but if he never goes to the bank and presents his check, he will never get anything. It is what we use, not what we hoard away, which is of actual value.

The third mistake of this unfortunate man, however, was the worst of all. He not only hid away his talent, but he hid it "in the earth," in matter. In other words, he regarded it as a material possession. The mental equipment of the man with the one talent did not include the true understanding of possession. From first to last he regarded his talent as existing in matter, even telling his master, when the moment of final reckoning came, that "there thou hast that is thine," meaning in the earth, in matter. No wonder he lost his talent, for if he had believed it to be in matter, he had never really had it at all. How inevitable, then, is the logical sequence that "from him that hath not" any real possession, "shall be taken away even that which he" in his blindness believes that he "hath."

Digitized by Google

Christian Science teaches that nothing is ever safe in matter. Chance and change disintegrate, "moth and rust doth corrupt, and . . . thieves break through and steal." Spirit being the true source of all good, all happiness, all supply, it is only as we lift our thought of possession from the material realm into the spiritual that we are laying our treasure, whatever it may be, in the one place where it is really secure. A constant, conscious realization of this would quickly dispel all sense of personal pride in one's own achievements, for if whatever we accomplish is brought about only through the intelligent use of a talent entrusted to us, it is not ours at all, but God's. Then if it is God's, it must come to man, His child, by right of reflection; and since Spirit can never be reflected by or in matter, it follows that this talent must be a wholly spiritual gift, and as such forever protected beyond the reach of chance or accident in the spiritual realm of the real. Knowing this, acknowledging it, realizing it, as an eternal, indisputable fact, let us joyfully proceed to use what we have, that the Father, and not self, may be glorified.

Probably most of us, if the truth were known, unconsciously think of ourselves as having only one talent,—in accordance with mortal mind's favorite method of limiting all that is good. We look at the man with the five talents, and with a sigh straightway proceed to bury that which we have. Let us remember, however, that the master of the house gave to each servant "according to his several ability," and the man with the five talents might have been compelled to defend them against odds which would easily have overwhelmed the others. There is no doubt that he received along with them his own peculiar problems, and if we could know all the temptations which assailed him on account of his greater responsibility, we would never again think of envying him; rather would we humbly thank God that there was found even one brave enough to stand the pressure. In certain countries, when soldiers on the line of march are obliged to ford some suddenly swollen stream, the officers are taught to swim with the sword held in the teeth to keep it from getting wet; and in like manner the man with the five talents is sometimes called upon to preserve his integrity and purity while himself passing through deep waters.

But why classify ourselves at all? It was the master of the house who did this, and not the servants themselves. In absolute Science there is no man with five talents, or with two, or with one, for "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13). To each one God has already given all; and since each of Mind's ideas reflects the infinite abundance, it can never be limited or circumscribed. Then let us make the very best of that which we consciously have at the present moment, remembering what our Leader counsels: "In order to apprehend more, we must put into practice what we already know. We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated. If 'faithful over a few things,' we shall be made rulers over many; but the one unused talent decays and is lost" (Science and Health, p. 323).

Let us therefore rejoice. If we can see that we have been given five talents, let us use them fearlessly, and give God the glory. If we believe we have but two, let us use those two, and not envy the man with five. Even if all we can seem to realize at present of the Father's abundance is just the one talent, let us still rejoice. Let us never think of Him who gave it to us as "an hard man," as did this unprofitable servant of long ago, but let us thank Him for His goodness, and make glad and grateful use of that which we have. We too can double our talents, and the reward of our fidelity will be the same; for it must never be forgotten that the true reward of service lies not in the doubled talents, but in that message which sooner or later comes to each waiting heart: "Well done, thou good and faithful servant: . . . enter thou into the joy of thy lord."

❖

Humility

ARTHUR H. LIDDLE

It has been wisely said that the first test of a great man is his humility, but humility has for students of Christian Science a deeper significance than this; it assumes for them a wider and fuller meaning than the world usually gives it. In "Miscellaneous Writings" (p. 356) our revered Leader says: "The second stage of mental development is humility. This virtue triumphs over the flesh; it is the genius of Christian Science. One can never go up, until one has gone down in his own esteem." If we look at the early history of Moses, we see in his experiences in Egypt and in the land of Midian how he learned the lesson of humility, and then we read in Numbers, "The man Moses was very meek, above all the men which were upon the face of the earth;" and later, in Deuteronomy, we are told that "there arose not a prophet since in Israel like unto Moses, whom the Lord knew face to face, in all the signs and the wonders, which the Lord sent him to do in the land of Egypt to Pharaoh, . . . and in all that mighty hand, and in all the great terror which Moses showed in the sight of all Israel." Is not this a striking commentary on a mental attitude which Mrs. Eddy calls "the genius of Christian Science"? Surely it is of great importance to understand in the light of her teachings what humility means.

Humility has too often been regarded as a somewhat doubtful virtue, because it is sometimes seen to be tainted with hypocrisy; but hypocrisy can no more exist where true humility is than can darkness mingle with light. True humility consists in leaning completely on God; it is the surrender of all desire to follow any path but that which divine Love points out. It means to lose all sense of personal responsibility and to realize that all strength, ability, capacity, intelligence is in God alone; it is to have the simple trust of a child, the receptive state of thought which Jesus said was necessary to enter the kingdom of heaven.

We learn in Christian Science that God, infinite Mind, is the only creator; the real man, therefore, as created in God's image, reflects only the one Mind, and can have no mind apart from God; whereas our former concept of man as material, with a separate mind of his own, is simply an illusion, since God is the only intelligence. The so-called human will cannot, therefore, direct man, although it may seem to do so. With this recognition of the powerlessness of the human mind, will, and intellect to guide man rightly, the true idea of humility begins to dawn upon us. We have, to apply Mrs. Eddy's words quoted above, gone down in our own estimation, and thus the allness of God, good, becomes more and more apparent. Daily and hourly we refuse to hearken to the suggestions of mortal mind and turn humbly to listen to the voice of God.

Christ Jesus raised the dead, healed the sick, and walked on the sea; none other has done such mighty works, and yet he said of himself, "I am meek and lowly in heart." He has set us an example of true humility which all can and must follow. The human mind would have us plan what it thinks best, and would have human needs met in the way it would like; but Love's ways are often not those which seem best from a worldly point of view, though we can never doubt that our problems are always solved in the best way as we follow divine guidance. Every student of Christian Science has

Digitized by Google

found this in countless ways. By looking to Love alone for guidance, we can avoid all anxious thoughts about results, since we are assured that "the meek shall inherit the earth."

The attitude of continually and habitually turning to divine Love and refusing to heed the false evidence of the material senses, results in the true humility that leads up to the stage of which Mrs. Eddy says (Miscellaneous Writings, p. 357), "The third stage of mental growth is manifested in *love*, the greatest of all stages and states of being."

✧

"Enter thou"

CAROLINE A. BALY

One can but realize, after a patient and earnest study of Christian Science, that a dominant asset to the seeker after Truth is gladness, a gladness which the most alluring earthly pleasures can never bestow. Christian Science is the demonstrable manifestation to the world of that rich reward of the faithful servant, "Enter thou into the joy of thy Lord." This phase of the teaching may not present itself during the earlier stages of our upward journey, because of the chemicalization explained on page 401 of Science and Health. This new-old doctrine causes such a mental upheaval, discloses so much latent, undreamed-of error, that the searching self-diagnosis resulting from an earnest longing to know the truth may be, and often is, somewhat appalling to the awakened conscience.

Our ascent from the material to the spiritual bears some analogy to the efforts of one learning to swim. During his first endeavors the swimmer can judge of his progress only by looking back to the starting-point. When, however, his more vigorous attempts carry him out into the stream in sight of the promised land, no matter how distant, he no longer looks backward to gage his progress, but forward. The goal is in sight, and the bright promise encircling that desired shore inspires him to breast the troubled waves, and to keep on courageously until at last with joy the goal is reached. It is just here that we realize, somewhat faintly perhaps, what we owe to our inspired Leader. This apprehension of the glorious possibilities of attainment is so uplifting that we for the first time enter into the joy of our Lord; and out of this new sense of gladness, hitherto unrealized, rises spontaneously the prayer, "God bless her." Thus we begin to taste the fulness of joy, and this joy no man can take from us.

Many students of Christian Science are slow to apprehend the healing potency of gladness, yet out of his wide experience the psalmist persistently urges this tribute to a loving Father: "Make a joyful noise unto the Lord, all ye lands. Serve the Lord with gladness: come before his presence with singing." Praise is indeed the only homage we can give to God, who giveth all, and Christian Scientists have great reason to praise Him. To be of a sad countenance amounts to a denial of God, for the discouraged and despondent must of necessity stand outside the kingdom of harmony, while praise is the open sesame to God's presence, the wedding garment displacing "the spirit of heaviness."

The Bible, which is so illuminated by Christian Science, demands of us the sacrifice of thanksgiving,—and why are we not more ready with this tithe? The closed hand does not give and cannot receive. Why lose the present good by clinging to the doleful past? Why turn the self-pitying gaze back to Sodom, when by looking up after the manner of the shepherds we can hear the angels sing, "Behold, I bring you good tidings of great joy"? How great this joy is, no dweller in the dead past can ever know! Mortals blindly elect to starve upon the husks of self-pity, self-justification, and discouragement, when all the time, if they would but see good, the table of Love is spread in the presence of these enemies.

"All that I have is thine," was the father's assurance to the son that was ever with him. Yet this rich heritage is so often ignored. Ofttimes even Christian believers seem to prefer to wander in the wilderness of false griefs of ephemeral sense. "Lazarus, come forth," rings out in loud voice today to those who thus drape themselves in mental grave-clothes. Our various trials and tribulations, mainly self-imposed, are the inevitable corollary of the false belief in a power apart from God.

Throughout the Bible and through all our Leader's writings comes the call for obedience and praise; the two are inseparable, for the disobedient cannot praise, and the obedient cannot do otherwise, because "obedience crowns persistent effort with everlasting victory" (Miscellaneous Writings, p. 118). All through her pilgrimage, out of the depths, on the open battle-field, and in patient anticipation of the "Enter thou," Mrs. Eddy's message rings with the gladness of overcoming, the overcoming promised throughout the book of Revelation,—and how rich is the reward assured the faithful!

Nevertheless, we should not fail to recognize the sweet uses of adversity, for until we awake out of the Adam-dream, these bugle-calls of suffering or privation seem to be a necessary part of our purification from all evil. Which of us, having glimpsed however faintly the glorious promise of Christian Science, would forego the harvest, "e'en though it be a cross" that leadeth us? And just here gladness is imperative, for we read, "Thy rod and thy staff they comfort me."

There is therefore no time or place where thanksgiving and gladness are undue,—gladness that the way, however rough and dark to mortal sense, leads up to heaven, and that whatever betide during our pilgrimage, we can, as our Leader says (Science and Health, p. 121), be "glad in God's perennial and happy sunshine, golden with Truth."

[Written for the *Sentinel*]

Pinions

GERTRUDE RING HOMANS

Rest in fullest measure,
Wait upon the Lord;
Soon 'twill be His pleasure
To fulfil His word;
Then will Truth dawn faster.
Prize its message terse:
"God is still the Master
Of His universe!"

Darkness may seem near thee,
Trouble pressing nigh;
Carnal mind may vex thee,
And thy mettle try;
Look to Him the harder
When things seem adverse,—
"God is still the Master
Of His universe!"

Naught can ever harm thee,
Thine is trust secure;
God is all around thee,
Let not sense allure;
In His will abiding,
None can good reverse,—
"God is still the Master
Of His universe!"

Selected Articles

[Judge Clifford P. Smith in *The Baltimore* (Md.) *News*]

The beliefs of Pastor —— are so fundamentally different from Christian Science that he could hardly be expected to speak of it accurately, but his sermon on this subject which you published recently, was not fair even to himself, for it put him in the position of speaking in an oracular manner without insight or appreciation.

The main thread of the sermon in question was woven about a series of mistaken suppositions regarding the position of Christian Science toward the item of human experience called death. The philosophy of Christian Science was supposed to be as follows: Whoever dies commits mortal error; death is the greatest of errors, and one's failure to overcome it here and now leaves him hopeless,—he has failed in the last moment of his trial. The conclusion drawn from these premises was that the death of Christian Scientists disproves the truth of Christian Science. The fallacy of this conclusion, however, begins with the falsity of its premises, for they do not represent the teachings of Christian Science in a single particular.

The position of Christian Science with reference to the change called death is simply that of original and unadulterated Christianity. When Christ Jesus said, "If a man keep my saying, he shall never see death," and when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he lifted up an ideal which will sooner or later draw all men. But it is not only in the belief called "this world" that we have hope in Christ; the true idea must reign in our thoughts until the mortal qualities of human consciousness are wholly eliminated. The passing on of a Christian Scientist no more disproves the truth of Christian Science than the same event in the experience of St. Paul disproved his statement that "we live, and move, and have our being" in God. Like St. Paul, Christian Scientists have perceived the truth of being; they have complete authority for it in the teaching and example of the Master. They have themselves experienced a satisfying degree of proof, and they do not regard any human event as final or capable of closing the door of opportunity. Jesus said, "I live by the Father," and, "All live unto him."

One of the difficulties encountered by our critic while speaking of Christian Science, is due to his insistence on its being a system of negative thinking. Take this illustration: "Christian Scientists declare that the ten most potent words ever written are the first ten words of Mrs. Eddy's scientific statement of being—'There is no life, truth, intelligence, nor substance in matter.'" I have been a daily reader of Christian Science literature for over fifteen years, and have talked with several thousand Christian Scientists, yet I never read or heard such an estimate from a Christian Scientist. If anybody will read the "scientific statement of being," on page 468 of "Science and Health with Key to the Scriptures," to which the clergyman referred, the reader will find it to be a paragraph of six sentences, in which positive and negative statements are evenly balanced. In form and in substance the entire paragraph corresponds to these words from Christ Jesus, "It is the spirit that quickeneth [giveth life]; the flesh profiteth nothing." For any one to say that Christian Scientists regard the ten words in question as the most potent ever written, would be like saying that Christianity is founded on the unprofitableness of the flesh—on the nothingness of Spirit's opposite.

When Mrs. Eddy chose a single form of statement corresponding to the words quoted by the reverend gentleman, she spoke affirmatively: "Christian Science . . . rests on the conception of God as the only Life, substance, and intelligence" (Science and Health, p. 185). It is doubtless true, however, that both affirmations of truth and corresponding denials of error are requisite for clear thinking when thought has been confused. This was particularly the case when Christian Science was introduced to a world that was accustomed to regard matter no less than Spirit as both real and good.

Another mistake that this critic insisted on making for Christian Scientists was expressed by him as "their teaching that God is in everything." There is no such teaching in Christian Science. Mrs. Eddy has said, "Spirit, Soul, is not confined in man, and is never in matter" (Science and Health, p. 467). Christian Science is based on infinite Spirit, and the infinitude of Spirit means, as expressed by Mrs. Eddy, "one God and His creation, and no reality in aught else" (Christian Science versus Pantheism, p. 9). Therefore the entire argumentative structure that the clergyman built on the supposition that "God is in everything" as the teaching of Christian Science, must fall for lack of foundation.

Our critic also fell on Mrs. Eddy's use of the word "Principle" as a synonym for God, in a manner which showed that he had given but very superficial consideration to the different meanings of this word and the propriety of giving it a new meaning. In the larger dictionaries, the primary meaning of the word "principle" is origin, source, cause; that from which anything proceeds; fundamental substance; primordial substance. It has been used by lexicographers in their definitions of Soul, or Spirit, as follows: "Soul, the principle of thought and action in man" (Oxford English dictionary); "Spirit, the principle of life" (Century dictionary); "Spirit, the universal principle imparting life from the creator" (Hastings' Dictionary of the Bible); "Spirit, the principle of self-consciousness, self-activity, and of rational power in general; that which signifies a likeness in man to the Divine Being" (Webster's New International dictionary).

Taking the word "principle" as thus in use, Mrs. Eddy gave it a distinctly deific meaning, which she distinguished by means of a capital letter, and employed the word "Principle" with several other terms "to express the nature, essence, and wholeness of Deity" (Science and Health, p. 465). That is to say, Mrs. Eddy did with the word in question what St. John did with the word love. Such is "the process with every great, creative religious mind," writes Professor Rauschenbusch on page 57 of his "Christianity and the Social Crisis;" "the connection with the past is maintained and the old terms are used, but they are set in new connections and filled with new qualities."

In effect, the rest of the clergyman's sermon was a fault-finding with Christian Science because it does not agree with him on the following propositions: "God is dealing with the world as criminals under death sentence." "The church should not expect divine healing, which is so much of restitution, and will belong to the world by and by, after the Messiah's kingdom shall have been established." Christian Science agrees that true healing depends on the will or law of God, but emphatically differs from everything else expressed or implied in these propositions. Such doctrines were repudiated over five hundred years before the Christian era; indeed, they should have been obsolete from the days of Moses, for he said, speaking of God, "He is thy life."

According to the teachings of inspired prophets whose sayings are recorded in the Old Testament, God is just to each individual, and does not punish any one for what another has done, nor condemn any one after the occasion for punishment has ceased. (See Psalms lxii. 11, 12; Prov.

Digitized by Google

xxiv. 12; Isa. lv. 7; Jer. xxxii. 19; Ezek. xviii. 1-3, 30-32; xxxiii. 14-20.) Some of these teachers perceived that God's will is to heal or restore, and to give life to all men. (See Psalms xxiv. 12-22; xxxvi. 7-9; xc.; ciii. 1-6; cvii. 15-22.) With the advent of Christ Jesus, the law of divine Love was fully revealed in its universal relation to human interests—"Even the very hairs of your head are all numbered," and in its universal availability to all men—"It is not the will of your Father which is in heaven, that one of these little ones should perish." As for the postponement of healing until after the establishment of a Messianic kingdom, he clearly taught that the kingdom of God comes upon you in the very process of healing. (See Luke x. 9; xi. 20.)

The rejection of Mark xvi. 15-18 by recourse to "higher criticism," as proposed by this clergyman, would not help him to controvert the present possibility of Christian healing, for two parallel sayings would still remain intact. No criticism has yet found a reason for expunging the Master's command to his disciples, "Heal the sick," and his extension of it to "all nations," as recorded by St. Matthew, nor any reason for deleting these words preserved by St. John, "He that believeth on me, the works that I do shall he do also."

❖

[Thomas F. Watson in *Searchlight*, Redding, Cal.]

An article published in your paper of recent date states that Bishop —— attacks the Christian Science faith as a heresy. I ask that you allow me space for a brief reply.

According to Webster, the definition of heresy is, "Religious opinion opposed to the authorized doctrinal standards of any particular church; . . . lack of orthodox or sound belief." Then the members of one church may readily consider all other religious beliefs as heresy. Religious opinions change so often that it has been well said that "the orthodoxy of today is the heterodoxy of yesterday." In "Miscellaneous Writings" (p. 21) Mrs. Eddy has written, "As the ages advance in spirituality, Christian Science will be seen to depart from the trend of other Christian denominations in no wise except by increase of spirituality." The reverend gentleman's statement that "every shred of truth found in Christian Science was taken out of the teachings of Christ" is quite true, for Mrs. Eddy tells us that in her search for the truth "the Bible was her sole teacher" (Science and Health, Pref., p. viii). Christian Science reiterates the teachings of Christ Jesus and rests upon demonstration. That this teaching attained some degree of success in proving its faith by its works, accounts for the phenomenal growth of this new-old religion, this return to primitive Christianity.

The critic calls this religion "mental therapeutics commercialized." Christian Science is mental therapeutics in the sense that it teaches one how to think good instead of evil, love instead of hate, and health instead of disease; in a word, it teaches one the truth about God, man, and the universe, the truth which Jesus said would make us free. In "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read (p. 369): "The prophylactic and therapeutic (that is, the preventive and curative) arts belong emphatically to Christian Science, as would be readily seen, if psychology, or the Science of Spirit, God, was understood."

Christian Science is no more "commercialized" than other religions that pay for the erection of churches, pay their preachers, soloists, and others for services rendered. A great deal of the healing work of Christian Science has been done gratuitously. However, when Jesus sent out his disciples to preach the gospel and heal the sick, he said, "Provide neither gold, nor silver, nor brass in your purses, . . . for the workman is worthy of his meat." On their return the Master said: "When I sent you without purse, and scrip, and shoes, lacked ye any thing? And they said, Nothing." Christian Science teaches that sin and sickness are overcome by the same method. Christian Science is founded on the Bible, especially the words of Christ Jesus, and we have his assurance that his words "shall not pass away."

❖

[Harry I. Hunt, in *Newark* (N. J.) *News*]

In "I. L. W.'s" able article on the work of an evangelist, in your issue of Saturday, I find a statement linking the use of suggestion with the practice of Christian Science, and I should like to correct this. The Christian Scientist does not use suggestion, though popular misconception of Christian Science would have it so. He accords no spiritual power to what is termed suggestion, for the simple reason that suggestion is an effort of one human mind to influence another human mind. It may be used for evil purposes as readily as for good, and is therefore of the "kingdom divided against itself," which Jesus declared could not stand. It was Paul who classified the human or "carnal mind" as "enmity against God," and to emphasize the utter unlikeness of this mind to Deity, he added, "It is not subject to the law of God, neither indeed can be."

It must be manifest to the thinker that all which proceeds from God is good, and hence that any so-called power which is not altogether good is not and cannot be allied with the power of Spirit, God. The Christian Scientist relies upon God, the one Mind, which is the only power, and which is ever present in overcoming sin, evil habits and appetites, discord and disease, and so places his health and happiness upon a sound basis.

