The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Items of Interest

Foremost among the problems to be solved by the constitutional government, when once it is fully established at Mexico City, Mexico, is the distribution of land. It is expected that some authority will be asked to draft a measure that will facilitate the transfer of lands from the present large holdings to individuals who will be required to till the soil. The local governments of the different states, including nearly all the important public offices, are almost always in the hands of, or controlled by, wealthy families owning large tracts of land. These owners look after their own interests entirely. Large estates, called haciendas, pay only 10 per cent of the taxes levied by law, as a result of misrepresenting the value of the property; while the small landholder is obliged to pay the whole tax imposed, as he is unable successfully to misrepresent the value of his small holdings and lacks the political influence to obtain reductions. As the result of this system of inequitable taxation, there has come the gradual disappearance of small holdings, which were absorbed by the large estates.

The section of railway joining the lines of Mecca and Bagdad was recently completed, and railway service has already been inaugurated. The ceremony of the inauguration of this line was attended by many notable people, speeches were made by the Vali, by the railway authorities, and by many guests of the Turkish government. The Oriental Railways Company has presented a petition for a concession to construct the railway line from Mouradli to Rodosto, and the minister of public works has ordered that this project be examined immediately, in order that the concession be granted without delay, should the project meet with approval. The minister of finance has been asked to consider this project and to submit a report on the matter, which will be the subject of a subsequent discussion at a ministerial council.

The loss of about three million dollars to the government through recent decisions of the court of customs appeals, has resulted in the Senate passing a bill to amend the law which makes the court's decisions final on customs disputes. The bill would give the supreme court the right to require the customs court to certify to it for review, upon petition of either party, any case drawing into question the construction of the constitution, a treaty, or any other case in which the attorney-general shall, before the customs court has rendered its decision, file with the court a certificate that its importance would justify a review by the supreme court.

A bill providing for a general revision of the patent laws is under consideration in Congress. Sentiment in Congress for several years has been shaping itself in favor of the proposed revision. The bill on which the one recently reported favorably to the House of Representatives is based, was introduced in the House in the early part of 1912, at which time there were extended hearings. Inventors, patent attorneys, manufacturers and vendors of patented articles appeared to express their views pro and con. Many who were not present in person, forwarded their views to the committee in writing.

It is believed by good authorities that if Brazilian sugar planters were making use of the more modern equipments that have advanced the industry in some other lands, Brazil would be one of the greatest cane producing countries in the world. The government is anxious that better methods for refining be employed, and for that reason admits into the country free of duty machinery and other materials necessary for plant equipment. The methods employed in the sugar mills are generally such that no more than 6 per cent of the 15 per cent saccharine is obtained.

Japan, in an ultimatum to Germany, requires Germany to undertake to withdraw immediately from far eastern waters all men-of-war and armed vessels or to disarm those which cannot be withdrawn; next, by date of Sept. 15 to hand over unconditionally the leased territory of Kiau-Chow with a view to its eventual restoration to China. An undertaking to accept the terms of this ultimatum was required by Aug. 23. As Germany made no response to the ultimatum, Japan has declared war and is taking steps to enforce her requirements.

Four public markets for the sale of food direct from producers to consumers were opened in New York city on Sept. 1. Until further notice there will be no charge for space. The markets are to be located at ferry and bridge entrances on the main routes used by farmers in bringing their produce to the city, and as these places are near the centers of congested districts, the borough and city officials hope to see a return to market-basket days and the elimination of the jobbers.

The will of Baron Basile der Schlichting, one of the notable Russian residents of Paris, leaves his magnificent collection of paintings, bronzes, and sculptures, valued at twenty million dollars, to the Louvre. Among his objects of art are one hundred and fourteen snuff-boxes for which the late J. Pierpont Morgan is said to have offered two million dollars. One of these boxes, painted by Fragonard, is valued at one hundred thousand dollars.

It is believed that the House of Representatives will take early action on the bill, already passed by the Senate, authorizing the establishment of regular lines between the United States and South American ports, and the United States and European ports, by naval ships, to carry mails, passengers, and freight. The bill as it went through the Senate also provides for a reserve active list of the navy, to which line officers will be transferred upon their own application and selection.

Mexico City is in the hands of the Constitutionalists. In accordance with a prearranged plan, General Obregon with his army marched in and took peaceful possession of the city Sunday afternoon, Aug. 16, amid the cheers of the populace. The evacuation of the Federals was completed, and Constitutionalist troops are now quartered in the barracks which the government soldiers recently occupied.

Estimates furnished by the International Apple Shippers Association from all sections of the United States, point to a record apple crop this year. The total production, it predicts, is about double that of 1913. An official declares that the total yield, for 1914, including box apples, will be between fifty-five and sixty million barrels. This estimate will give to 1914 the biggest crop since 1896.

Tuesday night, Aug. 18, President Wilson signed the amendment to the Panama Canal act, under which alien-built ships may be admitted to American registry for the overseas trade. The measure becomes effective at once, and is expected to aid materially in solving the problem of handling American exports while the European situation exists.

Imports of South America amount to $1,000,000,000 a year. British exports to South America in 1912, the latest data available, amounted to nearly $250,000,000. Germany supplied goods valued at $150,000,000, with France next to the extent of $80,000,000. Belgium's total is placed at $50,000,000, and Austria's approximately at $40,000,000 worth of merchandise.

The nomination by President Wilson of Attorney-General James C. McReynolds to the United States Supreme Court, to fill a vacancy, has been confirmed by the Senate, and Thomas W. Gregory of Austin, Texas, assistant to the attorney-general, has been named to succeed Mr. McReynolds as the head of the department of justice.

According to engineering opinion, the spillway of the Gatun dam, Panama canal, carries a greater volume of water, when all the gates are opened, than that passing over Niagara Falls.

Certain that there is ample money on hand to meet the situation, the relief fund committee of Salem, Mass., has ordered the fund closed, the total now being $619,124.

The first of all warships to pass through the Panama canal was the Peruvian destroyer Teniente Rodriguez, which made the trip Aug. 18.

The value of the grindstones and pulpstones produced in the United States in 1913, according to the United States geological survey, was $855,627.

The total weight of hides exported from Ecuador last year was 1,967,905 pounds. There was a decrease in exportations to the United States.

The International Municipal Congress was held recently at the Anglo-American exhibition, Shepherd's Bush, London.

In 1913 Argentina bought in the United States ten hundred and sixty-two touring cars, worth $1,181,785.

The total value of exports from Cuba during 1913 was $165,125,069.

Mind's Activities

IRVING C. TOMLINSON, M.A.

IT is generally believed by mortals that disease is accompanied either by too much or too little action in the physical parts involved in the discord. For example, fever is thought to be a case of overaction, while a chill is ascribed to inaction of the bodily functions. The fact, however, is exactly what Science and Health declares of real being (which is eternally spiritual), and what we must affirm for ourselves whenever discord manifests itself in the body, namely, "There is . . . no inaction, diseased action, overaction, nor reaction" (p. 427).

One who is instructed as to the truth of being, intelligently declares that all wrong action or lack of action is unreal, because he knows that in reality God, divine Mind, is the only source of action. Science reveals divine Mind as ever active, and this continuous action of the one cause and creator, our God, must be harmonious. God being All-in-all, the only real activity there is, must be the activity of God, and it is therefore perfect. Thus the spiritual Scientist reaches the assurance that a manifestation of either inaction or overaction is but a false and unreal condition. This understanding, and the realization that God is ever present and manifest in perfect, harmonious action, is the remedy with which to destroy the discordant action of mortal mind, and establish the harmonious action of divine Mind.

As one progresses in Science, he awakens to the importance of holding a steadfast thought as to the harmonious activity of divine Mind, and it is inspiring to recall the complete faith of Jesus in the power of this Mind to overcome every physical discord. Anger, irritability, excitement, appear to be accompanied by overaction. Indifference, sloth, poverty, repression, seem to be marked by inaction, and are signs of one's separation from Truth. When we realize that conditions are but thoughts expressed, we shall be more careful of our thinking. One can free himself when he perceives that these erroneous expressions are signs of his being "absent from the Lord;" and his only need is, therefore, to become present with Him. This he does by knowing for himself that the divine all-action is expressed in health, harmony, peace, love, and joy. To reverse the error, is to establish the truth of being.

It is helpful to consider and be grateful for the divine activity which manifests itself in so many silent and unobtrusive ways. Every good impulse that we have, every right step that we take, may be traced to the manifestation of divine law, the expression of Truth; for whatever action is spiritually good, means that the divine Mind is being expressed. To think clearly and truly is to possess spiritual consciousness, and this it is that triumphs over sin, disease, and death. Mankind are apt to forget these unheralded witnesses of the divine immanence, and take their blessings too much as matters of course, instead of uplifting their hearts in thankfulness to God for all the good that is their heritage. When one comprehends that every expression of harmony, every manifestation of health, which he experiences, is a sign that God is with him, that He is blessing and caring for him, he then trusts God more and more, and comes to know with rejoicing, as our Leader tells us, that "all that God imparts moves in accord with Him, reflecting goodness and power" (Science and Health, p. 515).

A fundamental characteristic of Christ Jesus was his consistent and persistent manifestation of the divine Mind in thought, word, and deed. He was ever about his Father's business. He was in the right place at the right time, doing the right work in God's way, ever knowing that he possessed unlimited power from on high to fulfil the behests of his heavenly Father. He asked nothing for himself, because he admitted but one selfhood, and that spiritual, and he knew that every need of God's child is already met. All any one really needs is to be made each day more worthy to do God's work aright. We can thus see that Jesus' pupils were not of his own seeking, but were gifts to him from the one Mind; that his patients came to him not because he sought them, but because his ways were God's ways, and his paths led him directly to those who were ready for the healing truth he manifested. His journeyings through Palestine, his sojourning in Samaria, his holiday visits to Jerusalem, were not his own plans, but were in accordance with the wise and ceaseless activity of divine intelligence. His entire life-work, as Scripture declares, was simply to manifest God in the flesh; and he knew no other Mind or will.

Jesus said of every one who believed on him, "The works that I do shall he do also." His disciples not only repeated his works in regenerating the sinner and healing the sick, but their redemptive labors were wrought in the same divine way. When his students healed in the name of Christ Jesus, as they always did, they were working, not according to their own methods, but according to that Mind which, as the Master had taught them, is ever-present Life, Truth, and Love. The activities of those early missionaries were the reflected activities of God.

Christian Science is making plain to its adherents that the only sure way in which they can be effective instruments for good among men, is to follow Jesus in recognizing and expressing this activity of divine Mind. It is an obligation of the Christian Science practitioner to know daily that his work is God's work, that the healing is wrought, not through any power of his own, but in accordance with the Scripture: "There is no power but of God: the powers that be are ordained of God." The business man instructed in Science knows, as he leaves home in the morning, that throughout that day he is to be about his Father's business. He labors not for himself alone, but for his fellows, secure in the knowledge that "whatever blesses one blesses all" (Science and Health, p. 206). So with each and every present-day disciple: he realizes that his life is not mapped out by himself, but that in so far as he loyally seeks for guidance he is following God's behests. Such a one surely finds that God's ways are "ways of pleasantness," and all His paths peace.

Conscious that God is the source of all true action, one is helped and strengthened in each day's activities, for he learns, as Science and Health states, that "God rests in action" (p. 519). The more one works in conscious unity

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

with God, the more easily he accomplishes his labors, and if he feels that his work is God's work, continually recognizing that he is about his "Father's business," he rejoices in His strength and abides in His peace. Thus harmony is established through the realization that there is no activity but of God, and that all the activities which be, are ordained of God.

Value of Denial

JOHN C. LATHROP

AFFIRMATION of truth and denial of error constitute in Christian Science the mental argument which attunes human thought, brings it into harmony with divine Mind. This is forcefully illustrated in the "scientific statement of being" as found on page 468 of the Christian Science text-book: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual." As here presented, the denial of error is actually a declaration of the truth; so, too, affirmation of the truth includes the denial of error.

No one questions the value of an intelligent affirmation of truth, when understandingly made. Such an affirmation is all-inclusive, effective, and sufficient. It is the spiritual knowing which instantaneously obliterates an erroneous thought, and leaves no trace of it. With this perfect realization always ready in consciousness, health and harmony would be assured. Would that we all had gained this perfection and poise of thought, this Christlike purity of mind, where positively no attention need be paid to evil, because all sin had actually been overcome! Moments of this clear vision and calm of thought are experienced by every Christian Scientist. During these periods great good is wrought, and this consciousness of absolute dominion should at all times be claimed as the natural and present possession of every individual.

It is because this perfect sense is not instantly realized and always maintained, that a denial of error is found to be of value and necessary; in fact, it is because there is some seemingly tenacious error to be denied and cast out that the truth is not readily realized. Mortal mind is a base deceiver, and is itself basely deceived. It loves its own, the erroneous material sense, and the trouble is that it is indisposed to face and give up this attachment; but the law of divine justice (divine Love) compels mortals finally to awaken, to repent in humility, to evidence love of good in practical reform, and to heed the command, "Thou shalt have no other gods before me [Spirit]." This change of thought is a "denial" of real value, and is an indispensable preliminary to a perfect affirmation of truth. What human mind does not still contain an iota of this tenacious self-love and self-will? Then what human consciousness has risen wholly beyond the need of denials?

In the affirmation of truth and the denial of error, much care needs to be exercised. This caution applies especially to denials. The fear and disfavor regarding denials is wholly caused by erroneous procedure. Christian Science teaches that evil is false and unreal, hence nothing. But when resisting and denying evil, it is very easy to make something of it, and herein lies the danger. If the denial of evil is for the necessary purpose of unmasking, denouncing, and abolishing evil, because it is a liar from the beginning and its claims are false and powerless to deceive, surely this is not making evil real, it is understanding it to be unreal. Thus it is the power of Truth, or God's law, which uncovers sin, and not the human will, and therefore no possible suffering can result. On the other hand, if one consciously or unconsciously still loves evil, or believes in its power, and then denounces it through a sense of fear or of duty, the belief in it is only aggravated thereby. Here it is seen why aggressive newspaper criticisms, personal attacks and exposures, the emphasizing of crime and suffering, investigations into the health of children, etc., are found to be far more harmful to humanity, as a rule, than they are beneficial. Evil and disease are sure to be known by mankind, but their unreality should be scientifically recognized in order that they may be destroyed and health and righteousness established.

Recognizing the imperative need of uncovering and uprooting the myriad claims of sin in human consciousness, expressed in countless forms, why this objection on the part of mortals to the facing of error and the demonstration of its nothingness? Why this tendency to excuse and ignore error and so prolong human suffering? Is it self-righteousness, moral blindness, and an unwillingness to confess and forsake sin which opposes this honest advance? Is it a disinclination to be practical, to take the sensible, human, and indispensable footsteps leading up and through the resurrection stage of mental progress? Is it a desire to be easy-going, to progress no higher than blind faith, and to be Christian Scientists only when the sun shines? Then it were well to ponder those words of our revered Leader: "Blindness and self-righteousness cling fast to iniquity . . . but if evil is uncondemned, it is undenied and nurtured. Under such circumstances, to say that there is no evil, is an evil in itself" (Science and Health, p. 448). Underlying this nature of thought, as Mrs. Eddy avers, is evil itself, subtly producing this very mental apathy or opposition to Truth, a condition of mind which thwarts better physical healing and the real progress of the student.

In the measure that mortals progress in purity of thought and spiritual understanding, argument will be less and less necessary, and the time cometh when to every human consciousness an intelligent affirmation will be an intelligent denial, when the denial of evil will simply be the affirmation of the truth about evil. But the danger lies (and here is the chief point) in assuming, talking, and acting as though one had already achieved the ultimate, thus brushing aside or ignoring the intermediate steps of sense-denial, and unconsciously nurturing evil, thereby exposing the vulnerable thought to the poisonous suggestions of ignorant or malicious wicked purposes. There is an argument which says that humanly everything is just as it should be, because everything is all for the best. Grave danger lies hidden in this supposition. It may be calling evil good, of which the prophet Isaiah has said, "Woe unto them that call evil good, and good evil."

Evil must be seen and known as evil, not as good, before it can be destroyed. Evil once besought Christ Jesus, "Let us alone; what have we to do with thee, . . . art thou come to destroy us?" and again it said, "Peace, peace; when there is no peace." The way of least resistance is not the radical method of truth and harmony, unless it is taken understandingly through divine Love, when the other cheek is turned. In "Retrospection and Introspection" (p. 64) Mrs. Eddy says: "It is scientific to abide in conscious harmony, in health-giving, deathless Truth and Love. To do this, mortals must first open their eyes to all the illusive forms, methods, and subtlety of error, in order that the illusion, error, may be destroyed; if this is not done, mortals will become the victims of error."

Nothing arouses or awakens thought as does the honest and determined but loving effort to unmask and overcome

evil, and evil is neither one person nor another. It is not confined to this sect or that, nor is it called by the name of any particular denomination or person; rather is it an impersonal usurper of God's power and prerogatives, and it is thus to be rebuked and denied utterly. This wise course, instead of increasing the sense of fear or exciting hatred, should wholly remove fear and prevent hatred, as it does with every honest thought. In fact, it is the only sure way of annihilating the cause of fear, and of supplanting it with a calm and peace of thought which merges into unity of interest and real love. An honest and loving rebuke of error (material sense) will separate it from truth and from spiritual sense; then conscious spiritual dominion will follow, and error will not be stirred up (chemicalized) till it be destroyed.

Coming daily in contact with mortal mind and its various suggestions of error, there is great need that one's affirmations and denials be always ready and instantly applied; more than this, it is important that one's mental work be so watchful and discerning that mental dangers are foreseen and discords forestalled. Thus the pathway of life will be made smooth and harmonious, for then one will be realizing what is so essential, namely, that the truth of being never was and never can be reversed. This watchful affirmation and denial will prevent or quickly overcome ignorance, fear, and sin,—the causes of all physical disease,—and the law of the Christ-healing will thus be established.

The affirmation of truth is the first and last declaration of awakened human thought; it is the beginning and the ultimate; but in the maturing stages of the human mind, the scientific denial of error is the indispensable correlative and safeguard which discloses and reverses subtle mental dangers, prepares thought for quicker and more lasting physical healing, and develops the true watchman in Christian Science. A true watchman is one who is conscious of his danger, meaning not one who is afraid of danger, but the very reverse, one who discerns and overcomes evil thoughts before they have had any opportunity to overcome him. Such a one grows stronger and stronger in righteousness, and makes rapid progress toward heaven, harmony.

Fitness and Blessing

HENRIETTA A. FIELD

A YOUNG Scientist sat by the window with open books upon her lap, but somehow the morning's study had failed to bring the needed help. She was thoroughly unhappy; discouragement, self-pity, and a half-conscious rebellion had wrought a sorry mood within. Her conception of Christian Science had led her to expect that honest effort to grasp the spiritual would be quickly followed by material blessing, and yet there were certain much longed-for demonstrations which seemed hopelessly far away in spite of all the earnest striving. Mortal mind assured her that she had spent ample time and effort in the attempt to gain the desired result, and had been conscientious in her work. It also reminded her of the fact that others were obtaining far quicker and better results than she was. Altogether, it seemed a most unfair proposition, and the troubled heart asked bitterly, Why are these things so?

That her "why," like that of many another young student, was really prompted by an honest desire to know the facts about this puzzling problem, was evidenced by the swift and satisfactory way in which Truth itself answered her question. Turning to the table, she picked up "Miscellaneous Writings," and opening it at random, her eyes fell on these words (p. 212): "When they [Jesus' disciples] were fit to be blest, they received the blessing." Slowly she read the words again, and yet again, while peace and understanding poured their healing balm into her waiting thought. It was enough. That short statement covered the whole ground. It revealed the underlying Principle upon which the bestowal of all actual good was based, and brought both a rebuke and a promise,—a rebuke to any latent sense that injustice or partiality existed on the part of the divine giver, and also to the possible thought of demanding a reward which had not been fully earned, even if one's effort had been his best. It was a promise as certain as Truth itself, that a right mental preparation would bring the full reward.

The cloud of discontent was banished in the glad realization that there was nothing to complain about, not even a just reason for any disturbing comparison with the progress of others, because the blessing which Truth had bestowed on another was but the pledge that when her own fitness was complete the same happy result would follow. True, there might seem to be sudden promotions in Science, as in the army, but no honest soldier of the cross would care to accept a reward that had not the foundation of genuine merit and just recompense.

It was comfort enough for that hour to be thoroughly convinced that God is ever perfectly just to His children; but not until later years brought a clearer understanding of the divine methods, was it recognized that the All-wise makes no arbitrary decisions regarding fitness and blessing. The young student then saw that they sustain to each other the simple relation of cause and effect. "Whatsoever a man soweth, that shall he also reap [experience the resulting conditions thereof]." To attain some degree of spiritual harmony and restful assurance, is to obtain a more healthful body and satisfactory surroundings. He who cultivates true courage and strength of character, will surely find the error fleeing from his presence. The grateful, humble thought inherits the earth, gains an ever-increasing sense of present good, as surely as the grass covers the hillside.

The one who acquires the true sense of justice, knows that in Truth there is no injustice, no loss, no wrong, since justice and judgment are forever enthroned with Him who maketh the very wrath of man to accomplish good for them that love God. The "pure in heart" are free from all the pangs of envy, hate, and lust, because their eyes do ever behold "the king in his beauty" and "the land that is very far off." He who has a thorough understanding of any fundamental truth, is indissolubly connected with the results accruing from that knowledge. In the words of our Leader on page 325 of Science and Health: "He who perceives the true idea of Life loses his belief in death. He who has the true idea of good loses all sense of evil, and by reason of this is being ushered into the undying realities of Spirit," the blessing for which he is truly fitted. As the poet has said,—

The waters know their own and draw
The brook that springs in yonder heights,
So flows the good with equal law
Unto the soul of pure delights.

Jesus' First Miracle

LUCIA C. COULSON

THE first miracle that Jesus wrought is of special significance to the student of Christian Science. In the second chapter of John's gospel we read of the turning of water into wine at Cana of Galilee, a demonstration which evidently made a deep impression upon all who heard of it, and which prepared the way for the healing work, as we learn from the fifth chapter of the same gospel.

Digitized by Google

Just how Truth finds us, just where Truth finds us, there the healing transformation begins, so that in most instances the first miracle wrought in us is the turning of the water of our daily experience into wine, and there is no detail too small, no condition too commonplace, for the exercise of Truth's power. It must have been soon after Jesus had finished uttering the sublime truths of the Sermon on the Mount that he came down and with tender consideration ministered to the needs of the wedding party. In "Miscellaneous Writings" Mrs. Eddy speaks of "the Principle that moves all in harmony,—from the falling of the sparrow to the rolling of the world" (p. 174), and this illustrates the universal and comprehensive effect of the Principle that is Love. It is very likely that most of those present at the feast regarded this miracle as simply a manifestation of the power of mind over matter, as many estimate the healing work of Christian Science today; but its spiritual significance may be gained as we follow the Master's work as recorded in the gospels.

One of the interesting points of this miracle is the fact that Jesus did not discard the water. It was not cast away; it was transformed. He changed the water into wine. This takes away the fear which comes to many beginners in Christian Science, the fear of losing something. The dread of a vacuum between the known and the unknown comes to some of us, and for such the lesson of this miracle is full of comfort,—not loss, but transformation! Here we may see that as our concepts of things change, the outward appearance changes also. As our concept of God grows clearer and truer, as it becomes enlarged, we become better able to see His reflection in ourselves and others; and in raising our concepts we help to raise the thought of all humanity, and this change is mirrored in what we call nature. Human experience is transfigured in proportion to the transformation of our consciousness, till at last we see that in the realm of Truth there is nothing "stale, flat, and unprofitable."

Again, Truth gives us just what we can understand. Jesus met the human need, and though, as some one has said, "the highest thinking and its externalization is purely spiritual," yet human beliefs must be improved and human experience enriched first. As Mrs. Eddy has so beautifully expressed it, "Think not to thwart the spiritual ultimate of all things, but come naturally into Spirit" (Science and Health, p. 485). The divine Mother-love will not give us the good we cannot understand, but will gently lead us by paths that we can follow, while ever pointing higher.

Mary Magdalene reached the place where she could receive the command, "Touch me not;" but in the first instance she had faithfully followed and served the Master. It is in such incidents as these that Christ Jesus reveals to us the tenderness of our Father-Mother God, and it is our privilege as Christian Scientists to reflect this in our dealings with others, and to pray for the discernment which will enable us to give to those who ask our help that which they will best understand.

Forgiveness

ALICE HALE COHEN

In the light of the illuminating example of the great Wayshower we are enabled to discern the nature of true forgiveness, and to discover that to forgive and forget is not sufficient; we must also forgive and remember. In other words, we must forget the false sense of man and replace it with a true or correct view of him. It is not sufficient simply to refuse to think of the supposed wrong that has been done; that is to leave our work unfinished. To reach the full accomplishment of forgiveness, we must correct our view of man, see not a sinning, suffering, discordant mortal, but the perfect man, who is spiritual, not material.

In the light of Christian Science we are eagerly and gladly learning to correct our old view of God as personal and limited, and to substitute therefor His completeness as revealed in the seven words given in the definition of God on page 465 of Science and Health. We are tempted, however, to leave the mist and vapor of materiality on the surface of that crystal thought which reveals man in God's image and likeness. The call today is to dispel this mist through a deeper study and a clearer sense of the definition of man in Christian Science. If we see in each fancied wrong or grievance (for they never possess the qualities of reality) an opportunity to obey this call, and an occasion to magnify and glorify God rather than the mortal selfhood, we shall find ourselves going forward in a unity of purpose which is irresistible. The war of clashing thoughts will cease, and we shall love spiritual man as our neighbor—or that which is nearest and dearest to our hearts.

To attempt to divide the thought of man, or to separate it in any way from the ideal, is to becloud one's comprehension and to place an obstacle in the way of progress, not only one's own, but that of the whole race struggling to be free. When we find a discord in music, we do not practise the discord, presenting it to all who hear us as our interpretation; we simply rule it out, substituting harmony in its place. This is voluntarily and gladly done, because we are able to perceive the basic law of music as harmony and to make the individual notes subservient thereto.

There is but one way in which an enemy (so called) can harm us, and that is to rob us of the correct view of God, man, and the universe. Hence the attack is directed against the citadel of individual consciousness, which, in order to resist it, must be built upon "the stone which the builders rejected," just as today error would have us reject all that is unlike itself. In the place of man in the unadulterated purity of Spirit, error suggests a mixed or composite man, combining good and evil, love and hate, spirit and matter. Once we yield to this temptation, and consent to build our walls of this adulterated composition, we find that they fall, and must continue to fall until we learn to build aright.

One of the strongest characteristics of love is loyalty. The highest sense of human love protects and is loyal to the object of its affection. The mother-love abides by a child through every trial, unchanging. A friend's faithfulness remains unshaken in the face of the world's condemnation. Through Christian Science we learn that the higher call to love our enemies can be accomplished only by faithfulness to the spiritual view of man as revealed in Science and Health, preserving it unclouded, even though the sense of injustice and wrong press hard for recognition. To love God is to be faithful to good, and to be faithful to good is never to forsake it in our thought of God and His creation. In "No and Yes" (p. 26), it is written, "Man's real ego, or selfhood, is goodness." Here is declared our standard of faithfulness to man.

Truly to forgive must be to "bless them that curse you, and pray for them which despitefully use you;" in other words, to open consciousness to the blessing of God's impartial sunshine, the sunlight of Christian Science, which fosters the growth of every thought faithful to God and the spiritual ideal. Thus we shall hold unshaken the correct view of man, and follow the example of our Master, "whose humble prayers were deep and conscientious protests of Truth,—of man's likeness to God and of man's unity with Truth and Love" (Science and Health, p. 12).

Selected Articles

[Frederick Dixon in *South London* (England) *Press*]

In a recent issue there is an interesting reference to Christian Science in an address by the Rev. Dr. ——. It is pointed out that he insisted that Christian Science was merely a fact which the church had hitherto overlooked. A fact that has led to the formation of a new church, which has spread all over the world, which maintains a great publishing house, and issues a vast quantity of literature, including a great daily paper, surely constitutes rather a serious omission. Again, if Christian Science is simply a fact which the churches have overlooked, why do the so-called orthodox sects one and all combine to attack the movement? The fact is, that Christian Science is a restatement of primitive Christianity. It is not new, inasmuch as Mrs. Eddy never maintained it was anything but the teaching of Jesus the Christ. At the same time, it has this element of newness, that for an enormous length of time, probably from the second century, the churches have been so busily engaged in persecuting one another for not being orthodox, that they have certainly omitted much of great value. Even while this critic was speaking, a controversy was going on in the columns of *The Times* as to the fundamental orthodoxy of the creeds themselves, and this controversy was being waged not by people like dissenters, whom the Bishop of Oxford is not sure can claim membership at all with a Christian church, but among the bishops and deans of the Establishment and great church scholars of the universities.

If it had not been for these centuries of quarreling and of dealing out torture and persecution, the fact that Jesus' command to his disciples was to preach the gospel and to heal the sick, might not have been overlooked. At the same time, even if it had not been overlooked, it would have been found that the demonstration of healing, in proof of the truth of the preaching, required not merely faith, but a scientific understanding of divine Principle, and that this was referred to in the New Testament itself, in a Greek phrase commonly translated "knowledge of God," but which everybody knows should be translated exact or scientific knowledge of God, that is, of Principle.

Faith-healing, in the ordinary acceptance of the term, is based upon the belief that God in His infinite wisdom sends disease, which men in their ignorance request Him to remove. Christian Science teaches that infinite good cannot be responsible for evil, that the wisdom of infinite Mind cannot be improved upon by the ignorance of finite belief, and that infinite Spirit is incapable of creating infinite matter. Christian Science healing, in consequence, is no process of mental suggestion, a process which claims to be able to produce evil equally with good. It is a recognition of the scientific fact of the allness of God, good, which destroys the human ignorance that is constituted in a belief in evil. Jesus said, "Ye shall know the truth, and the truth shall make you free." A knowledge of absolute truth necessarily frees man from a belief in ignorance. As this knowledge of the truth permeates the human mind, it necessarily destroys a belief in evil and inharmony. In this way Christian Science heals the body by first healing the mind, and in healing the mind it destroys the ignorance which is expressed in sin equally with sickness.

The only way, then, in which it is possible in Christian Science to make a man healthier, is by making him better; and in making him better it necessarily makes him healthier. This is not faith-healing; it is scientific spiritual healing. It is brought about by what the epistle of Peter calls a scientific knowledge of God, that is, of Truth. This scientific knowledge of Truth can be demonstrated like all scientific knowledge. That is why Jesus said, "He that believeth on me, the works that I do shall he do also." In other words, "He who understands my teaching will be able to demonstrate it as I have demonstrated it." In the exact proportion, therefore, in which a man gains a scientific knowledge of God, he acquires the ability to demonstrate that knowledge. He acquires that knowledge, however, solely as he lets that Mind be in him "which was also in Christ Jesus."

✧

[Frank Bell in *The Public Ledger*, Philadelphia, Pa.]

"Several months of study" are credited with having equipped the clergyman quoted in a recent issue, to condemn Christian Science as unchristian, because, among other things, "it denies the existence of sin, whereas the Bible specifically recognizes sin and denounces it as the curse of the race." Yet on page 29 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, it is averred that "Christians . . . must grapple with sin in themselves and in others, and continue this warfare until they have finished their course." And on page 37 we read, "Does not Science show that sin brings suffering as much today as yesterday? They who sin must suffer." Christian Science attracts those who would rather be equipped with a demonstrable method of overcoming sin than hear the most scholarly discussion of the origin and qualities of sin. And the same is true as to sickness and other discordant conditions. It should be added that "several months of study" may afford one less actual knowledge of Christian Science than several hours of open-minded testing of its simplest rules.

✧

[Don E. Gilman in *San Diego* (Cal.) *Union*]

The text selected by the Rev. Mr. —— for his sermon, as reported recently by the *Union*, forms a fitting basis for correction of his misstatements regarding Christian Science. Quoting from Paul's second letter to Timothy, the doctor took for a text, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Terming Christian Science a "strange mixture of truth and absurdity," the speaker said that it "teaches people not to use the medical knowledge and skill which God has put in their power," and that "it proceeds upon the strange assumption that the less use we make of the knowledge and the powers God has given us, the more He will come in to supply the place of them."

A strange mixture indeed, but fortunately Christian Science lays claim to no such mixture. On the contrary, its very foundation is laid in an exact, demonstrable knowledge of God, and of man in his relation to Him. It does not teach that God has given man a knowledge of medicine, but that the use of medicine and material remedies is the outcome of lack of knowledge of and trust in Him. To believe that God has endowed man with such knowledge, would be to hold Him responsible for most of the ills to which mortals are heir. If God has a knowledge of medical practice, He must as well have a knowledge of the need for its application, and sickness and death must be good, for in Habakkuk we read that God is of "purer eyes than to behold evil," and cannot "look on iniquity." To admit that God is the author of medicine, is to admit that He is the author of sickness, for we learn in Genesis that God made all that was made. Without sickness there would be no need of medicine, and to believe that God sends sickness, then endows man with the knowledge by which to overcome sickness, is to set up a

Digitized by Google

kingdom divided against itself, and accuse God of being its author.

Christian Science is not a negative philosophy, teaching truth by a process of "don'ts," but is positive in its assertion that absolute reliance upon God to heal all our diseases is more efficacious than a poisonous drug, and more conducive to spiritual being. Christian Scientists refrain from using medicine because they have determined that that which is without intelligence is unable to affect them unless they are endowed with faith, and faith is a quality of mind. They therefore take the short cut and deal primarily with mind, knowing that disease is but a product of mortal or carnal mind, as the apostle Paul termed it, and is destroyed only by reliance upon divine Mind.

Medicine is not a science. None of its hypotheses are provable absolutely, as every conscientious physician will admit. Mrs. Eddy, the Discoverer and Founder of Christian Science, says: "Deductions from material hypotheses are not scientific. They differ from real Science because they are not based on the divine law. . . . The so-called laws of matter and of medical science have never made mortals whole, harmonious, and immortal" (Science and Health, p. 273). Christian Science rejects the opinion that medical knowledge and so-called skill are derived from God, and holds with Paul that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Spiritual power, love, and a sound mind protected the ancients from the plagues, saved them from the jaws of the lions, and were with them in the fiery furnace. In the works of Jesus and the apostles, and during the first three centuries of the Christian era, this power, love, and a sound mind healed the sick, raised the dead, and performed many wonderful things.

Four thousand years of medical knowledge have not lessened disease, but with the increase of that knowledge diseases have increased in number. Christian Science has no quarrel with the medical fraternity, and respects the conscientious endeavors of the many broad-minded physicians who are endeavoring to lift their fellow man out of the bondage of sickness, but it cannot accept the statement that medical knowledge is derived from God, because its fruits attest otherwise. In fact, thousands of Christian Scientists know from experience that medical practice has not infrequently left them worse than it found them, while the "spirit of power, and of love, and of a sound mind," has resulted in health, harmony, and longevity. The practice of medicine, or medical knowledge in action, is not absolute in its effects, and an infinite, all-knowing, all-powerful God could not confer knowledge lacking in accuracy.

Jesus said, "Ye shall know the truth, and the truth shall make you free." Can it then be said of Christian Scientists that they do not exercise the knowledge God has given them when they "know" that God has created man perfect, in His own image and likeness; "know" that the same Mind which casts out sin will heal sickness as well; "know" that when they have the Mind "which was also in Christ Jesus," they will be able to do the things that he did, and that he said they should do, and even greater; when they "know" that absolute faith in God is not possible while there is still faith in drugs? Possibly Christian Scientists are profiting by the experience of Asa, who, as we read in Chronicles, "in the thirty and ninth year of his reign was diseased in his feet, until his disease was exceeding great: yet in his disease he sought not to the Lord, but to the physicians. And Asa slept with his fathers."

If our critic, in his inference that Christian Science does not teach the full gospel, refers to some religious doctrine which includes both spirit and matter, good and evil, as being coequal and powerful, then he is correct; but if he refers to the "good news concerning Christ and his salvation," then he errs. The first tenet of Christian Science, as stated in the Christian Science text-book, "Science and Health with Key to the Scriptures" (p. 497), is: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." It accepts in its entirety Jesus' command to "heal the sick, cleanse the lepers, raise the dead, cast out devils," and considers the methods he employed as the highest manifestation of the divine intelligence.

Christian Science can be judged only by its fruits, and if its critics busied themselves with demonstrations of the truth of their teachings, there would be little time left for attacks upon or criticisms of a movement which has brought happiness to thousands of homes, and health and strength to hundreds of thousands of men and women all over the world.

❖

[Algernon Hervey Bathurst in *Weymouth* (England) *Telegram*]

May I trespass again on your space in the endeavor to show a recent critic that Christian Scientists are not vitally concerned with matter and what is generally known as the material creation. The situation might, I think, be best summed up by quoting those magnificent words of the Founder of Christianity, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes." Again, Paul, writing to the Corinthians, said, speaking of the reality of Spirit, and therefore the unreality of matter, "The things which are not seen are eternal." I quite agree with this critic that "all things are good," if by that he means that all that is real is good, although I am inclined to think that this can scarcely be the interpretation he would have put upon the sentence, since he is so determined to uphold matter as something real and therefore eternal.

It is evident to every student of the Scripture that Christ Jesus and his disciples never overcame a single difficulty, whether it was a case of healing the sick, feeding the multitude, or stilling the tempest, by giving reality to matter or the so-called laws of the carnal or mortal mind, which the apostle says so distinctly is "enmity against God." The whole trouble arises through the illogical and therefore false reasoning with which the world has endeavored to be contented during so many centuries. Nothing was more simple than the teaching of Jesus, nothing was more logical; and nothing is more simple or logical, and therefore practical, than the teaching of Christian Science. Knowing the truth which alone can free mankind from the bondage of evil, Jesus was able to prove the truth of the statement that he had come to fulfil the law of God. Christian Science is the reiteration of that same teaching, and because it is so, the signs do follow.

If, however, a Christian Scientist, or anybody else, were to endeavor to practise the teaching of the Master on the basis of the reality of matter, he would not proceed far. The belief in the power or reality of both good and evil is typified in the Scripture by the "house divided against itself," which Jesus declared must inevitably fall. Reasoning from cause to effect, therefore, we find one creator, one "great First Cause," which the world has generally agreed to call God, Spirit, infinite, omnipresent, and omnipotent. If there is one cause, the effect or creation of that cause must be as perfect as the cause itself. Now, it does not matter how real evil appears to be, it does not matter how serious a physical trouble seems to be, the difficulty can be overcome today just as easily as two thousand years ago, if the teaching of the Master is properly understood and applied.

Digitized by Google

The only way to overcome evil is to prove its powerlessness, and the only way its powerlessness can be understood is by knowing something of the omnipotence of God. It follows inevitably, therefore, that to the extent the omnipotence and omnipresence of God, Spirit, is understood, the belief in the power of evil vanishes.

If the critic will forgive my saying so, he should not accuse "these people" of being "no good at healing the sick," because he shows so clearly that he has really, to put it mildly, obtained no reliable information on the subject. A famous doctor quite recently acknowledged that Christian Science heals, while a dean of the Church of England referred, in the course of a lecture, to the crowded condition of the Christian Science churches. It is not usual for churches to be crowded regularly to that extent unless there is good reason for it. The reason is, that the sick are being healed by Christian Science daily, many of them of troubles from which they had been unable to find relief in *materia medica*. The pressing necessity of proving the truth of Christian Science by healing the sick is emphasized by Mrs. Eddy in the text-book, "Science and Health with Key to the Scriptures," from beginning to end, and I can assure the critic that if Christian Science were nothing more than a mere theory, it would never have reached a fraction of the world-wide proportions it has already attained.

❖

[H. Cornell Wilson in *Brooklyn* (N. Y.) *Eagle*]

Judging from Dr. ——'s attack on Christian Science, reported in a recent issue, it is quite evident that our friend is uneasy because of the growth of Christian Science in Brooklyn. In order, therefore, to allay any fear on his part, permit us to assure him that, as a rule, people turn to Christian Science for physical healing only after exhausting their faith in other methods. The Christian Science movement is made up largely of those whom *materia medica* could no longer help. Christian Scientists have learned from experience not to offer their assistance unless those whom they would help are ready to forsake reliance on aught but God. Surely our critic will not deny to such the right to turn to Christian Science, especially if he cannot help them.

Our critic's proposition to compel all who practise healing to take a medical examination, however, is absurd. As well appoint lawyers to pass upon the fitness of students to practise medicine, as to appoint members of the medical profession to pass upon the fitness of Christian Scientists to practise their method of healing. Those who pass upon the fitness of others to practise, should themselves be masters of that system. Jesus of Nazareth healed the sick without medicine. It is not recorded that he failed in a single instance. If medicine had been the preferable method, Jesus certainly would have used it. If Jesus were here today, our critic would probably want a law passed compelling him to take a medical examination before he would be considered eligible to heal.

It is equally absurd for our critic to assert that Christian Scientists ignore sanitation and contagion. Christian Scientists are, perhaps, more careful than any other class of people to observe all reasonable sanitary and quarantine regulations. It has never been proved in a single instance that Christian Science has caused the spread of contagion. Medical critics should have less fancy and more fact. Mere hearsay testimony is worthless.

Christian Scientists do not claim to have any supernatural power. Jesus assured his followers that the works he did, and even greater works, would be done by those throughout all time who should understand his teachings. Christian Science is the discovery of the divine Principle underlying Jesus' teachings. That this claim is valid, is proved by the fact that through the study of the Bible, in connection with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, vast numbers have been healed and saved, many of whom have learned to heal and help others. The time is not far distant when the world will look with as much incredulity upon disbelief in Christian Science as we today look upon the persecution of Columbus for daring to declare that the world was round and of Galileo for daring to declare that the earth revolved.

❖

[Charles E. Jarvis in *Pasadena* (Cal.) *News*]

Our critic assumes that opposition to Christian Science "is aroused by its emphasis on disease and its use of sickness to draw people to its lectures and meetings." While it is true in many instances that people have turned to Christian Science for physical healing after having exhausted all that "expert skill, perfected through costly years of experiment and study," could offer, it is not alone freedom from disease and sickness that humanity is seeking, but for relief from sorrow, sin, and the emptiness of barren lives as well. Those who have turned to Christian Science in response to the inherent longing for better things, have proved that God is "a very present help in trouble," regardless of the nature of that trouble. To say, then, that "if everybody were well physically, there would be no Christian Science," is about as logical as to argue that if everybody were saved, according to orthodox belief, there would be no Christianity.

While we cannot agree with our critic that Jesus healed the sick only "under protest," it is true that the purpose of physical healing, then as now, was to "teach some spiritual lesson," namely, the operation of God's immutable laws and the application of these laws to the solution of every human problem.

If Christian Science offered nothing beyond the cure of physical ills, it would not differ from the various therapeutic agencies to which mankind has resorted for centuries past. It is, however, a Christian religion,—Christian because its teachings are based literally upon the words and works of Christ Jesus; and scientific because it is full, exact, and demonstrable knowledge of God. That humanity should seek freedom from pain and discord, should not be regarded as unreasonable, nor should the healing of "all manner of sickness and all manner of disease" by spiritual means be deprecated, especially when both conditions prevailed in the time of Jesus, whose test of a man's Christianity was his ability to heal the sick. "He that believeth on me," he said, "the works that I do shall he do also; and greater works than these shall he do;" and James tells us that "faith without works is dead."

Christian Scientists are earnestly striving to realize more of that Mind "which was also in Christ Jesus," to follow the golden rule, and to obey the injunction, "Seek ye first the kingdom of God, and his righteousness," for they fully realize that only as they do so shall "all these things be added unto" them. "Seeking is not sufficient," Mrs. Eddy tells us on page 10 of Science and Health. "It is striving that enables us to enter. Spiritual attainments open the door to a higher understanding of the divine Life."

❖ ❖ ❖

The opportunity to practise Christian Science in the home is perhaps one of life's greatest blessings. The seeming trials are stepping-stones to those who value having brought to light the idiosyncrasies of mortal thinking.

MARY L. FREYTAG.

Editorial

Good the Only Power

In something like a half score instances in Science and Health, Mrs. Eddy uses the words God and good synonymously, as, for instance, "God, or good, never made man capable of sin" (p. 480); and again (p. 398), "Evil has no power, no intelligence, for God is good, and therefore good is infinite, is All." It is likewise upon the basis of an entirely good God that Mrs. Eddy elaborated her discovery of the Christ Science, and thus gave to an ever-increasing number of Christians a saner, more consistent, and more comforting concept of Deity than they formerly held. That this newer and truer concept of God has helped them to become better men and women, and to deal more justly and compassionately with all mankind, is, to them at least, a settled fact, and through this improved understanding they are giving up the erroneous belief in a dual power, good and evil, with its correlated belief that sin and disease are a necessary part of human experience.

As Mrs. Eddy writes on page 381 of Science and Health, "Ignorant of our God-given rights, we submit to unjust decrees, and the bias of education enforces this slavery." That sin and sickness are in the same category, and equally to be resisted and overcome, she makes clear in her elucidation of the previous statement: "Be no more willing to suffer the illusion that you are sick or that some disease is developing in the system, than you are to yield to a sinful temptation on the ground that sin has its necessities." We occasionally find persons who try to justify the doing of evil upon the plea that good has resulted from it, or will result from it; but this on the face of it is an impossibility. To assert that good can be the product of evil is to assert that "sweet water and bitter" can proceed from the same fountain, a logically unthinkable proposition which necessarily assumes the reality and desirability of evil.

It cannot be supposed that persons who desire good to prevail in the affairs of men will voluntarily resort to the practice of evil, unless they believe that evil is more powerful than good and that good cannot do as much for the welfare and prosperity of the race as can evil. The logical outcome of this belief would be the postulate that evil is primary and good secondary, a postulate to which no Christian can assent and which finds no justification in the teachings of Christ Jesus. Our Master in no wise sanctioned evil in cause or effect, and to be consistent Christians his followers must avoid even the semblance of evil.

The text, "Surely the wrath of man shall praise thee," is sometimes warped to do duty in support of the erroneous belief that evil can result in good, but this use of the text will not bear analysis. The fact that the wrath of man can be checked and made to praise God is one of the most convincing proofs that evil has no inherent power and that its use is inconsistent with true Christianity. The supposition that evil has any quality upon which goodness can be based, is a harmful illusion that does not harmonize with right reasoning, and that leaves no unvarying standard by which conduct may be judged and morality enforced.

Christian Scientists should be especially alert to detect the error which seems to say that evil has a place and a use in our "passage from sense to Soul" (Science and Health, p. 566). Christian Science presents no halting, changing, obscure method of salvation, which needs to be, or can be, reenforced by evil. On the contrary, it moves along the straight and narrow path of righteousness which admits no evil. The statement, "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), the truth of which Christian Scientists demonstrate daily, not only leaves no place for evil and no need for its aid in Christian living and Christian teaching, but also no possibility that God is its author or in any wise responsible for it.

ARCHIBALD MCLELLAN.

❖

Humanity

CHRISTIAN SCIENCE does not, as some mistakenly suppose, deny to humanity the rights and privileges of God's children, but establishes these upon a sure foundation in getting rid of all erroneous concepts of man's being and of his relation to God. It is deeply interesting, as well as very helpful, to trace Mrs. Eddy's teachings on this subject, as found in Science and Health and her other writings. While it is true that she makes a clear distinction between man as God's likeness and the material and mortal concept of man, it is noteworthy that she seldom uses the word human, or any of its derivatives, without pointing upward, away from the false to the true, from the perishable to the enduring, from the material to the spiritual. Her words respecting "human ability to reflect divine power," as found on page 52 of our text-book, are very significant; also those on page 52 of "Unity of Good," where she emphasizes "the need that human consciousness should become divine, in the coincidence of God and man."

It is very apparent that we all need an enlarged sense of man's nature and possibilities, which would blossom out in a pure, loving, and lovable humanity. No one has ever been really great who has not expressed this truer sense of humanity, the mental qualities which mark the noble man and woman, and who has not seen the divine possibilities of all men, whatever their station or disadvantages. Such a one was Victor Hugo, who gave to the world in the character of Jean Valjean an ideal of the uplifting and ennobling of one who seemed hopelessly crushed, and that through the touch of human sympathy and love. It was because of his marvelous presentation of this ideal that unnumbered thousands followed the great writer's mortal remains to the grave with more love and honor than was ever bestowed upon the mightiest potentate.

In speaking of Christ Jesus our revered Leader says, "Through the magnitude of his human life, he demonstrated the divine Life. Out of the amplitude of his pure affection, he defined Love" (Science and Health, p. 54). She says this of the one of whom we are accustomed to think as our Exemplar, and it assuredly calls upon us to measure ourselves anew, and to do it daily, in order to learn whether we are at all approaching what Paul names "the stature of the fulness of Christ." It was the true humanity of Christ Jesus which attracted to him the suffering, sinful, and sorrowing, and through this channel the infinitude of divine Love reached them and healed them every one. At the same time he did not fail to discriminate between the true idea, the pure gem, however it might seem to be covered up by the clay of mortal belief, and the tawdry counterfeit which hid its baseness under a robe of self-righteousness, as in the case of the publican and the Pharisee. It was, however, impossible to mistake mortal falsity for the ideal presented and lived by our Master, and well might Pilate say to his accusers, at that memorable trial, "Behold the man!"

Pilate had a glimpse of that rare humanity which is God's reflection, but his own humanity responded so feebly to its appeal, that through the long centuries he has been thought of only as a moral coward, as one who saw the right but

Digitized by Google

feared to follow it. And what of the one who stood that day before him, condemned to death because of his brave devotion to God and to his fellow men? To Christian Scientists he is one with Truth and Love, the demonstrator of Life eternal.

Though men have strayed so far from the perfect Father that they fear to claim any relationship with Him, they stretch out toward Christ Jesus their "feeble hands and helpless," and touching his humanity they awaken to what God means they shall be, and that is, perfect. Then they are healed, made whole, and through Christian Science they go on until they "are complete in him, which is the head of all principality and power."

ANNIE M. KNOTT.

"It is the hour of man"

THE need of the world is and ever has been the appearing of man. This transpired in the coming of the Master and he taught that this appearing was to continue after him. His disciples were to think as he thought and do his works, and practical Christian Science is the faith and endeavor that would realize this redemptive assurance.

Today aspiring Christian believers of every name are beginning to see that if men were but right, the world would not be wrong. Moreover, regardless of their interminable confusions, and their present appalling conflict, all who merit the name "Christian" join sincerely in the poet's prayer,—

> And ah! for a man to arise in me,
> That the man I am may cease to be;

and the universality of this union of moral perception and honest desire still supplies a ground of hope for humanity.

In view of its distinctive teaching, one who spoke for Christian Science might be expected to say that healing is the world's greatest need, and he too would be right. Indeed, St. Paul would have said that these two are manifestations of the "same Spirit." The Christian Scientist who forgets for one moment his responsibility to demonstrate divine Truth after the manner of the Master, misses at that moment his "high calling of God." We need also to remember, however, and with equal devotion, that genuine healing follows every disclosure of the Christ-man; that many of the physically well need supremely that cure which perchance is to be brought them only through the impress of our clean, fine every-day living, our justice, our purity, our reliability, and our kindness. Revelation is always concretely expressed. As one has said, "A purely theoretical truth is a barren absurdity, the real is not something independent of us." So Christian Science teaches that man is God manifest, the infinite Life, Truth, and Love reappearing, "coming now as was promised aforetime, 'to preach deliverance to the captives [of sense]'" (Science and Health, Pref., p. xi).

Today it is demanded of us that we heal the sick. It is also demanded that we lay aside "all malice, and all guile, and hypocrisies, and envies, and all evil speakings;" that we be "all of one mind, having compassion one of another, love as brethren, be pitiful, be courteous . . . eschew evil, and do good." And what an impressive demonstration, what an irresistible fact, such living has proved in many a family and neighborhood. Markham is right, the world was never in greater need of

> The fine audacity of honest deed;
> The homely old integrities of soul.

Men may attribute Christian Science healing to suggestion, hypnotism, etc., but when through personal touch they find spiritual aspiration and intuition, unselfishness and love and, withal, thoroughgoing honesty in the practitioner, they are ready to acknowledge the healing works as of God.

As Christian Scientists we have insisted upon the possibility of the appearing of God's perfect man, and this has not only surprised the Christian world, but it has given warrant for the expectation that this man will begin to appear in us; that our every-day walk and conversation shall reveal a distinctly advanced and advancing ideal of Christian living. This is the least demand of our fellows that would be complimentary to our genuineness and to the practical values of Christian Science teaching. To command confidence and respect, one must be true to that for which he stands. Any absorption in material projects and pleasures, in the world's struggle for wealth, its devotion to profitless social events and amusements, ill comports either with the spirit of Christian Science or with the privileges and obligations resting upon every Christian Scientist. Religion and morality are not two but one, and we make this most impressively apparent as we express the purity, integrity, spiritual-mindedness, and all-embracing compassion of a Christlike man.

JOHN B. WILLIS.

Large Type Edition of Science and Health

A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers, is announced by the publisher of Mrs. Eddy's works. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, will be about the same thickness as the cloth edition of Science and Health. The printed page will be 8⅝ inches long, 6 inches wide, with fair-sized margins. The price of this edition will be $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address. Orders for the above book should be sent to Allison V. Stewart, Falmouth and St. Paul Streets, Boston, Mass.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

VICTORIA, AUSTRALIA.—Increase of interest on the part of the press has been evidenced during the year by remarks made to the committee on publication personally by members of editorial and reporting staffs, and by the almost entire absence of scoff in the editorial columns of the Melbourne dailies. The "Tract on the Christian Science Movement" which was threatened last year in the report of the publications committee of the Presbyterian Assembly, materialized in a special editorial in the organ of that denomination, answer to which was rejected by the editor of the paper but was published through another medium and circulated among the Presbyterian clergy, since which time there has been no recurrence of the flouts and gibes on

Digitized by Google

Christian Science and Christian Scientists which were formerly not infrequent in that paper.

Concurrent with the Presbyterian attack, a popular Melbourne preacher, who has since left Australia, attacked Christian Science through what was advertised as a "Lecture on the Life of Mrs. Eddy," delivered in several suburban churches of different denominations, at the instance, according to rumor, of the council of the Melbourne churches. Replies to the attack were inserted in *The Herald* and the *Weekly Times*, and distributed among ministers of various denominations in and around Melbourne.

Increase of interest on the part of the public is evidenced by frequent conversational remarks made to the committee in daily intercourse in his limited circle; but the most satisfactory and convincing proof of greater local interest in Christian Science is the increasing attendance at the Sunday and Wednesday services of the church, the upper hall of the Athenæum being now crowded to its utmost capacity every Wednesday evening.—*Correspondence.*

SAN FRANCISCO, CAL.—Working drawings are being completed for a church building which will be erected by Second Church of Christ, Scientist, on their property at the corner of Dolores and Cumberland streets. The auditorium will have a seating capacity of about one thousand. Completed, the church will cost about sixty thousand dollars.

San Francisco Examiner.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 6, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 14, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Liverpool, England

A large and appreciative audience assembled in the Picton Lecture Hall to hear Bicknell Young deliver a lecture on Christian Science. The lecturer was introduced by J. W. Harwood, who said in part:—

Every student of the Scriptures must have recognized the fact, that although some portion of the gospels is given to the recording of the sayings of Christ Jesus, yet a greater portion is given to the recounting of his works. The emphasis laid on the works by our Saviour was sufficient to warrant the writers in so doing. He said: "If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works." He went still farther when he said, "He that believeth on me [that is, he who understands my teaching], the works that I do shall he do also." The teaching of our Master, relating as it does to metaphysical or spiritual facts, was so contrary to the prevailing systems of religion and worship that it would not have been accepted if not accompanied by the works, which included healing the sick, casting out devils, and raising the dead.

It is a matter of history that the immediate disciples of Jesus and his followers for three hundred years proved their understanding of Christianity by doing similar works. Before Jesus went away he promised to send another Comforter, who should abide forever, and guide us into all truth. He defined the Comforter as the "Spirit of truth."

Undoubtedly this promise is fulfilled in Christian Science, for it is guiding us into all truth, and proving itself a comforter by healing the sick, freeing sinners from their bondage, displacing sorrow and mourning with happiness and joy. The signs which Jesus said should "follow them that believe," are again being made manifest.—*Correspondence.*

❖

Coeur d'Alene, Idaho

The Rex Theater was crowded to hear a lecture on Christian Science by Col. William E. Fell. The speaker was introduced by Atty. Frank W. Reed, who said:—

A religion that teaches a rule of thought and action which delivers its followers from sin, sorrow, poverty, disease, and every other discordant condition, is no less than scientific and Christian. Such a teaching is exact and complete in its ministrations; it leaves nothing further to be accomplished or desired by mankind. When men and women everywhere have found such a religion, they will be satisfied, and they will not be satisfied with anything less.

Man does not willingly suffer. He is ever searching for a remedy which will give him relief from disease and from every other condition which makes for unhappiness. It may not be known by all here today, but it is a fact, that many thousands—yes, I may say many hundreds of thousands—of people in every part of the civilized world, have found such a remedy and such a religion in Christian Science, for they have proved its teachings to be the exposition of Truth, which heals and saves.

The Cœur d'Alene Semi-Weekly Journal.

❖

Los Gatos, Cal.

There was a large attendance at the lecture on Christian Science by Willis F. Gross at Ford's Opera House. Edward B. Stone introduced the speaker, and said in part:—

It is gratifying to see assembled here so large an audience. Jesus came to this world, in fulfilment of prophecy, not only to proclaim the gospel to mortals, but to speak the truth to every form of error, to preach deliverance to the captives, which is but freedom from sin, disease, and death. All of this he did, as we read in Matthew, in fulfilment of the law of God, the fulfilment of the spiritual law, to the utter destruction of the so-called material law; and then he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." It is because of our desire to do this, to have that Mind in us "which was also in Christ Jesus," to live the Christ-life, and to show others the way, that we give this lecture tonight.—*Los Gatos Mail.*

❖

Arlington, Wash.

Prof. Hermann S. Hering delivered a lecture on Christian Science to an intensely interested audience at the Opera House. He was introduced by the Hon. A. H. Moll, who said in part:—

If Christian Science is what its followers believe it to be, then it is the greatest and most important subject before the

Digitized by Google

world today, one in which every man and woman is vitally interested, because it deals with the living present and with the everlasting future life of mankind. The fact that it has made such rapid gains in membership, and that its members are so firm in their belief, is but one proof that there is something more to it than appears on the surface.

When I first heard of Christian Science, I, like a great many others, thought it was only another ism, introduced by some person who wished a little notoriety or who wanted to make an easy living. When I learned a little more of it, and saw the personnel of its membership and the influence for good which they exerted, I concluded that the religious part was all right but that the healing was imaginary. I am frank to admit it has taken a number of years to convince me that it was other than imagination; but the many instances of healing that have been brought to my personal attention, have finally compelled me to lay aside my prejudice and admit that there is something to it which is beyond the comprehension of mortal mind.

I am not familiar with all the teachings of Christian Science, nor do I fully understand all that its followers claim for it. I do know, however, that their fundamental belief includes all the essentials of the Christian religion, and that Christian Science is a great power for good in the world today.—*The Arlington Chronicle.*

❖

Calgary, Alberta, Canada

The Hon. J. A. Tweedie, M.P.P., in the Sherman Grand Theater, Calgary, in introducing Judge Clifford P. Smith, who lectured on Christian Science, said:—

The Christian Scientists in this city have been in the habit of giving at least one lecture a year during the past few years. I had the honor and privilege of presiding at one of their lectures given by Professor Hering in the Al Azhar Temple some two or three years ago, and I am glad to see that there is a great increase in the attendance here today. I think many people entertain a feeling of suspicion toward Christian Science, or perhaps they come to a lecture with a prejudiced or biased mind; but undoubtedly, so far as the fundamental teachings of the Christian Scientists are concerned, they have a religion, and they have principles which can recommend themselves heartily to the thinking people of any community in any country. They have their foundation in God, and they have the mental and physical welfare of the human being at heart. They endeavor to apply the principles of Christianity toward the prejudiced feeling of the individual.—*Correspondence.*

❖

University of Michigan, Ann Arbor

In introducing Bliss Knapp, who lectured on Christian Science, Mr. Frost, president of the Christian Science Society here, said:—

As students in this university, we are all seekers after the truth. We are studying in the realm of law, engineering, mathematics, accounting, and so on; but wherever we may be at work, we are striving to master the principles which lead to the solution of the various problems involved. If in any particular case the principle is not thoroughly understood or properly applied, the problem is not solved; but it is the student and not the principle itself which has failed.

However, with all our learning, many have failed to become interested in anything beyond our material world, and have been stamped by the outer world as unbelievers,—unbelievers in the Principle of Life, which is God. In the past we have relied upon material remedies to solve our life-problems; but today Christian Science is teaching us, with the Bible as its authority, of the one Principle of life, which is God, and that when this Principle is fully understood and correctly applied, it does meet and satisfy every human need.

Correspondence.

❖

Danville, Ill.

Virgil O. Strickler appeared before a large audience at the Fischer Theater and lectured on Christian Science. In introducing the speaker, Frank M. Ferris said in part:—

Christian Science brings to us and to the world a message of love; a message of that perfect love which casts out fear. This message will be presented to us by the lecturer.

Correspondence.

Testimonies of Healing

We read and hear of so many cases of quick healing in Christian Science, that a sense of discouragement often tempts those whose healing is slow. That is one reason why I desire to give my testimony, the other reason being the pleasure I take in publicly expressing my gratitude to Christian Science for all it has done for me during the past sixteen years.

I was persuaded to try Christian Science through the healing of a dear friend. At that time I was in very poor health, longing to die, for I thought I would then find release from my suffering. Our family physician and an eminent specialist had done all they could for me, but I was growing worse. I had nervous trouble in many forms, and was not able to lift my hand above my head or take a quick step. I had so much fear of everything that my life became a dreadful nightmare. Severe headaches would cause me to stay in bed for two days at a time; then I had other serious ailments, and such trouble with my eyes that I could not read more than one page at a time, and never after dark, without pain.

Christian Science found me in this condition, and I consented to see a practitioner on the recommendation of my friend. At first I would not permit the practitioner to talk to me about this teaching, and I refused to read Science and Health; but after my first treatment I asked him how often I would have to come to his office. He replied, "You had better come every day this week." It seemed a long time to me, for immediately many material demands seemed to claim my time; but I resisted them with the thought that as I had started, I would be as faithful to Christian Science as I had been to the doctors. Then the fault would not be mine when it failed, for I was sure it was going to fail in my case.

For ten days I was as faithful as I knew how to be, and at the end of that time I walked into my practitioner's office in a very different mental attitude. For the first time in many years I was feeling better, mentally and physically; I was more humble and grateful. I said to him: "You have something I have not, and I want it. You can now talk to me about Christian Science and I want to read the book." After that I was treated every day (except Sunday) for three months. At the end of that time I was healed of many ills, but not entirely cured. I then discontinued treatment to work out my own salvation.

It was six years before I was healed of the trouble for which I came to Christian Science. Mentally, everything looked dark and gloomy when Christian Science was brought to my notice; I did not see one ray of light ahead. I felt I had nothing to live for. Trouble over which I had no control seemed to close in around me, with no possible means of escape, and a bright day seemed a mockery to me. My first thought upon awaking in the morning was: "Another day to drag through! How long will it all last?" Now I awake feeling happy that I have another day in which to work for God. When I started to read Science and Health for the first time, I saw very little in it. I kept looking ahead to see how many more pages I had to read before finishing the book, for I thought that when I had finished reading it I would then have the whole of Christian Science. Poor creature that I was! I have now been reading it sixteen years, and each time I read it, it is a new book to me. I enjoy it more, and it means more to me, because I understand it better as I grow spiritually. It has made the Bible mean more to me, as it has explained the Scriptures and has brought me nearer to God in understanding. It has made Him an ever-present help in time of trouble.

When I first attended a Christian Science church service and looked around into the faces of those happy persons, I felt it was not for me, and when I was told that "God is no respecter of persons," and that I too could be healed, it seemed too good to be true. Now my days are bright, and I am happy and well. The healing has stood the test of years, and best of all I am able to help others. All I am, all I have, I owe to Christian Science. How can I help being grateful to Mrs. Eddy, who has made this possible by her faithful work!

I thought I knew God in my former church. I was a teacher in the Sunday school for a time, and a member of the church, but Christian Science has given me a better understanding of God and made my healing possible. "Science and Health with Key to the Scriptures" has given me a nearer and more practical sense of God. To those who have not yet been healed, but who are seeking, I would say: "Press on; the healing is there for you. Be patient, and love more."

LULU PARSONS BROWNE, New York, N. Y.

◆

[Translated from the German]

The blessings which have come to me through Christian Science impel me to make public acknowledgment thereof. In 1910 I received three copies of *Der Herold der Christian Science* from my sister in New York. She called my attention to Christian Science, as she knew that we were often struggling with illness. I was very much pleased with its contents, although it seemed strange to me that God should not permit sickness, and I could not then make up my mind to investigate the subject further.

I had been afflicted since childhood with a throat trouble which recurred regularly in winter time, manifesting itself in loss of voice. The least effort in speaking caused great distress, and the various physicians and specialists, as well as a professor who was considered very able, succeeded in relieving me only temporarily. In January, 1912, hoarseness again set in. At that time I had lost all faith in physicians, as I had tried so many "cures" for this as well as for the relief of an abdominal complaint and a severe bowel trouble. All the remedies which I tried failed to benefit me. I had been at two sanitariums and gone through a well-known "cure" in Wörrishofen, but, as I said, without being benefited.

Although I had been told that God does not send disease, I seemed comfortless, till finally, in January, 1912, I decided to go to Frankfort-on-the-Main and attend a Christian Science service. I also had a talk with a practitioner and was treated that same day, whereupon my voice began to return and I was able to speak, the pain having yielded considerably. The first thing I learned was that divine Love is omnipresent and omnipotent, that God sends only good, and creates only that which is perfect. The result was that my fear disappeared. The physicians had forbidden me to speak, and I had to desist from many other things without ever being benefited by so doing. The abdominal trouble had necessitated my wearing a truss for years, and it was difficult for me to do housework, so that many things had to be attended to by others. The bowel difficulty was accompanied by great suffering, and I often became frightened as to the possible outcome. I had a great desire to know the liberating truth, to have spiritual food, and this I received when treatment in Christian Science was begun by the practitioner, who also explained the subject to me.

I was completely healed of the throat and bowel trouble and the abdominal complaint in three months, through the power of Truth. Since then I have been doing all my work with ease and have become a very different woman, praising

Digitized by Google

God for the grace which He daily bestows upon us,—the God, who, as David says, "forgiveth all thine iniquities; who healeth all thy diseases." I had twelve operations of the nose and throat performed in the course of eleven years, and two operations for the abdominal complaint. Twenty-one physicians have attended me, four of whom were "nature-cure" physicians.

I had always inclined toward religious subjects and had felt the desire for a better explanation of the teachings of the Bible. Now my wish has been fulfilled, as Science and Health furnishes me with the answers to all these questions. I have had beautiful results through the application of the truth taught in Christian Science, and I now understand the meaning of the words, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." Would that all who suffer in body might recall the words of the Bible, "I am the Lord that healeth thee;" and "The Lord is my strength."

I am deeply grateful to God, who governs all things so wonderfully, for enabling me to discern the truth which was promised to us by Christ Jesus, and by which I have been blessed so abundantly. I will gratefully continue on the way which Mrs. Eddy has shown us in the spiritual understanding of God, good.

FRAU ANNA SCHWANINGER, Darmstadt (Hessen), Germany.

❖

It is with deep thankfulness to God that I send this testimony to the *Sentinel* in acknowledgment of the manifold benefits which have come to me since I took up the study of Christian Science. It is several years since I heard of this teaching. At the time I was journeying home from South America, and while in New York I attended my first Christian Science church service. I remember very little about that service save that it pleased me. Christian Science appealed to me as soon as I heard about it, and the point which first drew and claimed my attention was the Christian Science concept of God,—that He is Love, the creator of good, and good only, and because He is Love, He is not the creator and source of disease, want, woe, and the myriad troubles and miseries which we had been taught that God sent us for our good.

When this new concept of God dawned upon me, I embraced it joyfully; and when I began to realize dimly the great truth that God is the only power and is all-powerful, I remember thinking to myself, If that is so, He is more powerful than an incurable disease; and this was the God I wanted to know about and learn to worship. I had always believed God to be all-powerful theoretically, but not until I began the study of Christian Science did I begin to learn that His power is a demonstrable fact, always present, and available to mankind at all times.

I have experienced the healing power of Christian Science physically, mentally, and morally, and for all this I am very grateful. One of the first physical healings I received was of a hard, troublesome cough which I had had several winters in succession, and which lasted weeks and even months. All the material remedies I took failed to heal me, but after reading Science and Health I was healed. Till this last winter, when I had a slight attack which was quickly overcome with Science treatment, I have not been troubled with a cough of any kind for the last five years.

Christian Science has completely changed my outlook on life, bringing into it happiness and contentment. Whereas before I had much to make me happy, yet life seemed vague and aimless; now, Christian Science has shown me that we have a goal to reach, and that each one of us has a place to fill in God's infinite plan, that our work is daily to know more about Him and so work out our own salvation. My heart goes out in gratitude to Mrs. Eddy, our Leader, for her wonderful book, "Science and Health with Key to the Scriptures," which has given me an understanding of the Bible I never had before, and is helping me daily to become better acquainted with the truth contained in the Scriptures.

DORA COOPER, Kensington, London, England.

❖

Many years ago, when I visited my daughter in Boston, we attended the services at Trinity church, but I found my daughter more interested in the Christian Science church than in the one of which she was a member. This quite disturbed me, so I called on Phillips Brooks and told him the cause of my anxiety. Very much to my surprise, Dr. Brooks asked, "Why are you disturbed? Are they not a good people, are they not serving God? Do they not strive to follow in the footsteps of Christ?"

Some years after this I found my faith in drugs all gone. While in Chicago, I was taken very ill with a severe cold and was under a physician's care for several weeks. My daughter had a similar attack, but she had Christian Science treatment and was quite well in a day or two. This quick recovery made a deep impression on me, for I was very weak and miserable, and quite discouraged about myself. We then started for California, and while in Los Angeles, to add to my other troubles, I suffered from a painful felon on my thumb. My daughter asked, "Can you not trust that one thumb to the care of Christian Science?" I did so, and was helped at once. In a week's time I was quite another person, for all my ills had disappeared. I bought a Bible, Science and Health, and the *Quarterly*, and commenced the daily study of the Lesson-Sermons. I had an instantaneous healing of pleurisy, and was also healed of rheumatism, stomach disorder, and other ailments.

I am very thankful for this wonderful privilege of knowing God as divine Principle, Life, Love, Truth, unfolded to us by our inspired Leader, who has given Christian Science to the world.—MRS. PERRY H. SMITH, Santa Barbara, Cal.

❖

With heartfelt gratitude I wish to testify to all that Christian Science has done for me. I had been a constant sufferer from what the doctors called chronic inflammation of the stomach, with a periodic displacement of that organ, during which time I suffered untold agony. Day and night for three years and a half I was in constant pain, until life was nearly unendurable. I had tried every material means for obtaining relief, even to the fasting cure, going without food at one time for fifteen days, but without relief. As a last resort I turned to Christian Science. After the first treatment I could see improvement, and in a few weeks I was entirely cured, and the healing has been permanent.

I can never express all that this wonderful truth has meant to me, not only in my physical healing, but in a spiritual sense. Several years ago I became dissatisfied with the doctrines of the church in which I had been brought up, and I determined to find the truth for myself, if it could be found. I studied earnestly every form of religious belief, but found nothing to satisfy my longing for a practical religion, one that could be taken into my daily life, making it sweeter, better, and more worth living. Christian Science has proved to be all that I had been seeking. The Bible, which was to me both uninteresting and enigmatical before, has become

Digitized by Google

an inspired book, and my whole life is being transformed by its glorious truths.

My heart goes out in thankfulness to God for leading me into this wonderful light, in gratitude to Mrs. Eddy, and to those who have helped to set my feet firmly in the path leading to our Father's house.

E. Marianne Ihde Wendt, Buffalo, N. Y.

✦

With pleasure I give my testimony as an expression of gratitude for benefits received from Christian Science through the study and application of the rules laid down in its textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

About four or five years ago, at the time of a most distressing condition of human existence, I drifted into Christian Science, there to be healed and comforted through the apprehension of its divine Principle. I had suffered for years from headache, nervousness, sleeplessness, and the torture of the fear of insanity, to which I held day and night, believing it to be an inheritance to which I must submit. I had consulted many physicians during these years, and every one of them gave a different name to my trouble. I tried many oculists, and they prescribed strong glasses, claiming that I had strained eyes, a structural defect, and so on; but I did not notice any benefit, because it was my mentality that needed to be set right. In this condition of pain, distress, poverty, and weakness, mental and physical, I kept moving from place to place in order to change climate and see different people and scenery, thinking thereby to get away from myself. It seems good that I had enough sense left to search a little farther for some truth unknown to me then. Among things and theories, I tried phrenology, mind-readers, etc., to see if they could tell me what was my trouble and give me any remedy or information that would help to cure me. Then, after all these things had failed, I was told to try Christian Science by a man to whom I was telling my trouble, although he said he did not know anything about it but had merely heard of it.

At this stage I was afraid to try anything if it was of a mental nature, for fear of overtaxing my mind, because I was a mental wreck and nervously exhausted. I did not even care to exert myself at all. I was afraid of work, afraid to meet people, also did not want to be responsible for any least undertaking; but I felt very keenly the need of help and strength outside of myself, therefore I went immediately to a Christian Science practitioner and told her of my condition. I had no faith in Christian Science, did not even know what it was, for I had never heard of it before. No wonder I could not see anything in it then. The first time I had a treatment the practitioner bowed her head and prayed. I did not understand what she was doing, and could not see that anything was being done. So I went out of her presence very much disheartened, with the thought that there was nothing else to try, therefore there was no more hope for me. The practitioner, however, was kind enough to offer me her book, Science and Health, that I might take it with me on a trip I was about to make.

I kept the book and began to read it. Every time I read I would get confused with the teaching therein, but as soon as I stopped reading my thoughts began to clear. I wondered at this experience, but kept reading and having help off and on, until now I can say with all my heart that I am a better man physically, mentally, and spiritually. No reader need think that the struggle was easy on my part. At times I was so discouraged that I threw the books away and condemned myself and my life, because I was tired of it,—tired of reading, and living, and work. Many nights I went out under the clear sky and prayed to the then unknown God to keep my mind sound and I would submit to the destruction of my sight; but I thank Him who is "altogether lovely," that He did not and would not harm either of them.

Now I can say with perfect assurance that I am well and happy; therefore I testify to the truth that is taught in Christian Science. It has power to heal and save men from all human trouble, and is efficacious even in poverty and financial limitation. I am thankful to God, and to our Master Christ Jesus, and grateful to Mrs. Eddy, as well as to every true Scientist who has helped me on my journey from sense to Soul.—William A. Baz, Camas, Wash.

✦

The deep sense of gratitude that I feel for Christian Science is beyond words to express. I had never been strong physically, and the last few years my condition was deemed serious. In 1906 we went to Denver, in the hope that the climate would improve my health, but in September, 1908, I was confined to my bed, it seemed to me for the last time, when my sister came to see me and advised me to have Christian Science treatment, as I had tried everything else. She knew nothing of this teaching herself, but had recently heard of a case of healing.

After she came, I waited a few minutes for some one to make an effort toward getting Science help for me, but every one was silent. Then I told them if they were going to do anything, it would have to be done soon, for I was getting very weak. My husband went to the telephone and called up First Church, then came and told me the conversation he had had with the one who answered his call. He had told the one in attendance that his wife was very sick and wanted to try Science, so he would like to know if it could do her any good, and the answer was, "Yes, it can." A practitioner's address and telephone number were given my husband, who then tried to call up the lady. He was given the wrong line, and thought it useless wasting any more money telephoning for Science treatment, so he did not try to call the second time. Seemingly he was very much discouraged, but I was not. A great weight was being lifted, and in about twenty minutes I rose and walked into the front room and sat down. My husband watched me closely, but did not say anything. This occurred on a Wednesday afternoon about three o'clock. A little later I began attending to my household duties, and remained up after that. I did not know how this healing had been done; I only knew it was through Christian Science. The following Tuesday I went to see the practitioner, when I learned I had found the truth in Science, and that it was through the simple desire for truth that I had been raised from the seemingly serious illness a few days previous.

This first experience in Christian Science has been a daystar before me always. The practitioner told me among other beautiful things, that we read in the first chapter of Genesis that God made all things good; that He made man in His image and likeness, and gave him dominion. She said that sickness is not good, and to be sick is not to be like God. The truth dawned upon me so clearly that it seemed I was just beginning to comprehend life. She told me to get a copy of Science and Health and read it, and I would be all right; but I insisted on having treatment. I took five or six treatments, and in the mean time got Science and Health. Through the study and application of its teachings, I needed no more help. The ailments of which I was healed were what the doctors had called serious stomach disorder, abnormal con-

Digitized by Google

dition of one kidney, which, according to *materia medica*, only an operation would relieve, nervous trouble that caused paralysis of the right arm at times and affected the left arm and both limbs, also weak lungs, two of my family having passed on from lung trouble. I told the practitioner only about the fear of this last-named disease, and of a minor complaint which had given quite a little trouble. The other ills were all forgotten, and when I say forgotten I mean all the word implies. It seemed as if they never happened, and spiritually I know they never did.

To me this healing meant, "He spake, and it was done." I have lived in this sweet atmosphere most of the time since. *Although the cross has seemed heavy at times, I know there is nothing impossible with God and that His love never fails.*

ROSA BUECH REID, Chicago, Ill.

❖

This testimony is given in grateful acknowledgment of the help received in Christian Science by myself and family. Although I did not come to Science for physical healing, the following is one of many proofs of the efficacy of Truth to heal. About six years ago, while feeling much troubled because of sickness in the home, a sense of lack and also of discouragement, I began to question why prayer was not answered, and earnestly to ask to know my relation to God. One day I was privileged to read the chapter on Prayer in Science and Health, and it was plain to me, as it says on page 10, that "there is some misapprehension of the source and means of all goodness and blessedness, or we should certainly receive that for which we ask." I at once began the study of Christian Science, attending services regularly, and studying the Bible with the help of the Christian Science *Quarterly* and Science and Health.

Two years later I began to have serious difficulty with one of my eyes. There seemed to be paralysis of the eyelid, with ulcers forming under it and deep inflammation of the eyeball. Having gained a little understanding of the truth taught in Christian Science, I was sure it was possible to be healed, so although able to read only a little at a time, I continued the study of Christian Science. After about four months, as the conditions did not improve, there was a great deal of fear entertained by the members of the family who were not interested in Christian Science, as well as by friends. I finally consented to go to an oculist, but told him I did so under protest. Up to this time I had no pain in the eyeball, but after the material remedies were used, both eyes showed the same trouble, and pain was also felt in both.

Without telling any one, I discontinued the use of material remedies. Relief was experienced at once, and a slow but steady improvement in conditions began. In five months more all trace of the trouble had disappeared. At the present time no one can see any difference in my eyes. There is no regret for the long period of time covered in this experience, as many helpful lessons were learned. The oculist has since said that there is no cure in *materia medica* for this condition, which finally leads to total loss of the eye. Surely God does heal all our diseases.

KITTIE E. FLEMING, Jackson, Mich.

❖

After many months of sleepless and painful nights I was healed of a goiter through help received in Christian Science. I was relieved of the pains in my heart after the first treatment, and I was completely healed with seven absent treatments. There has not been any return of the trouble. I am very thankful to God, and grateful to Mrs. Eddy for the blessings I have received through Christian Science.

EMMA ROWLAND, Chicago, Ill.

From Our Exchanges

[The Universalist Leader]

The ancient patriarch Job, stripped of all the things that seem good to man, and beating up against the infinite with his insistent demand for justice and fair dealing, is like those figures which our explorers dig from the ruins of Pompeii, or from the rock sepulchers of the Nile, or from the eternal ice of the poles. Frozen, incinerated, mummied, fixed forever on the spot where he sat that day, a thousand generations come and go, and as they pass this figure every one of them who has eyes to see or ears to hear, or mind to question or heart to understand, will look into his face and think his thoughts again. The same losses, the same sorrows, the same distress that made his problem there, make ours here. Evil besets us as it did him. And as we listen to his story, all the centuries have disappeared, and we sit with Job amid the ashes of our desires.

For this is the immortality of such creations of the literary art, that they fix forever in the persons they portray the immortal and universal problems of existence. This is as far as we can get. We only know that somehow there is a strange, mysterious chord of sympathy which binds the ages all in one, and ties the heart of man to the heart of man, round the whole globe and across the centuries. We only know that whoever touches the deep experiences of life and lifts them to the light where other men can see, plants a beacon on the broad highway which will light the pilgrim soul of man forever, on his way to God. He who can paint in words the incarnate personality of man's eternal brooding, questioning desire, has left an immortal heritage to all coming generations. Job will never die. When our children's children come this way, they will look at him and understand him as we do. He will speak to them as he does to us, out of his great misery, but of his great faith.

[The Christian World]

Loisy says a very striking thing in one of his books: "It was the kingdom that was expected, but it was the church that came." When there was no second coming to set up the kingdom, the social development of the spirit of Jesus continued. It was inevitable that those moved by him should come together. It always will be inevitable; there must be churches of one kind or another. But to suppose that the first century fixed the type is quite untenable. Congregationalists have often justified their own church polity by telling us that the churches of Jerusalem and Antioch were separate and independent communities. The statement is probably correct, but nothing follows so far as the England of the twentieth century is concerned. Congregationalism today, and any other ism, must justify itself by its spiritual and moral utility, not by reference to the past. Every kind of church is right that does right; every kind of church is good that does good.

[The Christian Register]

Let no one say that churches have ever yet been busy with the purpose of making good will prevail in the world. Say rather that churches of every name have thought least of this end, practical and spiritual as it is. They have really taught that this is a most distant and well-nigh impossible end, that it is too difficult for man, and not indeed normal to expect of him. They have taught that only one has ever lived this normal human life, and that true life is to be looked for in another world. With noble exceptions this has been

Digitized by Google

the weight of the teaching of the historic church. The call today is for a type of church such as hardly yet has existed. Give us a church, men begin to cry, that shall bring faith, hope, love to bear upon common life, that shall abolish injustice and war, create human welfare, and show the secret of happiness to common men.

Now the interesting thing today is that this very gospel is being apprehended and preached and applied here and there in churches of every name. Unitarians have no monopoly of it; Christians, as such, have no monopoly of it. There are noble rabbis who are teaching it, and Roman Catholics also. There is coming to be a real, though as yet invisible, brotherhood of all who hold to this faith. It is a faith that tends preeminently to make men free. Its natural mode of organization will be in free churches. The bond of a strong good will is the strongest bond that human beings can have. Already, wherever there are free churches in polity, the tendency shows itself to become free altogether,—free in thought, in open-mindedness, in breadth of sympathy, in the disappearance of prejudice and caste, or class feeling, in the largeness of outlook and generous activity.

[Rev. R. F. Horton, M.A., D.D., in *The Christian Commonwealth*]

I would suggest that the fundamental need of our time is not, as some seem to think, more religious zeal or more evangelical fervor, or more philanthropy—of those things I doubt if there was ever so much in the history of the world. What is required now is something which underlies these manifestations, namely, such a statement or setting of religious truth as will carry complete conviction to the thought of our time. We want to present the message of Christ to men so that it commends itself to every man's conscience in the sight of God, so that a man in receiving it does not feel for a moment that he is repressing his sense of truth, or playing fast and loose with his better and nobler feelings. We want to make the spiritual life seem to be what it really is,—the most reasonable, the most attractive, and, indeed, the only real life for men; so that men once again may desire it with an intense passion, and be ready to sacrifice everything to gain it, seeing that all other things they gain vanish away, and this alone can last.

[*Zion's Herald*]

Jesus Christ, on departing from this earth, bequeathed to his disciples a curious species of blessing,—peace. We are not aware that this kind of property was ever left to anybody by any other person's will than that of the crucified Judæan. The world might well be astonished at this form of bequest, since it itself knows nothing of peace. The life of the world is constantly soiled with selfishness, torn with passion, and agitated by ambition followed frequently by remorse. The peace which Jesus gives, then, is not given by the world, since it is never possessed by the world, nor can it be understood by worldlings. Nevertheless, it is a real peace, and the only peace worth having, since it involves an appeasing of the conscience, a calming of the passions, a redirection of the desires, and a balm for the wounded heart.

[*Northwestern Christian Advocate*]

The kingdom is brought in, not by impatient wishing and praying for it, but in a constant and assured faith that God is not going to be permanently defeated in His purposes concerning this world. He will triumph. Nor are the signs of His coming triumph wanting. Only let His own be instant in prayer and in holy character and in fruitful work, and the kingdom will be hastened to its consummation.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

"God's Lovingkindness to Man," a lecture by the Rev. William P. McKenzie, has been translated into German and is now on sale in pamphlet form.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.15; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $2.00; half calf or half morocco, $2.50. On earlier volumes write for prices.

Items of Interest

Massachusetts is to have a three thousand-acre fish and game preserve on the end of Cape Cod as the result of the efforts of the chairman of the harbor and land commission, who has succeeded in getting trees and grass to grow on the sand dunes, thus keeping them from drifting. There are thirty-three hundred acres of sand owned by the commonwealth on the end of the cape. They form the northwestern part of Provincetown. Race Point light stands at the extreme northwestern angle of the proposed reservation. The ocean at high tide makes up into the sand back of the light, forming a fair-sized but shallow basin called Race run. It is proposed to dam this water and make a pond of it. The fish and game commission has promised to put fish here and in several other ponds in the reservation. A public park may be made out of this former waste of dunes, and a refuge afforded for the thousands of sea birds that frequent the New England shores. No hunting or fishing will be allowed in this preserve. The possibility of having such a reservation on Cape Cod grew out of the success achieved in getting trees and grass to grow in the sand. Brush was distributed over the sand and grass planted between. This has taken hold.

Mt. Washington, in New Hampshire, is the nation's property at last. The government and the owners have now agreed upon the purchase price, the foresters are satisfied with the terms, and it is altogether probable that the forest reservation commission will at once authorise the transaction. This is the most important purchase that the government has made in connection with the White Mountain National Forest establishment. Already the government owns some of the summits of the Presidential range, Madison and Adams and their northern slopes. This latest purchase of thirty-five thousand acres includes all of the great central peak, Mt. Washington, together with its flanks and spurs and six other Presidential peaks as well, Clay, Jefferson, and Adams of the northern group, with Monroe, Franklin, and Pleasant in the southern chain. Included within this area are the Great gulf, a wild ravine six miles long on the easterly side of Mt. Washington, and the Huntington and Tuckerman ravines, where, in ages past, glaciers dwelt.

It is intimated as being probable that the world is about to shake itself free from the domination of the German Kali syndicate. Potash in immense quantities has been discovered only recently in Spain, and already French and Spanish engineers have proved up deposits in the vicinity of Barcelona, which, it is said, contain more than two hundred million tons of the highest grade potash salts the world has yet discovered. These discoveries are of incalculable value to the fertilizer companies; they also mean much to the woolen industry, which uses potash in wool scouring and for other purposes. Potash goes into a wide range of industrial endeavor. These Spanish deposits outcrop in certain cases, something which rarely happens in Germany. Some of the German mines run down fifteen hundred to two thousand feet, and the shafts through which operations are conducted, are expensive to construct owing to the necessity of keeping all water seepage out of the mine.

"The army and navy branch of the Young Men's Christian Association is making a college course of an army enlistment," said an officer recently at a United States artillery training camp. "I know of a number of men who enlisted because they were unable to find profitable employment," he continued, "and who, realizing that it was a lack of elementary education that handicapped them as civilians, began studying arithmetic, English, and other subjects at Ft. Meyer. Many of them continued to the advanced grades, and some even perfected themselves in technical subjects. The consequence was, that when they had served their enlistments they got paying jobs, which, but for their army service and the Y. M. C. A., they would never have been able to hold. Even foreign languages are taught at some of the posts."

In the twelve months ended with June the total trade of the United States, both import and export, with the two empires of Germany and Austria, reached the grand total of $577,542,594. Of this great trade, $42,829,092 represents import and export transactions for the year between Austria-Hungary and the United States, while the balance, $534,713,412, is German-American trade in both directions. During the same period the United States shipped to the United Kingdom merchandise valued at $394,271,863, while British imports here reached $293,661,304.

The amount of coal mined in Sweden annually is only about eight hundred and sixty thousand tons, while the importation of coal amounts to about five million tons, besides four hundred and eighty thousand tons of coke. It is estimated that there are ten million acres of peat bogs in Sweden, and that there are approximately five thousand tons to the acre, or a total deposit of about fifty billion tons.

"The year 1913 is our banner year in the production of minerals," is the announcement made by Secretary of the Interior Lane. The secretary further said: "Our mineral production in 1913 reached the unequaled amount of two and a half billion dollars, which was an increase of more than two hundred million dollars over the output for 1912, and of five hundred million dollars over the 1911 figures."

The importance of mineral oil exports is attracting attention now that these have been almost completely shut off. The ratio of the value of these to the total exports of the United States during the past five years, has been approximately 5 per cent. Mineral oils have been exported in the past five years to the value of six hundred million dollars, comprising 9,215,265,000 gallons.

Estimates coming from all over the state of Kansas indicate that all previous wheat acreage will be exceeded this fall, the figures showing that probably more than ten million acres will be planted. Something more than eight million acres was harvested this year, producing a crop of approximately one hundred and eighty-six million bushels.

After many days' consideration, the federal reserve board has decided that it will open all twelve reserve banks at the same time. This decision was reached after discussion of a proposal that the New York, Boston, and possibly other banks in the East, be opened first. The board felt that such a plan would be unwise.

Germany, on Aug. 17, acknowledged receipt of the United States mediation proposals. Answers have been received from the King of England, the President of France, and the Emperor of Austria. The mediation proposal has reached the Russian foreign office.

Nine hundred thousand barrels of oil are reported burned in the Healdton and Cushing oil fields of Oklahoma. Lightning started the fires. The loss is estimated at four hundred thousand dollars, with about one hundred and fifty thousand dollars insurance.

President Wilson personally, by letter, has called the attention of the attorney-general to the general rise in food prices, and has asked the department of justice to conduct an investigation to ascertain corrective measures and whether there is conspiracy.

During the first week of business the Panama canal earned approximately fifty-five thousand dollars, not including the amount collected for barge service and payments made in advance for ships on their way to use the canal.

The United States Senate has passed the emergency war risk insurance bill, carrying an appropriation of five million dollars for the purpose of insuring American vessels and cargoes against the hazards of war

The railway returns for Great Britain for 1913 show that the number of miles of running track open were 40,689, and the miles of sidings were 14,749. The number of passengers of all classes totaled 1,228,316,000.

In conformity with the ruling of the United States Supreme Court, the interstate commerce commission has issued an order vacating its previous decision, which held oil tap lines not to be common carriers.

Russia, it is announced, has offered autonomy to Poland in return for her loyalty, and the Czar will sign a proclamation giving Jews civil and political rights equal to those of other Russian subjects.

The total cultivated surface of Argentina at the present time is 59,532,000 acres, the increase for 1913 being placed at 2,728,000 acres. Wheat, linseed, oats, and corn are the leading farm products.

The output of gold in the Transvaal for June, 1914, was declared at 717,926 ounces, valued at £8,049,558.

Germany has raised the embargo on exportations of dyestuffs.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII | September 12, 1914 | No. 2

The Perfect Concept

ROBERT NALL

A GREAT preacher in his latest book has written: "The anticipation of triumph is one of the secrets of victory. Now, this is a most important truth in Christian Science. . . . Christian Science counsels its disciples to keep their minds fixed on finished achievements. They must steadily foresee the condition at which they want to arrive."

While the foregoing statement does not express correctly the teachings of Christian Science, it nevertheless hints at an "important truth," otherwise the command given by the Master, "Be ye therefore perfect," would have little or no meaning. Scholastic theology has always accepted this in theory; Christian Science, as revealed through Mrs. Eddy, has made it practical, for it has shown that there is a true or perfect standard ever before mankind, and that the whole basis of salvation, of man's redemption from sin, want, and woe, is based upon it. This conviction is fertile in wonderful results. It means annihilation to all sense of doubt and fear, and to a whole brood of false beliefs,—beliefs which for thousands of years have corrupted human thought, shackled aspiration, beclouded the vision, and perverted the teaching of Jesus. On the other hand, it stimulates effort, encourages men to "fight the good fight of faith," and to know that heaven (harmony) is not a fantastic dream, but a reality,—a state of consciousness to which all may attain.

One of the very first things which the student of Christian Science learns, is that "the Christlike understanding of scientific being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259). Moreover, he soon accustoms himself to being governed and guided by this truth, that is, when he has cast off many traditional views and opinions. It is on this basis that all the healing works of Christian Science are done; and it is because human thought outside of Christian Science refuses to accept this basis in its entirety that the search for physical health is limited to matter, thus ignoring the claims and the power of Spirit. Christian Science reckons with absolute confidence on mankind's ultimate triumph over sin, sickness, and death. A little consideration will show that there are the most unanswerable reasons for this, reasons which make a strong appeal to all who flee to Christian Science for help.

The belief of uncertainty and imperfection which pervades mortal experience is a source of terror to most people. They are sure of nothing and are in fear of a hundred things. It is a travesty on the perfection of all God's creation that men should so placidly accept the normality of the evils which affect them, should reckon them as part of the divine order of government, and therefore inescapable. Now there is no warrant in the teachings of Christ Jesus for any such interpretation of the divine attitude toward man or God's dealings with men. All the fruits of Christian Science—even in the comparatively small measure of attainment that has so far been reached—reveal the very antithesis of this false concept of the creator and His works.

It is the "perfection of the rule of Christian Science" which "constitutes its utility" (Miscellaneous Writings, p. 233), and it is this thought of perfection, of ultimate triumph, of victory, of mastery, of freedom, which we must ever keep in view if God's will is to be "done in earth, as it is in heaven." For Christian Science in its final analysis is the complete and perfect knowledge of God,—the consciousness of His allness, the spiritual understanding which unfolds the truth that "in him is no darkness [materiality] at all," and that all which is real and eternal is Spirit and spiritual. Therefore to be a Christian Scientist is to be daily learning and proving that imperfection can never come from perfection, that a perfect Principle can never be conscious of anything opposed to its own nature, and that as man is the spiritual idea of this perfect Principle, he is now just as God made him—neither more nor less than perfect.

Beliefs contrary to these truths lead to despair. One sees this on every side. How often we hear of men who have become so-called "derelicts"! Mortal thought decides that they are worthless, incapable of reformation. Hope for such men is abandoned, and they are too often left to drift because they have never been encouraged to know what the perfect man is, and what therefore are his possibilities and his possessions as a child of God. And so with the sick and the halt and the lame and the blind. When all these and other conditions are calmly accepted as real, they become mental fixtures, escape from which is deemed impossible. It is this attitude that is responsible for the anachronism of all modern Christian institutions—hospitals for incurables. In the face of what Christian Science is achieving on the basis of this perfection of all God's creation, and bearing in mind also the clearer understanding of Christianity which is beginning to dawn upon the thought of the world, it is lamentable that hopelessness with regard to man's relief from sorrow and sickness should still prevail. Yet it is not surprising. In its valiant and inspiring efforts to restore the truth of primitive Christianity to the consciousness of humanity, Christian Science has to wrestle with the belief that flesh and blood are the arbiters of health and life, that matter is as real as spirit, and that in some way or other man is the medium of imperfection.

It is the inertia of material thought which bars the door—but only for a time—against Love's compassionate achievement. The omnipotence and omnipresence of good can never be overlooked by those who are walking the way that Jesus trod. For a time the testimony of corporeal sense is seemingly an impenetrable barrier against the power of Truth; but the perfect concept is here, slowly but certainly unfolding itself to human apprehension, and revealing that every lie of mortal belief will assuredly be destroyed.

One may well be encouraged by the steady progress which Christian Science is making. The fact that it has changed the concept of prayer for tens of thousands of people, is in itself a cause for deep thankfulness. It has long been an axiom that many prayers are not answered because answers are really not expected—a clear absence of faith. This is in line with what Jesus expounded. Mrs. Eddy went

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

farther in interpreting the Master's idea of prayer, for she taught that without a right understanding of the perfect source of all blessedness, and without the enlightenment that comes from "the Spirit of truth," prayer is in vain. Here again it is important that the basis of fruitful prayer should be perfection,—that one should know that God has provided all good for us, and that it is our part to take Him at His word, to become reconciled to Him, to arise from the false consciousness in which we have been submerged, and know that there never was a time, nor ever can be, when He will withhold any good thing from those who sincerely look for His omnipotent aid.

How practical this is, any Christian Scientist can testify. He has found that the first message of Love which came to him when he entered upon this way of life, was not the last. It has been followed by other messages, winged with truth day by day, just in proportion to his fidelity and his sincerity; and he rejoices accordingly. From what a Slough of Despond has he been rescued! The horizon of his thought has now been expanded into a vision; yea, more than this, into a realization of what it means to know, as Mrs. Eddy says in "Miscellaneous Writings" (p. 104), that "according to Christian Science, perfection is normal,—not miraculous," and that "clothed, and in its right Mind, man's individuality is sinless, deathless, harmonious, eternal."

Manifestation

LUCY NICHOLSON

Of all the similes used in the Bible to illustrate the power of Truth and Love, the most frequent is light. In the first chapter of Genesis it is recorded that God said, "Let there be light: and there was light." The dawn of spiritual understanding dispels the unreal phenomenon of darkness, making manifest the spiritual universe with perfect harmony.

In the material world, light is perhaps the most loved thing there is. The day brings cheer and joy and opportunity to the strong and well, while those who are bound with the chains of suffering or sickness or fear, greet its coming with relief, and there is scarcely any human grief which the sunshine does not heal a little. The essential quality of light is that it makes manifest. "Whatsoever doth make manifest is light," said Paul in his epistle to the Ephesians; and Jesus said of his followers, "Ye are the light of the world," meaning that those who followed him truly, in deed as well as in word, did make manifest to the world man's true selfhood, which was ever in its perfection, needing only the light, or realization of the truth of being, to break through the darkness of erroneous human belief and make it apparent.

In the book of Job we read of God's graciousness to man, and His promised deliverance of the one who seeks divine aid from fear and pain. When the light of spiritual understanding makes manifest the perfection of God's idea, man, then all the false beliefs of imperfection must disappear like mist in the sunshine.

In reading, in a recent *Sentinel*, a most interesting article upon the spiritual meanings of oil, namely, charity, consecration, gentleness, prayer, and heavenly inspiration, the thought came to the writer, that if these meanings were considered in connection with certain parables and narratives in the Bible, a clearer understanding of them might be gained. For instance, in the parable of the wise and foolish virgins, one sees how insufficient care to keep their lamps filled with oil (their lives continually expressing gentleness, charity, and right desire,—that is, unceasing prayer) caused the foolish virgins to be shut out from the perfect realization of their true selfhood, which is the kingdom of heaven within us. So too in the narrative of the widow who had only a handful of meal and a little oil, just enough to bake a cake for herself and her son; yet when Elijah came and told her to bake a cake for him, she obediently and trustfully did so. We read that "the barrel of meal wasted not, neither did the cruse of oil fail." The doing of the obedient act filled her whole consciousness with charity, gentleness, and right desire, and the supply, which it had been her difficulty to perceive, was made manifest; the abundance of oil had made the light of true perception reveal every good and perfect gift which had before appeared to be withheld from her.

Mortals take it as a matter of course that each new day will bring its supply of light, which seems to need no oil of prayer or charity or consecration to make the objects of our daily existence manifest to us. But if we have not the light that comes from God, our ways are dark indeed; while to him who has even a glimmer of this light, the facts of being are beginning to appear.

When it seems hard to realize that God's children have all good things, when the Father's simple "All that I have is thine" seems to be a dream-promise, too good to be true, let us ask ourselves if we are not hiding our inheritance away in some dark corner of the human mind, under a bushel of doubt and fear and responsibility. Let us remember that we have to let our light shine before men, and so show that we too can claim sonship with "the Father of lights, with whom is no variableness, neither shadow of turning." Jesus said, "While ye have light, believe in the light;" and that is what Christian Scientists all over the world are trying to do. They know that they have gained through Mrs. Eddy's teachings an understanding of the light which makes manifest to them the creations of Life, Truth, and Love.

"Count it all joy"

HILDA TAYLOR

Every earnest student of Christian Science is awake to the need of overcoming all that falls short of divine perfection. The command, "Be ye therefore perfect," comes unceasingly to each individual, and our revered Leader says, "God demands of man every hour, in which to work out the problem of being" (Science and Health, p. 261). Some are awake to the fact that there is a need for overcoming sin, sickness, and death, though they rarely make the effort till some unhappy, painful, or discordant condition comes into their experience; nevertheless the demand is of God, and requires instant and loving obedience. Again, there are those faithful followers of Christ who are so eager to detect and uncover error in themselves, so fearful lest they should fall short of the divine requirement, that their thought begins to be wholly taken up with how much they have to overcome; thus fear, discouragement, or a hopeless sense of inability may creep in, and their problems grow into heavy and great burdens. They begin to feel that the demands of Truth are beyond their understanding, and that obedience to them is impossible.

The writer, during a recent experience in which she seemed quite unable to solve her problems in spite of weeks of what she felt had been honest and faithful work, began to grow so discouraged that she felt she must give up even trying. In this way she began to listen to the voice of error, which said, "Wait till you have a fuller understanding of Truth." Then there came to her the thought of joy, although at the time she could not possibly see what place joy could have in an unsolved problem. She therefore opened the Bible to see if that would help, and read these words from the epistle of

Digitized by Google

James: "Count it all joy when ye fall into divers temptations; knowing this, that the trying of your faith worketh patience. But let patience have her perfect work, that ye may be perfect and entire, wanting nothing."

To "count it all joy" when confronted with seemingly insurmountable problems, surely that was not possible. Yet the command was clear enough, to rejoice "when ye fall into divers temptations." What were temptations but the suggestions of mortal mind,—which possesses neither intelligence nor power,—trying to make evil a reality to the human consciousness. The need was to see them as such, in order to "count it all joy" that we had awakened to our opportunity for demonstrating their nothingness through the understanding of the Christ-ideal given us in Christian Science. In a moment the writer was able to count the whole of her experience joy, for Truth was awakening her to the need of overcoming. It was seen to be an opportunity for demonstrating the perfection of God and His idea, whereby man might be found "perfect and entire, wanting nothing." In the consciousness of this new occasion for joy, the clouds of discouragement and fear and the self-centered thought of inability vanished.

So may all who are laboring under the weight of problems unsolved "count it all joy" that they are awake. The mere fact of realizing that there is something to overcome proves this, and the joy is that one is awake to the demand of Truth for perfection. Because it is the call of Truth, we can take up the work of demonstration fearlessly, even gladly, knowing that only through these experiences do we make any progress toward the true understanding of God, and man perfect as His likeness. Mrs. Eddy tells us in Science and Health (p. 233) that "progress is the law of God, whose law demands of us only what we can certainly fulfil."

How well this incident illustrates some of our experiences in our spiritual journey. God is ever with us, ready to guide each step of the way. As the children of Israel were guided in the best possible paths through a long and troublesome journey, so the obedient ones of today are guided. But when we fail to follow the divine guidance closely, how different is the story! The true path of life is lost, and all about us we see only the tangled thickets of error, while there seems to be no path out of them. We forget that when we "wait patiently on God and seek Truth righteously, He directs our path" (Science and Health, p. 254). Instead of this, fear, self-will, pride, or some other human belief, argues that if we only set out in some certain direction, where the thicket of error seems less dense, we shall come out all right. It would be foolish, useless, and even wrong, to pause and wait for guidance when we have such a long and difficult journey ahead and many difficulties to overcome. So we start in the way that human belief tells us is right, and at first perhaps we may seem to be following the right course; but after a time things begin to go wrong. We do not feel quite so sure of the way. Moreover, error's thorns tear the flesh, and its undergrowth trips our feet, until we find it impossible to follow the chosen path after all. Then at last necessity compels us to cease following the guidance of human belief, and we begin to open up our consciousness to Truth. We begin to know that God will find every honest seeker and give him the guidance of true intelligence.

And how quickly and surely divine Love does find us! When we listen for our Father's voice and follow His bidding, soon we are once more on the homeward path, the path of spiritual understanding. Here are no thorns, no tangled thickets of error to hurt us and check our progress. Here each step is marked out by divine Truth and Love, and during the whole journey we are supported and strengthened. The right path may lie entirely opposite to that which mortal sense chose as the right one; but when we are following God's leading we need not be anxious, even though we must pass through the deserts and the wildernesses of human belief, for Love will make springs of water to break forth in the desert and the wilderness shall blossom as the rose.

❖

True Guidance

B. E. LANGDON

THE absolute futility of relying upon so-called human intelligence and wisdom to direct our footsteps, and the necessity of pausing and waiting on God when in doubt what path to pursue, was brought home to me very clearly one day some months ago.

Together with a friend, I went up on a mountain to pick berries. I knew nothing about the place, but my companion knew the vicinity well. When, therefore, we were ready to come home, she led the way, while I followed, closely at first; but finally I lingered to get a few more berries, only to find, upon looking up, that she had disappeared from view. I had no idea which way she had gone or which way one ought to go to get down the mountain, but fear and dismay urged me to do something, and seeing what looked like an opening in the thicket which surrounded me, I set out in this direction, thinking it might be the proper path. Before I had gone far, however, I found that the opening was deceptive, for it only led into a growth of brambles and underbrush so dense that it was impossible for me to go any farther.

Necessity having compelled a pause, I began to realize that I did not have to try to find my way home myself with only blind belief for a guide, for my friend, with her thorough knowledge of the place, would come back for me when she saw I was not following her. Even while I was thinking thus, I heard her calling, and soon she joined me. Soon we were started safely on the homeward path, which, by the way, led in a direction directly opposite to the one in which mere conjecture had led me to start.

Environment

LOUISE KNIGHT WHEATLEY

ONE midsummer afternoon two friends were gathering pond-lilies. One had been a student of Christian Science for some time, the other was still fresh from the wonder of her first healing. As they had not met for years, there was much to say, so even after the lilies had been captured they were in no hurry to return home, but let their little boat drift idly among the cool shadows of the willow-hung banks, telling and retelling "the old, old story," which grows ever more beautiful with the telling.

Presently, however, the radiance seemed to fade from the face of the younger student, and it was evident that in spite of her new-found physical freedom she had still much to trouble her. "I want to progress," she explained; "I want to be a good Christian Scientist, to join the local church and The Mother Church, to learn to heal people, and all that; but how can I ever hope to do anything, situated as I am? You know how things are at home. You must have noticed how opposed mother is, and father just laughs, and the rest are too indifferent to care one way or the other. I supposed that when they saw my healing they would all want to be Christian Scientists right away; but while they are glad, of

Digitized by Google

course, that I am well, and admit that Christian Science did it, they do not seem to care to take it up for themselves. And the more I talk, the worse they seem to get. So what can I do, all alone among so many?

"I get so discouraged," went on mortal mind's excuses. "If I were only in different surroundings, I know I would get along faster. But what is the use of trying to grow or progress when everything seems to be against me? How can I ever expect to accomplish anything, situated as I am?"

Still the other was silent. She seemed to be looking at the flower she was holding in her hand, but in fact she saw only the unhappy face beside her, the cheeks wet with hot, rebellious tears. "Show me how to help her," she was praying, "in just the right way, dear Father. Thou knowest, and I am listening." Experience had taught her that her friend was passing through a phase of human progress to deal with which the utmost care and delicacy must be exercised by those who would help, a phase which by its very nature usually comes to those who are but babes in Christian Science, whose tender, sensitive thought, just unfolding like some frail bud, is easily shocked, confused, discouraged.

"Oh, Love," she breathed, "Thou that carriest the lambs in Thy bosom, tell me what to say. I know the Christ-consciousness is here, and that consciousness is mine. Help me to know that I can help and heal this little child of Thine." A breeze fluttered the surface of the lake, and with it came the perfume of the lily she still held; and as she looked into its golden depths, her prayer was answered.

"Listen, dear," she said. "I want to tell you a story. I was just thinking about this lily, and the time when it lay asleep in the bottom of the lake. Look over into the water. How does it look down there?"

"It doesn't look very nice. I can see only mud and weeds and crawling things."

"Exactly. Yet that is where the lily first found itself. Rather discouraging, was it not? It woke up one day to see the light shining on the water, ever so far above its head, and it wanted to get out into the sunshine where the little waves were dancing, and where everything was bright and beautiful; but what could it do, situated as it was? What was the use of trying to be a pond-lily when everything seemed to be against it? Yet there was within it that God-given capacity which told it that the power governing it was greater than any environment. It knew it had a right to be a pond-lily because God had given it the right, and there was nothing at the bottom of that lake, or anywhere else in all the world, to hold it back. So it stopped thinking about the things with which it seemed to be surrounded, and just began to rejoice. It thought of all the wonderful things that it was going to see some day,—the rippling waves, the sky, the sun,—and how it was going to float like a star on the surface of the water, and be so sweet and pure and white that every one who came near it would be happier because it was there. And since it could not think of two opposite things at the same time, the more it thought about these things, the more it forgot to worry about the others. So after a while it was just the same, so far as the lily was concerned, as if they were not there at all.

"The lily did not need to have its surroundings changed. It did not need to be taken out of them. It did not need to pity itself because it had to stay in them. It did not need to say, I will wait till the mud dries up, and the weeds untangle, and all the crawling things have gone away, and then I will begin to be a lily. It just began right where it was. And it quietly went on growing,—because, you know, there was really nothing to stop it,—until one day it found itself out in the sunshine, shaking out its wet leaves and laughing for joy. Here it is in my hand. Is it not marvelous that anything which the world would say had such 'a bad start' could grow to be so beautiful? But God is so good! Even when it believed itself in the bottom of the lake, it was not there at all, but all the time just lying in the arms of His protecting care, surrounded and enfolded by divine Love. For think a minute, dear. If God is All, and is everywhere expressing Himself, how could there ever have been room for anything else?"

There was a moment's silence, and then the one who had been listening picked up the oars. "Let us go home," she said softly. "I want to begin to grow."

Silent Service

FRANK L. ROBINSON

Some who have come into Christian Science, find that their family and near friends are not interested in this great truth, and they are wont to say that they have more or less difficulty in keeping up the daily reading and study of the Lesson-Sermon. Other members of the home circle object to their withdrawal for this purpose even for a half hour, since they do not understand that this reading or study cannot be done so effectively or satisfactorily in the family circle. The Christian Scientist, however, well understands why his studies under such circumstances are not so fruitful of good results as when properly done alone, where the mental application is not disturbed from time to time by diverting remarks or the moving about the room of members of the family, though they may seek to avoid all unnecessary disturbance.

When we know that it is through the so-called physical senses—sight, hearing, taste, touch, smell—that we cognize our physical surroundings; when we remember that it is through these faculties that we receive those impressions which go to make up mortal mind, then we understand why we should shut out error, and especially in the daily study hour, while seeking to get a clearer grasp of the spiritual verities. However intent one may be upon gathering the utmost spiritual help from the reading and study which are such important factors in the daily experience of Christian Scientists, he soon learns that to get the best results he must close the door to the physical senses, so far as possible, and to that extent realize God's presence. Christian Science reading-rooms are ideal in view of their quiet atmosphere, and if there are moments of forgetfulness on the part of those coming to these places, and conversation ensues, all that is necessary to insure quiet is a gentle reminder to that effect from the attendant.

Spiritual growth makes it more and more possible for one to enter into the closet and shut the door, no matter where he may be or what his surroundings. Until that higher plane is reached, however, one should be considerate of circumstances and do all he can to muffle or silence the mortal senses; otherwise the beginner in Christian Science will be tempted with discouragement. A saving thought is that any seeming disturbance will vanish in a little time if we but look to divine wisdom for guidance. Ultimately the false sense of separation which other members of the family circle entertain during the study hour will fade away, and the time of its going will be hastened in proportion to our growing understanding. It would be well to remember that wisdom is sometimes as much in evidence when manifested by silence as by the spoken word. Mrs. Eddy reminds us (Science and Health, p. 89) that "Spirit, God, is heard when the senses are silent," and this surely means more to us than can aught else, for it implies unerring guidance.

Selected Articles

[Frederick Dixon in *Burton Daily Mail*, Burton-on-Trent, England]

In a recent issue, speaking of the report of the medical and clerical committee on healing, you say that Christian Scientists will naturally claim the report as an acknowledgment of the great part which may be played in the world by faith-healing, but that it may be necessary to utter a word of warning as to the danger of postponing medical treatment in serious ailments.

First, then, may I point out that the committee has so far excepted Christian Science from the scope of its inquiry, and, therefore, that the present report in no way applies to Christian Science healing. Then, may I explain that Christian Science is not faith-healing. Faith-healing, at all events as commonly understood, is the belief that disease is sent, or permitted, by an omnipotent and omniscient Deity, who is requested in prayer to do something in accordance with the desires of the finite intelligence of mortals. Christian Scientists would regard ordinary medical treatment as faith-healing, inasmuch as they would claim that any action seeming to be produced by a drug is not produced by the drug at all, but by the faith of the human mind in the efficacy of the drug. Consequently, in accordance with the old proverb that "familiarity breeds contempt," drugs, as everybody knows, constantly lose their apparent efficacy.

Of course, the report of the committee is a distinct admission of the efficacy of mind in healing, but inasmuch as the committee declare that they place no limit on the ability of God to heal, it seems a little illogical, on their part, to warn patients against being careful to call in doctors in time. If divine Mind is capable of healing the sick, it is surely as capable of healing a serious case as a simple case. If it is necessary to call in a doctor in a serious case, why not call in a doctor in a less serious case? I know the report states that doctors may be regarded as the instruments of healing, but why should a doctor be regarded as an instrument of healing in a serious case, and divine Mind be trusted to effect a cure only in a simple case? We arrive at the extraordinary position of one critic, that Jesus touched only non-infectious cases of leprosy, which, seeing that Jesus raised the dead and walked on the water, is a logical absurdity.

Christian Science treatment is neither faith-healing nor what is known as mental suggestion, for mental suggestion is based upon the belief that one human mind can control another human mind. Now, inasmuch as the human mind is torn with all the sensual passions and is conscious of rather more evil than good, the sort of suggestion which would travel from it to a sick mind may easily be gathered. I am aware that certain witnesses before the committee declared that the moral status of practitioners was immaterial to the mere healing; but it seems an outrageous theory that if it is possible to carry on a process of healing by suggestion, the fount of that healing should be a mind filled with a belief in evil and torn with sensual passions.

Christian Science repudiates all these theories. It would describe faith-healing as simply another phase of what is called mental suggestion, and mental suggestion it would denounce as based on the belief that there is power in good and in evil. Jesus declared that a "house divided against itself" could not stand, and the healing effected by a mind which believes in good and evil, merely takes the form of an effort to suggest to patients something they are anxious to believe, with the result that, as the cause is not destroyed, the human mind gradually reverts to the old standpoint and the disease again manifests itself.

Christian Science is based upon the doctrine of the allness of God, with the corresponding corollary of the nothingness of evil. In the Greek text of the Bible this is spoken of as a scientific knowledge of God. Now, the scientific knowledge of God is a scientific knowledge of truth, and this scientific knowledge of truth is the knowledge of the truth which Jesus declared would make the world free from the ignorance which was the result of a belief in a relative power of evil. So long as any lie is believed in, the persons deceived by it suffer from the effect of their ignorance. The moment, however, the truth is grasped, the effect of the lie, which was a relative reality only while the belief in the lie lasted, disappears, and the knowledge of the truth frees the person from the deleterious consequences of his former ignorance.

Christian Science healing, then, is the effort to give humanity the understanding of the Mind which was in Christ Jesus, and so the human mind, with its belief in good and evil, plays no part at all in the healing. As man gains the Mind which was in Christ Jesus, he gains a scientific knowledge of absolute truth, and this destroys in the human consciousness the belief in sickness and sin. Now, the body being nothing but the subjective condition of the human mind, necessarily alters as the mind alters. Jesus himself said, "Repent: for the kingdom of heaven is at hand." The Greek word for repent means essentially a change of mind. In the exact proportion, therefore, in which a man changes his mind from a belief in the power and reality of evil to an understanding of the scientific fact of the omnipotence and infinity of good, he repents, and he finds the kingdom of God at hand in the form of the harmony which results as the carnal mind gives place to the Mind of Christ.

❖

[H. Cornell Wilson in *The Democrat*, Skaneateles, N. Y.]

We believe the Rev. Mr. —— will readily agree that one may profess Christianity and still be far from Christian. The proof of Christianity is not in words, but in works. When John's disciples went to Jesus to ask if he were the Messiah, Jesus referred them to his works, saying, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them," closing with that love-laden promise, "And blessed is he, whosoever shall not be offended in me."

Like Jesus of old, Christian Science answers its critics with its healing and regenerating works, knowing that while the world may refute the statement of Christian Science, it cannot deny its works. Christian Science congregations, springing up throughout the civilized world at the rate of one every three days or less, are made up largely of those who could not elsewhere find relief from sorrow, suffering, and sin. On page 135 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy writes: "Christianity as Jesus taught it was not a creed, nor a system of ceremonies, nor a special gift from a ritualistic Jehovah; but it was the demonstration of divine Love casting out error and healing the sick, not merely in the *name* of Christ, or Truth, but in demonstration of Truth."

Our critic may think it absurd to include the name of Mrs. Eddy in connection with the "great Biblical scholars" whom he mentions, but we should like to ask him if the study of the works of the scholars named in his letter has ever enabled him or any of his friends to destroy sickness and sin in Jesus' way. The study of the Christian Science text-book is daily enabling many to do this. Jesus said, "By their fruits ye shall know them," which is the only reasonable test.

If our critic believes that Jews take up Christian Science

Digitized by Google

because they do not consider they are becoming Christians, the same statement would have to apply to those Jews who became Jesus' immediate followers. Christian Science is the reign of reasonable religion. It is based on Principle, is practised according to rule, and is demonstrable, therefore scientific. For this reason, Christian Science is found acceptable to thinking people everywhere, no matter what their race or nationality, or what their previous religious belief may have been.

❖

[Robert S. Ross in *Kingston* (N. Y.) *Leader*]

In a recent issue appeared an article in connection with the growth of the various religious denominations in America, with particular reference to building operations. The report stated, among other things, that Christian Science has experienced a falling off. In this connection, you may be interested to know that the past year has seen greater growth than any previous year in the history of Christian Science. There are now approximately fifteen hundred Christian Science churches and societies throughout the world, and new ones are springing up at the rate of about one every three days. Although Christian Scientists are spending large sums building churches, it should be borne in mind that the chief aim of Christian Science is to repeat the works of the Master in healing the sick, saving the sinner, and comforting the broken-hearted. Without these "signs," Christian Scientists hold that church building is of little consequence.

❖

[W. G. Watkins in *Oconomowoc* (Wis.) *Enterprise*]

A recent issue of the *Enterprise* announced a sermon on "Why I am not a Christian Scientist," or "Mrs. Eddy versus Jesus Christ." The implication carries with it the assumption that the critic is thoroughly familiar with the teachings both of the Master and of Christian Science. The question arises, "How are we to know what the Master taught and what Mrs. Eddy teaches?" Jesus said: "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself."

On page 28 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "Neither the origin, the character, nor the work of Jesus was generally understood. Not a single component part of his nature did the material world measure aright. Even his righteousness and purity did not hinder men from saying: He is a glutton and a friend of the impure, and Beelzebub is his patron."

There are many today who still believe that Jesus' earth mission consisted of a few years of miraculous acts. From that view-point the teachings of Mrs. Eddy would conflict with his; for Christian Science emphasizes the fact that Jesus came to make available to all mankind, and for all time, the law of Life, the law of God, the law of health. He demonstrated that "the flesh profiteth nothing," that "it is the spirit that quickeneth." A comprehensive interpretation of this is given on page 26 of Science and Health: "The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, the truth, and the life;' 'I and my Father are one.' . . . Divine Truth, Life, and Love gave Jesus authority over sin, sickness, and death. His mission was to reveal the Science of celestial being, to prove what God is and what He does for man."

It is not from the negative statement, "There is no matter," that the Christian Science movement has attained to the dignity of a large and rapidly growing denomination, but it is due to the exalted concept of God as Spirit, Life, and Love, and of man's true nature as His reflection. It is a realization of these facts that saves to the uttermost all that call upon Him. The general mistake of critics is that they do not understand what Christian Science gives in place of that which it repudiates. It is giving to religious faith a new and permanent inspiration by placing the emphasis not upon the temporal and finite, but upon "the things which are not seen." When it is affirmed of matter or evil that it is not real, it means that, looking from the standpoint from which the Master looked, it has not the qualities of permanence.

We are living in an age when materialistic doctrines are being cast aside for a higher order of things,—the kingdom of heaven on earth. Prophetic of the times are the words of Mrs. Eddy in the Preface to Science and Health (p. vii): "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away. Ignorance of God is no longer the stepping-stone to faith. The only guarantee of obedience is a right apprehension of Him whom to know aright is Life eternal. Though empires fall, 'the Lord shall reign forever.'"

❖

[Charles E. Jarvis in *San Diego* (Cal.) *Union*]

Among the books recommended by Evangelist —— in a recent issue of the *Union*, he names one which "deals with the mind, the conscious mind, the subconscious mind, and the superconscious mind." "It gives," he says, "one of the most concise answers to Christian Science that I have ever read, in such a fair way that no Scientist can object, and in such a safe and sound way that none can answer him." With due appreciation of this gentleman's evident desire to be fair in his own statements, it should be remembered that the so-called "conscious mind, the subconscious mind, and the superconscious mind" are but conditions or states of the mortal or carnal mind which Paul describes as "enmity against God." It is obvious, then, that any treatise dealing with such questions, can offer no explanation of Christian Science, which deals solely with God and man's relationship to Him.

Paul said, "Let this mind be in you, which was also in Christ Jesus," and in the degree that the Christian Scientist attains this spiritual state is he enabled to perform the works Jesus said his followers should do. Christian Science needs no other "answer," and the thinking world is evidently fast becoming more and more satisfied with it.

❖

[John W. Doorly in *The Yorkshire Observer*, Bradford, England]

Your correspondent "Gamma Minus," in his article on "Religion and Healing," makes an attack on the teachings of Christian Science. If there is one thing of which students of Christian Science are anxious to convince humanity, it is that its healing work is in no way associated with suggestion, but is unalterably based on the correct and scientific understanding of God and His Christ. It is quite evident from the article by "Gamma Minus" that Christ in no way enters into his conclusions with regard to healing, since his remedy is a certain amount of suggestion mixed with a certain amount of what Christ Jesus never used or recommended, and that is the uncertain action of material drugs.

The truth, in a nutshell, is this: Nearly fifty years ago, Mrs. Eddy discovered that healing as practised by Jesus was in no way a phenomenal appearing, but was the result of his perfect understanding of God's invariable spiritual law. Since then this discovery of the operation of the "Spirit of truth" has been fully tested, and has proved itself able to free mankind from every form of sin and disease. Other

Digitized by Google

systems of religion and medicine which have become conscious of these results and of the enormous growth of Christian Science, have also become conscious of the fact that it now rests with them no longer to base salvation on a theological dogma which is to save after death, or to base health on a healing system which has an interminable list of incurable diseases, but to prove their systems here and now by practical results, even as Christian Science is doing. The consequence is, that these systems are engaged in the process of running from drugs to hypnotism and suggestion, and back again to drugs, in the vain effort to accomplish what can be attained only through Christ or spiritual means.

The Christian Science movement is not dependent upon learned debates to discuss whether Truth heals or how to heal, but is healing mankind from their sins and sicknesses in the only right way, the way laid down in the Bible; and day by day thinking men and women are perceiving this more clearly. Against this rapidly advancing movement such criticisms as that of "Gamma Minus" weigh not one jot.

❖

[Ezra W. Palmer in *The Pueblo (Col.) Chieftain*]

The minister of your city who recently attacked Christian Science, seems to feel aggrieved because his position on healing the sick by prayer has been questioned. It seems hardly credible that a minister of the gospel of Jesus Christ should, from his pulpit and in the public press, question and argue against spiritual healing. The four gospels are a record of healing by prayer; the ministry of Jesus is full of accounts of healing the sick; he sent forth his disciples on the same mission, and he made clear that all who believed (understood) should possess the same power. His momentous words to his followers—not merely his disciples—in the last chapter of Mark's gospel are:—

"And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Jesus' disciples healed the sick and raised the dead; and the early Christians for three hundred years did likewise. In fact, spiritual healing has never been wholly lost since the time of Jesus, but it had become isolated, sporadic, infrequent, the manifestation of faint gleams of that wonderful spiritual light which so illumined early Christianity and gave it the wonderful power to convert the pagan world.

What has Christian Science done to draw attacks such as this reverend critic indulged in? Christian Science, given to the world by Mrs. Eddy, reinstates primitive Christian healing, "the understanding and demonstration of divine Truth, Life, and Love, healing and saving the world from sin and death" (Church Manual, p. 19). That it has been successful in its mission, is attested all over the civilized world, and a great multitude drawn from every class of society rejoice in the healing of physical disease and the joys and profound peace that come from right relationship with God, the divine ruler of the universe. Although this healing by the power of God is so widely known and is testified to in Wednesday evening meetings by many of the best people in cities and villages all over the nation and abroad, this critic announces in the press that he is a doubting Thomas. He even thanks God for his skepticism, a state of mind which Jesus rebuked in his dull and reluctant disciple. Jesus extended no blessing to Thomas for his incredulity, but said, "Because thou hast seen me, thou hast believed: blessed are they that have not seen, and yet have believed."

The commands of Jesus as recorded in the tenth chapter of Matthew, that his followers should "heal the sick, cleanse the lepers, raise the dead, cast out devils," are just as imperative on this critic as a professed follower of the Master, as upon Christian Scientists. Nevertheless, he shows no evidence of his willingness or ability to comply with these plain commands, but glories in his unbelief, and demands of Christian Scientists that they present him evidence, in the press, of the healing of various diseases by prayer.

Jesus pointed out in several parables the necessity of diligently seeking to find truth, and his admonition is commended to this critic. Has he diligently sought to discover the facts about Christian Science healing? Mrs. Eddy in her wisdom established various avenues through which the facts about Christian Science can be readily ascertained. These include the periodicals,—the *Christian Science Sentinel* and *The Christian Science Journal*,—in each issue of which are well verified testimonies of healing, giving the names and addresses of those who thus testify. In each church, Wednesday evening meetings are held, at which public testimonies of the healing work of Christian Science are given. Public free reading-rooms are also maintained by each church, where inquirers may go for information and literature.

In addition to these helps, Christian Scientists everywhere are always glad to aid sincere seekers for light, and willingly tell of their joy over redemption from the bondage of material sense. All these avenues have been open to the critic. If he has not availed himself of any of them in arriving at his skeptical conclusions regarding Christian Science healing, we may be pardoned if we say that he has "based his generalizations on insufficient data." If this critic will investigate Christian Science healing with an unbiased mind, he will find plenty of evidence to prove that it heals cancer, tuberculosis, and other so-called incurable diseases, and he need not go beyond the confines of his home city to find the evidence.

❖

[Henry Deutsch in *Tribune*, Albert Lea, Minn.]

Christian Scientists are always grateful for the recognition of the splendid healing work that is being accomplished through Christian Science teaching, and therefore appreciate the kindly reference thereto in a recent issue in connection with the article of Dr. ——. However, if people are to receive the benefits of Christian Science, they must know the right basis thereof, which requires a correct statement. While it is true that fear and its results are destroyed through the healing work of this religion, that is simply one of its effects.

The teaching of Christian Science is based upon the Bible, and more particularly on the words and works of Christ Jesus. Its gospel and healing work are based upon Jesus' inspiration and example, and follow as the direct result of the effort on the part of Christian Scientists to have that Mind "which was also in Christ Jesus." Understanding God correctly, and realizing the right relation between Him and man, Christian Scientists attain to that promised transformation "by the renewing" of their minds. This places the healing upon the proper spiritual foundation.

❖ ❖ ❖

The river of gladness flows free through the lands
Of mercy and goodness and peace.
Good thoughts are its ripples, true words are its sands,
And never its current shall cease.
As crystal its clearness, as music its flow;
It reflects the blue heavens above.
As we lave in its waters, rejoicing, we know
Its source is in infinite Love.

MINNA MATHISON.

Editorial

"Unifies men and nations"

SOLOMON is commonly accredited as one of the wisest of men, and it was doubtless out of his own experience that he evolved this bit of practical wisdom, "A soft answer turneth away wrath,"—one of the best known, most frequently quoted, and yet least acted upon of his proverbs. The reason for this, perhaps, is that to human belief, while conceding the truth of this saying, preaching is held to be much easier than practice.

The counsel voiced by the prophet Isaiah is along the same line: "Come now, and let us reason together, saith the Lord;" but this reasoning process to which we are invited cannot be made effective if those who should "reason together" are not courteous, considerate, and Christian, rather than angry, dictatorial, and unchristian, and this applies to nations as well as to individuals. Indeed, we may reasonably ask how many of the wars which have stained the pages of history would have been prevented had the wisdom of Solomon prevailed, and had those concerned preferred to "reason together" instead of forcing conclusions, based, not upon the good of all mankind, but upon personal prejudice and angry intolerance, unmindful that he "who overcomes by force, hath overcome but half his foe."

Perhaps the same impression prevails with nations as with individuals, that a "soft answer" is an indication of a weak or invertebrate personality; but this is not true. "The truth is always the strongest argument," wrote a pagan sage, and the hand of iron grasps none the less firmly when encased in a velvet glove. As a celebrated English divine cleverly counseled his students: "If you are drawn into a controversy, use very hard arguments, but very soft words."

The bringing in of the reign of universal peace is one of the great world problems of the day, and the necessity for more definite steps in this direction is greatly emphasized by the lamentable exhibition of military force to which Europe has now committed itself. The war which is now in progress shows there is much yet to be done; and until the problems which arise from time to time in the affairs of nations in their relation to other nations are viewed from a less personal and selfish standpoint than that from which they have been viewed, the full measure of peace cannot be expected.

Jesus said, "Seek ye first the kingdom of God, and his righteousness;" and more specifically quoted, in answer to the lawyer's question as to which was "the great commandment in the law": "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets." There can be no question, if these two great commandments were to be followed with understanding, that peace would speedily prevail. That Christian Science is helping to usher in the blessings of universal peace is the claim of its followers, and that it is following the teachings of Christ Jesus in this regard is apparent in that close bond of brotherhood which makes Christian Scientists "citizens of the world." Mrs. Eddy has definitely stated the teaching of Christian Science on this subject, and the Principle on which it is based, in the following passage from our text-book (Science and Health, p. 340):—

"'Thou shalt have no other gods before me.' (Exodus xx. 3.) The First Commandment is my favorite text. It demonstrates Christian Science. It inculcates the triunity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

ARCHIBALD MCLELLAN.

Assurance of Immortality

How pitifully desolate the mentality in which the uplook and outreach of the nobler self has been so mocked, the aspirations so snuffed out by the dispiritenings of earthly experience as to be frightened into utter silence, and the thought of death as effecting individual annihilation become the sole remaining comfort!

It is apparent that such an entry into "desert despair" could not be made by any person who had witnessed the sovereignty of Life which Christ Jesus brought into demonstration, and which lit up the otherwise darkening clouds of persecution that loomed so ominously upon the early church. Today as then the proof that existence is independent of material law, which appears when those condemned to affliction or death find freedom through the realization of Truth in Christian Science, renders possible the absolute assurance of the ancient sage, and the joyous cry is again heard in the corridors of consciousness, "I know that my redeemer liveth."

It has been said that the Master predicated immortality "as naturally as a bird predicates flight when it feels its wings;" and we do well to consider the reasons for this fact. Manifestly his certainty was grounded in his understanding of the nature of man and his relation to God, and it is just here that following him Christian Science also brings human assurance into the realm of certitude.

The intimations of immortality are abundant in nature, and Tennyson was quite right in his great lines:—

> My own dim life should teach me this,
> That life shall live forever more,
> Else earth is darkness at the core
> And dust and ashes all that is;

but he who through Christian Science acquires a concept of God, of man, and of the law of Life which frees sufferers from "the law of sin and death," has gained a basis of faith of which the poet evidently had no knowledge, though he honored Christ. The unspeakable mistake of the Christian church is in its teaching that the physical laws which provide for death, are of God, instead of demonstrating as did the Master that they are the products of false belief.

Here Mrs. Eddy makes vital contribution to Christian thought in her teaching that death and all that leads to it "must be overcome, not submitted to," before we can "rest in Truth, refreshed by the assurances of immortality" (Science and Health, pp. 76, 387). Speaking far better than he knew, a minister has recently said that "we must get our faith in immortality by living the immortal life." This living as understood in Christian Science consists in so realizing the unity of God and man, and the unreality of all that leads to death, that Jesus' promise, "He that believeth on me, the works that I do shall he do also," is blessedly fulfilled.

In revolt against undemonstrated, and as they aver unde-

monstrable, "pulpit propositions," and yet unwilling to commit their destiny to a future of utter forgetfulness, not a few of the children of culture have found a forced and altogether unnatural content of thought in that belief in an impersonal immortality strangely longed for by George Eliot when she wrote her famous lines beginning

O may I join the choir invisible
Of those immortal dead who live again
In minds made better by their presence,

This is an immortality which, as one has said, "thrusts you into death, the maw of nature, that your dissolved elements may circulate through her veins"! Such a hope can but be the reaction of a logically daring mind, which, while protesting against unlived Christian dogma, still adheres to the Christian ideal of mediatorial ministry. The countenance of such a one must be uncomforted, and its sadness can be dispelled only as he gains, through spiritual apprehension, that knowledge of God which is "life eternal."

JOHN B. WILLIS.

❖

"The seat of the scornful"

THERE are a good many phases of human thought which are regarded with much complacency by mortals, but which are nevertheless harmful to those who entertain them, and ofttimes disturbing to others who may be influenced by them. In the first psalm we have a fine presentation of the ideal man, who is said to be known of God and protected by Him. Such a one "walketh not in the counsel of the ungodly, . . . nor sitteth in the seat of the scornful." The last might be regarded as a rather negative virtue did we not find numerous other references to the same subject in the Scriptures. Isaiah says, "The scorner is consumed, and all that watch for iniquity are cut off." In Proverbs we read that "scornful men bring a city into a snare." It is also interesting to read Tennyson's words in the "Idyls of the King":—

No knight of Arthur's noblest dealt in scorn;
But if a man were halt or hunched, in him
. . . . . .
Scorn was allowed as part of his defect.

The tendency to be scornful toward one's fellow beings indicates narrowness of nature, and proves that the one who indulges it is not looking toward, but away from, God's idea, whereas it should be our constant effort to find this idea reflected both in ourselves and in others. It may be that the spiritual qualities which characterize God's likeness shine forth very faintly from human consciousness in many cases, but it is cheering to know that "matter disappears under the microscope of Spirit" (Science and Health, p. 264), and when we behold the real man as thus revealed, the man that God knows, we shall love and reverence him, and so help the erring mortal to find himself.

Time was when many regarded with scornful merriment the foibles of their fellow men, even when they believed that these moral weaknesses were dragging them down to perdition. Such a mental attitude has, however, a scathing rebuke in the story of Noah and his three sons. We read that he indulged in wine and that his son Ham spoke of it to his brothers, evidently in a condemnatory way. Shem and Japheth then went and with the utmost delicacy protected their father from the unfeeling and scornful scrutiny of any who might pass, and thus gained for themselves a blessing. It is a coarse nature which mocks at the weakness of any one, and a pure and strong one which refuses, like St. Paul, to know any man "after the flesh." The apostle reminds us that "if any man be in Christ, he is a new creature." If he is like Christ he will be merciful in all his judgments of others, knowing full well what it costs to "put off the old man with his deeds."

No one knows better than the faithful practitioner in Christian Science, how impossible it is to heal the sick and the sinning, as Christ Jesus commanded, and at the same time to sit "in the seat of the scornful." In undertaking this holy work we must look away from the false mortal concept and know that God's child is neither sick nor sinful. Our Master did not shrink from contact with lepers, or even with the adulterous, because he knew the utter nothingness of all that is unlike God and the strength and beauty of all that represents Him. Although the mourners in Jairus' household "laughed him to scorn" when he did so, even death was utterly denied by Jesus. He proved the truth of his doctrine that Life is all and death is naught.

This same truth is taught today in Christian Science, without any reserve, and yet, as our Leader asks (Science and Health, p. 55), "Does not the pulpit sometimes scorn it?" It rests with us, however, to manifest more and more that love for God and all His ideas which finds delight in God's law and meditates upon it day and night. Thus we shall be deep-rooted in Love, and, unwithered by scorn, shall bring forth our fruit in its season.

ANNIE M. KNOTT.

Admission to Membership in The Mother Church

The next admission of candidates will be **Nov. 6, 1914.** Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before **Oct. 14, 1914.**

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

Among the Churches

Current Notes

OAK PARK, ILL.—At half-past six in the morning on Tuesday, June 30, there gathered a little group on the northeast corner of Oak Park avenue and Ontario street, to attend the ceremony of the laying of the corner-stone of Second Church. The church building was started June 1. The auditorium will seat a congregation of eleven hundred people without the obstruction of a single pillar in the upper auditorium. The Sunday school below will accommodate four hundred children.

Oak Leaves.

HEMPSTEAD, N. Y.—Four years ago a number interested in Christian Science held their first service in this village. A little later, a reading-room was opened; then followed the organization as a society, the opening of a Sunday school, the holding of Wednesday evening services, and now they are incorporated as First Church of Christ, Scientist.

Hempstead Sentinel.

CONNECTICUT.—The committee on publication has distributed 18,738 pieces of literature for the year. A summary of the distribution for the same time, as reported by sixteen fields, makes a total of 46,965 pieces, showing a grand total for the state of 65,703 pieces of literature.

Committee on Publication.

SEATTLE, WASH.—Official announcement of the opening of the new First Church of Christ, Scientist, June 7, is contained in a communication to the press signed by Charles A. Griffith, president of the board of directors. The announcement reads: "The edifice is practically completed, and the first services will be held in the completed structure on June 7. The church is not ready for dedication, as it is not fully paid for. In order to complete their building, the board of directors issued bonds several months ago to the amount of eighty thousand dollars, half of which are still unsold. These bonds are secured by a first lien upon property valued at more than two hundred thousand dollars, and bear 7 per cent interest. The bonds are to be retired within a period of ten years, and not until this is accomplished, and every obligation met, will the church be dedicated."—*Seattle Times.*

RICHMOND HILL, N. Y.—Dedication services in First Church of Christ, Scientist, of Richmond Hill, were held July 26. The building is located in Greenwood avenue, between Jamaica and Lexington avenues. It has a seating capacity of two hundred. The property is worth twelve thousand dollars.—*Brooklyn Standard Union.*

PORTLAND, ORE.—The directors of Fifth Church of Christ, Scientist, yesterday [April 1] filed articles of incorporation in the county clerk's office.—*Portland Oregonian.*

The Lectures

Medford, Ore.

Willis F. Gross lectured on Christian Science at Page Theater. Mayor M. Purdin, in introducing the lecturer, said in part:—

I have made some little investigation into Christian Science, and one thing impresses me very much, and that is, the profound peace that seems to fill the lives of those who believe and practise the doctrines taught. They seem to be above and away from the petty trials and troubles that vex the lives of some of us on the outside, and for that reason, if for no other, it would seem to be good for all of us. Those who believe the New Testament, must be convinced that the Master, when on earth, performed many acts of healing the sick, and that his disciples had the power to do those things. Somewhere in the dark and gloomy days of a gray and hoary antiquity this power was lost, or if not lost, was permitted to fall into disuse, until in the days of the nineteenth century it was again called into use and proclaimed to the world by Mrs. Eddy, and has since been practised by her followers.

Medford Mail Tribune.

✦

Seattle, Wash.

Orison J. C. Dutton, in introducing Prof. Hermann S. Hering, who lectured on Christian Science, said:—

Your presence here clearly indicates the important fact that in this city, as throughout the civilized world, thinking people are eagerly seeking to learn more on the subject of Christian Science, for out of the melting-pot of centuries of religious strife, creeds, beliefs, and persecutions, comes this ever-practical, demonstrable truth. For many years I was a scoffer at what I understood Christian Science to be, and had I been told ten years ago that some day I should make remarks in public in favor of this subject, I should have replied emphatically: "Never! Not I!"

About five years ago I was in attendance at a lecture given in this city by one who claimed to be able to expose the teachings of Mrs. Eddy as false and blasphemous. The whole discourse appealed to me as unfair and unjust, tearing down the beliefs of others, giving nothing of comfort or help in their place. I determined then and there to investigate for myself, with the result that every hour of my life is one of gratitude for that decision.

In our family of six many benefits have come to us through the application of the Principle of Christian Science, and it has been applicable not only in a physical and a spiritual way, but in a business way, solving my daily problems and lifting me out of the bondage of fear and limitation. The commercial world is sick with fear, and the understanding of the source of supply heals this sickness. Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."—*Correspondence.*

❖

Memphis, Tenn.

Atty. H. B. Anderson, in introducing Bicknell Young at the first of two lectures on Christian Science in the church edifice, said:—

I feel that it is peculiarly inappropriate for me to introduce the speaker of the evening, for the reason that I am totally ignorant of the teachings of your church. My mind is so limited that I am a most crass materialist, and the spiritual nature of your doctrines is beyond my grasp, but for the Christian Scientist as an individual I have the highest admiration. In a community where one third of the conversation is about the deplorable state of the speaker's liver, and the other two thirds is about bad business conditions and the excessive heat, coldness, wetness, or dryness of the weather, the serene countenance of the Christian Scientist shines forth like a beacon-light on a dark and stormy coast. Experience teaches us that at least ninety per cent of the ills that humanity suffers from is purely imaginary, and the other ten per cent is aggravated by worry, but your Christian Scientist treads the race-course of life free from the handicap of fear and fretfulness. To him the millennium is a personal matter concealed about his person, and when the rising sun awakens him from his serene slumbers, there dawns for him each morning of his life "the day of long expectation and ancient promise."

Judged by its fruits, your church has naught to dread, since its fruits are peace and serenity for its members, and its heel bruises the head of the serpent of fear, that ancient enemy of humankind. The Christian Scientist can hear of a new disease without canvassing himself for symptoms, can sit in a draught without visions of hot mustard foot-baths, running eyes, and swollen nose; can read of the discovery of a new and horrendous germ or microbe without palpitation of the heart; can face financial loss without fear of the poorhouse, and even witness a new comet in the heavens and refrain from speculating on the consequences of a collision with the earth on which we now reside. The thousand and one little pin pricks of fear, dread, worry, and apprehension from which the rest of mankind suffer, the Christian Scientist airily waves aside as he serenely and calmly treads the allotted pathway of his life.

It may be that I have missed the real essence of your doctrines and the benefits you confer upon your membership; it may be that my view is painfully superficial, but I voice the observation of the mass of outsiders who still cling to calomel and quinine, and have a healthy respect and interest in chills, colds, and old-fashioned "rheumatics." We are frankly envious, and though not of you, we admire you.

Digitized by Google

I have another ground of admiration for the Christian Science church of Memphis. My respect for your publication committee is very real, and from month to month it keeps on growing. I notice in the papers that about once in so often some minister of another church preaches a sermon denouncing your church, and starts off with the brilliant, startling, and original epigram that "Christian Science is neither Christian nor scientific." Then next morning your publication committee, through its chairman, replies, and does it gently, sweetly, lovingly almost, but does it thoroughly and accurately, and in a workmanlike manner, with full attention to details.—*Correspondence.*

❖

Indianapolis, Ind.

Judge Clifford P. Smith delivered two lectures, one for First, and the other for Second Church of Christ, Scientist. At one he was introduced by Gov. Samuel H. Ralston, who said:—

I cheerfully speak an introductory word to you this afternoon. I am not a Christian Scientist, as you doubtless know, and I have no objection to your thinking that my lack of faith in the teaching of Christian Science is due to ignorance. Possibly this is true. I accepted the invitation extended me to appear here on this occasion, because I recognize that you are a body of earnest and progressive citizens, standing for law and order, for business thrift, and advocating, as I understand, the fatherhood of God and the brotherhood of man. While I am Governor, therefore, I shall always esteem it an honor to greet the citizens of Indiana whom I can thus truthfully characterize.

It matters not how good a man may be, there are times when he doubts whether this old world is actually growing better from a moral and religious view-point. There are times when we are all doubting Thomases; but it is well that our doubts should not rule our lives. "Hope springs eternal in the human breast," and faith extends its horizon beyond the chasms of doubt. Nothing affords stronger proof of the constantly broadening charity among men, than does the closer relation now everywhere existing among the people of different religious denominations. Tennyson spoke prophetically when he wrote,—

> Through the ages one increasing purpose runs,
> And the thoughts of men are widen'd with the process of the suns.

Let us hope—yes, let us believe—that as "the thoughts of men are widened" the world is made better.—*Correspondence.*

❖

Chicago, Ill.

Virgil O. Strickler delivered two lectures on Christian Science for Eighth Church. He was introduced on the first evening by Eli K. Stough, first reader, who said in part:—

While Christianity has ever remained the same, Christians have been groping in the darkness of a blind faith, and have been depending on medicine to heal not only disease but sin. When Christian Science was discovered and given to the world by Mrs. Eddy, the "law of the Spirit of life in Christ Jesus" was restored to Christianity, and a practical religion, healing both disease and sin, was established for all mankind.

On the second evening the introductory words of Mrs. Adele Duvall, second reader, were in part as follows:—

In behalf of this church I welcome you here this evening to hear the reason for the hope that is within the heart of every true Christian Scientist. Over nineteen hundred years ago, on the shores of Galilee, there was a man who lived and practised the Science of being. Jesus of Nazareth healed the sick, turned water into wine, fed the multitude, and raised the dead in accordance with the law of God, the law of Love. This law was observed and successfully demonstrated for a few centuries, then lost sight of through its very opposite, hate, and humanity lapsed into darkness and doubt for many centuries. Nearly fifty years ago, from a modest home in a little town in Massachusetts, Mrs. Eddy gave to the world her discovery of the new-old truth, the law of Love. It was her close communion with God that enabled her to discern the truth which the Master said would make men free.—*Correspondence.*

Testimonies of Healing

I give my testimony in the hope of helping some one who needs Christian Science as I did. I gained such an uplift after some explanation from a Christian Scientist, and through reading a lecture and a *Christian Science Journal* which she gave me, that I began to study the Bible. The first verse I saw clearly was, "Who forgiveth all thine iniquities; who healeth all thy diseases," and the thought then came to me that if this was true, God would heal me. When I had read about ten days, an abnormal growth in my stomach disappeared, and a chronic disorder of nine years' standing was overcome after all material means had failed. I had tried the different schools of medicine, besides dieting and other methods, for many years, but to no avail. I was also able to lay off glasses which I had worn over three years. I am still rejoicing in this healing, which came to me three years ago, after two weeks of almost constant reading of the Christian Science literature.

