When one thinks how gifted men in all times have toiled to increase the mastery of nature, to discover its mineral treasures, its chemical secrets, or its mathematical relations, with the view of making them practically serviceable for good, and then notes how the products of their every triumph may be made to serve the ends of the most cruel passions and multiply a thousandfold the devastations of war, he begins to realize how eternally true is the teaching of the ancient wise men that righteousness alone exalteth a nation. Philosophy, science, and art, the culture of the schools, enlarge and in a sense make possible the enrichment of human experience, but they have never saved men or insured the maintenance of peace. Christ, Truth, alone brings spiritual transformation, supplies the cement of brotherhood, and protects human sense from the ruthless ravages of its baser self.

When Jesus prayed, "That they may be one, even as we are one," he named the only permanent basis for racial unity and international concord. This fact is becoming impressively manifest just now, and it brings a glint of light to an otherwise darkened outlook. It is being seen, as never before, that the fatherhood of God involves the brotherhood of man; that we cannot consistently affirm the one, if we do not sincerely accept the other; that it is ours to bow the knee to Him "of whom the whole family in heaven and earth is named."

Said the Master: "Go thy way; first be reconciled to thy brother, and then come and offer thy gift." This is the spirit of Christlike Christianity, of that true socialism which is an eternal protest against every provincial, exclusive, clan, or caste sense of brotherhood. Christian Science is wondrously helping humanity toward this realization, in its teaching that escape from and protection against every mortal enmity and repulsion is to be gained only as we know our fellow men for what they are and not for what they seem. In Christ's name, it is pleading again with the sons of men as did the ancient prophet, saying, "Have we not all one father? hath not one God created us? why do we deal treacherously every man against his brother?" It is declaring that Truth-knowing is freedom bringing; that the Christ Science and the Christ love are one.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

PORTLAND, ORE.—The exterior of Second Church of Christ, Scientist, at the northwest corner of East Sixth street and Holladay avenue, is practically completed, and the interior finishing is now [Oct. 5] in progress. The members are looking forward with much interest to the time when they can occupy the new church.—*Portland Oregonian.*

SAN FRANCISCO, CAL.—Six hundred square feet of space in the sections devoted to the many religions of the world in the Palace of Social Economy at the Exposition, have been allotted to the Christian Scientists for a comprehensive exhibit, which will include a display of the publications issued by the organization.—*San Francisco News Bureau.*

Digitized by Google

NEODESHA, KAN.—The new Christian Science church edifice at the corner of Fifth and Indiana streets, is nearing completion. The first service therein will be held next Sunday, Oct. 11. The main building is 68 by 43 feet, and the auditorium will seat fully one hundred persons. In January, 1908, about twenty members of the Christian Science Society met at the home of one of their number and legally organized as First Church of Christ, Scientist. A charter was secured from the state. The present church site was purchased in 1912. In January of this year it was decided to build, and plans were drawn. The corner-stone was laid May 16 with a simple ceremony.—*The Neodesha Register.*

MEMPHIS, TENN.—During the tri-state fair held in this city, First Church of Christ, Scientist, maintained a reading-room, which was largely attended and greatly appreciated by visitors to the fair. The space used was in the Woman's Building, the most prominent structure on the grounds, and its neat and artistic arrangement attracted much attention. Quantities of our authorized Christian Science publications were given to inquirers, and a number expressed their intention either to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, or to seek healing.

Correspondence.

MINNEAPOLIS, MINN.—The corner-stone of the new church edifice of First Church of Christ, Scientist, corner of Nicollet avenue and Twenty-fourth street, was laid between six and seven o'clock on the morning of Oct. 14. The structure is to have a seating capacity of nearly one thousand. First Church was organized on Christmas eve, 1892, and after occupying rented halls for several years, built the first Christian Science church edifice in the state of Minnesota, a simple brick structure on Fifteenth street near Portland avenue.

Correspondence.

ROCHESTER, N. Y.—The Cogswell house in East avenue at Prince street is being razed, and on the site is to be erected a building for First Church of Christ, Scientist. The foundation will be laid this fall, and the remainder of the building will be put up in the spring.

Rochester Democrat and Chronicle.

The Lectures

Oswego, N. Y.

The Hon. Clarence A. Buskirk delivered a lecture in the church edifice to a large and very attentive audience. Charles I. Ohrenstein of Syracuse introduced the lecturer. He said:—

In speaking to the people of his time, Paul said, "Why should it be thought a thing incredible with you, that God should raise the dead?" Speaking in a Christian land, may not we at least ask, Why should it be a strange thing with you, that God should heal the sick? I am sure all will agree that it should not be a strange thing, but a very natural thing, a very usual thing, and a very welcome thing. How shall it become so,—by adherence to the doctrines which deny the possibility of doing this, or by the honest investigation of the doctrine which is proving it all over the world?

It should not be understood from this that these lectures are given for the purpose of converting those of other denominations to Christian Science, for that is not so. They are given for the purpose of making known that Christian Science is not some strange or weird thing, but is the truth of God and of His Christ applied to human needs today. They are given that the discouraged and disconsolate, the body-sick and sin-sick, may learn that there is a "balm in Gilead,"—the balm of truth, which Jesus said that ye shall know, and it shall make you free. They are given for the purpose of correcting, as far as possible, the mistaken notions about this Science and the various misrepresentations of it.

Correspondence.

❖

Tomah, Wis.

A very attentive audience listened to a lecture on Christian Science by Bicknell Young at the Unique Theater. The speaker was introduced by the Rev. W. D. Bancroft, who said in part:—

Religious liberty has triumphed. Men of the twentieth century are patient with the new. We adopt the wisdom of Gamaliel, "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it." When a new doctrine has survived the middle of the second generation and the passing of the one who was the human agent in its founding; when it claims the Bible as its source and brings about an earnest perusal of that proven fountain of truth by its followers, and when the fruits of its teachings appear in the lives of men in those graces which we cannot but recognize as Christian, then we become more than patient, we become interested.

We wish to know the truth. Truth is old, but the manner in which it is expressed, and the scope of our comprehension of it, are ever new.—*Tomah Monitor Herald.*

❖

Chatham, Ontario, Canada

In introducing Judge Clifford P. Smith, who lectured on Christian Science, J. K. Walker said in part:—

To me Christian Science has always been associated with the name of that good, pure, and distinguished woman, Mrs. Eddy, who departed this life full of glory and honor and ripe in years and experience, and who had the exceeding great satisfaction of witnessing, before her departure, the success of her faith and its adoption by hundreds of thousands of men and women all over this continent and elsewhere.

Those of us who have observed the growth of this religion and have lived among its votaries, are obliged to admit that it is not a science "falsely so called," but represents a living and abiding Principle that has brought comfort and happiness to tens of thousands of our race.—*Correspondence.*

❖

Pasadena, Cal.

The beautiful church edifice of First Church of Christ, Scientist, was filled to overflowing to listen to the lecture on Christian Science by Prof. Hermann S. Hering. J. L. Mothershead, Jr., first reader of the local church, introduced the speaker as follows:—

We are all more or less familiar with that great stretch of desert lying between Pasadena and the East. We know of its menace, its barrenness and seeming uselessness, and some have experienced its dangers. On the other hand, we have seen the wonderful results produced by bringing water to this waste, how it can be made to "rejoice, and blossom as the rose."

But more cruel and far-reaching than this desert is the desert of human experience, through which all mankind is passing. And today the whole world is athirst and is seeking for water, the water which will quench that thirst, which will

Digitized by Google

still that restless seeking for satisfaction, which will satisfy that burning desire. That water is truth, the truth which Jesus said would make men free. We have one with us who will tell us of this truth.—*Pasadena Star*

❖

Batavia, Ill.

Virgil O. Strickler delivered a lecture on Christian Science before a large audience in the Baptist church. He was introduced by Hugh A. Bone, superintendent of public schools, who said in part:—

It is sometimes said that we are losing faith in religion, that this is a godless age. I do not believe this to be true. Men may be losing faith and interest in theology, but the interest of human beings in religion has never been greater than it is today. We may be losing faith in dogma, which does not function in helping to solve the perplexities of human existence, but we are interested in a religion which gives more abundant life seven days in the week. To all thoughtful people Christian Science has shown results which deserve careful and unprejudiced consideration. Our judgments are too often based upon hearsay or incomplete information, or misinformation. We have the privilege this evening of listening to one who can speak with authority.—*Correspondence.*

❖

Pietermaritzburg, Natal, South Africa

Clarence C. Eaton, who lectured on Christian Science, was introduced by R. Hammersley Oldfield, Esq., head master of Glen Lyn College, who said in part:—

I am not a member of the Christian Science church, but this much I think I may be permitted to say: that the claims of Christian Science cannot be lightly passed over by any thinking person, whether he is a follower of Christ or not. Christian Science claims that it "awakens the sinner, reclaims the infidel, and raises from the couch of pain the helpless invalid." Its followers claim that "it speaks to the dumb the words of Truth, and they answer with rejoicing. It causes the deaf to hear, the lame to walk, and the blind to see" (Science and Health, p. 342). Are these claims frivolous or presumptuous? Was it not Christ himself who performed these works of love and mercy, and did he not encourage his every follower to tread in his steps? "Greater works than these shall he do" was his own promise.—*Correspondence.*

❖

Marion, Ohio

Col. George B. Christian, in introducing William R. Rathvon, who lectured on Christian Science, said in part:—

My own personal experience is that there are many people standing in the front ranks of the world, fine minds, bright men and women, who have adopted Christian Science; and I know, and you know, that happy lives, sweetness of disposition, joy of the love of God and man, are shown and exhibited by every convert of this cause. This has been my personal observation. Men everywhere are seeking for the light and the truth, and so it is pleasant to know that this evening we will receive the word from one competent to give it. Not a minister, but a business man of large experience, comes to us from out the great West with this story tonight.

Correspondence.

❖

Ridgewood, N. J.

The Christian Science church was filled on the occasion of the lecture by Dr. Francis J. Fluno. Dr. G. Adolph Anderson introduced the lecturer, saying, among other things:—

It is evident, from the comments we sometimes hear, that many people do not consider Christian Science a religion, but only a new system of therapeutics. As a system of healing, it is new; but the power which underlies it is as old as creation itself, for it is the power of God, which has been demonstrated by the prophets and by Jesus and his followers,—though we consider the healing to be its minor blessing. It is a religion of majestic dignity, and as such it rises above all creeds, petty forms, or elaborated ceremonials. It is a religion of doing; of spirit, not of vain repetitions. The remarkable growth throughout the whole civilized world bears eloquent testimony, from grateful people, of its healing and regenerating power. To understand the Principle of life, as did Jesus of Nazareth, and to apply it to living, is the study to which loyal Christian Scientists devote themselves.

Ridgewood Herald.

Testimonies of Healing

[Translated from the German]

A sense of deep gratitude to God impels me to testify to the great blessings which I have experienced through Christian Science. In April, 1909, I had an acute attack of rheumatism, and was bedridden for a while. I suffered great pain in my legs, and could not move them in the least. A physician prescribed medicine which seemed to relieve the pain in a short time, but it was beyond his power to fit me for work. I then resorted to a remedy which is supposed to be very effective in cases of rheumatism; and whereas I had been almost incapacitated for work for over four months, the improvement that now took place enabled me to perform heavy duties. Still, I did not get along so well as formerly. In December, 1911, I had another very severe attack of the same trouble, and having lost all faith in the physicians, I immediately applied the remedy which I had used successfully on the former occasion. This time, however, it failed to benefit me. A bowel trouble and other difficulties were added, and I found myself in a practically hopeless condition; besides, I was discouraged, and felt that it was useless to try anything. But divine Providence decided otherwise.

I had heard something about the healing work performed through Christian Science, and I asked an acquaintance to give me some literature on the subject. I was so much impressed through reading this literature in connection with the Bible, that I confidently applied for treatment and was healed. This healing, of course, greatly aroused my interest in Christian Science. I subscribed for the *Herold*, and as soon as the German version of the text-book, "Science and Health with Key to the Scriptures," was published, I secured a copy, and read it very carefully. The Bible has become dear to me, as it now appears to me in a very different light, and I am happier every day for having been led to find this glorious teaching. I also used to suffer with a phase of toothache, and had teeth extracted on that account. This trouble has completely disappeared, and other ailments as well. I have been working steadily now for over two years, without losing one hour on account of ill health, and I enjoy such a sense of well-being as I never knew before. But far more important than this is the spiritual uplift which has taken place in me, and for which I am most deeply grateful.

There is with me a sense of great love for Mrs. Eddy, who with all her heart strove after an understanding of divine Truth, till the pure Christ-teaching, which today as of yore transforms the sinner and heals the sick, was again revealed to humanity through her.

PETER GLARNER, Unterbach, Oberhasli, Ct. Bern, Switzerland.

✦

A little over three years ago I met with an accident. I was carrying a little girl across the edge of a lawn which is raised several feet from the sidewalk, when I slipped and fell. Immediately my right ankle began to cause me great pain. Fear began to be felt, for I had planned to climb a mountain the next day, but I managed to get into the house and sit down. Then I repeated over and over again the Lord's Prayer and "the scientific statement of being" (Science and Health, p. 468), while my mother gave me a treatment. She told me that I lived and moved and had my being in God, therefore I could not meet with any accidents. Almost immediately the fear left and all the pain disappeared.

The next morning, after I was ready to go to the mountain, fear again seemed to be manifested, and I asked mother if she thought I should go. She replied, "Go, and God will be with you." I did go, and not once did my foot give me the slightest pain, nor did I even think about it. On my way down the mountain (this was Wednesday), I wondered if I would be able to go to the evening meeting, or if I should go home and go to bed. Then the thought came to me, Why should I not be able to go to church, when God had been with me all day while I climbed the mountain? When I arrived home I told my mother that I was going to church. I did so, and from that day to this I have not experienced any bad effects from what had seemed to be a badly injured ankle.

For all this, and many other healings, I am certainly grateful. I attend the Sunday school and find it of great benefit and help in my work. My one desire is to gain a clearer and better understanding of this great truth.

PAULINE OLIVER, Los Angeles, Cal.

✦

Christian Science means everything to me; and to say I am grateful is putting it mildly indeed. This teaching has lifted me up and out of conditions which in the old thought I never could have overcome. In my darkest hour I was led to the truth, and when God brought me out of that seeming condition, new hope came to me. I was still very miserable at heart. My one desire was to meet some one, have some experience, or find some occupation that would take me entirely away from self. A day came when I was invited to visit a friend whom I had known a long time but had lost sight of, and as a result of that visit I learned of Christian Science. I was thus led to the truth in a simple yet beautiful way, and have attended church regularly from the beginning. Christian Science has helped me in business and in domestic life as well as physically.

I am thankful to God for my many blessings, and my desire is to help others, that they may learn the meaning of Job's words, "I know that my redeemer liveth." I am grateful for Science and Health, which our Leader so lovingly and unselfishly gave to the world. I thank God for Christian Science.—ROSE ERHARDT, Chicago, Ill.

✦

I am glad to testify to the healing of one of my grandchildren through Christian Science. I was present at the birth of this child, whose parents were not at that time Christian Scientists. In caring for the baby I discovered a large swelling on its neck. I denied this evidence, declaring there could be no imperfection in God's idea. When the doctor came to see the baby, he too noticed the swelling and at once said it was a goiter. As the mother had one on her neck, I supposed this was what it would be called. The doctor called the next day, bringing his wife, who is a trained nurse, and another physician. They examined the baby's neck, and all said they knew of nothing that could be done for it. My husband and I talked the matter over and said we would like to try Christian Science for the child, and the next time I was at my son's house the mother surprised me by asking if we did not think Christian Science treatment would help the baby. I said I knew it would, and she asked me to see a practitioner. After telling a practitioner about the case, I asked her to give treatment, and she did. When I saw the child again, about five days later, the neck was nearly normal, and in a few more days it was perfectly natural. The child is now two years old, and there has never been the least symptom of swelling since; its neck is perfectly normal.

Another wonderful demonstration, to us, was the healing of one of my sons. He is a farmer, and early one morning,

Digitized by Google

as he was doing his chores, he stuck a pitchfork into the side of a haystack to help him climb up on it. As he turned to get down, his foot slipped. The fork had fallen out of the stack so that the tines were turned outward, and he struck it as he fell, the outside tine entering the lower part of the bowels in the center, and passing six inches by actual measurement toward the hip. He immediately drew out the fork himself. Seeing his wife in the yard, he called to her, and when she reached him he had fainted. She ran to the house and telephoned for his two brothers. They soon arrived, and after carrying him into the house they put him to bed. He seemed to be in great pain. By this time my husband appeared, and as this son is interested in Christian Science, his father telephoned to a practitioner, telling her what had occurred, and asking her to begin treatment at once. She promised to do so. My son had regained consciousness, but he complained of great pain and numbness in the arm and the side of the body which had been injured. He got relief from the pain in half an hour; by evening the numbness had disappeared, and he continued to improve right along. The third day he ate dinner with the family; in less than a week he did heavy work, and in a few days more, was back in the field, as well as ever. That was three years ago, and he has felt no bad effects from the accident since. To me these were two wonderful demonstrations, for they proved that divine Mind is the surgeon, and that God is an ever-present help.—ELLEN A. LOCK, Central City, Neb.

I wish to acknowledge what Christian Science has done for me in the healing of a long, deep gash, cut in the instep of my foot while splitting wood. The accident happened about noon, and a Christian Science practitioner was sent for at once. Before she came the suffering was intense, but shortly after she arrived the pain ceased suddenly, and the demonstration was made. The wound healed very quickly. In three days I was able to put my foot to the floor, and by using a knee crutch I did all my own work as usual. In about a week I discarded the support and was able to use my foot the same as formerly except that I limped a little. In three weeks the cut was almost healed over, and the healing was very clean, while the entire action of my foot was perfect in every way, and has been ever since. The scar is now gradually disappearing.

I also want to mention a demonstration over a large sliver run crosswise through my first finger. I thought it best to go to a physician and have the sliver removed, and he found it necessary to cut through my finger in order to take it all out. After the operation he told me it was all removed, but in about three days the finger began to swell and caused me a great deal of pain; then poisoning set in. Feeling unable to handle the case myself, I called on a Christian Science practitioner for help, and in one treatment I felt perfectly healed. One day, about two weeks later, while at work, I felt something pricking at one side of my finger. On looking, I found a large piece of the sliver working its way out, and in pulling the piece out I found, to my surprise, that it extended through the full width of my finger.

Christian Science has become the chief factor of my daily life, and I am constantly reaping the beneficent influence of Truth.—HARRY G. LOCK, Central City, Neb.

Since childhood I had much trouble with my ankles, the doctor keeping me off my feet for a month at one time, saying that I had inflamed ligaments, and threatening me with more serious trouble if I did not follow his advice. After that it was years before I ever tried to wear low shoes, and yet I continued to turn my ankles. I would be laid up a week at a time. About two years ago, when helping to stage a little operetta, late one afternoon I turned my ankle, and for a moment all the old fear and pain came back. I had received help in Christian Science before, and felt I must overcome this error then, if I did not wish to be a slave to fear. I could hardly force my way to the telephone, but I did so, and called up a Christian Science practitioner and asked for help. She treated me that evening, and the next morning telephoned me. Although I was somewhat better, I was still very loath to use the ankle much, so I asked her to continue treatment during the day, as it was quite necessary that I should attend a rehearsal in the evening. As a result, I was able to direct the rehearsal, which required a great deal of walking about. I felt no bad results, only a great peace of mind, and gratitude for the wonderful truth that is showing us the real spiritual man and the glory of divine Mind.

I have not had any trouble with my ankles since, or any fear of it. I can wear low shoes and am perfectly free from the old weakness. I am sincerely grateful for this, and for the many blessings which come to me each day through an understanding of Christian Science.

ELLA H. CUBBISON, Roslindale, Mass.

In 1908 I began to have kidney trouble. I had a copy of Science and Health which I used to read, and I had also been attending church services, as Christian Science appealed to me very much as a religion; but I was not yet ready to receive its full blessings, and went to a doctor for help. The ailment was pronounced acute Bright's disease. For six weeks I lived on a very limited diet, and then I was given a diet list and told I would have to restrict myself to it if I wished to have my health. I took a great deal of medicine and for a while seemed better; then the medicine lost its effect. For three years I would be sometimes better, then worse, but I was never without drugs. I was not able to do my own work; if I did our small washing I would be ill the next day. I was miserable in mind as well as body, the fear of the disease and my weakened physical condition causing me to worry over everything.

A sister-in-law, who had often asked me to try Christian Science for the physical trouble, asked me to see a practitioner for my mental state. I did so, and the first uplift was beautiful; everything began to look bright. For some time I was so occupied with my reading that I forgot the medicines, but there was still much fear of the old disease. It soon became necessary to have treatment for the kidney disorder, and the relief was almost instantaneous. Since then I have eaten what I wanted and all I wanted, have enjoyed good health, and have never used material remedies.

A few months ago there seemed to be a slight return of the ailment, but it was very slight and has again disappeared. I feel that it was only a call to another step higher.

I. WINIFRED MACINTOSH, Bremerton, Wash.

It is with a feeling of deep gratitude for all that Christian Science has done and is doing for me that I give this testimony. On Christmas morning, 1912, my son, aged nine, while playing with firecrackers, met with an accident. One of the crackers exploded, hitting him in the right eye and badly burning that side of his face, the eyebrow being entirely burned off. As soon as I found out what had happened, I tried to declare the truth for him, but the pain seemed so great I thought it best to call a Christian Science practitioner. In a few hours after we got in touch with the practitioner, the boy was resting easily, and he slept well that night. The

Digitized by Google

treatments were continued for perhaps a week, and it was some little time before all the scars had disappeared, but the pain was gone after the first day, and in a very short time the eye was as perfect, in every way, as before, even the eyebrow growing again.

This is only one of the many healings which my two children and I have had since coming into Science about five years ago. While I am thankful for the physical healing, I am more grateful for the right understanding I am gaining of the Bible by studying it in connection with Science and Health. I feel I have many faults yet to overcome, but I am striving to learn more of this wonderful truth that makes us free from all that is unlike God. I am indeed grateful for all the good I have received and am constantly receiving through the study of Christian Science.

MRS. BURTON E. SAVAGE, Memphis, Tenn.

I am glad to send in my testimony, for I and my family have received so much benefit through Christian Science! We have had many healings. My little girl had a bad cold, with all the symptoms of acute lung trouble, whereupon I sent word to a practitioner, asking for absent treatment, and the next morning when she called, my little girl was outdoors playing. The previous winter the child had had the same symptoms, and the doctor pronounced the ailment acute lung trouble. She was sick for three weeks that time, under medical treatment. I have had much to be thankful for in the past two years, and am striving every day to learn more of the truth as taught in Christian Science.

MARY ROSENDALE, Iola, Kan.

Some time ago my little girl, aged six years, was taken ill with scarlet fever. As she was not a strong child, we felt that if she had to go through with this illness, there was small chance for her recovery. Her father and I thought the matter over carefully, and decided to send for a Christian Science practitioner. We had received help in Science previous to this, and although the child was very ill, we decided to have treatment for one day, the practitioner telling us that if there was no change for the better she would be quite willing for us to call a doctor. She came to the house about ten o'clock in the morning, and again about nine o'clock in the evening, and the next day before noon I could not keep the child in bed, so I dressed her. In the afternoon she played with her little brother, and did not go back to bed until her regular bedtime. She continued to improve, and in a few days was quite well. She is now a much stronger child than she used to be, and has had no bad after effects.

The healing was so plain that it could not be ignored, and we feel very grateful for the help received through Christian Science. We are trying to gain an understanding of it, so as to be able to live it.

MRS. S. T. MCNICHOLL, Winnipeg, Manitoba, Canada.

I was born and lived the greater part of my life in a New England city within an hour's ride of Boston, and was in urgent need of the healing truth revealed in Christian Science; yet not until I had made my home in California did I sufficiently lose the antagonism for what I believed Christian Science to be, to allow myself to make an investigation of its teachings. At that time I had nearly lost faith in everything. I was suffering from a so-called incurable organic trouble of fifteen years' standing, from the effects of a nervous breakdown, and from many minor ills. I was also much discouraged, since the medicine which I took for one ailment seemed to aggravate another. For eight years I had been obliged to wear glasses for a structural defect of the eye, and I was told by the oculist that I would never be able to get along without them. For many years I had been without faith in God as being of any use to humanity, and circumstances had been such that my faith in human nature was nearly destroyed. I was unhappy and without any object in life.

Christian Science has completely reversed all these conditions. I have been healed of the organic disorder, of the eye trouble, and of many other physical ailments. I have learned that God is divine Love, and that He, as Mrs. Eddy says, "always has met and always will meet every human need" (Science and Health, p. 494). I have found that it is not necessary for me to have faith in human nature, but that I must have faith in man as God made him, or I prove that I have no faith in God, since man has no being which is underived from God. I am no longer without an object in life, for I have the same aim which every Christian Scientist has,—to prove the omnipotence of good and the unreality of evil through the overcoming of evil.

I am indeed grateful for this revolution in my thought and for its attendant results, but I find that some of the most helpful experiences which I have had in Christian Science have been along the line of my work. These have been the experiences which have done the most to change my standpoint of thinking from a material to a spiritual basis, to teach me that God is the only self-existence and that man has no separate existence of his own. I remember that when I first became interested in Christian Science, whenever I heard any one mention how much this teaching helped him in his work, I had a feeling of disappointment to think that I did not need the help along that line. I am grateful, therefore, that in this very direction where I least realized my need, where I had the greatest feeling of self-confidence and the least feeling of dependence on God, I have been obliged to prove over and over again that although "with God all things are possible," yet without Him we "can do nothing."

I feel particularly thankful for one of the first experiences I had. At that time I was one of four persons who for a year and a half were given work to do that from a mortal standpoint meant constant friction, worry, and fatigue. In health, disposition, and temperament, I was the one least capable of undertaking any such work, so I found it necessary to rely on God every instant of that period. The result was, that the work was done without friction, without worry, and with very little sense of fatigue. I was the only one of the four who lost no time from sickness, notwithstanding the fact that I was told by those in authority that I had been given the hardest of the work to do. I was also told that whereas some concern had previously been felt about the wisdom of giving me some other work which I desired, for fear my health would not be equal to the strain, I had now proved to them that they need have no further feeling of apprehension in that regard. I am very grateful for this and many other experiences of a similar nature, because they are helping me to realize that even on this human plane there is nothing which it is right for us to do or to have that is impossible, if we rely on God and not on self.

Not the least of the blessings for which I have to thank Christian Science is the deliverance from the bondage of a strong sense of financial limitation. Only those who have been thus freed, can appreciate the relief which comes with the realization that supply is dependent on right thinking alone, and that this is externalized in whatever is necessary to meet the human need. When I remember the years of

Digitized by Google

doubt I went through when first investigating Christian Science (years in which, because of my loss of faith in everything, I dared not accept a single statement without proof), I am thankful beyond the power of words to express that I have been *led* out of doubt, hope, and belief, into an absolute knowledge, which nothing can take away, that Christian Science is the same truth that Jesus taught and demonstrated.

I am thankful to God, who has guided me into the light, also grateful to His messenger, Mrs. Eddy, through whose unselfed efforts the truth has been revealed to this age in such a practical form that humanity is daily being healed and regenerated.—EDITH M. SHORT, Los Angeles, Cal.

◆

It is with a sense of deep gratitude that I acknowledge all the blessings received since I began the study of Christian Science. From childhood I was never strong, and as a young wife and mother I became very ill, suffering for years with intense nervousness, weak heart action, bad headaches, stomach trouble, etc. All this made life a misery to myself as well as to those around me. My fear was so great on account of the heart trouble that I could not be left alone even for a very short while.

It was in the midst of all these ills that Christian Science came, and replaced discouragement with hope, restlessness with peace, and invalidism with health. The loving help and treatment of a dear practitioner and friend brought about a complete change of thought, followed by sweet confidence in the truth which sets us free. I have had many other demonstrations of the healing power of Christian Science in my home, in the instances of whooping-cough, colds, stiff neck, etc.; but its teachings were especially appreciated on the occasion of the passing on of my dear mother. I had always believed it impossible to live without her, and the very thought of parting would disturb me greatly; but I know now that death has no power, that it cannot intervene between us and our dear ones, and that there is no separation.

I hope this testimony will help others who may perhaps be in a similar condition to that in which I seemed to be a few years ago, and lead them to study that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as I was led to do, whereby the understanding of God was revealed to me. I also hope to become worthy of being called a good Christian Scientist.

MME. EVA GONTHIER, Geneva, Switzerland.

God's Works

GEORGE H. BURCHARD

THE works of God beyond compare are great;
Not merely mountain huge, and glacier stream,
And stars, and sun with golden morning beam,—
Although with joy these things we contemplate,
Since all that truly is, Mind doth create,—
But rather doth the Lord most gracious seem
Because His hand hath made the earth to teem
With blessings fitted to our needy state.

God's promises to us are always sure.
To those who trust He giveth daily meat;
His judgments through the ages shall endure;
All strength, all life, we find in Him complete.
Through fear of Him we gain in wisdom pure,
Through love of Him we serve with willing feet.

From Our Exchanges

[Thomas Arthur Smoot, D.D., in *The Homiletic Review*]

The efficacy of love to meet every possible social, economic, and political condition is clearly indicated by the claims of Jesus. To his mind, no contingency in life can possibly arise that is able to defeat love. Only by loving can the heart gain, and only by hating can it lose. It is the one positive principle of existence—the love which he declares in his doctrine to be his distinctive attribute. By it all enemies are to be overcome. And that seems a hard, not to say inconceivable, thing to believe; for my enemy is certainly hostile to my welfare; he is, by the nature of the case, unlovely, and may be inherently very wicked, but not totally so. The Teacher of this new philosophy could not ask me to love any one that is totally bad; that were a monstrous thing to require. But there is nothing arbitrary or unreasonable in the injunction, for to love an enemy is the only way by which I can work toward his uplift into a place of unity and utility in my own life. I am not to love him for the bad that is in him, but the rather, despite the bad I am to love him for the modicum of goodness that he possesses. When love has drawn whatever goodness there is in him to the plane of whatever goodness there is within myself, there is a union of two human forces that coalesce with that infinite force of divine love, and the united stream sweeps on toward that "far-off divine event." The supreme task of love is to draw into this current every individual force in the race. This achievement, as the ideal of Jesus, is the mystery of godliness that so attracted and exercised St. Paul.

[Rev. R. J. Campbell in *The Christian Commonwealth*]

Turn to "the tree of life," and pluck the leaves thence "for the healing of the nations." Think brave thoughts now as never before; do kind deeds now as though there were none but you to do them. If the faith of others fails, let your faith be all the stronger; yea, you must be strong for those who suffer, for those who faint and fall, even if your own heart is torn and bleeding. Admit no despair in your soul; keep pessimism and selfish panic away. "O taste, and see, how gracious the Lord is: blessed is the man that trusteth in him." Oh, be comforted; believe in the good that underlies all this mass of ill. Get others to believe it from what they see of you,—your fortitude, your faith, your nobleness of deed and aim. Let your hand be ever raised toward "the tree of life;" scatter the leaves of healing wherever the world has need.

[*The Universalist Leader*]

We cannot for a single day live our own life faithfully, bravely, and sweetly, without inspiring other lives with an increased sense of the value of the virtues we practise and a greater longing to fulfil the demands of all righteousness. Most of us can recall more than one embodiment of goodness and worth by whose influence we have been especially blessed. We knew that they wanted us to be pure and honest, just and kind; but we also knew that the desire to commend themselves to us and others as patterns of excellence was not the chief motive for the conduct that made their own lives noble and beautiful; and it was this knowledge that made their example most effective.

[*The Christian Register*]

We sometimes have a dream of a time coming, and not far off, when men and women of differing shades of belief will be really tolerant of each other's opinions, and the question will not be asked, What do you believe theoretically? like a

Digitized by Google

talent wrapped in a napkin, but, What do you practise actually? Do you live on the spiritual plane, and is the love of God now in you, leading to the glowing impulses of peace, mercy, and charity? Our tolerance is yet far from such a point of glorious achievement. When that time comes, the barriers of silence, constraint, and cold indifference, and dislike of the neighbor's religious life, will be thrown down, and there may be a real communion of saints, where those of differing shades of belief will be glad to give and receive help and inspiration from those who differ as well as from those who agree, but are all endowed with the open mind, the desire for light and leading, and the same spirit that lived in their Master, Jesus Christ.

[*The Advance*]

There are startling and indeed saddening elements in the life of today. There is a wide-spread, and probably a growing, distrust of creeds. There is a sad estrangement of the masses from the institutions of religion. There is an appalling paganism accompanying the depopulation of rural communities and an equally appalling godlessness accompanying the segregation of people in cities under conditions that unmake stability and responsibility. There is mammon worship, and race hatred, and class distinction, and bitterness of strife between capital and labor. There is increasing distrust of legislatures and of courts. There is growing doubt of the adequacy of democracy to endure the strain put upon it by modern conditions. There is a lessened sense of sin, and almost an entire absence of fear of punishment. There is a growing secularization of Sunday, an increasing love of luxury, a mad race after pleasure. There is vehement protest against the permanence of marriage, a protest uttered now for perhaps the first time in history on behalf of woman. There is, most ominous of all, a sad decay of family life.

Moreover, certain tried and approved methods of religious work have proved subject to the law of diminishing returns. The old-time evangelism is not producing its former results. Within the church are seen a diminished number of our choice young men seeking entrance to the ministry, and the ministry itself shows a serious "leakage at the top."

Are there any cheering signs to oppose this rather formidable list? There is, first of all, an end to the age-long warfare between science and religion. That battle, fought since Galileo's day, is over. It is now accepted as an axiom that scientific truth and religious truth cannot be in conflict, and all truth is from God. Religion has become more reasonable, and science, for its own good, a trifle more humble. Science itself has been hard hit, and has had to reshape a number of its most confident assumptions. It will be rare hereafter that a scientist calls God the unknown, and certainly no man speaking in the scientific spirit can call Him unknowable. So many things which we did not know we are beginning to know, and we are so enlarging the circumference of our perceived ignorance that we hesitate to assume so much of knowledge as to say that anything is permanently unknowable.

[*Zion's Herald*]

There is much to be thankful for just in the opportunity of going on. To be permitted to do our daily tasks should be welcomed as one of our richest blessings, and no day should pass in which we have not lifted some heartfelt prayer to our Maker for this high privilege. That we may find in our daily work so many things of human interest, that inspire us to love the people we see and to have faith that God's plan for a better world is being furthered, should stimulate us for that work, and should cause us to go to it with a freshened zest and a sweetened spirit each day.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year, 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 65 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JESS B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in the CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second-class matter.