❖

[Editorial in *Columbus* (Ohio) *Dispatch*]

A bill in the Ohio legislature proposes to give entire freedom to the practice of Christian Science in the cure of disease. It is a measure in the interest of the personal liberty of a great and growing body of intelligent people, all of whom are ready to testify to the relief and comfort they have secured from such treatment,—not only are ready, but actually do testify to the efficacy of the cure with a zeal that is one of the marvels of the day. Time and experience seem to have lifted this treatment out of mere experimentation and entitled it to professional recognition. Doubtless if the doctors of medicine had given greater attention to the psychological element in certain ailments, they would not now be so concerned about the competition of the Christian Science healers.

❖

[Editorial in *Dayton* (Ohio) *News*]

The appeal of the Christian Scientists in this country for "religious liberty" seems fair enough. They do not seek to thrust their religion down the throat of any one else; they only ask that they be allowed to worship God in their own way, according to the dictates of their own consciences. Their code of morals is as high as the code of morals of other people; they conform to the laws of the land in their daily lives; they do not seek to overthrow our civic institutions. Why, then, should they not be allowed to worship as they please and to believe whatever they desire to believe?

The most that can be said against Christian Scientists is that they place an interpretation upon the Scriptures which is not the same as that placed upon the same writings by the so-called orthodox churches. They have set up no strange gods, however. They are following, in their own way, the teachings of the same Nazarene upon whose teachings the

Digitized by Google

Christian religion is founded. There is nothing in their teachings that is inimical to a republican form of government, to a moral household, to clean living, or to the well-being of the human race.

It is legitimate for those representing all other denominations to seek to lead people to embrace the teachings of their own several creeds or "faiths." Any one has the right to hire a hall, or build a church, or rent a lot and proclaim the advantages of his religious belief. It is also legitimate for the Christian Scientists to do the same thing, and they ought not to be interfered with in any such mission. They ought not to be hampered by special laws or hindered by regulatory measures that do not apply at all.

We pride ourselves that America is the land of religious liberty. It was settled by people who sought to escape religious persecution. It has been made great through a broad-minded policy that gave to every one the right to worship God as he saw fit. So if a group of people decide upon a certain line of worship or conduct, they ought to be allowed to pursue it peacefully, "without let or hindrance." If Christian Science cannot be combated by argument, it ought not to be crushed by statute.

❖

[John M. Tutt in *The Aurora* (Mo.) *World*]

Recent issues of the *World* have contained attacks on Christian Science by the evangelist now conducting revival services in Aurora. Space is asked for a brief reply, not only in justice to Christian Science, but also to those of your readers that may have been deceived.

First, let it be said that with the reverend doctor's righteous efforts to preach Christ's gospel there can be naught but hearty accord. What saddens one is, that the doctor seems to feel an impulsion to vilify in order to make converts. Or can it be, indeed, that he uses invective as a sort of nettle-broth with which to sting his audience into excited attention? This method he may deem quite successful, but when he goes out of the way to attack Christian Science, he is manifestly unfair to a very large body of citizens whose lives and deeds in any community entitle them to that immunity from persecution accorded by Jesus: "Forbid him not . . . For he that is not against us is on our part."

Our critic, however, will doubtless welcome correction of certain erroneous statements. He says, "The Christian Scientists would come in the town and take all the members out of your churches." That is a mistake. The Christian Scientists would rather see restored to the churches the Christian healing established by the Master. There is a Christian Science organization in Aurora. Is there evidence of such a plot as our critic claims? The Christian Science church does not close its doors to the members of any other church, but it certainly makes no effort to decimate other congregations. Christian Science is offered to all under Jesus' command, "Freely ye have received, freely give," and the efforts to make converts are most unobtrusive and shorn of attacks on other denominations.

The false charge that the rich are sought and the poor neglected, is probably occasioned by the fact that the effect of Christian Science on the individual, be he poor or rich, is to improve his condition financially as well as physically and spiritually. Poverty, sin, and sickness, all errors, are the result of wrong thinking, and the improved thinking resultant from the study of Christian Science is witnessed to by the improvement shown by its beneficiaries. But it is erroneous to claim that Christian Science seeks the rich in preference to the poor. In fact, a man's wealth must be estimated in terms of right ideas, and not "in the abundance of the things which he possesseth."

Our critic avers, "Christian Science says if you believe there is no sin, there is no sin." Christian Science says no such nonsense. Scripture states that Christ came to "destroy the works of the devil." Sin is surely the devil's work, and Christian Science teaches that when sin is destroyed from the lives of men, it is thereby forgiven. Christian Science teaches the destructibility of sin through Christ, and the necessity for destroying it. All the real, God made; He did not make sin,—hence the unreality of sin. When a man has therefore scientifically overcome sin, he knows its unreality. The claim that Christian Science has taken the Lord's Prayer and "torn it to pieces to make it mean things that it was not intended," is untrue. Again, it is untrue that Christian Science "does away with the death of Jesus on Calvary's cross." Our critic says he delights in the statements of Paul. Very well, let us permit Paul to state the Christian Science position in the above criticism: "For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life."

"Sufficient unto the day is the evil thereof," said Jesus. It is more important to heal the sick and the sinning than to walk on water, and so Christian Scientists will not accept our critic's invitation, but will remind him that while he divides Jesus' command, "As ye go, preach . . . Heal the sick," Christian Scientists are humbly trying to keep the commandment undivided. And beginning with the simpler demonstrations, they have the assurance of the Master, "Lo, I am with you alway." So in the fulness of spiritual growth, and when confronted with the necessity to do so, they may even come to the walking on the waves, knowing demonstrably that through Christ they can do all things. Now they rejoice in the healing and regenerating influence spread abroad to a sin-sick and disease-laden world, through a gentle woman's glad acceptance of the Saviour's profound words: "He that believeth on me, the works that I do shall he do also," and "These signs shall follow them that believe."

❖

[S. T. Downs in *Elkhart* (Ind.) *Review*]

There does not seem to be any reason to suppose the President was thinking of Christian Science when, in a recent address, he referred to the business situation as a state of mind. Judging from a recent editorial discussing the address, however, and without further reference to the President's remarks, it will be of interest to you and your readers, no doubt, to learn that Christian Science has healed every disease known to mankind, and has proved just as effective in restoring health and prosperity to a sick business. The Christian Science periodicals have published many such testimonies, and others are often given at the Wednesday evening meetings, telling how all manner of discordant and impoverished business has felt the healing ministry of Christian Science.

This teaching shows that a sick business, as well as a sick body, is the result of wrong thinking and practice, and that as men turn from a belief in God as corporeal, and as sending both good and evil, to the understanding of God as Spirit, divine Principle, and man in His image and likeness, the channels are opened for the operation of spiritual law. Christian Science teaches, in other words, that as men become obedient to the Master's command, "Seek ye first the kingdom of God, and his righteousness," human affairs become channels for the expression of harmony in fulfilment of the promise in the latter part of the same statement,—"and all these things shall be added unto you."

Troubled Waters

It is well sometimes, when to human sense a storm of discord is raging and the troubled waters threaten to engulf everything in one tremendous tidal wave, to give ourselves pause long enough to remember that God still commands the winds and the waves, and that the "Peace, be still," of the Master was meant for the comfort and solace of anxious hearts in all times and places. Let us recall, too, the counsel of our Leader to "avoid voicing error; but utter the truth of God and the beauty of holiness, the joy of Love and 'the peace of God, which passeth all understanding,' recommending to all men fellowship in the bonds of Christ" (No and Yes, p. 8).

We must get away from the belief that there is any reality or power in anything but God, good, and His manifestations, for the belief that evil is real and has power over mankind is the foundation of all inharmony,—sin, sickness, and death. It is this false belief which needs to be destroyed, and which is destroyed through Christian Science,—through the scientific and exact knowledge and understanding of the allness and omnipotence of God. If evil were real, it would be so only because of some creative power which could give it origin and force it upon mankind. That God could or would create evil is unthinkable, because such an act on His part would be in every way inconsistent with divine goodness, and the instant that He launched evil upon the world, He would cease to be good.

The only other explanation of evil as reality would be that there is some other creator, some being or force with power to create and send upon men something which God could not and would not create. Such a belief as this would be equivalent to the declaration that God is not the sole creator, and is likewise powerless to prevent evil. This, too, is unthinkable, and leaves no logical explanation of evil as a phenomenon of human existence, other than that it is unreal, an illusion of mortal mind, a bald imposition upon credulous humanity. Of this false belief Mrs. Eddy writes on page 186 of Science and Health: "Evil is a negation, because it is the absence of truth. It is nothing, because it is the absence of something. It is unreal, because it presupposes the absence of God, the omnipotent and omnipresent. Every mortal must learn that there is neither power nor reality in evil."

Mrs. Eddy also writes on page 183 of the same book: "To suppose that God constitutes laws of inharmony is a mistake; discords have no support from nature or divine law, however much is said to the contrary. . . . Truth casts out all evils and materialistic methods with the actual spiritual law,—the law which gives sight to the blind, hearing to the deaf, voice to the dumb, feet to the lame. If Christian Science dishonors human belief, it honors spiritual understanding; and the one Mind [God, good] only is entitled to honor." In all her writings Mrs. Eddy endeavored to make clear to those who are in search of truth, the foundational basis of all of Jesus' teachings, namely, that God is omnipotent. It is upon this basis, in demonstration of the truth of her discovery of the underlying Principle of the Christ-power, that sickness is healed and the sinful are relieved from the bondage of the belief of evil as ministering to their pleasure or their advantage.

Today, when evil seems to transcend the power of good in the world's affairs, when so many are depending upon force instead of righteousness for the solution of human problems, it is well for Christian Scientists to be calm in the face of excitement, to be prayerful in the midst of clamor, to be just in the presence of injustice, and to dominate whatever situation confronts them through the understanding of God's allness. In this connection they should ponder well Mrs. Eddy's words on page 442 of Science and Health: "Christian Scientists, be a law to yourselves that mental malpractice cannot harm you either when asleep or when awake." When thus protected, they will find that they cannot be swayed by every wave of popular emotion; and when confronted with the necessity for choosing between two lines of conduct, they will be able to choose the one dictated by righteousness, or at least the lesser of the evils which at the time may seem the only solution for human difficulties.

Archibald McLellan.

❖

Holding On and Letting Go

Students of Christian Science soon learn that mortal belief is the opposite of the spiritual fact. While this is admitted, it is not at once seen that we must let go our material concepts if we would grasp and hold spiritual realities. Christ Jesus said plainly that we cannot serve two masters, for we would "hold to the one, and despise the other," a decision which Christian Scientists accept as vital truth. The trouble with most mortals is that they cherish tenacity, whatever its object, cling to that which should be given up for something better, even as the chrysalis creature might cling to its temporary shroud, preferring to dream on in darkness rather than to make the effort demanded by the encompassing life. Sooner or later, however, a call will come which neither butterfly nor mortal man can disregard. To the human sense of his day Paul said, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light."

Christian Scientists are sometimes asked why they do not heal the sick instantaneously, as it would seem that Jesus did on most occasions, if we are to judge from the statements found in the gospels. These accounts are gratefully accepted by Christian Scientists, who know that "with God all things are possible," and that even the raising of the dead but proves the operation of a spiritual law of which mortals have too long been ignorant. They however learn that results in the healing work which they endeavor to do, are dependent upon the clearness with which they perceive the truth and the tenacity with which they hold to it. On page 396 of Science and Health, Mrs. Eddy warns us against piling up hypothetical difficulties in advance of our own efforts, and then she says that the refutation of admittedly false testimony "becomes arduous, not because the testimony of sin or disease is true, but solely on account of the tenacity of belief in its truth, due to the force of education and the overwhelming weight of opinions on the wrong side." The one who is healed has much to give up, in the way of racial and special beliefs, and if he could sooner see the reason for this he would address himself to his task with alacrity and cheerfulness.

No one hesitates about giving up a sense of suffering, but when it comes to letting go of all the beliefs which produce discord, mortal sense is very apt to hold on to them, chiefly from the force of habit. A deeply impressive testimony was given in The Mother Church one night by a man from the West, who told of his healing in Christian Science. He spoke of the great change it had made in his whole life, but he said that one grievance remained untouched for some time after he had accepted this teaching. A feud dating back twenty years was unhealed, but as the student advanced in understanding his desire deepened to meet the erstwhile enemy as a brother. He however lacked the courage to take the initiative, and as he was planning to visit The Mother Church it troubled him to think of carrying this shadow along with

Digitized by Google

him. A few days before he started he saw the other man coming toward him on the street, and a great wave of true desire swept over him. While still uncertain as to the step to be taken, the other came up to him with outstretched hand, and asked if he was not ready to bury that old grievance. Needless to say, he was fully ready, and in telling of it in his testimony, he spoke of this healing with reverence and awe, as something which God had done, and which was far above the aims of mortal man.

If we truly desire to let go of all that would hinder our spiritual advance, we should often pray as did the psalmist, "Search me, O God, and know my heart: try me, and know my thoughts." If we hold tenaciously to all the truth that we can grasp, evil of every sort will let go its unreal hold upon us, and we can never surely cling to anything which is not of God, or in any wise unlike the divine nature. If we would reflect the wisdom which is divine, we must let go all else to gain it; but this is well worth while, for as we read in Proverbs, "length of days is in her right hand; and in her left hand riches and honor. Her ways are ways of pleasantness, and all her paths are peace."

ANNIE M. KNOTT.

❖

Saving Goodness

No forest monarch figures more prominently, perhaps, in Scripture than the fir-tree, and all wood-lovers will recognize how fittingly it stands for true greatness, for the union of strength and sweetness. It ministers not only in its towering uprightness, but in the fragrant atmosphere with which it surrounds itself and in which all may find both refreshment and delight. It thus symbolizes the Christlike man, one who gives equal expression to truth and love, to unyielding integrity and to unfailing compassion. Here Christ Jesus comes immediately into view. The "strength of the hills" was in him, while his spirit distilled a loving-kindness which with pervasive generosity brought comfort and joy to all who were troubled and distressed; and this is the kind of man which Christian Science projects and evokes.

Fénelon was noted for his sterling inflexibility of character, and yet it has been said by one who was ever with him, that he was "never known to speak brusquely to any one . . . nor did a harsh or contemptuous word ever escape him." This remarkable equanimity of good temper and good cheer which marked his bearing toward all and under all circumstances, is accounted for by the fact that he had learned to "love God in all men," a thought upon which he himself enlarges in one of his celebrated letters to the Duke of Burgundy. "Nothing," he writes, "is so sterile, so cold, so constrained as a heart that loves only itself in all things; while nothing can excel the frankness, the tenderness, the gentle loveliness of a heart filled and animated by divine love."

Christian Science emphasizes the teaching that the goodness of the Christian life is to be very much more than a comfort and a delight; that there is a very great difference between the belief of being good and goodness itself; that while to be kindly and good-natured toward all men is well, it is by no means sufficient; that redemptive love is compellingly though perhaps quite unconsciously corrective, a fact which is not apprehended apart from divine Science. Respecting this Mrs. Eddy says, "A pure affection takes form in goodness, but Science alone reveals the divine Principle of goodness and demonstrates its rules:" and she further states that when this kingdom of heaven reigns within us, "sin, disease, and death will diminish until they finally disappear" (Science and Health, pp. 147, 248).

Here we gain a new and inspiring sense of the philosophy of efficient goodness, of the power as well as the winsomeness of the loving life. Christian Science further teaches that only as we gain the Christ-concept of man and embody the spirit of the Master, can we be thus savingly compassionate to mankind, and that the truly healing ministry always brings to its objects the fragrance of divine Love. There is thus disclosed the irresistible sweetness and charm of the ideal which it is ours to express as the children of God. Such goodness is a Messianic endowment; it fills the house of consciousness with the perfume of prayer, and brings to earth the atmosphere of heaven. It is capable of loving "more for every hate" (Poems, p. 4), and of meeting our Lord's requirement that we forgive "until seventy times seven." It brings into demonstration the power of good.

When one thinks of the state of the world today, of the amount of ill will which is being nurtured in the hearts of men, the greatness of the need that all who have thus "learned Christ" shall not only be strong and immovable, in knowing and asserting the truth of being, but that they shall create and maintain an atmosphere of subduing compassion for all, begins to appear. What can heal this mighty hurt of humanity today? What can dispel the prejudice and passion, the enmity and hatred which are seemingly dominating the civilized world? To these questions there can be no answer save in the remembrance that, as a well-known hymn expresses it,—

> The love of God is broader
> Than the measure of man's mind,
> And the heart of the Eternal
> Is most wonderfully kind.

Love alone is adequate to the demand, and we are rendering the highest service when we love rightly, love unceasingly, and love all; when we give of God, of good, to men even as the flower gives of its treasures in a perennial fragrance.

JOHN B. WILLIS.

❖ ❖ ❖

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

CANTON, OHIO.—The corner-stone of the new Christian Science church edifice was laid Sunday morning [April 11] at five o'clock. The church is being built on Cleveland avenue, NW, and will cost when completed about thirty-five thousand dollars. The lot upon which the building is being erected has a frontage of 76 feet and is 220 feet in depth. The Sunday school room will be located on the ground floor and will accommodate about four hundred pupils. It is thought that this room will be ready for occupancy about the middle of July, and the congregation plans to hold regular services in it, as soon as it is ready, until the main auditorium is completed. The church, it is expected, will be finished in September.—*Canton Repository.*

Digitized by Google

ALBERT LEA, MINN.—First Church of Christ, Scientist, will build their church on the fine lot at the corner of Adams avenue and Clark street this spring. At a meeting of the church building committee Wednesday night [April 14], at the church rooms in the D. B. S. Hall, the bids for the construction of the foundation were opened. As soon as the plans which are now under way are completed, bids for the construction of the church will be advertised for. The church will cost when completed in the neighborhood of twelve thousand dollars.—*The Tribune.*

EDMONTON, ALBERTA.—On Sunday, May 2, the members and friends of First Church of Christ, Scientist, will hold services in their new church building, which has been erected on the property acquired by them for this purpose. The building, which is located on 118th street and Athabasca avenue, is a frame structure of modest design on the bungalow plan, with a wide piazza across the front. Its seating capacity is two hundred and eighty persons. The property, being well wooded, gives to the stranger the impression of peace, for which we as Christian Scientists stand, and yet is easily accessible from all parts of the city.—*Correspondence.*

AKRON, OHIO.—Excavation work for the thirty-five thousand dollar Christian Science church to be erected at Buchtel avenue and Fir street was started Saturday [March 27], and construction work will be rushed so as to complete the structure early in August. The church will seat six hundred people, and will be 60 feet wide by 95 feet long. The three hundred members of the church now hold services in Music Hall, but will move to Crouse gymnasium April 4, where they will remain until the completion of the new church. The congregation has grown from a handful of people, until now a modern church is needed to care for them.

Beacon Journal.

MEADVILLE, PA.—The prisoners in the county jail enjoyed the service of the Christian Science church Sunday afternoon [April 11], when they were visited by a company of members of Second Church of Christ, Scientist. All the prisoners who cared for the service were invited to assemble, and they did so. The full regular service of the church was conducted, and in the entire city there was not a more attentive or appreciative audience during the day than this one.

The Republican.

PORTLAND, ORE.—Members of the various Christian Science churches in this city are discussing the establishment of a new church, to be known as Sixth Church of Christ, Scientist. The question will be definitely decided at a meeting to be held in First Church of Christ, Scientist, the evening of April 1. So far, no formal action has been taken.

Portland Telegram.

The Lectures

Bakersfield, Cal.

A large audience greeted Clarence W. Chadwick, who lectured on Christian Science in Scribner's Opera House. Judge Milton T. Farmer, in introducing the speaker, said in part:—

I come here not as a member of the Christian Science church. I hope that my travel through life's "vale of tears" has taught me, as I think it should and must teach any man, this lesson: that the approach to truth is not clearly defined, and no group of persons can say that they have a preemption of copyright upon that way of approach. What I mean is this, we live in a country where religious freedom and tolerance of belief are enjoined upon us by law. More than that, we live in a country where men's minds and women's minds naturally respect that doctrine of religious tolerance which is enjoined upon them, with the result that people who belong to one church or to another church, to this or that denomination, must, if they properly appreciate the society in which they live, feel toward the worshipers that tolerance which is enjoined upon them.

I think if there is anything which is beautiful in life, it is the thought that the strong, the educated, those who have had opportunities which others may not have had, may bring their experiences and their opportunities to the aid of those who need aid, to the less fortunate, to the less favored in life's paths. It seems to me that there is something in this church of Christian Science, this Christian teaching, which means just that; that those who understand, who know, who see the benefits of the better things in life, are doing something to alleviate the conditions of misery which surround the rest of us.

My work is such that I come into daily contact with the wicked and the unfortunate. There is nothing that hurts one's heart so much as to look upon one who has got beyond any reasonable hope; to see a man or a woman in whom the very possibilities of being noble and good seem to have been blighted. Now this Church of Christ, it seems to me, has a message for us all. It offers to us all a doctrine which will serve to make the better things in life available to the humble, the poor, those who are less fortunate in life.

The Bakersfield Californian.

❖

Lovelock, Nev.

The Orpheum Theater was crowded at the lecture on Christian Science by Virgil O. Strickler, many people coming from distant points to hear him. The lecture was given under the auspices of First Church of Christ, Scientist, of Reno, and the speaker was introduced by Gustavus S. Paine of that city, who said in part:—

The attitude of the average person nowadays toward Christian Science is one of friendliness. After years of ridicule and abuse, Christian Science has come to be pretty generally recognized as a religion of common sense, of cheerfulness, and of love; a religion which returns at last to the method of healing practised by Christ Jesus, and which has accomplished wonders for hundreds of thousands of intelligent people in every corner of the world. The best indication of your attitude toward this subject and a good indication of the recent growth of the Christian Science movement is your presence here this evening. In Nevada today there is not a town, a mining-camp, or a post-office where there are not to be found one or more who are seeking the truth as unfolded in Christian Science.—*Review Miner.*

❖

Chicago, Ill.