Although I came to Christian Science for physical healing, and am grateful for it, I am more grateful for the spiritual uplift I have received. The overcoming of fear has meant much to me, and it gives me great joy that I not only can work out my own problems, but am able to lead others to an understanding of this truth. The Christian Science literature and the Lesson-Sermons are of great help to me. I am thankful to God, and grateful to our dear Leader, Mrs. Eddy, for this revelation of the healing truth.

ANNA L. FOGT, Troy, Ohio.

❖

Words seem inadequate to tell of the marvels which have come to me during the last few years through a little understanding of the Science of Christianity. For eleven years I was constantly ailing, and for the last six years of that period was seriously ill, in bed most of the time, nearly always suffering intensely. The trouble began with tubercular disease of the mesentery glands, followed by inflammation of the stomach and bowels, ulceration of the liver, extreme nervous exhaustion, etc., one ailment following another until I was in despair of ever knowing health again. During this time I had thirty-four doctors, some from the continent, and had tried every remedy that my husband or I could hear of. The first to prove useless were drugs, then one after another all failed,—nature cures, electric and magnetic treatment, etc.,—until there seemed nothing else to try, and for the last fourteen months I was in bed, just waiting and hoping to die.

Finally, an unknown friend asked to see me. She came and left her copy of "Science and Health with Key to the Scriptures," asking me to read it. I agreed, feeling too weak to dispute the matter, although full of prejudice against the subject; but as soon as I began to read the book I felt every word was true. I continued with the greatest eagerness, and could not read fast enough to satisfy the craving for more understanding of what I knew to be the vital truth. After four days, when I was nearly half through the book, I felt very restless, and it dawned on me that I was feeling so much energy and returning vitality that I needed something to do. I therefore called my nurse and told her I wanted to get up. From that day, health has persistently returned, sometimes with big strides, sometimes slowly.

Constantly during that first reading I found myself laughing aloud with happiness, so unutterably beautiful was the revelation it brought me. Surely Science and Health is the most wonderful book that has ever been written, for without it the Bible, on which it is based and which it explains, has come to have but little meaning for many. It was only eight months after my first apprehension of the truth of Christian Science that I went to Germany to investigate a new system of musical education. There I had an active time, full of opportunities for learning God-reliance, for I lived with strangers and could speak no German.

It has meant much to me to be relieved from physical suffering; it has meant still more to be relieved from mental suffering, in the form of constant dread of disease and the sense of utter hopelessness and despair of ever being able to get about again and to live my life as I felt every one had a right to do. The greatest blessing of all, however, is to have in some degree a right understanding of the divine Principle on which to base all thought and action; in fact, a correct concept of God and of the truth of being. My healing has been permanent, and as I gain in understanding, so do I gain in health and strength.

Surely not since Jesus of Nazareth lived has any one done so much for humanity, or had and deserved so much gratitude from so many thousands of people, as has Mrs. Eddy. Looking back, those long years of illness seem like a horrible nightmare. Now I have begun to live, and am learning how to express gratitude and love in service to mankind.

ETHEL INGHAM, London, England.

The above is a correct account of my wife's illness and recovery.—PERCY B. INGHAM, London, England.

❖

[Translated from the German]

Our son was afflicted for a period of four years with severe asthmatic bronchitis. We consulted many physicians, also had an operation performed, and tried all kinds of remedies and methods of cure, but the only result was an aggravation of the trouble, and the boy breathed with great difficulty the greater part of the time. We decided, upon the physician's advice, to take our son to the seashore for a long stay, and although he was able to breathe freely while there, as soon as he was brought inland, the old trouble would manifest itself again. Finally, the asthma returned even after one year's continuous stay in a sanitarium at the seashore, and this caused us to be greatly disheartened.

At that time of our greatest need, when we could see no help and no way out of our troubles, we turned to a Christian Science practitioner in Hannover, and we owe the complete and surprisingly quick recovery of our son to the blessed influence of this spiritual method of healing. A few years later, when the boy was taken with severe inflammation of the lungs, we again asked for help in Christian Science. This severe attack was also healed absolutely, and our son recuperated in an astonishing way.

FRAU EMMA GUTDEUTSCH, Saarbrücken, Germany.

❖

"To those leaning on the sustaining infinite, today is big with blessings." I can fervently offer up praises of thanksgiving for understanding the great force of these opening words of the Preface to "Science and Health with Key to the Scriptures." Truly I can sing praises with all my heart. I write this testimony of gratitude for being rescued, as it were, from destruction and death, and for being given a glorious hope of immortality. This is a wonderful transformation to me, and the year 1912 will ever be inscribed on my memory as the year of great and manifold blessings. It was a marvelous experience to be led out of chaos and dark night, where the future appeared to be obscured and cloudy, whereas now I see a beacon-light of hope, which becomes more and more brilliant.

To inscribe my name to this testimony without saying

Digitized by Google

what has brought about this change, would rob me of the greatest pleasure. I now perceive that to know and understand God, infinite good, so illumines the horizon of one's life that he can in great measure unlock the door of mysteries and can give answer to all seeming problems which encompass daily experience. My trouble was not physical, but I was in bondage to the thousand and one ills of the human mind; living in mortal fear of some calamity or crisis happening, if not today then tomorrow; going through the world aimlessly, as it were; living this apparently desultory life "to the end of the chapter," because by the very condition of things we must live without knowing either the why or the wherefore. To me *this is the most abject misery that ever enshrouds the mind of any human being, and I thank God from my heart that the veil has been lifted, and* "whereas I was blind, now I see." *All of the foregoing shows, as surely as night follows day, that the past was all error, a myth.*

Most of us, from our inherent nature, crave what we should have; and if we would only place our finger on our lips, as our Leader tells us, and think of our blessings, the doing of this daily would create in us silent gratitude, which would mean the reflection of the glory of our Master, and we should "see him as he is." Mere words are inadequate to express my feelings at this period. I can only state in a word that all things have been recreated and made new to me through the understanding of Christian Science, and the most wonderful thing is that there is no turning back. The power of Christian Science is great, and the Bible, interpreted in its light, will become a potent force to bring together the diversified sects and religions. May the day hasten of such a consummation!

My prayer is that the spirit of the brotherhood of man may encircle the earth; and may the spirit of our Leader's poem "Feed my sheep" (Poems, p. 14) enter the hearts of all humanity.—JAMES F. SMYTHE, San Diego, Cal.

❖

I am very grateful for the healing power of Truth as manifested in Christian Science. The proof of God's all-power which came to me was the healing of a severe tremor of the hands, at times of the entire body; and the heart was affected to such a degree that I was greatly troubled about getting to sleep because of the loud beating. The doctor said this was all caused by a goiter. One physician urged an operation, while another advised me to remain in bed for weeks, to see if that would not reduce the heart action. About this time I began Christian Science treatment with a practitioner, and felt that I was helped; but later I was led to take treatment from another practitioner, whose simple explanation of the truth enabled me to gain a clearer understanding, and I soon began to feel much better. After having treatment about two months I had occasion to go into a much higher altitude, but I did not experience any unpleasant effects. I can truthfully say my healing has been permanent. For this and for many other blessings I am truly grateful.

SARAH E. GREGORY, Beloit, Wis.

❖

Our family has been interested in Christian Science for nearly three years, and we have been benefited in many ways by reading Science and Health. I wish to give a few cases of healing, as I think thereby some other sufferers may be led to the truth that will make them free. My brother, who is a carpenter, was at work on a building in the summer of 1912 when he fell, and broke his arm in two places. The doctor set it; then my brother came to my house and had Christian Science treatment. He was soon able to go back to work again, although the doctor said it would be several weeks before he would be able to use his arm. My brother also had a stomach trouble which was supposedly due to a growth, but it disappeared while the practitioner was giving him treatment, and a bowel disorder also was healed.

My mother was taken with acute lung trouble when she was away from home and was a very sick woman. A Christian Science practitioner was sent for and gave her two treatments. The next morning she was up and dressed, and in one week's time she was able to come home. In the early fall months she fell and seriously injured her hip, so that she could not stand. Again the practitioner was called to our home, and in two weeks my mother was able to be about. She is very thankful for the benefits she has received through Christian Science. She is over seventy-three years old and loves the Christian Science literature. We have Science and Health and the *Quarterly*, and enjoy the Lesson-Sermons very much. We always feel benefited by them.

MRS. H. BURGESS, Baldwinsville, N. Y.

❖

With a heart full of gratitude I wish to give my testimony in order that it may help some one else. Until a few years ago I was a great sufferer from chronic headaches (which recurred so often that I was never entirely free from pain), also from bleeding at the nose, which was very annoying. I had also a growth on the back of my head, had suffered from catarrh since my childhood, and every spring the change in weather caused me many sleepless nights. Fear of lack of supply was ever present.

Between six and seven years ago we came to the United States from Germany with a desire to have a more independent life. Nearly one year after our arrival here I learned to know about this wonderful truth, Christian Science, and after the first attendance at a Sunday service at Third Church of Christ, Scientist, in Chicago, I knew that I had lived entirely wrong. I told my husband about it, but he did not care much. Nevertheless, I began to work quietly to secure a copy of that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, our beloved Leader; and it was proved to me before I had read it that "thoughts unspoken are not unknown to the divine Mind" (p. 1), for the following week my husband purchased the book for me, although he was earning very little at the time. From the first Sunday service I had the understanding that God, Mind, is perfect in every way. Words fail to express my grateful feelings for the quick and wonderful change effected. All I cared for was to read this book, no matter with how great difficulty, and after reading for about a month I was healed of all the ailments from which I had been suffering. My husband could not help seeing this, and he gradually began to be interested.

In the same year, in the month of March, we purchased a little home, although we had only a small sum of cash in hand; but with the understanding that the real supply is spiritual and not material, we began to live a far different life, and tried to love our neighbors as ourselves. My daily prayer was for meekness and love, that I might live so that others would see the truth and walk out of Egypt into the promised land of spiritual understanding. In the following June my husband was promoted to a better position by his employers, and had more than double his former wages. He was also healed of chronic bowel and stomach disorder, entirely freed from the desire for liquor and tobacco, and is today a well man. He is an usher in Eleventh Church of Christ, Scientist, in this city. We had the help of a faithful

Digitized by Google

practitioner only once, and that was after being one year in Christian Science. Error in the form of blood-poisoning manifested itself in a severe form, but this was overcome in a very short time. Since then I have been free from ills of every kind, and have been able to give to others "a cup of cold water" in Christ's name.

With deepest gratitude I can say that my healing has been permanent. It is now five years since I was healed, and I have never noticed the slightest return of my troubles. On many occasions I meet friends who have not seen me for several years, and every one remarks how healthy and happy my appearance is. I am thankful to God, and indeed grateful to our dear Leader for giving us our wonderful text-book, "Science and Health with Key to the Scriptures." I try to live daily more unselfishly and purely, so that I may be worthy to be called a Christian Scientist.

ELLA ZUGENBUEHLER, Chicago, Ill.

❖

As I had trouble previous to the birth of a baby, I went to see our physician, and after examination he said that on account of injuries at a former birth, material supports would have to be used. This was done, but even then the birth was premature, and the child lived only a few days. The doctor said I would have to undergo an operation, but this was not done.

Since taking up Christian Science I have had a healthy, happy girl born, and I never even went to see a doctor, but had Christian Science treatment for some time before the little one's arrival was expected. At the time of the birth there were with me my husband, my mother, and a practitioner. I was up a little while the third day, and from that on as I chose. I got along the best I ever did, taking everything into consideration. I have had no return of the old trouble, and have felt well almost every day; indeed, I am doing the work for our family of five in all, with the help of my husband and children.

MRS. H. L. CASE, Bellingham, Wash.

❖

Five years ago, when I first had occasion to turn to Christian Science and was healed of a stomach disorder from which I had suffered for years, I thought I felt grateful. From that time until the present, my experience has been varied. Every human need has been met through Truth, and I have lacked no good thing. I have also had the wonderful blessing of being able to help others; and I can say that I have indeed been born again.

All this would make any man feel grateful, but there was a test awaiting me which to sense might well bring forth the agonizing cry, "My God, my God, why hast thou forsaken me?" My wife was suddenly taken from me under the most painful circumstances. I was called to my home to find that her clothes had taken fire, and on account of the injuries received she had quickly passed on. I knew that if Christian Science meant to me all that I had thought it did, this was the time for me to prove it. I tried to realize that none of God's children can ever die, and that the evidence before me presented only what mortal mind had outlined. All the life, the love, the individuality that ever had been, still existed, and to find it I must rise to a higher plane of thought. I saw the truth of what Mrs. Eddy says on page 264 of Science and Health: "The crude creations of mortal thought must finally give place to the glorious forms which we sometimes behold in the camera of divine Mind, when the mental picture is spiritual and eternal. Mortals must look beyond fading, finite forms, if they would gain the true sense of things."

The sense of relief I then felt cannot be expressed in words. The next few days proved even more conclusively what a wonderful healing balm Christian Science is, for though I was the recipient of many messages of consolation and sympathy, they did not and could not heal grief, although I knew that they were the highest expressions of love the human heart could offer.

I hope that this may reach the eye of some one whose sorrow may be lessened as he remembers Jesus' words, "Lo, I am with you alway."

WILLIAM J. FLAMMER, Elizabeth, N. J.

❖

Three years ago I became interested in Christian Science through attending a Wednesday evening meeting. Shortly afterward I was taken seriously ill with what was pronounced peritonitis and other complications, and the doctor said I would have to be operated on in a few hours. My husband, however, sent for a Christian Science practitioner, who had been a trained nurse for a number of years before coming into Science. She explained so clearly how all things are possible with God, that I decided to trust myself entirely to Him. While she was treating me I fell asleep, and when I awoke I knew the mental surgery was done, for the swelling had disappeared and I felt the healing power of Truth. We were deeply grateful for this proof of the truth of Christian Science, and we felt that if such suffering could be overcome through its teachings, it was certainly worth investigating. We therefore began to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the Bible.

I am glad to state that my healing has been permanent. Since then we have had many demonstrations through the realization of the truth, but best of all is the spiritual uplift, and the desire it creates to know more of God. Constant patience and faithfulness are required, but it is only in the degree that we are mindful of the spiritual things that we can expect to be helped physically.

Words cannot express my gratitude to Mrs. Eddy, who has given us our text-book, which shows us the way to right living and right thinking, and meets humanity's needs from a practical, intelligent standpoint.

MARGARET T. KRAMER, Philadelphia, Pa.

❖

I wish to testify to the healing of a very painful and severely injured nose and face. While walking very rapidly in a garment factory where I was employed, I ran into a shaft with great force and was thrown with violence across it, striking my face on the floor. When I was able to raise my head I noticed blood flowing from my nose most profusely, and my first thought was that I was badly injured; but I was kindly assisted by my fellow employees until I could ask help from my employer, who was a Christian Scientist. All the time I suffered intense pain. I am pleased to state, however, that as soon as treatment was given in Christian Science the blood ceased to flow, the pain subsided, and in a short time I was perfectly free. Truly Christian Scientists know, as set forth on page 424 of Science and Health, that "accidents are unknown to God, or immortal Mind." I may add that the thought was voiced by an employee that doubt was entertained of my recovery, but within less than half an hour I was able to resume my work; and in less than one week all evidence of discoloration had disappeared.

I am truly grateful for this and other healings in Science, some of which have been slow but none the less sure; and I am thankful to God for the privilege of knowing of this healing power.—MARY AMBROSE, Indianapolis, Ind.

I have enjoyed many benefits in Christian Science. One case of healing was quite vivid to me as well as to those around me. Upon arising one morning, about December, 1913, I found that I had the manifestations of mumps. I was able to clear my thought quite well from the fear of consequences, and as I was expected to be at my office as usual, I called up a Christian Science practitioner to have her treat me and ask her advice as to whether it would be better for me to go to the office or not. She lovingly advised me to telephone to my employer and tell him about it, saying that if he was willing, I could go to my work, as I had no pain whatever. He gave his consent at once for me to come. He and his wife were not interested in Christian Science and did not know much about it, they said, but they thought it was quite wonderful that I could take care of my work as usual and not be sick, as cases of severe illness with the same ailment had come to their notice.

I am very grateful for the loving help which comes from the understanding of divine Principle, God, as taught in Christian Science.—ANNA O. GIBSON, Seattle, Wash.

❖

I wish to express my deep gratitude for Christian Science. The change in my family is wonderful since we have learned the real meaning of this teaching. I have been healed of many different complaints, but to me the most remarkable was the healing of deafness. I could not hear a word, but after going to a Christian Science practitioner I found one morning, when I awoke, that I could hear as well as when I was a child.

I have learned that God is the source of all supply, and for this I am very thankful to God, and grateful to Mrs. Eddy.—MRS. A. D. COVEY, Los Angeles, Cal.

❖

I have long wanted to express my gratitude for healing, and recently have felt impelled to do so. During the winter of 1909 I was attacked with a very severe bowel disorder. I was a student of Christian Science at the time, but felt that my understanding was not sufficient to meet my need, so I called a practitioner. My healing was slow, but I am thankful now that it was so, because of the spiritual growth during this time. I look back with joy unspeakable to the day that Christian Science was presented to me. I am very grateful to all who have helped me, and I hope to show in my life some of the thankfulness which is in my heart.

S. LOUISE BARTON, Portland, Ore.

❖

My husband was healed in Christian Science after many years of suffering. Although I knew nothing about this healing religion, I pleaded with him to try it as a last resort. During his illness I became sick mentally, and told my daughters that I thought I was insane, as at times I manifested symptoms of mental disturbance in lapse of memory, with severe pains and distress; but with one treatment in Christian Science this condition was entirely overcome. A distressing sensation was healed absolutely while studying the Lesson-Sermon with my husband. My son was healed in three days of fever. He had all the symptoms of typhoid fever and had not eaten any food for a week, but after the first treatment he asked for something to eat. In three days he was all right. Another son was healed of a severe nervous disorder in two treatments. Discord has also been overcome to a great extent, and words cannot express our thankfulness to God for Christian Science, and our gratitude to Mrs. Eddy.—KATHERINE JONES, Chicago, Ill.

From Our Exchanges

[The Christian Intelligencer]

We are not strangers to the ideal of the great apostle. The secret of his blessedness and perennial spiritual vigor and hopefulness is conveyed in the words, "To me to live is Christ." Paul found in Christ the answer to all his needs and scope for all his powers. The problems of life and destiny, as they struggled in Paul's soul for solution, found answer in Christ. And when he saw the light and opened his soul to it, he found himself in the sweep of mighty purposes, and learned that Christ's call to every man admits him into partnership with God in the regeneration of a world. It is just this which appeals to every right thinking man. We want an answer to some of the questions which life presses upon us. We want at least a satisfying faith in which we can rest. We want work, also, worthy of our powers. Paul found all he wanted in Christ and so he got the spirit which never grows old.

[The Living Church]

Perhaps we should all arrive nearer the fulness of truth if we made it a rule to see the other man's right and our wrong; for we are far too apt to think ourselves right and the other wrong—all of us. And how much we should learn! Jerusalem was on the eve of her fall, not because there was no truth in her, for there towered the temple erected to the glory of the living God, but because Jerusalem could not learn that she knew only in part, or perceive that all outside of Jewry was not altogether wrong. She rejected the Christ because he seemed to contradict all that she held as true, when he complemented and made complete the truth that was hers. She was not wrong,—that was not the trouble; she believed that Jesus was wrong, and she failed to receive all that he had to offer. "For we know in part, and we prophesy in part. But when that which is perfect is come, then that which is in part shall be done away."

[The Christian Register]

Old things have passed away, and, behold, all things have become new. Newness of life, freshness of hope, a great desire to explore a real world and a glorious universe, have made religion desirable and theological science an exhilarating study. We know almost nothing about life and the multitudinous forces that play upon it, but the difference between the old time and the new is amazing. Among things banished is fear of the unknown, dread of looking too closely into the secrets of the divine order lest haply we should commit some crime against the Holy Ghost and be condemned for analyzing the decrees of the Almighty. Now the way is open for all honest seekers after truth, and the results of exploration are rich rewards, such as fire the imagination of heroic souls and make of life a continuous revelation of goodness and mercy at the heart of things.

[The Continent]

Not all the materialism of this age is outside the church, nor are the institutions of Christianity itself immune from that idolatry of intellect which rates the mind's knowledge above the heart's experience. The moment that a church establishes schools of higher learning, it is sure to incur the temptation which Mr. Burroughs says has misled civilization,—the temptation to forsake the spiritual faculties that appreciate God while sharpening all too industriously the faculties that accumulate knowledge or accentuate skill. And no conscientious scribe who has traced the trail of this subtle

Digitized by Google

tempter would dare affirm that all the Christian colleges of the land, or even all the theological seminaries which the churches maintain, have successfully fortified themselves against such an enemy.

[*The Christian Work and Evangelist*]

What this world needs most today is not more commerce and larger navies and heavier guns, but more men and women with open soul windows outlooking on God and studying the possibilities of human life. This is the age of the spiritual, and God is coming closer to souls for larger self-revelation. The age is propitious; a new evangel must be urged, a new type of life must be lived. Is not truth shining forth with increasing brilliance? Are not the voices of heaven and earth strangely commingling? Is not knowledge increasing marvelously? Is there not a growing heart-hunger for better living? Are not old creeds breaking up? Is not the Christ personally attracting men as never before? Surely the age is evolutionary, and we must take higher vantage-ground.

[C. Hanford Henderson, quoted in *Chicago* (Ill.) *Post*]

In my own beautiful church a man must believe the creed, formulated in 325, and the thirty-nine articles, promulgated in 1563. These are impressive and important documents, for they proclaim what some of the church fathers at a given date believed; but the attempt to impose their literal acceptance upon the present hour is the impossible task of attempting to stop the creative onflow of time. Any church with a definite, specific creed is impossible to a modern religious boy. He cannot promise to believe anything, for belief is spontaneous, flexible, expansive; and when he starts out to know God he must be ready to travel wherever the quest leads him.

[*The Advance*]

When the reunion of Christendom comes, it will not be brought about by each denomination shouting its own tenets and then making grudging and parsimonious concessions by way of compromising, each one going reluctantly a mile, while the others insist that it shall go twain. Our fathers were very sure that they were right in the things concerning which they differed from each other. Possibly some day we shall discover an equal confidence that we are right in the things wherein we mutually agree. We venture humbly to suggest that hereafter overtures on behalf of Christian union proceed upon this hitherto untried basis.

[*Zion's Herald*]

There is something about the unassuming and every-day efforts of well-meaning people, which not infrequently arrests attention and makes of them veritable guide-posts to wholesome endeavor and right living. Would that more of us who are persistently longing for enlarged opportunities, could have our eyes opened and our hearts attuned to the far-reaching effect of much that is commonplace. Perhaps, if this were so, we should find a refreshment in our daily tasks which we now count as toil, and it might be that others would turn from us heartened and inspired by the tender and loving spirit in which we have performed some simple deed.

[*The Christian Commonwealth*]

Christianity is alive, and has a mission to the modern world. We must at all costs free it from what is useless and erroneous in its heritage of the past, in order that what is true and valuable in it may be able to do its proper work.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 15 cents; fifty copies or more, 13 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman P. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.60; six months, $1.30. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

If Brazil were to engage more extensively in the cultivation of cotton and rice, this step would help materially to solve its economic questions, according to investigators who have been busy with the subject for months. Cotton is grown almost entirely in the eastern states. Ordinarily very primitive means of planting and working the cotton crop are employed by the farmers, who have only small holdings. As rice is one of the important articles of food in Brazil, it became an essential matter to encourage home production, and toward that end a high protective duty was imposed on importations. Rice growing has increased so that it supplies a considerable part of the home demand. It is raised mostly on a strip of land fifty to seventy-five miles wide along the coast, and also to a certain extent along the rivers. The annual production amounts to about eighty thousand tons, and in a recent year some sixteen thousand tons additional were imported, chiefly from India.

Five million acres of government land in the western provinces of Canada, now being surveyed by the department of the interior, will be opened for homesteading purposes in a short time. This work is being done in widely separated districts, from northern Manitoba to the valleys of British Columbia. The chief scene of activity in the province of Alberta is in the Peace river district, north of Edmonton, where forty-five townships are being subdivided into quarter sections of one hundred and sixty acres each. This will provide sixty-four hundred homesteads, or a block of land more than forty miles square. In "the Peace river block," a tract of three million five hundred thousand acres, surveys are being made in the vicinity of Port St. John and Hudson's Hope, six hundred miles by road from Edmonton. This land was conveyed to the dominion by the province of British Columbia.

Plans have been formulated by the General Federation of Women's Clubs for beautifying the Lincoln highway by planting trees, shrubs, and flowers along its course from ocean to ocean. This important piece of work will be accomplished by the Lincoln way tree committee, which will consist of the chairman of conservation of the Federation of Women's Clubs of thirteen states through which this highway passes. They will be assisted by the women's clubs throughout the respective states in the planting of the trees. It is estimated that it will cost twenty-five million dollars to accomplish this work, several millions of which have been promised.

President Wilson, in a special address to a joint session of Congress, asked imposition of internal revenue taxes sufficient to raise one hundred million dollars annually, because of the effect on revenues resulting from the European war. The President was cheered for several minutes when he entered the House chamber, his reception being more demonstrative than when he last appeared, which was to read his message on Mexico. The galleries were crowded. This was his seventh appearance to read one of his messages.

Post-office officials anticipate an expansion of the parcel post as the result of an advertising campaign at state and county fairs. Postmasters established parcel-post exhibits at the fairs, emphasizing the value of exchange between consumers in the city and producers on the farms. One of the features of the exhibits was the mailing containers. Officials said much still remained to be done to impress upon shippers the necessity for properly packing food shipments.

Oct. 1 is the date fixed by General Carranza, provisional president of Mexico, for calling a general convention in accordance with the plan of Guadalupe and the compact of Torreon. At that time the governors of the various states, military commanders, and one delegate for every thousand men under arms, will meet at Mexico City to name the day for the general election and decide on platform reforms.

A port development project, which by the time it is completed will have cost in the neighborhood of fifty million dollars, has been begun at Halifax, Nova Scotia. In addition to this, upward of ten million dollars will be expended in new buildings and other civic improvements during the next two or three years.

An important treaty, by the terms of which the United States gains control of the waters of the harbors of Colon and Ancon, in the Canal Zone, together with certain other valuable rights, has been signed by William Jennings Price, the American minister, and Ernesto T. Lefevre, Panama secretary of foreign relations. The new convention has been under negotiation for the last four years.

Preliminary approval has been given by the city council of Salem, Mass., to an order appropriating two hundred thousand dollars for the use of the rebuilding commission in restoring public buildings that were seriously damaged in the fire and in the reconstruction of streets in the area affected.

The total output of iron ore in the United States last year was the largest of any previous period. The crude iron ore mined in the United States in 1918 amounted to 61,980,487 long tons. The iron ore shipped from the mines in the United States in 1918 amounted to 59,643,098 long tons, valued at $130,905,558.

It is now conceded that the seaman's bill, before the United States Congress, has been disposed of for this session. It has passed both houses, but the Senate will not consider the House amendment, because senators think the bill would add to the difficulties of building up the merchant marine and might bring disputes with other nations.

The federal financial year of the commonwealth of Australia closed on June 30 with an accumulated surplus of £1,108,328. The revenue for the financial year was £21,733,450. The principal items of revenue were customs and excise, £14,973,554, post-office, £4,514,318, and land tax £1,869,908.

German universities are to be open to citizens of neutral countries, but representatives of belligerents will be refused entrance, according to a ruling of the German government. A great number of American students now in Germany expect to enroll when the universities open in the autumn.

Directors of the Chicago grand opera company have announced that there will be no performances the coming season owing to the war in Europe. The Boston grand opera will also be omitted this season, and the Boston Symphony Orchestra may not give any concerts.

The National Tax Association has just held a conference in Denver, Col., to discuss the enactment, interpretation, and administration of tax laws. Educators, public officials, and students of economics and public finance, as well as representative taxpayers, participated.

The New South Wales government has sent a fisheries expert to Europe in order to collect information to guide the government in carrying out its plans for the working of trawlers and the running of state fish depots in New South Wales.

The acquisition by the Colorado State Agricultural College at Ft. Collins of sixteen hundred acres of government land in connection with the forestry department has been consummated.

France and England have expressed to the United States their disapproval of certain phases of the government plan to build up a merchant marine through the purchase of ships.

When the District of Columbia federal grand jury completed its reports last week, there were thirty-one food dealers indicted under the Sherman antitrust law on counts charging price fixing.

An estimate of the capital invested in nitrate mining in Chile, made a few years ago, gave $136,500,000 as English interests, $51,500,000 as Chilean, and $16,500,000 as German capital.

An imperial edict has been issued changing the name of St. Petersburg, Russia, to the slavonic form of Petrograd, by which it will in future be known.

The Chilean government has placed with a home manufacturer an order for railroad equipment valued at more than eight million dollars.

The members of the United States Federal Reserve Board hope to open the new banking system for business by Oct. 1.

Argentina buys annually about fifteen million dollars' worth of pine lumber, two million dollars' worth of it coming from Canada.

President Wilson has signed the bill establishing a bureau of emergency government insurance for shipping.

Effective Testimony

GEORGE H. MOORE

THE question is sometimes raised as to what motive should be dominant in the thought of Christian Scientists in support of the weekly testimony meetings. So essential to the growth of Christian Science are these meetings, so accurately do they register the spiritual status of the church body, that adequate mental preparation for them on the part of the church-membership is surely vital.

One attitude of thought not uncommonly indulged, namely, that the responsibility for these meetings is in God's hands and we therefore need make no preparation for them, may safely be eliminated as dangerous. It is true that the meetings are in God's care; but it is to be remembered that while God's work may be said to be forever done, our work as channels for its manifestation is by no means completed. In a certain sense, His work for us was done when we were healed of sickness and sin, when divine Truth redeemed us from sorrow and fear; and the meetings have been appointed that we may tell what God has done, that out of the richness of our experience, the fulness of our gratitude, we may disclose to others the operation of divine law. Responsibility for this, our part, does not devolve upon God, although He does supply incentive, strength, and reward for the service we may render. Everything is done for us that can be done, except only the actual paying of our debt of gratitude.

This debt can never be discharged vicariously. Neither the text-book of Christian Science, nor the manual of church government, provides, by church vote or by general consent, for the designation of a certain faithful few who shall, like Horatio at the bridge, stand off the lurking silences which sometimes would punctuate these meetings. Though rotation in office when rightly understood constitutes an effective means for enlisting the broad interest and cooperation of the church-membership, it implies much more than the limiting of the term of service of the church officers. It means participation in all church activities by all church-members. It assures equalization of opportunity for all, and in like measure it demands distribution of responsibility upon all; and no individual member should desire exemption from its moral appeal. Failure to live up to this basic law of our church polity would inevitably result in unequal tasks, in one-sided, non-symmetrical growth of the church body; in reversion to the supposedly outgrown error of vicarious sacrifice,—the spiritually timid and unresponsive members of the church being tempted to unload duties in which they should share, on to the shoulders of those who are more awake to the demands of the situation.

Equally perversive of the divine provision is the disposition to overlook or excuse the inertia of silence which tends to reverse or even to nullify the proper message of these meetings. Such silences are quite likely to be interpreted as giving evidence that Christian Scientists possess neither the rich experience nor the abundant gratitude which the meetings are obviously designed to proclaim. The quiet of home supplies abundant opportunity for prayerful silence, and more faithful resort to this communion previous to the hour of meeting, a recounting to one's self of the reasons for gratitude which are multiplied in every Christian Scientist's life, would go far toward dispelling the misplaced quiet of the meeting itself.

The natural and healthy mental return for benefits received is gratitude, a quality of thought as quick and spontaneous as the turning of the flower toward the sun, or the up-spring of the grass in response to the refreshing shower. It is impossible to think of gratitude as a laggard, hesitant, or delinquent state of mind. It tends rather to overflow its bounds and cannot be confined or repressed. The Christian Science testimony meeting is a natural arena for the voicing of gratitude, not primarily for the benefit of the one expressing it, because these meetings are essentially evangelical in purpose, but for the enlightenment of those who come to them to learn of a better way out of their too familiar perplexity and distress. Christian Scientists find help from the meetings not only because they bring confirmatory evidence of accepted truths, but because they are therein increasing their own store of good by sharing it with others; and the meetings as a whole are effective in proportion as the members, through a generous spirit of self-sacrifice, perpetuate this altruistic point of view.

Two quite distinct impressions may be carried away from a fruitful testimony meeting. One is that Christian Science is equal to the fortifying and rescuing of its students in the great crises of human experience, whatever their nature; the other, that no detail of human life is too insignificant to be regulated by the great Principle which controls the universe. Both types of testimony have their mission; but it may fairly be questioned which of the two bears most convincingly on the unprepared thought of strangers,—the so-called major demonstrations of Principle, offering evidence so startling that the spiritually uneducated thought rebounds from its challenge incredulous and unconvinced; or the simpler proofs of divine guidance, provision, or control.

It is to be remembered in this connection, however, that a comparatively large part of humanity still refuses to believe the greater demonstrations of Jesus, and that a considerable part of Christendom is frankly apologetic in accepting them; whereas all men unite in extolling the sweet convincingness of his daily life and teaching, his supreme trust in God and fellowship with good. Effective testimony must always have in mind the end which it is designed to accomplish. In no case does the success or failure of the meeting depend on any individual testimony, though it may seem so to the shrinking novice making his first contribution thereto. The meeting makes its appeal as a whole; it must be judged as a whole. Responsibility for its issue is not alone on the few who speak, but also on that ensemble of thought which gives prayerful attention and furtherance to what is said, discriminating always in favor of the spirit rather than the letter of its offerings.

If Christian Scientists are keeping the faith in daily life, the benefits of Christian Science are not meager, intermittent, or vague. All human experience in intelligent pursuit of good, converges to one end,—the verification of Principle; and every clear demonstration of this fact is pertinent to the

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

purposes of the testimony meeting, subject always to the conventions of modesty and good sense. Christian Scientists cannot afford to depreciate God's work by classifying any well-defined demonstration of spiritual law as minor or insignificant, and they do not face any such shortage of good evidence as to call for any overzealous magnifying of trivial circumstance or coincidence into peculiar exhibitions of divine protection and favor. Ungracious silence in the presence of invited guests can be excused neither by a lack of startling or dramatic episodes in one's own experience, nor by an assumed lack of ability to round a perfect sentence or to present one's evidence with declamatory skill. Good form in testimony is eminently desirable, but never in itself convincing, and it is always secondary to good intent. A testimony may conceivably be as finished in form as a perfect, shining sphere, and yet be as empty as a soap-bubble.

The genius of good testimony is spiritual earnestness and sincerity, qualities which always dominate and dignify the vehicle of their expression. It is an absolute betrayal of the purpose of the testimony meeting to think of it as an arena for the display of personal talent, ambition, or erudition, for the glorifying of self or the exploitation of personal history. The object of the meeting is not to display the achievements of men, but to magnify the eternal Principle which makes all worthy achievements possible. Such requirements may seem to minimize the significance of the individual testimony, but if so, they at the same time lighten the seeming burden of those who offer the testimony.

The Christian Science church body has reason to be glad that the sense of alertness to opportunity is shared by so large a proportion of its members. Nevertheless, there is never a good reason to be advanced why "well done" should not be forever merging into "better done;" no reason why every Christian Science testimony meeting should not offer such a glad outburst of gratitude, and be so vital with spiritual power, that no stranger could possibly go from it unfed, or unconvinced of the divine sufficiency of Christian Science to meet the needs of humanity.

God's Perfect Will

MARY HORNIBROOK CUMMINS

A FULL recognition of the fallibility and unreliability of all human will is something which comes to the student of Christian Science only by degrees and through a growing knowledge of God. In the past he has been so accustomed to following the dictates of this will, has become so imbued with the belief that it is a wise guide, that he cannot readily free himself from its thraldom. Indeed, such is the glamour enveloping anything upon which the human will fastens, that until it is laid down, and God's will is earnestly sought, the situation cannot be viewed with any degree of clearness.

Every young student has probably had the experience of allowing human will to outline something as very desirable, and then seeking to bring the law of God to bear upon conditions in order to procure the wished-for result. If he has failed, he has felt baffled and discouraged. If he has seemed to succeed, he has undoubtedly found that the thing turned out to be not at all what he expected. Frequently the anticipated sweet morsel turns to bitterness in his mouth. In either case, if he be wise, he has gone apart alone with God and sought to know wherein the trouble lay, and divine Love and wisdom has revealed to him when and how he surrendered the helm of his life to the pilot of self-will and thus left the safe, deep waters of God's plan for the shallows and breakers of mortal sense. Such a course is fittingly characterized by Mrs. Eddy when she speaks of erring mortal thought as "the offspring of will and not of wisdom, of the mortal mind and not of the immortal" (Science and Health, p. 192).

But let not one who is passing through such an experience be cast down, for it is by these lessons that we begin to apprehend something of what Paul meant when he spoke of "that good, and acceptable, and perfect, will of God." The Christian Scientist who has glimpsed the "beauty, grandeur, order" of God's will, can henceforth have but one supreme desire, one oft-breathed prayer, "Not my will, but thine, be done." He earnestly seeks to get the mortal sense out of the way of the divine, so that God's law "may have free course, and be glorified."

As our own will is laid aside, we are less liable to be swayed by the will of others. Indeed, the man or woman who has not yet awakened to and acknowledged the supremacy of the divine will, may be compared to an instrument upon which every one plays his own tune. The individual may not be aware of this fact, and would probably indignantly deny it, but it is none the less true. The Christian Scientist, however, is winning freedom from the thraldom of human will, his own and that of others. This does not mean that he shall not listen with courtesy and patience to what his brother has to say, or that he shall not give his view-point careful consideration, always remembering to be just and merciful, but it does mean that he shall take no action, make no decision, until he has sought that clarity of vision which comes from communion with God. Christ Jesus spent hours alone with the Father, even continuing "all night in prayer to God" when faced by a problem which needed wise decision, and in this, as in all else, he is our Wayshower.

The individual who is truly seeking to allow the divine will to dominate him, usually has very little to say about "personal domination." Indeed, the too frequent use of this phrase is conclusive evidence that the speaker still acknowledges wills many, and has not enthroned God's will in his own consciousness. For, just to the extent that we love and desire God's will do we become unaware of the desires of human will, our own or others; while from our inmost heart we subscribe to those words of Tauler's covenant (A. D. 1340): "Whatever Thou willest that do I also will; and desire altogether to come out from my own will, and to yield a whole and willing obedience unto Thee, and never to desire aught else, either in will or thought; only let Thy will be accomplished in me in time and in eternity."

Cheerfulness

CLAUDE L. DE LONG

WE often hear it remarked by those attending a Christian Science church for the first time, "Your congregation is certainly composed of wonderful people; they all seem to be so happy and contented." This remark should of course be true of all Christian churches, but cheerfulness certainly does pervade the atmosphere of Christian Science and is reflected in the face of its every true representative to a degree that is remarked by the stranger. Surely, he thinks, these people have found something in their study which accounts for this conspicuous attitude of contentment.

When one considers what Christian Science has done for its followers, he is not surprised at this expression of cheerfulness. Many of them have been lifted from bondage to sickness and sin, from fear, from the depths of despair, where they even questioned whether there could be a God who is Love, since seemingly, through no fault of their own, they were permitted to suffer so. When awakened in the glorious light of Truth to the knowledge that they are not

Digitized by Google

subject to any law of sin and death, because of the "great fact that God lovingly governs all, never punishing aught but sin" (Science and Health, p. 412), they may well rejoice.

Christian Scientists are cheerful because they are learning what God truly is; because they are finding their true relation to God; because they are learning that through the knowledge of what God is and of man's relation to Him, they are able to prove by actual demonstration that the truth Christ Jesus taught is just as active today in overcoming sin and all manner of discord, as when its power was made manifest in his healing works. Christian Scientists are cheerful because the Scriptures are being revealed to them in a manner so plain that all may understand; because in a measure they are learning how to love their neighbor as themselves, and because they have been enabled to gain some glorious glimpses of the saving truth given to this age through the earnest effort and lifelong labor of their beloved Leader, Mrs. Eddy, in her text-book, "Science and Health with Key to the Scriptures."

Christian Scientists are learning through the study of the Bible in the light of Christian Science that God is infinite Life, Truth, Love; that God is ever present; that He is all powerful, the only creator, and that His creation is wholly good. Mrs. Eddy says: "This creation consists of the unfolding of spiritual ideas and their identities, which are embraced in the infinite Mind and forever reflected. These ideas range from the infinitesimal to infinity, and the highest ideas are the sons and daughters of God" (Science and Health, p. 502). The Bible is full of passages which show clearly "that we are the children of God: and if children, then heirs; heirs of God, and joint-heirs with Christ."

The mother-love is perhaps the purest love that we can humanly perceive. A mother guides and guards the footsteps of her child, and protects it, to the best of her ability, from all that might be harmful to it. How much greater, then, is the Love that is infinite? Is it possible that infinite Love has created man, placed him under bondage to any discordant condition, and then expected him to seek out some material remedy for his relief from suffering? Logically there can be but one answer to this question: No, indeed! God is "of purer eyes than to behold evil," much less to visit it upon His children. God's creation was perfect "in the beginning," and it can never change; but the human concept of this creation must be changed from a material to a spiritual basis. Only that which is good can proceed from God, the source of all being. God being the only creator, and His creation being wholly good, evil does not exist except as a false human concept, and this concept is destroyed through the understanding of the word of God as taught in Christian Science. Knowing this, the student of Christian Science is enabled to see the absolute nothingness of all that is opposed to God, and to put into practice his understanding that "the human concepts named matter, death, disease, sickness, and sin are all that can be destroyed" (Science and Health, p. 426).

Through the understanding of Christian Science as explained in Science and Health, the Scriptures are revealed in their true light and found to be a practical daily guide in our acts and conversation. One seeking proof of the efficacy of Christian Science treatment in overcoming all manner of discord, may find testimonies in abundance in both the *Sentinel* and the *Journal*, or they may come into personal contact with those healed, as well as hear their testimony, by attending one of the Wednesday evening meetings. The Christian Scientist has found that the word of God is as effective in healing the sick today as it was in the time of Jesus, and he is daily proving the power of Truth to be effective in his business affairs, as well as in healing the sick and sinful, and as a guide in his relations with other men.

"Love thy neighbor as thyself" is an injunction more easily followed when we see clearly that all discord and inharmony—pride, envy, jealousy, etc.—does not emanate from, nor is it directed against, any person or persons; but it is the one lie which we call mortal mind or error, trying to establish a power opposed to God and directed against any effort on the part of men to recognize the power of God as absolute. A lie loses its seeming power as soon as it ceases to masquerade as the truth. One may believe an error, but can never know it; only the truth can be known. Thus the student of Christian Science is enabled to restore harmony where discord seemingly reigned, by knowing the nothingness of error and the allness of Truth, by recognizing God as the one intelligence governing the universe and man.

Surely cheerfulness and a happy face are but the outward expression of that inner sense of peace that passeth understanding, which comes to us only through knowing God and man's relation to Him as taught and demonstrated in Christian Science.

❖

The Divine Sending

MARY JAMES ARNOLD

THE Scriptural statement that God is "of purer eyes than to behold evil," is regarded in Christian Science as fundamental truth. This proposition, that God does not know evil, being accepted by the student, gives rise to various questions which must be taken up one by one and their answers sought and found, for thought must be established on a firm basis, not only of knowing but of knowing why we know. One question, which is of such vital importance that it is asked by most of those who are seeking an understanding of God as infinite good, is this: If God knows not evil, how could He know the need of mortals, and so send Jesus to meet that need?

The writer, in her intense desire to have her topsy-turvy concepts of God and man righted, sought eagerly an answer to this question for many weary days, until it seemed that not another step along that pathway could be taken until the problem there presented should be solved. Then came an hour of trial,—apparently a great injustice had been done; those near and dear had betrayed and wronged, and anger, revenge, self-pity, and all the cruel horde, beat at the door of consciousness, clamoring for admission.

It was Wednesday; and that night the little church held at least one whose silent, humble prayer was for understanding and guidance that the problem might be rightly met. As the opening lesson was read, to this listener every word was like healing oil poured on a rankling wound. Speaker after speaker arose. One told how hate was overcome by remembering that Love governs all God's ideas. Another quoted from "Miscellaneous Writings": "It is . . . our self-will that makes another's deed offensive" (p. 224). Each and all gave of their experience to meet this unspoken need, and before the meeting was over all sense of discord was wiped out of the listener's thought, and she was able honestly to see that those who had seemed to wrong her were perhaps only following their own highest sense of right, and thus there was no cause for offense. And then in a flash of light the other question was answered, and the seeker understood how God sent Jesus to exemplify the perfect, spiritual idea among mortals.

It was not necessary that the dear ones at that Wednesday evening meeting should know the one who sought for help. They did not know of her problems; few of them knew of her existence. But out of the affluence of their gratitude

Digitized by Google

for good, they gave the message, and it was received by each according to his need. And so the all-wise Father, knowing and loving every one of His children, pours forth always the infinitude of His tender kindness, and to us it becomes manifest in every loving thought and word and act. God "sent" Jesus, just as He commissions each one of us, not to manifest mortality,—sin, disease, death,—but that we shall express goodness, justice, mercy, all His attributes. He sent Jesus, not by being conscious of mortal mind, but just by being Love, "who from all eternity knoweth His own ideas" (Science and Health, p. 519).

The man Jesus came into human experience to respond to the human need of a Wayshower, just as today Christian Science, the impersonal truth of being, is entering into the thoughts of those who hunger for peace and harmony; but it does not by any means follow that divine Truth must become conscious of the sense of need in order to overcome it. The light is not conscious of darkness when it sends forth its myriad rays which dispel the gloom, nor is the spring shower conscious of the presence of drought when its gentle drops refresh the thirsty ground.

In reality, the question arises from a wrong concept of God. When we learn more of Him as ever-present Love, the idea of a sending from some distant place or time gives way to a glad consciousness of the Christ, "the divine manifestation of God" (Science and Health, p. 583), which was expressed without measure in Jesus' earthly experience, and which will be manifest in us in proportion as we follow his example. In this, as in every other problem of mortal existence, Christian Science shows us the way.

"The finger of God"

ELSIE L. WIGHTMAN

"If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you," said Jesus, showing as clearly by his words as by his works the "consummate naturalness" (Miscellaneous Writings, p. 200) of his conscious relationship with the Father. Reflection convinces us that this was a striking if less obvious way of saying that the Father, whose will he always did, was the glorified author of the heavenly deeds which formed so significant a part of his own ministry; moreover, that when one is released from any form of bondage by receiving into his life "power from on high," he must admit that power not merely as a rescuer or "guide, philosopher, and friend" in emergencies, but as the supreme governing factor of his life. Works thus accomplished are emphatically precluded from the possibility of being otherwise than according to God's will, and serve to make manifest to mortals the rule of infinite Principle in such a way that they welcome rather than fear it.

Jesus' entire career exemplified that eternally harmonious working of divine law throughout God's creation which Mrs. Eddy has comprehensively described as "the unlabored motion of the divine energy" (Science and Health, p. 445). His perfect oneness with the Father's will enabled him to exhibit unerring action rightly directed, and this produced the immediate effect of instantaneous healing. He declared this to be a normal result, a glorious possibility for every obedient child of "the most High," rather than his own peculiar and exclusive inheritance.

Thus Jesus described the activity of one who is a coworker with God, working under His direct control, in union with Him, reminding us that the works cannot be done until we have become what St. Paul designates as "instruments of righteousness." The great Teacher made this clear in his answer to those critics who attributed his success to Beelzebub. To cast out devils by Beelzebub was not only to declare allegiance to error (for we are told that "his servants ye are to whom ye obey"), but in thus subduing an evil manifestation by the utilization of evil, we should come to be fully identified with it.

The followers of this mythological embodiment of power where power is not, judged after the sight of their eyes and imaginations, described man as possessed by devils, and would then proceed to exorcise these demons by mortal mentality's pretended magic domination; whereas Jesus, beholding the perfect man, was able to prove that God's omnipotence was ever ready to free mankind from belief in an evil power.

It is as though the Master hinted that the demonstration which caused them so much wonder, was but a small manifestation of the divine power and of what was possible to man when governed by God. The expression "the finger of God," seems to imply that the omnipotent, who "taketh up the isles as a very little thing," and before whom mortals and their faulty concepts are but "as grasshoppers," does not need to use any exertion to overcome evil, but that the least touch of Truth will cause error to disappear. People have represented God as fighting a prolonged and tremendous battle with evil, but here we have the unlabored operation of divine Principle; therefore it must be that the seeming conflict takes place only in human consciousness.

This aspect of the subject reminds us of Jesus' words, "If ye have faith as a grain of mustard seed," also of our Leader's statement, "A grain of Christian Science does wonders for mortals, so omnipotent is Truth" (Science and Health, p. 449). There is also a valuable lesson as to Truth's method. The "finger of God" does not point at evil, but casts it out. Since God cannot behold iniquity, it could not do the former, but can only indicate the perfect model, though to an awakening conscience it may seem otherwise. To such a sense the very highway of holiness, divinely indicated for man's salvation, is the place of destruction; consequently an honest attempt to walk in that way insures deliverance from evil of every description.

In following Jesus' example by striving to cast out all evil for ourselves and others, we should never attempt to do so by any supposed power of our own, but by turning to the spiritual means taught by divine Science, rather than to any form of material remedy. The work will be accomplished by "the Spirit of God," by reflecting that Mind "which was also in Christ Jesus."

[Written for the *Sentinel*]

Eternal Justice

FRANCES A. HALDANE

Amid the crowded clamor of the way,
The noisy mart within the temple gate,—
The bickering who will or will not pay,
Covetousness that stalketh soon and late,
The lust for gain which quickly turns to hate,
Or ruthless thrusts the weaker to the wall,
While some of justice make a show, and prate
That he who fell no doubt deserved the fall,—
O Thou most just, upon Thy name we call!
Thou holdst the balance in Thine unseen hands;
Be Thou with us when foemen would enthrall.
Thy truth eternal as the mountain stands.
O Thou most just, who filledst primal day,
Puissant through all ages, be our stay!

Selected Articles

[Frederick Dixon in *The Commonwealth*, London, England]

In a recent issue, under the heading of "The Healing of the Mind," you say that you wish some doctor would write sympathetically and with practical knowledge of what is comprehensively known as faith-healing. In faith-healing you include Christian Science. Now, of course no Christian Scientist would admit that Christian Science is covered by what is commonly understood by faith-healing; this, however, for the moment is not the question, but rather, why no doctor will follow the idea you throw out. First, may I point out that this is not quite the case. To give a single example, *Dr. Saleeby, in his lectures, has drawn attention to the undoubted healing accomplished by Christian Science of such complaints as locomotor ataxia, and has written with considerable sympathy of this form of healing. Still, the great mass of doctors are afraid of Christian Science healing, as the human mind is always afraid of every step forward.* When the stethoscope was first invented, the leading medical paper of the day spoke of it with just the contempt with which homeopathy was attacked after Hahnemann's discovery of it. Christian Science, as a matter of fact, is a step right forward beyond homeopathy. Homeopathy reduced the drug to a minimum, and so showed that the healing action was mental. This has not, however, prevented the homeopaths from being almost as violent in their denunciation of Christian Science as the allopaths.

You give in your article a very convincing example of how not to be critical. You talk of the simple reading of Science and Health over a sick cow, as if any Christian Scientist ever did such a thing. At the same time, the reading of Science and Health to a sick cow would be at least as efficacious as much of the veterinary treatment many of us have seen, and a good deal less injurious than quite a lot of it. Why, at the same time, should it be so supremely ridiculous to think that a man can be healed by divine power and that a cow can not? There is a certain saying of Jesus about the fallen sparrows which might lead people who write in this way to think twice. If matter is a subjective condition of the human mind, as Christian Science insists it is, and as the idealism of natural science admits it is, what is there to prevent a cow from being healed any more than a man? I know that this sounds very strange to people who believe Christian Science is suggestion, but then, one of the things the world has got to learn is the fact that its description of Christian Science as suggestion will never make this teaching suggestion, for it is the very antithesis of anything of the sort. A world in which the power of God could not rescue an animal from pain and suffering, would be very far from the harmonious condition which Jesus described as the kingdom of God in our midst, and an omnipotent power which had to be confessed unequal to healing any creature would be very far from exhibiting omnipotence.

The fact is, of course, that Dr. ——, like medical men in general, has formed a concept of Christian Science healing which is a veritable burlesque of what it really is. They talk on the platform, they write articles in the papers, in sublime ignorance of the fact that what they are perpetually criticizing is their own complete ignorance of a subject they are too self-satisfied to investigate. The sick, however, are in a very different position to the doctors. The sick wish to get well, and are not so particular as the doctor as to what cures them. The result is, that the sick appeal for Christian Science treatment, and when they are healed they give "unto Cæsar the things which be Cæsar's, and unto God the things which be God's." As a result, Christian Science has spread right round the world, and is exerting a greater and greater influence every day. The medical profession may choose to assert that this is not the case, just as the Spanish Inquisition is reported to have insisted to Galileo that the world did not move. The world did move, however, and Christian Science is spreading; and when the medical profession some day wakes up to the fact, it will be too late to establish its reputation for sanity in dealing with the question.

❖

[Clifford P. Smith in *Indianapolis (Ind.) Star*]

The report in the *Star* of a sermon delivered at Bethany Park, credits a minister from Columbus with statements which show a lack of correct information on his part. Mr. Quimby, to whom our brother refers, was an avowed mesmerist; and mesmerism is the very opposite of Christian Science. It is therefore impossible that Mrs. Eddy could have learned anything of Christian Science from him. Any one who wishes to read an authentic account of Mrs. Eddy's experience with Mr. Quimby can find it in "The Life of Mary Baker Eddy," by Sibyl Wilbur, at almost any public library. A chapter on this subject is also contained in Mrs. Eddy's "Miscellaneous Writings" (pp. 378-383), a book which can be found in many public libraries or at any Christian Science reading-room.

Whether a certain charge for a certain course of instruction be suitable or unsuitable, is necessarily a matter of opinion; and it is a fact that Mrs. Eddy did a very large percentage of her teaching without any direct compensation whatever. During the earlier years, while she was endeavoring to make known to all people the "good tidings of great joy" which she had discovered, her income from all sources was of the most meager description. Even later, when Christian Science came to be better appreciated, she applied the most of her income for the benefit of others; and throughout her whole career as the Leader of the Christian Science movement she lived simply, gave liberally, and finally left the bulk of her estate to use for extending the world's knowledge of the religion which she taught. Mrs. Eddy's motive with respect to money is most clearly evidenced by the use which she made of her money.

The occasional passing away of a Christian Scientist no more proves that Christian Science is false than Paul's decease disproved his statement, "We live, and move, and have our being" in God. Paul knew the absolute fact, and he furnished practical proof of it on more than one occasion, even though he did not at once prove the whole of his teaching. The philosophy of Christian Science is indicated by the following excerpt from Science and Health (p. 492): "Being is holiness, harmony, immortality. It is already proved that a knowledge of this, even in small degree, will uplift the physical and moral standard of mortals, will increase longevity, will purify and elevate character. Thus progress will finally destroy all error, and bring immortality to light."

✦

[Frank Bell in *The Leader*, Carbondale, Pa.]

The opinion expressed by a speaker quoted in a recent issue, concerning Mrs. Eddy, is wholly at variance with the opinions of those who have had actual knowledge of her. When Mrs. Eddy removed her residence from Concord to a suburb of Boston, the city council of the New Hampshire capital adopted resolutions expressing regret at her departure. The Governor of New Hampshire, in a recent public address in Boston, referred to Mrs. Eddy as "the Granite State's greatest woman," and said: "She has left the impres-

Digitized by Google

sion of her work not only on New England but on the entire world, and we are proud of her."

Clara Barton, founder of the Red Cross Society, paid this tribute to the Leader of Christian Science: "Mrs. Eddy should have the respect, admiration, and love of the whole nation, for she is its greatest woman." Many other distinguished men and women have attested their high regard for Mrs. Eddy and her achievement, and the number of those who through lack of knowledge still regard her and her work with disapproval or even indifference, is daily diminishing. In less than fifty years Christian Science has become a world-wide religious movement. Today it has approximately fifteen hundred church organizations, some of which are to be found in every civilized country; a part of its literature is obtainable in seven languages, and its text-book has enjoyed a larger sale than that of any other book ever printed except the Bible. Needless to say, Christian Science is well past the stage where untempered abuse can interfere with its progress.

❖

[W. G. Watkins in *Oconomowoc* (Wis.) *Enterprise*]

If Christian Science were what our critic claims it to be, there would be nothing left to consider, because there would be neither Christian Science nor Christian Scientists; but fortunately for all, the truth it teaches enables every one to prove each step of the way in individual consciousness. On this basis of proof it rests; and on this basis it has in half a century girdled the earth and given to multitudes health, happiness, and prosperity.

In giving to your readers some explanation as to "why he is not a Christian Scientist," there is every evidence that our critic is not acquainted with Christian Science teachings, and consequently subjects this religion to misrepresentation. There is not the slightest warrant for attempting to liken Christian Science to paganism. Nothing is in more marked contrast than are the teachings of the two. Christian Science is based upon the Scriptural teachings concerning the omnipotent, the All-in-all, or God. It accords with the Master's declaration that "God is a Spirit," and every statement contained in the Christian Science text-book, "Science and Health with Key to the Scriptures," is consistently deduced from this premise. Christian Science endorses the teaching that God is good, and that He made all that was made, "and, behold, it was very good."

I note that the most "vigorous protest" against this religion is made on the assumption that Mrs. Eddy directly contradicts the teachings of the Master. Then follow remarks tending to show that the line of demarcation between the human sense of death and man's individuality as spiritual and eternal has not been made. Christian Science does not deny that matter, sin, sickness, and death seem real to mortals. It makes that much needed distinction, however, between the illusiveness of the corporeal senses and the Mind "which was also in Christ Jesus."

❖

[M. I. Whitcroft in *Bristol* (England) *Times and Mirror*]

When the critic of Canon McClure's recent book set out to criticize that book in the columns of your newspaper, it would have been wiser and in better taste had be confined himself to that object. Instead, however, he seized the opportunity of airing his own views of Christian Science, which can be of no possible interest to your readers, but which display extraordinary ignorance of a world-wide religion, and of its Discoverer and Founder, that gentle, cultured, spiritually-minded woman, Mrs. Eddy, whom the American press acknowledged as one of the world's greatest women, and upon whom the French government bestowed the certificate of the decoration of Officier d'Académie.

These facts alone are a sufficient refutation of the discourteous and unchristian epithets flung by the critic (who proudly claims them as his own) at one whose life was devoted to the teaching and practice of Christianity, obeying our Lord's commands in their entirety, preaching the gospel and healing the sick. Christian Science is "so called" because it is daily and hourly, in its healing work, giving the proof of Christianity demanded by our Lord of all who believe on his word, and for this reason should be honored and respected by all who "profess and call themselves Christians."

It is more than foolish to describe the adherents of Christian Science as "feeble-minded," and the statement will deceive no one except, perhaps, the one who made it. It is known and acknowledged as a great religious movement, which is increasing so rapidly that a new church or society is formed on an average every three days. In its ranks are to be found judges and lawyers, statesmen and authors, men and women from all professions, including the medical and clerical, whose object in life is to purify and uplift humanity, comfort the sorrowing, heal the sick and sinful. The mission of Christian Science is summed up in the words with which Mrs. Eddy described the purpose of its great daily newspaper, "To injure no man, but to bless all mankind" (The First Church of Christ, Scientist, and Miscellany, p. 353).

❖

[Algernon Hervey Bathurst in *Surrey and Hants News*, Farnham, England]

My attention has been drawn to a paragraph in a recent issue, in which the term "faith-healing" is used as if it were synonymous with Christian Science, and I will ask you to allow me to say that there is a very great gulf fixed between what is known as faith-healing and the practice of Christian Science.

The writer of the paragraph referred to goes on to say that it is "the element of truth" in Christian Science which is of so much importance in healing disease. May I add that it is not merely an element of truth, but absolute Truth revealed by Christian Science which results in the healing of sickness as well as the destruction of sin, and that the faith of a Christian Scientist is not a blind belief that the Deity will eventually intervene and remove or alter some condition created or permitted by Him. It is that absolute or scientific knowledge of God, or Truth, which must, as Jesus declared, make men free,—free, that is, from the belief that sin, disease, or discord are more real or powerful than God. Nearly two thousand years ago Christ Jesus reminded humanity that sin, disease, and discord were contrary to the law of God, the law he had come to fulfil or reveal. Christian Science reiterates that teaching. In those early days the healing of sickness was just as essential a part of the practice of Christianity as was the reformation of the sinner. That is the standard maintained by Christian Science today. True healing, however, can never be accomplished so long as disease or any form of error is considered to be even permitted by Him who made all that was made.

❖

[Henry Deutsch in *Republican-Press*, Atwater, Minn.]

An article in a recent issue indicates your appreciation of Christian Science, and I am therefore sure you will be glad to correct a misapprehension that might occur from reading the statement in your columns. Christian Science is not will-power. The latter does not enter into its operations in any manner whatsoever. In fact, in so far as will-power

Digitized by Google

enters into the effect, the results are a failure, because the purpose of Christian Science is to emphasize that thought expressed by the Master, "Not my will, but thine, be done."

As stated in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, "Human will-power is not Science. Human will belongs to the so-called material senses, and its use is to be condemned. Willing the sick to recover is not the metaphysical practice of Christian Science, but is sheer animal magnetism" (p. 144). The healing and uplifting power of Christian Science results from the application of a demonstrable, scientific Principle, which is as exact as is the principle in mathematics or any other exact science. Christian Science brings to the human consciousness a realization of the all-presence, all-power, all-wisdom, and all-intelligence of God, and man as His image and likeness. This realization lifts and dissipates the shadow of disease, sin, discouragement, depression, and gloom, even as the sun dissipates the mists and darkness. We do not will away any of these manifestations of mortal mind and their accompanying evils, such as anger, selfishness, hate, etc., but understanding the allness of God, we rise to the consciousness of the nothingness of anything opposed to Him, and before that consciousness these manifestations disappear. The results are attained as indicated in the Scriptures, "Be ye transformed by the renewing of your mind."

❖

[John W. Doorly in *Wakefield* (England) *Express*]

Mr. —— believes, evidently on the authority of one lady, that Christian Science is allied to Mohammedanism. Perhaps he will explain how it is that while Christian Science has healed and saved a multitude of people from their sins and sicknesses in the name of Christ, although, as he claims, it is allied to Mohammedanism, yet his own particular religion, which evidently is in no way allied to this Eastern belief, can give no such proof of the presence and availability of that Christ to heal and save now, even as was done nineteen hundred years ago. He evidently credits Mohammedanism with more power than he does Christianity. Here is the crux of the whole matter: that he does not believe that the understanding of that Christ whom he professes to acknowledge can heal all manner of sin and all manner of disease today, although that Christ is the "Lo, I am with you alway;" but he does impute that these effects are attained through what he terms a hopeless metaphysical tangle and a mixture of Mohammedanism. Christian Science, however, asks your readers to judge it, not according to this gentleman, but according to Christ Jesus. "By their fruits ye shall know them."

I wonder if the critic is so satisfied with what he has accomplished in his own church in the way of demonstrating the reality of Christ, that he can afford to step out and attack another religion, which is astounding humanity by its actual results. And again, I would remind this critic of the command of the one that he evidently recognizes as the authority, *i.e.*, Jesus Christ, when he forbade his disciples to interfere even with those whom they declared were not doing as they did. Would not more be accomplished if this shepherd spent his time in improving the conditions of his own flock, rather than in attacking some one else's belief?

The critic's letter is simply a conglomeration of statements gathered from other people's writings. Now, I would like to ask this correspondent how much of the spirit of Christ he would consider that I was manifesting if I should go out of my way to send a letter to the newspapers containing extracts from the critics in his church—and there have been and are now not a few of these critics; and would he consider that it was helping the church of Christ at all to do this? Is not the world sick and tired of doctrinal discussions which benefit no one, and are they not longing for that living and vital Christ "who healeth all thy diseases" and "forgiveth all thine iniquities"? Christian Science is giving this Christ-healing to mankind, and it has no time to spend in doctrinal discussions, but relies wholly on its accomplishments for the proof that it is Christlike. Its astounding growth is the evidence that it is choosing the better way.

For another correspondent's information I will say that Christian Science teaches that God is one and indivisible, and that Jesus was not God, but that he expressed God, being a manifestation of the power and presence of God; hence his declaration, "My Father is greater than I." Christian Scientists believe in one Mind or Spirit, called God, in one Christ, the manifestation of this Mind, and in the Holy Ghost, which is the appearing of this Christ in human consciousness. They absolutely refuse to believe that one infinite cause can ever be divided into three persons, and they do not find any teaching in the life of Jesus Christ which convinces them of this doctrine, but they are willing that their fellow men should believe in this doctrine if they so desire.

Christian Scientists regard Christ Jesus as a manifestation or representation of God; but to them the Christ was and is the truth of all being, or God's law, which is "the same yesterday, and today, and forever;" and it was to this Christ that Jesus referred when he declared, "Ye shall know the truth, and the truth shall make you free." Through his exalted life Jesus demonstrated the truth of his being, or Christ, and for this, as Mrs. Eddy expresses it in "Science and Health with Key to the Scriptures" (p. 18), "we owe him endless homage," and Christian Scientists are striving to express this endless homage by obeying his command, "Heal the sick, cleanse the lepers, raise the dead, cast out devils." For which of these works shall they be smitten?

❖ ❖ ❖

[Written for the *Sentinel*]

My Shepherd

SAMUEL JOHNSTONE MACDONALD

THE Lord my shepherd is; I know
No lack of guidance, good, or grace;
He leadeth me where'er I go,
And maketh clear the path I trace.
All places are His pastures green,
On all sides lie His waters still;
In every place Love's power is seen,
In every place is known His will.

And thus I come to understand
That God alone is Life and Soul;
Myself and all are in His hand,
And He doth lead, support, control.
As Father then He leadeth me
In His own paths of righteousness;
From all self-righteous vauntings free,
His power alone doth heal and bless.

And as dark thoughts to Truth give way,
The bounteous feast of Love is spread,
And o'er me dawns the perfect day,
Whence mists and shadows all are fled;
Thus, consecrated now anew,
With surer faith and clearer sight,
Naught e'er again shall cloud my view,
Or e'en obscure Truth's holy light.

Editorial

And Again Legislation

In the August 20 issue of *Life*, attention is called to the efforts of organized physicians to secure legislation such as they desire, ostensibly for the public interest. We quote from *Life* as follows:—

"At a recent meeting of the American Medical Association at Atlantic City, fifteen reasons were advanced for the establishment of a national department of health. Among these perhaps the best one—from the medical standpoint—is that which states, 'To influence state and city authorities to enact reform legislation in relation to health matters.' The kind and quality of legislation to be enacted would of course be determined by the doctors themselves. They would quite naturally not be willing to admit that anybody else is competent . . . This is a beautiful system . . . It aims for nothing less than the direct control of the health, the liberty, and the person of every American, whether male or female."

As the bulk of medical legislation asked for by the medical societies in the past has included a definition of the practice of medicine drawn in such terms as would include all who heal the sick, whether by medical treatment or not, there can be but little doubt of the correctness of *Life's* conclusion. The intention of such proposed legislation is to make it a crime for any person who is not a physician, in the most limited sense of that term, to attempt to heal the sick; but inasmuch as the only person who ever healed all manner of disease and never failed to heal those who applied to him, was not a physician, and did not practise the system which the American Medical Association stands for, it would certainly seem that to create a monopoly in favor of and at the behest of physicians who have never equaled this record, is not in the interest of the people.

There are thousands of persons alive today who would have been in their graves if it were not that Christian Science healed them. To make it impossible for others to be healed as these have been healed, is the animus of medical legislation, and it is time to call a halt. That the principal thing the doctors are trying to do through legislation is to enlarge the definition of the practice of medicine, so that it will include all healing of the sick, should not be lost sight of when reading the pledges which the Chicago Medical Association have requested, on behalf of "the physicians of Illinois, through the Illinois State Medical Society, the Chicago Medical Society, the fifteen branch societies of the Chicago Medical Society, the one hundred and two state county medical societies, and the various city medical societies throughout the state," from candidates at the primary elections. The pledge asked of the district candidate is as follows:—

"If elected to the Illinois Legislature, I will do my utmost to maintain one standard for all practitioners of medicine, and will use my influence to defeat any legislation the object of which is to permit any cult to practise medicine at a standard of medical education lower than those already in the field, under the pretext that its followers are not practising medicine. I shall at all times support medical legislation which is in the interest of the people of the state, and not for the interest of any special cult or school of practice. I shall vote to retain in Illinois a one-board supervision over all medical matters, including the examination of candidates for practice; that the examination be for all alike, whether they belong to the now recognized schools of medicine or have tacked on to their names some 'path,' 'cult,' or 'ism.'

"I will use my best efforts to help amend the medical practice act, so as to give the state board of health supervision over all medical licenses issued by the state of Illinois. Under the present law the state board of health has jurisdiction only over those issued since 1899."

The candidates for county commissioner are asked to pledge themselves as follows:—

"If elected a county commissioner, I hereby pledge my support and cooperation with any committee of physicians that may be appointed or recommended by the Chicago Medical Society, the function of said medical committee being to act in an advisory capacity to the county board in all matters pertaining to the medical charities of Cook county."

These documents speak for themselves and for their sponsors. No doubt this plan is to be generally tried, but we do not believe that American citizens who are awake to their right to choose the method of healing which shall be used for them and for their families, are going to bind themselves to accept dictation from any privileged class to the exclusion of all others. Evidently the doctors believe that "desperate diseases demand desperate remedies."

ARCHIBALD MCLELLAN.

❖

The Blight of Bias

PARTIZANSHIP is usually associated with politics,—for which there is certainly no lack of occasion,—and thought of as mildly offensive. Many good men even frankly accept the term as defining their attitude on this or that subject, and there is special need just now of wakefulness to the blighting effects of its nature and influence, and of intelligent devotion to that proving of "all things" which St. Paul so earnestly commended to the Thessalonians. We have come upon a time when unless men are saved from the dominance of mortal sense relations, they are likely to reach conclusions and express judgments which are not wise and fair, for the reason that they are not grounded in knowledge of facts but rather in inherited or educated bias. It is a time when an understanding of the truth of being, and of the falsity of material sense as revealed in Christian Science, is imperative, if we would be compassionate, just, and helpful toward all.

Personal bias is characteristically unprogressive. It stands for the prejudice that "closes the door to whatever is not stereotyped" (Science and Health, p. 144). It witnesses to an ignorance that is often quite unteachable, or to a selfishness that is largely indifferent to the means of securing its ends. It invariably distorts judgment, makes one blind to the faults of his own clan or party, and thus directly contributes, in local, national, and international politics, to the power of "manipulating machines." It tends to enslave one to the rule of astute personality; and when we remember the extent to which this has obtained in legislative affairs, we are led to wonder that, despite its prevalence, representative government has not perished from the earth. The substitution of loyalty to a party, a combine, or a creed, for loyalty to public interest, to mankind, to truth, is a clever act to which error is ever resorting, and perhaps in no other way is the mesmerism of mortal sense and the gullibility of the well-intentioned made more pitifully manifest.

Partizanship not only gives a power to the plunderer which can be beneficially wielded only by the patriot, but it always conduces to the weakening of the ethical unit; it divides and distracts those redemptive forces of society which, if they are to win, must be at-one and inseparable. Thus many of the ills of partizanship appear upon the plane of the religious life. When but a moiety of it is added to educated opinions, broad-minded and cooperative denominationalism speedily degenerates into that contentious sectarianism which has so

Digitized by Google

often made it possible for the legions of evil to hold high carnival and enlarge their borders.

Religious organization and method is a blessing as a means to an end, but partizanship would have us become so absorbed in the means as entirely to forget the end. And this it has accomplished in many a sad instance, when attention has been focused not upon the truth but upon the maintenance of traditional formulas of belief. Here mental laziness has always figured prominently. The larger, truer view necessarily demands conscious effort, a careful consideration of all the facts, an intelligent adherence to the fundamental issue, and we can perceive this issue only when spiritually alert, awake to the subtlety of selfishness, the trickery of mortal sense. As we are taught in Science, Love alone is "impartial and universal," hence Love must "finally mark the hour of harmony" (Science and Health, pp. 13, 96).

The remedy for all bias is found in enlarged spiritual vision, in the realization of the universality and demonstrability of truth, and in a constantly controlling recognition of the brotherhood of man. There is absolutely no partizanship in Christian Science, for it seeks all good and only good for all. At all times and in all things it is loyal to divine Principle and to the universal good. It knows no man and no event "after the flesh," and how surely and speedily the turmoils and tragedies of human life would cease, if all professedly Christian men, and especially those in authority, were thus loyal even in modest degree to the simple requirements of Truth and Love! This is the single but all-inclusive insistence of Christian Science, and it is the only thing that will make wars, within and without, to cease.

JOHN B. WILLIS.

❖

Influence

As students of Christian Science we undertake to declare daily for ourselves the protecting and governing power of divine Love, and to "watch and pray to be delivered from all evil, from prophesying, judging, condemning, counseling, influencing or being influenced erroneously" (Manual, Art. VIII, Sect. 1). We have all become familiar with the instructions given in the "Rule for Motives and Acts" as here quoted, but it is possible that we do not sufficiently ponder their deep spiritual intent and thus gain for ourselves greater mental freedom and at the same time help others to realize it by leaving them more and more to God.

Apart from Christian Science, relatively few think seriously upon the question of influence, at least in the way in which it is regarded after one accepts this teaching. Most people pride themselves upon being independent thinkers, uninfluenced by the opinions and tastes of others, but this is very far from being the case. Those who lift their heads above the mists of popular prejudice are few, but they are the great men and women of their time. Christ Jesus appeared in an age when the influence of those in authority, especially in respect to religion, held in check everything that tended toward progress. The rulers failed to see that their personal influence was doing nothing to make manifest man's God-bestowed heritage of freedom, nor did those under their control see that they were blindly submitting to the human will instead of becoming acquainted with divine Mind, man's creator, and the source of all true freedom, which was the keynote sounded by Christ Jesus.

It is curiously interesting to read in John's gospel how the rulers resented the implication that they were either "influencing or being influenced erroneously," when the Master told them that the truth would make them free. They insisted, as most people would today, that they had never been "in bondage to any man," but Christ Jesus discerned everywhere the fetters of sin and disease, and broke them for those who were ready for freedom. We find, however, that the Master refused to influence men in a personal way. His counsel was always on the broad basis of the demands of Principle. When a man came to him, asking him to influence his brother so that he would divide an inheritance with him, Jesus refused and warned him against covetousness. He also reminded him that "a man's life consisteth not in the abundance of the things which he possesseth."

If we are divinely guided in all we do, we shall make no mistakes, for we shall respond to the "divine influence ever present in human consciousness" (Science and Health, Pref., p. xi). Paul points us away from fallible human opinion, when he says: "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of his good pleasure." He goes on to counsel the followers of Christ that they be "blameless and harmless," and this condition can be attained only as we earnestly strive to be conscious of the divine influence and respond to it continually. As we do this with a fuller understanding of God's good will, the "fear and trembling" will give place to calm assurance and peace. Our revered Leader's words on page 447 of Science and Health cannot be too often pondered. She says, "You must not forget that erring human opinions, conflicting selfish motives, and ignorant attempts to do good may render you incapable of knowing or judging accurately the need of your fellow men." This offers a sufficient reason for guarding ourselves against "influencing or being influenced."

Christian Science does wonders in bringing to us a new sense of freedom from mental bias, which may be due to our inherited tendencies, or to the influence of our fellow mortals. The sincere Christian Scientist must therefore guard against saying or doing aught which would in any way interfere with freedom of choice upon the part of those who are working out their problems with the higher understanding of Truth gained in Christian Science. We cannot too often recall the apostle's advice, "If any of you lack wisdom, let him ask of God."

ANNIE M. KNOTT.

Among the Churches

Current Notes

SPRINGFIELD, MASS.—In 1912 First Church of Christ, Scientist, found the seating capacity of its chapel outgrown. In seeking a solution of the problem presented, the building of a larger structure was found for the time impracticable, and a hall of sufficient seating capacity and available for all necessary services could not be found. It was generally felt that the interests of our movement would be best served in the erection of a larger and more permanent type of building for First Church before the formation of a second church. Out of this sense of the situation it was decided that a portion of the membership should withdraw and form a society, which could meet in one of the available smaller halls, meanwhile cooperating in every right way with First Church until the completion of its new building. This step was taken in October, 1912, and since that time a most harmonious relationship and cooperation has existed between these two branches of The Mother Church. The society has cooperated in all the general field activities, has contributed all its funds for building purposes to the building fund of First Church, and has rejoiced in the privilege.

During the present year First Church appointed a build-

Digitized by Google

ing site committee, and invited a representation from the society to confer upon the selection of a proper building site. The outcome took form in a unanimous recommendation that the present site of First Church be retained and adjoining property be secured if possible. This recommendation was unanimously adopted by the executive board of First Church, and because of the society's close interest in the matter, and as an expression of good will, was unanimously approved by its executive board. The recommendation was then placed before the entire membership of both bodies, and at meetings held simultaneously in their respective meeting-places, the same was unanimously adopted by First Church and unanimously given friendly approval by the society. On July 24 a cash purchase of the property referred to was consummated.

The Christian Scientists in this city are grateful beyond words for the manifest spirit of unity in this transaction, and they see in it an enduring foundation for "the structure of Truth and Love" (Science and Health, p. 583) which must precede the visible manifestation of church building. It is noteworthy that in this field there are working together the students of approximately twenty loyal Christian Science teachers; furthermore, it is seen that in no small degree the inspiration and knowledge how to cooperate has been increased through our efforts rightly to utilize our great impersonal missionary, *The Christian Science Monitor*.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 6, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 14, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Junction City, Kan.

The Opera House was well filled by an interested audience, who heard a fine lecture on Christian Science by Virgil O. Strickler. The Rev. Mr. Emmons of the Universalist church, in introducing the lecturer, said:—

It is one of the pleasant privileges of a clergyman that brings me before you this evening. To cooperate with the officers and members of a sister church in advancing the cause of our common Master, is always a privilege and a pleasure. In these days, when true Christian men and women are more and more seeking to lay aside their sectarian prejudices, that the Master's work may be more efficiently performed, it is especially advisable to draw nearer together, to unite in those services and relations that emphasize harmony and establish our mutual understanding of matters that are vital to the fulfilment of our faith and duty. When we walk apart, in the isolation of our particular Christian point of view, we confine ourselves to an area of thought and life that will ultimately become unproductive in its ability to supply us with the spiritual sustenance which we as spiritual beings must acquire if we are to maintain and develop our spiritual consciousness. But when we refuse to be limited by the boundaries of our own particular belief, and open our minds and hearts to the divine rays that shine through and vitalize other conceptions of God's truth as held by other people, we prepare ourselves for a more abundant entrance into and realization of life.

The Christian life, if it be true, is not a life which stagnates, but a progressive life, moving forward day by day toward larger relations and more significant services, under the inspiration of the "Spirit of truth," which, we are told, will guide us "into all truth." And to the extent that we learn of the truth, shall we be able to free ourselves from the partial and false conceptions by which so many followers of the Master order their lives. Because of this it is essential that we be on the alert for all the intimations of Truth with which life is so replete, that we may indeed be led into "all truth." A wise teacher has said that "there is no religion higher than truth," and I find myself in hearty accord with that statement; for it is the essential basis of our conscious relations with God, and the pursuit and understanding thereof quickens and expands our consciousness to its uttermost divine possibilities, leading us at last to conscious at-one-ment with God.

We are here this evening to listen to the exposition of a conception of truth (Christian truth) as set forth by a Christian church, the power and effectiveness of which is increasing daily. Within a comparatively few years a mighty host has rallied to the standard erected by this church, and these attest their loyalty thereto, and their joy therein, in words and ways that are unmistakably commendable and sincere. Our common Master, in referring to some statement of truth he had made, said to those who gathered round him, "He that hath ears to hear, let him hear." And we shall do well if in that temper of mind and heart we listen to our Christian brother, who comes to us as an accredited representative of the Christian Science church.

The Junction City Union.

❖

Washington, D. C.

Two large audiences listened with earnest attention to the lectures delivered by Prof. Hermann S. Hering on the subject of Christian Science. On the first occasion, the lecture was delivered in the church edifice of First Church of Christ, Scientist, the introduction being by John H. Schaefer, first reader in Second Church, who said in part:—

Many business and professional men today are seeking success, conceived of as fame or fortune or power, in their several lines of endeavor, impatient of the golden rule, with a selfish desire of acquisition, unmindful of the methods pursued, regardless of whose rights or whose privileges are infringed. Is not this state of consciousness in need of healing in the same degree as the consciousness laboring under physical disability and ignorant of the divine Principle that heals and saves? Our beloved Leader has fearlessly said in Science and Health: "Success in error is defeat in Truth," and, "Level wealth with honesty, . . . and we get better views of humanity" (p. 239). And as to power she writes, "You can have no power opposed to God . . . The good you do and embody gives you the only power obtainable" (p. 192).

At the second lecture, in Poli's Theater, Senator John D. Works, in introducing the lecturer, said in part:—

The religion of Jesus of Nazareth was a living, pulsating energy, that not only spread the gospel but healed the sick.

Digitized by Google

His comments that we should do likewise have come down to us, and this is the distinguishing difference between the religion of Christian Science and that of the other churches. The great and enduring work that is being done by Christian Science today, is done in the quiet and silence of the home and in the offices of the noble army of practitioners who are carrying healing and comfort to the sick and afflicted. You can find evidence of the work that is being done in this way in every community. All over this country, and elsewhere, Christian Science is coming to be known as a religion that carries out the complete command of the Master, not only to preach the gospel but to heal the sick.—*Correspondence.*

❖

Austin, Minn.

Willis F. Gross addressed our people on Christian Science at the Majestic Theater. He was introduced by Etta M. Ousley, former first reader of the local church, who said in part:—

The truths of Christian Science are not new, but newly practised; and they are filling the whole world with a new light, new joys, and new hopes. Through its understanding the sinner, the diseased, the sufferers of mind and body, are hearing and obeying God's call, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." It is bringing to the weary heart the knowledge of that living love which passeth all understanding. It does not pull down or take from (as many suppose) the religion of other Christians based on the teachings of Jesus Christ; it can only add strength of a more complete unfolding of God's word, and a more fruitful faith.

Christian Science brings a full salvation, fulfils prophecy, points to the kingdom of heaven within, and restores the lost Israel. It glorifies God in thought, in word, and in deed; it leads from darkness into His marvelous light.

Austin Daily Herald.

❖

Florence, Ala.

City Attorney S. W. Frierson, in presenting Francis J. Fluno, M.D., who lectured on Christian Science, said in part:—

I am not a Christian Scientist; I hold no brief for the Christian Scientist. Of the articles of faith of this branch of the church universal I have but a limited knowledge; of the healing in its wings, of the practical application of its doctrines in the treatment of those ills that flesh is heir to, I have experienced a wonderful and convincing personal demonstration. The day is long past when the materialist, the atheist, or the scoffer can afford to argue against or to cavil at the healing accomplishments of Christian Science. We hear it charged that Christian Science is antichrist. I am quite sure that this is untrue. From my information I should say that not only is its corner-stone Christ, its key-stone Christ, but that every stone in its foundation and superstructure is Christ. And is not the very name itself sufficient refutation of this assertion?—*Correspondence.*

Lectures to be Delivered

Bedford, England.—Col. William E. Fell, Corn Exchange Hall, 8 p.m., Oct. 13.

Belvidere, Ill.—Bliss Knapp, Majestic Theater, 8 p.m., Sept. 27.

Chicago, Ill. (Eighth Church).—Bliss Knapp, Church Edifice, Michigan boulevard and 44th street, 8 p.m., Oct. 1 and 2, and 3:30 p.m., Oct. 3.

Chicago, Ill. (Fifteenth Church).—George Shaw Cook, Masonic Temple of Austin, Central avenue and Fulton street, 3:30 p.m., Sept. 27.

De Kalb, Ill.—Bicknell Young, Church Edifice, 8 p.m., Sept. 28.

Dover and Foxcroft, Maine.—Clarence W. Chadwick, Chapel, Lincoln street, 8 p.m., Oct. 2.

Elgin, Ill.—William R. Rathvon, Grand Opera House, 4:30 p.m., Sept. 27.

Evanston, Ill.—Bicknell Young, Church Edifice, 8 p.m., Oct. 1.

Fort Atkinson, Wis.—William R. Rathvon, Lyric Opera House, 8 p.m., Sept. 28.

Geneva, Ill.—George Shaw Cook, City Hall, 8:15 p.m., Sept. 28.

Hartford, Conn. (Second Church).—Jacob S. Shield, Church Edifice, corner Asylum and High streets, 8 p.m., Oct. 2.

Hood River, Ore.—Dr. Francis J. Fluno, Heilbronner Hall, 8 p.m., Sept. 29.

Hornell, N. Y. (Second Church).—Clarence W. Chadwick, Woodbury Universalist Church, 8 p.m., Sept. 29.

La Grange, Ill.—George Shaw Cook, Church Edifice, 8:15 p.m., Sept. 29.

Lawrence, Mass.—Virgil O. Strickler, Church Edifice, Green street, 8 p.m., Oct. 2.

London, England (Sixth Church).—Clarence C. Eaton, Hippodrome, Felsham Road, Putney, 3:30 p.m., Oct. 11.

Los Angeles, Cal. (Second Church).—William D. McCrackan, Church Edifice, 8 p.m., Sept. 26; Shrine Auditorium, 8 p.m., Sept. 27.

Los Angeles (Gardena), Cal. (Eighth Church).—William D. McCrackan, Auditorium, 8 p.m., Sept. 25.

Michigan City, Ind.—George Shaw Cook, Orpheum Opera House, 8:15 p.m., Oct. 1.

Morris, Ill.—Bicknell Young, Fraternity Hall, 8 p.m., Sept. 29.

Newton, Mass.—Virgil O. Strickler, Players Hall, West Newton, 8 p.m., Oct. 1.

New York, N. Y. (eleven churches).—Virgil O. Strickler, Carnegie Hall, Seventh avenue and 57th street, 8 p.m., Sept. 27, and 8 p.m., Sept. 28.

Olean, N. Y.—Clarence W. Chadwick, Church Edifice, 8 p.m., Sept. 28.

Ottawa, Ontario, Canada.—William R. Rathvon, Church Edifice, 288 Metcalfe street, 8 p.m., Oct. 2.

Pasadena, Cal.—William D. McCrackan, Church Edifice, Oakland avenue near Colorado, 8 p.m., Sept. 28 and 29.

Plymouth, Mass.—Clarence W. Chadwick, Universalist Church, 8 p.m., Oct. 1.

Sandy Spring, Md.—Willis F. Gross, Lyceum, 8 p.m., Sept. 27.

South Bend, Ind.—George Shaw Cook, Oliver Opera House, 8 p.m., Oct. 2.

St. Albans, Hertfordshire, England.—Col. William E. Fell, County Hall, 8:30 p.m., Oct. 12.

St. Louis, Mo. (Third Church).—Bliss Knapp, Church Edifice, 3524 Russell avenue, 8 p.m., Sept. 29.

Toronto, Ontario, Canada (Third Church).—Jacob S. Shield, The Royal Alexandra Theater, 3:15 p.m., Sept. 27.

Washington, D. C. (First and Second churches).—Willis F. Gross, Poli's Theater, 3:30 p.m., Sept. 27.

Wellesley, Mass.—Virgil O. Strickler, Town Hall, 8 p.m., Sept. 29.

Testimonies of Healing

About seven years ago I was ill with a very puzzling liver trouble. I consulted several of the best physicians in Chicago, four of whom were specialists, and not one of them agreed with any of the others as to the name of my ailment. I then took up Christian Science, in which I had been interested for some time, but which I had never studied. I went at it in earnest, with the determination to find out what there was in it for me. I read Science and Health, but did not consult a practitioner; in fact, I did not know any. I read the book through three times. The first time I did not get much out of it, but very gradually it became clearer to me, and just to that extent I began to improve, and I kept on reading every morning. I used to get up at six o'clock in order to find time for this study, and I got much illumination at each reading. It is the making over of our thought that does the healing work, in reality. The practitioner can start us on the right way and always help us in a sudden emergency, but our own work, daily and hourly, is what builds up the structure on a sure foundation in Christian Science.

It was at least a year after beginning to read the book before I was entirely healed. I gradually improved, and whatever it was that ailed me simply faded away into the nothingness where it belonged. It served to prove to me that everything was in the thought. I never had any help from any one; I was healed simply by reading the book, although the last doctor I consulted told me that I would have to go to a hospital to have my liver drained, that there was not a sound organ in my body, and many other discouraging things. Any one seeing me then would have thought it true, but I have steadily gained in health, and now weigh much more than I did at that time, and am always well.

I hope my experience will help others to be patient with their own healing if it seems to be slow, and that they may see how so much depends upon the work we do for ourselves in Christian Science; for the healing comes not by any extraordinary effort, but by daily and hourly clearing our thought of the things unlike good. It rests us greatly every time we realize that God is All. It is difficult, with what we consider the material evidence before our eyes, to make our thought over, but it can be done. We should not be discouraged or grieve if we cannot understand the truth all at once. Mrs. Eddy says we should "emerge gently" (Science and Health, p. 485). If the demonstration is not made readily, it will come, never fear; it will be made.

I have long intended to add my little word of testimony to the helpful ones in the *Journal* and *Sentinel*. Christian Science will benefit all who will honestly seek to understand its great truths. I am very grateful for what I know of it.

Erminie J. King, New York, N. Y.

I wish to add my testimony to that of my sister, as I have felt for some time that the blessings which have come to me through Christian Science are too great to remain unacknowledged. My earliest recollection of my sister is of her being subject to very severe and sudden attacks of illness, and it was largely through her influence that I was induced to find out what Christian Science could do for me.

I have been healed of a very complicated form of eye trouble, after wearing glasses for nearly twenty-five years. I have undergone a number of operations, and at one time was in a dark room for a week with a thread around the muscle of one eye. After each operation and muscle-cutting I would be better for a little while, but would soon slip back again to the old condition of eye strain and frequent headaches. I fully expected to wear glasses all my life, but after I had had eight or ten treatments under Christian Science, I had a sudden impulse one Monday morning to start the week by not putting on my glasses, to see what would happen. I did not put them on, and watched all day for a headache to come, but none came. From that day to this, now a year and a half, I have not had my glasses in my hand or even looked at them. My vision has gradually improved, and the muscular strain has entirely disappeared, though I work all day in a poor light.

I am very grateful for this healing, but far more grateful for the spiritual awakening which has accompanied it. At the time I sought the help of Christian Science I was struggling under what seemed to me an incomparably heavy burden of grief and sorrow. This burden, which was *gradually* weighing me down into I dare not think what deep waters, has been lifted from me; a great stone has been rolled away from my heart, and I have courage again to stand on my feet and try to do my share of the world's work. Through Christian Science alone my thought has been opened to the good in my fellow men. I can again believe in humankind, and my heart goes out in sympathy instead of indifference to human suffering, while I long to give my quota of help.

No words can express the deep thankfulness I feel that into my consciousness has come the firm conviction and proof that the beautiful words, "I know that my redeemer liveth," are not mere empty sounds, but are true, and will carry their message of consolation and inspiration to every heart open to receive them.—Florence J. King, New York, N. Y.

❖

[Translated from the German]

A few years ago, after the birth of a child, I became sick in mind and body, and to my great sorrow I was obliged to leave the baby and seek help in other surroundings. As I did not seem to be gaining, despite the treatment of a specialist, and was unable to sleep, besides experiencing great pain internally whenever I attempted to take nourishment, I applied for help to my dear sister in London, who came at once and explained Christian Science to me. I took heart as I began to understand that God is Love and sendeth no disease, and that my wrong conceptions about God, and man in His image and likeness, needed to be corrected. I had believed I must die, as had another dear sister shortly before, but now I learned that there was no such thing as an hereditary disease, that it was only a man-made law, and that the law of divine Love alone governs all. Thus I daily gained in physical health and strength, sleep returned, and I was able to eat without suffering.

I thank God for having preserved me to my family, that I may point out to them as well as to many others the way from sense to Soul. Mrs. Eddy says, "Love is the liberator" (Science and Health, p. 225). I am deeply grateful to her, as well as to all who have helped me in gaining the spiritual understanding of the law of Love which sets us free.

Sophie Eberbach, Heilbronn a. N., Germany.

❖

Revenge and the desire to take another's life for a seeming wrong heaped upon me, made me hate the world and all it contained. Human justice in this case was out of the question, and after exhausting all material and physical means, Christian Science was recommended to me. I listened attentively to the stranger who spoke, and decided that three dollars was a small investment to find out what Christian Science meant. I purchased the book "Science and Health with Key to the Scriptures," and read it in all my spare

Digitized by Google

moments. It was good reading, full of tender love, which I knew nothing about, and often I wondered why I was reading when I was so discontented, as I thought I was. Physically, I thought I was as well as men in general are, and not knowing any better, I was trying to be content with my condition, although I suffered a great deal; but mentally I was in bad shape, and I knew it.

Science and Health, studied intelligently, brought spiritual illumination. It unfolded to me the Science of Christianity, a thing I little dreamed was essential to man, and revealed a living God, the Principle of good, of love. It taught me that revenge is no thing, hate no thing, and the seeming wrong no thing. These illusions, turned face upward, revealed to me the truth about God, and awakened me to the fact that they were no part of God, therefore no part of me. It took a long time for me to believe this, even with all the evidence staring me in the face; but now I know and believe that Love overcometh hate, and that to be at-one with God is the only true life to live, for it means harmony and love for one another.

A faithful Christian Science practitioner toiled long with me to overcome the sense of hate, but before I was cured of this I was freed from a rupture and from a slight catarrhal affection, both of years' standing. For the past year and a half I have been free from all signs of influenza, which has affected me semiannually for the past twenty years. My nose was broken in August, 1912, and I had it set by a surgeon but treated by Christian Science. Specialists on nose and throat have pronounced the nose absolutely perfect, and even question whether it was ever broken. I have discarded glasses, which I had been wearing for fifteen years.

All these cures have been of great help to me physically, and I feel most grateful for them; but had I not received a clearer understanding of my relationship to God and His great love for men, possibly I would not be so grateful. The spiritual understanding as taught by Christian Science means more to a student in Science than all the cures of the flesh. The knowledge of the fact that God is Love, Life, and Truth, is sufficient to heal all ailments; and this knowledge, which before was hard for me to understand, has taught me love, not hate. Christian Science teaching applied to business problems, dissolves all obstacles, assures success, and elevates men to a higher standard for greater achievements.

I receive great help through the *Monitor* and *Sentinel*, along with our regular Lessons, and nearly everything I read seems to fit in with our daily needs. I am most thankful to God for all the rich blessings He has in store for us, and truly grateful to our beloved Leader, Mrs. Eddy, for her great work, "Science and Health with Key to the Scriptures," which teaches us the way to inherit these rich blessings, and that we, as the children of God, are the rightful heirs to them. I have been studying Christian Science for two years, and the above results are its fruits. My highest aim is to grow in the better understanding of the knowledge of Christian Science, and to be able to lead others in the path of righteousness, as I was led.

WILLIAM D. STINEMAN, Seattle, Wash.

❖

With a heart full of gratitude, I send this testimony of the healing power of Truth. For years I had never been really well, but eight and a half years ago I was so seriously ill that our family doctor was called in. He said I was suffering from extreme nervousness and weakness, also a stomach disorder. Then for five months everything was tried that *materia medica* could propose, but all to no purpose. It is utterly impossible to describe that part of my existence; the intense fear coupled with the exhaustion was unbearable. I prayed that God would help me; I knew there was no other help for me, only by and through Him.

A faithful friend, a Christian Scientist, had occasionally mentioned Christian Science to me, but I never listened; however, in my great need I wrote to her, saying I would try anything if only I could be helped. This lady came to me, and in consequence I at once bought a copy of Science and Health and began to read it; next I found I must study it, and lastly, that I must live its teachings.

Everything now is changed. I can truly say, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." What this knowledge is to me, I can only express by a life wholly consecrated to our Father-Mother God, to whom I am every day more thankful for all His love to me. I can truly say that the healing is permanent. I am glad and grateful for the tender, loving life of our dear Leader, Mrs. Eddy. The way indeed grows brighter and brighter unto the perfect day.

MRS. E. KNIGHTLEY, Carlton, Wakefield, England.

❖

The all-power of God as taught in Christian Science came to me wonderfully in two demonstrations. In December, 1908, I went to a dentist, and he asked permission to use an anesthetic. I was about to ask him not to use it, when I decided to let him do the work as he thought best, as I had read that day in Science and Health (p. 473), "God is everywhere, and nothing apart from Him is present or has power." That was exactly what I needed. I enclosed that thought within my heart, and it stayed with me.

The dentist prepared the tooth, and I felt no pain whatever. Finally he applied the anesthetic. As soon as he had done this I felt a change, but I thought it was merely a sense of weariness and tried to overcome it. The dentist asked me if he should go on with the work, and I said, "Yes, this is nothing." He replied, "But I want to see some perspiration and color." I told him he should not fear, but I could soon tell, thanks to Christian Science, that the thoughts which came crowding in were wrong. I was thinking of a change that was soon to come, and I was wondering whether it would cause pain. I was not afraid, and as there were some seemingly hard problems for me to meet at the time, I even considered this "slipping away" a solution of all difficulties.

Then came the true thoughts, always leading up to God's presence and all-power, that my passing away in the chair would hurt the dentist's excellent reputation, that it was not the time to sleep, that I had to do my work here, and demonstrate the power of Truth. The dentist spoke to me often, and he gave me some wine to drink, but I could not taste, nor was there any sense of smell when he tried a restorative. He was then, as I now know, greatly puzzled. Then darkness seemed to come slowly. My sight was strong and clear, but the circles of light became smaller and smaller, until there was only one tiny speck of it, and then that also was extinguished. I wished for a Christian Science practitioner, but I could not speak. Instantly, however, the thought came, God is here, all powerful and the only power; He will help me. The strain of keeping the eyes open was so great that I thought it better to close them, and I must have done so, because I heard the dentist say quickly, "Here, wake up!"

Never can I tell of that wonderful change and of that instantaneous healing. I sat up at once, feeling so strong, so happy, and so thankful. I laughed for joy and said, "Yes, doctor; now I am all right." For a few minutes the dentist was speechless, but as I kept on talking and enjoying the wonderful light, he finished the work. I was in the chair one hour and a half. The dentist warned me against the drug

Digitized by Google

before I left him that day, but it seems as if I did not then realize what had come to me. After I left the office I went to see a friend who was expecting me, and the trip required four changes, but my thought was so completely turned away from the body that nothing caused me any trouble or a minute's consideration. Late that afternoon I was physically normal again.

The next time I saw the dentist, he told me that he had never had such an experience before. I said to him that I thought I was going that day, and he replied, "Well, you were going." He again warned me against the drug, and he also said that the change came to me before there could have been any return of the circulation. I was glad he told me this, for it proves Christian Science true. Before I came into Science, a specialist had in two years' treatment of ear and throat used the same anesthetic, and I had contracted a great dread of the drug at the time, for I had noticed its ill effects; but the demonstration I had that day of the truth of Christian Science was complete.

The second demonstration occurred in January, 1912. At that time I contracted an illness, but all unpleasant symptoms were expelled by the truth of Christian Science, except a cough, which seemed to bother me at night and kept me from sleep. When Wednesday evening came I wanted to go to the meeting, but a sense of weakness seemed to keep me. This condition, however, was soon overcome, and I went to church. Toward the end of the meeting I became so faint that I thought of leaving the room, but did not wish to disturb the people between me and the door, and yet I did not want to lean against any one near me. I called on God, and knew He was the only power, and when a testimony to which I was listening was finished, a great sense of relief came over me, for I could think only of God. Then I heard distinctly these words: "There is no power here but God." I looked into the first reader's eyes and answered in a clear voice, "No, there is not," and then I saw that the meeting had closed, but I had not heard the end of the testimonies, nor the closing hymn, nor the moving and talking of people going home. I sat upright in my chair. I was thankful for that.

The reader walked a few steps with me, and then perspiration broke out so freely that my coat felt as if I had been in a heavy rain. I also noticed that the remainder of the ailment had entirely disappeared, for when I had come to church it seemed as if I could not speak one loud word. The night had turned cold and windy, but I felt no ill effects from going home in my damp clothing.

These two demonstrations of Truth's power were a great help to me, and I thank God for them. In the first case I was completely conscious and heard the voice of Truth; in the other case I was unconscious, to all appearance, when the reader, to whom I was a stranger, spoke just once to me, as I was afterward told.

Caroline W. Moeser, Brooklyn, N. Y.

✦

It gives me great pleasure to tell of my healing in Christian Science. About five years ago, when I came to California, my health was poor and I was having trouble with my eyes. My cousin was interested in Christian Science, having been healed of a very severe case of rheumatism, so I became interested, bought a copy of Science and Health, and after reading a while took off my glasses, which I had worn for fifteen years, and have never used them since. My eyes are very strong now, and I can read and sew without any difficulty. I was also healed of headaches, chilblains, and numerous other ailments. I am glad to say my healing has been permanent, and I am always glad to tell any one of it. Christian Science is a great help to me every day.

I am thankful to God; also grateful to Mrs. Eddy, and to those who so lovingly helped me to understand this wonderful truth. Each day I can say, "Bless the Lord, O my soul: and all that is within me, bless his holy name. . . . who forgiveth all thine iniquities; who healeth all thy diseases."—Bertha M. Bruch, Bishop, Cal.

✦

I owe Christian Science endless gratitude, greater than any words can express, for it has healed me, and helped me in every possible way. In the three years I have been studying its teaching, it has done for me what twenty years of *materia medica* had failed to do. I was never free from some ailment. I frequently consulted doctors, followed their instructions, and took their medicines, always with the same result,—improvement for a short time, then a return of the old conditions. Among other things I was subject to periodical attacks of acute throat affection and influenza. My throat was once operated on, the doctors saying that this would put an end to the trouble; but within six months I had a more violent attack than ever. I continued to have these attacks, and after studying Christian Science a short time I was taken ill with one; but this time I had Christian Science treatment and was quickly and permanently healed. I was healed of influenza in the same way.

As the result of an illness when a baby, I was nearly blind in one eye. The eye was enlarged, and quite useless. The various specialists who examined it, agreed in their verdict that it was incurable, and that it would be impossible to restore the sight. One specialist operated on it, thinking he could at least put it straight, but when the bandages were removed, he found his work had been almost useless. I am sure they all did their utmost to help me. After studying Science and Health for a short time, I found the sight was returning, and the eye was becoming normal in position and size; and I am expectant that as my understanding of Truth increases, the sight will be fully restored. At the same time I found I was healed of ingrowing toe-nails, for which two doctors had treated me but had failed to cure me.

Soon after this I became very ill with stomach disorder and kidney disease, and an internal growth developed which was very apparent even through my clothes. My left side became contracted so that I could not stand upright, and a thick crust covered my hands, feet, and head. I had already received such convincing proofs of the healing power of Christian Science, that I at once applied to a practitioner for treatment. This was lovingly and generously given. In the time which followed I had many experiences of God's protecting care and power to uphold. There were times when I felt almost hopeless, but I found that as surely as I tried to be obedient, and know that whatever the material evidence I was in truth God's perfect child, so surely did I get my reward. I am indeed grateful for the mental and spiritual awakening which came to me at this time, especially for the lessons I learned in the overcoming of self.

After about four months' treatment I awoke one morning to find myself healed. My limbs were straight and supple; I was absolutely free from pain, and oh, so happy, with such peace as I had never before experienced! New skin soon grew on my hands and feet, I gained weight rapidly, and in three weeks looked and felt perfectly well, so much so that an acquaintance asked me what wonderful doctor I had found. At this time all my hair fell out, but it soon began to grow again, and I now have quite an abundance. Added to

Digitized by Google

all this was the healing of fear. My mother and several members of her family had passed away from a malignant growth, and my father from Bright's disease. This had made such an impression on me that I lived in fear of the same end. Christian Science has completely healed me of this fear. The symptoms and the appearance of my body during the illness were in many ways similar to theirs.

That this healing is "without money and without price," I have proved. I had very little money at the time, and what I gave the practitioner was absolutely nothing in proportion to the time and thought given to me, so that the poorest need not be afraid to ask for help. Christian Science teaches that God supplies our every need, from the least to the greatest, when its teaching is consistently and faithfully applied.

Because of ill health during childhood I received very little education. As I grew up I felt this to be a great disadvantage, and it often made me unhappy. Our Christian Science literature is now meeting this need, and giving me an education which is invaluable. My gratitude for health and happiness is great, but greater still is my gratitude and joy for the spiritual understanding of the Bible, which the study of Mrs. Eddy's book "Science and Health with Key to the Scriptures" is giving me. Her life was one of noblest self-sacrifice and good works, which we can only begin to appreciate when we try to follow her teaching. "Thanks be unto God for his unspeakable gift."

WINIFRED I. KENT, Hammersmith, London, England.

I would like to corroborate the above testimony of my wife, which has proved to me the wonderful healing power of Christian Science. I have known her since childhood, and can truthfully say that she did not enjoy good health until she took up the study of Christian Science.

I also have received great help morally, spiritually, and physically from the small knowledge I have of the truth.

HERBERT KENT, Hammersmith, London, England.

❖

One Saturday in August, 1912, I was stricken with a severe cold, which settled on my lungs, the latter becoming so congested that breathing was experienced with difficulty. Under *materia medica* a well-developed case of acute lung trouble would have been the verdict. A practitioner was called to give Christian Science treatment, and within two hours I was able to lie down and sleep, resting quietly and comfortably all night. The following afternoon I went driving, and on Monday morning reported at my desk, much to the surprise of several in the office who had expressed the opinion, after my leaving them on Saturday afternoon, that a siege of several weeks would be my lot.

I am deeply thankful to God for all the blessings I am experiencing from Christian Science, and grateful to Mrs. Eddy for having found a way which enables practitioners effectively to apply the Principle.

EDWIN W. SCHURZ, La Porte, Ind.

[Written for the *Sentinel*]

Tryst

AMY RUTH WENZEL

"CAN you tell me the way to joy?" she said;
"Love promised to meet me there."
But the patriarch shook his hoary head,
"'Tis at sorrow He waits, my dear."
"Nay, nay! 'Twas at joy, Love promised to be;
Sweet were the tones of His voice.
Why, He is here, my brother!" said she,
"Waiting for us to rejoice."

From Our Exchanges

[The Universalist Leader]

We thought we were in the midst of Christian civilization. Everywhere were peace societies; international amity companioned with religious fellowship. The rulers of the earth joined in calling congresses which had for their ultimate purpose the disarmament of the nations. It had almost seemed that there could never again be a great war, certainly not among the so-called civilized peoples. The kingdom of heaven was well on the way, if not already here. In the refinements of culture, in the enrichments of affections, the broadening of the spirit of brotherhood, verily the vision of our Lord was near its realization. When lo, as out of a clear sky, flamed the worst war, in its possibilities, that human history has ever known.

All the years of training in nobler and better things, all the generations of culture in religious development, all the ideals of a race in one short moment are cast wrecked to the earth, and humanity reverts to type and is again the brutal savage with his club. And as they spring to the contest, we discover that while these rulers of the earth have been talking ideals and dreaming dreams, they have been sharpening their swords and charging their guns, and equipped as no body of fighters ever were equipped before, they plunge into the vortex of battle, and the moon is darkened and the sun has hidden its light. Yet who shall say there is no saving remnant? Out of all the refining influences of the centuries there have come forth some pure souls, who have become native to the higher realms of living. The many may still hear the call of the wild, but there are the few, the new Christs of the new time, who though they go to their Calvary and are lifted upon their cross, will yet draw the world unto them.

[The Continent]

If only there had been enough Christianity in the world, no man, prince, potentate, or private citizen, could have hated or envied or overreached or dreaded his neighbors enough to bring war to pass. Which means simply that war, howsoever long the chain of causes leading to it, all traces back to the fact that some man somewhere did not feel Christian love toward his brother. There is no other root whence dread mortal conflict between man and man can spring. Behind that lies this other looming and unforgettable fact: Jesus Christ sent his church into the world to teach men to love. It failed to do it in time to prevent this terrific catastrophe.

There may be some to reply that the church never could do it, claiming either that it was never commissioned for it or the achievement is in nature impossible. But those are questions of debate. What cannot be debated is this: The church of Jesus Christ never yet put forth all of its might in one consummate and consuming vow of endeavor to try whether it could be done. Instead of daring that mighty test, the church has occupied its soul with the flattery of self-satisfaction in its tremendous organizations, its fabulous property, its civic prominence, its intellectual brilliance, its acumen of learning, its perfection of philosophies, its exquisitely defined denominational peculiarities.

For the church, therefore, in this crisis, the study most fitting is a contrite but unflinching inquiry into the vast shortcomings in its service to the world which the present ghastly light of war reveals. It is a time for confessing with the deepest penitence that the church has not made Christianity count for as much in this throbbing modern world as it ought to count for, the proof thereof being the sheer fact that such a hate-flaming struggle is possible. And it is time that the

Digitized by Google

church, appreciating its failure in terms and degree all unmitigated, shall covet of its Lord the grace for such new consecrations and new heroisms as shall turn the inefficiency of the past into the most glorious efficiency with which the gospel of Christ has ever yet been proclaimed among mankind and his life lived in illustration thereof.

[*The Christian Register*]

If there has been a marked decline in religious faith and observance, the causes are not so partial and circumscribed as some may think. The day has passed when the believing mother or wife is thought potent enough in prayer and supplication to save the unbelieving husband or son. The deep conviction of personal religion does away with the hope of a vicarious redemption. We are all bound up one with another, and the distinction of the sheep and the goats every day loses more and more of the sharpness of outline.

We cannot believe that a vast revival of religion of the ancient type will save society. The old methods and appeals are now ineffective for millions of souls. They have lost their interest, and the first requisite is a vivid soul-stirring renewal of interest in religious things. Dogma is denuded of its force, and the creeds, many of them, as the poet says, are outworn. Billy Sunday may terrify a certain class of hearers by his vivid description of the torments of the nether regions, but intelligent men and women are no longer moved by lurid portrayals of God's wrath and vengeance.

[Rev. J. M. Lloyd Thomas in *The Christian Commonwealth*]

To use the holy name of Christ as a kind of moral drug, a curare, to chloroform and paralyze men and women, and keep them quiet in their chains and prevent their righteous insurgence—this is a loathsome apostasy. Christianity is not a despotism to enslave, but an emancipation to liberate. It is no passive or pusillanimous submission to preventable wrong, but an active cooperation for right. It claims justice and pleads for mercy. It releases humanity for its highest ends. It will not address all its lectures to the workers. It will seek to convince the masters and the capitalists that commerce exists for humanity, not humanity for commerce; that the organizers of trade and manipulators of finance and directors of industry are here, like the rest of us, to minister, not to be ministered unto; that the community as a whole, the social democracy, is over and above them as God is over and above the community; that however important class interests may be, they are ever subordinate to the well-being of society, and must ever be justified at that final bar of humanity which is the judgment-seat of Christ.

[*The British Congregationalist*]

Hideous though the wrong and cruelty of war may be, God still reigns, and His will is still being done. In and behind all the welter and confusion of the strife, the great undying principles of justice, mercy, and peace abide. Whatever happens they will not ultimately fail, and history is our witness to their vitality and power. No temporary set-back can destroy those great moral principles which unite nations and make human life possible and tolerable. Against the blackness of darkness in which we now stand, these will yet shine out the more brightly. It is for all men and women of good will to show that it is by these things that they live, so that the truth and power of them may be more widely recognized.

[*The Christian Intelligencer*]

Men will not be won to a church which has become identified with the very world of which their souls have wearied. We cannot hope to redeem life from insipidity if our own lives have lost their spiritual tone and freshness.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $5. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.35 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the *Lesson-Sermons* which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 15 cents; fifty copies or more, 12 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Levant, single copy, $3.50. Pocket edition, size 4⅛ x 6⅛. Full morocco, single copy, $3; twelve copies, $30.

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Single copy, 10 cents; twelve copies, $1; one hundred copies, $7.50.

PHOTOGRAVURES OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, is for sale at the following prices: 8-inch (mount 12 x 10), single copy, $1; six copies, $5.25; twelve copies, $9.50; 12-inch (mount 15 x 20), single copy, $2; six copies, $10.50; twelve copies $19; 16-inch (mount 21 x 28), specially adapted for Reading Rooms, single copy, $3.50; three copies, $9.50; six copies $18.50; twelve copies, $35.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount in Reading Rooms. Smaller reproduction of the above picture. Size, 11 x 14. On Japanese vellum. Single copy, $1; six copies $5; twelve copies, $9.50. Photogravure Post Cards, reproduction of the large picture of the Church and the Publishing House, each 5 cents; twenty-five, $1.15; one hundred, $4.25.

QUARTERLY COVERS, in black morocco. Pocket size, 4¼ x 6¼, $1.15 each, or $11 a dozen. With change pocket, $1.40 each, or $14 a dozen.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—"THE MOTHER'S EVENING PRAYER," 75 cents; "OUR WAITING HAPPINESS OF THE MIND," 27 cents; "SUFFICED, SHOW ME HOW TO GO," 27 cents; "CHRIST MY REFUGE," 75 cents; COMMUNION HYMNS—"SAW YE MY SAVIOUR?" 50 cents; "HOLY CHRISTMAS MORN," 27 cents; "LOVE," 40 cents. For quantity prices and further information see our latest catalogue.

The first four hymns are arranged for high and low voice in the same copy. The last three hymns are published separately in high and low keys. When ordering state key desired.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

In pursuance of its retrenchment policy inaugurated earlier in the year, the Pennsylvania railroad has announced that sixty-eight trains will be discontinued on the lines east of Pittsburgh and Erie, beginning Sept. 15. This annulment is in addition to the usual reductions in the seashore schedules which are always made in the fall. Usually the changes in the general schedule are made in November. On April 1, the company annulled one hundred and eighteen passenger trains, and some weeks previous twenty-three trains were discontinued. In addition, a number of trains were discontinued on the Pennsylvania lines west, as well as in the suburban service in the vicinity of Pittsburgh. The curtailment in service made earlier in the year, it was estimated, would effect a saving to the company of two million dollars a year, provided the reductions remain in effect that long.

The eleventh annual report of the Metropolitan water board of London, England, states that the total amount of water supplied in the metropolitan district for the year 1913-14 amounted to 89,183,700,000 gallons, or a daily average of slightly over 244,000,000 gallons. The grand total volume is equivalent to 398,000,000 tons of water. The Thames furnished 59.1 per cent, the Lee 23.6 per cent, and wells, etc., the remainder. The total population supplied by the board at the close of the year was 6,721,207. The immediate construction of a reservoir at Littleton, to contain 3,500,000,000 gallons, is under contemplation by the board. This will be followed by an adjoining one of similar capacity, and by a third at Stanwell which will contain 3,300,000,000 gallons.

A national market commission, as a semi-official body to organize states, counties, and localities for economic distribution of farm products, to meet the high cost of living, was advocated before the agriculture committee of the House of Representatives by David Lubin, director of the International Institute of Agriculture at Rome. Mr. Lubin wanted the United States to adopt the system of handling farm products used in Germany, Austria, and other countries. The United States Senate has adopted a joint resolution instructing Mr. Lubin, who is also the American delegate to the International Institute of Agriculture, to present resolutions to the 1915 session of the institute looking to the establishment of an international commission on the marketing of agricultural products, with particular reference to ocean freight rates. The resolution has already passed the House.

Figures show that the wheat crop of Nebraska that has already been housed is 142 per cent of the five-year average, and is 69,735,000 bushels. The advance in prices, due to the European war, gives an added value of nearly $35,000,000 to the wheat alone. The big corn crop, although only 82 per cent of a five-year average, is still more than 150,000,000 bushels, and the war prices have advanced the value of this crop something like $30,000,000. The oat crop of 71,413,000 bushels is 130 per cent of the five-year average. The demand for oats for the horses of the armies in Europe has sent prices above normal, and has added a number of millions of dollars to the Nebraska farmers' bank account.

A loss of three million two hundred and twenty-five thousand dollars, 80 per cent of which was preventable, was caused by fires in Boston during the past year. "It seems incredible," says the report of the fire department, "that the business interests of the city do not rise *en masse* and demand the simple remedies which the law could easily give them; for not only would this tremendous loss be cut down, but with the loss reduced, insurance rates must be reduced and fire department costs reduced. Europe shows what can be done in the matter of fire prevention. Boston's fire loss is ten times greater than that of a dozen leading cities of Europe."

The Temple Iron Company, at a special meeting, has decided to reduce its capital stock from two million five hundred thousand to two hundred and fifty thousand dollars. This action is the final chapter in the history of the Temple Iron Company, which was the holding company for the anthracite coal trust, founded by the late president of the Reading railway and allied corporations. The company was brought before the bar of the United States Supreme Court, which ordered its dissolution. The iron company will continue in existence, but it will be devoted to the original business for which it was chartered,—the operation of an anthracite blast furnace.

On Sept. 15, in the presence of the Cabinet, Secretary Bryan signed peace treaties with the diplomatic representatives of Great Britain, France, Spain, and China. These treaties bind each of the countries to submit to investigation by an international commission, for a period of at least a year, all questions which cannot be settled diplomatically. During the period of investigation, hostilities cannot be opened. With the signing of these treaties Secretary Bryan's peace pacts number twenty-six, of which nineteen have already been ratified by the Senate.

The total of new locomotive orders received by the American Locomotive Company during the entire year ended June 30, was $14,454,931, equivalent to only about 25 per cent of the company's capacity. At the beginning of the year there were unfilled locomotive orders on the books of $17,156,388, as compared with $4,162,356 at the close of the year. During the first half of the year the plants operated at an average of about 67 per cent of their capacity; in the last six months they operated at only 29 per cent.

Secretaries Bryan and Redfield, of the departments of state and commerce respectively, presided recently over a conference in Washington, D. C., between diplomatic and consular representatives of Central and South American countries and manufacturers and exporters of the United States. The conference was merely preliminary, and is to be followed in a short time by a larger and more formal one, at which there is to be an effort to set machinery in motion that will increase American trade with the republics of the South.

A request upon the United States Congress to pass a law giving the navy department unquestioned and sweeping authority to impose censorship on wireless stations is probable, as a result of the protest of the Marconi company at New York against the navy's action regarding the sending of alleged unneutral messages from its Siasconset station. The new wireless legislation will be asked to avert possible lengthy litigation of the navy's censorship rights and to assure its wireless control in the future.

A sudden dearth of small notes, silver and copper coin, attributed to hoarding through fear or speculation, has been manifested in certain parts of Italy, and the minister of the interior has issued a circular to all the prefects to institute a strict watch over money transactions and to inflict the legal punishment on all who, through alarmist advice or otherwise, obstruct the free circulation of the notes and coin of the realm.

Evacuation of Veracruz, Mexico, was ordered Sept. 15 by President Wilson. The United States soldiers and marines under General Funston, who have held Mexico's principal seaport since it was seized by the fleet April 21 last, will embark for home as soon as transports can go after them, and shortly afterward all of the war fleet, except a few light draft vessels, will be withdrawn.

Beef packers of the United States are now in absolute control of the Argentine output of beef, thus destroying the value of Argentine beef as a competitive check on the price of native beef, according to testimony given at the inquiry into the advance in the price of living necessities.

Applications for more than five million dollars war risk insurance reached the United States federal bureau during the first week of its operation. Most of the applications cover ships and cargoes in the transatlantic and South American trade.

The interstate commerce commission has before it the petition of Eastern roads for a rehearing of the advance freight-rate case and for permission to put into force the 5 per cent increase which the commission, in its ruling a few weeks ago, denied them.

Lassen peak, in California, has already had more than forty eruption. As the result of recent violent disturbances, clouds of ashes descended at Mineral, ten miles from the peak, and a plume-like pillar of smoke was visible for twice that distance.

The Ottoman minister of foreign affairs states that by imperial irade the Ottoman government has abrogated, as from Oct. 1 next, the conventions known as the "Capitulations," restricting the sovereignty of Turkey in her relations with certain powers.

The Illinois Central railroad has completed its second track between New Orleans and Prenier. This gives it practically two tracks all the way from New Orleans to Chicago.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII | September 26, 1914 | No. 4

A Defense of Human Rights

JUDGE CLIFFORD P. SMITH

THE rights of persons who elect to employ Christian Science to preserve or recover their health, do not depend solely upon the constitutional guaranty of religious freedom. For, as Chief Justice Clark has said, "this is a free country, and any man has a right to be treated by any system he chooses." Whoever thinks that spiritual knowledge is more effective and reliable in case of sickness than material knowledge, has the right to act accordingly. Liberty, Mr. Justice Brewer of the United States Supreme Court says, is "simply the right to do that which one deems best, subject to the limitation that it does not interfere with the equal rights of other members of the community." (American Citizenship, p. 87.)

The fact that the practice of medicine is not an exact science, but is confessedly a mere process of experimentation, and the fact that thousands upon thousands of persons—constituting a considerable and a respectable part of the community—hold to the opinion, based on their own knowledge, observation, and experience, and the known experience of others, that Christian Science furnishes the most effective and reliable curative method,—these facts alone, not to mention the other considerations weighing with them, should dissuade the members of legislatures from attempting, by law, to deprive these citizens of their freedom of choice. Any such law, whether attempting the result directly or by indirection, must necessarily be contrary to the spirit of free institutions, and deprive citizens not only of their religious liberty but of their individual liberty as citizens of a free country.

In 1899 Governor Thomas of Colorado vetoed a bill for an act designed to suppress the practice of Christian Science. In the course of his veto message he said:—

"The true intent and purpose of the bill is to restrict the profession of medicine to the three schools therein mentioned and then limit the number of practitioners to suit the judgment of the composite board. People desiring medical or surgical service may employ its licentiates or die without the consolations of the healer. This is but to say that a medical trust is to be established which shall regulate demand and supply by absolute control of the product which forms its basis, the General Assembly furnishing the appliances whereby the trust shall become effectual. . . .

"The fundamental vice of the bill is that it denies absolutely to the individual the right to select his own physician. This is a right of conscience, and as sacred as that which enables the citizen to worship God as he may desire. It is indeed the same right manifesting itself in a parallel direction. It is a part of the law of this land, and no civil power is strong enough to deprive the citizen of its exercise. He may indeed select a healer of doubtful reputation or conceded incompetence, but that is his affair just as much as is his choice of a minister or attorney. His action may prove injurious, possibly fatal, to himself or to some members of his family. It is better so than to delegate to any tribunal the power to say 'thou shalt not employ this man' or 'thou shalt employ this one.' That this bill produces such a result indirectly makes it the more objectionable. It is not the outspoken and aggressive assault upon individual liberty that men should fear, but the indirect or resultant blow that is masked and falls unexpectedly.

"The bill, like all kindred forms of paternalism, assumes that the citizen cannot take care of himself. The state must lead him as a little child, lest he fall into trouble unawares. He must be guarded and chided, limited here and licensed there, for his own protection. Such a system, born of the union of church and state, crumbles into ashes in the crucible of experience. It cannot flourish, though disguised in the garments of an alleged public necessity. The privilege of choosing one's own physician is a positive essential to the public health. Yet this bill assumes to thrust the coarse machinery of the criminal law into one of the most sacred relations of human life, to drag the chosen physician, if unlicensed, from the sick-couch to the prison cell, and to substitute for him some one who, however exalted and honorable, may not command the confidence or secure the sympathy of his patient.

"These comments are not extreme, for it must be remembered that those who believe in and patronize the various arts of healing that are ostracized by this bill form a very large part of every community, nor are they confined to the ignorant and superstitious portions of society. They number in their ranks thousands of the most refined, intelligent, and conscientious people. They recognize in many modern forms of relief to the suffering a religious or spiritual element that appeals to their best and tenderest sympathies. The benefits they claim and the cures they narrate are not imaginary. Shall the government enact by statute that these people shall not longer enjoy their benefits or put them into daily practice? Shall it officially declare these people to be criminally wrong and the three schools legally right? By what authority does it so declare?

"A distinguished physician of Massachusetts has recently declared with force that 'the commonwealth has no right to a medical opinion and should not dare to take sides in a medical controversy.' It would be as consistent to take sides in a theological or philosophical discussion. The one would be condemned by all men; the other is equally foreign to the province of government. It may regulate, but cannot prohibit the calling of the citizens; it may prevent the commission of wrongs, but cannot deprive the individual of the right to choose his own advisers."

Charles S. Thomas, from whom we thus quote, is now a United States senator. He is a profound student of law and government, as well as a man whose personal character and professional attainments should give especial weight to his official utterances.

In 1903 Governor Peabody of Colorado vetoed another bill for a law aimed at the practice of Christian Science. Governor Peabody said: "Guided by the late experience of similar legislation in other states, the conclusion is irresistible that all such legislation has a tendency to restrict the citizen in the employment of whomsoever he pleases in the

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

treatment of his diseases, and it also has a tendency to build up, under the protection of the state, a trust or combination of certain schools of medicine, to the exclusion of all others equally meritorious."

Probably no other man of his time has contributed more to the knowledge of the reasons which should obtain in the enactment of penal laws than the late Joel Prentiss Bishop. On the present question he has tersely said: "While the public has an interest in the health of its several members, every individual has of right his own health especially in his own keeping. But not infrequently legislators, with zeal burning more brightly than wisdom, undertake to regulate men's health to the point of infringing their own private and rightful jurisdiction and control." (Criminal Law, Sect. 494.)

"Science has not yet drawn, and probably never will draw, a continuous and permanent line between the possible and impossible, the knowable and unknowable. Such a line may appear to be drawn in one decade, but it is removed in the next, and encroaches on what was the domain of the impossible and unknowable." (From the opinion of the United States circuit court of appeals in Post v. United States, 135 Federal Reporter 1.)

"In all scientific inquiry, the first step is to scrutinize the evidence of the senses, whose indications are always imperfect and often misleading. History shows again and again that the supposed scientific beliefs of one age are at variance with the scientific facts of a later age. In every such case, it will be found that the earlier and false science has laid too great stress on the apparent and has failed through insufficient knowledge in apprehending the real." (From the New Standard Encyclopedia.)

❖

"They shall never perish"

HELEN ANDREWS NIXON

In the tenth chapter of John's gospel the above reassuring words occur. Jesus' message was for all mankind. To be sure, he did not promise that those who did not believe his message should be saved in their sins, but he did say that all who heard and heeded it should in his age and in every age know him as the way and follow him to the Father. He said, moreover, "All that are in the graves [in oblivion to his message] shall hear his voice." Each one is to awaken, sometime, somewhere, to the voice of Truth, and come forth.

Jesus' supreme confidence in the omnipotence of good inspires all his followers. This confidence in the immortality of good is the seal of discipleship. It is born with the advent of spirituality in human consciousness. Human experience untiringly repeats "the old, old story of Jesus and his love." However hard and soul-searching an experience may be, at the end thereof the mortal is brought face to face with himself, his innermost self, and with the reality of things. Erroneous, selfish interests alone are ephemeral. The universal problem with its true solution survives every conflict of selfish interests, and points to the operation of divine Principle in human affairs. Each human being comes to see that he is undergoing a purifying process, that he himself is being saved alive, though his "goods" (his selfish plans, projects, and purposes) perish.

Jesus' words, "They shall never perish," are wonderfully proven true as we realize—grow to realize, perhaps after years of blindness—that the purpose of life is not to destroy or cause to perish. We finally grow to understand that the purpose of life's discipline is to teach us to lay aside voluntarily and lovingly all that is unworthy of perpetuity. Thus to learn aright life's lessons is to gain the highest and purest joys. All mankind have but one teacher, one shepherd, one fold into which all shall finally be gathered. Through the exemplification of this fact the scientific verity of the fatherhood of God and the brotherhood of man is brought to light. This is earnestly longed for by the better class of men and women today, and in Christian Science it is seen not as a far-off event, but as the present living fact of facts.

Prominent among the Master's teachings was the assurance that his words and deeds were not for that age alone, but for all ages. He did not say that men could hear his voice while loving their sins, but that this voice was humanly heard when hearts had grown consciously or unconsciously weary of sin and were asking, "What is truth?" One by one we come to know that Jesus' teachings and demonstrations prove that the quality and character of the divine Principle at work in the affairs and hearts of men is Love, unweariedly seeking the one stray sheep, though the ninety and nine are safely housed. The prophecies of all ages have culminated in this age in the advent of Christian Science, and they are finding fulfilment. In the words of Mrs. Eddy, "This human sense of Deity yields to the divine sense, even as the material sense of personality yields to the incorporeal sense of God and man as the infinite Principle and infinite idea,—as one Father with His universal family, held in the gospel of Love" (Science and Health, p. 576).

❖

Spiritual Birth

GRACE SQUIRES

"Of all days in the year," said one, "Thanksgiving and Christmas give me the most work. Our empty chairs are never so apparent as then, and it certainly is difficult to feel thankful in the face of loss and loneliness. The inscription on our church wall almost mocks me, 'Divine Love always has met and always will meet every human need' (Science and Health, p. 494). Wherein is my need met, when my chairs remain empty and my heart aches with pain?" Christian Scientists travel long roads of human endeavor before they learn that to lay down all for Christ is not to pick up human substitutes. We are tempted to keep all materiality that is pleasurable, and turn to Spirit only when the pain begins. Regarding this, Mrs. Eddy says that mortals "expect . . . what is impossible,—a material and mortal sense of spiritual and immortal Truth" (No and Yes, p. 40).

He who is suffering from a sense of loneliness or loss, turns to this or that material circumstance or person, drinks of temporal water, and thirsts again. He does not recognize the pain of the situation as a false sense, and turn to God for His impartation of that divine truth which alone quenches and heals, but argues from a material standpoint that it is natural to grieve in the face of loss, and natural to be lonely with one's companion gone, and so arguing, forges the links that bind him. It is well for humanity that Jesus did not so argue; that he did not declare for the normality of any material situation which confronted him, and then conform to that sense of normality; did not declare for the naturalness of hunger after forty days of fasting, and satisfy that hunger materially; or on the cross aver the naturalness of death to a man undergoing crucifixion. He never temporized with any personal situation by yielding to the arguments of materiality, but always wrested therefrom a spiritual victory and healed the situation with the truth. Matthew records that Jesus refused on the cross to drink the medicated vinegar which was supposed to deaden physical pain, and in its place declared for the love of his Father, and rested in His outstretched arms.

Digitized by Google

As mortals we do not see the spiritual ultimate, and so the journey seems long and wearying. We will not turn away from material sense and look toward the eternal things of Spirit. Mortals would like to have every suffering experience medicated with materiality, if only its pain would cease, and this comes from mistaking the goal toward which we climb. Spiritual birth has its price. It comes to humanity with labor. Jesus clearly illustrated this in his statement regarding the woman in travail, who afterward "remembereth no more the anguish, for joy that a man is born into the world." Then Jesus made its application to his disciples,—"Ye now therefore have sorrow: but I will see you again, and your heart shall rejoice, and your joy no man taketh from you." Unfortunately we do not always look at the birth of Truth's idea and the gain of its delivery; we look the rather at the sense of pain, and then surrender to it.

To admit the reality of suffering is to deny the truth, and we should never permit any discordant circumstance to argue for its naturalness. Divine Love always meets our need, not by descending to a material plane, but by lifting human consciousness to that height where the spiritual idea is reached and realized. Whatever the suffering human sense grasps at materially, as alleviation for its pain, will break under its weight, until one turns in absolute surrender to God. There he will gain the spiritual sense of all good and rest beside still waters. The empty chairs will be filled, the loneliness companioned by those he can help, because he will have plunged beneath the surface of this illusive sense of life and have reached reality.

Whatever be the suffering condition before us, it holds this one solution. Within its human density and darkness lies this one pearl of great price. Turning away from every subtle suggestion of self-pity and personal leniency, scorning every human expediency that but begs the situation, one should fight the good fight and demonstrate his faith. He cannot look at his friends and draw safe conclusions. He cannot say, "But you have this or that; no wonder you are sustained." There is only one thing any of us can possess with security, and that is an understanding of Truth, and that understanding is in exact ratio to our faithful labor for it.

True Sympathy

HON. MRS. FRANCES PORTER

ONE often hears it said that Christian Scientists lack sympathy, but I have reason to be very grateful for the kind of sympathy shown me by Christian Scientists some time ago, when what seemed to be a great sorrow came into my life. All my non-Science friends were very kind, and sympathetic as they understood the meaning of the term, and yet every letter and every word seemed to make the sorrow even greater. I had just one feeling, and that was a desire to get to the Christian Science church, where there were those who knew something better, those who knew and believed that God never wants us to suffer; and I was not disappointed. At the first service I attended, the cloud was lifted and I felt able to think clearly again.

Before coming into Christian Science I believed that love was very limited,—just for a few relatives and friends,—but since the light of Truth has dawned in my consciousness I have been learning that Love is divine and is for all mankind; that when God bestows His love upon us, it is not as a personal gift to be retained by us, but an inheritance to share with all mankind. Even a glimpse of this truth completely healed my sense of sorrow. The thought came to me that if we are as busy as we should be in loving and helping all mankind we shall have no time to be sorrowful. I feel renewedly grateful to Mrs. Eddy for this wonderful revelation of the Principle of being,—for helping us to understand the God who is Love, "how to attain a mind in harmony with God, in sympathy with all that is right and opposed to all that is wrong, and a body governed by this mind" (Christian Healing, p. 14).

The Dream Dispelled

WILLIAM E. BROWN

"AWAKE thou that sleepest, and arise from the dead, and Christ shall give thee light." This clarion call of Paul is just as applicable and significant to the Christian of today as it was to the Ephesians of the first century, but until the advent of Christian Science the real import of Paul's peremptory yet loving command was not understood by mortals, though there is embodied therein the most important advice in all Christendom. Parallel in importance is Mrs. Eddy's statement on page 40 of Science and Health, "The nature of Christianity is peaceful and blessed, but in order to enter into the kingdom, the anchor of hope must be cast beyond the veil of matter into the Shekinah into which Jesus has passed before us."

One of the things which Christian Science seeks constantly to impress upon its students, is that there is no resting-place in matter. This Science clearly teaches that matter, or material consciousness, is but the Adamic dream from which all mortals must awaken before peace and happiness can be attained. When one is convinced of the truth of this statement, there is seen to be but one real business in life, namely, the continuous effort to awaken one's self and others to a consciousness of the real universe of God's creation. Accompanying this conviction comes a quickened condition of thought which realizes the foolishness and danger of dilly-dallying by the way, and thereby prolonging the dream of life and intelligence in matter.

What gratitude the world owes to Mrs. Eddy for instructing mortals as to the facts of existence, showing them that the mortal sense of it is but a dream, to be dispelled through a knowledge of the truth of being! This is what Paul taught the Ephesians. "Awake," he tells them, "and Christ shall give thee light." It is Christ, then, that is to awaken dreaming mortals. Here again Christian Science confers eternal blessing on mankind by giving a spiritual understanding of Truth and imparting the ability to apply it practically to all the affairs of daily living.

To those who have wondered and mourned over earthly existence, with its sin, sickness, and death; with its cruelty, selfishness, and inhumanity; with its strife, competition, and rivalry involved in the mere act of existing, there comes a great sigh of relief to know through Christian Science that it is all a mortal and unreal dream, and that in place of the hopeless task of unraveling the tangled medley of centuries, one has only to awaken to a higher consciousness which knows the universe as God has ever known it, unchangeably perfect, harmonious, and indestructible, every idea forever in its rightful place, doing its own work, always provided for. This view illuminates the declaration of Paul to the Corinthians, "For as in Adam all die, even so in Christ shall all be made alive." Here the terms Adam and Christ unmistakably refer to mental conditions, and this interpretation is further strengthened by the rendering given in another translation, which reads "the Christ."

That mortal existence is but a dream, is clearly taught by

Digitized by Google

the Scriptures, which employ the terms sleep and awake repeatedly in connection with the all-important question of salvation. To the Romans Paul said, "It is high time to awake out of sleep: for now is our salvation nearer than when we believed." Again the psalmist sang, "I shall be satisfied, when I awake, with thy likeness." So, then, the most important thing in life, the true goal of mortal existence, is to awaken from the Adam dream or consciousness, to perceive the universe as it really is, spiritually perfect. To this end, therefore, must be brought all effort and endeavor, that we may bring into captivity "every thought to the obedience of Christ." That is, one must plant one's self on the rock of truth, knowing that God, man, and the universe are eternally perfect; and standing there, one must deny every argument or suggestion which would contradict this great truth. In other words, one must strive to know that he is a child of God, and must act accordingly.

Those who are convinced through Christian Science that the real business of human experience is to awaken from mortality's dream, make no compromise with error, have no time or inclination to gossip or listen to slander, have no surplus time to kill in foolish amusement or frivolity, but on the contrary deem every moment precious and an important factor in life's problem. "With Christ," Mrs. Eddy declares, "Life was not merely a sense of existence, but a sense of might and ability to subdue material conditions" (Unity of Good, p. 42), and on page 56 of the same volume she points out the landmarks which indicate progress in this overcoming. To experience such progress, it is well for one constantly to observe the admonition of the Founder of Christian Science, she who discovered the way of awakening from the Adamic dream. "To understand God," she tells us, "is the work of eternity, and demands absolute consecration of thought, energy, and desire" (Science and Health, p. 3).

"Strengthen thy brethren"

ELSIE E. EDWARDS

In the twenty-second chapter of Luke we find these words of Christ Jesus, spoken to Peter, "I have prayed for thee, that thy faith fail not: and when thou art converted, strengthen thy brethren." This tender appeal, made by the Master as he was nearing the close of that most wonderful earthly ministry, may well be considered by all who have named themselves followers of Christ in Christian Science. It matters not how slight our understanding of this subject may be, there is always some one who seems to know just a little less; some one who is taking the first faltering steps, and who, because he has not yet learned to turn his thought to divine Principle, may for a time seem to be hindered in his growth Spiritward through our failure to measure up more nearly to the requirements of Truth.

How grateful we should be that God in His love has shown us the perfect way, through Christ Jesus, and that in our own day our revered Leader, Mrs. Eddy, had the clarity of vision to grasp the import of that wonderful Christ-way, and to give it to the world in such a comprehensive form that all who will may understand. How earnestly we should watch and pray that this light which is given us be not hid, but that all who come into any relations with us may feel that sense of love and good will for which the world is hungering and which does indeed strengthen the brethren.

These loving words, "strengthen thy brethren," may well be borne in thought in all our church affiliations, that we may be ever awake to the great opportunities along this line of work. It is clearly seen by every earnest Christian Scientist that his personal presence at the church services is not all that is required, but that he must do his part in realizing the ever-presence of God, infinite Love, if he would reap the full benefit of the service and make it a season of refreshing for the heart-hungry who have come there, perhaps for the first time. At the Wednesday evening meeting is found a special opportunity to give to the seeker the information that Christian Science has indeed been our savior from sickness and sin, and we can ill afford to allow any error, whether it call itself fear or indifference, to keep us in our seats on those occasions.

In speaking of the brethren, Jesus evidently had in mind those men who had left all, and with Peter had enlisted to lessen the sufferings and sins of humanity. No one knew so well as did he how the enemy would seek to enter through the arguments of minds many and divide the ranks, thus hindering the unfolding of the Christ-idea. He also knew that their only protection from this insidious foe was a persistent refusal to see in a brother aught but the reflection of God. This loving counsel given a disciple two thousand years ago, may be of great value to the disciple in Christian Science today. The brethren who have enlisted with us to lessen the sin and suffering of the world, are entitled to our loving thought and kindly support in every right endeavor. This may well be borne in mind with regard to those who are faithfully working to fill the different offices in our churches,—that we be slow to criticize, and ever ready to serve and to uphold their hands.

In a letter to The Mother Church (Miscellaneous Writings, p. 129) our revered Leader has given us words of immortal wisdom which every Christian Scientist may well often ponder, and which if obeyed will surely do much toward hastening the coming of Christ's kingdom on earth; and in the Christian Science Hymnal (p. 105), the thought of loving service to our brethren is thus expressed:—

Among the saints on earth,
  Let mutual love be found;
Heirs of the same inheritance,
  With mutual blessings crowned.

Thus will the church below
  Resemble that above;
Where streams of pleasure ever flow,
  And every heart is love.

Grateful Praise

CAROLINE H. FISKE

Some one remarked a while ago that he did not see why the Bible contained so many commands to praise and to magnify God; but in Christian Science how easily and beautifully this is explained! To praise God, to exalt Him, to magnify Him continually, is the earnest desire of its every true representative. As Mrs. Eddy says, "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good" (Science and Health, p. 450). A Christian Science treatment magnifies God in consciousness until all sense of evil disappears.

The writer is most grateful for the spiritual signification of praise learned in Christian Science. An almost constant feeling of loneliness and depression has been destroyed through the practice of the simple rule to let "all that is within me, bless his holy name." How grateful we all should be that today it is possible to declare, with understanding, as did Mary centuries ago, "My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour"!

Selected Articles

[Frederick Dixon in *Weymouth* (England) *Telegram*]

There is nothing in this world for which mankind has a greater respect than matter, as matter is commonly conceived, and there is certainly nothing which less deserves its respect. The cardinal difference between Christian Science and every other philosophical system lies in this, as Mrs. Eddy puts it: "that *by knowing the unreality of disease, sin, and death*, you demonstrate the allness of God" (Unity of Good, p. 9). No other thinker since the day of Jesus and his disciples has ever got anywhere near this; if one had, he would have met with the same opposition as has Christian Science. The ancients, it is true, represented matter as a privation, but that is quite another thing and leaves people as comfortably material as they were before. Again, the scientific idealists, from the time of Berkeley down at any rate, proclaimed the unreality of matter, but that did not prevent them from acting precisely as if it were real, so that there was a genuine excuse for Lord Byron's famous epigram:—

> When Bishop Berkeley said "there was no matter,"
> And proved it,—'twas no matter what he said.

People frequently refer to the denial of the reality of matter, in the speculations of philosophical idealism, as if it bore some relationship to the denial of the reality of matter in Christian Science. As a matter of fact, the gulf between the two theories is as wide as that which separated Dives and Lazarus. To Berkeley, physical phenomena were simply a subjective state of mind. That is to say, instead of the human mind being contained in the brain, the brain itself was contained in mind. This, of course, ultimately reduced matter to a manifestation of God, and so the idealism of Berkeley, as Huxley pointed out, vanished into undiluted pantheism. Now, if you will substitute energy for God, you will have the point of view of the philosophic idealism of today. Matter, writes Professor Ostwald, is something we have constructed for ourselves, but he goes on to prove that the only reality is energy. All this amounts to in the end is the proverbial fight about the ass' shadow, and that was just what made Huxley say that eventually there was nothing to choose between materialism and idealism, and that one was as pure a piece of speculation as the other. If energy is real, and matter is the result of its vibrations, matter to all practical intents is itself real. The causes of life are inherent in a force which at any rate permits local inharmony, and sin, disease, and death are as uncontrollable as in the materialistic theory that nothing exists but "the forces inherent in matter."

The Berkelcian theory differs from this mainly in so far as it substitutes God for energy. It makes God as absolutely responsible for matter as the ordinary theological teaching, though inasmuch as it represents matter as a mental phenomenon, it implies that all the sin, disease, and death in the world is a part of the divine consciousness rather than a result of it. It is not much to be wondered at, therefore, that Mrs. Eddy insists that the cardinal difference between Christian Science idealism and the teaching of natural science is the consciousness of the unreality of sin, disease, and death, and declares that "the Apostle Paul explains this warfare between the idea of divine power, which Jesus presented, and mythological material intelligence called *energy* and opposed to Spirit" (Science and Health, p. 534). The fact is, that every form of teaching other than Christian Science ultimately results in making God responsible for evil, simply because those who accept it will not agree to the logical deduction that the admission of the infinity of God leaves no room for evil, and will insist on attempting to account for the evidence of their own senses as part of the divine creation.

Seated on the parapet of Jacob's well, Christ Jesus told the woman of Samaria, "God is a Spirit: and they that worship him must worship him in spirit and in truth." The universe, therefore, and man made in God's image and likeness, must be spiritual and not material, unless it is possible to gather grapes of thorns. The material universe as man sees it, cannot be anything but a counterfeit of the spiritual reality created by divine Love and intelligence,—the subjective state, truly, of that mortal mind or energy of which Jesus said, "He is a liar, and the father of it." Just, then, as a lie is a mere negation, incapable of producing anything true, so intelligence is incapable of producing inharmony, and love, sickness or sin. If, consequently, these seem to exist, it can be only as the dream of a supposititious mortal consciousness; and as man wakes out of this dream he begins to see the new heaven and the new earth, "for the former things are passed away."

Now, if the Christian Scientist rested the idealism of Christian Science on mere assertion, he would logically reduce himself to the level of the philosophic idealist who uses drugs to counteract the effects of mind, or the orthodox idealist who insists that Spirit is the ultimate of matter. As a matter of fact, he accepts the onus of proof. He is not satisfied with merely giving a reason for the faith that is in him; the scientific materialist and idealist are prepared to do as much as that for their speculations. He demonstrates the truth of his theories in the face of the world.

For forty years Christian Scientists have been healing the sick and the sinner, the man without hope and the man in want, absolutely without any material means at all, and simply through the understanding of Mrs. Eddy's words already quoted, "that *by knowing the unreality of disease, sin, and death*, you demonstrate the allness of God." As a result of this, the world is today richer by many hundreds of thousands of happy and healthy men and women who have learned how absolutely Christ Jesus was able to say, "The kingdom of God is within you."

✧

[Judge Clifford P. Smith in *The Outlook*, New York, N. Y.]

In the Bible we are admonished to "overcome evil with good." What is the nature of good and the nature of evil by which the one is superior to the other? Where do good and evil come in contact so that the one can be used to overcome the other? In the same book good and evil are sometimes personified, but they are oftener defined impersonally in mental terms. Some of the Scriptural names for good are "mind," "mind of the Spirit," "spiritual understanding," also "truth." Some of the Biblical names for evil are "fleshly mind," "carnal mind," also "error," "deceit," and the like.

Christ Jesus defined evil as "evil thoughts." He resolved all of "the things which defile a man," into thoughts that are evil. Nor did he leave the subject there. If evil thoughts were not different and separate from true consciousness, there would be no deliverance from them. Hence we have his further description of evil as a liar, or lie, and his emphatic statement that there is no truth in it (John viii. 44). Such being the nature of good and evil, the scene of the warfare between Spirit and flesh must be the so-called human mind, the consciousness of both good and evil. This must be the meeting-point where evil can be overcome with good. Here is where the errors of material sense can be corrected with the truth of spiritual sense.

The Hebrew proverb is scientific: "Keep thy heart with all

Digitized by Google

diligence; for out of it are the issues of life." Evil appears and disappears only in the so-called human mind. The kingdom of God is in the consciousness which He creates; that is, the consciousness of absolute good. It was nothing less, therefore, than the practice of Christian Science which Paul and Peter summed up in their precepts: "Let this mind be in you, which was also in Christ Jesus;" "Arm yourselves likewise with the same mind." This true mentality, this spiritual thinking, is godliness itself, and we are warned in the Bible against denying the power of godliness. Doing that, we are told, is resisting the truth. "Finally, brethren," Mrs. Eddy writes on page 6 of "Christian Science Versus Pantheism," "let us continue to denounce evil as the illusive claim that God is not supreme, and continue to fight it until it disappears,—but not as one that beateth the mist, but lifteth his head above it and putteth his foot upon a lie."