Items of Interest

A majority of the United States Supreme Court joined in an opinion that the Oklahoma law proviso, permitting railroads to furnish sleeping, dining, and chair car accommodations only to the white race, was unconstitutional, but they did not so decree, because of imperfections in the petition on which the case reached the courts. The majority, through Justice Hughes, stated that previous decisions in regard to laws for separate coaches for the two races being unconstitutional, were not to be questioned. He then set forth the reasons for the opinion that the lower court was wrong in holding the proviso constitutional. "The reasoning is," said he, "that there may not be enough persons of African descent seeking these accommodations to warrant the outlay in providing them. This argument with respect to the value of the traffic seems to be without merit. It makes the constitutional right depend upon the number of persons who may be discriminated against, whereas the essence of the constitutional right is that it is a personal one. Whether or not special facilities shall be provided, is doubtless conditioned upon there being a reasonable demand therefor; but if facilities are provided, substantial equality of treatment of persons traveling under like conditions cannot be denied. It is the individual who is entitled to the equal protection of the laws, and if he is denied by a common carrier, acting in the matter under the authority of the state, facilities or conveniences in the course of his journey, under substantially the same conditions as furnished to another traveler, he may properly complain that his substantial privileges have been invaded."

Trees will be planted along the Lincoln highway from ocean to ocean by the women of the states through which it passes, working under the direction of the General Federation of Women's Clubs. Each state's planting is to be individual and done under the conservation chairman of its own women's clubs. The organization from New York to California is now complete, and in many of the states the trees to be planted have been selected. Every schoolyard along the highway is to be planted. The birds of the country are not to be forgotten, for it is proposed to plant all along the way berry-bearing shrubs, and at intervals to erect bird shelters, thus giving the birds food and shelter across the continent.

Twenty thousand men are engaged in the completion of the new rapid transit system that will connect all five boroughs of Greater New York. The whole work has been divided into eighty-three contract sections, and sixty-four contracts have been let. Sections already placed under contract involve a total expenditure of approximately one hundred and fifty-six million dollars. Last year the disbursements of the city to the contractors on this rapid transit work averaged one million six hundred thousand dollars each month. This year it has been a trifle more than two million dollars each month, and next year it is the belief of the commission that close to three million dollars a month will be expended.

The commission appointed some time ago to inquire into the university question in South Africa, recently issued its report. It advocates the creation of two separate universities, one in the south, which would take over the existing colleges in the Cape province, the other in the north, with headquarters either at Pretoria or Bloemfontein. The latter would take over existing colleges in the Transvaal, Natal, and Orange Free State. The consensus of opinion throughout the country does not favor the adoption of the report.

Practically one entire session of the recent convention of the National Association of Railway Commissioners at Washington, D. C., was devoted to a discussion of methods of at least reducing what was termed the "annual slaughter" of people at grade crossings and on railroad rights of way. The report recommended more stringent laws as to trespassing upon railroad properties and the adoption of better means of protecting the public at grade crossings.

The government of the Union of South Africa has advertised for applications for the leasing of certain land for the cutting of papyrus. This growth, with the tambookie grass, is occupying the interest of the commerce and industries department. It is found, after tests and analyses, that these two wild crops afford excellent material for paper-making, and the present seems an opportune moment to establish pulping works in South Africa.

The decision of the ninth United States circuit court of appeals, that railroads cannot be constructed across reclamation projects, even with the authorization of the entrymen, without the consent of the secretary of the interior, was reversed in the United States Supreme Court, in the suit of the government to enjoin the Minidoka & Southwestern Railroad Company from extending its line across the Southside Minidoka project in Idaho.

The Chicago Stock Exchange opened its doors Nov. 20, and trading was resumed where it stopped July 30, with other trading centers, because of the European war. The Chicago exchange is the first of the broad official markets in securities throughout the world to resume operations. Business began with the closing figures of July 30 as a basis for transactions.

On Nov. 4, at a depth of 2,840 feet, one of the best gas-wells on the American continent was tapped five miles north of Viking, a station on the newly completed transcontinental line, the Grand Trunk Pacific, seventy-five miles east of Edmonton, Alberta, Canada. The flow measures nine million cubic feet per day, with a rock pressure of five hundred pounds per square inch.

A case brought up from Arkansas is pending in the Supreme Court of the United States, to test the constitutionality of the migratory game bird law. It will be argued, in all probability, next spring, and a decision may be expected during 1915. The lower court in passing judgment said it could find nothing in the Constitution giving Congress the right to enact the legislation, and this being the case, it held the law to be null and void.

Congress appropriated at its last session $1,116,118,138 for the current fiscal year, as against $1,088,678,788 for the last fiscal year. In addition, contracts were authorized, subject to future appropriations, aggregating $40,333,000, and included $600,000 for fortifications, $38,350,000 for the navy, $810,000 under the sundry civil act, and $578,000 for public buildings.

Among the requests of the enginemen for improved working conditions, presented to the arbitrators in the western railroad case at Chicago, was one for the elimination of the surprise test, to which the men strongly object. The federal arbitrators hearing the pleas of the men and of their employers on ninety-eight western roads, were told that the surprise test defeated itself in time.

At the national council of teachers of English, in its fourth annual convention at the Auditorium hotel, Chicago, the appointment of a committee to investigate the possibilities in schools and colleges over the United States as to improvement of the speaking voice, the committee to report at the next conference, was approved without a dissenting voice.

The city of Cleveland, Ohio, has won a point in its contest for the ownership of about thirty acres of lake front property against the Cleveland & Pittsburgh and other railroad companies in the Supreme Court recently, when the court dismissed the motion by the railroads for a review of the case.

Inquiries for nine million railroad ties and nine to ten million feet of large timbers have greatly stimulated the lumber situation in the Northwest. The inquiries come principally from the United Kingdom. The supply for that section of Europe has heretofore come from the Baltic.

Apple wood, used almost exclusively for saw handles, also furnishes the material for many so-called brier-wood pipes, and particularly for the large wooden type used in printing signs and posters.

According to recent figures, there are forty-two sugar-cane plantations in the republic of Argentina, thirty-eight of which are in actual operation, with an annual output of 276,140 tons.

Despite the unfavorable conditions which prevailed during the summer, Canada's total trade for the fiscal year is well on the way toward the billion dollar mark.

The state school of forestry at Bottineau, N. Dak., announces that it will have one million trees for distribution to the citizens of the state during 1915.

Forbach, Germany, is said to have the most profitable town forest known; it yields an annual net gain of $12.14 an acre.

The parcel-post service between the United States and Germany and Austria-Hungary has been resumed.

Life and Enlightenment

REV. WILLIAM P. MC KENZIE

THE translation of life into terms of enlightenment or understanding helps our progress. Ignorance and the deprivation of good which it involves, have been described as darkness by both poet and prophet. Of the froward, Eliphaz declares, "They meet with darkness in the daytime, and grope in the noonday as in the night." The description in Isaiah of those to whom judgment and justice are absent is graphic: "We wait for light, but behold obscurity; . . . we stumble at noonday as in the twilight: among them that are lusty we are as dead men" (Rev. Ver.). Similar testimony is borne by Hosea when he says, "My people are destroyed for lack of knowledge." When Paul received his commission, he recognized that his life-work in the service of those whom he had called Gentiles was "to turn them from darkness to light," thus showing that he himself had received a genuine illumination, and had seen "the light of the knowledge of the glory of God in the face of Jesus Christ."

In Paul's mind there was an endless giving of thanks to the Father, "who hath delivered us from the power of darkness, and hath translated us into the kingdom of his dear Son." Thus we may see how clear to him was the truth which the Master spoke to the group in the temple when he declared, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." If men through misunderstanding dwell in darkness, "being alienated from the life of God through the ignorance that is in them, because of the blindness of their heart," evidently the gaining of understanding means not only enlightenment, but life as well. By a process of revelation the real becomes the actual to us, and disconnected, unreal beliefs vanish. The text-book of Christian Science, "Science and Health with Key to the Scriptures," explains this in saying, "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony." It also declares that "darkness and chaos are the imaginary opposites of light, understanding, and eternal harmony, and they are the elements of nothingness" (pp. 390, 479).

Our stages of progress are marked by continual discoveries of good, and at each discovery we wonder that we had not known and enjoyed earlier what is revealed to us, so self-evident does it appear. Like the artist, we have to be perpetually interpreting anew what we see. He depicts his insight on canvas, and the beauty of nature disclosed in the painting touches the thought with a new sense of the harmony of the creative Mind. One said to Turner, "But I do not see in nature what you bring out in your pictures;" and his reply was, "Madam, don't you wish you could!" Our discoveries are not by any means limited to the realm of the beautiful in nature. We make new appraisements of friends and home and national life, rising thereby to new standpoints of gratitude and praise. The wonder of it all, even when we are entranced with God's love expressed to us in the loveliness of earth's scenery, is in the reminder that all this is but a foretaste of the infinite unfoldments of good. Nature indeed helps to reveal this goodness, as Paul declared to the people of Lystra, showing how "the living God . . . left not himself without witness, in that he did good, and gave us rain from heaven, and fruitful seasons, filling our hearts with food and gladness." But every man is a true witness when he has won and reveals a character like to his creator. Exactly such a character was manifested by the Prophet of Nazareth, who thus fulfilled the hopes of a long line of prophets, so that a New Testament writer could quote exactly Isaiah's expectation, and declare it fulfilled, saying, "The people which sat in darkness saw great light; and to them which sat in the region and shadow of death light is sprung up."

We cannot learn the truth about anything through its unlikeness. That which it is not, does not inform us regarding its true character. So, if we seek to learn the truth about God, we must learn from that which represents Him, or presents His true likeness. From the Son, then, who was in obedient accord with the Father, doing nothing of himself as person, but accomplishing miracles because he revealed the action of divine Principle, we may learn, because in the enlightenment that is thus made possible we may actually "have the light of life."

The wars and controversies in the world are between men who view not one another as of God's creating. Mankind has a controversy always with its own false concept of man, not perceiving man as God's idea. Our text-book says, "Through spiritual sense you can discern the heart of divinity, and thus begin to comprehend in Science the generic term *man*" (p. 258). Qualities manifested in men and women have been looked upon as conditions of personality, and thus limited and localized. But through spiritual sense comes the enlightenment whereby the desirable characteristics of manhood and womanhood are seen to be impersonal, and so not denied to any one. Men have been induced by materialistic philosophy and so-called science to believe that life must be a destructive process, whereby in its course of existence the successful life must utilize, exhaust, or displace many other lives. In that view a nation maintains itself by feeding upon other nations, or blotting them out of existence, and fear causes every man to be hostile to his neighbor.

If one could imagine a conflict between the figures in a mathematical problem wherein some were obliterated by the others so that they might have more room on the slate, the result would be the same as with the rivalries and wars of nations, namely, confusion. The nations continue in darkness, and upon the mathematical problem no light is shed. But with enlightenment comes a sense of life as well. The erroneous statement has no existence in mathematics, because only that which its basic law governs has reality. In men, likewise, the temporary sense of life, hourly endangered, flickering like candle flame in a rushing wind, and assured of extinction, fails to express reality. It is not the enlightened view, even though a common one. When enlightenment is gained, then life is discerned apart from any principality of evil or dominion of matter. The martyr, not his murderer, is seen to be the one who knows life.

Christian Science by its elucidation of the Scriptures makes

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

us understand "the power of an endless life." It explains the faith triumphant whose demonstrations are recorded in the eleventh chapter of Hebrews. The secret that Moses knew was this vision given by faith. "He endured, as seeing Him who is invisible." A passing vision of his life's continuance came to Peter and James and John on the mount of transfiguration. When all men are enlightened so as to enter into the light of life, death will certainly be "swallowed up in victory."

❖

Our Table

HORTENSE W. LEWIS

THE opening words of the twenty-third psalm, "The Lord is my shepherd; I shall not want," are very familiar, and have often brought comfort and strength and assurance to those in want and distress.

Recently the writer was led to think about the following words from the same psalm: "Thou preparest a table before me in the presence of mine enemies," and she recalled the mental picture these words used to present to her when as a youngster in Sunday school she heard them read. Then, turning away from that picture, false and material, she tried to see what spiritual message she could now find in them. The old picture of one sitting down in complacent self-satisfaction, and enjoying all the good things a well-filled table had to offer, while his enemies were forced to stand aside and watch the eater's enjoyment, seems today crude, material, and personal. St. John tells us that "God is love," and so we find ourselves asking about the table Love has prepared: What must one do to avail himself of that which Love prepares? What would such a table contain? Lastly, who are the enemies referred to?

Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." In seeking the kingdom of God, mortals have to give up material beliefs and opinions, and learn to think rightly. The process is an educational one, and like all education, it is a mental process. Man's storehouse, or table, is in consciousness. The man who is a student takes pride in his library, selecting his books with great care as to authorship, illustrations, etc., while the man who is known as a "good liver" consumes much time on the choice of viands for his table. What about the man who seeks "first the kingdom of God"? May not thoughts be the wherewithal to fill his table? Each can choose, yes, be very particular about the thoughts he entertains. He can select and hold only those which are true, loving, helpful, and spiritual. Thoughts of fear, anxiety, and worry need to be banished as mental outlaws, for they are not in accord with divine Mind. They do not acknowledge the omnipotence of divine Mind. Christian Scientists are reminded that "right thoughts are reality and power; wrong thoughts are unreality and powerless, possessing the nature of dreams. *Good* thoughts are potent; evil thoughts are impotent" (Miscellaneous Writings, p. 252). No one should covet that which is unreal, counterfeit, but all should learn and assimilate the real and true, so that they may no longer be tricked and deceived by the unreal.

The Bible and our Leader's works are guides for those right mental processes by which alone one can have his table set out with the best. When we remember that man is God's image and likeness, the reflection of the pure, perfect, ever-loving divine Mind, we know that he can express nothing save that which this Mind knows and creates. The perfect Mind must maintain order, so each man has his place and his work to do. When self-importance and pride try to assert themselves, we need to recall Jesus' words, "I do nothing of myself." We can do nothing of ourselves, but by virtue of man's relationship to God we may manifest goodness, wisdom, intelligence, and patience, and rejoice in this relationship which reveals the infinitude of Mind. On the other hand, discouragement and self-depreciation can find no place in human consciousness when it is realized that man always reflects and expresses Mind. Omnipotent Mind knows no discouragement, neither can anything depreciate or belittle omniscient Mind. Envy and jealousy are mental intruders, closely related to selfishness, and they involve a doubt as to Mind's willingness and ability to supply *all of* man's needs. These mental outlaws are put to rout when it is realized and acknowledged that Mind knows and supplies man's every need.

Sin brings suffering, punishment, in mortal belief. Because of the pain and lack of satisfaction which always follow wrong doing, mortals can find no real pleasure in error, and should be glad to abandon it for the right and true. All right doing is preceded by right thinking, and so has the authority and protection of omnipotent Mind, which blesses man and pronounces him good. That which Mind thus honors is eternally blessed.

There is but one way to detect and correct wrong thinking, and that is by learning what right thinking is and how to apply it to all problems. When it is understood that right thinking alone is powerful and effectual, wrong thinking can bring no terrors or fears in its train, for man by uttering his protest against the very belief in its power, renders it null and void. "We should become more familiar with good than with evil, and guard against false beliefs as watchfully as we bar our doors against the approach of thieves and murderers" (Science and Health, p. 234). There have been many times when the writer has been thankful for verses from the Bible or passages from our beloved Leader's writings which had been learned and were available on her mental table to aid her in barring the door against intruding beliefs. If we follow Paul's injunction to the Philippians—"Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things"—we shall always have our table prepared by divine Mind.

❖

Reflected Light

PERCY M. HOLDSWORTH

A story of childhood days, which memory has recalled many times since the coming of the light through Christian Science, is that of a boy coin revealed by a beam of reflected sunlight. A boy had received a bright new gold piece as a birthday gift, and while at play in his father's barn, the coin dropped from his hand and disappeared through a crack in the floor. Grieving over the loss, he ran to his father and begged for a lamp to take to the barn, that he might see to find the gold piece. The father, however, realized that the use of a lamp in the barn involved so great a risk that other means must be used to supply the needed illumination, and after explaining the danger in using a lamp in such a place, he had the boy get two mirrors. One of the mirrors was so placed outside the barn that light from the sun was received and thrown into the open door. With the other mirror in his hands, the father caught the sunbeam, reflecting it downward through one after another of the cracks in the floor, and

Digitized by Google

soon the bit of gold, catching the ray of light, was seen and recovered.

The application of this simple story is almost too manifest to need explanation. Most of us have seen some of God's precious gifts to man—it might have been health or happiness—seemingly disappear from sight, and have longed to recover them, both for ourselves and for others. We may even have brought the lamp of human endeavor, of material means, to help us find the hidden treasure; but through the work of our revered Leader, Christian Science is established so that the light of infinite Love is reflected in all its pure glory. As we come into the path of this radiant beam, the accumulated dust of self-confidence, self-righteousness, and self-love is cleared away, and we begin to reflect health, joy, peace, and loving-kindness. The light of Truth and Love has revealed in hidden places the gold that was supposedly lost. This blessed privilege inspires increasing gratitude to the unassuming woman whose unselfed devotion has disclosed our Father's love for all His children.

God the Ever-present Help

ALBERT E. MILLER

In this day and hour, the broader recognition of God as "a very present help in trouble" is revealing in ever-increasing measure the power and majesty which appertain to Him; but remembering the declaration of Jesus that to know God aright is life eternal, yet seeing death and decay in all about them, men are beginning to realize how meager, after all, is their knowledge of Him who, as the psalmist affirmed, "healeth all thy diseases," as well as "forgiveth all thine iniquities."

Time and again, in seeking a panacea for their ills, mankind have learned the futility of trusting to material means for permanent cure. *Materia medica* has never ceased to be experimental: it is constantly revising its list of remedies and adopting new theories of disease entirely at variance with former ones. The vaunted medical discovery of today may be, and frequently is, thrown aside as worthless tomorrow. Notwithstanding all this, and perhaps because there seemed to be no other way of escape, the majority of mankind have continued to put their trust in drugs and physicians for deliverance from physical ills, giving them the benefit of the doubt, in case of failure, by ascribing it to the will of an inscrutable Providence.

It may well be asked why men go on trusting in a system whose fallibility is acknowledged even by its exponents. Why do they not instead turn to God in their hour of need, and appeal to Him for deliverance from physical as well as mental torment? Does not the Bible give assurance that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning"? The gift of bodily health, of wholeness or holiness, is truly a good and perfect gift, and assuredly it comes from above.

Health is not to be derived from drugs and hygiene; it is secured only through the right understanding of God and of man's relationship to Him. It is interesting to recall in this connection that the words health, holiness, wholeness, and healing are derived from the same root and are identical in their original meaning. The God of our fathers, who is "the same yesterday, and today, and forever," and man, who is His perfect idea, need but to be known aright, and the sufferer, whether from physical or mental ills, will find himself "every whit whole." Jesus knew the Father aright, knew Him as omnipotent and omnipresent good, and man as His image and likeness. This was why Jesus was able to heal the sick. He "beheld in Science," Mrs. Eddy tells us, "the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476).

The argument is sometimes advanced that drugs and other commonly used material remedies for disease have been divinely bestowed upon mankind, and that their rejection constitutes disobedience to God's law. If we believe that such remedies were divinely ordained for healing the sick, then we must also believe that Christ Jesus, who came to do the will of the Father, erred in failing to use material remedies. If Jesus had found efficacy in them, would not his intelligent employment of such means have constituted an invariable rule whereby his followers throughout all generations might have profited?

Take the only instance which can be cited where Jesus even indirectly used any material means, when he mixed the clay with spittle and applied it to a man's eyes, commanding that it be at once washed off. What would be said of any one today who should undertake to cure blindness with such means? It is evident that Jesus did not use this mixture as a remedy, but rather as a sign or token of contempt for matter, and that his understanding of the truth alone did the healing. Jesus said, "I am come that they might have life, and that they might have it more abundantly;" and in healing the sick by spiritual means he showed mankind how to gain a fuller and better sense of life. He taught that God is Life, is Spirit; and further, that they who would worship God, must worship him "in spirit and in truth."

The laying hold upon this redeeming sense of life must be done individually. It is the working out of one's own salvation, to be wrought not "with fear and trembling," but "in the midst of fear and trembling," as a later translation has it. For this working out God has provided mankind with abundant opportunity and direction. Christ Jesus said, "I am the way, the truth, and the life: no man cometh unto the Father, but by me." In other words, absolute consecration to God, such as he demonstrated, brings out the understanding whereby men may gain their own freedom from sickness and sin, and also loosen the fetters for their fellow men. Often it is in helping others to obtain their freedom that men free themselves. And why not, since we have the Master's word, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me;" and his promise, "He that believeth on me, the works that I do shall he do also"?

Criticism versus Censure

CYRUS ALVIN POTTS

The continued use of words in a wrong sense has frequently resulted in their incorrect definition in standard dictionaries and other reference books. One of the most notable of such words is criticism, the meaning of which according to Webster is "the art of judging with knowledge and propriety," or in the language of Scriptures, with "righteous judgment." "By criticism," says Dryden, "as it was first instituted by Aristotle, was meant a standard of judging well." Criticism does not apply to a person, but minutely and rationally points out every beauty or blemish in a person's works, and it is especially applicable to literary and scientific matters. One who assumes the rôle of critic must be competent, and capable of supporting his assertions by positive proof or demonstration.

To find fault with, blame, or condemn a person is to censure. Criticism has to do with things and censure with

Digitized by Google

persons. To censure requires no more than a simple assertion, usually actuated by ill nature, ignorance, or a desire to inflict punishment. The Roman magistrate who had charge of the morals and domestic affairs of his people was called a censor, from which the word censure is derived. The only legitimate place accorded censors was and is an official one. Strictly speaking, no one has the right to censure another except in an official capacity, and this official function should be exercised only by men of sound judgment and morals, and for the sole purpose of elevating the morals and protecting the rights of the public. The unofficial censor may be either mild or severe, according to his ill or good nature, but in any event he is likely to take cognizance of personal conduct and to judge according to appearances, and hence not to judge "righteous judgment."

To express disapproval of one's speech or conduct for the purpose of overcoming or preventing the repetition of some impertinent act, is not censure but rebuke or reproof, because the one who expresses his disapproval is supposed to have substantial reasons for such rebuke or reproof, and not to be actuated by the spirit of contumely. Jesus was a critic of the highest type, not a censor in any sense of the word. He said, "I judge no man." Mrs. Eddy tells us in Science and Health that Jesus "rebuked sinners pointedly and unflinchingly, because he was their friend" (p. 53). He rebuked Peter for his presumptuous manner of speech, and reproved him for smiting the servant of the high priest. He rebuked and reproved others as the occasion warranted, but censure was foreign to his character. The rebuke or reproof which will uncover and check an error, is righteous, but the censure which depresses hope and brings despair, is unrighteous.

Possibly no error is so greatly indulged and so little restrained as that censorious fault-finding which is generally called criticism. Some seem to believe they have a right to think as they please about another, so long as they refrain from expressing their thoughts audibly; but thoughts unspoken are often felt as keenly as those expressed, and when vent is given to censure, the commandment which says, "Thou shalt not bear false witness against thy neighbor," is broken. Not one of us would approve a judicial sentence unless both sides of the case had been presented. The unbiased judge is the one who reserves his decision until he has heard all the evidence available. In order to be just and to judge "righteous judgment," we must hear the truth and all the truth respecting the case before rendering our verdict.

In Luke we read that "whosoever shall speak a word against the Son of man, it shall be forgiven him: but unto him that blasphemeth against the Holy Ghost it shall not be forgiven." If a brother is rebuked in the spirit of love, even though he resent the rebuke at the time, such resentment will pass away; but if we censure, make realities of unrealities and deny the testimony of spiritual sense, this shall not pass away (be forgiven), either in this world or in the world to come.

If honored, the truth as revealed in Christian Science will enable one to be discriminating and fair in all his judgments. It separates the wheat from the chaff in a manner which is both Christian and scientific, and as human thought becomes more Christlike, men will think and speak more scientifically. They will not hesitate to point out and rebuke error in a loving way, but they will hesitate to blaspheme the Holy Ghost, *i.e.*, pervert and disqualify the testimony of the spiritual senses.

Before appointing ourselves censors of others, it would be well to ponder the words of our Leader as found on page 8 of Science and Health: "We should examine ourselves and learn what is the affection and purpose of the heart, for in this way only can we learn what we honestly are. If a friend informs us of a fault, do we listen patiently to the rebuke and credit what is said? Do we not rather give thanks that we are 'not as other men'? During many years the author has been most grateful for merited rebuke. The wrong lies in unmerited censure,—in the falsehood which does no one any good."

Fear Overcome

GRACE P. TARBEL

An experience of recent date has taught me many forcible lessons, which I gladly share with others. One morning, while engaged in household duties, I heard my name called by a member of my family who was evidently in great distress, and as I crossed the floor to go to him, a great sense of fear possessed me; but like a flash of light there came to my consciousness the thought that though mortal sense could do nothing, God was there, and that with Him all things were possible. At once all fear vanished, and I felt that my prayer was answered. When I approached the one who had called, he said, "I do not need you; I am all right." It seems that a horse, in leaving the stable, had kicked him in the side and hand. The blow was so severe that his watch was dented and broken beyond repair.

It is not necessary to enlarge upon details, but by holding steadfastly to the truth gained with my first realization of God's presence, the one who had been injured used his hand and leg with perfect freedom the next day in doing some very heavy work, and the flesh was normal and without discoloration. It is not, however, the physical healing that I wish to lay stress upon, but the overcoming of fear, and the mental step taken which produced such results. I have read many articles in the various Christian Science publications telling of like overcomings, and I sometimes wondered how others accomplished these healings; but in my own need I was answered by ever-present Mind.

By the systematic study of the Bible and Science and Health, as explained in the Manual, just as one would study a subject each day in school, putting into practice the knowledge gained in all the little things which come into daily life, such as refraining from gossip, from criticism of others, from worry, irritation, unkind words and actions, etc., I am learning that in doing the work of the Master daily, one's thoughts turn naturally and instinctively, in a time of crisis, to Truth, and he is rewarded with a realization of that love spoken of in St. John, which "casteth out all fear," and which restores harmony.

[Written for the *Sentinel*]

Rejoice in the Lord

SAMUEL JOHNSTONE MACDONALD

Rejoice! Again I say, Rejoice!
But not alone with lute and voice;
Nay, first know joy dwells in thine heart,
For that thou hast in Truth thy part,
Then love from out thy heart will glow,
And all the world shall surely know,
Not by thine anthems or thy creeds,
Nor by thy words, but by thy deeds,
Which testimony true afford
That thou hast been with Christ the Lord.

Selected Articles

[Judge Clifford P. Smith in *Chesterton* (Ind.) *Tribune*]

Any one who undertakes to state the teachings of a religion in which he does not believe, is likely to encounter a difficulty, for the reason that he is apt to lack the appreciation and insight which would enable him to speak of it with accuracy and justice. Twice difficult is the task of one who attempts to sum up a religion other than his own in a few brief sentences.

For these reasons the Lutheran minister whose letter on Christian Science appeared in a recent issue of the *Tribune*, would better have been content to report what he saw and heard at the Christian Science church which he attended. As a reporter he was a distinct success, but not so as an expositor of Christian Science. For his evident sincerity, however, the thanks of Christian Scientists are hereby tendered. Our brother's comment on matter and disease, as well as his reference to the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as containing "a sort of spiritualized metaphysics," makes one wonder, however, what kind of metaphysics should be expected in a book which, as he rightly said, is based on the Bible. Will you not allow a Christian Scientist enough space for an explanation?

To some people the world is wholly material; to others (the majority at present) there are two worlds, the one material and the other spiritual, or one world compounded of these opposites. To the Christian Scientist either the universe is wholly spiritual, or he is gaining this perception. As Mrs. Eddy has said (Science and Health, p. 573), "The heavens and earth to one human consciousness, that consciousness which God bestows, are spiritual, while to another, the unillumined human mind, the vision is material." It is well to remember also that all human hope and faith involve a conviction of unseen reality.

For example, a man's concept of self would hardly be more than that of an animal, if it did not include some knowledge of the fact that identity and individuality are not determined by matter or bounded by it. Natural or physical science also defines substance as that which is real, in distinction from that which is apparent, and admits that the supposed substance of matter is unknown. Thus, in a book entitled "The Problems of Philosophy," published last year, it is said that one thing we know about any physical object is that it is not what it seems. Rt. Hon. Arthur J. Balfour of England, while delivering the Gifford lectures at Edinburgh last winter, put the case in these words: "The real world, as science pictures it, is more and more removed from the real world as we perceive it or are capable of perceiving it." The science to which he referred, was, of course, natural or physical science, and the perception was that of the physical senses.

Christian Science, therefore, solves the most fundamental of all problems when it begins with spiritual causation and arrives at definite and consistent conclusions respecting the substance of man and the universe; and the understanding thus conferred is found to be capable of proof or demonstration when it is put into practical use for the betterment of human conditions. Of course every man must have some view of himself as being subject or not being subject to disease. Equally evident to a Christian should be the proposition that a purely spiritual concept of self does not include disease.

Christian Science affirms the further fact, that whether one's sense of self does or does not include disease, depends on the quality of his consciousness as being false or true. "Ye shall know the truth, and the truth shall make you free," is a statement of divine metaphysics which admits of no exception for any form of bondage. "The mind of Christ," the Mind "which was also in Christ Jesus," is the remedy for every woe. "The kingdom of God is within" the consciousness which He creates.

[Robert S. Ross in *Brooklyn* (N. Y.) *Eagle*]

If our friend whose letter appeared in a recent issue will take time to consider the matter, he will, I am quite sure, admit that Jesus of Nazareth proved by his works that the application of the divine Principle of his teachings would solve every human problem, whether social or religious, political or economical. In other words, Jesus gave the remedy for every ill, not for his own time only, but for the centuries that should follow.

In those days, as in ours, unselfish hearts, individually and collectively, were doubtless endeavoring by various means to lessen the burdens of mankind. That every unselfish effort to help others should have the moral support of all right-thinking people, Christian Scientists do not question; but our critic should bear in mind that only by working in the way that Jesus worked will all error be effectively and permanently overcome. "No man cometh unto the Father, but by me," said Jesus. In other words, no man can arrive at a demonstrable understanding of divine Principle, God, the source of all real being, except by following Jesus in precept and practice.

Jesus taught and practised the Science of Christianity, or Christian Science. By this means he healed the sick, fed the multitudes, walked on the waves, raised the dead, and eventually triumphed over the grave. This Science enabled Jesus to break the yoke of every known material law, and we have from him this blessed assurance: "He that believeth on me, the works that I do shall he do also." That there was no mystery about Jesus' works, and that his promise is perpetual, Mrs. Eddy has proved, for, by applying the Principle of Christian Science to their thought-processes, men, women, and children throughout the civilized world are daily and hourly being made free from sin and sorrow, disease and poverty.

How to work out a full salvation, all may learn by faithfully studying the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and applying to their daily lives the rules laid down therein. On page 340 of this book Mrs. Eddy writes: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

[Ezra W. Palmer in *The Critic*, Grand Junction, Col.]

The comments on Christian Science by a writer in a recent issue are interesting and show a friendly spirit. He, however, falls into an error common to all who accept the materialistic conception of the universe. He believes that the way to remedy existing evils is to change things materially, and then, to use the critic's language, "there will be a chance to pray the things spiritual into existence."

This critic has overlooked the fact that mankind has for

Digitized by Google

centuries attempted to destroy or escape from the effects of evil in just this manner, but have been unsuccessful. Jesus Christ, the greatest of all reformers, the one who showed the way to mankind's full and complete emancipation, used an entirely different method. He laid no stress on mortal strivings or mortal efforts. He knew that mortals could not heal themselves of the wounds caused by belief in sin and death. He saw that freedom could be gained only as man grasped the omniscience and omnipotence of Spirit, which quelled evil and lifted man into his spiritual estate, beyond the power of greed, hate, poverty, sin, and death.

The great Teacher, therefore, in his Sermon on the Mount, admonished his followers, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It is this insistence of Christian Science on the all-sufficiency of Spirit to meet human needs that distinguishes it from all systems of human thought. A Christian Scientist knows that God supplies all his needs here and now, and he furthermore knows, for all time, that from this same divine source the supply is always equal to the demand. Mrs. Eddy says, "Christ, Truth, gives mortals temporary food and clothing until the material, transformed with the ideal, disappears, and man is clothed and fed spiritually" (Science and Health, p. 442).

Christian Science does not accept the dictum that God made material man or material things. If God made matter or material things, then it would be logical for us to begin with material things in the attempt to remedy evil, the concomitant of materiality. But Jesus declared that "God is a Spirit," and he further declared that men must worship Him "in spirit and in truth." Christian Science likewise teaches that God is Spirit, and His creation, like Him, spiritual. To attain health, peace, and harmony, therefore, we must work from a spiritual, not a material basis. To attempt to remedy materiality with materiality is folly. Jesus characterized such efforts as the blind leading the blind, with the result that both fall into the ditch. "Not by might, nor by power, but by my spirit, saith the Lord of hosts," and only thus is the conquest of evil gained.

Christian Scientists make no claim that they have yet demonstrated the power of God sufficiently to overcome at once all the evidence of evil, either for themselves or for others. But this they do know,—that they have proved to a degree the immanence of God, and they have strong assurances, through the healings already accomplished, that they are on the right way. As they work faithfully, stronger proofs will be made manifest, until all evil is destroyed, and we shall behold the full radiance of Spirit undimmed by a cloud of sin or evil.

❖

[Frank Bell in *The News-Times*, Reading, Pa.]

If your correspondent who has "read considerable on the subject" of Christian Science, will consult authentic sources of information, he may ascertain that his notion that Christian Science is deficient in "promises for the future" is altogether mistaken. It is true that Christian Science is regarded by its adherents as a distinct improvement on those forms of religious teaching which offer little or nothing beyond "promises for the future." The difference between Christian Science and such theories is the difference between promise and performance. The Christian Scientist has immediate proofs of the correctness of his religion. He is working scientifically with laws that are fundamental to all reality, and his individual experience satisfies him that the application of these laws will produce results as accurately tomorrow and next year and forever as today.

The mathematician has something better than a promise as to the future of mathematics, and no less is the Christian Scientist assured that man, governed by divine law, has nothing to be afraid of ahead. The reason why this practical religion continually gains ground, while theoretical systems simply stagnate, is readily discerned by any open-minded inquirer.