The remarks of C. M. Veazey, first reader, in introducing Clarence C. Eaton at the first of two lectures on Christian Science in Fourth Church of Christ, Scientist, were in part as follows:—

The most important thing to humanity in these days is its recognition of the fact that it can confidently expect, right now, the fulfilment of Jesus' promise, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." Since the advent of Jesus of Nazareth his teachings have lighted the way for us with varying degrees of brightness, until in the present day there have been revealed more clearly the practical rules of right thinking, right living, of which the lecturer will tell you. Today, therefore, the person who truly desires to lead a better life, manifest a purer

Digitized by Google

consciousness, has before him, to hear and to understand, the demonstrated facts for his guidance.

At the second lecture Mrs. Lillian H. Turner, second reader, in her introduction said:—

Nineteen hundred years ago the light of Truth appeared on earth through the teachings and works of Christ Jesus. He understood Truth, and used this understanding, which was spiritual, to free mankind from all forms of bondage,—healing the sick, reforming the sinner, and raising the dead. For three hundred years his followers beheld the light of Truth. They understood and did the works that he had done. Then the light became so dimmed through the confusion of human theories and doctrines, that the power to heal as practised by Christ Jesus and his followers was lost. But the light, though obscured, continued to shine through the dark centuries, until discovered nearly fifty years ago by Mrs. Eddy. She revealed her discovery to the world in Christian Science. Now again Truth, shining through Christian Science, is liberating humanity from its distresses, sins, and diseases.—*Correspondence.*

❖

Auburn (N. Y.) Prison

William Axton, president of the Welfare League, introduced Prof. Hermann S. Hering at the lecture on Christian Science given in Auburn prison. There was a large number of men in attendance, and the speaker held the closest attention of his audience throughout. The introduction was as follows:—

You remember, last fall, when we planned to give you talks and lectures during the winter months, from five to six o'clock in the afternoon, our idea was to have them along educational lines. It mattered not whether the subject was music, travel, history, moving pictures, the reading of good books, or religion, our purpose was to have all of an educational nature. We have with us this afternoon a gentleman who is an authority on one idea of religion. It is not his purpose to have you take up this belief or to ask you to become Christian Scientists, but rather to explain this teaching in an educational way, so you will better understand the subject of Christian Science. Professor Hering has held the chair of professor of electrical engineering in one of our large universities, and his work consisted in finding out the whys and wherefores of electricity. He also studied the subject of Christian Science with the same care and found out why certain things were truths, and you are perfectly safe in believing them.—*Correspondence.*

❖

Greeley, Col.

At a Christian Science lecture by George Shaw Cook in the Sterling Theater, George M. Houston, in introducing the lecturer, said in part:—

The quiet, loving, and patient manner in which you have spread your religion and have grown strong in the world, is a matter of congratulation to you, and of admiration by those who may not understand the fundamentals of your faith. It is said that theories are of no value except as they stand the test of use; and if we may judge by the lives and character of those who follow your faith, certainly there must be ample cause for such splendid effect. I congratulate you for having chosen the better way of conquering cities and nations. It is a grand thing to have such examples as you generally show to the communities of which you are a part.

It is remarkable that many of the great religions of the world have had a kind of deadening effect upon the ambitions and activities of their adherents, so far as they related to other avenues of life than religion itself; but that is not the case with you. I cannot recall many of your faith, if any at all, who have not, in proportion to their religious zeal, shown themselves active and energetic in the affairs of their particular department of life, whether in business, or in the world of education, or in any other line.—*Greeley Tribune.*

❖

Joplin, Mo.

The introductory remarks of the Rev. John Garretson of First Congregational church, upon the occasion of the lecture on Christian Science given by Jacob S. Shield, under the auspices of Second Church of Christ, Scientist, were as follows:—

I am not a Christian Scientist, nor do I take it that all present are of that faith, but I trust that I am, in company with all thoughtful people, a seeker after truth. Truth is not isolated. Truth is as unconfined as is the air that we breathe. Truth is as free as the bird that wings through the pathless spaces above, and I believe that truth is as unprejudiced as the sun. All that truth requires to make its home in a personality is a pure heart, a hungry mind, and an obedient will. These qualities are essential if we would enter the way of him who said, "I am the way, the truth, and the life."—*Correspondence.*

Testimonies of Healing

In the spring of 1912, my answer to an inquiry as to when I was going to send in my testimony was that I would wait till the attacks, caused according to the verdict of medical doctors by a clot on the brain, had stayed away at least a year. This excuse no longer holds good, for it is now several years since I had one, and I consider it my duty publicly to acknowledge the benefits physically, morally, and spiritually received through a better understanding of Life, and the relation of God to man, gained by my daily study of Christian Science as revealed to this age by our dear Leader, Mrs. Eddy, in her priceless book, "Science and Health with Key to the Scriptures."

In the summer of 1905, while stacking alfalfa on a Nebraska farm, all at once my right arm commenced to twist and move with terrible convulsions, and I lost consciousness after experiencing an agony of pain. These attacks recurred every four or five days; also, I could not control the muscles of my face. I had the best medical care I could obtain, given with the utmost kindness. My home doctor could not diagnose the case, so I went to see a specialist on nervous and mental diseases in Omaha, Neb. After keeping me six or eight days in a hospital and having me examined by two more doctors, this physician sent me home, after diagnosing the case as blood clot on the brain and incurable. He told me that if there had been one chance out of ten I would have been operated on. That my case was regarded as utterly hopeless, I have the most convincing proof in a letter from this specialist, dated Feb. 13, 1906. My home doctor then told me I might receive some help by going to the mountains, so I sold out and moved with my family to Sandpoint, Idaho. Here, for the first half-year or so, the attacks were not so frequent, but they came back worse and oftener than ever.

It was at this time that another doctor from whom I was taking treatment told me he could do nothing for me, but advised me to try Christian Science. This advice, however, was not given until I was utterly broken down, with death staring me in the face. The doctor told my wife not to cry because I was going to die, but rather cry because I was alive yet, so great were my sufferings; and on being asked what he thought about Christian Science, his answer was, "By all means, try it."

More to have the satisfaction of having tried everything than from any faith in it, a Christian Science practitioner was sent for. What my thought about religion was up to that time can be imagined from my answer to the practitioner, when she asked me to repeat the Lord's Prayer while she was giving me treatment. I told her I had not prayed in forty years and was not going to pray now. Notwithstanding this impolite answer, she was willing to take the case. I can never forget the calmness and mental rest that came over me after this first treatment; and I was then and there so convinced that Christian Science was the only way, that the next morning I buried all the medicine we had in the house, and with it my belief in material means for attaining health.

Slowly but surely, by taking up the study of Christian Science, I came to an understanding or consciousness of what life really is. The meaning of St. Paul's saying, "In him we live, and move, and have our being," became clear, and as a consequence fear left me, and with it the attacks, which seemed to me worse than death. I know that I have to thank Christian Science that I am restored to health; and I do not think it is any too much to say "restored to life" again. I am in the best of health, and able to do a full day's work on the farm. It is unnecessary to say I am thankful for this new outlook on life, as made plain to every one who is willing, in the teachings found in the Bible and explained and made comprehensible through the writings of our Leader.

C. C. VAN AELST, Goldendale, Wash.

❖

Having been a beneficiary of the teaching of Christian Science seven years, I now feel it a duty as well as a privilege to testify to this fact. Christian Science came into my life at a time when I was without hope and without God. My dominant desire was to die, as I believed I could thus escape the ills and disappointments of what I called life. Now I know, in a degree at least, what life is—I know it is not sorrow, despondency, etc., but is joy, peace, and activity. Christian Science has healed me of many ills, among them rheumatism, fever, and an injured ankle which was swollen to twice its normal size. The ankle never pained me after I realized the truth of the statement in Science and Health (p. 76), "Suffering, sinning, dying beliefs are unreal." I asked myself, Do you believe this is really true? Yes, came the quick rejoinder, I know that it is a fact. Well, if so, arise and walk. I did so, and was healed.

In my school experience the study of psychology was very unsatisfactory to me, as it never seemed consistent that intelligence could originate in a material brain. The inconsistency was explained when I studied Christian Science, for this teaching showed me the impossibility of intelligence originating in matter, and I was satisfied. I have had the privilege of class instruction, and I am daily endeavoring to realize the truth about every condition that presents itself. Christian Science has brought into my home and environment more joy than I ever dreamed possible.

EVALEEN BARRETT PRATZ, Kansas City, Mo.

❖

I rejoice in this opportunity to express my gratitude for the many benefits I have received through Christian Science. For a year I was an invalid, and during that time underwent three serious operations, besides having one other severe illness. After the last operation, the doctors declared that I would doubtless be a semiinvalid all my life. As I am only a young woman, naturally this gave me anything but a cheerful outlook. Becoming convinced that there was nothing for me in medicine, I finally turned to Christian Science for aid, and was not disappointed. Even now I am enjoying better health than I have had for years, and from day to day I feel that I am gaining new strength. Needless to say, I feel very grateful for this wonderful new experience which has come into my life. I am finding day by day that Christian Science offers a solution for every problem that may arise, whether physical or spiritual.

JEAN E. CASPER, Mattoon, Ill.

❖

On coming to Christian Science I thought only to experience a physical healing from acute stomach disease and accompanying nervous and bowel troubles. This was the only reason that led me to take up the study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures." The Bible as a book of interest had never appealed to me, and was considered useless for any but those who expounded it. Even the instructions received from teachers of different denominations while in pursuit of the truth had failed to impress me, so that I had at last settled down in the firm belief that if God was to be worshiped by me, it must be in my own way and not by any taught rule.

Digitized by Google

This state of thought, accompanied by physical torture, had extended over a period of twelve years, so that when *materia medica* declared it could do no more in my case, there was nothing left but to apply for Christian Science treatment.

This application was made more to please others than myself, for I had little hope that there could be any help for me, and believed that even though a slight relief might be experienced it could come about only through the action of human will-power. Picture the glad surprise and the following joy when after the first treatment in Christian Science relief was experienced, and within the year I was on the road to an enlarged understanding of Christian Science and its accompanying health and wholeness. The Bible then became to me the Book of books, and as understood in Science and Health it has been an unerring guide, for by means of its higher spiritual teaching, my mother, wife, and children have been safely raised above many seeming difficulties.

GEORGE W. COOPER, Brooklyn, N. Y.

❖

I write this testimony with deep gratitude to Christian Science for its effects upon my understanding. Through the study of Science and Health I have been made to know that God is Love, Truth, and Life. It has led me out of gloom into light. I was instantly healed of mumps, and went about as usual, so that no one noticed the symptoms, while a friend of mine not in Christian Science was away from her work for over three weeks, and seemingly suffered a great deal. Colds have been destroyed in one treatment. One evening, a domestic animal showed symptoms of poisoning, but with Christian Science treatment it was all right in fifteen minutes. For these proofs of God's care of all His creatures, but more abundantly for the joy and spiritual uplift that I have experienced, I am sincerely thankful to God, and grateful to our dear Leader, Mrs. Eddy.

ANNIE D. OGG, Monrovia, Cal.

❖

A few years ago I was healed of an eruption on my hands and ears. At times both eyes were almost closed on account of the swelling caused from the highly inflamed condition of the ears, both external and internal. I had suffered for more than three years from this malady, and the remedies prescribed by local doctors failed to relieve me. I was hardly able to use my hands at all, was miserable from sleeplessness, discouraged, and desperate, when a neighbor who had received great help from Christian Science treatment told me about it as a healing means, and gave me some copies of the *Sentinel* to read. A little later on I asked her to write to a practitioner whom she knew, for treatment, and in a few days my hands showed marked improvement. This friend loaned me a copy of "Science and Health with Key to the Scriptures," and I cannot command language to describe the peaceful assurance I felt when reading this wonderful book. Treatment was continued for five weeks, when all trace of the disease was gone, and I have been free from it ever since.

One of my sons was healed of chronic headaches and profuse hemorrhages of the nose. Another son, twelve years old, was stricken with a spasm having all the symptoms of epilepsy, and was unconscious for two days. A letter was again sent to the practitioner asking for help, and in an hour from the time the letter was received the boy regained consciousness. He rapidly improved from that moment, and in a few days was able to attend school again. These healings were accomplished through absent treatment, proving to us that the power back of the treatment is omnipresent Mind. A minor illness of my little daughter, two years old, was healed simply through my reading to her out of the text-book. The truth so clearly stated in this wonderful book has lessened our fears and sense of limitation, and we are happier than ever before. The outlook upon things in general has been greatly broadened by the *Monitor* and the *Sentinel*, copies of which occasionally come to us in this remote section, where Christian Science is little known.

We are happy in thus availing ourselves of the opportunity to express heartfelt gratitude to all those who have been instrumental in helping us to these glimpses of the "promised land" of peace and plenty, which can be ours in every experience when we apply right thinking about God and man as His image and likeness. The little I have learned about God through reading the Christian Science text-book has made life much brighter and happier for me, and my hope is that my testimony will be of benefit to others.

LAURA HOUK, Bridgewater, N. C.

The above statement of my wife is correct in every particular. The Christian Science text-book is a safe guide, because its statements are founded on the Bible.

GEORGE HOUK.

❖

I would like to express my gratitude for all that Christian Science has done for me. Before I knew of this religion I was for many years in a state of mental darkness and misery. I never went to church, as the old theology I had been taught in my youth was absolutely unsatisfactory, full of contradictions, and of no use to any one who wanted to prove its truth. The God I had been told to worship seemed to me as capricious and unjust as Jupiter, and I would have none of Him. I was filled with bitterness and resentment at the thought of all the sin and useless suffering I saw around me, and concluded that there could be no God, only some blind, cruel power that brought us into life to suffer and to die for no purpose.

In my own household there was always sickness, depression, and endless worry. I suffered greatly from recurring and severe attacks of influenza, constant neuralgia of the head, and great physical exhaustion. My eyes too were becoming affected by the headaches, and I could read at night only with the aid of glasses. One day, in a state of deep depression, I went to visit some friends. They were talking in an eager and animated way about Christian Science, as a Scientist had just been in to see them. I asked what this teaching was, and they said they did not know, but Christian Scientists healed the sick and all seemed happy and healthy. I wondered greatly and enviously what could make them so happy. On returning home I spoke about it to my husband, and we agreed to make inquiries, especially as we wished to teach some religion to our little daughter and had none to give her.

Not long afterward my husband brought me a copy of "Science and Health with Key to the Scriptures." I took it with me to my room when I went to bed, feeling, as usual, weary and discouraged. I opened it just to read something, as I always did before sleeping, but I had not read long before a great light seemed to shine through all the darkness and I called to my husband, "I have found at last what I have so long been looking for, the truth." Since then my whole outlook on life has changed.

Before I knew of Christian Science I was oppressed with many fears,—fears of illness, of misfortune, of lack,—and these made life a burden. Now I am thankful to say these fears have almost entirely passed out of my consciousness. My health is better than it has been for fifteen years. Only once have I had an attack of influenza, and it was overcome

Digitized by Google

in two days. Neuralgic headaches I never have at all, and I have long since put away my glasses. For the physical healing I am indeed grateful, but much more so for the spiritual healing. I can never express in words my deep thankfulness for the joy and peace which have come into my life, for the great and blessed knowledge that God is Love; that He is ever near, "a very present help in trouble," and not "a God afar off."

This winter I have been entirely without help in the house, and have been able through Christian Science to undertake very strenuous work entailing early rising. Although there has been much sickness all around me, I have never been off duty a single day, and have been able to overcome feelings of fatigue and discouragement. Both my children were healed of severe attacks of influenza; the one who was in high fever and delirious was cured of those alarming symptoms after ten minutes' treatment. Many other things I am being helped to overcome, and my heart is full of thankfulness to God, and also gratitude to our revered Leader, Mrs. Eddy, for showing us the truth.

Mrs. L. G. Murray, Edinburgh, Scotland.

✧

I desire to express my gratitude for help received in Christian Science. I had suffered from a severe cold for a number of weeks and had tried every form of medicine recommended to me. When all material remedies failed, I went to a Christian Science practitioner, and he gave me seven treatments. During this cold I had become almost deaf, but after the fifth treatment my hearing returned completely and the cold had entirely disappeared.

I have also found great relief in other ways through my study of Science and Health. After wearing glasses for more than ten years I am delighted to say that I have been able to lay them aside. I have not had them on for about a year and a half, and I am sure I will not need them again. I am sincerely thankful for all these benefits, both physical and moral.—W. A. Swem, Los Angeles, Cal.

✧

About four years ago I was most wretched mentally, and withal a physical wreck. At this time Christian Science was brought to my notice and I had treatment. As a result, my health has so greatly improved that I have been able to leave off all medicine, although at one time this seemed simply an impossibility. Mentally I have grown much more happy, with more kindly and forgiving feelings toward my fellow beings. Christian Science has given me an altogether different outlook on life. I am indeed thankful to God for all these blessings, and grateful to Mrs. Eddy, who was spiritually minded enough to be enabled to give out this healing truth to the world.—Mrs. E. R. Joseph, Exeter, England.

✧

It is indeed with a grateful heart that I testify to what Christian Science has done for me. About six years ago it was presented to me for investigation. At that time I was affiliated with a church, and a devout worker in it. I did not think I needed a religion to heal me; in fact, I always prided myself on my health and strength, although many are the times that I had to go home from work on account of severe headaches. My mother had been afflicted with headaches for fifty years, and according to the generally accepted laws of heredity, there seemed no reason why I should not have them, especially as our family physician often told me I would, and said there was no cure for them. At the same time I was wearing a support, as I had been ruptured some four years before, and the doctor advised this as the only remedy. Frequently when at work I would be compelled to stop and adjust the support, and I could not be without it at all. I thought my days as a horsetrainer were over.

Christian Science appealed to me from the very beginning, and it was not long before I saw the light and noticed that the headaches came less frequently, and many other discords were giving place to harmony. In the Bible we read that "God is love." In love there is no hate; no evil of any kind, no sin, sickness, or death. John says, "There is no fear in love; but perfect love casteth out fear;" and the Bible also tells us that God is "of purer eyes than to behold evil." It is this understanding and realization of God, and of man created in His image and likeness, that has freed us from the bondage of man-made laws which would hold one in such slavery and ignorance. Now I am entirely well, although frequently put to severe tests of heavy and straining lifts. The headaches and the hernia have passed into their native nothingness, together with many other wrong conceptions. The power of Spirit over matter has been proven to me in many instances. It has transformed for me a life of uncertainty into one of confidence, contentment, and happiness. I would be ungrateful indeed if I did not thank God through Christian Science for so many blessings.

John D. Ritter, Chillicothe, Ohio.

✧

For a long time I have felt that as I receive so much benefit from the testimonies of others, I should also give my experience of what Christian Science has done for me. It is now about twelve years since I first heard of this teaching through a friend who had been suffering from what the medical faculty calls depression. So much did she suffer, and for so long, that she was completely unfitted to take the responsibility of her family. Her husband heard of Christian Science through a business friend, and they decided to have treatment, with the result that she was able to resume her duties and was quite well in about three months.

It was through what I saw done for this friend that I began to study the text-book, "Science and Health with Key to the Scriptures." All my life I had been a church-member, but at that time I was unable to gain much comfort in my church. I had many sorrows and struggles with the world, having lost my husband at an early age and being left with four small children to bring up and educate. I was never very strong, and suffered for years with severe headaches, which made me at times quite unfit to do much. I did not think a great deal about my condition, for I had so long been accustomed to it that it seemed to be part of my life, but I was very weary of it all. After commencing the study of Science and Health, also the reading of the Christian Science literature, I one day realized that I had not been suffering from headaches for a long time, and they have never returned.

About two years ago I fell on a slippery sidewalk and injured my hip. I was taken home and a Christian Science practitioner was communicated with. Treatment was taken up for me, and though a doctor who was asked to set the bone said I would be in bed for three months and would never be able to walk again without lameness, as a piece of the bone was splintered, still I am thankful to say I was up in five weeks, and after using a crutch for a few days was able to walk as well as ever. I can truthfully say I had very little pain during the whole time, and I certainly am not lame. No remedy whatever was applied, except the truth as taught in Christian Science by Mrs. Eddy,—not a splint or a bandage of any kind; and I never feel the slightest discomfort from my leg in any way.

Digitized by Google

To say that I am grateful does not express my feelings; I am more than that, for my whole life is changed. I am happy and full of peace and joy, and I desire above all else to be able to help others to find this healing truth. I am thankful to God, and grateful to Mrs. Eddy, who has indeed made so plain the way in which we can apply the teachings of the Bible to all our needs. I am also grateful to all the kind friends who have had so much patience and given me always such loving help.—EMILY J. SPRACKETT, Toronto, Canada.

[Translated from the German]

I feel like telling the whole world of the wonderful healing experienced through Christian Science. For twenty years I suffered with liver complaint, and during the last years this trouble grew so serious that several physicians told me I must submit to an operation. This I did, as the suffering had become intense. Two months later I left the hospital and went home, hoping to be restored, but a month had scarcely elapsed when the pain set in as before. The physician advised me to have another operation performed, but I refused, although I suffered severely and felt so weak that it was almost impossible for me to get up.

While in this distressing condition I heard of Christian Science, and so applied to a practitioner in Geneva for treatment, which was taken up. After the very first treatment I experienced a wonderful sense of well-being, and after the third I felt that I was healed. For this healing I am indeed thankful, but still more so for the better apprehension of divine Love and the growing understanding of the Bible. There has also been a much greater sense of peace and love in our family since I have learned to apply the truth, and divine Love has healed me of irritability. I am very grateful for our Christian Science literature.