To illustrate: An act that culminates in murder must first take form in human thought. The gist of sin, as pointed out in the Sermon on the Mount, is the yielding to a sinful impulse. The temptation or incentive to sin is always mental; it is almost always a false sense of pleasure in evil. The only positive cure for sin is the truth relative to the illusion back of it. Sin is a thing of thought—false thought; it must be overcome on that basis, and this can be done most effectually at the point of its inception. Detected and rejected there, the evil neither enters into character nor is expressed in action.

Can it be said, then, that Christian Science calls men off from an intelligent campaign against evil? Christian Science changes its students into better men and women, not only by giving them true motives, pure desires, and absolute ideals, but also by discovering to them the deceptive nature of evil impulses and the source and power of good thoughts. In like manner this Science equips its students for the cure and prevention of disease. It teaches them to analyze the conflicting elements of human consciousness and to maintain the true sense of being against the false sense of disorder, thus destroying the essential cause of disease and establishing the conditions of health.

So also the power of divine Mind, acting with true thoughts, or truth, is found to be available in every case of human need. As the psalmist said, "His truth shall be thy shield and buckler." In a word, the aim of Christian Science is to induce and enable men to realize their rightful freedom and God-given manhood.

[Algernon Hervey Bathurst in *Financial News*, London, England]

Will you allow me to say a word with regard to the remarks on my letter to you, published in a recent issue? I heartily agree with the first two sentences, but I would like to state most emphatically that Christian Science has nothing whatever to do with occultism; indeed, it would be difficult to find two greater extremes than anything in the nature of occultism and Christian Science. Again, the understanding and application of the teaching of Christian Science will never give a man an unfair advantage over his neighbor. Christian Science reveals absolute Truth, and enables the student to recognize and so rely entirely upon Truth and justice, and to know that by practising the golden rule he will injure no one, least of all himself.

I admit the general belief is that "business and spirituality are on two different planes," but it is just this belief which Christian Science has already done so much to alter, in demonstration of the truth of Jesus' statement, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." The most remarkable feature of Christian Science is its vastness, for there is no condition in human experience to which it cannot be applied, including the business world, which surely stands in need of improvement. Now, Truth is immutable and cannot change. If, therefore, discord, dishonesty, or any evil conditions were true, it would be hopeless to try to improve them.

In giving Christian Science to the world, Mrs. Eddy, in the text-book, "Science and Health with Key to the Scriptures," reminds us how the Founder of Christianity revealed the law of God by healing sickness and destroying discord, and it is the spiritual or scientific understanding of this law which heals and prevents discord, whether of a physical, mental, moral, or business nature, today. This is a scientific fact which Christian Scientists are proving daily, but most certainly not by worsting their neighbor. The psalmist said, "Great peace have they which love thy law," and it is for this peace realized when business affairs are made right through an understanding of the immutable law of God, that the Christian Scientist is so grateful.

We publish the above letter with great pleasure, though it certainly opens up a very wide field. For instance, the proposition that "Truth is immutable and cannot change," would alone afford scope for a treatise.—EDITOR *Financial News*.

[John L. Rendall in *Fort Dodge* (Iowa) *Messenger*]

It would be well for self-appointed critics of Christian Science to heed carefully Jesus' teaching concerning "the mote" and "the beam" and to "judge righteous judgment." In his sermon the Rev. Mr. —— has perhaps unwittingly, but nevertheless positively, misrepresented Christian Science and its followers, and he certainly fails to grasp the fundamental fact that Christian Science is itself pure and unadulterated Christianity. He states: "The devotees of Mrs. Eddy are certain that Christian Science can work wonders." The question naturally occurs, "Why are they certain, and of what are they certain?" They are conscious that only through the power of God are the seeming "wonders" worked, and they certainly have a good and sufficient reason for the hope that is within them, because of daily proofs of God's healing power. In other words, Christian Science is a demonstrable religion.

Our critic also stated: "Mrs. Eddy classes herself with the virgin and Christ himself." In answer to this, let me quote Mrs. Eddy in an article published in the New York *Herald*, Feb. 1, 1895. "'Am I the second Christ?' Even the question shocks me. What I am is for God to declare in His infinite mercy. . . . My books and teachings maintain but one conclusion and statement of the Christ and the deification of mortals. Christ is individual, and one with God, in the sense of divine Love and its compound divine ideal. There was, is, and never can be but one God, one Christ, one Jesus of Nazareth" (Pulpit and Press, p. 74). We beg to differ with our critic where he states, "Christian Science uses the words atonement, justification, mercy, heaven, and hell, and all other terms of Christian theology, but by them means something entirely different from what the Bible does." In this he arrogates to himself the sole right to determine just what the Bible means. May it not be within the range of possibilities that the Christian Science definitions are the more reasonable, logical, satisfactory, and scientifically exact? He states that Mrs. Eddy says: "The Comforter is Divine Science." What Mrs. Eddy really says is, "This Comforter I understand to be Divine Science" (Science and Health, p. 55), and her statement is daily being proved to be a correct one.

Digitized by Google

When our critic raises the point of heaven as a "place," he disputes Jesus' statement, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." This agrees with Mrs. Eddy's statement on page 291 of Science and Health, to which our critic refers, "Heaven is not a locality, but a divine state of Mind in which all the manifestations of Mind are harmonious and immortal."

Our critic states that Mrs. Eddy says, "God never created matter." This is true, but Mrs. Eddy also denies the existence of matter as an absolute reality, and in this she is sustained by the highest thought among scientific men of this age. Mrs. Eddy does not deny that God is the creator of man and the universe; in fact, she positively affirms that He is the one and only creator, and that His creation is spiritual and not material. The point of contention upon the part of our critic is, that God's creation is a material one and that matter is real. Inasmuch as the brightest minds of all ages have differed on this point, I will not undertake in this article to convince the gentleman of his error.

Mrs. Eddy does not "deny the atonement." She says: "Atonement is the exemplification of man's unity with God. . . . The atonement of Christ reconciles man to God, not God to man" (Science and Health, p. 18). I might go on indefinitely, correcting these misapprehensions of the theology of Christian Science, but suffice it to say that in its practical workings Christian Science is in exact accord with the highest ideals of Christianity. Its mission is to heal the sick, comfort the sorrowing, reform the sinner, and bring peace and joy into individual lives and characters. That it is fulfilling its mission is attested by its thousands of adherents and the increasing thousands who are daily becoming its beneficiaries.

Just a word as to the "personal enrichment of Mrs. Eddy" and the "enormous fortune" which she "made out of her followers." Mrs. Eddy's fortune was the legitimate fruit of her labors. It was contributed by Christian Scientists who got vastly more than value received. It was left by Mrs. Eddy to further the work and advance the cause of Christian Science, all of which was with the hearty approval of the contributors to the "fortune." True, Christian Scientists charge a moderate fee for their services, so does our reverend critic, unless evangelists have recently changed their methods. If only "false systems" have been "systems for getting money for somebody," does his particular system come under this head? Jesus asked, "If I by Beelzebub cast out devils, by whom do your children cast them out?"

✧

[David Anderson in *Southern Cross*, Melbourne, Australia]

An extract from a sermon by Professor ——, published in the *Southern Cross*, contains a reference to Christian Science in which he speaks of this religion as a fashionable form of racial folly, practising esoteric mysteries, the root of which, according to the professor, is an unspiritual thirst after a sign, after thaumaturgic wonders, and other things on the level of conjuring tricks. The ninth commandment not having been abrogated, it is a little surprising how readily some learned critics use the pulpit and the pen to promulgate representations, which they do not substantiate, of a religion from which they differ, but which, nevertheless, is a religion believed in and practised by a million of their fellow-professing Christians. Opinion is free to all, and Burns, who was a keen observer of his fellow men, clerical and lay, in a few terse words expressed the indisputability of facts. Our critic might therefore be invited to quote specifically his authority for the assertions he makes, by indicating any passage in the Christian Science text-book, "Science and Health with Key to the Scriptures," which would show either sympathy or accord with esoteric mystery and magic or with Pythagorean philosophy.

The study of Christian Science requires no special initiation, unless it be the dropping of prejudice, and there is nothing in Christian Science uncommunicated or unintelligible to the general body of its followers, or to the world at large. Children understand it sufficiently to prove their understanding by its practice. Its thirst is that spiritual thirst for living waters which Christ Jesus commended, and which is quenchable only through obedience to his commands. Its healing may be wonderful, but it makes no claim to the miraculous in any other sense. It regards the miraculous works of Jesus not as supernatural, but as divinely natural, fully accepting the assurance, "He that believeth on me, the works that I do shall he do also." The existence of Christian Science as a religion, and its continuous and uninterrupted progress, are outcomes of that "weariness and despair and breakdown of blank materialism to satisfy the heart of man" to which our critic alludes. Christian Science does not "deceive the carnal heart," as the professor asserts; but on the very best authority it regards the carnal mind as "enmity against God;" that fleshly mind which is a deceiver from the beginning; a negation of the divine Mind, the Mind "which was also in Christ Jesus."

✧

[George Shaw Cook in *Register-Gazette*, Rockford, Ill.]

In a recent issue the announcement of a public drama contains the mistaken statement that it will be of interest to Christian Scientists because it exploits mental suggestion. Permit me to explain that the subject of mental suggestion is not one in which Christian Scientists are interested. It should be understood that Christian Science treatment involves something more than mere belief; it includes demonstrable understanding of the ever-presence and all-power of God, or divine Mind, and this understanding is the basis of all true faith.

Likewise, it should be understood that Christian Science treatment is in no wise akin to mental suggestion, mesmerism, hypnotism, or any other form of mental treatment which involves thought-transference or the exercise of will-power. None of these acknowledges the power of divine Mind as supreme. All of them depend, in one way or another, on the supposed influence of one human mind over another and on the asserted control of mind over matter. Christian Science is based upon the fundamental proposition that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). It is therefore the only system of healing which denies the actual existence of matter and of the so-called mortal mind.

Credo

HERBERT H. YEAMES

WHAT is thy faith who sayest, "I believe
In God the Father," and yet livest not
As if God were, and were thy Father too?
On such a faith no shadow of fear could fall,
No burden of anxiety could weigh,
No petty passions press disquieting.
The love of God is like an atmosphere
Embracing all things, like a boundless sea
Upbuoying; and none who trusts himself,
Serene in His sustaining strength, can sink,
Feeling beneath the everlasting arms;
Feeling above the brooding wings of Love.

Editorial

No Other Cause or Effect

One of the many misconceptions of Christian Science which have found credence with those who have not studied this subject, and therefore are not in a position to judge its teachings fairly, is the belief that Mrs. Eddy taught her followers a process by which they may injure other persons, or may in turn themselves be injured. This supposed process, all the more mysterious and fearful because not understood, is believed to be somewhat akin to witchcraft, and is commonly known as animal magnetism. The tree is known by its fruit, and that the Discoverer and Founder of Christian Science, one whose own rule of life was to return good for evil, could ever have devised or taught such a pernicious doctrine, is not to be credited by those who are familiar with the actual teachings of Christian Science. They do not hesitate, therefore, to stamp the claim that she did lend herself to such practices as untrue.

Mrs. Eddy, by making use of the term animal magnetism in characterizing evil, simply classified in a convenient way "the voluntary or involuntary action of error in all its forms" (Science and Health, p. 484). As to its supposed power she writes: "Animal magnetism has no scientific foundation, for God governs all that is real, harmonious, and eternal, and His power is neither animal nor human. Its basis being a belief and this belief animal, in Science animal magnetism, mesmerism, or hypnotism is a mere negation, possessing neither intelligence, power, nor reality . . . It is the false belief that mind is in matter, and is both evil and good; that evil is as real as good and more powerful. This belief has not one quality of Truth" (pp. 102, 103).

Throughout her writings Mrs. Eddy is insistent upon the fact that God is good, and that He is omnipotent, omniscient, and omnipresent. This being true, it is only common sense to recognize that there can be neither place nor power in the universe of God's creating for anything so wholly unlike Himself as evil. It is through an unfaltering faith in the allness of God,—to Him alone all things are possible,—that we come to see the consequent nothingness and impotence of evil and can bid it depart. For Christian Scientists, therefore, to believe that there is any other power than God, who is good and only good, would be entirely inconsistent with Christianity as taught and practised by Christ Jesus. We must be alert, as was he, to the insidiousness of the claims which evil puts forth, trying to find a weak spot in our armor. It may appeal to the desire for revenge, the pride of place and power, the thirst of mad ambition, and clothe itself ever so skilfully in the guise of good, but back of it all is the scheme to set itself up in opposition to the one power, God. When this is uncovered, and we see it in all its hideousness, we shall declare as did our Master, "Get thee hence, Satan: for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve."

Those who believe that animal magnetism is allied with Christian Science, should not only read but study Mrs. Eddy's writings; and if this study is made in a spirit of fair-mindedness, they cannot fail to see that animal magnetism is no part of the teachings of Christian Science, but is simply a general term for evil, and that evil is to be guarded against and overcome. If there be any who fear the seeming power of evil under this name, they should likewise study our Leader's writings, for in so doing they will find that animal magnetism is not something to fear, but is rather a false belief that there is a power apart from God, good. They will also learn how this false belief may be met and mastered. Christian Science strips the cloak from all evil, and exposes the falsity of so-called intelligent matter. It stimulates righteousness and promotes happiness, and these it could not do if it depended upon evil to produce results. Its teachings put mankind on guard against the most subtle forms of evil.

It matters not, then, what error may claim for and of itself. The Christian Scientist has a sure defense, for he whose thoughts are governed by good can neither do evil himself nor be harmed by it. So long as he is clad in "the whole armor of God," he will pass unscathed through the hosts of evil. In the new volume of her writings, "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy clears away every last vestige of doubt and fear when she says (p. 364): "Animal magnetism, hypnotism, *etc.*, are disarmed by the practitioner who excludes from his own consciousness, and that of his patients, all sense of the realism of any other cause or effect save that which cometh from God. . . . This epitomizes what heals all manner of sickness and disease, moral or physical."

Archibald McLellan.

Friends and Foes

Throughout the Scriptures, especially in the Old Testament, are many references to foes, or enemies, which were probably regarded by the general thought as personified beliefs of evil. It is also true that many today share the beliefs of those of the olden time, and without hesitation personify the ills of mortal experience and fight them as solid realities. It is very evident that when error is thus personified it multiplies rapidly, that is, according to material sense.

In the psalms we find this sorrowful plaint: "Lord, how are they increased that trouble me! many are they that rise up against me." The modern saying, that troubles never come singly, is due to the same belief that error can counterfeit good and by the multiplicity of its representatives harass and wear out those who attempt to cope with it. Thus we find the afflicted man who dwelt in the tombs actually identifying himself with evil, and saying in response to Jesus' question, "My name is Legion: for we are many." It is, however, cheering to read that the "great Friend to all the sons of men" was able to bring deliverance to this captive and to demonstrate to him and to those who knew him that "one with God is a majority." We also read that Jesus' disciples "cast out many devils," the foes which attack men as sin, disease, and death.

In the wonderful article entitled "Love Your Enemies," on page 8 of "Miscellaneous Writings," Mrs. Eddy shows us the real significance of friends and foes, and we cannot too often ponder this statement, "Simply count your enemy to be that which defiles, defaces, and dethrones the Christ-image that you should reflect." She makes it clear that no person can force us to think evil or do evil, and it is the realization of this vital fact which leads to dominion over all things. It is only as we yield ourselves "servants to obey" the enticements or the threatenings of error, that we come under its thraldom and suffer from our failure to disarm the foe with the weapons of Truth, and to know that divine Mind is our "best friend." (See Science and Health, p. 176.)

The tendency of mortal mind to increase our foes by multiplying its erroneous beliefs, was curiously illustrated in an address given at the opening of a hospital a few years ago. The speaker reminded his hearers that some centuries ago men's foes were wolves and other wild animals, but that the present-day foes, namely, disease germs, were far more dangerous and numerous. It is little wonder that many who

Digitized by Google

accept these material theories begin to question the wisdom and power of a God who, according to material belief, sends new foes to distress those who had gotten rid of some others, and there are not a few mortals who are driven by such theories to doubt and almost to despair. Happily, to many such there comes the blessed discovery that God never works in this way, that all He creates and governs is, like Himself, good. As this is demonstrated in Christian Science, the foes are no longer increased, but decreased in the ratio of one's understanding and faithfulness. What is more, the place which our mistaken sense once gave to foes, is found to be occupied by friends, by divine ideas which inspire and gladden us wherever we are, and we never need to be alone in the Father's house.

The apostle James tells us that "the friendship of the world is enmity with God," but the Master presents the true ideal when he says, "Ye are my friends, if ye do whatsoever I command you," and the command which immediately follows is "that ye love one another." If we fail to heed this gentle yet imperative command, we shall miss the presence and power of the Christ-idea, and cry out that our foes are increased; but this should only drive us to the promised Comforter, "the Spirit of truth," that we may better learn how to walk with the "friend that sticketh closer than a brother."

ANNIE M. KNOTT.

Our Part

BOTH self-respect and efficiency are conditioned in human experience by one's consciousness of his call and commission. The most stimulating thing that can come to a man is the conviction that he has something splendidly worth while to do, and that God stands behind him to help in the doing. The daring and devotion of heroism then becomes possible. Thus, though the psalmist ofttimes yielded to the temptation to account himself as good for nothing, when he was awakened to his privilege as a child of God he became transformed, made ready to dare and to do. He had gained the conquering consciousness, and sang with exultant joy, "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?" This in part explains the uplift which Christian Science brings to the thought and feeling of men. It furnishes the proof that they have not only the opportunity but the capacity to radiate the healing truth, and thus to do the Master's works even as he commanded.

The story told in the tenth chapter of Acts shows us pertinently that though Peter had done wondrous things through faith in the name of Jesus, he was nevertheless manacled by an inherited belief that the activities of good were limited by racial distinctions. Not only was the apostle healed of this false sense by the vision vouchsafed him, but he was led to understand as never before that God, divine Principle, is revealed, becomes redemptively effective upon the human plane, in the activity of His idea. When the word spoken to Cornelius, "He shall tell thee what thou oughtest to do," and the word spoken to himself, "Arise . . . and go with them, doubting nothing: for I have sent them," were duly wedded in Peter's thought, his life-work was given a new perspective, and his mouth was "opened" as it had not been, for the dissemination of the healing gospel. This enlarged perception of one's individual place and privilege in the divine order is an immediate bestowal of Christian Science. However dense one's past torpidity and listlessness, he can but be quickened into busy usefulness by the assurance that he actually figures in the program of the world's redemption.

Self-depreciation and self-excuse constitute the bivalve where weakness would fain hide itself, and they witness to two very general mistakes, the first being the failure to recognize the significance, in an organization, of minor parts to the whole. Students of nature aver that no least thing can be removed from its composite order without seriously disturbing its balance. Attention has recently been called to the report that a bee malady in England threatens to seal the fate of flowers and vegetables, since they are entirely dependent upon the "blissful burglary," as Lanier names it, of this clever little marauder, for the fertilization of their seed. What a startling fact, if so be, that the illness of an insect should threaten the starvation of a race! And yet experience often brings us the discovery of kindred dependences. Before he had acquired more than what was to him an amusing notion of the nature and significance of Christian Science treatment, the writer once rather jokingly commended it to the parents of a congenitally crippled child, and ten years after, he unexpectedly came upon the wondrous fact that, acting upon this vagrant suggestion, their little boy had been made whole under Christian Science treatment and was approaching manhood strong and well. Significant indeed are both cosmic and human relations.

The second mistake made is in the failure to honor and live in the selfhood that is linked to God; it is the practical denial of the relation which enabled the awakened apostle to say, "I can do all things through Christ." Christian Science is proving humanity's helper in begetting a right sense of self and of this self's relation to the infinite; that consciousness is to become not only the channel of divine revelation, but the fact of revelation, God manifest. It gives a clear perception of the philosophy of salvation, what we are to escape from and how it is effected. It makes possible the efficiency of the Christ-life by revealing its Principle and rule.

JOHN B. WILLIS.

Among the Churches

Current Notes

CHICAGO, ILL.—Starting with a membership of about five hundred, Fifteenth Church of Christ, Scientist, held its first services yesterday [May 3] in Masonic Hall, South Central avenue, Austin. This church is the third Christian Science church to be organized in Chicago since March 1, and was necessitated because two other churches had become quite overcrowded.

Third Church, West Washington boulevard and Leavitt street, has a seating capacity of fifteen hundred, yet for months almost every Sunday service saw dozens standing during the service. Similar conditions existed at Second Church, whose members meet in the Warrington Theater, Oak Park. The excess membership of these two churches, particularly those living at the extreme ends of their respective zones, organized Fifteenth Church. The growth of the Christian Science church in Chicago is regarded as remarkable.—*Chicago Examiner.*

HONOLULU, HAWAIIAN ISLANDS.—First Church of Christ, Scientist, has just purchased a building lot on the corner of Wilder avenue and Kewalo street. The lot is situated in a very desirable part of the town, in the residence district, and is easy of access, being on the car line. It is 178 by 125 feet, and the price is seven thousand dollars, of which forty-five hundred dollars has been paid. The church was unanimous in its choice of this lot, and is happy in having taken this step toward getting a home. It plans to erect an appropriate edifice as soon as funds are available.

Correspondence.

SPRINGFIELD, ILL.—First Church of Christ, Scientist, held services for the first time in their new church, South Second and Edwards streets, yesterday [June 28]. A remarkable transformation has been wrought in the property, the entire first floor being made into an auditorium which will seat about one hundred and seventy-five people.

The Illinois State Journal.

PORTLAND, MAINE.—Christian Scientists in Portland are delighted to learn that the new church which has been talked of for a long time past, is to be commenced about the middle of July. This announcement was made in the vestry of the church on Neal street by the president of the church. The building, when completed, is to cost approximately forty-five thousand dollars and it will easily seat seven hundred and fifty people.—*Portland Express-Advertiser.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 6, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 14, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Chicago, Ill.

The introductory words of LeNoir White at the lecture on Christian Science by Virgil O. Strickler, who spoke under the auspices of twelve Chicago churches, were as follows:—

This large audience is possible here today because of the faith and obedience, the words and works, of one noble, courageous woman, Mrs. Eddy, the Discoverer and Founder of Christian Science. That works follow her words, many of you are witnesses. It has always been God's purpose that all mankind should know Him. David said, "He sent his word, and healed them, and delivered them from their destructions." Mrs. Eddy tells us (Science and Health, Pref., p. xi), "When God called the author to proclaim His gospel to this age, there came also the charge to plant and water His vineyard." Her obedience to the charge given her was very wonderful, for she not only wrote and published the message itself, as found in the text-book of Christian Science, "Science and Health with Key to the Scriptures," but she provided ways and methods whereby mankind might receive the message. She founded The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., whose branches are now located all over the world. She furnished the order of service for these churches, ordained the Bible and the Christian Science text-book as the pastor therein, and made provision for the Lesson-Sermons, which are read from these books to the congregations every Sunday. She instituted the Wednesday evening meetings, where grateful people testify of Christian Science Mind-healing, and established Sunday schools, where the children and youth are taught the Scriptures, and whereby they learn how to exemplify the teachings of Jesus.

Mrs. Eddy founded the Massachusetts Metaphysical College, and later a board of education of The Mother Church, providing teaching and teachers, with the result that now there are practitioners everywhere, ministering to the sick and helping the sinner to reform. She founded a publishing society, making provision for publishing and distributing Christian Science literature and periodicals, and later a great international daily newspaper, devoted to clean journalism. Thus did she plant and water, and all the world today is a witness that through these avenues God has given a mighty increase. She also established a board of lectureship of The Mother Church, whose members are instructed so to present the subject of Christian Science to the people as to remove prejudice and misconception and prepare the way for the message which blesses all who receive it. Thus we see that because of the eternal purpose of divine Love, and because of the obedience of the Discoverer and Founder of Christian Science, we are here this afternoon to enjoy the God-given privilege of listening to a lecture on Christian Science.—*Correspondence.*

❖

Bozeman, Mont.

John A. Luce, attorney-at-law, in introducing Clarence W. Chadwick, who lectured on Christian Science at the Opera House, said in part:—

We are living in a strange age. Mankind seem to be filled with fear. As a result of this fear we find numerous societies being formed daily, some for protection of its members, some to project upon the world special ideas of which their members are possessed, for the prevention of all manner of thoughts, acts, and deeds. Classes are arrayed in hatred against one another, and through fear there is a lack of harmony, and discord prevails.

However, over forty-eight years ago there was started by Mrs. Eddy a religion which is called Christian Science, and which—it is the hope of those who believe in it—will remove from the human mind this awful fear and bring harmony instead of discord into the lives of men. This philosophy is aptly named Christian Science. It is Science because it is demonstrable, and it is essentially Christian, being founded upon the teachings of the Lord Jesus Christ.

The members of the Christian Science church, as far as in them lies, are following in the footsteps of the meek and lowly Jesus, and it is their firm hope that through the benign influence of the wonderful teachings of Christian Science all men may be brought to follow in his footsteps. They are obeying the admonitions of Jesus Christ, and are not only preaching the gospel but healing the sick.

Correspondence.

❖

Buffalo, N. Y.

In introducing the Rev. William P. McKenzie at the second of two lectures on Christian Science, James F. Foster said in part:—

About a dozen years ago I enjoyed a very clear misconception of Christian Science; I say enjoyed it, because, like many others, I imagined myself having considerable merit in making fun of my friends who had taken up the study of this religion. A little later a necessity in my life caused me, quite reluctantly, to turn toward that which I had previously ridiculed, and in the course of study I found that my misconceptions were being corrected. Then, too, I was amazed to find that physical difficulties were disappearing.

Digitized by Google

As I pursued the study of this truth as revealed in Christian Science, more and more of my misconceptions were corrected; more and more of my physical and mental difficulties, as well as the difficulties in understanding God's Word and in understanding Him and my relation to Him, were swept away. The board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was instituted that these misconceptions, which exist in the thought of many, might be wiped away by those who are qualified and authorized to speak on Christian Science from the standpoint of understanding and from the standpoint of demonstration.

We, as Christian Scientists of Buffalo, invite you here this evening, but not to make you members of the Christian Science church. Christian Scientists are not entering into competition with any other church, or into competition with our friends the doctors; but having found the truth, we deem it not only a privilege but a duty to tell our friends about it, so that they may use it in their lives.—*Correspondence.*

❖

La Crosse, Wis.

The tenets and aims of Christian Science were explained at La Crosse Theater by Virgil O. Strickler. The lecturer was introduced by Leigh Toland, who spoke in part as follows:—

Christian Science satisfies the intellect with absolute truth and uncompromising logic. Greater than all this, it reveals universal Love, simply and easily understood by the honest heart, Love that heals of all fear and disease, meets every human need here, and brings the peace "which passeth all understanding." It would not be infinite if it were less, and the powers and established works of Christian Science are beyond the might of unaided humanity.—*La Crosse Tribune.*

Testimonies of Healing

It is with a heart full of gratitude that I endeavor to write this testimony of healing which I have experienced through the knowledge of God, good, as taught in Christian Science. As a child I was delicate, and under the care of doctors who restricted my diet, claiming that the stomach and bowel disorder from which I suffered, were due to a disordered liver. I was greatly annoyed with a cough, and in my eleventh year a physician examined my lungs and said that they were affected by inherited disease, and that I could not live longer than three months. Contrary to expectations, I dragged on to woman's estate, full of pain and nervous anguish.

After marriage I lifted a heavy jar, which caused more trouble, and my physician said I should have a specialist, as he did not understand my case. I had two specialists, and each said I would have to be operated on if I expected to get well. My heart, however, was so weak, and I was so nervous, as they expressed it, that they were afraid to administer an anesthetic, consequently I was spared the ordeal. As the years passed, it seemed as if most of the ills known to humanity were added to my burden, and last but not least, Bright's disease. Knowing, according to *materia medica*, the fatal effects of this disease, I would have been glad to pass out quietly. I suffered so intensely during this illness that many times I have taken a whole bottle of medicine in one day. I thought this and another remedy relieved me, but I continued to fail, and my stomach gave me so much trouble that everything I took caused great suffering.

My diet was being constantly restricted, until hot water was my principal support, accompanied by a cereal. I felt that medicine was doing me no good, so I tried other means, which benefited me for a while; but I was told that I could never expect to be strong again. Sure enough, I continued to grow more delicate, suffering intensely, and my heart was so weak that at times I could not speak above a whisper. This may seem overdrawn, but I have not told half of my mental and physical suffering.

In the fall of 1911 my husband spoke of my illness to a friend, a Christian Scientist, and she kindly sent me some literature, as well as an old *Quarterly*. I read the Bible references, and through these divine messages and the reading of the literature I was helped, though my friends thought the improvement was due to a new medicine I was taking at the time. Lack of encouragement finally caused me to drift back to the old thought, yet I borrowed a copy of Science and Health and read it. I could see nothing in it, however, as I was looking at it materially; so I went back to the flesh-pots of Egypt. I tried all the medicines of the previous years, and added a few, but I weakened steadily, until on the morning of June 25, 1912, I had reached man's extremity; then through a loving Christian Science practitioner I experienced the glorious proof of God's power.

The healing was instantaneous, as I got up and walked from one room to the next, ate a hearty supper, experiencing no inconvenience from it, and lay down and slept like a baby until ten o'clock, when my husband awakened me. I had promised to let the practitioner know how I was at that time, and I was able to talk to her and assure her that I was well. On lying down, the great blessing I had received so flooded my being that I cried out my thanks and praise to our loving Father-Mother God, and the divine presence filled my heart to overflowing with His dear love. Since that time the promise of Christ Jesus, "If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him," has had a glorious meaning. I think the grandest thing Mrs. Eddy did, was to show us how to consecrate ourselves, in a measure, as she did,—to feel with her Love's "gentle presence, peace and joy and power" (Poems, p. 4).

It is two years since God so graciously showed me the true method of healing, and all that He does is permanent. Science and Health is indeed my blessed "Key to the Scriptures." I am endeavoring to follow the Wayshower and our Leader in all things, yet I have much to learn.

Does any one wonder that I am thankful? Long and earnestly had I looked for "the glory that turned the gray of life to gold," and the "lost chord" was found in the melody of Christ's love revealed. All day long the Master's *loving* words sing in my heart. No matter how hard my task, there is joy in serving, and I would not exchange this sweet peace for all the wealth of earth. I also love to meet the dear brothers and sisters at our meetings, and I think no one should miss them. There love radiates on all sides, and gives me added zeal to study the Lesson-Sermons and strive to gain the full measure of their promise. All the literature is very helpful.—NANNIE P. SHANKLAND, Lexington, Ky.

◆

[Translated from the French]

For several years I suffered from rheumatism and nervous troubles, and in addition to these ills I became afflicted in August, 1912, with local paralysis of the nerves of the right side, accompanied by a marked displacement of the shoulder-blade. I had one hundred electrical treatments, besides using various internal and external remedies according to the diagnosis of the physicians whom I consulted. At the end of the year 1912, after five months of treatment, my condition was unchanged, and I not only despaired of ever experiencing healing, but even felt that I could hardly expect any kind of improvement.

It was then that a friend discreetly called my attention to Christian Science, which I had never heard mentioned before, and it came to me as a revelation. My decision was quick, and I consulted a practitioner without delay in order to obtain the desired information and explanations on the subject. We agreed readily, though the religious standards according to which I had been reared still had their hold on me. She then undertook to help me, and pursued her aim so conscientiously that after a month I was able to translate somewhat from the English, with which I had not been in the least familiar. I felt that I was receiving valuable instruction, and that with work and patience I would surely reach the point where my dormant thought would be awakened and where I would get rid of the errors which were besetting me. The second month my condition was greatly improved, the third month I felt well, and the fourth I was healed.

I would like to add to this testimony the following interesting instance of healing. Last spring, while on my way to the office one morning, I was seized with a violent attack of illness, and shortly after I reached there my condition became so acute that I had to ask to be taken home. I notified the practitioner, and she immediately gave me treatment, and later in the afternoon helped me again. The effects were not long delayed, for that same day I was freed, I may say instantaneously, from the attack, and able to resume my work the next day.

Today, thanks to Christian Science, and to the intelligent and practical application of its teachings, I feel like a new man, ready to overcome error, and aspiring to attain to higher spiritual and scientific understanding.

Digitized by Google

It would be impossible for me in the face of such proofs to remain indifferent to the blessings of God or to fail to recognize the almightiness of His power as well as His infinite goodness. I feel that I can hardly give adequate thanks to Mrs. Eddy for having made me acquainted with the teachings of Christian Science and its blessings through her wonderful book, which must not only be read but studied. I am profoundly grateful to God for the grace He has bestowed upon me, and I am asking Him daily to strengthen and increase the faith through which alone we can become better, yea, attain perfect harmony, without relying upon any material means.—Louis Beauverd, Geneva, Switzerland.

✧

I write this testimony in loving gratitude for what Christian Science has done for me. I had been a sufferer since childhood from stomach trouble, and for fifteen years had suffered intensely from what the doctors pronounced an affection of the spine. Different physicians told me my case was incurable, and naturally I was in a very hopeless condition. I was rapidly growing worse, not being able to sit up long at a time. A friend, hearing of my condition, advised me to try Christian Science; but as I was of a skeptical nature, it did not appeal to me. I was so fearful my case would not be reached by divine Love, that I lingered in doubt for two weeks, when I suddenly realized that something had to be done immediately, as the flesh on my left limb had become apparently lifeless. I therefore hurriedly called a Christian Science practitioner.

I can truthfully say I was healed in one treatment of both the stomach and the spinal trouble. I had dieted for eight years, but since my healing I have eaten everything set before me, and go to bed and sleep,—a sleep such as no one knows who has not had Christian Science treatment. Fear has been banished from my life. It is now over five years since I was healed, and the trouble has not returned. I am trying to prove myself a loyal student of Christian Science, and have depended wholly on it; I am also able to demonstrate for myself very successfully. Every day I am gaining a better understanding of the Bible and of what God really is.

I am thankful to God for the many blessings I have received, also grateful to our revered Leader, Mrs. Eddy, who has made this Science demonstrable.

Laura Summers, Jerome, Idaho.

✧

In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we learn that it is unnecessary to understand disease in order to heal it; and as we carefully analyze this fact, we see that to study disquisitions on disease is to become more acquainted with it, more fearful of danger under certain conditions, and more fearful of the suffering that the knowledge of disease laws entails. In the Old Testament we are thus counseled: "Acquaint now thyself with him, and be at peace: thereby good shall come unto thee." And in the New Testament Jesus, speaking to his disciples, commanded them to preach the gospel with "signs following," namely, the healing of the sick and sinning. There was no recommendation of the study of pharmaceutics, material laws or conditions. Jesus knew and proved that the understanding of God as the only creator, who made all that was made and pronounced it good, healed the sick and distressed with a thoroughness that no knowledge gained through the study of matter could even attempt.

Jesus also said, "Seek ye first the kingdom of God, . . . and all these things shall be added unto you." This means, as I understand it, that if we seek to know God as good, as the only creator and source of all being, the only power, presence, and activity, and man as made in His image and likeness, as governed and controlled by Him, the conscious expression of understanding, joy, peace, health, happiness, and success, having senses which are spiritual, and having dominion over all the earth, here and now, we can be healed of all our inharmonious conditions. It was by this understanding that I was healed in the summer of 1912. I felt very ill. My limbs were swollen, and among other discords, there was a constant discharge from the mouth. We, however, sought the kingdom of God, and held steadfastly to man as made in His image, spiritual and perfect, as the expression of the one infinite Mind, inseparable from the Father. We sought to understand more about God and His creation. Each day more of the truth about God's man was revealed to me, and bit by bit the belief and fear of the disease fell away,—gave place to the understanding of perfect health and strength. The disease has not appeared in any way again.

I am indeed grateful for the understanding of God's goodness which I have gained from our text-book, and feel that I have so much to be grateful for that I do not know where to begin or how fitly to express it all. I love all the Christian Science literature, and am privileged to be on the distribution committee here. My heart is filled with love and gratitude to Mrs. Eddy for proving the saving love of God for His children, and for her unselfish living and clinging to God as the only power, that she might give this truth to us, that we likewise might know God and rely upon Him as an ever-present help in time of trouble.

Marianne Maude Metcalf, Brighton, England.

✧

Words cannot express our gratitude and thankfulness for what Christian Science has brought to us in the last few years. Discord has lost its seeming reality, and peace and love have taken its place. The first Christian Science treatment in my immediate family was for my eyes. I could hardly see to thread a needle or to sew. I wore glasses, and was told I would always have more or less trouble with my eyes; but they have been healed in Science. Bowel disorder, supposed to be due to heredity, was destroyed, and croup has been conquered and reduced to its nothingness. Many other ills have been overcome, in proof of the allness of God. The physical healing, however, has been the least of my benefits. I also wish to express my thankfulness for the spiritual uplift which I received in reading the chapter on Prayer in Science and Health. I am very grateful for the Christian Science literature, which is daily food for thought. It helps me in my work, and also in teaching the children to do right.

The healings referred to occurred several years ago, and they have been permanent and complete. Since that time I have had class instruction, and I would like to add a testimony of healing which took place in July, 1912. My oldest son, who was then fifteen years old, became sick, being feverish and unconscious. He was all spotted in blotches, but a Christian Science practitioner treated him, and the next day every blemish had disappeared. Four or five days later the younger boy's hands were all spotted, and the practitioner said I must notify the authorities. I did not want to do this, but she told me I must be law-abiding. I said I would send first to our old family physician and see what he had to say about it. When the physician arrived, he examined the boy and our little girl, and said that the ailment was scarlet fever and a throat affection in one of its worst forms. The next day the health authorities came and quarantined the house.

When the physician had finished his orders, the practi-

Digitized by Google

tioner told him that we were Christian Scientists and would leave the healing to God, whose presence was always with us and ready to save. The physician laughed, and said he doubted it in this case; however, I read to the two children from Science and Health, and when the doctor came the next day their temperature was normal. He was greatly surprised at this, and said that if the children's bodies did not scale or peel it surely would be wonderful. I sent for the practitioner, though she had to stay outdoors, and told her what the doctor had said. In less than two days the children were entirely healed. When the doctor saw this, he asked permission to read Science and Health and took the book home with him.

All that I am and all that I have is due to Christian Science, this saving truth as taught by Mrs. Eddy. I am grateful each day for the many blessings that have come to me, and are still coming, through the understanding of this teaching.—Lydia J. Ingalls, Chicago, Ill.

❖

[Translated from the German]

A sense of deep gratitude impels me to tell of the many blessings which I and my family of eight members have received through Christian Science. It is almost six years since I first heard of this teaching. Up to that time we had nothing but sickness in our home during twenty years, and one member had passed on. A sister who lives in Switzerland, and to whom I would often pour out my troubles, sent me two medical books the suggestions of which I followed, but without being benefited. Later on she wrote that she wished I would try Christian Science.

This proved to be what we needed, and I now understand the meaning of the words, "Man's extremity is God's opportunity." I was indeed broken in mind and body, and I had been driven to assume debts on account of the expense incurred by medical treatment. One of our children having been taken with typhoid fever, we had a Christian Science practitioner attend the case, and through her loving ministrations the child was made whole in two weeks, whereas my wife and our eldest girl had been obliged to stay in bed for fifteen weeks formerly with the same malady.

I might fill a whole book with accounts of the benefits and blessings which we have experienced through divine Love. Recently our youngest boy contracted a severe cold and had to stay in bed. The throat was affected, and there was high fever. As the child seemed to drop into a serious condition within a few days, we asked a practitioner to take up treatment. The result was that he felt much better the next day, and was entirely restored in a few more days. During the six years since we have been reading Science and Health there has been no physician in our home. The understanding of God as taught in Christian Science has proved itself to us all to be a "shield and buckler" indeed. I thank God from the depths of my heart, and would not fail to express my gratitude to our Leader, Mrs. Eddy, for having taught the truth which maketh free.—Otto Grap, Columbus, Ohio.

❖

About six years ago a newspaper man who was stopping at our house told us one evening of the case of a business man who had been healed by Christian Science of total deafness. I was interested enough to want to know how Christian Science could accomplish this healing, and remembering that I had seen the text-book, "Science and Health with Key to the Scriptures," in the library to which I belonged, I determined to get the book and read it. I read part of it, some of which I understood, but a great deal was like Greek to me. I did not grasp at all what was meant by the unreality of matter, so after a short time I returned the book, feeling I could not understand Christian Science.

Before and during this time I was constantly under medical treatment for severe stomach trouble, nervousness, headaches, and another ailment for which I had to take a certain medicine each day. I also had a very bad structural defect of the eye; in fact, the last oculist I consulted said I had one of the worst cases he had ever seen. For the next few years I tried many things in search of the health I longed for, one of which seemed to help me while I was having treatment; but as soon as I stopped, old conditions returned. During these years I read many metaphysical works, for I was looking for a better understanding of God as well as for health.

In the autumn of 1909 we decided to give up housekeeping and live in New York. This necessitated sending our dog to the country. He was there less than a week when his back was so badly injured that he lost the power of his hind legs and suffered dreadfully at times. My husband had several veterinary surgeons examine him, but they could not relieve his sufferings and advised my husband to have the dog killed. This I refused to have done. Finally, one of my neighbors who had recently become interested in Christian Science, advised me to take the dog to a practitioner for treatment at once. I did so, much against the wishes of my husband, who thought it was foolish to expect Christian Science to cure a broken back that the surgeons could not even help. My dog was healed, however, in a short time, and is today healthy and as playful as a pup, though nearly eleven years old.

I then decided to have Christian Science treatment for myself and was healed of the stomach trouble almost at once. Of a bad attack of cold and an acute throat affection I was healed instantaneously. My eyes are better than they ever were, and I have not worn my glasses since 1909. The chronic headaches have also been overcome, as well as the disease for which I had to take medicine every day. Since the first day I visited the practitioner's office, I have never taken any medicine. God has been my only physician.

I am utterly unable to define the depth of my thankfulness to God for all the blessings that have come to me through Christian Science, which surely is the Comforter that Jesus promised should come and lead us into all truth.

Florence C. MacFarland, Mt. Vernon, N. Y.

❖

It is with a sense of true happiness that I give this testimony to the power of Truth. I came to Christian Science not so much for any particular need, as because the "still small voice" led me into what has proved to be my greatest blessing. The knowledge that there is but one Mind, and that God is good, has enabled me to solve many problems, for when the truth is faithfully and correctly applied, it heals, saves, protects, guides, and brings joy unspeakable. Divine Love leads into that path to peace which makes life worth living; and with God on our side, and the joy of the Lord in our consciousness, the mountains melt into mole-hills, and even the mole-hills disappear as vapor, leaving the sweet peace that nearness to God alone can give.

For many years I was active in another church, in its various departments, including Sunday school and young people's society; but in the six years I have been reading the Bible in the light of the teachings of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have found it to contain greater treasures than I ever thought were there. I am grateful for the spiritual understanding which enabled our Leader to give us Science and Health, which is truly a "Key to the Scriptures." The revelation of God's Word has been to me as the unfolding of a flower and the going forth of its sweet fragrance.

Digitized by Google

Physically, I have had many benefits. Nerves used to seem to be a great power, till Christian Science awakened me to the realization that there is but one power and cause, and that is God, whose goodness fills all space and whose law is ever operative. Colds used to be frequent and of tedious duration, till I realized that the material sense of things must yield to the spiritual, and Truth has been my physician that never fails. In coming down a mountain trail two years ago, there were all the manifestations of the suffering and lameness that go with an injured ankle; and though the friends who were with me expressed the belief that I would be in the house for a week or more, I found that Truth "is equal to every emergency" (Science and Health, p. 406), for I walked down-town the next day without pain or limping, and the ankle has been normal ever since. My general health and strength have improved so much that I seem to have really "put off the old man," as Paul directed.

While my heart is full of gratitude for these and many other physical benefits, I also wish to express thankfulness for the spiritual blessings. I shall ever be grateful for the right sense of happiness that Science has brought to me; for the better understanding of God and His omnipotence, omnipresence, and omniscience, and of man's relation to Him; and for the joy that has come in being able to serve in His vineyard. I ask no greater joy than to know more about God, and to be able to prove my faith by my works. I can truly say with the psalmist, "God is our refuge and strength, a very present help in trouble."

ANNA E. SHERMAN, Oskaloosa, Iowa.

✦

I will try to tell what Christian Science has done for me. I am over sixty years old, but my health is better and I can do more work now than I could at thirty. I always felt weak and tired, and suffered almost constantly from headache and backache. I then began doctoring, and used drugs until I felt compelled to take some kind of medicine almost every day. I was also troubled with malaria every summer. Some of my friends wanted me to try Christian Science, and I decided to do so. It helped me from the first, and after one week's treatment I was healed. Now I eat anything I wish, sleep well, and can work all I want to. I also had a small growth of a serious nature on my right temple, but this has disappeared. It has been three years since my healing.

Christian Science has helped me very much spiritually. It draws me closer to God. The understanding of the Bible gained through the study of Science and Health lifts me up out of trouble and disappointment. I hope this testimony will help some one to turn to Christian Science and trust all to God.—ROSETTA KINKADE, Beloit, Kan.

✦

I am frequently asked if Christian Science has healed me of any serious ailment. My reply is, that according to medical opinion there seemed no permanent relief for me, but I have been healed by the study of the Bible as interpreted in Mrs. Eddy's books. We frequently hear it said, "Oh, yes, So-and-so was healed by Christian Science, but then she had only a nervous trouble." Does this mean that nervous troubles are not considered serious? Under the law of *materia medica* if one has a nervous trouble, he is subject to a despot that rules mortal existence with a rod of iron, for according to belief all the material senses are dependent upon nerves. If Christian Science can heal nervous disorders, it can heal anything. My healing has been permanent, and I now rejoice in being able to help others.—MINNIE S. MILLAR, New York, N. Y.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in The Christian Commonwealth]

There will always be more that God can do, and certainly always more for us to learn, but nothing new will contradict or break away from what has gone before. To know God at all is to know Him altogether. We need not assume, because of the perfection of the revelation of God in Jesus Christ, that there will be no further revelation, or that God has exhausted His glory or truth; but it will all be of the same order, one eternal wisdom expressing itself in infinite and ever more expanding ways.

We may change toward Him, He will not change toward us. Our thoughts of Him must change, but He changes not, and what He is will always be better than our very best. Whatever is lost,—love, light, life itself,—God remains, and in God remains all that is not delusion or lie. Our highest happiness, our eternal identity, the best that we were meant to be, is absolutely assured. Not only shall nothing be ultimately lost, it shall be as if it had never been thought to be lost. Sin shall be as if it never had been, tears shall be wiped away, sorrow forgotten, death overcome.

[The Standard]

Can Christ save men? That is the real issue of Christianity. We cannot answer that question except by believing in him and walking in his footsteps. Belief in theories about him cannot save us. Belief in the church or in the doctrine of an infallible Bible or in any creed man ever made cannot save us. But getting the spirit of Christ into our lives can save us. That spirit is the power that makes men turn from sin to righteousness, from hatred to love, from selfishness to service. The possession of that spirit is all the proof any man needs of the reality of Christ and his religion. And it has this glorious advantage over all other kinds of evidence, it is the first-hand evidence. We know and are persuaded that he is able to save because we have the indisputable proof in the fact that we are living his life. The source of our strength, our joy, and our inspiration is not in ourselves but in him. It is his love, his truth, his life that has made us new creatures.

[The Christian Intelligencer]

Where reason falters and philosophy and logic fail, we may turn with all the more confidence to faith. The promises of God stand sure, and the word of the Book is clear and definite, "He must reign." Taking this as an assurance and comfort even in this time of peril and strife, let us recall a few of its lessons, as first, its positiveness. "He [that is, Christ] must reign," says the promise. Not that he may reign, or that he ought to reign, or that in any spirit of hesitation we should pray for that reign, but "He must reign." The confidence of faith in the inimitable purposes of God breathes in its every syllable. That its fulfilment is not yet clearly seen does not invalidate this promise. He who gives it is not only wise and good and great, but He is eternal.

[Cleland B. McAfee in The Continent]

The day for catholic unity by one common spirit is upon us now. It is our own fault and our shame that we hold back from entering into that day. No church's spirit is bound to its organization or to its distinctively creedal expression or to its ceremony and ritual. It would be folly to pretend that there are not men of equal spiritual power in churches which differ widely in all these matters. The thing that makes them powerful is that they have yielded in their own

Digitized by Google

spirits to the one mighty Spirit of God. With the empowering of that Spirit they can live under any organization, and work under any creed that voices God's truth, and worship through any ritual or ceremony that gives their hearts full swing.

[*The Christian Register*]

Great movements are on foot; the stars in their courses are fighting for human liberty; and although under the serene heavens satanic forces are engaged in the work of destruction, the real things will abide, and they who are brave enough to trust themselves to the things not seen, but eternal, which are wrought into the warp and woof of the fabric of human life, will see their work survive. The indestructible temple of gold, silver, and precious stones is surrounded by the hovels built of wood, hay, and stubble, but the fire shall try the work of every man and nation, "of what sort it is," and the right sort will endure.

[*The Advance*]

What is the end for which the church was established? Was it that there might be built up a great system of church machinery, with men assigned to the work of keeping the wheels going? Was it that millions of men and women might be registered as members of an immense organization? Was it that great sums of money might be collected and expended for certain causes? Were these the chief reasons for the church's organization? Assuredly not. The church exists primarily to feed the soul of man, to minister to his spiritual nature, to keep him in the atmosphere of the eternal. Life has many interests, and it ought to have. But not all even of good things are equally important.

[*The Christian Work and Evangelist*]

What does it all mean? It means many things. First of all, it means that there is something the matter with our Christianity, or else that we are not presenting it truly. For it seems to have no power whatever over men or nations when any real provocative of men's passions comes. Most of these millions of men who are now drunk with lust of killing, and hoarsely shouting for their brothers' blood, have been calling themselves Christians and have most of them been taught in Christian schools and churches. And in a day it is all forgotten.

[*The Universalist Leader*]

As we look back at the revolutions of history, we are aware that the causes which shook the world were animated by desires which if worked out sanely would benefit the race. The heart of the people is right, but sometimes it is impatient, and the will is headstrong. Should we wonder at this as we study the past? Over all the story of the world's great life is written the martyrdom of humanity. But for the splendid stability of the human race, the noble story of its climb through pain and tears up the long ascent of history would read less comforting and encouraging than it does.

[Rev. John Thomas in *The Watchman-Examiner*]

A man may shut himself out of the way of knowing Christ by the barriers raised by his own intellectual conceit. We cannot begin with Jesus except as little children. If we approach him as "the wise and prudent," we know that he will be hidden from us.

[Rev. Robert Bakewell-Green in *The Living Church*]

Christianity says, Heaven is your home, and all men are your brothers, for God is the Father of all; therefore love all men, and fight only the spiritual battle under the banner of the cross.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. *Orders for* six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 60 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Pamphlets

CHRISTIAN SCIENCE: ITS RELIGIOUS PHILOSOPHY. By HON. CLARENCE A. BUSKIRK.

CAUSATION: VIEWED IN THE LIGHT OF CHRISTIAN SCIENCE. By FREDERICK DIXON. Also printed in Swedish.

CHRISTIAN SCIENCE VS. MENTAL SUGGESTION. By FREDERICK DIXON. Reprinted from the *Weekly Budget*, London, England.

CHRISTIAN SCIENCE VS. FINITE SENSE. By FRANCIS J. FLEMO, M.D.

CHRISTIAN SCIENCE: THE GOSPEL OF FREEDOM. By WILLIS F. GOOSS.

CHRISTIAN SCIENCE: THE RELIGION OF THE BIBLE. By JUDGE SEPTIMUS J. MANNA.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Approximately one thousand acres of wood and brush land in Hingham, Mass., are being posted with notices informing the public that a state reservation has been established and that no hunting or fishing is allowed. Mallard ducks and a few quail and partridges are about the only game on the area at this time, but the state fish and game commission is planning to stock it with pheasants, partridge, and quail next year. This land is set off for five years under the voluntary wishes of a number of citizens who jointly own the property. It is only under the control of the state commission, as the land still belongs to its individual owners. At the end of five years the fish and game restrictions are removed automatically unless extended another five years. The owners of the property are also restricted from hunting within the area. This action of the state commission is made possible by an act of 1911, whereby a closed season of five years may be ordered upon any land petitioned for by the owners and after a public hearing has been held. The commission has a number of other areas under consideration for reservations under the five-year provision.

The last big work across the river Nile was the raising of the Assouan dam, completed in 1912. By means of this undertaking, the capacity of the reservoir was more than doubled, and the supply of spring and summer water correspondingly increased. The total cost of the dam and the four barrages already built, has been about sixteen million pounds, but the value of the crops rendered possible by this means has fully justified this outlay. Preliminary work is now being done in connection with the two new cross-river structures in the Sudan. One of these is a barrage on the Blue Nile which will enable a perennial canal to irrigate a large area of cotton land to the south of Khartum. The other is a dam on the White Nile, a short distance above Khartum, which will form a reservoir to store flood water for further augmenting the spring and summer supply to Egypt. When the Blue Nile flood comes down, it backs up the waters of the White Nile for a distance of two hundred miles, and this is the water which will be impounded.

The valves for shutting off the flow of water in the shafts of the Catskill aqueduct in New York city are the greatest ever used. The largest ones stand twelve feet high and seven feet in diameter at their maximum. They vary in weight, with all their attachments and machinery, from ten to twenty tons each. They are of the finest manganese bronze, and will withstand not only a tremendous strain but also rust and corrosion. The main reservoir in the Catskills is five hundred and ninety feet above sea-level. The tunnel which reaches to the city limits descends two hundred and ninety feet. This gives three hundred feet to insure a good pressure, and it is estimated that if the water were left free to come up out of the shafts at various points, it would rise to a height of two hundred and fifty feet.

Present indications are that the commercial apple crop of the United States this year will be far in excess of that of last year, but less than that of 1912 by several million barrels. Officials of the department of agriculture say that the problem of distribution will be somewhat complex, owing to conditions resulting from the European war. In normal times Europe takes less than two million barrels of American apples, and growers and dealers are urged to make plans in other ways to dispose of the supply usually sent to Europe. Shippers of apples are advised to stimulate the demand in and increase their shipments to Latin America and the Orient, and it is suggested that through cooperation with the department of commerce, extension of trade in this respect can be accomplished.

The interstate commerce commission has decided to reopen the Eastern advance rate case, and it will begin hearings in Washington on Oct. 19. A formal order to that effect has been prepared. The railroads have asked the commission to modify its recent decision, which granted increases west of Pittsburgh and denied all increases between the Great Lakes and the Atlantic seaboard. Under the law, the commission cannot modify that order without hearings. The decision to reopen the case brings the whole question up again for review, in which the railroads will press for the 5 per cent increases throughout the territory east of the Mississippi and north of the Ohio and Potomac rivers.

The Morgan Engineering Company of Memphis has started work on the contract to drain the sunken lands and swamps in northeast Arkansas, which are supposed to have been caused by an earthquake a century ago. The surplus water will be let into the St. Francis and Tyronza rivers. The territory to be drained covers three hundred square miles, or two hundred thousand acres, which will require three hundred miles of ditches forty to fifty feet wide and ten to fifteen feet deep. The main ditch will be fifty-five miles long. The entire work will cost a total of one million five hundred thousand dollars.

The payment of about six hundred thousand dollars to the Cherokee Indians from their tribal funds, now in progress, marks one of the last steps taken by the federal government in dealing with the Cherokees as a separate people. The Cherokee nation passed into history on June 30 of this year, when tribal relations were dissolved pursuant to an act of Congress. Only final distribution of all the funds belonging to the nation remains, when the last chapter in the history of one of the proudest and most powerful of the Indian tribes will have been written.

The bureau of crop estimates of the United States department of agriculture sends out a report on the cranberry prospects for this year. Replies from thirteen of the largest and most widely experienced cranberry growers were tabulated separately. The average of their estimates is that the 1914 crop will be 12 per cent larger than that of last year. The average estimates of the other replies is that it will be 8 per cent larger. The Cape Cod Cranberry Growers' Association estimate that the crop will be 16 per cent larger, which would indicate 380,222 barrels.

Although Chile is a large consumer of imported coal, local deposits were worked last year to the extent of one million five hundred thousand tons. As in the case of iron and copper deposits, government officials are now engaged in locating and mapping new ore territories. It is possible that some similar action may be taken, as in the case of the nitrate fields owned by the republic, where the nation is trying to conserve its deposits.

All kinds of paper are imported into Paraguay, but there is a movement under way to establish a mill at Concepcion where timber suitable for paper making is found in plenty. There is an effort to become independent of outside sources in many of the articles consumed in this republic, and the paper mill enterprise has the financial backing of leading citizens.

The important work of water conservation is being vigorously proceeded with in South Australia. For the convenience of settlers and the traveling public in the sparsely populated parts of the state, bores are being put down, tanks erected, and dams excavated, while in the more populous centers reservoirs are being constructed.

The appropriation of four hundred thousand dollars to dredge Boston harbor channel to a depth of forty feet has been stricken out of the rivers and harbors bill by Congress. The bill provides for a twenty million-dollar lump sum to be expended on continuing present projects in the discretion of the secretary of war and chief of army engineers.

So far, 1914 constitutes a record year for the fruit industry in Tasmania. The export season is now closed, as far as the oversea markets are concerned, and the exports to the United Kingdom, Germany, and South America made a total of 904,416 cases, as against 598,141 cases for the whole of 1913.

Antigovernment demonstrations at Panama grew out of dissatisfaction over the award of Chief Justice White on the Panama-Costa Rica boundary question. The demonstration was led by the antigovernment party. The general public, however, seems to regard the settlement of the question as an equitable one.

Colorado coal miners, at the session of the United Mine Workers of America at Trinidad, as expected, voted an adoption of the peace plan drawn up by a federal board and urged for adoption by President Wilson and the international officers of the miners' union.

Bananas exported from Costa Rica in 1913 amounted to 11,170,812 bunches, 8,354,722 of which went to the United States, 2,763,111 to England, and 52,979 to Holland.

Pittsburgh mills are preparing six million horseshoes for shipment to France and Russia. They will be accompanied by horseshoe nails and toe pieces.

Prayer of Faith

SAMUEL GREENWOOD

THE only kind of prayer that was used or commended by the Master and his apostles was the prayer of faith, that is, a living reliance upon what they understood of God. A mere perfunctory supplication to Deity has no practical bearing upon human salvation; for until one begins actually to commune with God in his own consciousness, his devotions do not bring the things of God into his life. The real purpose of prayer is not, as some may suppose, to persuade God to pass over one's shortcomings, or to win admission to an undeserved heaven, but to bring mankind to such a recognition of the divine nature and being as will transform human thought and life.

Two essentials of prayer are thus set forth in the book of Hebrews: first, "He that cometh to God must believe that he is," and second, "that he is a rewarder of them that diligently seek him." The first may seem superfluous to the average Christian, who would naturally deny any imputation of skepticism; but from the prevalence of evil conditions, even among Christian peoples, it would seem that practical faith in God is sadly lacking, else that God is not rightly understood. This first essential might be clearer if rendered thus: He that cometh to God must believe that He is what He is. Many have been taught to believe that God is what He is not, and prayer from that standpoint could not prove permanently beneficial. Most persons believe that God is, though their beliefs as to what He is may widely differ; but unless our belief about God is true, our prayers do not bring us into communion with Him. In this case a false belief about God may be said to be the only God we have, and this false belief can do no more for us spiritually, in making us godlike, than the false belief that two and two are five can do for us mathematically.

If we come to God as one who takes cognizance of evil, and therefore believes in it, we cannot rise above our own sense of evil or be delivered from the fear of it. Misled by false teaching, some pray to God as virtually a participant in evil, believing Him to be the sender of disease and death. If we accept the teaching and works of Christ Jesus, we should know there is no such God as this, and that prayer offered on such a basis would be as vain as if offered to a wooden image. Only the true God is true; and he whose concept of God is not true has no knowledge of God at all. If there could be evil in the divine consciousness, it would establish God's imperfection, a position which is manifestly unthinkable. This word evil, which includes all the phenomena of human discord, designates not what God is, but what He is not, the suppositional opposite of infinity.

It is worthy of note here that the Bible does not ask mortals to believe in the existence of aught besides God. On the contrary, the Scriptures declare God to be All-in-all; hence this first essential of prayer means that we must not only believe that God is, but that all being is included in God and His manifestations. If we pray believing there is a power besides God, we are beset by the fear that this other power may prevail. This is not the prayer of faith, but of doubt and unbelief. If we come to God believing that He is omnipotent, there can be to us no other power than good; if we believe that He is omnipresent, there can be to us no other presence than good; if we believe that He is omniscient, there can be to us no other intelligence than good. There is plainly no other attitude in which prayer to God can be acceptably offered.

The second essential of belief is, that God will reward those who diligently seek Him. This indicates the necessity of understanding what God is in order that we may seek Him intelligently, that is, scientifically. A purely emotional or intellectual belief in Deity may offer prayer from a sense of religious duty, though without expectation of present reward; but one who approaches God as infinite good, knows that he will be rewarded not on the ground of idle petition, but of actual worthiness. To seek God diligently, believing that He is All, means that we shall diligently seek to be good, to have "no other consciousness of life" (Science and Health, p. 242); and this, Mrs. Eddy tells us in the same paragraph, is the "one way to heaven."

The general lack of faith in the efficacy of prayer is undoubtedly due to a misapprehension of the nature and being of God, and of the cooperative activity required of the petitioner. It is not enough to acknowledge the existence of Deity,—we are told that even the devils believe this,—but an infinite God demands that we shall acknowledge Him as All. There is no less absolute way by which one may fulfil the first commandment and "have no other gods." If we come to God honestly acknowledging His supremacy, we shall not believe in anything else, and shall not seek to know anything else. "Have faith in God," urged the Master; and since he declared evil to have no truth in it, he evidently intended that we should have faith in nothing but God.

If mortals seek to know God as one in whose consciousness evil has recognition, and consequent place, the natural result would be to impress their belief in evil more tenaciously upon them. Praying for deliverance to a God who sends sickness, suffering, and disaster upon men, could only end, as it has ever done, in disappointment and despair. Locating God in a far-off heaven, as many are taught to do, does not inspire with the confidence that He can be found here. Christian Science is the revelation of "God with us,—the sovereign ever-presence, delivering the children of men from every ill 'that flesh is heir to'" (Science and Health, p. 107); hence Christian Scientists are learning to seek God where they are; that is, not in locality but in spiritual consciousness. Believing as they do that God is here, they naturally believe that health is here, that life, harmony, goodness, love, etc., are the fact of their being here and now; and they have measurably found that the diligent seeking of Truth in this way does bring a reward that is tangible, practical, and satisfying.

We are all more or less familiar with the prayer of doubt and unbelief, and we know its failure to satisfy spiritually or to heal physically. Coming to God in a state of doubt and fear is not acknowledging His supremacy, and our reward is

according to the measure we mete. "According to your faith be it unto you," said Jesus. If we have more faith in the power of so-called material laws and conditions as able to make us sick and miserable than we have in God to keep us well and happy, our prayers will not tend to improve our experience or to spiritualize our thoughts. If we absolutely believe that God is what He is, then we absolutely know that His will is being done in earth as in heaven; and that it is the work of mankind, through prayer and demonstration, to become actually conscious of the divine presence and power, since by virtue of His infinitude God could not make Himself more than He is or do more than He is ever doing.

It is not difficult to picture the effect upon humanity if all Christians practised the unreserved faith in the omnipotence of good that is required of them. We can probably best realize this by picturing the effect upon our own consciousness of so doing. By all means, let us prove this thing. Let us come to God actually believing that He is infinite Love, that only Love is, that only Love rules, and witness the effect upon our life. What do we think would be the practical effect of the prayer of faith in such a God? What would be the natural reward of diligently seeking such a God? This question is so momentous in its promise, and so obviously practicable, that it presses for proof and will not be silenced. Of a surety, to become conscious of good, to know and understand the nature of God, to have the assurance here and now of the allness of divine Love, the boundlessness of Life, the omnipotence of Truth,—this must be the end of all right seeking, and within the possible reach of all mankind.

States of Consciousness

MARTHA B. WHITE

THE great thinkers of the world who have pressed home the question of the sources of knowledge, have shown that in the last analysis all we know is thought, since the process of knowing is itself a process of thinking. Therefore the only world we know is a mental world, the circle of our own consciousness. Whence springs that consciousness, and by what is the river of thought fed? This has become the important question.

Men have called the creative Principle by the name of God, and sought in many ways to find the nature of God as thus conceived. Christian Science shows that since like produces like, the creative source of conscious being is Mind, and that life is to be found and understood by keeping to this definition, and not by seeking to belittle God by interposing another creator of opposite nature, called matter. Since we know only mental things, matter must be a guess at something different from the mental. Experience of Christian Science demonstration proves that the Principle of all things is indeed Mind, and that this Mind is Immanuel, "God with us." Christian Science demonstration—healing the sick and blotting out evil conditions—is the bringing into daily manifestation the beneficent and all-powerful Being whom Jesus called our heavenly Father.

The activity of Mind is reflected in the unceasing flow of pure thought, the book of Revelation telling us that the "river of water of life" (the stream of consciousness) is "clear as crystal," because it proceeds "out of the throne of God." In thought is our recognition of life and identity, and "real consciousness is cognizant only of the things of God" (Science and Health, p. 276). Therefore, as mankind rises to higher modes of thinking, the evils that now befog the way will no longer appear. It has been said that if mankind, instead of the five senses they now possess, had other totally different senses, the world would seem an entirely different place. This is very true, and Christian Science is teaching how to gain the spiritual senses of man, which are attuned only to good, and which can no more hear and respond to a suggestion of error than a tuning-fork can respond to a note that is out of its key.

In the first eighteen verses of his gospel, St. John has compressed into amazingly few words a statement of the Science of man's being, man's spiritual relationship to God, and the work of Jesus Christ as a full exemplification of the correctness of his statement. He treats of the creative Word, the utterance of the divine Mind, absolutely one with that Mind, of which it is the expression, and shows that *that* Word, spoken into consciousness, awakens a true *sense of* life and being. Principle is not seen directly, but known in its manifestation. The God-likeness which is the real man, remains immaculate in the divine Mind, the image and ideal of that perfect intelligence. In the manifestation of that ideal we learn and recognize our Father.

St. John's digest of the essence of Jesus' message tells in brief the story of the ideal of Christian Science. To attain that Mind in which sin and evil are unknown, is to attain the kingdom of heaven. Before a thought that has attained to spiritual comprehension, the image of error cannot linger. Just because Truth never partakes of false belief, the spiritual idea annihilates error. Jesus healed the sick with a word. The very presence of Peter seems to have been sufficient to restore well-being to those he passed, when he himself had learned to reflect flawless understanding, for we learn in the Acts of the Apostles that the sick were brought into the street so that even his shadow might fall on them. The shadow was nothing, but the presence of one who had risen to be a clear reflection of true consciousness, "clear as crystal," was much, "and they were healed every one."

John himself, under sore stress while on Patmos, rose to the consciousness that recognizes and experiences the ever-presence of God. Mrs. Eddy sums up the significance of this in the following words: "This testimony of Holy Writ sustains the fact in Science, that the heavens and earth to one human consciousness, that consciousness which God bestows, are spiritual, while to another, the unillumined human mind, the vision is material. This shows unmistakably that what the human mind terms matter and spirit indicates states and stages of consciousness" (Science and Health, p. 573). Spiritual consciousness is heaven, and its attainment demands constant progression.

Truth Never Reversed

HON. MRS. FRANCES PORTER

THE other day I was having a most interesting conversation with my daughter (aged four) on the subject of cattle, when suddenly she announced, "Horns have cows, mama." Of course she meant to say that cows have horns, but her stumbling set me to thinking. It showed me the mistake all mortals are making. We laugh at the thought of a pair of inanimate horns possessing a cow, making it eat or move or suffer as they want, and is it not equally ridiculous that any organ or part of the material body should govern the image of God?

Man possesses his body and governs its every action. A pair of hands, for instance, cannot make a man steal if he does not want to, and they cannot even suggest stealing to him. They are no more intelligent than the cow's horns; it is Mind which holds the control. Respecting this fact, Mrs. Eddy says: "Exercise this God-given authority. Take

Digitized by Google

possession of your body, and govern its feeling and action. Rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man" (Science and Health, p. 393).

Let us refuse any longer to believe the lie that is enslaving the race, the lie that matter possesses and governs man, for, as Isaiah tells us, "the Lord is our lawgiver. . . . And the inhabitant shall not say, I am sick: the people that dwell therein shall be forgiven their iniquity."

❖

Waymarks

OLCOTT HASKELL

IN the prophecy of Isaiah we read, "And thine ears shall hear a word behind thee, saying, This is the way, walk ye in it, when ye turn to the right hand, and when ye turn to the left." Christian Scientists have much reason to be grateful for our Leader's loving wisdom, shown in the naturalness with which the teachings of Christian Science are presented. Her spiritual vision precluded the possibility of following those who, like the builders of the tower of Babel, have sought to construct an approach to God from the heaped-up phenomena of the physical senses.

The opening words of the Bible are, "In the beginning God," and scarcely less significant are the first words in the Preface to the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "To those leaning on the sustaining infinite." In Christian Science the definition of man follows that of God. Thus God and man, Principle and idea, are presented to view in their normal and indissoluble relationship. After Christ Jesus had instructed his disciples, he sent them forth to practise the art of healing, and today many who have been healed and uplifted through Christian Science, turn to the work of helping others. Here understanding is tested; and as facts are brought to view in a new light, questions arise in the mind of the student as to what are the best methods of working. How shall these be answered?

The reflection of divine Love carries with it the realization of peace, guidance, and protection. Mrs. Eddy, who was the pioneer for present and future ages in the discovery and demonstration of Christian Science, knew full well the need that thought be guided aright, and that human opinion be excluded from the foundation upon which Christian character should be reared. Her care to guard against the presentation in her writings of aught but pure truth, is indicated where she says, "I was only a scribe echoing the harmonies of heaven in divine metaphysics;" and again, "On what hath not a 'Thus saith the Lord,' I am as silent as the dumb centuries" (The First Church of Christ, Scientist, and Miscellany, pp. 115, 268).

We have the assurance in the Church Manual (Art. VIII, Sect. 9) that whatever is requisite for the work of teaching or for healing is given in Mrs. Eddy's writings; hence those who desire instruction can have recourse to a reliable source from which to obtain it. If one were told that our Leader had written comprehensive directions as to how to proceed for the healing of disease, and that in addition to this she had given an analysis of a typical case of sickness, showing point by point how every symptom could be mastered, he would be eager to obtain these instructions. Yet comparatively few recognize that the Christian Science text-book contains this very information.

The average reader of Science and Health passes somewhat hastily over the division entitled "Mental Treatment Illustrated" (p. 410), and some have even confessed to a sense of annoyance that twelve pages were devoted to the allegorical court case (pp. 430-442); but this attitude only shows that "their eyes were holden" to the very things of which they were perhaps in most need. A more careful study would have revealed in it many wonderfully helpful points in regard to practice. The allegory records a formidable array of claims (symptoms) presented against the patient by "health-laws" and other witnesses for "Personal Sense;" and it is worthy of note that for the healing of this case, thought is not directed to the body, to its functions, or to its organs, but that each claim is met and destroyed on the mental plane where, indeed, all temptations to sickness and sin present themselves. It is the recognition of man's spiritual and harmonious being, and not the contemplation of any bodily organs, that heals the sick. In other words, the entire fabrication of sickness is destroyed by the realization of what St. Paul describes as "the glorious liberty of the children of God," and to which he refers when he declares that "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

The above illustration is but a single instance of what Mrs. Eddy has done to meet our needs; but the study of this case has served to awaken in the writer a deep sense of gratitude for the wisdom which has removed, as far as possible, every obstacle to the student's progress and has made plain the safe and scientific path of practice.

❖

Divine Guidance

ANNE BRACKETT JORDAN

AN experience, the remembrance of which is continually recurring with ever-increasing thankfulness to God, may help some one to see how ever ready our heavenly Father is to help and guide us if we really turn to Him with all our hearts.

At one time, as my work was at a long distance from home, I was obliged to board, and I found a place where the family, with the exception of one member, seemed most inharmonious; but there was apparently no other place to go. As time went on, the problems connected with my work grew more serious, so that I often longed for peace and quiet in which to work them out. One late fall afternoon, when seeking a quiet place, I felt guided to take a walk up a little street where all seemed peaceful and near to God. My attention was drawn to a row of houses, some unoccupied, whose rear rooms looked into the woods and across them to the sunset. As I looked, I felt keenly that there must be a little corner there where I could be alone with God.

The winter came, and with it increasing problems in work and the uncovering of error in my thought. A physical ailment seemed stubborn, and turning away from all material help, I was led to look over the list of practitioners in *The Christian Science Journal*. I had done this in the fall, but no address had proved to be near my work. This time, however, divine Love had been preparing a place, for I found the address of a practitioner not only near my work, but on the very street to which I had been so drawn. When I called at one of the houses which on my first walk had not been occupied, and explained my desire for a room with Christian Scientists, I was told very kindly the reasons why the family would not be able to have me as a boarder; yet I felt I could still trust Love to lead me. Soon after this I went home for a short vacation, and for that time the thought of a new boarding place was abandoned; so it will be seen how free the circumstances were from personal effort or influence and how every step was divinely directed.

Digitized by Google

On my return from vacation I met the Scientists on whom I had called, and on Easter Sunday the plans were discussed for my coming to live with them as soon as it was right to leave the place where I was then staying. I remained with them the rest of the time my work kept me in that place, and the little back room looking out on the sunset was truly, as Mrs. Eddy quotes on page 202 in "Miscellaneous Writings," "quite on the verge of heaven." I did not spend all my time in that room, however, for the sense of oneness which we derived from being "workers together" in the truth, was the cause of great joy to me, and the hymns sung and the experiences told will always be to me a glorious realization of God's nearness and love. In that little room, moreover, the last dark shadows of the physical ailment vanished, and many minor ills were also overcome. Here I learned to rejoice once more, and with the rejoicing came freedom from bondage, and the impersonal healing of a dear one, which has meant much in our lives since that time.

No wonder we are daily more grateful for the beloved Leader whose unselfish life not only revealed to us the loving Father, but who was also such an example that her followers are continually doing deeds of kindness, and thus making glad the children of men.

❖

"Philosophy and vain deceit"

RICHARD STONE

In that wonderfully vivid description of the temptation in the wilderness, Milton in his "Paradise Regained" depicts "the evil one" as reminding Jesus that "all knowledge is not couched in Moses' law, . . . or what the prophets wrote." Pointing to the wisdom of the Greeks, he minutely relates each school of their philosophy. The tempter then insinuates that if Jesus is to overthrow their wisdom, it is essential that he should be familiar with it, else, "How wilt thou reason with them, how refute their idolisms, traditions, paradoxes?" for, he argues, error can best be overcome by its own weapons. To these blandishments Jesus replies with crushing logic, that "he who receives light from above, from the fountain of light, no other doctrine needs, though granted true,"—that all such philosophies are false, little else than "dreams, conjectures, fancies, built on nothing firm," and that whoever is unwise enough to seek true wisdom in such a medley of sophistries, finds it not.

It was to people impregnated with the Greek philosophy —that love of worldly wisdom which placed the pursuit of happiness in the pleasures of the senses and denied the providence of God—that Paul wrote his epistles. In these he frequently sounds the note of warning. He bade the Colossians to "beware lest any man spoil you through philosophy and vain deceit," and he besought the Ephesians that they should "walk not as other Gentiles walk, in the vanity of their mind, having the understanding darkened." It was not given to the Greeks alone to found a philosophy built upon the evidence of the material senses or upon mere intellectuality. All down the ages mankind have created philosophies based upon materiality, and thus erected a veritable tower of Babel having its foundations in sand.

Material philosophy has been tried in the scales of human experience and found wanting. It has been of no avail for rescuing men from sin, disease, and death, or of any value in showing the path to true and positive happiness, for the reason that such wisdom, being a mingling of good and evil, could never bring forth fruits wholly good. Despite past experience, mankind have sought escape from the direful effects of materiality by plunging into newer theories of the universe, until, finding the hopelessness of such pursuit, the world may very well cry with Job, "Where shall wisdom be found? and where is the place of understanding?"

Men can be saved from the effects of a material philosophy only by something entirely outside of themselves. The first step toward discovering this avenue of escape must be the acceptance of the advice of John the Baptist. Mankind must repent, which has been rendered, "Change your mind." It is only by a persistent change of thought from a material to a spiritual point of view that the human race can obtain salvation from all the sin, sickness, want, and woe which are the result of a material way of thinking. Christian Science has come to this age to enable us to understand God, and to know man's true relationship to Him. It has made it possible for untold thousands to realize that the universe, including man, cannot be unlike Spirit, God, who created it. Christian Science elucidates the teaching that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning;" therefore, since sickness, sin, and death cannot be included in the terms good and perfect, what Mrs. Eddy designates as this "malevolent triad" (Science and Health, p. 357) can never have had any place in God's kingdom.

Christian Science is enabling us to prove day by day that, mysterious as it may seem to the physical senses, the effect of this change of thought from a material to a spiritual basis results in the healing of the sick and the uplift of the sinner. It is the persistent seeking of the spiritual, that Mind "which was also in Christ Jesus," which enables us to see the perfection of man, and this insight eliminates in the consciousness of humanity the false material belief which brings sin, disease, and death. On page 476 of Science and Health we read: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." And the Master's promise for all time is "He that believeth on me, the works that I do shall he do also."

❖

[Written for the *Sentinel*]

When Jesus Walked by Galilee

RUTH ADELE LEEDER

When Jesus walked by Galilee,
'Twas then Truth made me free.
I care not how the years have fled
Since there he gave the hungry bread,
And made the blinded eyes to see,
The deaf to hear, the lame to walk,
By far-off Galilee.

When Jesus walked by Galilee,
Love broke the chains for me.
No more the pain, or fevered brow,
Can hold my life in bondage now,
Since there Truth's strong voice bade them flee
Like chaff before the driving winds
Of far-off Galilee.

When Jesus walked by Galilee,
'Twas then eternity;
For there was opened wide the gate,
That I the golden harp might take,
Whose chords sound only harmony—
The perfect note still rings out true
From far-off Galilee.

Selected Articles

[Frederick Dixon in *Evening Despatch*, Birmingham, England]

In a recent issue there is a reference to the report of the clerical and medical committee on mental healing, and also a statement by Dr. —— to the effect that Christian Science is neither Christian nor scientific. In these circumstances I am sure you will permit me to examine exactly what this leads to. To begin with, I think it would puzzle this gentleman to tell us what an orthodox Christian is, and what orthodox natural science is. For almost as many centuries as belong to the Christian era, the various nominal Christian sects have been persecuting one another without mercy, on the ground that each of them individually was the Christian church. Today the Roman Catholic church dismisses all of the Protestant churches as heretical, and the Bishop of Oxford, writing to *The Times*, says that he is not sure that a Dissenter has any right to be regarded as a member of the Christian church.

As for natural science in general and medical science in particular, the story is exactly the same. Pliny declared that the doctors differed from the rest of the world in the fact that they could kill legally, and the persecution of illegal practitioners began as early as the persecution of religious heretics. The court physician to Edward II healed the Prince of Wales of smallpox by wrapping him in red cloth, while the unfortunate so-called charlatan was simultaneously placed in the pillory for putting a parchment instead of a red cloth on a woman's chest. I wonder how the critic's patients would like John of Gaddesden's red cloth prescription applied to them. Later on it was orthodox to inoculate for smallpox; since then it has become a criminal offense. Then there came arm to arm vaccination, and that has shared the same fate. Today vaccine is orthodox treatment, though a gentleman has lately been writing to the press to invoke a return to red cloth.

Everybody knows that the allopathic physicians dragged the homeopathists through the police courts, just as the medieval bishops and the later Jacobean and Georgian bishops dealt out Jedburgh justice to the Dissenters. Today the bishops and scholars of the church are disputing as to whether there is such a thing as an orthodox creed, and yet our critic is sure that Christian Science is neither Christian nor scientific. The Christian Science movement has spread all round the world because it has convinced millions of people that the teaching of the gospel, that preaching is to be with "signs following," is the only orthodox Christianity or science worth talking about. The Founder of the Christian religion made that demand long ago when he brushed aside profession with the declaration that those who believed on him would be able to do the works he did. Millions of people, of all the countries in the world, who have experienced Christian Science healing, are quite as honest and quite as intelligent as the gentlemen who, having learned nothing from history, are always ready to assure their neighbors that their views are right.

❖

[Ezra W. Palmer in *The Pueblo (Col.) Chieftain*]

Considerable publicity has been given the sermon on Christian Science by the Rev. Mr. ——. In his preliminary announcements he promised to be candid in his discussion of Christian Science. The word candid, according to Webster's International dictionary, means "free from undue bias; disposed to think and judge according to truth and justice or without partiality or prejudice." Had the reverend critic done this, there would be no cause for objection. But judging from reports of his sermon, the critic proceeded to attack Christian Science with vehemence, going over many of the stock objections which have been exploded times without number in the past by its defenders.

To illustrate the hostile attitude of this critic, he is reported to have declared in his opening statements that he would "rejoice in all the good Christian Science can do." Later in his address he announced that he would require the affidavit of a physician to convince him that Christian Science had healed cancer. He is then reported to have enumerated a number of diseases which he did not believe Christian Science had ever healed. This incredulous and hostile attitude of mind does not speak well for the critic's ability to "judge according to truth and justice."

There is nothing reported in the critic's sermon or in his announcements in the press to indicate that he made any effort to discover the truth about the healing of cancer or other so-called incurable diseases by Christian Science. If he had candidly desired to know the facts about the genuineness of Christian Science healing, he could have found plenty of evidence in the city of Pueblo, and he would have discovered many well-known and reputable citizens who would have furnished abundant proof, sufficient to satisfy any unbiased investigator, regarding the authenticity of the healing of cancer, as well as other diseases, by this teaching. Instead of investigating data available at his very door, this critic chose to go into his pulpit and declare he did not believe. What value has his reiteration of disbelief? None whatever. It is on a par with the incredulity of the African chief who refused to believe that water could become solid, because he had never witnessed such a phenomenon.

The fact is, history is full of the dissentient shoutings of disbelievers. The so-called wise men refused to believe Columbus when he declared that the earth is round; they refused to believe Galileo when he declared that the earth moves; they refused to accept the Copernican conception of the stellar universe; they refused to believe Harvey when he demonstrated the circulation of the blood; they refused to believe that Jesus healed the blind man; they refused to believe that the great Master arose from the grave; they have for fifteen centuries refused to follow his plain commands given to his followers to heal the sick, and today the modern mouthpieces of this spirit of skepticism and pessimism stand in pulpits dedicated to Jesus the Christ, and not only give no evidence of their own power to heal the sick, as he commanded, but scoff at and belittle those who do.

Such attacks merely bring out in bolder relief the spiritual poverty of those who make them, and, like King Canute's vain commands on the shore of the sea, have no effect on the steadily advancing waves of Christian Science progress. Many times various divines have essayed to demolish Christian Science to their own satisfaction from their pulpits, but Christian Science refuses to be demolished. Its healing work goes on steadily and unostentatiously. Tried, true, and valued members of their churches are healed of baffling diseases by Christian Science after other systems fail, and then the attacks to save the day for scholastic dogmatism must be repeated. The reverend critic who made this unfortunate attack needs to wake up. Christian Science is not understood by quoting from the biased attacks of hostile critics, nor can it be elucidated by assaults on it because it does not accord with the dogmas of a scholastic and barren theology.

Christian Science is a demonstrable religion. He who understands it can heal by the power of prayer. He receives spiritual light which illumines and transforms him. He

Digitized by Google

grasps the meanings of the sayings of Jesus, the prophets, and the apostles, and the promises of the Bible are made practical in the daily affairs of life. Fifty years have passed since Mrs. Eddy first grasped the conception of the allness of Spirit and the nothingness of everything unlike God. During this half century a great multitude have been healed of every known disease, a great spiritual uplift has gone out through all the civilized world, and an unnumbered multitude have been led to rejoice in the affluence and love of God. Surely Christian Science has had sufficient fruits of the Spirit to cause all sincere Christians to rejoice in its beneficent work, and only prejudice and ignorance could induce attacks upon it.

❖

[Algernon Hervey Bathurst in *Midland Evening News*, Wolverhampton, England]

My attention has been drawn to an editorial, recently published in your paper, which referred to the home secretary's method of dealing with suffragettes. The article describes him as recommending "a sort of Christian Science process." In explanation of what this "process" is, it is stated that "Mr. McKenna suggests that the press should ignore the militants." Will you allow me to point out that, in the first place, Christian Science never recommends that anybody should ignore anything, and that, in the second place, Christian Science and faith-healing, which the writer of the article evidently considers are synonymous, are altogether different. I am in no way concerned with criticizing the home secretary's policy, nor is it for me to propose what steps he should take. It is, however, a matter of considerable interest to me that the public should know that the teaching of Christian Science is preeminently practical or scientific, which would certainly not be the case were Christian Scientists merely to "ignore" difficulties.

Mrs. Eddy discovered Christian Science owing to her intimate knowledge and spiritual discernment of the teaching of Christ Jesus. She then tested it thoroughly, and proved that the truth demonstrated by the Founder of Christianity is as available today as ever, not by ignoring sin and disease, but by healing those conditions. There are a great many business men who are earnest students of Christian Science, and they could scarcely be successful in the affairs of this world were they to ignore everything in the nature of a difficulty. It is perhaps because Christian Science is just as applicable to business affairs as to physical troubles that it is recognized as a preeminently practical religion. Indeed, it could not well be otherwise, since it is the reiteration of the teaching of Christ Jesus, who proved that a correct understanding of the law of God which he had come to fulfil, destroyed discord, evil, sin, and disease, and proved that man is not limited by the so-called laws of the carnal or mortal mind.

The only "Christian Science process," therefore, is the understanding and demonstration of the truth which Jesus said so emphatically would make men free. When Jesus healed the sick, stilled the tempest, or walked on the water, he ignored nothing, but most certainly knew the truth about God and His perfect creation, including man. That process or spiritual discernment of reality is today enabling Christian Scientists to heal themselves and others of troubles from many of which they had failed to find relief in any other direction.

❖

[W. G. Watkins in *Milwaukee* (Wis.) *Free Press*]

At the outset of his discourse on Christian Science, a report of which appeared in a recent issue, the Rev. Mr. —— assumed an attitude of fairness in being "glad for every bit of good which Christian Science is doing in the world," but subsequent remarks disclosed some misconceptions of the subject. While its adherents are deeply grateful for the growth of Christian Science, which has already extended to all parts of the globe, they are in no way engaged in competition with evangelical churches as to numbers or otherwise. That which really concerns Christian Scientists most is well expressed by Mrs. Eddy in her Message to The Mother Church for 1902 (p. 2): "To live and let live, without clamor for distinction or recognition; to wait on divine Love; to write truth first on the tablet of one's own heart,—this is the sanity and perfection of living, and my human ideal."

After advising against entrusting consumptives to the "tender mercies of Christian Science," our critic says: "Abundance of fresh air, nutritious food, rest, a cheerful mind, and an unfaltering faith in God, are curing consumptives by the thousands." From that statement the uninformed public might infer that the remedy mentioned was proving the needed boon to suffering humanity; but what says a tuberculosis expert quoted in a recent issue under the caption, "White Plague Battle Failure, Says Expert"? Dr. Julius Rosenberg, specialist in tuberculosis, quotes statistics in the current issue of the New York *Medical Journal* to show that the campaign against that disease has made no substantial headway in the last twenty-five years, and adds, "Surely there is no cause here for felicitation," and warns physicians that "it is high time for them to recognize conditions as they are; that the mortality from tuberculosis is about the same, with no prospect of improvement."

In healing where every known material remedy has failed, including numerous cases of consumption, Christian Science is furnishing unmistakable proof of the promise that "all things, whatsoever ye shall ask in prayer, believing, ye shall receive." Here we have the Master's promise, in which "believing" is seen to be the one thing essential to an answer. His entire earth mission was the highest exemplification of unfaltering faith in God that the world has ever witnessed, and in his every word and act there was no attempt to amalgamate spirit and matter. Jesus knew and proclaimed, and we also should know, that it is the Father which dwelleth in us that "doeth the works."

By reason of her high ideal and continued searching, Mrs. Eddy caught the true import of Jesus' message. Science, philosophy, and religion will join in the universal praise which will be accorded to her when humanity interprets aright her contribution to the world's general betterment and ultimate salvation.

❖

[Thomas P. Watson in *Oakland* (Cal.) *Tribune*]

The wonderful progress which Christian Science has made, and its remarkable growth in less than half a century from a little handful to more than a million of adherents, its revival of primitive Christianity, healing and teaching as the Master commanded,—all this has brought forth much comment from pulpit and press. That this comment has become more and more favorable, is not surprising when one considers the good which Christian Science has accomplished and is still accomplishing. Many liberal-minded clergymen, physicians, and other professional men, though holding to different systems of healing or theology, have acknowledged the great good which Christian Science has achieved in uplifting the fallen, reforming the sinner, healing the sick, and bringing hope and renewed courage to those weighed down with sorrow and despair.

The article, "Must Protestantism Adopt Christian Science?" by "A Churchman," which was published in *The North American Review*, has accorded to Christian Science the merit it has earned by proving its faith by its works, with

Digitized by Google

"signs following," the signs which Jesus promised should follow "them that believe [understand]." That this article, which simply renders "to Cæsar the things that are Cæsar's," should have brought forth such a deluge of bitter denunciation and vituperation from the reverend Episcopal clergyman in Oakland, simply goes to show that the gentleman did not take the trouble to inform himself on the subject of Christian Science, or he would not have published in his *Weekly Message* a bundle of falsehoods which were at one time circulated by malicious gossip, and which have each and every one been proven false; nor would he have heaped abuse on the gentle and noble Founder of a religion that has brought consolation to hundreds of thousands of the sick and sorrowful.

Assuming that this minister of the gospel is honest in his condemnation of that which he has been mistakenly led to believe is Christian Science, and that he has unfortunately gathered his information from unreliable sources, we unhesitatingly recommend for his perusal, and those who read his paper, the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, also "The Life of Mary Baker Eddy" by Sibyl Wilbur. These books are in every public library, and thus are easy of access, so that none need be without reliable information on this subject. We are reminded that Paul was honest in his ignorant persecution of the early Christians who dared to differ from him in his religious belief, until the light of Truth came to him and transformed him into a humble follower of the Christ.

Our clerical friend has been misinformed in regard to the movement's "losing ground," and the "rumors that its costly church [in Boston] is to be sold" are without any foundation whatever. Any one who will visit the Christian Science churches in this city or elsewhere will find them usually crowded, some to overflowing, for the world is hungering for a practical religion, and humanity is finding it in this new-old truth. Christian Science is no more "Eddyism" than the law of gravitation is "Newtonism," as has been said by the Christian Science writers many times. No consecrated follower of the Christ can afford to speak thus disrespectfully of any religion which has rescued even "one of these little ones" from misery and sin and brought him into "newness of life" in Christ; and Christian Science has rescued thousands. Jesus defined the work of his followers when he said: "Preach the gospel," "Heal the sick," "Feed my sheep."

✧

["One who would Investigate" in *The Gazette*, Colorado Springs, Col.]

Mr. ——, will you please tell me, through the columns of the papers, where in Science and Health I may find your statement, made in the *Gazette* July 9, page 2, in regard to Christian Science?

I went to Science and Health—the text-book of Christian Science, by Mary Baker Eddy—to try to find the statement. These are some of the statements I found there: On page 497: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." "We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death." "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure." Also on page 444 I find: "Let us be faithful in pointing the way through Christ, as we understand it, but let us also be careful always to 'judge righteous judgment,' and never to condemn rashly." My name is not on any church book.

✧

[Robert S. Ross in *New York (N. Y.) Tribune*]

Permit us to call to your attention a misstatement of Christian Science by Edwin F. Bowers, M.D., in your magazine section recently.

Christian Science does not ignore disease, but brings about its destruction by reducing it to its proper denomination, namely, nothingness. Physics teaches that nothing can be added to a vessel already full. This sound reasoning is universally accepted. Christian Science declares that God is good, that He is Spirit, and if He made all that was made, there ceases to be place for anything but that which is spiritual and good. The only existence which evil has, must therefore be a supposititious existence, which has no more reality than a proposition in physics which might declare that something can be added to a vessel already full. Christian Science is a system of exact reasoning based upon divine Principle, and for this reason is entitled to and is receiving the consideration of thinking people throughout the world.

That the teachings of Christian Science are based on truth, is being made evident in the healing of all manner of diseases, many of them considered by the medical profession to be incurable.

✧

[Charles E. Jarvis in *Riverside (Cal.) Press*]

Dr. —— of Minneapolis, as quoted recently in the *Press*, has evidently confused the teachings of Christian Science with those systems which employ suggestion and will-power, and are therefore antithetical to the former. He tells us that "faith-cure, Christian Science, and the like, all come back to the original premise of the control of the body by the mind." It should be remembered that the mind therein referred to is the human or "carnal" mind, which Paul tells us is "enmity against God," whereas in Christian Science man is regarded as the image and likeness of the immortal, divine Mind, supreme intelligence, or God, and is subject alone to His immutable laws. It follows that happiness and physical health obtain when self-will, self-righteousness, self-pity, and all the rest of the concomitant phases of the human mind, are overcome through an understanding of God and of man's relationship to Him, as taught in Christian Science.

[Written for the *Sentinel*]

Security

JOHN RANDALL DUNN

Love divine, the enfolding arms
Of Thy mercy compass me.
With mine opened eyes I see
All the ills, the threatened harms,
Phantoms—fleeting dreams—to be;
For in Thine enfolding arms
Dwelleth sweet security.

Father-Mother Love, so near,
Gently brooding over all,—
Hearing me before I call,—
When I rest in Thee, all fear
And its train of sorrows fall;
Dwells nor pain nor anguished tear
With the thought that Love is All!

Editorial

Active Service

NOTWITHSTANDING the call to active, positive demonstration of Christian Science which pervades Mrs. Eddy's writings, there are yet many that have been healed in Christian Science who fail to realize the necessity for work and study on their own behalf. As a consequence, they go on from year to year simply as somebody's patient; in other words, they have transferred their former allegiance to the family doctor and the ways of *materia medica* to the practitioner of Christian Science. Instead of helping themselves and others, as they might do if they were willing to devote the same amount of earnest application to the acquirement of an understanding of the teachings of Christian Science which they have given to gain proficiency in some new art or worldly accomplishment, they are content to be mere recipients, forgetting the Master's injunction, "Freely ye have received, freely give."

To such as these Mrs. Eddy's words, "The song of Christian Science is, 'Work—work—work—watch and pray'" (Messages to The Mother Church, p. 20), should be a call to action. Through this work and study they will find that "God is no respecter of persons," and that He does not withhold from them that diligently seek Him the understanding which they need in order to do His work. They will also find that He does not require that He shall be approached only through a selected mediatory class or priesthood. He is the Father of all, and all are equally His children—"heirs of God, and joint-heirs with Christ." Just as the little child turns to father and mother, strong in its faith that they are able to do whatever is asked of them, why should not we children of a larger growth confide in the omnipotence and omnipresence of our Father-Mother God, knowing that when we ask aright He does hear and answer prayer?

On page 452 of Science and Health Mrs. Eddy writes: "Expect to heal simply by repeating the author's words, by right talking and wrong acting, and you will be disappointed. Such a practice does not demonstrate the Science by which divine Mind heals the sick." Again, she writes on page 350: "To understand all our Master's sayings as recorded in the New Testament, sayings infinitely important, his followers must grow into that stature of manhood in Christ Jesus which enables them to interpret his spiritual meaning. Then they know how Truth casts out error and heals the sick. His words were the offspring of his deeds, both of which must be understood. Unless the works are comprehended which his words explained, the words are blind."

Solomon has said, "Understanding is a wellspring of life unto him that hath it," and thousands of Christian Scientists are proving the truth of this proverb. They have learned that to understand God aright is indeed life eternal, and that to advance in this understanding they must put into practice every grain of truth they have acquired. Merely to trust in God without understanding His nature and power, is not sufficient; neither is it sufficient for Christian Scientists simply to read or memorize the letter of Mrs. Eddy's teachings, if they would heal the sick or help the sinful man to forsake his ways. Throughout her writings Mrs. Eddy has insisted upon the necessity for proving all things; also that her followers shall be doers of the word as well as hearers of it. The importance she attaches to this doing—that we shall be active instead of passive recipients of God's bounty—is emphasized when she writes (Science and Health, p. 37): "It is possible,—yea, it is the duty and privilege of every child, man, and woman,—to follow in some degree the example of the Master by the demonstration of Truth and Life, of health and holiness."

The call, then, is for active participation, on the part of every Christian Scientist, in the effort to establish the kingdom of heaven in the hearts of men here and now. We are grateful for what has already been accomplished in this work of redemption, but much yet remains to be done. Shall we, then, sit idly by while the fields "white already to harvest" go unreaped? God forbid that we should be so faithless to our trust! If we are "perpetual patients," let us break the mesmeric chain of dependence on personality and turn to the one and only God, "who forgiveth all thine iniquities; who healeth all thy diseases." If we are practitioners, let us urge upon our patients the necessity for daily persistent effort to know and do the will of God—to work out their own salvation. While the need of the moment is being met, let us strive to strengthen their understanding, and then push them out as the mother bird does her nestlings, that they may find their wings. Let us give as we have received, till all the world shall have shared in the blessings which Truth bestows.

ARCHIBALD MCLELLAN.

❖

"Alive unto God"

MEN are sometimes well worthy of study when they express as their own conviction what in fact is but the reflection of an inherited mental attitude, the resultant of centuries of teaching. Like the scurrying straw, such a man is chiefly interesting for what he indicates, and not for what he is. He registers the direction of a world-enswathing current, of which he is perhaps quite unconscious but to which he is wholly subject.

This is most notably true with respect to those temperamental impulses and religious predispositions which Christian Science not infrequently incites into exhibition. How often does the convincing evidence appear that in his statements a given person is not expressing an intelligently acquired judgment, or even an intentionally fair interpretative opinion, but only putting into circulation a mental inheritance that was laid up for him, perchance, by some centuries-old mistake of human sense! In such an event it is seen that a man is not himself, not an individual, not the manifestation of thought, but only an index of the rule of a hoary belief. He may count himself to be intelligent, liberal, and self-governing; declare boastingly, maybe, that he pays tribute to no man, while in fact he is a mere echo, an unknowing exponent of a long forgotten contention.

This was illustrated recently in the remark of a cultured but willingly ignorant clerical critic of Christian Science, who after giving various other reasons for his antagonism said, "Name a single D.D. or man of large mind who has accepted Christian Science, a man who commands the world's attention." It was an expression of the pose of the contented religious culture of all history, and it was very adequately answered more than eighteen hundred years ago, when St. Paul wrote to the Corinthians, "Hath not God made foolish the wisdom of this world? . . . not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; . . . and things which are not, to bring to nought things that are."

The fact is that creedal culture is and always has been one of the chiefest disabilities to Christian progress, a disability which the rebuke of Science first of all irritates and then destroys. It was the "men of parts" who cried out against the early witnesses for Jesus, saying, "Have any of the

Digitized by Google

rulers . . . believed on him?" and the inquiry is still heard from those who determine the value of Christian Science teaching, not by its fruits, but by what the educationally prejudiced may think of it. The critic referred to has been steeped in theological lore, and thereby been made seemingly impervious to the appeal of the words and works of the Master, the essential truth of the gospel. This is the unscientific wisdom of the Pharisee, which has so often shown itself opposed to the wisdom of Christ, it is alive unto men and to their dictum, but not "alive unto God."

Nothing gives more certain evidence of the verity of the gospel than the record that it stirred up the religious stand-pat-ism of the Jewish church, and nothing argues more forcefully for the corrective and quickening significance of Christian Science than the fact that in setting free "imprisoned thought" (Science and Health, p. 114) it brings about a repetition of these first-century phenomena. Mrs. Eddy's supreme insistence is, that we shall be alive to Truth; that we shall escape from the bondage of tradition and be free, and in the nature of the case this constitutes an unpardonable offense to those who are entirely satisfied with their present spiritual apprehension and efficiency.

It will comfort Christian Scientists betimes if they but remember that the turmoil and opposition of mortal thought are altogether and most encouragingly explicable.

JOHN B. WILLIS.

Hearing and Heeding

AMONG other important changes which have come over religious thought in the last half century is that respecting the communication between God and man. Not so many years ago it was very generally believed that the channels for such communication had been closed since the early days of Christianity, at least to a large extent. Few believed that God speaks to every man every day, and that those who hear and heed bless the whole human family by so doing, even if they never tell others of their mental and spiritual experiences, but live more truly each day because of their recognition of the divine demand and of their obedience thereto. Those who do all this, and who inspire others to do likewise, are the world's best benefactors, and such, we read in the prophecy of Daniel, shall shine "as the stars for ever and ever."

In Science and Health (p. 232) our revered Leader says, "In the sacred sanctuary of Truth are voices of solemn import, but we heed them not." This is a warning which we all should consider, for the word of Truth, when understood by us, leads ever away from discord and toward harmony. It may be that like the child Samuel we shall not at first understand the call, but if we listen and obey, we shall soon find guidance for every step of the way. This is made clear in the epistle to the Hebrews, where the psalmist's words, "To-day if ye will hear his voice, harden not your hearts," are quoted. We are at the same time reminded that those who did not enter into the promised land failed because they hardened their hearts, and the writer of this epistle says that it is "through the deceitfulness of sin" that men's hearts are hardened and spiritual blessings missed.

We also learn from the apostle's words the lesson of prompt obedience. There should be no parleying with error when Truth makes its demands upon us, no Felix evasion, with the excuse that a more "convenient season" will find us better prepared to obey,—it is "today if ye will hear his voice." Surely there can be nothing sweeter than the voice of Love, which is forever calling us away from all the beliefs of mortality, with its false pleasures and pains, its false concepts of God and man. It is certain that if we heed not the "still small voice" of Him "that speaketh from heaven," we shall have the wind, the earthquake, and the fire of mortal experience, until the stubborn human will bows before omnipotent good and acknowledges the supremacy of Spirit and spiritual law.

It is not possible to overestimate the debt we owe for the revelation in Christian Science of the spiritual sense which is inseparable from man as God's idea. The Scriptures tell us plainly that God talked with men in bygone days, but those of us who accepted these statements, before we knew of Christian Science, believed that God no longer communed with men in this way. We were sometimes told that this was no longer necessary, an explanation which seemed a mere mockery when we were well-nigh overwhelmed with sickness or sorrow. We also supposed that the ancient prophets heard the voice of God, Spirit, through material sense; but Christian Science has taught us that this was a mistake, that it was spiritual sense which enabled them to hear and heed, and it was this same sense which led us to search the Scriptures, even before we learned that God is ever with us, calling to us to draw nearer to Him and find Life.

In Christian Science we learn that spiritual sense is man's priceless birthright, and well may we rejoice to hear the Father's voice, even if it come as a rebuke to error, in order that we may be awakened to the high demands of Truth and Love. Christ Jesus reproached his coreligionists with their failure to hear the Father's voice, and in St. John's vision we read again and again, "He that hath an ear, let him hear what the Spirit saith unto the churches." We are told at the same time that those who are loved of God receive the rebuke of Spirit, but this only points the path to the throne and bids the obedient press on to that complete overcoming which reveals man in God's likeness.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—*The First Church of Christ, Scientist.* Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

PORT ARTHUR, ONTARIO, CANADA.—The initial service of First Church of Christ, Scientist, in its new home in the Municipal Building, took place on Sunday morning, Aug. 9. The entire north end of the second floor of the building has been transformed, and makes a most attractive chapel. The reading-room adjoins. The situation is most suitable and convenient, being in the heart of the city and on one of the principal streets.—*Correspondence.*

ONTARIO, CAL.—First Church of Christ, Scientist, was filled to its capacity yesterday morning [July 26] for the special dedicatory services, and the event will be a memorable one in local Christian Science circles. The church was built a year or more ago, but only recently was it freed from debt, and the dedication followed.—*Ontario Report.*

Digitized by Google

CHRISTCHURCH, NEW ZEALAND.—The Christchurch Christian Scientists, who have been steadily gaining ground and increasing in numbers during the last few years, have just concluded terms for the purchase of the building known as Girton College, in Latimer square, and the land adjoining the college. The building, with a few alterations, is to be used as a church. Services are to be held in the large hall, which was formerly the class-room, and one of the large front rooms is to be used as a reading-room. It is thought that a gallery may be constructed in the large hall later on. The members of the church are particularly pleased with their purchase, and are very glad to think that shortly they will be able to vacate their present cramped quarters at the corner of Gloucester and Manchester streets, where they have held their services for the past two years.

Negotiations for the purchase of the property and land have been in progress for some little time. The Christian Scientists will take possession about October. The purchase money for the building and site is stated to be twenty-five hundred pounds.—*The Sun.*

EUGENE, ORE.—Construction of a new twenty-five hundred dollar church building for the Christian Scientists in Eugene will commence soon at the corner of Twelfth and Oak streets, according to plans adopted at a meeting of the members of the church. The building will seat three hundred and thirty persons. The auditorium is to be thirty-five by sixty-five feet, and when the church is enlarged will be sixty-five by sixty-five.

The Christian Scientists decided upon a new church several months ago and purchased a lot upon which they proposed to build some time in the future, but no date was set. It was found that the church was in a position to build this year, and now an effort will be made to have the building complete by Oct. 1.—*Eugene Guard.*

❖

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 6, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 14, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Long Beach, Cal.

The introductory words of Prof. W. L. Stevens, superintendent of public schools, to the lecture on Christian Science by Virgil O. Strickler, were in part as follows:—

Christian Science is endeavoring to bring to mankind a larger view of life, which means a clearer conception of the truth. The most worthy goal of all human investigation is to know the truth. Any church, sect, or society which is earnestly endeavoring to discover truth and to apply its principles to daily living, is entitled to the profoundest respect of society. Every individual has the inherent right to pursue this quest according to the dictates of his own conscience and intelligence. It is well for all to remember that the individual or the group that has the most comprehensive grasp of truth, is the most tolerant of the beliefs of others.

Christian Science, in endeavoring to bring this larger view of life to humanity, has been singularly effective in reaching the individual. Too frequently the religious work attempts to reach only the masses, the state, or a world-kingdom, forgetting that the individual must first be quickened. It was the method of the great Teacher to step from out the multitude to reach the individual, to soothe the sorrowing, and to heal the sick. Out of individuals quickened by a keener spiritual life, efficient churches must be fashioned.

The belief of the Christian Scientist, therefore, is a vital factor in influencing the controlling forces of human existence. Your presence here tonight clearly indicates that you are profoundly desirous of knowing more fully the truth, in order that this influence may be exerted still more potently for strength and beauty, for health, harmony, and happiness.—*Correspondence.*

❖

Milwaukee, Wis.

A large audience listened to a lecture in the Auditorium under the auspices of Fourth Church of Christ, Scientist, by Clarence W. Chadwick. Introductory remarks were made by E. P. Lincoln, first reader, who said:—

Never since the Christian religion was established by Jesus has there been such wide-spread interest manifested in its teaching as at the present time. The healing element of Christianity, which had been lost sight of for many years, has in our day been discovered by Mrs. Eddy, who has proven to the world by demonstration the power of Truth to heal mankind, both in mind and in body. Jesus said, "And I, if I be lifted up from the earth, will draw all men unto me." Our Leader has revealed to us in Christian Science a clearer understanding of this truth and what it means to mankind.

Milwaukee News.

❖

New Bedford, Mass.

William R. Rathvon gave a lecture on Christian Science to an audience which crowded the Christian Science church on Middle street. The lecturer was introduced by former Mayor Thomas Thompson. "Since Science and Health was written," said Mr. Thompson, "it has done more than anything else to arouse the world to a consciousness of the Principle that was taught in the far past." After characterizing Mrs. Eddy as one of the greatest women who ever lived, Mr. Thompson said that the interest in the Christian Science religion had become so great that its edifices were not large enough to accommodate the vast audiences which were ready and willing to listen to the solution of the great problem. "The Christian Scientist," he said, "is always the one with sunshine over his face. That is what is needed in this life. Christian Scientists live their lives in deeds, and not in words. A man must live up to the high consciousness expounded in Science and Health, or he is not a Christian Scientist."

New Bedford Times.

❖

Willows, Cal.

Prof. Hermann S. Hering lectured at the Opera House to an audience of about three hundred and fifty people. He was introduced by Judge W. M. Finch, who said in part:—

When I was asked to introduce the speaker this evening I unhesitatingly accepted, not that I am a Christian Scientist,

Digitized by Google

for I am not a member of that organization, but rather because of the high regard in which I hold the Christian Scientists of Willows. I am unable to say either that I believe or that I do not believe in Christian Science. I do not know enough about its doctrines to form the basis of belief.

This is an age of investigation. Nothing should be accepted or rejected without a knowledge of the subject. If Christian Science is to be accepted, that acceptance should be based upon an intelligent knowledge of its teachings. If it is to be rejected, that rejection ought not to be through ignorance. In this as in all other matters, to seek the truth should be our guiding purpose. With an unbiased mind we should first ascertain what the facts are, and then draw our conclusions from the facts thus established.

Correspondence.

❖

La Fayette, Ind.

A lecture on Christian Science was given by Jacob S. Shield in the Victoria Theater. Thomas Bauer, mayor of the city, introduced the speaker, saying in part:—

We should indeed welcome into our community such instrumentalities for good as lead in the direction of true happiness for the people; and as one of these great influences for good, I am most glad to find in our midst the Christian Scientists, whose aim and ambition in life is true happiness. We meet today that we may review this all-important subject, and view it from the standpoint of the Christian Scientists. We can well feel assured that we will take away with us from this meeting an inspiration for good.—*Correspondence.*

Testimonies of Healing

A few years ago we came to Christian Science for the healing of our child. We had been told, and believed, that the case was hopeless and incurable. The boy was then three years of age, and he had not made any progress from the time he was a baby a few months old. He could not stand alone, was fed with a spoon, could not eat solid food or take much liquid. Toys did not interest or amuse him. He could not hold anything in his hands, but dropped everything immediately and cried; and there were times when he absolutely refused to take food. He had curvature of the spine, and he could not stand or walk or talk, and the bowels had never acted naturally.

The doctor said the child should have training in an institution, where he could be taught to be clean, that was all. He would never walk or go to school, never be able to earn his own living. We had consulted a brain specialist, and also one of the leading physicians and surgeons in Manchester, and the opinion of both was that he had never been a normal child and never would be. Both admitted they could not account for cases like this and could not do anything at all for us. We had to resign ourselves to the inevitable, thinking it must be God's will and that this was our cross.

Christian Science treatment was commenced in August, 1910, and since then all those discordant conditions have vanished, and the child is a new creature. He is a very affectionate little chap, with bright, intelligent eyes. Even the skull has developed and raised, and the spine is no longer curved, but perfectly straight. It is a great joy to us to hear him talk, and his speech is daily becoming clearer. He is now able to play out-of-doors with other children. He continues to progress splendidly, and has been attending Sunday school almost twelve months. A month ago he started day school, and this is a great pleasure to him. It was reported to me, at the end of three weeks, what good progress he was making there. One golden text which he learned for Sunday school is very fitting,—"Stand still, and consider the wondrous works of God." Truly the power of God has been manifested to us!

We have received so much help from the testimonies in the *Sentinel* that we desire to send this message out into the world to help others. For this and many other blessings that have come to us, we are truly grateful; and for the better understanding of the Scriptures, which have been revealed to us through the study of Science and Health and all the Christian Science literature, words can never express our thankfulness.

Our gratitude for all this is beyond words. But great and wonderful as is this healing, it is nothing compared to the knowledge of God as Love which has come to us through Christian Science.

Mrs. A. Tyrer, Longright, Manchester, England.

❖

Almost nine years ago I began the study of Christian Science for the physical help I hoped to receive from its teachings, also to learn of God as a Father-Mother, for I had at that time sustained the deep sense of loss of my only parent. I was thus left apparently alone and in a strange country, where I had come a short time before in search of health, thinking I would be benefited by the California climate. After having been here for several months, however, I grew worse. At this time I had exhausted all that *materia medica* could offer me; also the many different places to which I had gone, hoping to find relief in the climate, had brought me no benefit. I then turned for the second time to Christian Science for help, seeking not alone the physical healing, but the knowledge and understanding of God as an ever-present help in time of need. Since beginning the study of Christian Science I have been perfectly and permanently healed of what was pronounced lung trouble by my physicians at the time, this disease being considered hereditary in our family.

I had been treated by my home physicians, but there seemed no help for me from their treatments. I was therefore advised by them to try a change of climate, but I had grown so much worse that I was unable to make the change. A relative recommended Christian Science to me, and a practitioner was sent for. It was not long before I was greatly benefited, but I was unable to grasp the spiritual truth of the help derived from its teachings. Several years after this I was again greatly in need of help physically, suffering with symptoms of the same condition, also from kidney and spinal trouble, nervous breakdown, and great mental disturbance. I again turned to *materia medica* for help, but after treating me daily for three months, my physician candidly told me he could help me only temporarily, if at all. He advised an immediate change of climate, so I spent some time at different resorts in search of health, having in attendance one physician who had had twenty-five years' experience in pulmonary diseases; but I was not benefited after being under his care for nine months. Finally, I was advised to try the California climate. After coming here I grew worse, as above stated, and so at last turned to Christian Science again, and was completely healed.

My gratitude for this wonderful proof of the healing power of Christian Science through the knowledge and understanding of God and man's true relationship to Him, as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is greater than can be expressed in words. For my healing and the many blessings which have come to me through the teaching of Christian Science, I am indeed thankful to God, and also grateful to our beloved Leader, who has made known to us this great truth that is freeing mankind from diseases of all kinds. I rejoice in the good that has come into my life through Christian Science.—Frances H. Keyes, Los Angeles, Cal.

❖

When about eight years of age, I began to wonder why the works of Christ Jesus and his disciples were not brought out now, as well as in the Master's time; but when I questioned others, I generally got the answer that these works were for Jesus' time only, and we could not understand them. Nevertheless, the desire to know more followed me all my earlier years.

After having been in America for some years, I paid a visit to Sweden, my native country, about nineteen years ago. In what seemed a very strange way, through this visit, and on my return to Chicago, I was for the first time brought in contact with a Christian Scientist. In my first conversation with the Scientist, when asking some questions concerning a certain experience, I was answered by being told of a demonstration in Science, and it was added that it was brought about through the understanding of God. I knew instantly that what I needed was an understanding of Truth, and I knew I had now found what had been lacking all these years. In a small way I began to look into Christian Science and investigate; but when we are bidden to the feast, the excuse is ready, and mine was, that because of my slight knowledge of English I could not understand this teaching. But Christian Science never left me; it was in my thought at

Digitized by Google

all times and under all circumstances, with a growing desire to know more.

It was eighteen years ago that I began the study of Christian Science. The next Sunday after getting a copy of Science and Health, I attended services in the Auditorium in Chicago, and the glorious revelation that came to me when the Lord's Prayer with the spiritual interpretation was read, can never be expressed in words. From childhood I could never pray; but the desire for a better standard of living was uppermost in my thought. At first I did not think anything about the healing, for I did not come to Christian Science for physical benefit, but with a heart sick; discouraged through the world's lack, I was hungering and thirsting after righteousness. I had been subject to severe headaches since childhood, also rheumatism, but as I continued my study I began to apply the truth and was entirely healed; and I have been able to apply Christian Science to all the conditions of human experience.

One of the times when I was deeply grateful for my knowledge of Christian Science was when my little girl arrived. I can truthfully say that she owes her life to this teaching, through the faithful work and understanding of one with whom I had the privilege of studying in class. Above all other benefits, however, is the spiritual uplift which has come through Christian Science, for it measures out the understanding of what Jesus said, "The kingdom of God is within you," within that consciousness whence all malice, envy, hate, jealousy, and revenge flee, to give place to the presence of divine Love, which is God with us.

CECILIA G. PECK, Denver, Col.

❖

Five years ago, while suffering from an acute intestinal disease, the after effects of what was named "Asiatic cholera," I began to read Science and Health merely out of curiosity to know something of the teaching of Christian Science, rather than with any hope of being benefited. For eighteen months prior to this I had faithfully applied the medicines prescribed by the physicians, with no good results whatever, and I was fast becoming resigned to what seemed to be an incurable disease. I then believed God was responsible for disease and death; that these were the divine methods of making us love Him more. Filled with a depressing dread and fear of a God whom I believed responsible for my acute suffering, ignorant of any known means of escape from that which I believed He had decreed for me, and finding it impossible to love a creator whom I deeply feared, I had become bitter and was hopelessly discouraged.

At this point my attention was attracted to this sentence: "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony" (Science and Health, p. 390). I was then led to the next step in my search to understand the true and living God in the definitions of God as found in this text-book. A careful study of these brought the comforting assurance that an all-loving God could not create disease and suffering. Then followed an earnest search for the underlying cause of my suffering, which was soon answered in that wonderful statement: "Fear is the fountain of sickness" (Science and Health, p. 391).

Ignorance of the true meaning and nature of God, fear of what I believed Him to be, and the sin of wrong thinking about Him and His creation, was indeed the source or cause of my many ills. Realizing fear to be but a false belief in evil as a power, how could this be true when God is infinite good? Ignorance, the supposed absence of truth, could not be a reality if infinite Mind, intelligence, was All-in-all. Sin, the belief in a power aside from good, was disobedience to the first commandment, "Thou shalt have no other gods before me." Had I not been believing that evil was of God, hence as real as good?

Urgent need of reversing my process of thinking was apparent, if I would be freed from this evil sense, and I began by assuming God to be infinite Mind, intelligence, the one cause. Any effect unlike that infinitely good cause must be a belief in more than one God, or creator, which is idolatry; for had I not been serving this false belief of life, intelligence, and pain in matter, which was then manifested in the fearful, discouraged, suffering mortal I was obliged to call myself. Five weeks of earnest, prayerful effort to replace the wrong thoughts I had been harboring with the truth about God, and man as His reflection, brought freedom from this dread disease, which I am happy to state has never returned. Thus, a brief but prayerful study of that wonderful book "Science and Health with Key to the Scriptures" did not change anything in God's universe, but the truth revealed in its pages did change my false concept of things by planting truth where error had claimed my thoughts; and this is the same truth which Jesus said shall make us free from every discord, when earnestly and faithfully pursued.

Every added proof that man coexists with God (and this proof is always given when we bring our thinking and living up to the demands of Principle), brings to every earnest student of Christian Science the deepest thankfulness to God for the pure, unselfish, patient work of our dear Leader, Mrs. Eddy.—LETHA R. MORGAN, New York, N. Y.

I wish to verify the statements made in the foregoing testimony of my wife's healing of intestinal trouble, also to the healing of chronic catarrh of the head and throat from which she had suffered since a child.

J. D. MORGAN, New York, N. Y.

❖

I can truthfully say that I have been helped more than I can tell through Christian Science. The doctor said I had a malignant growth. I had had medical attendance for three months, getting no better, and was finally told I would have to submit to another operation. Instead, I had Christian Science treatment, and was perfectly healed.

It has been almost five years since that time, and my healing has been permanent. We have attended Christian Science services ever since, and are members of the society at Jerome. We are truly grateful for all the benefits we have received through Christian Science.

SARAH ATWOOD, Jerome, Idaho.

❖

It is with the deepest thankfulness to God for Christian Science that I give the following testimony of mental surgery. Two years ago my son was engaged in a game of basket-ball at the gymnasium of the University of Chicago. During the game, when jumping after the ball, he fell, incurring a badly fractured ankle-bone. The surgeon, who was always at hand in case of emergency, was called. The boy declared himself a Christian Scientist and asked to be sent home. The surgeon smiled and said it was too serious a case for Christian Science. He was allowed to bandage the ankle, and then he sent my son home in a carriage with a message to me, saying that the ankle-bone was badly fractured and he advised the X-ray, in order to have it set properly. He also said that the boy must not put his foot to the ground under any consideration; if he did, the consequences would prove dangerous.

When I saw my son being carried into the house, my fear was very great, but the comforting thought came to me that "divine Love always has met and always will meet every

Digitized by Google

human need" (Science and Health, p. 494), and I also realized that only radical reliance on Truth would heal a broken bone. We then sent for a Christian Science practitioner. Upon arrival she inquired of the boy's father if he was willing to have Christian Science treatment, and when he gave his consent, we were all grateful, for at that time he was not much interested in Science. Treatment began at once. In three days my son was able to hobble around the house with the use of a cane, without touching his foot to the ground; in ten days he put on his shoe, and walked with the aid of a cane to the practitioner's home, one block away. In two weeks he returned to school with scarcely any trace of a broken ankle. In three weeks he walked from school with his companions, a distance of three miles at least. Mrs. Eddy says, "Christian Science is always the most skilful surgeon, but surgery is the branch of its healing which will be last acknowledged" (Science and Health, p. 402).

I was indeed grateful for this satisfying demonstration; it proved to me that Truth does heal and bless mankind. Christian Science has met our many needs for five years.

GRACE ELLWOOD, Chicago, Ill.

✧

In July, 1911, having been pronounced by my physician dangerously ill from an infection, and feeling certain that I would not live more than a very few days, I was persuaded by my wife to try Christian Science. Upon the arrival of the practitioner, I at once stopped taking the drugs with which my system was thoroughly saturated.

When the doctor learned of the discontinuance of his prescribed treatment, he informed my wife that I could not live forty-eight hours unless I resumed the regular doses of medicine. But with the first treatment in Science, I immediately arose from my bed, and shaved and dressed myself. The first night the usual sleeplessness was changed to peaceful sleep. Within two weeks I had discontinued regular treatments and had resumed my duties at the office. Within thirty days my weight had greatly increased, the ailment which had apparently held me in its grip having reduced my body to a mere skeleton during my illness. Since that time I have been in practically perfect health. I have had no more of the severe headaches, which formerly had been frequent, and several other ills have entirely disappeared.

I am deeply grateful to my wife for persuading me to try Christian Science, and to Mrs. Eddy for her works, which I am confident mean eventually the emancipation of mankind. Especially and immeasurably am I thankful to God for the understanding of Truth and Love that I am more nearly approaching every day.—JAMES H. LAST, Colby, Wis.

✦

All who have experienced the healing touch of divine Love, feel the responsibility of telling other suffering mortals about the way of escape. I want the world to know the omnipotent love and power of God to destroy the terrible evil and misery of mortal existence. I had desired Christian Science a long time before it was my privilege to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I was led in devious ways before reaching Christian Science. I naturally believed in divine healing from proofs of the destruction of evil, mental and physical disease, through simple childlike faith in God and His Christ, and I am forever grateful for these proofs that all that is unlike God, good, even very serious evil and suffering, can, when renounced, be destroyed; that the corrupt, worthless "old man," according to St. Paul, can be "put off," if we but turn to the pure spiritual truth taught by Christ Jesus, turn positively, and refuse, as Christian Science teaches us, to dwell at all upon the material. To live right in the present is the only way to redeem the past.

Christian Science has thrown wonderful light on the Scriptures, and the passage, "The soul that sinneth, it shall die," has become most comforting and helpful with the understanding that "soul" in the passage means sinful sense; for it is a positive promise that all evil, from the greatest to the least, is doomed by God to complete extinction, and the sooner we get to work with Him to this end, the sooner we shall get rid of the inevitable suffering of sin. I am very thankful for the revelation Christian Science gives that evil is not man and no part of man, any more than a poisonous reptile fastened to the hand would be a part of the human body, for "man is not material; he is spiritual" (Science and Health, p. 468); and by knowing and clinging faithfully to it, what is unlike God, good, is destroyed.

The most joyous thing is that this message is universal. "All flesh shall see the salvation of God," for "our God is a consuming fire" to all unlike Himself, good, to all that does not bring glory and honor to Him and good to man. Christ Jesus said, "Him that cometh to me I will in no wise cast out." A careful study of the Bible and Mrs. Eddy's writings gives many assurances of the certain destruction of evil, and we that have proved them, know them to be true. I know from my own experience and that of others, that there is hope for all, even those in the most despairing state, from whatever cause.

Christian Science has made me a new individual mentally, has sustained me wonderfully in trial, has healed a severely injured ankle, colds, burns, and other discordant conditions. A burn over the upper part of the face was also healed. When starting a fire with the use of kerosene, the flames burst forth into my face, burning the forehead, singeing eyebrows, lashes, and hair, but through divine protection my clothing did not ignite, nor were the eyes injured. This seemed wonderful; it gave proof of the divine ever-presence. The pain was soon relieved by Christian Science treatment, and the burn healed quickly. The accident happened about six o'clock in the evening. I retired about ten, and rested well during the night, though I was awake more than usual.

Christian Science has taught me that materialism, even in its refined forms, robs God of His glory. I am deeply thankful for what this teaching has done for those dear to me, for the world, and for myself.

MILDRED JOHNSON, Dallas, Texas.

The above testimony, written by my daughter, is true. I am indeed thankful to God, also grateful to Mrs. Eddy for all the good that has been revealed to me through the study of Christian Science.—KATE JOHNSON.

✧

I hope the readers of the *Sentinel* will find the same joy and gladness in reading my testimony that I find in reading the testimonies of others. For the past six years God, divine Mind, as revealed and understood in Christian Science, has been to me a "very present help" in solving my physical, mental, and business problems.

Before I came into Christian Science my eyes were affected at certain times so that I could not distinguish objects clearly, for whatever I gazed upon appeared to be doubled. Through Christian Science, however, the cause of this trouble was uncovered and I was set free. Last summer one of my eyes became seriously bloodshot, and according to human opinions seemed in an alarming condition, but I sought the help of a Christian Science practitioner, and within two weeks the eye was restored to its normal condition. During the time my

Digitized by Google

eye was thus affected, I was not hindered to any great extent in performing my daily work, which necessitates the close application of my eyes.

There has been only one occasion for me to remain home from work on account of illness since I became interested in Christian Science. That was when I had contracted a severe cold, manifesting itself in a throat affection, fever, weakness, etc. Again I received help from a practitioner, and was healed within a week; and the peace which accompanied this healing was indeed the "peace of God, which passeth all [human] understanding."

I can say in all sincerity that as a result of studying the Bible, together with "Science and Health with Key to the Scriptures," and other works by Mrs. Eddy, I have become a better son, a kindlier brother, and a better citizen than before commencing this study. Christian Science has transformed, reformed, and regenerated me; it has made me more loving, unselfish, and honest. It has led me out of the darkness of error into the light of Truth; lifted me from the depths of ignorance to the glorious heights of spiritual understanding and intelligence. All who will approach Christian Science with an open and unprejudiced mind can understand it and be benefited by it.

I am deeply thankful to God for Christian Science, and grateful to Mrs. Eddy for her most noble labor in behalf of mankind; and I have profound respect and appreciation for the faithful and untiring workers in the Christian Science movement.—CHARLES HAGEN, Chicago, Ill.

❖ ❖ ❖

[Written for the Sentinel]

Comrades

MARY BEECHER LONGYEAR

TODAY we're walking in the narrow path
Which leads to endless life.
The clouds of sense obstruct our sight,
The rocks are steep that scale the height;
Behind, sad memories lure our ears,
And fill us with foreboding fears;
Strange forms glide by with vaporous grace,
While poisoned perfume spreads apace;
The waving trees on either side
Seductive fruit 'mid verdure hide.
We feel the strangeness of our way;
But 'mid the gloom, hope bids us say,
We're walking in the narrow path
Which leads to endless life.

Sweet comrade of my heart's best love,
You're on the path, behind, above—
I know not where; I hear your voice!
To help you, guard you, is my choice,
But Love's stern mandate I obey,—
"Walk thou with me this narrow way;
Give not your thought to kith or kin
Until my joy you enter in."
Some happy day, when clouds shall lift
And light of Love shine through the rift,
When mists of earth-born wraiths take flight
And radiant day dispels the night,
We'll call and answer, though the world divide,
To find that we've been marching side by side,
While walking in the narrow path
That leads to endless life.

From Our Exchanges

[The Advance]

Spiritual things are the real things. Philosophers still debate the problem of things in themselves. Are there any such things in themselves? The mind is creative. Things are all parables of spiritual realities. The deeper philosophers get into the problem of ultimate reality, the farther they get from mere dirt and the deeper into the mind as the indisputable fact. All our lessons of heaven are in terms of parables. The pearly gates, the golden streets, the glittering crowns, and the endless song are all parables of the things which "eye hath not seen, nor ear heard, neither have entered into the heart of man."

[The Christian World]

There is a spirit steadily rising in all the churches, especially among the young, which may be called a new spirit, although it is shot through and through with the most adventurous impulses of the spirit of past ages. It is new in its eager absorption of the latest knowledge, and its intolerance of all that hinders or limits its acquirement of the fullest possibilities of life; but it is old in its dissatisfaction with anything that demands only a small output of its power—in its hungry longing for some high call to give itself in generous self-abandonment. What is old in it is its desire to adventure the soul; what is new in it is its demand that the adventure shall be "among masterpieces." When it is demonstrated that in the highest and noblest sense Jesus is the greatest spiritual adventurer the world has ever known, the new spirit —which is entirely of his creation—will enter into captivity to the mastership of Christ, and therein find perfect freedom.

It is not sufficiently realized today how great an adventurer Jesus was in the realm of the spiritual. Whenever it was realized in the past, the adventurous spirit of true sainthood burst forth. It burst forth in Paul, and carried Christianity out of Palestine into Europe. It burst forth in Francis of Assisi, and revealed the joy of Jesus in the arms of poverty. It burst forth in Luther, and liberated the faith of Jesus from the tyranny of Rome. Through all the Christian centuries it has burst forth whenever the way of Jesus has been seen to be the way of the soul's adventure.

Unfortunately, there have been teachings of the churches—doctrines clumsily taught and imperfectly received—which have made it almost impossible for some to see this clearly. The splendid actions of Jesus have not been seen as daring adventures of the spirit, because men have been taught to regard them all as items of a prearranged program. His temptation in the wilderness has been robbed of all its thrill, and all its helpfulness, to those who have only seen in it the sham conflict of a being clothed in celestial armor quite impervious to all the weapons of evil which common men have to face. His goings out and breakings loose from the detaining hold of home and synagogue and nationality have been heard of with little interest by those who have only seen in them the necessary steps of a preordained mission. In reality they were all heart-lacerating enterprises; and Jesus was urged to undertake them by the same "song of the open road" that from Abraham onward has lured the sons of God on their way to spiritual freedom.

Jesus would be less than Abraham if we might not say of him that "he went out, not knowing whither he went." And so it was through all the wonderful life, until we come at last to the great adventure of the cross, if, indeed, we may not call the whole of the life of Jesus an adventure of the cross! There has never been a grander expression of the soul's ad-

Digitized by Google

venture than when Jesus dared to say, "I lay down my life, that I might take it again." Did Jesus know that he could take it again? Was there no "brave adventure of the spirit" in that leap in the dark with its ringing cry, "Father, into thy hands I commend my spirit"? The great hour of Jesus only helps us in our own great hour if we can believe that his knowledge was, in kind, as our knowledge; that his assurance in facing the unseen was the assurance which is alone vouchsafed to us,—the assurance of faith.

[*The Christian Work and Evangelist*]

Every man in Europe who has urged armament, guns, militarism, the mailed fist and force as the basis of civilization and as assurance of peace, is to blame for this war. It has proved the great fallacy of the days, and the world is now seeing it. But it has been the fallacy of history, and intelligent people should have known this long ago and have put it in the junk-heap of outworn things a hundred years ago. Every intelligent man in Europe has known since boyhood that the whole system was accursed of Satan and utterly contradictory to the sweet spirit of good will and love taught by his Christian religion, and he should have been getting his government on to this basis long ago.

[Rev. Frank O. Hall, D.D., in *The Universalist Leader*]

There was a time when I expected that ours would become one of the great—I hoped the greatest—denominations in Christendom, but in the thirty years of my ministry I have not seen the denomination increase. I have seen the great principle for which our fathers contended, taken up and proclaimed by other churches. I was talking not long ago with an aged and beloved clergyman of our church, as noble a servant of Christ as ever lived. He was balancing his account and getting ready to depart. Said he, "I have never preached to large congregations, I have never received any great honor, and certainly I have never possessed much of what the world calls goods; but I remember that fifty years ago I was proclaiming, and was condemned for proclaiming, what I have lived to hear preached from every progressive pulpit and taught in every progressive theological school in America, and that is honor enough." It is honor enough. God bless his memory and increase his tribe.

It may be that it is the destiny of the Universalist church to be reabsorbed into the older church out of which it came. If the Congregational church had stood a hundred years ago upon the platform which it adopted at Kansas City, there would never have been a Universalist church.

[Rev. R. R. Rodgers in *New-Church Messenger*]

What we need is not more conscientiousness, for that may be spurious or false; and what we need is not more faith, for that may be mistaken; and what we require is not more prayer, for that may be directed to unworthy ends; but what we all stand in the greatest need of is, more of the good by which we walk with God, and live as brethren with each other. With this we labor in peace and unity; we take our share in all helpful service; we keep the mind open to wider-viewed intelligence; all wisdom becomes our companion, and all knowledge our teacher, and in us the miracle is realized in its spiritual and only true meaning, "And the Lord showed him a tree, which when he had cast into the waters, the waters were made sweet."

[*The Christian Commonwealth*]

What this war has shown, is not that Christianity has failed, but that it has never been tried. The world has lived under the domination of unchristian ideas, and these have now broken down. The political system of the Old World has ended in bankruptcy.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges. Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The Atlantic Deeper Waterways Association convention, recently in session in New York city, protested against the stopping of work on those Hudson river improvements which are to connect New York city with the barge canal system at Troy, and which are to provide suitable connection from the barge canal to Canada. Work on the barge canal has been going on for some years. Other projects besides the completing of this canal must be carried out if the canal is to be of the greatest service possible. Various improvements have been made at Troy for the last eighty years. At one time about seventeen million dollars was expended to secure a depth in the Hudson river of nine feet from Troy to Albany. At another time a twelve-foot channel one hundred and fifty feet wide was built at a cost of five million five hundred thousand dollars. The present project, adopted in 1910, provides for a channel twelve feet deep at all stages, from deep water to Waterford, a distance of about thirty-nine miles.

Owing to the failure of the United States to approve of regulations governing the taking of food fish in boundary waters, the Canadian government is about to serve notice that it resumes its liberty of action. A treaty was made between the two countries six years ago for the appointment of a joint commission to frame fishing regulations applicable to boundary waters from the Atlantic to the Pacific. A set of regulations was agreed upon. Canada approved of them, but the United States failed to do so, owing chiefly, it was said, to objections from lake fishermen. In 1912 Canada gave notice that unless the regulations were approved at the next session of Congress, Canada would resume liberty of action.

The Siasconset station of the Marconi Wireless Telegraph Company was indefinitely closed at one o'clock, Sept. 25, upon receipt of such instructions from its New York office. Orders of the federal government to the United States censor had been given to close the office at noon, but pending further orders from Washington, the office remained open until the message came from its New York headquarters to suspend business. Since the closing of many other Atlantic wireless stations, including Sable island, the high-power station on Nantucket island has been the only means of communication with vessels in either direction, and it has been handling an average of about three hundred radiograms daily.

For the double purpose of securing ships especially adapted to their trade and avoiding neutrality complications, the United States shipping board provided in the Alexander government ship purchase bill may decide to build ships instead of purchasing them from German, British, or French citizens. The bill, which the President desires to have made effective at the earliest possible date, would constitute the secretaries of the treasury and commerce and the postmaster-general a shipping board under the President's direction, vested with the authority to issue thirty million dollars of Panama canal bonds, and with the proceeds to purchase or construct ships to be operated by a government company.

A lumber camp, erected under the supervision of the Massachusetts state forester as a demonstration camp, is being constructed in the woods of Andover, preparatory for the cutting of timber and the sawing of boards for the market. Seven hundred and fifty-two thousand feet of lumber, ties, and cord-wood will be taken out of a one hundred and ten-acre woodlot belonging to a private party without injuring the forest and without costing the state anything. The intention is to improve the forest, give a dying tract a new lease of life, and yield financial returns adequate to pay for the work.

Increases of one quarter cent per mile in the cost of railway mileage books became effective Oct. 1. The advance tariffs will not be set aside by the interstate commerce commission, but may be investigated later. The railway officials announce that the action of the roads was based upon the decision of the commission in the 5 per cent advance rate case, which held that passenger fares on railways generally were inadequate. The tariffs filed in August proposed an advance of one fourth of a cent a mile on mileage books on roads that were charging two cents a mile.

As a first step toward the realization of the big plans for state forests, the state forestry commission of Massachusetts has met and organized. The commission decided to make a tour of the state to see where the waste land is that may be bought for forestry purposes, starting about Oct. 1. By act of legislature this commission has ninety thousand dollars at its disposal, ten thousand dollars of it becoming available this year and twenty thousand dollars more each successive year for four years.

There are ten fish hatcheries in Maine under the control of the state. The private hatcheries numbered thirty in 1910. Maine's fish commission was first formed in 1867, and since that time has been much increased in efficiency through larger appropriations from the state and by perfecting its methods. During the season ending Dec. 31, 1913, 4,644,116 fish were raised at the hatcheries and planted in the public waters of the state.

Postmaster-General Burleson has concluded a convention for parcel post service between the United States and French Guiana, which becomes effective Nov. 1. The limit of weight of parcels is fixed at eleven pounds, and the rate at twelve cents a pound or fraction thereof. International parcel post service will then be in effect between the United States and fifty countries. The international service is expanding at the rate of about twenty-five per cent a year.

Replying to the president of the Colorado Fuel & Iron Company, President Wilson declares that he cannot accept the declination of his three-year truce plan for ending the Colorado mine strike. While no definite statement was forthcoming concerning the disposal of federal troops now in Colorado, it is believed that the President proposes to withdraw this protection if the operators fail to accede to the truce plan. A substitute compromise plan was discussed.

Greater uniformity in the laws of various states affecting the business of corporations is one of the ends that will be sought by the governors' conference which will meet at Madison, Wis., Nov. 10 to 14. Two of the six papers to be read at the conference will deal with the question of uniformity of legislation, and Governor Miller will discuss the fixing of conditions to be met by corporations before they are allowed to do business in a state.

Some of the new uses of asbestos, generally known as a fire and heat proof substance, are in filtration, refrigeration, and the manufacture of paper, Christmas trees, building material, rope, yarn, and clothing. Many of the finished products and samples of the raw material are now exhibited in the division of mineral technology of the older United States national museum building in Washington, D. C.

As the New York, New Haven & Hartford Railroad Company and the New England Navigation Company filed answers denying allegations of monopoly and conspiracy in restraint of trade made by the government in its dissolution suit, the judge in the federal court extended the time of the other defendants, corporate and individual, giving them until Oct. 10 to put in their answers.

Reports from the nine thousand six hundred and fifty-three post-offices in operation as postal savings depositories at the close of August, 1914, indicate that the deposits amount to forty-eight million dollars. The increase in August was approximately four million two hundred thousand dollars, which is the largest since the system began operation in January, 1911.

Secretary Bryan of the state department has announced that the American government has instructed Ambassador Morgenthau at Constantinople to notify the Ottoman government that the United States government refuses to acquiesce in the attempt of Turkey to abrogate the capitulations under which foreigners in that country and its dominions enjoy extraterritorial rights.

Colorado is assured the greatest crop of sugar beets in its history next year, as the result of the purchase by the Great Western Sugar Company and others of one million dollars' worth of beet seed, which will be planted on greatly increased acreage to meet the extra demand caused by the decrease of supply of cane sugar.

On Sept. 18 King George's signature was attached to the home rule bill, which thus gains the statute book. The bill will not go into operation, however, for a year, and before that time an amendment to it will be considered in Parliament.

According to a telegraphic communication, the date of the opening of the international rubber exhibition at Batavia, Java, which had been postponed, has now been fixed for Oct. 19.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII October 10, 1914 No. 6

Fear of Ill Obliterated

HON. CLARENCE A. BUSKIRK

TWENTY-THREE centuries of readers have had the opportunity to become familiar with the story of Damocles, whom history records as a sycophant in the court of Dionysius, known as tyrant of Syracuse. The story runs that the monarch caused a sword suspended by a single hair to hang threateningly over the head of Damocles throughout a lengthy banquet to which he had been invited. Both ancients and moderns have gathered many lessons from this incident. Indeed, every reader is likely to draw lessons from it to apply to himself, for men seem to be prone to people their landscapes with both large and little fears.

We find in the writings of the ancients which have been preserved, a great amount of moralizing upon the strange enigmas present then as now in human existence. Some of their moralizing was of a very high and noble character, and richly deserves and repays perusal. It remained, however, for the teachings of Jesus, which he proved through his works to be true, to throw the revealing light upon the mysteries which seem to environ human experience.

One of the obvious lessons which has frequently been drawn from the story of Damocles is, that in man's seemingly most prosperous and most enjoyed moments there is always impending over him the menace of danger, misfortune, and death. The Egyptians sought to impress this lesson by placing a human skeleton conspicuously at each of their banquets, and a vast amount of literature, both ancient and modern, has been devoted to this and similar lines of thought. The Stoics could never have launched their famous school of philosophy except on the basis that human life is something to be suffered and endured, and that this planet is at best a human purgatory. The fierce and turbid maelstrom of modern life, with its materialistic and often maddening and viciously destructive searchings after selfish satisfactions and pleasures, is to be explained by the wide-spread belief that this human existence is all that man has, that he is only a superior animal, and that it is the part of wisdom to "eat and drink; for tomorrow we die."

Whenever an individual or a nation is obsessed with this materialistic falsehood, the seeds of intellectual and moral decay and ruin have already germinated, and such individual or nation is beginning to retrogress. The only hope is in tearing up and destroying, root and branch, all these baneful beliefs, which grow rampantly like noxious weeds. How can this needed work be achieved? There is, there can be, but one way. It is by broadcasting, according to the teaching, method, and example of Christ Jesus, the truth that makes men free. Already, though the time has been so short comparatively, Mrs. Eddy's writings have accomplished a work in disseminating the saving and redemptive truth which has no parallel since the day of the early church, and which has assumed immeasurable proportions in the deliverance of hundreds of thousands from the despairing thraldom of materialism, belief in the reality of the pleasures and pains of material sense. When we come to understand that happiness does not and can not follow from the gratifications of physical sense, and that all such gratifications are sure to be more than counterbalanced by satiety, remorse, suffering, and hastened physical dissolution, we are prepared to begin to understand the truth relating to the government of divine Principle, under which and by which we "live, and move, and have our being." On page 285 of Science and Health we read: "The time has come for a finite conception of the infinite and of a material body as the seat of Mind to give place to a diviner sense of intelligence and its manifestations, —to the better understanding that Science gives of the Supreme Being, or divine Principle, and idea."

When we realize that all happiness deserving the name, including all pleasures deserving the name, are mental and not material, and that there can be no other source for them than Mind, and no activities belonging to them except they operate under the government of divine Principle, we are prepared to understand man's true being and place in the universe. When we comprehend that the government of divine Principle is actuated by divine Love, and that divine Love is the only explanation of the existence of the universe, we are ready to understand that the universe which really is (not seems to be in human belief), must be in absolute alignment and harmonious cooperation with the divine Love which has purposed and functioned God's universe everywhere and forever. And when we come to know that what is termed human evil, whatever its appearance to human sense, is no part of God's universe,—the universe ruled by divine Principle,—and therefore is without any law or support except as furnished by erring human mind, we understand that the truth, and nothing else, can make us free.

It is then we have the understanding which alone can enable us to obey the admonition of Jesus, "Have faith in God." And then it is that we know there is no evil impending over us at any time or in any place, for we are ever in the custody and under the protection of omnipotent and omnipresent divine Love. Then we no longer need the philosophy of the Stoics, and are no longer lured to vice and consequent debasement by the seductive falsehoods of materialism, but rest serene in knowing the all-power of God, good.

Giving Testimony

MAJ. H. C. FAITHFULL CUMBERLEGE

PERHAPS few students of Christian Science give their first testimony without a struggle; many may even find it a severe trial, and the difficulty is not always overcome at the first attempt. On the other hand, there are doubtless fewer still who are not desirous of giving testimony, and they would gladly do so could they gain more confidence. It is not, as a rule, reluctance to acknowledge benefits received which holds the would-be testifier fast to his seat, but mental disability brought about in one way or another by fear.

In all these cases, overcoming is purely a matter of persistently contending for the truth, the accomplishment of an effort inspired by a sense of duty or by gratitude. Of these two impulses gratitude is the more productive of good results

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

quickly. Impelled by gratitude, mortals rise to heights far above their usual level of accomplishment. One of the surest ways of helping ourselves and others to overcome the fear of giving testimony, is therefore to be found in increasing the sense of gratitude. The wisdom of seeking to bring this result to pass is unquestionable, because it has been amply demonstrated that more good always results for him who gratefully and sincerely makes public acknowledgment of the good already received through Christian Science. Mrs. Eddy tells us that "a just acknowledgment of Truth and of what it has done for us is an effectual help" (Science and Health, p. 372).

There should be little difficulty in quickening the sense of gratitude in most students of Christian Science, since lack of gratitude among those who have experienced the benefits of this teaching is nearly always due to ignorance of the actual measure of their blessings, and is not in any wise vicious or intended. It is only a question of knowing that this is the trouble, and how to set about correcting it. When one who desires to give a testimony becomes vividly conscious of his blessings, the sense of fear yields to an impulse of gratitude which cannot be restrained, and his hesitation disappears as the mist before the warmth of the rising sun.

This ignorance of the measure of their blessings, manifested too often by students of Christian Science, is due to lack of observation, a bad habit resulting from the blindness of materiality. The world in general very rarely stops to think what it owes to the labors of countless individuals whom it never sees. How many persons, as they warm themselves before a blazing coal fire on a cold day, utter a mental "thank you" for the miners who dug that coal lying on their backs perchance, or crouching in confined surroundings, half-naked, grimy, and sweating, deep down in the bowels of the earth? The world takes all too much as a matter of course. Instead of remembering its dependence upon others, it holds that it confers a favor on them by its acceptance of the product of their toil.

When this lamentable aspect of social conditions is explained to an open-minded man, his sense of justice quickly responds, and his actions toward his neighbor are likely to be more just, if not more charitable, ever after. Similarly, when the attention of the student of Christian Science is called to the many good things which this teaching has brought to him, and which he may have taken more or less as a matter of course, his sense of gratitude is quickened, and the word which would not come before, now bursts forth as a torrent, carrying all fear before it in one eager though divinely ordered rush.

Until set right about it, many students think that they have nothing to say because they may not have been healed of some very terrible disease, or have not had some especially wonderful experience of the overwhelming power of Truth to correct discord. This is a great mistake, for the many little changes which invariably take place and alter the whole tone of the life and circumstances of the honest student of Christian Science, are in the sum a more instructive and helpful testimony to some inquirers than is the story of a healing from some specific disease. When the question, "Where should I be now but for Christian Science?" is fairly and squarely answered by the honest and sincere student of Mrs. Eddy's teachings, he will never lack material for a good testimony.