❖

[Charles W. J. Tennant in *Birmingham* (England) *Gazette*]

In a recent issue it is reported that "Christian Scientists are saying to themselves a thousand times a day, 'There is no war; there is nothing but sunshine, happiness, and peace.'" Christian Scientists are doing nothing of the kind. *They*, however, know that war would be impossible if *all* Christian people would obey the injunction of St. Paul, to let that Mind be in them "which was also in Christ Jesus;" which means, to think as Jesus thought on every occasion and in all circumstances. Christian Scientists are simply endeavoring to conform their daily living to this standard.

❖

[W. G. Watkins in *Milwaukee* (Wis.) *Free Press*]

In a recent issue of the *Free Press* an article appeared under the caption "Doctor's Helps," purporting to be "the truth about Christian Science." The doctor's attempt to explain Christian Science is but another testimony to the fact that an error in premise begets a like error in the conclusion. The truth about Christian Science can never be deduced from the erroneous premise that "every single human creature born upon our earth is an image of our great creator." There is a distinction—and a very important one—which Christian Science makes between the fleshly man and the man created in the image and likeness of God. The dual concept of spirit and matter which has imposed itself in some degree upon every form of righteous endeavor is gradually giving way to the inevitable recognition of God, Spirit, and His spiritual creation, including all reality and being.

Although the doctor stated a fundamental fact in saying that "Christian Science eradicates physical and mental disorders by living in accordance with the standard of truth, which standard has been laid down by our creator," it is equally important that the premise of Christian Science be adhered to if the Science is to be understood and demonstrated. Mrs. Eddy says that "it is not wise to take a halting and half-way position or to expect to work equally with Spirit and matter, Truth and error. There is but one way—namely, God and His idea—which leads to spiritual being. The scientific government of the body must be attained through the divine Mind. It is impossible to gain control over the body in any other way. On this fundamental point, timid conservatism is absolutely inadmissible. Only through radical reliance on Truth can scientific healing power be realized" (Science and Health, p. 167).

Christian Science is the acme of completeness within itself, and cannot be made the adjunct of material ways and means, and any attempt so to use it would be but the exercise of a mistaken sense of the subject.

❖

[H. E. Chandler in *The Post Express*, Rochester, N. Y.]

The article in *The Post Express* entitled "Prayers for Peace," has all the virtue of "orthodoxy;" still, we must not forget that the heresy of yesterday is the orthodoxy of today, and the orthodoxy of today becomes the absurdity of tomorrow, hence "orthodoxy" is not above criticism.

One would gather from the article referred to that in some

Digitized by Google

way this war is part of the eternal plan. It reads, "We may properly ask that God will bring this conflict to an end as soon as peace may forward the eternal purpose." If there is any eternal plan and purpose in this war, surely God will know when that purpose has been attained, without our prayers or advice; and surely we do not wish Him to set aside His plan for ours. Furthermore, if this war is God's plan, why should we mortals try to thwart Him by our efforts for peace? If war is not God's plan, why seek to fasten the responsibility of our mortal transgressions upon the Deity and charge Him with something the very opposite to His nature?

It will be conceded that the basis of all true analysis must rest upon our conception of the nature of God, who is the center and circumference of all things; and when one contemplates the conception that some mortals have of an all-wise and loving Father, an infinitely good being, we may wonder that wars and discords ever cease. Jesus demonstrated that he knew more of the eternal plan than any one before or since his time; and under the most trying circumstances, and even when the excuse was the defense of his own person, he said in no uncertain voice, "Put up thy sword." A good many of your readers will agree with me that war, "conclusive" or "inconclusive," is no part of the divine will, but rather that it is the overflowing of mortal hatred, envy, and incapacity, and that our own "creature" is so revolting to us that we dare not father the blame, but would make it the "plan" of Him who the prophet declares is "of purer eyes than to behold evil."

Yes, I have had many proofs of the power of prayer, but let us remember the words of that apostle of "The Prince of Peace" who said, "Ye ask, and receive not, because ye ask amiss." Being only a traveling man and not a theologian, perhaps I have no warrant to discuss this theme; but then some things were hidden from the wise and revealed unto babes.

✧

[David Anderson in *The Mercury*, Kew, Australia]

The question is asked, If the lecturer gained health through Christian Science, why are Christian Scientists ever ill? In answer, it may be said that Christian Scientists enjoy better health than when they believed in the theory of life and intelligence in matter. But they do not claim immunity from disease and discord, for they do not profess to have attained that full understanding of divine Truth which they are nevertheless daily striving to gain. Why, it is also asked, do Christian Scientists persist in dying? "Surely some of them would choose to live forever." Christian Scientists know that man, being immortal, does live forever; that he does not have to die to live; that life is intact, and immortality is not reached through the portals of the tomb; and this knowledge destroys the fear of death as well as any wish ever to anticipate it.

✧

[John L. Rendall in *Cedar Rapids* (Iowa) *Republican*]

I have read with considerable interest the editorial in a recent issue of the *Republican*, under the caption "The Mysterious God," for it commented on the statement made in a recent lecture on Christian Science to the effect that "a right understanding of God heals the sick." There is, as you truly state, "a lot of misunderstanding of God in this world." This misunderstanding, however, is not because of anything that God has established or ordained, but is due to the unwillingness on the part of humanity to relinquish the wrong concepts, the man-made theories which have burdened the ages. God is understandable, but not from any materialistic view-point. Jesus said to the woman at the well, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

The great trouble with humanity has been that it has conceived for itself an outlined, circumscribed, and materially located God in the image and likeness of itself. St. Paul saw this condition of things with the Athenians, and stated: "As I passed by, and beheld your devotions, I found an altar with this inscription, TO THE UNKNOWN GOD. Whom therefore ye ignorantly worship, him declare I unto you." There has been too much blind belief in the "unknown God." There is too much of mysticism and idolatry in human thought, neither of which has any legitimate part in the relation between God and man. The wise man said, "Understanding is a well-spring of life unto him that hath it," and Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

It will therefore be seen that the statement by the Christian Science lecturer, that "a right understanding of God heals the sick," certainly has Scriptural authority. Christian Scientists rejoice that a large measure of this understanding has come into their lives, and they further rejoice that they are daily proving its divine efficacy in the overcoming of sin and disease.

✧

[S. T. Downs in *South Bend* (Ind.) *News-Times*]

The notion held to by some people who have not taken the trouble to investigate is that Christian Science lays emphasis on physical healing practically to the exclusion of everything else. This probably explains the erroneous reference to Christian Science in a sermon by a clergyman as reported in a recent issue.

Christian Science is bringing the kingdom of heaven to mankind by instructing human consciousness how to understand and apply the laws of God. In doing this, it is healing every form of sin by stimulating in mortals a desire to be governed by purer thoughts and desires; it is destroying envy, jealousy, strife, and hatred by giving to mankind a practical understanding of Love; it is destroying poverty, lack, and human misery by a demonstrable understanding that God cares for His children. Christian Science is doing all these works, as well as healing every disease known to mortals, through the Science of divine Mind, as taught and demonstrated in the life and works of the great Wayshower, Christ Jesus.

It will be seen that the healing of bodily ills is not primarily the object of Christian Science, but these works simply prove its divine origin, and are the "signs following" to which the Master referred. This fact is further brought out in the Wednesday evening testimony meetings, where the statement is made by a large majority of the speakers, that while the physical and moral regeneration is cause for rejoicing, the spiritual uplift is the greatest proof that Christian Science is God's plan for bringing the kingdom of heaven, or the reign of harmony, to mankind.

✧

[From *The Portland* (Ore.) *Advocate*]

Many of our people are embracing the religion of Christian Science, and this, to our way of thinking, is a sign of independence and progress. Christian Science teaches that to reach a haven of peace, contentment, and happiness, one does not have to die, since it can be reached by right thinking and right living. For evidence of this fact, one has only to consult the thousands of believers of that faith, some of whom have been snatched from a wretched state of physical and moral decay to the blessed sunlight of health and happiness.

Editorial

Oneness with Principle

THROUGHOUT the apostolic narratives of the New Testament it is unmistakably emphasized that Christ Jesus' preaching of the gospel of salvation from sin was coincident with his healing of the sick. How better could he answer, when he was asked to establish his claim to the Messiahship, than unhesitatingly to point to the works which he had done in proof of his divine commission!

Although well versed in the law and the gospel handed down from the time of Moses, Jesus made no attempt to argue with his questioners the validity of his claim. What need was there of words when under his tender, compassionate ministry the erstwhile blind gazed upon the glories of earth and sky, the deaf ears were unstopped that they might catch the gracious message to suffering, despairing humanity, and the lame leaped and walked, joying in their freedom from bondage! Possibly it was the remembrance of this scene, indelibly stamped upon his memory, that in later years brought forth from the steadfast James the declaration that "faith, if it hath not works, is dead, being alone."

Again, when the great Teacher had nearly closed his earthly ministry, he impressed upon his followers that these same works should also be done by those who believed on him. When he instructed them to preach the gospel and heal the sick, he did not lay greater stress upon one than upon the other, but rather coupled the two as concurrent and inseparable. When we read of the works of healing wrought by these faithful ones and their successors in the next two or three centuries, we wonder that so beneficent a ministry was ever allowed to lapse. Yet in the last half century history has repeated itself: the sick are healed in Christian Science, and the indifferent and the doubting try in vain to stem the current of irrepressible, onrushing truth.

How strong and true Mrs. Eddy's declaration rings: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away. Ignorance of God is no longer the stepping-stone to faith" (Science and Health, Pref., p. vii)! And when she buttressed her faith with the works which are the hall-mark of the follower of the meek and lowly Jesus, no wonder so radical a departure from "time-honored systems" let loose a torrent of objections and detractions. It was to justify her faith by her works, that she might bring again to humanity "the healing of the seamless dress," that Mrs. Eddy founded the Church of Christ, Scientist, which today encircles the globe.

That which needs to be brought out in a Christian Science service, then, in fulfilment of its mission to mankind, is that the gospel which is there preached is the same gospel Jesus preached; that the same signs of healing follow as when the Master taught the multitudes on the hillsides and in the valleys as he "went about doing good," and that Christian Scientists, in emulation of his example, are healing the sick today as he healed them so long ago. The importance of the church services as a means of spreading the gospel of the kingdom is recognized by all followers of this faith, and they also realize that the reason for the existence of any Christian Science church is that the gospel of Christ Jesus, for which Christian Science stands, may be preached in the most effective and convincing manner. Second only to the preaching of the gospel is the testimony of those who through the teachings of Christian Science have proved for themselves that God still hears "the effectual fervent prayer of a righteous man" and heals the sick,—their message of hope and cheer to the sin-sick and suffering!

To do its best work for humanity a Christian Science church should be the most harmonious organization on the face of the globe, and in order to bring this about it is necessary that the membership should be at-one with divine Principle, that divine Principle of which Mrs. Eddy has written on page 112 of Science and Health: "From the infinite One in Christian Science comes one Principle and its infinite idea, and with this infinitude come spiritual rules, laws, and their demonstration, which, like the great Giver, are 'the same yesterday, and today, and forever;' for thus are the divine Principle of healing and the Christ-idea characterized in the epistle to the Hebrews."

Oneness with Principle is possible of attainment and the goal to be striven for, else why should Jesus pray, "That they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us: that the world may believe that thou hast sent me"? The world is watching Christian Scientists today as never before for the proof of their oneness with the Father, infinite Principle, and men will believe when they see us manifesting "the fruit of the Spirit" and healing the sick.

ARCHIBALD MCLELLAN.

A Daring Deed

THERE is a rugged mass of red rock on the New England coast which serves to mark a great crisis in the history of thought. It seems to be a projection of that vast adamantine center of things which the later geologies failed either to carve or cover up, and it is so hard and so well buttressed as to have remained quite indifferent to the assaults of the sea during perchance ten thousand centuries. Here, as we are told, with her feet firmly planted upon that which remaineth ever to the people of God, and with her eyes lifted above the seemingly boundless expanse of turbulent mortal thought, nearly a half century ago a woman took a stand for Truth which was past all compare in its daring, and which was destined to become an event of immeasurable significance to human life.

There is nothing which to human sense develops more inertia than religious prejudices. Sometimes they get a hold upon conviction which seems unbreakable, in which event the apparent immobility of the obstruction they present to spiritual advance is fully apprehended by those only who are championing some progressive reform. In a very considerate but very uncompromising way, which spoke volumes for the scientific thoughtfulness with which she had proved the impregnability of her own position, Mrs. Eddy rebuked a host of these long entrenched and highly honored creedal views about God and man, the reality of material substance and of evil, and the consequent naturalness and authority of the so-called laws of disease, decay, and death. She had keen mental vision, the capacity to cope with the deeper dialectics; but her rarest equipment was her spiritual intuition, "the sword of the Spirit," and with it she smote the unworthiness of these man-made beliefs "hip and thigh." When one compasses the facts of the situation, the disparity humanly speaking of the contending forces, the ingenuous presumption of her venture seems wonderful.

"Such is the structure of the moral world," as Sir Henry Jones has said, "that something of the authority and splendor of the absolute belongs to every deed rightly done;" and this was never more clearly proved than in the outcome of Mrs.

Digitized by Google

Eddy's David-like daring. Progress is a perennial revolt against an existing order. Many protests may be heard, but to achieve anything for good they must voice a spiritual verity. Her dauntless heroism would have challenged the world's admiration in any event, but it would have availed nothing had it not been the expression of loyalty to a demonstrable proposition. Nothing can truly "arrive" for men that is not of God, eternal Truth, and only as we have the daring of faith, this abandon of fealty to the noblest that we know; only as we are willing, as the Master taught, to give up all things for the truth, can we companion with it and contribute to its triumph. "Dare to be a Daniel" is a call to very much more than a sentimental attitude. It means the glad assumption of any seeming hazard, and in this the measure of its efficiency is determined. It was the pitifully manifest lack of this quality which led the Master gently to upbraid his disciples with those memorable words, "O ye of little faith!"

As one thinks about all this, however, it is sure to become evident to him that Mrs. Eddy had no thought that her doing was a wonderful thing. Having demonstrated her proposition, she could state it without any sense of fear or reserve, though counter statements were piled high as Pelion. The expert chemist has no sense of venture whatever so long as he honors the established equation of his compound. It is quite a simple matter for him to work what the world calls miracles. And this is the most interesting fact about the doing of any truly great deed,—it is accomplished easily and without any sense of effort. There is no struggle or stress in the realm of divine law, and he who is following its lead is sure to find that what seems to men a daring deed, has been achieved with as little strain as that with which a rosebud unfolds its tinted secrets to the sunshine.

JOHN B. WILLIS.

Words that Heal

THE student of Christian Science soon learns that thought underlies all the words that are spoken, and he thus comes to be more discriminating in his use of them than ever before. The testimonies published in our periodicals, and those given at the Wednesday evening meetings, sometimes tell of the overcoming of the habit of profanity, in conjunction with the healing of disease and other ills, showing that as one awakens to the dignity of real manhood he becomes more of a gentleman. Students of Christian Science recognize the power of right thoughts, and these naturally call for right words. As a familiar hymn has it (Hymnal, p. 160),—

> I myself would gracious be,
> And, with words that help and heal,
> Would Thy life in mine reveal.

It goes without saying that no true Christian Scientist would use violent or profane language on the absurd supposition that this would make his statements more effective. If we are ever tempted to use violent language, we should remember Job's declaration, "How forcible are right words!" We can at the same time remember the Master's saying: "A good man out of the good treasure of the heart bringeth forth good things: and an evil man out of the evil treasure bringeth forth evil things. But I say unto you, That every idle word that men shall speak, they shall give account thereof in the day of judgment."

The wise man says that "pleasant words are as an honeycomb," and that they are "health to the bones." We are told that Christ Jesus rebuked sin when it was necessary to do so; but we also read that people wondered at the "gracious words" with which he presented the truth. On almost every page of the gospels we find words spoken by him which healed the sick, comforted the sorrowful, and awakened sinners from the dream that sin has either power or pleasure. Nowhere in his recorded utterances do we find cold casuistry or bitter condemnation. Divine Love inspired his words and deeds alike, hence his words glow with ever greater eloquence as the centuries roll on. Christian Scientists are daily proving that the words which brought healing two thousand years ago have not lost their power with the lapse of time, for they are reflections of the infinite One, who said that His word should not return unto Him void, but would accomplish His good pleasure, bringing joy and peace wherever it was heeded.

In Science and Health (p. 454) our revered Leader tells us that "right motives give pinions to thought, and strength and freedom to speech and action." With this sense of strength and freedom, we should weigh well our words and make them effective weapons for Truth. Christian Scientists should do their part in preserving purity of language, in the face of the modern tendency to degrade it by the thoughtless repetition of slang even by educated people, and by its introduction into so much modern literature, a tendency which betrays an unsound mental state that needs to be healed.

While statements of truth are always serious, they need not lack brilliancy or vigor; indeed they will possess both if they come from the heart and the motive is to do good. The most learned men in Jerusalem marveled at the eloquence of Peter and John, whom they looked upon as ignorant fishermen; but their most appealing argument was the erstwhile lame man who stood beside them. Peter had neither silver nor gold, nor had he learning, but he had an understanding of Truth's all-power, and when he declared it, the man who had been helpless from his birth sprang to his feet, "walking, and leaping, and praising God." Need we wonder that both civil and ecclesiastical law were dumb in the presence of this demonstration and its eloquent defense when the apostles were brought up for trial! The record tells us that the priests and rulers "could say nothing against it;" and thus should all our words and deeds witness to the divine influence which transforms all that it rests upon.

ANNIE M. KNOTT.

Among the Churches

Current Notes

HARTFORD, CONN.—At the reading-tent maintained by Second Church of Christ, Scientist, at the state fair, Charter Oak park, Sept. 7 to 12, there were 1,510 pieces of literature distributed. The success of the undertaking is not to be judged alone by the amount of literature distributed. The presence of the tent at the fair; the conscientious work done by those in attendance; the atmosphere of peace and harmony, which was commented on by many who were not Christian Scientists; the opportunities for an impersonal declaration of the truth, and the fact that many left the tent refreshed in body as well as in spirit, are proofs of the "signs following" of which Jesus spoke so often. It was with much gratitude that the public availed themselves of the privileges here offered, and the literature was readily accepted and read.—*Correspondence.*

EUGENE, ORE.—The contract for the construction of the new Christian Science church at Twelfth and Pearl streets has been let. The structure is to be completed by Dec. 15. The main auditorium will seat three hundred and fifty persons.—*Eugene Guard.*

Digitized by Google

SALEM, ORE.—At the state fair held in Salem from Sept. 28 to Oct. 3, a *Monitor* booth with reading-room was maintained in the Educational Building. Last year a tent was erected on the grounds; this year space inside was secured. The week's work proved the wisdom of the change. We feel, too, that making the booth a *Monitor* booth instead of a denominational one, was a wise step. On the walls of the reading-room were displayed pages from the *Monitor*, each properly designated and mounted upon a gray mat. This enabled us to show the visitor at a glance the scope of the paper's work. Pages representative of the following departments were shown: International, Foreign, South American, Special Articles, Fashions and Household, Children's, Sports, Financial, Home Forum, Editorial, Advertisements. A show-case contained an exhibit of Mrs. Eddy's writings, while Christian Science literature for free distribution was made easily available.

In distributing the *Monitors*, those who passed and seemed at all interested were offered free sample copies, a word of explanation of the purpose of the paper being given whenever opportunity offered. A Wednesday issue was given to those who had children. A month's free subscription was offered to any who desired it, and one hundred and fifty-three people availed themselves of this privilege. They were almost without exception serious, thinking people, earnestly desirous of knowing more of the *Monitor*. Almost two hundred copies were delivered each day to farmers' families camping outside the grounds during fair week. Tables with *Monitors* were placed in the Salem hotels with card signs inviting the guests to take copies.

Looking over the activity this year, we find much more literature distributed, more people reached, more visitors in the reading-room, and a very noticeable increase of kindly feeling toward Christian Science from the public as a whole.

Correspondence.

MISSOURI.—A soldiers' reunion, at which there is always quite a large attendance, is annually held in the village of Glenwood. The reunion this year was held the latter part of August, lasting four days. As Christian Science is but little known in this part of the country, a few Scientists concluded it would be a good opportunity to maintain a reading-tent. We had a cot for every one who needed it; also for the use of mothers with sleeping babies. Our chairs were occupied most of the time, and we could have used as many more. Several of our visitors made the remark that this tent was the best thing on the ground. We gave away 377 *Sentinels* and 183 *Monitors*.—*Correspondence.*

ROXBURY, MASS.—Contracts for the erection of the Christian Science church at Elm Hill avenue and Howland street have been awarded. The building will be one story high, with pitch roof, 95 by 106 feet ground measurement, and will have a basement and a mezzanine floor.—*Boston Transcript.*

LANCASTER, OHIO.—As is the custom with the Christian Science denomination, the exercises today [Oct. 1] attendant upon the laying of the corner-stone of the beautiful new church on North Broad street were of a very simple nature.

Lancaster Eagle.

KOKOMO, IND.—During the Prosperity exposition held in this city the first week in September, a reading-tent was maintained on the grounds by First Church of Christ, Scientist, of Kokomo. All of Mrs. Eddy's writings, as well as copies of the periodicals and pamphlets, were on the tables for reading, and pictures and mottoes adorned the walls. Many persons visited this attractive reading-place, and over five hundred copies of free literature were distributed.

Correspondence.

MONTICELLO, ARK.—The Christian Science Society maintained a well arranged and conducted reading-room on the fair-grounds, and they deserve commendation.

Monticello Advance.

NEW YORK, N. Y.—During the third quarter, ending Oct. 1, the Mission Yacht Association distributed 96,250 Christian Science periodicals to the seamen of 4,250 ships in New York harbor.—*Correspondence.*

The Lectures

Chicago, Ill.

At a lecture on Christian Science in Fifth Church of Christ, Scientist, D. A. Clippinger, first reader, in introducing Clarence W. Chadwick, said:—

That God is good is a part of all religious teaching. The world accepts this theoretically, and doubtless would rise up and defend it, if challenged. Nevertheless, I venture the assertion that what the world needs most to know is that God is good. Centuries of education have so filled the human mind with false concepts, fallacies, and contradictions concerning the Almighty, that there is scarcely a human attribute which has not in some way become attached to Deity. We acknowledge God as the author of every good and perfect gift, but we also manage to connect His inscrutable wisdom with all of our afflictions. This erroneous concept of His creation is the direct cause of all human misery. Christian Science undertakes to correct this. It teaches that God is omnipotent, omnipresent, unchanging good; that He is the author of good and of nothing else, and that evil in any degree whatsoever is no part of the divine nature and purpose. To the practical application of this teaching is due the phenomenal growth of Christian Science in the past fifty years.—*Correspondence.*

❖

Christchurch, New Zealand

A lecture was delivered by Prof. Hermann S. Hering in King's Theater, before a large audience. The lecturer was introduced by Mrs. M. E. Simpson, who spoke in part as follows:—

Christian Science is a subject holding its place in the foreground of the world's thought today, impelling men and women to think for themselves and to recognize a hitherto unacknowledged power that heals the sick and sinful, and unfolds man's dominion as a child of God. Before I heard of this teaching, the problem of existence had baffled me almost to distraction. What am I? Whence came I? Whither do I go? were questions that I felt I had a right to have answered. Yet neither demands, prayers, nor tears brought me an answer. Behind me were sad memories; before me, old age, decrepitude, the grave, and beyond that a faint hope of a heaven that had no fascination for me. Around me were my suffering fellow creatures whom I could not effectually help. Calamity seemed the rule rather than the exception; death seemed more powerful than life; matter seemed to govern spirit, and sin seemed to outwit holiness. I tried to believe my Bible. It told me the sick should be healed as in Jesus' time, that Jesus had promised to send the Comforter to abide with us forever, and to lead us into all truth; yet with all my earnest desire, the Comforter came not to me.

While in utmost despair, a friend lent me a wonderful

Digitized by Google

book he had recently become possessed of. It was "Science and Health with Key to the Scriptures" by Mrs. Eddy. As I read that book, life took on a new meaning. My whys and wherefores were answered, and I realized peace and happiness, and an understanding that sin and sickness can be healed now as they were two thousand years ago; that the Comforter is ever present, a living reality, to be understood and known.

Since that time I have seen disease and sin disappear through Christian Science treatment. In this city is an ever-widening band of happy people who can tell of wonderful healing by Christian Science. They can tell of lives chastened and sweetened, of operations being made unnecessary through the healing power of Truth, of restoration to health from diseases pronounced incurable by medical men,—and all through the truth as contained in the Christian Science text-book.

These happy people have invited you to share with them the love-feast that is to be given us tonight by our distinguished visitor, and we know the ever-present Comforter is with us, because we believe the words of him who said, "Where two or three are gathered together in my name, there am I in the midst of them."—*Correspondence.*

❖

Hamilton, Ohio

Judge Clifford P. Smith lectured on Christian Science to a large audience in the Jefferson Theater. He was introduced by Judge Ed. H. Jones of the court of appeals, who spoke as follows:—

We often hear it said that interest in religious matters is on the wane, and it is not unusual to hear remarks to the effect that society, politics, business, the drama, and picture shows attract more attention and take more of our time than does the church. To those of us who are interested in the growth and progress of the church and look forward to the coming of God's kingdom, these observations are often made with mingled emotions of regret and conviction. To such it is encouraging to witness this large gathering of Hamilton and Butler county citizens, coming, as you have this sultry afternoon, to hear a lecture of a purely religious nature by a conspicuous representative of that modern church whose teaching recognizes no limitation upon God's power and emphasizes to a marked degree His omnipresence and omnipotence.

What Christian Science has accomplished in the number of believers and in adding to the sum of human happiness, entitles it to respect and to the patient and earnest consideration of all thinking persons. It has made rapid strides in its short history. The fact also that it is now increasing at the rate of three new organizations a week, and that in many of our cities its edifices are taxed every Sabbath to their utmost capacity, stamps its work and faith as things vital and worth while.

It is not surprising, then, when we look at the achievements of Christian Science, that so many of our people have embraced the opportunity afforded them to hear it discussed today.—*Hamilton Journal.*

❖

Cranford, N. J.

In introducing Bicknell Young, who lectured on Christian Science in the edifice of First Church of Christ, Scientist, Hugh Hearon, president of the school board, said:—

Perhaps the greatest need in education today is a clearer vision of the truth. Any new ideas, hopes, or teachings which serve to make us better men or women, physically, mentally, or morally, will be gladly welcomed; and if in the demonstration of Christian Science we receive an additional ray of light, then the world will be the better for the establishment and maintenance of this movement. Many seekers after truth have failed to find this ray of light in materialism and its kindred thoughts, but Christian Science, the "still small voice" of truth, comes today and brings us a message from God, telling of our relationship to Him,—a message which sheds light on darkened thought, gives surcease from sorrow, freedom from the bondage of sin; which heals every sickness, and which delivers the message of true brotherhood to mankind, the message of peace and love.

When we stop for a moment and review the religious history of the past, and the next instant see the religious thought of the present, its constantly increasing spirit of tolerance and good will, the advancing gospel of man's brotherhood to man, are we not justified in saying that today the great body of men and women are earnest seekers of reality and truth, and as such desire and strive to be impartial, fair, and honest? We are all becoming more tolerant and open-minded; our standards of ethics and morals are more than ever before leading us to the actual accomplishment of a lofty ideal. We are able, therefore, to entertain and investigate advancing ideas, and shun to an ever-increasing extent the prejudice and dogmas of the past.

I think all of us, whether we are members of the Christian Science church or not, have been impressed with the remarkable growth of this movement in the past few years, especially by the membership, which comes from all walks of life. I have yet to meet a Christian Scientist who is not enthusiastic and sincere.—*Correspondence.*

❖

Adrian, Mich.

Virgil O. Strickler, who lectured on Christian Science, was introduced by the Rev. J. W. Gray, county commissioner of schools, who said in part:—

I am not a Christian Scientist, but before I introduce the speaker tonight, I wish to drop this flower of tribute to whom I believe tribute is due: The purity of life, the gentleness of character, the sweetness of spirit, the patience under trial, the cheerfulness of manner, the freedom from bitterness, from vindictiveness, retaliation, and evil speaking,—in short, the true refinement of life and character which this faith has wrought for men and women with whom I am and have for years been personally acquainted,—these are the supreme credentials that they are following the Master, who taught all men everywhere, as Paul says, to be kind, tenderhearted, loving one another, and forgiving one another, even as God for Christ's sake hath forgiven us.—*Correspondence.*

Testimonies of Healing

When alternating between absolute indifference as to whether or not I got well and frantic desire for the recovery of my health, Christian Science was brought to my notice and accepted,—accepted not because I had any faith in its healing efficacy, but because there was nothing else left to try. I was suffering from a distressing state brought on by childbirth. Every physical function was disorganized, and my mental condition was distressing.

The healing at the time seemed a slow one. It was eight weeks after Christian Science treatment was begun before I was conscious of any improvement. Then little by little I was able to eat and retain my food, and the horror of sleeplessness left me. Gradually I began to take an interest in the doings of the family, and thoughts of myself and my aches and pains ceased to claim my whole attention. I do not know when I began to read "Science and Health with Key to the Scriptures," for notwithstanding the fact that my health had been greatly benefited by Christian Science, when I took up the text-book I felt impelled to contradict everything I read. I remember reading how Mrs. Eddy said that the healing power of a drug lay not in the drug itself, but in the human opinion held in regard to it. I thought this ridiculous. I had always taken a certain remedy for a cold, and it had always done the work. That very evening the papers contained an advertisement decrying the virtues of this drug and extolling those of another medicine. This showed me that Mrs. Eddy was right; that a cure must have been brought about by the way persons felt about the matter; and if she was right in one thing, maybe she was in another. In place of contradicting the book, I began to hunt in my daily experiences for proofs of its statements, and I found that every statement could be proven. From that time my improvement in health was very rapid, till now my appearance is, as the Bible puts it, that of a "watered garden."

After my opposition to Science and Health was through God's grace overcome, another struggle ensued,—that of religious scruples. I was born and had been reared a Jewess. Our family had always belonged to reformed congregations, still the words Christ Jesus were anathema to us. In studying the Lesson-Sermons, such subjects as Life, Truth, Reality, etc., were easily understood and very helpful, but the lessons of the Sacrament and of Christ Jesus were very hard to read and study with an unprejudiced mind. Many a time I put the books away, intending to drop the whole subject, but then I would think of my wonderful physical healing and how my conception of God had broadened and deepened, and what a comfort it was to know that God is omnipotent, omnipresent, and omniscient Love. Pondering on the full meaning of those three attributes of Love, which seemed to satisfy every demand that a child had a right to expect of a father or a mother, I could not give up the study. I persisted, knowing that somehow and in some way this subject would also be made clear to me; and it was.

I was explaining to a sick friend one day how I as a Jewess could have taken up Christian Science, which I wanted her to try also. As I explained to her what I knew, the matter was as clear to me as if I had always understood it. I found that if the Jewish worship was the worship of the one and only God, I was a better Jewess for being a Christian Scientist; that now I not only say that God is omnipotent, but I prove it; I not only say that God is Love, and that hate, malice, and other forms of mental discord are unreal, because not of God, but I try to put this truth to daily use. It took Christian Science to teach me what God is; that He is a Father who is near, and not far off. The perfect standard with which we may compare our daily doings, and if they do not tally know that they are not true, but that the way to solve our problems is not hard, is to unsee the evil and realize the omnipresence of good. This constant holding of one's thought to the good in life is to me the wonderful part of Christian Science.

For the physical blessings that have come to me and my family through the patience and understanding of a faithful Christian Science practitioner, I am thankful; also for the marvelous and disinterested friendship and help of a Science friend who, seeing my need, helped me without solicitation over the rough places. For the Lesson-Sermons and hymns I am also thankful. I am deeply grateful to the *wonderful* woman, Mrs. Eddy, whose vision was clear enough to perceive the truth of God and put it into practice for the benefit of mankind. In fact, I do not need to have a special day of thanksgiving; each day has become a day of thanksgiving to me.—Mrs. Joseph Herzberg, Milwaukee, Wis.

When Christian Science was first brought to my notice, I was in a nursing-home in London, recovering from a deeply incised wound, the result of an operation. My two sisters came up from the country to see me, and told me about Christian Science. I was greatly interested in what they said, especially in the new concept of God, and at once I felt convinced that it was the truth. At six o'clock the following morning the nurse came as usual to dress my wound, from which on previous occasions there had always been a heavy discharge; but this time the nurse remarked that the wound was getting on very well, for there was no discharge. This struck me as strange. I wondered if it could have been the result of the conversation with my sisters the day before. I now know that it was the power of Truth which healed me.

A day or two later a friend offered to take my sisters and myself for a motor drive in an open car, though the weather was very cold. I had only recently returned from West Africa, and I had not been out for some weeks, but my sisters told me that I could go out with perfect safety. I felt they would not say this unless they knew it to be true, so I went, and greatly enjoyed the drive, suffering no ill effects afterward. That was a further proof to me of the truth of Christian Science. After this I had very little trouble with the wound and was soon able to leave the nursing-home.

Though knowing that Christian Science was the truth, I was not at that time ready to take up the study of it seriously. I was a so-called man of the world, living a careless, selfish, sensuous life, largely of amusement and what I then thought pleasure. I was by no means prepared to give up all this and take to a religious life. Like most men, I was desperately afraid of becoming too good! I may say that this is a fear which, among others, has left me since I have gained a further understanding of Christian Science. While in this condition, knowing the truth and yet living in direct opposition to it, I was very unhappy. Life did not go smoothly with me, as it had always done before, and serious trouble suddenly came upon me. I was confronted with what seemed a tremendous difficulty. Choice, as usual, lay between right and wrong, and the temptations to do wrong were great; but, thank God, I did right. A year later the choice was again before me. I chose the wrong, and quickly descended into a hell of my own making.

Shortly after this I had another experience in Christian Science. I was instantaneously healed of malarial fever, an ailment which had begun to fasten on me after service in West Africa. This wonderful healing, as it seemed to me,

Digitized by Google

woke me up a bit, and I at last got myself inside a Christian Science church,—a matter of no small difficulty, as I had rarely been in a church for years. I began to attend the Sunday service regularly, and after another struggle went to a Wednesday evening testimony meeting. That was an experience which greatly impressed me, and after that I went often.

I was still leading the same life as before, but the taste of ashes in the mouth was getting worse all the time. At the end of four months' attendance at the Christian Science church the thought came to me, Shall I go on as I have been doing, or shall I try to see whether Mrs. Eddy is right when she says in Science and Health (p. 330) that "evil is nothing, no thing, mind, nor power"? The general belief of the world is, that if a man has been in bondage to sin and tries to give it up, the devil, an evil intelligence, will drag him back and make him suffer such tortures that he yields to it once more. I determined to put this to the test, and see whether the statement in Science and Health was really true or not. I gave up the sin to which I had been in bondage for years, and started in to try to live the life of a Christian Scientist. The moment I honestly turned to the light, I found that the sin had left me, never to return. Soon after this, other bad habits, such as drink and tobacco, also left me. Later on, the troubles which seemed to loom so large in my life gradually faded away, and a beautiful change came into my whole consciousness.