FRAU ROSA CRÉTALLAZ, Bernex near Geneva, Switzerland.

[Written for the *Sentinel*]

The Guiding Light

MINNA MATHISON

Oh, let not seeming lure us
To leave the charted way;
Let wisdom still adjure us
With precepts day by day.
Though darkness lie before us,
Our guiding light is nigh;
Hold fast,—it flashes o'er us
And brightens earth and sky.

Let not the din and clamor
Of that which seems to be,—
False pleasure's costly glamour,—
Obscure reality.
In Mind we have our being,
In Mind our sure defense.
Rejoicing, hearing, seeing,
We lose the mortal sense.

Oh, let the perfect ever
Rule in our thought alone;
Let human discord never
Obscure Love's purer tone.
The path we walk unfearing,
By faith and not by sight,—
Love's wisdom guiding, cheering,—
Grows brighter and more bright.

From Our Exchanges

[*The Watchman-Examiner*]

As the thought broadens into the sphere of human action, it calls for the expression of love for enemies, indefinite deeds of goodness to all who hate us. This may not be so difficult as the cultivation of right feelings and right speech, but it is essential if you would be a child of God that you should "do good to them that hate you." And you must go even beyond that, and when feeling is right and speech is loving and you have done all the good you can to your enemies, you must then pray for the loving care of the heavenly Father for "them which despitefully use you, and persecute you."

How happy would the world be if this standard of love set in the Sermon on the Mount universally prevailed! The war in Europe, unjust competition in business, oppression of every sort, and strife of every kind would cease. This perfect condition, unhappily, seems far from being realized on the earth at the present time. But at least those who aspire to belong to the family of God may be assured that in order to do so they must have the spirit of Him who does good unto all, sending sunshine and rain upon both the evil and the good, and blessing alike in all material ways those who love and those who hate Him.

[*The Christian Commonwealth*]

To kneel down in the morning and ask God for guidance during the day and help to live the right life, and then go out and never think any more about it all day, will probably be of no use. A man may do that for years in a quite formal way, and then complain that prayer is a failure. He has not really been praying at all; he has only been asking for things, as any selfish person might do. The words of prayer which are uttered in a few minutes must represent the constant desire and effort of the soul, or they are not real prayer. Speechless prayer can do much, but prayerless speech can do nothing. The man who earnestly seeks truth, who hungers and thirsts after righteousness, though he may never kneel down to utter words of prayer, nor have any fixed times for such exercises, prays infinitely more than a man who is frequently on his knees supplicating God, but who does not make any serious search for truth or any strenuous effort toward the ideal. Many who think they pray much and frequently, scarcely pray at all, because their petitions are out of harmony with their life.

[Rev. Andrew Gillies, D.D., in *The Christian Advocate*]

You cannot get social righteousness out of anything else in the universe except individual righteousness; and you cannot get individual righteousness without getting right with God. "These ought ye to have done, and not to leave the other undone." We talk today about the tremendous need of the times. The need of our times is not less activity, but more real piety. It is not less philanthropy, but more righteous personality. It is not less laws, but more love and justice and sympathy and truth walking around on two legs. It is not less preaching and teaching of the gospel, but more real living of the gospel. It is not less religious institutions, but more religious men. This is the world's need, and when this need is really met, great things will be seen on earth in the way of spiritual achievement.

[*American Lutheran Survey*]

The church has an open door before it. The old theory of millions of men, as to the possibilities of human nature without recourse to Christ, has been shaken and shattered to its very foundation. The faith of the world in the wisdom of

Digitized by Google

man is a fallen idol. It is for the church to do here as it does in China and Japan: to transform the temples of unbelief and materialism and intellectualism and human philosophy into the sanctuaries of the living God. One thing is certain, —God's word will be heard. The day will come when "every knee shall bow," and "every tongue shall confess" that Christ is Lord of all. Meantime, we who believe in him as the Saviour of the individual and of society, have but one duty to perform, and that is, to proclaim the truth of God's word both as regarding sin and salvation.

[*The Universalist Leader*]

We frequently plead, as an excuse for our moral deficiencies, that we are no worse than our neighbors. What everybody does, or is supposed to do, seems less criminal than if we practised it alone. The man of affairs who knows that many of his methods are not strictly honest, salves his conscience with the reflection that they are characteristic of most business transactions. The youth who entered politics with high ideals, feels less inclined to be governed by them in proportion as he discovers that they are not shared by his associates. We are less sensitive concerning our knowledge of the contents of an immoral book or the incidents of an immoral play when we find that most of our acquaintances have read the one and seen the other. Customs and manners that are essentially wrong, appear less evil as they become more prevalent; and we fancy that we are doing fairly well so long as our social rectitude does not fall below the average.

Meanwhile our lives are judged in the sight of God, not by those of our associates, but by His standard of righteousness, which does not change with human fashions. The evil that we share with others is as wrong as if we were the only offenders. We cannot escape personal responsibility by losing ourselves in a crowd. Our individual worth is weighed against the divine requirement; and our neighbor's deficiencies will not atone for our own.

[*The Christian Intelligencer*]

The Bible is not a riddle which defies solution; it is a revelation, a making known unto men of the divine mind. Surely, the all-wise God would not undertake to inform the world of His will and merciful purpose in language unknown to the human tongue, and in doctrines unintelligible to the human mind. It is because the Bible (in all that it is necessary for man to know for his highest good) is brought within the power of his comprehension, that it is "profitable for doctrine, for reproof, for correction, for instruction in righteousness." The line of demarcation between right and wrong, good and evil, is sharply drawn in the Word of God, and as plainly as the human language can make it. The real merit of the conflict between these two opposing forces is likewise so plainly set forth that any ordinary mind can grasp it. Therefore, the plea of enforced ignorance cannot be accepted in justification of a neutral position.

[*Northwestern Christian Advocate*]

The usual conception of a "backslider" is of one who actually falls from grace, who turns his back upon Christ and betakes himself down the road of sin; but we think the same result, practically speaking, will be attained by merely failing to advance. Truth is ever on the march; ideas are growing; the experiences of the world and of the individual believer are constantly enlarging, and he who is not marching abreast of the on-moving procession is not only seemingly, but in the most real sense, losing out.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in which all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued as a "pocket edition," size 4 x 5⅝ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, bevelled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

Reforestation work has already been started on Massachusetts' first state forest, which consists of about sixteen hundred acres in Winchendon. The tract was purchased for less than eight thousand dollars, and is the first to be bought by the forestry commission under the legislative act of 1914, carrying an appropriation of ninety thousand dollars to be expended over a period of five years. The property is now placed under the control and management of the state forester, to reforest and develop in such a way that the "public enjoyment" may be increased thereby and the water supplies of the commonwealth conserved and protected. This land is now tax exempt, although the state pays to the localities in which the area lies, the amount of taxes lost thereby. It is situated mainly in Winchendon, near the northern boundary of the state, and includes a portion of the Millers and Otter rivers. The tract was purchased with the express view of showing the neighboring communities how bare land in the state may be returned to its former wooded condition with much higher valuation.

Agreements which have been entered into between the Dominion department of agriculture and two of the provincial governments of Canada, provide for important advances in agricultural instruction under the agricultural instruction act. Ontario and British Columbia are the two provinces with which agreements have been made so far, but agreements with the other provinces are on the way and will probably be completed in the near future.

The Ontario agreement provides for an expenditure of $266,013.66. The principal features of the program are the appropriation of twenty thousand dollars for agricultural instruction in the public schools, eighty-one thousand dollars for additional buildings at the Guelph Agricultural College, and one hundred and fourteen thousand dollars for the work of district representatives of the department of agriculture. The British Columbia program provides for an outlay of $58,265.94, out of which the usual demonstration work will be carried on, and fifteen thousand dollars will be used for agricultural instruction in the public and high schools of the province.

In the course of an effort to develop trade in the berries known in Newfoundland as partridge-berries, the government has made public a report of an investigation conducted by a botanical expert. He finds that this berry, which is entirely different from the American partridge-berry, is a variety of the cranberry of American commerce. It is identical with the foxberry of Nova Scotia and the mountain or rock cranberry of the United States, and is known in the Chicago market as the lingen berry. The berries grow in great quantities on the moorlands of the colony, and always have been used locally. Ten years ago they were introduced to the export trade, and last year about five thousand barrels were shipped out of the colony. They have found particular favor with the Scandinavian population of several cities in the United States. The expert expresses the opinion that with careful supervision of the moors, intelligent cultivation, and development of markets, the government should be able to make the sale of the berries an important industry.

Several additions have of late been made to the known mineral wealth of South Australia. In Adelaide, recently, the government geologist inspected a number of precious opal specimens which are reported to have been obtained in the neighborhood of Stuart range, to the westward of Anna Creek station, by a party of prospectors who were in search of gold. The government geologist states: "The specimens were evidently secured from veins in the desert sandstone formation, and are quite the best obtained in South Australia. The general characteristics of the samples are in all respects similar to those exhibited by material obtained at White Cliffs in New South Wales, where also the desert sandstone is the formation containing the opal. Precious opal is always associated with opal possessing no commercial value. The samples contain a proportion of the precious variety that is more than sufficient to justify careful and systematic prospecting. It is reported that the deposits extend over a very large tract of country.

No time will be lost in starting work on the eight-foot waterway from Chicago to the Gulf of Mexico, announced Governor Dunne of Illinois on the passage of the five million dollar bill by the legislature. The law goes into effect July 1, and the Governor hopes to see active work begin by the middle of August. Illinois' part in the big waterway is to add the connecting link between the Great Lakes and the Mississippi by clearing out a channel along the Illinois river. The distance to be covered by this joint channel is sixty-five miles between Joliet, the end of the sanitary district canal, and Utica, whence south the Illinois river is navigable to the Mississippi. Only barges will be able to utilize this eight-foot waterway. Opponents of the measure made a strong fight for a waterway accommodating sea-going vessels. Money will be raised by the sale of bonds bearing 4 per cent interest.

The Rogers Pass five mile tunnel under the Selkirk range, now under construction for the Canadian Pacific railway, and to be completed in 1916, will, it is said, be the longest railroad tunnel on the continent of North America, the longest at present being the Hoosac tunnel on the Fitchburg railroad in western Massachusetts, 4.75 miles. The Rogers Pass tunnel will cost ten million dollars. It will shorten the Canadian Pacific main line over the Rockies by four miles, and will materially reduce the mountain grades. The tunnel will be 29 feet wide and 23 feet high, and built in a straight line. It will be several thousand feet below the present line of the railway over the top of the mountains, and will be wide enough for two tracks.

The business of the Panama canal in May was the largest of any month since the canal was opened. A total of one hundred and thirty-six sea-going vessels passed through, carrying an aggregate of about 635,057 tons of cargo, which is between one third and two fifths more vessels than had used the canal in any preceding month, and 186,100 more tons of cargo had passed through in a previous month, exceeding previous records by more than five per cent. During this month the tolls collected amounted to $806,316.56, making the total amount $2,971,675.29.

It took fifty-three minutes for the Metropolitan line steamer James S. Whitney, loaded with twenty-five thousand tons of general cargo to go through the Cape Cod canal, from a point inside the breakwater to a point just past Buzzards bay bridge. This steamer is the first American one of its size to use the canal, and is the first big steamer with cargo to pass through. The usual route was thus shortened by about sixty miles, and fifteen tons of fuel were saved.

The Western Steel Car and Foundry Company announces that its plant at Hegewisch, Ill., will be running on full time, with over four thousand employees, on and after June 1. This is due to the order received by the company for thirty-six hundred cars. More than one thousand men are at work now, unloading materials for car construction. The plant will build two thousand cars for the Chicago & Northwestern railroad, and sixteen hundred for the New York Central lines.

Plans are being perfected for the construction at Mobile, Ala., of one of the largest shipbuilding plants in the United States. A four million dollar organization is to undertake the project, which it is hoped to have in operation within six months. The new plant will cover about fifteen acres, with equipment for building six hundred-foot vessels, including an eight hundred-foot dry dock and a marine railway.

The formation of a council of fifty citizens, with an executive committee of eleven, to work out a practical, comprehensive city plan for metropolitan Boston, and an offer of prizes from twenty-five thousand to one hundred thousand dollars, as may be deemed necessary to attract the best experts of the country to submit studies, were determined upon by the second city planning meeting a few days ago.

Officials of the Massachusetts highway commission were of the opinion that by June 1 the number of motor vehicles registered would exceed the total registration for the year 1914. From Jan. 1 to May 7 there have been 68,082 automobiles registered, compared with 51,226 cars for the same period last year.

Orders for 14,045 steel freight-cars for replacements have been placed by the Pennsylvania Railroad Company for its lines east and west of Pittsburgh. This will represent an expenditure of approximately sixteen million dollars.

Ernesto Nathan, former mayor of Rome, commissioner from Italy to the Panama-Pacific exposition, formally opened the group of eight buildings representing Italy at the fair.

The ships of the American-Hawaiian line have carried more than one fifth of the 3,346,019 tons of cargo that passed through the Panama canal up to April 1.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII June 12, 1915 No. 41

"Not as the world giveth"

IRVING C. TOMLINSON, M.A.

ONE of the Master's most precious promises was expressed in the familiar words, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you." It is to be observed that Jesus intimates there is a kind of peace which the world gives, but that the peace which he bestows is of a very different type. A year ago there was so-called peace in Europe, but it was the peace of the world, and not the peace of Christ. It is described by the prophet's words, "Peace, peace; when there is no peace." The apparent calm in men's lives is frequently the outcome of fear, and war measures are restrained only because of superior opposing forces. There is a seeming bodily peace of like nature which is brought about by the use of drugs or human will-power. This is indeed "no peace," because it is neither permanent nor true, and it must be supplanted by the harmony which Christ alone bestows. Materialistic peace (the phrase itself a misnomer) is confusion, latent or otherwise. The true remedy for all war is that given on page 329 of Science and Health: "If men understood their real spiritual source to be all blessedness, they would struggle for recourse to the spiritual and be at peace."

How deplorably evident it is that much of the peace which has been proclaimed in the past was no peace at all. Efforts have been made to accomplish freedom from war through measures of suppression. In an address on "Universal Peace," Talcott Williams of Columbia University says: "The only necessary thing in the world is righteousness, and the reason why deep down in the consciousness of men there rests, unshaken and unchallenged, the conviction that international peace is not for our day, is because international righteousness does not exist in our day. World peace can only come through world righteousness. The world will never become righteous through peace—peace can only come through righteousness. Peace is only the visible sign of righteousness."

It has been said that all evil tendencies must be subdued and chastened, lest punishment should follow (a wrong motive); and instead of freedom there has often been slavery and bondage to fear or to a superior human will-power. The Christ-way is a better way, for the freedom and harmony which he bestows is the outcome of expression and not suppression. The Master would have all mankind enjoy a rightful peace through manifestation of the best and noblest qualities, and he would have them dwell in thought, not upon the so-called "balance of power," but upon the beneficent power of infinite good. He would have each one know himself as the child of God, the Christ-man seeking to express the divine ideal which is incarnate in every man. "Come unto me, all ye that labor and are heavy laden," is his loving invitation, "and I will give you rest." This promised rest comes from knowing the truth, from understanding spiritual realities, so that one may be ever ready to respond to these inspiring words of the Master, "Let not your heart be troubled, neither let it be afraid."

There is a false sense of peace which is the outcome of the toleration of that which is neither just nor right, or the bearing of indignity and wrong without any effort to better conditions. It is of this callous indifference to the spurious and unreal that the Master said, "I came not to send peace, but a sword," for the abiding calm that Christ gives is not satisfied with wrong-doing of any kind, but strives for peace "not as the world giveth," in which there is no possibility of wrong or weakness. Confidence in God is the only thing that can establish that perfect rest in which the clamorous discords of mortal sense have no place. Mortals have sought peace vainly, because they strove to find it where it is not—in matter and material experiences. It can come only through a transformed mentality.

The peace which comes from the precept and practice of the truth, as taught and demonstrated by Christ Jesus, is based upon right thinking and right doing. Herein is Mrs. Eddy's priceless contribution in behalf of world-wide peace. The scientific understanding of God and man, as made clear in the teaching of Christian Science, helps to establish peace within one's consciousness, and this being accomplished, freedom from strife within and without is experienced. The world undertakes to maintain peace through the "balance of power," but the peace of Christ comes from knowing God as the only power, and man as having dominion over all that is unlike good. It is of this peace that the poet sang (Hymnal, p. 274):—

O thou God of peace, be near us,
Fix within our hearts Thy home;
With Thy bright appearing cheer us,
In Thy blessed freedom come.

Come with all Thy revelations,
Truth which we so long have sought;
Come with Thy deep consolations,
Peace of God which passeth thought!

❖

"Begin to possess"

MARY HICKS VAN DER BURGH

"BEGIN to possess, that thou mayest inherit." Thus spake the God of Israel to His people and their great leader in the olden time; and it is still true that if we would possess our inheritance as children of the Most High, we must begin to assert our God-given dominion, casting out the enemy in all the various and subtle forms with which it strives for a foothold in our consciousness through our particular environment. This calls for alertness.

Though gently forbearing with his disciples, the Master seemed to express a rebuke when he said, upon their failure to heal, "This kind goeth not out but by prayer and fasting," for it showed that those who would try to do his works must abstain from worldly thoughts, desires, and ambitions, and give themselves to constant communion with the Father. In this silent communion, inharmony's jarring notes are hushed, care slips away, the burden falls, the dark is light, the crooked straight, and over the pain-racked body are spread the healing wings. Thus we sit in heavenly places

with Christ Jesus, with John and Peter and Paul, and all the good of all times, for Paul tells us of "the whole family in heaven and earth." Here we can be sure that all are in one accord.

God knoweth them that are His, and nothing can keep the honest seeker for the light from this spiritual assembly gathered together in the church "not made with hands, eternal in the heavens." In such presence, how can the healing of any discordant condition fail? Why should we not expect here the healing for every ill? We know that it was not the Master's human personality which healed while he was here on earth; it was the Christ-idea, which remains forever accessible. Indeed, we can now expect divine aid with surer hope, because he said of the believer, "Greater works than these shall he do; because I go unto my Father." Thus by communion with God we come to the promised land.

Coming from this communion, we are confronted with suggestions from the material sense of life. "Take heed what ye hear," said the Master. We are enlisted not only to cast out evil, but to keep it out. Here begins the fasting,—abstaining from belief in the power of evil as it seems to be manifested, either in ourselves or others; and by availing ourselves of every opportunity for communion with good, we may continually add to our spiritual possessions.

As students of Christian Science we have been freed from many delusions. Unfettered by a belief in personal enemies, we are free to concentrate against the common enemy of mankind, a belief in the power of evil. In doing this we are assisting humanity to throw off the shackles imposed by the subtleties of false beliefs. What chains have been shattered, what victories achieved, since first our brave Leader proclaimed the truth which has at last aroused so many dormant believers in our Lord to an understanding of the life-giving power of the word. Since then we have indeed begun to possess,—to come into our heritage.

Christian Science shows us that there are not two problems, one material and the other spiritual, but it is ours with singleness of heart to seek the kingdom of heaven, and "these things shall be added." Manifestly these things cannot be added until the first condition has been fulfilled. Honest attempts proved this to be a demonstrable truth. God is not unmindful of His covenant, and there is no limit to His ability or willingness to supply His children, but we must comply with the condition and so begin to possess. Can any phase of evil triumph over him who dwells "in the secret place of the most High"? There even death becomes a shadow, as the psalmist describes it, and by faithfully conquering each lesser ill we are leading up to the final victory over the last enemy to be overcome. Is anything else so much worth while?

As beginners in the study of Christian Science we may be able to grasp but one of the many truths read in our textbook, "Science and Health with Key to the Scriptures," and even that but partially; nevertheless, by applying that thought as best we can to some inharmonious condition, we are able to prove its power. We have begun to understand and possess our birthright. The writer remembers with what joy, mixed with incredulity, she read from the first sentence in the Preface to Science and Health the words, "Today is big with blessings;" but the thought was harbored, and the leaven of truth began to work, finally replacing despair with hope. This was the forerunner of many similar blessed experiences. Then the Bible was reopened, and a new light shone upon its pages, which had been read for long years with unseeing eyes. Again, Mrs. Eddy says: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more" (p. 3). Surely to avail ourselves of the blessings we have is to begin to possess, and unless this is done, we have a repetition of the story of the unused talent.

Solomon tells us that drowsiness leads to poverty. Just as surely spiritual supineness leads to barren lives and spiritual loss. A persistent elimination from consciousness of all that is unlike good calls for alertness and perseverance. As the husbandman hath long patience, so we, in spite of failure to harvest all our planting, can assure ourselves by the promise that "we shall reap, if we faint not."

God will not let us be overcome by error; Truth will show us how to handle it. Confronted by a problem that seemed most perplexing, and failure appearing to follow well-meant effort, the writer sought the source of all wisdom. In there came to mind Moses' terrifying experience with a serpent, when the great man fled before its venomous activity. But God instructed Moses how to handle the serpent, and when he obeyed the divine command, its powerlessness to harm was demonstrated. It then occurred to me that perhaps because of fear and ignorance of the divine purpose I had taken hold of my problem at the most difficult place, and that properly grasped it could be overcome.

We are not asked to demonstrate what we do not understand, but if each day we add to our spiritual possessions, using them to acquire more and greater conquests, God will instruct us how to handle error, until we come to the blessed understanding where we lose all belief in it, when we shall have rolled away the heavy stone of mortal sense and walk glorified with the Master, who encourages us to overcome even as did he. "He that endureth to the end shall be saved."