When Jesus sent forth his disciples to preach and to heal, he concluded his instructions with this reminder of their privilege and duty: "Freely ye have received, freely give." If the privilege and purpose of giving testimony were fully understood by all students of Christian Science, there would never be any temptation, even in the smallest of congregations, to look around to see whence a testimony might be expected, but it would always be, Who will have the unselfish joy of giving way to another? It should be remembered that the testimony meeting is not held primarily for the benefit of the regular attendant, although none need go away unblessed; its chief function is to feed the stranger within the gates with the encouragement and hope which will lead him to find for himself in the study and practice of Christian Science the measure of health and happiness that has been won by those who so gratefully bear witness to the fact.

Even if nothing very unusual has occurred recently, the student has always in reserve the story of his own *healing*, which never loses its force. What if the great majority present have heard it in much the same words many times before? The stranger has not heard it before, and he has come to the meeting because the loving all-Father has drawn him, though at the time he may have any kind of an opinion on the subject, or none at all. Though he may hear nothing but statements of heart-felt gratitude for Christian Science, the general effect on a receptive mind is as good as when testimonies of healing from specific diseases are numerous. There is ample scope for both kinds of testimony, and for that matter there need never be any lack of either, wherever and whenever two or three are gathered together in the name of Truth, the divine Principle of Christian Science.

❖

Honesty

EVA S. LOMBARD

To be absolutely honest requires a discriminating sense of what honesty means, and this can be worked out only by taking the first steps correctly and tilling the ground of material belief until every weed of dishonesty has been uprooted. We cannot reach this ideal sense of honesty without faithfully taking every step, any more than a child can solve astronomical problems without knowing how to add, subtract, and multiply. It is usually very easy to see dishonesty in others, and that particular phase of it which would rob us, is especially likely to seem appalling; but it is quite another thing to discover that slight deviation from moral rectitude in ourselves which might make us loath to pay a debt that could not be collected by law. We might even trick a custom-house officer and regard it with suave complacency, unless we were in danger of losing caste by being discovered.

Sometimes through self-justification we are wholly blinded to our own entertainment of a dishonest thought or purpose. Mortal mind may have hundreds of little subterfuges by which to cheat itself, and unless we have learned to watch our motives constantly, correct our false steps, and unravel our snarls, we are not likely to make progress as Christian Scientists. It sometimes requires sacrifice, when we have been all our lives contributing to our love of ease and material comforts, really to let go of what seems to us our "substance," for the mere sake of honesty; but only in this way do we take a long leap ahead in the direction of self-mastery and loyalty to Truth.

When we deliberately blind ourselves to the "little foxes" that spoil our integrity, we are binding ourselves with shackles that must later be removed through "suffering or Science" (Science and Health, p. 296), for we cannot die out of these temptations. They must be met scientifically, and it is a serious calamity to be so darkened by our attempted self-defense that we cannot see. It has been said that "Christian Science and business are two different things," but they cannot be separated if business means intelligence

Digitized by Google

and integrity. One might as well say that business and the multiplication table are two different things. They are, of course, but it would be a most unintelligent business which was conducted without in some way using the multiplication table. Christian Science ought to make business more intelligent and just, and it certainly does bring out a higher sense of honesty. It demands harmony with the exactness of divine law, in business as in everything else.

We are honest according to our intelligence. There is no honesty in business or society without intelligence, and the greater the intelligence the more perfect one's honesty. In other words, we are honest, whatever our station or occupation, in so far as we are governed by spiritual intelligence, in proportion to our recognition of omniscient Truth. If we have not reached the point where we demonstrate honesty in business, then we surely are not capable of demonstrating honesty in Christian Science practice or as a member of a Christian Science church.

We have none of us yet reached the point where we are sitting at the right hand of our Father, at the right hand of righteousness, truth, and purity, and we shall never become perfect, as our Father in heaven is perfect, without making a start in the straight and narrow path. We are constantly quoting, "Ye shall know the truth, and the truth shall make you free," but do we realize that Jesus promised this only as we "abide" in his word? To abide means to take up one's residence, to stay, to endure. What is the truth? Is it some vague ideal away off in the distance, or is it a practical possibility right here, today? We can no more solve a problem in Christian Science by using any form of dishonesty, than we can solve arithmetical problems by lapses from the exact truth.

No worthy Christian Science practitioner would knowingly attempt to influence another person dishonestly. He knows that he would work the same disaster to himself and to his patients as would result if in a schoolroom pupils were taught that the problems were too difficult if they tried to work too exactly; that compromise with numbers is inevitable for the present, but that in some far-away time they would be able to work out their problems on the basis of exact truth. There is no limit to our present supply, but there is no peace in that dishonesty which tries to find satisfaction in the stifling of truth for the gain of that overabundance which may be the fruit of greed, ambition, or desire for display. Dishonesty is nothing but a mesmeric belief that mortal mind can enrich itself at another's expense. It is seemingly in the air, and is generally accompanied by a desire for personal adulation; but worldly trappings can never repay one for a lowered sense of Truth's demands.

No Christian Scientist will undertake to "demonstrate" success for himself at the expense of another. When Elijah begged the widow's last handful of meal, it was not to feed himself alone, it was to feed the widow and her son as well as himself; and the supply when touched by spiritual sense became abundant. When Jesus had some loaves and fishes, he did not beckon to his disciples, bid them help themselves, and then call it a "demonstration." No, the hungry multitudes were fed, and, thank God, they had enough! His sense of supply robbed no one, but fed all.

Jesus said, "Whosoever will lose his life for my sake [for Truth's sake] shall find it." What a direct promise, and what a rebuke to any who would attempt to demonstrate success through the selfishness which leads to dishonesty! When Jesus bade Peter take the penny from the fish's mouth, it was not for the purpose of tricking Cæsar; it was for the express purpose of paying the taxes which were required. Some people labor under the false notion that if they rob the wealthy and contribute to the poor, this is a virtue, and that somewhere there is a power which will adjust the balance, with advantage to themselves. There is no such power, and whether Cæsar or poverty need correcting, they will never be improved through moral blindness to law.

In Science and Health (p. 453), Mrs. Eddy says that "honesty is spiritual power." It is only as we increase in honesty that we can increase in understanding; and honesty, perhaps more than any other quality, draws the line of demarcation between falsehood and true Science. Let us see to it that nothing but the truth, not only in the large affairs but in the very smallest details of life, can find a channel for expression through us.

Principle versus Personal Attachment

HORACE M. RICHARDSON

THAT a grave error was to be guarded against by Christian Scientists in their churches, must have been seen by their Leader, when through the Manual of The Mother Church Mrs. Eddy wisely gave its members "A Rule for Motives and Acts" (Art. VIII, Sect. 1). The first sentence of this reads, "Neither animosity nor mere personal attachment should impel the motives or acts of the members of The Mother Church." So important did this by-law seem to be in the thought of its author, that she deemed it worthy of being publicly read, in its entirety, at every Christian Science Sunday service throughout the world, upon the first Sunday of each month.

One of the many teachings of Christian Science emphasizes, in even an added sense, how important it is that students should carefully watch and examine their own motives, especially in relation to church affairs. In this endeavor, one who strives to be ever awake, and to resist the temptation of being impelled in his actions toward others through feelings of animosity, may be entirely oblivious to the fact, when so doing, that he is being impelled by a sense of mere personal attachment. The proper discernment of this error in the premise, would save much subsequent labor, and both preserve and promote the unity and harmony of churches, as well as individuals. As it is more especially for the harmonious government of Christian Science churches that this by-law has been formulated, its members will readily recall that the solution of their church problems, and all other problems, is and should be through adherence to the guidance of divine Principle, since the more spiritual definition of church has been unfolded in Christian Science as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (Science and Health, p. 583).

We here find an intimation of how fearlessly and lovingly we should consider each step, when called upon as members to endeavor to bring into experience whatever of divine Principle is for the progress of the church, and to do this impartially, in a manner much the same as the conscientious juror sifts the evidence and examines the law in order to arrive at a just verdict. In the solution of the problem before the church-member, the spiritual law to be adhered to is comprised in only that which rests upon and proceeds from divine Principle; and because of its impersonal source, it will therefore be safe, from the very start, to exclude all that does not proceed from this source.

That one should thus be left free to govern his actions under such circumstances, is obvious. But suppose that previously such a member has allowed himself, in establishing personal friendships and attachments, to make no reserva-

Digitized by Google

tion for circumstances which naturally arise in the government of a church, when one may find occasion to differ from even his closest friends as to what may and what may not appear to be a right and wise line of action. In these circumstances we can imagine the plight of a Christian Scientist member who, unconsciously perhaps, has so obligated himself to friends that when the time comes for a stand to be taken upon the side of what appears through demonstration to be the guidance of Principle, he finds he has subordinated the possibility of such a stand to his sense of personal attachment. Instead of becoming a factor for their helpful solution, or being ready to assist in analyzing the problems that present themselves to every church, such a one thus becomes an additional problem to be reckoned with, and to such an attempted exchange of one's spiritual birthright for the pottage to be found in mere personal attachment, we may trace the failure by some church organizations to reflect through its members the wisdom and intelligence necessary for the solution of its problems. Surely, if this by-law was deemed so important by its author, it behooves her followers to obey its spirit in their churches, and look well to what is impelling each motive, act, or vote.

Christian Scientists will never cease to be grateful to Mrs. Eddy for uncovering this error, so universal in its character, and for the sense of freedom which the observance of this by-law brings. Nor has she been content to stop at the uncovering, but having pointed out the error, she instantly supplies the means for its destruction when she adds, "In Science, divine Love alone governs man." If a sense of mere personal attachment is thus found to be an error which needs to be so guarded against, how much more should the temptation to beget a wrong sense of personal attachment in others be rebuked! The whole ground of the loving admonition contained in this by-law, appears to have been covered in its concluding words, wherein Mrs. Eddy counsels that we daily strive, through watching and prayer, for deliverance from "influencing or being influenced erroneously."

✧

Statutes and Songs

MARGARET MORRISON

THE accepted definition of the word "statute" brings to thought a prohibitory decree to which a penalty is attached, a mortal concept of law. But as we are taught in Christian Science to reverse a mortal concept in order to know the spiritual fact, we see that God's statutes are not prohibitory decrees but laws of progress; laws that unfold themselves in love and beauty, ever-increasing good and glory, revealing man's divine origin and power; laws that create in our hearts songs of praise. The psalmist wrote, "Thy statutes have been my songs in the house of my pilgrimage."

In this reversal of the material concept of law it will be seen that God's statutes neither prohibit nor command. They cannot be reversed, perverted, misconstrued, or made subservient either to human fear or desire. They are God's purpose brought down to human consciousness. Men can neither hinder nor help their operation; they can only realize man's harmony with them, and any failure to realize this harmony is due to ignorance of what constitutes God's law. When it is known that God's laws are purely spiritual, emanating from infinite Life, Truth, and Love, man will have "recourse to the spiritual and be at peace" (Science and Health, p. 329). Who would not be willing to obey the law of Love if he understood the transcendent joy and blessing of selfless service? Who would not be willing to obey the law of Life if he understood the nothingness of death, or the law of Truth if he understood the omnipotence of good? So this ignorance of the law of God, of what His statutes are, has seemed to create fear in the hearts of men, instead of songs. The curse of condemnation and penalty seems to cast its shadow over all human living, to crush out all joy, all spontaneous praise and thanksgiving to the only lawmaker, whose law commands "his lovingkindness in the daytime, and in the night his song."

The understanding that there are no material laws, but only false beliefs about law, that the only force throughout the universe is spiritual, is Love, at once lifts our work into the mental realm, and we begin to see that God operates through a consciousness of divine law. The law of Love can operate only through a consciousness of love, never through a sense of fear; the law of supply only through a consciousness of supply, never through a sense of lack; the law of peace only through the consciousness of peace, never of enmity, etc. As each one endeavors to clear his individual consciousness of all ignorant superstitions and false beliefs in material law, and allows God's law to operate through his consciousness, the beauty and joy of the divine statutes will become apparent, the tenderness of Truth, the omnipotence and restfulness of law. Men will know that they cannot escape from God's law of good, that it governs immutably.

Our work is to lift consciousness out of the mists of ignorance and superstition into a clear, exact knowledge that Spirit gives not only a song but substance, not only an ideal but the actual law; that good is man's destiny. Then the presence of God will be made manifest in the consciousness of man, and God's order will be established on earth even as it is in heaven.

[Written for the *Sentinel*]

Home

HARRIETT PUTNAM

I've journeyed in far distant lands
Where the flowers ever bloom,
Where the sky is blue
The whole night through,
And the royal palm
With stately calm
Rises from coral sands.

I've wandered where bold cataracts
To each other loudly cry,
And mountains lift their summits
To the cloudlands of the sky,—
And in every place
And with every race
My home awaits me there.

Come with me to my home, dear friend;
'Tis a dear and beautiful place.
There Truth and Love and Life abide,
The Father constantly at my side,
Filling the home with a radiance fair.
Do you know this home,
Can you enter there?

Oh, come with me to my dwelling-place;
No sorrow can enter there.
We drop at the door all worry and care,
All blame and censure and thought unfair.
Then come with me,
And we'll all of us share
This wonderful home
Which is everywhere.

Selected Articles

[Frederick Dixon in *Newcastle* (England) *Weekly Chronicle*]

Will you permit me to point out once more that there is no connection between suggestion of any sort and Christian Science? I am driven to this because of an article recently published in your paper, entitled "How to Get On," which argues that Christian Science is a phase of "self-hypnotism." There are, of course, about as many definitions of suggestion as Huxley once said there were of religion, that is to say, there is a definition for each definer. Ultimately, however, the thing comes to this, that suggestion is the attempt to instil certain beliefs into the consciousness which will produce a change of thought. Self-hypnotism, then, is really largely a form of self-deception, but inasmuch as a person acts in accordance with that self-deception, it has a very pronounced effect. Under the influence of self-hypnotism, that is to say, all sorts of changes may be rung on the gamut of effect, but the causes remain absolutely untouched. That is one of the numerous dangers connected with it.

Christian Science, on the other hand, relegates effects to their proper place, and scientifically deals with causes. You may, by a process of hypnotism, turn a patient's thought temporarily into a new channel, but you will not affect the cause of disease. In Christian Science you attack the cause of disease itself, through a scientific understanding of the absolute fact of its non-existence. It is here that the necessity arises for an understanding of the unreality of matter, as taught in Christian Science, and generously perverted by the critics of that teaching.

When once the scientific theory of the unreality of matter, as really taught in Christian Science, is grasped, a basis is afforded for the destruction of all phases of inharmony which exist in matter. Now, if matter itself is nothing but the subjective condition of mortal mind, and that is the common basis of all idealistic philosophy, then the cause of every phase of inharmony must be a mental one, and can only be permanently destroyed through Mind. It is not in the least the case of suggesting a new line of thought to a patient, it is a question of realizing for and teaching the patient the absolute truth which Jesus declared would make the world free from those mistaken beliefs which constitute its ignorance.

Mrs. Eddy writes, "The student who heals by teaching and teaches by healing, will graduate under divine honors" (Miscellaneous Writings, p. 358). This healing by teaching and teaching by healing is the effort to realize for and explain to the patient the absolute truth. The process is as purely scientific as ridding a pupil of the ignorance of the multiplication table. You do not suggest to a pupil that two and two make five, or even suggest to him that two and two make four. You explain to him the scientific fact, and that scientific fact once grasped destroys the ignorance of the multiplication table with all the inherent effects of that ignorance. Christian Science is the only absolute science in the world, for the simple reason that it is the only science which attempts to deal with primary causes. Every phase of what is called natural science deals frankly with secondary causes. In other words, they deal with effects, while Christian Science alone is dealing with causation.

✧

[Judge Clifford P. Smith in *New Haven* (Conn.) *Union*]

My comment has been requested upon the statement issued by a well-known critic of Christian Science, and reported in the *Union*, concerning the decision of a New York court in the case of a Christian Science practitioner.

The critic's observation that the hostility of doctors and ministers toward the Christian Science religion would be removed by depriving its practitioners of compensation for their services, can hardly have been intended to be taken seriously. There are more than a few doctors and ministers who are willing to pursue their own occupations and let Christian Science stand or fall according to its merits. The others, it is to be hoped, are actuated by a higher motive than the getting of an ignoble advantage.

As the situation exists where the law is impartial, a large percentage of Christian Science healing is not paid for, even when a practitioner has been instrumental in the result. Many sufferers are, for the time being, unable to pay. Others, from material habits of thought, do not accept the view expressed by Paul to the Christians at Rome, which I quote in modern English: "If the Gentiles have shared their spiritual blessings, they owe them a debt of aid in material blessings."

Compensation is no more important to a Christian Scientist than it is to a minister or a doctor, but he has the same right to it that they have. For one who is able to heal the sick by prayer, to do so and to receive payment for that service no more tends to commercialize religion than paying salaries to judges tends to commercialize justice. Finally, and most important, all men have the right to employ a Christian Science practitioner if they want to, and to do so on fair and honorable terms. There are a multitude of people in good health today who would have been invalids or worse if Christian Science practitioners had been obliged to abandon the healing work.

✧

[Charles H. S. King in *Eugene* (Ore.) *Guard*]

In a recent sermon the Rev. Mr. —— is reported in your paper to have asserted that Christian Scientists—together with certain others whose beliefs differ from his own—are "adherents of a religion other than the Christian religion." This is a rather important assertion for a minister of the gospel to make, and I am sure that you will be willing to give space for an answer to the charge.

In the first place, it cannot be denied that many of the teachings of Christian Science differ from those of the reverend critic. But this fact does not in the least invalidate Christian Science or by any means lead to his astonishing conclusion—that Christian Science is not Christian. If he had taken the trouble to study Christian Science and find out exactly what it does teach, his only justifiable conclusion would be that Christian Science is different from his own belief; and he would have been spared the contumely of making a statement which cannot stand the test of logic.

This statement is very familiar. The bitterest criticisms of Christian Science have come from the theologians, because it challenges their emphasis of doctrine. But the people have accepted Christian Science because it meets their need. This phenomenon is merely the repetition of history, and reveals the solid foundation of Christian Science. The theologians in Jesus' time seemed to find no greater satisfaction than when they called Jesus a sinner, but the people received him gladly, and glorified God for having given such power as he manifested, unto men. The theologians today minimize the works of Christianity and magnify its doctrine. Christian Science magnifies the works of Christianity and does not neglect its doctrine. This identifies Christian Science with the very spirit and genius of Christianity. Is it not a big leap, then, to the conclusion that Christian Science is not Christian?

Digitized by Google

Lessing, the great teacher of the eighteenth century and one of the clearest thinkers and greatest Christians Germany has ever produced, said: "To acknowledge a God, to seek to arrive at the highest conceptions of Him, to take into consideration these highest conceptions in all our actions and thoughts, constitutes the most complete essence of all natural religion." This was exactly Mrs. Eddy's method. With rare spiritual insight she followed the golden thread of the highest truths in the Bible. The result was a system of thinking that is at once perfectly logical and Biblical. It is devoutly to be wished that all religionists would be as consistent with their highest premises as was she, for she omitted nothing essential to Christianity. On the contrary, one of the notable contributions of Christian Science to the history of Christianity has been its magnificent emphasis of an omitted and most important element of Christianity,—an element which the critics of Christian Science have done their best to minimize and reject, or explain away. Is it not an anomaly for a religionist to say that that religion is not Christian which has reinstated primitive Christian healing, when other systems were apologizing for its absence by explaining it away?

The reverend gentleman mentions seven fundamental doctrines which he believes are essential to Christianity. According to his text, those of the true faith are to ostracize all those who abide not in "the doctrine of Christ." Here indeed is the doctrinal test and its hearty application with a vengeance. In presenting the Christian Science point of view, it might be pertinent to ask, What is the doctrine of Christ? Is it confined to the critic's seven fundamentals? His doctrinal text was from the ninth and tenth verses of John's second epistle. In answering the question, I should like to quote a greater authority than John. I will quote Jesus himself. Our Master said, "The Lord our God is one Lord: and thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment. And the second is like, namely this, Thou shalt love thy neighbor as thyself. There is none other commandment greater than these."

The condition of salvation, then, according to the greatest authority in the world, is intense love for God and love to man. According to Jesus, Christianity was no formula; it was no creed. It was "spirit" and "life." He never said, By their doctrine ye shall know them, nor did he enjoin ostracism of non-conformists. His test of discipleship remains the authoritative test for all his followers for all time. No test of John or James, or Peter or Paul, or anybody else, will ever suffice as a substitute for his. Jesus' test was: "By their fruits ye shall know them." To be sure he said, "Ye believe in God, believe also in me." And Jesus' definition of belief in him was no creedal definition, but a practical one. What was this practical test? In Jesus' own words: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." In other words, the test of correct belief is works—and not simply any works, but "the works that I do," "and greater."

Is Christian Science non-Christian because it insists on a reiteration of Jesus' great promise and test of discipleship, and supports that reiteration, in some measure at least, by ingenuous works of healing? Let the reader note that these works were not mentioned in the critic's fundamentals, although they occupy a prominent place in the Bible as Jesus' test of discipleship. It is to be inferred that this is a part of the Bible which is not in accordance with the critic's views, and which he accordingly sets aside "as being useless."

It is not possible in the scope of this letter, or necessary, to cover the gentleman's seven points, but there is one other point that ought to be mentioned. One of the fundamentals given was as follows: "The authority of God's word—meaning the acceptance of the Bible as an authority." In discussing this point he said: "When we get our authority outside of this great work, we have no authority for Christianity." As far as Christian Scientists are concerned, this is a thrust at their commentary on the Bible, "Science and Health with Key to the Scriptures" by Mrs. Eddy. On page 497 of this book, anybody can find this statement, which is number one of the tenets of the church: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." This represents the consistent view of Christian Scientists at all times. The Bible is the source and chart of their faith, and nothing that has ever been said about their devotion to their commentary on the Bible can alter this fact.

There are many Christians who theoretically and sentimentally believe the Bible is authority, but when it comes to a practical application of that belief, they swerve away on to the track of popular disbelief. In this way the great promises have become nullified in popular thought, and the Bible—although an authority in the doctrine of the church—has been practically discarded as an authority on the problems of daily life. The promises, for instance, "He that believeth on me, the works that I do shall he do also," and "Nothing shall by any means hurt you," are theoretically accepted as authoritative, but their magnificent import is denied in practice by most Christians.

Christian Scientists accept these promises unreservedly, and with the light Christian Science throws on them, are able to apply them in daily problems, with the results promised in the Bible. Consequently, the belief of Christian Scientists in the authority of the Bible is not theoretical. They do not believe in it simply as an act of piety or because they have been told to do so; they believe in the Bible because they have proved it to be true, and this is better than all doctrinal beliefs. At a time when other Christians were asking why Christianity was losing its hold on the people and the Bible its place in their lives, Christian Science restored the very spirit and genius of Christianity, and at the same time proved the Bible to be true by doing the ancient works and fulfilling the Bible promises. To say that a religion that will perform such a service for mankind is not Christian, is simply to misinterpret the facts. "Can ye not discern the signs of the times?"

[Ezra W. Palmer in *The Denver* (Col.) *Times*]

In the *Times* of recent date appeared an article, "Is Mind over Matter a Truth or a Fallacy?" The writer of this article, while faintly conceding some power to mind, takes the position that the basis of life is physical, and that mind is the servant of the body. As this writer disparages healing by reliance on mind, a brief comment from a Christian Science standpoint is submitted.

It will be apparent at once that mind is either superior to matter or it is not. There can be no middle ground or uncertain strivings. If it can be shown, even in one instance, that mind controls the body, the question is settled. The demonstration of the superiority of mind in one instance, shows conclusively the possibility of the power of mind in all instances. Thus Columbus by one voyage demonstrated the error of all previous conceptions of the earth; and Morse,

Digitized by Google

by one slender wire between Baltimore and Washington, revolutionized the means of communication. The life of Jesus proved conclusively the control of Spirit over the universe, and the body of man as well. He healed the sick, raised the dead, quelled the storm, appeared behind closed doors, and arose from the dead, because he knew the laws of Mind which govern all things.

Those who decry the ability of Mind to destroy disease, do so because of their own ignorance of the power of God, which is always available. To such critics the body appears to be largely self-acting and subject to diseases and afflictions which the individual is helpless to control. The idealistic conception of the universe has been held by thinkers in all ages. Mrs. Eddy not only insisted that Mind was the basis of the universe, but proved it to be practicable in the affairs of life, as did Jesus, by actually demonstrating that all "causation is Mind, acting through spiritual law" (Science and Health, p. 417). That her position was correct, an unnumbered multitude of Christian Scientists have proved to their own satisfaction by the healing of sickness and abnormal conditions which interfere with man's harmony and health.

The contention of this critic that thought, feelings, and even mind originate in juices of tissues, the kidneys, glands, and other organs of the body, is a piece of gross materialism quite in keeping with the further dogma of his school that drugs heal. Both are crude conceptions, which a clearer understanding of Jesus' works and teachings is rapidly eliminating.

❖

[Willis D. McKinstry in *Independence* (Kan.) *Reporter*]

In commenting on a news story from New York in a recent issue of the *Reporter*, you jump to a wrong conclusion by associating Christian Science with "the unveiling of a gold reliquary to St. Andrew," and it is a misapprehension of Christian Science to confound it with "mental suggestion" and "hypnotic imaginations." Kindly grant me space to say, Christian Science is founded upon a divine basis. Its teachings declare, as does the first command of the Mosaic decalogue, "Thou shalt have no other gods before me," that is, thou shalt not recognize or know any power or intelligence other than God, divine Mind.

Mental suggestion, or hypnotism, originates in the belief that there is intelligent matter, or minds many, and is the operation of the so-called "human will" or "carnal mind." This claim of mental influence can be used for evil as well as for good purposes. It is a stronger mentality claiming to take possession of a weaker, controlling it to suit its own whims and desires. It is just as essential that mortals know how to protect themselves from this mental influence as it is that they escape other phases of evil.

Christian Science instructs mankind as to their spiritual selfhood and immortality, and awakens human consciousness to a realization of spiritual truths. As intelligence is an emanation or manifestation of divine Mind, God, it is mental or spiritual, therefore is not capable of any physical or mortal expression or experience. Man is the offspring of eternal Mind, his being is immortal; hence all men have the one Mind, the one intelligence, and are capable of possessing the same or true knowledge of all that exists in fact. This truth dispels the desire of or necessity for one individual consciousness to steer, guide, manage, control, or govern another individual consciousness or expression of intelligence.

The sun is expressed through its innumerable rays of light, which diverge in every direction. Each ray contains the same elements, hues of coloring, and degrees of light; hence one ray cannot boast that it is more beautiful or expresses more light than another, neither are the rays of light subject to any degree of darkness. The one infinite intelligence or divine Mind is all-inclusive, and man, the image and likeness of divine Mind, expresses this all-inclusiveness.

The works of Christian Science prove the truth of its teaching, for through its ministrations the lame walk, the blind see, the sinner is reclaimed, and the sick are healed. Divine intelligence dispels human fear, ignorance, and superstition. The scientific fact of spiritual being must some day be accepted by all, in fulfilment of the prophecy that "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

❖

[Clinton B. Burgess in *The Erie* (Pa.) *Dispatch*]

No thinking person will be likely to differ with the conclusions expressed in the excellent editorial in the *Dispatch* of recent date regarding the way in which victims of the drug habit should be dealt with; but I feel that attention should be called to the fact that Christian Science, while it has proved a complete remedy in numberless such cases, cannot rightly be classed as "suggestive treatment."

The supposed value of suggestive treatment lies in the readiness of the mind of the patient to respond to suggestions expressing, audibly or otherwise, the will of the operator, whose aim is so to control and determine the thought of the patient as to produce the desired effect. A great danger in this kind of treatment, and one that is recognized by those who have made a study and practice of it, lies in the fact that with each response or yielding by the patient of his individuality and self-control to another's will, his own power of resistance to suggestion is weakened. The result is a growing tendency to yield to strong suggestions from without,—suggestions which may and do come from other sources and baser motives than the earlier ones, which may have been given with the most benevolent intent. Against this tendency to be controlled the victim of the suggestion habit may struggle as vainly as does the victim of the drug habit, and thus the remedy be worse than the disease.

In methods and results Christian Science, based wholly on the teachings, works, and example of Christ Jesus, the most successful healer of the ages, is exactly and emphatically opposite to suggestive treatment. Misunderstood by those who could not perceive the natural supremacy of spiritual power and law over the material, the healing works of Jesus were classed by them with the suggestive methods of the exorcists of that time, and his answer to their accusation, as recorded in Luke xi. 17-20, was at once a repudiation of such methods and a lesson on the futility of using evil in the attempt to bring about good.

[Charles W. J. Tennant in *Saturday Review*, London, England]

In the review of "Modern Substitutes for Traditional Christianity," by the Rev. Mr. ——, in a recent issue, is the statement: "Nearly everybody would like to be convinced by Mrs. Eddy's gospel, but her rigmarole gives us nothing new that is worth having." Mrs. Eddy's discovery of the Science of Christ, the demonstrable knowledge of Truth, has brought into the homes of hundreds of thousands of the human race an understanding of God and man's relation to Him which has resulted in a condition of health, peace, and prosperity that to them was certainly new and well worth having. The teachings of Jesus may seem a "rigmarole" to those who do not understand them, nevertheless they are clear and practical to those who do.

Editorial

Of God Alone

In the thought of many who have but a superficial knowledge of Christian Science, or more correctly speaking, a superficial knowledge that there is a system of healing called Christian Science, is the belief that the healing of sickness is all there is to this teaching. We speak advisedly, therefore, in saying that such critics have but a superficial knowledge of the actual teachings of Christian Science, else they would not have overlooked Mrs. Eddy's statement on page 150 of Science and Health: "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

It is almost impossible in these days for one to dispute that Christian Science does heal the sick and reform the sinning, without being promptly confronted with a host of witnesses to the healing power of Truth. Even then the would-be critic infers, as did the Pharisees of old, that the healing is not through the power of God; in other words, that it is accomplished largely through suggestion. This misapprehension of what Christian Science is and how it does its work is in a measure due to the common belief that in their use of the word "Mind," Christian Scientists are referring to the brain, intellect, or will-power of some person or persons, and that through these channels they hope to control the "minds" of others, enabling them to substitute a belief of health for a belief of sickness, irrespective of the truth or of appearances.

Again we find the mistaken sense of what Christian Science actually teaches. Mrs. Eddy, in Science and Health (p. 591), defines Mind as "the only I, or Us; the only Spirit, Soul, divine Principle, substance, Life, Truth, Love; the one God; not that which is *in* man, but the divine Principle, or God, of whom man is the full and perfect expression; Deity, which outlines but is not outlined." Surely there is nothing in this definition to warrant a claim of kinship with the mutable, fallible will which we all must acknowledge mortal mind to be, that "carnal mind" which Paul declares is "enmity against God," and therefore as opposite as the poles in its workings.

In her definition of the Mind which in Christian Science heals the sick, the Mind "which was also in Christ Jesus," Mrs. Eddy makes clear the fact that what Christian Scientists must do in their practice, and what they actually do in healing the sick, is to understand and prove the truth of being, which is that God is omnipotent, the only creator, and that man in His image and likeness is as perfect as is God Himself; therefore every belief that sickness and sin are realities is untrue, and an imposition upon mankind. In other words, Christian Scientists do not simply delude themselves and those who have asked their help into believing that by some supposed power in the human mind they can make a man well. The appeal of Christian Science is to God, the infinite, divine Mind, and this takes its practice entirely out of the realm of mortal mind or suggestion.

While it is true that the healing of sickness is an important part of the work of Christian Science, because it is through the promise which it holds out of relief from perhaps years of untold suffering and anguish of body and mind that it so largely makes its appeal to mankind, all this is but the sign following the real work of the Christian Scientist, just as the signs followed the real work of Christ Jesus and his disciples when the multitudes thronged them, eager to be relieved from their burdens of misery and woe. The great Teacher touched the vital point in his mission when again and again he bade those whom his loving compassion had made whole again, to sin no more. There must be regeneration within, if the body is to manifest the health and wholeness which is the birthright of the children of God.

What is perhaps after all the strongest proof that the healing is of God alone, is the gratitude which wells up to overflowing in the hearts of those who have been raised up from beds of suffering, freed from bonds of worse than bodily slavery, comforted in sorrows that were harder to bear than any sickness. Like the blind man of old, they know they have been healed of God after human science had admitted its inability to give relief, and they give the glory to God in regenerated living, in a daily endeavor to be obedient to the greatest of all the commandments, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself," which is unimpeachable proof of communion with omnipotence.

ARCHIBALD MCLELLAN.

"Godly sorrow"

As the Bible is studied in the light of Christian Science, we become more and more aware of the fact that the Scriptures must be interpreted spiritually in order to gain a demonstrable sense of their teachings; otherwise, they often seem self-contradictory. When, however, we apply the Principle of all harmony, we leave behind us the old concepts, which did not satisfy the demands of our higher nature, and gain new views of the progress possible in the truly Christian life.

In the seventh chapter of II Corinthians St. Paul discriminates between the ordinary sense of sorrow, which he says "worketh death," and that which he terms "godly sorrow," that "worketh repentance . . . not to be repented of." He then goes on to speak of the effects of this truer sense of sorrow, which undoubtedly includes the "sorrow for wrongdoing" characterized by Mrs. Eddy as "one step toward reform" (Science and Health, p. 5). Paul says of it, "What carefulness it wrought in you, yea, what clearing of yourselves, . . . yea, what revenge!" The last word seems almost incomprehensible until we ponder a passage in Romans which reads: "Vengeance is mine; I will repay, saith the Lord. Therefore if thine enemy hunger, feed him; if he thirst, give him drink." Here we have a very different view of revenge from that commonly entertained, but it is what we should expect when we know that God is Love. The demands of Principle must be vindicated, even if the living water offered for the opponent's thirst may seem as "coals of fire on his head."

"Godly sorrow," which clears up things so marvelously, must in its highest significance be no mere personal grief, but deep regret that humanity has so lost sight of divine Truth as to be in bondage to the evil beliefs of sin, disease, and death. This is finely illustrated in the account of Jesus' weeping over Jerusalem, and again at the grave of Lazarus. He whose whole nature radiated joy, the joy which proves Life in its fulness and melts away even the shadow of death, could weep because, as he said to those who rejected the truth he offered them, "Ye will not come to me, that ye might have life." This was the cause of his sorrow when he grieved at all. There was no element of selfishness or worldliness in this feeling, and he gave the fullest proof that "divine Love cannot be deprived of its manifestation, or object," and that "sorrow is not the master of joy" (Science and Health,

Digitized by Google

p. 304). This vital truth brings the salvation of which the apostle wrote, with a "vehement desire" for a fuller realization of it at all times. It is true that sorrow for wrong-doing on one's own part is also to be regarded as "godly sorrow," but when right-doing is the rule of each hour, joy for the healing and saving truth takes its place, even as light disposes of darkness.

Mrs. Eddy warns us against the tendency to "pray and repent, sin and be sorry" (Science and Health, p. 19), a tendency which is, alas, too common on the part of mortals, and which can be uprooted only by greater watchfulness and a truer sense of prayer. Christian Science comes to show us that God's child has no evil tendencies, that his nature is spiritual and godlike; and the opposite belief, namely, that it is difficult to do right and easy to do wrong, constitutes "the old man" who is to be "put off," with all his deeds, that the "new man," the real man, who delights to do God's will, may be manifested. Such a one, by his reflection of Truth and Love, has power to "destroy the works of the devil . . . because he is born of God," to quote St. John. With error's destruction all sense of sorrow fades out, and the joy upon which our Master insisted takes its place.

Here it may be said that "godly sorrow" is the gateway of approach to that fulness of joy which is found in the Father's presence, but today, if we listen, we may hear, as did St. John, the "great voice out of heaven," telling us that there is to be no more sorrow, "for the former things are passed away."

ANNIE M. KNOTT.

Peace and Joy

WHERE shall the heart find quietness and peace, a satisfying sense of repose, in the midst of the seemingly endless turmoil of human life—how gain that unvarying buoyancy of spirit which will enable one to surmount such a flood of trial and tragedy as that which is sweeping over many of earth's fairest fields today? To this question world-philosophies can make no satisfying answer. In the presence of such an engulfing catastrophe the asserted worth of mortal possessions—wealth, position, honors, culture—disappears, and all men are brought to a common level of recognized weakness and need. When the ministry of accustomed pleasure fails, when the dearest family ties are ruthlessly sundered, when even the simple joys of the fields and the sky have vanished, and not a song is heard in all the land,—in such an hour, how shall the heart escape the reefs of anguish and despair unless it is consciously anchored in the haven of Truth and Love?

Though bruised and bleeding from the "many stripes" which had been laid upon them, and painfully manacled in the noisome darkness of an "inner prison," at midnight the songs of Paul and Silas were heard in all the corridors of their dismal dungeon! Manifestly they had found the source and explanation of that peace and joy which passeth understanding, for they were saved "to the uttermost," even in the hour of evil's seeming triumph. This true spiritual ground of rejoicing has been regained in Christian Science, to the unspeakable comfort of those that were sorely troubled and sorrowing, and its secret is revealed in Mrs. Eddy's counsel that we are "to know no other reality—to have no other consciousness of life—than good, God and His reflection" (Science and Health, p. 242). Think what such a realization would signify to the frightened and grieving millions at the present hour!

The vast intensity of the world-tragedy now being enacted, is so appalling as to tempt one to think that every hope of human redemption must be given up, and yet, as we have come to know in Science, it does not and can not destroy or even disturb any least element of true being. God, and His every creation or idea, remains untouched, and in all the realm of Spirit there abides the perfect peace that reigned "when the morning stars sang together, and all the sons of God shouted for joy." Let one realize this inspiring truth in Christian Science, and he has become superior to every circumstance and event.

To his disciples Jesus said, "In the world [so long as you are subject to material sense] ye shall have tribulation: but be of good cheer; I have overcome the world." And they, too, were to overcome. He had just spoken to them of the turmoil which would attend their declaration of truth, and he then gave them this definite assurance of their possible and permanent mastery of human feeling and impulse: "Your joy no man taketh from you. . . . These things I have spoken unto you, that in me ye might have peace."

Today true Christian Scientists in all the world are witnessing to an ever-increasing consciousness of this supremacy over mortal experiences,—trials, temptations, afflictions, losses,—as the result of that new perspective into which all these things are thrown the moment one apprehends the falsity of material sense-testimony, the unreality to Truth of all its asserted facts. Said the psalmist, "In thy presence is fulness of joy; at thy right hand there are pleasures for evermore." This tremendous fact, made demonstrably clear in the teaching of Christian Science, is the one true and adequate measure of joy, of our possible freedom from every depression and fear. To know that God, good, and His manifestation, are the one blessed and all-inclusive reality, is indeed life. It means escape from every bondage. It means the practical realization of Jesus' promise, "My peace I give unto you;" the joy of the Lord has become our strength.

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science, by Bliss Knapp, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Monday evening, Oct. 19, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

UTICA, N. Y.—Upon the pageant grounds there is a tent that has been erected by the Christian Scientists. It is provided with accommodations for those who may wish to rest after the climb up the hill, or who may find the heat of the sun too strong for them and desire to retire for a time into the shade. Yesterday and today, free ice-water was served to all who asked for a drink, and this will be done throughout the remaining performances of the pageant. The service was taken advantage of by many, and to the hundreds who drank freely and who rested beneath the tent, the thoughtful kindness which prompted the act was fully appreciated. It was a most gracious and beautiful thing to do.

The Utica Observer.

COLUMBUS, OHIO.—A new seventy-five thousand dollar stone church is soon to be built by First Church of Christ, Scientist, on the south side of Broad street just east of Ninth street. The site is on the Wetmore property, which the church acquired two years ago.—*Columbus Journal.*

Digitized by Google

MANCHESTER, ENGLAND.—At a time when so many clergymen are complaining of empty churches, it is of particular interest to hear of a religious body finding it necessary to extend their place of worship. This is the happy position of the Christian Scientists in Manchester, who have leased the Lesser Free Trade Hall on Peters street, to be occupied by Third Church of Christ, Scientist. It is interesting to recall that the first Christian Science church in Manchester was opened in July, 1902, although a Christian Science service had been held in the city as early as 1900. The prosperity of the original church made it essential that a second should be provided, and this was opened in September, 1909.

Manchester Weekly Times.

ATLANTA, GA.—The chaplain of the federal prison has just received from the Trustees under the Will of Mary Baker Eddy a gift of forty-five volumes of Mrs. Eddy's writings, comprising six different titles, and forty-two annual subscriptions to the five periodicals published by The Christian Science Publishing Society.

The local Scientists have been holding services at the federal prison for some time, and the demand for Christian Science literature in the institution is a natural result. The chaplain of the prison, who is also its librarian, informed the Atlanta Christian Science church of the demand, and the church referred the matter to the state committee on publication. The donation is the result of his representations to the Trustees under the Will, and incurs an expenditure of over two hundred dollars.—*Savannah News.*

CHICAGO, ILL.—Fifteenth Church of Christ, Scientist, organized to relieve the overcrowded condition of Third Church, started with a membership of one hundred and fifty, a few of whom were former members of Second Church. The newly formed church meets in Masonic Hall, North Central avenue.

Correspondence.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 6, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 14, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Bartlesville, Okla.

An orthodox minister of the gospel, pastor of the Methodist Episcopal church of Bartlesville, the Rev. J. G. Harshaw, introduced Virgil O. Strickler to a large audience in the Odeon Theater. He said:—

We are assembled here to listen to a lecture on Christian Science. My part of the program is to introduce the speaker, and I offer no apology as a Methodist preacher for performing this pleasant duty. John Wesley declared long ago: "I desire a league, offensive and defensive, with every soldier of Jesus Christ." I believe that the true Christian Scientist is a soldier of Jesus Christ, and I am here to receive that inspiration which comes from the shoulder touch of comrades in a great cause for the well-being of humanity on this earth. Furthermore, I believe that divine healing belongs with the preaching of the gospel, as it did in the beginning. When the heart of John the Baptist was growing weary and impatient in Herod's prison at the slow working of the gentle Jesus, he sent two of his disciples to inquire, "Art thou he that should come, or do we look for another?" Jesus replied, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, . . . and the poor have the gospel preached to them." This is practical Christianity. The multitudes today, as in the days of Christ, are weary, worried, and full of fear, and theological theories will not satisfy or give peace. Only God can heal and give peace to the sick and troubled soul.

The Principle of divine healing was given to the world through one who consecrated much of her time and talents for the good of humanity. Mrs. Eddy became an exile in seclusion, that she might know the truth and be able to give it to the world. Then, as the Spirit of God unfolded the apocalyptic vision to "John the Divine," so He unfolded the basic truth of Christian Science to Mrs. Eddy. I shall be glad to listen to one who has given the subject great and long-continued thought, and who will doubtless be able to solve many mysteries.—*The Morning Examiner.*

✧

Dayton, Ohio

Two thousand persons, including a large number of well-known professional men and women of Dayton and vicinity, listened to a lecture on "Christian Science: Its Truth and Value," by Judge Clifford P. Smith, in Memorial Hall. Judge Smith was introduced by Atty. Philo G. Burnham, who said in part:—

Among the many wonderful promises of the Bible, one which appeals to Christian Scientists with a compelling force is found in the words of Jesus, "Ye shall know the truth, and the truth shall make you free." We believe that Christian Scientists accept these Bible promises with greater literalness than any other class of believers. Because of this, we believe that to be so free means free from fear, because "perfect love casteth out fear;" free from sickness, because the Lord "healeth all thy diseases;" free from hate and envy and malice, because "God is love;" and ultimately free from death, because Jesus said, "If a man keep my saying, he shall never see death."

The central purpose of the Christian Science movement is to teach mankind what it believes to be the truth as to the real relation of God to man, and as a part of this movement it is trying to bring about a restoration of primitive Christianity by an observance and practice of the inseparable and equally important commands of the Bible to preach the gospel and heal the sick. The claim that Christian healing was and is limited to Jesus' day and to his own personal followers, is disproved by both sacred and profane history.

Dayton Journal.

✧

York, Pa.

William R. Rathvon lectured on Christian Science at the Orpheum Theater. He was introduced by Frank Bell, committee on publication for the state of Pennsylvania, who said:—

The official roster of Christian Science churches and societies shows the existence today of 1,377 such organizations.

Digitized by Google

These are established not only throughout the United States, but in Europe, Asia, Africa, Australia, and South America, and according to the latest official report new ones are being formed at an average rate of three per week. Within our own state of Pennsylvania, Christian Science is represented by organized bodies in fifty-one cities and towns. In one American city there are fifteen churches of this denomination. The periodical publications of Christian Science include an English monthly, a German monthly, a weekly, and a model daily paper of international circulation, while Christian Science literature is now supplied in seven languages,—English, German, French, Spanish, Dutch, Swedish, and Norwegian.

The laws of nine of our states recognize Christian Science by name. The laws of fourteen other states, and the federal government regulations for the Panama Canal Zone, directly sanction the practice of Christian Science healing. Several departments of the United States government at Washington accept certificates of Christian Science practitioners in granting sick-leave to employees. These facts are cited, not in a spirit of boastfulness, but by way of assisting us to realize that the subject of this evening's lecture is one that has already enlisted the earnest support of a world-wide following and has established its right to the respectful consideration of mankind in general.—Correspondence.

Lectures to be Delivered

Alameda, Cal.—Willis F. Gross, Unitarian Church, Grand street, near Santa Clara avenue, 8 p.m., Oct. 19.

Baltimore, Md. (First Church).—Bliss Knapp, Church Edifice, University Parkway, west of Oak street, 8 p.m., Oct. 23.

Berkeley, Cal.—Virgil O. Strickler, High School Auditorium, 8 p.m., Oct. 17.

Blackpool, Lancashire, England.—William R. Rathvon, Grand Theater, 8 p.m., Nov. 1.

Boston, Mass. (The Mother Church).—Bliss Knapp, Church Edifice, Falmouth, Norway, and St. Paul streets, Back Bay, 8 p.m., Oct. 19.

Bristol, England.—Col. William E. Fell, Colston Hall, 8 p.m., Oct. 29.

Calgary, Alberta, Canada.—Dr. Francis J. Fluno, Grand Theater, 8 p.m., Oct. 18.

Cedar Rapids, Iowa.—William D. McCrackan, Greene's Opera House, 8 p.m., Oct. 22.

Chicago, Ill. (Sixteenth Church).—Jacob S. Shield, Armstrong School, 8 p.m., Oct. 20.

Cleveland, Ohio (Fourth Church).—Clarence W. Chadwick, Woodward Masonic Temple, 1945 East 105th street, 8 p.m. and 8 p.m., Oct. 18.

Cortland, N. Y.—William R. Rathvon, Temple Theater, 8 p.m., Oct. 18.

Dallas, Ore.—Prof. Hermann S. Hering, Armory, 8 p.m., Oct. 16.

Decatur, Ill.—Clarence W. Chadwick, 8:15 p.m., Oct. 19.

Dedham, Mass. (auspices Hyde Park).—Bicknell Young, Memorial Hall, 8 p.m., Oct. 19.

Englewood, N. J.—Bliss Knapp, Englewood Lyceum Assembly Hall, 8:15 p.m., Oct. 22.

Flint, Mich.—Bliss Knapp, Masonic Temple, 8 p.m., Oct. 16.

Frankfort, Ind.—Jacob S. Shield, Blinn Theater, 8 p.m., Oct. 18.

Fremont, Ohio.—Dr. Francis J. Fluno, Colonial Hall, 8 p.m., Oct. 22.

Haverhill, Mass. (Second Church).—Bicknell Young, High School Hall, 7:45 p.m., Oct. 20.

Kansas City, Kan.—Clarence W. Chadwick, Masonic Temple, corner 7th street and Ann avenue, 8 p.m., Oct. 20.

Kansas City, Mo. (Second Church).—Hon. Clarence A. Buskirk, Church Edifice, 31st street and Troost Avenue, 8 p.m., Oct. 19.

Kansas City, Mo. (Fourth Church).—Hon. Clarence A. Buskirk, Gladstone Theater, corner St. John and Elmwood avenues, 8:30 p.m., Oct. 18.

Lindsay, Cal.—Willis F. Gross, Arboretum, 8 p.m., Oct. 15.

London, England (First and Second Churches).—William R. Rathvon, The Great Hall, Cannon Street Hotel, City, 1 p.m., Nov. 8.

Luverne, Minn.—Clarence W. Chadwick, Luverne Opera House, 8:15 p.m., Oct. 23.

Lyndonville, Vt.—Bicknell Young, Music Hall, 8 p.m., Oct. 22.

Medicine Hat, Alberta, Canada.—Dr. Francis J. Fluno, I. O. O. F. Hall, Third street, S.E., 8 p.m., Oct. 19.

Meriden, Conn.—Bliss Knapp, Poli's Theater, 3:45 p.m., Oct. 18.

New Bedford, Mass.—William D. McCrackan, Church Edifice, Middle street, head of Sixth street, 8 p.m., Oct. 20.

New York, N. Y. (Second Church).—William R. Rathvon, Church Edifice, Central Park West and 68th street, 8 p.m., Oct. 19 and 20.

Norwalk, Conn.—Bicknell Young, Town Assembly Hall, 8 p.m., Oct. 23.

Oakland, Cal. (Second Church).—Virgil O. Strickler, Idora Park Theater, 8 p.m., Oct. 20.

Oakland, Cal. (Fifth Church).—Virgil O. Strickler, Grand Theater, corner Ninetieth avenue and East Fourteenth street, 8 p.m., Oct. 22.

Oklahoma City, Okla.—George Shaw Cook, Overholser Opera House, 8 p.m., Oct. 18.

Oneida, N. Y.—Bicknell Young, Salvation Army Hall, 8 p.m., Oct. 16.

Oshkosh, Wis.—Jacob S. Shield, Opera House, 8:15 p.m., Oct. 19.

Pacific Grove, Cal.—Virgil O. Strickler, T. A. Work Hall, 8 p.m., Oct. 19.

Parsons, Kan.—George Shaw Cook, Elks Theater, 8 p.m., Oct. 19.

Perry, Okla.—George Shaw Cook, Grand Opera House, 8 p.m., Oct. 22.

Providence, R. I. (First Church).—William D. McCrackan, Church Edifice, corner Prospect and Meeting streets, 8 p.m., Oct. 17, and 4 p.m., Oct. 18.

Rochester, N. Y.—Bicknell Young, Temple Theater, 8 p.m., Oct. 18.

San Francisco, Cal. (Sixth Church).—Virgil O. Strickler, Dreamland rink, 8 p.m., Oct. 18.

San Jose, Cal.—Prof. Hermann S. Hering, Victory Theater, 8 p.m., Oct. 19.

San Mateo, Cal.—Willis F. Gross, Masonic Temple, corner Ellsworth and Tilton, 8 p.m., Oct. 20.

Santa Cruz, Cal.—Prof. Hermann S. Hering, Knight's Opera House, 8 p.m., Oct. 20.

Shelbyville, Ill.—Jacob S. Shield, Unitarian Church, 7:45 p.m., Oct. 22.

Sioux City, Iowa.—William D. McCrackan, Auditorium, 7:45 p.m., Oct. 23.

Stockton, Cal.—Prof. Hermann S. Hering, Auditorium, 8 pm., Oct. 22.

Syracuse, N. Y.—Bicknell Young, Empire Theater, 8 p.m., Oct. 18.

Warren, Ohio.—Bicknell Young, Warren Opera House, 8:15 p.m., Oct. 11.

Testimonies of Healing

While reading the *Sentinel* I felt impelled by a sense of love and gratitude to tell what Christian Science has done for me. About ten years ago I had cause to be examined by a physician, who declared that I was afflicted with heart disease. In trying to find a remedy for relief, I was examined by four more physicians at different times, and all diagnosed the ailment as organic heart trouble. They could offer me only temporary relief, and I was told to avoid all violent exercise. Under these conditions I struggled on, and three and a half years ago my wife passed on, leaving me with a son ten years of age. This meant the breaking up of my home. I left the boy with relatives while I came to Brooklyn to begin life anew. Instead, I began to crave for alcoholic drinks to help me forget the past, but this was a failure, as it made me worse physically and mentally.

In this terrible condition I went to visit relatives who were just beginning to study Christian Science, and they advised me to try the healing power of Truth to destroy this desire for strong drink. I was also given Christian Science literature enough to read for a week, and I promised I would be at the Sunday morning service. This promise I kept, and I cannot find words to express my thankfulness to God for allowing me to do so. I felt a new hope after the service. I found I had something to live for, and a new light took the place of darkness. By the study of our text-book, "Science and Health with Key to the Scriptures," and the Bible, and the reading of the *Sentinel*, in a short time I lost all desire for strong drink. About a year later I found that the man-made laws had no more power over me.

Before Christian Science came to me I could not run or walk fast, for my heart was affected so that I would have to sit down to rest, and the pain would stay with me for days. Since my healing took place, I have been put to the severest tests. I have run up four and five flights of stairs, have also had to work in a small steam-heated room where the thermometer registered from one hundred and twenty to one hundred and forty degrees of heat, but I have felt no ill effects. When I was under the care of *materia medica* I was told to avoid all violent exercise, but my daily work as carpenter consists of hard and very often violent exercise, and I still enjoy perfect health.

I consider my healing complete, and have lost all fear of a recurrence of the trouble, knowing divine Love is ever ready to meet our needs. I am indeed thankful to God and grateful to our beloved Leader, Mrs. Eddy, for the noble sacrifices she must have made in order to bring to mankind this wonderful truth; and I am also grateful to the brothers and sisters at our little church, who were ever ready to help me to a better and higher understanding of Truth.

A. J. Hahn, Brooklyn, N. Y.

❖

I wish to express my gratitude for what Christian Science has done for me. I was very much discouraged and thought there was no help for me in this world, as we had tried all that *materia medica* had to offer; but when a friend told me of her healing in Christian Science, I went to a practitioner and asked for help. I had many physical ills, among which were rheumatism, chronic sleeplessness, neuralgia so severe at times that even opiates failed to give relief, also female trouble for which we had employed some of the best physicians and surgeons in Maine and Massachusetts with the result of only temporary relief.

I was healed of all these ills in about two months' treatment, and my gratitude is boundless. Words are inadequate to express the peace and joy that have come to me through the study of "Science and Health with Key to the Scriptures." It has helped me mentally, spiritually, and financially, and my heart overflows with love to God and gratitude to our dear Leader, who has so lovingly pointed the way for all who will seek it. I can truly say this healing truth has made me free.—Mrs. Archie Della Lucy, Cambridge, Mass.

❖

An unusual awakening of gratitude came to me recently over a healing in our family. It proved so indisputably that there is no place where Truth cannot penetrate and perform its perfect work, that I desire to share the glad tidings with the readers of the *Sentinel*.

Sunday morning, Jan. 19, 1913, our baby swallowed an open safety-pin. I was summoned home from church, which was only a few blocks away, to find the little one crying and very nervous, and his father greatly disturbed. My own battle with mother-fears was strenuously fought all the way home, but the strength I always receive at the Christian Science services helped me to declare that God, good, Spirit, is the only substance and power, and that accidents are unknown to divine Mind.

I was perfectly calm outwardly as I reached the house, but as the case seemed complicated to my inexperience, we took the baby to the home of a Christian Science practitioner. The fear was met almost instantly, and I brought the little fellow home playing along the road as contentedly as could be. The practitioner kept the father to give him a treatment, and later on in the afternoon she came by in a neighborly fashion to reassure me that every phase of error is destroyed by the application of the truth. Although the pin was five days in passing through the bowels, the child was perfectly normal and happy during the time and was given nothing but his regular food. Our trust in the power of Christian Science was so great that any one living in the same house with us would not have known that anything had happened. What a grand thing it is to have a family remedy always at hand, and one in which the utmost confidence can be placed!

A little over three years ago, having become thoroughly dissatisfied with my long-time church relations, with myself, and with the world in general, I attended a Christian Science service in First Church of Los Angeles, Cal. The truth, so simply presented on that occasion, uplifted me so that I shall never forget the mental healing which followed. A few months later I had an attack of a throat affection which had been chronic with me from childhood. I had had two surgical operations performed at different times, only to have a return of the trouble when I caught the slightest cold. I knew very little about the power of Christian Science to heal physical ills at that time, but was led to apply to a practitioner for help and was healed in one treatment. I have never had a return of the ailment since. Through the knowledge I have gained I have been able to cure colds for myself and family, and to prevent their continuance. Fear about my throat had prevented me from eating oranges, of which I am very fond, but this fear was also destroyed in two treatments, so that I am now able to eat anything I like, with no ill effects.

Through the study of the Lesson-Sermon and the other literature I have been healed of chronic bowel disorder, nervousness, and many other physical ills, but I am especially grateful for the spiritual regeneration that Science is bringing to me. The healings have all proved permanent. My baby is a strong, healthy boy, and has never had a material remedy in his life. I have never applied for help in meeting

Digitized by Google

any problem, physical, mental, or financial, without receiving relief through the application of Christian Science.

My heart goes out in gratitude to Mrs. Eddy when I think of the wonderful patience and love she had for mankind in her labors to make the Bible truths understood and serviceable in our present-day needs.

FANNY FERN BURFORD, Monrovia, Cal.

❖

I am sending this testimony in the hope that it may help some one who has almost lost hope of ever being well and happy again, as I had when the blessed truth came to me; and to express my gratitude for the many benefits God has bestowed on me through Christian Science.

I was suffering with the supposedly incurable disease, hereditary tuberculosis of the lungs. I had spent two years in a sanitarium, where all was done for me that mortal mind could suggest, but at the end of that time I came away in the same if not worse condition, the physicians telling me they had done all that could be done, but that a change of climate might prolong my life. I came to the West, and for a few short months I seemed to be very much better; then with all its seeming power error attacked me, all the old symptoms returned in exaggerated form, and for six weeks I was confined to the bed, battling for my life. The physicians were powerless to do anything except advise another change of climate, which I was too weak to try.

It was then divine Love sent Christian Science to me by a lady, a complete stranger, who brought me a *Sentinel* and asked me to read it. It was a case of man's extremity being God's opportunity, as I was ready to grasp at any straw that offered relief, though I had ridiculed Christian Science, or rather what I thought it was, and was skeptical about it. I read enough to become interested, and decided to give it a trial. I dropped my diet, gave up the fresh-air life, and went to the home of a Christian Science practitioner to live. Under her treatment and loving guidance in the study of this wonderful truth I was able to be back in school in one month, and since finishing there I have been busy at the work I love, and which physicians had positively forbidden me to do,—stenography. I have never had better health in my life. I have been healed of innumerable ills, among them being headaches and stomach disorder of many years' standing.

It is now a little over two and a half years since I took up the study of Christian Science. In that time I have been in school about four months, and have been employed as stenographer in a college for a year and eleven months. I have not missed more than a couple of days through sickness. These have been the happiest, healthiest years of my life.

I am more thankful every day that I was led to take up the study of Christian Science, not only for the physical healing, but for the clear understanding it gives of the real truth of our being, and for the knowledge that God is good, that He could not send evils, sin, and sickness upon His children, and best of all, that He is an ever-present power, ready to guide and protect us.

MAE SHINGLEDECKER, Manhattan, Kan.

❖

During a trip South in the winter of 1911-12, I seemed to contract a bad cold. On returning to Limon, Col., it developed into a severe case of lung trouble. I tried to work for myself with what little understanding I had of Christian Science, but to no avail. I called upon a Christian Science practitioner for help, and in one week's treatment I was entirely and permanently healed. With this trouble I had very severe hemorrhages, but these were overcome. I was also healed of a well-developed case of hay-fever in three days' treatment.

I am very thankful for the physical healing, but the mental quickening seems yet more wonderful, for I am now beginning to love my neighbors as myself. Before coming into Christian Science, it seemed difficult for me to be interested in any religion—in fact, I could not read the Bible with any understanding; but Science and Health has revealed to me the straight and narrow pathway which leads to eternal peace. I am most thankful to God, and very grateful to our beloved Leader, Mrs. Eddy, who has given us the key to the Bible which teaches us how to become free from our bondage to false beliefs.—W. H. PRINGLE, Limon, Col.

❖

It has been over seven years since I turned to Christian Science for relief from rheumatism. I had suffered for a long period, having been under the care of specialists at different times. Quieting tablets were administered during the day and hypodermics at night, to relieve the intense pain, until I feared that I had become a victim to the drug habit. When I sought treatment in Christian Science, I told the practitioner that I wanted only the cure, and that I had no time for reading or studying. She told me the truth was for every one, but that I must put aside all material remedies. This I was glad to do, although at times it seemed that I could not get through the night without them. She left a copy of *The Christian Science Journal* with me, and I found it contained so much that was beautiful that I was encouraged to seek other reading upon the subject.

My first act was to procure a copy of "Science and Health with Key to the Scriptures" without my practitioner knowing it. With the aid of the text-book and my good friend's kindly counsel, I was gently led to the reading of the Lesson-Sermons, all of which meant much to me. The thought of God as Principle appealed to me strongly. It was after several weeks of treatment that I resolved to take a stand for Truth. In a measure I had realized that Christian Science contains the help I needed, and further to acquire the liberty I craved, I declared that I would no longer submit to error. Accordingly, I prepared to get up and dress myself; and although it took me two hours to do this, a realization suddenly came upon me that my healing was complete, and never since have I had a return of the trouble. Not only have I been freed from this malady, but from great nervousness, severe headaches, and despondency as well. Other ailments, including a bad temper, have also been overcome. In place of continual worry and fear, there has come a sense of protection and safe guidance. Life is one long day of rejoicing. I am more and more thankful to infinite Mind for giving us this understanding through Mrs. Eddy's life and works.—IDA F. HAYS, Chicago, Ill.

❖

From early girlhood I was considered of delicate constitution. Attacks of heart trouble, liver complaint, bowel disorder, and severe headaches, for which I was taking medicine daily, made life a burden to me for weeks and even months at a time. As the years went by, these conditions became chronic, until, about eight years before trying Christian Science, I became a confirmed invalid, bedridden for months at a time. As a result of this condition, I suffered with nervous breakdown and an abnormal condition of one kidney. At this time, just five years ago, I was given up by three different physicians. The verdict was that there was not a sound organ in my body. The sinking spells were becoming more

Digitized by Google

frequent and severe each time. I was not expected to live more than a short time at best, as all material means which I had tried had failed.

I gladly turned to Christian Science, seemingly the only remedy I had not tried, though I did not have much faith in it, because I did not understand it; but the lady who gave me treatment quoted, "With God all things are possible." She gave me three treatments, and told me I could come to her for the fourth, although I lived half a block away. I thought she must be crazy to think I could walk. She said, to encourage me, that God was my strength and that I could come; so the next day I requested my husband to assist me to dress and help me to walk, which he was glad to do. With trembling steps, he holding me up mostly, we started, and the farther we went the stronger I felt. My husband left me there and was to come after me in a couple of hours, but feeling so much stronger after having treatment, I thought I would surprise him and see if I could walk home alone. I started in God's strength, and got home without any assistance. I was perfectly healed at that time.

Words are inadequate to express the deep thankfulness I feel to God, and my gratitude to our dear Leader, Mrs. Eddy, for my wonderful healing. The Bible has become more precious to me than ever, and with Science and Health as a "Key to the Scriptures," it does most beautifully unlock the treasures for each one of God's children. My greatest desire is to get a better understanding of this blessed truth as taught in Christian Science.

Mary E. Moore, Fairmont, Minn.

✧

I have long felt a desire to express my gratitude for and appreciation of Christian Science. About twenty-two years ago this beautiful religion was brought into our home by a dear relative, and it seemed the most reasonable explanation of the Bible I had ever heard. I purchased a copy of "Science and Health with Key to the Scriptures" and have read it ever since; in fact, the Bible and the Christian Science textbook are my daily companions.

Soon after taking up the study of Christian Science, our little girl became afflicted with convulsions in a serious form, but as my husband and all of my relatives rather opposed me in relying upon Science, she was treated by physicians. While I tried to use what little understanding of the truth I had, she was not healed at that time, but I feel sure it preserved her until the opposition subsided. At the end of five years she had grown very weak and was in a pitiful condition, with no hope of *materia medica* helping her. Being fully convinced that medicine would never do her any good, her father then asked me to put her under the treatment of a regular Christian Science practitioner. I at once did so, and the result was an instantaneous healing.

At the time of my little girl's healing, my husband was suffering with severe kidney trouble, as he had been for many years. He had grown very weak, had a severe cough, and could not eat any solid food without experiencing pain. He therefore decided to try Christian Science for himself, with the result that he was changed from a sick man to a well one in less than a week. The coughing ceased, and he could eat anything he wished without any bad results.

Mrs. Eddy says, "The higher Truth lifts her voice, the louder will error scream" (Science and Health, p. 97), and at this point of rejoicing and thanksgiving, our little boy was stricken down with appendicitis. As, however, we had already proven that we could rely on God in time of trouble, we turned at once to Christian Science. The child seemed very ill, was unconscious for some days, then recovered within a very short time. The following spring he had another slight attack, but it was overcome at once by knowing the truth that makes us free.

These healings have been permanent, for I have waited thirteen years to send in my testimony. The convulsions and kidney trouble, which were instantaneously healed, have never shown any symptom of returning, and my son has never had the slightest attack since the one mentioned as occurring the following spring. These are not half of our healings, however, as my children had other illnesses as they grew up; but they have all been overcome through Christian Science. Scarlet fever, measles, mumps have been healed. My little boy jumped on a plank with two rusty nails in it, and these penetrated through the foot, yet he wore his shoe the second day following. He also fell and cut the back of his head very badly. He would not consent to have it tied up, but begged me to read Science and Health to him. He is today a young man twenty years of age, attending the Christian Science services regularly on Sunday.

Christ Jesus said, "Lo, I am with you alway." Mrs. Eddy says: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought" (Science and Health, p. 495). We could not do as our dear Leader has told us to do, without having the Christ here with us, and to me this saving religion is the reappearing of the Christ.

Mrs. Y. D. Taylor, San Antonio, Texas.

✧

Words are inadequate to tell of the bondage from which I have been delivered, and it is with a heart full of thankfulness to God that I give this testimony, in the hope that it will help some one who is athirst in the desert. Like many others, I came to Christian Science for the healing at a time when I was a physical wreck, sick and weary of *materia medica*, which I had been trying for twelve years. I had been suffering from a complication of diseases, among them Bright's disease, rheumatism, and a rupture, and I seemed to be getting worse from year to year. I was unable to do my work, and I could not walk even a few blocks. The physician told my husband that I had only a few months to live.

I was giving up all hope, when I spoke to a friend and said I would like to try Christian Science but knew no practitioner. She said she knew one and would communicate with her. I shall never forget the first treatment,—how I prayed and wept for joy to think I was to be healed, and that God was an ever-present help in time of trouble. That night, for the first time in months, I slept. The next evening I went to a testimony meeting, and I cannot tell of the peace and joy which came over me when I heard the hymns and the reading of the Bible and of "Science and Health with Key to the Scriptures" by Mrs. Eddy. It was the hand of divine Love that led me to the truth. I am thankful to God and grateful to our revered Leader for what Christian Science has done for me. My one desire is to be a faithful follower of Christ and to be a worthy Christian Scientist.

Minnie Baier, West Hoboken, N. J.

I can testify to the truth of the above testimony sent by my wife.—Louis Baier, Sr.

✧

In the spring of 1910, Christian Science was brought to my notice by a kind neighbor, who told me of her healing. I realized that it was what I needed and what I had been longing for all my life, as I had never been well. I had gone through two serious operations for an abnormal growth, and was told I would have to undergo a third. I forthwith took up the study and engaged the help of a Christian Science

Digitized by Google

practitioner. In two months I was free from suffering and was happy and contented, with a song of joy and praise in my heart continually.

In the summer of 1912, I was taken with a disease called jaundice, and in a very severe form. I suffered a great deal of pain, my flesh turned a deep yellow, and I could not retain my food. The fear of death was in the thought of those around me, but through it all, with the loving help of a Christian Science practitioner, I had no thought of fear, knowing well that God is my strength and my life. My husband was very anxious about me and begged me to take some medicine, so to help allay his fears I consented, but my stomach refused to retain it. I then told my husband I could not serve two masters, and that I knew medicine could not heal me; that God would heal me if we would only trust in Him and have no fear. After two weeks of patient care and help from the practitioner, I was able to take a long journey out of the state, traveling two nights and three days on the train, with no thought of fear or fatigue.

I am now perfectly free from the disease. Words fail to express the gratitude I feel for this beautiful demonstration of the power of Truth. I am also very grateful for the help that I have gained in the study of Christian Science in regard to the overcoming of colds, fever, and mumps, with various other forms of error, in the thought of my little boy.

My constant prayer is that I may prove worthy to be called a Christian Scientist.

BESSIE BROTHERTON, Oakland, Cal.

❖

I came to Christian Science to be healed of deafness, from which I had suffered since my childhood. The practitioner worked patiently for a long time, as my fear was very great. I can now say that although to mortal sense my hearing is not yet perfect, it is very much improved, for which I am indeed thankful. I have also been healed of rheumatism in my back which formerly kept me in bed for a couple of weeks at times, suffering severely. Some years ago I had six of my teeth extracted without the slightest pain; it was the most satisfying demonstration I have ever experienced.

For all this I am deeply thankful, and especially for the overcoming of fear, which held me in bondage in consequence of the sickness and sorrow I had passed through from my childhood. I am deeply grateful for all the help received in Christian Science.—CLARA ZETTERSTROM, Evanston, Ill.

❖

[Translated from the German]

I am giving this testimony with gratitude for the benefits received through Christian Science. I suffered for twelve years with rheumatism, which increased in severity every year, till my hands became crippled, while the help afforded by physicians and medicines was only temporary. To this trouble was added a severe nervous condition which made me as helpless as a child. In this state I was willing to try anything, and when Christian Science was offered, I accepted it. My healing was slow, as I entertained a great many doubts, but gradually I attained to a better understanding of the truth, and for four years I was entirely well.

Last year, however, I became ill with what is termed twisting of the bowels, which under *materia medica* calls for an operation, from the effects of which I might not have recuperated, owing to my age; but I was completely restored through Christian Science within a week, and my health is as good as it was in former years. I thank God, and am grateful to that dear woman, Mrs. Eddy, as well as to others of my fellow beings, for all the good which I have received through these teachings.—FRAU MATHILDE ROHDE, Milwaukee, Wis.

From Our Exchanges

[The Continent]

Look through Christ's dealing with men, and see if the least sign is anywhere discoverable that he was conscious of antagonism between what he did for their temporal bodily welfare and what he did for their eternal spiritual welfare. He dealt with each as he faced the need of it and never was at a loss to find time and place for both. Usually, in truth, he combined them so completely that he did not even think of them as separate interests. People needed restoration to health and strength, and they needed their sins forgiven, and he met both needs simultaneously. And he could deal thus sufficiently with men because he saw men whole.

What a man needed on his physical side was real to Christ and urgent, but that did not make the same man's soul need unreal. He was eager to make life worth while for people here and now, but that did not leave him cold and thoughtless about their preparation for eternity. And he saw everything in proportion. Near things were not the greater to him because they were near, yet looking to the far and looming things did not make him overlook immediate things.

[The Universalist Leader]

And has Christianity failed? When the great Christian nations writhe in deadly embrace, with but one thought, to despoil the other of his possessions and enslave another's will, has not Christianity failed? There is no question but that it has failed to connect itself vitally with the motive forces of the people, so as to control their action, and this is because it has so largely failed to appeal to the primary sources of human life. It has in its attempt to apply certain specific principles to certain specific conditions, failed to incarnate its Christ into the whole life, and make life a ministry of service instead of a ministry of conquest. No, Christianity has not failed, for Christianity has never yet been tried in fairness to itself.

[Rev. R. R. Rodgers in *New-Church Messenger*]

As by growth in goodness old tyrannies, old despotisms, the vices, follies, and sins of our ancestors have been laid aside for a better faith and a higher life, so will it be with all the harsh, irrational, and barbarous doctrines still held by the followers of the Lord Jesus Christ. It is goodness, and goodness only, that prepares the world to receive the truth. Goodness makes all truth palatable; and whenever the heart opens to better feelings, and the mind, as a consequence, opens to the truth, the miracle is realized where it is written, "And the Lord showed him [Moses] a tree, which when he had cast into the waters, the waters were made sweet."

[The Christian Intelligencer]

We wonder what the men who brought on the war could have been thinking of. Ah, but "thou art the man"! For a war like the present is born out of an atmosphere of unkindness to which every man who has not the spirit of Christ has contributed. And in the circle in which we live we may often have been guilty of just that want of kindness which between nations spells such sweeping disaster. Can we not see how sinful is our failure to have that mind in us which was also in Christ? Are we not persuaded now of the surpassing grandeur of love and of the preeminent splendor of the method of Christ, the method of compassion, gentleness, sacrifice, and kindness? The issues of the present situation are now beyond us as individuals and as a church; but woe to men if this colossal war does not drive them to God. We look for a sweeping revival of religion. The hand of judgment will

Digitized by Google

produce the cry for mercy. And having received mercy, we shall henceforth show mercy and place our influence on the side of kindness, the force wherewith God is saving men and by which all that divides men will be effectively removed.

[*The Standard*]

In the enthusiasm which usually accompanies the acquisition of new truth, it is easy to lose one's perspective and to forget that one must be all the more careful when setting forth the unfamiliar and the new to relate it to the familiar and the old. To get away for a moment from the monotony of our figure, if Moses on Mount Nebo could have had a Bleriot monoplane, he might have paid at least a flying visit to the promised land. Too many preachers who have caught, like Moses, a vision of a land flowing with the milk and honey of new truth, expect to transport hitherward their congregations, who are intellectually still on the Nebo side of the Jordan, in some such equally facile and delightful manner. Paradoxical as it may seem in the light of our illustration, such incredibly rapid mental and spiritual transportation leaves far too many in the congregation up in the air, and they neither reach the promised land of new truth nor remain on the level table-land of the old.

[*The Living Church*]

The present function of the church should be one of earnest, unremitting prayer. It is not necessary for us to inform Almighty God which party is in the right and should win and which party is wrong and should suffer. There is in the war a right and a wrong. Somebody is responsible before God for it. Vengeance is His; He will repay. Our part is to pray Him to overrule the sins that have caused the war, to protect and guard the innocent, to bring good out of the present chaos, to strengthen the forces that make for peace, to bring peace to the nations when that shall be possible and right.

[*The Advance*]

It belongs to us ever to remind the world of what is its real and deeper need. It is important that we ourselves should never forget what is the one surpassing blessing which we are privileged to bring to men. Silver and gold we have, but that power which is ours in the name of Jesus Christ is far richer than any gift that these can buy. It belongs to us to bid men to rise from their spiritual lethargy, to lift themselves above the mean and sordid conditions of their lives, to cease to sit forever as paupers just outside the beautiful gate of their spiritual inheritance, to rise and walk and leap in the joy of their free sonship.

[*The Congregationalist and Christian World*]

If Europe had really accepted and tried the Christianity of Christ, it is safe to say that her powers would not now be engaged in this colossal business of human destruction. Europe is repeating the bloody barbarisms of the past on the gigantic scale of modern force and effect, because it never has surrendered its barbarous notions of the past to the appeal of Christianity. The paganism of the human race has been and is awfully persistent, and Christianity has nowhere promised peace on a pagan basis.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

The cross was more than a mere martyrdom. Jesus held the belief that it was his and every true man's mission to devote his life to ransoming men from the delusion, the fear, and the slavery in which wrong views of life, false estimation of their own personality, and moral failure had involved them. His teaching, his life, himself, he gave, and sought to give, to ransom men from the power of these things.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The parcel post service between the producers in the rural communities and the consumers in the cities has been declared to be a great success by the post-office department, and its rapid extension, until it shall embrace all of the most important urban centers of the country, has been determined upon. Emphasis is given the growing importance of this service by the recent announcement that several cities have been added to the list of twelve originally set apart to receive the service. Ten of these cities were designated for the first experiments last March, and two others were added in July. "Complete reports from the ten cities first chosen have been received," said an official of the department, "and the postmaster-general regards them as encouraging in the highest degree. It is the belief of the postal authorities that the service has proved so successful that its future is assured, and that gradual steps should now be taken for its expansion throughout the country."

The ten cities set aside experimentally were Washington, D. C., St. Louis, Boston, Lynn, Mass., San Francisco, Atlanta, Birmingham, Baltimore, Rock Island, Ill., La Crosse, Wis. The two cities added in July were Louisville and Cincinnati. The newly designated cities, in which the service began on Oct. 1, are Chicago, Brooklyn, Philadelphia, Indianapolis, Denver, Seattle, Portland, Ore., Cleveland, New Orleans, Austin, Providence, Nashville, Los Angeles, and Hartford. Postmasters of the smaller towns in contiguous farming areas are to prepare lists of farmers and others who wish to sell their products direct to the city buyers by way of the parcel post. These lists are to be forwarded to the postmasters of the large cities, who will have them printed for general distribution by their letter-carriers, going into every home in those cities.

Trustees of the Rockefeller foundation have announced the inauguration of an investigation into the problem of industrial relations. The root of the social disorder which the foundation acknowledges exists today, is, it is stated, to be investigated systematically and thoroughly. It will be sought to disclose the cause of the destructive tendencies between capital and labor and to "find means of promoting harmonious, united action." The foundation says in part: "The Rockefeller foundation is deliberately attempting to grapple with what it believes to be the most complicated and at the same time the most urgent question of modern times. The foundation is not baffled by the knowledge that the task has seemed hitherto well-nigh hopeless. It is hoped that an investigation started on the scale of which the foundation is capable, and impartially pursued, will gradually win for itself the cooperation not alone of employers and workingmen of industrial organizations, of individuals and institutions interested in social reform, but also of universities and governments throughout the world." The foundation is capitalized at one hundred million dollars.

An important bill that will fail of consideration during the present session of the United States Congress, for want of time, is that to conserve the fish supply of the country. Statistics show that unless there is federal control the fish supply of the United States, notably that of the Great lakes and Chesapeake bay, will rapidly disappear. It is the aim of the bill to place all migratory fish under federal protection, and to prohibit under heavy penalties the use of food fish in the manufacture of oils and fertilizers. The federal commissioner of fisheries would be directed to regulate the netting, seining, and otherwise taking of migratory fish, as well as to specify rules as to seasons and other conditions under which they might be taken. The bill is before the House committee on merchant marine and fisheries, whose members are understood to be favorable to the aim underlying it.

The annual report of the treasurer of Yale University shows gifts and bequests for the year ending June 30, of $1,019,846.78, as compared with $1,416,035.84 for the previous year. The net increase in funds is $650,245.74 as against $1,054,868.58 for last year. As a teaching organization, the university closed the year with a deficit of $7,786.46, the amount being considerably smaller than the deficit of a year ago. Loss of interest, through default, and reduction of dividends amounted to more than twenty-seven thousand dollars, this being, however, less than 4 per cent of the total income from all investments. Because of the losses of income the average yield on total investments is reduced to 4.83 per cent as compared with 5.01 per cent a year ago. The total investments amount to $14,624,258.58.

A million and a quarter acres of government lands in the Choctaw and Chickasaw nations are being advertised by the federal government for sale by auction at various county seat towns in Oklahoma. The sale begins Nov. 3 and ends Dec. 2, 1914. These are timber and segregated coal lands, the latter being the very best in Oklahoma. They are divided into small tracts suitable to the home builder, and are to be sold for one fourth cash; the second one fourth in one year, the balance to be paid in one year at 5 per cent interest, making it possible for any person to get a home direct from the federal government, insuring a perfect title. Most of the tracts are excellent farming lands, all being near towns.

Owing largely to the establishment of oversea markets, the area under fruit culture in South Australia continues to show a steady increase. According to the official returns for the season 1913-14 the area planted with fruit-trees is 24,425 acres, and as the localities suitable for fruit growing are numerous and extensive, ample scope is afforded for further profitable expansion. The production of the principal fruits last season was, in bushels: Apples, 450,240; pears, 86,852; apricots, 144,962; cherries, 53,270; plums, 93,173; oranges, 139,952; peaches and nectarines, 92,146. The estimated value of products of orchards last season was £384,478.

Two hundred and twenty-five feet above the cataract of the Spokane river, in the center of the city of Spokane, Ore., was driven on Sept. 15 the golden spike that symbolized the completion of twenty-two million dollars' worth of railroad construction, including the coming to Spokane of the main line of the Chicago, Milwaukee & St. Paul and the building of a new Oregon-Washington Railroad & Navigation Company line that brings Portland, Ore., ten miles closer to that city by rail.

Secretary Bryan for the United States, and Ambassador Bakhmeteff for Russia, have signed a treaty binding the two nations to submit all disputes that cannot be settled diplomatically to an international commission of five members for investigation for a period of at least one year, during which hostilities may not be commenced. This is the twenty-seventh of the so-called investigation treaties, and follows in a general way the lines of those previously negotiated with nations.

By a unanimous vote the Senate fixed as the first measure to be undertaken by the federal trade commission, when organized, an investigation of the Standard Oil Company. The Gore resolution which provides for this investigation and demands investigation of the various branches into which the Standard Oil Company was divided following the Supreme Court decision, was approved.

The New York, New Haven & Hartford Railroad Company and the New England Navigation Company has brought suit in the New Haven county superior court against John L. Billard and six other officers of the Billard Company for the recovery of $3,824,147, alleging fraudulent action in connection with the sale of Boston & Maine railroad stock.

The emergency revenue bill, estimated to produce one hundred and five million dollars in a year, was passed by the House of Representatives by a vote of 234 to 135. The bill now goes to the Senate, where the finance committee plans for its prompt passage.

Conferees have agreed on a final report on the Clayton anti-trust bill, second of the administration trust legislative measures, which is at last ready for final consideration by Congress, after many months of deliberation in both houses.

The public utilities act of Maine, passed by the last legislature and suspended under the referendum act so that the voters might pass upon it, was adopted by a vote of nearly two to one at the recent state election.

The consolidation of the Methodist, Presbyterian, and Congregational churches in Canada was proposed in an official report of the special committee of the recent Methodist general conference.

Exports of Venezuelan asphalt amount to about five hundred thousand dollars annually, with the United States buying the greater part of the product.

The total foreign trade of Brazil in 1913 amounted to $689,658,589, as against $670,111,140 the year before. This is a decrease of $30,457,551.

An appropriation of five hundred dollars has been made, at the request of the mayor of Boston, for establishing a public market.

Day of Judgment

CLARENCE W. CHADWICK

THE student of Christian Science is not interested in a future judgment-day, as were those of an earlier period; his time is fully occupied in meeting the requirements of God in the present. He has learned from experience that the contemplation of salvation in another world does not constitute the worship of God "in spirit and in truth." To him, God is a God near at hand, infinite, unchangeable, all-loving, and obedience to His law brings peace, health, and happiness on earth.

"The great day of judgment is coming. Are you prepared?" These were essentially the words, painted in large letters upon a sign-board, which met the gaze of a traveler from his car window not many weeks ago. It might be interesting to know the thought of the one who was instrumental in placing this conspicuous and unique sign, whether it was intended as a note of warning to benighted mortals to prepare for some terrible future event, or as a loving reminder of the great joy of living in the ever-present now. The chances are that thought was trending toward a future event more than toward one which is already taking place, since the generally accepted religious teaching has to a large extent presented this view of the judgment.

This theology of the past has not inspired people as it should to live normally in the present; it has not offered as it should present spiritual rewards for righteousness; it has not emphasized the necessity of overcoming evil with good here and now, but has left practically everything pertaining to the kingdom of heaven for future or post-mortem adjustment. It has assured humanity that a final day of reckoning was sure to come, and that it would be a "day of wrath," a "dreadful day." Untold suffering, both physical and mental, has resulted from such teaching; diseases have undoubtedly been multiplied through the influence of the fear and morbidness thus awakened. This is no idle theory, for time and again has it been proven in Christian Science that when the belief and fear of death have been destroyed for patients, all manner of diseases have disappeared at the same time. The unchristian belief in evil needs no other license than to be assured that a death-bed repentance will be a sure passport to the heavenly kingdom. A final day of judgment, which has not yet arrived, would leave evil at large to defy the demands of right thinking and living.

Christian Science makes a radical departure from such misconceptions of Deity, and reveals God as an ever-present, ever-operative divine Mind or Principle, whose demands upon man are "the same yesterday, and today, and forever." This right idea of God clears away all mystery concerning a final judgment-day, eliminates fear, and brings a sense of gratitude in the knowledge that "the judgment-day of wisdom comes hourly and continually" (Science and Health, p. 291). Should any one doubt this statement of Christian Science, let him stop and ponder these words of the Master: "But of that day and that hour knoweth no man, no, not the angels which are in heaven, neither the Son, but the Father." When he does so, he will admit that all thought of time is necessarily omitted from God's knowledge, since "his understanding is infinite." The only judgment-day God can know, therefore, must be one that is continuous, and just as much in evidence today as it will be a thousand years hence. What God knows must and does exist eternally. This certainly does away with all thought of any future or final day of judgment which is not already operative, and fully confirms what our Leader has to say upon this subject.

Jesus made it very clear that he came not to condemn or judge the world according to any human standard of judgment, "but that the world through him might be saved." The only judgment or judgment-day he knew, was always associated with the thought of Love. While all judgment was committed unto the Son, he knew that it was not his, but the judgment of divine Love, his Father-Mother God. He knew that such judgment is forever impartial, and is a law of condemnation or destruction to sin only. One who is thinking Christlike thoughts and living in accord with such thinking, is not under condemnation or judgment. On the contrary, he who understands not the Science of being and his true relationship to God, is already under condemnation. This is made clear in John's gospel, where we read: "He that believeth on him [the Son] is not condemned [judged, Rev. Ver.]: but he that believeth not is condemned [hath been judged, Rev. Ver.] already, because he hath not believed in the name of the only begotten Son of God." Is it not evident, then, that the only day of judgment there is or ever can be, is the constant uncovering and destruction of error and sin in individual consciousness, until all sense of evil has been overcome?

When does this day of judgment arrive? The moment the door to our mental abode is swung wide to receive the "King of glory," the Christ, or true idea of God. Then it is that the tares are separated from the wheat, and we become mentally alive, or awake to the deep things of God. Should any one fear the coming of such a judgment-day? Should he not rather welcome its approach, and do all in his power to let it come quickly and effectually? The day of judgment is indeed at hand already, only awaiting human recognition and admission, and Truth is ever ready to save to the uttermost. To be oblivious of this fact, and to think of it as a far-off future event, is to rob one's self of the blessings of today by remaining "in the congregation of the dead" (those who misunderstand Christ, Truth).

Christian Science has come to usher into the consciousness of mankind a truer concept of the day of judgment, revealing it as the constant activity of right thoughts or ideas forever operating to destroy all that is opposed to the nature of God, or good. The first practical sign of the visitation of this judgment-day in Christian Science is the experience of moral and physical healing. This is sure to come to all who are meek and humble enough to receive it in its purity and simplicity, and to let it point the way to the spiritual kingdom here and now.

This demonstration of Christian healing is the actual "coming of the day of God, wherein the heavens being on fire shall

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

be dissolved, and the elements shall melt with fervent heat;" in other words, one's false material sense of heaven and earth will give place to that true or spiritual sense of them which constitutes the kingdom of heaven on earth. Speed the coming of this spiritual day or consciousness of the divine ever-presence!

Joyfulness

GEORGE C. FRANKLIN

An assertion one frequently hears made by new-comers in the Christian Science church is this: "I never saw so many happy faces in a public gathering before." And why not? In every such audience a large percentage of the people have proven the truth of Mrs. Eddy's statement that "Truth is revealed. It needs only to be practised" (Science and Health, p. 174). They know now that the long search of humanity for a demonstrable truth is ended, that the years of uncertainty are past, and that the truth of Jesus' words, "The kingdom of God is within you," has been proven. Having drunk deep draughts of spiritual truth, they are freed in a great measure from their slavery to materiality and to suppositional material laws, and well may they rejoice. Instead of a problematical resurrection after death, they know that today is the day of salvation, and that peace, harmony, health, prosperity is theirs now. Instead of being subservient to the superstitions of ages, they stand freed from every law which makes for bondage, but bow before the law of God, good, and realize the positive, demonstrable power of a perfect creative cause.

Several years ago the writer was one of a party of explorers who were making their way across a very barren country. The only water left was in kegs. It was warm and unpalatable, and was used only when some thirst-tormented traveler was compelled to wet his parched throat. Forced to make a dry camp at night, one of the party, more hopeful and venturesome than the rest, followed a narrow, almost indiscernible trail that led south from the camp for a few yards, where he found another plainer trail, and a little farther on yet another trail came in. The track was then broad enough so that it could be seen some distance ahead. The traveler quickened his pace. Why? Had he seen any evidence of a spring? No. But he knew that there was some reason why the wild animals of these "bad lands" had followed the same course. Increasing evidence of travel spurred him on, and after going around a point of rocks, he saw before him a little valley, and near a huge boulder, as if nature would protect the life-giving flow, was a clear, cool spring of pure water.

The problem of the moment was entirely solved. It was only necessary to carry the news to the rest of the party and bring them to the spot. Can any one imagine the discoverer returning to the dusty camp, and with a solemn face and whining voice starting in to argue with the other travelers that there was water obtainable, and then recounting all the details of how to get it? No. The joyful announcement was, "Boys, I have found water;" and that was enough to bring all within sound of his voice to their feet, ready, eager to follow the one who had made the discovery.

At a later day, and under a greater need, the writer was led to follow another trail, which promised hope of relief from suffering for a dear one. The trail was the dim hope that some relief might be found where material wisdom had utterly failed. The almost unacknowledged hope led to the home of a Christian Scientist where six people were holding a Wednesday evening meeting. The trail was plainer after that meeting! The hope that relief was obtainable was augmented by the simple testimonies given. Literature was purchased, and finally the perfect haven of scientific, demonstrable Truth was seen, and an entire family was healed. Can any one who has experienced such happiness allow himself to become, in the words of St. Paul, "entangled again with the yoke of bondage"?

There is indeed nothing to be solemn about. There is no reason for a tremulous voice or a strained face when telling about what Christian Science has done for us, either in public or in private. In fact, such an attitude, instead of carrying conviction, would have the opposite effect, and might remind the listener of emotional meetings where mesmeric influences have swayed the audiences. Those who had the great privilege of a personal acquaintance with the Discoverer and Founder of Christian Science, never tire of speaking of her vivacity, her joyfulness, her freedom of action. The message of Christian Science is liberty, and there should be nothing in the public or private life of a Christian Scientist which would remind any one of the years of "servitude to an unreal master," but rather should he "rejoice that we are subject to the divine 'powers that be'" (Science and Health, pp. 226, 249).

Way of the Lord

INEZ KOCH

It is recorded in the books of Moses that "the Lord went before them [the children of Israel] by day in a pillar of a cloud, to lead them the way; and by night in a pillar of fire, to give them light." In all their pilgrimage through the wilderness, "he took not away the pillar of the cloud by day, nor the pillar of fire by night, from before the people." Spiritually interpreted, this may mean that divine Love is guiding us all the time through the material wilderness of false beliefs, in the way of understanding. The spiritual interpretation of light is understanding. Jesus pointed this out clearly when in answer to Thomas' query, "Lord, we know not whither thou goest; and how can we know the way?" he said, "I am the way, the truth, and the life." Manifestly the human personality of Jesus could not in itself be regarded as the way of infinite Mind, and we understand this pregnant saying only when we recognize the great fact that Mind, or Spirit, can be manifested through spiritual consciousness alone. Everything that is not Mind, is opposed to it, and therefore, to reach the way of God, or Truth, through material thinking, is impossible.

In face of the supposed actuality of a material universe, our efforts at spiritual thinking all seem frustrated by so-called laws of nature, heredity, etc., but Jesus' work was never frustrated by these laws. He annulled every one of them by understanding the law of God. Moreover, he was the Wayshower. He taught us that we also should know this law, the truth that makes us free. It seems, therefore, that our primal necessity in following the Master is to understand what this way is. Jesus proved that he understood God's nature and law by his works, healing the sick, saving the sinner, and raising the dead. This he did simply through his spiritual ascendency, and by absolutely discrediting all and every material evidence; that is, through his scientific knowledge of spiritual causation.

In "Science and Health with Key to the Scriptures," Mrs. Eddy points this out when she says (p. 170), "Spiritual causation is the one question to be considered, for more than all others spiritual causation relates to human progress." To recognize God, Spirit, as the only cause, means to recog-

Digitized by Google

nize that the effect, the universe including man, is spiritual. It does not require a great deal of learning to grasp this; it requires only an honest desire to understand it. So long as we persist in honoring man-made laws and material theories, we are not honestly desiring to follow the Christ, Truth. It is the carnal mind, the "enmity against God," which would rob us of our birthright of dominion and power over sin, disease, and death. Our protection from its evil influence lies in the knowledge that it "profiteth nothing." It is always based on the supposition that matter is an intelligent entity, with power to create or destroy. This, it is clear, cannot be true, for God, Spirit, is the only cause, and all real effects are in the divine Mind. All the claims of material sense are but the manifested beliefs in falsity. In proportion as we gain the true understanding of being, or God, in that measure are we freed from the illusion of mortal sense, and we find that this understanding is leading us in paths of righteousness, in the way of right thinking.

"The night shineth"

EVA S. W. WILLIAMS

We have most of us played, as children, the game called blindman's buff, in which one player is blindfolded and hunts for the others. The room may be brilliantly lighted, but with his own will and consent a bandage has been placed over his eyes so that he can see nothing, and it might as well be all darkness that surrounds him. He knows, however, that at any moment he can remove the bandage, or ask another to remove it for him, and he will see as well as ever.

Now, the simile may seem to be far-fetched, but it is not really going too far to compare our experience as mortals with that of the blindman of the game. At this period, the beginning of the twentieth century, when Mrs. Eddy's discovery of Christian Science is nearly fifty years old, we have no longer the excuse that our ancestors had for ignorance of what man is and of his relation to God. We may by no means grasp the meaning of all we read in the textbook of Christian Science, but from the outset it is possible and indeed imperative for us to know that because its author proved so much, we may trust with unquestioning security in the accuracy of its statements. What we have to do is to make the truths of Science our own by putting one after another into practice, until in the fulness of time we shall understand all.

One far-reaching statement of Science declares that God is "all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal" (Science and Health, p. 587), and this enforces the acceptance of these words of the one hundred and thirty-ninth psalm: "If I say, Surely the darkness shall cover me; even the night shall be light about me. Yea, the darkness hideth not from thee; but the night shineth as the day: the darkness and the light are both alike to thee." What, in the first place, is meant by darkness? Surely every illusion of sin, pain, sorrow, sickness; and it is these conditions which in God's sight have no place. He does not see them. It would be a great help in the darkest hours of human experience to cling so firmly to this that the night may be seen to shine as the day.

But what is the bandage round our eyes, holding us in bondage to the conviction that our darkness is real? It is simply, when expressed in brief terms, a belief that even though God cannot see or experience darkness, we can! We deify evil by giving it a creative power which reason alone suffices to hinder us from imputing to God, though behind all would lie the primal fact that God then must have created evil itself. The following verses from one of our hymns (Hymnal, p. 130) explain in some measure what is wrong:—

Theories, which thousands cherish,
Pass like clouds that sweep the sky;
Creeds and dogmas all may perish;
Truth herself can never die.

Worldlings blindly may refuse her,
Close their eyes and call it night;
Learned scoffers may abuse her,
But they cannot quench her light.

Mortals are actually blindfolded by creeds, theories, dogmas, all based on material concepts of God, which they honestly wish to shake off, but which seem to have a strong mesmeric power over them, a power which can be defeated only through persistent prayer and watchfulness. The shafts of malpractice can do no harm to us as Christian Scientists if we are on guard; but for this much more is needed than verbal assent to what Mrs. Eddy teaches. It demands solid mental work. St. Paul himself says, "We wrestle . . . against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places."

Let us take the case of one into whose citadel the enemy seems to have effected an entrance, one who feels himself beyond hope, and perhaps beyond recall. Let him also declare that "the night shineth as the day," and he will find that Christian Science meets his need also, and offers him peace. Mrs. Eddy says: "If students do not readily heal themselves, they should early call an experienced Christian Scientist to aid them. If they are unwilling to do this for themselves, they need only to know that error cannot produce this unnatural reluctance" (Science and Health, p. 420). It may be that "unnatural reluctance" is just what needs to be removed; but whatever the individual requirement may be, the glorious fact remains untouched, that "God is light, and in him is no darkness at all."

"Stem the tide"

MAUD DUNN

With marvelous foresight Mrs. Eddy has equipped her students for their work, declaring with calm certainty that "the present new, yet old, reform in religious faith will teach men patiently and wisely to stem the tide of sectarian bitterness, whenever it flows inward" (Science and Health, p. 139).

The writer was recently impressed by the remark of an earnest Christian Science worker, that possibly we students of Christian Science are not sufficiently alive to the need of stemming the tide of sectarian bitterness when, as Mrs. Eddy has said, "it flows inward;" that is, as I understand it, when it appears in the ranks of Christian Scientists. Are we, in a word, sufficiently kind and considerate for one another; do we always stand shoulder to shoulder, and if not, why not? Is the false claim of sectarian bitterness ever seeking to separate us? If so, our Leader has reminded us that "a special privilege is vested in the ministry. How shall it be used? Sacredly, in the interests of humanity, not of sect" (Science and Health, p. 236). We are all ministering one to the other, and we are all working to manifest the kingdom of heaven on earth, in which there are no sects and no bitterness; no cliques, no separation.

Speaking in a debate in the House of Commons on the Welsh Disestablishment bill, Mr. Asquith has recently said that a fact, which he was sorry to say was attested by the experience of history in hundreds of controversies, was that whenever a matter proceeded upon ecclesiastical grounds,

Digitized by Google

there was exhibited a bitterness of partizanship and an uncharitableness of temper which in purely secular controversies were generally avoided.

Christian Scientists have acquired a reputation for brotherly love, for peace, for forbearance toward opponents, and we do well to see to it that nothing flows inward or outward but truth and love; that our church meetings are patterns to all other denominations; that our conduct to our fellow students is a pattern to all other coreligionists, and that we pursue the course commended by Mrs. Eddy: "The way to extract error from mortal mind is to pour in truth through flood-tides of Love" (Science and Health, p. 201).

The writer is the daughter of a clergyman of the Church of England, and she well remembers talking to a clergyman brother-in-law about the good-fellowship which she found in the Christian Science ranks fourteen years ago, on first joining the movement. "Ah, yes," he said, "the early Christians were like you when they were persecuted, and were only a small body. Directly you get larger and are not persecuted, you will find it all goes," or words to that effect. How important that we see to it that the larger we grow in numbers the more we grow in love, because God's children are certainly one harmonious family. We need daily and hourly to prove that there are no sects and no bitterness in our Christian body, but that here peace and harmony forever reign.

No Condemnation

FREDERICK R. RHODES

IT would be difficult if not impossible to find more helpful and encouraging words than those contained in the eighth chapter of St. Paul's epistle to the Romans, and it has been the glorious privilege of nearly all who have prayerfully taken up the study of Christian Science, to experience at least in part the truth of its promises.

The writer remembers being carried on board one of the Atlantic liners at New York about twenty-two years ago, en route for England, there to undergo a dangerous operation for an internal growth, though with little probability of ever being a strong, active man again. Having no practical knowledge of God, and being indeed without hope in the world, my only desire was that I might die. The operation having been performed, I was pronounced convalescent after several weary months spent in bed, at the same time being informed by the surgeon that, although the operation had been successful, he could not promise the growth would not return.

The seed of fear thus unconsciously sown began to spring up some years later, and ended in a complete breakdown of the nervous system. After being away from business six months, with little benefit, I decided to try Christian Science treatment, and as stated in a testimony published some few years ago, I was completely healed in five weeks. The gradual unfolding of the truths contained in the Bible not only healed my sickness, but immediately began to transform my entire being by a renewing of the human mind; and in place of an insatiable desire for excitement, evidenced in racing, playing cards, and so on, came the earnest desire to know more about this God whose healing and saving power had so wonderfully and quickly wrought such a transformation in both my physical and mental condition.

I had always suffered from fear of heredity, and the load which Christian Science lifted from my shoulders was very large. During my study of the Bible, together with Science and Health, the true interpretation of the second commandment greatly helped finally to dispel any lingering doubts about hereditary penalties. I noticed that the word "generation," as used in Exodus, was printed in italics, hence I gathered that it was not in the original Hebrew, but that probably the hiatus had been filled in with the word which to the translators best evidenced the intended meaning. I also noticed that the word "generation" is inserted, not generations, and this is very significant, as in the Hebrew writings the word generation (*dour*) is associated with living people, but in its plural form (*dourouth*) signifies descendants. Again, would it not read "their children," and not "the children," if the so-called law of heredity had been implied? The meaning has been made clear by Mrs. Eddy's teaching that if one sins he suffers, if he ceases to sin he ceases to suffer. This clearer view convinced me of the inability of any past or future event to interfere in any way with man's harmonious representation of the perfect creator, who alone controls, constrains, and governs His children at all times and under all conditions.

As I sailed away from Boston, after attending the annual meeting at The Mother Church, one of the most uplifting experiences in which it has ever been my privilege to participate, I could not help contrasting the occasion with my previous leave-taking, and feeling a deep sense of gratitude to God for the uninterrupted good health with which I had been blessed, and above all for the better understanding of Him "whom to know aright is Life eternal" (Science and Health, Pref., p. vii), which had been given to me through the study and practice of Christian Science. The ever-presence of divine Love is no longer merely a theoretical proposition, but a practical and demonstrable possession of all earnest students of the Bible and Science and Health.

As a business man, the study of this wonderful system of thought-correction has proved of inestimable value to me, bringing about in the most natural manner more harmonious business relationships, and providing for much more satisfactory work to be done all through the various departments. Mrs. Eddy has indeed given to the world the Christianly scientific method of proving right here and now that there is "no condemnation to them which are in Christ Jesus." It matters not that one may be attacked by poverty or sin, the fact remains that through the application of this rediscovered Christ-power we are enabled to say, "In all these things we are more than conquerors through him that loved us."

[Written for the *Sentinel*]

The Ever-presence

RUTH INGRAHAM

OPEN thy hands,
Clenched in despair's petition—
Can thy demands
Exceed the fulness of His love's fruition
In whom creation stands?

Only believe!
The fairest, fullest blessing
Thou canst receive,
Is ever that which is most closely pressing,
Waiting till thou perceive.

Cease, then, to plead,
And in glad recognition
The answer heed.
Make thou on Love eternal requisition
For every human need.

Arise and shine!
Beholding His reflection,
Thy will resign—
See, the dream vanishes, and all perfection
Appears in Love divine!

[Editorial in *The Union*, Sacramento, Cal.]

Out of the apparent rebuff to the cause of Christian Science inflicted by a New York court decision, which held that a practitioner of that faith who took pay for his services to the sick violated the law, it is probable that real good will come. The decision has attracted the attention of people generally to the unjust character of the laws dealing with the treatment of the sick. As a result, there is a demand in New York that the legislature take steps to change the obsolete statutes of the state. Certainly there is something supremely absurd in a law which will permit one man to give drugs and yet which prohibits another from healing who does not use drugs.

No sane man will deny that the gentle teachers and followers of the principles of Christian Science have done much good in the world, and they are doing good daily in every city in the land. If they do nothing more than teach the doctrine of clean living and brotherly love, they are doing a great work. Clean life and the golden rule will solve many of our troubles. That the mind exercises a powerful influence on the body, cannot be questioned. Who shall say how far that influence extends, where it begins, or where it ends?

No fair-minded man will seek to deprive science of any of the glory won by hard-working students and professors in their search for remedies for human ills. They have accomplished wonders, and daily they are adding to the wealth of human knowledge, and their efforts are prolonging the lives of men. But laws which bind men to this or that method of treatment or cure are obsolete. Some revision of the statutes is required which will permit the people to have access to all methods of bringing health. If the New York decision shall have this effect, it will prove a great blessing to mankind. If our brothers prefer the gentle art of Christian Science to the use of physic and the knife, they should not be denied the privilege.

❖

[Judge Clifford P. Smith in *Atlantic City (N. J.) Review*]

A friend has sent me for comment or reply a letter which was printed in the *Review* of recent date, in which a minister endeavored to justify his statement that Mrs. Eddy, the Discoverer and Founder of Christian Science, was actuated by the love of money. To justify this statement, our brother quoted a part of a notice written by Mrs. Eddy to her students and published in 1897, in which she admonished them to circulate and sell the Bible and her published writings. It was perfectly natural that the author of "Science and Health with Key to the Scriptures" should regard this book and her other writings as beneficial to the human race, and her faith is amply sanctioned by the results shown in the lives of those who have studied her writings on Christian Science in connection with the Bible.

The other item of proof adduced by our friend in support of his statement was that a judge at Philadelphia refused a charter to a Christian Science church on the ground that it was a matter of business and not of religion, which decision, he said, was confirmed by the supreme court of Pennsylvania. The fact is, that the judge did give such a reason for his refusal, but the supreme court held that the evidence did not justify that conclusion. Whether a church has a formal charter or not, is of little consequence; but the fact that there are churches in Philadelphia, Atlantic City, and elsewhere whose religion heals the sick, reforms the sinner, and betters every phase of human life, is of vast importance to the world.

So far as Mrs. Eddy's desire for money is concerned, her motive is most clearly evidenced by the use which she made of her money. Throughout her career as the Leader of the Christian Science movement, she lived simply, gave liberally, and finally left the bulk of her estate to be used for extending the world's knowledge of the religion which she taught. Which of her critics has wrought so much or so well?

❖

[Charles D. Warner in *The Hartford (Mich.) Day Spring*]

The remarkable growth of Christian Science in every part of the world is causing comment among all classes of people. The universal inquiry is, "What is it?" Out of this mass of inquiries have come many erroneous impressions about Christian Science from those who have given opinions on the subject rather than facts based upon investigation. The human family in all ages has sought for deliverance from disease, from sin and its consequences, and from all other things that cause unhappiness; so that anything that will heal disease, destroy sin, and bring happiness, is certainly worthy of investigation, for every human being wants to have health, to be free from unhappiness, and to be contented.

Christian Science does all these things. There are many happy persons making themselves useful in the world today, who will bear positive testimony as to the truth of the foregoing statement. Most of these persons will tell you that when they came into Christian Science they had either been given up by physicians or had reached the depths of despair in sin or in poverty. They will all testify that there was no material means for their deliverance, because they had tried all material means without result; but as soon as they sought Christian Science they experienced in increasing measure what they had been seeking for,—either health, or relief from many other forms of unhappiness. Can we reasonably deny the testimony of such responsible witnesses clothed and in their right minds? If one had a case in court, would he not feel secure in the issue if he had many reliable witnesses who would come forward and all, individually, tell the same facts in relation to his case?

God, as revealed in the Bible, and as explained by Mrs. Eddy, the Discoverer and Founder of Christian Science, is "the great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence" (Science and Health, p. 587). Being Spirit, He is incorporeal, and fills all space. As He fills all space, He is ever present; and no matter where you may be, He is there. If we ascribe to God personality, or think of Him as a person, we immediately limit Him, because a personality is limited and cannot fill all space. Likewise, by ascribing to Him personality, we become in a measure idolaters, and prayers to such a God are not answered. Christian Science reveals that God is Spirit, and that man is His image and likeness. God being spiritual, man as His image and likeness must be and is spiritual. So you see that God can be apprehended only spiritually, never materially. Christian Science teaches that there is one omnipotent God. To acknowledge any other power is to dishonor Him. It bases its faith on the first chapter of Genesis, where we are told that God made all that was made, and "it was very good." Therefore, anything that claims existence, unless it is good, is a seeming and not a reality, because God made all, and all good. The truths of Christian Science, being eternal, are not new. They have always been and always will be. Christ Jesus the Wayshower practised them, and he healed the sick by the selfsame Principle. Every Christian Scientist acknowledges "one supreme and

Digitized by Google

infinite God," and acknowledges "His Son, one Christ; the Holy Ghost or divine Comforter;" acknowledges "Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Way-shower" (Science and Health, p. 497).

It is no disrespect to the glorified name of Jesus to practise in this age the things that he did. He himself said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Now he spoke for all ages to come, and in these words commissioned you and me to put into practice the things that he did. He also said to his disciples: "Go ye into all the world, and preach the gospel to every creature;" "Heal the sick." For three centuries following the resurrection his full teaching was followed, and his disciples healed the sick by the understanding and the application of the divine truths he taught. Then the healing was discontinued, and for fifteen centuries mankind have depended for the most part upon material means for healing sickness.

In 1866 Mrs. Eddy, who had suffered an accident, was given up by her physician to die. Then it was she sought the only help left her—God. She was healed. Impressed by her experience, she went into retirement for a number of years, searching the Scriptures for guidance. The result was the book "Science and Health with Key to the Scriptures," which sheds light upon the pages of the Bible and gives a spiritual insight and understanding to the promise of God.

A knowledge of these truths is within the reach of all, for God does not withhold Himself from any of His children who seek Him. All that is necessary is that we be convinced in our consciousness that we want the truth, and nothing can keep us from it. We must become as little children, and be like the little ones who were spoken of by Christ Jesus.

❖

[Willis D. McKinstry in *Abilene* (Kan.) *Reflector*]

Under the headlines "Fees for Christian Science Healing Illegal," you run a press item from New York reporting the decision of the appellate division of the supreme court, sustaining a lower court which convicted a Christian Science practitioner for practising medicine without a license. Christian Science healing cannot be connected or associated with the practice of medicine; in fact, Christian Science rejects the use of all material means. It is a result of the prayer which contains a scientific understanding of man's unity with God. If an understanding of the operation of divine law enabled Jesus to heal the sick, it should not be thought incredible for one with a knowledge of the same law to do the same work now. Truth and its manifestations are "the same yesterday, and today, and forever." He who gave the commands, "Go ye into all the world, and preach the gospel," "Heal the sick," also declared, "The laborer is worthy of his hire."

❖

[Henry Deutsch in *Weekly Mirror*, Minneapolis, Minn.]

The Christian Science organization is strictly religious, and perhaps more so than other organizations because it insists upon the whole garment of Christ instead of merely a part thereof. In other words, it not only follows the Master's command to "preach the gospel," but also to "heal the sick." Christian Science is founded strictly on the Bible, and it is readily admitted that its adherents make a closer and more faithful study of this "Book of books" than perhaps any other body of Christian people.

Physical healing is only a part of Christian Science practice, and not the most important part, although it is demanded as a proof of our belief, and it was required by the Master, who said, "These signs shall follow them that believe." The main function of Christian Science is to restore primitive Christianity and regenerate humanity, and experience has demonstrated that the healing of sin and sickness go hand in hand. "Jesus healed sickness and sin by one and the same metaphysical process." "But the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, pp. 210, 150).

❖

[John W. Doorly in *Mirfield and Ravensthorpe Reporter*, Dewsbury, England]

In a recent issue I notice the remarks of the Rev. Mr. —— at the Dewsbury Town Hall. This gentleman states that doctors and nurses could not be done away with, for, with all due respect to Christian Science, medical aid was a necessity. In the first place, will you permit me to state that Christian Scientists have absolutely no desire to do away with doctors or nurses? Their only desire is to have for themselves the remedial agent which they have proved to be the most efficacious; and because this agent happens to be the power of that infinite Mind or intelligence whom men call God, and because they rely wholly and solely for themselves on spiritual means, this does not mean that they desire or request others, who believe that material means are potent to help them, to desist from those means.

However, there are other opinions on the necessity of doctors and nurses, even in the ranks of *materia medica*. Mrs. Eddy cites the statement of the well-known surgeon, Dr. James Johnson: "I declare my conscientious opinion, founded on long observation and reflection, that if there were not a single physician, surgeon, apothecary, man-midwife, chemist, druggist, or drug on the face of the earth, there would be less sickness and less mortality;" also the statement of Dr. Mason Good: "The effects of medicine on the human system are in the highest degree uncertain; except, indeed, that it has already destroyed more lives than war, pestilence, and famine, all combined." (See Science and Health, p. 163.)

Christian Science teaches that the doctrine of Jesus Christ was the "undivided garment" (Science and Health, p. 142); that it demands the healing of the sick and the saving of the sinner; that it was the gospel of the ever-presence and infinite availability of Spirit, and that this healing system, which required neither a doctor nor a nurse, is the only one that will eventually heal and save mankind. This healing was not confined to Jesus or his disciples, since it was practised by Paul and Philip, and by the Christian church for three hundred years after, during which time they frequently raised the dead. Does the reverend gentleman suggest that the aid of a doctor or a nurse was necessary to aid in these accomplishments, and if these acts were accomplished through Christ, is not Christ "the same yesterday, and today, and forever"?

The truth is that theology and ritualism have divorced this gospel of healing the sick and saving the sinner into two different systems, neither of which can permanently heal the sick or save the sinner; therefore theology will have to return to that Christ who heals the sick and saves the sinner through the same process and at all times. "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" Jesus' gospel, however, required that before a man could heal

Digitized by Google

the sick he should understand God, and his life should be one of the highest Christianity; while the practice of medicine requires nothing more than that a man should believe in an inanimate drug, although he might be quite ignorant of the fact of God's existence. It is strange to find a minister of Christ's gospel trying to decry the actual realization and practice of that gospel which he is supposed to teach. That Christian Science has healed unnumbered thousands from every phase of sin and disease, and that without either a doctor or a nurse, is a well authenticated fact, and is only another vital proof that Jesus' gospel was true nineteen hundred years ago and is true today. "It is the spirit that quickeneth; the flesh profiteth nothing;" "Ye shall know the truth, and the truth shall make you free," are today vital facts in Christian Science, and it has well been said that Mrs. Eddy's greatest gift to humanity was that she proved the Bible to be true.

❖

[From *Wakefield (England) Express*]

Alderman Abson created some amusement by expressing his quaint ideas respecting doctors, who, he said, were at the present time a law unto themselves. We had got almost into the way of thinking that if a doctor told us we had the toothache, we believed him! A doctor went to a mason one day and said, "My word, that mortar covers a lot of defects!" "Yes, doctor," replied the mason, "and so does a spade!" He thought that if the money which was now being spent in that direction were diverted into another channel, the results would be of a much happier description. . . . If a child did not get sufficient food, it became an easy prey to the disease they so much dreaded. He believed that more than half the cases of consumption were due to the victims being underfed. He did not know what our forefathers would think if they could come back and see England running mad, as it were, on the abilities of the doctors. Every week they could see in the local paper nearly a column full of names of persons who had passed away, all of whom, he took it, had been attended by doctors. He had read the Biblical history of the world and other works, but nowhere had he read of the creation of a regiment of doctors to cure the imperfections of God's children! He liked to look at things as they were. He was thankful to say that he had not required the services of a doctor up to now,—no doctor had ever entered his bedroom and felt his pulse or examined his tongue! He did not think he should ever invite the attentions of a doctor, unless it were simply to avoid the necessity of an inquest! He thought that as a nation we were going mad on the medical profession, and that if more money were spent upon feeding the children, the nation would profit far more than it was doing at present.

❖

[Charles H. S. King in *La Grande (Ore.) Observer*]

It is a pleasure to note the growing friendliness of the press and of the general public toward Christian Science. Its good works are compelling acknowledgment of its pure teaching. In a recent editorial of this paper on being cheerful, the editor referred in a kindly way to Christian Science, but unconsciously voiced a popular misconception when he said that "Christian Science teaches us that it is possible to cultivate cheerfulness by will-power." We do not wish to make a mountain of a mole-hill, but as no such teaching can be found in any Christian Science literature, we believe the editor will be glad to give space to a correction of his statement.

It would seem that nobody needs the teachings of either religion or philosophy to instruct him in the use of his will-power. All mortals use it more or less until they learn its baneful effects. The mission of Christian Science is corrective. Its purpose is to wean men away from the use of will-power, and to inculcate a consistent reliance on the divine Mind in all situations. The Bible teaches, "Not by might, nor by power, but by my spirit, saith the Lord." Christian Science is founded on the Bible, and the uniqueness of its teaching—like that of the Bible—is that God is the power that heals and regenerates, that "the flesh"—human will, material personality, personal magnetism, etc. —"profiteth nothing."

Proofs of the value of Christian Science are abundant, and the world has been forced to admit the efficacy of its teachings. But the world seems determined to interpret the *modus operandi* of those teachings in its own way. It seems to be reluctant to admit it is the divine Mind alone that heals and regenerates in every case.

Jesus taught that the human will was as the shifting sand, or a "reed shaken with the wind." It was he who said, "Have faith in God." Christian Science is reiterating his marvelous teachings. One advantage of Christian Science is that it shows very clearly how to distinguish between divine power and the carnal human will. Christian Scientists are cheerful, because they have learned this distinction, because they have learned that the "Comforter, . . . even the Spirit of truth," is with them always. This concrete knowledge, and all that it implies, is an unfailing source of joy and satisfaction. Whatever betides, it is a rock upon which to lean.

❖

[Algernon Hervey Bathurst in *East London (England) Advertiser*]

In a recent issue is a paragraph on "Faith as a Cure," which refers to the report of the medical and clerical committee on faith-healing. Will you allow me to say that Christian Science is in no way connected with faith-healing, and that the committee referred to has so far not included Christian Science in the scope of its inquiry. The report, therefore, does not refer to healing by Christian Science treatment.

In mathematics, or when endeavoring to rectify any mistake, there is obviously no good gained by accepting the mistake as part of reality or truth. No mistake can be corrected unless one knows the truth about it. So, in Christian Science the suffering body is not dealt with as something which has to be changed, but through a knowledge of the truth as revealed by Mrs. Eddy in the Christian Science textbook, "Science and Health with Key to the Scriptures," the Christian Scientist is able to know the truth about the difficulty which has presented itself, and this knowledge is the healing of the trouble. Some two thousand years ago Christ Jesus and his disciples understood enough of the law of God, or recognized Truth sufficiently clearly, to be able to heal those who came for help. If it was right for the sick to be healed in this manner two thousand years ago, it is obviously right for disease as well as sin to be destroyed in the same way today.

Now, it is obvious that this method of healing taught and demonstrated by Jesus the Christ and his disciples during the first few centuries of the Christian era, is in no way associated with suggestion or faith-healing, which is after all but a form of suggestion. Christian Science, therefore, is unique, and stands alone in the world as the exact reiteration of the teaching of the Founder of Christianity, who gave the forcible message to humanity that those who understood his teaching would be able to do the works he did.

Editorial

Knowing the Truth

ONE of the first things realized by those who have come to Christian Science for healing, is that in the process of being healed they have been freed from a great weight of fear which has been as a millstone about their necks. Almost thirty years ago, Mrs. Eddy in writing of the prevalence of fear said, "Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air" (Miscellaneous Writings, p. 7). In the years that have passed since these words were written, the discussion of so-called "health conservation," the exploitation of new medical theories, and the publication in the newspapers of articles on the subject of how to keep well, have largely added to the perils of the day.

All these things, though put forward in the press ostensibly for the public good, have catered to the belief that disease is a reality, that it proceeds upon certain well-defined lines and can be cured or checked only through certain material processes and by the administering of certain material remedies. If these material remedies fail, then the case is supposed to be past help. Fortunately for an ever increasing number of people, Christian Science, in direct opposition to this belief, has healed thousands of persons who had been left without hope, from the medical point of view. What is more, Christian Science in restoring them to health has destroyed their fears, not only of disease, but also of all kinds of things, named and nameless, which have interfered with their freedom in all their business, social, and religious activities.

Probably no one who has experienced this healing in Christian Science can look back upon his former experience without wondering how he could have been held in such utter bondage to a nameless fear, or how he could have given such implicit allegiance to something of which he was not conscious. How many of these people would have admitted in the old days that they were lacking in moral courage or that they were ignorant of that truth of which Jesus said, "Ye shall know the truth, and the truth shall make you free"? Almost every one will agree, as a general proposition, that ignorance and fear are copartners, and many will agree—still as a general proposition—that ignorance is the cause of fear; but never since the early days of Christianity until the revelation of Christian Science through the inspired thought of Mrs. Eddy, has the knowing of the truth made men free from both sickness and fear.

The truth which Jesus said should give freedom in this way, was the truth about God and man; namely, that God is omnipotent, omniscient, and omnipresent; that he is not the author of evil, therefore evil does not possess either power or entity; also that man is made in the image and likeness of God, therefore man can be subject only to that which is good. There is unquestionable proof of the truth of this assertion, for we read in the first chapter of Genesis that God declared His creation to be good, and in this account of the spiritual creation we find neither fear nor sin mentioned, but only that which is "good" and "very good."

This truth has been reiterated and reemphasized by Mrs. Eddy in Christian Science, and it is the knowing of this truth which has freed from bondage those who have found it, just as our great Master declared that it should. His reassuring promise, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom," is just as true here and now as it was when it fell from his lips by the shores of Galilee nineteen hundred years ago; and that mankind is learning how to "fear not" is quite evident from the testimonies of those who have been healed through Christian Science. Mrs. Eddy has emphasized this in the chapter Christian Science Practice in Science and Health, and especially on page 442 in the words, "Christian Scientists, be a law to yourselves that mental malpractice cannot harm you either when asleep or when awake." God is omnipotent and omnipresent, and our safety from evil is assured when we know of a certainty that because of His omnipotence and omnipresence evil has neither place nor power.

ARCHIBALD MCLELLAN.

✦

Ignoble Excuse

MORTAL sense has no impulse or tendency that is more subtly debilitating to the spiritual life than that exhibited in the universally prevailing habit of self-excuse. It is a fault which is sure to make itself prominent when men are inquired of as to the non-fulfilment of duty, or asked to give an explanation of their unjust, lustful, or other ignoble conduct. Under such circumstances responsibility is ofttimes denied with a promptness and persistence which belong only to the activities of good, and self-exculpating reasons for delinquency simply flood the situation. The extent and the virtue-benumbing effects of this stumbling render a bit of honest self-analysis well worth while, and in due time the teaching and spirit of Christian Science is sure to impose such an introspection upon every victim of the habit who comes under its influence.

He who seeks to uncover the ramifications of the roots of this error, will find that they are very numerous. First of all, he will note that mortal sense tries to induce us to excuse ourselves not only when brought face to face with the demands of duty, but when blessed with an offer of special privilege. Christ Jesus recognized this last strange phase of the malady in the story told in the fourteenth chapter of Luke, where the self-robbing incongruity of the disposition is shown by those who when honored with an invitation to a great feast, straightway "began to make excuse."

When men are brought to task for their personal weaknesses, their excuses are frequently based on the claim that the ill-doing was the result of inherited impulse or desire, and that they are therefore not to be held responsible. No sane person believes that freedom to do right is denied us because our great-grandfathers may have chosen to do wrong, nevertheless he who in extenuation of depravity says, "That's my nature, and I can't help it," practically argues for the legitimacy of the rule of wrong, or else concedes his unwillingness even to try to do right. He is capitulating with meanness to the utter discredit of manliness. The real ground of every such excuse, as we are perfectly well aware, is the mortal indisposition to deny one's self the indulgence of some form of lust.

The acknowledgment of stupidity which is voiced in the phrase "I didn't think," is also very often called to serve in explanation of selfish obliquities, in which case those indicted undertake to apologize for one discreditable doing by simply naming another! Respecting these, and all kindred excuses, the fact of the matter is plainly put by Mrs. Eddy when she says that "blindness and self-righteousness cling fast to iniquity," and that "though error hides behind a lie and excuses guilt, error cannot forever be concealed" (Science and Health, pp. 448, 542).

Excuses for the neglect of privilege, the failure to utilize opportunity, are much more seemly in appearance, and hence the more likely to deceive the unalert. False modesty, the timidity which shrinks from all notice, and the self-deprecia-

Digitized by Google

tion which so often fools people into thinking that it is a virtue, are the prolific sources of excuse for that belittling of individual capacity which accounts for much mental and spiritual leanness. This self-disparagement, to which so many good and capable people are pitifully prone, hampers human advance right and left. Unnumbered persons are inefficient as the result of lack of courage and of this controlling habit of thus counting themselves out, and to all such Christian Science comes to inaugurate an entirely new order of thought by ruling out the privilege of self-identification with the weakness of mortal sense. It teaches that this procedure is utterly unchristian, because it hides and dishonors the man to whom is given power over "all the power of the enemy;" because it denies the presence and authority of the Christ, the divine idea; because it would disprove St. John's inspiring assurance that "now are we the sons of God."

St. Paul rebuked this enervating weakness, and stood for Christian Science pure and simple, when he taught that we are not to be weaklings, but to "be strong in the Lord, and in the power of his might."

JOHN B. WILLIS.

❖

Mountain Climbing

IN reading the Bible, one is impressed by the numerous references to hills and mountains, these being mainly used to symbolize mental and spiritual exaltation. Thus we find the psalmist asking, "Who shall ascend into the hill of the Lord? or who shall stand in his holy place?" And the answer begins, "He that hath clean hands, and a pure heart." Humanly speaking, the ascent of mountains is usually undertaken by those of a brave and adventurous spirit for the pure joy of the experience, and those best fitted for such attempts gain their fitness by heeding in some measure Paul's advice about keeping the body in subjection. The enervated, sluggish thought would be ill qualified for mountain climbing, or any other brave endeavor, either on the physical plane or the spiritual; therefore we need to get rid of the tendencies which hold mortals down to mere earthliness, and at any cost strive after the attainment of man's divine endowment of purity, health, hardihood, strength, and endurance, for without these the higher altitudes cannot be gained.

In this upward journey from sense to Soul the Christian Scientist should ofttimes pause to recall our revered Leader's words respecting "them who love God," namely, "Stately Science pauses not, but moves before them, a pillar of cloud by day and of fire by night, leading to divine heights" (Science and Health, p. 566). Many who come to Christian Science are in the plight of Lot and his family, when the call of Truth aroused them in the face of impending destruction, with the warning, "Escape for thy life; look not behind thee, . . . escape to the mountains, lest thou be consumed." In many cases the cry of kindred would urge that there be a longer tarrying on the plane of material experimentation, which had failed to bring health or happiness, but the command comes anew in gentle yet insistent tones, "Flee as a bird to your mountain."

As we begin the ascent in Christian Science, we find new and unexpected aids, which we appropriate as material belief is left behind. The children of Israel were afraid even to approach mount Sinai; but Moses went up and communed with God, infinite Mind, and returned with his face shining so that the people could not look upon it. Then we read that as the years went on, up to one hundred and twenty, his vision was undimmed and his strength unabated. In Science and Health (p. 174) we read, "The thunder of Sinai and the Sermon on the Mount are pursuing and will overtake the ages, rebuking in their course all error and proclaiming the kingdom of heaven on earth." The moral law, materially interpreted, is prohibitive and restrictive, but when we ascend to spiritual heights and commune with the infinite source of all law, we find the freedom wherewith Christ makes free,—freedom from sin, disease, and death.

Strangely enough, mortals complain of the process by which the heights of Truth are gained. They deprive themselves of the mountain climber's joy because they fail to heed the apostle's admonition to "lay aside every weight" and to look unto Jesus, who went bravely forward, enduring all things for "the joy that was set before him," and Paul adds that we should consider this, lest we be "wearied and faint." Here we may remember that the ordinary mountain climber finds both joy and strength in breathing deeply the higher, purer air, and so should we on our spiritual journey. Even if we are forced to take the earlier stages to seek relief from suffering, we should press on for the pure joy in it, until the weight of belief in fleshliness is dropped and we shall "mount up with wings as eagles."

St. John tells us in glowing words how he was carried up to "a great and high mountain" and shown the city of our God descending to men, and in its foundations were the names of those men who wrought with the Master in healing the sick. John also heard a voice from heaven which declared that sin, sorrow, and death should be no more. The Master said that in the great final struggles of humanity we should flee to the mountains, which surely means that we should press on till the mists of mortal belief, hate and fear, are left behind, and we enter upon our heritage in the realm of Spirit.

ANNIE M. KNOTT.

Among the Churches

Current Notes

GREAT FALLS, MONT.—The Christian Science distribution committee of Great Falls took advantage of an opportunity of distributing the *Monitor* and other Christian Science literature on the fiftieth anniversary of the organization of Montana territory, which was commemorated by a golden jubilee celebration held here from the tenth to the fifteenth of August. After the committee decided to have a tent where free Christian Science literature could be obtained, the owner of a well-located vacant lot furnished the site free of charge. This reading-tent was well equipped with all comforts necessary for the occasion, and there was a loving cooperation of all Christian Scientists in making this work a success. The tent was open from nine in the morning to nine in the evening. Copies of the *Journal, Sentinel, Herold, Monitor,* and pamphlets on Christian Science were distributed, and information was given regarding *The Christian Science Monitor,* its origin and purpose. The *Monitor* of Aug. 8 carried an article on the jubilee, and there were one thousand copies of this issue distributed.—*Correspondence.*

PARKERSBURG, W. VA.—The members of First Church of Christ, Scientist, of this city were so well pleased with the results of the booth which was maintained at the West Virginia fair here last year, that it was unanimously decided to have the same this year at the fair, which closed Friday night, Aug. 21. More than thirty names were added in this way to the mailing list of the distribution committee, and nearly two hundred copies of the *Sentinel* and *Monitor* were given out to those who manifested an interest in Christian Science.

PRETORIA, SOUTH AFRICA.—The Christian Science reading-tent, maintained by the Christian Science Society of Pretoria, at the recent agricultural show held in this town, was greatly appreciated by the many who took advantage of the comfort and the welcome found there. About eighty copies of the *Monitor* and about the same number of the *Sentinel*, and fifty copies of the *North American Review* containing an article on Christian Science, also several Dutch pamphlets, were distributed. There is a ready acceptance of all the Christian Science literature in Pretoria. Several dentists, all the police stations, most of the hospitals, the fire station, the central prison, and several other public places are very pleased to receive it.—*Correspondence.*

LOUISVILLE, KY.—First Church of Christ, Scientist, has bought for twenty-eight thousand dollars the property at the southeast corner of Third and Ormsby avenues, and will proceed with plans for a new church. The property on the southwest corner of Third and Ormsby avenues was given in part payment for the new site. The old site was found to be too small for the purposes of the church, which has grown extensively during the past year. The new site has a frontage of one hundred feet and is two hundred feet deep. When the new church is built the present edifice on Third street, between St. Catherine and Oak streets, will be sold.

The Lectures

Charles City, Iowa

H. J. Deards, in introducing Virgil O. Strickler, who spoke on Christian Science at the Opera House, said in part:—

I trust you will pardon me if I make a few personal remarks in regard to how I became interested in Christian Science. As a young man I was very active in church work, especially in Christian Endeavor and the Sunday school. When I was about eighteen years of age, I was elected superintendent of a Sunday school in Wisconsin, which position I held for seven years. As I stood looking into the faces of the children as they took their places in the Sunday school room, just as I stand before you tonight looking into your faces, quite often I found myself asking the questions: "What am I doing for these little children? In what way am I helping them in their daily life? How can I help them to meet their every-day problems?" The only answer I could give was that I was trying to help them live clean, pure lives, and telling them about a heaven hereafter.

A few years later I moved to Des Moines, and was again at the head of a Sunday school. Unconsciously I asked the same questions as before, and I assure you the answer was very unsatisfactory. Then my attention was called to Christian Scientists. When I use that term, I do not mean those who simply bear the name, but those who are living the teachings of Christian Science, whose faces reflect divine Love. As I watched them, as I drew closer to them, I found that they had a religion not only for Sunday morning but for every day in the week. They got great pleasure out of talking about it, and received help from it in every condition of life.

About this time I was in Chicago on a Wednesday evening. It was a stormy night, and I hardly thought it would pay me to attend church. Nevertheless I went, and there I found an audience of twelve or thirteen hundred people. I listened to testimonies from those who had been connected with nearly every religious organization of which I had ever heard. Some testified that they had been to the bottom of the gutter, but by means of Christian Science they had been lifted up, and had been able to claim their birthright and become clean, honorable citizens. Others told of the healing of many so-called incurable diseases. After the service was over and I mingled with the audience as it dispersed, I did not hear any one asking how this person or that was; nor did I hear any one talking about social events. Every one was happy in talking about the blessings he had received from reading the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

When I returned to my hotel and sat down to think over what I had heard that evening, I realized that I had found the answer to the question which had so often perplexed me. Here was a religion based on the simple teachings of Christ, a religion that would teach the children about divine Love, and which would help them in their every-day life to meet every problem as it arose, and to realize that "the kingdom of heaven is at hand."—*Correspondence.*

❖

Augusta, Ga.

Judge Clifford P. Smith, lecturing on Christian Science, was introduced by William B. Brown, first reader of the local church, who said in part:—

The greatest need of mankind today is to know God and His laws, and how to apply these laws in our daily living. That this is possible, has been demonstrated beyond successful contradiction, practically all manner of diseases having been healed, from the simplest to the so-called incurable, poverty has been overcome, and business problems have been solved. All this has been accomplished by the understanding and application of spiritual law as taught in Christian Science.—*Correspondence.*

❖

Richmond, Surrey, England

A lecture on Christian Science was given by Bicknell Young at the Hippodrome, the largest hall in the town, before a crowded audience, the theater being packed and a large number unable to obtain admission. Maj. W. Cyprian Bridge of the war office occupied the chair, and in introducing the lecturer said in part:—

It is a great pleasure to me to introduce the lecturer this afternoon, because I am always glad to be publicly identified with the great cause of Christian Science, which is so irresistibly spreading its benign influence over the whole world, and is in my opinion destined to relieve mankind of all the ills with which it seems to be oppressed. Quite early in life I found that I had no use for the conventional anthropomorphic God as humanly conceived. Then a few years ago Christian Science found me and mine, and revealed to us in convincing fashion that God is a God of love and goodness only, knowing and tolerating naught that is evil. This revelation has brought to us a measure of peace, health, and confidence such as previously seemed impossible of attainment, and for this we are constantly grateful.

Correspondence.

❖

Baltimore, Md.

The introductory words of Senator John D. Works to the lecture on Christian Science by Clarence W. Chadwick were as follows:—

The whole world, except perhaps a few self-satisfied teachers or preachers, is seeking and searching and yearning for the true religion that will satisfy the needs of mankind now and for all time. There is but one religion, as there is but one God; nevertheless we have a thousand different churches,

Digitized by Google

denominations, and sects striving to serve the one God, but in many different ways. We have not been content to follow the simple teachings of Jesus of Nazareth, but have gone off after false gods, resulting in minds many and confused. The humble Nazarene taught the true religion, not by word alone, but by example. He "went about doing good." He not only preached the gospel, but healed the sick and sinful. He understood and applied the great divine Principle that healeth all our diseases.

Christian Scientists believe in the teachings of the great Master in their fulness. They are obeying his command to "preach the gospel," and striving to fulfil his other and equally imperative command to "heal the sick." Thousands are ready to bear willing witness to the healing of sin, sickness, and disease through the beneficent ministrations of Christian Science. I speak feelingly on this subject, because I was healed by this means. I was a great sufferer for many years from a complication of diseases, and was brought near to death's door. I had tried physicians of many schools without obtaining relief. In a state of desperation I resorted to Christian Science treatment for help and was healed. I knew practically nothing about Christian Science; I was a disbeliever and scoffed at it, until I was convinced by my own experience. Since then, I have known personally of hundreds of other cases of healing, some of them of diseases known as incurable.—*Correspondence.*

Lectures to be Delivered

Albuquerque, N. Mex.—*Virgil O. Strickler*, Elks Opera House, 3:30 p.m., Oct. 25.

Atlanta, Ga.—*Bliss Knapp*, Church Edifice, Peachtree and 15th streets, 8:15 p.m., Oct. 27.

Belfast, County Antrim, Ireland.—*Col. William E. Fell*, Ulster Minor Hall, 8 p.m., Nov. 5.

Bromley, Kent, England.—*William R. Rathvon*, Bell Hotel, 3 p.m., Nov. 8.

Testimonies of Healing

I am truly thankful for what God has done for me through the agency of Christian Science. It came to me at a time when death and the grave seemed very near. I had called in an attorney and had had my business affairs fixed up just as I wanted to leave them. A daughter who lived within call of my home and had been with me through many days of extreme suffering, when doctors and medicine had failed to give any relief, had notified the other members of my family of my condition and had advised them that if they wished to see me alive they would have to come at once.

These notices soon brought to my home four of my daughters who lived in different places around the country, and to all human belief I had but a short time to be with them. When in that condition, Christian Science came to my rescue. One daughter, who lived in Denver, had become interested in Christian Science, and on her arrival she commenced to apply it for me, saying that it was curing many cases in Denver which the doctors had given up as fatal, and she believed it would help me. My reply was, that Christian Science could do nothing for me and I did not want it, that my own church was good enough for me,—I had been a Methodist all my life and I was content to die one. Here the daughter who lived near me joined in urging Christian Science treatment, saying that I was very sick and that doctors and medicine had not helped me, and that even if Christian Science did not help me, it could do no harm.

There were no practitioners in the town where I was then living, so my daughters asked my consent to write to a Scientist in Denver, requesting her to give me absent treatment. I thought it the height of absurdity to think that a person two hundred and fifty miles away could do me any good, and I lying there at the point of death; but to satisfy them I said they could do as they wished, I did not care. The next mail took a letter addressed to a practitioner in Denver, and Christian Science healed me of all my diseases and fear, and the healing was perfect and permanent. Though that was about twenty years ago, I have had no need for doctors or medicine since, have had no sickness, and seldom an ache or a pain, and now, at the age of ninety years, I am still in good health, free from sickness, suffering, or fear. While a member of a Christian church for nearly fifty years, trying to serve God through fear of punishment, I was in constant dread lest at some time, in some way, I should unconsciously break one of His laws and be kept out of heaven for so doing. Christian Science has, however, healed me of both sickness and fear.

I am truly thankful to God, and grateful to Mrs. Eddy for what has been done and is still being done for me. My heart also goes out in gratitude to the two loving daughters who were instrumental in bringing Christian Science to me; they are still with me, and are doing all they can to make me comfortable and happy.

PHILETUS H. WILCOX, Huntington Park, Cal.

❖

About ten years ago I had what was diagnosed as an attack of congestion of the brain, due partly to heat prostration and partly to overwork and worry over an accumulation of troubles. This attack left me a mental and physical wreck, so that it became the regulation thing for me to spend part of each year in the hospital, each breakdown being more serious and protracted than the preceding one. I suffered from hemorrhages in various forms, ulceration of the stomach and intestines, heart weakness, etc.; in fact, I seemed to be having a taste of all the ills "that flesh is heir to."

In December, 1910, I was very ill, and physicians said I could not live. I had previously submitted to an operation and was now threatened with another. The doctors said there was a complication of difficulties, any one of which was likely to prove fatal at any moment; I might recover, but the relief would be only temporary, for I could never be well. It was the second time this verdict had been pronounced upon me. I always had the best of physicians, and feel sure they gave me the highest expression of love that they knew; but the fact that no two physicians agreed as to the cause of all my ills, had weakened my faith in their system of healing. I then determined to overcome my weakness by sheer will-power. I was better for a while, but this effort proved disastrous, since it sapped my mental strength, and when I found I was losing ground again, a suicidal mania took possession of me. I felt that if I could not be well I might as well die, and began deliberately to make plans for that end.

In July, 1911, I went on a vacation trip, and felt that this would be a good opportunity for me to slip quietly out of existence when away among strangers. While in Seattle, I visited a Christian Science friend, and some impulse prompted me to lay my troubles before her and ask her if she thought Science could help me. She told me her own experience, and upon the strength of her advice I decided to give Christian Science a trial. I returned to Portland and sought a practitioner, feeling like the prisoner who seeks the court of last resort. Unlike the bearing of a stern justice, however, there was such a warmth of love in the practitioner's greeting that I broke down completely, and when I was sufficiently composed to grasp the meaning of her words, all I could say was, "It is too good to be true!"

As I said before, I went to the practitioner feeling like a condemned prisoner. When I left her an hour and a half later, I felt as if my troubles had all vanished like mists before the sun. The joy of living filled my heart, and I realized for the first time in my life what is meant by the peace that passeth understanding. I think, however, my greatest sensation was one of surprise at the change in me in that short hour. It was a veritable resurrection. It also awakened in me a desire to know more of this healing truth, and I immediately began the study of the Bible and the textbook, "Science and Health with Key to the Scriptures." Since then I have had no other physician than Christian Science, and have found that divine Love does indeed meet every human need.

If I could command all human language, it would be inadequate to express my gratitude for what Christian Science has done for me.—GEORGENE L. MILLER, Portland, Ore.

❖

I gladly send my contribution in regard to the regenerating and healing power of Christian Science. I know that it is of God, for it has healed me. From childhood I was troubled with a weak stomach; hardly anything I ate seemed to agree with me. Mother would give different kinds of medicine to relieve me, and some of the time I would feel real well; then I would have another attack, and it was laid to some kind of food I had eaten. I was always taking medicine. After I grew to womanhood, whenever I had a severe spell I would go to a physician for relief. I did so until I got discouraged and thought there was no cure for me, so I quit taking so much medicine. I soon became subject to bad spells which affected my heart. I went to a doctor about it, and he said that the trouble was caused by my stomach. He gave me medicine, but did not cure me.

Digitized by Google

In the winter of 1909 I was getting much reduced in flesh and weak, for I could not eat enough to sustain me. I could not lie down at night because it affected my heart, and so we sent back East to a heart specialist, who relieved me at first; but I kept on growing weaker and thinner, till my husband wanted me to have a home doctor. We got one of the best physicians and surgeons in Olympia, Wash., who gave me a thorough examination. He said he could do nothing for the heart, because if he gave me anything to relieve that, it would hurt the stomach, and *vice versa*. All hope was gone, and I made ready to pass from this stage of action to the great beyond.

At this time we got a letter from my husband's sister-in-law, asking why we did not try Christian Science. We knew nothing of this teaching, having never read the text-book, but my husband wanted me to try it. There was a small society in Olympia, and I asked him one Sunday morning to go there and see if he could buy the text-book. He did so, and brought home "Science and Health with Key to the Scriptures" and gave it to me; then he went out. I opened the book at the Preface, and began to read: "To those leaning on the sustaining infinite, today is big with blessings" (p. vii). Those were soothing and strengthening words to me. I read on and on, and before I got through reading the chapter on Prayer, unutterable peace seemed to permeate my whole being. My heart quieted, and I felt as though I was being born again; such a spiritual uplift I never experienced before. I knew that I had found the panacea for all disease, and I said, "Man's extremity is God's opportunity." I kept right on reading till bedtime. I took no medicine that night, and awoke with a very bad spell with my heart. Then I reached for the medicine, but drew my hand back and said, "Get thee behind me, Satan." I told my husband that I was being healed, and in three days I went to the table and ate what the rest did. I have eaten normally ever since, and have done my own work.

I give God all the glory and praise through Christ for my healing, and my heart goes out in gratitude and love to Mrs. Eddy for all that she has done for men. Surely she was divinely inspired to discover the new-old religion that Christ taught and demonstrated when he was here in the flesh.

MARY S. OLNEY, Tumwater, Wash.

It is with pleasure and gratitude that I testify to the truth of the statement sent to you for publication by my wife. When all material remedies had failed, we were led to Christian Science, and she then learned of the truth that makes us free.—JOHN D. OLNEY, Tumwater, Wash.

✧

In writing of the countless blessings that my three years' study of Christian Science has brought, it seems to me that I am writing personally to all who need help. It is my earnest wish that all who read this testimony may be helped to become free from discordant conditions, whether they be of sin, sickness, sorrow, or limitation.

The fourth in a family of eight, with loving and broad-minded parents, it had always seemed that we were very greatly blessed, having most excellent health and cherishing deep love for each other. As we grew, we were allowed to choose for ourselves in a religious way, and taught to recognize the good in those of different thought. Since childhood, I have been a close Bible reader. At twelve years of age I united with the little church near my home, entirely of my own accord, but with my mother's approval.

It happened that my path led where I almost continually heard different views concerning religion, medicine, and politics discussed, always, however, by people who had made considerable study of their various beliefs. I always enjoyed these discussions, and thought them educative, for they showed me that another person's thoughts were as valuable to him as mine were to me. I was not influenced in any way by them, perhaps only broadened, for the every-day lives of some of these people showed plainly that they were making a right use of the good in their belief, and the rest was God's affair, not mine. The more I studied, the more I wondered, "What is the truth?" Back of all I knew there was a positive good, a certain truth, one exact answer, the ultimate fact!

Gradually, as there seemed to be nothing in any teaching I had had to give me an answer, I lost all confidence in religion, and later, after many trials, in medicine. Religion and medicine had always been connected in my mind; unconsciously almost, I wondered why they were ever thought of separately. One of the most earnest Christians I have ever known, outside of Christian Science, was one who, though not entertaining religious convictions in the ordinary sense, went far and wide about the town and country, winter and summer, doing what he could as physician and surgeon to relieve mankind, rich and poor alike—a doctor of the old school; indeed, very often receiving only thanks for his efforts, and occasionally not even that.

It is only since I have come into Science that I can appreciate how boundless gratitude can be, and it is only since then that I can appreciate all that friends and physicians tried to do for me as health and a dear one seemed to pass away. I thought it only fair to give each physician and his prescriptions an absolutely thorough trial, so for a year and a half all that was known in medicine for one particular ailment was tried faithfully, but I seemed to grow rapidly worse. My own relatives who are physicians believe in giving but very little medicine and give even less to their own families, and I wondered at that; so I tried other cures without medicine, but to no avail.

Then, when I seemed physically very weak indeed, came the first great sorrow of my life, the passing away, under an operation, of my beloved mother! In the hospital with her that night I tried to pray, and then I thought, "Surely, if there is a God, He must be able and willing to take care of one so dear; and if there is no God, then it is useless to pray!" Certainly through the bitterness and sadness God was with me, or the light could not have come so clearly as it did soon after this. When all hope of regaining health had been given up by my physicians, relatives, and myself, I went to tell one dear friend good-by for all time. As I told her of my discouragement, she said, "Why not let God cure you?" My answer was sudden, and it was, "Don't speak to me of God!" It seemed the time had come, however, for in a few simple words she and her daughter made clear to me the truth that God is good. At once the way was made plain, and through all false teaching, back of all old prejudice, above all thoughts of opposition, I studied! And how soon I found that there really was an answer to every question, even my old wonder, "What is the truth?"

I had heard of Christian Science and had known this friend was a Scientist, but I thought of it as some peculiar religious fad, and was more prejudiced at the thought of a "woman's book" than at what I had heard of its teaching. Of course, I had often heard Christian Science mentioned in various ways by doctors and ministers and others, so it was no new name to me, but such a new-old answer. I knew I was well at once, and little by little I learned how and why it could be. The more I study, the more clearly I see the perfection of God's spiritual creation. I am grateful beyond expression, but I can only prove this by my good work for my fellow men.

Digitized by Google

Every day new proof is given me that truth is scientific and that Science is the truth. My little son is able, in a marvelous way, to demonstrate Science in every-day childish happenings, and often he has made plain to me the way in greater things.

It has often surprised me to see in the Bible and Science and Health, thoughts expressed that I had often felt and wished I could express. It is so grand to know that God's work is done and that it is perfect, and as we demonstrate one problem we will be qualifying to undertake the next,—and the possibilities are unlimited. I am profoundly thankful every hour of every day for that unselfish life which was devoted to making the Science of life plain to us all. The Bible seems like a glorious book to me now, since the "Key" has opened it again.