I am most deeply grateful for all that Christian Science has brought into my life. The world is an entirely different place, and existence, which before had seemed chaotic, is opening out into life eternal. The spiritual enlightenment which has come to me through the study of Christian Science, seems so all-important that I sometimes almost forget the wonderful physical freedom which has come to me. Before hearing of Christian Science I was often ill, frequently on the sick-list, and sometimes on sick-leave; but since honestly turning to Christian Science, and trying to live the life it demands, I have not in the course of seven years missed a single day's duty through sickness. I attribute this solely to the protecting power of Truth. I have also found Christian Science a wonderful help in my home. My little girl, who is eight years old, has never to my knowledge taken a drop of medicine, and is a happy, bonny child. Whenever any illness has come up, it has always been quickly overcome by divine Principle.

I am thankful to God that it is my privilege to live in this age, when the truth stands once more revealed, so that all who will may learn of it. I am very grateful to our dear Leader, who was pure enough to discern the truth, and brave enough to stand for it, alone with God, against the whole world, and who gave it to the world in such a form that every one who is willing may gain the understanding of it and make it his own. Words are empty things with which to express gratitude, but I trust that my real gratitude may be shown in deeds. I write this testimony in the hope that it may help some struggling pilgrim as other testimonies have helped me.

H. B. Des Voeux, Major Royal Engineers, Plymouth, England.

✧

I wish to express my deep gratitude for all that Christian Science has done for me. In the summer of 1912, while running home from a neighbor's house on a dark night, I fell and injured my leg. The pain was intense, and after coming into the house I said, "Some day I know I will have trouble with that leg." Three weeks later I got what I had been looking for, the swelling and pain being so great that I called a Christian Science practitioner. In two days I gained relief. The suffering was extreme, but it has taught me never to look for error or think it is likely to come.

It is now two years since I was healed of this trouble, and there has been no further difficulty. I was also healed of a chronic throat affection after doctors had said the only way I could get relief was to have the tonsils removed. Then, too, I have been helped in business matters. When everything has looked darkest, the thought that God is the source of all real supply and will lead us to do the right thing, has helped me to solve my problem every time. For these and many other healings in our home, I am truly thankful to God.

Freda Baars, Puyallup, Wash.

✧

I feel it is time I should tell what Christian Science has done for me. I was a sufferer from erysipelas, but was cured through Christian Science. I have had many wonderful healings. On one occasion my wrist-joint was thrown out of place, and put back without any other remedy than Truth. This text from Jeremiah is a great help to me: "I will cure them, and will reveal unto them the abundance of peace and truth;" also, we are told in Psalms, "God is our refuge and strength, a very present help in trouble." For all this I feel very thankful, and I hope that through my testimony others may be led to look to God for help and put their trust in Him, the giver of all good. My family are all living witnesses of the power of Truth.

I have been a student of Christian Science for fifteen years, and have taken no medicine in all that time. I have recently been out to the mountains of Wyoming and Idaho, also in Kansas, and got along all right, although before coming into Christian Science I was not able to travel. I used to wear glasses, but I have not worn them in all these years. My lungs have also been restored. Words fail to express what Christian Science has done for me in various ways,—for my children, my home, my all. The spiritual unfoldment and uplift is the "pearl of great price." I feel deep gratitude to Mrs. Eddy for this wonderful discovery, and I am very thankful to our heavenly Father for sending this blessed truth to me.—Mrs. J. A. Willis, Niangua, Mo.

I can testify to my mother's healing in Christian Science.

Maude Willis.

✧

[Translated from the German]

In the following I would like to tell briefly of the blessings I have received through the study of Christian Science, and thereby express my sense of deep gratitude, and help some fellow being.

For many years I had been afflicted with a diseased condition of the glands in the arm-pits, often suffering great pain. Upon the physician's advice I submitted to an operation, but after a year had elapsed the trouble manifested itself in an aggravated form, making it necessary for me to stay in bed during a period of six months, with consequent inability to perform any kind of work. After a short improvement I had a return of the illness in 1911, and suffered so severely that I yielded to despair, more especially because I had completely lost faith in medical skill.

At that time I was advised by a friend to turn to Christian Science, and my chief desire being to be freed from the trouble, I made up my mind to call on a practitioner in Hannover. Although I had no understanding whatsoever of Christian Science at that time, I experienced distinct relief after the first treatment, and the results which attended the

Digitized by Google

following two weeks' treatment were simply wonderful. I was able to perform every task without any sense of fear, trusting firmly in God and banishing the trouble from my mind. After two weeks I was completely freed from this ailment, and there has been no indication of it since.

I am deeply grateful, not only for the healing of disease, but more especially for the spiritual understanding which has come to me and to my family since that healing. We are indebted to Christian Science for many benefits in a physical as well as in a spiritual way, and I can testify openly that through these wonderful teachings, happiness, contentment, and health have come into our home. Our desire is that many may attain to the recognition that divine Love is always and everywhere present, and I am very grateful to Mrs. Eddy for showing us the way to divine Love and Truth.

Frau Christine Schrecke, Bockenem (Hannover), Germany.

I would like to express deep thankfulness to God for the good I have received through Christian Science. One evening, about six years ago, I was eating fish for supper. I had always had great fear of a fish-bone sometime getting fast in my throat, and that very thing happened. I at once hurried to a physician, two blocks distant. He gave me some medicine which caused violent retching, but it had no other effect. He then ran a long steel probe down my throat, but after some five minutes gave it up and told me that he could not remove the bone. By that time I was so frightened that I hardly knew what to do, but I thought of a Christian Science practitioner who about a year before had healed my mother of stomach poisoning. I therefore called him up on the telephone, and told him the trouble. He said I should go home and not be afraid; so I went home and lay down. Not over five minutes had passed when there was a tickling in my throat. I remained very still, and then felt something on my tongue. I put my fingers in my mouth and brought forth the fish-bone, which was almost an inch long.

I have seen some wonderful healing done by Christian Science and have received many blessings, for which I am very thankful. I can only try more each day to live as our dear Leader has pointed the way.

J. S. Allen, Los Angeles, Cal.

I am Mr. Allen's mother, and I was present at the time the bone was removed.—Alice Allen.

✧

A number of years ago, on the advice of several physicians, I was about ready to submit to a surgical operation, when my attention was directed to two wonderful healings of malignant growths by a Christian Science practitioner. I had never before heard of Christian Science, and naturally understood nothing of its *modus operandi*, but the proof was most convincing and conclusive. One of those healed was a brother, the other an acquaintance; and the condition of both before taking up Christian Science was well known to me. Witnessing these proofs, I knew that a surgical operation was entirely unnecessary, and so asked to have this practitioner sent to my home. She called the following day, and began treatment for me and for my little daughter, two years old, who was a sufferer from what the physicians termed inherited tuberculosis. The child was in a very weakened condition and had a severe cough, but during the practitioner's visit, which was rather long, she was instantly healed, and has been in perfect health ever since. My own healing was accomplished in three weeks' time.

My husband was also in great need of Christian Science, as he was suffering from the same disease as the child, and his mother, sister, brother, with numerous near relatives, had fallen victims to it; but even after all these proofs, it seemed impossible for him to give up his doctors and medicines. Later, however, when these same doctors informed him that *materia medica* could do no more for him, and that it was their belief that he could live but two weeks longer, he immediately asked for Christian Science treatment. The same practitioner was sent for and began treatment, the result being that fifteen days later, Oct. 28, 1901, my husband returned to his office and at once assumed all his former duties. He has been well ever since. His case surely proved that "man's extremity is God's opportunity." Many relatives and friends, witnessing these marvelous healings in our family, were led to seek the truth, and today they are active workers in the vineyard, helping the cause to the best of their ability.

Truly, words are inadequate to express my gratitude; it must be expressed in deeds. My earnest desire is, as Mrs. Eddy says on page 4 of Science and Health, "for growth in grace, expressed in patience, meekness, love, and good deeds," that I may "keep the commandments of our Master and follow his example."—Rose K. Raeder, Cleveland, Ohio.

✧

In reading the seventeenth chapter of Luke we find that of the ten lepers who were healed, only one returned to give glory to God; and I feel that unless I give my testimony so that others can derive some benefit from it, I have not been truly obedient. Christian Science has done so much for me during my five years' study, that my heart is full of gratitude to our dear Leader, through whose teachings, as set forth in the text-book, "Science and Health with Key to the Scriptures," I have been raised from the grave. Though seemingly dead to spiritual understanding, I have learned in Christian Science that to know God is life eternal.

When I was a child I never wanted to go to church, and while I had a lovely Christian mother, she could only tell me that I ought to go because it was right. Still, I never could see where she derived any benefit from her way of thinking, so I refused to follow in her footsteps. By the time I was sixteen years old I had become so bitter against churches that I had no use for those who professed to belong to one. I had no desire to read the Bible, and never did. It is said that an infidel has some kind of a god that he worships, but if I had any, I do not know what it was, for I did not care for anything or anybody, not even for myself. In fact, I tried to make away with myself once, though not because I thought it would end all, for I did not think that far ahead. After my mother passed on, I thought I would go to church and try to believe there is a God. I was following the theatrical profession at the time, and as soon as the minister discovered I was in the church, he began to attack the stage, and that made me more bitter than ever. A few years later I married, but was so unhappy because of my disposition, that I would get despondent and remain so for a week at a time, having hysterics followed by nervous prostration. When people did me an injury I never forgave them, and I had very few kind words to say about any one. My temper seemed uncontrollable.

While in St. Louis visiting some friends who were interested in Christian Science, I attended First Church with them and found just what I wanted. I read and studied Christian Science, and tried to live up to the truth it teaches, just as a drowning person reaches out for something to save him. I once read that Abraham Lincoln said he would

Digitized by Google

never join a church unless he found one whose members "loved their neighbors as themselves," so I decided I never would either. Therefore it is easy to understand how grateful I am to have found that church. I have been able to overcome evil with good, and to love my neighbor as myself. The Bible has opened a new life to me, and it is my ever-present help in trouble. Christian Science has brought me many friends, also happiness, prosperity, youth, and a love for everything that has life.

Three of us in our little company are studying Christian Science. We go over the Lesson-Sermon together every day, and hold Sunday services in our room at the hotel when there is not a Christian Science church in the town, taking turn about in being first and second readers. With our understanding we have been able to overcome discord in many forms, among them scarlet fever and spinal meningitis. Christian Science has been a great help to us in our travels every day, for seemingly everything is against us at times. We get the *Sentinel* and *Journal*, and they are a love-feast to us. We are able to place the *Monitor* in the hotel office, and I have interested several people in Christian Science, and at present have a Science and Health loaned out.

I am surely glad to have found this "pearl of great price," and I want to thank all the dear Scientists for every thought, word, or deed they have given me on my journey. I want, in return, to be worthy of the name Christian Scientist.

MRS. OSCAR GRAHAM PEEKE, Dallas, Texas.

✧

[Translated from the German]

The deepest gratitude prompts me to write this testimony about the healing of a disease with which I became afflicted in 1913. Through kind people we became acquainted with Christian Science, and after I put myself under the care of a practitioner I recovered, and have been quite well ever since. It was a serious case of appendicitis, and the physicians said that I certainly must submit to an operation; but this has been proven unnecessary. I give this testimony with a heart full of gratitude to God, and with the hope that it may point out to some fellow being the way to Christian Science, which brings to the world blessings only, and peace.

FRITZ DÖPPEN, Kaufdorf bei Bern, Switzerland.

Answers

J. LILIAN VANDEVERE

"PRAY, what is friendship?" As the question came
The hearers thus made answer: "'Tis a ghost
Of buried confidence; a pretty name;
A staff that splinters when we trust it most,
And breaking, wounds. The scars throb on and burn."
So spoke the first. "But must man ever lean
And never give support?" I sadly turn,
Some crumb of comfort from the next to glean.
His tongue was ready. "'Tis the cordon strong
Of kindred souls with which we fence us round."

"Can love, a prisoner, sing its sweetest song;
Can it by our prescription be embound?
Must all mankind be shunned lest one betray?
Are we to choose the hands that clasp our own?
Is there no larger part, no better way,—
Are we to walk secluded or alone?"
Then spoke the last, so simply, and at the sound
I heard my query answered and was free.
"Friendship! It is the open road, which found,
Leads ever on to higher ministry."

From Our Exchanges

[*The Christian Register*]

The spiritual assets of the world are enormous, beyond men's common belief. Religion is like radium. Wherever you try it, wonders are worked; but the world has seen so little of it that most men almost doubt its existence. The faith in goodness at the heart of the universe, the open mind that follows truth, the friendly heart, the law of the constant good will, what men call "the Spirit of Christ" (which we may see even in those who do not profess a belief in Christ), —these things are infinite in their reach and momentum. They change lives; they make homes beautiful; they are strong enough to build cities, to bind states together, to maintain the peace of the world. Religion is like radium, but it is unlike radium in that there is an infinite supply to draw upon. It is herein like a mighty reservoir.

[*Zion's Herald*]

What we do with our religion is a pretty good test of how much religion we have. If we keep it to ourselves, we have not very much of it. A sure way to impoverish our soul's growth is to lock up in our own hearts what little religion we may have, and try to keep it there. It won't stay. We shall find ourselves losing that little which we have, and we shall note that we are growing lean in our souls.

If we believe in religion for ourselves, we should believe in it for all the world. That calls for loyal and loving living on our part. Our tenderest and truest and tineliest efforts should be put forth to introduce others to the winsomeness and worth of the Christian religion. And more than this, it calls for a generous and vital interest in the work of Christian missions at home and abroad. When we are able to say that we have the spirit of Christ in us, we shall find that we are so living that we are truly giving away our religion.

[James E. C. Sawyer in *The Christian Intelligencer*]

Spiritual joy is not to be measured by the noise it makes. When fullest, it is often quiet. Where the river is deepest, it is still. The purest, deepest rapture of the spirit is not noisily demonstrative; it is the joy of profound humility, of complete devotion, of humble self-sacrifice, of perfect trust, of loving and tender responsiveness to the guiding eye. The soul that is silence unto God hears the "still small voice." The joy of complete consecration and constant obedience is a great power. In countless ways it manifests itself in fruitful and unselfish service of humanity. Loyalty to the vision of the guiding eye inspires spiritual enthusiasm.

[*The Universalist Leader*]

Many think that the decline of the church is due to present conditions; but this is not true. The decline of the church is the cause of the present conditions; the church with its supplies of Christian ideals has not kept pace with the expansion of the world, hence degeneration. Following this cataclysm there will be a reaction to religion. Civilization without religion has been tried and found wanting; it is inadequate, it is futile. Christianity has not failed, but civilization without Christianity has failed miserably.

[*The Congregationalist and Christian World*]

We cannot think of the kingdom of God in our own neighborhood, or even our own nation, without dreaming also of Christ as the world-wide king. The whole race must have part in our prayers and desires, our gifts and endeavors. This is the divinest life that man can live,—to hold him-

Digitized by Google

self after Christ's pattern in a stewardship for the service of the world. This way lies nobility of character, power, and the promised joy of the Lord for those who carry the cross of his self-devotion and bear his message in their lives to other men.

[*The Living Church*]

Of what use is it to ask questions when we have already determined in our own minds what the answer shall be? Or is it a question that seeks no enlightenment? Herod questioned Jesus with many words; but Jesus answered him nothing. Nicodemus came to him by night and questioned him; and Nicodemus went away puzzled. The accusers thrust the woman taken in sin at the feet of the Saviour and put their question; but they and not the woman left his presence convicted. "Is it lawful to heal on the sabbath day?" was Christ's own question of them that murmured; and he answered with mercy so infinitely tender that his questioners were silenced yet unsatisfied. The Jews searched him with many questions on every occasion; but none of his answers satisfied them. Yet he could sit at the well-side and answer patiently the questions of the Samaritan woman. He looked with love upon the rich young man, even though the young man could not take his advice. No question of his disciples was too absurd or foolish for him to hear and answer; and to those that loved him he opened up the treasure-house of parable and analogy and showed the riches within.

And when we ask questions, is it the truth we seek, or justification? When men ask advice, they receive it; but few follow it, for faith belongs only to the child and the childlike. If we fail to receive an answer to our questions, it is because we cannot hear. There is always an answer forthcoming, if only the damning answer of silence. Herod gained no answer of Christ; yet how fully and completely was he answered!

[*The Outlook*]

The loneliness of Christ came from his perfect knowledge of men and their ignorance of him. He had reached the goal, and they were so far from it that they saw it only as in rare moments they caught far and faint glimpses of it in his stainless and radiant life. He could speak to them only in parables which they but dimly understood, as children get baffling glimpses of great truths which cannot be made plain to them; this made his life a Gethsemane. His joy lay in the knowledge that the disciples were traveling his way and that the knowledge that would reveal him to them was coming day by day. The light came slowly to them as it comes to us, and there were many false dawns; but the day will break in which we shall look into his face and into the faces of one another and understand.

[*New-Church Messenger*]

There are those who seem to have little patience with the doctrine that to make the world better, individuals must be made better. They seem to strive to make the whole world better in mass. Yet it is as true of the nations of the earth as of smaller units of society, that to be reformed and regenerated, the individuals composing them must be made better, "born again."

[The Ven. Archdeacon Wilberforce, D.D., in *The Christian Commonwealth*]

The process of God's forgiveness is cure, not good-natured oblivion. The Father's forgiveness is saving us from the consequences of wrong-doing and wrong-thinking by removing the sin with knife and cautery, and the awakening in us of the higher, healthier life of the immanent mystic Christ. This is how the Father has forgiven, by curing, some of us.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. This book, called "A Defense of Human Rights," contains a table of statutes and testimonies of healing in addition to a general review of the legal status of Christian Science, and will replace the pamphlet "Christian Science and Legislation," which has been discontinued. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

"Christian Science: The True Christianity," a lecture by Clarence C. Eaton, C.S.B., has been published in pamphlet form, and is now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in the CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Thomas Mott Osborne, the new warden of Sing Sing prison, New York state, on Dec. 8 granted thirteen of fifteen requests made by the prisoners for special privileges and changes in rules and regulations which the men asked as "reforms." Throughout the day not one of the prisoners violated a rule of the prison, for the first time, perhaps, in the history of the institution. The men have been put practically on their honor. A trial court of convicts will be allowed to pass on cases of insubordination and infraction of the rules, and will be under supervision of the prison officials only. So far as the men make it possible, they are to be allowed to govern themselves.

Mr. Osborne, in return for the privileges granted, asked for better general discipline in the prison; better order in the cell block, as a mark of consideration to those desiring to read or study; more cleanliness and less waste, for the reason that a "very small amount of bread wasted by each inmate means in the aggregate the cost of many barrels of flour, the money for which might just as well be put into a greater quantity and better quality of food;" better work, "as one of the concrete tests of the new systems;" longer hours of work on Saturday, since the entertainments of that afternoon are shifted to Sunday, and "the worst thing a man can learn in prison is to do inefficient work."

Nine cardinal causes of industrial unrest most generally agreed upon by employers and employees alike, have been presented to Congress by the commission on industrial relations in its preliminary report as follows:—

Largely a world-wide movement arising from a laudable desire for better living conditions; a protest against low wages, long hours, and improper working conditions in many industries; a desire on the part of the workers for a voice in the determination of conditions under which they labor, and a revolt against arbitrary treatment of individual workers and a suppression of organization; unemployment and the insecurity of employment; unjust distribution of the products of industry; misunderstanding and prejudice; agitation and agitators; the rapid rise in prices as compared with wages; the rapidly growing feeling that redress for injuries and oppression cannot be secured through existing institutions. "In addition," says the report, "it has been stated by many witnesses that the tremendous immigration of the last quarter century, while not itself a direct cause of unrest, has served to accentuate the conditions arising from other causes by creating an oversupply of labor unfamiliar with American customs, language, and conditions."

Owners and drivers of motor-cars in Massachusetts contributed to the state in license and registration fees, during the fiscal year ending Nov. 30, a total of $965,669.59. Whereas the number of motorists licensed increased over 22 per cent, and the number of motor-cars registered over 23 per cent, the amount that motorists paid the courts in fines for infraction of the automobile law practically stood still. The amount paid in fines was $39,704.84. Of the total amount of the fees and fines that motorists paid, more than eight hundred thousand dollars is directly available for road maintenance. Of this amount six hundred and forty thousand dollars is available for maintenance of state highways, and the other one hundred and sixty thousand dollars for the improvement of through roads that are not state highways. There were registered during the year 77,246 motor vehicles, including 8,236 commercial vehicles and 39 cars owned by non-residents. The bulk of the cars registered were of less than thirty horse-power.

In a manifesto issued recently in the *Voice of Juarez*, General Zapata, the day following General Carranza's entrance into the Mexican capital, gave his position as the acknowledged leader of the peons of the republic. In part this manifesto said:—

"This agrarian revolution is not being fought to gratify the ambitions of one person, or a group of persons, or of a political party. It is of deeper origin and has higher aims. The man of the field was hungry and downtrodden; he had been misused and exploited beyond endurance, and at last he took up arms to win the bread which the rich had denied him. He wanted to get hold of the land which the rich and selfish landowners had so long kept from him, and to recover his manhood. He embarked upon revolution, not to win illusory political rights, which fail to provide food, but to procure a bit of ground which would yield him bread, a home, liberty, independence, and a chance to go ahead."

With an increase of more than twenty-five million barrels over the preceding twelve months' output, the year 1913 made another new high record in the production of petroleum in the United States, the total being 248,446,230 barrels. The value of the yield was $237,121,388, producers receiving an average of 95.4 cents a barrel, as compared with $164,213,247, or an average of 78.7 cents in the previous year. Since the beginning of the industry in 1859 there has been produced in this country 3,069,694,605 barrels, having a gross value of $2,575,704,530. The world's production last year was 381,508,916 barrels, of which the United States contributed 65.12 per cent, with Russia and Mexico holding second and third places respectively. California continued its lead among the producing states, with a production of 97,788,525 barrels last year, which was equal to 39.356 per cent of the country's yield.

The work of framing a rivers and harbors bill for the coming session of Congress has been begun by the House rivers and harbors committee, with estimates before it from the war department asking for appropriations aggregating between forty-nine and fifty million dollars for waterway improvements. These estimates do not contemplate any new projects. When the measure is finally reported to the House, it possibly may not carry appropriations to exceed thirty or thirty-five million dollars. The most extensive project contemplated is the improvement of the Mississippi river. The Mississippi river commission recommended that twelve million dollars be appropriated for work extending from the head of the passes to Cape Girardeau or Rock Island, but this sum was cut in half by the army engineers in their recommendations to Congress.

The boundary convention between the United States and Panama passed its third reading in the national assembly last week, and received the President's signature. It is yet to receive ratification by the United States Senate. This convention was signed on Sept. 2 by the Panaman secretary of foreign relations, Erneto T. Lefevre, and by the American minister, William J. Price. According to the terms of the boundary convention, the United States gains control of the waters of Colon and Ancon, together with other valuable rights. The instrument replaces what has been known as the Davis agreement of June 15, 1904, in which the boundaries of the Canal Zone were tentatively fixed, and also amplifies the Panama canal treaty of Nov. 18, 1903, under which the Canal Zone was acquired from Panama.

The United States government has not expressed an opinion on the request of several South American nations for the cooperation of the Washington government in negotiations with the European belligerents for the exclusion of their warships from the waters of the western hemisphere. The Peruvian minister communicated to Mr. Bryan in detail the proposal of his government for the establishment of a neutral zone in the Atlantic and Pacific ocean. In effect it would extend the territorial waters of neutral countries from the present limit of three miles to a designated meridian, within which merchantmen of all nations would be free from molestation.

New Yorkers on whose premises fires occur "due to their own wilful and culpable negligence," will hereafter have to pay the fire department the cost of extinguishing them, according to a statement by Fire Commissioner Robert Adamson. The commissioner based his statement on a decision rendered recently by the appellate division of the supreme court, in a suit which he brought against a corporation for fifteen hundred dollars, the cost of fighting a stubborn fire in a big factory building which the corporation owned.

How to meet the expenses of the government the coming year, where to retrench in public expenditures, what means to employ to make up for a decreasing customs duty revenue, were the leading features of the recent special message to the Argentine Congress delivered by President de la Plaza.

About one hundred and twenty-one thousand trees were planted by the forestry department of the Michigan Agricultural College in connection with its campaign to promote and assist reforestation in the rural districts of the state.

Hearings have begun before the House military affairs committee in Congress in connection with the military appropriation bill. Official estimates of the army call for an appropriation of $104,124,512, including militia.

A permanent organization of city managers was recently effected in Springfield, Ohio, under the name of City Managers Association.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII | December 19, 1914 | No. 16

"The good fight"

IRVING C. TOMLINSON, M.A.

LIFE is often characterized as a battle. We are placed here to win a victory in behalf of the Spirit over the flesh. This mental struggle is the real contest of life. The great apostle said, "Fight the good fight of faith," and Mrs. Eddy speaks of Jacob, when he had successfully wrestled with the angel, as "a soldier of God, who had fought a good fight" (Science and Health, p. 309).

The foe that opposes us is neither person nor persons. The enemy with which we battle is the false claim of evil. We become surer of victory as we learn that "there is no power but of God," and are sufficiently imbued with this truth to apply it instantly to every manifestation of discord. We are given dominion over all conditions and circumstances as we conquer fear, ignorance, and sin in ourselves. It is a glorious fact that every battle with wrong conditions reveals, through overcoming, more of good, which takes the place of the seeming evil in one's experience. There is no story in the Old Testament of deeper interest to the general reader than the account of David's victory over Goliath. Our Goliath is the mistaken belief that there is power in evil, the lie that there is life, truth, and intelligence in matter; that there is something other than God, eternal good. No material weapon is of any avail. The "sword of the Spirit," wielded with the strength of omnipotence, is our sufficient equipment and protection.

This "sword of the Spirit" is the word of Truth, wielded with the understanding that every form of warfare is due to false suggestions of mortal mind, and that abiding peace is the eternal reality of being. Knowing this, we have nothing to fear, for evil is without presence or power; hence the knowledge that "one on God's side is a majority." Thus mentally equipped we can go forth conscious of absolute dominion, sure that nothing can hinder the desire and effort to do right. Jesus tendered "the sword of the Spirit" when he said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent;" and the Christian Science text-book, "Science and Health with Key to the Scriptures," enforces his words, and is making plain to thousands that the right understanding of God and His spiritual creation arms one to achieve certain victory when he fights "the good fight of faith."

The true soldier is strictly obedient to the supreme authority, serves his country faithfully, and sacrifices all for a righteous cause. Thus our good fight leads to complete triumph when every soldier is loyally submissive to the divine commands. He who has enlisted on the side of Spirit must needs be true to its impulsions. He knows that the enemy can be put to rout only as all unite in yielding instant allegiance to the great commander. Better for the army that a soldier be a stay-at-home than a disobedient man-at-arms. In "the good fight of faith" victory comes only to him who obeys, and surely there is nothing to lose and everything to gain by obedience to Christ, Truth.

Profoundly significant is the fact that the warrior's time of enlistment is called his term of service. The good soldier serves his cause first and always. To think of himself first would prove him unworthy; to act as though his interests were superior to those of the cause would separate him from the ranks. Victory will perch upon the banners of the faithful only as each soldier gives whole-hearted service to the cause of Truth, vitally conscious that every step forward means the breaking of shackles and the tearing down of limitations.

The good fight demands sacrifice. He who enters the army of the Lord gives up all. He is fighting for Spirit against matter, and to cling to the old is to prove disloyal to the new. Yet loss is indeed gain as we steadily win an unwavering conviction that back of all good is God, the strong deliverer with whom man is forever allied; therefore the Master said, "He that loveth father or mother more than me is not worthy of me." Obedience, service, and sacrifice, supplemented by "the sword of the Spirit," will in the end win everlasting victory for him who steadfastly fights this "good fight of faith." We have for support all that is real in the past and in the present. We have as our helpers the Bible, the life of the Master, the heroic deeds of the patriarchs, prophets, and saints of all times, and we also have Science and Health and the other writings of our revered Leader. The establishing of true democracy on earth, the growing sense of the brotherhood of man, the rapidly increasing hosts of Christian Scientists,—all these point to Immanuel, "God with us," and they constitute the support which battles with us for supremacy over all that is unlike God.

What if the false claim of error seems to assert itself today? We have but to gird on our armor more tightly, we have but to grasp more firmly the "sword of the Spirit," we have but to obey more implicitly the divine commander, the captain of our salvation, and the march of error will be proven but a dream, an unreality which will vanish with the oncoming hosts of Truth. Let us know for ourselves that God is continually sending us reenforcements of intelligence and love. In our battle for Spirit let us recognize the spiritual universe here and now, that "with God all things are possible," and we will then joyously awaken to know that already, as Mrs. Eddy says on page 3 of "Pulpit and Press," "the good fight we have waged is over, and divine Love gives us the true sense of victory."

❖

Making a Demonstration

MAME C. BEEYMAN

YOUNG students of Christian Science, as well as friends who attend our meetings from time to time, often ask the question, "What do Christian Scientists mean when they say, 'I went to work and made my demonstration'?" Possibly an experience I had when I was a very young Scientist may help some such inquirer.

We had gone to a new place to live, and shortly after arriving there, some one told us that if newcomers ate much of a certain kind of fruit, they would be poisoned, and also be taken with a fever which was often difficult to overcome.

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

We had been in the place but a few months when our little son, then about five years old, did eat a good deal of the fruit one day, with the result that he was taken with terrible cramps and vomiting, and in a short time was in a high fever. I put him to bed, sat down beside him, and tried to realize that God was present, that in His presence is "fulness of joy." I tried to know that there was nothing to fear, and that if I said I believed in God's presence and power to heal, I must act as though I meant what I said. Then I turned to the Bible and read carefully the ninety-first psalm. Next, I read in Science and Health Mrs. Eddy's comments upon the Bible teaching and the Lord's Prayer with its spiritual interpretation (p. 16), then "the scientific statement of being" (p. 468). During this time the child seemed to be suffering greatly, and the temptation would come to me to examine him and see if the fever was lessening, but each time I would say, "No, I can trust God to do the work, and I shall not take the evidence of the senses to see if He is doing it; I will know He is." I thus continued to read from our text-book different paragraphs which had helped me from time to time, and in about two hours the child was quiet and resting peacefully.

When the time came to put him to bed for the night, the thought came to let him sleep with me; but at once I said, No, for that would indicate a fear that God would not care for him as well as I should. So I put him into his own bed with the perfect assurance that he was safe in the arms of divine Love, and after reading for several hours longer from the Bible and Mrs. Eddy's writings, I retired without any sense of fear. The next morning the child awoke perfectly well, being free from any of the symptoms manifested on the previous day, and I never had that condition to meet again during the four years we remained in the place. Thus did I work out my demonstration.

I am grateful that from the first of my experience in Christian Science I learned to rely upon the study of the Bible and Science and Health to meet my every need, and they have never failed me. A familiar hymn tells us that "day by day the manna fell." This has been a guiding thought, and I have tried to "learn this lesson well."

Real Accomplishment

BESSIE L. BIGNALL

How many of us have not faced the questions: "What am I really accomplishing?" "Am I doing all I should?" Perhaps one's occupation and environment seem to cause dissatisfaction, or there is a sense of being hampered in some way, of being unable to bring forth desired results. Perhaps the suggestions are lack of opportunity, lack of education, lack of confidence, lack of influence, etc., which create a feeling of unrest and discontent. How are we to remove and dispose of these stumbling-blocks to success?

Let us first look squarely at our desire to accomplish a given end. What is our motive? Is it prompted by selfishness or unselfishness? Will others be benefited by it? Are we seeking financial gain, social distinction, ease, or have we indeed a righteous desire to prove that "progress is the law of God, whose law demands of us only what we can certainly fulfil"? (Science and Health, p. 233.) Our next step is to follow the injunction of the Master, "Seek ye first the kingdom of God, and his righteousness," and then not only will all we need be added unto us, but others will be benefited by this unfoldment of good. Our health, wisdom, supply, harmony, as well as our right place, exist now in divine Mind, untouched by any opposite evidence. So we are not waiting for any specific good to be created, but merely for that unfoldment of good which results naturally as we realize and honor the true source of good. A tree brings forth fruit in accordance with the law of nature. It cannot of itself cease to grow and produce fruit; neither can we, under divine law, cease to expand into "newness of life" and bring forth the fruits of righteous endeavor. Though we may fail to accomplish what our human sense desires or outlines, when working honestly with Truth we soon find that no loss has occurred; that only a far better result has unfolded than our finite sense could have planned.

Again, the keen distress sometimes experienced in the working out of a problem results not from divine Love, which *is* ever urging us to press forward, but from our own resistance and self-will. Love's way is always painless and harmonious, and in proportion to our realization of this fact we lose all sense of discord and joyously await the unfoldment of good.

Though the way must ofttimes have seemed dark and dreary, Mrs. Eddy, the Discoverer and Founder of Christian Science, trusted in Love divine, and worked and prayed that this great truth should be unfolded step by step to human consciousness. How great is the love expressed in that one sentence: "My weary hope tries to realize that happy day, when man shall recognize the Science of Christ and love his neighbor as himself, when he shall realize God's omnipotence and the healing power of the divine Love in what it has done and is doing for mankind" (Science and Health, p. 55). The correct understanding of God destroys all sense of limitation, readjusts all wrong and inharmonious conditions, reveals our rightful work and place, and unfolds the fulfilment of all true desires. When this comes to pass in our experience, we see that the outward manifestation of good is but the natural result of our having worked "together with God," and that real accomplishment is in gaining a clearer sense of Love's omnipotence.

Right Thinking

CAPT. J. C. SCOTT

Our Leader says, "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them" (The First Church of Christ, Scientist, and Miscellany, p. 210). It is evident that this advice, the very essence of practical Christianity, is given to those who are awakening to the demands of Truth, for through Christian Science we have come to know that man in God's image needs no such advice. Mrs. Eddy knew, and those who are trying to put her teachings into practice know, that in proportion as we keep our minds "filled with Truth and Love," in that proportion will sinful and inharmonious conditions be banished; and this improving thought-process is the only way of attaining unto the "perfect man, unto the measure of the stature of the fulness of Christ."