Testimonies

GERTRUDE SANDS SHERIDAN

I WANT to send a word of gratitude for the testimonies published in the *Journal* and the *Sentinel*. The first stage of interest and joy in Christian Science is entered by many people as the result of physical healing through the power of Truth. Glad wonder at deliverance from disease, also from the so-called laws of health with their penalties and limitations, outshines all else in the consciousness of the new student. During this period testimonies of healing through Christian Science are eagerly listened to and read. Later, however, the healing becomes a part of daily experience and is rightly taken as a matter of course. Then comes a time when the "Testimonies from the Field" are regarded, more or less unconsciously, perhaps, as representing a department for beginners, or for those who "think of looking into Christian Science."

Such has been my own attitude, but of late I have received great help and inspiration from these testimonies. Often light has been shed for me on some problem of the moment by coming upon the working out of a similar problem and of the specific thought-processes which solved it. Once or twice when discouragement has seemed to overwhelm me, release has come in a twinkling through the reading of a single testimony; and with it a glorious new courage, a surer consciousness of joy, and an all-pervading sense of gratitude.

I have also found that the need of so-called chance inquirers has been more fully met by my ability to answer their queries in regard to the healing of specific cases of disease and to refer them to this or that recent issue of our periodicals. I recall a testimony in the *Sentinel* which told of a healing of malignant disease at what was virtually the hour of death. The writer stated that the road to health was long and slowly

Digitized by Google

traversed, but that from the first she and those who helped her rejoiced. She said, too, that she was helped by remembering that Jesus on several occasions thanked the Father before he declared the truth for the sufferer. The reading of this testimony, and others expressing similar thoughts, has taught me much about being grateful. Sometimes when personal sense has affirmed discord for me, it has been quickly dispelled by a larger, more universal sense of gratitude.

Paul admonished the followers of the Master to "rejoice with them that do rejoice." In Science and Health (p. 3) our Leader writes: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more." Let us avail ourselves of the help which this department of our periodicals affords us, for as we read of the deliverance and gratitude of others, there comes to us a new and overwhelming sense of wonder and joy for that deliverance, for the good already received by mankind, and we rejoice anew.

Right Standards

ALFRED F. GOODMAN

In Science and Health (p. 569) Mrs. Eddy says, "Every mortal at some period, here or hereafter, must grapple with and overcome the mortal belief in a power opposed to God." We are also told in our text-book that progress in Christian Science is a constant warfare with the flesh. This warfare is a mental one, and by its means we are enabled to rise above the testimony of the physical senses. To those living in a material world, so called, surrounded by manifestations of what seems to be the absence of God, those without a working knowledge of God as divine Principle, or any proper realization of how to get that understanding, or who are not willing to give up what they have for something better, obedience to the Scripture command that we "pray without ceasing" seems next to impossible. It certainly is not possible so long as we are unwilling to give up the old for the new; but as soon as the willingness to do this comes, the way out of the difficulty presents itself. This way is one of warfare with the flesh, the destruction of the belief in the flesh or mortality, and the first step in this direction is taken when we learn to think correctly.

We know that everything must be subject to a standard of values or measurement. Silver and gold have a certain standard of weight and fineness; different kinds of cloths have a standard of quality up to which they must measure; food must be up to a certain standard of purity to be sold upon the market. We realize that all of these things must be so in order that conditions be proper and right, but we do not all see the necessity for a standard of right thinking. Christian Science is, however, very plain on this point. It says that we must think right, must keep our mentality clear and pure, else we cannot demonstrate its rules. The Principle of Christian Science makes this demand, for pure and correct views regarding God and man are absolutely necessary to its demonstration; consequently, we must realize the necessity for a standard of right thinking, and must make every thought that enters our consciousness measure up to it. Any thought which cannot stand the test must be rejected.

He who strives along this line must note what suggestions are finding entrance to his thought. He must be very careful regarding the thoughts which he thinks about himself and others. He must stop long enough to make sure that he is hospitable to divine ideas alone, and that whatever he thinks regarding his fellows is in keeping with the truth that man is the reflection of God. A Christian Scientist should not allow any thought which does not measure up to this standard of Truth, to abide for one moment in his consciousness. The most simple and satisfactory, as well as the only safe plan, is never to give entrance to recognized errors, but as St. Paul says, bring "into captivity every thought to the obedience of Christ."

He who constantly guards his thought against the entrance of any impure or erroneous suggestion, will not consent to think upon anything unlike Life, Truth, and Love. This must first be realized in regard to himself, before he applies it to others. The battle must be fought and won in his own consciousness first, then he will be in a position to realize the truth concerning his fellow man. "First cast out the beam out of thine own eye," said the Master. Thoughts that are right manifest Truth; they are good, and bring forth good fruit; they are life-giving, and know no death; they are loving, with no sense of hatred; they are neither envious, disobedient, untrue, selfish, nor unkind. St. Paul says, "To be carnally minded is death; but to be spiritually minded is life and peace." The more we realize that this is the absolute truth, the more will we be benefited. The carnal mind is "enmity against God," we are told, thus showing that material thoughts wage war against the facts of Spirit. "To be spiritually minded is life and peace," but "to be carnally minded is death." Surely this should make us guard our thoughts and be sure that they are in the right direction.

Sometimes a moment's negligence, a consent to think of that which is not uplifting, not spiritual, may give us a great deal of unnecessary work,—work that will take time, patience, and love to accomplish; hence the necessity for watchfulness. We should earnestly consider the source of all right thinking. Man does not think with the brain. Divine intelligence is round about him; he lives, moves, and has his being in God. Made in the image and likeness of God, he reflects the perfect Mind. Man is thus answerable to his Maker alone. He is under no power but that of God. God gave him dominion, and he has this dominion now, because God's laws and ordering are unchangeable.

We know that sooner or later all must come to know the truth; we know that some day we will enter into the realization of man's full inheritance and dominion. Today it is ours to purify and guard all our thoughts; to measure them, every one, by the standard of Truth. Then we will think only good thoughts, and see all the beauties of creation, the limitless glory of man in God's image. We shall see and know why man can never lack, because divine Love supplies his every need.

Transitional Periods

ALFRED FARLOW

There is an old saying that he who is forewarned is forearmed. Before the writer gained an insight into spiritual truth as it is taught in Christian Science, he oftentimes wondered why the Master of Christianity discussed at so great length the calamities and upheavals he foresaw would take place in the world previous to the final restoration of that peace which is gained by the establishment of the kingdom of God. He now sees that such warnings, which were accompanied with a clear outline of the proper remedy, were calculated to guard against surprises and possible defeat. Jesus said, "Ye shall hear of wars and rumors of wars," but he also said that the days of calamity would be short, evidently assuming that his followers would heed his admonition, "In your patience possess ye your souls." If any doubt as to the meaning of the term "souls" occurs to the reader, he has only to ask himself what it is that is lost by impatience.

Digitized by Google

It may be interesting to note that Elijah did not hear the "still small voice" of Truth, which corrected his misapprehensions and destroyed his fear, in the midst of the earthquake, the wind, and the fire, but after these disturbances. No doubt our Lord knew that in the general transition from materialism to spirituality, from sense to Soul, from selfishness to unselfishness, there would be more or less of chemicalization which would take place in the general human consciousness, and which might find outward manifestation on the battle-field. He was, however, wise enough to know that the peace and patience of the individual would insure the peace of nations and shorten the duration of war.

On page 278 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy writes: "Love rules the universe, and its edict hath gone forth: 'Thou shalt have no other gods before me,' and 'Love thy neighbor as thyself.' Let us have the molecule of faith that removes mountains,—faith armed with the understanding of Love, as in divine Science, where right reigneth."

Christian Science gives us a clearer understanding of the method whereby to exercise patience and thereby possess our spiritual sense, and it certainly behooves Christian Scientists to exercise this understanding, and not lose sight of the stupendous responsibility which rests upon them in this particular hour. With the knowledge which we possess and with the prophecy which Christian Science affords us, we are in a position to understand what it is that chemicalizes general humanity, and we should calmly rest in the realization that divine presence means peace always, and evil can neither chemicalize nor exist in the divine presence.

When Jesus was undergoing the tortures which human opposition inflicted upon him, he said, "Father, forgive them; for they know not what they do." He did not imply by this that they had a human excuse for their conduct, that they did not know they were piercing his side and forcing nails into his hands and feet, but he knew that they were prompted by supposed fundamental evils of which they were in a sense unconscious, and of which their hatred of him was an external expression. When nations as well as individuals war against each other, they imagine they have certain grievances; but a more careful and scientific study of the supposed cause of strife shows that ignorance alone is at the bottom of this as well as of every other error. Then why not appeal to the understanding that intelligence, God, is supreme and governs everywhere, and that ignorance has no power?

A Silent Sentry

AMY C. FARISS

THE belief, based upon material evidence, that the elements can interfere with God's ideas, is daily and hourly proved to be erroneous by the student of Christian Science. More and more is it being acknowledged that from the cradle of its own conception to the grave of its own digging, mortal mind and its so-called laws are without power and authority; and that in reality they cannot operate to harm or hinder God's child in any direction, if even so much as a grain of spiritual understanding has been planted in the human thought. Christian Science is constantly proving how omnipresent and all-inclusive is God's love for every creature of His universe. It points to His tender care and unfailing provision for all human need, and reveals how divine Love guides the tiniest workers to places of safety and rest. If, then, our industrious coworkers, the bees and the birds, can rely upon divine wisdom, can there arise a circumstance in which this same wisdom may not be relied upon to meet our every need?

During a storm one winter night, the writer dallied with subtle argument concerning the inadvisability of going to the Wednesday evening meeting. The streets were flooded, the reasoning ran; the planks which were necessary to reach the cars were liable at any moment to be carried away, so swirling was the water; the cross-line cars might not be running, as reports had it that several lines were out of commission. Visions of being stranded on the way to or from the meeting kept flashing into thought,—even the suggestion that there would be no meeting, as possibly no one would be able to reach the church. But as error had already been busy with consciousness that month, the writer had promised herself that on this evening she would carry with her the pledge which was already overdue, and one honest thought silenced the reasoning of the elements, so far as their asserted hindrance was concerned. Error should no longer be allowed a place, no matter under what guise it presented itself. Then something within began to rise up in trust and confidence. Like a barometer, which Mrs. Eddy calls "that little prophet of storm and sunshine," it denied "the testimony of the senses" and pointed "to fair weather in the midst of murky clouds and drenching rain" (Science and Health, p. 122).

No special difficulty was experienced in boarding the first car, but long before the transfer point was reached, the passengers became aware that they were making slow headway, and from time to time it seemed as if the car would stop altogether. But soon the spirit of confidence was in control. However uncertain the trip appeared to become, joy alone bubbled up in the heart of the one who had ventured out in reliance on Truth. At the transfer junction, after a few uncertain steps, the writer and another Christian Scientist who had alighted, found themselves in the middle of the street with rain falling, and as far as eye could reach in the semi-darkness, a sheet of rushing water, the slightest depth of which was where they stood. Then came Love's ever watchful care, Mind's omnipresent, protecting, and all-seeing wisdom. From out the gloom loomed a figure. In a twinkle two stranded women were separately picked up in strong arms and carried to the cross-line car, which arrived just at the moment it was needed. Love's silent sentry was not dismissed. He also boarded the car; and when the church was reached he again carried them across the rushing stream and landed them safely, almost at the door of the church.

Perhaps this friend in need did not himself know by what authority he so generously befriended the two women; but they knew, and during the whole evening their hearts were singing a glad song of gratitude to divine Love and wisdom. The thought came, as row on row of vacant seats met the eye, that only the few who had that hour braved the storm, knew the wonder and joy of what the evening held. On returning home, the flooded condition had subsided, and like God's people of another day, they walked "on dry ground."

[Written for the *Sentinel*]

"Awake thou that sleepest"

J. BALFOUR ELLIS

WE seek no flashing light that gleameth far away,
Piercing the shrouding night with transient ray;
Called out of sleep, Father, we pray to Thee
That Truth's unclouded sun may light our way.

And thou, O Christ, art Truth and Life and Love, today
As when twin stars first sang their rhythmic lay;
And all the seeming dark must fly before
The Light that shineth to the perfect day.

Selected Articles

[Judge Clifford P. Smith in *Lynn* (Mass.) *Item*]

When a person who can write the word Reverend before his name, advertises an attack on Christian Science and uses such language as you have just reported, the probability is that the Christian Science church of that vicinity is growing. But the abuse of a religion or its founder never turned a thoughtful man away from it, and no one who is ready to consider the merits of Christian Science is likely to accept voluble vituperation instead of intelligent information. Vilification proves nothing against any one or any thing, except the person who resorts to it; and the only reason or argument furnished by the speaker whose declamation you published was a palpable fallacy.

For the purpose of proving something against Christian Science, the speaker related an incident which contained its own refutation. The story was that a native of India, by name Pundita Ramabai, was told of Christian Science when she came to America, and she recognized it as an ancient Indian philosophy. The nature of the information furnished to this lady was not stated, but it can be gathered from her explanation of the philosophy which she identified with Christian Science. She said: "It means just this: the philosophy of nothingness. You are to view the whole universe as nothing but falsehood. You are to think it does not exist; you do not exist; I do not exist; the birds and beasts that you see do not exist. When you realize that you have no personality whatever, then you have attained the highest perfection of what is called 'Yoga.'"

Now every one who has ever read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as a student or sincere inquirer, knows that the lady who said this had been misinformed. There is not a single point or item in what she is reported to have said that corresponds in the least degree with Christian Science. The Christian Science text-book can be found at most public libraries, or at any Christian Science reading-room, and any one who wishes to know its contents is cordially invited to examine this book for himself, and do his own thinking. Mrs. Eddy from girlhood until after her discovery of Christian Science, when she was forty-five years of age, was a member of the Congregational church. She was a woman of liberal culture, but never studied Indian philosophy, or even read it. On the contrary, she was a profound student of the Bible, and was devoutly religious and Christian. Christian Science is based upon the Bible, and in all of Mrs. Eddy's writings she refers to the Scriptures, especially to the teachings of Christ Jesus, at every point.

The view of the universe which Christian Science inculcates is simply that of pure and unadulterated Christianity. It does not begin with a negation of anything, nor end with a denial of anything that possesses the nature of substance, but it defines substance as that which is real, in distinction from that which is apparent. So does the New International Dictionary. Christian Science begins with the idea that "he that built all things is God," and proceeds consistently with the axiom, "That which is born of the Spirit is spirit." It concludes that spiritual facts must be "spiritually discerned." (See I Cor. ii. 12-16.) Christian Science, therefore, cultivates the faith which involves a conviction of unseen reality (see Heb. xi. 1), and develops the spiritual understanding which sees all things as they really are—as God made them to be. (See Col. i. 9-13; Rev. xxi. 1-4.)

The Master said, "Every plant, which my heavenly Father hath not planted, shall be rooted up." Mrs. Eddy has consistently written, "Every object in material thought will be destroyed, but the spiritual idea, whose substance is in Mind, is eternal" (Science and Health, p. 267). Christian Science, therefore, solves the most fundamental of all problems when it begins with God as the only Mind and cause, and arrives at definite and consistent conclusions regarding the substance of the universe, including man. Moreover, the understanding thus conferred is found to be capable of proof or demonstration when it is put into practical use for the betterment of human character and conditions. There is a great multitude of persons, extending into every quarter of the globe, who can bear witness to this fact from personal experience.

[J. Arnold Haughton in *Radcliffe* (England) *Times*]

Some of the statements made by Dr. —— in the course of his sermon on "The Modern Search for God," reported at length in a recent issue, show that he has not perceived the true nature and operation of Christian Science. To say that Christian Scientists conceive the saving power of religion "so meanly and selfishly" is the direct opposite of the truth; for on page 113 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "The vital part, the heart and soul of Christian Science, is Love." Christian Science is essentially a religion of love, and the explanation of its mighty achievements and its rapid growth is to be found in the statement on page 192 of the same book, that "whatever holds human thought in line with unselfed love, receives directly the divine power."

It is not correct to say that Christian Scientists "regard religion as a medicinal influence, a sort of disinfectant or anodyne, that may prove its value to a doubting world by curing dyspepsia and nervous worries." It is perfectly true, of course, that Christian Science heals the sick, and heals not only sickness of the kind mentioned in the statement just quoted, but every type of disease, including organic and so-called incurable diseases. The mission of Christian Science, however, "is not primarily one of physical healing," but "to take away the sins of the world" (Science and Health, p. 150). Its physical healings are the signs which Jesus said should "follow them that believe," and as such are proof of a spiritual understanding of God on the part of the Christian Scientist. Its real mission is to impart this spiritual understanding to mankind, and it is practical in its results only because it is spiritual in its import. The doctor may rest assured that Christian Scientists are among those who realize most clearly that to redeem human society "nothing short of a divine redemption will suffice."

It ought to be added that Christian Science differs fundamentally from "New Thought," which is mentioned by our critic in the same connection as Christian Science.

[G. W. Allan in *Ingersoll* (Ontario) *Chronicle*]

A recent issue contained a report of a sermon on "Christian Science: a Substitute for Christianity," to which I should be pleased to offer reply. Early in his address the speaker names several things which have operated to "drive" people out of the church "into the fold of Christian Science," and the greatest of these, he states, is "the pain-throb of disease and suffering." Here, if he but realized it, is one of the most complete indictments of modern Christianity,—that the institution which is intended to commemorate the life and work of the first Christian, drives away those whom the Master drew unto him.

"Anciently," Mrs. Eddy says, "the followers of Christ, or Truth, measured Christianity by its power over sickness, sin, and death; but modern religions generally omit all but one

Digitized by Google

of these powers,—the power over sin." Then she adds: "We must seek the undivided garment, the whole Christ, as our first proof of Christianity" (Science and Health, p. 142). This acceptance of the neglected part of Jesus' command, and healing the sick in obedience thereto, constitutes the offense of Christian Science, and it is a strange fact that the most intense denunciation of this religion comes from those who have been specially ordained by the churches to be emulators of him who not only healed the sick, but stated that his followers would be recognized through their doing the same.

Our Master, knowing the ease with which a profession of Christianity might be made, defined it for all time on the basis of "works" rather than "words"—"He that believeth on me, the works that I do shall he do also." This definition and test of discipleship never having been abrogated, still remains the standard by which "ye shall know them."

It is exceedingly strange that a person accustomed to study could read the Christian Science text-book, with its almost three hundred references uncovering and denouncing sin, and still proclaim that Christian Science teaches "there is no sin." Of course there is sin in human experience, else where would be the purpose of Christian Science. Let me refer you to Mrs. Eddy's writings. In "Rudimental Divine Science" (p. 2) we find, "The emphatic purpose of Christian Science is the healing of sin." In Science and Health (p. 29) we are told, "Christians . . . must grapple with sin in themselves . . . and continue this warfare until they have finished their course." Again (p. 203), "Sin kills the sinner and will continue to kill him so long as he sins." Also (p. 327): "The way to escape the misery of sin is to cease sinning. There is no other way." Still again (p. 569): "Alas for those who . . . fail to strangle the serpent of sin . . . They must eventually expiate their sin through suffering."

While Christian Science teaches that the sin in human experience must be overcome, it also teaches that sin and sickness are not of God, are not God-created or God-sent; but that God, omnipotent good, is available to men, even to the complete destruction of all such.

❖

[Thomas F. Watson in *The Union*, Grass Valley, Cal.]

The Rev. Mr. —— tells us that Christian Science is founded on superstition, and yet "as a method of healing the system is entitled to favorable consideration." He admits that "it performs some real cures," but says that its fundamental teaching is "false in philosophy and false in fact."

Jesus plainly said that "a corrupt tree" cannot "bring forth good fruit." He also said, "By their fruits ye shall know them." Christian Science should be judged by its fruits, namely, the healing of sin and sickness. Superstition and ignorance do not heal the sick or reform the sinner. In "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 83), we read: "Between Christian Science and all forms of superstition a great gulf is fixed, as impassable as that between Dives and Lazarus." The critic objects to the teaching that God is All, yet the Bible states, "The Lord he is God; there is none else beside him." In Jeremiah we read, "Do not I fill heaven and earth?"

As to the critic's assertion that Christian Science has no claim to being a science because it is not based on matter, Webster's dictionary tells us that science is "accumulated and accepted knowledge which has been systematized and formulated with reference to the discovery of general truths . . . knowledge classified and made available in work, life, or the search for truth; comprehensive, profound, or philosophical knowledge." Therefore this Science, being an exact, demonstrable knowledge of Truth, undoubtedly has proved its right to the title of Science; and as it states and elucidates exact knowledge of the truth of Christianity, it is both scientific and Christian, hence the title Christian Science.

The gentleman objects because Christian Science makes "Love and God identical in the sense of being," yet John writes: "He that loveth not knoweth not God; for God is love." Christian Science does not "deny a vital part of the efficacy of prayer," as this critic asserts; rather does it emphasize the efficacy of prayer at all times and under all circumstances. Science and Health states (p. 1): "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." The critic objects to referring to God as Principle. He says: "It is impossible to pray to a principle." Science and Health states (p. 272), "God is the divine Principle of all that represents Him and of all that really exists." The teaching of Christian Science is that Love is the divine Principle of the universe.

The fact that the spiritual man (made in God's likeness) is sinless, is borne out by the Scriptures: "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." Christian Science does not teach that a mortal man cannot sin, but it does teach that sin and sickness are both overcome through the right understanding of God. Christian Science also teaches that to acknowledge our sin aids in its destruction. Science and Health (p. 461) states: "Both sin and sickness are error, and Truth is their remedy."