MARIE ENGLE-JOHNSON, Palacios, Texas.

❖

Christian Science has brought me so many blessings, and brought them so naturally, that I realize their extent only as I look back on former conditions. I first turned to it for physical healing, having suffered for over ten years from a skin disease of the most aggravated type. This was not painful, but being located on the face it was a disfigurement, and caused me great annoyance. I faithfully tried every remedy I heard of, and was treated by many physicians, among them being specialists of both New York and Boston, but I received no help; in fact, the more material remedies I used, the worse the trouble seemed to grow.

Finally I turned to Christian Science, hoping that there I might find the desired help. I read the text-book, "Science and Health with Key to the Scriptures," and seemed to gain a fair understanding. I was treated by a Christian Science practitioner, and I even had class instruction, but still the healing was delayed. I had done all that I knew how to do, and there seemed nothing left but to do as the apostle Paul says, "Having done all, to stand,"—not to turn back, not to lose faith, but to stand. It required three years of just such standing before the perfect healing came, but with it there also came the understanding which knows that our way is not God's way. I had planned how that healing should come about, never realizing the changes which must be wrought in character and in ways of thinking. When these were effected, the physical healing naturally followed.

I can feel nothing but gratitude now for this apparently slow healing. Patience and experience have given me a firm foundation, the faith that Christian Science never fails us. If we are willing to do our part, to take each step as we see it, and even when appearances are most discouraging if we are willing to stand, the desired help must come. The Bible is filled with just such promises, and they cannot fail. We of this age are especially blessed in having had a Leader who could show us how to make these promises available.

MARTHA SHOPBELL, Peoria, Ill.

❖

It is with a deep and growing sense of gratitude and love that I would speak of the healing and regeneration which Christian Science has brought to me. For eight years it has been my remedy for all ills, physical, mental, and moral, but only within the last year have I experienced the joy and peace which greater light has brought. Before this truth came to me, I was discontented, unhappy, and suffering from one physical ill after another, with a fear of God rather than love for Him, and holding a violent prejudice toward what I supposed Christian Science to be.

While suffering from nervous breakdown, and feeling too miserable and discouraged to interest myself in anything, some Christian Science literature was loaned me. As I read, the thought came that this was not what I had supposed Christian Science to be, so I got up from my couch, put on my things, and sought the Christian Science reading-room, where I poured out a torrent of questions and asked an explanation of all the adverse things I had heard. Answers were lovingly given, and they satisfied me. I took home a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and as I read day after day with increasing interest, it seemed so good and true and practical that it gave me courage. My physical condition improved proportionately, until after a few weeks' reading the most distressing features disappeared. I also gave up the use of glasses, which I had worn for a long time when reading. Since then all physical ailments have yielded to the application of the teaching of Christian Science. An injured ankle was healed in less than a week with no pain after the first ten minutes. Throat trouble, also some temperamental faults, have yielded to the power of good. I owe much to the patience and loving-kindness of those who have helped me to overcome this form of sin, for this freedom means more to me than all the other healing.

How good it is to know that in this teaching all may learn the truth about God and man, and so find a remedy for every ill known to mortals, if we patiently apply the Principle and take each step as it is unfolded to us. For this greatest of blessings, this priceless treasure, I am deeply thankful to God, and grateful to our dear Leader, Mrs. Eddy, whose purity and faithfulness have given us our text-book, wherein we may learn the truth which heals and makes free, as Jesus said it would.—E. FRIEDA DRISCOLL, Brookline, Mass.

❖

I have been receiving the blessings of Christian Science for three years, and I want to send a testimony in the hope that it may help some one to know of this blessed truth. I first heard of Christian Science when in a hospital, after an operation. I was told by a dear lady that she had been healed by Christian Science of the same trouble for which I had just been operated on. That seemed to arouse my curiosity; and to think I could have been healed without this dreaded operation!

I did not take up Christian Science then, but later a friend loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. For years I had been a sufferer from backache, caused by an injury to the spine, the result of a fall from a horse. I had taken special treatment for relief, but was told I would never be well and would become paralyzed. I could never exert myself, or even do my own housework, but while reading Science and Health, I suddenly realized that the pain in my back had ceased. I had been living in a very unhappy state, with the constant fear of being helpless, but after trying to live as near to the teachings of Mrs. Eddy's book as I could, I began to feel happy and to know my true selfhood as God's perfect child.

Now, after only three years spent in reading this inspiring book, attending services regularly, loving my neighbor as myself, and praying daily to have more understanding, and more of that Mind in me "which was also in Christ Jesus," I find myself a well woman. My back is entirely healed, as well as numerous other ailments. My three children and myself have not taken any medicine for three years, and know of only one physician, God. I used to take great pride in having a fine, well-equipped medicine chest, and it seemed hard for me to give it up. I asked a dear friend how long one should study Christian Science before giving up drugs, and she said

Digitized by Google

as soon as my faith became strong enough I would destroy them all. So one evening I gathered them together and threw them all away, and from that day to this we have not taken or needed any drugs.

The physical healing is great beyond words, but the spiritual uplift is the sweetest. To be able to commune with God as a God who is Love, at all times and in all places to feel His presence, is far greater than any physical healing could be. My prayer is that I may know more of this truth and be able to help others to be as happy as I am.

Just recently a gentleman who saw me reading "The Life of Mary Baker Eddy," asked me if I believed in Mrs. Eddy's teachings. I said, "Indeed I do," and asked him if he did. He said that he had heard a great many things which were not in her favor. I asked him if he was sure that what he heard was true, and he said he had no proof. Then he told me he had had a pain in his side for five years and doctors believed it due to an abnormal growth, and he asked if I thought Christian Science could cure him. I said I knew it could, and offered to give him a treatment. He said he would be glad to try something for relief. In a couple of days I met him, and at once he said he had had the best of sleep and was entirely free from pain. He is now trying to be a devout Christian Scientist, and says he is so thankful for the copies of the *Sentinel* and the *Journal* that I give him. He reads them many times, and is very earnest.

I, too, am very thankful to God for leading me all the way, and grateful to Mrs. Eddy for helping us with her books to have the new heaven and the new earth appear. I pray daily to have more of that Mind in me "which was also in Christ Jesus."—Ella M. Bishop, Santa Cruz, Cal.

✧

I had suffered many years with rheumatism, and the last attack was the worst I ever had. Medicine did not relieve me any longer, so my wife, who had previously been healed through Christian Science treatment, of ailments she had had for years, begged me to have a Christian Science practitioner in to help me. We therefore called a practitioner, and I was helped quickly, so that I was able to be at my work in three weeks. I was permanently healed at that time.

H. L. Hawkins, Seattle, Wash.

[Written for the *Sentinel*]

Autumn Time

Warren C. Klein

The melodies of Love resound today
O'er hill and vale and the maturing field;
They tell old truths, e'en of glad beauty's sway,
And herald loud the coming of the yield.

The children of the woods parade today
In royal vestments and in dress divine,—
Enduring tones of brown and tranquil gray,
With deep greens dipped in richest crimson wine.

The eyes of heaven are mirrored clearer now,
In sparkling roughs and calms of sapphire hue;
The brooks' cool waters are made sweeter now,
For they are nourished by celestial dew.

The melodies of God resound sincere
In grateful hearts, at home, in lane and street;
The harvests white of love and light appear,
And all kneel meekly at the Master's feet.

From Our Exchanges

[*The Watchman-Examiner*]

Amid all this bustle of commerce and riot of grossest sensualism was born and grew to manhood and mature age a man who was chosen of God to be the model for all generations of piety, fidelity, faith, obedience,—a man so intimate in his relations with the Divine Being that he was honored with the noblest of all titles, "Friend of God." At some crucial hour in his life, under circumstances, no doubt, profoundly solemn and impressive, the divine voice penetrated the recesses of his spirit, and he knew that he was "called of God." How gladly would we know when and where and how the God of glory appeared to him. But the voice came, and found an answer in the heart of this man of Ur. And at that moment the history of mankind began to move in a new channel.

The call of Abraham was one of the most momentous that ever came from the heart of God to the heart of man. From his acceptance of it dated the separation of the chosen people from surrounding nations, and the marvelous history of that strange race, stiff-necked and uncircumcised in heart and ears, yet held by the grip of almightiness to its providential mission till the fulness of time came when the righteous one appeared to fulfil, in his larger and more glorious sense, the promise made to Abraham.

How shall we account for this call, this history, and this larger fulfilment of the promise? Is it all a myth? Was there really no call? Was there no divine purpose running through the age-long history? Was Abraham himself an abstraction—a sort of mythological personification of the *Zeitgeist*? To an affirmative answer some modern critical speculations would inevitably lead. But they find no warrant in the lifelike story of the man of Ur, or in the manifestly guided history of the Hebrew people, or in the holy realities of the gospel of grace that Jesus Christ by his life and death and exaltation revealed to the world, or in the blessed experiences of the power of his indwelling life to which rejoicing multitudes through all the intervening centuries have borne glad witness. The call to Abraham was a supernatural call, or the testimony of history is a mockery and human experience a flippant lie.

[*The Christian Work and Evangelist*]

The right should always speak, even though it do so while being crucified. The resurrection is sure to come out of every Calvary. But here is our point: The poor Pope dies crying for peace; the cardinals are praying for peace; the Protestant churches are likewise rebuking the nations and in our own land are urging the President of the United States to offer mediation to the warring powers. But if the church of Austria, France, Germany, Great Britain, Italy, and the United States had begun, say, only fifty years ago proclaiming the gospel of good will among nations as a fundamental doctrine of Christianity, calling nations to account before the same bar of judgment as that to which she brought individuals, approving and rebuking them by the same standards, war would probably have become impossible by this time.

If the church had universally begun preaching fifty years ago that war and Christianity had no more in common than drunkenness, adultery, murder, and lying have with it, war would have by this time been held in something of that same horror that good people hold these other things. If the Catholic church had announced fifty years ago that any man who took the sword, be he emperor or peasant, excepting in defense of his invaded country or in defense of justice, would

Digitized by Google

be excommunicated, there would be a great difference in the attitude of men toward this foulest crime earth knows. If the Protestant churches had unanimously taught that when a man became a member of Christ's church he arose into citizenship in a kingdom which knew no national or racial bonds, neither Greek, barbarian, nor Scythian, but his chief allegiance was to Jesus Christ and his closest tie was with all Christians,—his real brothers,—there would today be a sense of kinship among all Christians that would make war of Christian against Christian abhorrent. . . . If the whole church had stood as a rock against this entire business of armament and militarism, then there would have been none of this making every nation a huge, menacing powder factory, ready to go off at the dropping of one match.

If our churches had for fifty years been everywhere teaching our children the heroism of peace instead of war, teaching that the good, great men were not the generals, the conquerors, the devastators, the ambitious, the destroyers, the warriors, but the good, great men were the saviors of the world who, with Jesus Christ, were great in moral power, warriors in the realm of the spirit, while the gentle, lovable, humane, mild, were the men who saved, gave, loved, blessed, cherished their fellow men,—if the church had taught that the heroes of the spirit were the real heroes, their children would have looked upon the men who slaughtered one another on fields of battle as now they look upon men who kill one another in brawls upon the street.

[*Zion's Herald*]

The Christian church needs preeminently two things,—truth and power; or, to put it another way, fact and force. It is the blessed work of the Holy Spirit to supply these two necessities,—to take of the truth of Christ and show it unto men, and to make the truth that is introduced into the mind to flame out intensely in the life. Facts of themselves do not create forces. A man might be versed in all the learning of the Egyptians and still be hard as Pharaoh; he might know as much as Solomon and be a voluptuary. To understand the law of right is not necessarily to do right, as Paul confessed when he lamented the fact that the lower law in his members warred against the higher. But when the "Spirit of truth" comes upon men, he transforms the theorist into an ardent worker, and makes old and familiar knowledge to glow as with Sinaitic fire, or with Calvary's winsome radiance.

There is need, then, to cultivate a love for truth, to nerve ourselves to pay the price of truth, and to seek for the baptism of the Spirit, in order that whatever truth we already possess may in turn possess us, becoming transmuted into power for evangelism and into forceful faith. The early Christians welcomed the Holy Spirit in his twofold function of enlightener and inspirer, and the church today, if it would win the world to Christ, must in like manner look to him both for truth and power.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

The peace of God is a real thing, and it is always born of the surrendered will. It is not God's compensation for shattered earthly hopes, but the promise that they shall be more abundantly fulfilled than at present you are capable of understanding. Get up high, lonely, sorrowful soul, when you want to look at the promised land you are forbidden to enter now. Get up high, and God will lift you higher still. Get up high to say farewell to earthly things, and the vision will open before you of an "inheritance incorruptible, and undefiled, and that fadeth not away." Get up high, and you shall look upon the face of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10½ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $3.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

There was completed at Chicago last week the twelve million dollar home of the Continental and Commercial National Bank, said to be in some respects the largest bank in the world, and in point of deposits the second largest bank in the United States. The building is twenty-one stories in height, and altogether there are twenty-six acres of floor space, of which the entire first and second floors and portions of other floors are occupied by three banks, the remainder by some two thousand offices. The three banks represent combined capital,—surplus and undivided profits of forty-one million five hundred thousand dollars and average deposits of over two hundred and thirty-five million dollars. Their employees number some eleven hundred persons. They have a total of about one hundred and two thousand commercial, trust, and savings accounts, whose average credits amount to over forty-five million dollars per day. Receipts and disbursements of money daily are estimated at a million and a half, and clearings both "out and in" amount to some thirty million more.

At the opening of the season the Massachusetts Forestry Association offered as a prize one mile of shade-trees to be planted in the city or town that during the summer planted the largest number of shade-trees in proportion to its population, size of trees and workmanship to be considered. Scituate was the town that carried off the prize. Fifty-eight cities and towns entered the contest, but only fifty-four carried it through to its conclusion. The total number of shade-trees planted in the contest was 12,498, spreading out approximately sixty miles.

Next year the association proposes to give four prizes of one hundred shade-trees in each. In order that the large cities may have an opportunity to compete on a fair basis, the association has divided the contestants into four groups, the first to consist of towns of less than one thousand inhabitants; the second of towns between one thousand and three thousand; the third, of cities and towns having between three thousand and ten thousand, and the fourth, of cities of more than ten thousand.

The interstate commerce commission has begun preliminary inquiries into the production, transportation, and marketing of crude petroleum in the United States. No dates have been set for hearings, and it is not expected that public hearings will be held till some time next year. The action resulted from a resolution of the Senate asking the commissioner to investigate the conditions prevailing in the states of New York, Pennsylvania, West Virginia, Oklahoma, and Ohio, or elsewhere, respecting oil production and trade, and whether the charge is true that substantially the same interests have operated the pipe-lines, made the market, bought the crude oil, refined it, and fixed the price of the refined products. The commission is also directed to ascertain whether any pipeline companies have recently stopped taking all or any part of the crude oil produced by independent operators.

The development commissioners are prepared, within the limits of the funds available and subject to treasury sanction, to recommend advances to the board of agriculture for Scotland for approved schemes of afforestation of land leased from private owners. In order that as much as possible of the money should be spent on actual planting, the commissioners hope that landowners will be willing to lease land for afforestation to the board, on the principle that no return is to be paid for the use of the land until the proceeds of the afforestation accrue, and that the proceeds shall then be divided between the landowner or his representatives and the board, according to the proportion which the rental value of the land bears to the sum required for the afforestation.

The proposed consolidation of the Hartford Carpet Company and the Bigelow Carpet Corporation is a success. It is understood that ninety per cent of the stockholders of these two companies have already agreed to this consolidation, and the syndicate managers are in a position to declare the plan operative. The consolidation will produce a company with about thirteen million dollars of annual business, and will be the second largest carpet undertaking in the country. The two concerns are said to be complementary to each other and are competitors in respect to only thirty per cent of their business.

The fact that the Hudson river is affected by tides as far as Troy, N. Y., one hundred and fifty miles from the sea, is advanced in support of the project now being advocated of dredging the stream so that the channel shall be twenty-seven feet deep instead of fourteen feet, as at present. This step, it is urged, would enable ships to transfer their freight to barges at Troy instead of at points farther down the river, thus expediting business along the Erie canal, which bears the traffic between the Great lakes and the Hudson and the Champlain canal, which joins the river with Lake Champlain.

Ratifications of the peace commission treaty between the United States and Guatemala were exchanged at the state department on the 18th, and the first of the conventions designed by Secretary Bryan to guard this nation from sudden war went into effect. Twenty-one of the twenty-nine conventions have now been approved by the Senate, and await only the formal exchange of ratifications to go into effect. Consideration of the treaty with China was delayed some weeks ago, when a batch of similar treaties was ratified.

Judge Veeder, in the United States district court, Brooklyn, has denied the application of the Marconi Wireless Telegraph Company of America for an injunction to restrain Secretary Daniels and four naval officers from shutting down wireless stations, on the ground that the court has no jurisdiction. John W. Griggs, president of the Marconi company and former attorney-general of the United States, asserted that he would take the case to the Supreme Court of the United States, if necessary.

Protesting against exploitation of labor in the shops of the United States government, the House committee on labor has recommended the passing of the bill on the subject. This bill calls for discontinuance of the "Taylor system," or stop-watch system, in government shops, prohibits the offer of any bonus to government shop employees for rapid work, and abolishes all timing devices calculated to keep close records on the men and to work them at undue speed pressure.

The Panama canal is beginning to produce revenue, though not yet enough to meet the calculations of the financial expert, because of the interruption of traffic by the European war. During August the revenues were $91,664, the greater part of which was received after Aug. 15, the date the canal was officially opened. East-bound traffic exceeded the west-bound by about twenty-five hundred dollars in tolls.

The corner-stone of the new High School of Commerce building in Boston was laid Oct. 2. The building is expected to be ready for occupancy when school opens in September, 1915. It will be 300 feet long by 150 feet deep. The cost of the building is estimated at $469,995. The land cost one hundred thousand dollars.

Russian Minister of Finance Bark has received an order that the prohibition of the sale of vodka shall be continued indefinitely after the end of the war. This order is based principally on the tremendously improved condition of the country since the Emperor issued the edict prohibiting traffic in this liquor.

Alaska's mineral output last year had a value of $19,413,094. Of this amount the gold production was valued at $15,626,813. The total value of the gold production up to the close of 1913 was $228,392,540. In addition, nearly $17,000,000 in silver has been produced in Alaska.

A report by the engineer on the harbors of the Australian Union recommends a graving-dock for Durban 1,080 feet in length, with a width of 110 feet and a depth of 41 feet, at a total cost of seven hundred and eighty thousand pounds.

An offer to sell or to lease the Copper River & Northwestern Railroad to the government for use in connection with the railway which the government is preparing to build in Alaska, has been made to Secretary Lane of the interior department of the United States.

The European war has cut down immigration into the United States to the lowest point in many years. During September only twenty-two thousand aliens entered the port of New York. This compares with 108,504 a year ago.

Congressman Jefferson M. Levy has agreed to sell Monticello, the home of Thomas Jefferson, to the United States government. Mr. Levy asks Congress for five hundred thousand dollars for this property.

President Wilson has signed the rivers and harbors bill, appropriating twenty million dollars to be expended under the direction of the war department on projects already begun.

The Oregon-Washington yield of dried prunes for this season is estimated at eight million pounds.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII | October 24, 1914 | No. 8

"Who shall deliver me"

WILLARD S. MATTOX

WHEN Paul cried, "O wretched man that I am! who shall deliver me from the body of this death?" he uttered the heart-cry of humanity throughout the centuries for surcease from the agony of mortal existence. From the multiplicity of tribulations which beset mankind there has been a perpetual and pitiful effort to escape, to find safety. The universal belief of that which menaces life, health, success, peace of mind, and moral integrity, has impelled men to seek everywhere for a way of deliverance. Some have taken refuge in the civil law. Business men think to protect their enterprises by legal recourse and through the various processes of offense and defense provided by man-made codes. Others insure their lives and their business from the risk of disaster and accident by putting their trust in human organization. For centuries it has been the general custom of mortal man to endeavor to protect his bodily health by the administration of drugs and material remedies. The El Dorado of the human desire for freedom from danger, from enemies, from unexplained and unknown hostile forces, has been eagerly sought in every conceivable material way, with, unhappily, no satisfying results.

Geography has played its part in this search for rest and security. Men have fled to other climes, have taken journeys to different places, in order to escape some evil or to improve their health. Those who believe that by a process of transferring matter from one place to another they may find rest or peace or security, are not acquainted with that wise observation of Epictetus to the effect that "Athens is a good place,—but happiness is much better; to be free from passions, free from disturbance." To this Goethe added a truism which is urgently making its appeal today to those who are still looking for satisfaction or safety in externals. "Every man," says the great German poet, "ought to begin with himself, and make his own happiness first, from which the happiness of the whole world would at last unquestionably follow."

Creeds have undertaken to discover the place of safety, and have outlined a theoretical heaven where suffering mortals are promised peace—after they are dead. Neither geographical journeys, however, nor a geographical heaven distant in space, have supplied an adequate remedy for the woes of the human race. The plaintive cry still goes up from unsatisfied hearts: "Where shall I find refuge? Where shall I find safety? Where may I feel secure? Is there a place or a condition or a state wherein there are no premonitions, no apprehension of an unknown future, no anxiety, no pain, no sin?" There surely must be some place where the "wicked cease from troubling" and where "the weary be at rest." Where is it?

During all the untold years through which mortals have pleaded and prayed for deliverance, in all the years through which they have devised futile means of protection and safety, the sufficient answer to this universal craving for peace, this world-hunger for an abatement of the daily conflict of mortal living, has been at hand, available, ever present. Mrs. Eddy has told the world where this answer may be found. "The Bible," she declares, "contains the recipe for all healing" (Science and Health, p. 406). And what do the Scriptures say? Can anything be more definite, more comforting, more hopeful, than the compassionate assurance, "The eternal God is thy refuge, and underneath are the everlasting arms"? When the mortal consciousness, beset and distraught by direst perils, begins to take in the majesty of this promise, begins to realize the stability, the permanence, and the reliability of an infinite power which is eternal good, then the way of salvation becomes visible for the first time.

The Master knew how profitless was the expectation that material modes or forms could provide a refuge from evil. With tender compassion he gives the invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." David knew, from his own experience, that there was no safety except in "the secret place of the most High." Unhappy mortals today are learning the wisdom of turning to divine Love even as a weary child seeks its mother's arms.

Christian Science has been an incalculable boon to the dissatisfied, the hopeless, the discouraged, the fearful of earth, for the reason that it has pointed out to them the only way of salvation from sin, sickness, and death. It declares, and has proved by its works, that the Saviour of mankind is ever present, ever available, and this Saviour is found in the knowledge of the truth about God and His creation. It is being made manifest to many thousands that the Christ-mind is the only refuge from evil in all its forms. To be conscious only of good is to be never conscious of evil. The "secret place" is a mental place, and it is no secret to the Christian who understands the science of real existence. Safety from belief in evil is found in the spiritual state of mind which the apostle Paul referred to when he said, "Let this mind be in you which was also in Christ Jesus." His question, "Who shall deliver me from the body of this death?" was answered immediately, when he declared triumphantly, "I thank God through Jesus Christ, our Lord."

The whole question of deliverance from the discord of mortal existence is simplified and resolved by Christian Science into a question of right thinking. Men and women of this century are making the welcome discovery that salvation is from a false belief of evil, rather than from evil realities, and that our refuge is in an understanding of the omnipotence and omnipresence of God. This is what is meant by Paul's injunction to "let this mind be in you, which was also in Christ Jesus." St. John plainly tells us where our true refuge is, in these words: "God hath given to us eternal life, and this life is in his Son. He that hath the Son hath life." Through the teachings of Christian Science the world is learning more of the value and import of Jesus' life and example. The Scriptural record reports that when Jesus was thronged by the multitude, he frequently went up into a mountain, alone, to pray. He sought refuge from the asserted claims of evil, in his own enlightened understanding of the divine all-power. "He withdrew from the material senses to refresh his heart with brighter, with spiritual views" (Science and Health, p. 32).

And so Christian Scientists are finding that when they are

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

pressed on every side by the apparently convincing evidence of evil, when hope is gone and faith is shaken, then they may imitate the example of the Master and retire, alone, to the exalted consciousness of the all-presence and all-power of divine Love. This is having the Mind that was in Christ, and in this Mind, in the spiritual understanding of good, there is no evil. The world finds its only safety then, its only refuge, in Mind, and by means of the improved knowledge of God, which Christian Science is teaching, each of us may demonstrate in the daily life the promise of the prophet, "No weapon that is formed against thee shall prosper."

"Rejoice, and be exceeding glad"

STOKES ANTHONY BENNETT

CHRISTIAN SCIENCE is essentially a religion of rejoicing. Bestowing its blessings of health, happiness, and success upon every earnest and sincere seeker after Truth, it inspires with faith, hope, and confidence as nothing else can. Being the demonstrable Word of God, the revealer of divine or spiritual good, Christian Science shows its loyal and wide-awake students their rightful heritage of harmony and dominion, at the same time filling them with joy and gladness unspeakable. Throughout the world today, thousands upon thousands of men and women are sending up praises to God for giving to this age an undaunted and courageous messenger, who through her purity and her devotion to the right was able to discover and to found Christian Science, which is indeed making mortals free.

The rejoicing, happy heart is ever the grateful, loving heart. In fact, there can be no real happiness and joy without a corresponding thanksgiving and holy regard for the source of these grand and noble gifts. Because "happiness is spiritual, born of Truth and Love" (Science and Health, p. 57), and because, as St. Paul declares, "the kingdom of God is . . . joy," it is plain that the great I AM is the source and support of these splendid qualities, and that to Him belongs all the credit for them; hence, to be imbued with the spirit of genuine happiness and joy, means to experience that satisfaction, contentment, and peace which really do pass human understanding. It means also to manifest unity or at-one-ment with God, thus proving ourselves His obedient and dutiful children.

The Bible has much to say to its students about rejoicing. The twelfth chapter of Deuteronomy declares, "Thou shalt rejoice before the Lord thy God in all that thou puttest thine hands unto," while the sixty-eighth psalm says, "Let the righteous [the right thinkers and doers] be glad; let them rejoice before God: yea, let them exceedingly rejoice." With almost the first words of Christ Jesus' Sermon on the Mount, there is recorded this injunction: "Rejoice, and be exceeding glad: for great is your reward in heaven;" that is, great is the reward of heavenly harmony here and now, for those who strive to think, speak, and act rightly. In his first epistle to the Thessalonians, the apostle Paul admonishes: "Follow that which is good, both among yourselves, and to all men. Rejoice evermore. . . . In everything give thanks: for this is the will of God."

The spirit of rejoicing—calm, quiet, and heartfelt joy-giving, coupled with naught of an emotional, gushing, or superficial nature—is the spirit which lifts one high above the earth-clouds of seeming discord, disease, disaster, and woe, and ushers him into the unfettered and unchanging realities of divine Life and Love. In other words, it is the spirit which enables one gradually to overcome and set aside the so-called burdensome, depressing things of the material world, and to substitute for these the real and eternal things of the kingdom of heaven, "the things which God hath prepared for them that love [that understand and adore] him."

He who in both sunshine and shadow rejoices for the sake of rejoicing,—because it is right to rejoice,—cannot help giving thanks in everything, and thus obeying the will of the Father. He it is who is gaining an understanding of things as they are, not as they appear to human sense to be; who is learning that immortal Truth, not asserted mortal error or evil, is the real leader and governor of man. He it is who is learning to know God and His creation aright, and to rest safe and secure in this knowledge. Such a one is realizing as never before, and is proving it at least in a degree, that God, Spirit, is omnipotent, omnipresent good; that He made all that was made, and that all reflects or expresses His perfection and might. To put it differently, such a one is knowing that spiritual good is infinite and eternal; therefore, that so-called evil, matter, and material laws are not real, are not God-created, God-appointed, or God-approved, and that their alleged claims to reality and power can, through the correct knowledge and application of divine Truth, be uncovered and destroyed. This knowledge is, in brief, the demonstrable or practical Science of Christianity, the basis of all genuine happiness and joy.

In examining the healing and transforming works which vital religion has accomplished in all the centuries, we find that rejoicing has played a most important part. Just here it is well to remember the words contained both in the sixteenth chapter of First Chronicles and in the one hundred and fifth psalm, to wit: "Let the heart of them rejoice that seek the Lord;" also these other words in the fifth psalm: "Let all those that put their trust in thee [God] rejoice: let them ever shout for joy, because thou defendest them: let them also that love thy name be joyful in thee."

When the children of Israel were afraid, and murmured because it appeared that the Egyptians (certain personified claims of error) were close upon them to do them harm, Moses said to them, "Fear ye not, stand still, and see the salvation of the Lord, which he will show to you today: for the Egyptians whom ye have seen today, ye shall see them again no more forever." Then followed that marvelously safe passage of the children of Israel through the Red sea,—"the dark ebbing and flowing tides of human fear" (Science and Health, p. 566),—and the complete destruction of the so-called enemy; that is, the overcoming and the annihilation of wrong thoughts in the minds of the Israelites themselves. When Joshua with his band was preparing to besiege and to take Jericho,—to attack and to overcome an apparently strong claim of evil or error,—he laid particular stress upon shouting (which indicates rejoicing and gladness) by commanding his every follower to shout in the right way, the way attended by patient experience and by sure, demonstrable spiritual understanding, instead of by mere human impulse and emotion. Catching the high purport of his instructions and resolving to yield implicit obedience to them, Joshua's loyal helpers, as one man, marched with him once around the city, happy and courageous in their effort to realize the ever-presence of an infinitely just and true God, who in due course would give them victory,—yea, who had already given them victory, for God, good, is omnipotent and omniactive, hence asserted evil or error is powerless, non-existent. Six days they thus marched, and on the seventh they "compassed the city after the same manner seven times." Then to the people, who notwithstanding the absence of external signs of success were nevertheless fully assured of it deep down in their hearts, Joshua said, "Shout; for the Lord hath given you the city." And it was so; for when each one had at

Digitized by Google

length realized the absolute goodness and glory of God and had been truly glad therein, and with a final mighty outburst of thanksgiving and rejoicing the walls fell and the city was taken, the perfect demonstration of the power of Soul over sense and of Mind over matter was made.

In this same connection it may be said that it was the inwardly unceasing, though perhaps outwardly silent gratitude for and rejoicing over God's might, majesty, and love, which enabled the prophet Elisha to multiply the widow's oil, to raise from the dead the Shunammite's son, to heal those who had partaken of the deadly pottage, and to cure Naaman the leper; which protected and saved the three Hebrew captives in the fiery furnace; which preserved Daniel in the lions' den, and which accomplished many other wonderful works recorded in the older Scriptures. Turning to the New Testament, we find added emphasis laid upon rejoicing and gladness. When, for instance, the man sick of the palsy was brought to Christ Jesus for healing, the great Teacher addressed him thus: "Son, be of good cheer; thy sins be forgiven thee." Again, when the disciples were sorrowful and depressed because of the cruel ways of the world and because the Master was about to go away and leave them, Jesus tenderly said, "Be of good cheer; I have overcome the world."

When Paul, that indefatigable worker of righteousness, was arrested and assaulted in Jerusalem, and his life seemed in jeopardy, "the Lord stood by him, and said, Be of good cheer, Paul;" and the apostle the more happily and boldly witnessed to the greatness of his God, and thereby eventually gained his freedom. When Paul and Silas were cast into prison at Philippi, and their feet were made fast in the stocks, these two fearless demonstrators of divine Truth and Love "prayed, and sang praises unto God: . . . and immediately all the doors were opened, and every one's bands were loosed." As a direct result of this proof of God's care for His children, the jailer himself was aroused to better, holier thinking, and he too "rejoiced, believing in God with all his house."

Thus do we see the inestimable value of sincere, heartfelt rejoicing, which means, first, the admission into individual consciousness of that only which belongs to and emanates from divine Truth, divine Love, and second, an abiding peace and gladness in the possession of this demonstrable and eternal good. Surely St. Paul never spoke more significantly and helpfully than when he admonished men to rejoice always, and to give thanks in everything, because this is the will of God.

The Widow's Mite

ALICE FROST LORD

No one who has not turned to Christian Science for healing, can understand with what anxiety a seeker after this truth listens to the testimonies of the Wednesday evening meetings. Though he has forsaken drugs, he has gained only a partial understanding of that power which takes their place, and being still more or less fearful of results, he goes to these services week after week, heart-hungry for any morsel of evidence which surely proves the power of God to heal in this day as in the time of Jesus of Nazareth.

It is for such seekers that Mrs. Eddy planned the character of the Wednesday evening meeting, and it is to meet their needs that testimonies should primarily be given. The story is never old, for few there be who do not find frequent opportunity to demonstrate the Christ-healing. Even in small things the power of God may be seen so clearly at work that these, too, will have weight to convince the newcomer into Science that he is indeed on the highway to health, peace, true happiness, and spiritual blessedness.

One who has perhaps trodden the path of anxiety for many weeks, while his healing was being effected, having at last received much, should surely be willing to give freely to others. Remembrance of those days is sufficient to untie fear-bound tongues and loose the healing message, even from trembling and hesitant lips. In the services of the Christian Science church, as perhaps in no other church, none come seeking for eloquence. This is not the magnetism of the Sunday morning Lesson-Sermon, nor the appeal of the Wednesday evening meeting. Eloquence is forgotten in the humble giving of the word of Truth as Jesus taught it, with power to save and to heal. The simplest testimony which bears some proof of divine power is, like the widow's mite, blessed of God, even more than the oratory of a less vital message.

It is to be noted that Christian Scientists have more than money to give in return for the blessings they receive. Their spiritual gifts outweigh the material, for none may measure the helpfulness of a few simple words in one of these Wednesday evening meetings; none may gage the power of silent prayer, making the spiritual thought potent to do its work of redemption and healing at all Christian Science services. It cannot be too often brought to mind that the whole hour of service may be profitably devoted to prayerful thought. Right thinking and true prayer, exercised from the time the Scientist enters the church, can but help make the service of the greatest spiritual value to all present. Here each has his spiritual task and loving service to perform,—a necessary and acceptable tribute to God.

The student in Christian Science quickly learns that to him who spiritually hath,—even though it be but little,—much more shall be given, according as he exercises the faith that is in him. The more of truth we understand, the more we can give; and the more we give, the more we can understand. These are the riches which none may take away.

Going Abroad

JULIA WARNER MICHAEL

The experience known as "going abroad" is one which many desire, others anticipate, and some achieve. Christian Science throws a new light upon this idea, revealing it to be a possible privilege within the reach of every individual who will take the necessary steps toward its achievement. No one need be deprived of its blessing, no one need be disappointed in its fulfilment.

The noblest going abroad is purely mental in its first and last analysis. It is the entry through Christian Science into the spiritual universe, the realm of Mind, and it is infinite in the opportunity it offers for discovery, enjoyment, and education. In it there is no fault. Its history is the old, old one of the ideas of never-changing Love expanding through eternity; its effect upon the traveler is one of constant inspiration which is never followed by reaction; its views are sublime with celestial grandeur; the climate met with is ideal and unchanging, health-giving to all. Every stage of the journey is secure, for God guides and guards every step of the way; good is all there is to be encountered. The price of the journey is within the reach of all; it is the earnest desire to know more of truth and beauty.

None of the old arguments of material duty, lack of funds, time, ability, and strength, family and business demands, need prevent or delay the start, for not only will the traveler profit by this broader experience, but also all upon whom and upon which his thought rests. In order to travel easily and far, the tourist must take little baggage with him. Spiritual consciousness, which contains patience, wisdom, self-

Digitized by Google

lessness, humility, and love, will be sufficient to clothe and feed him. Doubt, fear, worry, ignorance, limitation, self-seeking, must be left behind, since they only encumber the traveler and impede travel. There are many treasures, souvenirs, to be acquired on such a trip, with which to beautify the home (consciousness) in the future. They are not of wood or of stone, neither of gold nor of silver, but are such as these: peace, joy, power, assurance, stability, knowledge, understanding, health.

Today each and every one may "go abroad" in the truest and greatest sense of the word, if he so desires. The way is open; there is nothing to hinder. He who seems to be confined to his bed by disease, may launch out on the deep of God's love and view the wonders of God's world. He who labors at his desk may know the boundless freedom of the reaches of divine Mind. He who fears to be alone in a foreign land, may find the ever-present and familiar companionship of brother and sister. He who seems limited by poverty, may behold from his own mental threshold the grandest views of earth and heaven.

To move the body from place to place is not to travel; but to move thought from view-point to view-point in the realm of divine Mind is to journey far and well, it is to be refreshed, improved, and benefited. He whose body travels over the earth, but whose thought remains bound to a personal, finite sense of life, fares not forth as does he whose spiritually quickened thought ventures out into the boundless realm of Truth, and whose "conception unconfined is winged to reach the divine glory" (Science and Health, p. 323).

It was such a journey as this that our beloved Master and Wayshower set out upon in his ministry to his fellow men. For him the earth was transformed and the limiting horizon of mortal sense was forever removed. Before his understanding of the truth of being, the fetters of sin, disease, and even death dropped away, leaving him free to pursue the ever-ascending path of Life.

Giving a Christian Science Lecture

ALBERT W. LE MESSURIER

THE giving of a Christian Science lecture is an important event in the history of each branch church, and the arrangements call for careful thought. It is the occasion on which the members get into intimate touch with the public, and the visible manifestation is the church acting as host with the public in the position of invited guests.

Looking at the undertaking in a superficial manner, we have a Church of Christ, Scientist, deciding on a date, inviting a lecturer, preparing a building, and bidding the public attend the lecture. The hall of course is to be clean and well lighted, with comfortable seats. The ushers are to be in their places, and the distribution of literature satisfactorily arranged for. The invitation to the public by the means advised by the board of lectureship must be ample and attractive, and the platform tastefully fitted up; then, all arrangements having been completed, the lecturer is expected to appear.

All is very simple so far; the letter has been carried out. But what amount of practical good would be effected by a lecture if this were all? If Christian Scientists went no farther than this, the task might as well not be undertaken. At this and every step in the arrangements we need to remember how necessary it is that "the letter and the spirit bear witness," as Mrs. Eddy points out on page 330 of Science and Health. The aim of our church being the spread of God's kingdom "in earth, as it is in heaven," thought must be turned in the direction indicated on page 65 of Science and Health, where we are taught that "to gain Christian Science and its harmony, life should be more metaphysically regarded." Let us then translate into spiritual terms the lecture work. First we shall be reminded that there is but one church, "the structure of Truth and Love" (p. 583), and this eternal fact will usher us into the redeeming truth of Christian Science and bring us into the unity which binds together all of God's ideas. We shall be prepared to see that there can be only one meeting-place, the tabernacle of God with men. It is self-evident that this tabernacle must be clean, for it is "holy unto the Lord," and nothing that offends or that is untrue can enter therein; and it is well illumined, though it requires neither sun by day nor moon by night, for the Lord God omnipotent is the light thereof.

The invitations to the lecture will be supplemented by diligent thought, seeking through the highways and hedges of material sense for those who are hungry and thirsty for truth, and gently entreating them to come into the refuge of spirituality. As all this is recognized through divine Science, we shall be ready to sit down in meekness and humility in the tabernacle of our God, the place prepared for us. In this exalted view of God and man we shall have no desire to see this one or that enter the lecture hall; but, seeing that God's children are to be found everywhere, like the ever-present Father, we shall bring forth the "best robe" and lovingly welcome all who enter with true metaphysical hospitality into the great truth of being.

Our platform shall be none other than that laid down for us in our text-book, commencing on page 330 with the words, "When the following platform is understood and the letter and the spirit bear witness, the infallibility of divine metaphysics will be demonstrated." Surely from this platform will flow streams of living waters. The lecturer will be perceived as a witness for Truth, as was our Master; reflection will answer to reflection; sick, sinful, and dying errors will be replaced by healthy, holy, and living concepts of Truth; God will be glorified and men will be blessed. Behind the words will be apprehended the action of divine Principle, and we shall recognize the spot whereon we stand to be holy ground.

[Written for the *Sentinel*]

Seeking a Country

AGNES FLORIDA CHALMERS

THIS day Truth calls to me to go and find
A country in the plains of heavenly peace,
And take for sustenance God's loving, kind
Remembrances and blessings,—truly, these
Were food and drink for Abraham. No lack,
No fancied human want, can turn me back.

This day Truth calls to me meekly to lay
Aside all human will and take the land
Another spurns. Far higher than my way
Is God's, and as I follow His command,
He leads me gently to the quiet plain
Of substance where all human loss is gain.

This day Truth calls to me to lay my all
Upon God's altar and to follow Him.
Like Abraham, I hear the Father's call
And know His voice. Each step throughout the dim
Way upward, Love requires naught of me
Save,—Ye shall know the truth that makes you free.

Selected Articles

[Frank Bell in *The Mirror*, Warren, Pa.]

The sermon on "Fads," as quoted in a recent issue, is incomplete. It fails to hold up to deserved public condemnation the fad of considering one's own brand of righteousness to be so superior in quality as to justify one in publicly pronouncing the religious convictions of others a joke. Christian Science used to be a favorite target for such faddists, but it is not nearly so much so nowadays, for a number of reasons, one of which is the growing difficulty of finding an audience in which there is not a number of persons who have looked into the subject for themselves and are impervious to the old stock misrepresentations. Even in this enlightened day, however, there occasionally appears one with the temerity to attempt a revival of some time-worn absurdity, such as, for instance, that Christian Science "denies the existence of sickness and then turns around to cure a sickness that does not exist." The point of the query then propounded, "Is this horse-play of equestrian wit?" lies quite in another direction from that which was intended.

If it were fundamental or even an incidental teaching of Christian Science that mortals are beset with no ills from which they need relief, it could not be a fact that some thousands of practitioners are finding occupation for all their time in healing by means of Christian Science, or that a great and growing body of intelligent persons, with churches by the hundreds the world over, could be recruiting ninety per cent of its members from among those healed through Christian Science of one form or another of suffering. It is estimated that in Christian Science meetings throughout the two hemispheres every Wednesday evening, five thousand oral testimonies are given by persons who have experienced the healing efficacy of this method. The weekly and monthly periodicals of the denomination regularly carry many pages of written evidence to a like effect. Is it to be assumed that these thousands of individuals turned to Christian Science because there was nothing the matter with them? To the desperately sick man what would be the appeal in a system that met his plea for help with the assertion that he should have no aid because he was quite well already? A world-wide movement could not be founded and nourished upon loving service while proclaiming that no service is anywhere required.

The plain teaching of the official literature of Christian Science is in full accord with the unanswerable logic of the facts. Sickness, sin, death, and other forms of evil, are denied reality in the realm of the spiritual and eternal, not in the material and temporal. Christian Science takes full cognizance of the presence in mortal existence of all the phenomena of false belief, though it differs from other systems in its explanation of the nature of these phenomena. The Christian Scientist stupidly ignoring evil, is a fiction of ignorance or perverseness. The Christian Scientist calm in the face of evil, awake to its false pretense, grateful for increasing immunity from its influence, and quietly but with telling effectiveness helping his fellow men toward a like apprehension—that sort of Christian Scientist is well-nigh everywhere present today, and in steadily increasing numbers.

✧

[Robert S. Ross in *The Truth Seeker*, New York, N. Y.]

We are in no position to know whether or not "faith-healing cults repudiate sanitation and those preventive measures that have done more for health than medicine," as your editorial of June 6 declares, but we do know that Christian Science does not repudiate them. As a rule, Christian Scientists will be found to be more careful than any other class of people in observing all reasonable sanitary and quarantine regulations. Contrary to the opinion of your writer, Christian Science does not ignore prevention. Indeed, it is the most effective preventive method known today, and it prevents by teaching mankind, as Mrs. Eddy writes on page 210 of "The First Church of Christ, Scientist, and Miscellany," to keep their "minds so filled with Truth and Love, that sin, disease, and death cannot enter them."

The fact that Christian Science congregations are made up largely of those who once suffered from diseases which the physicians had given up as incurable, is proof positive that the Christian Science method is more efficacious than *materia medica*. As to its being suicidal for people to have recourse to mental healing, permit us to call attention to the fact that about one hundred thousand people, including nearly forty-five thousand children, die annually in New York state under some form or other of medical treatment, while failures under Christian Science treatment seldom occur. We leave it for your readers to judge the relative merits of medicine and Mind.

Experience has taught us that criticisms of Christian Science are due more to misunderstanding of its teachings than to a desire to be hostile. We believe this to be the case in the present instance.

✧

[Richards Woolfenden in *Blackburn* (England) *Times*]

It is good to find the Rev. Mr. —— taking an active interest in Christian Science. This is only another instance of the wide-spread attention which the subject is attracting among all classes. Today there is no topic of more intelligent inquiry wherever two or three are gathered together in any part of the world. The one note of general surprise is that people possessing such intelligence and practical common sense in other matters, should so often be found among its warmest advocates or as actual members of the Christian Science church. This fact at once disposes of the criticism that reasonable beings are deterred from accepting the statements of Science and Health because of their apparent difficulty. Your readers who have already learned to take the subject seriously, have found that just in proportion to their fair and honest inquiry lies the ability to put these statements to the test of demonstration.

If the critic had treated the Christian Science text-book with the same respect that he would handle and quote from any other scientific manual, he would not have fallen into the error of mutilating the context by misquotations. No one would ever think of finding a true explanation of any subject in this way. After all, his difficulties are only those of his own creating, and probably do not concern more people than himself. It is only another instance where so much is required to be unlearned before the real enlightenment of a new subject can reach us. This is the rule of illumination in most great subjects, and Christian Science is no exception to the rule in this respect. It is willingness to sit down before the facts like a little child, which qualifies one to graduate in any school of experience, and those who have submitted themselves to Mrs. Eddy's guidance after this fashion, have found a new understanding of God, a new interpretation of the Comforter promised by Christ Jesus, and a new and more loving interest in their fellow men. These are facts within the reach of any intelligent inquirer, as a result of which many are already leaving the churches of their earlier affiliation, and many are finding their way to church who had never been there before, or having been, had been driven away by the sheer logic of a lifeless creed.

Such being the case, your readers must have been rather amused to find the reverend gentleman making an attempt to

Digitized by Google

show a discrepancy between statements delivered in a public lecture on Christian Science, and other statements, taken haphazard and unrelated to their context, from Science and Health, the Christian Science text-book.

His first example of chopping up the text to suit his purpose was taken from page 382, and here your readers would find difficulty in recognizing the sentence as he has transcribed it. May I be allowed to present a sentence from the same page, which reads as follows: "If half the attention given to hygiene were given to the study of Christian Science and to the spiritualization of thought, this alone would usher in the millennium." In this sentence Mrs. Eddy has delivered a much needed rebuke to the prurient method of teaching hygiene which is being used today.

In this connection ministers of religion will find their strongest ally, in the battle that lies before them, in a closer acquaintance with Mrs. Eddy's pioneer work. By way of illustration, let me quote the following, also found on page 382 of Science and Health: "One whom I rescued from seeming spiritual oblivion, in which the senses had engulfed him, wrote to me: 'I should have died, but for the glorious Principle you teach,—supporting the power of Mind over the body and showing me the nothingness of the so-called pleasures and pains of sense. The treatises I had read and the medicines I had taken only abandoned me to more hopeless suffering and despair. Adherence to hygiene was useless. Mortal mind needed to be set right. The ailment was not bodily, but mental, and I was cured when I learned my way in Christian Science.'"

Your readers who are not yet familiar with Mrs. Eddy's writings will now be in a position to judge for themselves as to Christian Science teaching on sanitation and hygiene. And if this citation were not sufficient, one has only to quote from page 413, where the critic took the sentence beginning, "The daily ablutions of an infant," etc., and reading on a few lines he would come to this important declaration of the Discoverer and Founder of Christian Science: "I insist on bodily cleanliness within and without. I am not patient with a speck of dirt; but in caring for an infant one need not wash his little body all over each day in order to keep it sweet as the new-blown flower."

Christian Science is a return to the method of the Master in meeting the claims of sin, sickness, and death. It is as far removed from pantheism as could possibly be imagined; so far, indeed, as to be more nearly related to the earlier Methodism expressed in the writings of Mr. Wesley, who summed up the Principle of healing found throughout the Bible in the striking thesis: "God gives health and holiness to His people in answer to the prayer of faith." Christian Science is the complete and final answer to the age-long query, "What is this prayer of faith that brings God's blessing to His people?" How that question has been answered it is possible now for all to know for themselves, by consulting the first chapter, entitled Prayer, in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

❖

[Ezra W. Palmer in *Colorado Springs* (Col.) *Telegraph*]

The Rev. Mr. —— is quoted in the *Telegraph* as making some derogatory statements regarding Christian Science. *Ipse dixit* statements are easily made, but it is quite another thing to support them by convincing evidence, and therein lies the weakness of the declarations of this speaker. They are merely fiat statements without an iota of evidence to support them.

Despite the assertions of the critic, Christian Science is not mental philosophy; it is not Hindu mysticism; it is not mental suggestion; it is not humbug; it does not claim that there is no evil in the world. This critic claims to speak with authority regarding Christian Science. He failed to mention that Christian Science heals by prayer to God, in accordance with Jesus' command, "Heal the sick." He made no mention of the tremendous fact that Christian Science practice is highly successful, and that more than one million people in all parts of the civilized world have been healed, and of all diseases known to *materia medica*. He failed to mention that many of these people came to Christian Science and were healed after all other systems had failed and the prayers of faithful pastors and devout members of orthodox churches had been equally unavailable. He failed to mention that Christian Science has made the Bible a source of joy and inspiration to a great multitude who had no hope, and were "without God in the world," and that its influence has been powerful for righteousness, spiritual living, and right thinking upon every life it has touched.

No, this evangelist made no mention of these things. To shout "false," "humbug," is not a convincing argument to a man whom Christian Science has healed and brought into intelligent unity with his God. The time has arrived for mankind to wake up. They need to know that denunciation, misrepresentation, and vituperation are not effective weapons in Christian warfare, and are utterly incompatible with genuine Christian living. Christian Scientists do not attempt to malign or obstruct in any way the work of other Christian people, and their example in this respect is recommended to this brother.

❖

[Paul Stark Seeley in *Portland* (Ore.) *Journal*]

When the reverend gentleman quoted in a recent *Journal* addressed his congregation in behalf of a national department of public health, his remarks were undoubtedly well intentioned. When, however, he characterized the objectors to such a department as the "misguided opposition," and alleged that certain beliefs held by the opposition had become a "national menace," he permitted his zeal to outrun his wisdom, and this led him to be more generous with his allegations than he could be with his proof.

The public, in seeking to reach a correct conclusion as to the need of a national health department, will remember that it is already paying for city, county, and state boards of health, together with a national public health service costing more than twenty million dollars a year, a service declared by competent physicians to be entirely adequate to carry on all the health activities within the jurisdiction of the federal government. The proposed department has been conceived, nurtured, and urged upon Congress for many years by the American Medical Association, composed of thousands of "regular" doctors. Its ultimate object, as proved by the evidence in the Congressional Record, is to place the allopathic school of medicine in control of the nation's health activities and bring the country's citizenship under the rules and surveillance of an army of "regular" physicians, whose medical opinions would be given the force of law. A great saving in life and dollars is the promise held out for this inroad on the national treasury and the accompanying invasion upon the rights of the individual. This promise, in the light of the multitude of medical failures and mistakes, seems a shaky base for setting up a national medical oligarchy clothed with governmental sanction and bolstered with legislative enactment.

The American Medical Association, whose well-organized political and publicity machinery is furnishing the dynamics for advocating the proposed department, has been for years a power in state and national politics. At its behest, legisla-

Digitized by Google

tures have passed laws restricting other systems of medical practice. Illiberality and intolerance have marked its whole policy when once in a place of power. Practitioners of other schools have been treated as charlatans and persecuted as criminals. The association's endeavor has always been to strengthen by law its ever shifting theories, and to establish, in so far as the public would permit, a medical monopoly. What it has done or tried to do in the states, it seems logical to presume it would try to do when entrenched behind federal law, its many protestations to the contrary notwithstanding.

For the many earnest and conscientious physicians who are striving to allay the world's suffering, we entertain a very high regard. A large number of them, we believe, are content to let their system stand or fall on its own merits, and that is all that should be asked for. Those in need of healing will find the system that will give relief; and any system that cannot rely for its success upon the intelligence of the citizen is the last one to be given the sanction of human law. It is very apparent that the time is not yet when the people of the United States are willing to surrender the right to seek for health where they believe it is most likely to be found. Medical, as religious freedom, is the right of every citizen, and the preservation of this right inviolate is as dear to him, when its importance is once recognized, as is the preservation of his right to worship God as he desires. In the last analysis these rights are coordinate and correlative. Both are essential to the enjoyment of life, liberty, and the pursuit of happiness.

✧

[Algernon Hervey Bathurst in *South London Press*, London, England]

I have read the report of Mr. ——'s address on "Faith-healing and Common Sense," in a recent issue, and ask you to allow me to point out that Christian Science, and faith-healing as it is generally understood, have nothing whatever in common. Also, it would scarcely be possible for a movement to be established on so firm a basis as is the case with Christian Science if, as the speaker said, "Christian Scientists have got hold of a certain amount of truth which they mixed with a great deal of error," for truth and error cannot commingle. The result of any attempt to make them do so is graphically described by Christ Jesus as a "house divided against itself," which cannot stand. That Christian Science reveals truth is evident when it is seen that the sick are healed, and sin and discord destroyed, by the application of the teaching of Christian Science today, in exactly the same manner as two thousand years ago.

Christ Jesus came, as he explained, to fulfil the law of God, and in so doing, both he and his disciples healed the sick and destroyed sin and various forms of discord. In doing all these great works, however, neither Christ Jesus nor his disciples denied anything beyond a belief in the reality of evil. Christian Science likewise teaches the denial of nothing beyond a belief in that which is not true. Christian Science, far from being destructive, is preeminently constructive, and since truth is immutable and infinite, it constitutes its own protection. It is for this reason that the understanding or demonstration of truth results in "signs following," in fulfilment of the statement that those who understood the teaching of the Founder of Christianity would be able to do the works he did. In proportion, therefore, to the understanding of that teaching are the works accomplished.

The mere *ipse dixit* that "Christian Science failed because it could not cure social disorders," is not convincing. There are many hundreds of thousands of Christian Scientists scattered over the face of the globe who owe everything worth having to Christian Science. Many who were previously unable to follow their trade or profession have been enabled to do so; homes where discord previously reigned have been united, while cases of the healing of functional and organic trouble are occurring daily. In face of these facts, the proof of which can be heard by any one at the Wednesday evening meetings held in all Christian Science churches, it is, to say the least of it, inaccurate to make a statement such as the one I refer to. As a matter of fact, it would be difficult to estimate the enormous work done by Christian Science in preventing disease and discord, although I must repeat that it is certainly not accomplished by any effort merely to "deny their existence."

As every student of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, knows, every case of physical trouble healed by Christian Science treatment means that that individual has gained a more spiritual and scientific understanding of God and man. He has gained a better understanding of the omnipresence of good. He has learned, as did the woman who "was bowed together, and could in no wise lift up herself," that the evil belief or false law of evil can be annulled by the understanding of the law of God. If this is denying the existence of disease, Christian Science is certainly doing so, with, however, this great difference, that the denial is coupled with the scientific understanding that evil is not part of the creation of God, and is therefore no part of reality. While Christian Scientists know that they have as yet by no means attained that point where all difficulties are instantaneously overcome, there is sufficient evidence of the truth of Christian Science to encourage them to go forward, knowing that just as the promise has already been partly fulfilled, they will, as their understanding increases, be able to do better.

✧

[Thomas F. Watson in *Fresno (Cal.) Republican*]

Under the heading, "Seeing Through Worldly Fog," the pastor of the First Presbyterian church of Selma gave an address in your city in which he asked the question, "Shall we then be tolerant toward Christian Science—that denies the commonest facts, and robs us of the personality of God?" Our critic does not state what the "commonest facts" are which Christian Science denies, but as the great Master said to His followers, "If any man will come after me, let him deny himself, and take up his cross, and follow me," the gentleman will find that Christian Science has Scriptural authority for denying that which does not proceed from God.

The Christian Science definition of God, as given in "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 587), is as follows: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all-substance; intelligence." This is not more impersonal than the definition of God as given in the Westminster confession of faith of the Presbyterian church, which is in part as follows: "There is but one only living and true God, who is infinite in being and perfection, a most pure spirit, invisible, without body, parts, or passions, immutable, immense, eternal, incomprehensible, almighty, most wise, most holy, most free, most absolute, . . . most loving, gracious, merciful, long-suffering, abundant in goodness and truth, forgiving iniquity, transgression, and sin."

One could hardly give a more impersonal definition of God than the one here quoted, which declares God to be "a most pure spirit, invisible, without body, parts, or passions," and this definition is accepted by all the evangelical churches. Christian Scientists use the same Bible, worship the same God, and follow the same Christ with their evangelical brethren, and they are humbly and earnestly seeking to obey his commands to preach the gospel and heal the sick, for he said, "If ye love me, keep my commandments."

Editorial

A Relief Fund

THE many Christian Scientists who have desired to contribute to the relief of those of our people who are enduring the hardships which war entails, will welcome the opportunity afforded by the following letter, a copy of which has been mailed to all the branch churches and societies in the United States:—

To the Christian Science Churches and Societies in the United States.

DEAR FRIENDS:—This Board has been informed that, as a consequence of the war in Europe, Christian Scientists in the countries affected are in great distress. As a means of relieving this distress, The Mother Church will take a collection at both of its services on Sunday, Oct. 25. If your organization should desire to take similar action, this Board will be glad to forward to reliable committees of Christian Scientists whatever amounts you may send for this purpose.

Remittances may be sent to Adam H. Dickey, Treasurer, 103 Falmouth Street, Boston, Massachusetts.

Very sincerely,

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS,

By JOHN V. DITTEMORE, Secretary.

Civic Duty

IN these days when things political seem to loom largely all over the country, the welfare of the people rightly commands something more than a passing interest from every good citizen. This is a class from which Christian Scientists are by no means excluded, as throughout Mrs. Eddy's writings there is distinctly manifested a love of country and good citizenship, and her counsel to her followers has always been along the line of obedience to law. When the publication of *The Christian Science Monitor* was announced in the fall of 1908, its politics as a newspaper became a matter of national interest, and Mrs. Eddy's letter to the *Boston Post* (reprinted in the *Sentinel*, Nov. 7, 1908) was widely circulated. We quote it below:—

"Mrs. Mary Baker G. Eddy has always believed that those who are entitled to vote should do so, and she has also believed that in such matters no one should seek to dictate the actions of others.

"In reply to a number of requests for an expression of her political views, she has given out this statement:—

"'I am asked, "What are your politics?" I have none, in reality, other than to help support a righteous government; to love God supremely, and my neighbor as myself.'

"MARY BAKER G. EDDY."

The sentiments voiced in this letter are a refutation of the belief said to be entertained by some Christian Scientists, that they should not exercise their right of suffrage. As to the right of woman suffrage she has written: "Our laws are not impartial, to say the least, in their discrimination as to the person, property, and parental claims of the two sexes. If the elective franchise for women will remedy the evil without encouraging difficulties of greater magnitude, let us hope it will be granted" (Science and Health, p. 63). The doctrine here inculcated is in keeping with the teachings of Christian Science, and is confirmed by her further statement (p. 340): "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes."

It may be set down, therefore, as a duty of Christian Scientists, that they participate in the government of the country; and he is the best citizen who most carefully, prayerfully, and punctually exercises the right of suffrage. Not that the admittedly undesirable in political methods should be perpetuated, or that blind and unreasoning partizanship should govern the actions of any one, since right thinking and acting must be paramount in the domain of public as well as personal affairs, and only rightly directed individual effort will bring about this condition. The ideal of good government is civic righteousness, which entails just and equitable laws and their impartial administration, and they who possess this ideal cannot delegate their duty in this regard to those who are actuated by selfish motives.

It is the part of all good citizens, of either sex, to see that those who are elected to public office are men or women of unselfish motives and sterling integrity, representatives of the people who will stand unflinchingly for just and wise laws and for their fearless administration. To plead that one does not approve of methods now in vogue, or that the heat and turmoil of the ordinary political campaign is distasteful, does not exempt one from duty, neither will standing aloof cure the evils of the partizan and corrupt methods which have so often been justly criticized. If practical politics are not what they should be, surely the blame lies largely with those who decry present methods without taking active steps to correct them. Personal ambition and selfish desire for private gain can have no place in the ideal social condition, and there must be individual and concerted effort on the part of public-spirited citizens to secure the elimination of these undesirable elements from civic affairs.

Whatever improvement is to take place in political methods and conditions must come through the individual whose ballot is cast unselfishly, whose every thought is one of love for his fellows, and whose every desire is for the establishment of Christ's kingdom. We would commend to Christian Scientists who are seeking to be guided aright in civic as in all other duties, a prayerful study of the "Rule for Motives and Acts," as laid down by our Leader on page 40 of the Church Manual, for a practical solution of this problem.

ARCHIBALD MCLELLAN.

Eternal Goodness

WHEN days seem dark for men and nations we shall do well to lift thought above the mortal outlook to the infinite and eternal goodness. A wonderful lesson may be learned from Moses' experience, when he was wrestling with "a stiff-necked people" and surrounded by hostile tribes. Without divine aid he could not have endured, but he did what we all may do in time of stress, he called mightily upon God, and divine Love answered, "I will make all my goodness pass before thee."

Again and again do we find the goodness of God presented in Holy Writ, the psalmist saying, "Surely goodness and mercy shall follow me all the days of my life." Paul discriminatingly prays that the Thessalonians may "fulfil all the good pleasure of his [God's] goodness, and the work of faith with power." This is in line with the words of our text-book (p. 213), "Every step toward goodness is a departure from materiality, and is a tendency toward God, Spirit." Mrs. Eddy adds that "material theories partially paralyze this attraction toward infinite and eternal good by an opposite attraction toward the finite, temporary, and discordant." Chief among these theories is the belief that evil

Digitized by Google

has more power than goodness, and the wide prevalence of this belief on the part of professed Christians is simply astonishing. The psalmist declares, "Great is our Lord, and of great power: his understanding is infinite," and Christian Scientists hold to this as the very foundation of their hope, the basis of their demonstration, whatever difficulty may present itself, for they know that linked to this power and understanding is changeless and eternal goodness.

The question for each individual, then, irrespective of doctrinal differences, is, How much of this goodness do I see when clouds lower, and how much of it do I reflect when trials and persecutions assail? Our attitude in the first instance will assuredly determine our bearing in the second, and will be a mighty factor in the working out of each life-problem. The one who never loses sight of the divine goodness will see it manifested in myriad ways, and will learn to look for its reflection in man, woman, and child. To do this persistently and consistently calls for a steady denial of sense-testimony, since evil is so apparent to material sense. The psalmist admits that he was beguiled into believing and saying that "all men are liars," but this was because he did not wait patiently for the spiritual evidence which annuls all false testimony with the fact that divine Truth "endureth to all generations," and is our "shield and buckler." The promise also is, "My people shall be satisfied with my goodness."

Paul asks of the unspiritual in his day, "Despisest thou the riches of his [God's] goodness"? Few would admit themselves guilty of this, but even the more spiritually-minded must acknowledge that they very often ignore and quite forget the goodness of God when they indulge in repining, or turn to false gods for relief. In Whittier's beautiful poem, "The Eternal Goodness," he tells of mortal misery and false views of God. Then he says,—

> Yet, in the maddening maze of things,
> And tossed by storm and flood,
> To one fixed trust my spirit clings;
> I know that God is good.

We all need to have our eyes opened wide to what our Leader tells us respecting "the power of good resident in divine Mind" (Science and Health, p. 570), and to apply our understanding of it to every circumstance in our daily lives. God declared His whole creation to be good, and "very good," and it is for us to prove this and rejoice in it, bringing forth more and more goodness, that life-giving "fruit of the Spirit."

ANNIE M. KNOTT.

Symbol and Substance

IN reading the Bible, one can but be impressed with the part assigned to symbolism. Simile, metaphor, and allegory are here drawn upon to an extent that speaks for the consideration of the broadest, most humanly vital theme by a body of writers who were rendered imaginatively alert, intuitively perceptive of the omnipresent beauty of Truth. This is no less marked in the parables of Christ Jesus than in the prophecy of Isaiah. It is no less noticeable in the sayings of St. Paul than in the songs of David; and that symbols and figurative address were thus generously utilized makes it clear that while the poetic enrichment of expression was thus gained, the one purpose in it all was the illustrative use of the seen to awaken a right sense of the unseen.

A notable instance of this didactic method is found in one of the most dramatic events of the Exodus narrative. The spirit of rebellion so frequently shown by the Israelites had brought an affliction which is described as the bite of fiery serpents, and for its cure Moses was instructed of God to make a brazen serpent and put it up on a pole, so that all who would steadily look upon it might be healed. Brought up as slaves, and thus accustomed to commands which were to be obeyed without questioning, it is possible that some of the Israelites did not perceive the metaphysical meaning of the brazen serpent. To the many, however, it must have been familiar as a universal symbol, among the Egyptians, of the divine wisdom, so that they rightly interpreted God's command through Moses that they gaze steadily upon it if they would be healed. In any event, their obedience to the highest truth they could then grasp was counted to them for righteousness, and they thus found freedom.

Christ Jesus supplied the key to this symbolism when he declared, "As Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up: that whosoever believeth in him should not perish, but have eternal life." Here the healing power of the apprehension of Christ, Truth, is clearly stated, and the fact of the untruth, the unreality of all that from which men are to be saved, is no less clearly revealed as a logical deduction therefrom. Nevertheless, from the early days of Christianity to the present hour the Christian world as a whole has been taught and still believes in the existence of material substance and the so-called laws that lead to decrepitude and death.

Christian Science has come to give the true metaphysical interpretation of the word of the Lord, saying, "Look unto me, and be ye saved, all the ends of the earth," to make it clear again that "wisdom giveth life to them that have it." How luminous this story becomes, and how stimulative to thought, the moment we are awakened through the study of Christian Science to the nature of substance, that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). We now apprehend what St. Paul's phrase, "looking unto Jesus," means. All men know that to be freed from the deceptions of error one must lay hold upon truth. They know too that the "sting" of error inheres in the fact that it simulates truth. All who are ignorant and erring have indeed been bitten by "fiery" falsity. This explains their dis-ease, and to be healed they must look to divine wisdom, to the truth of being. This is the philosophy of all true education, it is the philosophy of salvation through Christ, it is the philosophy of Christian Science. "The truth shall make you free;" "I am come that they [ye] might have life,"—these words of the Master are perfectly intelligible the moment we perceive the deceptive nature of material sense, that its world and all that pertains to it is without substance or being, place or power.

To have an understanding heart, to be no longer fooled by mortal belief, to center our thought upon Spirit and not upon matter, upon the law of Life and not the law of death; to have and to worship one God, the eternal good, in whom and of whom are all things,—this is the heart of Christianity, this the loving call of Christian Science; and this, in the measure of the fixedness, the continuity of our looking unto Truth, its redemptive conquest.

JOHN B. WILLIS.

Among the Churches

Current Notes

PITTSBURGH, PA.—Second Church of Christ, Scientist, was dedicated June 21. There were three services. Second Church, organized for the convenience of former members of First Church living on the North Side, held its first meeting May 5, 1907, in McKnights Hall. The building just dedicated was purchased in May, 1908, and from time to time has been improved.—*Correspondence.*

Digitized by Google

PATERSON, N. J.—Simple ceremonies marked the cornerstone laying of First Church of Christ, Scientist, at Fair and Auburn streets, this morning [Sept. 1] at six o'clock. The dedication of the church will be the culmination of ten years' work. Meetings were first held in this city about a decade ago, and Orpheus Hall has been the meeting place for the past eight years. The present site was purchased in 1910 from the Shelby estate. The auditorium will seat two hundred and fifty persons.—*Paterson Guardian.*

BILLINGS, MONT.—The building committee of First Church of Christ, Scientist, last night [July 29] approved plans for a new church. The edifice will cost twelve thousand dollars, and will be built at Division street and Burlington avenue. The lots were purchased last year for four thousand dollars. The seating capacity of the new church will be five hundred. In addition to this, three hundred and fifty may be seated in the Sunday school room.—*Billings Tribune.*

LOGANSPORT, IND.—The new Christian Science church, corner of Ninth and North streets, will be opened Sunday [Aug. 30]. The church is a beautiful creation of the architect's art and is one of the most unique church edifices in the city. It is also one of the few structures of Logansport that would arrest the attention of the visitor here. The building has a seating capacity of approximately four hundred.—*Chronicle.*

FOND DU LAC, WIS.—First Church of Christ, Scientist, maintained a reading-tent during the county fair, Sept. 1-4, and many copies of *The Christian Science Monitor, Sentinel, Journal*, also pamphlets, were given to the public. Often every seat was taken, and quite a number expressed their thanks for having such a delightful place in which to rest.

The Lectures

Kansas City, Mo.

Bicknell Young delivered two lectures on Christian Science in Second Church of Christ, Scientist. He was introduced the first evening by F. M. Merwin, president of the church, who said in part:—

There seems to be abundant evidence to prove that we in this day are more generally heeding the injunction to worship God "in spirit and in truth." The interrogation of the human heart expressed in groping fears, in the to and fro of material seeking and the stress of daily living, has brought each of us at times to the tomb to inquire where they have laid the Christ. Like Job we have cried, "Oh that I knew where I might find him! that I might come even to his seat!" To all this we say, Christian Science reveals Him from whose presence we cannot go. It is teaching clearly the answer to the question, "What is truth?"

On the second evening, Mrs. Leonora L. Ewing, second reader, said in part:—

An Old Testament writer once said, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." This wise man of old knew that nothing less than the understanding of Truth would dispel the ignorance of God and its consequent fears, which enslave men and rob them of health, happiness, and peace.

That this wise counsel is still heeded, and that the world is seeking understanding, is evidenced by the deep and far-reaching interest in Christian Science which is abroad today, —an interest awakened by the works, the signs following the application of this new-old religion, which in less than half a century since it was given to the world has won its hundreds of thousands of adherents, who are ready and willing at any time to give a reason for the hope that is within them. Many of them will tell you that they have been lifted out of sin and its shame and degradation. Many have been raised from the depths of physical distress, and a large number are rejoicing that whereas they were without hope and "without God in the world," they have found that through Christian Science all may know Him "from the least of them unto the greatest of them."—*Correspondence.*

◆

Ottawa, Ill.

Clarence W. Chadwick, who delivered an address on Christian Science at the Chapel, was introduced as follows by Senator H. W. Johnson:—

It is frequently said that we are living in a materialistic age. If by that is meant, among other things, that as a whole men lack respect and reverence for things spiritual, I think the charge is well made.

We must admit that the present is a restless age. Many well-disposed persons are floundering about seeking a safe place for anchorage. I will not at this time attempt to diagnose the cause, nor to suggest a remedy, but if we are to heed the voice of some, society is much in need of heroic treatment. But the remedy recommended by this type of our fellow man, intensifies rather than allays the present condition of unrest. Their remedy destroys individualism and personal responsibility as well. Their panacea for all real or fancied ills of society is the fiat of the law; that is, they propose to bring joy, happiness, love, health, and truth to all by legislation,—the spiritual as well as the material welfare is to come from the state. The old-fashioned religion (not meaning the creeds or fine-spun theologies) has been largely abandoned by many of these self-constituted conservators of the public weal under the cover of altruism. This develops the selfish in man and does not meet his spiritual requirements.

As I understand it, Christian Science is not fundamentally a new religion, it defines itself in a sincere desire to live the Christ-life; to be filled with his spirit, which leads into all truth.—*Correspondence.*

◆

Minneapolis, Minn.

At a lecture on Christian Science by Col. William E. Fell, under the auspices of First Church of Christ, Scientist, the Auditorium, which seats about twenty-five hundred people, was filled, and many were turned away because of lack of room. The speaker was introduced by Gov. Adolph O. Eberhard, who said:—

In introducing the distinguished lecturer this afternoon, a distinct honor has been conferred upon me. He brings a message of good will that will strengthen the bonds of friendship between England and America. The imaginary boundary separating us from the Dominion of Canada, represents one thousand miles of river, one thousand miles of lakes, one thousand miles of prairie, and one thousand miles of mountains without a single fortification except that of good will. Being an authorized lecturer of The First Church of Christ, Scientist, of Boston, Mass., the speaker brings to us a message of right living, well doing, and efficient service. That is what Christian Science represents. It stands for everything that is good, true, noble, and elevating in American citizenship. While it is true that no message has ever been brought to us from that country from which no traveler has yet

Digitized by Google

returned, we know that whatever there may be in us that thinks and hopes and believes, is part of the infinite and will live beyond the grave. This is a great gathering of the representative men and women of Minnesota, and we shall be glad to hear the speaker's message.—*Correspondence.*

❖

Waukegan, Ill.

The remarks of City Commissioner Clarence W. Diver in introducing William R. Rathvon, who lectured on Christian Science, were in part as follows:—

One of the most commendable signs of our advancing civilization is the spirit of toleration which is abroad in our land with reference to the various religious beliefs, and any creed or belief which contributes to the welfare of the individual and thus *a fortiori* to society, is worthy of careful investigation and entitled to respect. The testimonies of thousands who have embraced Christian Science and have found in it the help which they had hitherto sought in vain, should have a respectful hearing and should bear weight with mankind. I am free to confess that I number among my best friends devoted followers of this faith, and I can say further that for clean living and an optimistic outlook on life they are unexcelled. I enjoy their society and find it restful and satisfying. I have never been importuned by them on matters of religion, and I know them to be free from the hysteria which too often characterizes those interested in advancing religious propaganda.—*Correspondence.*

Lectures to be Delivered

Aberdeen, Wash.—Willis F. Gross, Grand Theater, 8 p.m., Oct. 26.

Altrincham, Cheshire, England.—William R. Rathvon, Public Hall, 8 p.m., Nov. 16.

Amesbury, Mass.—Bicknell Young, Universalist Church, 8 p.m., Nov. 2.

Auburn, Maine.—Bicknell Young, Church Edifice, 93 College street, Lewiston, 8 p.m., Oct. 30.

Bangor, Maine.—George Shaw Cook, City Hall, 8 p.m., Nov. 5.

Birmingham, Ala.—Bliss Knapp, Lyric Theater, 3 p.m., Nov. 1.

Bradford, Yorkshire, England.—William R. Rathvon, The Mechanics Institute, 8 p.m., Nov. 12.

Brunswick, Maine.—Bicknell Young, Pythian Hall, 8 p.m., Oct. 31.

Centralia, Ill.—Dr. Francis J. Fluno, Pittenger Grand Opera House, 2:30 p.m., Nov. 1.

Chelsea, Mass.—Bliss Knapp, Church Edifice, Reynolds avenue, 8 p.m., Nov. 5.

Chicago, Ill. (Third Church).—Bicknell Young, Church Edifice, Washington boulevard and Leavitt street, 7 p.m. and 8:30 p.m., Nov. 5, and 8 p.m., Nov. 6.

Colorado Springs, Col.—Clarence W. Chadwick, Burns Theater, 8 p.m., Nov. 1.

Croydon, Surrey, England.—Col. William E. Fell, The Croydon Baths, 8 p.m., Nov. 13.

Dallas, Texas.—William D. McCrackan, Church Edifice, 8 p.m., Nov. 3.

Emporia, Kan.—Clarence W. Chadwick, Commercial Club Room, 8 p.m., Nov. 2.

Eureka Springs, Ark.—Virgil O. Strickler, Eureka Springs Opera House, 8:15 p.m., Oct. 31.

Fayetteville, Ark.—Virgil O. Strickler, Ozark Theater, 8 p.m., Nov. 1.

Freeport, Ill.—Clarence C. Eaton, Masonic Temple, 8:15 p.m., Nov. 5.

Ft. Smith, Ark.—Virgil O. Strickler, New Theater, 8:30 p.m., Nov. 2.

Fullerton, Cal.—Prof. Hermann S. Hering, High School Auditorium, 8 p.m., Nov. 5.

Glendale, Cal.—Prof. Hermann S. Hering, High School Auditorium, 8 p.m., Nov. 6.

Gloversville, N. Y.—George Shaw Cook, Darling Theater, 8:30 p.m., Nov. 1.

Indianapolis, Ind. (Second Church).—Willis F. Gross, Church Edifice, Delaware and Twelfth streets, 8 p.m., Nov. 6 and 7.

Kalamazoo, Mich.—Clarence W. Chadwick, Church Edifice, 8 p.m., Nov. 5 and 6.

Little Rock, Ark.—Virgil O. Strickler, Kempner Theater, 8:15 p.m., Nov. 3.

Liverpool, England.—William R. Rathvon, Philharmonic Hall, 8:15 p.m., Nov. 22.

London, England (Second Church).—William R. Rathvon, Kensington Town Hall, Kensington High street, London, W., 8 p.m., Nov. 9, and 3 p.m., Nov. 10.

London, England (Fourth Church).—Col. William E. Fell, Municipal Hall, Tottenham, 8 p.m., Nov. 12.

Los Angeles, Cal. (Fourth Church).—Prof. Hermann S. Hering, Highland Park Ebell Club House, 8 p.m., Oct. 31; Shrine Auditorium, 3 p.m., Nov. 1.

Marshalltown, Iowa.—Jacob S. Shield, Church Edifice, Fifth and Main streets, 8 p.m., Nov. 3.

Mitchell, S. Dak.—Jacob S. Shield, City Hall, 8 p.m., Nov. 5.

Muskogee, Okla.—William D. McCrackan, Hinton Theater, 3 p.m., Nov. 1.

Newark, N. J.—Hon. Clarence A. Buskirk, Keeney's Theater, 3:30 p.m., Nov. 1.

Newton, Kan.—Jacob S. Shield, The New Auditorium, 8 p.m., Nov. 1.

New York, N. Y. (Third Church).—George Shaw Cook, Church Edifice, 125th street near Madison avenue, 8 p.m., Nov. 2 and 3.

Omaha, Neb.—Clarence C. Eaton, Church Edifice, St. Mary's avenue and 24th street, 3 p.m., Nov. 1, and 8 p.m., Nov. 2.

Paris, Texas.—William D. McCrackan, High School Auditorium, 8 p.m., Nov. 2.

Perry, Iowa.—Dr. Francis J. Fluno, Jones College, 8 p.m., Oct. 27. (Correction.)

Portsmouth, Ohio.—Willis F. Gross, Sun Theater, 2:30 p.m., Nov. 1.

Quincy, Mass.—Bicknell Young, Alpha Hall, corner Hancock street and Cottage avenue, 3:30 p.m., Nov. 1.

Rome, Ga.—Bliss Knapp, Carnegie Library, 8 p.m., Nov. 2.

San Antonio, Texas.—William D. McCrackan, Beethoven Hall, 418 South Alamo street, 8 p.m., Nov. 5.

Sedro Woolley, Wash.—Willis F. Gross, Princess Theater, 8 p.m., Oct. 23.

Sheffield, England.—William R. Rathvon, The Empire, 8 p.m., Nov. 15.

St. Albans, Hertfordshire, England.—Col. William E. Fell, Cinema, Chequer street, 3:30 p.m., Oct. 25. (Postponement.)

Venice, Cal.—Prof. Hermann S. Hering, Church Edifice, corner Brooks and Second avenues, 8 p.m., Nov. 2.

Winchester, Mass.—Bicknell Young, Town Hall, 8 p.m., Nov. 1.

Testimonies of Healing

With the desire to help others who may be groping in mental darkness, I will tell what God has done for me through Christian Science, hoping it may aid them to break the fetters of error and material sense beliefs.

Some years ago a great sorrow came to me, so that the sun of my life seemed to be darkened, never again to shine. I seemed to be passing through that experience of which Mrs. Eddy speaks on page 266 of Science and Health, beginning, "Would existence without personal friends be to you a blank?" I seemed to be in a wilderness of sorrow, with fear of insanity and suicide. I walked the floor and called on God to deliver me, all the time believing there was only one way that things could turn in order for me ever to have peace on earth again. I had been in Christian Science for a number of years, and was having help from other Scientists, but human love clung to personality until divine Love forced me to accept what best promoted my growth (see Science and Health, p. 266); and not until then could the demonstration be made. I could not let go until everything that life held dear seemed to be slipping away from me. I had been in this state of mental anguish for some time, burying my false gods one by one.

Although I could not then realize that I was making any progress, I now know I must have been, for finally the key of truth turned in the rusty lock of my consciousness and revealed to me the fact that I could again be happy. It came to me in this way. One evening I was alone, going over the sad conditions of my life, and to my darkened sense there was not one ray of hope or happiness. It was evidently the darkest hour before the dawn. Then it almost seemed as if a voice spoke to me and said: "You are God's child, and He has promised to take care of you. Every hair of your head is numbered." A light seemed to break in upon my darkened sense and I called upon God.

From that time on I tried to cease struggling and to let God do the work, and when the temptation would come and my heart would cry out for false gods, I sought strength in prayer. It was some time after my complete surrender before all sense of grief and fear was overcome, but never again did I get into the "slough of despond" in which I had been floundering. The material fetters were slow to yield, for the condition that brought on my sorrow did not change; the material sense-testimony was just the same. I had to learn that my happiness did not depend on person, place, or condition. My sense of what constituted happiness had to change. It seemed like a long and dreary road through a wilderness of tears, but I ceased to plan for my future or to look ahead for one hour.

I wish I had the words to describe how I was led step by step from darkness into the light, from dark shadows and forebodings into the sunshine of peace, from barren shores and troubled seas into "green pastures: . . . beside the still waters." When questions of importance came up to decide, as they did later, thick and fast, I would say to myself that I did not need to decide, that God was taking care of me and my affairs. All my friends were surprised at the despatch, accuracy, and justice with which my affairs were adjusted. They could not understand how order could come out of such chaos in so short a time, and I could not explain it. I only said to those who I thought would understand, that God was taking care of me. Even my place of residence was changed without any planning or thought-taking on my part. It came about through friends I had not seen or heard from in many years, and had almost forgotten.

We never know what divine laws are at work for our good and protection, if we only trust God and let Him guide our footsteps. Sometimes, when I think of all that has been done for me, how I have been led step by step, how one difficulty after another has been overcome, one problem after another solved, a feeling of awe comes over me, and I fervently thank God for our revered Leader, Mrs. Eddy, who has shown us how to live so near to God that He can be realized as a very present help in time of need. Before I could reach this altitude of spiritual faith and understanding, I had to yield up my false gods and know the truth. Now, after all the buffeting I have been called upon to pass through in order to learn how to demonstrate God's love and care, I can truly say I am grateful for the many blessings I have received. I am happier than I believed it possible for me ever to be again. There is a zeal and interest in life I never expected to experience, a peace I have never known before.

For some time I have been an active business woman with a reasonable degree of success, and every step has been demonstrated. I have used the same understanding and faithful application of the scientific Principle in my business that is used to heal sickness and sorrow. Christian Science is a practical religion, for it can be applied in every condition of life. If one is governed by understanding and intelligence, it will not be found wanting when weighed in the balance, for it will adjust all our affairs lovingly and harmoniously if we will only yield our will to the divine law.

The demonstration is complete, and every day I prize Christian Science more and more, and feel more thankful to God, and grateful to our dear Leader for all this teaching has done for me.—Ella F. Everts, San Diego, Cal.

[Translated from the German]

Toward the end of 1898 I first heard of Christian Science through a friend. What he said seemed very wonderful indeed, though hardly believable, yet I clung to it as a drowning man catches at a straw, for it seemed impossible for me to continue to bear my suffering any longer. I had been afflicted for seven years with a nervous trouble which was steadily growing worse, although I had submitted to treatment from various physicians and also used many other means and methods of cure, but all with the same negative result.

My friend told me that a gentleman whom he knew had been healed within a very short time of a severe bowel complaint through Christian Science, and said that he intended to ask for treatment, as he was suffering with spells of dizziness and feared a serious outcome. What I heard inspired me with new hope, and I immediately went to Hannover for treatment. Before becoming acquainted with Christian Science I had always been a dissatisfied man, who lived in constant fear, and, I am sorry to say, for years without faith in God. The understanding of the inexhaustible source of all good, which heretofore I had known merely by name, was now opened to me by the practitioner, and I felt like a wanderer who has gone astray, but after reaching the limits of his endurance, finally finds the right way. In a very short time I learned to trust God, the only power, and succeeded in casting out doubt and fear, during which time I had the most loving assistance from the practitioner. My condition improved, and I soon became a perfectly well man.

During the former years of suffering I had lived in constant dread of a spinal trouble and its possible results, such as insanity or paralysis, and whenever symptoms of the dreaded disease were manifested, the thought would present itself to end my life. Today I can see that had I continued to live in

Digitized by Google

this state of anxiety, the false beliefs which were evidenced by well-defined symptoms would have governed the situation. I attribute my healing to Truth, and know these erroneous concepts to have yielded only through the recognition of what constitutes man's true life. But I have found much greater good than physical healing; I have found a God who is an ever-present help, a Father whom we need only trust, and in accordance with whose will we must live in order to be free from want.

I give thanks to God for having sent Christ Jesus, the Ensample, whose life and teachings have been made comprehensible and applicable in this age through the work of Mrs. Eddy. May this testimony be the means of encouraging seekers for help to continue on the right road, and may the time not be distant when the words of our Master will come true, "There shall be one fold, and one shepherd."

HERMANN HUMMERT, Braunschweig, Germany.

✧

Deep gratitude for the healing of a malignant throat attack compels me to acknowledge the great good that Christian Science has done and is doing for our little family. The two physicians who came to diagnose the ailment, pronounced it a very serious case, and urged me to take antitoxin. I told them I could not take their remedies, but would rely upon Christian Science for help. They saw it was of no use to urge me, so they talked to my husband, hoping he did not have so much faith in Christian Science as I, and that he would use his influence to get me to take the antitoxin. My husband told them that he would not interfere with my rights and that he thoroughly believed in Christian Science, but would leave me to choose my own method of treatment.

Absent treatment was kindly given by a practitioner in Chicago. The material laws concerning this disease were broken down and I was free. I know that by having Christian Science treatment I was saved much of the suffering mortal belief says accompanies this disease. One of the physicians told a friend that I did not have a "fighting chance" for recovery. While we have nothing but the kindest feeling for the medical profession, we know we have found a better way to heal every disease and discord. I was told the doctors said I would be left with heart disease, and at first there seemed to be symptoms of this, but I have been free from these for over a year. Today I am a strong, healthy woman, and am able to do whatever seems necessary for me to do.

During the years we have been interested in Christian Science we have received many blessings. No material remedies have been used, and we have found Christian Science able to meet all our needs. In our home we have seen the healing of measles, chicken-pox, mumps, acute lung trouble, rheumatism of many years' standing, ivy poisoning, a skin disease, blood-poisoning, a form of paralysis, chronic stomach and bowel disorder, and the overcoming of two cases of eye trouble. Glasses were discarded, and have not been worn for over four years. We thoroughly tested many forms of material treatment previous to our acceptance of Christian Science, but we received no permanent help.

I was healed of a number of ailments, said by *materia medica* to be chronic, by reading Science and Health. These healings were almost instantaneous. The physical benefits, however, are the smallest part of the good that has come to us. The spiritual awakening, the peace and happiness we have gained by trying to live and practise Christian Science, are the greatest blessings of all. My husband and I were church-members for a great many years, but we never found the satisfaction in our churches that we have found in Christian Science. The Christian Science Sunday schools are doing much good, and our little daughter gains a great deal of help by attending.

We are very thankful to God for all these blessings, also grateful to our dear Leader, who made the way plain for us to follow. We know if we follow that way we shall be led into all health, peace, and holiness.

ESTHER D. ROSS, Kalamazoo, Mich.

✧

Christian Science was first presented to me over seven years ago, after the physician had told me that no medicine would reach my case, as I had inflammation of the left lung. I had suffered for months; I could not lie on that side, and with the least exertion I would have great pain. I was very much discouraged, but it was in this dark hour, when life seemed nothing to me, that Christian Science came to me. I quickly saw it was the truth and grasped it. I asked for help in Christian Science, and one treatment cured me. The same treatment also healed me of a bowel disorder with which I had been troubled all my life. Later I was cured of severe headaches of three years' standing, when it was sometimes a day and a night that I could hardly raise my head from the pillow.

In 1912 I stepped on a rusty nail which went entirely through my foot, and it was very hard to pull out. My first thought was to declare the allness of God, who is an ever-present help in time of need, and is All-in-all. I then called a practitioner, who treated me, and I had no pain. In a few days the condition was fully overcome and I was able to wear my shoe.

When in the mountains of Idaho, seven miles from any town, I became very ill with acute lung trouble. There was no help to be obtained in Christian Science except through what understanding my husband and I had; still I had no fear. I knew that the same protecting power was with me, for there is no power but God, and He was with us in the mountains just the same as anywhere else. I knew that God was All-in-all, and He was our only physician. With our reliance on God, and what little understanding we had, I was well in a few days.

We have had many splendid demonstrations since coming into Christian Science. How I wish every one could know the truth! Life has been different to me since I took up its study, and I am truly thankful for what it has done for me and mine, and for the light it gives me on the Bible. I am grateful to our dear Leader, Mrs. Eddy, for this wonderful religion which is finding its way all over the world, and I try to prove my gratitude by a continual endeavor to reflect God, good, in my daily life. I hope this will help some one who is seeking the truth, to trust all to God. My heart is full of thankfulness to God for all I have and all I receive every day, and for the truth that makes us free.

MRS. W. A. GABLE, Bellingham, Wash.

✧

Several years ago I was attacked by an illness which developed into acute lung trouble, and I was under a doctor's care for two months. He visited me twice daily. When I was able to get out of bed I was taken to Bloomington, my home at that time. The physician told my husband it would be dangerous to move me, but later he said I had better be taken to Arizona or New Mexico, as I could not live in this climate through another winter. I was also suffering from nervousness and bowel disorder. My husband took me home May 15, 1900.

The following day a dear friend came in to see me and told me of Christian Science and what it had done for her, saying that I also could get help. She asked me to read the

Digitized by Google

Journal she had brought me and to go to the Wednesday evening testimony meeting. I was not then able to stand on my feet long enough to dress. I read the *Journal* through, and by Wednesday evening was able to dress and be taken in a carriage to the church. After hearing the many testimonies of healing, I slept throughout the night, for the first time in months. The following day I called a Christian Science practitioner and commenced treatment. I laid aside my glasses, which I had worn for five years, and have had no need of them since. After eleven treatments the practitioner told me she thought I had sufficient understanding to work for myself. Though my struggles were many and my physical healing slow, I am thankful I never thought of turning to mortal mind for help. Mrs. Eddy says, "Wait patiently for divine Love to move upon the waters of mortal mind, and form the perfect concept" (Science and Health, p. 454).

In all these years we have not used any material remedies or turned to mortal mind for help, with one exception. A few years ago our four year old daughter, while waiting for a piece of ice, was struck with a three hundred pound cake, which slipped from the tongs of the iceman, seriously injuring her right leg and apparently breaking every bone in the left foot, besides lacerating the flesh of the foot badly. I was in the house at the time and heard an older daughter cry out for me. My first thought was that Mind is ever present and controls His idea, and that there was nothing for me to fear. With this sweet assurance I walked out and took my child from the arms of the iceman and carried her on to the porch. With so many around me voicing error I was not able to work alone, so I called for a Christian Science practitioner, and then for a physician to set the bones.

Upon his arrival, the physician said it was such a serious accident that the child would have to be taken to the hospital. Arriving there, a surgeon was called, and he said the foot would have to come off; but I told them that all I wanted them to do was to set the bones and I would take care of the rest. They said the child would probably be crippled for life, and would not walk for three years without the aid of crutches. I held her hand during the setting of the bones and realized as never before that God was ever present and controlled His child. She suffered no pain after the first day and was up in a wheel-chair on the third day. In one week the surgeon took the cast from her foot and said every bone was set perfectly. She walked in six weeks without the aid of crutches and was perfectly healed.

Serious throat and lung trouble, croup, sciatic rheumatism, jaundice, measles, mumps, and other discords have been overcome in the family by the power of Truth. Words cannot express my thankfulness to God, and my gratitude to our beloved Leader for the benefits derived from Christian Science.—Jessie J. Disbrow, Springfield, Ill.

❖

[Translated from the German]

In the spring of 1911 I was taken severely ill, and was obliged to stay in bed for six weeks, besides suffering from the after effects a long time; but in the spring of 1912, when I had another such attack, accompanied by pleurisy, we turned to Christian Science for help, having in the mean time investigated its teachings. A Christian Science practitioner to whom we applied took up treatment, and I began to improve at once, so that in a short time I was completely restored. I would also mention that I remained in bed only a few days and was able to supervise my business all the time, something which had been impossible during former attacks. Furthermore, I have been healed of severe cough and expectoration of years' standing, and all who see me wonder at my healthy appearance.

We have also experienced in the case of our youngest son what is possible with God. When the child began to walk, his right foot would turn over, so that he actually stood on his ankle. Various physicians to whom we applied spoke of operating and shortening the sinew, but to this we could not consent. We then had the child wear a boot with splints on the side, but this proved a failure, as the limb did not show a normal development. The quick healing which I had experienced, induced us to put our son under the care of a Christian Science practitioner. After the first few treatments we discarded the surgical boot, and a few months later our child was healed, his leg now being as normal as the other, so that he is able to be on his feet from morning till night and to run faster than any of his playmates.

For this wonderful healing, as well as for other instances of help received in our family, I feel impelled to express my thankfulness to God, and my gratitude to Mrs. Eddy, the Discoverer of Christian Science. We have had so many proofs of the power of divine Love in a personal as well as in a business way, that Christian Science could never lose its hold upon us.—Hermann Blume, Braunschweig, Germany.

❖

I wish to express my heartfelt gratitude for all that Christian Science has done for me. I was healed of a severe spinal trouble of many years' standing. I had to use a rubber cushion for three years prior to my healing. I had also been taking an opiate for two years, but through Christian Science I was cured entirely of that dreadful habit. I have never taken a dose since or had a desire for it. I was also cured of a severe inflammation of the eyelids. For years I could scarcely see to read at all. I can now read day or night. These healings have proved permanent. Through fear and opposition I gave up Science, but never in thought, and five years ago I took it up again. I now have no opposition. It has been a number of years since I was healed of these ills, and with all the opposition and trials not one of them has ever returned. I am nearly sixty years old and have never worn glasses. I have other ailments that have not been overcome, but I know that Truth will heal them all.

I thank God for the many other blessings I have received through this most glorious truth, and for our faithful Leader.

Etta Feazell, Los Angeles, Cal.

❖

I have been asking myself daily if I were doing all I could for the cause of Truth, which makes men free from sin, sickness, and death. Then it came to me that I had never written for our periodicals, although I have been helped, cheered, and strengthened by what others have contributed. At the time I came into the understanding of Christian Science I was very ill indeed in mind and in body, and I had the strongest opposition from relatives and friends. My healing was slow, very slow; but now I am most grateful for this, since it compelled me to strive the harder for an understanding of Truth. I had been an active church-member for some years, but was in a most darkened state when the truth dawned upon my consciousness. My prayers had not been answered. I could not understand the plan of salvation, and I did not know how to pray aright. I was beginning to wonder if there was a God after all.

In the darkest hour I was led to read this passage in Isaiah: "I will bring the blind by a way that they knew not; I will lead them in paths that they have not known: I will make darkness light before them, and crooked things straight. These things will I do unto them, and not forsake them." These promises seemed like a voice from heaven, and I held to them day and night, striving to know that they were for me, and feeling sure they would lead me to light as yet

Digitized by Google

unseen. Shortly after this I was led to take up the study of Christian Science, but with little hope of its healing me, as I had many ailments that *materia medica* could not even relieve, although for many years I had spent every dollar I had in search of health. I have been entirely freed from the lung trouble that kept me in bondage so long, also healed of a broken bone in the foot that the doctor could not heal. Besides this, the malice, envy, and resentment which filled my consciousness have all disappeared as the truth has been poured in. It was eight years before I was completely healed, but there was a constant gain for the better from the start. While I am most grateful for the physical healing, it is the spiritual understanding that fills me with joy. To know that God is ever present and omnipotent, meets every want and quiets every fear. I could write pages about the many trials and triumphs I have had since coming into Christian Science, and some of these stand out as beacon-lights, urging me on to greater endeavor.

Words are inadequate to express my heartfelt thankfulness to God for this wonderful truth that frees mankind from all inharmonious conditions, and I am indeed grateful to our beloved Leader, who has so faithfully shown us how to make this teaching practical.

AGNES E. GRIMES, New York, N. Y.

Since coming into Christian Science I have been helped in so many ways that it would be impossible to tell all in one testimony, but for the benefit of young mothers I am writing this. I have had two little ones come to me since I accepted this truth. While my help with the first was very great, at the time of the birth I was so situated that I had to have a physician and a nurse that were opposed to my religion. Although to material sense I got along beautifully, I did not have the freedom that was experienced in the last instance, when I was able to procure a Christian Science nurse. The months prior to the birth, in both cases, passed without the ailments that usually accompany this condition. I felt and looked so well that my nearest friends and neighbors were unaware of my condition until a very short time before the arrival of the babe, and some were completely surprised. As I had had two children before I took up Christian Science, I can appreciate the vast difference. The old way was slow and hard, but the last birth was almost painless, and over very quickly. The baby, a little girl, is strong and healthy. She has never had the ailments of infancy, and has been unusally good. She is now two years old. The children are learning to demonstrate the truth. For all this and many other blessings I am truly thankful to God.

EVA M. POWELL, Medford, Mass.

I wish to express my gratitude for the innumerable blessings I have received in Christian Science, one of which is the healing of a chronic throat affection that I had had for years. I am more thankful, however, for the spiritual understanding of God which I am gaining every day through the study of the Bible and "Science and Health with Key to the Scriptures," and which is enabling me to overcome all manner of discord by knowing God as the only power and evil as nothing.

I am truly grateful to Mrs. Eddy for the wonderful revelation she has given us. My healing has been permanent, though I had a severe cold in the early spring which was beautifully met in Christian Science. For over seven years God has been my only physician, and I am grateful beyond words for the many blessings that are coming to me every day.—MARY BARRETT, South Bend, Ind.

From Our Exchanges

[The Christian Commonwealth]

Certain elements have been growing up during recent decades which men of good will and faith have argued against in vain,—the belief in force, the trust in statecraft, the appeal to selfishness. We shall never need to waste our breath upon them again; their nemesis has arrived. After this terrible war is over it may be that there will be fewer fire-eaters in Europe, fewer to say that armaments are the only guaranty of peace, fewer to think that in the end might is the only thing with which we have to reckon. There are some rebellions that God can only laugh out of existence; there are some sins that can only be burnt out in their own hell-fire.

Meanwhile, let us remember that there are Christian men in all the nations of Europe who are not going to let this be the end of their hopes or friendships. When this is over, the Christian church will have to take a different position. The old compromise of state and church has been broken to atoms; the amalgam of the teaching of Jesus and the acceptance of the world's standard which we have labeled Christendom has perished in a night. There is a great work ahead. If we have to mourn that after so many hopes, and just when it seemed so near, we have to begin all over again, let us remember what a chance that may mean. It may be a thousand times better that we should be driven to believe that the kingdom of God is something that has to be received as a gift. Some of us have long doubted whether the things so often identified with the coming kingdom were not being attempted on lines that squared ill with the attitude of Christ, and with an ominous disregard for him.

[The Christian Register]

The old forms of religious faith and custom have wholly failed to conquer the war spirit of Europe. Christianity as an organized ecclesiasticism has collapsed as a counterforce to the spirit of militarism and racial hatred. After centuries of idolatry of the Nazarene, whose message was that of peace and good will, all that Europe has to show today is the red record of hatred to the death. Something is wrong, and wrong at the very source. It can mean only that there is needed a new statement of religious ideals that will grip the modern conscience and be forceful in deciding the destinies of the nations. It is recognized that democracy is the force which must be developed to give peace and safety to the world, and slowly it is being recognized also that democracy is but one expression of religion. All growth and progress are from the heart and center, and it is with these that religion has to do.

It is not hard to discover the fact that in liberal religion are to be found the principles which work out into democracy. Religion, to be vital, must find its roots in the soil of the present. It must be more than an echo from the past, more than the perpetuation of ancient conceptions.

[The British Congregationalist]

We have been told that this is a spiritual struggle, a holy war. It is so only in the sense that certain great spiritual issues are at stake, as they are in all wars. But it rests with the churches to see to it that these spiritual issues are not lost sight of in the general welter of things, and that, when the end comes, they have their place in the settlement, . . . and when the sound of the guns has ceased, we must be quite sure that spiritual forces are reckoned at their true worth.

It is time already for the churches to prepare for this. They must keep before men the imperishable value of that

Digitized by Google

righteousness which alone exalteth a nation. They must show how it is "not by might, nor by power," but by the "spirit" of God, that men and nations really live. They must teach in season and out of season that nations, like individuals, are great in proportion to their character, to their keenness of conscience, their sobriety, their self-sacrifice, and their fear of God. They must insist that war is always an evil thing, though sometimes the lesser of two evils.

[Rev. T. Rhondda Williams in *The Christian World*]

Our rationalistic friends seem to think that this great war is going to put an end to religious faith. A look inside the churches shows that the trouble is working in the opposite direction; it is drawing men to God. The churches are everywhere much better attended than when the trouble began. This is not only so in our own country, but in the other countries concerned. People are everywhere gathering together in greater numbers to seek God, to acquaint themselves with Him, and to find in that communion a peace which even the war cannot disturb.

Many people in France who had abjured the church altogether, are turning back to it in these days of distress. With all its faults and limitations, it still offers the essence of the truth which is more precious than any other, and utters a word which no other institution exists to utter concerning the relation of man to God, and concerning the possibility of realizing in God the life of the soul. It is certain that human history is full of testimony that it is not trouble that drives men away from God or destroys their faith in Him. The most troubled times have been the times of deepest religious experience, the deepest realization of the presence of God. It is a commonplace that the richest religious literature is the literature of sorrow. And already the present trouble has added a seriousness to many frivolous lives, which has led men and women to consider whether, after all, there is not in the message of religion something essential and eternal.

Why is this? I think it is because in times of great stress men discover their own deeper selves, and when they do so they always find God. Great trouble somehow digs into the very foundations of a man's existence, and he cannot explore there without finding the eternal. When some tremendous trouble sends its plow through our heart of hearts, then we become aware of wonderful things we have never suspected before. It is a vain hope that trouble on the enormous scale that we are now witnessing, will drive humanity from God; it is pretty sure to do the very opposite. And we may be sure that the instinct of the human heart will be a safer guide than the intellectual reasonings of theologians on the one hand and rationalists on the other.

[*The Universalist Leader*]

What any given experience shall do for us depends on how we use it. If prosperity makes us better, it is because it has been thankfully received and worthily employed. It is when the loss of worldly fortune causes us to prize more highly than we did the spiritual riches which must henceforth constitute our only wealth, that it bestows a better treasure than it took away. It is when we grow more conscious of God's cherishing love because we have sought it for companionship in our loneliness and comfort in our sorrow, that the chastening of which the apostle speaks yields the peaceable fruits of righteousness. It is when, feeling and obeying an impulse to shield others from a suffering of which we have learned the bitterness, we become gentle where we were rude, and helpful where we were indifferent, that our dross is consumed and our gold refined in the furnace of affliction. It is when, through its darkness, we look for and find the day-star of eternal hope, that we are made better by the woe of bereavement.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $3. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; fifty copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; fifty copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 60 cents. In all other countries, one year $1.25; six months 75 cents.

SALE PRICE, POSTPAID: Single copy 10 cents; twelve copies to one address $1. Foreign rate, single copy 12 cents; twelve copies to one address $1.25.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows: "THE MOTHER'S EVENING PRAYER," 75 cents; "CHRIST MY REFUGE," 75 cents; "LOVE," 60 cents; COMMUNION HYMN—"HAVE YE MY SAVIOUR?" 50 cents; "BLEST CHRISTMAS MORN," 27 cents; "O'ER WAITING HARPSTRINGS OF THE MIND," 27 cents; "SHEPHERD, SHOW ME HOW TO GO," 27 cents. Quantity prices will be furnished on application.

The first three hymns are arranged for high and low voice in the same copy. The last four hymns are published separately in high and low keys. When ordering state key desired.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

President Wilson has signed the Alaskan coal land leasing bill, opening the coal fields of Alaska. Because of restrictions recently put on the output of coal from Canada to Alaska, the bill was hurried through Congress at the request of Secretary Lane and several Western senators. The bill is designed to throw open to a system of leases under competitive bidding the immense coal resources of Alaska, tied up the last eight years, and pending claims will be adjudicated within a year. The Bering river, Matanuska, and Nenana coal fields will be the first surveyed, the government retaining 5,120 acres in the Bering and 7,680 acres in the Matanuska fields, and one half of all other coal areas. To prevent monopoly, or in other emergencies, the government reserves the right to mine coal for the benefit of the army and navy, or for the operation of the government railroads in Alaska. Leases will be made in blocks of forty acres, or multiples of that amount not exceeding 2,560 acres altogether in any one lease, and to run not more than fifty years. Present coal land claimants may relinquish their rights to patent under the old law, payments being refunded. Royalties paid by lessees must be at least two cents a ton, with a maximum unrestricted. Proceeds from leases will be usable only to reimburse the government for building the Alaskan railway.

When President Wilson pushes a button in the White House some time in the afternoon of Oct. 31, the flash at the end of the wire in Kansas City will open the new Union station, the third largest in actual size in the United States, and the center of a terminal system that has cost in excess of fifty million dollars. A few minutes after midnight on the morning of Nov. 1, the first train will enter the new station, to be followed thereafter each twenty-four hours by more than three hundred incoming and outgoing trains. Where the old union depot was outgrown in the first twenty years of its life, the new station, with the expenditure of a comparatively small part of its original cost of six million dollars, can be trebled in size so far as train accommodation is concerned, and doubled as to passenger accommodation. The systems which will use the new station are the Santa Fé, Burlington, Rock Island, Union Pacific, Frisco, Missouri Pacific, M. E. & T., Kansas City Southern, Alton, Chicago, Milwaukee & St. Paul, Chicago Great Western, and Wabash. The Kansas City, Mexico & Orient railroad, when completed, also will use the new station.

By touching an electric button, President Wilson will announce to the world, on an early date in November, the official opening of Houston's ship channel, the completion of which on Sept. 7 marked an era in Houston's commerce. Throughout its length of fifty-one miles from Bolivar roads in the Gulf of Mexico to Houston, Texas, the channel is more than twenty-five feet deep, as required by the government. From the Turning basin to Morgan's point it is one hundred feet wide at the bottom, and thence to Bolivar it is one hundred and fifty feet wide at the bottom. The amount expended in this improvement was two million five hundred thousand dollars, and the work extended over a period of two years. Houston assumed responsibility for half this amount, and the United States government for the remainder. In return for the government's half and its promise to maintain the channel forever, the city of Houston promised to erect and maintain free wharves. It has cut the distance for rail hauls and will bring commerce direct to the largest railroad center in the Southwest.

The final link in the Cuba-United States all-rail communication will be furnished within a few months, when the Henry M. Flagler, the great sea-going ferryboat now nearing completion, goes into service between Havana and Key West. It will soon be possible for a traveler to board his train at Havana and remain in his stateroom while going through to New York city. The Henry M. Flagler will be capable of handling thirty of the largest freight cars, loaded, and will make the trip between Havana and Key West in eight hours. The ferryboat is three hundred and fifty feet in length, with a beam measuring fifty-seven feet. Loaded with twenty-three hundred tons, it will have a speed of twelve knots an hour.

The famous Iguazu waterfalls will soon be in direct railway communication with Argentina, through Paraguay. With the Zambesi falls in South Africa and the Niagara falls of North America, the Iguazu makes up the world's three greatest falls, and Argentina is aiming to make the Iguazu a point of attraction for tourists. The Argentine government is planning to purchase an immense tract of land adjoining the falls for a national park. Agricultural, meteorological, and forestry stations, and a great military post at the junction of the Iguazu and Parana rivers, are a part of the scheme now being outlined in this city.

Officials of the Philadelphia Company report that the company has struck a gas well having an output of twelve million cubic feet a day, with a rock pressure of eight hundred pounds to the square inch. This well is on the company's farm in the Old Murraysville field, within a mile of the first well drilled in this field thirty-five years ago. The new well was struck in the sand six hundred feet below the original discovery, and is less than fifteen miles from the city of Pittsburgh.

The commercial apple crop of the United States is now placed at forty million five hundred thousand barrels, against a little less than thirty-one million in 1913, and compared with forty-eight million in the large crop of 1912. Prices are ranging from $1.75 to $2.50 per barrel, low prices, compared with $3.00 and $3.25 a year ago. The total exports from the United States last year were about one million barrels, compared with one million eight hundred and twenty-four thousand barrels the year previous.

After three years of effort, important progress has been made toward the establishment of a national park in Colorado to be known as the Rocky Mountain national park. The bill looking toward this end has been passed by the Senate and has gone before the House public lands committee. The area which it is proposed to convert into a great national park is chiefly in the Arapahoe and Colorado national forest reserves a short distance southwest of Denver, embracing about two hundred and thirty thousand acres. Local forest officers report that the tract embraces an area of exceptional scenic beauty and that it is visited annually by tourists.

With its great wealth of tin ore, Bolivia now expects to become one of the chief sources of supply, since the European situation prevents shipments from sections which have been drawn upon heretofore for this valuable mineral. Tin is found in almost every part of the main chain of the Cordillera Real and its numerous spurs. In the departments of La Paz, Potosi, and Cochabamba there are a large number of profitable mines. The finest grades of the mineral contain up to 65 and 70 per cent of pure tin, and the ore is shipped for smelting just as it comes from the mines.

A serious landslide in the Culebra cut at a late hour Oct. 14, completely interrupted all traffic through the Panama canal for six days. A large mass of trap rock mixed with loose earth sloughed into the channel. Conditions at the scene of the slide north of Goldhill are reported to be excellent, the channel probably being one hundred and fifty feet wide, with an average depth of thirty-five feet. The dredging operations are proceeding at the rate of twenty-five thousand cubic yards daily.

Secretary of the Treasury William G. McAdoo announced last week at a meeting of class C directors of all regional reserve banks, that the federal reserve board plans to inaugurate the new currency system and open the twelve reserve banks on Nov. 16. He said it was not planned that all functions of the banks would be exercised at that time, but that facilities for receipt of deposits from member banks would be had, and rediscounting of such part of the bank capital available would be possible.

Every United States high school girl who, if a member of a Greek letter fraternity, does not resign before Nov. 15, will be barred from joining such fraternities when she reaches college, under a resolution adopted last week at New York by the Congress of the National Pan-Hellenic, representing seventy thousand college fraternity women in this country. The congress will meet next year in San Francisco.

With an address of welcome by President Wilson, ex-President Taft in the chair, and the entire Supreme Court sitting as guests of honor, the American Bar Association began its annual session at Washington last week.

William Penn, in his Charter of Rights, provided that for every five acres of forest cleared, one acre should be left in woods. Foresters today maintain that on an average one fifth of every farm should be in timber.

The steamship Victoria, which arrived from the Bering sea ports recently, brought five hundred thousand dollars in gold bullion.

Wireless telegraphy is being used in Canada in reporting forest fires.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII October 31, 1914 No. 9

Practical Idealism

JUDGE CLIFFORD P. SMITH

To be a genuine idealist requires first a practical idealism and then the consistent practice of it. It is to entertain true ideals and bring them into demonstration as rapidly as it is humanly possible.

Although Jesus said "I live by the Father," and "It is the spirit that quickeneth [giveth life]; the flesh profiteth nothing," he also continued to eat material food until near the time when he rose above all material conditions. Although he taught as absolute truth that God is Spirit, and man is "that which is born of the Spirit," he also recognized a relative difference between physical disorder and physical health, and in this he was perfectly consistent. Although Paul taught the unalterable fact that man is inseparable from God ("In him we live, and move, and have our being"), he also recognized the human sense of separate existence and tried to impart the true idea. Although he was able to annul for himself the general belief that the life of man is subject to the bite of a viper, he did not proffer his hand to the viper to have it bitten.

The apostle spoke absolutely of man's essential nature as determined by his relation to God, and yet he also spoke of an "old man" to be "put off" and a "new man" to be "put on," of mortality to be overcome and immortality to be gained. Speaking absolutely, he said, "We have the mind of Christ;" speaking relatively, he said, "Work out your own salvation." In all this he adhered consistently to Christian idealism. His philosophy and theology are described by Mrs. Eddy on page 254 of Science and Health, where she says: "God requires perfection, but not until the battle between Spirit and flesh is fought and the victory won. . . . The human self must be evangelized. This task God demands us to accept lovingly today, and to abandon so fast as practical the material, and to work out the spiritual which determines the outward and actual."

Pantheism is defined in the dictionaries as "the doctrine that God is the only substance, of which the material universe and man are manifestations." Christian Science declares that matter cannot be the manifestation of Spirit, nor evil the product of good, and consistently denies the seeming reality of aught that is unlike divine good. It does not deny that sin, disease, and death, want, suffering, and woe, have a relative existence in human experience. But this Science does deny that evil, in any form, has the reality of absolute substance or being; it declares that every phase of evil can be scientifically abated and abolished; and it gives to its students a spiritual understanding that lifts them more and more into the realm of the real.

In Mrs. Eddy's Message to The Mother Church for 1901 (p. 14) she said, "To be delivered from believing in what is unreal, from fearing it, following it, or loving it, one must watch and pray that he enter not into temptation—even as one guards his door against the approach of thieves." In the Bible we are admonished to "overcome evil with good." What is the nature of good and the nature of evil by which the one is superior to the other? Where do good and evil come in contact so that the one can be used to overcome the other? Good and evil are sometimes personified by the Biblical writers, but they are oftener defined impersonally in mental terms. Some of the Scriptural names for good are "mind," "the mind of the Spirit," "spiritual understanding;" also "truth." Some of the Biblical names for evil are "fleshly mind," "carnal mind;" also "error," "deceit," and the like.

Christ Jesus defined evil as "evil thoughts." He resolved all of the things which defile a man into thoughts that are evil, but he did not leave the subject there. If evil thoughts were not different and separate from true consciousness, there would be no deliverance from them. Hence we have his further description of evil as "a liar," or lie, and his emphatic statement that there is no truth in it. Such being the nature of good and evil, the scene of the warfare between Spirit and flesh must be the so-called human mind; in other words, the consciousness of both good and evil. This must be the meeting-point where evil can be overcome with good. Here is where the errors of material sense can be corrected with the truth of spiritual sense.

The Hebrew proverb is scientific: "Keep thy heart with all diligence; for out of it are the issues of life." Evil appears and disappears only in the so-called human mind. The kingdom of God is in the consciousness which He creates; that is, the consciousness of absolute good. It was nothing less, therefore, than the practice of Christian Science which Paul and Peter summed up in their precepts: "Let this mind be in you, which was also in Christ Jesus;" "Arm yourselves likewise with the same mind." This true mentality, this spiritual thinking, is godliness itself; and we are warned in the Bible against denying the power of godliness. To do this, we are told, is to resist the truth.

In entire conformity with this teaching Mrs. Eddy writes, "Finally, brethren, let us continue to denounce evil as the illusive claim that God is not supreme, and continue to fight it until it disappears,—but not as one that beateth the mist, but lifteth his head above it and putteth his foot upon a lie" (Christian Science versus Pantheism, p. 6). To illustrate: An act that culminates in murder must first take form in human thought. The gist of sin, as pointed out in the Sermon on the Mount, is the yielding to a sinful impulse. The temptation or incentive to sin is always mental; it is almost always a false sense of pleasure in evil. It therefore becomes true that the only positive cure for sin is the truth relative to the illusion back of it. Sin is a thing of thought—false thought; it must be overcome on that basis; and this can be done most effectually at the point of its inception. Detected and rejected there, the evil neither enters into character nor is expressed in action.

Can it be said, then, that Christian Science calls men off from an intelligent campaign against evil? Christian Science changes its students into better men and women, not only by giving them true motives, pure desires, and absolute ideals, but also by discovering to them the deceptive nature of evil impulses and the source and power of good thoughts. In like manner this Science equips its students for the cure and

Digitized by Google

prevention of disease. It teaches them to analyze the conflicting elements of human consciousness and to maintain the true sense of being against the false sense of disorder, thus destroying the essential cause of disease and establishing the conditions of health.

Thus the power of divine Mind, acting with true thoughts, or truth, is found to be available in every case of human need. As the psalmist said, "His truth shall be thy shield and buckler." In a word, the aim of Christian Science is to induce and enable men to realize their rightful freedom and God-given manhood.

❖

"Ye have done it unto me"

JULIA S. KINNEY

In the twenty-fifth chapter of Matthew's gospel, Jesus explains the nature of what is called the last judgment. We find him earnestly endeavoring to unfold that condition of thought which enables one to enter into the kingdom of heaven, the realization here and now of God's power and presence. The Master's words are of deep significance, because they show the separation which each individual must make in his own consciousness between thoughts and motives which are spoken of as "blessed of my Father," and those which bring only suffering. Moreover, his words reveal a sure standard by which to measure and pass final judgment upon each thought before it develops into an act, so that each act may be indelibly stamped by our Lord's characterization, "Ye have done it unto me."

Jesus' every word and deed showed that his view-point was different from that of mankind in general. He looked upon man from the standpoint of the Biblical teaching that God created him in His own image, with the result that, when confronted by the appearance of a maid whom all others declared dead, he affirmed that she was not dead (though they laughed him to scorn), and he proved the truth of his words even to the most skeptical. Again, when brought face to face with a woman who had been found in a very grievous offense, whom all others were united in condemning, and insisting that Moses declared death to be the punishment of this sin, Jesus, after quietly rebuking the self-righteousness of her accusers, assured the woman that he did not condemn her, and admonished her to "go, and sin no more." Many instances related in the gospels prove that, as Mrs. Eddy says in Science and Health (p. 476), "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals."

The Master's steadfast adherence to the one standard, namely, "Be ye therefore perfect," was rendered possible because of the entire separation which he made between what is and what is not the image and likeness of God. Having made this separation, he utilized every opportunity to reflect the godlike qualities of mercy, kindness, patience, meekness, and love. He realized that to be about his Father's business required of him not only that he teach others what love is, but that he should so intelligently reflect divine Love as to dispel all the illusions of evil. He never allowed himself to be influenced by material sense or to manifest anything but love and forgiveness. Even when nailed to the cross, these were uppermost in his thought. He knew that every act springing from the pure thought of man as the child of God, spiritual and perfect, must be such as to win the divine approval.

Jesus' life and teachings were in striking contrast to those of the Pharisees of his day. They sought popularity and the praise of men; he sought the glory of God. Although their own minds were filled with evil, they sought place and power that they might have authority to sit in judgment upon the sins of others. Christ Jesus, whose every thought was governed by Love, sought only opportunities to heal and bless. We are told that even in their prayers and almsgiving they desired to be seen of men. Jesus gave with tender compassion and prayed with understanding. Their acts were the result of self-assertion; his, the result of self-effacement. Blinded by selfishness, they could neither see nor supply the needs of their brethren, whereas he, alive to their every necessity, was constantly ministering to their deepest wants. Self-righteousness, intolerance, ambition, pride, and arrogance would alienate any one from God. "Depart from me, ye cursed," is the law of evil's annihilation.

Through the light which Christian Science throws upon this Scripture we learn how to apply the "scientific statement of being" (Science and Health, p. 468), which begins: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all." When this truth is accepted, then the "Son of man" has come, "and before him shall be gathered all nations [thoughts]: and he shall separate them one from another, as a shepherd divideth his sheep from the goats." Thoughts which are based on the allness of divine Mind, the spiritual concept of God and man, are "blessed," because such thoughts bless mankind. They feed the hungry with the meat of understanding, supply the thirsty with the water of life, tenderly fold the stranger to the heart, cover the naked with garments of charity, visit the sick, and come to the prisoners of sense with thoughts of health and freedom.

It is not enough, however, to declare and hold to these spiritual ideas occasionally or only in cases of dire need and distress. On the contrary, the same steadfast adherence to the spiritual view-point, and the same careful distinction of thoughts which Jesus evidenced, are required of each disciple. Throughout her writings our beloved Leader constantly points to his words and works, and in her own life she has shown us what man's possibilities are when we faithfully follow the Master. Never to miss blessing "one of the least of these" is to reflect constantly the godlike qualities of compassion, mercy, tenderness, and love, and make sure of winning that benediction, "Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world."

❖

Growth

EDMUND K. GOLDSBOROUGH

For long centuries natural scientists have sought a solution of the mystery of growth as manifested in nature; but it was not to be found by material seeking. When, however, the light of metaphysics was turned upon the question in scientific analysis by Mrs. Eddy, a true explanation was given, and she wrote, "God creates all through Mind, not through matter, . . . the plant grows, not because of seed or soil, but because growth is the eternal mandate of Mind" (Science and Health, p. 520). In reality, therefore, the material growth which seems to take place is a mistaken sense of the eternal fact that growth is a manifestation of Spirit, and not of matter.

Throughout the ages, mankind have marveled at the secret of growth. Following what appears to be decay, death, and desolation, comes the perennial springtide, when the buds unfold, the waving grass and the foliage of the forest become luxuriant. Like the sun breaking through the mists of the morning, the fact of spring forces its way, as it were, through the dark shroud of winter, dispelling the disharmony of the

Digitized by Google

elements, the bleak outlook yielding to the gentle touch of summer.

Even to mortal sense it is evident that so-called nature is apparently responsive to a restorative influence whose life-giving properties are seen in the regenerative processes of the seasons, thereby hinting at the eternality of life. But for the belief that we seem to "see through a glass, darkly," the fact of a forever spiritual existence would become apparent, and the almost universal belief in dissolution and death would be relegated to the realm of nothingness. As the seeming scales of sense fall from our eyes, the false concept that nature is matter and at the mercy of discord and destruction, is replaced by the truth as voiced by Mrs. Eddy in the beautiful article in "Miscellaneous Writings" entitled "Voices of Spring," in which she says (p. 331): "In sacred solitude divine Science evolved nature as thought, and thought as things. This supreme potential Principle reigns in the realm of the real, and is 'God with us,' the I AM."

Unity with God

EVELYN F. HEYWOOD

THE call to the Christian Scientist is always a practical one. He is not merely asked to believe that God's promises are true; he is taught how to understand and so to manifest the truth of them in his daily life. He is not told that salvation comes through worshiping a far-off, omnipotent being, but rather through unity with an ever-present, ever-loving Father. Christian Science does not say to the sad and weary that the power wielded by Jesus in the overcoming of sin, sickness, and death is no longer available; it brings to him the blessed assurance that divine Love blesses all impartially, and it shows him how he may prove the truth here and now by the recognition of his sonship with God, even as the Master proved it.

It is noteworthy how, in losing sight of so much of the present availability of the gospel teaching, scholastic theology has obscured the true meaning of the word atonement, giving to it a ritualistic and sacramental office, thus separating it from the hearts and understanding of those seeking to draw nigh to God. Down through the centuries the Christian has thought of the atonement with awe not untinged with remorse, and for him it has called up the picture of an agonized figure upon the cross, symbolizing the greatest tragedy, the cruelest injustice, in all the world's history; while only too frequently the word atonement in its vital, its eternal significance, has been forgotten.

On page 18 of Science and Health we find atonement defined as "the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love." As the student reads and ponders this definition, as he considers it in the light of Jesus' words and works, it must surely dawn upon him that herein lies the whole mission of him who called himself the Wayshower,—to give to the world the true understanding whereby men might realize their at-one-ment with the Father, whereby they might overcome even as he overcame. "I and my Father are one," said Jesus; but even after his resurrection, when he had overcome "the last enemy," and knew himself ready to rise above all sense of corporeal selfhood, he claimed nothing for himself that he did not claim equally for those who were his disciples. To them he sent this message by Mary: "I ascend unto my Father, and your Father; and to my God, and your God."

In all that he said, in all that he did, during those years of his ministry, the Master sought to impress upon his followers that all real substance and power is in and of God, and that apart from God men can do nothing. As unity with the Father was the basis of all Jesus' teachings, so also must it be of him who seeks humbly and faithfully to walk in his footsteps. "You have simply to preserve a scientific, positive sense of unity with your divine source, and daily demonstrate this" (Pulpit and Press, p. 4), Mrs. Eddy reminds us, and the student quickly learns how positive and consistent that unity must be, if he is to overcome evil and hold fast to that which is good. The inevitable results of the ignorance and apathy which tend to alienate men from their Maker, are fear, disaster, sickness, sin. When it dawns upon one that each time he attempts to do anything in his own strength, according to his own will and wisdom, he is in that moment annulling for himself the whole mission of the Christ, "the exemplification of man's unity with God," and at the same time bearing false witness to his sonship with the Father, he will seek to dwell more and more consciously in at-one-ment with God; he will realize that therein, and therein alone, are safety and peace.

Only in so far as one is awake to man's unity with Love can he cast out his own fears and the fears of others; only in so far as he is awake to his unity with Truth can he see the lie of sin and sickness to be nothing and thus set men free; only in so far as he realizes his unity with God, who is the Life of man, can he rise above the false sense of life in matter and recognize man's likeness to the Father, who is perfect, thus giving practical testimony to the words of Jesus, "The kingdom of God is within you."

Seeking and Finding

ELLEN WADHAM

CHRIST JESUS said, "Seek ye first the kingdom of God." The writer was healed in 1901, in two weeks, by the devout study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, after having been for a year and a half under *materia medica*, the ills from which she suffered being pronounced "Bright's disease," rheumatism, and dropsy. Since that time she has had marvelous proofs of God's care. With startling clearness the promise that all good things will be added when we seek first the kingdom of God, was verified to her a short time ago, and the experience was wonderful, and withal so simple.

A friend who is a Christian Science practitioner, asked if I would be willing to do a little missionary work which required a nurse? I replied that I would, but when I went home I found I had very little money on hand and the bank was closed. I felt the urgency of the call, however, and started. When I got off the car at the railroad station, a young man helped me with my suitcase, and after learning where I was going, told me I had no time to lose and I would have to buy my ticket on the train. While waiting for the train to start, a disturbed sense seemed to prevail, and I said in my heart the words of our dear Leader, "Shepherd, show me how to go;" and the other line, "I will listen for Thy voice" (Poems, p. 14). Instantly there came to me these words: "Thine ears shall hear a word behind thee, saying, This is the way, walk ye in it, when ye turn to the right hand, and when ye turn to the left." There was my answer!

Turning to the young man at my right, I asked what the fare was to B——, and if it was far. He replied that the fare was something over a dollar, and that I would not get there till dark, for it was a long ride. I could not help saying that this was perplexing, since I had only seventy cents with me. He then told me not to be troubled, for he would go and

Digitized by Google

get my ticket. He did so, saying it was one dollar and sixty-five cents. I told him I was going to nurse some sick children, and asked him for his card; but he refused to take my name and address, assuring me that it was all right. When I returned ten days later, I wrote a letter of thanks to the one who had been my friend in need, enclosing a post-office order, and giving him thanks from the mother of the children as well.

This experience proved to me that when we pray understandingly, God certainly does answer our prayers. Our beloved Leader has said that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Many are disappointed because they do not receive what they think they need, but with the help of our text-book, "Science and Health with Key to the Scriptures," we realize that the Bible is indeed an unerring chart. We must practise the precepts which the master Metaphysician taught and lived. In the prophecy of Amos we read, "Behold, the days come, saith the Lord God, that I will send a famine in the land, not a famine of bread, nor a thirst for water, but of hearing the words of the Lord." The world is indeed famishing for the truth, and there is abundant work for all to do who have a right understanding. A copy of the *Sentinel* or *Monitor* passed along in a quiet, kindly manner, means so much to many a lonely one!

While in Boston I seldom went anywhere without taking some literature, and I have afterward met the recipients in The Mother Church and at lectures, and they usually told me that the reading had helped them. While sitting on the Common, taking a general survey of those resting at luncheon hour, I have offered the *Monitor* to one or another, and among the scores of people I had only one refusal, and that was courteous enough. I hope the good work of sending out these life-giving messengers will continue, till all shall realize that God's kingdom is here and now.

❖

One's Own Business

JOHN M. DEAN

CHRISTIAN SCIENCE is teaching thousands of men and women that they can best be about their "Father's business" by minding their own business. A meddlesome busybody is far from manifesting the activity of divine Mind, and he who grapples with his own problems is sure to have his hands full. In "Miscellaneous Writings" Mrs. Eddy says, "The warfare with one's self is grand" (p. 118), and when we learn that self is the first enemy we have to conquer, we can concentrate the forces of good upon our problem until nothing is left for error to claim as its own.

The psalmist said, "Fret not thyself because of evil-doers," and Paul laid down the injunction, "Study to be quiet, and to do your own business." Things which in no wise touch our problem are no part of our business unless those interested ask for our help, in which case it becomes our business lovingly and compassionately to respond. We can surely afford to ignore everything which does not affect our individual problem, while scientifically correcting everything that does. The individuality of man gives each of us the right to demonstrate his own salvation, and it should not be forgotten that this right is equally the property of all. We all remember the fate of Uzzah, who presumptuously attempted to steady the ark and received quick punishment for his temerity; and in varying degree, punishment comes to every man who assumes to steady the ark for his neighbor.

"If" and "but" should be no part of the vocabulary of a Christian Scientist when speaking of a fellow man. How often have we heard some individual condemned by faint praise, as when some one says, "He (or she) would be all right, if—," or "He is a good man, but—." If our brother has his regrettable shortcomings, he cannot be helped by having the knowledge of it spread promiscuously, even though it be spoken of in scientific terms. We must remember that "false claims," like the famous "three black crows," can be magnified until they grow into a wonderful resemblance to reality and pass current as such to all who are willing to judge "according to the appearance" rather than according to "righteous judgment."

No statement which lacks the pure inspiration of Truth and Love can help under any conditions, and we can easily distinguish between right and wrong words by asking ourselves the question, What good purpose will they serve? The thing which cannot help would best be left unsaid or undone, and nothing possesses an absolutely negative quality. Either good or bad preponderates in everything we think, say, or do; and our constant effort should be to keep our thoughts so attuned to divine Love that every word will weigh in the right side of the balance. Not the least of the dangers attending constant faultfinding is in the effect liable to be felt by the critic. As Mrs. Eddy says in "Miscellaneous Writings" (p. 130), "Does not the latter [the Christian Science text-book] instruct you that looking continually for a fault in somebody else, talking about it, thinking it over, and how to meet it,—'rolling sin as a sweet morsel under your tongue,'—has the same power to make you a sinner that acting thus regarding disease has to make a man sick?"

If our neighbor manifests an error the contemplation of which disturbs our equanimity, we have only to remember the rebuke of Jesus, "What is that to thee? follow thou me," and we shall blush for shame that the faults of another should have been in the least permitted to obscure our clear vision. The lesson of keeping our own door-step clean must come to each individual as he is prepared to receive it, and those who have already learned it, may inspire less fortunate ones by their example. Then without strife, tumult, backbiting, or captious faultfinding, there will come a time when every door-step will be clean, and there will be no possible occasion for criticism.

There is an anecdote of a little girl who had been taught the beatitudes, and who one day said to her mother, "Mama, I have been a peacemaker today." When asked how she had been a peacemaker she replied, "I knew something that I didn't tell." This little child had learned the lesson of not repeating unnecessary things, and her thought of making peace should be an inspiration to all who are in any degree able to grasp that saying of the Master, "Blessed are the peacemakers: for they shall be called the children of God."

[Written for the *Sentinel*]

Compassion

EDITH L. PERKINS

DEAR little bird with the wounded wing,
So fettered by fear and suffering,
The Father's love doth healing bring!

O thou oppressed, with the wounded heart
So grievously pierced by sorrow's dart,
The Father's love doth joy impart,—

The Love that heals all earthly ill,
That every seeming void doth fill,
That saith to the struggling, "Peace, be still."

Selected Articles

[Judge Clifford P. Smith in *The Daily Patriot*, Concord, N. H.]

In the *Concord Evening Monitor*, recently, was an editorial entitled "Rational Christian Science—the Cole Case," that contained several points on which I trust you will permit me to publish a brief comment. The first matter to which I refer is the possibility of "inheriting" and "conferring" a knowledge of the power to heal. It would not be consistent with Christian Science to believe that this knowledge or power could be any other kind of inheritance than that which is described by Paul in his epistle to the Corinthians. As for conferring or imparting a knowledge of Christian Science, this can be done by teaching, for which the Bible and Mrs. Eddy's book "Science and Health with Key to the Scriptures" are at once the basis and the chief means. Membership in The Church of Christ, Scientist, comes after, not before, a knowledge of this subject. Mrs. Eddy never claimed to be the second or successor of any person. She lived her own life without any pretense, and I am only one of the many who are beginning to appreciate how much she was enabled to accomplish for human welfare in spite of opposition that was persistent, groundless, and futile.

As for the need of a practitioner in every case of healing, a large number of persons have been set free from the bondage of disease by the liberation of thought gained through reading the works on Christian Science written by Mrs. Eddy. The testimonies of such persons who have had that experience are not infrequently in the periodicals issued by The Christian Science Publishing Society at Boston. It is also true that one person can aid another to gain his rightful freedom from disease. The law and power of God are available to this end, through the prayer of spiritual understanding. Christ Jesus did not mock us with an impossibility when he commanded his disciples to "heal the sick," and told them to teach all nations to observe whatsoever he commanded them.

❖

[Frederick Dixon in *Midland Daily Telegraph*, Coventry, England]

In a recent issue, under the heading of "The Church and Faith-healing," there is a reference to Christian Science to which I am going to ask you to let me take exception. It is the statement that "Christian Scientists have found their system of treatment by prayer and suggestion only applicable to a certain class of disease." Now, first of all, Christian Science actually eschews suggestion. Suggestion, it points out, is the claim that one human mind can act and control another human mind. If this were the case, it would make the stronger mind able to dictate either what it chooses to call good or evil to the weaker human mind. This, indeed, is the claim made for suggestion.

Fortunately, however, when faced by Christian Science, mental suggestion always breaks down, and the fact is demonstrated that there is no actual power in it. As a matter of fact, suggestion is just what has been known throughout the dark ages of the world's history as magic or necromancy, or any mental dealing of that nature. In the time of Jesus it was called exorcism, and when the Pharisees wished to dispose of Jesus' healing they tried to describe it as exorcism, or as they put it, casting out devils by Beelzebub. In his reply, Jesus once and for all crushed the claim of mental suggestion to be regarded as Christian. A house, he declared, divided against itself could not stand. At the same time, he declared that if he cast out devils through the Spirit of God, then the kingdom of God was come among men.

The kingdom of God never came to any human being by suggestion from a mind believing in good and evil. It comes exactly in the proportion in which the carnal mind gives place to the Mind of Christ, and that is precisely how Christian Science healing is effected. In other words, it is effected by a clear understanding of spiritual law, which in driving out every belief of evil in the human mind, naturally substitutes a harmonious for an inharmonious condition in the human body, which is itself only the subjective condition of the human mind. It is obvious, then, that such healing is not confined to one or another kind of disease. Christian Science healing has been found efficacious not only in nervous and functional, but in organic diseases. It has been said again and again that Christian Science will not heal a broken limb. Yet only a month or two ago, after two doctors had spent weeks in trying to cause a broken limb to set, without the slightest result, the setting was accomplished by Christian Science. The doctors declared that the only way to save the use of the limb, after the failure to make it set in the ordinary way, was to wire the bones. The patient's family objected, and Christian Science treatment was substituted for the wire. The limb healed rapidly and completely, and the result is a piece of perfect setting brought about after the impossibility of mending except by wiring was supposed to have been proved by the use of the X-rays.

Finally, may I point out that Christian Science healing was never before the committee which has just reported. According to the press, at the time the committee was constituted, Christian Science healing was specially excepted from its survey. No attempt was ever made to obtain any information concerning Christian Science healing from any official source, and that is very like what the Pan-Anglican Congress did, some years ago, when it decided about the orthodoxy of Christian Science, after excluding every Christian Scientist who was able to give it any information on that subject.

❖

[Paul Stark Seeley in *East Oregonian*, Pendleton, Ore.]

The time when religious convictions and beliefs were taken second hand from the pulpit and platform is rapidly giving way to an age in which the individual is seeking at first hand for the truth about God. Men no longer sit content with opinions passed to them through channels narrowed by secular prejudice and warped with scholastic bigotry; and to this freedom of individual thought Christian Science owes in considerable measure its remarkable growth in the last twoscore years. Thousands and hundreds of thousands have found in Christian Science not a perversion of Christianity, but a living religion of good deeds. From it they have learned what the orthodoxy of the day has failed to teach them, namely, the daily application of Christ's teachings to humanity's every need, whether that need be for comfort from sorrow, healing of sickness, or forgiveness of sin.

To a world filled with sickness, discord, and despair, Christian Science has brought again the message of "on earth peace, good will toward men." It has thrown the light of understanding on the Scriptures and unlocked for all mankind the treasures of spiritual truths therein contained. Its road has been hard and its advance beset by heavy odds. Persecution by those who have not understood has been bitter, but persecution is giving way to toleration, and toleration to respect and approbation. The message of Christian Science is that of the Messiah, the Christ, Truth, proved by Jesus and the early Christians, and discerned in this age by a great and good woman who endured the opprobrium and ridicule of a hostile world to give what she had seen of spiritual truth to a sin-sick humanity. The truth about Christian Science can be learned by any fair-minded investi-

Digitized by Google

gator. Its text-book, "Science and Health with Key to the Scriptures," is in almost every public library. A correct biography of its Discoverer, Mrs. Eddy, written by Sibyl Wilbur, is likewise available. Christian Science asks of the world but justice and honesty when its teachings are being considered, and for its followers it seeks no other standard than the one established by Jesus, "Ye shall know them by their fruits."

No religion is more completely in accord with the Bible than is Christian Science, and no class of people are more earnest Bible students than are Christian Scientists. Through the truth which it teaches, the world is learning that religion is the science of right living, and that the teachings of the Bible, understood, give to man the key to happiness and health. Man's relationship to God is made clearer through this teaching, and man learns that as he applies the simple truths of right thinking enunciated by Jesus, he can acquire the Mind "which was also in Christ Jesus." That Christian Scientists are doing this in some degree, their works testify, and show to a doubting world the present possibilities for mankind to demonstrate, as did Jesus, the supremacy of Spirit, God, over the ills of mortality. By so doing they find the present-day fulfilment of the Master's promises, "He that believeth on me, the works that I do shall he do also;" "Ye shall know the truth, and the truth shall make you free."

❖

[Richards Woolfenden in *Weekly Telegraph*, Blackburn, England]

The one thing lacking in the sermon reported in the *Telegraph*, in which the Rev. Mr. —— delivered an attack on Christian Science, is the note of originality. Those who have followed the press reports in recent years have become accustomed to this kind of utterance. There is usually the same choice of text, the same outline in its treatment of the subject, the same quotations from American divines, and the same misquotations from the Christian Science text-book, "Science and Health with Key to the Scriptures." The question naturally arises, Why should this stereotyped form of attack be followed in dealing with a subject that has probably aroused more antipathy in recent years than any other topic of public discussion? Is it not because the opposition is well-nigh exhausted and finds difficulty in gathering new material for a fresh sortie?

The reverend gentleman's own confession in the matter is the most damaging indictment one could bring against the self-appointed critics of Christian Science. He tells us that in turn he has fulfilled his vow actively to oppose all forms of evil—systems of thought and propaganda—which came his way. There is no evil in Christian Science, however much he may offer protest to the contrary. All the evil he can find lies in his own perfervid imagination of a system of thought and action which is already working wonders in every part of the globe in the elimination of all that is unlike God and heaven and harmony. Christian Science is the greatest temperance reform movement in the world, and is probably making more total abstainers than all the church organizations put together. For this reason alone, therefore, it is entitled to the respect and admiration of every People's Mission in the world today.

If the critic had given more time and thought to Mrs. Eddy's teaching in Science and Health, he would have hesitated before making the recent lecture in the Blackburn Town Hall the occasion of such an unwarranted and unnecessary attack. In the first place, he would have avoided the mistake of quoting sentences without their context, as, for instance, when dealing with the atonement he quotes Mrs. Eddy as saying, "One sacrifice, however great, is insufficient to pay the debt of sin." This is found on page 23 of Science and Health, but instead of being a reference to the Saviour's sacrifice, as the critic would have us believe, it is an allusion to the self-sacrifice necessary on the sinner's part in order to avail himself of the practical benefits of atonement. To read it in its proper setting is to see the sentence in a new and truer light altogether. For the sake of your readers who are not yet familiar with the Christian Science text-book, I will present it to them here with the preceding and the following sentence of its context: "Wisdom and Love may require many sacrifices of self to save us from sin. One sacrifice, however great, is insufficient to pay the debt of sin. The atonement requires constant self-immolation on the sinner's part." Such statements, treated in the way they deserve, show the dignity and the practical value of Mrs. Eddy's contribution to the doctrine of atonement. On the contrary, our critic's misuse of one sentence puts him out of court entirely as a trustworthy guide to anything like a true synthesis of the subject.

In the next place, the one note that characterizes St. Paul's treatment of the atonement is that of joy and peace and hope and reconciliation. He makes it the ground of an appeal to all that is noble and glorious in man. To him it signifies the great and essential feature which the editor of the *Hibbert Journal* has recently termed "the togetherness of man." But this is the note which is lacking in the critic's recent utterance at the People's Mission in Blackburn.

It is because Christian Scientists are going to work in this spirit all over Lancashire, throughout Great Britain, and in all parts of the earth, that we find their example quoted by right-thinking men and women everywhere. They have no time for attacks on other people's religion, being busily occupied in enjoying and practising their own. It is an easy matter for your readers to convince themselves that Christian Science is all that it claims to be,—Christian, scientific, and practical; and if any one has any doubts thereon, all he has to do is to apply the rule of healing laid down so clearly in the Christian Science text-book. It is a proper test on any subject that when one understands the nature of it, he should be able to demonstrate its rule. When the reverend gentleman has satisfied himself that this test also applies to Christian Science, his criticism will cease, for he will then be in a position to confer a lasting benefit upon his family, his friends, and his followers, and his ministry will be accompanied with signs of power from on high.

❖

[Robert S. Ross in *The New York* (N. Y.) *Times*]

In a recent issue of the *Times*, Roger S. Tracy says he would like to know "what Christian Scientists would have done if they had been put in charge of the health of the workers on the Panama canal instead of Colonel Gorgas and his assistants."

Before answering our friend's question, permit me to assure him that Christian Scientists not only do not want to be placed, but cannot in any sense be placed, in charge of the health of others. Real health is dependent upon righteousness, and the primary purpose and aim of Christian Science is to turn thought to divine Principle, God, wherein is all righteousness, and the only secure and sure asylum from evil, sin, and disease. Referring to those who seek this "secret place of the most High," the psalmist sang: "Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness; nor for the destruction that wasteth at noonday. A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee."

And now for the answer: If a Christian Scientist had been

Digitized by Google

placed in charge of the work to make the canal zone habitable, he would doubtless have done exactly what Colonel Gorgas and his men did, namely, apply commonsense, sanitary engineering methods. Indeed, that is as much as one could do. But it should be borne in mind that it was sanitary engineering and not *materia medica*, surgery, or serums that brought about improved conditions at Panama. Despite sanitation, however, large numbers of workers died of disease; but the public has not been kept informed on this point. Christian Science teaches that we must beware of making clean merely the outside of the platter.

❖

[John W. Doorly in *Ossett (Yorkshire, England) Observer*]

The healing of Christian Science has absolutely nothing in common with either magic or what is commonly termed faith-healing, which is often blind human belief. Christian Science healing is accomplished through understanding the invariable actual law of God, and is based wholly on a scientific and spiritual premise. Jesus described this process as knowing the truth, and no other way of salvation but this knowing of the truth can ever save mankind permanently from either its sins or its sicknesses.

The gospel of Christian Science teaches clearly that sin and sickness are both effects of the carnal mind, and can be dealt with properly only through an understanding of the divine Mind, or that Mind "which was also in Christ Jesus." Thus Christian Science shows that mere human belief in any agency can never free mankind from its sins and sicknesses, since this very belief is of the same origin as sin and sickness; but when we turn from the mortal mind with its many beliefs, we find surcease from its woes in the understanding of the divine Mind, or true being.

Today it is true that medical systems which have failed to heal humanity of its sicknesses, and a theology which has failed to heal mankind of their sins, are both seeking aid in the supposed activities of the human mind termed suggestion and faith-healing. But neither of these has any connection whatever with the law of the divine Mind as taught in Christian Science, revealing God and His Christ to men, and which alone can heal and redeem them. Any one who will take the trouble to study the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will see clearly the difference between Christian Science healing power, which operates through the understanding that God is the only Mind, and this wrongly termed "spiritual healing" which is the result of blind faith.

❖

[Thomas F. Watson in *Mountain View (Cal.) Register-Leader*]

Through the columns of your paper I would like to correct an item that appeared in *The Signs of the Times*, two recent copies of which contained articles which refer to "the sophistries and delusions taught and fostered through Christian Science." Now, Christian Science is no mere "theory purporting to be truth," but is demonstrable truth; and this truth contains no sophistries or delusions, but is the spiritual law which destroys human delusions. To use the definition of the Discoverer and Founder of Christian Science, it is "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

Jesus said, "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." In "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read, "Since the author's discovery of the might of Truth in the treatment of disease as well as of sin, her system has been fully tested and has not been found wanting; but to reach the heights of Christian Science, man must live in obedience to its divine Principle" (Pref., p. vii).

Our critic deplores that "worldliness and pride are increasing in the world and in the church, and the cloud of unbelief and death grows darker," and then condemns Christian Science, which teaches us how to overcome these errors. He states, "Our only hope is in God and the blessed truth of His Word," and forthwith condemns Christian Science, which teaches us how to understand God and His Word. Science and Health states on page 341, "The facts are so absolute and numerous in support of Christian Science, that misrepresentation and denunciation cannot overthrow it;" and on page 342, "The hour has struck when proof and demonstration, instead of opinion and dogma, are summoned to the support of Christianity, 'making wise the simple.'"

The critic refers to the "divine standard for the measurement of all theories purporting to be the truth." The divine standard which Jesus gave us was this: "By their fruits ye shall know them;" and "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; . . . they shall lay hands on the sick, and they shall recover." Christian Science has come with "signs following." It heals the sick and the sinful in the way Jesus taught. Science and Health has proved itself the most wonderful commentary of the Bible the world has known. It has unlocked the Scriptures, causing thousands to love and understand the Bible who before studying it were indifferent to its teachings.

Any one who will study the Christian Science text-book will find that Christian Science is both Christian and scientific —that it is the law of divine Love.

❖ ❖ ❖

CHRISTUS CONSOLATOR

Beside the dead I knelt for prayer,
And felt a presence as I prayed.
Lo! it was Jesus standing there.
He smiled: "Be not afraid!"

"Lord, thou hast conquered death, we know;
Restore again to life," I said,
"This one who died an hour ago."
He smiled: "She is not dead!"

"Asleep, then, as thyself didst say;
Yet thou canst lift the lids that keep
Her prisoned eyes from ours away!"
He smiled: "She doth not sleep!"