Jesus said to the disciples whom he sent out to establish the kingdom of God in human consciousness, "Behold, I give unto you power . . . over all the power of the enemy." This power is inseparable from right thinking, which is the Christian Scientist's ammunition of Truth and Love, and with it he holds his position against all the onslaughts of the enemy, no matter what the odds; for when thinking right he is with God, and "one on God's side is a majority."

Christian Science teaches that the law of Truth destroys every phase of error. Now, all divine law is absolutely incontrovertible, otherwise God's universe would be unstable. To attempt to override the law of Truth by allowing contradictory thoughts regarding the allness of Truth and good

Digitized by Google

to enter into one's consciousness, is certain to be attended with disastrous experiences. Here the law of cause and effect, or of like producing like, appears. If right thinking be the cause, then right results are the effect.

The offending subtlety of mortal mind is seen in evil thoughts which appear in the garb of good. Should any Christian Scientist be tempted to steal or commit any of the more obvious sins, such a suggestion would not be permitted to dwell in thought for an instant. A right thought would correct and drive out this devil. But suppose, for example, such a thought as this presented itself: I see no harm in doing thus and so,—although I know it isn't absolutely right,—because it will please a certain person. In "Science and Health with Key to the Scriptures" (p. 238) Mrs. Eddy says, "Attempts to conciliate society and so gain dominion over mankind, arise from worldly weakness;" and in her "Retrospection and Introspection" (p. 86) we read: "There is but one way of *doing* good, and that is to *do* it! There is but one way of *being* good, and that is to *be* good!" In our concessions to material belief, we must guard against laying up for ourselves "treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal."

It was in conceding to matter, believing that by so doing society would be conciliated and the cause of Christian Science furthered, that the writer once found himself on the horns of a dilemma, and after a sharp experience he proved that hard and fast right thinking and acting, in the way we are taught in Christian Science, is the best way in the long run; that to hoist one's standard to the top of the flagstaff and keep it there, proud to serve under it, is in the end more certain to command respect from both friends and foes. If the result of right thinking is accompanied by the disapproval of society and for that reason we are tempted to concede something, before making our decision may we be reminded of the good soldier who would under no circumstances think of conceding a part of his position to the enemy, unless his action was a step toward the ultimate overthrow of this enemy. So, in Christian Science, infinite Mind will direct and show us what should and should not be done in our warfare with the flesh. By offering a bold front the battle may appear to rage more furiously, but, as the captain of our salvation has said, we have power "over all the power of the enemy." Moreover, our ammunition is inexhaustible!

Now the analogy drawn between a good soldier and a loyal Christian Scientist must be rightly apprehended, or we shall very soon be regarding ourselves as martyrs with enemies attacking us upon all sides. Paul's words, "The last enemy that shall be destroyed is death," are tantamount to the statement that in reality there is no enemy, for we know that God, infinite good, creates nothing unlike Himself. Christian Science reveals the fact that in reality there is no enemy, nothing to destroy, but we must gradually prove this by demonstration, right thinking regarding others, before we can expect to rid ourselves of the consequences of past wrong thinking. Take as an excellent example that of a force, detached from the main army, marching through an enemy's country, and owing to its isolated position, unaware for a considerable time afterward that peace has been declared. In reality it has no enemies, yet the same precautions against attack would be taken day and night. If not, what would be the result? In sleeping without first establishing outposts, the fear that the enemy might attack and destroy the force would soon produce panic and disorder, and the only thing that could destroy this fear would be the provision of ample protection until the truth that there really was no enemy had been apprehended.

The Christian Scientist's protection during his march through the enemy's country of erroneous mortal beliefs is systematic right thinking, and this must be continuously employed until the truth that in God's creation there are no enemies has been conclusively proved. The Christian Scientist's declaration of peace is, "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and therein we find the assurance that we have no enemies. The writer, since he commenced the study of Christian Science, has always called the ninety-first psalm "the soldier's hymn." If that psalm is faithfully studied, its spiritual import and practical value will constantly be made manifest in experience.

"Lest we forget"

J. C. BRAINARD

Resistance to Truth—that stumbling-block in mortal existence which works subtly or openly in seeming determination to prevent the release of mortals from their self-imposed enslavement to habits which are opposed to God—is the mainspring of error which operates to turn the neophyte or the disciple from the straight and narrow path of righteousness and lead him into the by-paths of material sense. Examples for our warning are many,—whether a Judas in his seemingly persistent and dogged determination to be a willing tool for evil's work; or a Peter confronted with an opportunity to stand as a joyous and fearless witness for the Messiah and his marvelous works, and yet led thrice to deny his sacred association with Christ Jesus; or the close companions of the Master, apparently unable to meet the temptation to sleep in the garden of Gethsemane, thus barring themselves from the privilege of loyal service to one who was taking away "the sins of the whole world," declaring evil's nothingness, and also destroying the delusion of the seeming power exercised by the last enemy, death.

Are we heeding the lessons given to the disciples, or are we also among the unfaithful laborers in the vineyard of Truth? There is no question in the thought of any true Christian Scientist as to the necessity of obeying in thought and in deed the counsels of our Leader as set forth in the Manual of The Mother Church (Art. VIII, Sect. 6), wherein every member is charged "to defend himself daily against aggressive mental suggestion, and not be made to forget nor to neglect his duty to God, to his Leader, and to mankind." Mrs. Eddy never lost sight of her life mission, never failed to appreciate the importance of her work; yet she never failed to sympathize with the struggles of suffering and sinning humanity in its passage from mortal surroundings and besetments into the haven of rest and safety, in the harbor of spiritual understanding.

The Master said, "By their fruits ye shall know them," and Mrs. Eddy proved to all mankind the efficacy of her words and works. She neither asked nor accepted personal homage, but she did expect and she did receive the gratitude of loyal hearts and consecrated lives; and to such as these the blessings of untiring and uncomplaining service must bring everlasting joy and reward. She well knew what Christian Science would mean to every one who stood fast for Principle; she knew that unending joy and comfort would come to those who were loyal and steadfast in their devotion to the cause of Truth. For this reason, if for no other, her name can never be separated from Christian Science, nor can it be divorced from the fact that she was the author of Science and Health. Nor was she in human affairs an ordinary woman. Had her religion possessed no special claims upon the attention of the world, even then would her followers undoubtedly have ex-

Digitized by Google

tolled her memory and memorialized her by some fitting and substantial mark. But here we have a woman whose very life was linked with the birth and establishment of a cause whose teachings and practical results are being seen and felt all over the world; a woman whose foresight and steadfast effort enabled her to establish four periodicals, which are being circulated in every part of the globe. As the founder of a new standard in modern journalism, Mrs. Eddy is entitled to gratitude unlimited, for today *The Christian Science Monitor* is a successful example of what can be accomplished in meeting the daily need for clean news and for an impartial discussion of timely topics of general interest. How well it is voicing to the world what her life has meant to us as individuals and what it is to mean to all humanity!

In the twenty-third chapter of Luke is noted the loving honor which Joseph of Arimathæa is said to have paid to Jesus' memory, and like Joseph, thousands of grateful and loving beneficiaries rise to give thanks and honor to the one who has so freely given of her all in consecrated service for mankind. No sign of our gratitude can be too great to express our heart's love, and we can all express this love at least in our effort to advance the cause of Christian Science at home and abroad.

On the banks of the little stream over which was "the rude bridge that arched the flood" at Concord, Mass., stands a monument erected in memory of the Minute Men who "fired the shot heard round the world." This monument calls to mind the sturdy courage of the patriotic hundreds who at a moment's notice rushed to arms to preserve their own freedom and their country's very life. When Mrs. Eddy started the work of establishing the cause of Christian Science on New England's soil, a shaft of light and love went forth,—"a bow of promise on the cloud" (Poems, p. 7). Well may we echo the words, "For all she did and all she dared, remember her today."

Sentinels of the Hillside

MARY B. CHAMPLIN

WHILE journeying one time, I was drawn irresistibly to the hills that skirted the quaint old city where I was staying, because of the wonderful brilliancy of the trees, clad in their autumn garments and radiant in the glorious sunshine of the unusually beautiful days of Indian summer. Never had I seen scarlet trees so brilliant, or yellow ones so golden; and as they drew me eagerly up the long stretch of sand-piled road intervening between the end of the car line and the tree-crowned hills, I thought to carry their radiance back to the city, that those who could not climb the hill might enjoy their beauty. As I neared them, every line and fiber stood revealed in vivid clearness, the familiar outline of oak and maple and sweet gum, and the various shades of marking and color gave out such wealth of light and beauty that I joyously gave thanks for the fuller consciousness, gained in Christian Science, of "infinite Mind and its infinite manifestation" (Science and Health, p. 468).

These sentinels of the hillside stood out against the background of evergreen pines like flaming prisms, radiating and reflecting every gleam of God's wonderful sunshine in myriad hues and with lavish hand. I carried some of the branches back to the city and placed them in hallway and rooms, but next day I could scarcely believe the transformation. Plain autumn leaves, such as one sees anywhere in season,—dull reds and yellows,—gave no hint of the beauty delineated when the sunlight streamed through. Were these the leaves that yesterday had beckoned me so irresistibly up that long and sandy road? But I had seen them on the hillside, and their message would never be effaced from memory. Separated from the sunlight, they could not give out its radiance, and were commonplace leaves, even as the statements of Christian Science seem cold and impotent when separated from the Spirit which giveth life.

Then quickly came to mind the dear Scientists whose light was reflected from the vision of the hilltop above the mists which had so often obstructed my own view, and I knew that the view was there and that I would gain it clearly as had they. How eagerly I had been scanning the faces of those I met in this section, where thought had been slow in responding to Christian Science, to see if they had been to the hilltop, if they were reflecting as His image and likeness the *light* that is Life indeed. And gratefully I knew that God's children could not be separated from the light which is their life, and could not become just plain material people again, when once they had become consecrated channels of His choosing. Then I gave thanks to our Father-Mother God that I had also seen and been drawn farther up the heights because of the light radiated by these human sentinels of the hillside.

[Written for the *Sentinel*]

Eternal Sonship

CASSIUS M. LOOMIS

THE starlit ether on that memorable night
Was laden with a sweetness and a joy
Of life as brilliant as the noonday glare.
The harp of heaven was swept by unseen hands!
Its theme was love, so truly worshipful
That shepherds, wakened from their humble sleep,
Praised God with bended knee and gladdened hearts.
What matters it if Herod's anger raged?
The babe was born! The hosts of earth must needs
Awake to find a life of vaster depths,
A life so real that Satan's hordes shall fall,
And, vanquished, meet the doom of utter night.
Oh, lingering memory of that wondrous past,—
"The Prince of Peace" was born on earth at last!

The Christ lived on. Decades crept slowly by.
The leaven of a gospel deep and pure
Was molding human weal in unseen ways.
And yet, to casual eye our Master's words
Seemed buried 'neath a superstitious awe
That mocked the message God had sent to man.
The leper, healed in Bethlehem's quiet shade,
Was healed no more, while stately powers
Strove hard to shape the drifting thoughts of men.
Indeed, the sun that shone on Israel's plain
'Mid wars and conflict seemed to shine in vain.

The mists have cleared. Once more the Word of God
Hath given to man the truth in phrase so clear
That kings and peasantry alike can reap
The harvest from a tillage centuries old.
The Christ whom error failed to crucify
Now walks among us, healing whom he may.
If in the darkened past the truth seemed hid,
Today it shines the brighter for the cloud
That with a silver lining dimmed its rays.
Love's choicest precepts cheer the troubled heart
With healings that our Saviour said would crown
The lives of all who seek the better way.
No rust of time hath dulled the blest decree
That made the "sons of God" forever free.

[Editorial in *New York Tribune*]

There is no publication in the country whose praise of the *Tribune's* new guarantee we value more highly than that of *The Christian Science Monitor*, from which we quote an editorial [see *Monitor*, Nov. 18] elsewhere on this page.

The *Monitor* is not only a national journal of wide influence. It is a paper of the highest standards of news, editorials, and advertising, a leader in the movement toward clean advertising. It has demonstrated to the satisfaction of the advertising world that it is character, the standards and ideals of a publication, and not merely circulation, which gives advertising value. It has rigidly supervised its advertising columns, and excluded everything save what was clean, honest, and truthful. It is one of the newspapers in the United States which could give the *Tribune's* guarantee without fear of disaster. We appreciate its approval, and gladly acknowledge our indebtedness to its courageous policy of clean advertising.

[Editorial in *The Christian Science Monitor*, Boston, Mass.]

It is only necessary to read the daily papers, all over the world, in order to discover that the war is uprooting many of those beliefs which the prophet Isaiah might have termed the idols of the human race. One of those beliefs is that of the orthodox concept of prayer. For centuries men have regarded prayer as a direct petition of the individual to an omniscient being. The idea has its roots in the remotest antiquity, and bound up with it is the whole gamut of those horrible superstitions with respect to the propitiation of the malignant deities. Sarcasm and eloquence have been hurled against this delusion alike in vain. "*Desine fata deum flecti sperare precando*," wrote Virgil, in the century before the birth of Jesus the Christ,—"Give up hoping that by prayer the decisions of the gods can be altered,"—while in the century after the crucifixion Lucian, in the "Dialogues of the Gods," exerted his unrivaled power of raillery for the purpose of destroying the same legend. Christianity conquered. Zeus and Diana went the way of Baal or Isis. But the idea of prayer as petition instead of assimilation endured, so that even as noble a man as Hugh Latimer could say, "Wherefore I pray you all to pray with me unto God, and that in your petition you desire that these two things He vouchsafe to grant us!"

Latimer himself would have been the very first to admit the omniscience of God. Yet it never seems to have occurred to him that there was anything irrational in doing that thing which Mrs. Eddy questions, on page 2 of Science and Health, when she demands: "Can we inform the infinite Mind of anything He does not already comprehend? Do we expect to change perfection?" Nevertheless, every time finite human intelligence petitions omniscient perfection to grant its desires, it assumes the possibility, it even calculates the probability, of being able to inform infinite wisdom or influence divine perfection, instead of realizing that it is human ignorance which must be lost in spiritual knowledge, and the human will which must disappear in obedience to Principle.

The simple truth is that it is the human will which, being human, is insistent in its desires. It bases its prayers on a material sense of right and wrong, of which it commonly constitutes itself the arbitrary judge. "My country, right or wrong," is, consciously or unconsciously, the usual underlying current of all prayers in time of war. There is a remarkable instance of what this ultimates in, in the famous passage in which Lord Macaulay describes the camp service of the allies on the morning of Blenheim: "The English chaplains read the prayers at the head of the English regiments. The Calvinistic chaplains of the Dutch army, with heads on which the hand of the bishop had never been laid, poured forth their supplications in front of their countrymen. In the mean time, the Danes might listen to their Lutheran ministers; the Capuchins might encourage the Austrian squadrons, and pray to the Virgin for a blessing on the arms of the Holy Roman Empire." In a word, here were men whose religious views were anathema one to another, petitioning God to assist them in jointly slaughtering men, in some instances of views identical with their own, all indifferent to the fact that a precisely similar scene was no doubt being enacted on the other side of the field. What prayer could have secured triumph for these arms but the prayer for the Mind of Christ, which would have brought them "in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

All these men desired an answer to their prayer. Yet it is doubtful if one of them would have sought it apart from the apocryphal Cromwellian apothegm, "Put your trust in God, and keep your powder dry." Could, however, a Christian conceivably seek an answer to prayer on any basis but a conformity to the Sermon on the Mount? Obedience to the Sermon on the Mount a distinguished bishop once described as an altruistic Utopia. Obedience to the Sermon on the Mount is, as a matter of hard, every-day scientific fact, the one practical basis for a stable society. As the result of obedience to its teaching, men will come into a common understanding of and subjection to divine Principle, and not waste their time in making counter petitions to infinite intelligence with a view to affecting the divine purpose. The man who prays without ceasing is not the man who is most voluble in uttering petitions: he is the man who most completely lets this Mind be in him "which was also in Christ Jesus." The prayers of such are answered, for, as Mrs. Eddy says on page 345 of Science and Health, "when the omnipotence of God is preached and His absoluteness is set forth, Christian sermons will heal the sick."

❖

[Judge Clifford P. Smith in *Elkhart* (Ind.) *Truth*]

The feature of your paper entitled "Truth's Saturday Sermon," with its opportunity for presenting the various views of religious truth, seems to be a pulpit from which each speaker may preach the gospel in which he believes. If so, the mere gibe at Christian Science or sneer at Christian Scientists, inserted in a recent "Saturday Sermon," was ill suited to its surroundings. May not a Christian Scientist have the space for one day in which to speak affirmatively upon the same subject?

Every man, whether he looks for evolution or for salvation, expects to live on a higher plane of existence than is visible to the physical senses. We have no reason to be satisfied with the life that appears to begin from mortal birth, which seems to be subject to all evil, fear, failure, sin, suffering, disease, disability, and to end in death. Eternal and abundant life is the prayer of humanity; it is the goal of righteous effort. In this situation the assurance of "things hoped for, the evidence of things not seen," tells us of an existence for man that far transcends the so-called life of mortals. Think the thing through, and it will become unthinkable that man should really be what he seems,—a bundle of contradictions, a mingling of opposite qualities, a meeting of conflicting forces. He must have a more consistent being than this.

For ages without number, humanity has accepted evil as an actual power and a fearful reality. Intelligent truth-seekers have sometimes perceived more or less clearly that the

Digitized by Google

government of the universe could not possibly be divided between two antagonistic powers; and sometimes they have inquired how evil can exist in spite of divine and infinite Love; but no explanation consistent with the omnipotence and goodness of Deity has ever been furnished by scholastic theology. So Christendom has taken its choice between evil as an independent power and a concept of God as including evil. In either view, the resistance to the adversary has been largely vitiated by the admission of its reality; for no effort which concedes the truth or verity of error can ever overcome it. Evil can be abolished only with the spiritual understanding which dispels it as illusion. The tenable and provable position is that the divine Mind includes the whole of reality; that evil is a lie, and the father of itself.

We owe a debt of gratitude to Nicodemus for eliciting from Christ Jesus a great lesson on this subject. To him the Master said, "Ye must be born again." "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit." In these few pithy sentences the Teacher set forth the truth of man's being; he stated the conditions and method of salvation; he summed up the whole problem and its solution. In these words he denied the testimony of the physical senses, that man is a material selfhood, and revealed the genuine identity of man as determined by Spirit.

The physical senses cannot perceive the real man. They cannot tell whence he cometh or whither he goeth. Jesus illustrated this by his reference to the wind. Man is that which is born of Spirit. Every quality and faculty that really belongs to man is derived from his Maker. Matter is not the product of Spirit, nor evil the outcome of good; neither does the one evolve into the other. Man, the son, is like God, the Father. They are of one substance and being, which is Spirit. This is the gist and meaning of the lesson that Nicodemus received from Christ Jesus. Mrs. Eddy has consistently said (Unity of Good, p. 46): "The scientific man and his Maker are here; and you would be none other than this man, if you would subordinate the fleshly perceptions to the spiritual sense and source of being."

The main question for each of us to decide is whether his view of Life and self should be subordinate or superior to the so-called facts of mortal existence. Christian Science adopts the answer to this question offered by Paul: "Be not conformed to this world: but be ye transformed." How can this be done? Paul answered that question also. He said, "By the renewing of your mind." James answered the same question in these words: "Purify your hearts, ye double minded." "The flesh" is simply the "fleshly mind." It is that which "profiteth nothing." Every item of experience is primarily and essentially mental. All that constitutes self depends on the mental state. If the mental action is true, the effect is harmony, experienced as goodness, joy, health, and the like. If the mental action is false, the result is discord, in the form of sin, suffering, disease, and the like. Therefore human conditions are improved and human experience is transformed "by the renewing of your mind;" that is, as false mentality is displaced by true thought. There is no exception or limit to this rule. As the Master himself said, "Cleanse first that which is within . . . that the outside . . . may be clean also."

This is the way of salvation. The absolute knowledge of the absolute truth,—this and nothing else will make us free; and though we now see as "through a glass, darkly," sooner or later we shall know even as we are known. Then we shall be perfectly free from the illusion of evil; free from all that is adverse to the welfare of man. Meanwhile, by overcoming specific items of evil we shall not only transform personal experience but advance the general progress. A Christian Scientist, therefore, is a Christian who accepts the absolute truth taught by Christ Jesus and uses it scientifically for the betterment of human conditions.

❖

[W. D. Kilpatrick in *Livingston Tidings*, Howell, Mich.]

Under recent date there was published an account of a sermon delivered in your city, in which Christian Science is attacked. For fifty years it has been subject to assault of this character, and during that time this great movement for good has shown a growth in every direction unparalleled by anything yet witnessed in the religious world. The first direct reference to Christian Science comes in the statement that this religion, associated in the article with several other doctrines and religious beliefs, cannot stand the test of what is called the "Five R's." We find no allusion in the Bible to the "Five R's," and therefore assume that this is a man-made test which the critic would have us accept as final.

The first of the R's mentioned is, "Ruin by the fall." We suppose reference here is had to the incident in the garden of Eden and to the fall of Adam as outlined in the third chapter of Genesis. Christian Science, in its elucidation of this part of the Scriptures, calls attention to the first chapter of Genesis, in which the creation is portrayed, wherein "God saw every thing that he had made, and, behold, it was very good." In the second chapter we find that "there went up a mist from the earth," and a deep sleep fell upon Adam. The first three or four chapters of Genesis, therefore, portray both the true creation and the false concept thereof, the former of God, and the latter a delusion caused by the "mist" and resulting in the Adam-dream, whence comes what modern theology is pleased to call "the fall." This is explained in Christian Science (supported absolutely by the Bible) to be the false or material sense of creation, which sense Jesus the Christ came to destroy.

The second of the R's is, "Redemption through the blood," referring to the absolute deity of Christ Jesus, and his sacrificial and finished work upon the cross. The only redemption taught in the Bible and enjoined by the prophets and by Jesus and his disciples, is the complete redemption from sin through the renewing of the mind, and the substitution of a comprehensive idea of man as created spiritually and in God's image and likeness, as described in the first chapter of Genesis, in place of a concept of man and the universe created and governed materially. The reference in this test to "his sacrificial and finished work on the cross" rather begs the question, as the Bible shows incontrovertibly that Jesus' work did not end with his experience on Calvary. Even after his resurrection we find him among men, explaining his doctrines and working out his salvation to the end that his career eventuated in complete and triumphant ascension above "the world, the flesh, and the devil."

The third test imposed is, "Regeneration through the Holy Spirit, implying the necessity of the new birth." There are probably no points on which our text-book, "Science and Health with Key to the Scriptures," is clearer than those of "regeneration" and the "new birth." All of Mrs. Eddy's writings express the necessity of a complete regeneration through the understanding of truth as spiritual, and the further necessity of being born again. Our concept of the "new birth" as explained by the words and works of Jesus and in our text-book, is that this "new birth" is going on hourly in the consciousness of mankind, in the endeavor to have in them that Mind "which was also in Christ Jesus," and that

Digitized by Google

not until all the elements of mortal belief are completely corrected and all sin cast out by this higher understanding of God, man, and the universe, is "regeneration" complete and man born again.

The fourth test is, "Resurrection of the body," by which it is inferred that our critic has in mind the resurrection of Jesus from the tomb. Where the notion originated that Christian Science does not recognize the resurrection of Jesus from the grave, we cannot imagine. It certainly did not develop from a study of the text-book, which recognizes not only the resurrection of Jesus, but points to it as one of the crowning events of his career, wherein he proved life to be deathless and beyond and above the limitations of matter. Jesus' resurrection, Christian Science teaches, was the grandest achievement of his career, and without it his triumphant demonstration of life eternal would have been impossible.

Lastly, we have as the fifth test, "Return of our Lord to judge the world and to set up his kingdom." The teachings of Jesus on this point are clear, unmistakable, and fully and completely adhered to by Christian Scientists. The importance of Jesus' words and works was to declare the ever-presence of the Christ, and the efficacy of divine Truth to save mankind throughout all time. We believe, as Jesus taught, that his final ascension terminated his work on earth, but that "his truth endureth to all generations," that this truth is constantly with man, and that "of his kingdom there shall be no end." It is clear from the Scriptures that in referring to his reappearance, Jesus was very careful to divorce this event from any sense of materiality, and to confine it to the spiritual facts of creation which it had been his task to establish in the consciousness of men. In this connection Jesus said: "Lo, I am with you alway, even unto the end of the world." "I will pray the Father, and he shall give you another Comforter, that he may abide with you forever; even the Spirit of truth."

The reverend gentleman then says, "Let me call your attention to twenty-three Scriptural facts that Christian Science denies," etc. He asserts that "Christian Science denies the supernatural birth of Jesus Christ." On page 29 of the text-book Mrs. Eddy writes: "The illumination of Mary's spiritual sense put to silence material law and its order of generation, and brought forth her child by the revelation of Truth, demonstrating God as the Father of men. . . . Jesus was the offspring of Mary's self-conscious communion with God."

The critic further states that Christian Science "denies his [Jesus'] vicarious suffering upon the cross, his atoning sacrifice for sin." I challenge the assertion, made in this connection, that "this statement can be proven by Mrs. Eddy's book," and affirm that there is no foundation in any of Mrs. Eddy's writings for such a statement. Christian Science teaches that Jesus' crucifixion was necessary as an example to a sinful world that Spirit, not matter, is the master of man, and that divine Love overcomes hate.

Again the critic says, "Christian Science denies the physical resurrection of Jesus Christ." Christian Science, as I have stated, points to the resurrection of Jesus as a glorious example of his sonship with God and his ability to demonstrate to a suffering world the unreality of any power apart from the divine. On page 45 of our text-book we read: "The reappearing of Jesus was not the return of a spirit. He presented the same body that he had before his crucifixion."

Christian Science does not "deny the reality and efficacy of prayer," but it teaches that to "pray without ceasing" is the only means whereby mortals will be enabled to emulate the example of the Master and to obey his commands with "signs following." The very groundwork of the religion of Christian Science is constant prayer, evidence of which may be found at any of the Sunday and Wednesday evening services of its churches and societies throughout the world. The burden of the words and works of Jesus was to prove to mankind that in proportion as one rises out of his false sense of life and intelligence in matter, into the fuller understanding of God, and of man and the universe, created spiritually and controlled by infinite intelligence, will the so-called power of Satan and sin be proven without foundation.

Christian Scientists look upon the miracles of Jesus Christ as absolute proofs that his teachings were based upon divine law. His sublime trust and confidence in the omnipotence of God, shown at the tomb of Lazarus, and resulting in the complete overcoming of death, is many times mentioned in the Christian Science text-book, and referred to as one of the conclusive evidences furnished us by Jesus that death should be overcome, not submitted to.

✧

[M. L. Cushman in *Atlanta (Ga.) Constitution*]

Having read with interest the different views expressed in your paper by some of Atlanta's good ministers on the "power of prayer" in the present hope for peace, I am led to contribute some remarks on the efficacy of prayer from the Christian Scientist's point of view.

While some modern thinkers are seeking salvation through telepathy, psychology, and other human systems, Christian Science as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy bids us turn humbly to the teachings of Jesus the Christ as the way. "I am the way, the truth, and the life," Jesus is recorded as saying in the gospels. This way, Christian Science teaches, is the example he gave us in his daily life, or in other words, his practical proofs of the power of prayer. No human problem was ever too large or too serious to cause our divine Exemplar to doubt the omnipotence of God.

As the apostle so beautifully expresses it, Christ, God's idea, is "the same yesterday, and today, and forever." So we today are learning there has been "no variableness, neither shadow of turning," with infinite good; and that the divine Principle of goodness as Jesus taught, is established for man to prove that human strifes are evil, therefore unlike God.

Human thought of duty is relinquishing the ancient concept of the God of war, until there are few modern thinkers who do not now accept Habakkuk's understanding of God as being "of purer eyes than to behold evil." Mrs. Eddy teaches us in Science and Health that "nations owe their false government to the misconceptions of Deity. . . . Tyranny, intolerance, and bloodshed, wherever found, arise from the belief that the infinite is formed after the pattern of mortal personality, passion, and impulse" (p. 94).

Students of Christian Science are learning that God is Principle, and that this Principle can be applied to every phase of human life. The principle of mathematics permits no error in numbers, and so also the Principle of good admits of no evil in reality. In solving a problem in arithmetic one would not appeal to the basic law to be consistent, but would endeavor to understand and demonstrate the law. So, likewise, the Christian Scientist's prayer for peace between nations is not a petition to a personal God, but a clearer and nearer sense of the Principle of peace. "The effectual fervent prayer of a righteous man availeth much."

As Christian Scientists, we do not fail to appreciate all prayer that springs from sincere aspiration; we feel that the world has never beheld a more beautiful testimonial to "The Prince of Peace" than America has given, in humble petition and faithful desire and trust in the God of love, who is able to still all strife and "silence discord with harmony" (Science and Health, p. 495).

Editorial

Appreciation

THE following cablegram and letters bear witness to the appreciation of our brothers and sisters across the sea of the loving-kindness of the Christian Scientists in America, and also to the effective work of William D. McCrackan, M.A., through whom arrangements are being made for distributing the fund which they have contributed for the relief of those in need:—

"The First Church of Christ, Scientist, Boston, Mass., John V. Dittemore, Clerk.

"*Dear Friends:* Your cable message was received on Oct. 2. We were glad to hear of your kind intention to assist financially the Scientists who suffer from the consequences of the war. With much joy and gratitude I instantly began to make inquiries as to the existing needs, and shall inform you of the result obtained.

"With kind regards, I am,

"DR. CURT GENTSCH,

"Berlin-Karlshorst."

"To the Clerk of The First Church of Christ, Scientist, Boston, Mass.:

"The boards of the Churches of Christ, Scientist, and Societies in the London district, attending a meeting of the members of Second Church, London, desire, after hearing a statement from Mr. McCrackan, to express their gratitude to the Directors of The Mother Church, and to their American brothers and sisters, for seeking to prove that today divine Love meets every human need. They are confident that the mission will prove a great blessing to humanity.

"Clerk Second Church, London."

"To the Editor of the *Christian Science Sentinel.*

"*Dear Friend:* We, the undersigned, on behalf of First and Second Churches of Christ, Scientist, Paris, France, wish to express through the *Sentinel* the deepest thanks of our respective boards, and of all the Christian Scientists in Paris, for the loving sympathy manifested in the gift of the Trustees under the Will of Mary Baker Eddy, and in the action of The Mother Church and the branch churches and societies in the United States, who took part in the collections made in aid of the fund for the benefit of Christian Scientists in Europe who are affected by the state of war.

"With cordial greetings, yours very sincerely,

"ALICE TOURNIER,

"First Reader First Church of Christ, Scientist, Paris.

"WILLIAM H. NORLEDGE,

"First Reader Second Church of Christ, Scientist, Paris."

❖

"Treasure in heaven"

AMONG the thousands of testimonies to the efficacy of Christian Science which are given at the Wednesday evening meetings and through the columns of the *Sentinel* and *Journal*, not a few are from business men who through the study of this Science have been able to accomplish more, and on better lines, than ever before. To persons who are familiar with Christian Science and what it accomplishes for those whose endeavor it is to understand and apply its Principle and rule, it does not seem at all strange that this should be so.

As an initial proposition it can safely be said that a man who is in such a state of health as to be unable to give his affairs the attention they need, is not in a position to conduct a successful business on his own account, nor to be of great value as an employee. If to this disability is added, as is so frequently the case, the vices which have taken root in conviviality or despondency, failure is quite likely to be the outcome. The banishment of these disabilities is not, however, what business men who make Christian Science their daily guide are most grateful for, as may be seen by a perusal of these testimonies. It has been claimed that observance of the golden rule is incompatible with success in business; but this is not true, unless there is something more precious and more to be desired than the kingdom of God. These men are finding out that it is possible to do business in conformity with this rule, and their heart's deepest gratitude is for the knowledge of God which will not permit them to take advantage of those with whom they trade, and that makes them more intelligent, more diligent, more kind, and more unselfish in their dealings with their fellow men.

If business is done upon any other basis than that prescribed by the Master, "Whatsoever ye would that men should do to you, do ye even so to them," then it is done on the false basis of power in evil, on the basis of a supposed intelligence superior to that which God bestows, and that can bring only an ephemeral success. Can any business man of righteous desire and Christian intent do otherwise than trust God in all his affairs, and give thanks to Him for all things of real value? What business man is there who does not wish to be guided by intelligence? If God is supreme intelligence, then His is the guidance which all desire, whether they know it or not.

Christ Jesus counseled his followers, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," thus pointing out to them that right desire and unselfishness must guide all who would truly succeed. As Mrs. Eddy has said on page 239 of Science and Health: "Let it be understood that success in error is defeat in Truth. The watchword of Christian Science is Scriptural: 'Let the wicked forsake his way, and the unrighteous man his thoughts.'" Christian Scientists are learning, contrary to a belief which is far too common, that it is possible to do business on a fair and equitable basis, and in doing business in this way they are losing nothing, but rather gaining something which is of far greater value than all else,—even "treasure in heaven."

ARCHIBALD MCLELLAN.

❖

Essentials

ALL thinkers are agreed that if people would consent to deal more with essential truth, not only in religious questions but in those of every-day experience, their differences of opinion would largely disappear. That this is not always the case, only proves that few are willing to look beneath the surface in order to get at the real issues involved, which from the Christian Science view-point means that they cling to the material sense of things and thus miss the spiritual. Material sense argues that the material is tangible and substantial, hence essential. Christian Science denies this, and its denial finds support from Christ Jesus' words, "Labor not for the meat which perisheth." In other words, if we have the essentials, the spiritual things, we shall lack nothing. In the third chapter of Revelation we find a sharp rebuke to the Laodicean church, which had said, "I am rich, and increased with goods, and have need of nothing," when it lacked the real things, and so the revelator declared that it did not even know it was "poor, and blind, and naked."

At the Christmas season people think of what they can give others, and it would be interesting to inquire how many take account of their spiritual possessions at this time to see how rich they are "toward God," as Christ Jesus said. for the real value of all giving can be measured in this way

Digitized by Google

alone. Nor is this a far-fetched idea, for it deals with the vital things of life. We must ourselves be true, else we cannot give truly even the smallest token of good will. We must also be truly thankful to the infinite source of all good, if we would radiate even a little of the sunlight of gratitude to those who have been good to us. If we have forgotten to be just in thought, word, and deed, we may well pause to remember that he whose natal day Christians seek to celebrate, came to establish justice in the earth no less than mercy. Lest we forget any of these things, we should turn our faces toward the light at the Christmas season, even as the earth is turning toward the sun. As we do this with real heart-hunger for righteousness, for more of love and truth, we shall recall with a new sense our revered Leader's words in the poem "Christ and Christmas," when she asks,—

> . . . Wherefore signalise the birth
> Of him ne'er born?
> What can rehearse the glorious worth
> Of his high morn?