❖

[Charles E. Jarvis in *The Tropico* (Cal.) *Sentinel*]

It is regrettable that any one should consider it necessary to go into the press to misrepresent doctrines with which he does not agree, but which are cherished by a large number of his fellow citizens. The only way in which to criticize another's theories successfully, is from the standpoint of the author. Mrs. Eddy has given us in her text-book, "Science and Health with Key to the Scriptures," a spiritual interpretation of the Bible which a recent critic has denounced and attempted to disprove from a purely materialistic basis. His premise being erroneous, his conclusions could not be otherwise, and it is therefore only fair to your readers to present a word of correction to some of this critic's statements.

To begin with, the reverend gentleman assures us that the doctrines of Christian Science are pantheistic. Now it is safe to assume that no one knows quite so much about the doctrines of Christian Science as its Discoverer and Founder, Mrs. Eddy, and she tells us on page 129 of the text-book above referred to, that "pantheism may be defined as a belief in the intelligence of matter,—a belief which Science overthrows;" and again, on page 279, "Pantheism, starting from a material sense of God, seeks cause in effect, Principle in its idea, and life and intelligence in matter." Lest there be any doubt on this point, permit me to refer to Mrs. Eddy's message entitled "Christian Science versus Pantheism," wherein on page 12 we find: "The Science of Christianity is strictly monotheism,—it has ONE GOD. And this divine infinite Principle, noumenon and phenomena, is demonstrably the self-existent Life, Truth, Love, substance, Spirit, Mind, which includes all that the term implies, and is all that is real and eternal."

Mrs. Eddy does not deny the existence of matter to human sense, but she most emphatically denies its ultimate reality, and in this she is sustained by many of the world's most profound physical scientists. It is generally recognized by

Digitized by Google

theologians that the so-called "free will of man," or human will-power, is man's worst enemy. Passion, appetite, lust, all forms of sensuality, are but differing phases of the human will, or "carnal mind," which Paul tells us "is enmity against God," and that "to be carnally minded is death." Whenever the individual has awakened to the recognition of these evil propensities, he is usually found striving by denial to overcome them. Jesus did not rely upon his own will in order to accomplish his results. He said, "I can of mine own self do nothing;" also, "The Father that dwelleth in me, he doeth the works."

Again, the critic avers that Christian Science "denies there is such a thing as sin;" then in support of that conclusion he separates from the context the following: "If soul sinned, it would be mortal. Because soul is immortal, soul cannot sin." Mrs. Eddy's exact words on page 468 of Science and Health are: "If Soul sinned, it would be mortal, for sin is mortality's self, because it kills itself. If Truth is immortal, error must be mortal, because error is unlike Truth. Because Soul is immortal, Soul cannot sin, for sin is not the eternal verity of being." From the comparison, it will be seen that the critic failed to distinguish between a false, human sense of soul and infinite Soul, synonymous with God, to which Mrs. Eddy refers. On page 447 we read, "To assume that there are no claims of evil, and yet to indulge them, is a moral offense."

The critic's further assertions that Christian Science denies the omnipotence of God, the incarnation of Jesus, Mary's spiritual conception, the crucifixion, resurrection, and ascension of Jesus, the judgment of mortals, or the denial of the trinity, may all very readily be disproved by a brief reference to the Christian Science text-book, with which the critic is obviously quite unfamiliar.

✧

[Robert S. Ross in *New York* (N. Y.) *Tribune*]

A gentleman of Passaic asks, in a recent issue, "How can Christian Scientists report cases of contagious disease when no medical man is called to diagnose disease?" Evidently this correspondent believes that medical diagnosis is uniformly reliable, and that the only way in which one can get well is by submitting to medical treatment. He may therefore be interested to learn that two of America's most noted physicians and surgeons (Doctor Cabot of Boston and Doctor Murphy of Chicago) have recently admitted that nearly 50 per cent of medical diagnoses are erroneous. In other words, they admit that in nearly half the cases medical diagnosis is based on mere guesswork.

The critic may also be interested to learn that Christian Science has taken cases diagnosed by *materia medica* as incurable and readily effected permanent cures. He may be still further interested to learn that Christian Science is the only physician in hundreds of thousands of American homes, with many children, and that these families are uniformly well and happy. If medical diagnosis is such a boon to the human race,—even though it fails in nearly 50 per cent of its cases,—how does this gentleman account for the works of Christian Science which, without medical diagnosis, seldom fail?

Let us suppose that this critic owes certain sums of money: one man for household goods, another on a note, and still another on a collateral loan. Now suppose that he is ready to wipe out these debts: would he have to pay the household debt in one kind of money, take up the note with another kind, and redeem the loan with still another? No, indeed; all three obligations could be wiped out with one kind of legal tender. Thus it is with Christian Science treatment; no matter what the type of the disease may be, it can be destroyed by applying to it the truth of being, as revealed in "Science and Health with Key to the Scriptures" by Mrs. Eddy. God is omnipotent, everywhere and at all times, not impotent on some occasions and omnipotent on others. Did not the psalmist sing of Him "who forgiveth all thine iniquities; who healeth all thy diseases"?

The law, however, requires that cases of contagion, and even suspicious cases, shall be reported to the health authorities. Christian Scientists are law-abiding people; they are therefore scrupulously careful to report such cases and to obey all reasonable quarantine and sanitary regulations. Diagnosis does not necessarily imply treatment, however, and the fact that failures under Christian Science treatment—children's cases included—are few and far between, speaks volumes for this method.

As for our critic's much-vaunted antitoxin, permit me to call his attention to the fact that more perfectly healthy children were sacrificed to this medical superstition by compulsory inoculation in New York state during the year 1914 alone, than died throughout the entire United States under Christian Science treatment during a period of thirteen years, as shown by figures published in *The New York World*.

✧

[S. T. Downs in *Indianapolis* (Ind.) *Star*]

There is positively nothing in the writings of Mrs. Eddy, or in any authorized Christian Science literature, that says directly or indirectly, or implies in any way, that Mrs. Eddy will "rise from the dead" or return to earth. The statement by an evangelist, in the article giving his opinion of Christian Science, in a recent issue, to the effect that Christian Scientists expect Mrs. Eddy to return here, serves to show the utter abandon with which he refers to the movement that has brought health and happiness to hundreds of thousands of suffering mortals. His statements about Christian Science evidence either a deliberate intention not to understand, or that he speaks from sources entirely unreliable.

A detailed discussion of all the erroneous references our brother made to Christian Science is quite unnecessary when it is seen that he has tried to apply to the relative sense of man, which is the mortal or physical man, what Christian Science teaches about absolute man, or man in God's image and likeness. A sincere seeker for truth soon learns that "when man is spoken of as made in God's image, it is not sinful and sickly mortal man who is referred to, but the ideal man, reflecting God's likeness" (Science and Health, p. 346). Christian Science proves that man in God's image and likeness, the spiritual man, is never sick and never dies; but it does not deny that sin, sickness, disease, and death seem very real to the mortal or material man, "until God strips off their disguise" (p. 472).

Instead of Christian Science setting forth any such absurd notion as that "prayer is idle," it is showing multitudes how to pray constantly. Christian Science teaches that God is Mind, divine Love, infinite Principle, and that we are certainly in no position to advise Him what is best for His children. Christian Science teaches, too, that the motives behind our prayers are known by Him, and whether it be a petition or a song of praise, the answer is in proportion as we sincerely and understandingly put into practice the command of the Master: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself."

Editorial

Abundance of Good

As this number of the *Sentinel* goes to press, the annual meeting of The Mother Church is being held, and Christian Scientists throughout the world will read with rejoicing the report of this meeting, which will appear in our next issue, because more than ever before they have reason to thank God for His abounding goodness. It is well to remember, too, that responsibility for the progress of the movement founded by our revered Leader is shared individually, as well as the rejoicing. In no other religious body, perhaps, are the adherents so closely identified with the teaching that they literally become living epistles, "known and read of all men." They are the witnesses that Christian Science does work for the regeneration of mankind, in that it heals the sick, comforts the sorrowing, and breaks the bondage of sinful habits, even as did the Master, who came that men "might have life, and that they might have it more abundantly."

It is indeed "marvelous in our eyes," recalling that only twenty years have passed since the dedication of the original edifice of The Mother Church, how richly has been fulfilled to this church the promise embodied in the passage from the Psalms which Mrs. Eddy took as the text of her dedicatory sermon (Pulpit and Press, p. 1): "They shall be abundantly satisfied with the fatness of thy house; and thou shalt make them drink of the river of thy pleasures." Only the eye of faith, that clear-sighted vision which discerns the promised land beyond the arid wastes of mortal sense, could have then glimpsed the wonderful progress, the abundance of good to be vouchsafed the cause to whose advancement Mrs. Eddy consecrated herself when the present-day efficacy of the Christ-healing whose Principle she had discovered was proven by demonstration to be beyond question.

Mrs. Eddy possessed not only the eye of faith, but an unbounded confidence in God's loving-kindness. Her trust was in "the living God, who giveth us richly all things to enjoy," in a God of love and not of anger, in a God who is good and who knows not evil. The religion she taught was the whole gospel of Christ Jesus, the gospel of healing as well as salvation, and she yearned to bring the healing truth she had discovered within the reach of all mankind. It was for this that she labored unceasingly, that there might be assured to them what we have learned to consider the inalienable rights of man, namely, "life, liberty, and the pursuit of happiness," in their fullest sense,—the more abundant life for which Christ Jesus came among men, the "glorious liberty of the children of God," and that enduring happiness which an understanding of omnipotent good alone can ensure.

This is the service to which The Mother Church and its every branch is dedicated, this the purpose of the periodicals founded by Mrs. Eddy, and every other avenue for the dissemination of Christian Science which she authorized, this the "high calling" and loving solicitude of every adherent of the cause in which Christian Scientists have enlisted,—the overcoming of sin, disease, and death. What greater usefulness the future has in store for the church founded by our Leader we may not now know. The duty of today is a renewed consecration, a deeper, truer realization of the mission of Christian Science and our individual part in its fulfilment.

In the parable of the prodigal son there is a double assurance of the good with which the Father would endow His every child, and we of today may well take the lesson to heart. Wayward or obedient, we can never get away from the omnipresent and omnipotent goodness of divine Love. "Son, thou art ever with me, and all that I have is thine," bespeaks the abundant riches of our Father's house, the kingdom within which is our eternal heritage. Let us, then, continue to heed the counsel of our loved Leader which has already borne such rich fruitage (Pulpit and Press, p. 8): "Know, then, that you possess sovereign power to think and act rightly, and that nothing can dispossess you of this heritage and trespass on Love. If you maintain this position, who or what can cause you to sin or suffer?" So working, watching, and praying, we shall win the victory!

ARCHIBALD MCLELLAN.

"A living sacrifice"

ST. PAUL'S admonition, "Present your bodies a living sacrifice, holy, acceptable unto God," recalls the rites and ceremonies of the Jewish church, which consisted largely in the sacrifice of animals for the sins of the people. This was doubtless a step away from the belief that sin can be recklessly indulged, in that it demanded a penalty from the wrong-doer; but at best it was only a temporary expedient, for we read in the seventh chapter of Jeremiah that God did not command the Israelites to offer "burnt offerings or sacrifices," but rather to obey His voice,—the voice which has never been silent throughout the ages, but which speaks to man, woman, and child, to all who are ready to listen and obey. Isaiah tells us that God delights not in the blood of slain animals, while the psalmist says that the sacrifices of God are "a broken and a contrite heart;" and he adds that God is "pleased with the sacrifices of righteousness," which doubtless means that one must give up all that would hinder him from reflecting the absolute "justice and judgment" of God.

As we ponder Paul's counsel we may remember that the sacrifices offered under the Mosaic law were to be perfect, but in Malachi we read, "Ye brought that which was torn, and the lame, and the sick." Now the offering which we are to bring when we hear the call of Truth is not any dead thing, for our God "is not a God of the dead, but of the living," and our sacrifice, as presented in the text quoted, is inseparable from service. St. Paul was addressing those who, like many of the present day, devoted almost every thought to the service of the body,—to feed, clothe, and adorn it while in health, or to cure it when diseased. They were "conformed to this world" in all their thought of themselves, but the apostle told them, as he tells us today, to be "transformed" by the renewing of our mind, that we may prove for ourselves how good the will of God is to usward.

Time was when many good people thought they could offer to God sick and sad sacrifices, but this would not meet the divine requirement, and Christian Science has come to tell us how we may meet it in the way Christ Jesus taught. On page 162 of Science and Health, Mrs. Eddy says, "Christian Science brings to the body the sunlight of Truth, which invigorates and purifies." Then it is no longer a sick body which is brought to the altar of Truth, but the human mind and body controlled by Truth and Love, and thus fitted for divine service. The psalmist gives us a fine view of the transformation needed to prepare us for this service, when he tells us of thought so uplifted that the one desire is to "dwell in the house of the Lord" continually, "to behold the beauty of the Lord, and to enquire in his temple." Then he tells of being lifted up above his enemies, which to the Christian Scientist would mean above all the beliefs of sin, disease, and death, and the sacrifices then offered are "sacrifices of joy."

It surely means a great transformation to be lifted above "passion, frivolous amusements, personal adornment, display, and pride" (Science and Health, p. 60), to contemplate

Digitized by Google

"the beauty of holiness," and to make it part of our "reasonable service" to reflect this beauty in symmetry and strength of character, as well as the graces of spiritual life. No one need argue that he cannot present a healthful body at the altar of Truth, for the age-long promise is, "I will restore health unto thee, and I will heal thee of thy wounds, saith the Lord." The diseased thought is consumed in the purifying fire of divine Love, and God's idea comes forth prepared for service, as did the three Hebrews from the fiery furnace so long ago. Their fetters alone were destroyed in that ordeal, and it is safe to suppose that they were wise enough not to hold on to them,—a lesson which should be kept well in view by those who seek healing in Christian Science. The lusts of the flesh, its fears and falsities, must be given up sooner or later, for they are not of God and have no relation to man as God's reflection. When the human sense is purged of error, then are we ready to present to God "an offering in righteousness," "a living sacrifice" ready for divine service.

ANNIE M. KNOTT.

❖

The Peace of Good

THAT there can be any least disharmony in the realm of Truth is simply unthinkable to those who believe in the God and Father revealed in Jesus Christ. It follows that all phases of conflict speak for the effects of untruth, hence the manifest fact of the world's present submergence in falsity.

When to an appalling international war is added the religious and political contentions, the economic strifes, and the many other present-day struggles, one begins to wonder where the dove of peace could find any least promise of the passing of the flood of wrong. Moreover, we know that all the phenomena of war without are but incidental to that war within so graphically described by St. Paul in the seventh chapter of his letter to the Romans, a war which has been as continuous and inclusive as human history. There can be no question, therefore, that from the material point of view not only peace but hope of betterment seems today to be perishing beneath the feet of Mars.

Under these circumstances the sop to content supplied by the theology that offers a heaven beyond the grave, has not satisfied, and cannot, for the reason that it does not honor the Master's declaration of the ever-presence of that kingdom of Truth and Love which is "not of this [material] world," and because the perennial failure of spiritual truth in its struggle with error upon this plane would leave no unquestionable ground of assurance that it can succeed upon any plane, or that this seeming conflict is not an essential part of the very nature of things.

Christian Scientists have come to see that there is no escape from the pessimism thus gendered, apart from the perception of the unreality of evil; that material sense with all it projects and occasions has no place or existence in right consciousness, the realm of Spirit. Having gained this realization, even in modest degree, one is in so far quite as untroubled about the inability of Truth to meet the situation as he would be respecting the question of the ability of light to cope with darkness. There is no one who is not entirely sure of the adequacy of a candle to dispel the intensest gloom, and Christ Jesus taught with the utmost clearness that divine Truth is such a dispelling light to every manifestation of abnormality. This is the very substance of his gospel, as it is also of the teaching of Christian Science. Says our Leader: "Truth destroys falsity and error, for light and darkness cannot dwell together. Light extinguishes the darkness, and the Scripture declares that there is 'no night there.' To Truth there is no error,—all is Truth. To infinite Spirit there is no matter,—all is Spirit, divine Principle and its idea" (Science and Health, p. 474).

"In the world ye shall have tribulation: but be of good cheer; I have overcome the world." Here is an explicit declaration that, despite the inherent and inevitable friction of falsity, it is ours to rejoice in the presence and power of the Christ-idea, a consciousness of spiritual being in which there is no element of untruth and hence no possibility of disharmony. The acceptance of the actuality of a warring world, its existence in that realm of being which the divine activity creates and sustains, would render this statement of the Master no less presumptuous than self-contradictory. He not only affirmed the allness of good, but he entered, and taught us how we may enter, into its eternal peace.

From the material point of view, war, in its last analysis, is but a modus for the eradication of the physically weak, and as such it obtains in the entire material order and is a vital requirement of physical evolution. From the spiritual point of view it is a phenomenon of that false sense which is escaped from as the verities of spiritual being are realized and demonstrated. This is the teaching of Christian Science, this the explanation of the strength and joy it brings,—that truth-knowing, the apprehension of the one God, good, "ends wars" (Science and Health, p. 340), and for the truth-knower this instantly takes place. This "peace of God" is the poise of corrected sense, and its place in our experience is named by St. Paul when he says, "The peace of God, which passeth all understanding, shall keep your hearts and minds through Christ Jesus."

JOHN B. WILLIS.

❖ ❖ ❖

Among the Churches

Current Notes

CEDAR RAPIDS, IOWA.—Sunday, April 4, was marked by the opening of the beautiful new edifice of First Church of Christ, Scientist, on Second avenue, every seat being occupied when the hour for the services arrived. Not all of the pews had been received, but those in place gave a seating capacity of five hundred, while additional chairs were brought from the Sunday school room. When all pews are placed, the seating capacity will reach seven hundred. The services were in keeping with the Christian Science program which obtains all over the country. The formal dedication, to mark the payment of all debt on the new building, will take place in the near future.—*The Cedar Rapids Gazette.*

CHARLESTON, W. VA.—The trustees of First Church of Christ, Scientist, have acquired the lot at the corner of Bradford and Lee streets, and will soon receive plans for a modern edifice. The lot is considered to be one of the most desirable in the city. It has a frontage of 92 feet on Bradford street and 100 feet on Lee street. The purchase price was about ten thousand dollars. For a number of years the Christian Scientists have held their services in a business building on Quarrier street.—*The Charleston Mail.*

SAN FRANCISCO, CAL.—Third Church of Christ, Scientist, was organized Dec. 18, 1908, with sixty-seven charter members, the majority of whom withdrew from First Church for that purpose. Services were held on Dec. 27, 1908, in Young Men's Hebrew Association Hall on Page street, near Stanyan street; in the latter part of 1909, however, these quarters were found inadequate, so the hall on Shrader street, near Haight street, was built for them, and services are still held there. This hall, which seats six hundred and fifty, is now filled by the congregation.

In January, 1914, a building site 75 by 137.5 feet was

Digitized by Google

purchased on Haight street, near Central avenue, facing Buena Vista Park, and on Nov. 2, 1914, actual building operations were begun. These have now progressed so far that on March 8, 1915, at half past seven in the morning, the corner-stone was laid. The seating capacity will be one thousand, and eight hundred children can be accommodated in the Sunday school room. The plan is to use the Sunday school room for services until the auditorium is finished.

Correspondence.

MICHIGAN.—The favorable attitude of the press toward Christian Science is gratifying and marked, and without any exception the replies by the committee on publication to attacks made through the columns of the newspapers throughout the state have been gladly printed. The wonderful reversal of sentiment shown through editorial columns of a large majority of the state papers against the operations of the American Medical Association in its attempt to pass its various so-called health bills through the present legislature, is a feature which augurs well for the future, and which has been of marked assistance in stopping the great avalanche of legislation of this character which was presented at this session.

The amount of literature distributed by the various churches and societies in the state for the seven months from April 1, 1914, to Nov. 1, 1914, the date at which these reports to the committee were discontinued, totaled 107,600 pieces. Synopsis of the work of the committee on publication for the year ending March 31, 1915, shows a total distribution of 35,626 pieces.

Report of State Publication Committee.

CANAJOHARIE, N. Y.—At an adjourned meeting of the fourth quarterly conference of the Methodist church, a motion was carried, after some discussion, that a new church be built on the present site at a total cost not to exceed twenty-five thousand dollars. It was voted not to begin building operations until eighty per cent of the total cost was either on hand or in sight. As there is nine thousand dollars insurance money to begin with, this means that the sum of eleven thousand dollars must be raised. A delightful and acceptable gift of seventy dollars in gold for the building fund was received from the local Christian Science society. This is the first gift for the new edifice, and it was received in the splendid spirit in which it was made.

Canajoharie Radio.

FRESNO, CAL.—The members of First Church of Christ, Scientist, have decided to build a new church edifice, and a committee has been appointed to work out details. The cost of the building is not yet known, because it has not been decided just what sort of a structure is desired. The church will be located at the corner of N and Calaveras streets, where property was purchased some time ago. The membership has outgrown the present place of worship on Merced street, and this is the reason the decision has been made to build. The church owns a frontage of 150 feet on Calaveras and 125 feet on N street.—*Fresno Republican.*

MOBILE, ALA.—We wish to announce that we have purchased a lot for a church building. It is a corner lot, situated on Dauphin street, in one of the most prominent residential sections, and is 100 by 150 feet. For a long time we have wanted a building of our own, and now that we have made a good start, we feel greatly encouraged. Interest is growing all the time, but we are not yet prepared to build.

Correspondence.