"Nay, then, though haply she doth wake
And look upon some fairer dawn,
Restore her to our hearts that ache."
He smiled: "She is not gone!"

"Alas! too well we know our loss,
Nor hope again our joy to touch
Until the stream of death we cross."
He smiled: "There is no such!"

"Yet our beloved seem so far,
The while we yearn to feel them near,
Albeit with thee we trust they are."
He smiled: "And I am here."

"Dear Lord, how shall we know that they
Still walk unseen with us and thee,
Nor sleep, nor wander far away?"
He smiled: "Abide in me."

Rossiter W. Raymond.

Editorial

"I seek not mine own will"

Among the criticisms of Christian Science which appear from time to time, is the claim that followers of this faith are narrow and bigoted, because they do not embody in their doctrine the views of others who have thought and written upon lines which the critics believe to be similar to Christian Science. These criticisms are based on the belief that Christian Science is but the practice of human will-power, or hypnotism. To such allegations Mrs. Eddy answered in her Message for 1901 (p. 20): "Christian Scientists are not hypnotists, they are not mortal mind-curists, nor faith-curists; they have faith, but they have Science, understanding, and works as well. They are not the *addenda*, the *et ceteras*, or new editions of old errors; but they are what they are, namely, students of a demonstrable Science leading the ages."

The great and essential difference between Christian Science and all other systems with which superficial critics confuse it, is that these other systems are predicated on a supposed supremacy of "mind over matter." These systems, however, deal only with the human or mortal mind, a mind which is believed to be endowed with power for both good and evil; whereas the Mind which Christian Scientists invoke is infinite, divine Mind, the one God and creator, whose creation and works are infinitely good, the Mind "which was also in Christ Jesus."

So little is this distinction understood, however, that it is not at all uncommon to hear persons say that they have always believed in the supremacy of "mind over matter," and they are under the impression that in making this assertion they are paying tribute to Christian Science. In this wholly superficial judgment they have in no wise differentiated Mind, God, from the false belief of a mind or intelligence apart from God, a belief to be governed only by the human will, either their own or that of a stronger personality than themselves. Christian Science teaches, on the contrary, that among the inalienable rights bestowed on man is that of self-government; that man is properly self-governed, not when he is asserting his own will or bowing to the will of another, but "only when he is guided rightly and governed by his Maker, divine Truth and Love" (Science and Health, p. 106),—a declaration of independence which clearly precludes interference with or infringement upon this self-government by another human mentality.

Divine Mind is the Principle and basis of Christian Science, and through the demonstration of this divine power, which is always right and always available for the needs of humanity, the sick are healed and the sinful are reformed today, even as they were in the time of Christ Jesus. In all the works of healing done by the Master, he took no credit to himself for their accomplishment, but declared he was only the instrument for the Father's will. "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me," is what our Master said when the Jews persecuted him and sought to slay him, after he had healed the impotent man at the pool; and so may say the Christian Scientist, for he cannot heal the sick or reform the sinner unless he also is actuated by the divine Mind, before whose omnipotence and ever-presence error of every kind and degree must be utterly destroyed.

Human will-power, on the other hand, boasts itself of its personal domination over the will of another, and this would rob man of the divine right of freedom and self-government. Holding firmly to the truth of being that God is the only power, recognizing no other than the perfect man of His creating, the Christian Scientist speaks "as one having authority," and sickness and sin, error of every kind, yields to the supremacy of immortal, divine Mind. It is because he has made the demonstration again and again, with good results for both himself and others, that he sees no reason for trying to add to a perfect Science the uncertainties of human will-power, that carnal mind which St. Paul declared to be "enmity against God." Christian Scientists are not concerned about such criticisms, because they do not take into account the fact that a system which is founded upon and adheres to divine Principle, must of necessity be unvarying in its demonstration and unchanging in its results.

Archibald McLellan.

Where?

In the book of Job the heights and depths of human experience are many times touched with a pathos which shows that the vital questions of life have been the same in every age. We read that this patriarch, who had known an unusual measure of happiness, goodness, and prosperity, was suddenly shaken by the stormy blasts of adversity, so that nothing remained to him but his integrity. His flocks and his herds were carried away by barbarous enemies, his servants were slain, and, saddest of all, his children perished in a cyclone. We can scarce wonder that his wife, swayed by material sense, bade him "curse God, and die;" but the final outcome of Job's great struggle is made sure when we read that out of the depths of his sorrow and desolation he could say, "Blessed be the name of the Lord."

In his mournful soliloquies, as he ponders the mortal problem of life and death, Job asks, as men have been asking from that day to this, concerning each dear one who has gone from their side, "Where is he?" The only response to this question which can come from the material side, would be that our beloved are in their graves, and Job was apparently under the pressure of this thought when he prayed that God would hide him from his grief in the silent tomb. But Christian Science teaches us that as Spirit can never be submerged in matter, no more can spiritual sense, which is the crown of true humanity, accept the material evidence that man either begins or ends in dust.

Mrs. Eddy says, "Life is the origin and ultimate of man, never attainable through death, but gained by walking in the pathway of Truth both before and after that which is called death" (Science and Health, p. 487). After all of Job's hard struggles, and the unavailing attempts of his three friends to solve his problem, at length spiritual light broke through the darkness and he made the inspiring declaration which has cheered so many: "I know that my redeemer liveth." He also saw, as did Paul, that "though our outward man perish, yet the inward man is renewed day by day." He could therefore realize that in his true being he would see God, and reflect the Life which knows no death.

All this may be granted, yet the unsatisfied human sense cries out, "Where are those who have passed through the change called death?" In his great poem, "In Memoriam," Tennyson says respecting death,—

> He put our lives so far apart
> We cannot hear each other speak.

The new-born child recognizes no one at first, does not see those about him, even though he has entered upon their plane of experience; but after a little, he comes to know them in the poor way that mortals know each other. A little longer,

Digitized by Google

and he loses sight of them, and they of him, and so the mortal dream of life in matter goes on till the full awakening comes in Truth, and we know ourselves and all our dear ones spiritually. Our beloved Leader says of one of her students who had to mortal sense passed on, "He is wiser today, healthier and happier, than yesterday;" and of another she says that he "is here now as veritably as when he visited me a year ago. If we would awaken to this recognition, we should see him here and realize that he never died" (The First Church of Christ, Scientist, and Miscellany, pp. 296, 297).

The spirituality of Christ Jesus was so intense and vital that materiality fled before it as darkness flees before light, hence he was able to commune with his friends after they believed him dead. It was not at first easy for them to recognize him, but as the light of Truth illumined their consciousness they saw their dear Master as victor over sin, disease, and death. Then they were ready to do more and better healing, and even to raise the dead. Paul says, "We shall not all sleep, but we shall all be changed." This change is mental, and is much greater than that from infancy to manhood; and as the mortal is put off, the things that God hath prepared, with all their glory, dawn upon the unfolding sense. The "pure in heart" see God,—see His world, see each other, and know that in Love's presence is fulness of joy.

ANNIE M. KNOTT.

True Possession

THE whilom city farmer was made glad, and withal very thoughtful, as he looked out through the trees to the glowing sunset and listened for the approaching stillness of the night. Here and there a cricket pierced the quiet with his hurried greeting, and now and then a lonesome whip-poor-will addressed his strongly inflected queries to the pine woods that hedged the western sky. These familiar sounds served, however, but to punctuate and render more impressive the silences of that vast shadow which pursued the retreating day. His domain was not large, but it ministered to his satisfaction in many ways. The trees were ever saying, "Be true and strong," as he neighbored with them; the fields offered their fragrance as incense for a perpetual service of praise; the brook that laughed its way through his stony pasture was constantly rebuking him into cheery content; while just now the woods and hedgerows were speaking in wondrous tones of all the glories of light.

Sometimes he had been tempted to think it fine that he could call such an acreage his very own, but as a student of Christian Science he could never rid himself of the feeling that this sense of possession was after all rather narrow, exclusive, and unworthy; that the chaining of material things to one's chariot is subtly belittling. This came upon him the more strongly just now, as the splendors before him led him to think upon those larger things that belong to every responsive life, and he felt how gladly he would share with every friend and fellow man the joy and exhilaration they brought him.

With the nobler sense of gain and of giving which the knowledge of Christian Science awakens, the conviction must come to every one, as it came to him, that we cannot truly possess anything that we do not continuously give away; that we can rightly be said to have only that which we spiritually perceive, realize, and bestow; that one's true wealth is determined by his escape from the material sense of possession, and his ability to delight himself in the good that is limitless and universal, the truth and beauty and love that no one ever thinks of holding in reserve or of trying to hoard, because they are as infinite as their source, and because the individual store of them is increased under the rule laid down by the Master when he said, "Give, and it shall be given unto you." As one apprehends this philosophy of the higher life, he finds himself free from the envy of material opulence as well as that fear of poverty which ofttimes robs even the rich of all peace. He has begun to see that contentment with fenced enclosures, all measurable possessions, is not in consonance with that immeasurable life for which, when at his best, he has always longed.

This drift of thought inevitably leads one to enlarge his horizons, to ignore the bounds within which mortal sense has laboriously tried to find happiness in a selfish assertion and an exclusive monopoly. With the spirit of the bee, which revels in all sweets, without trespassing in the least upon any right or lessening any supply of good, he now exacts a tribute from every flower in sight, and multiplies his pleasure and his gain a thousandfold by appropriating and rejoicing in the beauty of his neighbors' fields and the fulness of their harvests. We are told that "every good gift and every perfect gift . . . cometh down from the Father of lights," and these His gifts can neither be individually appropriated nor consumed. We possess them only as they find in us a channel for their continuous manifestation, their prompt transmission to others.

Thus every real good belongs to every son of God, and this evidently was St. Paul's meaning when he said, "All things are yours." This is the unstinted bounty of Truth and Love, the prodigality of good as revealed for our ever-increasing and eternal joy in Christian Science; and perceiving it we know how surely right Ruskin was when he wrote, "Nor can any thing be wealth except to a noble person."

JOHN B. WILLIS.

Among the Churches

Current Notes

YOUNGSTOWN, OHIO.—At Spring and Bryson streets is a large brick building which attracts much attention from the visitors to Youngstown who are being shown over the handsome North Hill section, and perhaps more inquiries are made regarding it than concerning any other building in the city. It looks like a church, and still is very unlike one, because at every window is a window-box filled with beautiful flowers, carefully tended, and adding to the building a touch of domesticity entirely foreign to the ordinary church. No religious emblem of any kind is to be seen, but the place is clean and bright with the touch of women's hands and the atmosphere of a home. This building is the edifice of First Church of Christ, Scientist, and is the headquarters of the Christian Science movement in Youngstown. Somehow one is led to wonder whether older churches could not, like this one, be made more attractive to worshipers and more effective in teaching a love of that beauty which is nature's everlasting and ever-changing prayer to the Most High.—*The Telegram.*

LOS ANGELES, CAL.—So great has been the growth of the Christian Science church-membership in Los Angeles that plans have nearly been completed for the moving of the Fourth Church congregation to Highland Park and the organization of two new churches. These new churches are to be formed in the Westlake and the Angeleno Heights sections. The congregation of the present Fourth Church is meeting in the Friday Morning Club House, 940 South Figueroa street. So many of the members of this congregation live in Highland Park that it is planned to transfer its meeting place to that section.—*Los Angeles Herald.*

Digitized by Google

WINCHESTER, MASS.—All the legal formalities having been complied with, First Church of Christ, Scientist, of Winchester, Mass., has come into possession of one of the most beautiful church building sites in this community. The entire parcel of land has an area of a little more than eighteen thousand square feet, and comprises two lots, one at the northwest corner of Washington street and Mystic Valley parkway, containing over five thousand square feet, the other, which adjoins, containing a little over twelve thousand square feet.—*The Winchester Star.*

CEDAR RAPIDS, IOWA.—The corner-stone of the Christian Science church was laid today [Sept. 3] at half-past six in the morning, with very simple ceremonies. The church is located on Second avenue between Twelfth and Thirteenth streets, and is to cost in the neighborhood of forty thousand dollars, including the furnishings and the organ. The congregation hopes to be in the new church by the first of the year.—*The Evening Gazette.*

The Lectures

Boston, Mass.

A lecture on Christian Science was given in The First Church of Christ, Scientist, by Bliss Knapp, a member of the board of lectureship of The Mother Church. He was introduced by the first reader, H. Cornell Wilson, in the following words:—

Each year in passing gives greatly increased evidence that Christian Science is surely fulfilling its mission of healing sickness and destroying sin. By restoring to Christianity its lost element of spiritual healing, Christian Science is effectually holding up to the world's view the lesson taught by Jesus, of works rather than words. The demand for demonstration which this places upon the individual, requires an ever-increasing spiritual understanding and development. Through attempting to live up to this requirement of actually demonstrating the Christ, Truth, its followers are found having constant recourse to God and His law to adjust all the affairs of life; and mankind is rapidly learning of the glorious effects that come with this fuller reliance upon Him who is Love.

The lecture this evening furnishes another opportunity to lay hold of spiritual facts and enlarge our sense of God, by which means, in the words of St. Paul, "the creature . . . shall be delivered from the bondage of corruption into the glorious liberty of the children of God."

The Christian Science Monitor.

❖

Paducah, Ky.

An audience of five hundred gathered at the Kentucky Theater to hear the lecture on Christian Science by William R. Rathvon. Miss Julia B. Scott introduced the speaker in the following words:—

Some one has beautifully said, "The seekers of the light are one." To me this means that, whether we know it or not, our great common need and desire is for more light, an enlarged understanding of life. Perhaps there are those here who are not conscious of their need of light. Perhaps there are those here whose hearts cry out for joy, because of great sorrows, great disappointments, or great physical weakness and suffering. Doubtless many would say that their need was of another kind. They have found all human relations shifting and unstable. Like Hamlet, they have found "life is an unweeded garden; things rank and gross in nature possess it merely." To all of you, seekers for the light, for the joy of life, and for abiding good, I give hearty greeting.

Jesus said: "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." And David, who had known the darkness of great grief, cried out, "Weeping may endure for a night, but joy cometh in the morning." And what is morning but the consciousness of light? As for good, James tells us, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." It was the world's great need for more light that caused one, some fifty years ago, to find through her own great suffering and purification that this light had never departed, though Christ Jesus had been invisible to mortal sense for nineteen hundred years. This discovery Mrs. Eddy called Christian Science, because it was the demonstrable knowledge of Christ. In the light of Christian Science may be found all that the human heart yearns after,—of joy, of good, of love, and of peace.

The News-Democrat.

✦

Brooklyn, N. Y.

The introductory remarks made by the Rev. T. E. Potterton, of the Universalist church, the "Church of Our Father," of Brooklyn, N. Y., on the occasion of the lecture on Christian Science given by Bliss Knapp at the Academy of Music, were in part as follows:—

When I was a student in the divinity hall of northern New York, one of our professors made this comment regarding Christian Science: "It is simply a movement, and will never result in a church organization." Yet within a quarter of a century it has been my experience, and I may add my joy, to note that the Christian Science church has grown more rapidly than any other orthodox ecclesiastical church movement, having the best attended churches in our city and elsewhere. It is attracting to itself earnest men and women of culture and refinement and of the highest social standing. It has developed a deep and growing enthusiasm for the magnificent work of spreading God's truth, and is rendering efficient service to humanity.

There are several things which I like about Christian Science. In the first place, I like Christian Science because it is a religion of health and happiness. I know it to be a religion that is healing and saving through its teachings, and I want to stand only with a religion that produces these splendid results. There is another thing about Christian Scientists which I like, and that is their splendid devotion and undoubted loyalty to their church. Here in this music hall are about twenty-five hundred people, many of whom are Christian Scientists, who have come here to be inspired, others who have come to learn; and this is a splendid tribute to the attractive qualities of this faith. I like their unyielding faith in the eternal goodness. In this world we are sometimes confronted with great anxieties, but it is undoubted sanity never to yield one's faith in the eternal goodness of God, a God who is Love and loving; and although for the moment we may not be able to see according to mortal sight, we shall know when the veil is lifted that all things have been, and in the final analysis are, working together for good to those that love God.

I like Christian Scientists because of their very efficient service to mankind, and their refusal to yield to despair or error and go down to the darkness of ruin and of sin. They have among them men and women who have gone to the highest spiritual altitudes through the influence of Christian Science,

Digitized by Google

and I say, God bless Christian Scientists and the Christian Science church. They have also a sane missionary zeal; they believe that they have the truth and they want to convert the world. Any person who believes he has the truth, ought to be resistless in his effort to give that truth to others. I have told you some of the things I like about Christian Science, and I suppose some of you are saying, "Why are you not a Christian Scientist?" but I will reserve that to tell my own people. I am very glad indeed to have had the honor conferred upon me of presiding at this meeting.

Correspondence.

❖

Green Bay, Wis.

The introductory words of Talmage Jay Bast, first reader, in presenting Clarence W. Chadwick, who lectured on Christian Science, were in part as follows:—

The religion aptly called Christian Science, presents the truth about God and His universe, including man, in such a reasonable and logical manner that it appeals to all who are willing to examine it. Christian Science, when rightly viewed, arouses the noblest thought and expectancy in man. It is not only beautiful in its simplicity, but is scientific in its practice and encouraging in its result. Naturally this Science must be approached at the right angle; it must be weighed carefully, and by the standard of its truth. Jesus the Christ made plain the plan of salvation, when he said, "Ye shall know the truth, and the truth shall make you free;" and he gave proof of the power of Truth.—*Correspondence.*

Lectures to be Delivered

Atlantic City, N. J.—Clarence C. Eaton, Steel Pier Auditorium, 8:15 p.m., Nov. 10.

Augusta, Maine.—Bliss Knapp, City Hall, 8 p.m., Nov. 6.

Beatrice, Neb.—Virgil O. Strickler, Church Edifice, 8 p.m., Nov. 6.

Benton Harbor, Mich.—George Shaw Cook, Bell Opera House, 8 p.m., Nov. 12.

Billings, Mont.—Bicknell Young, Babcock Theater, 3:30 p.m., Nov. 8.

Bournemouth, England.—Col. William E. Fell, Westover Skating Rink, 8 p.m., Nov. 20.

Brockton, Mass.—George Shaw Cook, Hathaway Theater, 4 p.m., Nov. 8.

Canyon, Texas.—William D. McCrackan, G. and L. Theater, 8 p.m., Nov. 10.

Chicago, Ill. (Sixth Church).—George Shaw Cook, Church Edifice, 11321 Prairie avenue, 8 p.m., Nov. 13.

Cranford, N. J.—George Shaw Cook, Church Edifice, 8:15 p.m., Nov. 10.

Delavan, Wis.—Clarence W. Chadwick, Opera House, 8 p.m., Nov. 13.

Denver, Col. (First Church).—Prof. Hermann S. Hering, Church Edifice, 8 p.m., Nov. 12 and 13.

Des Moines, Iowa.—Virgil O. Strickler, Church Edifice, 8 p.m., Nov. 12 and 13.

Dublin, Ireland.—William R. Rathvon, The Abbey Theater, 8 p.m., Nov. 23.

Eastbourne, Sussex, England.—William R. Rathvon, Town Hall, 8 p.m., Nov. 20.

El Centro, Cal.—Prof. Hermann S. Hering, Holt Opera House, 8 p.m., Nov. 8.

Fairbury, Neb.—Virgil O. Strickler, Steele's Opera House, 8:15 p.m., Nov. 5.

Fairfield, Iowa.—Clarence C. Eaton, High School Auditorium, 8 p.m., Nov. 3.

Fairmont, Minn.—Jacob S. Shield, 8 p.m., Nov. 13.

Grand Island, Neb.—Virgil O. Strickler, Liederkranz Hall, 8 p.m., Nov. 8.

Grand Rapids, Wis.—Clarence W. Chadwick, Daly's Opera House, 8 p.m., Nov. 12.

Hamilton, Mont.—Bicknell Young, Lucus Opera House, 8:30 p.m., Nov. 10.

Hastings, Neb.—Virgil O. Strickler, Kerr Opera House, 3 p.m., Nov. 8.

Helena, Mont.—Bicknell Young, Unitarian Church, 8 p.m., Nov. 9.

Huntington Park, Cal.—Prof. Hermann S. Hering, High School Auditorium, 8 p.m., Nov. 3.

Jackson, Mich.—Clarence W. Chadwick, Athenæum Theater, 8 p.m., Nov. 9.

Janesville, Wis.—Clarence W. Chadwick, Church Edifice, corner Pleasant and High streets, 8:15 p.m., Nov. 10.

Jerome, Idaho.—Bicknell Young, Amusement Hall, 3:30 p.m., Nov. 14.

Kearney, Neb.—Virgil O. Strickler, Opera House, 8 p.m., Nov. 7.

Kent, Ohio.—Rev. William P. McKenzie, Opera House, 3 p.m., Nov. 8.

Leytonstone, Essex, England.—Col. William E. Fell, Town Hall, Stratford, 8 p.m., Nov. 23.

London, England (Third Church).—William R. Rathvon, Church Edifice, Curzon street, Piccadilly, W., 8:30 p.m., Nov. 17.

Ludington, Mich.—Hon. Clarence A. Buskirk, Lyric Theater, 8 p.m., Nov. 10.

Marshall, Mich.—Jacob S. Shield, Empire Theater, 8 p.m., Nov. 10.

Mattoon, Ill.—Hon. Clarence A. Buskirk, Grand Theater, 3 p.m., Nov. 8.

Minden, Neb.—Virgil O. Strickler, The Chautauqua Auditorium, cor. 8th street and Minden avenue, 8 p.m., Nov. 9.

Minneapolis, Minn. (Second Church).—Jacob S. Shield, Minneapolis Auditorium, 8 p.m., Nov. 12.

Missoula, Mont.—Bicknell Young, Missoula Theater, 8:30 p.m., Nov. 12.

Mt. Pleasant, Mich.—Clarence W. Chadwick, Opera House, 3 p.m., Nov. 8.

Muskegon, Mich.—Jacob S. Shield, Woman's Club Building, 8 p.m., Nov. 9.

Niles, Mich.—Jacob S. Shield, New Niles Theater, 3:30 p.m., Nov. 8.

North Platte, Neb.—Virgil O. Strickler, Keith Theater, 8:30 p.m., Nov. 10.

Nottingham, England.—Col. William E. Fell, Albert Hall, 8 p.m., Nov. 19.

Olathe, Kan.—Dr. Francis J. Fluno, Baptist Church, 3:30 p.m., Nov. 8.

Passaic, N. J.—Bliss Knapp, Smith's Academy, 42 Pennington avenue, 8:15 p.m., Nov. 9.

Portsmouth, Hants, England.—William R. Rathvon, Albert Hall, Commercial Road, 8:30 p.m., Nov. 19.

Shawnee, Okla.—Dr. Francis J. Fluno, Shawnee Theater, 8 p.m., Nov. 12.

Springfield, Mass. (Church and Society).—George Shaw Cook, Municipal Auditorium, 8:15 p.m., Nov. 9.

Springfield, Mo.—Dr. Francis J. Fluno, Landers' Theater, 8 p.m., Nov. 5.

Washington, D. C. (First and Second Churches).—Bliss Knapp, Poli's Theater, 3:30 p.m., Nov. 8.

Wichita Falls, Texas.—William D. McCrackan, Wichita Theater, 3:30 p.m., Nov. 8.

Wilmington, Del.—Clarence C. Eaton, Church Edifice, 3 p.m., Nov. 8.

Testimonies of Healing

While returning from my work one night, I fell from a bridge and sustained a serious injury to my leg. I was unable to move from the place where I had fallen, so I lay there helpless for twelve hours, in a temperature below the freezing-point. I was lightly clad, being without an overcoat. A friend found me in the morning and took me home in a carriage.

A Christian Science practitioner was called upon to handle the case, but it was thought advisable to have a physician set the bone. The former family physician was called to do this, but he required the assistance of a surgeon. The leg was set and put in splints, fourteen pounds of iron being suspended from the ankle to keep the limb from shortening as the bone knit. Even with this precaution the surgeon thought the leg would be shorter than the other, and that I would be compelled to lie in bed for six weeks before it would be strong enough to bear any weight. The physician also said I would probably have acute lung trouble from exposure to cold.

The surgeon and physician were dismissed, and the case was handled entirely in Christian Science. The fourteen pounds of iron were removed from my ankle, and in a few days the splints came off. The knitting of the bone was accomplished without the least pain, though the surgeon said it would be very painful. In two weeks I was out of bed, moving about the house and up and down stairs with the aid of a crutch. I even went out of doors, taking a short car ride in order to spend Thanksgiving day at a friend's house. Within seven weeks I went back to my work, which was of such a nature that I was on my feet most of the day. I never felt the slightest effect from the exposure of twelve hours in a freezing atmosphere, and the leg was just the same length as it had been before the break. I have given it the severest test, indulging in all manner of athletics, and have never felt the slightest weakness in it. This wonderful healing caused me to take a deeper interest in Christian Science, an interest which has steadily increased during the past six years.—Henry Trousdell, Cleveland, Ohio.

The case of healing given in the above testimony occurred in our home, and its daily progress was witnessed by me, as I helped to care for my cousin during his confinement to the house. The surgeon had notified me that the limb would be short, as it was "a very bad break," but the work was done as stated.—Mabel Nelson, Cincinnati, Ohio.

✧

[Translated from the German]

I would like to give evidence of my gratitude to Christian Science by telling of the great blessings which it has brought me. In May, three years ago, a serious inflammation in the right arm manifested itself as the result of an accident. The trouble was so painful that I could neither lie down nor sleep, and most of the time sat up in bed in great suffering. I then asked a Christian Science practitioner in Hannover to help me, and the result was that with ten treatments the trouble was entirely overcome, for which I cannot be too grateful.

My husband, who was a great sufferer with rheumatism, has also been healed within a short time. A sense of deep gratitude impels me to report our daughter's healing. In August, 1907, a hard, red, and very painful spot appeared on her face, and a few days later her whole cheek became inflamed and swollen. Her vitality, too, became very low, as fever had set in, and she was constantly delirious. A well-known physician happened to call on us, and when he saw the child, he looked very serious, and designated the swelling as a bad case of carbuncle. He said he would probably return in the evening to look after the patient. We knew, however, that God is our physician, and after the doctor had left, we wired to a Christian Science practitioner, asking her to declare the truth for our child, and the rapid change in our daughter's condition seemed like a wonder. She slept quietly until about morning, and the hardening as well as the swelling completely subsided. When the physician returned the next morning, he was greatly astonished at the quick improvement, for which he could find no explanation. For this help in time of need we are profoundly grateful to God.

Frau Auguste Könnecker, Burgwedel bei Hannover, Germany.

✧

After three years' study of Christian Science, I want to express my gratitude for the great blessings it has brought me. As a child I attended a Sunday school and tried to believe what was taught me about God, yet I could get no answers to my prayers. As I grew older I ceased to attend any church, until I gradually came to regard what is called nature as the cause and law of existence, though this belief seemed cold-blooded and cruel in its mode of operation. I met with trouble and sorrow on every side, and at last my thoughts became hard and full of resistance. I had periods of great depression and hopelessness, and this unhappy mental state naturally resulted in poor bodily conditions.

Finally Christian Science was mentioned to me by a newly made friend, and with the first reading of Science and Health the light began to dawn upon me, the hateful thoughts and hard way of looking at life melted away, and I found that God's law does destroy all that is unlike good. A heart weakness and poor circulation, also stomach disorders, disappeared through my study; but for the peace that passeth understanding, and my changed view-point of life, I am most grateful. My aim is to demonstrate the truth and beauty of the word that Mrs. Eddy has given to the world. I am thankful for the privilege of class instruction, and also for our Christian Science literature with which the Publishing Society supplies us. Any one who is discouraged by human experiences can find rest and hope in Christian Science.

Alida M. Coombs, Honolulu, Hawaiian Islands.

✧

I feel it a duty as well as a great pleasure to add my testimony to state what Christian Science has done for me, although words are inadequate to express all I feel. I was a sufferer for twenty years, and had undergone a severe operation. It seems to me that I tried every material means without help. Christian Science was presented to me by a lady who was almost a stranger to me, when I was visiting my daughter. The lady said there was a practitioner in the town and she would bring her to see me, and she did so. I shall never forget her kind and loving words, and her happy face. She gave me two treatments and I was greatly relieved. The healing has been permanent; I have never used any material means since, and that was over three years ago. The practitioner advised me to get "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the *Quarterly*, which I did, and found the blessed Christ-teaching. I found that God is Love, and ever present; that He is All-in-all, that He is "the strength of my life." I can say with Mary, "My soul doth magnify the Lord."

My heart goes out to Mrs. Eddy in great thankfulness and love. I am striving to follow her teachings, to be instant in action, ever ready to offer the "cup of cold water in Christ's

Digitized by Google

name, and never fear the consequences" (Science and Health, p. 570). I have been able to make many wonderful demonstrations for myself and others. How thankful I am for Christian Science, for the light which has dawned upon me, for the glorious gift of God's love. I am also grateful for the loving-kindness of those who broke the bread of life to me. I am striving to reach the heights where God is fully understood.—Mrs. J. V. Loughrey, Morristown, S. Dak.

❖

I am so glad to tell of the wondrous healing I had through Christian Science. The ailment was appendicitis. One afternoon I was taken very ill, and in the evening a friend called up a Christian Science practitioner for help. In about an hour I experienced relief, but in the night I had a second attack and by morning I was suffering intense pain. The practitioner was again called, and came at once. After the first treatment I felt relief, and in a very short time I fell asleep. When I awoke the pain was gone, but I was still very weak. In three days from the time I was taken ill, however, I was at my work. Asthma of long standing has also been overcome. I am very thankful to God for the healing work that has been done for me, and grateful every hour for Christian Science.—Susie Thurber, Lockport, N. Y.

❖

From my earliest childhood up to the time I was healed through Christian Science, fear was my constant companion, and I was extremely nervous. As time went on, my condition grew worse instead of better, and finally a general breakdown followed, both mental and physical. It is now eight years since I was healed through Christian Science and I have been perfectly well ever since. Not for this healing alone am I truly grateful, but for each step taken which has given me a better understanding of the truth. I am filled with thankfulness and love to God and with gratitude to Mrs. Eddy, also to others who have helped me along the way.

Clara Louise Krohn, Los Angeles, Cal.

❖

In gratitude to God as the great Physician I should like to tell of the healing through Christian Science of my little daughter. When she was a year old her body was entirely covered with an angry-looking rash, which grew steadily worse for more than a year, until she could not endure the lightest covering over her at night. A physician was consulted. He pronounced it a skin disease, and in my ignorance of a better way and fearful of what I believed to be an incurable disease, I faithfully applied the medicine he prescribed, but the child grew worse all the while. I then remembered that one of my immediate family had shortly before been healed of this disease through Christian Science treatment, and I asked her to write to the same practitioner, who was then living in an Eastern city, for help. In reply, the practitioner lovingly assured us that disease is not a part of God's "very good" creation, and that we need not fear it; that if we would trust entirely to God we could prove His power and very presence with us in these remote mountains of North Carolina as elsewhere, and that she would begin treatment immediately.

Up to that moment I supposed God had sent this affliction upon us, for I was ignorant of God as infinite good; but on looking up one of the Bible references which the practitioner had given as our authority for denying disease as a power, I read in Genesis, "God saw every thing that he had made, and, behold, it was very good," and I knew then that this affliction was not good or of God, and fear and doubt left me immediately. The child's bodily irritation grew less each day. She slept normally, and the fever and soreness began to disappear,—from the face first,—and at the end of a week she was almost healed. In three weeks the lower limbs had healed over, and just five weeks from the day treatment was commenced every trace of the disease had vanished. That was in July, 1912, and no trace of the eruption has returned.

This undoubted assurance of God's healing power and presence with us in this remote section, where God and His law are so little known, is indescribable in words, and I take this opportunity of thanking those unknown friends who have sent us copies of the *Sentinel*, *Journal*, and *Monitor*. Their contents have been like water to the thirsty.

Ardie Houk, Bridgewater, N. C.

The above testimony is true in every respect. I saw the child several times during the few weeks she was under treatment, and I know there has been no return of the disease.

Laura Houk.

❖

My gratitude for Christian Science is unbounded. My humble prayer is, that my testimony may help some one who is in need, to have the perfect peace that comes through the understanding of God in Christian Science, when this understanding is put into practice. Many times I had heard of Christian Science, and I had never given it a word of criticism or doubt as to what it did for others. For this I am truly thankful. I did not, however, investigate the teachings of this Science, as to their practicability, until I was overwhelmed with disease and all material means had proved of no avail to heal or even alleviate my suffering.

In November, 1905, after almost five months of intense mental and bodily suffering, when my throat was partially paralyzed, the attending physician, who could do no more, recommended that a consultation of physicians be held. As a result he, with half a dozen others, pronounced my afflictions due to blood-poisoning and a malignant growth on my tongue, and they said there was no hope for my recovery. Many years before, my grandfather had passed on with such a growth, so this, according to *materia medica*, was hereditary.

It was on this day that a friend brought to me her copy of "Science and Health with Key to the Scriptures," and asked me to try Christian Science. I was then ready to become a disciple, and I can never forget the concept of God I gained upon opening the text-book and reading the words, "To those leaning on the sustaining infinite, today is big with blessings" (Pref., p. vii). My consciousness became illumined with the truth, the light that knows no darkness. "Today" I needed help, and here was the sweet assurance of Love to heal. As I read, I came to our Leader's words in the chapter on Prayer, "The highest prayer is not one of faith merely; it is demonstration," the chapter ending with "the spiritual sense of the Lord's Prayer" (p. 16). I was healed. All fear vanished, and medicines were thrown away; I had been on a diet for months, but now I ate what I wished, and with less pain. My throat was well; I could again swallow naturally. From that hour to this no material means have been used for me or mine; the truth has always sustained us.

My friend in a few days came for her book. My husband then went to the reading-room and purchased one, and aided me in the study of it, together with the Bible. I began to attend the mid-week services to hear more of this truth. Daily I tried to demonstrate and make practical what I was studying, not forgetting to be thankful, to put on "the garment of praise for the spirit of heaviness." Although I had much to overcome that seemed so real, through the teachings of Christian Science I now knew a loving Father-Mother God who was all my strength and was always present. I found

Digitized by Google

rest without drugs, something I had not done for months; the eruptions began to heal, and healed without scars.

Our Thanksgiving day was a day of joy and thankfulness instead of a day of mourning. Step by step I had made progress through the reading and careful study of the text-book, but the severe headaches still continued. For this and for the full restoration of my tongue I sought a practitioner and took a few treatments,—six in all. The headaches did not appear to be any better, but I knew the practitioner had been faithful, and I was satisfied; I knew there was more work, more individual work for me to do. Each day since then Christian Science has unfolded to me the good and perfect work of the creator, and with joy and gladness I can sing of His wondrous love. I realize there is no path other than the understanding of God as Spirit, perfect Mind, and man as God's image or idea. It is this assurance of the allness of God which has enabled me to advance through self-help, and which has destroyed any discordant manifestation that has sought admission to my mentality, for almost eight years.

I was entirely healed, and am now stronger than I have ever been. I know there is nothing God can not and will not do if we ask in the right way; and Christian Science teaches this way. I had sought climates many for relief from neuralgia of the head, also hot springs and doctors many for a bowel disorder, the after effects of typhoid fever, but these ills of ten years' standing have vanished. To know that wherever we stand is "holy ground" dispels all fear and darkness.

Christian Science has taught me how to pray; that it is the prayer of affirmation which heals and blesses all mankind; that we must keep our thoughts so illumined with love, be so in at-one-ment with Him, that we can say with the psalmist, "He is my refuge and my fortress: my God; in him will I trust." Through this teaching I have found my daily work more satisfying, spiritual joys filling the place of the material, which once seemed so desirable. There is no limitation to good; only as we show thankfulness daily by reflecting that good which we have received, do we acknowledge God's allness. The Bible, which formerly I could not read understandingly, has become the most precious of books through the study of Christian Science.

I am grateful for all our Christian Science literature, and the lectures have made clearer the way; grateful also to all those who by testimony have helped me to rejoice in my way from sense to Soul. Words are inadequate to express my gratitude to our Leader, Mrs. Eddy, who discovered for us the new-old ministry of the healing Christ, Truth. May my daily deeds and life make me worthy of the name Christian Scientist.—Maude L. Hart, Seattle, Wash.

❖

When a child, I suffered a very bad attack of a throat disease, and for the next fifteen years its effects remained, although I tried almost every known means in *materia medica*, even submitting to several operations. I obtained but little relief from various physical ills, particularly a throat affection which manifested itself in a very troublesome speech defect. My eyesight and hearing were also affected. Finally, about five years ago, I suffered from nervous prostration. The physician stated that if I ever recovered, it would be years before I would be able to work, and then only at an outdoor occupation.

I was in a pitiful condition when a Christian Science practitioner was called to our home. I had been unable to sleep, except with the aid of most powerful opiates, for six weeks; yet shortly after the practitioner left, I fell into a natural sleep, and when the physician called again he remarked upon the seeming miracle. In a few days I was out of bed, and in a short time I was able to return to office work. While I have worked harder and have seemingly had more to contend with than ever before, I have had no recurrence of the trouble, and the change in my physical appearance is such that friends remark about it. Since this healing I have had numerous other demonstrations of the truth of Christian Science, in accidents, contagious diseases, and notably in the discarding of eye-glasses, after wearing them twelve years. For the past five years, even though I do considerable night work and study, my eyes have been better than ever.

While I am indeed grateful for the physical healing, which is becoming more and more outwardly manifested in me, yet my greatest cause for gratitude is that I have found a sane, practical religion, which enables me to prove every statement it makes. I am thankful for the better life it is making me strive to live, for the literature, the ideal church service, and other agencies, and for the friends who have always so willingly and readily striven with their understanding to help me gain the blessings which I now enjoy. I submit this testimony with the hope that my experience may be a help to others.—Walter F. Petzhold, Cincinnati, Ohio.

❖

[Translated from the German]

It is with a grateful heart that I herewith tell of the blessings and benefits which I have received through Christian Science. Two years ago, when this demonstrable truth was brought to my attention, I was freed from a number of ailments. I was suffering especially with severe headaches and rheumatism, which had held me in bondage for years, and for which I took drugs of all kinds, though without success.

For fourteen long years I almost lived on medicine of all sorts, so that according to the doctors' statement there was no hope in that direction; indeed, my system seemed to be transformed into a pharmacy. During the time of my affliction there were many people who tried to tell me about God, Truth, and all the things that are taught in Christian Science, but I then seemed unable to grasp their meaning. Through God's leading I found a young friend, who was the first to explain to me the subject in our mother tongue, and this was also the easiest way for him. Later on, when the German edition of the text-book appeared, I secured a copy, and was healed of all my diseases in eight months' time. The study of the Lesson-Sermon affords me the highest enjoyment, and I herewith give thanks to God, and gratefully remember Mrs. Eddy, the Discoverer of Christian Science. I have been completely restored physically and mentally, and I praise God for the innumerable blessings which He bestows upon us, especially for Christian Science, which came to this world as the Comforter that leads us into all truth.

Rebekka Schweitzer, San Francisco, Cal.

❖

"Were there not ten cleansed?" These words of Jesus, together with a deep sense of gratitude for the help and comfort that Christian Science has brought to me and mine, cause me to give my testimony of healing. I was always a frail child, sick a good share of the time when quite young, and to mortal sense never strong. I was, however, kept in school most of the time, and having naturally a studious disposition, became a teacher, struggling with ill health more or less while teaching. I had always attended church and Sabbath school, and had been a church-member; but I finally became dissatisfied, and lost interest in religious matters as they appeared to me. I then began to search alone for some-

Digitized by Google

thing logical and assuring; so I read philosophy, mental healing, and spiritualism, only to find chaos. I rather prided myself on my much reading and love of books, until I began to see that mere learning as such was after all of secondary importance.

While in this state of mind and after I had given up teaching, Christian Science was brought to my notice for the third time; but like many others I was prejudiced, and began to read only through curiosity, until I became so much interested that I wanted to read all the time. I then began to hope that I might find the healing I had sought in *materia medica*, for I had certainly given drugs a fair trial, besides having had two operations in a hospital. I read alone for some time and received much help, although I understood only a little of the truth; but this little sustained me through a third and very serious operation which was performed some time after this, and which threatened my life, as conditions were such that little hope of my recovery was given my husband. It was following this ordeal that I was healed through a Christian Science practitioner of serious results of the operation, which had left me miserable, unable to eat or sleep. I was also healed of bowel disorder, from which I had suffered for fifteen years. In a week's time I began to improve, and while the healing was slow, it was steady, thus giving me the opportunity to study and help myself. To me this was, and still is, a cause for sincere gratitude. Other minor ills have been overcome; and while I still have work to do to realize perfect health, I know that as the truth is unfolded I shall be able to rise above mortal sense. I continue to gain in strength and am able to do a reasonable amount of work daily.

There have been many demonstrations of the power and presence of divine Love in our family of four, such as the healing of fever, colds, broken bones, and rheumatism. It has also brought a greater degree of harmony into our home. My husband too is a student of Christian Science, and has been able to do good work for us all. We are striving to do God's will, and are greatly interested in the various publications and helpful testimonies from our brethren. To our friends who so kindly helped us when we most needed the light of Truth, we extend our heartfelt thanks. To God we give praise and thanks for the coming of Christ, Truth, to the world, and also for the noble life of our Leader. I trust my words may bring encouragement and comfort to some seeker for Truth.—Addie B. Little, Red Oak, Iowa.

❖

I would like to express my gratitude for what Christian Science has done for me and mine. Twenty years ago I had a severe attack of a kidney disorder and a nervous breakdown. My husband, having heard something of Christian Science, wanted me to try it. I did not think it would do me any good, but he insisted on my going to see a practitioner, and I finally consented, just to please him. It was necessary for me to go some distance from home to reach the practitioner, so I remained in the town in order to see her each day for one week, though I seemed to get worse. I then went home, but continued treatment absently, and began to improve. At the end of the second week I was well enough to do my housework. "Science and Health with Key to the Scriptures" has been a wonderful help to me, for with the understanding gained from the study of this book, I have been able to keep myself and my children so that the younger ones do not know what it is to take medicine.

My gratitude is beyond words to express, but it can be shown better by my daily effort earnestly to strive to walk in the path our Leader has so lovingly shown us in Science and Health.—Minnie Pearson, Cawker City, Kan.

From Our Exchanges

[The Outlook]

Moses, Micah, Paul, and Jesus Christ all concur in teaching that the fundamentals of the Christian religion consist, not in a system of doctrines, but in a new and divine life; in reverence and righteousness; in doing justly, loving mercy, and walking humbly with God; in living soberly, righteously, godly, and hopefully; in one word, in love, in all its various phases, experiences, and activities.

To substitute as the fundamentals of Christianity a system of doctrines for this life of love, is not to promote the life of the spirit; it is to dwarf and deaden the life of the spirit. It is to deflect men's minds from right living to scholarly thinking. It is practically to deny that Christianity is a universal religion and make it a form of philosophy. Doing justly, loving mercy, living reverently and hopefully, is something which can be understood by the scholar in his library, by the cook in the kitchen, by the child in the playground. But that atonement is by propitiation, or that the future coming of Christ will be "visible bodily local," or that the grace of God is "a certain attitude or act of God toward man," are propositions which, however important they may appear to the scholar in his library, are not likely to be understood by the cook in the kitchen or the child in the playground.

[The Congregationalist and Christian World]

We need just now a new vision of the price of peace. The world is hungry for it, our souls long for it, and we miss it so often and so sadly. Why? Because we want it before we have paid the price. "Seek peace, and pursue it." See it through the eyes of your enemy, establish it in holy conditions of soul and state, seek it in wrongs redressed, and impatiences controlled, and misunderstandings uncomplainingly borne, and old ways righted, and sins confessed, and mistakes rectified, and brotherhood highly exalted, and in a great serene confidence that God will not fail us, and our little broken strength and wisdom can be corrected by His power and goodness. But upon such conditions as these its coming is more certain than the morning. There are a thousand signs about us, in spite of all that seems to contradict our hope that it is coming. And though it will be long before the splendors of it brighten all our sky, it is such a cause as every man might be proud to champion and to the consummation of which the Christian church may gladly devote her strength and her saving passion.

[The British Congregationalist]

The war has delivered a staggering blow to Christianity in the minds of those who have looked to the churches to have inspired men with a greater love for the doctrines of "The Prince of Peace." Many earnest people are asking themselves for what the churches stand if they are not powerful enough to protest successfully against the horrible slaughter and holocaust which is deluging Europe with the blood of men and the tears of women and little children. It is not an unjustifiable question. It is one which will have to be seriously considered and answered in due time.

It would be unjust to blame the teaching of the Master for the denseness and wayward-heartedness of his would-be disciples. It is not a failure of Christianity that has brought about this terrible warfare among the nations, but a failure on the part of those professing it to take up internationally a strong and impregnable position. It must be an international sentiment. For one nation through its churches to

Digitized by Google

preach and practise peace will not insure it. It is undoubtedly false to argue that preparedness for war is a guaranty of peace. It is no such guaranty, though it is undoubtedly true that preparedness does militate against hasty aggression. There can, indeed, be no guaranty of peace until the church and its gospel of divine love and charity to all men is strong enough to make it clear that there must be no more war.

[*Zion's Herald*]

"When this cruel war is over, the people of Europe will be hungry for God." These words, spoken to us by one of our most devout and devoted ministers who is in close touch with the trend of world movements, open a vision of the spiritual service that will offer itself when the clash of arms has ceased. The people will be hungry for God! It will be a time of religious searching, when men will throw themselves back upon the true realities of life. Under the wings of the Almighty will they find the only comfort and consolation, the only solace and peace that will satisfy. They will turn to God.

The war is the precursor of a great spiritual awakening. Every student of religion is aware of the fact that following great calamities or periods of great national depression, there have been seasons of rich spiritual experience. When wealth and power and national strength have all gone into the crucible of adversity, and men have come to realize that all of these are as stubble, then they have lifted their voices in petition to the Almighty, they have cried in the agony of their despair, "To whom shall we go? thou hast the words of eternal life." In Him they have found their comfort.

[The Very Rev. Charles E. Craik, D.D., in *The Living Church*]

Christianity has no more broken down in these nations at war, than it has broken down in the individual man who stumbles in his Christian course, but who still, in spite of his stumble or even his fall, keeps his faith in God and his eyes turned to God. A professedly Christian nation may sin, and it would suffer the penalty in some form and at some time; an individual may sin, and he also must pay the penalty of his transgression. But in neither case has the truth of God broken down; the human heart in the aggregate and in the individual has broken down,—for a time,—but Christianity has not failed. Has Christianity been a failure in the vast number of Christian men who are giving up their lives in this war? Has it counted for nothing in their character? Has God rejected them in the hour of death? Will He turn His face from them in the day of judgment, because they died in battle?

[*The Christian Register*]

Never have churches had a plainer mission and a larger task; never has the world so openly shown the need of them. Their great task is to create a new heart in men and renew a right spirit among them. Until that is done no disarmament will be valid. When it is done none will be needed. We have dreamed this work nearly done; we are rudely waked to find that it is not yet begun. There is no discharge in this war. The madness of the world is unsubdued. The great call of the hour is for enlistment in the eternal hosts whose weapons are love to God and man, to destroy the great skepticism of unbelief in them.

[*The Advance*]

The heart of the world is still sound at the core. Human brotherhood is not a mockery. The church is not a failure. Faith in God, however bigoted, narrow, provincial, perverted, and ridiculous in the forms in which it expresses itself, is still the one power which is to save the world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with *Key* to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; fifty copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 15 cents; fifty copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 60 cents. In all other countries, one year $1.25; six months 75 cents.

SALE PRICE, POSTPAID: Single copy 10 cents; twelve copies to one address $1. Foreign rate, single copy 12 cents; twelve copies to one address $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

In October, 1904, the New York subway was opened. It was designed for a maximum daily capacity of four hundred thousand. On Jan. 4, 1905, three hundred and sixty thousand passengers were carried, and on Jan. 26, 1914, one million two hundred and seven thousand. When the subway was opened, it ran from Brooklyn bridge to One Hundred and Thirty-seventh street and Broadway, on the West Side, and to One Hundred and Forty-fifth street and Lenox avenue on the East Side. Gradually the northern termini were extended, and the Brooklyn extension was formally opened in January, 1908. On the opening day in 1904, the entire schedule called for twenty-five local trains and fifteen express trains daily. Today, sixty-four local and sixty-five express trains are operated daily. The present daily car mileage is one hundred and eighty-four thousand. In the year ending June 30, 1914, the daily average of passengers carried was 932,639, the total for the year being 340,418,000. In the first fiscal year of operation, that ended June 30, 1905, seventy-two million passengers were carried.

If the experts figured out correctly the "taxables" when Congress was working on the income tax law, there are more than 140,000 income tax dodgers who have evaded the internal revenue collector and failed to pay their share of the toll. According to figures made public by the secretary of the treasury, 357,598 returns were made under the income tax law during the fiscal year just ended. The estimates on which Congress did much of its work on the act, gave a total of 425,000 taxable incomes. These estimates did not include incomes between $3000 and $4000. The law has turned in about $28,000,000 for the payable ten months of last year, instead of about $45,000,000, as had been expected. Forty-four returns were made on incomes over $1,000,000, 91 on incomes between $500,000 and $1,000,000, 222 on incomes between $250,000 and $500,000, and 1241 on incomes between $100,000 and $250,000. In no instance were these figures near the estimates, which put the $1,000,000 incomes at 100, the next at 350, the next at 500, and the $100,000 to $250,000 at 2,500.

The Netherlands, with a population of 6,144,000 and an area of 13,171 square miles, has a foreign trade of nearly $3,000,000,000. According to revised figures for 1912, imports were valued at $1,452,458,168, a gain of $112,491,200 over 1911, while exports were $1,251,472,027, an increase of $158,052,446 over the preceding year. Though the country is only slightly larger than Maryland, it ranks among the leading commercial nations of the world. In 1912 its imports were 90 per cent as much as those of France, which has a population six times as great, and its exports about 60 per cent as much as those of Germany, which has a population ten times as great. This large commerce is due partly to the favorable location of the Netherlands for transshipment of goods destined for or originating in European countries and sections distant from the seaboard.

Decree in the suit of the government against the New York, New Haven & Hartford Railroad Company was filed in New York last week before Judge Mayer in the United States district court. T. W. Gregory, United States attorney-general, and Frank H. M. Swacker, special assistant United States attorney, represented the government, and Moorfield Storey was present for the New Haven. In agreeing to the decree, the New Haven Company, the New England Navigation Company, the Boston Railroad Holding Company, and the Providence & Danielson Railway Company admitted "being parties to combinations in restraint of trade," and that they had "attempted to monopolize, and now are monopolizing, transportation by railroad trolley line and steamboat lines within New England."

Electrical heating of rooms on the hot-water system is now being carried on in Stockholm. In the top story of a building is a heat-insulated water-tank of one hundred to three hundred gallons, with electric-heating devices for the water. During the night the water is heated. An automatic device switches off the current in the morning and throws on an electric-motor pump, and this sets up circulation of warm water in the radiators throughout the building. A heat storage-tank of one hundred and twenty-five gallons, using four kilowatts and ten hours' charging at night, will take in heat enough to suffice for radiators in four or five rooms. With a two hundred and fifty gallon tank and six to eight kilowatts, eight rooms can be well heated.

Some interesting information is being made public in official reports regarding the resources of the Canadian Ungava, as that part of the Dominion of Canada is called which lies north of the province of Quebec, and has recently been added to that province. By this addition of territory Quebec doubles her area. The interior of Ungava, it is pointed out, is a huge plateau, which rises abruptly within a few miles of the coast to a height of fifteen hundred to twenty-five hundred feet. The streams furnish enormous quantities of power, especially where they leave the interior to flow through the strip of lowlands, a few miles wide, adjoining the seacoast.

The United States government is informed that the work of setting up American banks in Buenos Aires and Rio de Janeiro is well under way. The federal government views the establishment of these branch banks with marked approval, and believes that if these first ones should prove to be successful, as it is assumed they will, others will be established by different groups of American financiers, until in the course of a comparatively few years South America will be linked to the United States by financial ties which will insure the rapid development of reciprocal business and social intercourse that will be helpful to both.

Commissioners on uniform state laws were in conference in Washington last week. Forty commissioners, representing thirty states, attended the session. The drafting of a uniform law on partnership was considered section by section. A maximum limitation upon the capital stock of corporations hereafter formed was recommended by a committee appointed to prepare a uniform incorporation act.

A satisfactory feature in connection with the undertakings of the government of South Australia, as shown by the revenue returns for 1913-14, is the continued prosperity of the railways. During the last two years over four hundred and twenty miles of line have been built in new districts in order to facilitate settlement. The traffic on these lines has come well up to expectations.

If the minister of finance is successful in carrying out a project which has been for some time under the consideration of a specially appointed commission, Russia will soon have an income tax to compensate the government for the enormous loss sustained through the prohibition of the manufacture and sale of vodka. This monopoly has yielded an average yearly income of about four hundred million dollars.

Steps are being taken to start the machinery of the twelve federal reserve banks under the new banking system, the opening of which has been fixed officially by Secretary McAdoo for Nov. 16. The early opening, it is expected, will do much to relieve conditions in the South brought on by the European war and help the general business situation throughout the country.

The mileage of railways in Europe increased from 206,987 in 1910 to 212,651 in 1912; in America, from 326,357 to 343,648; in Asia, from 63,188 to 66,534; in Africa, from 22,850 to 26,491; in Australasia, from 19,229 to 21,678, and in the world, from 638,611 to 670,997.

The Commercial Cable Company is now accepting messages in code for Great Britain, provided they are coded from the following standard editions: A, B, C., fifth edition; Lieber's code; Cox code, tenth edition, or Western Union code.

Throughout the national forests the rangers are posting the roads with permanent guide signs which tell distances and directions, especially at forks and crossroads. The signs are usually put up in the winter, when other work tends to be light.

According to the latest available figures, Pennsylvania stands fifth in the production of wood pulp, and is second to West Virginia in the amount of slabs and other sawmill waste used for pulp. Maine stands third.

The King of England has given permission to have a part of the royal estate placed at the disposal of the school of forestry at Cambridge University for purposes of experiment and demonstration.

The best excelsior is made from basswood, or linden. Aspen and cottonwood, however, supply nearly half of the total amount manufactured.

As many as seventy-two different kinds of wood are used in the manufacture of umbrella handles, canes, and whips in the United States.

Passing of Time

M. G. KAINS, M.S.

IN the popular acceptation, the meaning of the word "time" is a sense of transition due to the rotation of the earth on its axis and to its revolution around the sun. If it were possible for these motions to cease, people on this planet would have no natural means of determining time, for there would be continual day on the sunny side of the earth and continual night on the other side. There would also be no seasons, due to the motion of the earth around the sun. From what we know of the motions of other planets in our solar system, our day is different in duration from that of Mars, Neptune, Uranus, Saturn, Venus, and Jupiter,—the other known members,—because they revolve at different rates and have orbits which also differ in distance traveled, and therefore in duration, from that of our earth. In a still more striking way, time may be seen to differ in its measurement as we go farther out into the universe and pass beyond the bounds of our planetary system to the vast deeps of space. Our daily measure is not the measure of any other planet or star which moves at a different rate in its axial revolution, upon which depends its own day; and our yearly measure is not the same as that of any other stellar body whose orbit or whose rate of travel is different from that of ours.

At first glance, all these various lengths of day of the different heavenly bodies seem strange to us who have been accustomed to calculate time by only two measures, our own twenty-four hour day and our approximately three hundred and sixty-five day year. We cannot at first, or even perhaps for some time, appreciate the fact that they are all of trivial importance compared with the great universal day, or, as we term it, eternity. In this day they have no part. They do not affect it in the slightest way. The universal day exists, calm, serene, profound, untouched, unsullied by the million million varying days of all the stars of space, for the transient cannot touch or know or measure the eternal, even though they all live and move and have their being in it.

The transient times of all these countless worlds and stars and suns pass away; but strange and almost impossible as such a statement appears to the imagination, infinite time, eternity, never began and will never end. Indeed, from the eternal standpoint, transient time does not exist even now; and therefore the phrase the passing, or the passage of time, though familiar, is incorrectly used, for time from the eternal standpoint always remains stationary, and we are in it now.

All over the civilized world, scientists are seeking to discover both the laws which manifest themselves in multitudinous observable effects, and the cause or foundation of the laws themselves; but though several hundred of the laws have been discovered, tested, and codified after having run the gantlet of fierce attacks on all sides by scientists and mathematicians, still no inkling of any cause has been detected. Thus these learned men, honest as they all are in their quest for truth, are confronted with the questions put to Job by Zophar the Naamathite: "Canst thou by searching find out God? canst thou find out the Almighty unto perfection? It is as high as heaven; what canst thou do? deeper than hell; what canst thou know?"

Whenever a law is discovered, it is immediately given to the world, that it may be compared with each and all of the others in every conceivable way. If it is in harmony with all, it is accepted as a law; but if it will not agree, it is called a "theory." On the other hand, if after proving itself it upsets any one of the previously accepted laws, that one is discredited and from thenceforth called a theory. Now and then some scientist less trammeled by "authority" than his fellows, is bold enough to announce in print, as one recently did in a metropolitan daily newspaper, that the "pet theory" he is advocating "is that Mind is the only cause in existence." He declares, however, that he cannot prove it to others, and that therefore he is careful to avoid saying that "Mind is the sole cause," even though he does assert that personally the theory is to him so firmly ingrained into his being that "it comes near to being a law"!

In his brief article this scientist refers to an unnamed treatise on differential calculus, the author of which, while endeavoring to explain various difficult points, was "within a wilderness of changing things in nature" when he suddenly announced that "'time is the only constant.' But," continues the scientist, "he did not define time itself. He was certain he did not know . . . I do not know what time or any other entity is. But the calculus may yet discover a cause, for it is now known to be infinite." In this statement his words present a striking parallel to those of Mrs. Eddy, who said: "The numerals of infinity, called *seven days*, can never be reckoned according to the calendar of time. These days will appear as mortality disappears, and they will reveal eternity, newness of Life, in which all sense of error forever disappears and thought accepts the divine infinite calculus" (Science and Health, p. 520).

Natural scientists have worked mainly according to the dictates and leadings of the intellect. They will not accept any statement which does not have the authority or the sanction of some previously accepted scientist, or the acknowledgment of logic that it is in due form and therefore acceptable as truth. But the human intellect, while a good servant, is a harsh master. It will not receive the intimations of intuition unless these accord with the previously accepted lines of thought-activity; hence the necessity of properly training it. Otherwise, it will not merely shut its eyes and stop its ears deliberately, but will blind and deafen itself to the presence and the gentle knockings of intuition, and so shut out truths which would benefit both the individual and the race.

It is too often forgotten that with the faculty of reason we judge phenomena in the world of sensation, and that with the faculty of intuition or direct knowledge we become cognizant of the hidden or inner facts of being. Intuition is, therefore, a species of perception which transcends that of reason or intellect, because when untarnished and unhampered it receives the truth direct. It should therefore be the master and receive precedence, where reason should be the servant to do its bidding in properly designated lines. Many people reach truth largely by the activity of intuition, but

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

probably a far larger number rely almost wholly upon the intellectual route. For this reason each may misjudge and even deride or pity the other. Yet there should be no such judgment as this. The intuitive perceptions should be welcomed in the most hospitable way and should be considerately tested by the reason in order to form correct judgments as to their nature. In such reception, reason should always be the coworker with intuition, so that "the dream that matter and error are something" may "yield to reason and revelation" (Science and Health, p. 347).

Among the many revelations of intuition is the thought that humanly speaking time is opportunity rather than the measure of anything. As the intellect grasps this, it gradually turns from those imperfect forms of thought which have hitherto interested it, to the more significant signs and symbols and facts of eternal creation. Then, in proportion as the universe is apprehended as a spiritual creation, it becomes more and more illuminated, and the fortunate beholder begins to comprehend in a deeper, fuller way than ever before that "the heavens declare the glory of God; and the firmament showeth his handiwork. Day unto day uttereth speech, and night unto night showeth knowledge;" for he will be advancing in the comprehension not only of the facts of creation and of the fundamental laws of the universe, but of the "great First Cause" that transcends both facts and laws. From the moment when the true, spiritual nature of creation intuitionally dawns upon awakened thought, he will delight in the law of the Lord, in which law he will "meditate day and night."

An enlarged view of this subject is gained as we read and ponder these words on page 598 of the Christian Science textbook: "One moment of divine consciousness, or the spiritual understanding of Life and Love, is a foretaste of eternity. This exalted view, obtained and retained when the Science of being is understood, would bridge over with life discerned spiritually the interval of death, and man would be in the full consciousness of his immortality and eternal harmony, where sin, sickness, and death are unknown. Time is a mortal thought, the divisor of which is the solar year. Eternity is God's measurement of Soul-filled years."

Illusions

HELEN W. BANNON

From our youth upward our religious teachers have sought to impress upon us the vanity, the unsatisfying nature of all earthly things; but the unreality of these things had not yet dawned on human consciousness, and the pious words seemed to the listeners little else than a figure of speech. David's affirmation, "Surely every man walketh in a vain show," was simply the language of metaphor, conveying no hint of unreality, until the scientific explanation was given by our Leader when she said, "You command the situation if you understand that mortal existence is a state of self-deception and not the truth of being" (Science and Health, p. 403). St. Paul's statement, "If a man think himself to be something, when he is nothing, he deceiveth himself," is surely a most emphatic declaration of the unreality of matter and mortal man; but through our ignorance its metaphysical significance has not been apprehended.

"Are sin, disease, and death real?" is the title of a Lesson-Sermon read periodically in all Christian Science churches; and the line of thought running through the passages selected from the Bible and the Christian Science text-book, brings home a clear sense of the unreality of these evil beliefs to all those who have ears to hear. For many, however, and especially those who are taking up the inquiry for the first time, this doctrine of the unreality of evil, upon which Christian Science insists, is hard to grasp; and the difficulty arises entirely from the false testimony of the five physical senses, described in Revelation as "the great dragon . . . that old serpent, called the Devil, and Satan, which deceiveth the whole world."

All the old religions had their dragon, or serpent,—from the one that beguiled our first parents to that against which St. John warned the early church,—and it has always been regarded as the symbol of evil. Every visitor to China will remember the royal standard, bearing on its yellow silk folds a great black dragon, each paw having five extended claws; and it may be, as an English resident in China stated, that these claws typify the five physical senses of man, so unreliable and even dangerous if trusted to. It would seem that Christ Jesus sought to convey this lesson in his parable of the ten virgins; five of them wise, and five foolish. As is well known, ancient writers of learning and erudition sought to clothe their ideas in the language of metaphor, thus concealing from the vulgar and ignorant truths which were perceptible to the more enlightened, and Christ Jesus himself was careful not to cast pearls before the unappreciative.

Each of us can recall instances in his own experience that show how subject we are to illusions. Voyagers to the polar regions tell us that there, where daylight or total darkness prevails, all sense of time is lost; and what are the hours, days, and years of more equatorial regions but so many statements of the earth's position with regard to the sun? It follows, then, that old age is also an illusion. The silvering hair, the lines on the brow, and the faltering gait, appear in obedience to falsely educated thought. We expect to grow old, therefore we manifest the signs of decay, for as a man "thinketh in his heart, so is he."

Space also is a conception of the human mind, to be classed under the head of illusions, and philosophers have all differed in their attempts to define it. If God be infinite, All,—and this is the creed of Christendom,—there certainly can be no space, in the sense of void. Can space, however vast, be a barrier to thought? Does any one believe his prayer for a loved one less potent because of intervening space?

An illustration given by Herbert Spencer in his "First Principles" shows that the sense of direction is also illusory. A ship lying at the equator starts on its voyage westward; the captain, walking along the deck from the stern to the bow, is also said to be going westward. Then he turns and retraces his steps toward the stern, the ship still continuing on her course. What direction is he following now? The motion of the earth on its axis, as well as that in its orbit round the sun, will have to be taken into account before the answer can be given; besides which, the solar system itself is believed to be traveling round some distant center. Time, space, and direction are thus seen to be illusions, terms invented to meet a limiting human sense.

Christ Jesus, the Wayshower, was enabled to set aside all such limitations, even to the overcoming of death. By appearing to his disciples and partaking of a meal with them after his exit from the tomb, he showed "the king of terrors" to be the greatest of all illusions; and we have his promise, "Because I live, ye shall live also." He disclaimed having any power of his own, ascribing his words and works to the Father dwelling in him, his divine source, of whom, and through whom, and to whom are all things.

This, then, is the bed-rock of Christian Science, that God, Spirit, Mind, and His manifestations, include all reality. Outside and beyond all limitation, He is enthroned, filling all space; the "Alpha and Omega, the beginning and the end."

Digitized by Google

With Him one day is "as a thousand years, and a thousand years as one day;" and to know Him is Life eternal. Being Spirit, He cannot be cognized by the physical senses; only the spiritually-minded can apprehend Him. Said the Master, "Blessed are the pure in heart: for they shall see God."

Encouraging Promises

BRIGMAN C. ODOM

For all who seem to be in distress, the promises of the Bible declare victory and triumph. These promises are conditional, but the conditions are reasonable and may be readily complied with. For example, the prophet Isaiah says, "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." The psalmist declares, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." John the revelator in referring to the Christ writes, "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." These statements, and many others of a like kind, show that one's protection from evil, from fear and its effects, lies in knowing God, in gaining a better concept of God and His creation.

The Bible promises relate to the present time. As the apostle Paul puts it, "Now is the accepted time; behold, now is the day of salvation." Accordingly, "they that wait upon the Lord," that is, they who know God as ever-present good and as infinite Life and Love, shall renew their strength now; they shall have courage and boldness at this present moment to perform fearlessly and successfully any undertaking that may come to them, regarding it as either a privilege or a duty. Through the understanding of God as "a very present help in trouble," every sense of inability or of physical disorder may be removed, and thus activity and strength will be found equal to every requirement or demand. If walking or running in the literal sense be required, it can be done and no bad effects should follow. Thus an enlarged sense of duty and an increased capacity for performing it will be realized by reason of a better acquaintance with God.

"He that dwelleth in the secret place" is under the protection and direction of infinite Love; he "refuses to be influenced by any but the divine Mind, commits his way to God, and rises superior to suggestions from an evil source" (Miscellaneous Writings, p. 113). To dwell in the secret place is to comply with the requirements of the first commandment, "Thou shalt have no other gods before me." Repudiating every encroachment of evil, knowing that it is not God-ordained, and claiming God's allness and goodness, one has the comforting assurance that he does abide "under the shadow of the Almighty." He enjoys greater freedom mentally and physically. Where formerly he was in bondage to fear and limitation, he now has the encouraging conviction that nothing can separate him from the Mind that is infinite capacity and perfection.

The condition on which blessings follow is, that the individual shall awake and act. "If any man hear my voice, and open the door,"—this is the attitude of thought and activity outlined by the Christ-idea, and it is the basis of operation by which one may enter the kingdom of God. The one who folds his hands and waits to reach the promised land by merely dreaming about it, will find himself a disappointed and hopeless wanderer, without chart or compass. If the goal be desirable, it may be reached through lawful and persistent effort, which results from the activity pointed out by the Master when he said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you."

With the encouragement offered in the Scriptures, there is no barrier to one's possibilities in Truth. He has everything to help and nothing to hinder. God is our Father, and we inherit all the richness and fulness of infinite good, as we read in the parable of the prodigal son: "All that I have is thine." Who is it that will not lay hold on the promises of the Bible and claim his rightful place as an heir of God and a joint-heir with Christ Jesus? "God is no respecter of persons," and He withholds no good thing for some future occasion. God's blessings are ready now for all who will accept them and appropriate them. "Whosoever will, let him take the water of life freely."

"Sermons in stones"

LOUISE KNIGHT WHEATLEY

It was once decided to build a union terminal station for all the railroads in a certain city, and a site was selected which from the view-point of convenience was entirely suitable, but which in other ways presented so many natural obstacles to the enterprise that the reclaiming of it seemed, to the ordinary looker-on, a tremendous undertaking. So uninviting, indeed, was its general aspect, that the city had long since discreetly passed it by to settle itself comfortably upon the rolling hills beyond, and for years it had lain, as often happens in the new and rapidly growing West, a jarring note in the general harmony of an otherwise beautiful environment.

When it became known that this unsightly tract had been chosen for the location of a building to cost several million dollars, there was general approval; yet when the work of preparing the ground for the construction actually began, things seemed to grow worse instead of better. Passive ugliness had been bad enough, but it was a joy compared with ugliness suddenly grown aggressively active. Queer little temporary buildings sprang up like mushrooms in a night, narrow cuts were made in the hills through which trainloads of dirt and stone crawled all day like tireless worms, derricks reared their gaunt outlines against the sky, tiny rivulets were drained, rock-crushing machines set in motion, and the whole scene was one of noise, dirt, and general confusion.

To the average spectator it seemed impossible that anything good could come out of such turmoil. There seemed to be no system about anything, but everything seemed to be happening at once, and without any apparent reason,—hills coming down, valleys filling up, rocks tumbling over, streams disappearing, everything changing and readjusting itself as best it might to the new order of things. This continued for what seemed a hopelessly long time; then at last the much-anticipated building began to outline its mammoth proportions, growing slowly but surely, until finally the completed structure stood revealed in all its symmetry and beauty.

To at least one student of Christian Science this experience proved to be one of those proverbial "sermons in stones" of which the poet wrote, for it taught her many things. She knew that this perfect, finished structure must ever have been before the thought of those in charge of the work, just as God's perfect, finished creation, man in His image and likeness, must be ever before the thought of those who would change and reclaim something far more precious than

Digitized by Google

a bit of rough acreage in the heart of a great city. She knew that even in the midst of what appeared to be the utmost confusion, there had never really been any confusion at all, but that every movement of every workman was actually a step in a direct line toward the orderly fulfilment of a plan laid out even before the first shovelful of earth had been turned.

The building was first of all an idea in the mind of the architect, a purely mental concept. This is what Christian Science would call the real building, for although he afterward conveyed his thought to human consciousness by putting it upon paper, its true substance could never be transferred to paper or built of stone, for it still remained a mental concept in the mind of the architect. This picture of the building, made practically available by numberless detailed plans and drawings, was then seen by the contractor in charge of the work, and from these plans he in turn passed along each day his instructions to the workmen. The constant remembrance of the finished building, and strict adherence to its plans and specifications, even in the midst of what seemed to the outsider like the utmost confusion, was what had made possible the steady advancement of the work, and its ultimate completion.

Is not the whole process somewhat similar to that which takes place when one seeks to bring about the reclamation of the individual in the way which Christian Science teaches? It sometimes happens that a practitioner is confronted with what appears to be a mass of error so hopeless that for the moment he may feel almost staggered at the thought of ever making any impression upon it. But what does he do? Does he remain blankly staring at its gaunt unloveliness, or does he quietly turn his thought away from it altogether, to contemplate instead that perfect picture, his working model, the real man, the man God made, the only man which Christian Science recognizes?

With this before him he begins his work, and if in the purifying and regenerating process which ensues, the patient sometimes experiences that strange stir which Mrs. Eddy has termed "*chemicalization*" (Science and Health, p. 401), wherein there seems to be taking place a general change and readjustment of all the old thought-formations, there is no occasion for alarm. It is only the activity of Truth, only "the old man with his deeds" slipping away to make room for the new. It is no cause for discouragement if, upon receiving Christian Science treatment, our troubles are not always immediately relieved, but even seem aggravated, just for the moment. Was not the first effect of the work on the building, to increase rather than to diminish its ugliness? "In moral chemicalization, when the symptoms of evil, illusion, are aggravated, we may think in our ignorance that the Lord hath wrought an evil; but we ought to know that God's law uncovers so-called sin and its effects, only that Truth may annihilate all sense of evil and all power to sin" (Science and Health, p. 540).

Even our great Master and Teacher, Jesus of Nazareth, encountered this moral chemicalization in the course of his healing ministry. On some occasions, at his very approach the devils (evils), recognizing the Christ as their destroyer, besought him to go away and leave them alone. "Art thou come hither to torment us?" they cried. And once when he "rebuked the foul spirit," and charged him to come out of the child, "and enter no more into him," the spirit "rent him sore, and came out of him: and he was as one dead." Was Jesus dismayed at this strange effect of the word of Truth? Did he think he had failed to heal the child? Had he only made matters worse, instead of better? We have no record that this master Metaphysician ever concerned himself with the material evidences of anything. He simply "took him by the hand, and lifted him up; and he arose."

Then let us not be disturbed by the noise of the rock-crusher, the shriek of the switch-engine, the creak of the giant derrick, the roar of the underground explosion. Rather let us rejoice, because it means only that the whole inert mass is being changed into usefulness and beauty. So, too, in our own problems, day by day, perhaps slowly but always surely, if both practitioner and patient are honest and earnest, the work goes on. Our thoughts begin to mold and fashion themselves anew, and as this is done the body, these thoughts objectified, will likewise begin to be fashioned anew.

The redemptive process sometimes requires unbounded patience on the part of all concerned, but through God's gracious goodness it can be completed, for nothing can withstand the transforming touch of Love. Then let us look at our picture every day, that concept of the perfect man, "the measure of the stature of the fulness of Christ." Let us look at it long and earnestly, rejoicing in its beauty, its purity, its reality; and let us study our plans and drawings which show us how to attain to it, our priceless working plans as laid down in the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. When this is done, we can go forth to the work of building with courage and confidence. No matter what may seem to confront us, we can go on, for we still have in our thought the perfect model we have just been contemplating, and the remembrance of it makes sweet the day's toil, for we know each step brings us nearer to this radiant possibility which is to be. In God's sight it already is. Our part is so to purify our own vision that His perfect creation, already finished, may become to us each day, each hour, a conscious and abiding realization.

✧

[Written for the *Sentinel*]

A Song of Joy

CLARA WHEELER SCHUTT

Ships are sailing out on the bay;
Lighted by Love they see the way,
And glide along without delay,
Because our Father is ruling the day.

He leads them on through storm and shine,
And carries them gently, this Love divine,
To shores of restful peace and joy,
Where thoughts of earth do not annoy.

Ships are coming and ships are going;
The way the pilot is ever showing,
Leading them quietly all the day,
Out into ocean's great highway.

They travel along, this aspiring throng,
Breasting the waves of sin and wrong,
And they land in safety by God's great might,
Ever rejoicing in Truth and right.

E'en waves of death cannot destroy
The thought which guides these lives with joy;
Eternal Love forever gives,
Eternal Love forever is.

Selected Articles

[David Anderson in *The Mercury*, Kew, Australia]

The Presbyterian *Messenger*, which brooks no contradiction in its columns to what is from time to time set before its readers as a representation of Christian Science, says that it "is to be abhorred, resting as it does on gross error." Unsupported *ipse dixit* has, of course, only the weight of the "I" that makes it; but it is hardly conceivable that anybody, and least of all those whose avocation is to uplift public thought, should abhor a religious movement which, encompassing the globe in considerably less than half a century, has, beyond all possibility of contradiction, brought to thousands upon thousands, and is bringing to more every day in the week, that health in sickness, light in darkness, comfort in affliction, and hope in despair which they had previously sought long and vainly through other channels with fullest sanction of the clergy. And, wonderful to tell, Christian Science has been doing this in face of just such aspersions as that above quoted, and in spite of harmless fusillades of blank cartridge fired from safe entrenchment of pulpit and editorial chair.

The *Messenger* says that Christian Science rests on error. The study of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," shows that Christian Science regards as error every contradiction of Truth; that it rests on the premise of God, Spirit, as All; that it accepts as conclusion the universe of Spirit's creation as spiritual; and that it tolerates no error in the premise or conclusion. Its first commandment (which analysis of the decalogue shows to include the other nine) is, "Thou shalt have no other gods before me," and anything short of fullest obedience to that command Christian Science unhesitatingly denounces as error.

Much publicity has been given to the recent report of a committee of English clergymen and physicians, appointed three years ago, to which the *Messenger* alludes, and which, in the words of the London correspondent of a Melbourne daily, "leaves things very much as they were as far as the general public are concerned." A conclusion of the committee is, that faith and spiritual healing can be permanently effective only in functional disorders as distinct from organic diseases. It is not so stated, but it is no doubt intended that Christian Science practice should be included in this comprehensive deliverance; and of the committee it may be fairly said, with fullest respect, that its members are, at the least, not sympathetic with Christian Science. Its information has been obtained chiefly, if not entirely, from antagonists of Christian Science. The spiritual healing of Christian Science is the healing of that Physician who healed "all manner of sickness and all manner of disease," and who never stopped to ask whether the disease was organic or functional. It is the healing which Jesus commanded his followers to combine with the preaching of his word,—an express command more than once repeated, which was not given for a special class or for a limited period; and the command has never been abrogated. The Master adduced his works as proof of his Messiahship, and the only test of discipleship he ever gave was obedience to his commands and ability to do his works.

The practice of medicine dates from long before the advent of Jesus, yet his command was brief and emphatic, "Heal the sick." Manifestly, heal the sick as ye see me do, for if ye believe in me, greater works than these shall ye do. Healing the sick is just as incumbent on Christian ministers as on Christian Scientists. They cannot get away from it, and it is a hopeful sign of the times that at least one "orthodox" church is waking up to its responsibility in this respect. That organic diseases have been healed in Christian Science has been proved on oath and by frequent sworn declaration of those who during years of previous medical treatment had been diagnosed by reputable physicians, sometimes more than once, as suffering from such. If the medical diagnosis was wrong in every one of these cases, all medical diagnosis must "go by the board."

Christian Science is not "faith cure." Christian Science healing is not attained through a blind belief, but through the understanding of an ever-operative divine Principle. The prayer of Christian Science is not a mere appeal to God to do something. "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1). Neither is Christian Science treatment healing by suggestion. Suggestion of belief—good or bad, and it may be either—will not heal. Complete recognition of the truth of being will. Said Christ Jesus, "Ye shall know the truth, and the truth shall make you free."

❖

[William C. Kaufman in *Missoulian*, Missoula, Mont.]

In answer to an editorial in a recent issue, I would like to say that *The Christian Science Monitor* is not in politics, and does not advocate the views of any political party. It is therefore unfortunate that this impression has gone out. It is always refreshing to look on the bright side of things in the face of seeming obstacles, and this is what Christian Science is doing. Business confidence has been more or less in the balance, and if *The Christian Science Monitor* saw a brighter outlook, it was right to voice it immediately, in order to throw the weight into the right scale, and thus aid the entire country.

There is great need for more constructive thinking; and since Christian Science stands in the foreground, demanding right thinking, it is natural that Christian Scientists have been subject to closer observation than that which would befall other individuals who do not stand for the teachings of Christian Science.

❖

[Frank Bell in *The News*, Newport, Pa.]

Referring to the communication of your correspondent "F," as printed in a recent issue, it appears that he has concluded to stand with your other correspondent, "Y," "against Christian Science." He is mistaken. That which links these modest men of "letters" is not unity in opposition but unity in misinformation. The chances are, neither of them is really opposed to Christian Science; they merely agree that the grotesque thing they have to some extent similarly described, is not entitled to the name of Christian Science. It should be added that such agreement is not necessarily confined to "F" and "Y," but probably is shared by almost everybody from "A" to "Z," including certainly all Christian Scientists. When they shall come to know what Christian Science actually is, what it is to the great numbers of earnest men and women who have won their way to the comprehension of its view-point and have put it to the test in their daily thinking and living, these two worthy correspondents no doubt will not withhold their approval; for nothing in what they have written can be construed as indicating that either of them would wilfully stand in the way of any agency which makes for the saving of mankind from evil.

It is to be regretted that any of those who have volunteered in the service of good should even temporarily waste their efforts in the fruitless propagation of misinformation concerning the motives and methods of others who are striving for the achievement of the same exalted purposes as themselves; but Christian Scientists are comforted in the knowl-

Digitized by Google

edge that they at least have been better instructed in the spirit of the golden rule and of the command to "judge not." Christian Scientists are not in doubt as to the ultimate failure of intolerant criticism; they have long observed that their cause continues to grow with increasing rapidity, notwithstanding its having been subjected to the extreme limit of the human mind's capacity for misrepresentation.

The quotations presented by "F" under the heading, "Christian Science as Found in 'Science and Health with Key to the Scriptures,'" do not in fact set forth Christian Science as found in the aforesaid book. They consist of sentences or parts of sentences culled from various portions of the book and rearranged without regard to sequence or association, and with the result that, taken as offered, they would in most instances convey a meaning entirely different from that which the author intended, and which they naturally express when read as written. The Christian Science text-book is not a haphazard collection of unrelated statements; it is a consistent and complete whole, and it must be approached as such by those who would grasp its meaning. Those who refuse to permit Mrs. Eddy to state her point of view in her own way, will continue in the dark as to the nature of her teaching, and therefore be incapable of intelligently discussing it.

In the alleged "parallel" quotations, incomplete parts of statements made by Mrs. Eddy with regard to spiritual man and eternal life are set off against statements in the Bible concerning material mortals and physical existence. The effect of this, of course, is to produce an appearance of inconsistency, when in fact the statements of Christian Science, as correctly given in the text-book, are readily seen to be in full accord with the Bible. The teachings of Christian Science with respect to the facts of creation, the nature of matter, sin, sickness, and suffering, birth, old age, etc., are not at all such as one might assume from the jumble of mutilated quotations offered to your readers in the above-mentioned communication. As well might one attempt to explain the science of numbers by rummaging around through a text-book, extracting a rule here and a statement there, and after shaking them together in a hat, as it were, offering the incoherent conglomeration as "mathematics"!

Christian Scientists have no fear of "parallel columns" of quotations from the Bible and Science and Health. On the contrary, that is their favorite method of study, and it has been adopted by them as a substitute for individual sermons. Among the quotations cited from the Bible in the "F" communication as disproving the statements of Christian Science, there is not one that is not frequently used in the weekly Lesson-Sermons which constitute the principal feature of the Sunday services in Christian Science churches the world over. These Lesson-Sermons consist of selections from the Bible illustrating the particular subject of the day, with correlative passages from this same Science and Health, which is the Christian Scientists' commentary on the Bible. Only, in this latter form of parallel statements, the selections from both the Bible and Science and Health are sufficiently comprehensive to convey the real meaning and not its opposite.

The excerpts offered from several East India philosophies as proving their identity with Christian Science are of no value, because they reveal nothing that resembles the teachings of Christian Science in the slightest degree. Christian Science bears no actual resemblance to any system that requires or expects human beings stupidly to ignore the conditions of materiality. The alleged resemblance could appear only to one who, as stated above, persistently refuses to recognize the distinction which Christian Science makes between the asserted reality of material things and the actual reality of things spiritual. Here it may be stated that the lady from India who was quoted as having said that Christian Science, as "explained" to her on her arrival in New York, was identical with the philosophies of her country, was fair enough to state afterward that she had been misinformed as to the real teachings of Christian Science. Your readers who will take the trouble to compare the "explanations" of your two correspondents with the actual teachings of the Christian Science literature, may judge of the probable picture of Christian Science that was offered this lady in the first instance. But her first statement, though repudiated, is still doing service, year after year, in certain quarters, with the correction carefully omitted.

[Charles W. J. Tennant in *Kensington News and West London (England) Times*]

In a recent issue appears an extract from an article in a parish magazine by the vicar of St. Mary's, West Kensington, on Christian Science. The vicar begins by saying: "The question has frequently been asked, 'What do you think of Christian Science?' which is not surprising, for this movement has attracted world-wide attention, drawn many cultured minds into its fold, led thousands to forsake their churches and identify themselves with this religious sect." He then goes on to say that he has made a study of Mrs. Eddy's book in order to find out what the teaching really is, his conclusions being that it is certainly not Christianly scientific, for it is distinctly opposed to Christian doctrine.

Now, let us examine this point. Christian doctrine is condensed into a nutshell in these words of Jesus: "The first of all the commandments is, Hear, O Israel; The Lord our God is one Lord: and thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment. And the second is like, namely this, Thou shalt love thy neighbor as thyself." Does our critic realize what it means to love God with all our mind? Does it not mean to have only the Mind of Christ in us, "bringing into captivity every thought to the obedience of Christ [Truth]"? Now, if the belief in evil is being held in consciousness, this is breaking the first commandment and not loving God with all our mind. Christian Science teaches very clearly the difference between the Mind which was in Christ Jesus and the carnal mind. St. Paul tells us that "the carnal mind is enmity against God." What does this mean? If it means anything at all, it means enmity against Truth, opposition to Truth. This being so, it is very clear that Jesus did not think with the carnal mind, for he said, "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." The correlative passage to this is found on page 180 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, where she says, "When man is governed by God, the ever-present Mind who understands all things, man knows that with God all things are possible. The only way to this living Truth, which heals the sick, is found in the Science of divine Mind as taught and demonstrated by Christ Jesus."

Now, since God is Spirit, God must know all things from a spiritual point of view. The carnal mind, or mortal mind, can only think from a material point of view, therefore these two view-points are polar opposites. God's view-point is correct, eternal and unchangeable; therefore the carnal view-point is incorrect, temporal and mutable. Now the question is, Which view-point are we going to have? Christian Science teaches one how to obtain that Mind "which was also in Christ Jesus," to think from his view-point, and thereby emulate his mighty works. When our Master said, "He that

Digitized by Google

believeth on me, the works that I do shall he do also; and greater works than these shall he do," he might have said, He that thinketh as I think will do the mighty works that I am doing, and greater.

The latter part of our critic's article consists of disjointed sentences taken from Science and Health irrespective of their contexts and held up to ridicule. This form of criticism is not worthy of consideration. Let Christian Science be judged by its fruits, and not by its distortion at the hands of those who do not understand the subject.

❖

[Paul Stark Seeley in *The News*, Roseburg, Ore.]

In a recent issue a visiting evangelist is quoted in opposition to the teaching of Christian Science concerning the unreality of sin, disease, and hell. His remarks might lead one to believe that Christian Science condones the evil-doer and treats with complacency the sins of mankind. Such is in no sense the case. "Christian Science Mind-healing," Mrs. Eddy writes in "No and Yes" (p. 32), "lifts with a steady arm, and cleaves sin with a broad battle-axe. It gives the lie to sin, in the spirit of Truth; but other theories make sin true." Christian Science does not excuse or ignore iniquity. It exposes the real nature of sin as a belief in evil, called by Jesus "a liar," never attributable to God, and so without rightful relationship to the man or universe created by Him.

Sin, from the standpoint of Christian Science, is wrong believing and wrong thinking; a false belief in an evil power that can control, impel, and direct man in ways that are not God's ways, and that deceives him into believing that pleasure is found in wickedness. Christian Science teaches that every sin committed is a wrong thought expressed. The origin is mental. Therefore it is from a mental basis that sin must be eradicated and destroyed. As a lie believed is as truth to the believer, so sin and its accompanying evil conditions are as truth to the sinner until his thought is awakened to the reality of being, found in an understanding of God and man's relationship to Him. With the truth of immortal good, Christian Science destroys the lie of mortal evil, including sin and disease. In "Retrospection and Introspection" Mrs. Eddy clearly defines this process. "Christian Science heals sin," she writes, "as it heals sickness, by establishing the recognition that God *is All*, and there is none beside Him,—that all is good, and there is in reality no evil, neither sickness nor sin" (p. 63).

The lying, negative nature of sin has, however, never been made a reason by Christian Science for excusing its presence. So to do would be wholly unchristian, for, as Jesus well said, "Whosoever committeth sin is the servant of sin," and, "No man can serve two masters." In Science and Health (p. 339) the teaching of Christian Science on this subject is clearly stated: "A sinner can receive no encouragement from the fact that Science demonstrates the unreality of evil, for the sinner would make a reality of sin,—would make that real which is unreal, and thus heap up 'wrath against the day of wrath.' He is joining in a conspiracy against himself, —against his own awakening to the awful unreality by which he has been deceived. Only those, who repent of sin and forsake the unreal, can fully understand the unreality of evil."

Christian Scientists are striving to recognize in thought and act the supremacy of the one living and true God, and through their understanding of Him to meet and destroy the false claims of evil that seek to dishonor God and rob man of his spiritual sonship with the Father. Referring to the true and spiritual man, John wrote, "Whosoever is born of God doth not commit sin; . . . he cannot sin, because he is born of God;" and Paul, writing his epistle to the Romans, pointed the way to this spiritual freedom when he said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." And so Christian Science in the present age is demonstrating man's ability to destroy sin and disease in the degree that he lets that consciousness of God's supremacy be in him "which was also in Christ Jesus."

Sin and disease, with their accompanying conditions of distress and discord, are shown by Christian Science to be the hell of man's own making. God did not make hell. The Scriptures state, "God saw every thing that he had made, and, behold, it was very good." But as sin is real to the sinner, so hell, the consequence of sin, is real to him until he turns from false belief in evil's power and presence to the recognition of God, good, as the one and only Mind, holding everlasting dominion over man and the universe. Man then begins more readily to discern the life that is real, and to recognize the verity of Mrs. Eddy's statement (Science and Health, p. 196), "Sin makes its own hell, and goodness its own heaven."

❖

[Ezra W. Palmer in *The Gazette*, Colorado Springs, Col.]

Christian Science has again been the subject of attack by the evangelist preaching in your city. These attacks are a part of his stock in trade and seem to be characteristic of his methods. The procedure employed by this speaker seems to consist in formulating a series of false statements regarding Christian Science, and then working himself into a passion in tearing them to pieces. Of course this scattering of the man of straw he has set up, constitutes no indictment of Christian Science. To one who has the least grasp of the profound insight which Christian Science gives of spiritual things, such performances as this critic indulges in merely provoke a smile at their crudity, and at the same time sincere regret that a religious speaker should attempt to play on the lack of information of his hearers in such a puerile fashion.

The weakness of these critics consists in trying to substitute words for the demonstrable works which Christian Science does in following the commands of Jesus. Failing to do these works, they turn their batteries of denunciation upon them, a proceeding whose futility time has amply demonstrated. Not denunciation, but emulation of the healing works of Christian Science, should be the goal of every Christian. The Master's figure of the beam and the mote is respectfully referred to this critic for his careful and prayerful consideration, and his attention is called to the words of the Master, "Judge not, that ye be not judged."

[Written for the *Sentinel*]

Hymn of Praise

EDGAR NEWGASS

O UNIVERSAL Love, though far we stray,
Uncomforted and sad, from thy clear way,
Thou followest to soothe who are in pain,
And make them whole, and lead them home again.

No man e'er joys, and none can breathe or see,
Or work or play, but does so unto Thee.
Thy holy mountain! Oh, did we below,
Who struggle with foul dreams—did we but know

No shame, no evil, no untoward alarm
Could ever frighten or make sick or harm;
Naught would there be from which to seek release,
Naught is there now, but Thou and Thy great peace.

Editorial

The Relief Fund

In the *Sentinel* of Oct. 24 announcement was made of a fund which was to be collected for the relief of Christian Scientists who by reason of their residence in the countries affected by the present European war are temporarily distressed. The Board of Directors of The Mother Church are glad to announce that at their request William D. McCrackan, C.S.B., of the Christian Science board of lectureship, has kindly consented to go to these countries and arrange for the necessary committees, that this fund may be quickly dispensed in the best way. In order to perform this office Mr. McCrackan has been obliged to cancel some lecture engagements and probably will not be able to make further appointments prior to Jan. 15, 1915.

✦

True Thanksgiving

"Glory be to God, and peace to the struggling hearts! Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love." Thus, on page 45 of Science and Health, Mrs. Eddy sounds a note of thanksgiving and triumph which finds echo in the heart of every Christian Scientist who has successfully tested the power of God, through Christian Science, in overcoming the sickness, impatience, and trials of mortal existence.

Mrs. Eddy has again and again pointed out in her writings the need for faithful endeavor on the part of her followers, that they may attain to the freedom from all evil which is man's birthright. She holds out no hope that those who seek ease and comfort for ease and comfort's sake, shall progress very far toward that goal to which Christ Jesus referred when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect;" on the contrary, she keeps before them the paramount requirement of salvation, as laid down by the Master, "Seek ye first the kingdom of God." Neither does the Discoverer and Founder of Christian Science hold out a hope that this goal, the attainment of salvation, may be reached vicariously. We cannot buy our way into the kingdom of God, nor will another's sacrifice, no matter how willingly offered, atone for our own shortcomings. Mankind must diligently work out their own salvation, even as this salvation is promised to all who faithfully seek it. "Ye shall seek me, and find me, when ye shall search for me with all your heart," is the Father's loving assurance; and the unnumbered hosts who have proved its surety, know that abiding peace and joy await those who gain their heritage as the sons of God by patient, persistent seeking to know and to do the will of the Father.

Christian Scientists regard the promises of the Scriptures as possible of fulfilment, and they also realize that the first step toward this attainment must be the recognition of the omnipotence, omniscience, and omnipresence of God, and the consequent unreality of all that is unlike Him. With this recognition of the allness of God and of man in His likeness, the fear which so largely enters into every human problem is eliminated; and in its stead is the consciousness that to one so guarded belongs the assurance of the psalmist: "There shall no evil befall thee."

It was on this basis that Christ Jesus was able to face and defeat every phase of error, even to the overcoming of "the last enemy." It was because he knew his birthright as the "beloved Son" of the Father, omnipotent, omnipresent good, that he was able to do the mighty works which he declared all his followers likewise should do, in fulfilment of that mission of which he read to the congregation assembled in the synagogue at Nazareth: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." He knew and proved that it is neither the law nor the will of divine Mind that mankind shall be subject to sin, and the suffering which is its consequent; and when he faced fearlessly the illusions of mortal sense which seemed so real to those who had not received the illumination that had come to him, they vanished before the word of Truth.

As we approach the day designated by the President of the United States as one of general thanksgiving for the mercies and blessings which are the bounty of an all-loving Father, let us remember and be glad that God reigns universally; that His promises are awaiting fulfilment even in those countries which are torn asunder by the belief that force is physical rather than spiritual. Today Christian Scientists are enlisted in a new crusade, one which has "sounded the keynote of universal freedom, asking a fuller acknowledgment of the rights of man as a Son of God, demanding that the fetters of sin, sickness, and death be stricken from the human mind and that its freedom be won, not through human warfare, not with bayonet and blood, but through Christ's divine Science" (Science and Health, p. 226). Victory cometh "not by might, nor by power, but by my spirit," and it is by the same "spirit" that Christian Scientists are overcoming the legions of evil. Truly they have reason to rejoice that in Christian Science they have found an effective weapon in the warfare against that which is ever seeking to destroy, but which must eventually yield to the power of good.

Archibald McLellan.

✦

Increasing Thoughtfulness

Among the unnumbered brief, thought-awakening sentences penned by the author of Science and Health, none is more pertinently related to present human conditions than her declaration in the Preface that "the time for thinkers has come" (p. vii). In this Mrs. Eddy may have meant that there is need of great dominating nonconformists of her own type; but she surely meant more, namely, that the hour calls for increased mental alertness; that men shall escape from their enslavement to customary and traditional thought.

Christian Science does not crown or nourish what may be called world-intellectualism, but it does preeminently inculcate and conduce to exact, consistent, and vital thought, to the habit of considering the subject in hand from every needful point of view, and especially of regarding it in the light of the great fundamentals of Christian faith,—the nature of God and of His universe, including man, and the law and order of the divine government as revealed and demonstrated by Christ Jesus. It calls to men again in the words of wisdom, saying, "Come now; and let us reason together,"—let us consider the human problem as related to the truth of being, respecting which we can but agree. This fact characterizes its every appeal and gives it the highest educational value. Christian Science teaching is in fact both a philosophy of being and a philosophy of practical living. It removes the accumulated débris of fallacious thinking, on which men have vainly tried to erect stable structures, and having thus uncovered the immovable ledges of truth, it founds thereon a "building of God," fashioned and adorned "according to the pattern showed . . . in the mount."

Digitized by Google

The need of an acquired habit of more logical, more discriminating thought, is constantly being revealed to Christian Scientists in their contact not only with commoners, but with the cultivated. One is often amazed to find men of trained minds, and in a sense of scholarly instincts, who are attached to and contend for beliefs and opinions which will not bear a moment's analysis, and which show that they have not learned to think discriminatingly, or else are not disposed to do so. The responsibility for this fact lies largely with that mental torpor which is the prolific parent of stupidities, and that educated prejudice which ofttimes not only shuts but bolts the door against progress. Said a minister recently: "I note that when you Christian Scientists have a piece of furniture which needs repairing, you send for a carpenter and have it fixed. When I find that my body is out of order, I send for a doctor and have it fixed. What's the difference?"

In answer, his attention was called to the very manifest difference between a man's thought-relation to the conditions of his body and his relation to extraneous matter, also to his immediate responsibility in view of the universally conceded significance of right-mindedness in the one case, as compared with the other. He was assured that Christian Scientists recognize every material condition, whether named normal or abnormal, to be but the phenomenon of a false sense of being; and that there are no limitations in all this realm of unreality to the sovereignty of that Mind which was in Christ Jesus. Again and again he proved the absolute authority of spiritual sense over so-called material law. Nevertheless, while Christian Scientists stand for this possible rule of the Christ-idea, it is obvious to them, as it must become to all others, that until they have solved the lesser problem of human self-rule, they are not well equipped to tackle the greater problem of world-rule.

The order of spiritual unfoldment and advance is "first the blade, then the ear, after that the full corn in the ear;" and he who directs his present effort to the working out of problems within the compass of his present understanding, gives evidence of that wisdom, that increase of thoughtfulness, of which the assured goal is success. Indeed, to grow in grace and to grow more spiritually intelligent is one, and this perception is withal a fruitage of Christian Science.

JOHN B. WILLIS.

"Diversities of gifts"

AFTER people become interested in Christian Science, they begin to study the Scriptures with greater care, but in most cases the bias of early religious teaching clings to the inquirer, until he advances sufficiently to apply truth to the varied problems of human experience. As he does this, he finds it available in all alike, whether in the overcoming of disease and sin, or any of the other discords of mortal belief. It may happen, however, when he essays to help some one to overcome a physical ailment, or to apply the law of healing for himself, that unexpected difficulties present themselves and the healing is delayed. While still wrestling with these difficulties, his attention is directed to Paul's statement to the Corinthians respecting "diversities of gifts," and he is apt to conclude that he is not gifted with ability to do the healing work.

Before venturing to discuss the proposition here presented, we should note that "gifts of healing" are inseparable from the operation of the divine Spirit, the Holy Ghost, according to St. Paul; yet, strange to say, spiritual healing was for long centuries almost wholly ignored, until Mrs. Eddy discovered and declared its divine Principle. It cannot be denied, however, that many devout Christians, and even little children, longed with all their hearts for the Christ-healing, though they were told by their religious teachers that it did not belong to their day and age. All the while the children were taught the hymn which begins,—

> I think, when I read that sweet story of old,
> When Jesus was here among men,
> How he called little children as lambs to his fold,
> I should like to have been with him then.

Some of these children afterward learned through Christian Science to rely for health and happiness upon the words of Christ Jesus, "Lo, I am with you alway," and their absolute truth is proved to child and adult alike in the healing which follows their acceptance of the truth.

As to the question of "diversities of gifts," it is highly important to ponder the related statement: "The manifestation of the Spirit is given to every man to profit withal." It does not appear that there is any discrimination on the divine side, although mortals would limit themselves and others and say that only a few should undertake the healing work. The fact is, that when men heed the Master's command to "let" their light shine, the Father is glorified by the healing which follows. To explain: A professing Christian who is unacquainted with the teaching of Christian Science, in calling upon a sick friend would most likely speak of the illness as real and as either sent or permitted by God. He might also recommend certain material remedies and cite certain supposed laws of disease; but he would not "let" the light of Truth shine upon the afflicted person unless he urged resistance to the devil of disease and strongly declared the all-power of God, divine Love, to destroy whatever He did not make. In "Miscellaneous Writings" (p. 105) Mrs. Eddy says: "Vanquishment is unknown to the omnipresent Truth. I must ever follow this line of light and battle."

It is quite possible that the early Christians believed certain persons could exercise some of the "spiritual gifts" better than could others, but we must not forget that the divine Principle of Christ Jesus' work had not then been revealed to humanity. This had to come later, with the full-orbed appearing of the "Spirit of truth" promised by the Master, and the healing ministry of Christian Science proves the presence and power of this truth in our midst today. It makes every one who accepts it whole, and we are told that without holiness, or wholeness, "no man shall see the Lord."

In Christian Science the "diversities of gifts" mean the rich and varied bestowals of divine Love for all of God's children, and it rests with them to appropriate more and more of these gifts, until all reflect the perfect man of God's creating.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

Digitized by Google

EUREKA SPRINGS, ARK.—At six o'clock this morning [Aug. 15] the corner-stone of the Christian Science church building, in course of construction on Mountain street, was laid with simple ceremony. The Christian Scientists have maintained an organization here since 1896. During these years services have been held in various places in the city. Feeling the need of a permanent church home, the Scientists let a contract for the erection of a church edifice on lots on Mountain street that had been purchased some years ago. Ground was broken on July 1 last, and the building has been progressing nicely since that time. The contract calls for the completion of the building by Jan. 1, 1915.—*Daily Times.*

ROCK ISLAND, ILL.—At a meeting of the building committee of First Church of Christ, Scientist, Thursday evening [Sept. 17], the contract was let for the construction of the new church at Twenty-second street and Seventh avenue. The contract price is eighty thousand dollars. The building will be erected on the site of the old Dart homestead, which was recently purchased by the building committee. The main hall will have a seating capacity of eight hundred.

Rock Island Union.

HARTFORD, CONN.—With an attendance of about four hundred, Second Church of Christ, Scientist, held its first service in its new home, formerly the Park Congregational church, at the corner of Asylum and High streets, last evening [Sept. 2]. The service was the weekly meeting.

Hartford Courant.

WEST CHESTER, PA.—A free reading-room was maintained at the county fair of the Chester County Agricultural Association near West Chester, Pa., Sept. 15-19. Much of the authorized literature was distributed. The room filled a need among the attendants of the fair and was widely patronized.

Correspondence.

WHITE PLAINS, N. Y.—Sunday, Sept. 13, the seventh monthly Christian Science service was held at the Westchester county jail. The service was a very successful one. Some of our friends were pleasantly surprised at the keen interest which the inmates manifested during the service.

Correspondence.

FLUSHING, N. Y.—Among the permits recently granted for new buildings in Queens was one to First Church of Christ, Scientist, for the erection of a church on Murray street, near Sanford avenue, Flushing, to cost twelve thousand dollars.

Flushing Journal.

RICHMOND HILL, N. Y.—Opening services were held in the new Christian Science church July 26.—*Correspondence.*

❖ ❖ ❖

The Lectures

Springfield, Ill.

A large and appreciative audience assembled in the auditorium of the Y. W. C. A. Building, to hear a lecture on Christian Science by William R. Rathvon. John H. Lord, district passenger agent of the Illinois Central Railroad, introduced the lecturer, and said:—

You have been invited here this evening for the purpose of listening to a lecture on a subject that is today attracting world-wide attention. While there are no claims made for it that it is in any way a new subject, yet there are hundreds and thousands of people from practically all parts of the civilized world who are giving testimony to the fact that Christian Science has given them new life, new thoughts, new ambitions, new hopes, new joys, new sight, new hearing; has taught them how to pray, how to love their neighbor as themselves, and how to live a true Christian life. It is also a subject that has been antagonized, criticized, and scoffed at from every conceivable angle. Yet with all this great opposition you will find its advocates moving onward, lending a helping hand where possible to do so, working earnestly and faithfully to help brighten up this old world of ours, striving daily to assist struggling humanity to get the understanding that the kingdom of heaven is here and now, only awaiting their occupancy.

It has been my great privilege to witness a remarkable case of healing through Christian Science,—remarkable for the reason that all material means had been exhausted and all hopes for the recovery of the patient had been abandoned, when Christian Science was called for, and God's glorious truth was most beautifully asserted. The healing was almost instantaneous. To many people, seeing is believing; but in this particular case, to me it was more than believing, it was understanding. There was unfolded the beautiful thought that here indeed must be the working of the same Mind and thought that rebuked the wind and calmed the tempest; that fed the multitude with the five loaves and two fishes; that caused the blind to see, the deaf to hear, and the lame to walk; that raised Lazarus from the dead.

Following these great demonstrations and beautiful manifestations many people will say, "Yes, but how shall we get this understanding?" It is for that reason that you have been invited here this evening.—*Correspondence.*

❖

Toronto, Canada

Probably twenty-five hundred persons were present in Massey Music Hall to hear William D. McCrackan, M.A., lecture on Christian Science. The lecturer was introduced by Jack M. Jackson, first reader of First Church, who said in part:—

On one occasion Jesus said to his disciples, "Blessed are the eyes which see the things that ye see: for I tell you, that many prophets and kings have desired to see those things which ye see, and have not seen them; and to hear those things which ye hear, and have not heard them." What were the things referred to? Were they not the manifestations of the power of God, or good, to overcome the obstacles which beset our earthly pilgrimage, including the ills of the flesh? Were they not the manifestations of the dominion possessed by man when spiritually endowed, over these obstacles, including disease? Manifestly this power of God, or good, is as available now as it was two thousand years ago, since we have no record of God having withdrawn Himself from His universe, or having been overcome by Satan. In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we are told that "if God were understood instead of being merely believed, this understanding would establish health" (p. 203), and students of Christian Science all over the civilized world are daily proving this to be true.—*Correspondence.*

❖

Meadville, Pa.

A. J. Palm, editor-manager of the Meadville Messenger Printing Company, in introducing Willis F. Gross, who lectured on Christian Science at the court-house, said in part:—

There are many important subjects concerning which I must express my ignorance, and Christian Science is one of them. I am not so densely ignorant, however, as to declare that it is all a fake or a delusion because I do not comprehend

Digitized by Google

it. I have learned that it is not safe to condemn a new theory or a new doctrine by what we do not know about it. In fact, it is hardly safe to do so even after we think we know considerable about it. When we find judges of courts, governors of states, members of Congress, and men and women prominent in all the walks of life believing in Christian Science, it would be presumptuous folly for one who knows nothing about it to declare that there is nothing in it. Every new proposition in religion and science has been obliged to fight its way to public favor against prejudice and ignorance, for we are prone to judge of new doctrines by our ignorance of them.

Christian Science is unlike any of our other religions in one respect at least. People as a rule are Methodists or Presbyterians because they were born Methodists or Presbyterians, and therefore all their early prejudices and feelings tend to cause them to adhere to their religion. It is not so, however, in reference to Christian Scientists; and I doubt whether there is a person in the audience who was born into the Christian Science faith, but all of you have become adherents of the faith in spite of your early prejudice against it.—*Correspondence.*

❖

Florence, Italy

A lecture on Christian Science was given by Bicknell Young in the hall of the Circolo Philologico. The hall was filled. The lecturer was introduced by the Hon. L. J. Keena, who said:—

I believe that each of us is seeking the kingdom of heaven. Civilized man has always sought it. Standards of morality have varied throughout the ages almost as widely as the varying conceptions of the Deity, but the aim of man has remained fixed,—the achievement of a higher life. In the main, the poetic imagination of man has set the confines of its vision of God's kingdom as lying just beyond the horizon of this mortal existence. And now comes a new-old interpretation of Christ's mission, repeating his saying, "The kingdom of God is within you." Because this interpretation establishes a rule of action, a law of life, based on the teachings and works of the Christ, it has been named Christian Science.—*Correspondence.*

❖

Clinton, Ill.

A lecture on Christian Science was delivered to a large audience in the circuit court room in the court-house, by Jacob S. Shield. The lecturer was introduced by County Judge Fred C. Hill, who said in part:—

Christian Science is a demonstrable religion of love and good cheer, and your presence here today is evidence of your interest in this cause. It is conceded by all Christian people that Christ Jesus was the Wayshower, and that he healed the sick, forgave sin, and arose from the dead. Then why need it be thought incredible that his followers today should be doing many of his mighty works, since he has said, "He that believeth on me, the works that I do shall he do also;" and again, since he has given us the way in his saying, "Ye shall know the truth, and the truth shall make you free"?

Christian Scientists are knowing and proving the truth of Jesus' sayings, expressed in their daily experiences; and thousands of men and women are testifying to the usefulness and availability of Christian Science in their release from the bondage of sin, sickness, and a belief in the reality of death. I desire to express to you publicly that Christian Science has been the agency that has released me from the bondage of disease of long standing, known to many of you.

Clinton Journal.

Lectures to be Delivered

Beloit, Kan.—Clarence W. Chadwick, Church Edifice, 8 p.m., Nov. 19.

Bloomington, Ill.—Clarence W. Chadwick, Majestic Theater, Washington and East streets, 2:30 p.m., Nov. 15.

Boise, Idaho.—Bicknell Young, Pinney Theater, 2:30 p.m., Nov. 15.

Burlington, Kan.—Bliss Knapp, Newk's Theater, 8 p.m., Nov. 19.

Chariton, Iowa.—Bliss Knapp, Court-house, 8 p.m., Nov. 16.

Chicago, Ill. (Twelfth Church).—Jacob S. Shield, Temple Sholem, 3760 Pine Grove avenue, 8 p.m., Nov. 16 and 17.

Chicago, Ill. (Fourteenth Church).—George Shaw Cook, Assembly Hall, Ravenswood School, Montrose avenue and Paulina street, 3:30 p.m., Nov. 15, and 8 p.m., Nov. 16.

Chillicothe, Mo.—Virgil O. Strickler, Court-house, Court Room, Nov. 19.

East St. Louis, Ill.—Virgil O. Strickler, Church Edifice, 8 p.m., Nov. 17.

Downers Grove, Ill.—Virgil O. Strickler, Dicke Hall, corner Forest and Belmont avenue, 8 p.m., Nov. 20.

Testimonies of Healing

With the hope of benefiting others I wish gratefully to acknowledge my healing, through the efficacy of Christian Science, of organic stomach disorder, catarrh of the bowels, uterine hemorrhages, and other troubles. My case was pronounced incurable, but through an earnest and diligent study of the Christian Science text-book, "Science and Health with Key to the Scriptures," I found health, happiness, and peace, for by its divine Principle I was healed not only of the physical diseases, but of a great sorrow which no other power could ever have effaced.

While my heart is filled with gratitude for the physical healing, yet the greatest joy and blessing that has ever come into my life is the illumination of the Scriptures, the spiritual understanding which a careful and earnest study of the Christian Science text-book has enabled me to obtain. It has furnished me with many proofs that "the exterminator of error is the great truth that God, good, is the *only* Mind" (Science and Health, p. 469). If we accept this teaching and apply it to our human experiences, thought will be lifted above physical ills and discord, and all untoward conditions, into the haven of peace.

A few years ago my two daughters were stricken with a so-called contagious disease. The physician was notified and we were quarantined. Before going away, the physician, knowing I was a Christian Scientist, said he supposed I did not want him to leave any medicine. He spoke in a kind, courteous manner, and I thanked him, saying I would rather he did not. I felt confident that divine Love could and would do as much for my children as it had done for me.

My youngest daughter's condition, from a human standpoint, was critical. She could not swallow or take any nourishment, and for more than twenty-four hours she was delirious. I was a young student in Christian Science at the time, but that did not hinder or change the eternal facts of God's omniactive law of universal harmony, which always has and always will be in existence, and it did furnish me with the evidence that a little leaven of this truth will leaven the whole lump of human belief. One year later this same daughter was examined by a specialist, who declared he would never have known she had been a victim of this malady. He stated that it usually required a long time for recovery, and in severe cases left its traces. He seemed much surprised to find her in perfect physical condition, and said she did not look as though she had ever had a day of illness in her life. The healing was perfect in every way, leaving the face and body free from scars and blemishes. The physician said he had heard of the case and it was very remarkable, and that we had been very fortunate.

Christian Science teaches us that God is a refuge, an ever-present help in time of trouble, and that neither age nor accident can interfere with the senses of Soul. As I entered a street-car one night, I asked the conductor to let me off at a certain street. When we were near it, I walked to the rear of the car where the conductor stood, and again mentioned the street at which I wished to get off. The car was moving slowly, and I had no thought but that it would stop at the proper time and place. The conductor took hold of my arm, assisting me down the steps. As I placed my right foot on the ground the car was still moving, and I fell, becoming unconscious. My first awakened thought was that life is "hid with Christ in God," a place where accidents are unknown, and that I was not hurt. The conductor assisted me to my feet and anxiously inquired if I was hurt. I replied that I thought not. He took my name and address, accompanied me across the street, and again anxiously inquired if I felt sure I was in no way hurt. I then assured him I was feeling all right, made my call, and returned home.

Early the next morning the street-car company sent one of their men around to our house to inquire into the matter as to how the accident occurred, and to ascertain if I were in any way injured, what I wanted for damages, and if I thought the conductor should be discharged. I replied I was not injured, did not want anything for damages, and did not want them to discharge the young man, for I felt sure a mistake of this kind would not occur again. A few hours later I felt a pain in my side, and the thought came that I had better examine and see whether there was anything wrong with my side; but to this thought I at once replied that I had neither time nor desire to be looking for evil, for I wished to be "about my Father's business." A couple of days following, after a bath, my daughter called my attention to a large dark spot on my side. I looked at the discolored place, called a bruise, with a very grateful heart for the true sense of being that awakened thought, for surely to dwell "in the secret place of the most High" was indeed an abiding "under the shadow of the Almighty."

All that I have, all that I am, I owe to the teachings of the God-inspired woman whose purity of thought discovered this divine Principle and partook of the things of God and revealed them unto men. I must confess that heretofore I derived but little comfort from reading and studying the Scriptures. I could not understand the Master's teachings, the prophets, and the book of Revelation by St. John. The Bible seemed a sealed book, and life a continuous perplexity and failure. My old-time faith would cry "Peace, peace," but it could not be found. For all this healing, and manifold other blessings, I am indeed grateful to Christian Science.—Ella V. M. Oliver, Los Angeles, Cal.

◆

About eighteen years ago I was said to be afflicted with an internal malignant growth. I tried every remedy that I heard of, and changed physicians several times, going from one doctor to another only to find no improvement whatever. This continued for six years. I became greatly reduced in flesh, and so weak that no rest could be obtained, even though I had good care. I was confined to my bed most of the time, with no hope of ever being well. I then went back to my kind family physician. He told me that an operation might prolong my life; but I did not care to submit to it, so we waited a while, and then to please my friends I called him again. After a brief examination he told me that it would only add to my misery, as I was then too weak to survive, even if the operation was gone through, and there seemed to be nothing to do but await the end.

About this time a lady moved into our neighborhood from a distant town. She had heard of my hopeless condition, so she called and kindly told me of her own healing, effected through Christian Science. She said that I could be healed also, but I did not think so. I told her I was too far gone, and that what she said was too good to be true; but I also told her that if she could do anything to let me have one night's rest from pain so that I could sleep, I wished she would do it. She talked to me a little while and left me. I slept that night and awoke refreshed, asked for food, ate it with relish, and retained it. This seemed a miracle to me, as I had been existing on stimulants and tonics. I continued to improve, relying on whatever this new friend told me about God as infinite divine Love that heals the sick. She came every day, and within a week I was out of bed, going about the house. I never went back to bed except to rest a little while or when I retired for the night.

About three months after this, my friend told me she was

Digitized by Google

going to move away. I had kept the good words she had spoken to me, and pondered them in my heart every day. When she came to see me to bid me good-by, she told me to send for "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to read it carefully and study its meaning. I did so, with the result that there has never been a return of the malady in the slightest degree. I began to do my housework, and during the past few years have worked hard, being on my feet all day and often until late at night. I am perfectly well, and weigh more than the average woman. During this time I have relied entirely on Christian Science for healing of every kind. When I have asked others for help, I have never failed to get relief, often immediately. At one time I called on a practitioner for treatment and was sustained through a sorrow. I have also been able to help others, and this gives me great joy.

In the early spring of 1912 I contracted a cold, which settled on my lungs. I had been through a long siege of illness under medical treatment, a member of my family having had typhoid fever, and this threw the whole responsibility of a large business on me. Although I was up late at night and early in the morning during the coldest months, I was enabled through the help of divine Love to be protected and sustained without loss; but as the cold constantly recurred, I called for help. During a treatment it occurred to me to tell my friend of a condition which had existed when I was about eight years old. I then had a very severe attack of measles. They "went in," I remember the doctor said, adding that acute lung trouble was likely to follow and leave my lungs weak, so that at an early age pulmonary disease might rob me of earthly existence. For a number of years I coughed all winter, until after my first healing in Christian Science, and this recurrence of the cough in 1912 reminded me of the former attacks in my girlhood. Mrs. Eddy says, "If God heals not the sick, they are not healed" (Science and Health, p. 231). The practitioner quietly remarked that there is no recurrence when Truth does the work. I also read from the text-book open before me, "Every law of matter or the body, supposed to govern man, is rendered null and void by the law of Life, God" (p. 380). Within a week the discordant manifestation was destroyed; every trace of cough, weakness, and soreness had disappeared, and relying on Truth there is now no fear of their return.

I send this testimony in deep thankfulness to God for my permanent healing, and in loving remembrance of my friend and neighbor who brought me the good tidings, "Christian Science healed me and this truth will heal you," and who also brought to my knowledge the text-book. I am a member of First Church of Christ, Scientist, of East St. Louis, Ill. I have a deep reverence and tender love for our beloved Leader, who wrought out in life-practice the rule of right thinking, then lovingly gave to a waiting, suffering world the statement of demonstrable truth found in Science and Health. I sincerely trust that my testimony may lead some weary searcher to see "the way, the truth, and the life" in Christian Science.—Kate Rochus, East St. Louis, Ill.

✧

I have received so much help from reading the testimonies in the *Sentinel* and *Journal*, that I feel it not only a duty but a privilege to tell what Christian Science has done for me. Stomach trouble kept me in poor health all my life. My mother had passed on from this disorder, when otherwise in good health, and several very good physicians, one a specialist from Chicago, said I would go the same way, but that he could help me. He put me on a very strict diet, and said I should rest half an hour before eating, and at least two hours after. I was, however, healed of this ailment through Christian Science, and it has never returned. I can now eat anything that is set before me, with no bad effects. I can eat a hearty meal and go right to work, or retire and sleep like a child, and get up in the morning without a headache, something I never could do before.

I had a lame back, caused by a strain when I was a young man, and as I grew older it became more troublesome. I could not stoop over without pain, and I walked with a cane. This, also, was entirely overcome in Christian Science. I wore glasses for sixteen years; now I read without them.

I have lived seventy-two years, and my health is better than ever before in my life. My healing was slow, and sometimes I was almost discouraged, but with the help of a faithful practitioner and the study of our text-book, "Science and Health with Key to the Scriptures," I would soon be gaining more rapidly. I read the *Sentinel*, *Journal*, and *Monitor*, and every morning, before beginning the day's work, no matter what I have to do, I go over the Lesson-Sermon. I find it gives me strength for the day, and saves time. I also have the pleasure of helping others.

I have not used any material means for six years, and have not even needed the help of a practitioner for two years. Words cannot tell all that Christian Science has done for me, nor can they express my thankfulness to God, also my gratitude to our dear Leader for making this healing truth possible for us.—P. J. Allen, Loogootee, Ind.

✧

It is over three years since I began to study Christian Science. I had been under medical treatment nearly all my life, suffering from nervous troubles, and about six years ago my throat became much enlarged. I tried different material remedies for it, but these were not of the slightest avail; the throat remained the same, until through Christian Science I became acquainted with a practitioner. I told her about the throat trouble and she treated me, with the result that the throat is now its normal size.

I am indeed very grateful for all the benefits I have received in Christian Science.

Alice Mathews, Tavistock, Devonshire, England.

✧

[Translated from the German]

I herewith wish to express my gratitude for the wonderful healing which I have experienced through Christian Science. Over three years ago I was daily seized with severe pain in the stomach and was nauseated after every meal. This condition lasted for two years, and during that period two physicians whom I consulted agreed in stating that I was extremely anemic. One evening, upon experiencing great suffering, I had a hemorrhage, which, to sense, made me feel extremely weak. The physician said that an abscess had opened in the stomach. I then had treatment from a physician of high repute and was greatly relieved; but although I followed all the prescriptions closely, severe pain would set in almost every day. The physician believed my system to be entirely shattered, and later on prescribed drugs, which, however, often failed to have any effect or else relieved me only for a short time. The continuous pain and slight hope of recovery added to my distress, and I sometimes felt very much discouraged, and even in a desperate mood, which often made life cease to appear desirable.

It was during that time of hopelessness that I heard of Christian Science. After reading several copies of the *Herold*, quite a few things became clear to me which had been a puzzle formerly, and I began to experience new courage and a sense of hope regarding possible deliverance from my suffering. A Christian Science practitioner gave me several treatments,

Digitized by Google

and now I am free from all the troubles mentioned, and enjoy a sense of well-being and a happiness such as I have not experienced for a long time. I am daily apprehending better the never-ending love and goodness of God.

Of late I have had to attend to many professional duties which could not be termed exactly agreeable, but I gained strength for their performance by reading in the Bible and in Science and Health in the morning before leaving, and everything was adjusted to my own satisfaction as well as to that of all concerned, so that finally it all turned into a very pleasant experience. The Bible, Science and Health, and the *Herold* are the sources from which I derive strength before taking up my daily work. I have become a very different woman since turning to Christian Science, and now I can see how much good we receive daily from God, and I also know that God leads and protects us wherever we may be. God is our only help, and on Him we may confidently rely.

I thank God from the depths of my heart for His infinite love and goodness, and I am grateful to our revered Leader, Mrs. Eddy, for the work which she has done in behalf of humanity. My endeavor shall be to increase in the knowledge of divine Truth.—Frau Fiedler, Dresden, Germany.

✦

About eleven years ago my boy, then two and a half years old, was taken with what is known as spinal meningitis. He was attended by our regular physician and a trained nurse, and two specialists were called in for consultation. After a few weeks the day came when they all decided that the child could not possibly recover and would last but a few hours. Just at this time a friend called. She was a Christian Science practitioner, and when I told her what the decision was, she asked if I would not try Christian Science. I told her that I had not the slightest faith in it, but if she believed my boy could be helped I wished she would try to help him. She said she would, and much to my surprise the child commenced to improve at once, and in about two weeks was perfectly well. He has not had the slightest return of the trouble, or any other ailment since as the result of having passed through that difficulty; and this is quite as remarkable as the healing itself.

Seeing this healing work done, caused me to think that the Christian Science religion must be far better than anything I had ever known about, although I had studied the Bible from my youth. Consequently, I began at once to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible, and I was finally convinced that Christian Science was the same truth which Jesus taught and practised long ago.

During the past ten years I have found it to be true that God is a present help in every time of need. By the teachings of Christian Science I am learning to have more faith in good and less belief in evil, and am thereby gaining peace. I am truly grateful for Christian Science, and that I was enabled to recognize it as the truth when it was presented to me.—Nellie D. Tearle, Roxbury, Mass.

✧

I want to give my testimony of healing through Christian Science, in the hope that it may benefit some one who has the same great need of help that I had. Three years ago I was a nervous wreck, discouraged and tortured with a skin disease which was so bad I could neither see nor sleep; also bowel disorder of sixteen years' standing, temper, sensitiveness, worry and all the ills it brings with it. I had tried several doctors and all kinds of remedies, but received very little help. Through the kindness of a friend I got a glimpse of Christian Science, and this gave me a different idea of God. I thought I would see what Christian Science could do for me, so I went to a practitioner. The nervous disorder was helped in a few treatments; but as the skin disease and bowel trouble did not yield, I was discouraged, though I did not want to give up Christian Science.

I was then advised to try another practitioner; but the help did not come. I was reading the Bible, Science and Health, the *Sentinel* and *Journal*, and as I read the testimonies of healing I wondered why I could not be healed. I knew that "God is no respecter of persons," so I felt that the fault must be in me. My practitioner worked lovingly and faithfully to help me to see that I must first seek the kingdom of God, as my thought was all for physical healing, and I was not thankful enough for my blessings. She then helped me to see what it means to be God's child, and with this understanding has come the permanent healing of the bowel difficulty and other troubles. The skin eruption returned several times, but it has now entirely disappeared. Christian Science has helped me spiritually, physically, and financially.

Mere words cannot express my thankfulness to God for all these blessings, and my gratitude to Mrs. Eddy. My desire is to help others and thus show how much I appreciate Christian Science for the light, joy, and peace it has brought into my home. The healing is wonderful, but I am more thankful for the spiritual understanding.

Helen Howery, Compton, Cal.

✧

I wish to express my deepest gratitude for the perfect healing of typhoid fever in the case of my daughter, then eight years old. Having had a full run of this fever myself, as did also my sister, whom I helped care for, I well knew the different stages of the disease, and as they would appear, nearly as quickly were they overcome by the practitioner through the power of Truth. There were others in our neighborhood ill with the disease at the time, and two deaths occurred near by.

Knowing that this was an unquestionable case of typhoid, I do not understand how to express myself about the healing as clearly as I would like to, but the result seemed marvelous to myself and to all who knew about it. In three weeks' time the child was up, and the fourth day after being dressed she walked a number of blocks,—something unheard of in the old thought. This healing took place over six years ago.

Lillian Howard Stevens, Lockport, N. Y.

✧

[Translated from the German]

The following testimony is given with a heart full of joy and gratitude. I was afflicted with spinal complaint for fifteen years, and whenever the pain in the back became acute, paralysis of the legs and feet would set in. Besides this, during the last twelve years my legs would fail me completely after every slight exertion or excitement. Under these circumstances I experienced great difficulty in moving about, and whenever I wanted to be out of doors, I had to be wheeled in a chair. The many physicians whom I consulted were unable to help me, and finally diagnosed the case as an affection of the spinal marrow, a disease which is considered incurable. I became very dejected, and lost all hope of ever recovering the normal use of my limbs.

In the beginning of 1913 relatives induced me to look into Christian Science, and I became acquainted with its teachings and its results. I now praise God for the help that He sent me, for a short time after I began to investigate the subject and had confidently put myself under the care of a practitioner, I experienced a slow but steady improvement, and

Digitized by Google

today I have reached the point where I am able to move about quickly, to walk on the street without assistance, and even to go alone on a journey.

I would not fail to give expression to and make public acknowledgment of the fact that I owe to the teachings of Christian Science my health and buoyancy, and that it has lifted me out of a seemingly hopeless condition.

FRAU MATHILDE HÜHNERMANN, Magdeburg, Germany.

✧

In August, 1912, our little son, aged six years, was scalded on the arm and leg by the accidental overturning of a pan of boiling starch. The burns were so severe that the skin came away in patches with the clothing when it was removed. A Christian Science practitioner was called to treat the boy, and in one week some of the burns had healed, while others required a few days longer. After the first few moments the child seemed to suffer no pain, and the accident did not interfere with his play except at the time it occurred. The neighbors who saw the burns at the time of the accident thought this healing very remarkable. There are no marks or scars visible, and no further trouble has been experienced. We are also able to rejoice in many other evidences of the healing power of Truth.—E. L. GAINES, Seattle, Wash.

[Written for the Sentinel]

The Day of Peace

THOMAS SPEED MOSBY

'Tis coming yet, though dimly seen
Beyond the clouds where cannon roar—
A day shall know no more rapine,
And war's rude note be heard no more.

For Love hath lit her beacon bright,
And learning true, that doth expand,
Shall in the future spread her light
To vanquish yet the mailèd hand.

In that fair golden, distant time,—
It may be far, it may be near,—
Eternal peace shall bless each clime,
Nor more shall fall the needless tear.

To all the lesson shall be pressed,
That he who would his country give
The gift that is esteemed the best,
Should for her strive to rightly live.

Whate'er the cause of nations' war,
The brave, the good, the true that fall.
Will all the gains of vict'ry mar,—
The life of man outweighs them all!

For every triumph wrought in strife
Of sabre clash and battle din,
The cost is paid in human life,
For death is still the wage of sin.

The world is builded out of peace;
The grandest triumphs ever won
Are wrought when armies give surcease
And war its bloody course has run.

Time's sweetest offspring, and the best,
Will be the day when men shall know
That war's red fever is at rest,
That its fierce flames no longer glow.

From Our Exchanges

[The Outlook]

It is not God, but man, who is on trial; man who prays often, not to the God of Christ, who declared that there can be no peace until righteousness is established, but to gods of his own making, to the tribal god whose care is for his own people and not for all his children in all nations. God's truth has not failed, nor has His love. He has never promised ease and physical comfort; He has never said that the world was made for man's pleasure. He has promised strength, but as the result of discipline, self-denial, and suffering; He has promised security, but as the result of overcoming evil with good; He has promised peace, but only when justice has been established; He has promised a redeemed world, but only when purity and love have been enthroned and crowned. Christianity has not failed; it has not even been tried. Hosts of men and women have lived by it, and been victorious over sorrow and trial, and died in the serenity of a faith which had become a life; but the world has never tried it. There is no Christian nation, nor is there a Christian civilization. In every nation there are sincere and faithful Christians, but there is no nation which, in spirit, institutions, and law, conforms to the law of Christian love. Some nations have gone farther than others in Christian experience and the endeavor to make Christianity the controlling principle of national life; but no nation has yet gone beyond the early stages of this radical reconstruction.

[The Christian Intelligencer]

Christianity in its true sense—the religion and spirit of Jesus Christ—has not broken down and can never break down, because it is spiritual in its nature and eternal in its duration. But civilization without Christianity not only has broken down now, but is continually breaking down, because its strength and wisdom are, after all, only the folly and the weakness of humanity. In our prayers for peace, therefore, let large emphasis be laid upon the restoration in the world, not of formal Christianity in any of its phases, but of the spirit of the living Christ. "The letter killeth, but the spirit giveth life;" and if, through this terrible baptism of fire and blood, the dead letter of materialism can be cast out of men's lives and replaced by the life-giving spirit of a real Christianity, even these months of agony and loss will not have been in vain.

[The Universalist Leader]

When an experience of any sort is ended, it matters very little whether it was sweet or bitter, whether it filled our heart with rapture or gave us cause for sorrow, whether we longed for it to pass away or wished that it might last forever. The only question of importance is whether it has made us better than we were. Has it made our conscience more sensitive to distinctions between right and wrong, and enlarged the sympathy through which we make the happiness of other lives our own? If it has done this, we are more than compensated for any pain that it may have inflicted. If it has done the opposite of this, we have paid too great a price for any pleasure which it has afforded us.

[Western Christian Advocate]

Prayer is religion at work as a directive force, preventing evil, effecting good, bringing healing to the sick, rescuing men and women from moral evil, bringing light and salvation to those that are oppressed. Mark it, then, as the highest expression of Christian faith today, that we believe in prayer as a directive force. This is assured to be reliable whether

Digitized by Google

applied to the exercise of the individual soul or to the intercession of a group. Witness Christ's great intercessory prayer. Study his parables of the importunate widow, the friend at midnight, and many of his passages on prayer. It is surely evident that the New Testament teaches us to believe that we have within our reach a power for getting things done which we have not appreciated,—prayer.

[*The Living Church*]

Deep within us stir the childlike, beautiful, faith-full things. Good desires lie beneath the accumulated rubbish of the worldly; and where these good things abide, the Holy Spirit of God strives with us and speaks. He is speaking when the heart moves us to kindness; when the voice of a fellow being would rouse us to good; when the beautiful word or the melody or the good deed of another finds response within us; when sin-sickness fills us with agony; when we would show forth again the likeness to Himself in which He created us. How can we please Him when we walk in the vanity of our minds, having the understanding darkened, being alienated from the life of God through the ignorance that is in us? But if we will become again as little children, seeking true life in the inner man, the Holy Spirit will in all things direct and rule our hearts; and we shall taste the fruits of the Spirit —peace, joy.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

We have to win back for ourselves and for others a great faith in God. Faith must be rebuilt, not to suit culture and civilization, but to insure for every man an open way for his soul to the presence of God; and while that will need better intellectual and social expression than the past has known, it will need, above all, the example of lives rich in saintliness and charged with divine power.

Every one will surely see now that unorganized opinion and unexpressed ideals which cannot be mobilized at shortest notice, are powerless before the forces which evil can immediately put on the field. This will mean that we cannot afford to be merely discontented with the church. We must build—and as fast as we can—one universal church, able to appropriate and give expression to the divine will, and relying, not upon might or power, but upon the Spirit of God.

[*The Continent*]

Christ did not tell us that the people who feel right about him should know of the doctrine, whether it is from God or not. He swung the whole matter of assurance on obedience: He that doeth the will shall know of the doctrine. The only safe emotions about Christ come out of obedience to him. If you are in doubt about any vital thing of the faith, the first thing to do about it is to see that you are in the kind of fight that gives your soul a chance to be healthy.

[*The Continent*]

War shall cease at last when deceit and tyranny and the towering vanities of puffed-up lust for power have been trampled down forever, and a pacified world has come to wish and choose a life where each conforms his own deed and purpose to the welfare of all. In that rational world there will be no wicked war, and therefore need be no righteous soldiers to frustrate it.

[*The Congregationalist and Christian World*]

The call today is not to the exceptional man in the church, to the theologian, to the minister, to the missionary pioneer, but to every man who bears the name of Christ. It is the call to give fairer, more constant, and more convincing expression in daily life to the Christianity we profess.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $3. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; fifty copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; fifty copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named as wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $2.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 864 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $3.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

According to the latest annual compilation made by the *Automobile*, there are in the United States 1,735,369 motor vehicles. This total was obtained by securing from the registration officials in all the states their figures for Oct. 1, with the proper deductions for duplication of registration. This figure shows a gain of 203,503 over the number of cars registered last year, and a gain of about 725,000 in two years. Among the states, New York leads with 160,475 cars, Illinois is second with 126,681, Pennsylvania third with 122,773, Ohio fourth with 118,950, California fifth with 118,061, Iowa sixth with 100,188, Texas seventh with 75,000, Michigan eighth with 74,777, Massachusetts ninth with 72,966, and Minnesota tenth with 66,700. Other states having over 50,000 cars each in order, are Indiana, Nebraska, New Jersey, Wisconsin, and Missouri. Nevada, with 1,523 cars, is credited with the smallest number of any state; Mississippi is next to the lowest, with 1,650.

Three girls of Athens, Greece, are taking a course in household economics at Simmons College, being the first of a number of girls who are to come to Boston for instruction prior to the setting up of a college in their native city. They have been sent here by a philanthropist in Athens, but the remainder are to come under the direction of the government. To build a college in Athens where courses in domestic science might be obtained, P. Charocopos of Cephalonia left by will one million five hundred thousand francs about three years ago. Of the income six thousand francs was to be put aside for the education and maintenance of three girls in any suitable school of domestic science that could be found in Europe. No domestic school now in Europe just suited the needs of these girls. Gordon Allen, an architect of Boston, when at the American Archæological School of Athens, proposed Simmons College in America. So the Queen of Greece, then Crown Princess Sophie, decided to send them here.

The three-story frame building in Portland, Maine, at the corner of Fore and Hancock streets, in which Henry Wadsworth Longfellow was born, has just been dedicated under the auspices of the International Longfellow Society as an international memorial for the poet. Since the purchase of the building by the society it has been thoroughly renovated, and placed as nearly as possible in its original condition. All the partitions which changed it into a tenement house have been removed, and much of the colonial appearance has been restored. Many heirlooms and interesting belongings of the place during the year it was occupied by the poet's family before they moved to the Congress street home, have been secured for the building.

Ohio leads in the recent awards of medals made by the Carnegie hero fund commission at Pittsburgh, Pa. In all, there were sixty-nine acts of heroism, nineteen to the credit of Ohio men and boys. Michigan has nine, and the others are scattered among nineteen states. Altogether, fifteen silver medals and fifty-four bronze medals are awarded. To the dependents of ten heroes, pensions or sums of money to be applied subject to the discretion of the commission are granted. In fifty cases, sums aggregating over sixty thousand dollars are appropriated for education, purchase of homes, or other worthy purposes that may be approved by the commission.

Fifteen million dollars in gold coin arrived in Boston last week. This is understood to be the largest single shipment of gold ever received at the Boston sub-treasury. It was sent from the Denver mint through the American Express Company. There also arrived in New York from the Denver mint the largest single shipment of gold ever made by the United States government,—twenty-five million dollars. It was locked safely in the vaults of the sub-treasury in New York city. The shipments were made in care of an express company over several railroad lines, were packed in five special cars, and came through under heavy guard.

The United States government printing-presses are turning out daily four hundred million internal revenue stamps required by the new war tax. In the mean time dealers and manufacturers in tobacco, and others required to pay the special taxes, will have all of November to obtain the necessary stamps, although the law became effective Nov. 2. The internal revenue bureau has already received small quantities of stamps, and will soon be in a position to care for the demands from collectors. Where stamps are not ready in sufficient quantities, a provision in the law meets the situation and the tax will be paid later.

Montana ranks tenth among the states in the total value of her mineral products, and its chief mineral industry is the mining and smelting of copper ores. As a producer of copper, it ranks second among the states, Arizona being first. It is essentially a metal-producing state, the values of its copper, gold, silver, zinc, and lead representing in 1913 more than 89 per cent of its total production. In the extent of its coal area Montana exceeds any other state of the Union, with the possible exception of Texas.

A despatch from the convention of delegates at Aguascalientes says Gen. Eulalio Gutierrez has been elected provisional President of Mexico. The election is for twenty days only. The Aguascalientes convention voted to meet in Mexico City later. General Gutierrez has been prominently identified with the Mexican revolutionary movement that resulted in the expulsion of General Huerta from the republic and rose with Carranza against Huerta in Carranza's native state of Coahuila.

In the recent state elections the question of woman suffrage was voted upon in seven states,—Montana, Missouri, Ohio, North Dakota, South Dakota, Nebraska, and Nevada,—and was carried in Montana, and final returns may show it was carried in one or two more. Ten states already have woman suffrage,—Wyoming, Colorado, Utah, Idaho, Washington, California, Kansas, Arizona, Oregon, and Illinois,—while the territory of Alaska enfranchised its women in 1913.

The department of justice announces an agreement with the American Smelting & Refining Company whereby title to several thousand acres of coal lands in Colorado, alleged to have been illegally obtained years ago through dummies, will be restored to the government. The lands are part of a 2,214 acre tract near the town of Aguilar, and part of 1,280 acres at Cokedale. They are estimated to be worth millions of dollars.

An expert is said to have expressed the opinion that cotton, compared with maize, was a more adaptable plant in the drier country in the northern Transvaal, and on the whole yielded a more profitable crop. It is estimated that from a good average crop there should be obtained from eight hundred to one thousand pounds' weight of seed cotton per acre, which would represent a net profit of five pounds.

The Bethlehem Steel Company was the lowest bidder at the navy department for supplying to the United States navy the fourteen-inch armor-piercing shells which it may need during the next year at $421 each. The E. M. Bliss Company, with their bid of $9.80 for four-inch shells, and the American and British Manufacturing Company, with their bid of $12 for five-inch shells, were the lowest bidders in their classes.

Twenty directors, or former directors, of the New Haven railroad, among them some of the foremost financiers, railroad builders, and promoters of industrial enterprises in the United States, were indicted by the federal grand jury at New York last week, charged with criminal violation of the Sherman law. The maximum penalty upon conviction is one year imprisonment and five thousand dollars fine.

The representatives of most of the important producing mining companies of the republic have held a meeting in Mexico City and founded the International Mining Association of Mexico. The object of this league is to foster the most harmonious and united cooperation between its associated companies, to further their interests, and to assist in the protection and development of their resources.

Because of extreme drought, the fire risks on the national forests in the Northwest were greater this season than in any other since 1910, the worst year since the forests were created. Much less damage was done this year, because experience in fire fighting was gained in the fires of 1910.

On Oct. 12 the Norwegian Centennial exhibition was brought to a successful conclusion. Since its opening on May 15 the national genius, resources, and productivity of the country have been revealed, both in the industrial and the artistic section.

The federal suit to dissolve the United States Steel Corporation under the Sherman antitrust law was concluded last week, and the court took the case under advisement, just three years and three days after the original petition.

Farmers of Lowndes county, Miss., in mass meeting, have pledged themselves to plant corn, oats, and wheat instead of cotton.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII November 14, 1914 No. 11

[From *The Christian Science Monitor*]

Thanksgiving Proclamation

The President today [Oct. 28] issued a proclamation setting Nov. 26 as Thanksgiving day.

The proclamation is:—

"It has long been the honored custom of our people to turn in the fruitful autumn of the year in praise and thanksgiving to Almighty God for His many blessings and mercies to us as a nation. The year that is now drawing to a close since we last observed our day of national thanksgiving has been, while a year of discipline because of the mighty forces of war and of change which have disturbed the world, also a year of special blessings for us.

"It has been vouchsafed to us to remain at peace, with honor, and in some part to succor the suffering and supply the needs of those who are in want. We have been privileged by our own peace and self-control in some degree to study the counsels and shape the hopes and purposes of a day of fear and distress. Our people have looked upon their own life as a nation with a deeper comprehension, a fuller realization of their responsibilities as well as of their blessings, and a keener sense of the moral and practical significance of what their part among the nations of the world may come to be.

"The hurtful effects of foreign war in their own industrial and commercial affairs have made them feel the more fully and see the more clearly their mutual interdependence upon one another and has stirred them to a helpful cooperation such as they have seldom practised before. They have been quickened by a great moral stimulation. Their unmistakable ardor for peace, their earnest pity and disinterested sympathy for those who are suffering, their readiness to help and to think of the needs of others, has revealed them to themselves as well as to the world.

"Our crops will feed all who need food; the self-possession of our people amidst the most serious anxieties and difficulties and the steadiness and resourcefulness of our business men will serve other nations as well as our own.

"The business of the country has been supplied with new instrumentalities and the commerce of the world with new channels of trade and intercourse. The Panama canal has been opened to the commerce of the nations. The two continents of America have been bound in closer ties of friendship. New instrumentalities of international trade have been created which will be also new instrumentalities of acquaintance, intercourse, and mutual service. Never before have the people of the United States been so situated for their own advantage or the advantage of their neighbors or so equipped to serve themselves and mankind.

"Now, therefore, I, Woodrow Wilson, President of the United States of America, do hereby designate Thursday, the twenty-sixth of November next, as a day of thanksgiving and prayer, and invite the people throughout the land to cease from their wonted occupations and in their several homes and places of worship render thanks to Almighty God.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, this twenty-eighth day of October, in the year of our Lord one thousand nine hundred and fourteen, and of the independence of the United States of America the one hundred and thirty-ninth.

"By the President:

(Signed) "WOODROW WILSON.

"ROBERT LANSING, *Acting Secretary of State.*"

"Saved through faith"

WILLIS F. GROSS

THE question of salvation is one which concerns all mankind, even though the majority may have a vague, indefinite sense of just how much it includes. With many persons the term is more vitally associated with the future than with the present. The thought of a future salvation seems to be quite well established, but a present salvation is often believed to be more a matter of theory than of actual experience.

Lack of understanding as to what salvation includes and when it can be experienced, has made possible the many conflicting theories as to how much or how little is required. Because of this disagreement there may seem to be conflicting statements in the Scriptures concerning the things that are necessary to salvation. There is the word of Paul and Silas to the keeper of the prison, "Believe on the Lord Jesus Christ, and thou shalt be saved." Jesus said, "He that believeth and is baptized shall be saved." In his letter to the Ephesians Paul wrote, "By grace are ye saved through faith; and that not of yourselves: it is the gift of God: not of works, lest any man should boast."

These texts seem to support the conclusion that faith is all that is necessary. There are other texts, however, which very clearly indicate that something more than faith, or mere believing, is required. Jesus said to his disciples, "If ye love me, keep my commandments." Many good works are necessary to keep his commandments. James declared that "faith without works is dead," and it must be evident that there is no salvation in a dead faith. It is written, that when Jesus the Christ had fulfilled his mission, "he became the author of eternal salvation unto all them that obey him." Paul wrote the Philippians: "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of his good pleasure."

When the true meaning of these and other similar texts is gained, it is seen that there is no sense of contradiction. When it is understood that now is the time to experience salvation, it will be seen that if the results do not follow, it must be because one does not believe. "He that believeth . . . shall be saved." There is no question about it. Salvation is the divinely natural result of right belief, and the passing of time has nothing to do with the fulfilment of the promise. Through faith, spiritual understanding, one becomes conscious of good as it has always existed. Jesus said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Good is already bestowed, but to material sense, or erroneous believing, it is

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

intangible and unreal. If the desired good is not attained, one must have more faith, for "faith is the substance of things hoped for."

When it is understood that now is the time to be delivered from evil and to become conscious of good as the reality of being, it becomes possible to determine the quality of faith that is necessary to salvation. So long as it is believed that salvation is to be realized at some future time, how is one to know that his faith meets the divine requirements? Then, too, if he believes that salvation means deliverance from sin but not from other evils which are the bane of mortal existence, would not the character of his faith prevent the attainment of the greater good? It is evident that the quality of one's faith depends largely upon what he believes salvation to mean and when it is to be realized.

In Christian Science, salvation is defined as "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed" (Science and Health, p. 593). According to this definition, salvation is a present possibility. Faith is indispensable, but faith must be enlarged and must rest upon a spiritual foundation in order to experience the greater good. A blind belief, even though it be honestly entertained, is not sufficient.

Whence cometh the faith which delivers from evil? Does it originate with human sense and does it find its support in so-called human intelligence? Ye are "saved through faith; and that not of yourselves: it is the gift of God." It is not enough that one have faith in God, he should "have the faith of God" (Mark xi. 22, marginal reading). The faith which saves does not originate with us; it is born of God. It enters human consciousness, and not only inspires thought, but controls action as well.

Here we begin to understand that faith and works are inseparable, and how it is that one can work out his salvation by expressing the activity of Mind, which works out good according to divine law and order. While it is true that one is saved through faith, it is just as impossible to have saving faith without works as it would be for the sun to shine and not dispel the darkness. In some way or other thought finds expression, and what a man does, is the only true indication, even to himself, as to what he really believes.

A man is in bondage to evil only so long as he indulges evil. When he has faith in good because he really believes in good, he can no longer believe in evil, and the indulgence of evil becomes impossible. To the extent that he believes in good he ceases to believe in evil, and his deliverance therefrom becomes an established fact instead of a future possibility.

In Science and Health (p. 291) Mrs. Eddy writes, "Universal salvation rests on progression and probation, and is unattainable without them." The term "universal salvation" is generally interpreted to mean the ultimate salvation of all mankind, but it also means salvation from all evil. This complete deliverance comes as the result of growth in the understanding of good, and a person's salvation is always according to his faith, or right believing. Progress is the result of activity. If a man puts into practice what he knows of good, he is prepared to receive more. This clearer realization brings a greater sense of freedom and harmony.

While it is true that man is saved through faith, yet God requires of every individual that he live according to his highest sense of good. "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." Activity in good rather than the profession of good, merits and receives the reward. The reward of faith put into practice is more faith; more faith means deliverance from more of evil. It is in this way that one works out his salvation. However, it must not be understood that man is saved by reason of or because of the good works he has accomplished; he is saved through faith, and this faith is the gift of God.

Of ourselves we are nothing. All that we are or have, all that we can be or do, is of God. When we awaken to the realization of this great truth, we see that in God we have all good and were never in bondage to evil. Through faith we understand that real being is spiritual, and that the illusion of evil has neither place, presence, nor power.