The unselfish thought which would bestow some kindness upon another is a gleam of light in the midst of mortal darkness, but the poet's prayer for "more light" should be ours until the essentials of Christianity are so recognized, realized, and demonstrated that none can any longer remain in the darkness of sin, sorrow, sickness, poverty, or ignorance, but all the nations will be "saved," as St. John predicted, and all walk in the light of Truth and Love.

St. Paul asks, "Who is sufficient for these things?" Then he says that we are not of ourselves sufficient to think anything, but he adds that "our sufficiency is of God." Even hope would forsake us if we depended upon material evidence alone, either for ourselves or for the world; but as we accept more and more the spiritual evidence (which is always the one thing needful), all the days and all the events in our earthly experience will begin to count for something vital. We are assured by Paul that God hath chosen "things which are not [to mortal sense], to bring to nought things that are." Often indeed do love and truth and happiness seem to be absent, yet no one would deny that these are the essentials of existence, and Christian Science makes it clear how they are to be attained and retained. To God they never cease to exist, and when we learn to desire the real things, the things that endure, the things that God knows and loves, rather than the fading shadows of mortal sense, we shall know that for us God's kingdom is come and His will done, in earth and heaven alike.

ANNIE M. KNOTT.

A Continuous Christmas

THE return of the Christmas-tide this year is sure to remind all thoughtful Christians of the heart-saddening incongruity between the sweet song of "On earth peace," that floated down out of the Judæan skies that first Christmas time, and the outcries of passion and of pain attending the present strife among Christian nations. Surely there will be at least a momentary lull in this strife, when above its dreadful din the echo of those far-away angel voices is heard again, reminding all of the coming of the gentle Christ-child to teach men that only in love for God and love for one another can happiness and peace be found.

The sufficient reason for the Master's moments of apparent depression appears when we remember that, knowing the world's wilful way, its pride and selfishness and love of power, he must have anticipated the unspeakable tragedies of the past nineteen hundred years, when he said, "Ye shall hear of wars and rumors of wars." Nevertheless, there remain his loving assurances: "Peace I leave with you;" "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." In these and other kindred sayings he disclosed the vital truth brought near again in Christian Science,—that despite all the turmoils of human experience, the promised Comforter is come, and that it is ours to find the freedom and joy of heaven in the declaration and demonstration of the omnipresence and omnipotence of good.

The phenomena of this mortal life can be known for what they are, the fictions of falsity, and their terrors escaped from only as we prove again the power of the Christ-idea, whose continuous coming constitutes the true Christmas-tide. We can celebrate a far-off event, but we can know and really possess only that which is present in consciousness; hence the significance of those wondrous words: "Behold, I stand at the door and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me."

This is the secret of Christianity, as the Discoverer of Christian Science has declared in all her teaching,—that the true Christmas, the Christ-coming, is not simply a long-time past occurrence to be rejoicingly remembered, but a state of consciousness to be entered into and manifested in affectionate and effective, that is, Christlike, living. It is that spiritual illumination and uplift of sense which makes men more wise, more loving, more pure, more just, more joyous, more gentle, and more inspiring. As the true concept of the Sabbath gathers up all the days of the week and gives them the sanctity of that which is consecrated unto the Lord, so the true concept of Christmas gathers up all the revelations of Truth, all the radiations of that "Light, which lighteth every man that cometh into the world," and scientifically centers them upon the solution of the one great problem, the redemption of humanity.

This is the joy of every Christian Scientist, his awakening to the fact that he is privileged to say to all who are sick or sorrowing, or in any way troubled in heart, "I bring peace, 'the peace of God,' to you," and to heal them through this, his Messianic ministry. As the disciples took bread from the Master's hand and gave it to the multitude, so are we called to feed the hungry, comfort the afflicted, lift up the fallen, heal the sick; in a word, inaugurate Christ's kingdom, supplant the tragedies of warring sense with the peace and joy of a perennial Christmas.

How great the need in all the world today of those who are indeed Christlike, who have a demonstrable knowledge of the Master's teaching, and who have gained something of his patience, his courage, his loyalty, his technique in demonstrating divine law, his skill in winning men! And this is our commission and opportunity, as Christian Scientists, to radiate the Christmas joy, to make it appear what it is in truth, present and continuous, by living again the Christ-life in word and deed.

JOHN B. WILLIS.

Among the Churches

Current Notes

PORTLAND, ORE.—The beautiful new edifice of Second Church of Christ, Scientist, at East Sixth and Holladay streets, will be opened tomorrow [Nov. 1]. With the completion of Second Church, all the Christian Science churches in Portland are now provided with buildings of their own, except Fifth Church, which was organized only last spring. The new building, which faces south, nearly fills the 100 by 100 foot lot. The auditorium has been so planned that from every one of the thousand seats a full view can be had of the

Digitized by Google

readers' platform. The site was purchased a year ago, and construction work on the beautiful building, whose cost is forty thousand dollars, started in February of this year.

Services which led to the organization of Second Church of Christ, Scientist, in 1897, were first held in 1893, when a small group of those interested in Christian Science met at the residence of one of their number on the west side. About a year later a hall in the Turney Building on Second and Taylor streets was engaged, and services were held there until the increased attendance made larger quarters necessary. The hall in the Auditorium Building on Third street was then secured. It was while here that a charter was secured and the church organized. Later, services were held in the present Elks' Temple on Stark street until 1906, when the Woodmen's Hall at East Sixth and Alder streets was rented, where services have been held up to the present time.
The Spectator.

VISALIA, CAL.—Attractive in general appearance, homelike in its furnishings, and tasteful in arrangement and decoration, is the new Christian Science church at the corner of School and Church streets, which will be thrown open to the public next Sunday morning [Oct. 11].

The new church is of the bungalow type, thirty-two by sixty feet. The main room will have a seating capacity of two hundred and fifty. The Christian Science Society of Visalia was organized in 1904.—*Visalia Times.*

STROUD, ENGLAND.—The Stroud Christian Science Society announce that owing to the steady increase in the attendance at their services, the society have been obliged to move to more commodious premises. They have accordingly acquired a lease of the Lower Lansdown Hall, which, now that it has been refitted and decorated, makes a large service hall and reading-room, both on the ground floor. The new premises will be open on Tuesday, the 29th of September.
Stroud News.

LIMA, OHIO.—Sunday morning [Nov. 1] the first service of First Church of Christ, Scientist, will be held in the new building on West Market street. This new religious home, which is most commonly known as the old Brice homestead, has been completely made over, and the rear of the first floor has been made into a splendid auditorium, with a capacity of providing seats for at least two hundred people.
Lima Daily News.

RIVERSIDE, CAL.—A pleasing service marked the dedication of Second Church of Christ, Scientist, yesterday morning [Nov. 1].—*Riverside Press.*

The Lectures

McCook, Neb.

It was an intent, interested hearing, by a good-sized audience, accorded William R. Rathvon in the Temple Theater when he delivered his lecture on Christian Science. The Rev. D. L. McBride of the Baptist church introduced the speaker as follows:—

It is with pleasure that I comply with the request to do this service of introducing the speaker upon this occasion. I engage in it, not as a Christian Scientist, but as one interested in all propaganda that tends to promote and enlarge intelligence. I hold the man or woman to be pitied indeed, to whose educational attainments the word *Finis* has been written. Life in both volume and quality depends more largely upon knowledge than upon any other condition. Eternity would be a drear and desolate Sahara, were it void of the perennial springs of an ever-enlarging knowledge.

Another consideration makes this service a pleasant one; namely, my personal sympathy with any movement the aim of which is to ameliorate the woes of humanity, to displace its sorrow with joy, its despair with hope, its bitterness with sweetness, and its weakness with strength. That the method used by others in this pursuit may not be mine, altogether, is only to point a divergence that prevails otherwheres, where vital issues are at stake. We are all agreed as to results, though we may disagree as to ways and means. But even here we should foster sincere and sympathetic consideration for the methods of those who differ from us, for it is possible that their way, after all, may be better than ours. We should at least consider this possible, and hence grant to all opposite teachings a respectful hearing.

When the great Teacher described the highest place in his kingdom, he named it discipleship, and enforced his meaning by the use of a child, for a child's dominant characteristics are eagerness for knowledge and an unprejudiced attitude toward teaching. Intolerance of free and full discussion of questions in controversy is either a mark of bigotry or of fear for the safety of our cause. Life is the largest enterprise committed to our keeping, and we should welcome all contributions to our better knowledge of it, a firmer grip upon it, and a better program for it.—*The McCook Tribune.*

❖

Melbourne, Australia

The proscenium and lower gallery of the Melbourne Auditorium were filled by a representative audience, who listened with closest attention to the annual lecture on Christian Science. Prof. Hermann S. Hering delivered the lecture on this occasion, and Hector MacDonald, a well-known Melbourne lawyer, introduced him. He said in part:—

I regard it as a duty to express, on behalf of those who sympathize with all ethical agencies, our good will to this important modern movement in respect of its basis of ethical thought and purpose; for its essential idea is that which underlies the thought of all religious organizations,—the endeavor to lead humanity into a better way of living. It is that conception of the spiritual which insists that Mind is the master and not the slave of material surroundings, and which is triumphantly challenging prevailing materialistic obsession, and lifting men and women to a plane above that welter of hate and strife which produces a disordered and unlovely civilization. Under its teaching we find Christian Scientists, instead of living self-regarding lives, now living for the betterment of others; and where they were formerly held in bondage to constant fear and anxiety, they are now facing the conditions of existence with courage and serenity, and enjoying peace of thought with consequent mental and physical health.—*Correspondence.*

❖

Sheboygan, Wis.

The lecture on Christian Science by Virgil O. Strickler, at the Opera House, was listened to by a large audience. Ernst Best, second reader, introduced the speaker in the following words:—

There has perhaps never been anything brought before the public that has met with so much opposition and criticism as has Christian Science. This is largely due to the fact

Digitized by Google

that the teachings of Christian Science are in direct opposition to material ways of thinking. Despite this fact, the number of adherents to this faith is constantly increasing.

Today one can meet with scarcely an individual who has not heard of Christian Science, and formed for himself some conclusion as to what it is, and who is not invariably ready to express his sentiments regarding it. Some are entirely prejudiced, pronouncing it the height of folly, the works of the devil; others are a little more lenient, admitting that Christian Science may be well applied in ailments not of a very serious nature; but beyond a certain stage, to rely on the power of Truth, as taught and practised by Christ Jesus over nineteen hundred years ago, to heal disease today, is looked upon as being impracticable and unworthy of further investigation. It is for the purpose of setting aright these misconceptions and acquainting the public with facts concerning Christian Science that these lectures are given.

Sheboygan Press.

❖

Darlington, England

Col. William E. Fell lectured on Christian Science before a large audience in the Mechanics Hall. Mr. Haworth-Booth, in introducing the lecturer, said in part:—

It is the smallest part of Christian Science that drugs and medicines are discarded. I am deeply grateful to say that I was able to abandon all of these seventeen years ago, when I began to study Christian Science. The happiness and mental poise, the health of mind as well as health of body, the hopefulness of the future, as well as the certainty of the divine omnipresence here and now, enfolding, protecting all,—these are among the things most highly prized by Christian Scientists; and when we see so much misery and sickness around us, we would fain give to others of these our blessings, for we know that the day will come when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."—*Correspondence.*

❖

Twin Falls, Idaho

The introductory remarks of Edwin N. Day at the High School Auditorium on the occasion of the lecture on Christian Science by Francis J. Fluno, M.D., were in part as follows:—

One of the greatest griefs that can come to any heart is that of being misunderstood. There never was any one who was more misunderstood than Jesus the Christ. Even the twelve men whom he chose and taught for three years, who came in contact with him personally, failed to comprehend his teachings until after he had gone to the Father. Our misunderstanding comes largely from our failure to grasp the Bible text in its spiritual meaning. We are living in an age of progression. The spirit of inquiry is abroad, and we, like Pilate, though more earnestly, are searching to know what is truth.

All the Christian world recognizes Jesus Christ as the one sent from God to bring the light that was to light the whole world. That light was truth, and Jesus said: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Upon the teachings of Jesus rests our hope of heaven and eternal life. Our love and loyalty, to be true, must stand the test our Saviour gave: "If ye love me, keep my commandments;" yet we have been separating the commands of Christ to "preach the gospel" and to "heal the sick." That light of truth has been obscured by our spiritual blindness. Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do;" also, "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover," and many other similar assurances familiar to us all. Does Christian Science stand these tests? Are they doing the "works"?

I am not a Christian Scientist myself, and I know very little of the subject, yet I am in most hearty sympathy with its basic teachings, and believe that I am voicing your sentiments when I say that you, by your presence in this assembly this afternoon, are giving expression to deep thinking and to a broad-minded inquiry into Christian Science.

Correspondence.

❖

Toledo, Ohio

The remarks of Mrs. Nellie Bell Brigham, president of the Woman's Educational Club, in introducing Jacob S. Shield, who lectured on Christian Science before an audience of about twelve hundred, were as follows:—

We rejoice that we are witness to the marvelous achievements of this twentieth century, a period unparalleled in research, discovery, and invention along all material lines. It would seem that the wheels of progress are harnessed to a speed never before attained. But a greater joy is ours that with this, or back of it all, has come an unprecedented awakening in the intellectual and spiritual realm—a search after truth and realities. Nothing has given such an impetus to this effort as has Christian Science, a religion which has brought healing, peace, and comfort to countless thousands in all the walks of life; a religion so much talked about and yet so largely misunderstood.—*Correspondence.*

❖

Chicago, Ill.

In introducing George Shaw Cook, who lectured on Christian Science in Logan Square Theater for Eleventh Church, J. George Dietrich, chairman of the board of directors, said in part:—

Christian Science was discovered and founded by Mrs. Eddy in the year 1866. Since that time, its growth has been steady, until today there is hardly a place in the civilized world where it is not known. The question arises, Why is this so? Because, through a practical, provable understanding of God, it offers to tired suffering humanity a remedy for every ill. Christ Jesus said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Christian Scientists have accepted the loving and tender invitation of the Master to come unto the truth, and this truth is daily freeing them from the bondage of fear, sin, and disease. Mrs. Eddy says in her book "Science and Health with Key to the Scriptures" (p. 203), "If God were understood instead of being merely believed, this understanding would establish health."—*Correspondence.*

Testimonies of Healing

I wish to testify to the healing and saving power of Christian Science. Shortly after I first heard of it, I was almost instantaneously healed of a bowel disorder of long standing. My little boy was healed at the same time of the same difficulty. This was in the summer of 1905. Last year I had a very severe attack of hemorrhoids, for which I was obliged to write to a Christian Science practitioner for help. Almost as soon as I applied for treatment I had relief, and though I was not quite healed for a little while, the trouble eventually left entirely. Only recently I had a wonderful proof of God's care and protection, when my little boy, aged nine years, fell from a tree, and according to the doctor's diagnosis dislocated his elbow very badly. The doctor was surprised at how little he suffered and how quickly he progressed. I, however, helped as far as my understanding went, and I also wired a practitioner for treatment.

I have had many proofs of the healing power of Christian Science, and also of the comfort this teaching affords in times of trouble and anxiety. I am deeply thankful to our Father, and also grateful to Mrs. Eddy.

Mrs. B. D. Craven-Phillips, London, E.C., England.

✧

[Translated from the German]

Praise be to God, our all-loving, omnipotent Father, who always helps us manifestly and wonderfully out of distress, however great. It is my privilege to give my testimony of healing, and I do so with a joyful heart. At the New Year, 1913, I felt ill, and a distressing condition of the throat manifested itself, also of the face. I seemed to improve during the following week, when there was a discharge from the nose, which was diagnosed by a physician as catarrh of the frontal cavity. I followed his prescription, but the only result was dizziness and loss of appetite. I was advised to go to a specialist, who after a thorough examination stated that the upper jaw was involved. After the fourth distressing procedure, instruments being used, the bone was pierced, whereupon the physician informed me that I must immediately go to a clinic and submit to an operation. I was very much alarmed at the prospect of worse things than those I had already experienced, and refused to do this.

On my way home, while in this hopeless condition, though praying fervently to God, I met an acquaintance and told her my tale of woe. She said that I could be healed through Christian Science without having to resort to a painful operation. The afternoon of the same day found me at the home of a practitioner, who lovingly undertook to treat me, and who with untiring patience elucidated to me the subject of Christian Science, for which I am deeply grateful. In the beginning I had two very bad nights,—there was a struggle between truth and error in my consciousness,—but after that I enjoyed good sleep, and the healing went on slowly though perceptibly, until there seemed to be a standstill. I experienced a certain fear, wondering whether I was worthy of such spiritual healing; but thanks be to our all-loving Father, this fear was overcome, Truth gained the victory over the supposed evil, and I was healed in mind and body.

I have learned that God is Love, that only good proceeds from Him, and that we are subject to no other power but His, and light shines into my gloomy life. Formerly I was always ill and depressed, but now I feel neither old nor weak, and am able to walk great distances, something I had not done since childhood. I am thankful to God for Christian Science, and wish to express my gratitude for those who joyfully and with untiring zeal comply with the Master's command to preach the gospel and heal the sick. I am sincerely grateful to Mrs. Eddy, whose teachings lead us out of unrest into peace, out of darkness into light, out of error into truth, out of death into life, and which usher us into the heavenly kingdom while we are yet on earth.

Frau Helena Lipski, Zurich, Switzerland.

✧

From the age of twelve, I was for many years a sufferer from rheumatism, and was confined in bed for periods of from one week to two months. I also suffered a long time from catarrh and stomach trouble. I employed several physicians, but never received more than temporary relief.

It is now over thirteen years since I first heard of Christian Science. I became interested in it through the healing of a former neighbor, who was cured of an abnormal growth, and through the healing of several relatives. I asked for treatment for catarrh, and in two days was able to breathe freely through my nose,—something I had not been able to do for many years. Soon I was entirely healed of this, as well as of all the other ills. I have depended on Christian Science alone ever since, and during all these years have lost but one day from business on account of sickness. I am now in perfect health.

I am very grateful for my healing, but much more for the spiritual uplift I have received through the truth revealed to us by Mrs. Eddy in Science and Health, which has indeed been a "Key to the Scriptures" to me. These teachings have brought to my consciousness an understanding of God as ever-present Love, which heals and purifies.

Harry S. Weidenthal, Cleveland, Ohio.

✧

We often hear the question asked of Christian Scientists, "What of accidents,—can Christian Science help you then?" I should like to give the following testimony to show that an understanding of God's protecting power, gained through the study of Christian Science, does protect one in case of accident.

Some time ago, after an hour of earnest prayer, I was studying the Lesson-Sermon for the following Sunday, when I was so suddenly diverted from my study by a thought of accident in connection with my child, a boy of nine years, who was away from home with others of about his age, that I was impelled to do quick and earnest work. I immediately met the fear by declaring that there are no accidents in divine Mind, and after further mental work along this line I dismissed it from my thought with this passage from Psalms: "He shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone."

About an hour later the boy came in, shivering with cold and dripping wet. I asked no questions, for I thought he had been wading and had fallen down. Later, when he had changed his wet clothing for dry and had opened a copy of Science and Health, he gave an exclamation of surprise and joy. I asked the reason, and he read aloud, "Man, reflecting God, cannot lose his individuality" (p. 337). Inquiring why this should hold such interest for him at this particular time, he said, "If it had not been for that I should have been drowned." Then I learned that at about the time I was thinking of him, he stepped off a ledge into water over six feet deep. He could not swim, and had never been in any such depth before. After going down he rose to the surface, and was carried about sixty feet down-stream, where he caught hold of a tree branch overhanging the water, and held there until his playmates put out a pole and pulled him

Digitized by Google

ashore. He suffered in no way whatever from this experience and was as calm and fearless as a child could be.

This proves conclusively to me that "the God of Daniel . . . is the living God, and steadfast forever," and that "he delivereth and rescueth, and he worketh signs and wonders in heaven and in earth" (one of the references I was studying just at this time) today, even as in the day He delivered Daniel from the lions. This right understanding of God, as gained through the study of Christian Science, came into our home over twenty-eight years ago. It has been caring for us in all ways since, and has been our only physician. All of our healings have been permanent, and we have experienced some that were certainly remarkable. The truth has never failed us. My mother had been very ill for many years and was a great sufferer, but Christian Science healed her, and she has not had a day's illness in all these years.

For this wonderful protection, and for the manifold blessings Christian Science has brought to us and to all the world, I am indeed grateful.—Beatrice Varner, Kansas City, Mo.

❖

It has been some time since my first personal experience with Christian Science in 1909, and for the many blessings that have come to me in this time, I wish to give thanks. The bitter and futile efforts to obtain happiness from materially conceived gods, forced me to accept Christian Science when no power seemed possible to save me. Having lost everything that seemed real to me,—happiness, respect, health, and means of support,—I turned to God with that desire which Mrs. Eddy says "is prayer" (Science and Health, p. 1), and the result was that the liquor and drug-taking habits were at once destroyed. Conditions which made it apparently impossible for me to escape either a prison or an asylum, vanished with the night. Here I wish to say that owing to my mother's beautiful healing, I had known of the power of Christian Science for several years before accepting it, and occasionally read the text-book, "Science and Health with Key to the Scriptures."

Comparatively recently, in January, 1913, the smoking habit was eliminated, although not without a struggle. For a long time I complacently waited for this habit to disappear. When I started to read the text-book, at first I had to pass over certain passages speaking of the tobacco habit; then these were read very hurriedly; later more carefully, as the fumes of tobacco on my clothes began to annoy me. Finally, a practitioner to whom I had gone on business said to me one day, "My dear friend, smoke cannot hide God from you." I came home and kept to that true thought all day, and by evening, confident of the healing, I threw out the tobacco and cigarette papers, and sent an acknowledgment of gratitude to the practitioner.

Here I would say that all such desires are permanently replaced by higher ones. My physical condition has so changed in this time that people who have known me since I first turned to Christian Science for help, have marveled. An emaciated body has changed to a normal condition; an eye trouble has been eliminated, and a severe catarrhal condition has vanished. These improved mental and physical conditions give great reason for rejoicing, but my greater gratitude is for the understanding of God which enables me to help in the redemptive work of mankind. I have had the privilege of class instruction this year, and I have never failed to see harmonious results when the Principle of Christian Science, as our Leader, Mrs. Eddy, has made it known to us, has been obeyed.

Christian Science means everything to me, as I came to it with nothing, and asked nothing but to know what real happiness was. It is with increasing measure giving me every opportunity to reflect peace and joy. The physical healings and benefits are but the necessary results of the right thinking that the discipline of Christian Science brings to one. Not words, but deeds alone, can express the measure of my gratitude for this redeeming truth that our Leader, through her sincere efforts to know God aright, has left,—a rich legacy to all who will but partake.

Edward Earle Daniell, Philadelphia, Pa.

❖

Early in 1907 the outlook for the future seemed very dark for us, and the "silver lining" hard to find through the heavy clouds. We were arranging to leave our home town, the place where I was born and had always lived; but "man's extremity is God's opportunity." A friend told me that Christian Science would keep me from being homesick when among strangers. Although I did not understand, I believed, and began the reading of Science and Health and other Christian Science literature, together with the faithful study of the Lesson-Sermons, seeking for something that would relieve the longing for my old home and friends when away from them.

Divine Love met our need. We did not move to the East, and now that we are Christian Scientists, we know more joy, content, and peace than ever before. To mortal seeming we have been obliged to give up many things which we considered necessary to our happiness; but with the going of material things there has been a reaching out for something better, something which this world cannot give and which can never be taken from us. A glance backward over the past few years brings such an overwhelming rush of good things for which I wish to express my gratitude, that there seems to be a sense of confusion as to which to tell about. This has been the case repeatedly, when I desired to write my testimony for the *Sentinel*. Thus the weeks, months, and years have passed, but with the passing every hour has brought added blessings.

We have had many splendid healings of physical ills, and have proven to our entire satisfaction that Christian Science does heal. I am grateful for the overcoming of fear, and for the thought of protection that this understanding of God gives, the knowledge that God is ever present, ever loving, and ever ready to help when we are in trouble of any kind, if we but turn to Him. From the beginning of my study of that wonderful book "Science and Health with Key to the Scriptures," I have never doubted one word.

During a time of sorrow, God's love was a sustaining power; it destroyed the sting of death. I prayed that I might "follow and rejoice," as Mrs. Eddy says, "all the rugged way" (Poems, p. 14). These wonderful words, sent by their author to one in a time of need, were given to me at this time: "He still lives, loves, labors" (The First Church of Christ, Scientist, and Miscellany, p. 295). I was young in Science, but they gave me the thought of Life, to which I clung until the sense of loss and separation was destroyed; and it has never returned.

It seems impossible to write this thank-offering of mine in the singular. This "Comforter" which Jesus promised, came to my husband and myself at the same time. We joined The Mother Church and our local church, and had class instruction together, and there is an entire oneness in our thought, aims, and desires. We wish to have our lives express our thankfulness to God, and our gratitude to our dearly beloved Leader. We are never so happy as when it is our privilege to tell others of the blessings that have come to us through this Christ, Truth.

Digitized by Google

With thousands of others, I rejoice that Mrs. Eddy has made it possible for us to have our *Sentinel*, *Journal*, and *Monitor;* they are ever welcome as they come with their healthful, helpful messages of encouragement. The "wakeful shepherd" beholds, feels, and knows, as Mrs. Eddy declares (Science and Health, Pref., p. vii), that "to those leaning on the sustaining infinite, today is big with blessings."

NETTIE WEST LICHTY, Des Moines, Iowa.

✦

[Translated from the German]

I am indeed glad to add my expression of gratitude for the help received through Christian Science. Since childhood I suffered from what the physicians defined as a nervous stomach trouble, which during the latter years took the form of gall-stones. Five years ago the attacks became so severe that I was bedridden for six months, and weak heart action having set in, the physicians believed in the necessity of an immediate operation. Two days before the operation was to be performed, a friend from out of town called on me and expressed the desire to ask a local Christian Science practitioner for treatment in my behalf, to which I gladly consented. Absent treatment was given the same night, and for the first time after a long period I had a sound sleep, lasting several hours. Then I woke up suddenly, with a peculiar stirring sensation in the body, and my first thought was that this might mean the end; but after a while I experienced such freedom and well-being that I felt I must wake up my people and tell them of the wonder that had occurred.

The next morning the kind practitioner came, and with four weeks' treatment, including the elucidation of the glorious teachings of Christian Science, I was enabled to go out of doors, and even to start on a journey. I also partook of all kinds of food, something which had been impossible for thirty years. When after four months the same trouble tried to manifest itself, it was quickly overcome, and other minor troubles have had to yield to the power of Truth. Almost five years have elapsed since my healing, and I have felt better during that time than ever before in my life.

I may say, therefore, with the apostle: "God, who is rich in mercy, for his great love wherewith he loved us, even when we were dead in sins, hath quickened us together with Christ, . . . and hath raised us up together, and made us sit together in heavenly places in Christ Jesus." My heart goes out in thankfulness to God for all the blessings which the understanding of the saving truth has brought me, and I am deeply grateful to Mrs. Eddy, the Discoverer of Christian Science.—FRL. GEORGINE KAST, Stuttgart, Germany.

✦

It is with sincere gratitude for the blessings of Christian Science that I submit this testimony. I had been in a nervous, wretched condition for many years, as the result of a serious illness and operation. In February, 1912, my family physician advised an immediate operation for an abnormal growth. My husband strongly objected to my being operated on again, and I also dreaded the ordeal. We were then spending the winter at a hotel in San Francisco, where I met a lady who told me she had been healed of the same trouble in Christian Science ten years before, and had since enjoyed good health. She gave me the address of a practitioner, who explained to me something of Christian Science, as I knew nothing about it. Its teaching as to Principle, God, good, appealed to me at once, and I asked for treatment. After a few visits, the severe pains disappeared, also the depressed mental condition, and my friends remarked on my improved appearance. I became intensely interested in the study of this healing religion, and I was indeed happy when, under the guidance of divine Mind and the kindly help of the practitioner, I gained an understanding of the Science of being and was enabled to overcome and prove the nothingness of discordant conditions. A year later I again visited the physician for an examination, and he was greatly surprised to find that the growth had disappeared.

Recently I was obliged to have some dentistry done, and with the help of the faithful practitioner I experienced very little discomfort, though I was in the dentist's chair two hours. The dentist said he had dreaded doing the work, and complimented me on being such a good patient, but I replied that the praise was due to Christian Science.

I thank God daily for directing me into this Science, and I revere the memory of Mrs. Eddy, who by her noble efforts made it possible for suffering humanity to understand and find peace and health through the teachings of our Lord Christ Jesus.—MRS. F. L. OLMSTED, San Mateo, Cal.

✦

With ever increasing gratitude, I would add my voice to the song that is swelling throughout the world today, coming from the hearts of those who have found freedom from bondage through the teachings of Christian Science. I can say with the psalmist: "Bless the Lord, O my soul: and all that is within me, bless his holy name. . . . Who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies." I derived benefit from this teaching from the very first, and have steadily gained in physical health and understanding of the truth.

In looking back over a period of three and a half years, God has indeed done all this for me. At that time I was a pitiable wreck, feeling that death was inevitable, and I was striving to bow to what I supposed was God's will, although I was crushed with the thought of leaving my dear husband and two little children who I felt needed me. I had prayed for light; I had besought the great Physician for healing, so when a dear sister brought to me these words: "God does not want to take you from your children; it is not His will that you should die," they were words of such comfort and solace that I at once took courage. A trip that had been planned for me was made without fatigue, and the necessary time was thus afforded me for the study of Christian Science. While from childhood I had loved God and tried to live a Christian life, ever looking to the Scriptures for guidance, yet I can truthfully say that the Bible was never so dear to me, never such a priceless treasure, as it is today, as its treasures unfold to me more and more in the light that Christian Science throws upon its pages.

From invalidism I have little by little resumed an active life, until today I manage my own home, am educating my two children personally, and attend to a little business besides. I am busy from six in the morning until nine at night every day but Sunday, when I give all the time I can spare to the study of our literature. Christian Science has been the only physician for myself and two children during these three and a half years, with one exception, when the law required that a doctor be called. He was then dismissed and none of his medicine taken, and every law of *materia medica* was made null and void through the power of Truth. In a recent siege of persecution, where prejudice and jealousy tried to upset my peace of mind and rob me of my rights as a citizen and parent, I was sustained by divine Love. The "everlasting arms" bore me up, and knowing that I was in the right, I waited upon God until things were adjusted. Needless to say, I came out the victor, and in reading an

Digitized by Google

article in a copy of the *Sentinel* I thought how true are the words, "No weapon that is formed against thee shall prosper." I am very grateful for all our Christian Science literature. Living as I do, where I cannot attend the church services, these messengers of Truth are a great blessing; and to know that we are all united in the study of the Lesson-Sermon each week is very helpful.

Is it any wonder that those who have gained so much from this new-old truth which has again been revealed to us through Mrs. Eddy, should feel grateful to her for her loving service to mankind? Only those who have thus gained their freedom can appreciate her faithfulness to the cause of Truth. To those faithful Christian Scientists who have helped and encouraged me on the way, I am also grateful. It is my earnest prayer that I may ever increase in the knowledge and love of God, and may be a profitable worker in the Master's vineyard.

EILEEN G. VAN WYNEN, Kerhonkson, N. Y.

❖

I desire to relate an incident where Christian Science overcame a so-called contagious disease. Over a year ago I was taken ill while at my place of employment, and became delirious. My family did not know what ailed me, but I was put to bed with a high fever. They tried to help me, but during the night the conditions became very alarming, and they telephoned to a Christian Science practitioner for treatment. For three days and nights I lay in this condition, not being able to swallow at all, and on the third day my sister was taken ill with the same disease. A physician was then called to diagnose the case, and he pronounced it scarlet fever. At the very first we suffered terribly, and I nearly lost my eyesight; but in spite of this my sister was confined to her bed only seven days, and I ten days, when we both got up and dressed. From then on we were well physically, although it was three or four weeks before all the dead skin fell away. I wish to add that none of the ill effects which this illness is supposed to leave, affected us. My eyesight has been as good since then as it was before, that is, perfectly normal.

This is merely one of innumerable experiences in which Christian Science has proven itself a competent physician, when it might have gone hard with us had we relied on material instead of spiritual means.

CECIL E. MACMAHON, Chicago, Ill.

❖ ❖ ❖

[Written for the *Sentinel*]

Freedom

DAVID E. ANTHONY

PRAISE be to God, and blessèd be this day
When men, released from the despotic sway
Of mortal mind and error's thrall, may rise
And climb the mount to Truth's own paradise.
At last with laurel him alone we crown
Who by Love's works shall merit true renown,
And know the freedom which the Father gave,
And loose our thought from shackles of the slave.
Untrammeled, free as mountain air, we find
Our lives illumined by the Christlike Mind,
And stretching out before us we may see
The path which leads to God's sweet harmony.
And as we journey o'er it, speed, O day!
As lightnings through the storm-clouds play,
With truth, with nobler thought, mankind inspire,
And toward the great eternal lift us higher.

From Our Exchanges

[*New-Church Messenger*]

The Word represents the Lord as being in a secret place. The dwelling-place of the Most High is spoken of as a secret place, and it is said that the Lord makes the darkness His dwelling-place. The question is asked, Why does the Lord hide Himself from man? Why does He dwell in a secret place? Why are His ways in secret? If He desires us to know and follow Him, why does He not clearly manifest Himself and His ways? Is it likely that one who loves us will clothe Himself in darkness and hide in secret places, and make His ways "past finding out"?

Is it not surprising that such questions as these should continue to arise, for that the Lord should hide Himself from any one is contrary to enlightened reason. It is a good sign of the times when it is perceived that one who loves us cannot consistently hide Himself from us, and that one who desires us to follow His ways cannot make them past finding out, in the sense that we can never know anything about them. It is not the Lord who makes the darkness round about Him; rather the erring ways of men, the wrong notions concerning God, are that darkness. The darkness is in our own uninstructed minds, and we ourselves are the authors of that darkness. God is light and dwells in light, but when we turn from that light through rejecting it, it can be but darkness. Again, the ways of the Lord are in secret, because they seem so impossible to us, because they are so different from our ways.

[*The Christian Register*]

For one mighty collapse of the time we should take intense satisfaction,—the collapse of the idea that God brings about great evils, and that, however wicked and cruel and needless they are, we must accept them as His way of bringing about good. This idea, it is true, is still entertained. There are men whose throats will not choke, whose intellects will not falter, whose sense of humor will not rise, as they mouth the wretched commonplaces of this disgraceful and absurd theory of Providence; but such men are few, and their hearers in overwhelming numbers will do some keen and uncomplimentary thinking of their own. They will marvel at the comatose state of mind of men who can show such helplessness, and they will call on their common sense and their reverence to demolish such folly and blasphemy.