The Lectures

Sherman, Texas

Clarence W. Chadwick delivered a lecture on Christian Science at the Opera House. He was introduced by Judge Jeff Hassell, who said in part:—

I am ignorant, perhaps inexcusably so, of the detailed plan of this church, but I know that its general purpose is in harmony with the spirit and the purpose of the orthodox churches, and that with them it seeks to lead men into the paths laid out by Christ himself; that it has for its adherents millions of men and women as devoted to the cause of humanity and to the cause of Christ as any that live. Its teachings have been misrepresented, sometimes in ignorance and sometimes by design. This is not the first time that such misrepresentations have occurred. You will remember that the teachings and the preachings of the Man of Galilee were decried and derided as sorcery, and the Saviour was denounced as a sorcerer.

Under the auspices of the local Church of Christ, Scientist, and by the authority of the church known as The Mother Church, this lecturer comes to correct misapprehensions concerning its teachings and to declare the truth about Christian Science.—*Sherman Democrat.*

❖

Manhattan, Kan.

Virgil O. Strickler, who lectured on Christian Science at Wareham's Opera House, was introduced by J. J. Paddock, ex-mayor, who said:—

In introducing the speaker and his subject, I would like to say a few words in praise of the little band of faithful Christian Scientists who by their self-sacrifice and devotion give this lecture to us absolutely free; and to add my humble testimony as to the truth of this world movement, for only by sitting at the feet of Christ Jesus, is it possible to gain the "pearl of great price,"—that truth which shall make us free. I am not a member of the Christain Science church, and I do not know that I am worthy to be one. If the claim that God still heals the sick by holy, uplifting prayer, or by knowing the truth about God and man, is true, no matter how startling and unbelievable to mortal sense it may seem, we ought to accept it, and remember that the "carnal mind is enmity against God: . . . is not subject to the law of God, neither indeed can be."

No amount of misrepresentation or ridicule will stop this great movement. Is it not time to stop and think,—for why should it be thought impossible for God to heal the sick? Did God ever heal the sick? And if so, has He changed? "If God heals not the sick, they are not healed" (Science and Health, p. 231). From tens of thousands of men and women, some of them under oath, come testimonies of healing from all manner of disease through Christian Science.

Jackson, Miss.

Neely Powers, attorney, in introducing Bliss Knapp, who lectured on Christian Science at the New Majestic Theater, spoke as follows:—

Nineteen centuries ago the gentle Nazarene came teaching and preaching the religion of Love. He commanded his followers to go "into all the world, and preach the gospel to every creature;" also, to "heal the sick." For three centuries after the crucifixion and ascension of our Master his disciples carried on the healing work, until the materialism

Digitized by Google

of the world seemingly caused this power to be lost. Some fifty years ago a woman who had failed to receive healing through material remedies, turned in her dire extremity to the Bible, with a prayer to God that this truth might again be demonstrated. Christian Science, the result, is a religion of Love. The application of this Principle as taught by Jesus, and as it has been demonstrated by Mrs. Eddy, is being felt today throughout the world, in healing the sick, in restoring sight to the blind, hearing to the deaf, and causing the lame to walk.

We have invited you here tonight because we know from experience that Christian Science has a healing message to all who have human problems to meet, and we welcome you this evening with the hope that you, as well as ourselves, may learn more of the truth that makes men free.

New York, N. Y.

A large audience listened to the lecture on Christian Science delivered by Col. William E. Fell in the edifice of Third Church of Christ, Scientist. The lecturer was introduced by Harry H. Hess, first reader, who said:—

Christian Science has a message for the world,—a message of tremendous importance. It is not a new story it has to tell, though strange to say it seems new to this age. It is the same old story Christ Jesus told two thousand years ago, which was then rejected by the world, and it is presented in much the same form now as it was then, with "signs following." In view of the importance of the proposition offered in Christian Science, and the character of the evidence presented in support thereof, it would certainly behoove every one to make a careful investigation before passing this subject by.

Roanoke, Va.

Practically every chair in the American Theater was occupied when Judge R. C. Jackson introduced William D. McCrackan, who delivered a lecture on Christian Science. Judge Jackson said in part:—

The present day is characterized by a spirit of intellectual hospitality and religious tolerance. This is probably due to the fact that men of every creed are learning more and more that no church and no denomination has within its grasp the whole truth. There never was a time when churches were so anxious to learn from one another.—*The World-News.*

❖

Monroe, La.

The Christian Science church on North Second street was crowded to hear a lecture on Christian Science by Virgil O. Strickler. In introducing Mr. Strickler, George G. Weaks said in part:—

In an age conspicuous for its advancement in scientific research in the realm of the physical as well as the metaphysical, it is not surprising that men should have looked for a religion that gives a more comprehensible definition of God, and man's relationship to Him, than that offered by scholastic theology; a religion that could reconcile in the mind of many thinking people an omnipotent, omnipresent, and all-loving God, with the sin, sickness, and misery all around them. Nor is it surprising that men should have sought a universal and more effective system of healing.

It was surprising when it was announced that both sin and sickness responded to one and the same treatment, and that Christian Science, or the Science of Truth, met both demands. It was but natural that a storm of derision should have followed this radical statement, so at variance to the generally accepted belief. When examined in the light of reason, however, it was found: first, that this doctrine would stand the test of analytical logic; second, that it was fully sustained by the Bible and was but a literal acceptation of Christ's teaching to his disciples and theirs in turn to many others; third, that it met the demand of a practical age in being demonstrable.—*The Monroe News-Star.*

❖

Oneonta, N. Y.

The introductory remarks of the Rev. L. C. Nichols, pastor of the Universalist church, in presenting William R. Rathvon, who lectured on Christian Science in the Woman's Club, were as follows:—

We come here tonight as searchers after the truth which will make life more grand and glorious. We are lovers of progress, and those things which challenge our attention as revelations of divine truth may easily find lodgment in our receptive minds. We must not stand aloof from those agencies which bring the truth to our homes and firesides. We are living in an age of transition, but the question must be asked and answered, From where and to what? We have a right to know. We are standing here tonight under the insignia of a faith which has blessed the world by its presence. It lives because it deserves to live. It has blessed the lives of millions, and has pressed the cup of cold water to many thirsty lips. It leads human minds to contemplate divine truths and opens the doors to a larger and grander life. It deserves the unprejudiced sympathy and the hearty cooperation of men and women everywhere.

Testimonies of Healing

It is with a sense of gratitude that I refer to the many helpful and encouraging testimonies which appear in our periodicals. I have reason to be very thankful for some measure of understanding of the divine Principle, the healing Truth, as unfolded to the world through Christian Science.

For many years I was in bondage to a bowel disorder that refused to yield to either medicine or hygiene. Medicines seemed to palliate, but they could not cure. At length I lost all confidence in *materia medica*, and having heard of Christian Science a few weeks before, and having read a portion of the text-book, "Science and Health with Key to the Scriptures," I applied for treatment. In less than a week my old enemy had disappeared. I was then residing in Salt Lake City. For this healing I felt very thankful to God, from whom all good emanates. I was also grateful for the spiritual awakening which resulted from it, and for my renewed interest in the Bible, much of which had seemed ambiguous and difficult to understand. In studying the weekly Lesson-Sermons in connection with Science and Health, the Bible pages soon began to glow with a new spiritual meaning that was uplifting and healing.

Mrs. Eddy says, "The Bible contains the recipe for all healing" (Science and Health, p. 406), and I have had a number of proofs of this in my own experience. Before I heard of Christian Science, I was for two weeks troubled with sleeplessness, and during that time slept hardly as much as I do now in two nights. One evening, soon after I became interested in Science, after an unusually busy day attended somewhat with worry, the thought presented itself that I was tired and nervous and would not sleep well. Then I turned to the Bible and read, "When thou liest down, thou shalt not be afraid: yea, thou shalt lie down, and thy sleep shall be sweet." Immediately my thoughts became peaceful; I retired and enjoyed a good night's rest. At another time I had a severe pain in my side, which I tried to overcome by denying its seeming reality. Not getting relief at once, I said, Why not affirm the truth? I then silently repeated a promise in Isaiah: "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." Before I had finished, the pain vanished. Both of these experiences prove the truth of another promise in Isaiah: "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear."

I also wish to express my gratitude to our beloved Leader, whose grand life-work has meant so much to humanity.

L. L. Woodruff, Seattle, Wash.

✧

When I first began the study of "Science and Health with Key to the Scriptures," I did not seem to understand the book very well, so I stopped reading it for a few months. When I again took up the study, I decided to give up medicine and see how I got along, with the result that I was healed right away of chronic bowel disorder. I also gained in weight, and have become much more happy. I have not taken any medicine since December, 1912. I read the Bible and the Christian Science text-book daily, and have also been reading other books by Mrs. Eddy, as well as the Christian Science periodicals, and I trust that I may be able to learn more of the truth that makes free.

I have now gained a sufficient understanding of Christian Science practice to be able to use it with good results for myself and others. I am so glad that I started to study Science and Health the second time, and that I have continued in this course. I have gained a better understanding of God, for which I am thankful, and naturally have learned to love Him more. I have become more desirous of living in obedience to God's law, and I want to continue to study and learn more about Him. I am so glad our Leader, Mrs. Eddy, had such a clear understanding of God that she was able to write Science and Health. Divine Love is indeed "a very present help."—Mirtie E. Robertson, Denver, Col.

✧

I send my testimony from a heart overflowing with gratitude for all the blessings Christian Science has brought to my home. Over twelve years ago, while performing a surgical operation, my husband cut his hand, thus starting a serious infection. For over eight years we tried everything known to the highest medical authority, but to no avail. I was advised to place my husband in the hospital for further treatment, and did so, but was then informed that it would be necessary to amputate his right arm in order to stop the disease. I was heart-broken at this, and greatly worried financially, for I was without immediate funds, and I could earn but little with a small child clinging to me for support.

It was by mere chance that I met a lady who placed Science and Health in my hand and told me I would find healing and rest through the study of that book. As I went home I prayed that God would fill me with the knowledge to meet my terrible burden. After reading the chapter on Prayer, I went to the hospital and told the doctors I would not consent to the operation, and in a short time I took my husband home. Dazed as it seemed from the lack of supply, I scarcely knew what to do, but always turned to the text-book, "Science and Health with Key to the Scriptures," and I soon realized I was the channel through which my husband's healing would come. He thought it best to go on a little farm for a time, and I was to remain at home to earn a living for my dear little boy.

In less than a year my husband was completely healed, but I was still under the sense of scant supply. Soon after his healing he came home, and I was called upon again to prove my faith by my works. He came to me perfectly well, but with no money or clothes or courage to start work again. The burden seemed more than I could endure, but again I turned to the chapter on Prayer and read that all things are possible with God. I at once borrowed the money to start him in his office, and from the first month the demands have been met. I thank God that I have been able to make these demonstrations, though with bleeding footsteps. I have had class instruction, and we who have been faithful and have proven our faith by our works, know that when the demonstrations are not made, the fault is never with Principle but rather with ourselves. It is my earnest prayer that every one who reads this testimony may be led to God through Christian Science.

Lucy L. Converse, Chicago, Ill.

I will state here that my hand was healed through the untiring efforts of my wife, who gave me Christian Science treatment.—Dr. Edmond D. Converse.

✧

It is indeed a great privilege to give to the world this acknowledgment of my healing through Christian Science treatment. My parents both passed on with what is known as Bright's disease, and it was not long before I had the same trouble, which grew steadily worse. I suffered many weary days and nights with unspeakable pain under the doctor's care, and when that channel was thoroughly ex-

Digitized by Google

hausted, I turned to the arms of divine Love and found health. I had been on a diet for some time, was not permitted to take anything either sweet or sour, but after my first treatment in Christian Science the fear absolutely disappeared from my thought. I ate whatever I wanted, as I was very hungry, with no bad results. I enjoyed an undisturbed night's rest, and have been perfectly free from the bondage of that ailment ever since. I continued with the treatments for eight days. My healing has not only been permanent, but I have enjoyed health I never realized was possible till Christian Science came into my life.

I am grateful for this physical healing, which took place in January, 1909, but even more so for the great spiritual awakening to the realization of only one parent, one Father-Mother God, and to the understanding that as His child I could not inherit anything unlike Him, who is Life, Truth, and Love. I learned there was no transference of human thought from one to another. My daily study of Science and Health, and the application of the truth expressed in its pages, have healed me of many phases of error, among which are envy, jealousy, hatred, revenge, and a discontented mind, which was ripened into peace, joy, and happiness that is born of Truth and Love. I am thankful to God, the Principle of Christian Science, and grateful to our beloved Leader, Mrs. Eddy, His messenger to this age.

LILLIAN E. AMANN, San Francisco, Cal.

When opening a new *Sentinel* or *Journal*, I almost invariably look through the testimonies to see if there are any from our own sunny island in the south, and I am often disappointed, so the thought came to send mine for others to read. I shall ever be grateful to the dear friends through whom I first heard of Christian Science, for it has been the best thing that has ever come into my life. I am thankful to have learned that God, our loving heavenly Father, neither made nor permits sin, sickness, or death, or evil of any kind. I have been healed of many physical ills. An old ailment, neuralgia, was overcome twelve years ago in one treatment, and about nine years ago a very severe attack of rheumatism in both legs was cured in a very short time. Neither of the ailments has ever returned. Bad colds, cuts, sprains, etc., have disappeared through the knowledge of the truth about God and man: that God, good, is the only power, and evil is nothing, no thing, only an error of thought.

I am thankful to God for sending us one who was able and willing to lead us out of darkness into His marvelous light, and grateful to our dear Leader for bringing us back to the footsteps of Jesus, who proved that sin, sickness, and death could be overcome here and now. I am also thankful that I have had the privilege of class instruction, which is a great help.

MARIAN COWLEY, Petersham, New South Wales, Australia.

It is nearly five years since I heard of Christian Science. Like some other people, at first I scoffed at what seemed to me a form of hypnotism, for I had heard of this Science only as mind-healing; and even after I thought I had grasped it I was still attributing the healing to the supposed power of mortal mind. It was only through a great demonstration that I was suddenly awakened.

The first healing of importance of which I had any knowledge occurred shortly after I was married. My wife had been complaining of severe pain in her hip. She thought it was a form of rheumatism, but as I was somewhat fearful, I sent her to a good doctor. After a thorough examination, he said she had tuberculosis of the bone. This was of course a sad blow to us, but we decided not to submit to an operation, though the doctor advised one. Then, as though the sun had peeped through the clouds, God sent us a very pleasant lady, who asked if we had ever heard of Christian Science. We told her we had, but were not satisfied with what we knew about it; her question, however, caused us to think, and we decided to try it. We called in a Christian Science practitioner, and remarkable as it then seemed to us, my wife was entirely healed in three treatments.

Since that time we have had many other beautiful demonstrations of healing, but the very greatest in my estimation happened when we were blessed with a baby boy. My wife's family knew nothing of Christian Science, and to please them we decided to have a doctor present when the so-called crisis came. My mother, who lived in the same house as we did, had never attended any one in a case of this kind, but was led to do what was right, and before the doctor came it was all over with little or no pain.

In the first instance the doctor still does not understand why my wife got over that dreaded disease without an operation; and in this latter demonstration he could only look on and declare it was the most wonderful thing he had witnessed. To say that we are grateful is to misuse the word, as it does not begin to cover our thanks to God, and our gratitude to Mrs. Eddy, without whom we would still be in the dark as to what God really is and means. I sincerely trust that this account of the good I have received from Christian Science will reach some one who is in doubt.

ROBERT W. SERGEL, St. Louis, Mo.

"When angels visit us," Mrs. Eddy writes, "we do not hear the rustle of wings, . . . but we know their presence by the love they create in our hearts" (Miscellaneous Writings, p. 306).

A few years ago I went one evening in great distress to a Christian Science reading-room. After two operations for severe muscular eye-strain without gaining relief, I became nervous and discouraged, and was in great suffering. Even with glasses I could scarcely read by artificial light. At the reading-room I opened the Bible. The type was blurred, but I read and repeated to myself, "He shall give his angels charge over thee." I was so tired that I was glad to leave it all to God, and in this moment of self-surrender my pain passed away. I was instantaneously healed, and the glasses, worn for three years, were laid aside forever. I use my eyes freely, and though there have been slight returns of pain, each time it has been overcome promptly, until the occasions, grown less and less frequent, are not worthy of mention.

As I learned to seek "first the kingdom of God," all my needs, great and small, were met through divine Love, one demonstration following another. Gratitude is a small return for the blessings received, for the benefit of class instruction, for the help of my dear teacher and friends, for our Christian Science literature and reading-rooms, and for my own home. Jesus said, "Physician, heal thyself," and Mrs. Eddy declared that "the warfare with one's self is grand" (Miscellaneous Writings, p. 118). I long to be worthy to be known as a Christian Scientist.

KATHARINE NORTON PINKHAM, New York, N. Y.

When Christian Science was brought to my attention by a friend, in August, 1912, I was very much in need of a practical religion. Having been through all the different isms without satisfaction, I was at that time outside of any religious body, but Christian Science came with untold blessing

Digitized by Google

and has given me a religion which can be used every day and in every way. Although I did not come to Christian Science for the physical healing, I have had many demonstrations of the power of Truth. After attending one of the Wednesday evening meetings I was able to do without medicine which I had used for many years, and which I had come to feel I could never dispense with. I have not used any drugs since.

I have also been entirely healed of chronic stomach and bowel troubles, from which I had suffered for over eighteen years. These ailments were overcome in about a month, simply by the reading of Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I have been cured through Christian Science of a condition of the kidney, from which I suffered great discomfort and depression at times, the doctor who was attending me having said he was afraid it would require an operation. In March, 1913, I was able to discard an extra heel of half an inch, which I had worn on one of my boots for lameness. I had suffered from this since childhood, and had undergone much experimentation with electricity, etc., without result. While conversing with a medical gentleman some years ago, the subject was brought up, and when asked his opinion, he said it could be nothing other than a diseased joint; but thanks to Christian Science, this is now almost entirely healed, and I can walk without any inconvenience, while I know that as I unfold spiritually my healing will be complete.

Though I am thankful for all the physical benefits, I feel much more so for the spiritual uplift which has come to me, for the clearer understanding, the fuller conception of God as Life, Truth, and Love, and for the restoration of my faith in Christ Jesus, who had latterly become to me something of a myth. Through the reading of "Science and Health with Key to the Scriptures" I am now able to understand, at least in part, the works and sayings of the Master. I am also thankful that the Bible has been given back to me, and for the light which Christian Science throws upon many things which before were dark. The Bible was for many years a closed book to me, but it is now full of interest. To Mrs. Eddy I am deeply grateful for what she has been able to do for humanity the wide world over, and also for all the Christian Science literature, which is so helpful. For all that this religion has done and is doing for me I shall never cease to be grateful.—CHRISTINA GILBERTSON, Edinburgh, Scotland.

It gives me very great pleasure to testify to the truth of my wife's statement in regard to her physical healing, and the spiritual understanding which has come to her in Christian Science.—DAVID E. GILBERTSON.

❖

[Translated from the French]

I suffered for several years with severe anemia, which brought on all the troubles believed to be connected with it, such as headaches, dizziness, etc. No physician was able to relieve me, and while I followed the prescriptions of each one, I relied chiefly on the strength of my will in order to emerge from this condition, although I also trusted in God to help. Nevertheless, my faith in God proved weak, and failed to furnish me with the proper support; yet I used all my strength in the struggle and, in order to renew my courage, read the Bible daily. The teachings which I thought I found therein, however, seemed not to accord with the explanations of the pastors, and more than once I felt that I had completely lost my way. When rheumatic pain was added to my trouble, the fear gained possession of me that I might never be restored to health, and I lost all hope and faith in life.

It was at this juncture that I heard of Christian Science; and feeling from the start that it contained something more than the current theological teachings, I made up my mind to investigate. Through the great sense of love shown by the practitioner, and her excellent way of explaining things to me, I gained a better understanding of God, and began to draw nearer unto Him who is "our refuge and strength" in times of distress. I took courage again, and my health gradually returned. All that had seemed obscure became clear through Christian Science, and thus I gained the assurance of an ever present God. This brought about my cure. I understood that my troubles as well as my fears were illusions only, and happiness returned into my life.

I feel that I am daily getting stronger morally and spiritually, and I cannot be too thankful to God, whom we find never to be beyond reach; and I am grateful to Mrs. Eddy for her life-work, the result of which is such a benefit to mankind. In closing, I would express the wish that in a city like this, where religion only too often assumes an abstract and complicated character, Christian Science might bring near to all who are not yet acquainted with its teachings.

ANTOINETTE RHEINWALD, Geneva, Switzerland.

❖

Previous to June, 1912, my wife was afflicted with the disease known to *materia medica* as tuberculosis, also with rheumatism in her limbs. She was in that condition for several years, and during all that time was under the care of the best medical physicians and specialists we could secure, but she never improved one iota. Throughout her illness she had at intervals serious stomach trouble. In October, 1912, we were told by the specialist treating my wife, that she could not regain her health without a change of climate, and he strongly advised us to go to Asheville, N. C. We therefore immediately closed up our house and went to that city, where we remained for seven months under the treatment of a specialist. As there had been no improvement during that period, however, we decided to go home for the summer, and were about ready to depart when my wife was taken with appendicitis. She was operated on, and twice after the operation was in a dying condition.

We finally removed to our home, where my wife was confined to her bed for about three weeks, and even after that she was scarcely able to get around the house. I was also with serious stomach trouble, as before stated, and we called our family physician, who treated me for four months, during which time I was confined to my bed. He could not relieve me except by administering a hypodermic, and this he did several times a day. Then, as he had exerted his medical skill to no avail, he advised a consultation with one of the best physicians along that line. This was agreed to, and after looking me over carefully, they told my wife that nothing more could be done for me, as I had a very serious case of gall-stone, but asked if she would consent to take the chances of an operation in spite of the fact that at my age and in my condition I was a very undesirable subject for one. My wife said she would not consent to an operation yet; and the next day, although we knew absolutely nothing about Christian Science, she asked me how I would like to try it. I replied that I was willing to try anything.