Works are the demonstration of Truth, and Truth is understood only as it is put into practice. A man may believe, but he knows, or understands, no more than he has proven to be true in his own experience. Salvation from sin, sickness, and death comes through knowing the truth. "Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed." How would it be possible for them to continue in the word, except they put it into practice? The parable of the talents shows the result of trying to keep without using. Even that which a man hath is taken away if he esteems not its practical value. The believer becomes a disciple only through faithful continuance in well-doing. What is the result? He gains an understanding of the truth, and the truth makes him free.

One Mind

BESSIE BYRNE

MANKIND in general seem to be waking up to the fact that outward conditions are the direct result of human thinking. Articles are appearing in current magazines and many books are being published which point out the control of thought over all external conditions,—that it is mind which is causative, and not matter; but most of these writings deal with the subject from the material view-point. Failing to distinguish between right thinking and wrong thinking, as seen from the standpoint of Christian Science, they drop their subject before they have really begun. Turning from the belief that an evil condition is a material fact, to the supposition that it is a mental fact, simply changes one's viewpoint; it does not elevate it. So long as we concede to evil any existence whatever, the question of whether it operates in the physical or in the mental realm makes little difference in the seeming effect it produces upon us.

An editorial which appeared some time ago in a weekly of wide circulation, after pointing out the results in human affairs of wrong states of thought and their blighting effect upon the individual, advised its readers to reject such thoughts, not upon the basis of their unreality, but solely because of their undesirability. Of course this is making an appeal to the human mind to use its asserted will-power. Believing that evil is real and can be thought and acted, and then attempting to steer one's thought-processes aright, is fighting evil in its own territory with its own weapons. One is quite apt to find these weapons turned against one's self. Mrs. Eddy sounds a note of warning which is applicable in this connection, when she says: "In a world of sin and sensuality hastening to a greater development of power, it is wise earnestly to consider whether it is the human mind or the divine Mind which is influencing one" (Science and Health, p. 82).

From the moment Christian Science awakens the beginner to the all-power of Mind, this true Christian gospel instils into the aroused consciousness the fact that God is all the power there is, and that the all-power of Mind simply means the all-power of God, since God and Mind are identical. This teaching clears up the whole question of good and evil think-

Digitized by Google

ing and the way to deal with it. It does not direct our attention to an imperfect human mind and to this so-called mind's uncertain ability to stop thinking its own evil thoughts and to increase its thinking of right thoughts; on the contrary, the realization that God is Mind uncovers the paganism of belief in many minds, dispels the notion that man has a mind of his own, and lifts him out of this false selfhood into the recognition of the one Mind whose thoughts must of necessity be good thoughts. The student who adheres to this truth and is faithful in applying it, finds the evil dropping away which formerly seemed part of his very nature. This is the inevitable result of coming more into man's true relation to God, infinite Mind. He is simply proving in his own experience, to some extent, that the divine consciousness is indeed the holy city of John's heavenly vision, where "there shall in no wise enter . . . anything that defileth, neither whatsoever worketh abomination, or maketh a lie."

The recognition of the one Mind and of man as God's idea, places one in quite a different position from that which he seemed to occupy when he believed he had a mind of his own separate from God. Though the illustration is very imperfect, the office of man in God's universe may be compared to that of a lens, the object of which is to focus rays of light for a given purpose. If we think of scientific understanding as the lens, and of God, Mind, as sending out thoughts as the sun sends out rays, we may gain a higher sense of our position in God's universe and of the profound reason for selflessness and humility. Standing in this position Jesus said, "I can of mine own self do nothing: as I hear, I judge." Every one knows that when focused by a lens, the sun's rays will burn a hole in a sheet of paper. This helps us to apprehend the nature of a Christian Science treatment. Man is the individualized manifestation of infinite right consciousness, and so, when confronted with a discordant condition, it is his office to gather the pure thoughts of infinite Mind and focus them into one error-destroying beam upon the problem. This consumes the error, leaving revealed that which God has created.

This analogy might be carried still farther to show the impossibility of power in so-called evil thinking. Though the lens gathers its rays, it is the sun and not the lens which ignites the paper; and so too it is not the human thought, but God's thought passing through purified human consciousness, that is effective. If the lens were turned away from the light, it could not focus the light, and would not subserve the end to be attained. In Science and Health (p. 504) we are told that "the rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence." Thought must proceed from mind, and the only Mind there is in reality is God.

On the human plane of consciousness, where we seem to be dealing with good thoughts and evil thoughts, it is well for us to remember that we cannot judge of a thought solely by its effect in the physical realm so called. It is the power behind a thought which is its real substance and lends it force. When we understand this statement, the flimsiness of evil so-called thoughts becomes apparent, and their seeming effects vanish.

It is a great blessing to have been awakened through Christian Science to some understanding of the infinite Mind that is all good. Those of us who have been inspired and protected by its teachings, should be most careful to think aright about everything that receives any attention from us at all. We should hold our thought steadfastly to the one Mind, not only for the sake of ourselves and the world in general, but for the sake of those others who, instead of being scientifically awakened from the dream of life in matter, have been set adrift by human reason on the currents of so-called mortal mind. Surely the recognition of their seemingly unprotected position should be an incentive to keep us steadfast and active in Truth, for then we are doing our part to bring in that day, which is approaching, when "they shall all know me [God]."

Testimony-giving

FRANCESE C. LYON

In the Church Manual (Art. VIII, Sect. 24) Mrs. Eddy says: "Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases.'" In studying the Bible a short time ago, I read from Luke's gospel the account of the healing of a woman who had been sick twelve years. We are told that she had been to many physicians, and had spent all she had in trying to get well, but had not succeeded. She had, however, such faith in the power of God that she felt if she could just touch Jesus' garment she would be free. When she did so Jesus said, "Who touched me?" Then, as we read, "she came trembling, and falling down before him, she declared unto him before all the people for what cause she had touched him, and how she was healed immediately."

From the study of this chapter it seemed very manifest to me that Jesus considered testimony highly important. No matter how insignificant the healing may seem to be, to tell it before "all the people" helps one to realize more of God's great power and goodness, and that the promises are fulfilled here and now, as any one may prove. The Bible statements are true, and can be proved by gaining a knowledge of the spiritual interpretation of the Bible as given in our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Any one who is willing to search can find. The simplest testimony glorifies God, and in being obedient to this call, we can surely hear, as did the woman, these blessed words: "Thy faith hath made thee whole; go in peace."

A Parable of Nature

DOUGLAS PARKER

Nature speaks to us in parables, and one of the great lessons it would teach us is that she does not effect sudden transformations. If you take a fish out of water and throw it on the beach, it will live but a moment. It is possible, however, for a fish to live for a long time out of water. There is a fish called the bommi, or mud-skipper, found on the west coast of Africa, which seems to prefer to live out of water, and which spends nearly all its time on the sunny banks of sand or mud, or on the branches of the mangrove trees which grow in those parts. Now this fish did not learn the art of breathing the air in a day; it meant years of patient struggle by its ancestors before this capacity was acquired. It may have made the attempt many times, only to find it impossible; but it did not give up, and after many efforts and much struggling it found that it could remain out of water for a little time, and then a little longer, until at last its endeavor was rewarded and it became master of the situation.

What has happened? Simply this: The fish was impelled to try to live in a new world, and made the effort to do so. Just so, whenever there is this combination of desire and effort, the end sought is sure to be attained. It would have been impossible for the fish to live in the sunshine had it remained in

Digitized by Google

the water and made no effort to come out. It has gained this new life in the only possible way, namely, by abiding in the environment of its choice in spite of the opposition with which it had to contend in the first instance. By so doing it received the gift of the environment in the shape of new organs,—lungs to breathe the air and eyes to see the beauties of its new surroundings. When men rise out of the material and seek the spiritual, as revealed through Christian Science, their former friends will doubtless think that they are leaving their natural and God-provided environment; but this is not so, for as St. Paul declared, it is in God, Spirit, that "we live, and move, and have our being."

In Christian Science we are taught that the kingdom of heaven is a state of consciousness. Mrs. Eddy says, "Heaven is not a locality, but a divine state of Mind" (Science and Health, p. 291). This world is also a state of consciousness, and mortals are the manifestation of this state of consciousness. Most people look upon the kingdom of heaven as something desirable, as a higher, better state than that with which they are acquainted here, a state or place which is attainable at death. They are under the impression that when they lose consciousness of the things of this world, they will wake up and find themselves in the kingdom of heaven, and will be able to manifest spiritual effects.

This higher state of consciousness is not attained, however, by dying. Death is not the entrance to the kingdom of heaven. If it were, death would be mortal man's best friend, and the wisest thing for the well-minded to do would surely be to pass away as quickly as possible. Mortal life is a state of consciousness, and merely to pass through the experience we call death cannot transform consciousness. In Revelation we read, "He that is unjust, let him be unjust still: and he which is filthy, let him be filthy still: and he that is righteous, let him be righteous still: and he that is holy, let him be holy still." These words surely show us that it would be foolish to expect the filthy by some mysterious process to become suddenly clean at the moment of their departure from this world.

Mortals are dwellers in a state of consciousness which is material and has manifestly material phenomena, but now and again they get glimpses of something far better than their material surroundings. They rise, as it were, to the surface of material sense, where mortal mind is less dense, and thus gain a vision of the spiritual. They make the effort to attain this state of consciousness, and perhaps at first they find themselves driven back, because they have not learned to breathe the air of Spirit; but if they persist, they will attain. What was the life of Jesus but the manifestation of a mind abiding in the spiritual instead of the mortal mind environment?

Jesus was the Wayshower. He called upon mortals to follow him out of material consciousness. He showed the way to put off the "old man," which is merely the manifestation of false mortal thought. His command was, "Abide in me." Abide in my state of consciousness, for by so doing you will manifest the works of Spirit. "The words that I speak unto you, they are spirit, and they are life."

Jesus' words and works were but his thoughts manifested, and Christian Science bids us rise into a spiritual state of consciousness. In Science and Health we read, "The fading forms of matter, the mortal body and material earth, are the fleeting concepts of the human mind" (p. 263). These human concepts will disappear as mortals abide in the Christ-consciousness, or Christian Science. As they obey the command, they feel and know that the transformation is taking place, that they are gradually putting off the old material man and his ways, and the new man, the image and likeness of God, is appearing. This is a natural process, and is simply the effect of reaching and abiding in the true mental environment.

If men desire the Christ-consciousness, and make the effort to attain to and abide in it, they may be sure that their efforts will be crowned with success, and that the transformation of the human mind and body will take place. Mrs. Eddy had a clear vision of spiritual reality, and her life testifies to the wonderful result of her endeavor to have the Mind that was in Christ Jesus. She has shown us in "Science and Health with Key to the Scriptures" that this is the only way to spiritual bliss, and has made it so plain that none can miss the way. Here we are reminded of St. Paul's words, "How shall we escape, if we neglect so great salvation?"

❖

Darkness Dispelled

HELEN MORSS KEELER

On one occasion I was sitting in a large hall, awaiting the opening of a meeting. All that morning my consciousness had been full of discord, fear, and discouragement over difficulty with my school lessons. I had forgotten the Father's help. As I sat thus, my attention was attracted by a dingy black spot on the ceiling. It seemed strange to me that such an ugly spot had not been removed from an otherwise immaculate ceiling, but the solution came directly when the sun's rays burst into the room and the black spot vanished. This sudden disappearance of darkness at the presence of light impressed me strongly. No one could have rubbed that dark spot out, no matter how long he might have tried. Only at the presence of light would it disappear, showing clearly that it never possessed entity or reality.

With this experience I appreciated the full significance of a statement by Mrs. Eddy which I had previously read: "Truth is the light which dispels error. As mortals begin to understand Spirit, they give up the belief that there is any true existence apart from God" (Science and Health, p. 282). It also recalled the words of St. John, "God is light, and in him is no darkness at all." With this clear thought of Truth, the former fear and discouragement disappeared instantaneously, and in their place were gladness and hope. After this the school lessons were taken up with fresh courage and with deep gratitude, for the loving Father's help was no longer forgotten. A greater watchfulness to turn the light of Truth on every seemingly dark experience was the result of that lesson on the power of light to dispel darkness.

[Written for the *Sentinel*]

Gratitude

MINNA MATHISON

A noble friend I had, who richly poured
Gifts, favors, gold upon me; and I throve
In all my ways. But when at length I strove
Him to repay from out my swelling hoard,
He stayed my eager hand; he shook his head,
And with a smile ineffable he said:
My gifts are free; I cannot take again
What I have given. Yet if thy heart be fain
Some recompense to make, and forth to show
Thy fervent gratitude, I bid thee go
Seek out thy brothers, to whom I am friend
Likewise,—although they know it not,—and spend
On them the treasure I have furnished thee,—
So shalt thou best repay thy debt to me.

Selected Articles

[Judge Clifford P. Smith in *The Boston (Mass.) Post*]

Now that the *Post* has printed the conclusions concerning spiritual healing that were announced in England last May by a clerical and medical committee of inquiry, the following statement from another point of view is submitted, with an earnest request for its publication.

The committee whose report was thus noticed was composed exclusively of representatives of the clerical and medical professions. Christian Scientists had no part in its proceedings. The position from which the members of this committee found but little to say in favor of Christian healing is indicated by the following excerpt from their report:—

"They would point out that for a satisfactory investigation of any case the following evidence is necessary:—

"(1) A diagnosis by a medical practitioner, before treatment, with a short history of the signs and symptoms.

"(2) An account of the treatment carried out, with dates and other details.

"(3) A medical examination, after treatment, by the same doctor if possible, with a detailed account of the changes which have taken place."

The stand thus taken plainly means that spiritual healing must depend for its evidence on the conclusions of a system whose theories do not admit of such healing. By the very nature of his training, a medical doctor is almost the last person who should be called upon to decide such an issue. From his point of view, as frequently disclosed, indisputable evidence of present health would simply disprove a former diagnosis of disease, subject only to the possibility that the party "just got well anyway."

The following observation from "The Sense and Nonsense of Christian Science" by Professor Prince of Dickinson College, is pertinent: "Generally speaking, the members of the medical fraternity, when confronted with the attested works of Christian Science, either deny the correctness of the original diagnosis or else deny the cure. The first is a reflection upon the competency of their own profession, the second is a blind and utterly indefensible contradiction of the evidence."

There was a time when accounts of Christian Science healing—the overcoming of physical disorder by an exclusively mental and spiritual method—were received with incredulity by disinterested persons. That time is passing, and among well-informed people it may perhaps be said to have passed. Now that these cases of healing have become numerous, either personal observation or the weight of testimony has convinced most people, and the greater part of those who still hold out have chosen a difficult position. They can say they have never known a case of Christian Science healing only by refusing to accept the statements of persons who are worthy of belief on other subjects, or by insisting on some other explanation for effects which, in the ordinary course of reasoning, would be credited to Christian Science.

The change of sentiment on this subject can be briefly instanced here. Thus, in 1909 the government printing-office at Washington issued a "Report on National Vitality," which was prepared for the national conservation commission by Prof. Irving Fisher of Yale University. In this report Professor Fisher said: "The public should go, and will go, to those who will render the most effective help. . . . There was no reason why it [the medical profession] should have lost hundreds of thousands of patients to Christian Science, except that these patients were for the most part benefited, and greatly benefited, by Christian Science after having received no benefit, and often injury, from the profession."

During a debate in the United States Senate in July, 1911, while Senator Works of California was speaking in opposition to a bill introduced by Senator Owen of Oklahoma for a national department of health, Senator Owen said: "The senator has spoken, Mr. President, of the value of Christian Science. I myself believe it has been very efficacious in many cases. What the process is by which recovery is accomplished I do not think is thoroughly understood." Christian Scientists are glad to make grateful acknowledgment of the fact that a considerable number of physicians, while not adopting Christian Science, have borne witness to its virtue. Thus Dr. Richard C. Cabot of Boston, professor of medicine in Harvard University, said in the *Twentieth Century Magazine* for January, 1912: "That Christian Science has done and is doing a vast deal of good, not only as a religion, but as a health restorer and a protest against the short-sighted naturalism of the doctors, we are firmly convinced. Its affirmations are helpful to thousands."

❖

[L. H. Jones in *The Courier-Journal*, Louisville, Ky.]

Christian Science being primarily concerned with religion, when it speaks of reality it means reality in the ultimate metaphysical sense in which all religious truths are to be taken. It does not mean that the objects of material nature, with their supposed laws of sin, sickness, and death, do not exist as phenomena of the human consciousness, where they appear very real to us,—painfully real at times; nevertheless, being products of the erring human mind they can be destroyed, like other errors, by knowing the truth; as Jesus said, "Ye shall know the truth, and the truth shall make you free."

Paul tells us that sin, sickness, and death are products of the human or carnal mind. Sin, he says, brought death into the world, and sickness, we know, is the means by which sin or death accomplishes its end. Therefore he tells us that "to be carnally minded is death." To be carnally minded means simply to have a carnal consciousness of life or being, to make a reality of carnal existence, to believe in the reality of carnal or material things. Again he says: "They that are after the flesh do mind the things of the flesh; but they that are after the Spirit the things of the Spirit. For to be carnally minded [that is, to mind fleshly things, to make a reality of them] is death; but to be spiritually minded is life and peace. Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

In another place Paul calls the carnal mind the "natural man," that is, the human mind or man, and says it cannot know "the things of the Spirit of God." Now, a man or mind that cannot know "the things of the Spirit of God," cannot know anything, and is neither mind nor man, for all that is proceeds from God, and God is Spirit. The knowing capacity of such a mind or man is nothing. Would God create a man or mind that could not know Him or His, that is in essential and irredeemable enmity against Him? Paul says that such a man cannot by any possibility become "subject to the law of God." Would God create a "kingdom divided against itself"? Why should good Christian ministers be so eager to make God responsible for a carnal or human consciousness which is the source of all evil, sin, sickness, and death, when even pagan philosophers and the ablest scientists and philosophers of modern times unite in declaring that in reality no such man exists?

Practically the entire objection urged against Christian Science by our critic is in an effort to uphold the reality of this carnal or human consciousness and its iniquitous contents

Digitized by Google

of sin, sickness, and death. Indeed, he seems to think that sin possesses a peculiar virtue of its own, in that it furnishes employment to God and an occasion for His usefulness, who otherwise, to use his own language, "has nothing whatever to do, since He has no field of operation." Therefore, it is not desirable to get rid of sin altogether, lest God should be deprived of His usefulness and perchance lapse into a state of "innocuous desuetude." It is impossible to believe in the reality of carnal or material things without being carnally minded, since it is our beliefs that constitute the contents of our consciousness. Furthermore, our consciousness will be more or less carnal in strict ratio to the more or less reality we attach to these things. Things absorb our attention and excite our desires in strict proportion to the amount of reality they seem to have for us. We desire them in proportion to the real pleasure, benefit, or satisfaction they seem to offer us.

Hence John tells us: "Love not the world, neither the things that are in the world. . . . For all that is in the world, the lust of the flesh, and the lust of the eyes, and the pride of life, is not of the Father, but is of the world." Here John tells us that there is not a single object in our material world that is of God, not a single thing that was created by God. Could it possibly be wrong to love anything that God created? Therefore God could not have created the phenomenal world to which John refers. God pronounced all that He created good. Can it be wrong to love the good? Therefore John tells us that the phenomenal world is not of the Father, is not good; he does not tell us where it came from, but he tells us that it did not come from God, and that is sufficient.

Yet this good minister and some of his brethren of other churches ridicule Christian Science and abuse it before the people, because it says, with St. John, "Love not the world, neither the things that are in the world," because they are not of the Father. I would ask our critics if they think any one was ever lost for believing in the unreality of material things, and if the difficulty is not always to induce them to believe sufficiently in the reality of spiritual things?

❖

[From *The Record-Herald*, Chicago, Ill.]

Chicago churchmen were divided regarding the findings of the London commission of prominent clergymen and leading physicians relative to the problem of spiritual healing. The commission's conclusion that "faith or spiritual healing can be permanently effective only in functional disorders as distinguished from organic diseases," found support in some quarters. The commission was appointed in October, 1911, by the conference of the clerical and medical professions, but the report was not completed and made public until recently. In response to a request for an opinion, the Chicago Christian Science committee on publication made the following statement:—

"You ask for an expression regarding the report of a commission of English clergymen and physicians to the effect that 'faith or spiritual healing can be permanently effective only in functional disorders as distinguished from organic disorders,' etc. It is not stated specifically that Christian Science treatment is included in this sweeping assertion of the learned gentlemen. Assuming, however, that the term 'spiritual healing' is intended to cover Christian Science practice, the answer to the denial that it can heal organic diseases is very simple and very short. It consists in a statement of the fact that Christian Science treatment has healed persons in great numbers who were afflicted with what is termed organic disease.

"I have on my desk affidavits of those who have been healed by Christian Science of so-called organic diseases, so diagnosed by one or more reputable physicians. Through the Christian Science periodicals and in the Wednesday evening meetings in Christian Science churches, testimony of thoroughly reliable persons is constantly being given to the fact that they have been healed of organic disease previously diagnosed as such by physicians. These testimonies can be verified by any one who is sufficiently interested to make the necessary inquiries. So much for the facts with regard to Christian Science healing.

"It should be understood that Christian Science treatment involves something more than mere faith. It includes demonstrable understanding of the ever-presence and all-power of God, or divine Mind, and this understanding is the basis of all true faith. Likewise it should be understood that Christian Science treatment is in no wise akin to mental suggestion, mesmerism, hypnotism, or any other form of mental treatment which involves thought-transference or the exercise of will-power. None of these acknowledges the power of divine Mind as supreme. All of them depend, in one way or another, on the supposed influence of one mind over another and on the asserted control of 'mind over matter.' Christian Science treatment is based upon the fundamental proposition that 'all is infinite Mind and its infinite manifestation' (Science and Health, p. 468). It is therefore the only system of healing which denies the absolute existence of matter and of the so-called mortal mind, which is the supposed seat of disease.

"For this commission, consisting partly of 'noted clergymen,' to limit the power of prayer by stating that 'the divine power is exercised in conformity with and through the operation of natural laws,' is surprising, to say the least. It virtually amounts to putting the material above the spiritual, and saying that the supreme power of God cannot become effective or operative unless it first conforms to the so-called laws of matter. Furthermore, such fallacious reasoning, together with advice that prayer for the sick should be used in conjunction with medical treatment, constitutes in effect a repudiation of the teaching and example of Christ Jesus.

"Although medical practice had been in existence in some form for two thousand years before the advent of Jesus, it is not recorded that he cooperated with medical doctors in his healing work. On the contrary, the gospel record shows that he healed 'all manner of sickness and all manner of disease' by spiritual power alone, without the use of medicine. According to the record, he always attributed the healing of sickness as well as of sin to his heavenly Father, divine Mind, alone. Christian Science shows that the healing works of Jesus, the apostles, and the early Christians, resulted from their understanding of the divine law. It therefore says that through the same understanding the same works are being repeated today, because real law never varies in its operation."

❖

[S. T. Downs in *Connersville* (Ind.) *Examiner*]

An article entitled "Suggestion the Subject" in a recent issue, in which one of your public school officials is reported as saying that Christian Science makes use of mental suggestion, is so liable to mislead your readers that I shall appreciate space to make an explanation.

In Christian Science we learn that God is Mind, and that in reality man is the reflection or expression of Mind, and is governed only by the law of Mind, the same Mind to which St. Paul referred as being in Christ Jesus. The opposite of this is the Adam-dream of many minds, with each mind having power to govern or control the other; it is the belief of mind in matter, and that man reflects both good and evil, and that

Digitized by Google

evil is as real and powerful as good. Mental suggestion, therefore, which is the belief of one mortal mind controlling another, is the direct opposite of Christian Science.

All through the writings of Mrs. Eddy, the Discoverer and Founder of Christian Science, she points out that the attempt to practise mental suggestion will destroy one's power to heal through the law of God, and she regarded the correct understanding of this so important that, in the Christian Science text-book, "Science and Health with Key to the Scriptures," she has given it a chapter entitled Animal Magnetism Unmasked. There is no desire to question the right of our brother or any other person to hold such views on this subject as he thinks best, but the facts about Christian Science were so incorrectly stated that it is necessary to inform your readers that Christian Science teaches it is a sin to try to influence another through mental suggestion, for either good or evil; that, in truth, man is subject only to the law of God, and there is nothing in His law but good.

❖

[Robert S. Ross in *New York* (N. Y.) *Times*]

In an editorial in a recent issue entitled "Healing Made Profitless," you assume that Christian Science is the practice of mental suggestion. Permit me to state that mental suggestion is the control of one human mind by another, while Christian Science is the overcoming of false human beliefs with the truth. A person may believe that two and two are five, but when the principle of mathematics is understood, the student learns that two and two equal four; and with this understanding the false belief is wiped out.

Mankind in general believe that there are two fundamental causes, good and evil, and that one is as real as the other. The natural deduction is, therefore, that sickness and sin are as real as health and goodness, and that mortals are the mere sport of circumstance. Jesus, however, came teaching the one fundamental cause, and that one good. Now, good could never be the author of its opposite, evil; therefore sin, disease, and death could have but a suppositional existence. It was the clear realization of this fact that enabled Jesus instantaneously to heal these conditions. This process is what Jesus referred to when he said, "Ye shall know the truth, and the truth shall make you free."

The Principle of Christian Science is the same today as it was in the first century, but Christian Scientists have not yet arrived at the point where they can demonstrate it with the same exactness as did the Founder of Christianity.

❖

[John W. Doorly in *The Yorkshire Post*, Leeds, England]

The revolt today against either intellectualism or determinism is caused wholly and solely by the fact that men are beginning to understand more clearly the correct nature of that infinitely good cause which we call God, and are perceiving more definitely than ever that an infinitely good cause could only produce an infinitely good effect. This effect of the one cause must be true being, or spiritual being, the understanding of which is true faith, and alone can lead mankind out of intellectualism or any form of philosophy based on the wisdom of this world.

Today, we find medical systems seeking the remedy for disease more and more in mental means and less in material remedies, and we find in the churches a decided return to what was anciently termed faith, but what is in its truest sense thinking on a higher plane; that is, in the realm of true being, or spiritual being, and in opposition to the thinking of mortality, which thinking Jesus Christ described as a "liar, and the father of it." Tomorrow, mankind will be accepting as normal and natural the teaching of Christian Science that the kingdom of heaven is the reign of one infinite intelligence, and is the perception of true or spiritual being, and that hell is the belief in mortal theories, which belief claims to have gained power and influence through centuries of wrong thinking. This revolt against intellectualism, therefore, is the demand for a clear, scientific, and concise understanding of spiritual being, or of the one intelligence called God, forever expressing Himself through spiritual law, and for that Christ, or Comforter, leading men into the understanding of this divine law, and declaring today as yesterday, "Ye shall know the truth, and the truth shall make you free."

That Christian Science churches are overflowing everywhere, is not to be wondered at, since Christian Science is offering to the sick and sinful surcease from their sins and sicknesses in the only correct way; that is, not through mere intellectualism, but through the understanding of and obedience to this one intelligence called God. Eventually it will be seen, as Mrs. Eddy states, that "Jesus of Nazareth was the most scientific man that ever trod the globe" (Science and Health, p. 313), and Science will be recognized universally, not as the intellectual belief in material theories, but as the perception of spiritual facts coming to mankind and destroying the belief in mortal theories, and thus healing every ill of the carnal mind. This is the fulfilment of the words of our Saviour, "He shall give you another Comforter, that he may abide with you forever; even the Spirit of truth."

[Written for the *Sentinel*]

A Song in the Night

VERNE E. TAYLOR

"It is so dark," I said, "I cannot sing;
In such a gloom I have no heart for song.
I hope the morn may some bright portent bring,
But oh, the night, it is so dark and long!"

Then suddenly there rang across the night,
Defying darkness with its lusty cheer,
A song (I deemed it such) so brave, so bright,
I caught its presage that the dawn was near.

The cock's loud challenge,—it was nothing more,—
A homely lay we oft unheeding hear;
But now it broke upon that darksome hour
Like some glad messenger of hope and cheer,

Proclaiming night far spent and day at hand!
Bold chanticleer, foretelling joy to come,—
I wonder, if he had refused to sing
At midnight, would the dawn have found him dumb?

For though 'twas his again to lift his voice
In greeting to the now full risen day,
The same brave song that made the night rejoice,
Was found full fitting for his matin lay!

. . . . . .

Courageous herald of the unseen day,
My thanks to you for this good lesson taught,
Who challenged midnight with your cheery lay,
And sang of light mid scenes with darkness fraught!

So may I, when another night seems long,
Remember well your gladsome midnight cheer,
Nor wait to greet the dawn with triumph song,
But let the darkest hour that same song hear.

Editorial

A Letter by Mrs. Eddy

On page 11 of a pamphlet entitled "Christian Science History," by Judge Septimus J. Hanna, published in 1899, is a letter from Mrs. Eddy in which she emphasizes the importance of handling mental malpractice. This pamphlet has long been out of print, but so many requests have been made that the letter by Mrs. Eddy might be given to the field through the *Sentinel*, that permission has been granted for its reproduction.

Under the heading "As to Her Last Class," Judge Hanna says:—

"Mrs. Eddy writes to me: 'In my last class I did not refer to mental malpractice,—its members generally had taken the primary course, and this instruction properly comes before that class. Without a question the student of Christian Science is not qualified to teach, preach, or to practise divine metaphysics, who knows not thoroughly how wisely and successfully to handle this heinous sin—mental malpractice. Without this understanding he cannot separate the tares from the wheat and destroy the tares—he cannot divide between an impartation from the immortal or divine Mind, and temptation, or the evil suggestion of human thought and argument; but this must be done, in order to obey the former and to resist and destroy the latter, and not till it is done will he be protected and imbued with wisdom and power to rise superior to evil suggestions. This attainment is indispensable whereby to establish a student on the scientific basis of Christian Science.'

"She further writes of this class: 'In 1898 I *selected* and taught a class of students, glad to give to the world such men and women to demonstrate Christian Science.' "

The Will of the Father

That there is need for works as well as words in the daily life of all Christians, and especially of Christian Scientists, is one thing that Mrs. Eddy's teachings have forced upon the attention of those who would win the "crown of glory that fadeth not away," the hope of which Peter held out to the elders of the early church. Unfortunately this occasion for personal demonstration is not fully realized by all who embrace Christian Science. Many simply believe in Christian Science because it has healed them, and they do not grasp the idea that there is a necessity for individual activity; therefore they continue in a state of mere passive receptivity for years. Whenever they are sick or in trouble, they depend upon some practitioner for help; and in so doing they fail to avail themselves of the very greatest benefit that could come to them; namely, the working out of their own salvation. Christian Science is not simply a cure-all for physical ills, to be administered by some practitioner who has taken the place of the family doctor. It is much more than that; it is the demonstrable religion of Christ Jesus, which means the salvation so definitely promised by him to all who would worship the Father both "in spirit and in truth."

The Master, near the close of that wonderful Sermon on the Mount, warned his disciples against the dangers of mere profession, saying: "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." Again and again was he insistent upon the necessity for activity,—the doing of the will of the Father which filled his own earthly career to the very end with loving ministries to humanity. The same was true of Paul, who added a word of reassurance when he wrote to the Galatians, "Let us not be weary in well doing: for in due season we shall reap, if we faint not."

So, too, Mrs. Eddy continually counseled her followers. In "Miscellaneous Writings" (p. 176) she asks, "Are we duly aware of our own great opportunities and responsibilities?" and in Science and Health (p. 8) she says: "Who would stand before a blackboard, and pray the principle of mathematics to solve the problem? The rule is already established, and it is our task to work out the solution." It seems easier, of course, to let some one else do the work, on the ground that as it is his profession he is better qualified to do it. This is a mere sophistry, however, and the sooner this is clear to us the better are our chances for advancement in the understanding of omnipotent, omnipresent Mind.

Every time we demonstrate for ourselves the ever-availability of Truth to heal and to save, we are strengthening our confidence in the all-power of Truth and fitting ourselves to give to others the "cup of cold water" that shall open up to them the way of salvation. The fact that so many who have been healed in Christian Science have availed themselves of the opportunity to share this blessing, has been a strong factor in the marvelous growth of the cause, and we should regard this privilege of doing the will of the Father in the way pointed out by our Master, as the greatest boon that could come to us.

Archibald McLellan.

Effectual Prayer

If a dozen persons were asked to define their individual concepts of prayer, it is likely that their statements would vary, because of their differing mentalities and preconceptions. It is, however, almost certain that all would agree that to be of any value prayer must be effectual. St. James has a good deal to say about prayer, especially in relation to healing, and it is he who gives the wonderfully inclusive statement that "the effectual fervent prayer of a righteous man availeth much." The verse which contains this statement invites thoughtful analysis. It sustains the argument that prayer does heal the sick, and it proceeds to give some of the essential elements of prayer. It states that the one who seeks healing must be willing to confess his faults, and that he who would help an afflicted brother must be "a righteous man." This is in line with the psalmist's words, "If I regard iniquity in my heart, the Lord will not hear me."

Mrs. Eddy lays great stress upon the moral demand in respect to the healer when she says, "Better suffer a doctor infected with smallpox to attend you than to be treated mentally by one who does not obey the requirements of divine Science" (Science and Health, p. 235). A window covered with dust and cobwebs would not admit light in the same degree as one that was clean, and the Scientist who would let in the healing light of Truth upon his fellow beings must have "lost much materiality—much error—in order to become a better transparency for Truth" (p. 295). No shadow of self-sufficiency must obscure the light, for the Christian Science prayer is not one of audible eloquence addressed to the human intellect. Rather is it the deepest desire of spiritual longing, an appeal from the blindness and injustice of mortal mind to the one perfect Mind, to God, who is both able and willing to save even those that by the law of mortal belief are doomed to die.

True prayer, as indicated in the epistle already quoted, is to be both fervent and effectual,—the righteousness of the one who prays must be active and vital. We have all known of prayers which asked that the sick might be healed if it were in accordance with God's will; but there seemed to be

Digitized by Google

great uncertainty about the divine will, and where the element of uncertainty was in the patient's favor, it was often dashed ruthlessly to the ground by the decision of *materia medica*. The one great essential of prayer, from the Christian Science standpoint, is to know the will of God, know it so well that there shall be a divine daring which challenges whatever is not God's will as taught and demonstrated by Christ Jesus. He ever declared for the supremacy of Life, and he proved this both for the dead and the dying, and commanded that his followers should pursue the course so gloriously opened up by him. Christian Science insists that God's "good pleasure" (to quote St. Paul) is at least as ready to heal the sick as to save the sinner, and no one questions the latter. Would any be blind enough to say or to think that one who desired to be freed from sin might not find God willing? Then why doubt the divine will to save to the uttermost those who are sick, if they admit and abandon the "faults" which spring from dependence upon matter and material law and seek spiritual aid through "effectual fervent prayer"?

A great change has come over the world's thinking in respect to prayer, as students of Christian Science can testify from their own experience. If honest, many of them will be forced to admit that when they were first told that the sick could be healed by prayer, without recourse to material means, they were wont to smile incredulously, if they did not do worse. Yet these same people would have waxed indignant if some one had proceeded in their hearing to ridicule the epistle of St. James. Happily for themselves, the time came when proofs were given them, possibly in their own healing, of the irresistible power of true prayer, and then their great desire was to understand better how to make their own prayers more effectual. In this task they found the needed help in their text-book, "Science and Health with Key to the Scriptures," and in the Holy Scriptures as spiritually illumined by its teachings, and thus they learned that God is "able to do exceeding abundantly above all that we ask or think."

ANNIE M. KNOTT.

❖

Fallen Leaves

THERE is nothing that seems more appealing than the issue of a futile heroism, the vain outcome of royally true, self-sacrificing endeavor. When earnest effort is put forth, life expended and a brave hope maintained, only to find utter defeat at last,—then all hearts are touched, and we unite in saying, "How pitiful!" This situation results whenever well-intentioned people fail to distinguish between that which is of men and that which is of God, between the transiency of mortal beliefs and the eternality of divine ideas.

We are living in a time when practically all religious people recognize the inadequacy and assured failure of many long-honored forms of Christian faith. They see that, not having developed into spiritual understanding, its past puttings-forth have withered away, and become simply relics which merit respect but that have no further value. Remembering that the truth can never grow old and decadent, those who are wise are undisturbed by the rustle of these fallen leaves; they are thinking ever upon Life's new appearings, and the consequent more beautiful tomorrow. They know that whatever passes has never had more than a temporal value, and they are proving the truth of Mrs. Eddy's saying that "willingness . . . to leave the old for the new, renders thought receptive of the advanced idea," and "helps to precipitate the ultimate harmony" (Science and Health, pp. 323, 324).

There are not a few, however, who make the mistake of attaching a permanent worth to a temporal form, and who waste their energy in heroic efforts to save that which were better lost, because the day of its usefulness has ended. They are trying to resuscitate and to revivify concepts or expressions of Christian aspiration which have had a relative life and brought a return of relative good, but which are now fallen because they are dead and dry, and which therefore should be simply gathered up and burned, because a larger, more vital unfolding of Truth has presented itself.

It is to be seen that every divinely redemptive idea that has come into the world has suffered from the fact that it has been embraced by an imperfect apprehension; been wedded, one might say, to an unappreciative consort. The truth always remains true, and it is therefore always beautiful, vigorous, and effective. When, however, it does not remain free in human consciousness, but is subordinated to or hidden by its setting or associations, it seems to lose its vitality and fall into desuetude. All that has failed or can fail, however, is the material sense factor of the imperfect concept, and if this is seen and men are but willing to "let the dead past bury its dead," then they may rise ever from their dead past into newness of life.

This readiness to give up the form in which the advancing human concept has expressed itself at a given period, has no flavor of irreverence. As Knowles has so well said,—

> Our lips shall have no sneer
> For the spire, the mosque, the ark;
> Broken symbols shall be dear,
> If they point us through the dark.

In fact, irreverence really begins when we forget substance, the spiritual truth, in our devotion to form. This was the stupendous mistake of the Pharisees in that day when Jesus cried, saying, "O Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, . . . and ye would not!" And this is the stupendous mistake of unnumbered religionists today. They are clinging to and striving to revivify some dead form or order, some human concept of truth which should be respected for what it has done and be permitted to yield as a fallen leaf to the fresh unfoldments of an ever-enlarging spiritual perception.

Christian Science has been criticized as "ruthlessly destructive of sacred things;" but this has always been charged against progressive ideas by the unprogressive, and the charge speaks for the attitude of unscientific thought in all the years. Spiritual advance always means escape from the thrall of some phase of devotion to a dead past, and knowing this, we part with the honored old as gladly as we welcome the nobler new.

JOHN B. WILLIS.

Among the Churches

Current Notes

CLEVELAND, OHIO.—Driven eastward by the expansion of the city, First Church of Christ, Scientist, has decided to move, and yesterday [Sept. 4] completed the purchase of the home of E. S. Rogers, president and treasurer of the English Woolen Mills Co. The property, including a fine large residence, is on the north side of Euclid avenue, near Abington road, and adjoins the Excelsior Club on the west. The land has 120 feet of frontage on Euclid avenue, and is 540 feet deep on one side and 403 feet deep on the other. First Church, which was the first Christian Science organization in Cleveland, built its present edifice at Cedar Avenue S.E. and East 46th street about fourteen years ago. At that time most of the members lived within a short radius of that location. During the past few years many of the members have moved eastward.—*Cleveland Plain Dealer.*

Digitized by Google

SANTA PAULA, CAL.—The opening services of the new church building erected by the Christian Science Society will be held Sunday, Sept. 13. The history of the local Christian Science Society follows closely that of very many other localities,—a few earnest followers of Mrs. Eddy meeting together in private homes to study the weekly Lesson-Sermon, then meeting for a time in some public place, in this instance services being held for some time in the Sunday school room of the Universalist church. Then, growing in numbers, the Odd Fellows Hall was rented for the Sunday and Wednesday meetings. The society was organized in July, 1912, and has continued to grow in numbers and influence.

The lot on 6th and Pleasant was bought and the present building erected entirely by the voluntary contributions, really thank-offerings, of those who have received benefits from the teachings of Christian Science. As is customary with the denomination, dedicatory services will not be held until the building is entirely free from debt. At present, the seating capacity is for seventy-two, but one hundred can be accommodated if necessary.—*Santa Paula Chronicle.*

KALAMAZOO, MICH.—On Sunday next [Sept. 27], services will be held for the first time in the handsome new church edifice erected by First Church of Christ, Scientist, on South and Park streets. While the edifice is not entirely completed or furnished, the church people will be most pleased to be able to use it and will patiently await its completion. The formal dedication will not take place, however, until the building is entirely completed, furnished, and paid for.

The Kalamazoo Gazette.

INDIANAPOLIS, IND.—If prizes were awarded for the most attractive booths at the state fair this week, the Christian Scientists would "place." The Christian Science booth near the Fine Arts Building is prettily decorated with ferns and flowers and outfitted with comfortable chairs, reading-tables, and couches. A free telephone, ice-water, and a reading-room for ladies are features.—*Indianapolis Times.*

The Lectures

London, England

Lieut.-Col. Robert Standen, in introducing Bicknell Young at the Kensington Town Hall, spoke in part as follows:—

If one were asked to give in half a dozen words a reason for the rapid spread of Christian Science, and the increasing interest in its teaching to which tonight's crowded audience bears testimony, the answer might very well be that Christian Science offers an interpretation of the teachings of Jesus of Nazareth and of the Scriptures at once logical, practical, and demonstrable. It was its inexorable logic that appealed to me when, more than ten years ago, Christian Science came into my life; the doctrine that God, omnipotent, all-knowing Love, was either unwilling or unable to put an end to the pain and sorrow of poor humanity, had always seemed a contradiction in terms, and finding no satisfactory solution to this and to many other difficulties in the teachings of orthodoxy, I turned away from the church in which I had been brought up. On taking up the study of Christian Science, I soon found my questions answered satisfactorily and my doubts set at rest, for this teaching is wholly consistent, from first to last.

That Christian Science is a practical, workaday religion, many here tonight, I am certain, both men and women, would gladly testify. It is not a one-day-a-week affair, to be put on and off with one's Sunday clothes, but is ready for practical use at all times and under all conditions. It links religion with conduct, and greatly benefits those who put its teachings into practice.

Christian Science is demonstrable; it proves its faith by its works. Just as in Galilee, when John the Baptist sent his followers to the Master to inquire whether he were in truth the Messiah, Jesus bade them draw John's attention to the wonderful works which his understanding of the Father enabled him to accomplish, so today Christian Scientists gratefully realize that they have been shown the way to follow in his steps, and to emulate in some degree those works, the signs of Immanuel,—"God with us,"—through their study of the Bible in the light thrown upon it by Mrs. Eddy's "Science and Health with Key to the Scriptures," the Christian Science text-book.—*Correspondence.*

❖

Cambridge, Mass.

William R. Rathvon delivered an interesting lecture on Christian Science to an audience which filled Scenic Temple. The Rev. William P. McKenzie, also a member of the board of lectureship of The First Church of Christ, Scientist, of Boston, in introducing Mr. Rathvon, said:—

When I first became acquainted with the ideals of the Christian Science movement, and came to know personally that benefactor of the race, Mary Baker Eddy, Discoverer and Founder of Christian Science, I was forced to admit the incorrectness of current opinion in those early days. There was much misrepresentation then, due to ignorance, but for ignorance today there is no excuse. The truth may be known in regard to that noble life's work, wherefrom as from living seed, with its increasing harvests, all mankind may be blessed. The truth may be known in regard to those following her leadership, from the current literature of our periodicals as well as from the characteristics of individuals. Yet within a few days I learned of an attack from a pulpit upon both the Leader and the movement, so incorrect that one could only feel extreme pity for any one who had to live in company with so depraved and revolting an imagination as that which invented the untruths set forth. A wise man said, "Lo, this only have I found, that God hath made man upright; but they have sought out many inventions."

The purpose of the lecture this afternoon is to establish uprightness in man, and to declare the righteousness of God. You are here by invitation of First Church of Christ, Scientist, of Cambridge, whose members have proved for themselves how Christian Science unfolds the goodness of God, and by its healing of the sick and reformation of the erring has restored in this age what for ages past has been the lost element of Christianity.—*The Cambridge Chronicle.*

❖

Pasadena, Cal.

An audience of two thousand persons listened to the lecture on Christian Science by Col. William E. Fell of Leeds, England, at the Christian Science church, and there were many who were not able to gain admittance. The lecturer was introduced by Mrs. Sarah Pike Conger, widow of the late E. H. Conger, former United States minister to China and ambassador to Mexico. Mrs. Conger said:—

It has been said that this is the age of thinkers. To you, thinkers of our own land and many foreign lands here represented, in behalf of First Church of Christ, Scientist, of Pasadena, I bring a most cordial welcome. Today we assemble to consider Christian Science. Mrs. Eddy in 1866

Digitized by Google

discovered the Science of living, of loving; the Science of Christianity; the Christ Science that Jesus understood, used, and taught. Mrs. Eddy named this discovery Christian Science. An understanding, with practical use, of this Science has touched the heart-chords of humanity, and their mellow, sweet, encouraging, healing tones have echoed and reechoed from land to land and upon the deep waters. These tones have awakened a listening ear in the activities of large cities, and brought joy in secluded places. Christian Science has been a balm to thousands of broken hearts; has destroyed the love for sin; has healed the sick. It is uniting in one brotherhood peoples of many nations. It encircles and penetrates the world. Surely Love's hand, the power of God, must be in it, for it is the universal Science of loving, of living.

Pasadena Daily News.

Manitowoc, Wis.

At the new Opera House, Bliss Knapp delivered a lecture on Christian Science. He was introduced by Andrew Johnson, who said in part:—

Our Lord and Master said, "Ye shall know the truth, and the truth shall make you free." This marvelous promise of nineteen centuries ago is being fulfilled today. History records that the true mission of the early Christian church was the healing of sickness and the destruction of sin. Through Christian Science many are learning that the divine Mind is as efficacious to destroy those ills today as it was during the first three centuries of the Christian era.

As Christian Scientists we cannot conceive of our existence as a continual fight with an evil force, but we believe and learn that good is the reality and evil the actual unreality, although to material sense evil often appears to be intensely real. As lovers of truth, we cannot fear illusion and error, because through spiritual understanding we know they are powerless. Thousands all over the world, through the faithful study of the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, have been brought out of bondage into the glorious liberty of the kingdom of God. This proves that Christian Science is demonstrable in human experience, and therefore scientific.—*Manitowoc News.*

Lectures to be Delivered

Akron, Ohio.—Prof. Hermann S. Hering, Grand Opera House, 3 p.m., Nov. 22.

Anderson, Ind.—George Shaw Cook, Grand Opera House, 3 p.m., Nov. 22.

Antigo, Wis.—George Shaw Cook, Opera House, 8 p.m., Nov. 27.

Baltimore, Md. (Second Church).—Rev. William P. McKenzie, Church Edifice, Mt. Royal avenue and St. Paul street, 8 p.m., Nov. 23 and 24.

Birmingham, England.—William R. Rathvon, Town Hall, 8 p.m., Dec. 1.

Bridgeport, Conn.—Clarence C. Eaton, Plaza Theater, 8 p.m., Nov. 22.

Butte, Mont.—Bicknell Young, Auditorium, 8 p.m., Nov. 18.

Camden, N. J.—Rev. William P. McKenzie, Broadway Theater, 1123 Broadway, 3:30 p.m., Nov. 22.

Chambersburg, Pa.—Virgil O. Strickler, Court-house, 8 p.m., Nov. 27.

Columbus, Ohio (First Church).—Virgil O. Strickler, Memorial Hall, 8:15 p.m., Nov. 26.

Council Bluffs, Iowa.—Clarence W. Chadwick, Masonic Temple Building, 8 p.m., Nov. 27.

East Orange, N. J.—Jacob S. Shield, East Orange High School Auditorium, 8:15 p.m., Nov. 23.

Evansville, Ind.—George Shaw Cook, Evans Hall, 8 p.m., Nov. 23.

Ft. Wayne, Ind.—Hon. Clarence A. Buskirk, Minuet Hall, 121 East Washington street, 2:30 p.m., Nov. 15.

Halifax, Nova Scotia, Canada.—Willis F. Gross, Masonic Hall, 8 p.m., Nov. 24.

Jersey City, N. J.—Jacob S. Shield, Bergen Lyceum, 651 Bergen avenue, 8:15 p.m., Nov. 27.

Kingston, Ontario, Canada.—Virgil O. Strickler, Opera House, 8 p.m., Nov. 23.

Kingston-on-Thames, England.—Col. William E. Fell, The Assembly Rooms, Surbiton, 8:30 p.m., Dec. 8.

Kirkwood, Mo.—Dr. Francis J. Fluno, Church Edifice, 3 p.m., Nov. 22.

Lakewood, Ohio.—Prof. Hermann S. Hering, Church Edifice, Detroit avenue, opposite Arthur avenue, 8 p.m., Nov. 23 and 24.

Lawrence, Kan.—Clarence W. Chadwick, Bowersock Theater, 8 p.m., Nov. 22.

Malone, N. Y.—Virgil O. Strickler, Opera House, 8 p.m., Nov. 24.

Marysville, Cal.—Bicknell Young, Marysville Theater, 3 p.m., Nov. 22.

Montclair, N. J.—Jacob S. Shield, Montclair Theater, 4 p.m., Nov. 22.

Testimonies of Healing

I feel that the time has come when I should give to the world the story of my many healings in Christian Science. I first heard of this religion about twenty-six years ago. I was suffering with a complication of internal disorders from which the physicians failed to relieve me. I went to a Christian Science practitioner, took two weeks' treatment, and was healed. I received some instructions with regard to the Principle of this Science at that time, but I did not obtain Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and I had very little comprehension of the subject.

About a year after this occurrence I began to manifest blindness. I seemed to be drifting into a state of mental hopelessness and physical darkness without the ability or the knowledge as to how I should go about it to resist my fate. Again it was recommended that I try Christian Science, and I was directed to a practitioner. I went to her and received one treatment, and my need was met. The next morning I awoke from a refreshing sleep, fully restored to my normal sense of sight. The practitioner upon this occasion presented me with a copy of Science and Health, saying that she had just purchased a new one. I thanked her, little realizing the treasure that she was putting into my hands, and I read the book; but I was not yet prepared for its teachings. I considered its spiritual demands too high, and I could not see how a mental declaration of its teachings could heal the sick. I certainly did not believe that its pages contained the explanation of my healing, so I laid the book aside, finding a novel, or something similar, much more interesting reading.

About the year 1890 I broke down with a severe attack of nervous exhaustion. I knew that material remedies could not reach this case, but once more I had to be reminded of Christian Science by another person. I went to a practitioner, still with little or no faith, strange as it may seem, and again divine Love met my need. One treatment was sufficient, and I found myself the following morning free from nervous or mental disturbance or confusion. I accepted this blessing gladly, rejoiced to be able to go about my material occupations, but not once was my thought raised in gratitude to the great Giver of all good. I did not understand Christian Science, nor did I seem to care to understand it so long as I could receive its benefits so readily; and my faith in material remedies was not wholly gone.

Time passed. In the year 1905 I found myself in a deplorable condition, which had come on gradually, in spite of the most strenuous medical and hygienic resistance on my part. I used medicine, various kinds of baths, calisthenics, change of climate, and obeyed rigorously all the laws of health and hygiene that I knew, but all to no purpose. I grew gradually worse, until I was finally obliged to remain in bed, suffering very much. There was liver and kidney trouble, bowel disorder, rheumatism, severe headache, which increased year by year, and a case of water on the knee, which threatened to make me a permanent cripple.

I reached the place where I knew that all material remedies were useless, and then with unaccountable reluctance I turned to Christian Science, and a practitioner was called in. Hitherto in time of extremity I had tried Christian Science, and it was not found wanting. Upon this occasion Christian Science tried me. Because of the stubbornly resistant state of my own thought, I suffered much before I could put aside my pride of human opinion and human intellect sufficiently to seek and accept the understanding of Science as a religion. Mrs. Eddy says, "It was this theology of Jesus which healed the sick and the sinning" (Science and Health, p. 138), and the time was come when I must understand this theology and put it into practice.

The way seemed long and hard, but once I saw the Principle and understood what was required of me, no time was wasted whining over the roughness of the road. With the loving help of a practitioner, for whose faithful, patient assistance I can never be sufficiently grateful, I set to work to find the solution to my problems. After two months, being greatly benefited, I discontinued treatment, determined to work out the rest of my problem through my own efforts, if possible. I am very glad I was led to do this, as I feel certain that I gained in understanding and confidence more rapidly in this way. The various ailments dropped away from human consciousness one by one, going back to the nothingness and oblivion whence they came. I have gained greatly in weight, and am the picture of health.

My healing was very slow. After my first two months' experience with the practitioner I had very little help from others. Occasionally I have been obliged to ask for a few treatments, when I always received sufficient assistance to enable me to go on for myself, declaring, living, and learning to trust the Word of God to meet all my needs and heal all my diseases. As I gained in understanding and in the realization of my own willingness to put into practice the law of good, to that extent I have been able to avail myself of the benefits of that same law.

Human pride, fear, and hate have been largely destroyed in my thought, and year by year I am more conscious of the presence and omnipotence of good, and the unreality and powerlessness of evil of every sort. There are indeed no words that can express the blessing that has come to suffering, sinning, dying mortals through the teachings of Christian Science. My long, slow healing kept my thoughts turned constantly toward this all-important subject, and has builded for me better than I knew at the time. It has enabled me to prove in my own experience and through my own efforts, under divine guidance, the facts of Science, and I am able to say that, to some extent at least, I know whereof I speak.

When I think of Mrs. Eddy, and desire to express gratitude toward her, words fail me. I can only endeavor, ever so humbly, to go and do likewise.

ELIZABETH A. ROSS, San Francisco, Cal.

I want to express my gratitude for Christian Science and our revered Leader, Mrs. Eddy, the author of our text-book, "Science and Health with Key to the Scriptures," hoping that some one in need may see these lines and take heart. Sickness and disease, as well as sin, fall before Christian Science through the application of the truth and the understanding of its practitioners.

I am studying daily to understand more of this truth, that I may be able to apply it to the problems of life in the case of others, as well as for myself and in my own home, for we know it is true and are sure it is the same truth taught by Jesus the Wayshower, because it bears the same fruits. My first healing was of a throat affection, of which I formerly had about three acute attacks every year. It has been six years now since I have felt it, so I know it is permanently overcome. I was also healed of granulated eyelids. Stomach trouble, which I have had for over thirty years, has been greatly relieved. I am sure that I shall be permanently healed of this when all fear is destroyed. My health is better than it has been for twenty years.

Our baby was healed of acute lung trouble and bowel disorder in its worst form. A Christian Science practitioner was called, and the child was healed in four days. For these healings we are very thankful, and there have been many more blessings received besides those of which I have told. Having the fruits which Jesus said would "follow them that believe," we are satisfied, and are very happy even with our slight knowledge of Christian Science.

Through Christian Science we are able to "glorify God in [our] body." Several members of my family have been healed of different ailments, and Christian Science has been our only physician for a long time. If some one reads this testimony and turns to Christian Science for help, I shall feel grateful. I want to be found faithful in following the Master's commands to preach the gospel and heal the sick.

R. F. RANDAL, Pride, Texas.

✧

A little over two years ago I had an abscess in my head. The suffering was intense, and I called in our family physician, but received no relief from the material means applied. I then secured the help of a Christian Science practitioner and was relieved in thirty minutes. There has been no return of the disease. At that time I also had, according to *materia medica*, heart and kidney troubles, which were fast developing into dropsy. The physician told my daughter that I might live a year, but the indications were that I could not live that long. This the doctor told me recently, when on a visit to her daughter's home. Now she admits that I am a living demonstration of the healing power of Christian Science. I was healed of the heart and kidney disease by reading Science and Health, studying the Lesson-Sermons, and by regularly attending the Christian Science church services.

My family and I are very thankful to God for His many blessings, and grateful to Mrs. Eddy for showing us the way to this healing Truth.

FANNIE W. WATSON, Denver, Col.

✧

I desire to tell something of what Christian Science has done for me. For about two years I suffered greatly from female trouble and neuralgia. I was examined by a physician, and he said I would never be well until I had an operation. I would not consent to this, so I turned to Christian Science and was healed very quickly. For several months I was perfectly well, and although I was passing through a period that is usually very trying to women, I suffered from none of its customary ills.

As the time approached for my baby to be born, I desired to engage some one to be with me at the birth, and I asked a nurse who lives in Lewiston and is a Scientist; but she said she could not promise to come, as she was then engaged, and her engagement might continue beyond that time. I did not want a physician, but a nurse, and I knew of one who was not opposed to Christian Science; so I wrote her, stating I did not intend to have a doctor. She replied that she would like to come, but as she knew nothing of Christian Science, she would not take the case unless a physician was present when the birth took place, though she would take the responsibility after that. I thought perhaps to have a physician present at the time might be more satisfactory to my husband, who was not a Christian Scientist, so I consented. My husband met the physician upon whom we had agreed, and told him of the case, with the intention of engaging him when needed. He came up in a few days, and my husband explained to him that I was a Scientist, and he said, "All the better." He pronounced me in perfect condition, but in a few days he began to intimate that there was something wrong on account of the delay. This tended to unnerve me for the time being, but the feeling would soon pass away, as the truth was declared and realized.

One day the doctor said he saw signs of grave danger, and later in the day he called the nurse over the telephone and said his greatest fears were realized, for it was the worst case of uremic poisoning he had ever examined; that if there was not a change in the morning he would have to call for a consultation, and the patient would have to be rushed to the hospital for a Cæsarean operation. He instructed the nurse to begin preparations at once for removing me to the hospital. She told him, however, that I was a Christian Scientist and she could not do what he asked without my consent and that of my husband. He answered that we would have to get Christian Science right out of the case, and said he would see my husband. This he did that evening, and told him the same thing. The nurse, my husband, and myself talked the matter over for some time that night. I was asked if I would go to the hospital, and I said no, most emphatically. We then decided that so long as I would not follow the doctor's advice, the only way was to dismiss him from the case entirely. To this the nurse consented. My husband agreed to do this, but for some reason he did not do so that night. The next morning, however, he called the doctor up and told him that he felt Christian Science and *materia medica* were in conflict, and so long as I wanted Science, we would relieve him from any further responsibility and that I would have Christian Science treatment. The doctor replied that he was very sorry my husband did not realize the seriousness of the situation, but if that was the case, nothing more could be done.

At that time I seemed to be in a very serious condition. The doctor stated that I would probably pass away, and the nurse reported that a condition he had predicted was coming on. I remember very little of what was going on at that time, but all at once a great peace came over me and I became warm and rational. In less than an hour my baby was born without any pain or suffering. He was a large child, was perfectly well, and has been ever since. It is now almost twenty months since my healing, and I am in perfect health, and have been all this time. I have never had a return of any of the former ailments. Our baby is also perfectly well, and has never had a sick day in his life. He had two minor ailments common to babies, but they were overcome in a very short time in Science.

I am indeed thankful to God that I had the faith and courage to stick to Christian Science, for I felt then, and feel now, that I could never have survived an operation.

MRS. CHARLES N. BREARLEY, Lewiston, Idaho.

✧

"Freely ye have received, freely give." I wish to tell of the healing of my husband. A growth appeared in his throat, which was in such a condition that it was impossible for him to eat solid food, and even the taking of liquids was accompanied by great pain. After five days' treatment in Christian Science, however, the growth entirely disappeared without pain, and during the period of treatment he was able to take nourishment, in spite of his fear and the fear of others (non-Scientists), which had to be destroyed. My husband had been subject to such growths on previous occasions, and under *materia medica* from four to six weeks had been re-

Digitized by Google

quired to relieve him, while he suffered greatly and was unable to take nourishment.

Christian Science has been the only physician in our home during the past five years. When an ailment troubles our little son, we always rejoice that instead of asking for medicine he asks for Science and Health, and if we are unable to effect a healing ourselves, which sometimes happens because of fear, he asks for a Christian Science practitioner. He knows, too, when he is healed, and tells us so. When he was about a year and a half old, a dog pushed him off a high veranda, causing a very badly injured leg; but in three weeks he was entirely healed, through the power of Truth, in spite of predictions of dire results by the non-Scientists in our home. Shortly after this the child was taken with a bowel trouble, the seriousness of which only those mothers not in Christian Science can appreciate. I am thankful to say that while there was apparently a very sick child, I had no fear. In a week the child was entirely healed and looked as rosy as ever.

A case of measles was also healed, on another occasion. On the advice of the practitioner and to conform to the law, we called a doctor, who made an examination and said there was no fever, that the bowels were in good condition, and in fact he did not consider the case serious enough to report to the city health department. The healing was accomplished in Christian Science in about ten hours, though the child had become apparently very sick, with high fever and eruptions on face and body.

I have been healed of rheumatism. I suffered from it for several months, until my heart was affected, and I then realized that I must not let error keep me from asking the practitioner for help. A few days after I asked for treatment I was freed from this condition. I was also healed of what is known as ringworm, although the healing was slow because I was sensitive to anything so disagreeable, and it was hard to take my thought away from it, especially as it manifested itself all over my chest and back up to my ears. I found I had to be healed of faults in myself before I could be freed from this discord; indeed, it meant a clearing up of errors I hardly realized I possessed and of which I am now heartily ashamed.

If space permitted, I could enumerate many more instances of healing in our home. I know I am growing stronger daily through the help brought me in the study of Science and Health by our dear Leader, Mrs. Eddy, and through the loving help of kind practitioners and our Christian Science literature. The *Monitor* means a liberal education to me. I am so grateful for its appearance in our home, and wonder how we ever got along without it. I want so to live that I, too, will reflect the dignity and goodness, the right thinking and living, that Christian Science demands.

Cecillia T. Daughs, Spokane, Wash.

I certify to the truth and correctness of all the statements in the above testimony of Mrs. Daughs.—C. W. Daughs.

✦

I owe so much to Christian Science that I feel it my duty to send my testimony. There have been so many splendid demonstrations in our family of six that I scarcely know how I can tell of any without mentioning all. For the last four years we have used no drugs of any kind, though the ills usual to a family of small children have arisen. All have been healed with single treatments by a local practitioner, until a year ago. Since then my husband and I have been able through Christian Science to help the children ourselves. My husband was healed of influenza, and the two oldest children were healed of an infectious skin disease. I have been helped to hear, having been very deaf, and according to *materia medica* incurably so. This last demonstration is not yet quite complete, as I am still conscious of some discord, but that it will soon be perfect I am certain. There have been ailments of all kinds overcome in these last four years, of which I will mention a few; namely, poisoning, stomach disorder, colds, a strained ankle, cuts, burns, and bruises. We have also been helped to demonstrate supply; but above all, the spiritual help that has come to my husband and me is so great that we speak continually of how wonderful it is. It has brought so much peace and contentment to our home life that we cannot be thankful enough to God, or grateful enough to Mrs. Eddy for making this truth plain, so that we can understand it.

Mary Durham Garfield, San Diego, Cal.

✦

I send this testimony, trusting it may command the attention of some one who is struggling against discouragement and doubt and lead him to turn from mortal beliefs to the healing fount of Truth.

For several years I suffered from a disease which kept reappearing with periods of intense suffering, at times of weeks' duration. I sojourned in several states and was attended by the best medical talent available, including doctors and specialists said to be at the head of their profession; but I continued in spite of their efforts to drift into a worse condition, until life seemed a burden and all hope fled. Their attempts to relieve my sufferings included two hospital experiences, one of which put me through a major surgical operation without avail, and the end seemed to have been reached. When it was proven both to their satisfaction and to mine that their efforts were futile, the last physicians reluctantly admitted that their profession could offer me nothing further, and advised my wife to have my earthly affairs put in order, as the end was inevitable and the probability that I would be spared to see the dawn of 1918 was apparently very remote.

A year previous, we had been advised by prominent physicians, that if I survived it would be to become paralyzed and helpless, and with this latest dictum—knowing as we did that the resources of *materia medica* had been exhausted—to mortal thought the sentence imposed upon me was final. But here, though in our deep discouragement we knew it not, dawned the ray of light which was to prove again, as it has so often through the ages, that "man's extremity is God's opportunity," and also the truth of Mrs. Eddy's statement, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). The light came through a very dear friend of former years, a Christian Scientist, residing in a distant city. She was communicated with, and responded at once with absent treatments. Suffice it to say, that though I was in another state, marked improvement was noted in my condition from the day and hour treatment was begun. In four days, for the first time in five weeks, mechanical means were unnecessary and normal action of the system was restored, and within a week I walked down-town, to the amazement of many who had expected never to see me again; while in thirty days I was able to report for duty in anticipation of resuming my vocation.

Only those who have thus stood within the so-called "portals of the shadow of death" can know with what deep gratitude and love I now acknowledge my indebtedness to Christian Science, and to the one who has given to the world from out

Digitized by Google

the obscurity of the past the understanding which makes its acceptance and demonstration possible, and to all those faithful followers of hers who are today living and laboring for its fulfilment. I have also been freed from the bonds of an opiate which the faith in drugs had tied, as well as the appetite for liquor and tobacco which years of indulgence had in mortal belief fastened on me, and no healing means other than Christian Science precept and practice has been resorted to in this regeneration of the body through the renewing of the mind.—FRANK M. STEVENS, Chicago, Ill.

✧

I want to express my thankfulness to God, and my gratitude to our dear Leader for what Christian Science has done and is doing for me every day. Like many others, I had heard of Christian Science for years, but having little appreciation of it, I wandered around in the dark, seeking something, I knew not what, till I reached the point where there seemed to be little time left for me on earth. I was a physical and mental wreck when I went to bid a dear Christian Scientist friend good-by, as I was leaving Salt Lake City for my home. She voiced the truth to me, but I did not understand it. I had no hope of reaching home alive, but she took me at once to a Christian Science practitioner, and arrangements were made for absent treatment, as my train was then due.

It had been months since I had known what a good night's sleep meant. I could not eat, and had lost much flesh. I had suffered from headaches from the time I was a child, and they grew so serious that I would lose my reason and have to be forcibly controlled. When I got over these spells I felt as though I had been hammered. I had hay-fever for twenty-three years, and many other ailments. After getting settled on my train, however, a peace came over me such as I had never known before. I asked for my berth to be made up before the regular time and went to bed. In the morning the sunshine woke me up. I had not moved all night, and such a restful sleep I had never known.

I was truly born again; everything was changed. I was perfectly healed and happy. I cannot find words to express the feeling of freedom that came to me, for I was always sensitive, and labored under a belief that as I was not very highly educated I was not so capable of earning my living as others; but the years that I have studied Science and Health have meant more to me than any schooling, for Christian Science has taught me how to pray, how to find God. It has also taught me that God is my strength, that I can do His bidding without weariness. My earnest desire is to live the true life, that my light may shine to guide some weary stranger to find this mental and spiritual freedom which is for all mankind.

It is now four years since I was thus instantaneously healed, not only of the ailments named, but also of a great trouble that seemed worse than death. It has been clearly proven to me what the understanding of God can do and is doing for humanity. I am a Christian Science nurse, and I have seen wonderful proofs of the divine power to heal. I will add here that I am in better health than I have been for thirty years; I am happier, and have a better understanding of my relation to God; also, I am able to do more for my brother man by seeing him as a child of God.

I have had the grand privilege of class instruction, which has given me the only education I have had. My hope is that my testimony may lead some one to seek the truth that will free him as I have been freed.

NANCY J. DOURGHERTY, Springfield, Mo.

From Our Exchanges

[Rev. Joseph Fort Newton in *The Universalist Leader*]

So unfortunate are many of the ideas associated with the word salvation, that it would be a gain if the word were not used at all for a decade. At least we should make clear what we mean by it. Let us go back to Tyndale, the father of our English Bible, and see what use he made of the word—if so we may track a word to a world-ideal. His ambition was to make the Bible so simple that a plowboy could read it. Strangely enough, he hardly used the word salvation at all, but instead such words as health, wholeness, soundness, holiness, but most frequently health. For example, "Perform your health with fear and trembling." And again, "How shall we escape if we despise so great health?" Why did so great a scholar select the word health? It was because he saw that it was nearer to the meaning of the word used in the Bible, and he was right.

Salvation, then, is health of soul, wholeness of nature, soundness of character—to awake to the reality of spirit and the spiritual world, and live as a citizen of that world. It means the growth of the soul, leading its powers forth to beauty and grace, making it superior to the evils that are ready to prey upon it, liberating it when it is in bonds of sense and selfishness, and by all means, human and divine, bringing it into right, that is normal, wholesome, happy, relations with God and life and its fellow souls. If it has fallen into sin, there is healing; if it has lost faith, there is ever the path to the mount of vision. By growing a rich, refined, tender, valiant soul, we are working with God, and have behind us and within us all the redeeming forces of life. And such a soul is a messenger of God for the redemption of its fellows.

[*The Christian Work*]

We see that the very things for which Jesus stood are now beginning to come to their own in the common consciousness of the race. We see that his vision of God is the only one that will satisfy the spiritual cravings of this restless age. We see that his view of the solidarity of life is gradually but inevitably becoming embodied in our social institutions; in proportion as we are leaving ecclesiasticism behind we are realizing on larger, grander lines the kingdom of Jesus, the kingdom of universal brotherhood, in which the only law is love because love is God. Do without Jesus! Why, the world as a whole is only just beginning to understand him. Talk about the progress of humanity! Only once in the long roll of history have we had a glimpse of what humanity truly and eternally is, and that we have had in Jesus.

[Rev. T. Rhondda Williams in *The Christian Commonwealth*]

At the bottom of the unrest of the present day lies really a demand on the part of the workers of the country for a different estimate of their personality. It is not merely a matter of wages; it is a question of being regarded from a different point of view. I believe that if the deepest heart of the people were unveiled, the greatest bitterness today would be found to be due to the fact that the people have a feeling that they are tools, not persons. They want more wages and better conditions, of course; but the soreness is around that feeling that they are tools in the hands of others. And for that reason I do not believe that any rearrangement of wages alone will bring about a stable condition of society; there must come some system of shared management in which the worker shall not feel that he is a mere tool.

The distinction as at present maintained between master

Digitized by Google

and man is the thing that must go down. Men must be so placed and treated as to feel that they are all joint masters in a system that serves the common interests. In other words, the possessing and the ruling classes will have to break up the fallow ground of that governing mind of theirs, and entertain new ideas of their relations to their fellow men. When that ground is broken, then the Lord will come into this labor world and rain righteousness upon us.

The same is true in religion. If we want the best that God has to give, we must remember that that best is always to come. We must not, therefore, let whatever possessions we have at present, however good, harden down into a fixed frame of mind that will refuse to adjust itself to any great new reception. It is because the churches generally have not broken up the intellectual fallow ground, the hard crust of medieval thought-forms, that they have not been able freely and fully and joyously to seek the Lord of this new time, or receive what He has to give them. And that is to miss a rich opportunity.

[*The Christian World*]

The permanent value of the revelation of God in the Old Testament comes with the interpreters of historic records and the prophetic guides of Israel who in the eighth and following century lived in times of national distress and anxiety. We owe little to the times of prosperity,—almost everything to days when the prophets saw God against the darkness of their world. In the days of exile, when their light had gone out, they drew nearest to the heart of God, and saw visions of the cross. In the hour when the tyrant Antiochus Epiphanes stood over a prostrate people, the brave few found confidence and hope and victory in God. Nor is it less true that the New Testament, so joyous, so free from melancholy, is set against a background of darkness. The story of Christ and his people was passed in the days of national anxiety and fear. These were days when some dread apocalypse was drawing near.

[*The Watchman-Examiner*]

The fact might as well be looked in the face, that no professions of spirituality make up in the smallest degree for a lack of the common moral virtues in professing Christians. Men are not saved by character, but they are saved for character; and the only conceivable evidence of salvation that really weighs with another than the man himself as to the reality of his salvation, is not descriptions of feelings or of inner experiences, but the substantial results of a changed life. In every community there are probably some men outside the churches of moral character superior to some of those in them. Christianity does not pretend to make men perfect instantaneously. But in the large, if the professing Christians of a town do not as a body represent a higher ideal of pure family life, of business rectitude, of human sympathy and helpfulness than the unbelieving community, the influence of the church will not go far.

[*The Christian Register*]

Right is the upward course toward satisfactions that are unlimited, because no human soul can ever get too much of them; wrong is the sacrifice of these upper-class humanities for the sake of lower delights. When one is called upon to make the choice between two forms of vital activity, he need only stop long enough to consider, and the way before his feet will be so plain that a wayfaring man, though a fool, need not err therein. Let every man and nation, in these times of sore distress, stop long enough to ask, Which way am I going,—up or down, forward or back?

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, *Discoverer* and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $3. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; fifty copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; fifty copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 65 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Thirty-six governors, former governors, and governors-elect, attended the opening at Madison, Wis., on the 10th inst., of the seventh annual governors' conference, which for five days considered means of improving conditions within and simplifying relations between states. Conservation of natural resources was the dominating subject, considered with special reference to state control. Uniformity of state laws in connection with extradition, with the fixing of regulations to be met by alien corporations doing business in a state, were among the topics for discussion. The question of how, by uniform laws, to compel corporations to comply with child labor laws and health and sanitation provisions without discouraging business, is, according to the secretary of the conference, one of the most important problems ever brought before the governors.

The important farm crops of the United States this year are worth $5,068,742,000, or $104,000,000 more than the value of the same crops last year, notwithstanding a loss of $418,000,000 sustained by cotton planters on lint alone as a result of the European war. Preliminary estimates of the important farm crops just announced by the department of agriculture, and statistics of the average prices paid to producers on Nov. 1, indicate that this year's wheat and corn crops are the most valuable ever grown in the United States, that the wheat and apple crops are record harvests, and that the potato crop is the second largest ever raised. The huge wheat crop and the increased price of that cereal, the large corn and apple crops, and the increased price of oats, barley, and rye, more than offset the big loss in the value of the cotton crop resulting from the war.

Actual difference in time between Washington and Paris has just been established, by the recent series of exchanges of wireless telegraph signals between the big naval wireless station at Arlington and the French government station on Eiffel tower, after experiments and calculations that required months of labor by both America and France. Signals received at each station were recorded on specially designed instruments, and to detect errors due to mechanical imperfections, the observers exchanged instruments and repeated their tests. It is approximately four thousand miles from Washington to Paris, and the greatest distance over which previous tests of a like nature had been made was six hundred miles.

A scheme which contemplates the cultivation of a million or more acres of land that is now raw, and the seeding of it to grain with the idea of bringing the trade balance of the Dominion of Canada up to normal, says a Calgary report to the *Mail and Empire*, is sponsored by the Canadian Manufacturers Association. The idea is for the manufacturers, the farmers, the banking and railroad interests, to shape up the plan and give it support, and to ask the Dominion to finance it. In addition to the revenue that it would produce, the land it would reclaim, and the money it would put into circulation, it would do much to safeguard the empire against any shortage of foodstuffs in war time.

Good progress is being made by the South Australian government with the extensive scheme for the locking of the river Murray, in order that its waters may be fully utilized for purposes of navigation and irrigation. The South Australian portion of the scheme includes the construction of six weirs and locks above Blanchetown, and three weirs and locks in connection with the Lake Victoria storage basin. It will involve an estimated expenditure of one million seven hundred thousand pounds. The control of the whole of the work in connection with the South Australian portion of the river Murray developmental scheme is under the state engineer-in-chief.

According to official returns, the last harvest throughout the Australian commonwealth amounted to the record total of 103,589,369 bushels of wheat. After providing for consumption of food and seed, this total would leave an exportable surplus for the whole season of between sixty-five and seventy million bushels. Since the middle of last December the exports from the commonwealth, including flour reduced to the equivalent of wheat, have amounted to nearly sixty million bushels, most of the surplus having been exported. The value of the exports so far this season is nearly eleven million pounds.

Stock in several eastern Ohio and West Virginia coal companies, valued at three million seven hundred and fifty thousand dollars, has passed into the hands of John S. Jones, a coal operator of Chicago, as a result of an entry made by the United States district court in the Sherman law suit brought by the government against the New York Central and Chesapeake & Ohio railroad companies, their subsidiary lines, and various coal companies controlled by them. The entry dissolving the ownership of the properties was made by agreement between attorneys for the railroads and the government.

Permanent prohibition of the sale of absinthe and kindred alcoholic beverages in France may be a result of the war. Transportation and sale of absinthe were forbidden when the war began, but traffic in other intoxicants was continued. The government has now supplemented its original order with another, forbidding the sale of any alcoholic drinks similar to absinthe. There is a marked movement in all parts of France tending to perpetuate this prohibition.

The report of the agricultural ministry in Egypt, issued at the beginning of October, gives a much less satisfactory account of the cotton crop than the preceding report. Instead of the crop being 2 per cent above the average, as the Sept. 1 report estimated, it is now reckoned that the crop is 5 per cent below the average.

The Cape Cod cranberry crop is now estimated at 380,000 barrels, or more than 40,000 barrels larger than last year. The New Jersey crop is given at 140,000 barrels, and that of Wisconsin is figured at 88,000 barrels. This makes a total of 570,000 barrels for the country, compared with 469,700 barrels last year.

An official decree under date of Sept. 22 limits the maximum area to be devoted to cotton in Egypt to one million feddans, equal to one million thirty thousand acres, for the agricultural year of 1915. Authorities regard temporary curtailment favorably in view of the shortage of grain crops in Europe.

Dismissal by the court of claims of the Missouri, Kansas & Texas railway claim against the government for three million acres of land in Oklahoma, valued at $61,280,000, which the railroad claimed under old land grants, has been affirmed by the United States Supreme Court.

Edinburgh University court has agreed that, subject to the permission and approval of the dean of the faculty of the university, the sons of Belgian refugees who have come to Edinburgh for the winter shall be allowed to take graduation classes free of charge for the winter session.

Ten lighthouse towers have been erected on the Hudson bay route by the Canadian government,—seven on the Hudson straits and three in the bay. Next summer the lamps will be lighted to guide shipping to Port Churchill, at the southwestern extremity of Hudson bay.

Work is in progress on the largest United States wireless telegraph station in New England, to be established on the federal land near the naval hospital in Chelsea, Mass. There will be two steel towers, each three hundred feet high, one of which is already well along.

By a new process based principally upon refrigeration, oil producers in southern California are enabled to extract gasoline from natural gas, securing results that heretofore could be obtained only by distillation of petroleum by means of heat.

Seven million salmon eggs of the pink and hump-backed varieties were shipped recently in a special bureau of fisheries car from Seattle, Wash., to government hatcheries in Maine, to be distributed in New England waters.

The gross public debt of the United States at the close of business at the treasury department on Oct. 31 was $2,783,162,924, compared with $2,809,262,119 on Sept. 30. The net debt Oct. 31 was $1,082,298,291.

Seventy-five thousand hunters' licenses—ten thousand more than were issued during any other year—have been given Massachusetts sportsmen, authorizing them to hunt deer on the six days of the open season.

At a recent meeting the stockholders of the New Haven railroad ratified the settlement of the suit against the road under the Sherman law. The number of directors was reduced from twenty-seven to seventeen.

The peace commission treaty between the United States and Great Britain became operative Nov. 10, upon the exchange of ratifications between Ambassador Spring-Rice and Secretary Bryan.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII November 21, 1914 No. 12

"To be spiritually minded"

BLANCHE HERSEY HOGUE

IN his letter to the Romans the apostle Paul tells us that "to be carnally minded is death; but to be spiritually minded is life and peace." Nothing could be clearer than this. To dwell in material, selfish, or, in Paul's words, carnal thought-habits, leads to death, is death; but we may, if we will, exchange this carnal, destructive thought for life-preserving knowledge. Spiritual-mindedness preserves life, is itself life and peace. Thus the cleavage between spiritual goodness and materiality becomes the cleavage between living and dying; between the quality of thought which sustains life and the mistaken beliefs which tend to destroy it. Truly, according to Paul, in righteousness we are indestructible; in error we are not safe.

On page 360 of Science and Health Mrs. Eddy writes: "Dear reader, which mind-picture or externalized thought shall be real to you,—the material or the spiritual? Both you cannot have." Again on page 534 we read, "The Son of the Virgin-mother unfolded the remedy for Adam, or error." Here we have set before us the necessity for continuous choice, every day and hour, of Spirit or matter for our mental contemplation; and we are told that the remedy for the Adam-dream in which "all die," is found in that Mind of Christ in which all shall "be made alive." Now what man in trouble would refuse an obvious remedy for his trouble, a remedy which, according to Paul, lies in that spiritually true right-thinking which literally is "life and peace"? What can lift thought from depressing material belief, save the activity of spiritual thinking?

The one sure remedy for human woe is the activity of the right idea of God, man, and the universe operating in individual consciousness, and divine Mind feeds human thought with these right ideas, with the true understanding of being. Who, if he knew the full goodness of God and his own receptivity to this goodness, could cherish sin or fear sickness? To adopt into our thinking the right idea of life, as Christianity in its wholeness reveals it, is to enter upon a process of spiritualizing our thought, and this at once introduces spiritual experiences into our daily affairs. "Life and peace" become present facts with us, because "to be spiritually minded is life and peace."

Recognizing, then, that the remedy for human trouble lies in spiritualizing human thought, we see at once the demand that each individual must needs work at the root of what he calls his own character; that the Christianization of individual thought is the one and only way out of trouble. Christianization of thought means obedience to divine law, living as the exponent or manifestation of divine law, being like Christ in thought and deed, expressing infinite loving consideration toward one another and toward all living things. Christianization means the expulsion of animality, the de-animalizing, if we may put it that way, of human thought. And our chiefest concern should not be to de-animalize our neighbor's thinking but our own. This mental process meets evil at the point of our own belief in evil; and it is just at this point that evil can be challenged and laid low.

Christian Science adds to the Christianity of the Scriptures the understanding of the Principle and rule for demonstrating all that Christ Jesus taught, and makes plain the life and peace which come hand in hand with true Christianization of purpose and motive. It refutes the human way of thinking which dooms the good to suffer "in this present world," and helps mankind to prove that spiritually based goodness, intelligent, divinely enlightened goodness, is truly life preserving and health preserving. Christian Science unfolds God to human thought as divine Mind, everywhere present, all powerful, maintaining His creation without lapse or flaw. It shows the whole experience of matter and evil to be a false sense of existence, having no divine origin, and furnishes the rule by which the false belief may be laid aside, thought by thought, and the divine Mind may enter and govern and enrich experience with its own divine presence and power.

As individual thinking beings we cannot at the same moment cherish animality and the Christ. The two cannot at any instant dwell together. Christ, Truth, entering, through the activity of the spiritual idea, expels animality; and then practically, provably, we have evidence in the departure of the one that we abide with the other. "To be spiritually minded is life and peace." Spiritual-mindedness strikes out of our experience here and now, in the measure of its attainment, much of disease and death. We are urged to have that Mind "which was also in Christ Jesus;" and to the degree that we have it, we lose, little by little, the capacity to sicken and die. Having it, even in modest measure, the glory of God permeates our present sense of being with holiness, tranquillity, spiritual blessedness, and peace. The activity of spiritual thinking is irresistible, invincible, incorruptible, indestructible. It must by the law of its own righteous vigor, its God-bestowed vitality and power, offset and expel error from every individual mind and heart which it enters.

The God who delivered men from the fiery furnace and from the lions, can bring us through unscathed; and He will, when we think as spiritually as did those men of God. He who fed by ravens and increased the supply of oil, will never desert us; and we will cease to fear He can, when we trust as did Elijah and the widow of olden time. Spiritual-mindedness and life and peace cannot be separated. Striving for one, we earn and receive the other. In permitting God to enter, we have let in redemption.

✦

Good Limitless

J. LOUISE CARTER

IN Christian Science we learn that God gives all to each. This bare statement may arouse questioning and distrust in the thought of one who reads it for the first time; but careful reasoning will disclose the fact that the robbing of Peter to pay Paul theory is true only on a material basis, where both quantity and quality are limited. How different the things of Spirit! Is any portion of Truth's bounty withheld from

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

the earnest seeker? Is Love limited? Even the human sense of love pours itself forth with abiding confidence in its superabundance. Is divine Principle the possession of one to the exclusion of the many?

It would be no satisfaction to a follower of Christian Science to feel that he had more of good in any direction than his brother. Our Leader tells us that "happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it" (Science and Health, p. 57). This is the pith of the whole matter, that there is an unlimited fountain of good open to all. This good is not material, but is an outcome of God, and is therefore of the nature of Spirit. It may be wisdom or understanding, it may be love or life,—whatever it is, it is always spiritual in its nature, and therefore real, forever above and beyond any possibility of injury, loss, robbery. Recognizing this, is it any wonder that our Leader says, "When the real is attained, which is announced by Science, joy is no longer a trembler, nor is hope a cheat" (Science and Health, p. 298). This must be the joy which "no man taketh from you," and the hope which is "as an anchor of the soul, . . . and which entereth into that within the veil."

Old theology has always taught the universality of God, but it has remained for Christian Science to bring to light His impartiality. If we believe that our brother has more than we, or that we have more than our brother, are we not accusing God, the giver of all good, of partiality? The very fact that our brother seems to have more than we have, should be an incentive to gain that understanding of God which can prove His impartiality.

Suppose one pleads inability to write for our periodicals on the basis that he cannot express thought helpfully and attractively, while others can; that he can only make tame, uninteresting statements of facts,—"bromides," some one calls them. But think a moment! Whence comes thought? Cannot Mind make a channel of one of its ideas as well as of another? Obediently reflecting the divine intelligence, one can demonstrate an ability to do that which before had seemed impossible. We are told that "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13), and this thought understood, brings quietness and peace to the heart agitated with human sympathy, the heart that would presume to fill God's place and supply any seeming lack. It helps, too, to dissipate from another a cloud of self-pity, which might easily seem to be a barrier between that individual and his demonstration of good. Ever more clearly do we see, as we study the Science of Mind, our own responsibility for our environment and limitations. We are responsible just so far as we do not gratefully accept and make practical this impartial goodness.

Many years ago, when at work for The Mother Church, evil in the name of good hinted that I had better give up this work and let some one else have the privilege. The work was full of joy; it brought me into touch with thousands of Scientists, from whom I received only love and kindness, and the inference was logical, that if a few thousand people could for a few days regulate their going out, their coming in, and their conversation according to the demands of divine Love, so that peace and harmony were made real, then surely, though perhaps slowly, would come the time when all God's children would dwell together in peace and unity.

To error's suggestion, therefore, there quickly came Truth's reply: Principle is impartial. While one is getting the experience he needs, others are gaining the experience they need; hence, each should trust God, the universal benefactor, to care for all. Voluntarily to yield to a novice the duties which one had learned to perform intelligently and with despatch, then, seemed like presumptuous sin, like a putting forth of the hand to steady the ark; whereas the faithful performance of those duties led to other and greater opportunities for service to our cause.

In Christian Science the reward for work well done is not "a little slumber, a little folding of the hands to sleep," but more activity for God, and an increased ability to serve humanity.

Feeding the Lambs

E. HOWARD GILKEY

After the meeting between Jesus and his disciples on the shore of the Galilean sea, of which Mrs. Eddy speaks as the "spiritual meeting with our Lord in the dawn of a new light," and after the disciples had eaten of that "morning meal which Christian Scientists commemorate" (Science and Health, p. 35), there was a period of individual instruction by the Master, during which he asked of Peter, "Lovest thou me?" Receiving a positive and assured affirmation from the impulsive follower, Jesus responded with grave significance, "Feed my lambs." A second and a third time Jesus asked Peter as to the sincerity of his loyalty to his teaching, and to each affirmative reply he responded, as if to drive the lesson home, "Feed my sheep." In the first command, to feed the lambs, we are shown the Master's tender regard for that which is meek and gentle and tractable, and it causes us to meditate upon the question, Why give particular attention to the lambs? If the elders of the flock are properly trained, will not the younger members follow? The Master's wisdom, superior to that of all humanity, led him to command that attention first and last be given to the pure mental reflection of the Most High, to safeguard it from the false beliefs that mortals and materialism would crowd upon its advancing consciousness.

During the unprecedented and unseasonable snow-storm which swept across the central United States about two years ago, a Christian Scientist was given a lesson in the preparedness of Love's unfailing works, which brought vividly to his mind the significance of the Master's admonition to Peter, and gave a new insight into the breadth and depth of the divine command. The drifting snow that whirled before the accompanying gale until the whole country was covered with a snowy blanket, marooned in a strip of woodland upon an Ohio farm, a farmer's live-stock, including quite a flock of sheep.

The woodland was at some distance from the farm buildings, and during the height of the storm no attention was paid to the cattle, nor did they make any attempt to return to their accustomed quarters. The following morning, however, two boys started from the farm-house, digging through drifts four and five feet high in places, to reach the woods and drive the live-stock home. Rugged, hearty, fearless, the boys made their way across the fields, breaking a passageway to the objects of their solicitude, and after a season of courageous effort, arrived at their destination. After a brief resting spell the lads started the horses and cattle homeward, everything going merrily until it came time to start the sheep, and then an unexpected halt occurred. The sheep would not follow the cattle, nor would they follow the boys down the path, and they would not permit themselves to be driven!

Again and again the effort was made to coax the bewildered animals to start homeward, but they would go to the edge of the wood, look out across the white wilderness, and then refuse to budge an inch in that direction. Every effort

Digitized by Google

to coax them proved unavailing, and every attempt to drive them only resulted in their running around in circles that got nowhere or else scattered them in detached groups among the trees. But the boys knew that they must get the sheep to the shelter of the sheds, and discouragement if not anger would soon have possessed them if one of them had not suddenly become conscious of an illuminating thought. Somewhere in that unruly bunch of frightened animals was a lamb that he had petted all that summer; perhaps he would follow! It was worth trying! Look him up and see!

One boy kept the sheep from scattering while the other went through the flock calling for his playmate of the previous summer, and after a little search he found him. The lamb came to him willingly, for love and confidence had grown up between them during the weeks gone by and the lamb had not forgotten. So the boy brought the lamb out and set him in the path toward the sheds and petted him. Then he started for the distant feeding-grounds and shelter, and called for his long-time pet to follow. It was only an experiment that would serve perhaps to prove how strong might be the love that bound the lamb to him, and it did not fail or prove insufficient for the test.

With just a moment of hesitation, the little animal responded to the tones of the one he loved and trusted. Planting its little feet in the first snow it had ever seen, the lamb kept its eyes fixed on the lad in front and followed obediently along the path where on either side the snow was almost impassable, and behold! with only another moment of hesitation on the part of the remainder of the flock, one sheep after another took up the line of march behind the little leader, until the whole line was soon in motion winding its way across the snow, led by the new spirit of confidence which had driven away all fear! After all the animals had been put under shelter and were given food and water, the boys raced to the house to tell the farmer's family and their guest how lucky they had been to have a pet lamb at hand to help them out in the dilemma which had arisen that morning, and this guest, a Christian Scientist, told the story to the writer.

Even as in the instance of the little lamb there lay hidden an unknown power of future service in the confidence that love inspired, so in all directions and everywhere divine Love works, through endless reflections of pure affection, to the advantage of those whose thought is given to Love's work. The lad might have been careless of the lamb early in the summer; he might have been blind to its gentleness and tractability, just as human thought is often careless of that which is gentle and tractable in mankind. But instead of being careless, he gave play to some kinder impulse within himself, made way for the law of God, which is the law of gentleness and kindly consideration to all living things, and thus all unconsciously he stored up the vital influence of confidence and innocent trust which in the bleak days of winter would work to save the lamb and its companions from unnecessary suffering, and himself from defeat in the attempt to perform his duty.

The admonition to Peter, "Feed my lambs," is an admonition for the followers of the Master to cherish gentleness, purity, meekness, and goodness wherever it is found, in whatever experience it is revealed, and carries with it an evidence of his regard for the fruitage of such conduct. Jesus knew, as no other has ever known, that the salvation of mankind from sin and suffering, and of the world from discord and unhappiness, lies in the protection that good thinking and tenderness throw around all that is pure and meek and tractable in human experience. His disciples must be alert to recognize and protect from injury the sometimes faint outcroppings of inherent spirituality which need but slight encouragement to develop untold power for good in any individual. There should be a protection and tenderness that includes instruction, encouragement, and spiritual guidance toward the kingdom where Love reigns, feeding the lambs with love, feeding the gentle thought with the food of kindly appreciation, feeding the world in this impersonal way with the bread of God, so that all may come to know, in an hour of stress or perplexity, that from this nourishment of gentleness and meekness there has come the fruitage of omnipotent Love itself; for, as our Leader says in Science and Health (p. 514), "tenderness accompanies all the might imparted by Spirit."

❖

Joy Spiritual

EMMA GOODMAN

WHILE reading in one of our Lesson-Sermons these words of Paul, "Rejoice in the Lord alway," I was reminded of an experience which occurred some two years since. It was a day in November, and material sense had been telling me that it was the season for the family gathering round the festal board, and a rush of mortal thought brought a wave of sorrow and a yearning for

> the touch of a vanished hand,
> And the sound of a voice that is still!

I was seemingly overwhelmed by a thought of separation and the mental picture of a far distant home and a lonely aged mother beside the family hearthstone. I then turned to the Thanksgiving Lesson-Sermon of that week, and through tear-dimmed eyes began to study the words of Truth, and as I pondered them I was delivered from the depths. These were some of the messages which came to awaken me: "Let the peace of God rule in your hearts, . . . and be ye thankful." "Neither be ye sorry; for the joy of the Lord is your strength."

Again the words of Paul were borne in on my consciousness: "Rejoice in the Lord alway." Surely these were strong words from one who had known "tribulations," "necessities," and "infirmities;" but in the face of the things he endured, he advocated constant rejoicing. Now Paul must have known that there was something real, something vital, for which to rejoice, and by way of illustration came the words of Jesus, "Your father Abraham rejoiced to see my day: and he saw it, and was glad." Then I knew why I should be glad. Despite the pitiful tragedies of our time, is there not cause for great rejoicing? Has there not been bestowed upon us the demonstrable spiritual understanding which Abraham saw (as Jesus said he did, and rejoiced to see it), and which Paul knew and expounded?

I am deeply grateful for the life of Mrs. Eddy, the Discoverer and Founder of Christian Science in our day. In the midst of a sense of loss, sorrow, and suffering, she lifted her eyes heavenward and discerned the Christ-idea, and made it known to us, and through her teachings have come my consolation and comfort in every hour of need. I am thankful that I can rejoice in some measure today in the apprehension of these words from our text-book, "Science and Health with Key to the Scriptures" (p. 266): "Man is deathless, spiritual. . . . He does not cross the barriers of time into the vast forever of Life, but he coexists with God and the universe."

I am also grateful for our Lesson-Sermons, for all of our literature, for the helpful articles which serve to uplift thought; grateful that I have experienced in some degree the joy of overcoming; exceedingly glad for the knowledge that

Digitized by Google

the material senses do not tell the truth when they would have us believe in sin, disease, and death. In reality this has been a fruitful season, filling my heart with food and gladness. In Bible language, I can say with Jeremiah, "Thy words were found, and I did eat them; and thy word was unto me the joy and rejoicing of mine heart." Nothing was changed outwardly, conditions and environment were the same, but the joy which came to me on that dull November day has not diminished; rather has it increased tenfold, as I go on my way rejoicing in the ever-present of divine Love.

Sunday School

LUCY HAYS EASTMAN

THE term Sunday school in its general use signifies an organization for the purpose of giving Christian instruction to youth. To the Christian Scientist, however, there is a metaphysical standpoint which, when gained and held, lifts the concept of Sunday school as far above human organization as Christian Science lifts the church above the material institution with its ceremonies and rites, and identifies it with the consciousness that proceeds from divine Principle. We reach this point as we lift thought above the human elements,—the personnel of the children and teachers, the Sunday school rooms and their equipment,—and then ask ourselves, What have we left? In this process there will be no sense of loss, since we know that in taking away matter we have done nothing to Mind; we have but turned from the lower to the higher, from the temporal to the permanent.

This real Sunday school is an individualized consciousness that is pure, childlike, teachable; a consciousness in which spiritual ideas of Truth unfold naturally, according to law and order, and are to be assimilated and demonstrated. Its foundation is built upon obedience to the ten commandments, the spiritual understanding of the Lord's Prayer, and the fulfilment of the beatitudes. It is equipped with spiritual intelligence, lighted by revelation, and taught and superintended by God, divine Mind. Its music is the praise of innocence; its pupils are the hopes and aspirations of higher humanity; its one teacher is the Christ-idea in each individual consciousness. This Sunday school is a vital part of that "structure of Truth and Love" which Mrs. Eddy tells us "rests upon and proceeds from divine Principle" (Science and Health, p. 583).

It is manifest that in this school there cannot be either disorder or disobedience, restlessness or mischievousness, ignorance or inattention, vacancy or lack of any kind, for it is filled with Love's ideas, which are governed wholly by divine Principle. Teachers and pupils meet on the same plane of thought, the "big children" becoming humble and trustful, and the little children wise and thoughtful. Thus one and all they come into that close touch which understands and is understood; into that spontaneous freedom which is so native to Love.

We older ones enter this Sunday school as we attain that consciousness which instantly responds with joyous obedience to the Christ-call to feed the lambs and to suffer little children to come unto him; while the little ones find their way through their natural receptivity to Truth and Love. Consecrated desire and purity of thought enroll us as members, and serve to make us at-one with the love-filled purpose of the school.

But what is the connection between this idea of Sunday school and the human organization, and of what practical benefit is it to us in our work? This: Whenever a human sense is replaced with a spiritual fact, does it not always bless and heal? Then the truth about the Sunday school, fully realized, produces no less harmonious results upon the human sense than does the truth about man. To regard the Sunday school from the standpoint of Truth, removes every condition of thought which would obstruct the assimilation of Christian Science. It acts as a law of progress and supply, of unity and unfoldment. By imparting the atmosphere of Love, it operates oftentimes as an impersonal treatment and heals any sick or sinful belief that may be present.

Lifted above material sense by the spiritual idea of Sunday school, the officers will meet their responsibilities by trusting in Truth; they will feel and express that spontaneity of thought which finds so quick a response in the child-heart. They will elicit obedience, promptness, courtesy, kindness, and reverence for the teaching, by exemplifying these qualities themselves, so that the children simply catch the contagion of good, and are impelled by love rather than by a sense of duty. Under these conditions there will be no occasion to resort to amusement in order to command attention; no need for the word of rebuke, because there will be nothing found in this school that "defileth, . . . or maketh a lie." The mental atmosphere will prompt all, as it did the little child who said after attending a Christian Science Sunday school for the first time, "It makes me feel that I love everybody and everybody loves me."

The metaphysical view-point of Sunday school gives us the wisdom to perceive the need of protecting its expression in the human organization, for in this day and age its appearance is as a little nursling with many a King Herod standing ready to slay it, and this ofttimes in the name of good. We need have no fears, however, so long as we are considerate for the protection which Mrs. Eddy has provided in the counsels of the Church Manual. If we are responsive to these counsels, we will take every human footstep that leads up to the divine idea in the right way and at the right time, and the Sunday school will come to be known not as a human organization but as a spiritualized consciousness.

All this gives the ideal school and those who conduct it a wonderful God-given mission, even this: to lay the foundation-stones of the scientific consciousness of future years. Every practitioner and Christian Science teacher, therefore, should feel that he has a share of responsibility in the Sunday school, and that his part of this work is never completed. Mrs. Eddy has said that "God has appointed for Christian Scientists high tasks, and will not release them from the strict performance of each one of them" (No and Yes, p. 7). What more joyous task could there be for the worker in the Father's vineyards than to turn for a little time each day from the stolid beliefs and fixed opinions of the "older children" to enter the realm of child-consciousness, there to unite with that praise which God perfects out of the mouths of babes. Let the efficient Christian Science student think well before he excuses himself because of home duties . . . lack of ability, and declines to work in this field.

We cannot have too high or too sacred a sense of the place that the Sunday school holds in the Christian Science movement. Speaking prophetically, our revered Leader has written: "The children are destined to witness results which will eclipse Oriental dreams. They belong to the twentieth century. . . . Ah, children, you are the bulwarks of freedom, the cement of society, the hope of our race!" (Pulpit and Press, p. 8.) In our onward and upward steps, who knows but that the Christian Science Sunday school may be the little child who shall lead us to that church of Christ which exists alone in the affections, and which is described by the prophet when he says, "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together"?

[Algernon Hervey Bathurst in *Newcastle* (England) *Chronicle*]

I cannot help feeling that the clergyman who complains of my not replying to all the statements he made as to the practice of Christian Science, is somewhat inconsistent. I said very emphatically in my previous letter that in giving Christian Science to the world Mrs. Eddy was reiterating the teaching of Christ Jesus, having first proved that what he taught to the fishermen and others in Judæa and Galilee nearly two thousand years ago, is as practical, and therefore as scientific, or demonstrable, in this twentieth century as it was then. Since the Founder of Christianity revealed absolute Truth, it is obvious that if the knowledge of Truth healed the sick for some three hundred years after the ascension, a knowledge of that same Truth is able to and must heal the sick today.

Now, it is with some regret that I am compelled, at this critic's own request, to refer to his statement that "the practice of those who believe in it [Christian Science]" tends to "become a real peril to society." In the first place, it is wise always to be careful when criticizing something one has not thoroughly tested. There are many thousands of men and women who have proved that, thanks to Christian Science, they are able to understand and apply the teaching of Christ Jesus as never before. This being the case, the critic can scarcely insist that the practice of Christian Science, or in other words the whole-hearted acceptance of the teaching of the Founder of Christianity, including the scientific understanding of how to make that teaching practical, has "become a real peril to society." There is no getting away from results, and just as the man who was healed of blindness in the temple said, in reply to the Pharisees who questioned him as to how he had been healed, "One thing I know, that, whereas I was blind, now I see," so the man who has turned to Christian Science and has been healed of some functional or organic disease, is left in no doubt whatever as to the healing or as to what has healed him.

The critic considers that my last letter was a long one on the merits of Christian Science. If, however, I were to endeavor to explain to him in detail the practice of Christian Science, it would be very much longer than the *Chronicle* would care to publish. In conclusion, however, I would like to say that the standard of Christian Science is the standard of the Founder of Christianity, namely, that a tree is known by its fruits. The fruits, or works, therefore, must remain the final answer, and can be the only test by which Christian Science, or any other system, can be fairly judged.

✧

[Ezra W. Palmer in *Colorado Springs* (Col.) *Telegraph*]

The critic asks, Is it not a perilous thing to adopt Christian Science? The answer to that question is found in results, and these are apparent in every city and in almost every hamlet of the nation. Men and women are made better Christians because of Christian Science. They have learned to love the Bible and to strive to follow its holy teachings. Their lives have been transformed from a material to a spiritual basis, and they have found a religion which destroys poverty, business worry, sickness, and sin, and gives them harmony, peace, and health. In Christian Science they have found no shipwreck of their Christian faith. On the contrary, their faith has become deep-toned, sure, a firm grasp of the profound essentials, a scientific understanding of God which naturally and freely expresses itself in healing sickness and sin in themselves and others.

Christian Science does not deny the death and resurrection of Christ Jesus, but points to his demonstration in overcoming death and arising from the grave as the great example for the redemption of humanity. "The cross," said Mrs. Eddy, "is the central emblem of history. It is the lodestar in the demonstration of Christian healing,—the demonstration by which sin and sickness are destroyed" (Science and Health, p. 238). Nor does Christian Science deny the atonement. The word atonement occurs but once in the New Testament, in Romans v. 11. In the American Standard Version the word atonement in this passage is translated "reconciliation," and the word is similarly translated in several passages in the King James Version. Jesus overcame sin, sickness, death and the grave, to show mortals the way, but not to do their work for them. "Work out your own salvation," said Paul, and this is the Christian Science standpoint. We work out our own salvation by following the example of Jesus in destroying sin, disease, and death. By so doing we "put off the old man with his deeds," and are reconciled to God—prove man's unity, his at-one-ment, now and forever with God.

This critic stumbles over the use of the terms reality and unreality as employed in Christian Science. Only God and His creations are real, for they only are unchanging, perfect, spiritual, and eternal. The unlikeness of God is the unreal. Thus sin, sickness, poverty, and death are contrary to the nature of God, and are destroyed by "the sword of the Spirit." To human sense sin and sickness are real, and they so continue until the human mind rises to a clearer knowledge of the divine Mind. Christian Science does not deny prayer to a personal God, as this critic declares. The term personal, when applied to God as frequently employed, carries with it a sense of anthropomorphism; Christian Scientists do not employ it with that meaning. "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense" (Science and Health, p. 116).

Prayer in Christian Science recognizes God as infinite Principle, divine, unchanging Love; but this does not reduce God to a vague abstraction, as this critic infers. The word Principle as applied to Deity carries with it the idea of the fundamental, the original, the source of law, comprehending and including all; the living, divine, creative *Esse*, "with whom is no variableness, neither shadow of turning." That the term Principle as applied to Deity is scientifically correct, is proved by the fact that the prayers of Christian Scientists are answered in the healing of sickness and sin.

Mrs. Eddy does not dismiss the Lord's supper as a "dead rite," as this critic asserts. What Mrs. Eddy did was to point out that merely eating the bread and drinking the wine do not bring us into unity with God. To rely on material bread and wine to bring us into fellowship with God, would be to perform a dead rite. We must prove our unity with God by destroying error, and when we do this no other commemoration is needed. Christian Scientists observe the sacrament, but they do it without material accompaniments.

[John W. Doorly in *Harrogate* (England) *Herald*]

In a recent issue I notice the remarks of Mr. —— on "Occultism," in which he declares that "the occultist differs from the Christian Scientist in that he recognizes the reality and relative permanence of the physical universe." I am glad that the critic has made clear that Christian Science differs entirely from occultism, since anything less like Christian Science than occultism could hardly be imagined.

There is, however, one point I should like to make quite

Digitized by Google

clear, and that is, that Christian Science teaches that "that which is born of the flesh is flesh; and that which is born of the Spirit is spirit," and that there is absolutely no connection between real or spiritual being and mortality. Christian Science goes a step farther, and proves by the destruction of sin and sickness that, in proportion as we realize true or spiritual being, God's law, in that proportion do we prove mortality, with its sin and suffering, to be unreal; and these small beginnings are our proof that eventually all sense of material existence will give place to the understanding of true being or reality, just as the belief that two plus two equals five yields to the eternal fact that two plus two equals four.

This final overcoming of a material sense of being is what St. John describes when he declares that he "saw a new heaven and a new earth: for the first heaven and the first earth were passed away." Then will be fulfilled the prayer, "Thy will be done in earth, as it is in heaven." For then will spiritual being be found ever present and eternal, and the belief in material existence will have disappeared. Christian Science decidedly teaches that in Truth matter has no inherent power, since Spirit is omnipotent, although to mortal sense matter seems to have power. Christian Science is based wholly and solely on the teachings of Jesus Christ, and is in no way occult, but is divinely natural, leading men from matter to Spirit.

❖

[Willis D. McKinstry in *The Enterprise*, Burlingame, Kan.]

Our critic asserts that it is not through personal antagonism that he is impelled to take up the discussion of Christian Science, but that he is actuated only by a sense of "duty to stand up for Christ and his gospel." We consider it our brother's Christian duty to stand for Christ's ministry, but to maintain this stand requires a true knowledge of "Christ and his gospel." What constitutes this scientific or spiritual knowledge is not a personal question, and its answer must be based upon the law and the testimony to be correct. Christ's words came from his right understanding of the law and the testimony, and brought results, even his works of healing. Christian Science teaches that his words and works cannot be separated, that a religion based upon "Christ and his gospel," the law and the testimony, permits of no such separation, and that the Christian of today must compass the destruction of sin, disease, and death as Jesus did, to be his follower, thus bringing to light the omnipotence and omnipresence of God, good. Even the casual reader of the Christian Science publications readily detects that our critic is sitting in judgment upon a subject of which he has a misapprehension.

To detach a sentence in Science and Health from its original paragraph, regardless of its context, is to destroy the original or spiritual meaning conveyed by the author, and Bible quotations when used in like manner become contradictory. Our critic says that Mrs. Eddy teaches that God is Principle and not a person. Here he mistakes the spiritual meaning of the words Principle and person as used in Christian Science. A proper understanding of the term Principle, and its metaphysical usage, removes from it any harsh or physical abstractness which the human sense may have attached to it. Principle is causation; it is primary, or that from which something proceeds. We have divine authority for declaring that God created all that is created, hence He must necessarily be the cause or Principle of the universe. The Scriptures also teach that "God is love." This teaching Christian Science emphasizes by declaring that the source, the basis, the cause, the divine Principle of all true being, is infinite Love. The teachings of Christian Science affirm the infinite personality of God, and impart a demonstrable understanding of His completeness and divine nature; they also declare that infinite, omnipresent Love is not a person in an anthropomorphic sense, and that infinite Spirit cannot be classified as a finite material organism humanly known as person.

Our critic is also much exercised over his misconception of what Christian Science teaches about sin. He says Young's concordance uses six columns to show where the word sin occurs in the Bible. It is quite true the word sin appears many times in the Scriptures, but the spiritual record of God's creation as given in the first chapter of Genesis declares that when it was completed He pronounced it "very good." If, as our critic thinks, sin exists as an entity, and is true and real, it must be immortal. As all that is immortal is of God, what right, then, would mortals have to try to destroy or overthrow that which is of Him? The teachings of Christian Science are in accordance with those of Christ Jesus, and affirm that sin is not of God, hence its claim of existence is without basis, substance, or law, its pretense is a lie, and it is the father of itself. It was from this false claim of evil, operating in human consciousness, that Christ came to redeem mankind.

Our Lord and Master, as "the way, the truth, and the life," proved the way of salvation for mortals. Through his knowledge of divine Principle and the operation of spiritual law, he saved sinners, healed the sick, and raised the dead; then he made that remarkable declaration of them that believe: "The works that I do shall he do also." The teachings of Christian Science do not ignore or push aside the claims of sin and disease, but they impart a scientific knowledge of spiritual existence to mankind, whereby one comes to understand that these evils are no part of man's true being.

Paul recognized and understood the operation of scientific truth, for he said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." For almost half a century, in the degree that mortals have understood the teachings of Christian Science they have proved through demonstration its efficiency to meet every human need.

❖

[S. T. Downs in *The News*, Indianapolis, Ind.]

In a recent issue of *The News*, an address given at the Propylæum, on "The Secret and Law of Suggestion in Child Training," is reported, in which there is an undoubted intention to be kind to Christian Science; but it is liable to confuse your readers, and I shall appreciate the opportunity to make a brief statement of what Christian Science teaches.

The speaker is reported as saying in the sentence immediately preceding the statement that Christian Science heals, that mesmerism, psychology, hypnotism, and suggestion are the laws of God, and the inference is that Christian Science agrees with this doctrine. In Christian Science, however, we learn that God is Mind, and that in reality man is the reflection or expression of Mind, and is governed only by the law of Mind; the same Mind to which St. Paul referred as being in Christ Jesus. The opposite of this is the Adam-dream of many minds, with each mind having power to govern or control the other; it is the belief of mind in matter, and that man reflects both good and evil, and that evil is as real and powerful as good. Hypnotism, mesmerism, and suggestion, therefore, being but different names for the belief of one human mind controlling another human mind, are the direct opposite of Christian Science.

Digitized by Google

All through the writings of Mrs. Eddy, the Discoverer and Founder of Christian Science, she points out that the attempt to practise hypnotism, mesmerism, or suggestion will destroy one's power to heal through the law of God. She classifies hypnotism, suggestion, and the belief of one human mind controlling another human mind as "animal magnetism," and regards the correct understanding of this subject as so important that, in the Christian Science text-book, "Science and Health with Key to the Scriptures," she has given it a chapter entitled Animal Magnetism Unmasked.

There is no desire to question the right of any person to hold such opinions on this subject as he may think best, but the implication that Christian Science is the same practice as mesmerism, hypnotism, and suggestion, is so strong in the report of the lecture, that it seems necessary to inform your readers that Christian Science teaches it is a sin to try to influence another through human mind suggestion for either good or evil; that, in truth, man is subject only to the law of God, and there is nothing in His law that can harm or operate for other than the highest good.

❖

[Paul Stark Seeley in *Silverton* (Ore.) *Journal*]

A contributor to the *Journal's* columns recently expressed the opinion that Christian Science teaches its followers to believe disease can be overcome "by just thinking you are well." In fact, Christian Science teaches nothing of the kind, and the misconception that it does, could not be held by any one who had given the subject fair investigation. What Christian Science teaches and proves, is that the evidence of disease presented to man by the material senses can be destroyed by a scientific, correct knowledge of God and man's rightful relationship to Him.

Christian Science affirms that there is but one God, one cause, who is supreme now and always; that God is Mind, Spirit, infinite and good; that man is made by God, and must therefore be like Him, spiritual and good. It teaches that God, being only good, could not create evil, which therefore can have no place in His creation; that the phenomena of evil, and the mortal and material universe, are the counterfeits of the true creation, and exist only as a lie exists—in false belief. Christian Science also declares that man may find his freedom from the oppression of mortality through gaining an understanding of God, by whom he is made and governed, so laying hold of his spiritual selfhood designated by Paul as "the new man, which after God is created in righteousness and true holiness."

A lie believed seems truth to the believer, affecting his course and conduct until he learns the truth which exposes and destroys its falsity. Just so mankind, believing in a mysterious and unknown evil power that can degrade men through sin and destroy them through disease, remains in bondage to this lie of mortal sense until the truth of being, perfect and harmonious, is learned and man's spiritual status of divine sonship is known.

"The cause of all so-called disease," Mrs. Eddy writes, "is mental, a mortal fear, a mistaken belief or conviction of the necessity and power of ill-health." Again, "Science not only reveals the origin of all disease as mental, but it also declares that all disease is cured by divine Mind" (Science and Health, pp. 377, 169). Attempting to overpower disease "by just thinking you are well," without that knowledge which enables one to strike at its root, is like beating the air to be free from poisonous fumes. Permanent relief is found only when the noxious vapors are traced to their source and extinguished. Likewise, the disease must be traced to its lair, which is mortal belief, and mastered through the understanding of immortal Truth, before humanity can find health, enduring and permanent. The true man, God-made and God-governed, is not the slave or subject of evil power; good, as God is good, he is entitled to, and has by divine bestowal immunity and freedom from every mortal woe, for woes have neither place in God's creation nor power over His creatures.

Christian Science is Christian because its teachings and its works are those of Christ. It is scientific because it is the truth. No mystery or superstition clouds its teachings. It heals, not by guesswork, but by the present-day interpretation and demonstration of God's unchanging law that harmoniously governs all. By its works Christian Science is proving the truth of Mrs. Eddy's statement in "The First Church of Christ, Scientist, and Miscellany" (p. 238), "God is understandable, knowable, and applicable to every human need."

❖

[F. D. Culver in *San Diego* (Cal.) *Sun*]

Apropos the pending triangular religious controversy between three reverend doctors, possibly the views of the ordinary layman might aid in squaring the issue; more especially, too, from the fact that any bias or theological erudition is disclaimed.

As I understand it, Dr. ——'s appeal is to the church universal; but, nevertheless, he sees fit to go out of his way to criticize the Jewish, Catholic, and Unitarian creeds, and especially to attack Christian Science. College men and women, learned physicians, divines, lawyers, judges, and statesmen, are found among the votaries of Christian Science, and no higher plane of intelligence and education obtains in any religious denomination than in the societies generally of this faith. This is a practical age, and mankind has long been seeking, not merely an ethical faith, but a practical one, one that is an ever-present help in time of need; and Christian Scientists claim to have found it, and to be demonstrating it every day. Ecclesiastical wrangling over reputed heretics and man-made creeds surely never has furthered and never can further the kingdom of God. While it may not be denominationally religious, still I have always been imbued with the idea that a splendid and quite essential Christian adjunct and humane trait is at least a little of the "milk of human kindness" and toleration for those who may honestly differ from some of one's own views.

This reverend gentleman claims to pin his faith on the Bible. So do Christian Scientists; and I do not understand that there is any difference in his belief, as it goes, and theirs perhaps, except that they do not believe in a good and bad God, but exclusively in the former. He recognizes the command of Jesus to go forth and preach the gospel only, but Christian Scientists observe the further command to heal the sick, which they deem the Bible text makes equally imperative. With all of the doctor's seeming antipathy for Christian Scientists, he no doubt would do them the justice to admit that he never heard of an official member of their sect casting reflections on him or his work.

❖ ❖ ❖

How good it is
To go to Thee, Lord, in the oppressing hours
Of strife and turmoil, when the spirit cowers!
Within the shelter of Thy mighty wing,
The suffering heart may learn to sing
A song of peace and joy and hope,
Of conscious power with wrong to cope.
How good it is!

ALICE M. MILLER.

Editorial

Seeking the Light

THE general interest in the question as to the truth and efficacy of Christian Science, which is shown in the increased attendance at authorized lectures on this subject, is one of the encouraging signs of the times, because it proves that mankind as a whole is more definitely willing to think for itself in matters of health and religion than heretofore. This question must, however, be answered not by preaching, but in the same manner that Jesus answered the messengers of John who had been sent to inquire of him as to the validity of his claim to the Messiahship.

Jesus' answer was, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." There was no haste on the part of the great Teacher to reply to the question so abruptly put to him, "Art thou he that should come?" He went quietly on with his mission to the sick and the needy—that was the important thing just then! He knew that the truth of his claims must stand or fall by his works rather than by his words, and in turning John's disciples to the unimpeachable evidence presented by the works of healing they had witnessed, he realized that he was establishing for all time the authenticity of his divine mission and his authority from the Father.

Sincere seekers for the truth today are looking not to the words of Christian Scientists, but to the works wrought through Christian Science, for proof that this modern gospel of health and salvation is the same gospel that Jesus taught and practised in the cities and in the mountains and by the roadsides of Palestine. Such being the case, it is at the present time more than ever incumbent upon Christian Scientists to heed the advice of our Leader to "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495) of Christian Science, to acquire so clear an understanding of its teachings that they can demonstrate its Principle with unerring certainty. When this is done, when we can present to the doubter evidence that cannot be gainsaid of the healing power of Truth and Love, all questioning as to the truth of Christian Science will have ceased and misrepresentation of its teachings will have been silenced.

That the works wrought through the present-day understanding of Christian Science are breaking down the barriers of unbelief, is clearly shown in the many testimonies of healing published in these columns and related at the Wednesday evening meetings, but more and better work is still to be done before all the world can be convinced that Christian Science is what its followers claim it to be. Everywhere earnest Christian Scientists are giving the visible sign,—not of self-righteousness, but of righteousness, in their daily lives,—the evidence that they are not seeking the things of the flesh, but the things of the Spirit in all their affairs. As a result, they are fulfilling in their own experience the promise of the Master, "He that believeth on me, the works that I do shall he do also." This is the work to which every true follower of the Master is called, and each must fulfil his trust.

While it is as true today as it was in the time of Jesus, that mankind is more concerned about being healed of its diseases, in which it has no pleasure, than it is in forsaking its milder sins, in which it believes there is pleasure, it is also true that it is watching closely the conduct of Christian Scientists, to see whether or not they are consistent in their preaching and their practice. It is therefore unquestionably the duty of every follower of Mrs. Eddy to prove her words on page 869 of Science and Health, "To be every whit whole, man must be better spiritually as well as physically." The Master asked this pertinent question: "What shall it profit a man, if he gain the whole world, and lose his own soul?" Is there any pleasurable indulgence that can outweigh in the balances the joy of leading into light and salvation them that are sitting in darkness waiting for deliverance? Let us awake to the sacredness of our mission as Christian Scientists in this day and age, and labor diligently for that understanding which is life eternal to him that possesses it and shares it with his brother man!

ARCHIBALD MCLELLAN.

Rationality

THAT the average man covets the reputation of being right-minded and reasonable in all his thinking, goes without saying. We all distinctly prefer to be regarded as sane, and this surely is well. Moreover, the average man is entirely sure that he is sane, and much of his time is spent in trying to convey at least a modicum of his sanity to the people about him who seem to be more or less unable to see things his right way. This is the goal of most of his argument: he is not trying to get at the truth himself, but rather to illuminate the unfortunates who have not as yet come to his knowledge of it, and it is the enjoyment of this sense of mental superiority which renders common disputation so relishable. With what sweet satisfaction ofttimes have we succeeded in making it again apparent that our idea is the only tenable one in the field!

Nevertheless it is unquestionably true, and every man must face it some day, that perchance the bulk of the convictions which he has aired with such confidence, not to say pride, wilt into utter flabbiness the moment they are subjected to any real test of rationality. This fact is revealed in the noticeably increased humility of every true Christian Scientist. He has grown more modest in his assertions, because he has acquired the habit of submitting opinions, his own as well as others', to the demands of logic, the habit of asking whether they can be clearly and consistently related to his highest concept of God. For him nothing is to be relied on or given value that does not express Truth, Life, and Love.

It has been well said that "the distinction of rational from irrational concepts is that the former have grounds which justify them, while the latter are only effects in us, deposits of habit, prejudice, tradition, caprice," etc., and it is amazing how one is awakened to the quality of generally entertained beliefs and opinions when the test of this simple distinction is applied. He then begins to see how thoughtless and unwarranted much so-called thinking is, and how significant, how absolutely essential to real progress, is that demonstration of the truth which Christian Science has again made possible in its statement of the Principle and rule of being. This may be said to be one of its greatest ministries to mankind, its insistence upon rational grounds for every affirmation of conviction or belief. Under its guiding influence one speedily begins to sift things as he has never done before, and all the deposits of his past mental education and experience are in due time overhauled, that he may gather and preserve every grain of the gold of truth, while discarding as valueless all else.

This reducing process certainly relieves one of a vast mass of mental débris. It is an emptying of self that makes room

Digitized by Google

for Christ, Truth, and respecting it Mrs. Eddy has said, "Christian Science, properly understood, would disabuse the human mind of material beliefs which war against spiritual facts; and these material beliefs must be denied and cast out to make place for truth" (Science and Health, p. 130).

This precipitates struggle. Mortals do not like to be shown that all their vaunted culture and wisdom is but "foolishness with God." Moreover, after they have become willing to know themselves, the patient labor involved in the discarding of old habits of thought, the sundering of life-long attachments, the giving up of cherished contentions, yet remains to be accomplished by the slow process of analysis and substitution. Here, however, the teaching of Science respecting the unreality of material sense-testimony, and the "glorious liberty of the children of God," of every divine idea, makes for courage. It wondrously supports and stimulates the aspiring heart, and in the measure of our willingness to submit all our thoughts to the touchstone of Truth, in that measure we may be sure that they will be freed from fallacy and brought into captivity "to the obedience of Christ."

JOHN B. WILLIS.

"Things new and old"

No one can deny that only deep spirituality can rightly apprehend the real meaning of our Master's parables. Indeed, he himself said to the disciples that it was not given to those outside of his teachings "to know the mysteries of the kingdom of heaven." He addressed the material thought in parables adapted to their dull and darkened condition, all the while knowing that it is the one who possesses some measure of spirituality that shall have as a result of his teachings "more abundance." Contrariwise, from the one who has not the truth there shall be taken away that which he seems to possess, since Truth shatters all falsity with the piercing rays of its irresistible light.

When read in the light of Christian Science, the thirteenth chapter of Matthew is a whole volume of revealed truth, uttered by one who was proving daily the truth about God, man, and the universe, telling his students of things which had been "kept secret from the foundation of the world." All the while the great Teacher was making known to all who would listen, the things of God's kingdom, the priceless treasures of Truth for which we might well lose all earthly things and with Paul count them but refuse so that we may "win Christ,"—know the truth which sets free! At the close of this marvelous discourse, Jesus asked his disciples if they had understood it, and they replied in the affirmative. Then he said, "Every scribe which is instructed unto the kingdom of heaven is like unto a man that is an householder, which bringeth forth out of his treasure things new and old."

At every step of the way Christ Jesus was doing this very thing. He went deeply into the treasures of the old prophets, treasures long buried beneath the false belief that the rare truths they uttered were of no value in another age, except, perchance, as rhetorical gems. But when he, the Messiah, read the words of Isaiah, "The Spirit of the Lord is upon me," his listeners were stirred as if "a rushing mighty wind" had shaken the synagogue where they were assembled. The words were old and familiar, but their meaning was new, and it was pressed home when Jesus said, "This day is this scripture fulfilled in your ears." And how, we may ask, was this message received? With love and gratitude by all, we might well suppose. But no! There were some who heeded the gracious words, vital with love for all mankind; but—alas that it should be told!—the messenger was thrust out of the city and his very life threatened because he had offered to blinded mortals the treasures of Truth,—made known to them the healing and saving power of God's word.

In our own time, when the world was virtually starving upon the husks of creed and dogma, a divinely inspired messenger found the key to the treasures of Truth and called to those who were hungering and thirsting to share with her the "things new and old." On well-nigh every page of the Bible these were to be found, but it needed "a scribe echoing the harmonies of heaven in divine metaphysics" (The First Church of Christ, Scientist, and Miscellany, p. 115) to show humanity how these were to be made available in the overcoming of sin and suffering. Through Mrs. Eddy's teachings we realize that the experience of the Shunammite mother may be ours, if we as faithfully hold to the truth of being and consistently refuse to accept the material evidence which denies that God, the only Life, is ever present and omnipotent, until the spiritual fact is realized and demonstrated.

Most of all do we find the riches of Truth in the words and works of Christ Jesus. The spiritual law which he declared and demonstrated is neither new nor old. It is eternally operative, and we have but to avail ourselves of its healing and sustaining energy. Well might he declare that though heaven and earth pass away, his words would remain. Thanks to Christian Science, his teachings are today, more than ever, a living power, and as we appropriate the "things new and old," we find it true that no good thing is withheld from those who love God.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BUFFALO, N. Y.—At a recent business meeting of First Church of Christ, Scientist, corner of North street and Elmwood avenue, steps were taken to organize a second church. This step has been under advisement for some time. Owing to the rapid growth of Christian Science in Buffalo, the large number of members living in the eastern and northern sections of the city, who find the North street church not easily accessible, have united in this movement, and Second Church of Christ, Scientist, in Buffalo, is the result. It is less than a year since the Scientists moved into their new church at North street, and although this edifice seats twelve hundred people, its capacity has frequently been taxed to the utmost. This movement to organize another church is therefore natural and desirable.—*Buffalo Times.*

DAYTON, OHIO.—For the past few years the Christian Scientists of this city have provided a free reading-tent for all the visitors at the Montgomery County fair. This year it is more attractive than ever. Its well-built floor is covered with druggets and comfortable chairs. It is decorated with pretty palms, ferns, and roses. Postal-card views of the tent are given to visitors, and a good cool drink of water is free to all. Here the weary may rest, and at the same time have good, wholesome literature to read,—the Bible, and authorized works on Christian Science by Mrs. Eddy, together with the Christian Science periodicals.—*Dayton Journal.*

TEXAS.—During the past year there have appeared in Texas newspapers twenty-seven articles adverse to Christian Science, and these have been reported to the state committee on publication. In twenty-five cases the articles have been answered by the committee; and of these answers, twenty-four have been published by the newspapers containing the original criticisms.—*Correspondence.*

Digitized by Google

WHITE PLAINS, N. Y.—After about one year of careful consideration and effort, conditions became ripe for the holding of services at the Westchester County jail. Opportunity for religious services is afforded the second Sunday of every month, and on that day one hour and a half is reserved for this purpose to all denominations. The time has to be divided up by as many as present themselves at a given hour. Our first Christian Science service was held on March 8. For several years the jail has been regularly supplied with authorized Christian Science literature, and a *Monitor* subscription has been in force for a few years. Thus the ground was well prepared.—*Correspondence.*

LOS ANGELES, CAL.—Official announcement is made of the plan of Fifth Church of Christ, Scientist, in Hollywood, to erect a handsome new house of worship at the corner of Hollywood boulevard and La Brea avenue. It is stated by those in charge of the project that only a part of the contemplated church will be erected at the present time. The Sunday school portion of the structure will probably be the part to be started first, an auditorium being added later as conditions and the growth of the organization warrant. It is estimated that the completed edifice will cost close to one hundred thousand dollars.—*Los Angeles Times.*

ANCON, CANAL ZONE.—Permission has been granted to the Christian Science Society of Ancon to hold meetings in the district court room, Ancon, until other arrangements can be made for its accommodation. The membership of the society includes residents of Ancon and Balboa.—*The Canal Record.*

ALBERT LEA, MINN.—First Church of Christ, Scientist, maintained a reading-room at the Freeborn County fair in the New Merchants Building, and gave away four hundred and fourteen pieces of literature.

Freeborn County Standard.

NEW YORK.—The free distribution of Christian Science literature in the state of New York for the month of August amounted to 105,482 pieces.—*Correspondence.*

The Lectures

West Chester, Pa.

Willis F. Gross, who lectured on Christian Science, was introduced as follows by J. Foster Stevens, one of the faculty of the West Chester high school:—

During the past half century there has been a great movement, throughout the educational world, toward what has been termed applied science, or the practical application of the teachings of our schools. Simultaneous with this movement there has been one in religion, known as Christian Science. This, so far as I know it, may be called applied religion; applied love; the practical application of the teaching of that great Teacher who blessed this earth nearly two thousand years ago.

As to ultimate results sought, there is no difference between the Christian Science faith and any other faith or belief. The one great difference, however, between this church and other Christian churches is that the Science church teaches that if sickness, disease, and sin were overcome and cured through the doctrines of the Holy Bible in the time of Christ Jesus, there certainly can be no reason today why the application of the same teachings and doctrines will not bring about the same results. Christian Scientists are to be met with all over the world, who will tell you that they have received this spiritual healing both mentally and physically. We cannot afford to refuse this great movement a fair hearing.—*Correspondence.*

❖

Auburn, Maine

The College street edifice of First Church of Christ, Scientist, was filled to overflowing at the annual lecture on Christian Science. The speaker, Clarence W. Chadwick, was introduced by Judge Louis J. Brann, who spoke as follows:—

Christian Science, as it exists today, is a great world-wide, moral, religious, and healing system, founded or based upon the spiritual interpretation of the Scriptures, and illustrated and demonstrated in its fulness and completeness by the Master, the humble Nazarene, nineteen hundred years ago. It in no way panders to the sensational and emotional, but is a religion of wholesome optimism, and of a most confident and abiding faith. It protests against the sad, gloomy, and long-faced variety, and says that true religion, lived and demonstrated, is the greatest agency of peace, joy, harmony, success, and thanksgiving in the world today.

Christian Science lectures are given to enlighten, instruct, and correct misapprehensions that have arisen or may arise with reference to its teachings, and in no sense to advertise or proselyte, because Christian Science needs to do neither, as indicated by its rapid and unprecedented growth as a religious movement during the past twenty to forty years.

Lewiston Journal.

❖

Bexhill-on-Sea, Sussex, England

Col. William E. Fell, who lectured on Christian Science in The Skating Rink, was introduced by General Guard, who said in part:—

The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is indeed what it claims to be, a "Key to the Scriptures." It is wonderful how it illumines and gives a correct understanding of so much of the Bible that previously we had to be content to leave as not understood or as not for our time. Christian Scientists do know that Jesus' commands are for all time, and that the so-called miracles performed by Jesus and his disciples are only examples for us all to follow and do likewise, and we shall do so according to our understanding of the truth about God and His creation.

Christian Scientists do try to obey the commands to preach "The kingdom of heaven is at hand," to "heal the sick, cleanse the lepers, raise the dead, cast out devils," and are gradually but surely attaining in some degree the results which Jesus promised, namely: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." Jesus also said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."—*Correspondence.*

❖

Placerville, Cal.

Prof. Hermann S. Hering, who lectured in the Opera House to a large and interested audience, was introduced by Mrs. George Rieber, first reader, who spoke as follows:—

Sixty-five years ago the discovery of gold by James Marshall, only a few miles from this place, marked an epoch in our nation's history. To me it seems most fitting that tonight, amid scenes of the quest for precious metal, we shall learn of another great history-making event, a discovery made on

Digitized by Google

the far Atlantic coast by Mrs. Eddy, and given to the world through "Science and Health with Key to the Scriptures." She named her discovery Christian Science; and although the quest for this "pearl of great price" has been slower than that earlier mad rush for gold, it has been steadily going onward for forty years, until today thousands of people all over the civilized world are filled with gratitude for the relief from mental, moral, and physical inharmony which they have received through its ministrations.

Mountain Democrat.

❖

Reno, Nev.

Virgil O. Strickler lectured on Christian Science to a large and attentive audience in the Majestic Theater. He was introduced by Charles H. Colburn of Carson City, a member of the state tax commission, who said in part:—

It is being recognized throughout the entire civilized world that through the study of Christian Science there is a tremendous awakening to the fact that some powerful influence for good is being brought into the lives and experiences of humanity. It is being conceded that Christian Science is a spiritual, demonstrable religion, logical and practical; that the truth regarding the potency of divine Love, as understood and taught and demonstrated by the Master, is the same truth today and forever; that if the healing of sin, sickness, disease, and discord was possible through the scientific application of the right understanding of this Principle nineteen hundred years ago, it must be possible today. If in thousands upon thousands of homes where sickness, sin, and sorrow had written their awful lesson in misery, want, and despair, Christian Science has been practical and effective enough to bring in the sunshine of hope, happiness, and health, it is certainly entitled to our earnest, unprejudiced consideration.

Reno Gazette.

❖

Snohomish, Wash.

Francis J. Fluno, M.D., lectured on Christian Science to a large audience in the Eagles Hall. He was introduced by the Rev. Robert Murray Pratt, minister of the Congregational church, who said in part:—

This century will go down in history noted for having brought to light the truth that Jesus came that we might have life, and have it more abundantly. He said, "I and my Father are one," and his prayer for humanity, "That they may be one, even as we are one," will be answered. When mankind opens the channels of the mind to the love of God, the perfect law of life, we shall be perfect, even as He is perfect.—*Correspondence.*

Testimonies of Healing

Christian Science came to me like an angel, at the midnight hour. Mrs. Eddy defines angels as "God's thoughts passing to man" (Science and Health, p. 581), and such a thought came to me one night in the year 1906, bidding me try Christian Science. I was then on what was believed to be my death-bed. My children and my relatives were afraid to leave the house, for fear I would pass on at any moment. For two days and nights the doctor did not give any hope, saying that I was too old and there was no chance for my recovery. I had been suffering from hemorrhage of the nose for almost two weeks. At first we called in our family doctor, and a week later a well-known physician in our neighborhood, but they could not help me. I grew weaker from day to day, and the evening of the last day of February the doctor was at my bedside from eight until twelve o'clock, when he left with the expectation that I would not live till morning. But "man's extremity is God's opportunity."

As soon as the doctor left, I made up my mind to try Christian Science, and when the nurse wanted to give me some medicine at three o'clock, I refused to take it. I have not touched a drop of medicine since. I told the nurse that as soon as daylight came one of my sons would look for a Christian Science practitioner. Those called upon were busy in the forenoon, but at last my sister-in-law procured one at two o'clock in the afternoon. When the gentleman came, he gave me a treatment which lasted about half an hour, and then I felt like one new born, I was so much better. I was able to move on my side, whereas I had been on my back most of the time, for as soon as I would turn the least bit, the hemorrhage would be worse. When I moved on my side after the treatment, the left side seemed paralyzed, but this was better soon, and the trouble left me the next day. A week afterward I had a relapse, and my children wanted to call the doctor, but I told them I did not want one. Then they called the Christian Science practitioner, and when he came at eleven o'clock in the evening, I told him I wanted to die in peace; but he said that I should not fear, for I would not die, that God was my life. The practitioner stayed with me until midnight, and he engaged a Christian Science nurse for the next day. In her presence I felt safe and secure, and I improved rapidly. I had three weeks' treatment altogether.

The first Wednesday in April I went to church and gave my testimony. I studied the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the Lesson-Sermon, and through this study I was soon enabled to overcome many ailments to which I had been subject,—headaches, stomach disorders of twenty years' standing, and erysipelas, with which I had been troubled since the year 1877. A dislocated arm, a sprained ankle, and an injured wrist have been healed, and the fear of the reappearing of the hemorrhage has been destroyed. The doctor and all my neighbors said that I was not healed, and that the trouble would soon come back if I tried to do any work. For some time, therefore, I had a little fear, but I fought against it, until it disappeared with the realization that I had nothing to fear, since God is my life, my strength, and my defense, "a very present help in trouble."

I must mention one more blessing. I had worn glasses for twenty-one years for reading and sewing, but since the year 1897 I had been obliged to put them on the first thing in the morning, and wear them until I went to bed. I took them off when I had been in Christian Science about two years. I do not say that my sight is perfect, but I read all the Christian Science literature, and look up words in the dictionary, without glasses, as well as do my housework and mending.

Words cannot express my thankfulness to God, and my gratitude to our beloved Leader for Christian Science. I am also grateful to all who have helped me with kind words and deeds. I am thankful for the *Sentinel*, *Journal*, and *Monitor*, and to the contributors for their inspiring articles, which are spiritual food for each student in Christian Science. Besides the Bible, our text-book, and our *Quarterly*, these give us the spiritual uplift which we receive daily,—the knowledge of the Lord. I am thankful that I have had the privilege of class instruction.

I hope that some sufferer who reads this testimony may be led to listen to the "still small voice" which bids us try Christian Science. Christian Science and *materia medica* are as different as are day and night. When I was in the care of the doctor, my household was in confusion, and three or four persons were required to care for me; under Christian Science, everything soon became calm, quiet, and peaceful, for we felt the "peace of God, which passeth all understanding." For all these blessings I give praise to God.

CAROLINE KRONENBERGER, Chicago, Ill.

❖

About four years ago I had what is known as granulated eyelids. I was unable to open them, as I seemed to have lost control of the muscles of my eyes. I went to one of the best eye specialists in Los Angeles, and in about six weeks the granulation seemed to be cured, but the sight was practically gone. The physician told me he had done all that he could do for me, and I went home pretty well discouraged. I tried material means in every way for about six months more, and at the end of that time my son suggested Christian Science. I went to a Christian Science practitioner, and received benefit after the first treatment. I had nineteen treatments in all, and I can now see to read the finest print without glasses, and my sight is continually improving. The treatments also cured me of the smoking habit.

For this healing I am very thankful to God, and grateful to Mrs. Eddy.—S. E. BISBEE, South Pasadena, Cal.

❖

A little over twelve years ago, two copies of *The Christian Science Journal* were sent me, and they seemed in direct answer to a sincere desire to get a better understanding of the Bible. These *Journals* were read over and over, for it seemed so good to know there was a church that made Jesus' teaching practical, and that we in this age could be healed by prayer, as the Bible teaches. I soon purchased a copy of Science and Health, but did not understand much of it, except the chapter on Prayer, until after I had class instruction six years later. There was bitter antagonism in the family against what they thought Christian Science to be, but during this time I got a great deal of comfort and help from studying the Lesson-Sermons and the Christian Science publications.

I have had many proofs of physical healing. Sometimes I have had to ask for help from a practitioner, and the healing has not always been quick, but it has ever been accompanied by a sense of peace, and an uplift such as I never experienced from material remedies. A better understanding of the Bible, gained through the study and demonstration of Christian Science, has taught me to love it and its promises. I have come to know that they will be fulfilled in us as we demonstrate Truth and Love more in our daily lives. Often when duty seems difficult or unpleasant, this passage from

Digitized by Google

Proverbs, speaking of wisdom, comes to me: "Her ways are ways of pleasantness, and all her paths are peace," and it strengthens and cheers wonderfully.

For all these blessings I am truly thankful to God, and grateful to Mrs. Eddy and to all earnest workers in the field.

AMY GRACE WOLFE, Union Bridge, Md.

✧

Several years ago I was one of the most wretched of women. I was sick all the time, having been subject to severe headaches all my life, and I was in deep sorrow. I was poor because I was too ill to work, and too despondent and discouraged to want to live. I felt that death would be a relief. I had facial neuralgia so severely that there were two occasions when for three days a teaspoon could not pass between my teeth far enough for nourishment to be taken. I also had what our family physician termed a rheumatic condition, and he informed me that I would have a long siege of illness. I suffered from stomach disorder, throat trouble, and other ills. I had many doctors and tried almost every known remedy, sometimes with temporary relief.

One day, when I had lost all hope and was suffering intensely, I was advised by a young lady friend who had been cured of defective eyesight and neuralgia, to go to a Christian Science practitioner whose name and address she gave me. I did not doubt what she said, but I did not believe that anything could cure me, so I suffered on for three more days and nights, and then decided to go. I have been very thankful ever since that I did go, though I was so weak that I had difficulty in walking to the practitioner's house.

After receiving treatment, I felt stronger, and the next day I had no headache. Several times that day I surprised myself by singing hymns, something I had not done for over two years. The spiritual uplift was more to me than I can ever explain. My physical healing was slow, but sure. I had to go back to the practitioner many times, for as the headaches and rheumatism improved, I was anxious to work, and so exposed myself unduly and had influenza twice and a throat affection. I also had a carbuncle on my arm, but I never wavered from the belief that God, through the instrumentality of Christian Science, would cure me permanently; and today I am a well woman comparatively, and much happier than I had ever hoped to be.

I began to study Christian Science and to attend the meetings soon after the first treatment. I studied with the prayerful intention of understanding this teaching, and with the firm determination to fathom it, and I have been rewarded by many demonstrations. My daughter has been healed of chronic stomach trouble, a throat affection, and other ailments. She is now a picture of health and happiness.

For all these blessings we are thankful to God, and to His Son, Jesus Christ. We are also grateful to Mrs. Eddy for the enlightenment found in the study of "Science and Health with Key to the Scriptures," and her other writings.

KATHLEEN H. VAY, New Orleans, La.

✧

The truth as revealed through the study of Christian Science was shown to me by a very dear girl friend who had been healed of St. Vitus' dance, and whose mother had been cured of a complication of diseases after having been pronounced incurable by the doctors. Although it was through these healings that I saw the truth, it was my desire that led me to take up the study, and not the physical results. I had attended Sunday school for seven years prior to this time, and had been quite a regular attendant, but it never appealed to me very much, and I always thought that there was something more in the Scriptures than I was learning. This vacancy is now being filled by my daily study of the Christian Science Lesson-Sermons, by the Wednesday evening meetings, church services, and Sunday school.

I am more grateful than words can express for the fact that I became interested in Christian Science before any prejudice against the subject had arisen in my thought. This left me free from the necessity to demonstrate over that error, for which I am very thankful, and I feel that most members of our Sunday schools will join me in this. I heard of Christian Science for the first time about seven years ago, and it seemed quite strange to me, as I was only eleven years of age at that time, that these people should read the Bible and Science and Health every day. Religion seemed to me something only for Sundays; but as I never argued concerning beliefs about God, and as none of my family or friends were looking into Christian Science, I did not become interested, and therefore knew nothing of the subject to be prejudiced about. Then, about four years ago, my friend told me of the God who had done so much for her and her mother, and said that through these healings her father had become convinced that there was a God who, when he knew Him aright and called on Him, would lead out of all darkness into eternal light.

Since entering upon the study of Christian Science I have not only been able to overcome, and usually alone, the errors which have arisen in my thought and manifested themselves in the form of disease, but I have been able to keep my mind comparatively free from these thoughts. My first demonstration was over a cold, a belief to which I had been subject every winter. This cold not only disturbed my rest, but woke all in the house, as I coughed most of the night. My relatives and friends claim that I have outgrown it, but I know differently; it has been overcome by the power of Truth, never to return again. I have had many more proofs of the healing efficacy of Christian Science. One proof which I wish to mention is the sustaining power which I felt while passing through what to mortals is the hardest experience, and during these times, which came twice within six months, I could look above the material and realize that there is no death.

My hope is that my experience will lead others to the straight and narrow path where "there is safe abiding," and that my testimony will help some one who is interested in Science, as the testimonies which I read in the *Sentinel* have helped me. I wish also to express my thankfulness that God showed Mrs. Eddy the truth, and that she was permitted to make it known to all mankind.

HELEN C. KRANTZ, Brooklyn, N. Y.

✧

I had been studying Christian Science about a year and had taken a few treatments for a trouble with my leg, but as yet had apparently obtained no benefit. At three o'clock in the morning, Jan. 25, 1910, I awoke with my chest, throat, and head so congested that it was with difficulty I could get my breath. My first impulse was at once to wire a Christian Science practitioner at Kansas City, Mo., for treatment, but it was so near morning I decided to wait and wire then. Lying there, suffering, I thought: "How hard it is to understand Christian Science! There ought to be some way to make it easier." Just then I began to get a little sleepy, and the thought came to me that God would take care of me, so I dropped to sleep, but soon, feeling a muscular jerk of my whole body, I awoke. I was perfectly free, and I never felt better in my life. The thought at once came to me, "Did I dream all this?" Then I remembered that I awoke with

Digitized by Google

a jerk; this was the proof I needed, as it is just when losing consciousness that I have this experience, and at no other times. This proved to me that I had been awake, and consequently it was no dream. I had had catarrh all my life up to this time, but have been perfectly free from it ever since. At the age of sixty-nine years I am enjoying as good health as I ever had in my life.

My thankfulness goes out in all its fulness to God for the love He has given His children, and I am also deeply grateful to Mrs. Eddy for directing our feet into the path that leads to eternal life.—A. D. Battey, Topeka, Kan.

❖

[Translated from the French]

I am anxious to tell how grateful I am for what Christian Science has done for me, both physically and mentally. I had been ailing for several years, more especially for the last two years as the result of a fall. I could not move about easily on account of gout, and besides suffered with a serious kidney affection. These ills kept me in a state of fear which interfered with all my doings, and made me feel unhappy.

In October, 1912, I had an attack of paralysis. It was at that time that I first heard of Christian Science and its healing power. Although I was not exactly clear as to the meaning of the term Christian Science, I did not hesitate to apply for treatment, and the subject was explained to me in such a loving and comprehensive way, and appeared to be such a beautiful and comforting truth, that it did not take me long to understand it. Within a short time my health improved, and I was able to come and go as I had not been able to do for a long time. The fear that pursued me has disappeared, and I am a well woman, seeing life in an altogether different light.

Although not familiar with the English language, besides not being very young, yet I bravely began its study, and am happy to say that after a few months it became possible for me to read that useful and inspiring book, "Science and Health with Key to the Scriptures," as well as the Christian Science periodicals. Since my healing I have had the joy of seeing my husband turn to Christian Science for help. He had been suffering for many years with very distressing pain, said to be caused by some condition of the spinal marrow. Within a short time there was a marked improvement, which is still going on, and we hope that with faith in God, complete healing will follow.

We are very grateful to Mrs. Eddy for the light which through her has been spread throughout the world, and which makes it possible for us better to understand the Word of God and helps us to put it into practice. We give thanks to God for this beneficent change, and for all His blessings.

Louise Pasteur, Geneva, Switzerland.

❖

About six years ago I was taken with colic while working in a lumber-yard. I told a friend who was working with me at the time, that I would not be there that afternoon, as I would have to stay at home and take some medicine. He said there was no need of staying at home for that. I asked him why, and he then told me he was a Christian Scientist and what Christian Science had done for him. I took him at his word and came back, and worked all the afternoon with no sign of the disorder. I therefore questioned him in regard to Christian Science, with the result that I borrowed his copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it for a week, when I bought the book for myself. I have not had this trouble again, although I had been subject to it for years.