What is against God's will surely cannot have been ordered by it; what is disobedience certainly cannot be rechristened and given divine title; what is so plainly and flagrantly against all His orders cannot be furbished forth as wearing the uniform of God's commands. The facts are too monstrous to be held up longer by a silly, inane notion of God's will as anything that may happen by the chance and device of wickedness. The mechanical and arbitrary theories of Providence and God's will have collapsed. All men can see their ruins. No argument is needed. There are the pieces, the fragments, never to be reconstructed. Now more people than ever will go to work helping God's will to be done, turning man's will away from what it has done to what it ought to do.

[*The Christian Work*]

It is something of a question whether a Christian has anything to do with his rights in any form or not. There is not the slightest indication that the Founder of Christianity was ever concerned with them. He was much exercised over the rights of others, but there is no passage in the gospels, so far as we remember, that would indicate that he ever worried over

Digitized by Google

his own rights or gave them even a thought. Indeed, the testimony is all to the effect that it mattered not what happened to him so long as other people got their rights. Once, when his accompanying disciples wanted him to call down fire on a certain city and assert his rights, he rebuked them, and intimated that he was not here for that sort of thing, but to get rights for others. Once when Peter drew his sword to assert his Master's rights, Jesus told him somewhat sharply to put up his sword. The idea of rights seems simply never to have occurred to Jesus. He was here to see that his brethren in all ages got rights, and he forgot his own.

[*Zion's Herald*]

The world has a rather plentiful supply of impatient idealists, people who expect the millennium to come by the passing of a few resolutions or the turning of a crank, but the real need is for practical idealists, who show their faith by their works, who are glad to make progress slowly rather than not at all, and who, while earnestly laboring for the right, manifest a considerate patience toward those who do not see eye to eye with themselves regarding the methods to be used in converting ideal into deed. It is possible, though perhaps not usual, to combine the fine, even fierce, ardor of the high idealist with the calm and sagacious policy of the eminently practical man of affairs.

[*The Universalist Leader*]

The habit of finding the faults in people and the evils in experiences, easily becomes a slavery which narrows life, and makes an otherwise very satisfactory person most unsatisfactory. There is more health in the simple food which satisfies than in the luxuries which breed discontent. Happiness awaits the one who passes from one genuine satisfaction to another, though little discontents border his pathway. It is wise even to be sometimes satisfied with self, however foolish it is to be self-satisfied.

[*The Standard*]

Let us see to it that there is something more Christian to Christmas than simply the name itself; rather, that in its entire observance it breathes forth the message of him who on that holy night came into the world, in lowly manger lying, the babe of Bethlehem. Let us ring in again the Christmas that points back to him of whom the angels caroled: "For unto you is born this day in the city of David a Saviour, which is Christ the Lord."

[*The Congregationalist and Christian World*]

Good it is, that all the world over many are praying who never prayed before, and many who prayed before are finding unprecedented comfort and strengthening in prayer. Out of a terrible world situation will arise a new conception of prayer and a wider employment of this approved method of better understanding the heart of God and of coming into sympathy with His purposes of good for all His human children.

[*The British Congregationalist*]

In the midst of the abstract and intricate study of theology it is so easy to forget that only by the childlike spirit is the kingdom of God entered, and only as this spirit pervades the teaching of the pulpit will the real kingdom of God be extended in the world.

[*The Universalist Leader*]

No church can live which lives unto itself alone; it must either grow or die. The growing churches are those which have given themselves in a whole-souled way to the extension of their faith.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is *$7.50 per* copy, with a discount of 25 cents each when *included in an order* for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. This book, the sub-title of which is "A Defense of Human Rights," contains a general review of the legal status of Christian Science, together with a table of statutory provisions relating thereto; also testimonies of healing through Christian Science. It is intended for general circulation, and will replace the pamphlet "Christian Science and Legislation," which has been discontinued. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

"Christian Science: The True Christianity," a lecture by Clarence C. Eaton, has been published in pamphlet form, and is now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.20 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 65 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Entered at Boston, Mass., post office as second class matter.

Items of Interest

In his annual report Postmaster-General Burleson announces the second consecutive postal surplus of his administration, and points out that now, for the first time in its history, the postal establishment has been securely placed upon a self-sustaining basis. The report records an astounding growth of the parcel post; points to the service performed by the postal savings banks in steadying financial conditions during the crisis precipitated in this country by the war in Europe; tells of reorganizations and improvements introduced in the railway mail service and in the larger city post-offices, which have assured prompt handling of the additional bulk of mail created by the parcel post; and reveals the aggressive and effective work of the department's law officers and inspection service in renewing the enforcement of the fraud-order statutes.

Among the numerous recommendations made to Congress are the following: That early action be taken looking to government ownership of all telegraph and telephone facilities; that the telegraph and telephone systems of Alaska, Porto Rico, and the Hawaiian Islands, including the Alaskan cable now operated by the war department, be immediately taken over and operated by the post-office department; that, partially to eliminate the forty million dollar annual loss in the delivery of rural mail, the contract or "star route" system of delivery be substituted for the present salaried rural delivery service; that while the present salaried system remains in operation, Congress sanction the method of computing rural carriers' pay adopted in the postmaster-general's order, which grants "the maximum compensation only in case of the maximum performance," and which, by making pay somewhat dependent upon the bulk of mail carried, will stimulate the development of revenue-producing business in the rural districts; that the limit upon the amount which may be accepted in a calendar month from a depositor in a postal savings bank be removed, and that the maximum balance which may be accepted from a depositor be increased from five hundred to two thousand dollars, limiting the amount on which interest shall be paid to one thousand dollars.

In his annual report, Secretary Houston of the department of agriculture sounds a note of warning to agriculture in the United States. "After all our efforts," he says, "while there is an increased diversification of agriculture and both a relative and absolute increase in important products, such as wheat, forage crops, fruits, dairy products, and poultry, we still note not only a relative but also an absolute decrease in a number of our important staple food products, such as corn and meats. This situation exists not in a crowded country, but in one which is still in a measure being pioneered; in one which with nine hundred and thirty-five million acres of arable land has only four hundred million, or 45 per cent, under cultivation; and one in which the population per square mile does not exceed 31 persons, and ranges from .7 in Nevada to 508 in Rhode Island.

"Just what the trouble is, no one is as yet sufficiently informed to say. It can scarcely be that the American farmer has not as much intelligence as the farmer of other nations. It is true that the American farmer does not produce as much per acre as the farmer in a number of civilized nations, but production per acre is not the American standard. The standard is the amount of produce for each person engaged in agriculture, and by this test the American farmer appears to be from two to six times as efficient as most of his competitors. Relatively speaking, extensive farming is still economically the sound program of our agriculture, but now it is becoming increasingly apparent that the aim must be, while maintaining supremacy in production for each person, to establish supremacy in production for each acre."

Although the railway mileage of Peru is far short of what it should be in view of the great natural resources awaiting further development, the republic has the distinction of having put through one of the greatest engineering enterprises in America. The rugged nature of the country is undoubtedly responsible for the slow progress in adding more railroads. Most of the railways of this republic are controlled by the Peruvian corporation, which was formed in 1890 by the holders of the external debt of Peru. The principal railway taken over by the bondholders is the Oroya or Central system, which is called "the highest railroad in the world." The plan was that the holders of the bonds would receive from the government all the railroads for a term of sixty-six years, which term has since been extended to eighty-three years, together with mining privileges, land grants, etc. In return, the bondholders were to deliver over to Peru one half of her obligations abroad and to look to Chile for a settlement of the other half.

About one million two hundred and fifty thousand dollars has been wasted by Mexican functionaries since the beginning of President Madero's administration, under pretext of carrying out the work of the drainage of Lake Texcoco, and nothing has been accomplished toward that end, according to an interview given out by Ignacio Bonillas, acting minister of communications. He said that the waste of money involved culpability on the part of the functionaries administering the fund of two million five hundred thousand dollars which was voted for the work in President Madero's time, and in view of the fact that nothing has been done to drain the lake, the functionaries mentioned were bound, in his opinion, to give an account of their dealings. Minister Bonillas still has at his disposal the use of the remaining one million two hundred and fifty thousand dollars.

Discussions at the seventeenth annual meeting of the Massachusetts Forestry Association at Boston recently, brought forth a general expression of the opinion that cities and towns should take advantage of the authority granted them by the last Legislature to appropriate money or issue bonds to establish town forests, and so assist the forestry movement, which the state has already aided by an appropriation of ninety thousand dollars for the purchase of land. As a method of arousing enthusiasm and interest in the movement, the association voted to reforest free fifty acres of land in a town or city which before next June starts the best "town forest."

The National Yellow Pine Lumber Manufacturers Association, with headquarters in St. Louis, has been formally dissolved, says the *Star*. The dissolution of the organization is attributed to a recent ruling of the supreme court of Missouri, in which the association was criticized severely for issuing price-lists. Many lumber companies in Missouri were fined heavily, and others were ousted during the litigation growing out of complaints against the issuance of price-lists by the Manufacturers Association and alleged adherence of the members to these fixed prices.

Only one person in every thousand in Denmark is unable to read and write, compared with seven out of every thousand in the United States. Of two hundred and sixty thousand Danish children of school age, only three hundred and seventy failed to attend school during 1911. Compulsory attendance upon school between the ages of seven and fourteen is strictly enforced. Teachers have high social rank, are leaders in both church and state, and are invariably pensioned for disability or age.

After a considerable delay, a government loan for three million dollars has been placed in New York, and work on the railroad from Boquete to Pedregal, Republic of Panama, will be continued forthwith. Payment of the loan is guaranteed by the annuities covering the annual payment by the American government for the rights in the Canal Zone. It is distinctly stipulated that the money raised is to be used for no other purpose than the railroad in the province of Chirique.

With the lessening in ocean traffic in the North Atlantic due to the near approach of winter, work will shortly be begun on the improvement of the Canadian government wireless telegraph station at Cape Race, on the southeast coast of Newfoundland. It is planned to double the present radius of communication. Most of the work of Cape Race can be done without interference with regular operations.

Members of the American Bar Association are taking active interest in the enactment at the present session of Congress of the bill to modernize court procedure and prevent delays of justice in federal courts. The measure was favorably reported from the House judiciary committee and is now on the House calendar. The Senate judiciary committee is understood to be favorable to it.

Congressmen at Washington have been notified by the chief of army engineers, that the adverse report on the project of deepening the Merrimac river channel from Lowell to the sea has been returned to the district engineer for further consideration.

Greece has turned to Chicago for its wheat supply, and is negotiating for the purchase of one million six hundred and sixty-six thousand bushels a month.

Resolve and Action

CLARENCE W. CHADWICK

Good resolutions are always commendable, but until put into practice they weigh little in the scales of progress. The coming of each new year may suggest the turning over of a new leaf and the firm resolution to do better in the future, but until resolve is expressed in action the new leaf really remains unturned. The student of Christian Science well knows that good resolutions are always in order every day of the year, and that the accepted time to live up to them is now; yet this does not prevent his joining the happy throng of those who hail the advent of each new calendar year as a fitting occasion for a modicum of retrospection and sober resolve to bring out a better and happier future. Indeed, the Christian Scientist should welcome this opportunity to take one step higher in the long ascent of human endeavor, and he does so in a very practical way.

A most searching and eminently pertinent question for us all to ask ourselves at this particular time has already been pointed out by our revered Leader on page 496 of the textbook, "Science and Health with Key to the Scriptures." She says: "Ask yourself: Am I living the life that approaches the supreme good?" Here is a question which may well cause us to halt and to engage in prayerful self-examination. It is a direct and positive appeal to our honesty and sincerity as Christian Scientists. There can be no dodging or faltering. We must face the issue manfully and joyfully, let the answer be what it may, for upon it hinges the future destiny of our sacred cause.

What does it mean to be "living the life that approaches the supreme good"? We shall need to rise above sense-testimony in order to answer this question intelligently, since no outward or visible conduct on our part is of itself a sufficient guaranty of a righteous life; for the veriest hypocrite may assume a form of righteousness and yet in thought deny the most vital essentials of a Christian life. That which defiles and defaces the Christ-image within must be reckoned with, if we would arrive at just and accurate conclusions as to our standard of living. The heart must be right, must be pure, else the outward life is a sham and pretense. The Master said: "Out of the heart proceed evil thoughts, murders, adulteries, fornications, thefts, false witness, blasphemies: these are the things which defile a man." Here, then, is a mirror into which we can all look for the return of a just verdict, be it "guilty" or "not guilty." If evil, murderous, adulterous thoughts are finding expression through us; if we are giving way to outbursts of uncontrollable temper or are at enmity with our fellow man; if contentious and fault-finding, hypercritical and intolerant,—if any of these errors, or others of a host which could be mentioned, are a part of our daily thinking, we must stand self-condemned, and the verdict of "guilty" cannot be made light of if we would lay claim to the Christian title of consistency.

It is very generally admitted by mankind that they know what they are thinking, but it is a well-established fact in Christian Science that one who has failed to shut out of consciousness the secret invasions of "aggressive mental suggestion" (Church Manual, Art. VIII, Sect. 6), may unwittingly voice and act out certain conditions of thought which a normal, peaceful, loving mentality would spurn to entertain. The essential mission of Christian Science is to save the individual from any such experience, and it will do so in every instance where love, humility, and unselfishness are stationed as sentinels at the door of consciousness. If selfishness, dissatisfaction, personal criticism, or kindred errors are entertained, these only serve as an opening wedge for the further intrusion of more aggressive phases of evil which would obstruct or crucify the Christ-idea. This phase of mental aberration is mentioned in explanation of the fact that it is possible for one to imagine that he is living a Christian life when in actuality he is manifesting anything but love and a sound mentality. Some rude awakening may arouse such a dreamer, and then he faces about, resolved to return to his Father's house, whether the journey seem long or short.

According to Bible teaching one might have faith to remove mountains, and yet if without love he would be counted as nothing. This proves that one cannot judge by the appearance, but only according to the fruits of righteousness. A righteous work means vastly more than the disappearing of some physical malady, for this of itself may or may not be a true sign of the Christ-healing. That moral and spiritual transformation of thought which extirpates sin,—those things which defile a man,—this is the proof from on high that one is living the life of a consecrated Christian Scientist.

The standard of Christian Science is a high one,—too high for mortal attainment. The old man of sin (the belief that man is mortal) must be put off, and the new man (the understanding of man's spiritual unity with God) must be put on through righteous thinking and living, before the Christ standard of perfection can be brought out in scientific demonstration. A radical purification of thought as an essential of right living cannot be overlooked by any student of Christian Science, and the sooner he reaches the place where he knows that no other can do his thinking or Christlike living for him, the sooner will he be able to protect his mental abode from the wilful aggressiveness of personal domination, and to live above the demoralizing demands of the senses. If any of us have not yet reached this mental height, it behooves us to resolve at once to do so, without waiting for the ringing out of the old and the ringing in of the new year. God's day is the ever-present now, and it is the only time any of us will ever have in which to put resolve into action. A firm resolution to do what is right is good; to live up to it is still better; to let others do the same, unmolested by the plague-spots of envy, jealousy, and hatred, is best of all, for it is the acme of Christlike humility, forgiveness, and consistency.

It is safe to say that all Christian Scientists who will take the time to make an inventory of their mental possessions, will uniformly acknowledge the need of more brotherly love and kindly Christian demeanor one toward another. If they will

Digitized by Google

then resolve to express this love and consideration toward all mankind, and will relegate to the silent chambers of a forgotten past all of the petty jealousies and contentions which have tried to rend the ties of true human friendship and to separate them from their common parent, divine Love, they will find no obstacles in the way of their becoming normal, loving, joyous, genuine Christian Scientists, brothers and sisters of one holy household. What a loving New Year's contribution this would be to the world's present meager supply of "righteousness, and peace, and joy in the Holy Ghost"!

Beauty and Truth

MADGE M. ELDER

MANY are willing to worship beauty who have no desire for truth. Beauty for beauty's sake has too often been the aim of many of the world's great artists and poets, and too often has their work been acclaimed by an unseeing multitude, yet beauty and truth are one; only the true is beautiful, just as all that is really beautiful is true. That which seems to be beautiful but has no truth behind it, is but an outward deceptive appearance, and can be accepted only by those who have a false estimate of the nature of beauty. To understand that truth is beauty puts beauty on a sure foundation, for it is then seen to be indestructible, eternal. An understanding of the "beauty of holiness" enables us to recognize the spurious forms that have no real value, substance, or permanency; and it bids us desire a divine model after which we can shape our work, for we have learned that whatever we would do that is to be beautiful, to help and to bless mankind, and to endure, must be true.

No matter how beautifully an artist paints, how wonderfully he blends his colors and mingles light and shade, or how skilfully he limns his forms, if his work does not express a true ideal, it is null and void. It has not in it the power to accomplish anything for the elevation of mankind. The poet may bring to his command the most exquisite language, the most melodious rhythm, but if it is only to embellish an idea that is not sound at its core, however finished and beautiful men admit the work to be, it leaves them no higher or better for it. The test of all beauty, and of all we think or say or do, should be this question: "Does it heal?" If it does not help to lift some load of sin, of fear, of sorrow or disease, it is devoid of beauty, truth, and spiritual power, and has proved itself nothing but an empty form.

We have only to think of some of the great masterpieces of literature, and ask ourselves if they have done anything to heal us, and then to think of the simple words of Jesus that healed, and are still healing, thousands, to understand what true beauty means. There is no beauty in any literature of the world like the beauty of the truth which Jesus expressed, and at his words we know that men were freed from life-long sin, were raised from beds of pain, and were glad to forsake all and follow Christ. Jesus has been styled a master poet; even those who do not recognize his Messiahship have been forced to admire the beauty of his language, the perfection and power of parable and argument employed. Jesus himself said, "Heaven and earth shall pass away, but my words shall not pass away," for he knew that the word he spoke was the word of God, and that "word is truth."

Many of us are perhaps too apt to think of the outward appearance rather than the inward worth, to strive for effects, to play with words; but none of these artifices ever reformed a sinner or healed a sick man. To the Christian Scientist the Bible and "Science and Health with Key to the Scriptures" are daily companions, and because they are so, and he devotes so much time to the study of these two books, the Christian Scientist is often accused of a want of appreciation of the vast storehouse of noble literature which the world contains; but nothing could be farther from the fact. Christian Science deepens one's appreciation of all that is best in literature and art, as it decreases the taste for that of a lower standard; and the Christian Scientist recognizes that as Truth has been in some measure reflected by all the truly *great philosophers, artists, and poets throughout the ages, he is always* grateful for the lessons they teach him. But it is pure and uncontaminated truth which every one needs, the truth which Jesus declared would make us free,—and the Bible and the Christian Science text-book have been proved by the test of healing to contain this truth. We have strayed so far from the simple teaching of Jesus that we need to be educated back to primitive and true Christianity, and this is the work that Science and Health is doing, interpreting and demonstrating to men the beauty and truth of the Bible.

The most beautiful sentence in all literature is this: "God is love." Nothing that any poet ever wrote is half so beautiful as that. Men have not yet comprehended or fathomed it. To realize its infinite meaning would heal us of every ill, and reveal the ever-presence of the kingdom of heaven.

Healing of Lack

FRANCES M. GORRELL

EVERY case of healing of whatever nature is the result of a human need, felt and expressed. It passes through various stages,—first a consciousness of discord, then a desire to be freed from it, later an application for help, and finally obedience to the demands of Truth.

In the second book of Kings we have the story of a widow, who, feeling her need and desiring that it might be supplied, went to Elisha for help. He at once gave her something to do, and she, willingly obedient, did as he commanded. There was no questioning on her part, no arguing, no dissatisfaction, no quibbling over the command, but straightforward, willing obedience. She went to her neighbors and borrowed all the empty vessels she could, filling them from the one pot of oil that she had, and the oil, when sold, supplied her present need. Jesus' first healing of which we have any record, was also one of lack. At the marriage in Cana of Galilee the supply of wine was insufficient, and Jesus, with his knowledge of the all-power of Mind, bade the servants fill the waterpots with water, draw out, and bear unto the governor of the feast. This they did, and the result was all that could be desired. In both cases that have been cited, the need was taken to the highest known source to be supplied. Now the same God, the same power, the same Principle is present today, and there is no real reason why any one should experience lack, since man is the expression, the idea of God.

We learn in Christian Science that abundance is as much an attribute of God as is goodness, and in striving for that Mind to be in us "which was also in Christ Jesus," we are as much in line for abundance as we are for goodness. It is not a lack of money that needs to be supplied in any case; it is a lack of understanding of the allness of God. God has no sense of lack, and if we were more alert to refrain from admitting a condition of poverty, even in thought, there would be less expression of it. No thing and no circumstance can hinder us from expressing the fulness of God's idea; and in order to prove this we, as students of Christian Science, must know, as did Elisha, and later Jesus, that God is All, and that nothing can limit the perfect unfolding of the spiritual idea.

Digitized by Google

Obedience is the final step in order to complete the experience of healing. Again we hear the words, "Whatsoever he saith unto you, do it;" and it is in proportion as we heed these words that we are able to make the demonstration. In "Miscellaneous Writings" (p. 118) Mrs. Eddy says, "Obedience crowns persistent effort with everlasting victory."

Profiting by Opportunity

JOHN H. HISTED

GREAT thanks are due Mrs. Eddy for her loving foresight in providing so many means by which to aid students of Christian Science in their search after Truth, and to enable them to progress in understanding with the greatest possible speed and thoroughness. Those who are not able to attend the church services are not debarred from worshiping God; for even if we are many miles away from any Christian Science church edifice, we can, by the aid of the *Quarterly*, read and study the same Lesson-Sermon which is being read to thousands of others at the same time all over the world. God is ever present, and will reveal Himself to the ranchman reading it alone on the wide stretches of the prairie, just as surely as He will to the great congregations of our cities. Many of the lectures are also published in pamphlet form, and besides the Bible, and Science and Health and the other works of Mrs. Eddy, we have the *Journal*, the *Sentinel*, and the *Monitor*, with our other literature, to afford us reading matter, any of which can be read or borrowed at the Christian Science reading-rooms.

It is evident that hearty appreciation is felt by Christian Scientists all over the world for the able endeavors of the Publishing Society, the Board of Directors, and the Board of Lectureship. The Sunday services, the Wednesday evening meetings, and especially the lectures, are as a rule attended by large audiences. The attendance at the reading-rooms is relatively small, and for the reason in part that the privileges there offered are not realized or appreciated as a whole. Blessings are sometimes lost sight of because we fail to perceive what is within our immediate reach. The writer was brought to see some opportunities afforded by the reading-room, and having taken advantage of them and been greatly helped and blessed thereby, would like others to profit by his experience; and this hope prompts the present writing.

It is not so difficult for us to realize our spiritual existence when we are at home in the morning or evening with Science and Health and the Bible open before us; but it is during the day, when we are surrounded on every hand by seeming materiality, that we are most in need of wisdom and guidance. It is at such a time that our faith and our understanding of Truth are tested. We are judged by our actions, and if we would be true to our convictions, our actions must correspond with our professions. In the midst of the rush and bustle of a busy day we long for a few moments to clear our consciousness of mortal thoughts, to gain a fresh realization of God's presence, and to become renewed with the spirit of love that for the time may seem to be lost. For many of us the reading-room might be the avenue for substantial aid at such a time of need. Ten to fifteen minutes thus spent every noon hour would help a great deal toward solving any problem of the morning and clearing the vision to meet the problems of the afternoon. We cannot all avail ourselves of this privilege, but in so far as we can, it is well worth our while; and many more surely would avail themselves of this opportunity if they knew of the blessings they are missing.

One day several months ago I stepped into a reading-room in New York city to read a certain article in "Miscellaneous Writings" by Mrs. Eddy. It was during the lunch hour, and to material sense the day was intensely hot, so that irritability had seemed to be expressed all the morning by everybody, including myself, and things in general had gone wrong. It was with a rather turbulent and unsettled consciousness that I entered the room, and the contrast between the glaring sidewalk and the coolness and quiet of the place was most pleasant. The calm, peaceful atmosphere of rest and unworldliness that pervaded the place was, however, far more refreshing to my troubled sense. An attendant immediately pointed out where I would find the book I wanted, and by the time I had read the article, all sense of heat and irritability was gone; my thought was filled with the realization of the fact that God is present and there is nothing but harmony, because God and His ideas are always normal, calm, and express everlasting love. The article read was, "Love Your Enemies." I quote the following sentence from this beautiful message, because it so vividly revealed to me at the time the unreality of all evil: "Even in belief you have but one (that, not in reality), and this one enemy is yourself—your erroneous belief that you have enemies; that evil is real; that aught but good exists in Science" (p. 10).

I left that reading-room with a new God-given strength to meet whatever difficulties might arise during the rest of the day, and since then I have made it a habit, whenever I am able, to spend at least a few moments in this way whenever I can. Lately I moved to another city, where I find that the reading-room is situated only two blocks from my place of business, which gives me the privilege of going there frequently, and for this I am most grateful. I have of late read a section of the Lesson-Sermon at noon as well as in the morning, and have found it most helpful in concentrating thought on that which is real and good.

A good way to express our gratitude for all the opportunities placed in our path is to take advantage of them, for thus we shall fit ourselves more thoroughly to be true and practical Christian Scientists.

Enlightenment

MOLLY J. ALLURED

IN the prophecy of Isaiah we read: "The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined." Before we knew of the truth as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures," many of us walked in darkness, because of our belief in material laws, so called, laws of health and of sickness, and that they had power to create and to destroy. The constant dread and fear which this belief brought in its train, made our plight a sorry one by reason of its utter hopelessness. As understanding grows, however, through study of the law of Life as taught in Christian Science, it enables us to demonstrate with assurance and certainty the truth of being, to know that "the flesh profiteth nothing," Spirit alone having all power. Then we are set free from the bondage of fear.

In Science and Health (p. 255) Mrs. Eddy says, "'Let there be light,' is the perpetual demand of Truth and Love, changing chaos into order and discord into the music of the spheres." This sentence was brought vividly to thought some time since, when traveling over the St. Gothard railway. The morning was gray and cold, and everything was hidden under a heavy mist that entirely obliterated the mountains. Entering the tunnel under these weather conditions, sunshine seemed very far away. The time occupied in passing through

Digitized by Google

the tunnel was about twenty-five minutes, and as the train rushed along the noise was so great that the travelers with one accord lapsed into silence.

Thought was busy, however, in spite of the darkness and noise, and the writer was reminded of the time when Christian Science was first brought to her notice, when darkness and discord seemed to be in her life. Emerging suddenly from the tunnel, the carriage was flooded with a blaze of sunshine, and we looked out on to a new world. The sky was cloudless, and the mountains stood out boldly, the snow-clad peaks gleaming in the bright sunshine. The hillsides were covered with vineyards, whose leaves, glowing in the rich tints of autumn, contrasted strongly with the dark green foliage of the cypress trees. The scene was impressively beautiful. We had passed out of darkness into light, and we were reminded of the gratitude due Mrs. Eddy for the wonderful revelation of Truth given to the world in Christian Science, making the journey from sense to Soul possible here and now. No matter how dark the outlook, nor how apparently difficult the problem with which we are faced, there is a way out of the bondage of material sense into the light of spiritual freedom and peace. Christian Science shows us this way, and if we are patient and honest in our search for truth, we shall find it and walk therein, reflecting as we go the love that the Father has for all mankind.

And so thought ascends in a pæan of praise to the Giver of all good, and we are impelled by a sense of gratitude to go up higher in the scale of being, rejoicing in the opportunity to let our light "so shine before men," that they may glorify our Father which is in heaven, the Father who is infinite Love, and whose tenderness is for all who put their trust in Him and thus realize their spiritual sonship.

Spiritual Vision

HELEN HAYDEN HILTON

I WOULD like to speak of the first time I felt the healing touch of the Christ in Christian Science. When a very young girl I was sent away to school because of the lack of educational advantages in the small town where my parents were then living. During that time I was told by physicians and specialists that unless certain impairments of the vision were corrected, I would be totally and hopelessly blind in a few years. Instead of being corrected, however, these difficulties grew worse until my last year in school, when at the age of nineteen the darkness to which I had been doomed began to fall about me so rapidly that much of the time I should have spent in school I was shut away in a darkened room.

My mental condition at this period was most unusual for so young a person, and I wish to speak of it, because the mental state is the only one to be considered. When scarcely more than a child, I had joined a church, because it was according to "the traditions of the elders" to do so. But as soon as I learned to think for myself, I thought my way straight out of it, so that at the age of nineteen I had arrived at a state of complete skepticism regarding every bit of religious doctrine I had ever received. This was specially terrible to me, because I came from a family of churchmen who had been pioneers in founding and building up one of the well-known denominations of our present day, so that by heritage, training, and association I had been thoroughly equipped with religious teaching. I suppose, however, that the independence of thought which caused my forefathers to depart from the prescribed teachings of their day, served me in rejecting the teaching they had built up. At any rate, I did reject it.

I did not, however, lose my belief in God. In fact, the more I rejected current theology, the more I longed to know God and the more I believed I could not see Him. Then the more I believed I could not see God, the more I believed I could not see anything; hence the blindness which the doctors called physical. I was comparatively indifferent to what the doctors said, terrible though it was. The thing which dominated my thought was the longing to know God. Now the beatitude says, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled;" *and when* I had reached the point where with all my *mind and heart* I longed to know God, divine Love heard and answered my cry for understanding, and through one of His little ones presented to me for the first time the definition of God in Science and Health.

This truth about God was the Spirit of God moving upon the darkness of my unbelief, declaring, "Let there be light: and there was light." In that light I saw,—saw God, man, "a new heaven and a new earth." From that moment I was healed, and from that moment I was a Christian Scientist. The best Christian Scientist in our ranks today has yet to learn a tithe of what God has wrought for this age through the teaching of Mrs. Eddy. But those who know it best are carrying on, through Christlike living and faithful work in healing the sick, the redemption of the world from sin, disease, and death.

[Written for the *Sentinel*]

The Ego God

ELIZABETH EARL JONES

How golden is the sunshine that coaxes out the flowers!
The sky is blue with fleecy clouds, the birds sing in the bowers,
While children laugh in pure delight and love the happy hours:
Oh, life is blooming everywhere, in gleams and glimpses glad and fair;
We see it in its varied sheen, but back of all is Life unseen,
And Life itself is God.

How reverence we the honest heart that dares to stand for right!
Our land is full of monuments to liberty and light;
We've cherished aye the Christ-idea, throughout the world's long night:
Now, truth is speaking everywhere in hieroglyphics grand and fair;
We know it through God's changeless laws, but back of all is Truth the cause,
And Truth itself is God.

How tender is the mother-love that teaches babes to stand;
How comforting the comradeship that prospers hand in hand!
How holy is the unselfed heart that points to "promised land"!
Yes, love is glowing everywhere, in kindly deeds and accents fair;
We feel love's hallowing touch entwine, but back of all is Love divine,
For Love itself is God.

No more seems God a distant king to whom we prostrate pray,
No more a cold abstraction must we tremblingly obey;
But evermore encompassing, and lighting all our way,
Is this glorious All of being, good,—Life, Truth, and Love now understood;
We feel His healing presence, power, with us every passing hour,—
Blest trinity,—one God.

Selected Articles

[Judge Clifford P. Smith in *The Herald*, Greencastle, Ind.]

The sermon delivered by an evangelist at Greencastle, as reported in a recent issue, contains several references to Christian Science which show that he was tempted to speak without knowledge. The propriety of an attack on Christian Science by a spokesman for other denominations may be left to him and to his employers, or it may be referred to all members of the community who are able to discern the signs of these times. The majority of the people are likely to hold that one who does not want Christian Science for himself is not thereby licensed to hinder other people who do.

In the present case, the attack consisted chiefly of the speaker's personal opinions, so expressed as to be liable to acceptance for statements of fact. For example, the statement that Christian Science is a new name for Buddhism, cannot be more than a personal opinion; it was evidently uttered as a mere matter of invective. Christian Science and what is commonly called Buddhism are not the same, or even similar.

Any one who will read "Science and Health with Key to the Scriptures" by Mrs. Eddy, will find that Christian Science is based on the Bible no less than are the faiths which differ from it and from one another. This book, the Christian Science text-book, can be found in most public libraries or in any Christian Science reading-room; and the sincere reader can observe for himself that Christian Science is simply an interpretation of the religion which was taught and practised by Christ Jesus. There are many interpretations of his teaching and example; hence it is fairly to be concluded that Christian Scientists prefer the one presented through Mrs. Eddy's writings, because they have found it most satisfactory. No compulsion rests upon a Christian Scientist concerning his choice of teaching or preaching, other than the force of reason, revelation, and demonstration.

This evangelist's public statement respecting the former church relations of the members of The Church of Christ, Scientist, evinces but little knowledge of the actual case. Christian Science is distinctly Christian. It has therefore appealed to many people from the different variations of Christian faith, but it has been accepted by a considerable number of Jews as well as by many thinking men and women whose concept of God had not previously been satisfied by the creed or doctrines of any church.

The attitude of a Christian Scientist toward the item of human experience called death is simply the view inculcated by original and unadulterated Christianity. When Christ Jesus said, "If a man keep my saying, he shall never see death," and when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he lifted up an ideal which will sooner or later draw all men. But no one has been drawn to it by losing sight of its perfect Principle, or by accepting mortal beliefs as if they were the living truth. The truth of man's being exists; it has now become known in a practical degree; and "first the blade, then the ear, after that the full corn in the ear" will be the manner of its perfect attainment.

❖

[John L. Rendall in *The Sun Herald*, Lime Springs, Iowa]

There has recently come to my notice a pamphlet which has been assiduously circulated in your locality, the title being, "Christian Science and Christianity Compared: Twenty Fundamental Differences Clearly Proven." A careful reading of this pamphlet convinces me of two things: first, that its author has not in the least grasped what Christian Science is teaching; secondly, that the supposed differences which he calls fundamental, are purely hypothetical. What he intends to convey is, that Christian Science differs in some respects from orthodox theology. This I readily concede, but I emphatically deny that it differs in any degree from fundamental Christianity.

The critic's first point of contention is: "She [referring to Mrs. Eddy] calls God a principle." This is misstatement number one. Mrs. Eddy calls God "Principle," or "the Principle of the universe, including harmonious man" (Science and Health, p. 276). The term "a principle" is just as objectionable to Christian Scientists as would be the term "a god," for from the Christian Science view-point there is but one absolute Principle, or God, the creator of all. Misstatement number two reads: "Again she contradicts the Bible regarding the creation record." I wonder which of the creation records this critic thinks Mrs. Eddy contradicts. There are two distinct and varying accounts in the Bible of the creation and origin of man. When he reads Science and Health understandingly, he will find that Mrs. Eddy accepts and emphasizes the record of spiritual creation as given in the first chapter of Genesis.