In a few days I revived somewhat, and when my wife inquired if I would go to the Christian Science meeting that night, I said I would. Several neighbors who knew that she was going to try to take me to the meeting, told her that she could never get me there and back; nevertheless we decided to go, and did. When I walked into that church, and looking around saw a crowd of about twelve hundred people, and later listened to the testimonies, the thought struck me

Digitized by Google

that some of those people might be wrong, but surely some of them were right. After the conclusion of the services, I remarked to my wife that I felt better, but thought it was temporary. The next day she asked me how I would like to try a Christian Science practitioner, and as I said I was willing, an appointment was made for that afternoon, and I was given a treatment. I told the practitioner that I had not had a night's sleep in four months, but she said I would sleep that night, and I did. I got up in the morning and went down-stairs to breakfast, at which I ate what my wife had prepared, and ever since have done the same. In one week's treatment I was practically healed, and the practitioner said I did not need to be treated any more; but my fear had not been destroyed, so I continued two weeks longer. I have been in perfect health ever since and have got back to my normal weight.

After my healing, my wife took treatment, and inside of a month she was entirely healed of the tuberculosis and rheumatism. She had lost flesh, but has now regained it. Neither my wife nor I can find words to express our sincere thankfulness to the one and only God and His Son, Christ Jesus, our Saviour; and we are deeply grateful for the teachings of our noble Leader, Mrs. Eddy. Soon after we were healed I had a slight difficulty which was not like my former attack of gall-stone; but it was easily overcome. Since then I have had no trouble, and for about two years we have both been enjoying God's blessings. I have made several minor demonstrations in further proof of God's ever-presence.

SAM RHINEHART, Cincinnati, Ohio.

❖

[Translated from the German]

I feel that the time has come to express my gratitude for the healing experienced in several instances through Christian Science. For a number of years I suffered with severe loss of blood, and this greatly weakened me. The physicians wanted to operate, but I would not consent. In the mean time I heard of Christian Science. After the first treatment I experienced an improvement, and after the third I felt like a new being, while the reading of the Christian Science literature afforded me great joy. My son, nine years old, was also benefited by Christian Science. When on one occasion he had an attack of rheumatism of the joints and the physician whom we consulted failed to bring relief, I went to a Christian Science practitioner and asked for treatment. I stopped giving the boy medicine, treatment in Christian Science was begun, and we relied implicitly on God's help. Things thereby took a turn for the better, and the boy's health is now as good as formerly. I am most deeply thankful to God, and grateful to our dear Leader, Mrs. Eddy. Would that all sick people were healed in this way!

FRAU R. MEYER, Bern, Switzerland.

❖

Words cannot tell what Christian Science has done and is doing for me. A few years ago I was suffering severely from pain in my chest and had all the symptoms of acute lung trouble. A Christian Science practitioner was called to the house, and in a week I was up and around, whereas in the old thought, under medical laws, I would without doubt have been in bed several weeks. Other ailments also have been overcome through the practitioner's help. I am indeed grateful, not only for the mental but for the spiritual help that I have received through Christian Science, and for the understanding I daily gain of this healing religion.

LULU M. BALLAK, St. Louis, Mo.

From Our Exchanges

[*American Lutheran Survey*]

The real significance of the war is its spiritual significance; all else matters very little. One great spiritual result will be that men will not speak so confidently of the glory of human nature and the wisdom of human philosophy, unhallowed and undirected by God's revealed word. The materialist who sees nothing but matter has long since been discredited and is now finally disposed of. The secularist and the Epicurean have been proven false prophets. The idealist of the Bergson type is shown to be only a harmless parlor philosopher. Men need something more secure than these false props, which fail to hold up the great structure builded by the nations and called civilization and culture. The structure itself was rotten, as were the props that held it up. Everything has fallen in the general crash. The brazen reassertion of the discredited theories and philosophies is like a peep in the roar of destruction. The world is getting down to realities, and by realities we mean spiritual realities; for they are the only real things.

[*The Christian Work*]

Who is the heretic? Not he who cannot state a doctrine of the supernatural,—perhaps everything worth while is supernatural,—but he who has not caught a vision of that new and larger implication of the gospel which all prophetic men are beginning to hold, namely, that Christianity must redeem the whole order in which men live as well as the individuals who live in it; that institutions, organizations, governments, which have relationships with each other, must deal with each other under those same Christian laws that Christian men follow in all converse one with another.

The man we should hesitate to ordain in these days is he who, living in this twentieth century, still conceives the mission of the gospel only in terms of the eighteenth century; who has not seen that Christ is big enough to make all realms of life his; who has not seen that there can be but one standard of righteousness in all these realms,—one for men, one for nations; who has not seen and is not prepared to preach that nations which steal, destroy, kill, practise war, fight duels with each other, are just as criminal in God's eyes and as amenable to condemnation as any man who does these things. Above all, we are beginning to think, in the light of what the world is witnessing, that that minister should be considered a heretic to Christ who today believes in force and preaches it, instead of Christ's one gospel of love as both the basis of civilization and its weapon.

[*The Christian Register*]

Everywhere, in all callings and sets, in all levels of endowment and attainment, there are men and women who possess, visibly and indisputably possess, superiority to their condition, a power of control in it which, if it does not conquer circumstance, lifts them above being conquered by circumstance. We see in them something which gives the word character immeasurable quality. That it is which holds them above the world they are in. Through character they have connection with a heavenly life while they are on the earth. "They make a conscience of what they do," as did Cromwell's men. Nothing could bribe them; no one could think of offering them advantage for surrender, nor would a mean motive live in their presence. When great sorrows come upon them, and they are bent low as the storm strikes them, some inner vitality brings them up again, and they stand stricken but unbowed. Though they may be silent and reserved as to

Digitized by Google

their faiths, no one could feel for a moment the slightest lack. Whatever their creed, the heart of faith is in them. Inner springs are undoubted, and though the multitude sees them not, like Moses in the wilderness they find waters of the spirit among the rocks along their way. These people live above the world, though unseparated from it.

[Ven. Archdeacon Wilberforce, D.D., in *The Christian Commonwealth*]

The spirit of truth is evolving the mystic meaning of the Christ-revelation more clearly as the years go on, and brilliantly illuminating the historic happenings of Bethlehem's cradle. What, then, is this revelation of infinite Mind concerning Himself, which is the underlying thought of the whole Epiphany season? Clear the mind from the cobwebs which human overdefinition has spun around men's thoughts of our heavenly Father. The being of the self-existent primal cause of all things is Spirit: God is Spirit,—not a spirit, but Spirit. We cannot define Spirit. The universe is God in expression, God conditioning Himself in phenomena. "The heavens declare the glory of God."

[*The Living Church*]

Our Lord says that one must be born again to enter the kingdom of God. The new birth is the beginning of new life, the entrance upon immortal existence, the appreciation and laying hold of those qualities which belong to the life which Jesus bought. To be a Christian is to have the mind of the Lord Jesus, and the new birth is the beginning of that mind in man. The mind of Jesus must grow in us gradually and progressively, till Christ's thought is our thought, till Christ's life is our life. To have the mind of Christ is to look upon truth as Jesus did, honestly and bravely. To have the mind of Christ is to be as pure as Christ was pure, with our souls free from vulgar, mean, and selfish thoughts.

[Rev. James M. Whiton, Ph.D., in *The Homiletic Review*]

The final parable of Christ utters the last words that can ever pronounce man's judgment by the law of the eternal love. Thus "the last judgment" is already here in its spiritual reality. Paul, year by year expecting with all his fellow disciples the descent of his Lord from heaven in flaming fire to judge the righteous and the wicked, wrote, "We shall all stand before the judgment seat of Christ." Nineteen centuries have revealed to us things unforeseen by Paul. The world exhibits to open-eyed intelligence a spiritual kingdom of which Christ is king. Wherever an institution, law, or custom in Christendom begins to be recognized as conflicting with his teachings, the spirit of Christ begins to train against it an artillery which at length sweeps it away. How evidently is the conviction gaining ground that the supreme power in human life is not fear but love.

[*The Congregationalist and Christian World*]

Human weakness was never written so plain on the face of any day as on the face of our own. Men were proud and strong in a strength that disappeared in a night; all the wisdom of Europe was put to flight by the crazy act of an eighteen year old boy in Servia. The utter weakness of wisdom shone out in one pistol flash. And the weakness is felt all over the world: O wretched men that we are; when we would do good, evil is present, and what we would, we cannot. Nationally, internationally, universally, personally, human frailty is evident to us all. It is a great day to preach the everlasting strength of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of binding and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this new edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly or quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $3.50; six or more, each $3.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 304 pages, containing articles published in *The Christian Science Journal* and sermons subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings and a list of the Scriptural quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, and affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 16 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.10.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Service in The Mother Church in Boston, June, 1898. A clear and exact refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *An exception is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

A recent statement by the secretary of the National Popular Government League, with headquarters in Washington, shows that while state and federal politicians are resisting the further extension of government ownership and control of public utilities, the cities show a strong tendency toward straight municipal ownership. He states that from April, 1914, to April, 1915, one hundred and eighty cities voted a total of $18,370,000 in bonds for municipal water plants; one hundred and thirteen cities voted $11,978,000 in bonds for municipal electric light plants; twelve cities granted franchises to private water companies; twenty-seven cities granted franchises to private electric light companies; two hundred and seven cities were reported as "considering" or "about to adopt" municipal ownership of electric light or water plants, and hundreds of other cities were reported as "contemplating," "agitating," or as having voted for public ownership of street-cars, gas plants, telephones, garbage plants, jitney busses, and other utilities.

According to the report of Dr. Donald B. MacMillan, Crocker Land, which Rear Admiral Peary believed he saw in 1906, does not exist. Confirmation of Peary's supposed discovery was the chief object of the MacMillan expedition, which left New York on July 2, 1913, under the auspices of the American Museum of Natural History. Peary had seen what he believed to be a distant range of mountain peaks. He was so positive that it was a vast expanse of land that he named it, and the land was indicated on the latest maps. Doctor MacMillan reported that he had the same experience, but as he traveled toward the supposed land, it changed its location with the revolution of the sun. Observations were taken at the same latitude and longitude where Peary believed the land to begin. Doctor MacMillan reported no land there. It is fair to assume that what Admiral Peary saw was a mirage.

That the United States Steel Corporation should not be dissolved, was the decision of the United States district court, filed at Trenton, N. J., last week. The principal points in the decision are: It refuses to issue any injunction; it holds that foreign trade of the steel corporation is not a violation of the Sherman law; it holds certain price fixing agreements which followed the Gary dinner but which stopped before the bill was filed, to have been unlawful; it allows the government to move to retain jurisdiction of the bill, if such price fixing practices are renewed, but suggests that matters may now be controlled by the new trade commission. The opinions, two in number, are largely a discussion of whether the steel corporation monopolized the steel trade or dealt unfairly with competitors or purchasers.

The sale of more than eight hundred autograph letters, valued at twelve thousand dollars, advertised to take place at a Philadelphia auction room, was stopped by order of a common pleas court, following injunction proceedings by the state of New Hampshire on the ground that the letters are part of its official archives. The collection is said to be of great historic importance, and contains letters written by George Washington and other revolutionary statesmen and soldiers. The injunction petition declares that all of the letters were originally in the custody of the first governor of New Hampshire. The papers disappeared many years ago, and their whereabouts was not disclosed until May, 1913.

For the past six years the city council of Christchurch, New Zealand, has been conducting a large forestry scheme on a municipal reserve at Bottle lake, a few miles out of the city. The reserve covers an area of eight hundred and eighteen acres, about forty of which have been planted to young pine trees. When the remainder has been planted the city will possess a valuable young forest of five million trees. It is calculated that in forty years' time, when maturity is reached, there will be available some one hundred and eight million feet of building timber, valued at five million pounds, which will last the community fifty years.

With the recent addition of one hundred and sixty acres to its already large territory, the New York Botanical Garden has assumed the leading position among the great gardens of the world, and especially of the northern hemisphere. Plans outlined for the future, and to some extent already under way, comprise educational work and some research of an industrial character. At present the reservation comprises about four hundred acres. Formerly there were about two hundred and fifty, and this put it in a secondary position to Kew Gardens in England, with its two hundred and eighty acres.

Announcement is made by the Chesapeake & Ohio railroad that it has closed a contract with the American Locomotive Company for twenty-four Mallet freight locomotives at a cost of thirty thousand dollars each, or a total of seven hundred and twenty thousand dollars, deliveries to be made within sixty or ninety days. The completion of this order will give the Chesapeake & Ohio eight hundred and forty-nine locomotives. The company recently closed a contract for seven hundred underslung steel freight-cars at a cost of six hundred thousand dollars.

Figures made public by the department of commerce show that April, 1915, imports totaled $160,576,106, against $173,762,114 in April last year, and $146,194,461 in April, 1913. April exports rose $94,656,761 above the best record made in April of any earlier year, being $294,470,199, against $162,552,570 in April, 1914, and $199,813,488 in April, 1913. The figures for the ten months ended April 30, 1915, show a favorable balance on merchandise transactions in excess of eight hundred and fifty-one million dollars.

According to advices received from Peking a tripartite treaty regarding Outer Mongolia has been signed by special envoys representing Russia, China, and Mongolia at Kiakhta. The treaty acknowledges China's suzerainty over Outer Mongolia, which is declared part of the Chinese republic. Mongolia abandons the right to make treaties for foreign powers. China relinquishes the control of the post-offices in Mongolia but retains the control of the telegraphs. The treaty contains twenty-two articles and two notes.

Various estimates have been made of the size of the California prune crop, but the average of the yield is one hundred and seventy-five million pounds. In Oregon, Washington, and Idaho, the dried prune output will run at least twenty-five million pounds. According to the best posted prune men it is therefore almost assured that there will be a tonnage this year of two hundred million pounds on the Pacific coast, against one hundred million last year, and low prices are predicted.

The Danish Parliament recently proposed to vote the sum of six million kroner toward the extension of the free port in Copenhagen harbor. It has been found necessary to make the extension owing to the greatly increased traffic caused by the vast importation of food and raw materials from abroad. Another reason for the opening of free ports is the steadily growing want of space in the harbors.

The United States will have the enormous quantity of three hundred and eighty-five million bushels of wheat during the coming year to supply the export demands, should the billion bushel wheat crop, the greatest ever grown in the world's history, which is indicated by the coming harvest in the forecast by the federal crop reporting board on the growing winter and spring wheat crops, be harvested.

A decree has been filed in the United States district court at Philadelphia in the government suit against the Keystone Watch Case Company. It confirms the decision handed down some time ago, and finds the defendants have unlawfully restrained trade. The court enjoins the defendants from further restraining trade in this respect.

Motions to dismiss six suits instituted by the government to recover from the Southern Pacific railroad oil lands in Kern county, Cal., valued at three hundred and twenty million dollars, have been denied by Judge Benjamin F. Bledsoe of the United States district court at Los Angeles, Cal.

By a decree just issued, the wireless systems of Peru and Brazil were thrown open for the transmission of general business between the two republics. The connecting stations are those of Iquitos, Masisea, and Lima, in Peru, and those of Acre, Porto Velho, Manaos, and Para, in Brazil.

Distributions by life insurance organizations in the United States and Canada amounted to $686,700,000 in 1914. The amount was the largest on record, exceeding by $40,150,000 the distribution in 1913.

The earnings of tolls at the Panama canal during the month of March were greater by $137,509.65 than the cost of operation and maintenance.

The government of Italy and the people engaged in farming are beginning to prepare for harvesting a grain crop of about five million acres.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII June 19, 1915 No. 42

Annual Meeting of The Mother Church

THE annual meeting of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was held in the church edifice, Monday afternoon, June 7. Promptly at two o'clock the meeting was opened by the retiring president, John C. Lathrop, who announced and read Mrs. Eddy's best known and loved hymn, No. 195, "Shepherd, show me how to go." After the singing of this hymn, Mr. Lathrop read selections from the Bible and correlative passages from Science and Health, and silent prayer was followed by the audible repetition of the Lord's Prayer. Another of Mrs. Eddy's hymns, No. 198, "O'er waiting harpstrings of the mind," was sung, and as the first item of business the names of the officers of The Mother Church for the ensuing year were read by Mr. Lathrop as follows:—

President, Edward A. Merritt; treasurer, Adam H. Dickey; clerk, John V. Dittemore.

The new president, Edward A. Merritt, C.S.B., of Cleveland, Ohio, was then introduced by Mr. Lathrop as follows:—

In her Message of June, 1899, our beloved Leader wrote, "Our annual meeting is a grave guardian" (The First Church of Christ, Scientist, and Miscellany, p. 125). The purpose of this meeting is to listen to reports of the progress of The Mother Church. These reports invariably cause rejoicing over past achievements, and those heard today will be no exception to the rule; but it is well to remember that the meeting has an important additional object and effect. It gravely guards us in requiring that we also recognize the labor which confronts us, our rare opportunities, and that we realize the present responsibility of each individual member of The Mother Church.

Momentous are the transformations now taking place in human thought, but transparent are these changes in human belief to the Christian Scientist. He knows that he need only each day bear onward the standard of divine Truth more patiently, live the rule of divine Life more consecratingly, and impart the inspiration of divine Love more self-sacrificingly; in other words, he need only lift the Christ, Truth, above the earthly claims of material law more fully, to draw all men unto it, to leaven the lump of human pride, self-will, and fear, and to convince mortals that Jesus' promises of brotherly love and salvation are now being fulfilled through Christian Science.

I have the honor to introduce to you as the next president of The Mother Church, one whose faithfulness and loyalty to the high standard of Christian Science have been long tested and abundantly proved, and who has been widely esteemed and respected in the world of business which has been his special sphere of usefulness, Edward A. Merritt, C.S.B., of Cleveland, Ohio.

In response Mr. Merritt said:—

Our retiring president has very graciously tendered to me his portfolio, and I am very much honored in receiving it. He has left me with a splendid Board of Directors and other officers of this church, and with a steadily increasing membership.

Our beloved Leader, Mary Baker Eddy, left us the legacy which we will always remember and seek and follow—the understanding of the Christ that there is one infinite Mind, and because this Mind is infinite, it is sufficient for all. Furthermore, that Life is eternal, that Truth and Love are infinite, sufficient for all. It is the duty of all Christian Scientists to become active in this understanding of the Christ. This means that we shall all think right, and right thinking means that we shall think according to the divine Principle of thought.

It is plain to us that God does not know the evil thoughts which people believe they think. Such thoughts are not in the realm of Mind. Any one who believes that he thinks evil, thinks nothing. We know that God is with us, within; that we are attaining in some degree the Mind of the Christ: that is, "God with us." This is the only God we can possibly have; it is the right sense of Life which is Life with us, the right sense of Truth and Love which means the perfection of Truth and Love with us.

The organization of Christian Science outwardly is manifesting increasing numbers—inwardly its growth is more spiritual. I am persuaded that this is the fact because I believe Christian Scientists today are more faithful in their work, more diligent in their study of our Leader's writings, and these we could not get along without. Christian Scientists have more to be thankful for today than any other people on the face of the globe, from the simple fact that they know something about Christian Science. They have been touched in some measure with the spirit of Truth and Love.

Perhaps Christian Scientists may in some degree act with more assurance than they should in reference to our cause, but we know that in divine Mind there is no menace to the cause; we should therefore intelligently resist the belief that evil is or can be true. The success of our cause rests upon individual Christian Scientists, and each one should know day by day the truth of being with the same sincerity as though the entire cause depended upon him; he should manifest purely the activity of the Christ. We all know that what the Christian Scientist knows about God constitutes his true individuality.

Our Leader has reflected great wisdom in reference to this organization. For instance, she left with us the Manual of The Mother Church. This Manual, a production of Mrs. Eddy, is for the guidance of the members and for the government of the cause of Christian Science, and according to the Foreword, which is an extract from Mrs. Eddy's "Miscellaneous Writings," the Manual is sufficient for the race—there need be no further changes.

In her wisdom Mrs. Eddy provided that The Christian Science Board of Directors should be the first officers of the church, and she knew well each member of that board. They are endeavoring to fulfil the provisions of the Manual with loyalty. Let us assist them in every possible way. Let us give unfaltering, unreserved fealty, loyalty, and fidelity, that we may reflect the one infinite Mind.

We know that divine Love is constantly and instantly de-

fining itself in us,—divine Love is with us,—and we cannot forget that as in Job's experience "Satan came also," so Satan tempted the Master. Can we hope to escape? Then let us be diligent, in order that our cause may not be honeycombed with the claims of personal sense or evil of any nature. It is our duty as faithful Christian Scientists intelligently to resist any contamination of our cause. Satan would be subtle in the attempt to destroy our spiritual progress by presenting to you and me claims of resentment, criticism, and contention in our work; but God never sent contention or rivalry to us. God is Love, and we should know enough to know that we should intelligently resist the belief that error is true in any degree. We should be constant in our intelligent affirmation of the truth, and constant in our intelligent denial of the claims of error. We should recognize evil as nothing.

The world seems to be in a mental state of excitement and animosity. Jesus warned his disciples that they would "hear of wars and rumors of wars;" but he also said, "See that ye be not troubled," and, "Let them which be in Judæa flee into the mountains,"—flee to the understanding of the purity of God and of His power. It would almost seem that the seven vials of wrath are being poured upon the earth, that the armies of Armageddon are gathered in battle, according to Revelation, sixteenth chapter, but let us not forget it is also related therein that this is "the battle of that great day of God Almighty." What then, we may well ask, should be the nature of the thought and the demeanor of Christian Scientists?