Since coming into Christian Science I have had many demonstrations of God's power to heal the sick and sinful. Among them was a case of sciatic rheumatism. I had been working for myself in Science, but finding I could not overcome the difficulty, I applied to a Christian Science practitioner. She told me I need not fear, as the pains would leave me; so I went away knowing that God created man in His own image and likeness, not to suffer pain. I did not see any change until the next day, when the pain seemed to get worse. I called up the practitioner and told her how I was, and she assured me I would be all right. When I left the telephone I could not walk, but after sitting down a few minutes I got up and walked a half mile back in the pasture. Then I went over to one of my neighbors and back, and it seemed that the pain had all gone. Not so, however, for it came back the next morning; but it was never so painful after that, and gradually left me altogether. That was almost a year ago, and I have had no symptom of the disease since.

I have been cured of the liquor habit of long standing. I once thought when I came to town I could not go home without taking two or three drinks, but thanks be to God and to Christian Science I can pass a saloon now and not think of drinking. The tobacco habit has also been overcome with this same understanding of God and His Christ. Then, too, a very severe stomach disorder has left me, and I could name numerous other healings. How blessed it is to know we have a God who is ever present!

I am thankful to God for this understanding of the Christ-way of healing. It is the only true way, for it is scientific Christianity. I am also grateful to Mrs. Eddy for her untiring patience in giving this new-old method of healing to the world as she received it from God. I hope my testimony may be of help to some one.

J. K. Smiley, Kalispell, Mont.

❖

I wish to express the gratitude of my heart for what Christian Science has done for me. It is several years since I walked across the street to an old friend to ask her something about this teaching. She had been away for years, and I knew she was called a Christian Scientist, but I had no idea what Christian Science was. A lady who knew of a healing in Christian Science, and who had been living near me, asked why I did not try it, though she was not a Scientist herself. I did not then heed the call, although I had suffered for twenty years and had spent a great deal of money in search of health. I had undergone one operation and prepared for another, and was going in two more months for a final one. The surgeon had told me to go home and take the medicine he left me, and by the time he came back to Fort Worth in September he thought I would be able to undergo the operation.

The doctors had said that my general system was broken down and my nerves were in such a condition that I could not be operated on for months; and it seemed that if I did not get relief I could not live until September came. But when we prepared for the minor operation I caught cold (I seemed very susceptible to colds), and as my trouble had been aggravated by the attack, the doctors would not operate. To mortal sense there seemed to be no hope, unless a very serious and dangerous operation were performed; but man's extremity was God's opportunity. When I said I had no confidence in any faith-healing, my dear friend replied, "You do believe in God, don't you?" I had believed in God and trusted Him since a child.

The very next day my friend called to see me with another lady, who told me more of Christian Science, and gave me

Digitized by Google

the name of a practitioner to write to. I began reading Science and Health, and the helpful letters from the practitioner led me to see the light, that beautiful light of the Christ-life, the blessed truth which, we are told in God's Word, makes us free. Joy and praise filled my heart, and I forgot I was seeking for health. I was so filled with that love in my heart that I only longed to know and to do, to live, and to tell all the world of the Christ, Truth. To the surprise and joy of my family and friends, in six weeks I was a well, strong woman, much stronger than I had ever been; and I have remained so.

I am thankful to God, and grateful to Mrs. Eddy for helping us into this understanding of Truth, which makes us free from sickness, sin, and all sorrow. Since my healing in July, 1910, I have had several demonstrations of God's power to heal both myself and others, and my daily prayer is to live ever a constant, pure life in Christ, my Lord, to do some good for God every day.

SARRAH S. KNIGHT, Wichita Falls, Texas.

❖

If I were to allow thought to dwell upon what I represented to humanity before I knew of Christian Science, I would be appalled at the picture. When a small child I had been run over, with the result that my skull was fractured. I had also fallen down-stairs, which caused abscesses of the head. The doctors all agreed that if I lived to be over twenty I would have to be kept quiet and happy. Most of my childhood and girlhood was spent in seeking health, and I used to tell my parents that I was costing them more in doctor's bills than I was worth. Far from being quiet and happy, I lived in nervous excitement, and have known some very bitter unhappiness. I was also a constant sufferer from neuralgia, and never free from sore and aching feet.

Truly I am now a different woman, and the understanding of Christian Science has accomplished the change. From being a Bible reader, I have become a Bible student. Instead of a careless, irresponsible, bend-with-the-wind sort of person, I am becoming more careful, dependable, and firm. Even as did the Master, I say, "I can of mine own self do nothing," but I know that with God "all things are possible." I find that with constant study of the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am proving all things, chief of which is the fact that Truth is first, last, and always.

The marked change in my daily thought has also been a source of great pleasure. At first I resented it, because it seemed to be taking from me my own individual thoughts, but now I am happy to say that my thoughts are almost constantly of God. I know that I have only one ideal, which is that of divine Mind, or Principle. I am not only bringing up my little girl to know the truth, but am also teaching little ones in the Sunday school, for I am convinced that close application to the study and demonstration of Christian Science brings peace, happiness, and health.

MRS. M. E. BRANDON, Plainfield, N. J.

❖ ❖ ❖

Like the singing quills of a happy dove
  Approaching the home roof-tree,
Is my vibrant pæan of Truth and Love
  For joy of the good to be.
And if the wintry storm blows cold
  At midnight, to menace me,
And I cannot fly, then these wings enfold
  My being protectingly.

GERTRUDE RING HOMANS.

From Our Exchanges

[The Congregationalist and Christian World]

The day is dawning when justice and righteousness, mercy and magnanimity, kindness and good will are to be the forces that will hold mankind together and prevent civilization from collapse. This as yet half-formulated desire of nations now in travail, is not a desire for a revival of official Christianity, for more elaborate religious functions, for more highly developed ecclesiastical systems; it is a world-wide yearning for the Christianity of Christ in its simplicity and power; for the expression in human lives day by day of the patience, the goodness, the courage, the humility, the long-suffering, the unselfishness which Jesus exemplified and taught; it is a yearning that society in all its parts be penetrated with his spirit.

Never did it mean so much to be a Christian; never has the constant exemplification of the Christian virtues counted for so much. We hear it said that this coming winter is going to be a hard one in church work. It need not be that. There has never been a better time to invite others to begin the Christian life, to study the meaning and the wide applications of Christianity, to demonstrate before the world its power to make life clean and strong, hopeful and sacrificial.

[The Christian Intelligencer]

Only one remedy remains which has never yet been universally tried,—the spirit and teaching of Jesus Christ. There still remains the greatest thing in the world, the power of love. Men have railed against the old doctrines of the faith, but see now how they are needed. Men need conversion; they need to be born again; they need the lesson and the power of Calvary.

Jesus, knowing how God's kingdom alone could bring peace and make all men brethren, taught his followers to pray, "Thy kingdom come." This prayer should be prayed unceasingly these days, with holy and humble passion. What tragedy and ruin men have made of their opportunities and responsibilities! To what terrible issues has self-sufficiency been brought! How the righteous have been made to suffer unrighteously! The crying need in this day of darkness is the power and grace of God. Knowing that His compassions fail not, let us pray as we have never prayed before, "Thy kingdom come."

[Rev. John Howard Melish, D.D., in *The Christian Work and Evangelist*]

If we believe in a living God, every movement of our time must have spiritual significance. The God in whom mankind finds its life, its progress, and its existence, must surely be at work among men. We men and women of a day may not interpret aright the meaning of the divine presence; to us what is really a retrogression may seem an advance, and what is real progress may appear a decline. But in spite of our limitations we should attempt to interpret the significance of every movement, for life and peace for any man or any generation spring only from thought and action that are in harmony with the will and purpose of God. Jesus condemns the religious people of his day and generation for their failure to interpret aright a spiritual movement of their time. They could tell the weather, he said, but not the presence of God.

[The British Congregationalist]

The world will not be won by the careful dissecting of texts and the collating of ancient manuscripts, but by a recognition that there is but one Master whom we serve, and that the vital things in religion are of the heart and spirit and

Digitized by G

not of the intellect. What the world wants is the one great note of the love and fatherhood of God, and the frank and humble acknowledgment that the gospel of "The Prince of Peace" cannot be effectively preached in the face of the schism in the ranks of the Christian church.

[*The Christian Register*]

What would a religion be good for which it is possible for men and women in this stage of the world to be equal to? How inspiring would be a moral code adjusted to the average ability to practise it? How much better off would the world be with a religion untroubled by ideals than with a religion that was perpetually above the world? What is the best way to treat the failures,—as if they were the failures of religion, or as if they were the failures of men to apply religion? The failure is so great that it seems the failure of God Himself. That is the length to which not a few people go who take the events of the time as texts for a religion in which religion is counted negligible, and give up faith as unworkable. But the world in times far lower than ours has yet kept its head, and its ideals have lifted it to renewed endeavor. We should not be in our place and with our blessings, if in the past men had talked of the failure of the one thing that was left to save them from their failures.

The world will lift up its head again. Men will believe God keeps watch above His own, and believe it more firmly than ever. We shall see where the inconsistency is, and make it our leverage for deliverance. We shall see that the inconsistency is not between God and His world, but between men and their God.

[*Zion's Herald*]

Now and then, throughout our whole lifetime, come moments of insight and vision, when we stand before new areas of life with the joy of discovery upon us, like Cortez, "silent, upon a peak in Darien." For life is a unity; it is full of order and beauty. We are slow to find it out, and even the vision that is open to us we often neglect. The details become confusing; all sense of the unity of life is lost; we need to discover clearly what it all means, what it is worth. Happily, these hours of revelation come to us. Sometimes in a quiet moment, or through the words of a friend, or from a book or a picture, we get a flashing, strengthening vision of the worth and beauty of life. Then, indeed, new continents are known and named by us, and royal roads are opened for the rejoicing soul in its richer commerce with God and good comrades.

[*The Watchman-Examiner*]

"If you follow Christ, the 'old man' will die of atrophy, and the 'new man' will grow day by day under his abiding friendship." No better advice could be given to the Christian who yearns for a fuller Christian life, but no more perilous advice could be given to the inquirer who is seeking to become a Christian. A man can never become a Christian by seeking to follow in the footsteps of Christ. There must be life before there can be fruit. It is not the imitation of Christ but the assimilation of Christ that makes a man a Christian.

[*The Universalist Leader*]

We all have a worst and we all have a best, and our best, be it little or great, is our real selves. However little of the best we may find to think of in a human soul, that little is the eternal, and will endure when all the rest has been swept away by time. It will endure and it will grow; it cannot be destroyed, for it is good, and good is God. Think of me at my best, means think of the God in me—think of the glorious, the triumphant, the victorious God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 105 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $3. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; fifty copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; fifty copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN R. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 85 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in the CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

In an advance statement from his annual report Secretary Lane calls attention to the fact that since March 4, 1913, settlers have made entry on nearly twenty million acres of public lands, an area equal to that of Connecticut, Massachusetts, New Hampshire, and New Jersey combined. During the same period practically as much more coal and other mineral land of the West has been examined in detail in forty-acre tracts by the geological survey, and most of it has been thrown open to settlement or purchase. Some of these lands, such as those which include workable deposits of phosphate or oil, are still withdrawn pending suitable legislation for their disposal or use. Another important activity in public land classification to which the secretary calls attention, is the designation of lands for entry as "enlarged" or three hundred and twenty acre homesteads. Designations under this law approved by him cover 33,153,056 acres.

Officials of the treasury department at Washington are seeking to lay the groundwork for a vigorous and nation-wide campaign for the detection of income tax dodgers and the collection of unpaid taxes, which some authorities believe may mount into the millions. The effort is directed particularly against stockholders and drawers of dividends from the corporations of the country. There are more than three hundred thousand corporations doing business in the United States. Any plan adopted to institute a thorough search of their lists of shareholders and the records of their dividends will be exhaustive and may take years. Officials hope that the corporations will furnish this information upon request, but there is some question as to the power of the department to make them do so.

Preliminary work is being rushed on the eight million dollar improvement of Michigan avenue, Chicago, which was voted at the recent elections. The north and south sides of the city are to be "linked" by a connecting boulevard and a one million five hundred thousand dollar bridge near the present Rush street structure. The project is the biggest single improvement the city has ever undertaken. It will make Michigan avenue the world's greatest thoroughfare, according to the Chicago plan commission. This commission, which brought out the plan and campaigned for it, is a body of over three hundred of Chicago's leading citizens, non-partizan and non-political, devoted to the city's improvement along lines carefully thought out and with a view to the city as a whole.

The value of the stone production in the United States in 1913 reached the grand total of $83,732,995, according to the United States geological survey. Besides the statistics of stone, the report, which is issued as an advance chapter from Mineral Resources for 1913, discusses the stone deposits and resources of the states west of the Rocky mountains, including Arizona, California, Idaho, Nevada, Oregon, Utah, and Washington, and is illustrated by three quarry maps. This is the third of a series of reports which discuss the stone resources of the United States. The 1912 report includes the fifteen Middle states west of the Mississippi, and is illustrated with six maps; while the 1911 report deals with the stone quarries east of the Mississippi, and is illustrated by seven maps.

Greater Boston will have what is said to be the second largest wireless station in the world, when the plant on the site of the old naval magazine in Chelsea is completed. The station is to work in conjunction with stations at Arlington (just outside of Washington, D. C.), at Panama, on the island of Luzon, and on the Pacific coast. By Jan. 1 the plant is expected to be in operation. The two towers are three hundred feet high, situated six hundred feet apart at the base. The weight of steel being used in each tower is about one hundred thousand pounds. The towers are being built under contract at the cost of $9,490.

The governors' conference at Madison, Wis., voted to meet next year in Boston, the date to be some time between July 1 and Sept. 15. Western governors denounced what they called unfair treatment of public land of states by the federal government, and urged that the Western states be allowed to develop their resources without interference from Washington. The government's policy of withdrawing coal and mineral lands was criticized on the ground that such action tended to retard development.

A large metal field has been discovered in Kvinesdal in Norway. The metal lodes vary in width from five to fifty meters. In the southern part of the field some traces of gold and silver, as well as of molybdenum, have been found. The remainder, it is believed, contains mainly copper and pyrites. It was hoped that experimental working might have been started, but so far this has not been possible. It is, however, expected that the work will be commenced in the mine in the near future.

Total collections of tolls for passage through the Panama canal from the date of its opening to Nov. 1 amount to $735,182. In addition, $11,610 was collected for the passage of barges through this waterway before it was opened to general traffic on Aug. 15, making the grand total earned by the canal $746,792. The cost of the canal, including the current appropriation, now stands at $358,559,049.69. More than $374,000,000 was appropriated. Of that amount more than $12,000,000 was for fortifications.

An epitomized record of the nation's growth is contained in the Statistical Record of the department of commerce. Since 1850 the population of the United States has more than quadrupled, being now approximately one hundred million. Foreign commerce has grown from $318,000,000 to $4,259,000,000, and the per capita value of exports from $16.96 to $23.27. National wealth has increased from $7,000,000,000 in 1870 to approximately $140,000,000,000, money in circulation from $279,000,000 to $3,419,000,000.

Work has been done on the United States national forests to improve the water facilities for stock on the range lands. In all, a total of 676 separate water improvement projects have been developed, 329 by the users of the range themselves, 172 through cooperation between the forest service and the users, and 175 by the service alone. Of these improvements, 378 are springs or seeps, 286 are reservoirs or tanks, while the rest are wells, trails, and the like.

The special Lincoln highway commission of the American Institute of Architects recently met in Toledo for conference. The committee represents the architects of the country organized in forty states. The meeting was held to formulate plans for beautifying the transcontinental road with memorials, bridges, and scenic effect, and its report will be submitted for adoption at the annual meeting of the institute in Washington, D. C., Dec. 2, 3, and 4.

A resolution was submitted in the recent session of the national grange, Patrons of Husbandry, at Wilmington, Del., protesting against a plan recently launched to remove the rural free mail delivery system from civil service, and to return to the old plan of awarding contracts for the delivery of rural mail to low bidders.

Argentina, one of the world's principal sources of grain supply, will have a bountiful crop to export this coming year. From the new crop the government estimates that it will have for export 4,200,000 tons of wheat, 2,000,000 tons of corn, 1,200,000 tons of oats, and 1,160,000 tons of flax.

The superior council of public works at Rome, Italy, has voted for work to be commenced on the construction of a canal between Venice and Milan. This is the result of a propaganda which has been carried on for many years, principally by the citizens of Venice.

The net profit of the Pullman Company for the last fiscal year is reported to be equal to 17.82 per cent earned on the one hundred and twenty million dollars' capital, as compared with 16.56 per cent earned on the same stock the year before.

Such rapid progress has been made on the five million dollar extension of Baltimore's water supply that the entire undertaking, including the grading and parking of the grounds, will be completed, it is expected, by the end of next year.

A definite start has been made on the new Wellesley College buildings which are to replace the burned College Hall. Plans have been completed, and the award of the contract for the construction work has been made.

Active work is being done to bring about a reduction in cotton acreage and to perfect the cotton holding plan proposed by the Texas Bankers Association.

Peru has established radio stations at Lima and Iquitos at a cost of one hundred and fifty thousand dollars.

The value of the root and fodder crops during the past season in Canada is estimated at $226,668,000.

What Jesus Came to Save

SAMUEL GREENWOOD

Jesus said of himself that he came "to save that which was lost," and every Christian church is professedly engaged in the same work. What was lost? Evidently Jesus did not refer to persons, or he would have used the word "those" or "them" instead of "that." Had his work been purely personal, it would naturally have been limited to those to whom he ministered, whereas the truth he taught was destined to encompass the destruction of all evil. The belief in a personal Messiah, voiced first by the Jews and incorporated into the creeds of Christendom, has permitted the evils which he came to destroy to flourish in the very shadow of the Christian churches. The mission of Christianity is not primarily the saving of persons, but the restoration of spiritual consciousness, the seeming loss of which makes human salvation a necessity.

What Jesus came to save was not a lost soul but a lost sense, the sense of God's omnipresence and omnipotence. Mrs. Eddy defines it as "the loss of spiritual power, the loss of the spiritual presence of Life as infinite Truth without an unlikeness, and the loss of Love as ever present and universal" (Science and Health, p. 470). It was this spiritual sense of being that Jesus came to restore. When he said, "I have finished the work which thou gavest me to do," it was not that he had accomplished the redemption of mankind, but that he had brought to light, as an ever demonstrable fact, the truth of God's supremacy, and had founded it on absolute proof. From this standpoint we can see the force of his command to repeat his works, something that would be unnecessary if his works in any sense were designed to take the place of ours.

A material sense of being would hide the spiritual, and includes all that we designate as evil. Mortals are submerged, lost, buried in this erroneous sense, and their resurrection or redemption is wrought as they gain the spiritual sense of being, a sense that includes no evil, and therefore declares the infinitude of good. As there is no possible means of dispelling darkness except by bringing in the light, so the evil in human consciousness disappears only as the spiritual truth of being dawns upon the thought. Jesus' teachings indicate that salvation is not a question of personal pardon but of personal reformation, and reformation is but the bringing to light of the individual's perfect spiritual selfhood as the child of God.

Metaphysically examined, material existence shows itself to be but the absence or loss of spiritual existence. What we call material sense, or the belief that life and intelligence are in matter, is itself only the sense of not knowing that life and intelligence are in and of Spirit. There is nothing more than this to evil and materiality; it is the sense of what is not. Let it be supposed that the omnipotence of good is universally acknowledged, and that an enlightened understanding of the truth of being has destroyed the belief that man is alienated from his divine origin, and where or in what consciousness would evil exist? We know beyond question that when human consciousness has progressed that far, there will be no place found for mortality or its accompanying discords. Logically, then, what the Master came to save —that is, to bring to light—was this sense of man's spiritual unity with God and his dominion "over all the earth."

Human experience shows that mankind are devoid of the knowledge that God's creation is spiritual, perfect, and immortal. They are without the consciousness that God is the sole author and preserver of man. This loss, or lack of knowing the truth, expresses itself to mortal sense as a discordant, degraded, unhappy, and dying man. Jesus did not come to save such a man, for no such man exists or could exist in God's universe. He did not come to save a sick and sinful race of beings, outcast from God's presence and doomed to eternal banishment, for no such race of beings has divine authority for existing, nor is there any place outside of the infinity of good where they could be banished. The supposition that there is something besides God, would declare that there is such a place and such a race of sinning men; and this supposition, taking form in human belief, has appeared to objectify itself in the so-called fallen race of Adam; but Jesus obviously did not come to save this false supposition or its embodiment. He did, however, come to save mankind from believing it, and consequently from suffering for it; and this freedom was to be accomplished through a knowledge of the truth. His injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect," reveals the unfallen, incorruptible selfhood of man in God's image; for this command would be impracticable if man's real being were not already perfect.

The Scriptures plainly teach regarding evil that it is both a lie and a liar, both a deception and a deceiver; and this untruth is all that claims the absence of good and the loss of spiritual power. But the Scriptures also teach that, despite evil's claim, God is everywhere, and that man's ability to reflect divine power is not lost. One might as well conclude that the sun is not shining because his eyes are shut, as that God is absent because sinning mortals are not pure enough to see Him. As one must open his eyes materially to see the light of day, so through spiritual discernment only can one become cognizant of God's presence. Healing in Christian Science proves that as the truth of spiritual being illumines the patient's thought, his troubles melt away and his sense of sin diminishes, like a dream that vanishes when the dreamer wakens. Thus salvation is seen to be but an awakening to the truth of being as sinless and perfect, not the pardoning of a sin-laden consciousness.

So sure was David of the actual omnipresence of God that he said, "If I make my bed in hell, behold, thou art there." He knew, as active Christian Scientists of today know, that though in the very midst of evil, the power of good is present to deliver. Through the ministry of Christian Science, the impersonal savior, the consciousness of man's spiritual power and freedom is coming to light. God's allness is being realized as a practical truth, and the claim that man is separated from his Maker is found to be without foundation. Christian Science is thus continuing the Master's work in saving what he came to save, that is, in bringing to the human conscious-

ross the spiritual sense of God and man that had apparently been lost in so-called material sense.

The familiar incident of the ship's crew who were suffering from thirst in the mouth of the river Amazon, in the belief that they were still in salt water, illustrates the position of humanity famishing for the realization of God's care and protection in the belief that He is in a distant heaven, whereas Jesus and his apostles brought out the fact that nothing can separate man from divine Love. Jesus suffered on the cross to bring this deathless truth to light. This spiritual sense of being, which is all that, in belief, has ever been lost, is being restored and reestablished in human consciousness under the "new name" of Christian Science, and is the "redemption" that "draweth nigh."

❖

Tenderness of Might

MARY L. MESICHAU

"A bruised reed shall he not break, and the smoking flax shall he not quench," wrote the prophet Isaiah of the coming Messiah, adding, by way of contrast, "He shall bring forth judgment unto truth." A strange prophecy, and holy to pass unheeded by the ruthless generation in whose midst it was uttered, where force determined right, and the bloody scourge of war fell heavily and constantly on the surging masses. Not only in prophetic vein, but doubtless for his own reassurance, were the words immediately following: "He shall not fail nor be discouraged, till he have set judgment in the earth: and the isles shall wait for his law." The aged prophet, disheartened, it may be, by repeated failures, oppressed by discouragement, still clung to the ideal of a world eventually governed by divine law, and resolved himself to wait with the isolated portions of mankind for the promised enlightenment. It may be, too, that he recognized the similarity between the bruised reed and his own rejected message, between the smoking flax and the sluggish perception of his people, and in picturing the unusual treatment to be accorded reed and flax, prefigured that "tenderness" which "accompanies all the might imparted by Spirit" (Science and Health, p. 574).

In striking contrast to the common custom of the prophet's day and the custom throughout the succeeding ages and not widely different now, is the treatment indicated for the reed and the flax at the hands of the Messiah. What could appear more worthless than a bruised reed,—bending at a touch, swaying with the gentlest breath of air, its slender symmetry marred, fit only to be plucked up and cast away, to be trampled under foot by the careless passer-by! But the eye of the seer detected the single ray of hope for the condemned waif. Though badly bruised, it was yet alive, and the tenderness that would forbear to break the wounded reed, would eventually by loving care restore it to its accustomed uprightness and beautiful vigor. If in the thought of the prophet the reed served to symbolize the message uttered by him and repeatedly rejected by the people, we can in some degree appreciate the comfort and consolation which healed him of his sore disappointment in the triumphant assertion that this same message, the word of God, "shall not return . . . void, but it shall accomplish . . . and it shall prosper."

Further, the smoking flax not only seemed useless for any purpose, it was even an annoyance, with its acrid fumes stinging the nostrils and blurring the vision of any who chanced in its vicinity. Why not scatter the heap, and throw water upon the fragments, that the lurking menace may be removed? Nay, the tenderness of might forbears to quench, but carefully tends the smoldering heap until the smoke gives way before a blaze that rapidly consumes all trace of past annoyance, and yields warmth and guiding light to the erstwhile wanderer. Again does Isaiah utter a strong word of comfort to cheer his solitude of waiting for the growth of perception in the consciousness of his loved people: "They also that erred in spirit shall come to understanding, and they that murmured shall learn doctrine." Out of the pain and disappointment which attended the seeming failure of his mission, came the healing tenderness of that mighty uplift into fuller prophetic vision embracing the world, and penetrating so forcefully that message from the seer of our Leader ago: "The very circumstance, which your suffering sense deems wrathful and effective, Love can make an angel entertained unaware" (Science and Health, p. 574).

He who later appeared in divine fulfilment of Messianic prophecy, used on different occasions symbols which link closely to those mentioned by Isaiah. The branch whose fruitfulness was dependent upon its unity with the vine, and the unquenchable fire which should burn up the chaff and also the severed branches, complete the parable begun by the prophet, indicating the results of the tenderness of might in dealing with frail and crippled instruments. When our Master would interpret God to an ignorant and misunderstood world, it was not as an inexorable judge with limitless power to condemn and punish, but as the tender, compassionate Father, whose might was that of omnipotent Love. When to a world slowly awakening to the perception of the universal fatherhood of God and the brotherhood of man, Jesus was impelled to announce himself the practical example and expositor of this strange doctrine, it was not to the justice of the Almighty that he first turned men for guidance, but to His compassionate tenderness.

Christian Science has come to this age interpreting anew the prophecy of the reed and the flax, and reiterating the message of the Man of Galilee, who first proved to the needy world the tenderness of divine might. To the depressed and disheartened consensus of an uplifting ideal ignored or ridiculed by their fellows, regarding their bruised reeds in dumb despair, it whispers the continuity of good, and counsels joyously expectant waiting for its sure unfoldment. To the disconsolate and unhappy, weary with futile effort, appalled at ignominious failure, crouched in blind hopelessness amid their smoking flax, it breathes the reviving word of courage and patience and fidelity, gently fanning the waning ardor into the blaze of renewed enthusiasm, and illuming the dim, worn path with the light of that meekness and might of life which is "hid with Christ in God."

❖

Progress

DUNCAN SINCLAIR, M.D.

In Science and Health (p. 233) Mrs. Eddy says, "Progress is the law of God." There is nothing dubious or uncertain in the statement. It is a true declaration concerning the spiritual or real life of man. But if this be true, there should not seem to be a lack of progress in the case of any one. Such a case would be lawless, a negative condition without divine sanction.

It assures and strengthens one to know that nothing exists in the providence of God to prevent progress out of the sorrows and sufferings which hedge about mortal existence, into the joy and health of regenerated manhood. Whatever seems to hinder progress is unscientific. There is a mistake somewhere, and the sooner it is discovered and rectified the better. We need to be alert to the errors which mortal mind would constantly seem to be seeking to place in our path.

Digitized by Google

He who has a garden knows the constant care it requires,—the digging, the watering, the weeding, not spasmodically but regularly; and always his object is the flower more beautiful, the fruit larger and more nearly perfect.

The Master's words are, "Be ye therefore perfect, even as your Father which is in heaven is perfect," whether we be gardeners or artists, ushers, readers, or practitioners. In her article "The Way" (Miscellaneous Writings, p. 355), Mrs. Eddy analyzes the steps of progress in a most helpful manner, showing how the individual life has to be ordered to promote it. To begin with, she makes "self-knowledge" the first step. We have to see ourselves just as we are; to ask ourselves where we stand with regard to the absolute standard of good, and whether our lives are an endeavor to conform to this standard. Is the balance being adjusted with more and more of good on one side and less and less of its opposite on the other? Are we becoming serene in our confidence that God is omnipotent and that, as Mrs. Eddy says (Science and Health, p. 102), "evil is not power." There can be no progress in self-righteousness, for it is a false state of mind, as lawless as it is obnoxious.

Next is mentioned "humility," the gem that sparkles on the bosom of the pure in heart, the wreath that rests upon the brow of the wise. Humility is never separate from genuine goodness. It looks beyond the shadows of sense into the real substance of Truth, and abides there. It is just, because it thinks not of itself; it is strong, because it rests not on itself; it is victorious, because after all it is not a cause in itself but the symptom of a knowledge which is irresistible.

Lastly Mrs. Eddy speaks of "love," the intelligent climax, not an emotional display. We may often know a positive quality of Mind by the absence of certain so-called negative qualities. When one is free from malice, envy, jealousy, hatred, or other of the hydra-heads of evil intent, when one has no desire concerning another but that which seeks to help and bless, has he not realized love for him? And as with ourselves, so with others. It should be our endeavor to remove every barrier which would tend in any way to arrest their progress. It is true we cannot uninvited go over the fence into our neighbor's garden either to dig or water or weed his soil, but we can stand ever ready to help him with a kindly word. He may be ignorant on some point about which we are informed; just as he may be able to enlighten us on some other point where our own knowledge is uncertain.

In Christian Science great watchfulness has to be exercised lest we cause the childlike beginner to stumble. The babe needs the milk of the infant, not the meat of the strong man, but we must never forget that to him as to us applies the truism, "Progress is the law of God." To leave him to God, having made the declaration of his true being, is often the best we can do at the moment. If we only spoke and thought to help, there would be less seldom heard such expressions from the earnest seeker after light and healing as: "Christian Science is difficult to understand," or "I shall never be able to overcome this or that." The more we understand God, the more reserved we are likely to be in talking about Him.

Christian Scientists should never forget the Master's attitude toward evil. If he had spurned the woman who washed his feet with her tears, should we have had the saint revealed? Loving-kindness can never injure, it will always bless. Jesus did not cloak evil when he threw around the sinner the mantle of his gracious protecting love. What he did, was to destroy the belief in evil's power within the stricken heart; beholding behind the veil of the earth-blasted child the image of the Father, he broke the agony of sin forever. The step that stalks past an afflicted one who is in the anguish that designates a craving for salvation, can hardly be said to belong to one whose gospel is that of love. Always must we be destroying in our own consciousness the false beliefs contingent on the material sense of things; then and only then shall we be able to go in and out among "the children of men," seeing for them man's possibilities as the child of God. Since "progress is the law of God," there are none who will not yet know themselves in the Father's image.

Believing Good to be True

MYRTLE B. S. JACKSON

Some years ago, when walking with a cousin down the main street of our village, we saw two ragged little children standing on tiptoe, gazing longingly into the window of a small jeweler's shop. Seeing that the trinkets which they were exclaiming over were marked fourpence and sixpence, my companion bent down to the children with sympathetic impulse, and said: "Would you like to have some of those bracelets? I'll give you both one if you like." They looked up at her with saucy derision, and responded with wise incredulity. The next minute, however, she had vanished into the shop, and ere they had realized her purpose, she slipped a shining ring of silver round each little wrist. "They are yours," I heard her say; "yours to keep." Then we walked on, while the children moved away, apparently too dazed to be quite sure of what had happened.

Since that time the incident has often come back to mind and assumed more metaphysical interpretations; for how often do we grown-up children, ragged and poor enough in our meager experiences of health and happiness, stand in the streets of this mortal pilgrimage and gaze at some faint concept of good, finding it too dazzling to believe that it could ever become our own possession. Mortals, so wise in their expectation of poverty and sickness and desolation, mentally turn away with a questioning shrug when the hint of a loving creator, a beautiful life, and abundant provision for their needs, is presented for their acceptance, so far removed from such blessedness has been their past experience. Yet this eternal good and these inexhaustible riches are here for us all; it is God's good pleasure that we should have them, and our present concept of good things is as a child's toy compared with the treasures of Spirit, which, St. Paul tells us, "eye hath not seen, nor ear heard, neither have entered into the heart of man" to conceive, but which he assures us are prepared for us by our Father-Mother God.

It is recorded in the fifth chapter of St. John that Jesus once saw by the pool of Bethesda an impotent man, who for thirty-eight years had looked on, while many of his fellow beings received some measure of relief from suffering, without being able to get any himself. Going to him, Jesus asked the startling question, "Wilt thou be made whole?" and the man replied (we can imagine with what dull despair), "Sir, I have no man, when the water is troubled, to put me into the pool: but while I am coming, another steppeth down before me." Then the miracle, to mortal sense, took place. Jesus, by spiritual power alone, healed him instantaneously, and he "took up his bed, and walked."

Today the Christ-idea again comes to us in the midst of our poverty and our problems, revealed to us with renewed power through divine Science, and asks us severally, "Wilt thou be made whole?" Although we may outwardly assent to such a glorious possibility, how often do we whisper within, "I do not think it possible." That we fail to get quicker answers to our prayers is, as often as not, because the very idea of receiving so much good simply takes our

Digitized by Google

breath away at the outset, and the feeling that such and such an occurrence would be "too good to be true," occupies a larger place in our convictions than the knowledge that because good is good, therefore it is true. We are tempted to think that God does not really mean us to have the blessing, and that some untoward event will circumvent our expectations of joy. Yet our Master said: "What man is there of you, whom if his son ask bread, will he give him a stone? Or if he ask a fish, will he give him a serpent? If ye then, being evil, know how to give good gifts unto your children, how much more shall your Father which is in heaven give good things to them that ask him?"

Nothing but our own fears and unbelief shuts us out from perfect health,—these, and the more subtle form which unbelief assumes with religious-minded people, that in some mysterious way it would not be right for us to be healthy and happy, that misfortune and deprivation are going to teach us something, and we shall find out by these means how selfish and sinful we are and perhaps start to improve our characters. That may be one way of meeting life's experiences, but back of it is still the demon of unbelief in good. To this some person may say, "Yes, but then how do you account for all the saintly people who have had the most sublime faith and trust in God's promises, and yet have had so few of their earthly hopes realized?"

Christian Science does not put such an inquirer off with the pious answer, "Well, human desires are all delusion anyway, and it is much better they never should be realized." Just as a human father would not take away his baby's pink balloon in order to give him a taste for astronomy, so God, as we understand Him now, does not lead one of us to a higher concept of His glory by the arbitrary and negative process of dispossessing us of such scant ideals as we already cherish. Rather will it be found that even the most trustful, with the most beautiful faith in God's goodness, have not persistently expected unlimited unadulterated good to flow into their lives in answer to prayer, but they have generally at crucial points given their faith an inverted twist, and have made a virtue of being content without the answer, or have relegated the answer to some time way off in the future, subconsciously feeling that the good they prayed for was still "too good to be true."

Then some one exclaims, "Yes, but I do believe in God; I believe in Christian Science. I have been expecting good, but the more I try, the more troubles I get; things seem to grow worse and worse." The right thing to do is simply to go on trying. Even if mortal experience does turn out to be, as so many say, "one thing after another," the time comes when the assertion of the truth, the persistent affirming of the presence and power of Love, breaks through the sense of trouble, however tremendous it may seem, and we realize that God is God, that He is infinite in power, and reigns, and thus we are delivered.

Piercing the veil of mortal sense, Christian Science has revealed anew the great facts of being,—that God is good, that man is His image and likeness, and therefore reflects infinite good, here and now; and every desire for health, wealth, happiness, home, friends, education, art, beauty, and the fulness of love, which has ever gone forth from the hungering heart of humanity, has already been given to man as God's image, from everlasting to everlasting, and is His "world without end."

A short time ago, a little girl who had been going to a Christian Science Sunday school, when she heard that a little playmate could not come to her party because she was in bed with a cold, exclaimed, "Ill in bed! Why, hasn't she been told that God loves her?" We older folk could well take that simple rebuke in the matter of weightier questions, and say, "Yes, sweet child, we have all been told, told for exactly nineteen hundred and fourteen years, that God loves us, but we have not adequately believed it; we have not really understood it; we have not applied it to our special affairs, otherwise we should assuredly have received the good we long for."

And for those who are patiently working, watching, praying, who are earnestly striving to turn away from the world as they see it, to the spiritual and perfect world as God knows it, the message is, "Faint not," for they will soon be able to rejoice in the words of that most human and divine psalm: "When the Lord turned again the captivity of Zion, we were like them that dream. Then was our mouth filled with laughter, and our tongue with singing: . . . They that sow in tears shall reap in joy. He that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him."

Cleaning Our Own Windows

SARAH E. COX

When I first came into Christian Science I was told that I had to cast evil out of my own consciousness and I should then see others in a better light; that I must not only try to see myself as God's idea, but must so see every one. I could not understand how my better thinking was going to make others better; and when the actions of other people disturbed me, I did not like to be told by a Scientist that the difficulty was in my own consciousness and that I had to cast it out. I used to be quite annoyed and could not see it at all, until one day I suddenly remembered an incident which had occurred some time before I knew of Christian Science.

Standing in my kitchen one morning and glancing through the window, I saw the sun shining on the windows of the house next door, and noticed how dirty they looked. Impatient with the fact, I said that I thought they should keep the windows cleaner, for they were not nice to look at. In the afternoon of the same day I was again standing in the same place near my kitchen window, and as I looked up I saw that my neighbor's windows were quite clean and bright. Now I knew there was no one at home, and was quite sure that no one had been in the house all that day, so I wondered at the changed appearance of the windows. Then I remembered that my own window had been cleaned since the morning, and this had made all the difference.

I laughed at myself, knowing that I had learned a lesson, but how useful it might prove I did not then realize. When the incident was recalled, it helped me to see that when the dust is removed from my own consciousness I get clearer views and may possibly discover that the thought of others is quite clean. When I am freed from all that is discordant, I shall have a truer understanding and be able to see others in the light of Truth.

On page 355 of "Miscellaneous Writings" Mrs. Eddy says: "Learn what in thine own mentality is unlike 'the anointed,' and cast it out. . . . Hold thy gaze to the light, and the iris of faith, more beautiful than the rainbow seen from my window at the close of a balmy autumnal day, will span thy heavens of thought."

See that no day passes in which you do not make yourself a somewhat better creature; and, in order to do that, find out first what you are now. Try to get strength of heart enough to look yourself fairly in the face, in mind as well as in body.—John Ruskin.

Selected Articles

[Algernon Hervey Bathurst in *Pitman's Journal*, London, England]

In a recent issue is a statement regarding Christian Science made in the article under the heading "How to Get On." Will you allow me to say that I entirely agree with the statement that "self-hypnotism . . . has no admitted religious basis." On the other hand, I would like to say most emphatically that Christian Science has nothing whatever to do with hypnotism or any system engaged in the manipulation of the human or mortal mind. It is impossible in the space of a short letter to say much on the subject of the practice of Christian Science, but the great difference between Christian Science and any other system is, that the Christian Science practitioner is successful only to the extent that he is willing to let that same Mind be in him "which was also in Christ Jesus."

The Founder of Christianity declared that the knowledge of truth would make men free, and he proved the truth, or as he declared, fulfilled the law of God, by healing sickness and destroying sin and discord; thus proving that they were not part of reality, or the perfect creation of God. In order to accomplish healing in this way there is no need to deal with the human or mortal mind, which Paul referred to as "enmity against God." Just so long as mankind continues to accept the belief in the power or reality of both good and evil, will he be dealing with what Jesus referred to as a house divided against itself, which cannot stand.

The corner-stone in the structure of Christian Science is the understanding of the omnipotence of God, good; and just as soon as the student is willing to understand that the "great First Cause" or creator, infinite good, Spirit, never created evil or even permitted it, will he begin to see that the general belief in evil and discord need not be accepted. If sin, suffering, and death had been in accordance with the law of God, Christ Jesus would scarcely have interfered with them. Again, since he proved that they were not true, and said so emphatically that those who understood his teaching would do the works he did, it is surely the duty of all Christians to apply that teaching, which they profess to accept, in the way so clearly demonstrated by Jesus Christ and his disciples. In doing this it would be impossible to adopt anything in the nature of hypnotism or the control or manipulation of the human mind. Through the study and practice of Christian Science the student gains greater freedom, a clearer sense of the omnipotence of good, and consequently is less afraid of evil and is the more easily able to get rid of the belief in it.

❖

[Ezra W. Palmer in *The Rocky Mountain News*, Denver, Col.]

In a recent issue, the Rev. Mr. ——, in a sermon entitled "Creation and Science," takes the position that God is the author of pain, and that "pain is the instrument of advance in the realm of moral and spiritual things." The reverend gentleman did not cite any words of Jesus and his apostles in support of this position, but did quote at considerable length that materialistic philosopher, Thomas Huxley.

As a matter of fact, the contention that God is responsible for pain, sin, or death, is wholly untenable from a Scriptural standpoint. All Christians agree that God is infinite, omniscient, omnipotent, and omnipresent. Jesus said that God is Spirit, and John declared that "God is love." Since, therefore, God is infinite, perfect Spirit, His creation must be like Him, made in His image and likeness. Since these postulates are true, to assume that God created pain, sin, and death, would be to render these evils immortal and spiritual. A person, therefore, would not be justified in attempting to overcome these errors if they are God-created and eternal. Moreover, it would be a hopeless task to attempt, since man cannot change the will of God. Furthermore, to assume that God is the author of pain, or permits it or any other evil to have entity, is to make Him responsible for all disaster, for fire, flood, disease, pestilence, and death. But this is a perverted view of Him whom St. Paul describes as "rich in mercy, for his great love wherewith he loved us."

A study of the works of Jesus does not bear out the contention of this minister. Jesus healed all manner of sickness. He never taught that God sent pain or sickness, but he healed human ills by the power of God, and instructed all his disciples that they should follow his example. The doctrine that would make God responsible for human ills is an outgrowth of ignorance of God. When the church was materialized by Constantine, with the resultant loss of its divine healing power, theologians unable to overcome human ills by the power of God, evaded the issue by adopting the convenient doctrine that God created sickness, pain, and sin for the purpose of making men good through the suffering these evils bring. Jesus taught no such dogma. He declared, "The truth shall make you free." It will be noted in this statement that truth alone does the work, and no reference is made to pain as a factor in the process.

Jesus never taught that pain freed mortals from pain, that sin freed from sin, or that death overcomes death. These are self-evident impossibilities. As well assert that a scientific knowledge of light can be gained by studying its negation, darkness. Jesus taught that knowing the Father aright brought freedom from every ill, and he proved it by his works. On another memorable occasion the Master again answered this question when he said, "It is the spirit that quickeneth; the flesh profiteth nothing." Where in this is there any place for the theological dogma that impugns the love of God by making Him responsible for human ills?

❖

[R. Stanhope Easterday in *The Peru* (Ind.) *Republican*]

The Rev. Mr. ——, according to a report of his recent sermon, made unflattering reference to Christian Science. Conceding then that he has nothing against Christian Scientists, he declares, "But I have something to say against Christian Science." He then answers in the affirmative the question as to whether Christian Science heals, but declares that he does not for that reason have to accept Christian Science as a religion. Our Lord in founding primitive Christianity, which in the last analysis is what Christian Scientists are but trying to emulate and again practise, declared that in all ages the healing of the sick through spiritual means should in large part be the criterion for true discipleship.

The results of Christ Jesus' own ministry were very largely his healings, and in his destruction of sickness and death, as well as sin, he certainly set the invincible stamp of divine disapproval thereon, for he said significantly, "I do always those things that please him [the Father]," and "My Father worketh hitherto, and I work." Furthermore, while thus engaged in this general ministry of healing, our Master insisted that he was about his "Father's business." His specific command to his followers in all ages included instructions to heal as well as to preach. Indeed, the preponderance of healing recounted in the gospels would seem to refute our critic's logic to the effect that a "sick body" is in any sense conducive to salvation, or that it is in any sense a criterion of sanctity.

Mrs. Eddy, the Discoverer and Founder of Christian Science, noting this preponderance of healing in the ministry of our Lord, and reasonably appreciating that he came into

Digitized by Google

the world that the world might be saved, insisted that our Lord's healing and his preaching must be reconciled. She maintained that his healing was the inevitable result of his teaching. In other words, she reasoned that to "know the truth" as Jesus knew it and practised it, would heal in the process of regeneration, or that healing was a part, and a necessary part, of the work of redemption. Christian Science is, therefore, primarily and preeminently a system of spiritual Scriptural interpretation calculated to effect a full salvation, and it but incidentally, though necessarily, heals the sick.

❖

[John W. Doorly in *Bradford* (England) *Daily Telegraph*]

My attention has been called to your kindly notice about Christian Science and faith-healing in a recent issue. In the public mind there is a very strong belief that Christian Science and what is popularly called faith-healing are analogous, and as Christian Science is very far removed from what is generally supposed to be faith-healing, I should like to explain the difference.

Christian Science teaches that there is but one cause, infinite good; that all real being is the effect of this one and only cause, and must forever be infinitely good, like its cause. It also teaches that mortality which sins, gets sick, and dies, is the false sense of this true being or effect. Now true being, or spiritual being, is God's law, or will; that is, it is the manifestation or expression of perfect Mind, of power, and of Life. When, therefore, a man gains an understanding of true being, he is putting himself at-one with that perfect Mind, and is expressing God's infinite law, which is also the expression of infinite power; just as when a man recognizes that two and two equal four, he is governed by the mathematical law, which is power to save him from the false sense that two and two equal five. This recognition of true being, or God's will, is what our Saviour so aptly described when he said, "Ye shall know the truth [that which really exists, or God's will], and the truth shall make you free [from that which seems to be, but is not]."

Faith-healing, more often than not, assumes that sin, disease, and death are God's will, and hopes through a blind appeal to God, who sends these conditions, to change the very conditions which it believes that infinite wisdom has caused or permitted. If infinite wisdom, however, caused these conditions, then they are good, and we cannot have too much of them; in fact we are bound to have them, as it is impossible for us to tell infinite wisdom what is best for us, or to change God, who is "the same yesterday, and today, and forever." Such teaching Christian Science absolutely refutes. A man may have faith in mathematics, but that will not do him much good unless he can understand and demonstrate its basic law; and so Christian Scientists are learning to understand God's immutable, spiritual law, and before this understanding the discords of the carnal mind, or the false sense of being, are disappearing. Mrs. Eddy has blessed humanity abundantly by revealing the fact that evil in all its phases is not a divine reality, and in the true sense is not real at all, but is just a mistake which has power only to him who believes in it, but is powerless to the man who is putting on the Christ-mind or knowing the truth, and this accords absolutely with our Saviour's teachings when he said: "Ye are of your father the devil . . . He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

That inevitably all Christian churches will adopt Christian Science when they really understand it, and see that it is none other than Jesus' teachings made practical through the "Spirit of truth" which he promised, is a foregone conclusion to Christian Scientists; and the Discoverer and Founder of Christian Science, Mrs. Eddy, has many times prophesied this in her writings. The world has rejected Christian Science because it has not understood it; but when it understands it, it will accept it readily. The churches have started healing guilds and many other forms of faith-healing; but it is a well-known fact to every one that these have been more or less forsaken because of unsatisfactory results; and no consistent and reliable results will be attained until the healing is done wholly and solely through Christ, the divine reality, "Lo, I am with you alway," dispelling every material *effect*. The crux of the whole matter lies in the understanding of true prayer. The Christian Scientist knows that to pray truly is to rise in thought above material sense and to grasp reality; that is, to utilize God's unchangeable law or will and to bring thought into accord therewith. Faith-healing, on the contrary, hopes to change God, or something that He knows or permits; hence these are two distinctly opposite systems.

❖

[Frank Bell in *Tribune-Republican*, Scranton, Pa.]

In denouncing a public display of views on religious subjects not in accord with his own, a speaker quoted in a recent issue goes out of his way to indulge in a number of irrelevant and inaccurate references to Mrs. Eddy and Christian Science. To classify Mrs. Eddy with those who have undertaken to "build a new faith" or to discuss her capability in that respect, is not justifiable, for the reason that Mrs. Eddy never pretended to do such a thing. Christian Science was given to the world as a restatement of vital but neglected phases of primitive Christianity, and it is so accepted by all who understand it.

Instead of being "alike in method" to those with whom our friend has mistakenly assigned her in his discourse, it should be said of Mrs. Eddy that, whereas the others referred to have sought to set up systems at best merely doctrinal or theoretical, her writings and teachings are characterized by her insistence on the value of demonstrable knowledge, as compared with professional faith or belief. Her contribution to mankind is a method by which the scientific efficacy of religion is brought within the range of individual proof. Thus the genuine Christian Scientist strives to be, not one who believes good, but one who knows and does good.

In the magnitude of its first half century the Christian Science movement is of itself the best answer to the suggestion that its Founder's system was destructive rather than constructive. Those who reject her teachings will not admit she has destroyed anything for them, and her followers are unanimously of the opinion that all that has been destroyed in their case was the veriest mental rubbish; whereas, constructively, Christian Science has done wonders for them. There is no reason for associating Mrs. Eddy with those who have laid claim to exclusive or monopolistic revelations. That sort of thing is especially repudiated by Christian Science, which contends for the universality and impersonality of truth.

It would appear to be idle to discuss the quality of Mrs. Eddy's mental equipment in view of the abundant evidence of her culture and capacity. To write the book that has a larger sale than any other except the Bible, to organize a church that within one's lifetime should grow to world-wide proportions, to establish a system of healing whose thousands of qualified practitioners, that devote themselves wholly to its demonstration, are to be found in all lands; to have started as one lone woman in middle life to lead a movement that

Digitized by Google

within two decades was revolutionizing the theological and mental thought of the age,—all this, and more, would seem to be the work of something not in any respect resembling "an untrained intellect."

Mrs. Eddy and Christian Science will be judged by what they manifestly accomplish for good. Are all the critics and their systems ready to meet a like test?

✧

[Paul Stark Seeley in *Oregon City* (Ore.) *Courier*]

Christian Science as an antidote for seasickness is made the subject of facetious comment by a traveler quoted in a recent issue of the *Courier*. The gentleman's experience, briefly stated, included a friend's statement made before sailing, that Christian Science was a preventive for seasickness; also his own subsequent attempt to ward off the malady by exerting his will against it, and his later submission to its discomforts with a conviction that Christian Science was impracticable, at least on the high seas. It is quite evident that Christian Science had no part in his trouble, except that he imagined it to be the use of will-power, with which it has in truth no relationship whatever.

The exercise of the human will can indeed never be associated with the application of Christianity to the needs of mankind, whether the need be great or small, on land or sea. Christian healing, as wrought by Jesus and repeated in this age by Christian Science, is based upon a truly scientific understanding of God and man as made by Him. Referring to this vital point in the practice of Christian Science, Mrs. Eddy says, "The Christlike understanding of scientific being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259).

Will-power has nothing in common with Christ. It is the antithesis of spiritual understanding which is the key to divine healing. Recognizing no fixed law, it operates by whatever means will best serve its own desires. Directed only by the whim of its employer, it becomes the motive power of selfish ambitions seeking its own ends without thought of God or man. At times simulating a good purpose, it never hides for long its mortal nature, wholly un-Christlike and unrelated to God. In place of the vacillating and uncertain human will, Christian Science opens the door to spiritual understanding, even to a present knowledge of that truth which Jesus said should make men free.

"Truth," Mrs. Eddy writes, "and not corporeal will, is the divine power which says to disease, 'Peace, be still'" (Science and Health, p. 144). The understanding of God, who is Truth, is the basis of Christian Science practice, which but follows the teachings of Jesus the Christ, who said of his healing work: "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father." "The Father that dwelleth in me, he doeth the works." When understood, Christian Science is capable of overcoming, and has many times overcome, not only seasickness but the many more serious diseases of mortals, thus proving by works the supremacy of the one living and true God, "whose dominion is an everlasting dominion," whose "kingdom ruleth over all."

✧

[H. R. Colborne in *The Australian* (Sydney) *Christian World*]

My attention has been called to the article in a recent issue entitled "The Question of Faith-healing," in which reference is made to Christian Science. The writer there shows that many have been attracted by the teachings of Christian Science discovered by Mrs. Eddy, and have joined the Christian Science church. It may well be asked: Why have they done this? Is it the teaching merely, or is it not also the results of that teaching shown in the improved lives, health, and character of the members of the Christian Science church that has brought this about?

The works of Christian Science in healing "all manner of disease," functional and organic, in supplanting discord with harmony, and in the overcoming of sin with right living, are manifest before the world, and it is fruitless at the present time to deny that these works have been and are being done. Some may not know of them, but inquiry only need be made in the right quarters, and overwhelming evidence can be brought forward to prove this statement.

We need to remember that men, however prominent they may be in the theological and medical schools, and however anxious to give an impartial judgment, are apt to approach this subject biased by their own views and education. Is it irreverent on the part of Christian Scientists to claim that the power of God is omnipotent, or are we to accept the idea that His healing power is limited to that class of disease usually diagnosed as functional? Which of these is most consistent with the idea of an all-loving, all-powerful, and ever-present God?

✧

[George Shaw Cook in *Quincy* (Ill.) *Whig*]

Reference to the alleged methods of Christian Scientists in a recent issue, gives one the impression that they are encouraged by the teaching and example of Mrs. Eddy to exercise what the critic terms "mental control" of others. Nothing could be farther removed from the experience of Christian Scientists in general. There may be individual instances of domination and control of others by persons calling themselves Christian Scientists, but if so, these persons would not be conforming either to the teaching of Christian Science or to the example of its Discoverer and Founder.

No one could more consistently or persistently have turned the thought of mankind away from the influence of personal sense than did Mrs. Eddy. To the extent that students of the Christian Science text-book, "Science and Health with Key to the Scriptures," are faithful to its teachings, they learn and demonstrate, as its author, Mrs. Eddy, has written in another work, that "in Science, divine Love alone governs man" (Church Manual, Art. VIII, Sect. 1).

The Pilot

GERTRUDE RING ROMANS

"WHEN Love is at the helm of thought,"*
Securely moves the ship;
The filling sails of impulse caught,
The staying ropes and rigging taut,
And songs upon each lip.

"When Love is at the helm of thought,"
What treasures fill the hold!
Wealth of good deeds for others wrought,
Rich revelations humbly bought,
And resolution bold.

"When Love is at the helm of thought,"
The promised port shines clear;
No distant horizon-hid spot
At Hesperus, but each moment sought,
When Love is by to steer.

Editorial

One and Indivisible

To the multitudes that have been privileged to gain in some measure an understanding of the truth discovered by Mrs. Eddy, it seems almost incredible that many of those who otherwise are most devout Christians, do not realize that the healing work which was so great a part of the ministry of Christ Jesus and his immediate followers, was inseparably linked with Christianity. Hence comes their distrust of Christian Science, because its exponents presume, as they think, to practise the healing of the woes of mankind.

Notwithstanding the practical proofs of its healing power, the unnumbered thousands who have learned what Christian Science is and what it is doing for humanity and have openly testified that God is "a refuge for the oppressed, a refuge in times of trouble," now just as He was in the days of the psalmist, these would-be followers of the Master still fail to see the immediate connection between the preaching and the practice of the Master in this regard. They evidently believe that these mighty works which Jesus accomplished and the doing of which he imposed upon his followers for all time, may be done or left undone in this generation as the churches may elect. This, however, was not the way in which the Master regarded the healing work, else why should he have answered John's inquiry as to the validity of his claims to the Messiahship by bidding his messengers report to him what things they had seen and heard,—how he had ministered to the blind and the deaf, the lame and the halt, and even raised the dead, the while he preached to the poor and needy the gospel of repentance and the coming of the kingdom of God in the hearts of men.

Neither is such a view consistent with the commission which Jesus delivered not only to his immediate disciples, but to his followers in all ages who should believe on him through the word of these disciples which has come down to us in the New Testament. Nor is it consistent with his final declaration as to what should constitute the proof of discipleship, the signs which should follow them that believed. They were to repeat the works that he had done through the power of Truth,—cast out evil spirits from the afflicted, loose from their infirmities them that were bound, and give consolation and comfort to the suffering and sorrowing. His intent in this direction is unmistakable. Surely this is a practical religion which the Master taught, for in it is exemplified the great commandments on which he declared "hang all the law and the prophets." It likewise demonstrates that the healing of sickness and the casting out of sin are accomplished through one and the same power—omnipotent good!

In her discovery of Christian Science, Mrs. Eddy saw at once that man in the image and likeness of God must be as free from sickness as he is from sin; therefore the healing of mankind from all their diseases, from all their sins, from all that is unlike good, was an integral part of his ministry. This truth she impressed upon her followers, and it is because of their ability to make their preaching and practice coordinate that they are today standing for the indivisibility of Christianity as Jesus preached and practised it. Christian Scientists are also finding, as did Christ Jesus, that mankind are often more ready for physical healing, to be relieved from their suffering and distress, than they are for the healing of sin; also that the healing of disease by means of Christian Science surely leads to the healing of sin. Mrs. Eddy has said on page 404 of Science and Health that "both cures require the same method and are inseparable in Truth."

Christian Scientists believe that the healing of the sick is not only a necessary part of the Christianity that the Master taught and practised, but also that Christianity would be incomplete without this healing work, and that the command to preach the kingdom of God and to heal the sick is one and indivisible. How much more of happiness there would be in the world today, how much more of the kingdom of heaven on earth, if that command had been observed in its entirety since it was first spoken, instead of robbing Him who as the psalmist declared "forgiveth all thine iniquities; who healeth all thy diseases," of half of His office! We cannot be "every whit whole," healed as God alone can heal, until both body and mind are in accord with that which is good and good only—infinite, divine Mind, God Himself.

ARCHIBALD MCLELLAN.

❖

Greetings

THOSE who are privileged to attend, regularly or frequently, the Wednesday evening meetings in The Mother Church, become familiar with the statement which often accompanies the testimony of a visiting member from one of its numerous branches, "I bring greetings," and then is given the name of the church to which the speaker belongs.

The habit of speaking in this way can easily be traced back to the days of our crowded annual gatherings, when many of those who spoke did so as representatives of some branch church or society. While this does not apply, in an official way, to those who speak at the testimony meetings of The Mother Church, it stands for something of deep significance, namely, the vital relation between this church and its every branch, including the entire membership. To the older members it is a reminder of the time, not so many years back, when the churches were few in number and their membership small, but nevertheless they were conscious of being deeply rooted in Truth and Love, and were relying ever upon the Master's words, "Upon this rock I will build my church; and the gates of hell shall not prevail against it." To Christian Scientists everywhere this rock means the ever-present Christ, the divine Truth which saves from sin, disease, and death in every age and clime, when the power of Truth is understood and acknowledged.

As we listen to the words of our visiting members, it is easy to recall the many loving greetings sent to the early Christian churches by the apostles and other faithful workers, or from one church to another, in some instances reference being made to the church which was in the house of certain brethren. These greetings were not mere formal courtesies, but tell the wonderful story of the awakening of the race to the truth taught and demonstrated by Christ Jesus, and voiced anew in our day by the "scientific statement of being," which declares that "man is not material; he is spiritual" (Science and Health, p. 468).

In the sixteenth chapter of Paul's epistle to the Romans we find a deeply interesting review of the spiritual history of that time. We discover in this chapter no trace of prejudice against the ministry of women; on the contrary, there are numerous references to them as fellow workers with the apostles, Phebe receiving this high commendation, "She hath been a succorer of many." The names of both men and women, as found in this chapter, would indicate that they were of different nationalities, but the one thing which bound them to Paul and to one another was the fact that they were

Digitized by Google

"in Christ," and with touching humility Paul says that some of them were in Christ before he was. It is also said, on good authority, that Julia, whom the apostle associates with other "saints," was a hostage from Britain and a ward of Nero. She, it seems, had come into the truth, probably through some soldier of the imperial guard who was detailed to be Paul's custodian while he was in Rome awaiting his trial. All these men and women to whom greetings were sent, and those who sent them, were united in bonds of truest fellowship, the faith of Christ Jesus, not alone faith in him. They counted not their lives dear, that is, the mortal sense of life, because they were assured of man's immortality, and were daily proving it in the ratio of their understanding. While Paul warns the Christians in Rome against those who would "cause divisions and offenses," he goes on to say, "Yet I would have you wise unto that which is good, and simple concerning evil."

In sending greetings to his dispersed fellow religionists, James says, "Count it all joy when ye fall into divers temptations [or trials]," while John, in greeting Gaius, whom he loves "in the truth," says, "I wish above all things that thou mayest prosper and be in health." In sending greetings to the church at Corinth, Paul speaks in a curiously interesting way of those who "have addicted themselves to the ministry of the saints," and the counsel he gives at the same time may well be remembered by all Christian Scientists. It is this: "Watch ye, stand fast in the faith, quit you like men, be strong."

ANNIE M. KNOTT.

❖

Consciousness and Capacity

EVERY profitable order of thought must be rooted in axiomatic truth; it must lay hold on the things that no normal person can question and be serious with himself. This fact remains true though it may commit the bulk of human dicta to the dust heap, and in keeping with it we learn in Christian Science that one's conscious capacity, his potential efficiency, is measured by his realization of man's relation to God; his inheritance of the divine nature, his enduement with that spiritual power which gave Christ Jesus irresistible authority over every claim and effect of so-called material law,—sin, sickness, and death.

In an important sense it thus comes about that one's working value is determined by his thought of himself, and that true self-denial and true self-assertion are always found hand in hand; indeed they are but opposite sides of the same fact, the apprehension of man in God's image. It is just here that many sincerely consecrated and aspiring people "gang aft a-gley," as Burns would have said, for the instrument of righteousness they would fain become is given a relation to God which is kindred to that of the broom to the sweeper or the piano to the pianist. The touch is intimate, but there is no likeness asserted or realized in their thought.

Relatively speaking, this concept is an advanced one, and it may be conducive both to piety and spiritual usefulness, but it does not express the truth of being, because it does not recognize man as incarnate Truth, God manifest. Strictly speaking, man is not the channel of a stream of divine manifestation, but the stream itself, flowing ever from that inexhaustible spring, the infinite Life and Love. To regard one's self as the tool with which the great artist expresses his wisdom and beauty of thought, is indeed to deny mortal self-sufficiency. It is to evince humility, freedom from presumption; but it involves no true self-assertion. It quite fails to recognize God's man, and in so far it wanders from the path and misses the goal, the summit of consciousness. It is well to be humble, but without daring this virtue is weak and relatively incapable.

Moreover, a sense of being the channel through which the divine outflow is conveyed, is likely to consent to if not create a conceded difference in nature between God and man, and so effect their separation rather than their unity. This does violence to the teaching of the divine immanence. It may in a sense be creditable to humanity, but it leaves the race unredeemed. Jesus' prayer for his disciples was, "That they may be one, even as we are one." This realization involves the identification of cause and effect, the all-inclusiveness of Deity. It brings to light the complete at-one-ment of Principle and its idea, and it is the true metaphysical basis on which Jesus' injunction, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven," may be fulfilled.

This is the more inspiring concept of Christian Science, that as a ray of light is "one with the sun, even so God and man, Father and son, are one in being" (Science and Health, p. 361). The "O! to be nothing, nothing," with which the spirit of consecration has well-meaningly phrased itself, would dispose of mortal selfhood, but it is wholly negative; it fails to grasp and hence to attain to spiritual sonship with Christ. It has no perception that "now are we the sons of God." St. Paul's nobler consciousness of capacity to be and to do, was gained even as we must gain it, in the spiritual understanding that man lives, moves, and has his being in God. This is the achievement of scientific apprehension, the realization that the divine Life is man's life, and that divine Mind expressed, constitutes man's intelligence. As Mrs. Eddy has written in Science and Health (p. 242), "It is to know no other reality —to have no other consciousness of life—than good, God and His reflection."

JOHN B. WILLIS.

Among the Churches

Current Notes

RIVERSIDE, CAL.—The Christian Science literature booth, being maintained this week [Oct. 13-17] at the county fair, is under the joint auspices of First and Second Churches of Christ, Scientist. All of the Christian Science publications are on display, and the Christian Science periodicals, consisting of the *Journal*, the *Sentinel*, *Der Herold der Christian Science*, and the *Monitor*, are being given away to those who wish them.—*Riverside Press.*

CORVALLIS, ORE.—The Christian Science Society of Corvallis, which has been holding its services in a room over the First National Bank, is now occupying a bungalow church which was recently built for its use. The building will seat nearly two hundred, and it also contains the reading-room. The society has been organized five years and the attendance is steadily increasing.—*Correspondence.*

FLUSHING, N. Y.—Christian Scientists of Flushing, and their friends from all sections of the borough, will hold their first service in the new stone and brick structure in course of erection at Sanford avenue and Murray street tomorrow morning [Oct. 4]. The service will be held in the chapel of the edifice each Sunday until the completion of the building.
Brooklyn Times.

HELENA, ARK.—Temple Beth-El has been sold to a Christian Science congregation.—*Hebrew Standard.*

Digitized by Google

ST. PAUL, MINN.—In February, 1908, First and Second Churches of Christ, Scientist, united under a new charter, that of First Church of Christ, Scientist. Within one year after this union, our church edifice was found too small to accommodate the increasing attendance, so a hall with a much larger seating capacity was rented. This, too, was soon outgrown. In the spring of 1910, arrangements were made to hold services in the new Masonic Temple, which it was thought would be adequate for some time; but with the growing interest and the ever-increasing attendance, the members of this church found it necessary to enlarge their accommodations, and therefore decided that it was an opportune time to build. A lot 100 by 260 feet, facing three streets, was secured, and the foundation for our church building was laid in the fall of 1912. The superstructure was begun the following summer, and completed in June, 1914.

Correspondence.

ARKANSAS.—Two sets of books identically alike were sent to the battleship U. S. S. Arkansas, in care of Capt. Roy C. Smith, commanding, by the Christian Scientists of this state. One set is for the library of the officers and the other for that of the enlisted men. Each set contains a Bible, and a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with a copy of each of Mrs. Eddy's other writings, as well as "The Life of Mary Baker Eddy" by Sibyl Wilbur, and a copy of the Christian Science Hymnal. Including duplicate subscriptions for a year to *The Christian Science Monitor*, the *Journal*, *Sentinel*, *Herold*, and the *Quarterly*, the value of the collection amounts to a little less than one hundred dollars.—*Texarkanian.*

The Lectures

Oshkosh, Wis.

The Rev. A. C. McHenry of St. John's Universalist Church, in introducing Clarence W. Chadwick at a lecture on Christian Science, said:—

The Universalist and Christian Scientist have at least a common attitude—they are both liberal; and they have a common conception of infinite fatherhood and motherhood, as Theodore Parker would say; that is, God is love. They have a common faith and human trust that no man can escape divine love; and they have a common philosophy that this love will continue to grow in the human soul, until all men become the expression of God. The road may be long, but the goal is sure! I could not admit that all the Bible is Christian, and perhaps I could not admit all that Christian Science admits as Christian, but I do admit that the logical result of belief in the authority of New Testament Christianity is Christian Science—applied Christianity.

Christian Science is primitive Christianity transplanted from a book religion to the souls of living men and women. It is not a modern heresy or a new religion, but rather the New Testament interpretation of the faith of Jesus and his early disciples vitalized in the faith of modern men and women. It is more than practical Christianity, more than social justice or temple building; it is the rebirth of Christ's faith in the Father—the faith that could say, "I and my Father are one."

Christian Science deserves a great deal of credit outside of its dynamic message of divine confidence to those in the chains of doubt and fear, sick in mind, body, and soul. It has comforted thousands that the religion of blind creed and dogma could not comfort, and it has brought freedom to thousands that the merely intellectual liberal could not reach. It has taken the study of religion out of the hands of the few and placed it in the hands of the many. It has deprived the clergy of their unjust and non-Christian monopoly, and has made men and women the expounders of the faith.

The Scientist says, "If there is a God, I want to know Him; I want to demonstrate His presence and power in the infinite depths of my own spirituality." The Scientist is not content to know or believe that Jesus and the Father were one, but he wants to know the far more essential truth that the Father and His humanity are one! It is this oneness of God with humanity that the world needs. We want a God of today; a truth that makes not merely our ancient brothers free, but us as well.—*Correspondence.*

❖

New York, N. Y.

Jacob S. Shield, who lectured on Christian Science at Fifth Church, was introduced as follows by Dr. Edmund F. Burton, first reader:—

We are living in what is frequently called the scientific age. This means that the world today is wanting to know things rather than believe them; that it is demanding proof of statements made to it; that it is requiring definite and satisfying answers to the questions "How do you know?" and "Will it work?" when theories are propounded to it. This sort of scientific knowledge is not usually thought of as being closely allied to faith or to a religion founded upon faith. And yet the Founder of Christianity, who proved his words by his works and so showed himself to be a scientific man,—this man taught the intimate relationship between faith and works, for he not only said, "By their fruits ye shall know them," and "These signs shall follow them that believe," but he also said, "According to your faith be it unto you."

Christian Science is a religion. It is a Science, and it is founded upon faith,—founded upon the sort of faith of which Jesus spoke, not upon the faith which is a blind acceptance of unproved—and perhaps unprovable—propositions and dogmas. Moreover, it is not simply a yielding to the present-day scientific tendency. It is the leader of this movement, both in point of time and in point of the depth of its basis and the height of its achievement, for it is based upon the absolute First Cause, not upon the relative forces which physical science calls causes; and its effects reach the profoundest depths of human consciousness, including the body, the mind, and the spiritual man.—*Correspondence.*

❖

Eureka, Cal.

Prof. Hermann S. Hering, who lectured on Christian Science in the Margarita Theater, was introduced by Atty. W. Ernest Dickson, who spoke as follows:—

We have met to listen to a lecture on Christian Science. It is not my province to tell what Christian Science is, but I happen to know a few of the things that its followers claim for it. They claim, and believe, that God is ever present. This belief is not new, except in this: That Christian Scientists really believe it. They claim, and believe, not only that God is ever present, but that He is ever available as a presence and power to help us. If that be true, think for a moment what it means to us. They claim that God can and does answer prayer; and if we pray aright, that our prayer is answered right here and now. They claim that we need not wait until after death to be the recipients of God's goodness, love, and protecting care, but that they are all about us and ever available, an ever-present help in time of trouble, and at other times as well. They claim that the sinner is

Digitized by Google

reformed through the ministrations of Christian Science; that poverty disappears; that financial problems are solved; that the fetters of evil habits, including the drink habit, are broken; that comfort and cheer are brought to the sorrowing heart; and finally, that every known form of disease has been healed. And they ask that these claims be judged and substantiated, not by their words but by their works.

Now if these claims are true, I make bold to assert that there is nothing in the whole field of human thought or endeavor that will so richly reward the inquirer, as an earnest investigation of the teachings of Christian Science. If, on the other hand, these claims are not true, then the whole movement must of necessity fall of its own weight. But Christian Science is not falling of its own weight; on the contrary, the movement is growing and spreading with a rapidity that is astonishing. Before the San Francisco fire there was one Christian Science church in San Francisco, and it was destroyed by the fire. Now there are six. I was in Los Angeles some three or four years ago, and there were at that time three Christian Science churches. There are now eight. Chicago has just completed its fourteenth. So I might go on indefinitely. The growth is not confined to the United States; the movement is rapidly spreading over the whole world.—*Correspondence.*

❖

Oregon City, Ore.

A. O. Freel in introducing Dr. Francis J. Fluno, who lectured on Christian Science in Busch's Hall, said in part:—

Christian Science has given to the world its healing message, which is permeating every avenue of the business, professional, and workaday world, bringing in its train peace, harmony, prosperity, and contentment. Its mission is to harm no one, but to bless all mankind. Countless thousands have received of its blessings through the healing of all manner of sin and disease, and through the elevation of thought and character.—*Oregon City Enterprise.*

❖

Oak Park, Ill.

Arthur Huertly, first reader, in introducing Bicknell Young, who lectured on Christian Science, said:—

In Science and Health Mrs. Eddy makes this statement: "Divine Love always has met and always will meet every human need" (p. 494), and one of the greatest of human needs today is a better knowledge of the truth that makes us free. In every community there are many who are eager to know of this truth; wishful to obtain a better insight into Christian Science, which has opened wide the doors of hope to the sick and the sinning; and which has brought "the glorious liberty of the children of God" to countless thousands of the human family. Tonight we have with us one who years ago found the "pearl of great price," and since then has been in all parts of the world, telling of the divine Love that, through Christian Science, brings freedom from sickness and sin.

Correspondence.

❖

Johannesburg, Transvaal, South Africa

Clarence C. Eaton lectured on Christian Science in the Caledonian Hall. J. C. Millbourne introduced the speaker in part as follows:—

Perhaps throughout the whole civilized world,—or ought I to say the world of religious thought?—today, no subject has become so controversial as Christian Science. And then to me always looms up the huge note of interrogation, Why? Because it is a religion that has but one aim, good; because its teachings are based upon the inspired writings of the Bible as a guide to eternal life; because it is a religion that strives for the uplifting of humanity, the redemption of the sinner, the relief of sickness, and, as I know, the restoration of peace and harmony in domestic life, long lost to such happy conditions. All these have been effected to my certain knowledge.—*Correspondence.*

Testimonies of Healing

When Christian Science found me five years ago, I was ill and unhappy. I had long suffered from what the doctors called extreme weakness—my limbs felt as if they were chained; I could not sleep, and often could not walk. I took every kind of medicine I thought would make me strong, only to become more discouraged. At last I threw the medicine away and made inquiry if Christian Science could help me. On that day a friend lent me a copy of Science and Health and showed me how to study the Lesson-Sermon. I had not the slightest understanding of Christian Science, but had asked God earnestly to show me some ray of light. To my astonishment I awoke early the following morning in perfect health. My joy was greater, perhaps, because I did not know that Christian Science could thus heal one; but I knew my sickness was gone, for all looked bright and beautiful. From that moment I felt love around me everywhere, and I knew this love came from God. My limbs were free—I had found "the liberty of the children of God."

The following week, knowing that God would help me, I gave a testimony in a Christian Science church here. I wanted to return thanks to God for all the good that had come to me, and no matter what another may say or think of this teaching, I have always before me the sweet memory of that healing. The erroneous conditions, however, could not have been entirely destroyed, for I was again attacked with the same trouble. I at once went to a practitioner and was helped; but I have had to learn that I can progress more in Christian Science if I work out my own problems. In this individual effort I have been reminded of a father who wished to make of his baby boy a fearless swimmer, and so plunged him into the water, never for a moment taking his eye from the child. Since helping myself more and not leaning on others, I know I am becoming less fearful. When the struggle between truth and error seems severe, I now know my heavenly Father's eye is always upon me and that I am in safe keeping.

Last summer I stood on a porch where I had lain so long in suffering and tears, and silently thanked God for all His love to me. I saw clearly that God was the same; nothing had changed but my own thought. I am now trying to see the good in others, for in so doing I am helping them as well as myself. Several of my dear ones whom I have not seen for many years are now in Christian Science. I told them of my healing, saying they should seek for themselves, and they have surely found the truth, for which I am very grateful. I am deeply grateful, too, for the love shown me now by little children, also that I have been the means of bringing others to Truth. My thanksgiving to God is in the words of David: "Thus will I bless thee while I live: . . . Because thou hast been my help, therefore in the shadow of thy wings will I rejoice."—Esther Dilley, Chicago, Ill.

✧

In June, 1909, when I was away at sea, my wife had a chill, and two doctors, diagnosing her case as appendicitis, insisted on an immediate operation. When I arrived home I elicited the fact that the operation had been a mistake and that the trouble was something entirely different. Feeling very indignant, I said, "I'll have nothing more to do with doctors; I will become a Christian Scientist," without knowing in the least how to do so. Immediately afterward, however, I met an old friend whom I had not seen for several years, and when I told her about my wife, she said that she herself had become a Christian Scientist. I felt that this was evidently an answer to my desire, so I asked her to tell me about Christian Science, and she gave me every assistance to study it.

For a month I inquired diligently, constantly comparing Mrs. Eddy's teachings with the Bible. I could find no flaw in the reasoning or anything illogical in the statements, so I came to the conclusion that the arguments were irrefutable, though I was unable to accept or even to comprehend more than the first steps. I had not hitherto thought of my own healing, although I had suffered for many years from what is called gun-deafness, for which two medical men had told me there was no known cure. At this stage, when halting between two ways and waiting for guidance, I was in church one evening, and as the clergyman read indistinctly I feared that, as so often happened, I would not hear, but quickly came the inspiring thought, that according to Christian Science there is no such thing as deafness. As this thought took possession of me, my ears were "unstopped," even as if a wall had toppled over, and I heard the service throughout.

I felt overjoyed at this demonstration, for it showed me conclusively that I was on the right way. It took me a long time to overcome all the old narrow beliefs, but gradually these have been replaced by the true ideas gained through Christian Science. As my thought has improved, my body has followed suit, and many minor discords have disappeared. I wish I could add that my hearing is absolutely perfect, but it has not yet reached that stage, though it must in time. At present it occasions me only slight inconvenience, and it has certainly improved since my first recovery.

The knowledge of an infinite, ever-present, all-loving Father is the greatest comfort and support in all dangers and difficulties, and in learning to understand and so to love the Bible, I feel most loving thankfulness to God, and to His Son, Christ Jesus. We must all feel deep gratitude to our Leader, Mrs. Eddy, for the unflinching way in which she clung to divine Truth, thus bringing happiness and health to unnumbered thousands of the world's sufferers.

Reginald Raby, Captain Royal Navy, Bath, England.

✧

The testimonies in the Christian Science periodicals have been a great help to me, and for this reason I want to tell of my own healing. A few years ago I was visiting at a distance from my home, and in working in some acid I got a quantity of it into my eye. Knowing the belief held respecting this acid, having studied medicine with my husband, who has been a practising physician for the past twenty years, I felt assured that there was no help unless God could aid me. In this state of thought, with both eyes closed and in intense pain, I asked for help in Christian Science. In twenty-four hours all pain and inflammation had vanished, and I could open both eyes; the second day the sight returned to the burned eye and I was completely healed. Can words express gratitude for this?

I afterward took up the study of the text-book, "Science and Health with Key to the Scriptures," and while the understanding of its teachings comes to me slowly, I know that they are true, and that, as we read on page 442, "an improved belief cannot retrograde."

Patti McMillin, Alexandria, Tenn.

✧

It is six years since my attention was directed to Christian Science, shortly after I was discharged from a famous hospital, where I had been for months under the care of one of the most efficient medical and nursing staffs. While there,

Digitized by Google

the chief physician gave me a prescription for a dose which he said I might take as long as I believed in it. At this time I was a heavy smoker, and felt with others who came to visit me, that frequent calls for the tobacco and whisky cabinet were absolutely necessary, so much so, that the aroma of these indulgences was frequent in the house. The understanding of Truth through Christian Science has, however, quite cured me of these desires. For years it had been considered necessary to my existence to use drugs constantly for stomach and other disorders, and I suffered much in consequence. In Christian Science I realized enough of our Master's command to take no thought for the body, to enable me to do away with all material means, and in this respect, through reliance solely on divine Love and Truth, I am now well and free.

Other visible signs of the ever-presence of divine Love are indicated by the fact that my mother and sister, who with me comprise the household, are good Scientists and have had many demonstrations of Truth's power. For this my thankfulness to God is unbounded, as is also my gratitude to Mrs. Eddy for guiding our steps to the light. I am grateful, too, for the great improvement and regeneration in my thought-processes from the low sensual plane on which they rested at one time, to what they are now,—a constant endeavor to think as God would have me think. This has been the means—though my final demonstration is not yet complete—of making me happy and grateful to all those who have helped me so much. All is more beautiful and harmonious than I ever dreamed possible previous to the advent of Christian Science in my consciousness. I write this testimony in the hope that it may serve to encourage some one still lingering in the mist of doubt and uncertainty, as I was at one time.

JOHN MILROY LAMB, Edinburgh, Scotland.

I gladly corroborate the above testimony of my son.

MRS. R. H. LAMB.

✧

The belief that my experience with Christian Science may lead some others to seek blessings as rich as those I now enjoy, prompts me to tell of my first wonderful demonstration, which relieved me almost instantaneously of the many years of physical and mental suffering with which I had been afflicted. While in the East, within a few years I was bereaved of a dear sister, two brothers, my father, mother, and afterward my own dear child, and as a result I was left almost a physical wreck. I had been brought up in my early life to love and revere all things which tended to promote the spiritual within me, so that my mind should have been receptive, but instead my sorrow hardened my heart to rebellion. The teaching of my church now seemed a mockery. As it looked to me, the affliction was sent, not by a loving Father, but by a hard and cruel one.

Conditions began to develop in my physical experience which threatened a like fate to that of my brother. Believing a change of climate would be beneficial to myself and children, my husband decided our course to California; later a visit to a dear neighbor opened to me the gates of heaven. Peace now reigned within my heart, and I knew God as my Father, the gentle and loving Father who comforteth me when afflicted. The words of this kind neighbor opened the way to a clearer understanding of the truth. Noticing my extreme nervousness, she asked me if I had ever heard of Christian Science. I answered that I had not. To my question, if Scientists believed in God and in Christ, came the answer that nothing but good comes from God. The food for my "famished affections" (Science and Health, p. 17) was at hand, and I eagerly partook of it.

From that hour I have been free, and the world grows more beautiful and lovely. The Bible is now an open book, and "Science and Health with Key to the Scriptures" by Mrs. Eddy has pointed the way to its treasures, for which I am most deeply thankful.

HANNAH EVANS, Oakland, Cal.

✧

[Translated from the German]

Since youth I have devoted thought and attention to religious questions and the problem of being, but I confess that in my search for the truth I failed to find complete satisfaction and enlightenment in my own as well as in any of the well-known religious creeds. I had to walk my own way, and finally, with many others, shared the opinion that while religion with its ideal values was a factor of the utmost importance in the lives of people at large, as well as with regard to their education along ethical lines, and while a matter of great interest to the state and possibly a very effective help in the case of simple-minded people, yet that the educated, the intellectual, though they might assist in establishing religion, could not sincerely believe in the creeds.

When my attention was called to Christian Science, I applied myself diligently to its study, and soon realized that it contained the truth, the Science of being, for which I had been seeking. My opinion as to scholastic theology has remained unchanged, but I have marveled and have been filled with joy through the recognition that true Christianity, as presented in Christian Science, the pure teaching of Christ, offers not only ideal but most practical values, very tangible results; that religion is not a matter merely for women and children, but is especially to be commended to men, a profitable thing for men in all walks of life. I have come to see that simple-mindedness and a limited knowledge are not the essential conditions of faith so called, but that the keenest intellect and the best reasoning powers are none too good for a comprehension of the Christ-teaching in its full spiritual import, and the conclusions reached thereby. I have also seen that, high above all denominations and so-called sects, there is only one great Christian ideal, the Christianity of the sincere disciple and follower of Christ Jesus, such as Mrs. Eddy emphasizes and presents in the light of spiritual understanding in "Science and Health with Key to the Scriptures." It then became evident to me how misplaced the word "sect" is, when applied to Christian Science. Christian Science towers so high above all denominations, parties, and dissensions, that it seems to be destined to serve as a perfect model, as an ideal to all denominations.

Another question of great moment urged itself upon me. Heretofore the educated man, the savant, the medical man, the man of practical science so called, was wont to look upon religion as upon something antiquated, time-worn, something that had no legitimate place in this age of progress. And now the marvel has occurred before the eyes of amazed humanity, as it did eighteen centuries ago. Christianity as restated and presented to the understanding by Mrs. Eddy, is not only a religion but a science, a science which is just as demonstrable as any other science. I can see the time nearing when the merely intellectual man will be considered reactionary, behind the times, and below the standard of his day, because his thought is not attuned to Truth and he has not a demonstrable knowledge of Christian Science. More wonderful still, not only one class of people may put this teaching into practice and use it to good advantage, but to all people, without exception, the possibility is furnished of attaining physical, mental, and spiritual betterment and a high standard of excellence.

Short as the time is, since I and my family have become acquainted with Christian Science, the omnipotent power of God, of the Mind "which was also in Christ Jesus," has been demonstrated to us repeatedly, and we are filled with deep gratitude for the blessings which this teaching is bringing into our home. The most convincing proof was given us about a year and a half ago, when our five year old boy was taken ill with scarlet fever. I would not omit to mention that as beginners we were severely tested, when the physician whose helpfulness and humanitarian spirit we had learned to appreciate on previous occasions, stated the nature of the case and prescribed remedies which we could not use, owing to the convictions at which we had arrived. The physician stated that this was a definite case of scarlet fever, which in its regular course would include all the usual symptoms, and would probably last for weeks. A quarantine was imposed upon us by the authorities, and the usual methods of disinfection were used, despite the fact that *materia medica* admits its present inability to explain how contagion takes place in the case of scarlet fever.

I immediately applied to a Christian Science practitioner for treatment, and was notified of her readiness to help. On the next day the fever, which had been moderate, remained stationary, and on the third day it yielded. The boy ate heartily, and from then on showed buoyancy and acted like a healthy child. A glandular swelling which appeared after a few days on the right side of the throat, disappeared within a few weeks without medicine or an operation having been resorted to. Our younger boy, two years old, was also taken ill with scarlet fever, and one day seemed unable to stand up. The practitioner was notified, and on the next day the child got up as usual, was well on the third day, and has remained so.

In both these instances we have had actual proof of the fact that disease has no power of its own, and that the law and manifestation of God offsets, or rather annihilates, the material law, so called, established by erring human consciousness. Further, it has been demonstrated to us that matter has neither life nor intelligence, for despite the proximity of the sick children and all modes of contact, there was no spreading of the disease. We have also learned that the more responsive and receptive one's own thought and that of those about the patient is to Christian Science, the quicker will the picture of disease vanish.

Carl Seitz, Niedereinsiedel (Nordböhmen), Austria.

◆

It is about fifteen years since I first heard of Christian Science. This wonderful healing came to me at a time when I was very sick and sad. I had been a delicate child, and my parents had been given to understand by a doctor that I would probably not grow up, as I had a very weak chest, one lung being seriously affected. The doctor had been called in to attend me during a bad attack of gout, to which I was subject, having inherited it, supposedly, together with a tendency to consumption, from which some of my father's family had passed on.

Christian Science was brought to my notice by a criticism in a daily paper, and Science and Health was borrowed from the reading-room. I commenced to read at once, and as I went on I seemed to be fed. Instead of a ceaseless longing for something to satisfy, I was conscious of a feeling of safety and warmth. Everything seemed to take on a fuller, brighter appearance, and in time even the fear of death had vanished; I was sure of God's loving care and protection, and was bright and happy. After a while my attention was brought down to the fact that I was getting strong, and even fleshy.

Some time after this, when I had passed my twenty-second birthday, I was studying the Lesson-Sermon one day, and I paused in my reading to compare the difference in my outlook. Instead of the nameless fear and dread of the future, I saw nothing but good before me. I had come to know God as my best friend, and I had nothing to fear. Then the thought came to me of what the doctor had said about my not being strong enough to grow up, and with a sense of deep gratitude I went to my mother, who was in the next room, and said, "Mother, I have forgotten something." "What is it, dear?" she asked. "I am past twenty-two and have forgotten to die." I was sorry the moment I had said it, because I saw the old look of anxiety pass over her face, and I realized how much the awful fear which had haunted me, had also haunted her; but my sorrow at having hurt her was quickly reversed by the recognition of the fact that the power of Christian Science is indeed omnipotent for good, being able to lift the heavy cloud of fear and anxiety for our whole family.

The next thing which had to be put right was the gout. When a very bad attack took hold of me, I asked for Christian Science treatment, with the result that I was healed. Although these attacks, according to medical law, were to come periodically, growing more violent and frequent as time went on, I have never had another.

These two cases of healing are only a small part of what Christian Science has done for me, and to say I am grateful is only a very feeble way of expressing my feelings. But what is most precious to me is the fact that we have a demonstrable understanding of God, by which the Bible may be explained and used as the remedy for all ills, showing as it does that God is a "very present help." I am more and more grateful to Mrs. Eddy, who was the means of giving this truth to the world in this age.

Barbara S. Banham, St. Albans, Herts, England.

❖

[Translated from the German]

Two years have elapsed since some dear relatives called my attention to Christian Science, that subject which includes the understanding of divine, omnipotent Love, the truth which leads us all toward the same goal,—toward health, contentment, and the attainment of true happiness. I would now like to give an account of my own wonderful healing through this teaching.

For a whole year I had been subject to a severe nervous trouble. I was tormented daily with the most dreadful headache, which was often accompanied by other distressing conditions, with pain in the stomach and in the back. The pain gradually extended over the whole body and daily increased in severity. My suffering was intense, so that all my family were affected thereby; but although I was surrounded by loving-kindness and all my desires were fulfilled, it seemed that nothing could comfort me. Besides this, I was in a state of constant fear of death. I set all my hope on the physicians, who did everything in their power to help me, yet all remedies and hygienic measures failed to benefit me, and this often led to such despair that I wished death might come, as it seemed that it alone could put an end to my suffering.

When all medical means failed, I was twice taken in a hopeless condition to a sanitarium for nervous diseases, where rest, air, and dietary nourishment were expected to bring about a cure. But it all proved in vain, for my condition

Digitized by Google

grew worse with every day. I now yielded to the ills which had befallen me, as there seemed to be no prospect of recovery, at least no prospect of complete recovery, according to the physicians' verdict. But although I seemed to be nearing death, yet at times there was an overwhelming desire to live and be restored to health. I had become apathetic and shrank from people. When others laughed, talked, or walked about, I suffered pangs, and oh, how I envied these fortunate ones! I never had any appetite, and I forced myself to eat what little nourishment I took. I was losing in weight every day, and new troubles were added.

While in this wretched condition I was led to behold a ray of divine light. My children heard of Christian Science, as it seemed by chance, and were favorably impressed. Despite my aversion to seeing people, I did not refuse to have treatment from a Christian Science practitioner to whom my children applied in my behalf, and who at once took up work in the most loving manner. The task imposed upon him was not an easy one, for I did not seem to be able to familiarize myself with this new view of what constitutes life. Through untiring patience on the practitioner's part, and through his loving explanations as well as his firm confidence in my healing, there gradually came a sense of trust, and I was able once more to look with hope into the future. To be sure, I had clung to this new hope like a drowning man to a straw. After about six months the practitioner had to leave on a journey, and so another was entrusted with my case. Fear and discouragement again got hold of me, as I had become accustomed to the first practitioner and doubted that this change would be favorable to my healing. It also meant a great deal of effort on the part of this practitioner, for despite the kindness she showed, it took me a long time to trust firmly. But divine Love finally was the victor, and I was healed of my troubles in about a year's time.

I feel deeply thankful to God, our almighty Father, for my wonderful healing, and grateful to Mrs. Eddy, our noble Leader, the Discoverer of this glorious Science; and I would not fail to thank those who in the spirit of love and helpfulness lent me their effective assistance. My children and myself have experienced other instances of healing in a mental as well as in a physical way, and we shall continue to assimilate more of this inspiring, life-giving teaching, and overcome the errors which are still besetting us.

Frau Flora Bohensky-Clerk, Zürich, Switzerland.

✧

Words cannot express my gratitude for all that Christian Science has done for me. The Scriptures declare, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." I have proved this promise to be true, as others in Christian Science have proved all God's promises to be true, here and now. "Behold, now is the day of salvation."

I took up the study of Christian Science when I had lost all faith in God and was in a wretched mental state. I desired peace only,—utterly indifferent as to whether I ever should overcome any physical conditions. With a correct knowledge of God, and an understanding of the Christ, came the "peace of God, which passeth all understanding;" and all other things were added unto me. A pronounced structural defect of the eye has been almost entirely overcome, while a severely injured ankle was healed in sixteen hours. A chronic case of piles was also healed, as well as a case of seasickness.

For all these benefits I am deeply grateful; but for the spiritual uplift, and the light which Christian Science has thrown on the Bible, I am more thankful than I can express.

Fritzi Heimann, Los Angeles, Cal.

From Our Exchanges

[The Watchman-Examiner]

It is ours to yield day by day and hour by hour to the promptings of the indwelling Spirit, and thus to work out our salvation with fear and trembling, realizing that it is God who worketh in us both to will and to do according to His good pleasure. We are Christians if we have accepted Christ as Saviour, if we are manifesting Christ's life in our character, and if we are giving our life to his service. Christ's life within us will inevitably blossom into noble character, and bear fruit in noble conduct.

[The Outlook]

It is idle to pray for peace unless we work for it; and we do not work for it when we simply express a desire that it may come. Peace cannot come until there is justice between nations; and while permanent peace ought to be held steadily before men, not only as an ideal but as a necessary achievement of civilization, it ought to be worked for even more than prayed for. We must remove the obstacles to peace before we have a right to ask the God of peace to establish it among the warring nations of the world.

It is a profanation of the great and sacred function of prayer to ask for peace and happiness and continue the habits and practices which make peace and happiness impossible. There is a legal maxim that he who comes into a court of equity must come with clean hands; it is a kind of blasphemy to ask for peace unless we make every effort to put hatred and greed out of the world.

[The Christian Register]

Never mind what you name it, provided only that you possess the religion strong and good enough to do the work of a civilized world. What a simple religion it is, as soon as you take it up! It is like the key out of the dungeon of Great Despair. We knew it all the time; we only did not use it. Is it so very difficult to live as men and not as brutes, to think the thoughts of a divine universe and not chaos, to obey the golden rule and treat each other and all men with good will, to expect the best of our neighbors and help to make the best prevail and not to look for the worst? Is the religion of Jesus anything less than this, or is it anything more than this? The conventional religions of Christendom have been tried and found wanting. This religion of the seers and the prophets, of humble people and children, has never failed as often as it has been tried. Whoever wants fulness of life is going to try it and live by it henceforth.

[Rt. Rev. Herbert E. Ryle in *The Christian Commonwealth*]

The most important and valuable thing in heaven or on earth is goodness. That is to be presented to the eye of the whole world, and being so presented it will gradually and unerringly work out its effect. "That they may see your good works," not that they may hear your good talk, says Christ. The world will be better for the constant seeing of good acts. The community at large, be sure, is at heart looking out for goodness. It wanders in all directions seeking for it.

[The Congregationalist and Christian World]

The reawakened desire of the world for help and courage, which faith alone can bring, must be met by our more living and obedient faith and more courageous venturing. It is no time to lessen reverence, to make room for selfish hopes of favoritism from the God of all the earth, to stop short in

Digitized by Google

the effort to build the kingdom of Christ in all the social relations of men. But let the church beware lest, when the cry of the world for the bread of God is heard, it offer the forsaken husks of an outworn philosophy or the cold stone of formality.

What are the real and central things of faith? Do we stagger as we go forward under the weight of unneedful burdens? Are we bearing false witness to our Lord by sins that easily beset us? If we would bring the questioning and desirous world into personal relations with God, we must ourselves enter into closer relations with Him than we have ever known. The world is growing more concerned about religion,—what of the church? On its own higher level of experience, is it fitting itself for leadership in a new age of faith?

[*The Christian Advocate*]

There is always peril that persons who do not give ethics a central place in religion will fall into the delusion of supposing themselves very godly, merely because they are sentimentally religious. The Bible nowhere encourages men to believe that pious thoughts or religious emotions can be taken as a valid and adequate test of a good life. "By their fruits ye shall know them" was the standard of judgment which Jesus gave his disciples. There is no piety deserving of respect which does not prove its worth by an exact fidelity to moral principle.

[Rev. David J. Burrell, D.D., in *The Christian Intelligencer*]

In all the literature of the world there is no such record of a life as that which is contained in the brief monograph, He [Jesus] "went about doing good." The manliest deed that this world ever saw was on Calvary; and the highest attainment of manhood is to imitate it. "If any man will come after me," said Jesus, "let him deny himself, and take up his cross, and follow me." So by the following of Christ we come at length to "the measure of the stature" of his fulness, and thus "unto a perfect man."

[*The Universalist Leader*]

There is a wealth of soul which is immune to poverty of pocket. Those who smile at this assertion are unfit for that kingdom. Let him who would write a book or preach a sermon or do any noble work, go about it in the spirit of his Master. Let him accept what the world gives, be it much or little, knowing that he shall never be denied the richer rewards of his own soul's satisfaction in the thing which he has done. That is the great, the divine compensation.

[*Zion's Herald*]

Jesus asked men to come and see where he lived, to walk with him over mountain paths, to eat with him in the open. Thus he convinced them by the logic of life. Jesus made himself real in the experience of men; then he became justified fully in their reason. He got at men through life. His point of contact was not made with the reasoning powers, but with the love and the friendship of comrades. Life is the final argument that convinces men of Christ.

[*The Continent*]

Our troubles are details. We need to see them in the whole scheme, against the background of the whole dealing of God with us. Our view must take in our own conduct, the conduct of those with whom we are allied and whose consequences may fairly come upon us, the value of the experience in coming years,—all such things belong in the background.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, *leather covers*, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in the CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

Construction of wooden passenger-cars for the railways of the United States has practically ceased, according to the report made at the annual convention of the National Association of Railway Commissioners recently by the committee on rails and equipment, of which C. C. McChord of the interstate commerce commission is chairman. The committee finds that 66 per cent of the 65,291 derailments in the ten years from 1904 to 1913, inclusive, were due to defective roadway and equipment. These derailments were the cause of 8,727 fatalities. Not only defects in steel but heavy wheel loads and high speeds are blamed for some of the breaking of rails or failure of rails in other respects. "There has been a noticeable increase from year to year in the loads to which rails and equipment have been subjected, and the increase is still going on," says the report. "In no other situation involving danger to life is material used with so slender a margin of safety, judging from the annual statistics of accidents. In comparison with other engineering uses of materials of construction, knowledge of the working stresses in railway materials is in a very backward state. No other service has furnished so extended a list of annual failures, which in part is attributed to this lack of information, nor would such an exhibit of failure be tolerated in any other branch of engineering. Many of these failures are believed to be of a preventable nature and, even in the light of present knowledge, could be guarded against."

Through new specifications for ax, sledge, adz, pick, and other handles made of hickory, the Panama canal authorities have recently purchased large quantities of this class of material for one fourth less than formerly paid, and at the same time are getting just as serviceable stock. The new rules are the result of a long study of the subject, covering exhaustive strength tests, investigations of the growth of hickory in the woods, processes of manufacture, and market conditions. Under the new specifications, handles are selected according to weight, as influenced by the density of the wood, and they now include material which may be either partly or wholly of heart-wood, known generally as red hickory. Red hickory was formerly discriminated against in commercial grading, but it is now accepted, since it has been found that weight for weight it is just as serviceable as the white hickory.

With its great railroad facilities on one side and immense ocean traffic on the other, a mile or so apart, both hampered by extreme congestion and antiquated, expensive methods of cargo handling, Jersey City, N. J., presents a situation with which its Chamber of Commerce is grappling in an effort to bring about more orderly arrangements. In and around this city lie thousands of acres of land which can be purchased at prices that would not buy good farming land in many communities, and yet enormous industries are huddled and crowded together where the land values are highest. The Chamber of Commerce has employed Bion J. Arnold of Chicago as its consulting engineer in studying the situation and seeking a solution.

The board of education of New York city is arranging to put into operation a plan by which high school pupils are to be given an opportunity to obtain technical engineering knowledge and experience while attending school. As the plan is at present developed, the high school students will work in pairs, one pupil attending school two weeks, while the other is engaged in the factory or engineering shop. At the close of the two weeks' period the pupils change places. No break is to be permitted in the continuity of the work. A number of employers have expressed their willingness to cooperate with the board in carrying out the plan.

A powerful army wireless station is to be erected immediately at Fort Leavenworth, Kan., by order of the war department, to be used as a relay station, from which the Arlington towers at Washington can communicate with any other radio station in the country. There is already in operation at Fort Leavenworth a very powerful station, which frequently has caught messages as far away as the coast of Brazil, and which, when conditions are favorable, can converse with Vera Cruz. Its situation, practically in the center of the country, would make it one of the most important in the United States.

After a great deal of waiting and discussion, the much desired measure, the agricultural warrants bill, has been approved by the Congress of the Argentine Republic, and in due course of time will become law. It is hoped, too, that the government will avail itself of the proposition that is now before it to initiate an elevator system. The grain elevator system exploited as a public service would eliminate many defects. The farmers lack capital and commercial credit, which obliges them to throw the harvest on an already overstocked market, overtaxing the railway transport facilities and causing the congestion of maritime transport.

The interstate commerce commission has announced that as pipe-lines had been declared by the Supreme Court to be common carriers, subject to the commission's regulations, it now was proceeding actively, "in accordance with its original terms, which bring into question the reasonableness of the rates, rules, regulations, and practices of pipe-lines." This action is in accordance with the original order of the commission, prepared by Commissioner Lane, now secretary of the interior, who held that the pipe-lines were common carriers and subject to the act to regulate commerce as to their rates and all other operations.

The erection of thirty-six public school buildings in various sections of Philadelphia, Pa., where congestion and inadequate facilities are known to exist,—seventeen entirely new structures and nineteen additions to old ones,—is recommended in the joint report of the board of education's department of superintendence and department of buildings. It is roughly estimated that almost four million dollars would be required to carry out the building program outlined. The items in the report, however, have been approved by the elementary schools committee, and will be adhered to as closely as possible.

Massachusetts will not be obliged to appropriate one million dollars to improve the Merrimac river, as the federal government has decided not to share in the expense, since an unfavorable report has been made on the survey of the river because of the large cost and the uncertainty of the material benefit that would result from deepening the channel.

The contribution of Aroostook county, Maine, to the relief of sufferers in Belgium will take the form of a train-load of potatoes. The Aroostook County Board of Trade has the matter in charge and has asked for contributions from the big potato towns, so that a train of about twenty car-loads may be sent at once. This would mean about fourteen thousand bushels.

At the recent state election in Massachusetts, party enrolment at the primaries was abolished, Saturday half-holidays without loss of pay were given laborers, workmen, and mechanics in the employ of Massachusetts, and employees of many of the cities and towns were granted a two weeks' vacation each year, with pay.

Cotton and cotton manufactures comprised more than one fourth of the entire value of domestic products exported from the United States to foreign countries during the last quarter century, their total for that period being $9,384,000,000 out of an aggregate of $35,789,000,000 for all articles.

Last year there were more than four thousand foreign students in attendance upon colleges and universities in the United States. They are distributed through two hundred and seventy-five different colleges, universities, and schools of technology, and include only those of college or graduate grade.

More than four million five hundred thousand gray squirrels were taken last year in Siberia for their fur. The tails alone weighed more than twenty-one tons. The animal figuring next in the fur trade of Asiatic Russia, in point of numbers, was the white hare, which contributed one million five hundred thousand skins.

One of the most expensive woods used regularly in an established industry in the United States is boxwood, the favorite material for wood engraving. It has been quoted at four cents a cubic inch, and about one thousand three hundred dollars by the thousand board feet.

The inauguration of the new President of Brazil, Dr. Wenceslau Braz Pereira Gomes, took place on the 15th ult. in the Senate chamber, in the presence of the members of Parliament, the diplomatic corps, and many prominent citizens.

Although there were an unusual number of forest fires in the national forests of Oregon and Washington this year, the loss of merchantable timber has been relatively small.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII | December 5, 1914 | No. 14

"The only sufferer"

HON. CLARENCE A. BUSKIRK

THE genius of Mrs. Eddy, who is coming to be recognized in all the world as a very great religious teacher, often gives us, and perchance in a few words, an unforgetable glimpse into otherwise profound darkness and night, her insight proving an illuminating flash which pierces and dispels the densest clouds and gloom. Take for example the two following statements: "The equipollence of God brought to light another glorious proposition,—man's perfectibility and the establishment of the kingdom of heaven on earth." "Immortal cravings . . . establish the truism that the only sufferer is mortal mind, for the divine Mind cannot suffer" (Science and Health, pp. 110, 108).

None may reasonably deny the eternal fact of infinity. Its proofs are everywhere. It is a fundamental proposition in all the philosophical and religious thought of the world. Infinity must be absolutely free from all limitation,—a single lack would mean finiteness. Hence, infinity includes self-consciousness and intelligence, which surely are the best and most supreme things in the universe; and this means a self-conscious intelligence without limitation or lack,—eternal, absolute, supreme, omnipresent, omniscient, omnipotent divine Mind. No one would deny that thought and self-consciousness belong to man; therefore to deny them to the infinite would be to make infinity merely finite, that is, more limited than man.

Let us consider the subject from another angle. When the eternal fact of divine Mind is granted, it follows that divine Mind is exclusive because omnipresent, and that what we term finite intelligence, in so far as it expresses truth and reality, must be a reflection, or an effect, of the divine Mind. It therefore also follows that any intelligence which is antipodal to divine Mind can have no real existence, but is the mortal mind described by Mrs. Eddy in Science and Health and her other writings. This consideration does not weaken the argument for the existence of divine Mind as an eternal fact, since human intelligence, though it be false and illusive in many things, nevertheless has a divine similitude even in its imperfect reflection of the truth of being.

Christian Science has shown irrefutably that matter has no sensation, and hence that flesh cannot suffer apart from mortal mind, which is the only sufferer. A vast array of unimpeached and unimpeachable evidence verifies the unanswered argument of Mrs. Eddy that suffering as perceived by physical sense is not a fact of man's being, and therefore can be overcome according to the divine Truth-cure; that such suffering has no real law creating or prolonging it, has no real power or government behind it or supporting it, but is a product of mortal mind; that such suffering, like the vast category of phenomena designated as mortal mind in the absence of a better term, is essentially a negation, not a real entity. It is like the mistake in addition, which has no mathematical rule as its genesis; like the illusions of the abnormal, which have no real existence and which Truth alone possesses the power to destroy.

That which is harmonious, that is, in accord with the government of divine Mind, cannot suffer, but in the realm of false human consciousness there seems to be very much that is inharmonious and productive of suffering. All such inharmonies need to be removed in order to start us on the road which leads to man's perfectibility, and suffering is a symptom or effect which sometimes prepares the way for the destruction of its cause, since it reveals the fact that there is something which needs betterment. The history of the human race would seem to indicate that in the long processes (in which a thousand years are but as one day) whereby mankind is slowly but surely climbing to higher and still higher plateaus, suffering is very much in evidence. Indeed, there have been theologians who have declared that human existence on this planet is purgatorial, a tragical preparatory school in which the pupils are flogged by an angry teacher from the cradle to the grave. This notion is, however, quite as unnecessary as it is illogical; and so also are all those melancholic views of human existence which depict it variously as a tragedy-farce or a farce-tragedy.

The sound view is the wholesome one which follows from the statement of Mrs. Eddy in "Miscellaneous Writings" (p. 208): "This is the law of Truth to error, 'Thou shalt surely die.' This law is a divine energy. Mortals cannot prevent the fulfilment of this law; it covers all sin and its effects. God is All, and by virtue of this nature and allness He is cognizant only of good. Like a legislative bill that governs millions of mortals whom the legislators know not, the universal law of God has no knowledge of evil, and enters unconsciously the human heart and governs it."

Every chord of suffering in the medley of human experience sounds its note in the vast hymn of mankind's betterment and progress. If you, dear reader, find yourself listening, self-pityingly or despairingly, to what seem to you your own exceeding chords of suffering, take heart, and find a solace in the divine fact that as you turn away from material evidence and grasp the truth of man's being, you are sure to be bettered in the only way possible, and courageously take your steps toward the higher life.

To illustrate: The man who has acquired great wealth and power sometimes becomes swollen with abnormal pride, and his kindlier sensibilities and sympathies are ossified. He grows deaf and blind to the agonies of the poor and feeble among his brothers and sisters. He forgets God; Love's sovereign government is ignored and even flagrantly trampled on. Only through suffering, here or hereafter, can such a man awaken to his mistake, and then find the truth which shows him the way of escape from prison. There is no other way for him to be delivered from the wretchedness of his state. A foolish world may think of him with mistaken envy, not knowing that vultures are gnawing at his vitals. "This is the law of Truth to error, 'Thou shalt surely die.'" The ancient or modern Crœsus with all his heaped-up gold, with all his fleeting power and bubble-like pride, may as well try to blot out the stars as to escape from the infinite processes which are eternally working toward the destruction of evil, the establishment of the kingdom of heaven on earth!

Let us learn more and more to submit cheerfully and joyously to every corrective experience, and pray ever, "Not my will, but thine, be done." Suffering is ofttimes necessary to turn mortal thought to the ladder of divine Science, where we must all begin our ascent.

Love descends to men as men ascend to Love,
And the ladder stands forever!
It stood at Adam's birth, with its foot upon the earth;
And its rounds are waiting ever
For our holiest endeavor.

Within the Ark

AMY C. FARISS

Writers in all ages have compared the turbulent phases of human experience to the fiercer elements of nature. The "Peace, be still" of Jesus, rebuking wind and wave and quieting mortal fear, calls to mind a picture in which the connection of storm and sea, of fear and turmoil, stands out distinctly.

Perhaps all readers of the Bible have outlined in fancy the beat and fury of the storm, related in the story of the deluge, and have seen the ark in which Noah and his family were safely sheltered, tossing on the waves. We are told that the rain fell and the water rose both day and night. Weeks and months passed as the ark, a mere speck on so vast a sea, rode in security; and for Noah and his little band there was perfect safety within the ark. The waters might foam and rage, the sky might grow black and send forth torrents; the chaos and desolation to outward vision might be complete,—yet those within had God's promise of deliverance, and they rested serenely.

Today, through the pure, clear consciousness of Mrs. Eddy, the world is fast awakening to the fact that we of this age also have God's promise of deliverance. From near and far experiences accumulate to prove that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." One thing is required of us, however, which we must heed if we would see the storms of mortal existence assuaged; if we would hear the "Peace, be still" that today as in Jesus' time silences wind and wave,—we must dwell within our ark as Noah did. We can no more make excursions aside to mingle with this or that form of error, than Noah could have entered a frail skiff and expected to brave in safety the surging sea. In wisdom we can no more go back to some hindering earth-attraction and think to linger engrossingly there, than Noah could have tarried without the ark, holding to some material possession with the flood threatening to engulf him.

Thanks to our chart of life, the Bible interpreted for us in the Christian Science text-book, we are learning something of what safety implies. More and more are we resisting the temptation to expose ourselves to the needless blasts which seemingly ever blow across the planes of mortal sense. Less and less do we find ourselves engulfed by opposing forces, less frequently do we have to go back to our ark through heavy seas and beating winds. By remembering at all times, as did Noah, that we have God's promise of deliverance from every evil, the promise of dominion over every mountain of difficulty, every sea of sorrow,—by remembering this, a great deal that is narrated in the Bible about man's control of contending circumstances and threatening elements, can in our day and time be repeated.

An experience came to the writer which shows that deliverance is swift and complete when one is dwelling in the ark of safety,—when thought is lifted in joy and praise and gratitude to the one Mind, and all the false beliefs of mortal existence are not so much as the break and toss of waves beating aimlessly at one's feet. It was at a time when a large suburban car had left the track and was bounding in a most alarming manner along the edge of an embankment. Like the wail of storm-driven voyagers, a cry went up which presently, as the car lurched and creaked, broke into a panic. Where a moment before laughter had rippled through the happy day, shouts and confusion bespoke the utter chaos of the thought of those who either did not know of God's promises or did not in their inmost hearts hold them closely at this hour. But to the one passenger who dwelt within her ark the moment held nothing beyond the absolute assurance of God's power to save to the uttermost. Even as the car appeared to be resolved in its stubborn purpose of finding a resting-place at the bottom of the declivity, no slightest tremor of doubt crept into the haven of safety; indeed, the thought became clearer that the Lord's hand was "not shortened, . . . neither his ear heavy;" and this assurance sustained her as the turmoil increased and the car was poised at a threatening angle on the edge of the decline.

Later the newspapers showed a cut of the car as it came to a stop above the embankment. Examination showed that a pole had been snapped asunder, and had caught the car exactly in the center, or it would have been overturned. The curious crowd which viewed the scene wondered much at the strange manner of deliverance, and exclaimed, "A miraculous escape!"

We, as Christian Scientists, may walk forth from some such experience with a new and happy sense of dignity, if our work has been already done,—if we are safely within our ark,—and perhaps, as in this case, we may leave the outward evidence of a disastrous moment as a sign stationed along the way to help open the blind eyes of others. We also have the assurance that the waters were finally assuaged, and that Noah found a mount, typifying the firm foundation of Truth, on which the ark rested. This promise likewise is for us, and the tokens of peace and joy even now are borne to us in dove-like promises of a haven in which, sooner or later, all of God's children must find their place.

The Coming of Our Lord

JOHN STEEN

In Paul's first epistle to the Thessalonians we read respecting "them which are asleep," "Then we which are alive and remain shall be caught up together with them in the clouds, to meet the Lord in the air: and so shall we ever be with the Lord." This Scriptural promise has been a source of much comfort to those who look forward longingly to the time when this meeting with our Lord shall actually take place. Christian Science not only emphasizes the truth and consolation contained in this beautiful passage, but in addition it assures us with the joyous conviction that this supreme event is not meant to be postponed to a future time, but that it is to a certain extent and degree a present possibility. It is, however, necessary to get the real or spiritual interpretation of the text.

It must be remembered that the Eastern writers of old were in the habit of clothing their meaning in symbolic language, hence the mistake of reading literally what was written metaphorically. Of Christ Jesus it was said that "without a parable spake he not unto them." Since all Christians believe that the Bible is the word of God, who is Spirit and Truth, the spiritual meaning must be the true interpretation. No material picture in our thought of the

Digitized by Google

happenings portrayed in the above text can convey its real meaning. "The Lord" refers to Christ, who said, "I am . . . the truth." The verb "to meet" implies on our part effort, desire, and searching. "To meet the Lord" signifies to gain an understanding of and to accept divine Truth, and we can do this only as we rise above materiality, since the truth of being is never material.

The marginal note of this Bible text also refers to the ascension of Christ Jesus as depicted in the first chapter of Acts: "This same Jesus, which is taken up from you into heaven, shall so come in like manner as ye have seen him go into heaven." Where is the heaven referred to, to which it is stated that Jesus has departed? Heaven is where God is; and as God is everywhere, heaven must be everywhere. Therefore to reach heaven it is necessary to be godlike. What does it signify to be godlike, or like God? God is Love, Truth, Life, divine Mind. Therefore to be godlike (and so to reach heaven) it is essential to be truthful, loving, alive to good, and to think only the pure and perfect thoughts of divine Mind. That "heaven is not a locality, but a divine state of Mind" (Science and Health, p. 291), is shown from our Lord's statement, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, Lo there! for, behold, the kingdom of God is within you." It is well worthy of notice that the marginal note refers to the words "with observation" as meaning "with outward show." It is evident, therefore, that to reach heaven is purely a mental process. Our Lord's ascension could only mean the complete overcoming of all the beliefs which constitute material selfhood through the perfect realization of at-one-ment with God, ever-present divine Spirit, or as Christ Jesus said of his own exaltation, "the glory which I had with thee before the world was."

The text previously referred to in Acts also states that "this same Jesus . . . shall so come in like manner as ye have seen him go into heaven." That is to say, the going was the departure or overcoming of all earthliness, and the coming "in like manner" signifies that even as then, so today, Christ or Truth is revealed in proportion as the human consciousness is freed from materiality through the realization of the omnipotence of God, Spirit, and of man's true, spiritual individuality. In Science and Health (p. 41) Mrs. Eddy states, "Like our Master, we must depart from material sense into the spiritual sense of being."

Resentment Overcome

IGERNA B. J. SOLLAS

THE temptation to resentment is perhaps one of the commonest and most insidious temptations we meet. It comes to us as an impulse, as do other errors. If, instead of obeying the impulse, we stopped to examine the temptation, we should see it in all its unattractiveness,—it would become no temptation. Memory of our past indulgences in resentment would remind us of the exceeding discomfort of this mental state, of its fruitlessness, of its stupidity, and of its ill effects. Analysis of its nature would convince us that it is equivalent to judging unrighteous judgment, that it tends to fix on its object that very fault we complain of in him, and therefore from which we would presumably wish to help free him. Persistent resentment is a common cause of serious illness, and a very little experience shows that a number of people who seek healing from disease, are really in need of healing from resentment.

Undoubtedly ignorance of the effect of thought, both on the thinker and the object of thought, is accountable for a great deal; and when this ignorance is dispelled, many reform without effort, others only after a struggle. Bacon has said, "To seek to extinguish anger utterly is but a bravery of the Stoics;" and it is just such teaching as this which makes overcoming harder than it need be. Let there be no concessions to error. Christ Jesus says, "Be ye therefore perfect," and in such a command there is hope and stimulus. Here is a goal worth arriving at. Christian Science also says that the point we have reached at any given moment is of little importance compared with the direction in which we are moving. And we need these two thoughts in conjunction. Admonitions to perfection have come to be spoken of as discouraging, but they are so only when we stop to measure how far we fall short, thus centering our thoughts on ourselves instead of on the goal, or when we doubt man's perfectibility. Samuel Butler thought that no lichen had ever clung to a rock without first saying, "Now I can cling to this rock." However that may be, it is certain that if we are going to look for improvement as an answer to prayer, we must believe that we receive; and it is obviously difficult to believe that God would give anything short of perfection, whatever we may take.

Mrs. Eddy has said, "An acknowledgment of the perfection of the infinite Unseen confers a power nothing else can" (Unity of Good, p. 7). Let us remember that the person of whom we are thinking with a sense of resentment is not man, but a projection of false sense. Spiritual man is at-one with "the infinite Unseen," and in recognizing his perfection we gain a step toward that healing power which is a manifestation of the Mind that was in Christ Jesus.

The Armor of Forgiveness

CASSIUS M. LOOMIS

IN church activities, perhaps more than in any other line of work, forgiveness becomes a paramount lesson to be studied and rehearsed. Should there be an appearance of inharmony, in well-nigh every instance it can be traced not so much to evil thought as to the member's overzealousness to do or say just the right thing. Christian Science has come to the world laden with a mighty tenure of truth. Every church worker, consciously or unconsciously, realizes this. It is so apparent to some that it amounts to a sense of personal responsibility, which at times brims over until thoughts and conclusions are given out that a moment of sober reflection would forbid. In times of need there are those in every church fold who can and do help with their Christly thought, —persons, perhaps, who are impelled forward by their great sense of gratitude for deliverance from past errors. One member of this sort, voicing conservative action, may come to the business meeting fully clad in the armor of forgiveness and find therein a work most fruitful. Somehow that person is able to put forward a thought which carries with it a mighty truth, and so apparent is his native tolerance for the thoughts and rights of others, that he needs but to state his position once, and there comes a momentous calm, even in the midst of many perplexing differences.

When our habit of thought is that of forgiveness, our conquest is won even before an offending word is spoken. "Forewarned is forearmed." There is no affront that sincere forgiveness cannot meet. Why? Because the real man—God's child—never offers an affront. Knowing this with a certainty that is instant in season and out of season, one's spirit of forgiveness, constantly thought and spoken, stills the turbulent waters with the Christly blessing, "Peace, be still." Who better than our revered Leader could have written these

Digitized by Google

words found in "Miscellaneous Writings" (p. 224): "We should go forth into life with the smallest expectations, but with the largest patience; with a keen relish for and appreciation of everything beautiful, great, and good, but with a temper so genial that the friction of the world shall not wear upon our sensibilities; . . . with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it."

In our unthinking earnestness we may sometimes forget that Christian Science in its early history was not nurtured in a bed of ease. Ingratitude came to her who kept at her post through every trial. Unforgiving helpers hindered, but Truth triumphed in the face of every obstacle. Shall we profit by our Leader's untiring loyalty to God? or shall we forget ourselves in the uncertain clamor for personal ends? Words of careful import heal and comfort, but unkind words and conclusions are void from the moment they are spoken. No better way has yet been found to praise a beneficent God "who forgiveth all thine iniquities; who healeth all thy diseases," than by an effacement of self so real that human bickerings are stilled, quickly reduced to their native nothingness. Doubtless many a war could have been averted had the spirit of forgiveness been made a national issue. As with nations, so with the individual; we can and should "let patience [and its handmaid, forgiveness] have her perfect work." Pope tells us:—

> Good-nature and good-sense must ever join;
> To err is human; to forgive, divine.

Offerings

MANA WILLIS FISHER

THE one short hour of our church service is surely rich in blessings. The opening voluntary brings peace, a quietness which lifts thought in praise and impels to a joyous participation in the hymns of praise. Then come the Scripture reading, the silent prayer, and the Lesson-Sermon, that declaration and unfoldment of spiritual truth which realized and winged with prayer goes forth on its ministry of healing. Who can measure the good received by all who are present!

Mrs. Eddy has said that "success in life depends . . . upon the improvement of moments more than upon any other one thing" (Miscellaneous Writings, p. 230). In the Sunday service there are many moments which may be profitably employed. In keeping with the spirit of the offertory these moments should be spent in returning thanks to the Giver of all good, and in prayer, pure desire, for the entire congregation, as we are taught in the Manual. (See Art. VIII, Sect. 5.) What a blessed privilege to know that God's word has indeed been spoken, that it has enriched the affections of those hearing it, and that it does "govern them" (Manual, Art. VIII, Sect. 4). The realization of what true supply is and whence it comes, will help to destroy all sense of lack, or fear of the "rainy day." This is an important part of the true offertory, and we have the promise that unselfish giving blesses all, and not ourselves alone.

The one thing which impressed the writer when attending her first Christian Science service, was the fact that every one within her view contributed to the collection, and great regret was felt that she had neglected to come prepared. The following Wednesday she went with an offering, and after the service expressed surprise that a collection was not taken. The answer received was to the effect that an offering was expected, but that it differed somewhat from the one on Sunday. It was weeks before the revelation came to her that it was an audible thank offering which was meant. This little occurrence added a new meaning to the counsel that we bring all our gifts into the storehouse.

Would error sometimes whisper that we have nothing to give? Let us reverse this by giving at once what we have, remembering the result which followed when Peter said to the one asking alms, "Silver and gold have I none; but such as I have give I thee." The man received what was far more precious than money,—freedom from the necessity of asking alms. We may always give out a scientific, loving thought, though we may not know whom it frees from bondage, or we may give a verbal expression of our thanks for benefits received, and thus find that the one used talent increases a hundredfold. This broader sense of making an offering has enlarged the idea of the fulness of the church service for at least one church-member, and it is passed on with the hope that it may enlarge and enrich the thought of what it means to make of service an offering unto the Lord.

Grace

GUSTAVUS S. PAINE

THE idea of grace is so akin to that of gratitude that one may gain a broader conception of both by considering them together. Grace and gratefulness both involve the thought of satisfaction; that is, joy in the recognition of good, or, in other words, the expression of loving intelligence in all activity. Whenever the human thought turns away from its own limited self, it must turn toward the unlimited, the great Giver of all happiness. In the spiritual interpretation of the Lord's Prayer we read, "Give us grace for today" (Science and Health, p. 17). This petition must be a simple desire, and in the very acknowledgment of that desire the human sense must lose just so much of its feeling of lack, and recognize the complete presence here and now of the one divine idea in the one divine consciousness. The expression of completeness, wholeness, is all there is to health; therefore the turning toward the wholeness of grace, gratefulness, is in itself healing.

In John's gospel we read: "And the Word was made flesh, and dwelt among us, . . . full of grace and truth. . . . And of his fulness have all we received, and grace for grace." The fulness of gratitude is indeed our daily bread, since the Word, the expression of spiritual truth, is sufficient for our every need. Let us not forget that Jesus, before he fed the multitudes or raised Lazarus, gave thanks and rejoiced in knowing that the Father had heard him always. He knew that all he needed was to reflect Love and the intelligence which was already his unlimited possession. Christian Scientists everywhere are seeing the fruits of the positive assurance that today, as of old, the Word dwells among us, and in accordance with Mrs. Eddy's request (Miscellaneous Writings, p. 127), they are knowing daily that "when a hungry heart petitions the divine Father-Mother God for bread, it is not given a stone,—but more grace, obedience, and love."

Grace and gratitude are the manifestation of Love,—Love so infinitely beyond its poor human counterfeit that we almost hesitate to use the word. Not by words, but only by daily healing, by daily recognizing the healing wholeness which is ours, can we prove in some measure that the loving grace of God has indeed "abounded unto many."

Yea, Truth is Life supreme.
The lie
May only vaunt itself
And die.

MARTHA WEBSTER MERRIHEW.

Selected Articles

[Judge Clifford P. Smith in *Providence* (R. I.) *Journal*]

The editorial on Christian Science and sanitation in a recent issue of the *Journal* was so far from the actual case that a Christian Scientist can hardly believe it was intended to be taken seriously. But since it was not marked "facetious," it is liable to be regarded as authentic; hence the publication of this letter is earnestly requested.

The effect of Christian Science with any one who lives according to its teachings, is to increase his efficiency in whatever calling he may engage. The inevitable results of the consistent study and practice of this Science include an augmented physical ability, a quickened mental capacity, and a greater power over the various hindrances to success in any legitimate endeavor. Christian Science thus enables its consistent students to become more proficient in any department of the world's work.

Of course, a consistent Christian Scientist would not engage in certain occupations. Some of them he would regard as essentially wrong; certain others would not be congenial, although he would recognize them as supplying temporary needs and therefore consistent, for the present, with the general welfare. Whether sanitary engineering would be an agreeable profession to a Christian Scientist, I do not know; but I do know that Christian Science practitioners, doing the regular work of that ministry, are engaged in effective sanitation that is benefiting not only the particular persons whom they serve, but the whole human race.

As for the consistency of Christian Science and material sanitation, the fact is that they concur in so far as sanitation denotes cleanliness or purity. Christian Science commends not only a clean body but clean surroundings, not only pure air but pure thoughts. It condemns all uncleanliness, including whatever tends to defile a man. The line which Christian Science draws between what is beneficial and what is injurious in sanitary measures can be clearly seen from the following excerpt from one of Mrs. Eddy's published sermons (The People's Idea of God, p. 12): "Having faith in drugs and hygienic drills, we lose faith in omnipotence, and give the healing power to matter instead of Spirit."

In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the subject of personal cleanliness is dealt with more than once, but fully on pages 382 and 383. This book can be read in most public libraries or at any Christian Science reading-room. For the present occasion the two sentences here quoted from these pages may be sufficient: "We must beware of making clean merely the outside of the platter." "We need a clean body and a clean mind,—a body rendered pure by Mind as well as washed by water."

✧

[Algernon Hervey Bathurst in *Weymouth* (England) *Telegram*]

In a recent issue of your paper, I note that a critic asks for some "definite proof as to the unreality of matter." Surely to do so is very like a schoolboy asking for a proof as to why three and three do not make seven, without studying mathematics sufficiently to see that the result always has been and always must be six. Again, may I point out that Christian Scientists are not engaged in denying the existence of anything, but they are seriously engaged in endeavoring to overcome sin and disease. They do not, however, endeavor to destroy sin by making a great burden of it.

Christian Scientists are doing their best to understand more fully that law of God which Jesus came to fulfil. In other words, instead of attributing to God a creation including almost more discord than harmony, instead of believing that good can produce, or even permit, evil, they are striving to apply the teaching of the Founder of Christianity, as was so successfully done by the disciples during the first few hundred years of the Christian era, and so to prove what every Christian admits, namely, that the creation of God is perfect, for He "saw every thing that he had made, and, behold, it was very good."

Your correspondent further says, speaking of reality, that "a bird in the hand is worth many in the bush," which seems to imply that in learning more of reality there is a possibility of losing something. On the other hand, Christian Science teaches very clearly that nothing that is true will ever be lost. In studying and practising Christian Science, the student does learn the truth about God and His creation, including man, and in so doing he awakens to the significant fact that man is in reality not a slave to evil, whether in the form of sin or sickness, but that he has now dominion over everything that is unlike God; and further, that, as Jesus stated so clearly, those who understand his teaching will be able to do the works that he did.

In order, however, to accomplish those works, it is essential, as Mrs. Eddy has written on page after page of the Christian Science text-book, "Science and Health with Key to the Scriptures," for the student to try at least to prove what he so willingly affirms, namely, the omnipotence and omnipresence of God, or good. Because it is true that good and evil are not at war in the perfect creation of God, it is possible to prove today that sickness is healed and sin destroyed by a Christian or scientific understanding of man and his relation to God. It is true, I know, that Christian Science reverses much of the wisdom of this world; but then, does not what Jesus the Christ and his disciples taught do exactly the same? Jesus said, referring to the supply of material things, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," which is the advice Mrs. Eddy so strongly urges all to follow. I readily agree with the critic that "the truth will stand," but it is just because the truth is immutable that it is so necessary to be able to discern between the true and the unreal, and not be found endeavoring to bolster up that which has nothing to do with the spiritual or real.

✧

[Paul Stark Seeley in *Hood River* (Ore.) *News*]

The opinion was expressed in a recent issue of the *News* that business conditions are likely "to undergo a little Christian Science readjustment that will bring better times." Kindly permit me briefly to explain the only way in which Christian Science can be employed in connection with business or other human problems. Christian Science is not mere optimism and nothing more. It is "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). It declares that God's power is not limited to the destruction of sin and the healing of disease, but that when correctly understood, His law is applicable to every department of human life.

The world's business is the ebb and flow of human activity, expressing itself in the production, distribution, and consumption of those things desired by mankind. Christian Science points out that Mind is the source and cause of all movement, and that business conditions are made harmonious or discordant according to the thoughts of those who constitute the business world. Right thinking, it shows, is thinking in accordance with God, divine Mind, who can impart to man

Digitized by Google

only thoughts which inspire and lead him to an existence that is harmonious. Wrong thinking is believing in and fearing an evil power, supposedly more efficient than God and capable of bringing discord and distress into the life of man. Right thinking, Christian Science teaches, is right living, and this repels and destroys the belief that evil is more powerful than good. Only when thinking rightly does man bring himself into conformity with God's law, find the truth about his own destiny, and gain the peace and harmony which is his rightful possession.

As wrong thinking, selfishness, greed, injustice, and every thought opposed to God is relinquished by business men and supplanted by a correct understanding of God, the one Mind and source of all thought and action, business activity becomes purged of the dross of mortal thinking, regenerated by divine Love. Man then does unto others only what he would have others do unto him. The man who thus conducts his business on the basis of divine Principle, has no cause for doubt or fear, for he not only believes but knows that the one Mind, supreme over all, protects and provides for those obedient to His law.

Christian Science teaches and demonstrates that neither commercial greed, financial influence, times, nor men, can supersede or overpower the omnipotence of divine Love, made available through Christian Science for the liberation of mankind from every form of mortal bondage, be it physical, mental, moral, or financial. "God," Mrs. Eddy writes, "is understandable, knowable, and applicable to every human need" (The First Church of Christ, Scientist, and Miscellany, p. 238). Christian Science enables mankind to prove this verity.

[John W. Doorly in *The Yorkshire Post*, Leeds, England]

The Rev. Mr. ——, in speaking at the Pentecostal conference at Sunderland, expresses himself as being quite sure that the healing in Christian Science, which he describes as "wonderful," was done through the devil. He also states that all diseases come from this aforesaid devil, and sometimes with the consent of God. Evidently he does not recognize the teachings of Christ Jesus on this subject, or he would hardly have committed himself to these statements.

The attack of the reverend gentleman on Christian Science healing is exactly the same as that which the rabbis hurled at Christ Jesus nineteen hundred years ago. It would have been as futile for them to deny his healing power as it would be for this critic to deny the healing power of Christian Science today, and so they accounted for it by declaring that "he casteth out devils through Beelzebub." Jesus' reply was clear and concise, showing that if Satan caused disease and then healed the same disease, he would be working against himself; but, he said, "if I with the finger of God cast out devils, no doubt the kingdom of God is come upon you."

The clergyman's proposition that the devil causes disease, sometimes with the permission of God, would make infinite good a partner in the creation of evil, which is, of course, an impossibility; and again, if infinite good could permit disease, it would be for a good purpose, and so it would be quite wrong to try to heal it. Under such circumstances, all healing systems would be working against God in a great many cases, and Christ Jesus himself, the great Physician, would have been found destroying that which God permitted. Such statements, however, have neither Biblical authority nor reason, and are based merely on the fervid imagination of some individuals.

Christian Scientists are grateful for the understanding that every phase of evil, including disease and death, is born of ignorance, and that a right understanding of God and His Christ will prove, and is proving, evil in every form to be powerless. The healing of sin and disease is today their proof that "the kingdom of God is come upon" them, and their gratitude for this teaching grows as they perceive that every school of medicine and of religion is daily drawing nearer to this conclusion. If the critic finds that he is able to help the sick and the sinning, all Christian Scientists are glad to hear it, but they fail to see why he should attack others for doing the same thing in what he describes as a wonderful way, especially when the system he attacks has healed ten thousand cases for every one his own belief has healed. Surely, we can all afford to spend our time attacking evil, and can leave the efforts of our fellow men to the judgment of Him who separateth wisely.

[Charles E. Jarvis in *The Star*, Pasadena, Cal.]

As one of those who have been brought from the depths of sin and despair through the loving ministrations of Christian Science, I wish to protest against the unjust and unwarranted, although somewhat thinly veiled, aspersion directed at Mrs. Eddy by a clergyman in his sermon published in a recent issue of *The Star*. Mrs. Eddy's life was one of rare unselfishness and loving service to humanity. Her true history is faithfully portrayed in her biography by Sibyl Wilbur, and I would respectfully refer our reverend critic to its pages.

That the opinion expressed by this critic was not held by those having actual knowledge of Mrs. Eddy, is evidenced by the fact that when she removed her residence from Concord to a suburb of Boston, the city council of the New Hampshire capital adopted resolutions expressing regret at her departure. The governor of New Hampshire, in a recent public address in Boston, referred to Mrs. Eddy as "the Granite state's greatest woman," and said, "She has left the impression of her work not only on New England but on the entire world, and we are proud of her."

Clara Barton, founder of the Red Cross Society, paid this tribute to the Leader of Christian Science: "Mrs. Eddy should have the respect, admiration, and love of the whole nation, for she is its greatest woman." Many other distinguished men and women have attested their high regard for Mrs. Eddy, and countless thousands of others have expressed profound gratitude for the good that has come to them through her gift to mankind.

[Frank Bell in *The Times*, Scranton, Pa.]

It appears from a paragraph in a recent issue that Christian Science was "attacked" by a speaker who demanded to know what it had ever done that so many persons should be drawn to it. If the details of the "attack" were in evidence, it would probably appear that the assault was not upon Christian Science itself, but merely upon somebody's mistaken concept thereof.

If any one is really in doubt as to the reason for the great growth of the Christian Science movement, the answer is on every hand. Almost every good-sized community in the world contains a Christian Science church or society. Every Wednesday evening more than thirteen hundred public meetings, in virtually as many cities and towns, include a half hour for oral testimonies of what Christian Science has done for those who rise in their places to speak: These are usually persons well known in their respective communities, whose statements are easily verified. A conservative estimate places the number of such voluntary statements at five thousand the

Digitized by Google

week. Furthermore, the monthly and weekly official Christian Science periodicals carry regularly many pages of original statements bearing the names and addresses of their authors.

The stories these volunteer witnesses tell of the benefits derived from Christian Science are typical of the experiences of countless numbers of others whose evidence is at the service of any sincere inquirer. They explain why Christian Science has become a world-wide religious movement in less than half a century, and why its churches continue to manifest increasing growth without recourse to sensational sermons, operatic choirs, emotional appeals, or other kindred expedients.

❖

[William D. Kilpatrick in *Detroit (Mich.) News-Tribune*]

In an article in a recent issue a clergyman proceeds to take a fling at Christian Science and classes it as "heretical." Now, just a word in connection with "empty church pews" and the attitude of many of the clergy toward Christian Science. For years past it has been the pastime of many ministers periodically to bring out the subject of Christian Science, and then in terms of scorn and ridicule proceed to give a demonstration of "brotherly love" and "good will toward men" by belittling and maligning the honest religious convictions of a large percentage of their fellow men. That, of course, is their privilege; but one of the best answers to the question of "empty church pews" can probably be found in the overcrowded churches of the Christian Scientists throughout the world. I would recommend our reverend critic to a little deeper thought and wider scope of observation along this line, if he would discover where the fundamental trouble in his church lies. Criticizing or ridiculing the honest religious convictions of another is surely very far from exemplifying the teachings of the Master.

The position taken by Christian Science relative to the subject of sin is most distinctly in accord with the teachings of Jesus. Whether it is considered "heretical" by our critic, matters very little in view of the fact that there seems to be no fast and fixed rule defining the orthodox position on any one subject. "The orthodoxy of today is the heterodoxy of yesterday," and what our critic may please to call orthodox today may have been termed heterodox yesterday, and what he calls heterodox today may be termed orthodox tomorrow. So until some unchanging standard of faith can be established, the accusation that any varying opinion is "heresy" amounts to nothing.

Jesus taught that sin and evil can be overcome with good, and that before the omnipotence of Truth, or good, evil or sin has no power. He taught also that as we sow, so shall we reap, and that if sin is believed and indulged in, the awful effects of this belief can but be manifest through the person so believing and indulging. And thus does Christian Science teach. Jesus did not give any power or authority to sin, and when his followers were enabled to understand the nothingness of sin as an entity, their fear of and experience in sin forever disappeared, and they were no more subject to sin. Jesus taught the overcoming of sin through the understanding of its nothingness. Had he attributed power or might to sin in any way, he would have dishonored an omnipotent God and would have placed evil on an equal footing with God. No one ever did or ever will master sin or evil, either in himself or others, by thinking that sin has any power and that God has created two powers, one good and one evil, and that man, God's child, has been left to shift for himself, helpless on a sea of mixed good and evil, with an even chance for either to win.

God made all that was made, "and, behold, it was very good;" "All things were made by him; and without him was not any thing made that was made." Considering these, with other passages in the Bible of like import, it would seem that the attitude of Christian Scientists as to the unreality of evil is pretty well founded in Scripture, as well as evidenced by fruits. The position of Christian Science in this is largely summed up in one of the church tenets, which may be found on page 497 of the Christian Science text-book, "Science and Health with Key to the Scriptures," as follows: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts."

❖

[Robert S. Ross in *The Times*, Watertown, N. Y.]

In reply to a recent editorial entitled "Psychological Bread," permit us to state that Christian Science does not teach one to ignore evil by advising him supinely to close his eyes and declare that evil does not exist. Christian Science goes to the very bottom of things, searches out the troublesome cause, and thoroughly destroys it. It may be "psychology" to ignore evil, but it is not Christian Science. It might be well for us to call your attention to the fact that Christ Jesus practised the Science of Christianity, or Christian Science. By this method he walked on the waves, stilled the raging tempest, and on two ocasions, with practically no visible supply, fed thousands. Christian Science destroys discord of every name and nature, physical, mental, moral, and financial. To doubt this would be to question the words and works of the Founder of the Christian religion.

It is not our desire to discuss the merits or demerits of our esteemed President's views on the business situation, but we do know that the discord to which the physical senses testify will diminish in the proportion that Christian Science is understood by the world.

❖

[Avery Coonley in *Chicago (Ill.) Tribune*]

By "Key to the Scriptures" Dr. —— evidently means the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which he includes in a list of books on mental therapeutics in his column, "How to Keep Well," in the *Tribune*. Christian Scientists will be glad to see it listed under such a category, for they have tested its practical value as a means of keeping well. It is also properly listed under mental therapeutics, but cannot properly be referred to as "similar" to the other books on mental therapeutics with which he groups it. Theirs is the therapeutics of the human mind, while that of Christian Science is the therapeutics of the divine Mind, God. St. Paul is my authority for stating that the two kinds may not properly be listed as similar. They are, in fact, absolute opposites, both in classification and results.

❖ ❖ ❖

I left the city's ceaseless din
And stood on upland field within,
Girt round with trees crowned o'er with gold,
Fit symbols of the summer's yield.

O perfect day! O wondrous glow!
You stir afresh my heart, to show
Love universal blessing all,
And fruitful make my fallow field.

ALICE BROWN NATHAN.

Editorial

Readers in Branch Churches

A QUESTION having arisen in some branch churches in regard to the eligibility for reelection to the office of reader of persons who have served for three years in that office, and this question having been referred to The Christian Science Board of Directors for decision, they make the following statement, to wit:—

There is no by-law of The Mother Church which regulates the tenure of office or the eligibility for reelection of readers in the branch churches, but as our Leader, Mrs. Eddy, in the articles "Words for the Wise" and "Afterglow" (The First Church of Christ, Scientist, and Miscellany, p. 250), has spoken definitely on this subject, there should be no difficulty in deciding what is the best course to be pursued in such matters. It seems clear to us that the intent of these articles was to recommend that no person should fill the office of reader longer than three years. It also seems clear to us that the election as either first or second reader (even after an interval) of one who has served as reader for a total period of three years or more, would not be in keeping with the spirit of this recommendation.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

Boston, Mass., Dec. 5, 1914.

❖

More Relief Needed

IN the *Sentinel* of Oct. 24 a call was issued for contributions to a fund for the relief of Christian Scientists who were in distress as a consequence of the present war. In response to this call the generous sum of $80,413.90 has been received, and this fund will be distributed to Christian Scientists by committees now being organized by William D. McCrackan, who is in Europe for that purpose. It is believed that the amount of money now in hand will be sufficient for the needs of Christian Scientists, and for the present at least this fund will be closed.

There is, however, great need of funds for the relief of hundreds of thousands of others besides our own people who are in poverty and distress by reason of the war, and a collection for their benefit will be taken in The Mother Church at both services on Sunday, Dec. 6. Any branch church or society which takes similar action may remit to Adam H. Dickey, Treasurer, 103 Falmouth Street, Boston, and such amounts as are received will be forwarded to the same committees of Christian Scientists for distribution.

❖

A Practical Christmas

THE way of the world has been to wage war upon persons and among nations, but the way of Christ is far different, and is pointed out by Mrs. Eddy on page 30 of Science and Health in these words: "Rabbi and priest taught the Mosaic law, which said: 'An eye for an eye,' and 'Whoso sheddeth man's blood, by man shall his blood be shed.' Not so did Jesus, the new executor for God, present the divine law of Love, which blesses even those that curse it."

If all mankind were to take home to themselves these sayings, and make them their guide in their intercourse with their fellows, the record of wars and murders, of "man's inhumanity to man," would soon become a thing of the past, and the brotherhood of man would more rapidly appear. Slowly perhaps, but surely, the practical demonstration of the teachings of Christian Science is ushering in a better feeling among men of all nations, and we may reasonably hope that when the present war is over, its very horrors will have served in some measure toward making wars impossible in the future. In the mean time, however, many helpless and innocent victims of the present strife are in distress, and practical charity is needed for their relief.

May we not as Christian Scientists welcome the opportunity to help these needy ones at this Christmas season, by observing this holiday as Mrs. Eddy has advised on page 262 of "The First Church of Christ, Scientist, and Miscellany," not with "the merriment, mad ambition, rivalry, and ritual of our common Christmas," but "in quietude, humility, benevolence, charity"? So shall the season be to us and to them the dawning of "on earth peace, good will toward men."

Persecution and Blessedness

IN a Sunday school class, recently, as the beatitudes were being studied, some questions were asked respecting the relation between persecution and blessedness. The meaning of this certainly does not lie on the surface, yet it surely calls for our earnest consideration, because of the Master's reiterated reference to it. It is easy to see that persecution cannot exist in the kingdom of heaven, yet we find an unequivocal statement that those who are "persecuted for righteousness' sake" have as their reward this kingdom. Many believe that this reward is to come after death, but there is nothing in the words of Christ Jesus on which to base such a supposition; he clearly meant that the blessedness is to be realized, here and now, by those who have risen to the spiritual altitude indicated by the preceding beatitudes.

The great Teacher spoke of himself to Nicodemus as the "Son of man which is in heaven," although the bitterest persecutions assailed him throughout his entire earthly experience; therefore we can see that persecution can shut out of heaven, or harmony, only those who persecute or those who give power to evil. The pupils in the Sunday school class were asked by their teacher what should be their first step if accusations of any kind were brought against them, and after a number of answers had been given they were helped to see that the first thing to do was to find whether there was not something in themselves which needed correction. At this point meekness would have to be called upon, as it removes all sense of suffering from self-analysis. St. Peter warns us against the discord which comes from evil-doing, even from being "a busybody in other men's matters." Then he goes on: "If any man suffer as a Christian, let him not be ashamed; but let him glorify God on this behalf." It can harm no one to be thoroughly aroused to the demands of God's law, and each awakening should bring us a keener sense of what obedience to this law requires of us.

On page 33 of Science and Health, Mrs. Eddy asks Christians if they are drinking their Master's cup, and she says, "Have you shared the blood of the New Covenant, the persecutions which attend a new and higher understanding of God?" In every age those who have taken a stand for pure spirituality have been misunderstood and misrepresented by those who loved the world and the things of the world, but this has only tended to show the difference between genuine spirituality and mere religiousness. Paul saw this when he said that one might even give his body to be burned, yet it would be of no profit if love were lacking.

Mrs. Eddy also tells us that "the vital part, the heart and soul of Christian Science, is Love" (Science and Health, p. 118). This leads us up to the Master's test as given in

Digitized by Google

the last beatitude. If those dear to us are "persecuted for righteousness' sake," what should we do? We are not encouraged to do anything except to know that "theirs is the kingdom of heaven;" and what Christian Scientist in such circumstances would not choose this above all other aid? If we ourselves had to meet the seemingly dreadful conditions outlined in the eleventh verse of the fifth chapter of Matthew, what should we do? There is nothing indefinite in the instructions which follow, and they are the words of him who proved the power of the truth he taught over every phase of mortal error,—over sin, disease, and death. He said, "Rejoice, and be exceeding glad." Not a little glad of the test, but "exceeding glad"! And why? Not because one is being persecuted, but because the grandest opportunity is given him to prove that for him the salt has not lost any of its savor, and that he is more ready than ever to "let" the light of Truth and Love so shine that it may give light to all that are within its radius.

Following the beatitudes comes the command to let the good work go on, so that our Father in heaven may be glorified. Did not Jesus heal the high priest's servant whose ear had been stricken off by the impetuous Peter, and that, too, when human hate was doing its utmost to crush the Master and his work? Never should we put the light of Truth under the bushel of self-pity, but enkindle anew our faith and trust by its beams, until the heart echoes the words, "Blessed are ye."

Brotherhood and Civilization

THE most enthusiastic evolutionist would no doubt say, with respect to the physical development of mortals, that as a machine, nothing more perfect can be produced or even conceived. He would further say, in all probability, that in the comprehension and command of so-called material forces, physical science, the knowledge and utilization of the cosmic order, is but at its beginning. Recognition of present world conditions would render it quite impossible, however, for him to entertain any assurance that, in the event of yet more marvelous gains in worldly wisdom and power, the apprehension and command of material forces, civilization would be correspondingly advanced.

It is tragically manifest today that unless such achievements are subject to the rule of unselfishness and good will, the universal love which alone weaves the bonds of brotherhood, they are likely to become instruments of unspeakable ill, the very besom of destruction. How recently the marvel of human flight has been named as possibly one of the greatest contributions to human good! Nevertheless, we now know that when the hand of enmity guides their course, these winged wonders may become the terror of the nations, in further proof, as a great teacher has said, that "evolution and progress are not synonymous terms."

Thus, for those who can read the signs of the times, it is written upon every high place of the earth today that nations can go forward "not by might," but only as they are impelled by love. This was the unequivocal teaching of Christ Jesus, and it was confirmed by St. John in his constant reiterations, "Little children, . . . love one another." It was affirmed by St. Paul when he wrote, "There is none other name under heaven given among men, whereby we must be saved," and it has been reaffirmed for this age by the Discoverer of Christian Science in her statement that "Love is the liberator" (Science and Health, p. 225).