The critic's third objection states: "She contradicts the Bible regarding the creation of man." He notes, however, the fact that Mrs. Eddy adheres strongly to the Bible in regard to the creation of man as related in the first chapter of Genesis. This being true, it is impossible to accept logically and consistently another account which is entirely at variance with it. In a fourth misstatement he says: "She denies the Bible regarding the existence of man." In "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read: "Man, made in His likeness, possesses and reflects God's dominion over all the earth. Man and woman as coexistent and eternal with God forever reflect, in glorified quality, the infinite Father-Mother God" (p. 516).

In misstatement seven we find: "Again Mrs. Eddy denies the Bible regarding the origin of sin, for she makes God the originator of sin, sickness, and death." How this critic could possibly have read into Science and Health something so utterly at variance with its teachings as the above, is inconceivable. There is not one statement in the Christian Science text-book that will in any degree justify such an utter misconception of Christian Science. What Mrs. Eddy makes very clear and plain is, that the only supposed origin of sin is in evil mortal belief. She teaches that the sum total of evil, sin, disease, and death are comprised within what St. Paul terms "the carnal mind," of which he states, "To be carnally minded is death; but to be spiritually minded is life and peace." Mrs. Eddy also teaches that the destruction of sin, sickness, and death is a purely mental process, even the attainment of the spiritual-mindedness above referred to. This is consistent Christianity.

The basis from which our critic derives his conclusions is intensely materialistic, because of the literal interpretation of passages in Scripture which were never intended to be taken literally. In this literal interpretation the spiritual significance of the Scriptures is obscured. Mrs. Eddy, through her deep spiritual insight, has taught the spiritual meaning of the Scriptures to such an extent that the Bible has become a new book to hundreds of thousands of people who formerly had failed to find in it that which was most needed for their spiritual welfare, as well as for the physical, mental, and moral healing and regeneration, the possibility of which the Bible teaches.

Between these two views there is no point of agreement. Christian Scientists are not therefore trying to reconcile their

Digitized by Google

teachings with those of orthodox theology, but they are consistently endeavoring to follow the teachings of Jesus Christ, and to practise Christianity as he taught it, and as demonstrated by his disciples and apostles. That they have succeeded to a wonderful extent in this endeavor is attested by the fact that hundreds of thousands of people are now alive and well, living happy, contented, and harmonious lives, full of gratitude to God for His infinite goodness, who formerly were sick and discordant, almost without God, and without hope in this world. This great multitude of people give overwhelming testimony to the fact that Christian Science in its teachings emphasizes and practises fundamental, basic Christianity in the highest concept of what this means, by healing the sick and reforming the sinner, and by giving joy and peace and an abiding conviction of God's infinite ever-presence and power to all mankind.

For one to attempt to belittle the cures in Christian Science is as hopeless a task as can be undertaken, for the testimonies of healing are irrefutable and irresistible. Moreover, they are so thoroughly attested that even the most insistent critics of its teachings have in many instances become convinced,—and why should not this be so? Surely "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." Surely God has not so changed as to become a "respecter of persons." Surely the statement, "Jesus Christ the same yesterday, and today, and forever," has not been abrogated. If it be true that God ever helped and saved mankind, it is true today, for that which is true is eternally true. It is said of God that with Him "is no variableness, neither shadow of turning." This is the very plain teaching of Christian Science.

✧

[S. T. Downs in *Indianapolis* (Ind.) *Times*]

A recent edition of your paper, in reporting a sermon by a clergyman, quotes him as making remarks that show a lack of correct information as to the teachings and practice of Christian Science. Our brother seems to be very much grieved that Christian Science is proving so attractive to members of other churches, for they are turning to Christian Science in large numbers. Perhaps an explanation of the cause for the lament is to be found, in part at least, in the spectacle of a Christian minister substituting for the Master's commands to "preach the gospel" and "heal the sick," an attack upon a noble woman whose work has brought forth the commendation of many of the world's greatest thinkers, some of whom, while not accepting her teachings, regard her as humanity's real benefactor.

Christian Scientists acknowledge Mrs. Eddy as the Discoverer and Founder of Christian Science, but there is nothing in this acknowledgment that deifies her in the slightest degree. It is only natural that those who have been healed of sin, physical suffering, and mental inharmonies, should experience and express a strong sense of love and gratitude for the one whose tireless devotion to the task set before her furnished to them the means of freedom.

It is a fact, that Christian Science churches, as a rule, are filled to their capacity, and it is not infrequent that they are unable to admit all who desire to attend. The growth of Christian Science during the last year is the greatest in its history. This has not been brought about through any form of entertainment in the service, by concerts, oratory, amusements, or attacks on anybody or anything except sin, sickness, and human misery; but there are hymns, prayer, and readings from the Bible, with correlative passages from "Science and Health with Key to the Scriptures" by Mrs. Eddy. At the Wednesday evening meetings testimonies of healing are given.

Christian Science teaches that God could not and did not create sin or disease, and this teaching is based upon a spiritual understanding of the Scriptures.

✧

[Ezra W. Palmer in *The Gazette*, Colorado Springs, Col.]

In a recent issue, under the caption "How to Keep Well," by Dr. ——, advice was given that "ill-balanced, self-centered, morbid people" needed mental therapeutics, and that they could get it from studying "Key to the Scriptures." Beyond doubt this is a reference to "Science and Health with Key to the Scriptures," the text-book of Christian Science.

The inference that Christian Science is of value to "ill-balanced, self-centered, morbid people," is a reference which might be interpreted in several ways. If the medical critic who wrote the article for *The Gazette* is really sincere in the expression that Christian Science is of assistance to people of unbalanced minds, he is conceding more than *materia medica* has been inclined to grant in the past. On the other hand, if his statement is intended to convey the inference that Christian Science is available only for nervous and mental difficulties and for people on the verge of insanity, he is very much mistaken. Christian Science has proved its healing value, not only in nervous and mental difficulties, but for all functional and organic diseases. In fact, there is practically no disease known to the medical profession which has not been healed through the prayers of Christian Scientists.

The medical critic is further in error when he infers that Christian Science is a species of "mental therapeutics." Mental therapeutics is usually defined as the action of hypnotism or mental suggestion. In other words, it is one human mind acting upon another through will-power. With this process Christian Science has absolutely nothing in common. Christian Science recognizes God as the divine Mind, and through knowing and understanding this Mind the healing is accomplished. This was the manner in which Jesus healed. He ever reflected the infinite Mind, and presented an exact, scientific understanding of God. The apostle Paul referred to this spiritual healing and scientific unity with God when he said, "Let this mind be in you, which was also in Christ Jesus."

✧

[Avery Coonley in *The Sentinel*, Chicago, Ill.]

Kindly grant me the courtesy of sufficient space for the correction of some inaccuracies of statement with regard to Christian Science which appeared recently in *The Sentinel* in an article entitled "The Jew and Christian Science," reprinted from the *Jewish Chronicle*.

In the opening paragraph the writer refers to the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as "a new Bible." It is not a Bible, and is never so described by Christian Scientists. No Lesson-Sermon is ever given in a Christian Science church which does not embody liberal reading from the same Authorized Version of the Bible that is used by other denominations. In endeavoring to refute the Christian Science view of matter, our critic does not make much progress. Christian Scientists understand the belief in matter to be a mistake, an entire misconception of reality. The critic's admission that "what things are in themselves, our sensational perceptions can never inform us," backed up by the findings of the most advanced physicists, who now analyze matter into centers of force, does not leave him a very firm foundation upon which to base an argument. Since force is not matter, the

Digitized by Google

physicists themselves have explained it by explaining it away. If this is all the stability which can be assigned to matter, there is little basis for proving the actuality of disease.

In describing Christian Science as a "pantheistic creed," the writer of the article in question entirely mistakes the basis of Christian Science, which denies the existence of the universe as matter, recognizing the material conception of it to be erroneous and the true universe to be in fact spiritual,—the reflection of God. Since the Christian Science religion and the practical demonstration thereof in the healing of sin and sickness are based upon the omnipresence, omnipotence, and actuality of God as Spirit, it not only is clearly not pantheistic, but is the very antipode of pantheism. Where the writer gets the impression that Mrs. Eddy or Christian Scientists "denounce medical science as a huge fraud" I cannot imagine. They have found that God more effectually heals their diseases than does the physician, and therefore quite naturally they prefer to rely upon God in case of sickness; but they do not denounce either the physician or his work.

Our critic unfortunately falls into an error which was years ago quite usual, in undertaking to dispose of the healings of Christian Science as "faith cures" confined to derangements of the nervous system. The day has passed when Christian Science healing can be thus lightly brushed aside. It is of too long standing, too well authenticated, and has cured too many serious cases of disease to be ignored. If this aspect of Christian Science is to be discussed at all, it must be as one of the world's great healing agencies, having to its credit thousands of cures of cases which had been given up by the physicians as hopeless,—an honorable record of over forty years' standing.

❖

[Thomas F. Watson in *San Francisco* (Cal.) *Argonaut*]

The *Argonaut* contains an article on the "Go-to-Church Movement," in which you account for the wonderful prosperity and growth of Christian Science by saying: "Christian Science . . . requires of its communicants no adhesion to outworn creeds. The Christian Scientist may believe what he likes."

Now, while we appreciate the spirit with which this writer handles the subject, giving Christian Science credit for accomplishing much good by giving, as he puts it, a "certain spiritual and moral uplift" to the individual, still it is quite misleading to state that "the Christian Scientist may believe what he likes." While it may be said that Christian Scientists have no "doctrinal beliefs" (Science and Health, p. 496), yet in order to join the Christian Science church one has to subscribe to the tenets as given in the Church Manual (p. 15), and in Science and Health (p. 497). The first tenet reads as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." The second tenet, an outgrowth of the first, reads: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." And the sixth is as follows: "And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure."

The Christian Scientist is expected to live his religion, thus proving his words by his works. Nevertheless, as long as the Christian Scientist has to eat and pay rent as do others, he will have to be paid for his services as are other people, if this is the point to which our friend refers when he accuses Christian Scientists of having "too close an alliance with the rules of thrift," and also charges them with turning out too many "eagerly thrifty practitioners." It may be stated that the Christian Science practitioners have all done much of charity work among those who have no means. The Bible says, "The laborer is worthy of his hire." In Jeremiah we read: "Woe unto him that buildeth his house by unrighteousness, and his chambers by wrong; that useth his neighbor's service without wages, and giveth him not for his work."

❖

[Frank Bell in *The Truth*, Scranton, Pa.]

In a recent issue an evangelist is permitted to express his personal opinion that Christian Science is a humbug. He is mistaken. Humbug is defined in the dictionary as, in its milder phases, a trick or hoax, and in its more serious aspects as a fraud or an imposition. Now, in the very nature of the case, Christian Science could be none of these, for the reason that it is the one system of religious teaching which makes no call whatever upon the credulity of its adherents, but leaves them entirely free to base their conclusions upon that which is demonstrated in their individual experience.

The Christian Scientist is not required to accept anything in blind faith, to subscribe to a creed or endorse a dogma. His convictions are expressed, not in sets of words, but in the results attained through the application of his religion. In brief, Christian Science asks no one to believe that which is not capable of present proof. Inquire of the Christian Scientist why he is one, and he is not likely to reply that it is because his parents were Christian Scientists, or that one really should belong to some church, because he fears what may happen to him in the next world, etc. The answer more probably will be that Christian Science has shown him how to overcome sin, to heal disease, to incorporate the golden rule in his conduct, to think clean thoughts, to be more charitable and kind, to be more efficient and less afraid; being and doing these things not from a sense of duty, but through growth in love for all that is genuinely good. These are scarcely the fruits of humbug.

The Sower

EUGENIA M. FOSBERY

I PLANTED once a seed and went my way.
Time passed; the cheerful sun shone down,
The rain did play upon the fallow ground.
I traveled far, and when again one day
I thither came, lo, there a tree I found
With leaves adance, and in the branches light
That clasped the sky the singing birds did sway.

I planted once a seed of truth, and went my way
With eyes agaze upon the glory of the sky.
I tarried not, but fervently within my heart,
"O Lord of Life, give Thou the increase," did I pray—
I knew not how the seed above the soil would start,
Or when 'twould grow into a tree with fruit on bough
To gladden all the wanderers who passed that way.

In after years with joyous smile one greeted me;
"The truth that thou didst voice," he cried, "hath
made me free!"

Editorial

"Ye shall know the truth"

Among the many misconceptions of Christian Science, one of the most prevalent is that which regards it as being simply a willingness on the part of its adherents to be optimistic about the every-day affairs of mortal existence. It is true that those who have gained through the study of the Bible and Science and Health the strength and assurance which an understanding even in a degree of the omnipotence of Truth bestows, carry about with them an atmosphere of peace and good cheer that cannot fail to convey to those with whom they come in contact the impression that Christian Science does enable its followers to meet with equanimity circumstances which to mortal thought would seem unendurable. It is quite natural, therefore, that those who have seen the truth thus tested should desire it for themselves when in deep waters, though their knowledge of the truth and its application is often so vague as to lead them into many mistakes. It does not surprise us so much, then, when we hear, as we frequently do, the remark, "I am trying Christian Science," made by some one who we have reason to think has no knowledge of what Christian Science really is.

It is quite apparent to those who know out of their own experience what are the teachings of Science and Health and what they can accomplish for the relief of the sick and the reformation of the sinning, that many times the person making this remark has merely fallen into the popular belief that to be an optimist is to be a Christian Scientist. Christian Scientists, however, have learned that optimism and the simple belief that all is good, will not do the work that Christ Jesus did, and that there must be constant prayer and a scientific demonstration of the allness of good, the omnipotence and omnipresence of divine Mind, thus bringing to light the consequent nothingness of evil, in order to improve human conditions. The mere determination to be happy, despite one's environment or condition, will not of itself bring happiness. The conditions that have produced the inharmony of body or mind must be remedied—the cause removed—before the effects can be right.

Frequently, too, we have heard persons say that they were trying Christian Science, when in fact they were doing nothing more than to abstain through will-power from the taking of drugs. Will-power is not Christian Science, neither is Christian Science will-power, and the optimism of Christian Science is not the cause of the general good health and prosperity which attend the practice of its teachings. Good health and prosperity are simply effects, and so is the ability to be optimistic in the face of what seems to be a disheartening state of affairs.

Mrs. Eddy has defined Christian Science on page 1 of "Rudimental Divine Science," "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony." And on the same page she writes of this Principle: "It is God, the Supreme Being, infinite and immortal Mind, the Soul of man and the universe. It is our Father which is in heaven. It is substance, Spirit, Life, Truth, and Love,—these are the deific Principle." From this it will be seen that Christian Science is not haphazard; it is not something lightly to be taken up and as lightly laid aside; it is on the contrary the most serious and important subject before humanity today; and a thorough study of its Principle and rules is as necessary to its understanding and demonstration as similar study is necessary to the understanding and demonstration of any science.

Christian Science requires that those who follow it shall know, as Jesus taught, "the only true God," the giver of eternal life, and that they shall know Him so thoroughly that they may apply this knowledge, not only to their own affairs, but also to the betterment of conditions for others who are in need. Those who gain this understanding find for themselves that the world offers nothing that is so well worth while; that in the keeping of the commandments there is "length of days, and long life, and peace,"—every *good thing* that the heart of man could desire.

Archibald McLellan.

❖

Evil's Unreality

In view of the seeming immensity of evil, its significance to human experience and its persistence in world history, it need not surprise one that many should have reached the conviction that it must have a place in the divine plan, and affirm that there is warrant for this conclusion in the fact that moral achievements are a direct fruitage of resistance to it. The claim is, that as joy could not be known for joy were it not contrasted with sorrow, so "if there were no such thing as evil there could be no such thing as goodness;" evil is therefore "indispensable" to a moral world.

Thus John Fiske and others contend that as hearing and sight are dependent upon an indescribably rapid succession of contrasts, the alternate rarefactions and condensations of air or ether, so in its very nature all knowledge is the result of "minute subconscious discriminations of likeness and unlikeness." It is thus argued that without the background of evil, good would be undefined, characterless, and indistinguishable; hence unknowable. This sounds plausible, in harmony with the physical facts, and it seems to honor good in assuming that its gain is well worth the calm endurance of the awful tragedies of human suffering as pertaining to the best order that Love could devise.

In the light of Christian Science, however, its adherence to the ideality and unvarying consistency of the divine nature and activities, this explanation of evil is seen to be utterly untenable. If, as affirmed, evil is indispensable to good, the service it renders must determine its character, and it can no longer be regarded as evil, as something that ought not to be; hence the moral discrimination between good and evil must be abandoned, the basis of their contrast, namely unlikeness, given up. This does not deny that evil is to be resisted, since as claimed this is also a part of divine order; but it certainly does make it out of keeping to denounce it as having no rights. The teaching of the Scriptures, however, is certainly at-one with the deepest moral sense of the race in declaring that evil should be resisted as an offense to justice and truth, an abomination for which God has neither use nor tolerance. If, therefore, evil is necessary to moral education and achievement, this Scripture teaching seems to become a pretense and Christ Jesus a deceiver regarding it.

In harmony with the almost universally accepted teaching of the divine immanence, Christian Science declares that whatever serves the divine purpose has place in the divine consciousness; that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). It is apparent, therefore, that if evil is thus essential to the human attainment of moral character, it must be a part of the divine nature; and one of the most fundamental assertions of the Bible and of Christian faith, namely, that God is too pure to behold iniquity, can no longer be maintained. It is true that the acceptance of the reality of the material order logically leads to this explanation of evil, and it is equally true that it effectively disposes of good, and lands the truth-

Digitized by Google

seeker in chaos. It adequately explains the devil, but in doing so it has dethroned God.

On the other hand, having declared that evil is unreal, that it has no existence in God's kingdom, Christian Science is entirely consistent in refusing to undertake to explain it. The effort is not only profitless, it involves contradiction, since explanation pertains only to that which is, and not to that which is not. In teaching that, regardless of the demand of the mortal concept, in God's world darkness is not essential to light, ugliness to beauty, ignorance to wisdom, and hate to love, Christian Science is not only true to the implications of all the Scriptures, and especially to those involved in the destruction of evil which Christ Jesus effected, but it is true to the profoundest intuitive sense of the Christian world, which has always separated between heaven and hell, and anticipated a time when evil will be no more.

To the Christian Scientist, proof of the falsity of the asserted reality of evil is supplied by every healing of sickness and sin. Individual experience is the epitome of world history, and he who through Christian Science has found the freedom of good in the overcoming of evil, has gained a satisfying assurance that "in him [divine Truth] is no darkness [no evil] at all."

JOHN B. WILLIS.

Healing and Gratitude

THERE is no denying that Christian Science awakens in the human mind new and healthful sentiments, and quickens those that already exist. This is especially noticeable with respect to gratitude, thankfulness for relief from suffering usually being its first manifestation. Gratitude and healing may indeed be called inseparable; they are in fact so closely related that it is not always easy to determine which is cause and which effect. It would be quite impossible to think of one's being healed in Christian Science without being grateful for the healing, and the intensity of the thankfulness would really measure the extent of the healing.

This does not in any way refer to wordy gratitude, for in some instances we had best follow the advice of our revered Leader, when she bids us "put the finger on the lips and remember our blessings" (Science and Health, p. 3). We must not, however, fail to "remember," and if we find our gratitude at all lukewarm, it were well to seek with wholehearted devotion for more spirituality, for this is what brings the healing which makes one "every whit whole." The story of the ten lepers who came to Jesus and besought his aid is of intense interest to students of Christian Science, because they know that the divine Principle manifested in all the work of Christ Jesus is as truly available today as then; also because this demonstration is truly typical of the healing work undertaken and accomplished in Christian Science. Of the ten men, nine were presumably Jews, familiar with the requirements of Levitical law, which seem to point to the possible healing of this dreaded disease; but in their case nothing beyond their segregation had been reached, until Christ Jesus responded to their pitiful appeal.

As we read in Leviticus the regulations for the leper, we find that in most cases the priest's office was to pronounce the man unclean, but there is no hint of this in Jesus' treatment of these unfortunates. We read that on one occasion he put forth his hand and touched the suppliant and pronounced him clean. In the case of the ten men it seems that there was no physical evidence of their cure when they were started on their journey to the priest, but it came with their obedience and the grain of faith implied thereby. To one of them, however, more than this came. It was that spiritual baptism which so flooded his consciousness that he returned to Jesus, no longer pitifully crying for help, but with a loud voice glorifying God. All the rest of his earthly journeyings were as nothing, whether characterized by joy or sorrow, compared with these steps which brought him to the feet of the Master, steps quickened by the awakening of that abundant sense of life which Jesus had come to bestow. It was meet that the first-fruit of his gratitude should be offered to the divine Love that had healed him, and then that it should be poured out upon the one who had made known to him the truth of man's being, by healing him.

That Jesus looked for gratitude as a proof that real healing had taken place, is evident from his inquiry as to the nine who had been cleansed but who had not returned to give thanks. His regret was not on his own account, but that none save the Samaritan were ready "to give glory to God." The one who was grateful was pronounced whole by Christ Jesus, and this should never be forgotten by us as Christian Scientists. If we cannot give thanks for physical healing, we can at least rejoice and give thanks that the light of Truth has dawned anew upon the world, and that our share of this priceless heritage is equal to that of any other child of the loving Father. Paul and Silas sang their thanks for Truth in the depths of a dungeon. Though their flesh was lacerated with the cruel scourge, their gratitude was strong enough to shake the very foundations of the prison, to open all its doors, and to loose every one's fetters.

It is surely both strange and sad that today professed Christians should think so much upon bodily conditions, and then wonder why sometimes the healing comes slowly. They should instead see that a true sense of gratitude and healing will enable them to prove the all-power of divine Love.

ANNIE M. KNOTT.

Lecture in The Mother Church

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science, by Clarence W. Chadwick, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Friday evening, Jan. 1, 1915, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

WALLA WALLA, WASH.—For a number of years it has been the practice of First Church of Christ, Scientist, to maintain a booth at the Walla Walla County fair, for the purpose of distributing authorized Christian Science literature, answering inquiries concerning Christian Science, and affording those who desire such, an opportunity to read the periodicals. The proof came on every hand that it is not always money that is needed to maintain the various activities in the cause of Christian Science, but always loving service. There were ordered for distribution 600 *Monitors*, and there were donated 244 *Sentinels*, 61 *Journals*, and 56 *Monitors*. At the close of the six days only 140 *Monitors* remained on hand, making the total number of pieces of literature distributed 821. Many were heard to praise the *Monitor*.

Correspondence.

FARGO, N. DAK.—The Christian Scientists have contributed to many cities an architecture as novel as their theology, and if the latter is as sound as the former is beautiful, it will surely pass muster. The church they have been erecting in Fargo is near enough to completion to show that there is nothing superior to it in the city, if there is in the state.

Daily Courier-News.

Digitized by Google

ALTOONA, PA.—The two former Christian Science organizations in Altoona have consolidated into one organization, to be known as First Church of Christ, Scientist, Altoona, and for the present they will hold their services and maintain their reading-room and free circulating library in their rooms on the third floor of the Lippman Building, corner of Eleventh avenue and Thirteenth street. The Christian Science movement is growing very rapidly here.—*Altoona Mirror.*

AKRON, OHIO.—Members of the congregation of First Church of Christ, Scientist, who have been holding services temporarily in Music Hall, will have a new home to worship in by the early part of next year. Church directors are now having plans drawn for a forty thousand dollar structure, which will be erected at Fir street and Buchtel avenue. It will be a brick fire-proof, stone-front building, and will seat six hundred and fifty people.—*Akron Beacon Journal.*

EAST ORANGE, N. J.—Early last spring First Church of Christ, Scientist, moved from a hall to a little colonial cottage on Main street which had been altered to meet their needs. The attendance at the services has more than doubled, the membership has increased, and the Sunday school is steadily growing. There are more calls for our text-book, "Science and Health with Key to the Scriptures," than the loan library can supply.—*Correspondence.*

MELBOURNE, AUSTRALIA.—The proposed new premises for First Church of Christ, Scientist, are to be erected on land at the intersection of St. Kilda road and Dorcas street, South Melbourne. The façade to St. Kilda road and Dorcas street has been designed in a treatment of modern classic and in accordance with the styles adopted in the United States for churches of this denomination. The auditorium, which is of amphitheater design, is planned to seat six hundred, and the Sunday school room some three hundred.—*Correspondence.*

ALBERT LEA, MINN.—The local Christian Scientists have purchased the fine site at the corner of Adams avenue and Clark street—the Morin estate—for nineteen hundred dollars, and they will erect thereon a modern church edifice. The work of building will begin early in the spring.

Albert Lea Tribune.

OAKLAND, CAL.—Preliminary plans of the new Second Church of Christ, Scientist, have been prepared. The structure, which will be put up at Thirty-fourth and Elm streets, near Telegraph avenue, will cost seventy-five thousand dollars.—*San Francisco Examiner.*

The Lectures

Durango, Col.

A good-sized audience heard the lecture on Christian Science given at the Gem Theater by William R. Rathvon. The lecturer was introduced by the Rev. R. S. Fairchild, pastor of the First Methodist Episcopal church, who said:—

It is a great pleasure to me to respond to the request of your committee that I make the remarks introductory to the lecture of the evening. Known among you as the pastor of the Methodist church, the occasion may warrant a few remarks that are in their nature more or less personal. Though not of your denomination, I assure you that I entertain for your work the kindliest feeling. In this day, when the lines of denominational markings are so dim, the spirit of brotherhood extends over all. It has been my fortune so to have grown up that I can express little denominational preference. Born a Methodist, educated in a Baptist university, affiliated for some time with a Presbyterian choir, spending the first few weeks of my ministry in the Congregational church, numbering among my best friends and most attentive auditors some of the Christian Science faith, it were difficult to express preference.

All denominations have in the past served their various purposes in a great way. At their inception they emphasized different and important phases of truth, but today their streams, as they progress, are found to be uniting, and to be flowing in the same great channel of truth. Every denomination has made its contribution to the great whole, and you Scientists should be very proud of your contribution. The greater truths which you have emphasized and are emphasizing, for the most part have been let lie dormant by others. It has been your mission to help arouse the churches from a negative work to one that is positive and constructive. Your mission has been to try so to fill the world with good things that evil should have no room. With you the text "Overcome evil with good" has been taught with added emphasis. Again, you have brought to the world with increasing attention that man's kingly realm is the realm of mind. Any church that lays great stress upon the texts: "As he [a man] thinketh in his heart, so is he;" "Blessed are the pure in heart: for they shall [or do] see God;" "Whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; . . . think on these things,"—that church does a great service to the world.

Now, we are all searchers for truth, and are winnowing it from the chaff. I for one am willing to appropriate it from whatever source found. Truth, like pure gold, is the same the world over. Prejudice should never blind our eyes to it. I am sure, therefore, that we shall all listen attentively to the speaker who comes to address us this evening.

Durango Herald.

❖

Melbourne, Australia

As a sequel to his lecture before thirteen hundred people in the Auditorium, Prof. Hermann S. Hering addressed a large meeting of business men and women in the Athenæum Hall during the luncheon recess on the following day. W. Taylor Stone, president of First Church of Christ, Scientist, introduced the speaker in a few appropriate sentences, and the address was listened to with the closest attention throughout. The audience, which included several Christian Scientists, was comprehensive and representative, ranging from office boy and young lady typist to grave and reverend seigniors of the counting-house, financial chamber, and legal and medical consulting-room. The midday address is a new departure in the lecture program of the Melbourne Christian Science church, and the result on this occasion evidenced public appreciation as well as a general interest in Christian Science. The same interest is also manifested in the large attendance at the Wednesday evening meetings, which weekly crowd the Athenæum Hall to overflowing. A press representative, present at the midday meeting, was heard to express surprise that the subject of Christian Science could draw such an audience on the floor and in the gallery, during the luncheon hour, when eminent church speakers, local as well as from the states and overseas, could only get together a scattered sprinkling in the body of the hall. The introductory remarks were as follows: —

The Christian Scientists of Melbourne have invited you here today, not to make Christian Scientists of you, but that you may have an opportunity of being told "the old, old

Digitized by Google

story" in a new and scientific language. The Discoverer of Christian Science, in her book "Retrospection and Introspection," tells us that she named her discovery Christian Science,—"*Christian*, because it is compassionate, helpful, and spiritual" (p. 25), thereby bringing into the realm of demonstrable truth the Christ-spirit, or Christ-mind. Professor Hering, in his chair at the university to which he belonged, explained and dealt with the intricacies and technicalities of electrical engineering. Today he will tell you how, in the great machinery of business life, you can demonstrate harmony, success, and progress by the utilization of mental or spiritual rules and laws. Professor Hering has not come here of his own initiative, nor has he been sent; he is here on the invitation of the Christian Science church of this city to remove misconceptions concerning Christian Science.

Correspondence.

Pasadena, Cal.

Bicknell Young spoke on the subject of Christian Science at the local church. He was introduced by Elmer Grey, who said:—

Many years ago I broke down completely in health. I had previously known a number of Christian Scientists,—in fact, was doing work for a corporation composed of Christian Scientists at the time,—but I had always felt that whereas my Christian Science friends were very pleasant people to know socially and to transact business with, they must intellectually be somewhat deficient—otherwise they would not be Christian Scientists! So when they proffered me help in my trouble, I refused it, and two years of invalidism followed. I spent months in sanitariums, took a cruise on the Atlantic and another long one to the islands of the South seas. Even after I had partially recovered my health and had broken down for the second time, I would have nothing to do with Christian Science.

I remember going into the office of a Christian Science practitioner and telling her that the only reason I had come to see her was to satisfy the entreaties of friends, and that I did not intend to take the matter up seriously, because I knew what Christian Science was and that it had nothing for me. More months of aimless drifting and fruitless living followed. Then my attention was called to the case of one who had gone through almost the same experience that I had, and who had at last found restoration to health through Christian Science. Now it happened that I had a very high regard for that person's intellect. She was a graduate of Smith College, and when I heard that one of that type had taken up Christian Science and found relief in it, I at once concluded that perhaps, after all, it was not so foolish a matter as I had for years imagined. My prejudice thus removed, I gave it some unbiased attention, and much to my surprise, and also to my great joy, I found almost instant relief.

Now, it is to remove such prejudices as this, and also to tell people something of what Christian Science really is, instead of what some may perhaps think it is, that the Christian Science board of lectureship has been established.

Pasadena Star.

Pittsburgh, Pa.

At a lecture on Christian Science at Palm Garden Park Hall, by Virgil O. Strickler, the introductory words of Norman T. Davy were as follows:—

Certain idealists have said that the highest ideals of the human mind never reach beyond their possible realization. To attain these ideals has been man's unceasing struggle through the ages. All through the Bible we find promises of the realization of these ideals, of man's eventual freedom from evil of every description. We are told that "as he [a man] thinketh in his heart, so is he." Jesus said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you;" also, "The kingdom of God is within you." How to ask, how to knock, at the door of the kingdom, and to realize its presence here and now, is the message Christian Science brings to us today.

Correspondence.

Los Angeles, Cal.

A large audience listened to an interesting lecture on Christian Science delivered by William D. McCrackan, at the Shrine Auditorium. Don E. Gilman, who introduced the speaker, said:—

Doubtless many of those present are to hear for the first time an authoritative exposition of Christian Science. To such there may naturally arise the question, What is there about this subject to attract so large an audience? An answer may be found in the words of the Master, "And I, if I be lifted up . . . will draw all men unto me." Christian Science is a "lifting up." It is "lifting" (freeing) men from the bondage of sin, sickness, and despair; it is replacing sorrow with joy, fear with courage, sickness and suffering with health and strength, evil with good. With authority it says to the struggling, strife-torn hearts of men: "Peace, be still." The same works which caused the people to throng the Master and follow him in multitudes, are causing the overflowing meetings and lectures of the Christian Scientists.

Los Angeles Examiner.

Lectures to be Delivered

Boston, Mass. (The Mother Church).—Clarence W. Chadwick, Church Edifice, Falmouth, Norway, and St. Paul streets, Back Bay, 8 p.m., Jan. 1, 1915.

Chicago, Ill. (Eleventh Church).—Bicknell Young, Logan Square Theater, Milwaukee avenue, near Logan boulevard, 2:15 and 4 p.m., Jan. 3.

Evanston, Ill.—George Shaw Cook, Church Edifice, corner Chicago avenue and Grove street, 8 p.m., Jan. 8.

Highland Park, Ill.—Bicknell Young, Church Edifice, 125 Hazel avenue, 8 p.m., Jan. 4.

Indianapolis, Ind. (First and Second Churches).—Bicknell Young, Murat Theater, 3:15 p.m., Dec. 27; also Second Church, Church Edifice, Delaware and Twelfth streets, 8 p.m., Dec. 28.

Lawrence, Mass.—George Shaw Cook, Church Edifice, Green street, 8 p.m., Jan. 4.

Poplar Bluff, Mo.—Virgil O. Strickler, Fraternal Opera House, corner Fourth and Poplar streets, 8 p.m., Jan. 7.

Providence, R. I. (First Church).—Clarence W. Chadwick, Church Edifice, corner Prospect and Meeting streets, 4 p.m., Jan. 3, and 8 p.m., Jan. 4.

Salem, Ohio.—Virgil O. Strickler, Grand Opera House, 3:15 p.m. (Eastern standard time), Jan. 3.

Sharon, Mass.—William R. Rathvon, Unitarian Church, corner Depot and Main streets, 8 p.m., Jan. 4.

Sherman, Texas.—Clarence W. Chadwick, Sherman Opera House, 8 p.m., Jan. 3.

Taunton, Mass.—William R. Rathvon, Odd Fellows Hall, 3:30 p.m., Jan. 3.

Winona, Minn.—Virgil O. Strickler, Masonic Temple, 8:15 p.m., Jan. 4.

Yonkers, N. Y.—George Shaw Cook, Warburton Theater, 3:30 p.m., Jan. 3.

Testimonies of Healing

Several years ago I heard about Christian Science as a healing agency, from a lady who had just become interested in the subject. When she told me that I could be healed through the reading of its text-book, "Science and Health with Key to the Scriptures," I laughed at the idea. I even thought that she was somewhat unbalanced mentally; but she did not argue with me, although I did my best to make her do so. I, however, wanted to read the book in order to get a better understanding of the teaching, so that if I got her into an argument I could get the better of her, and show her that she had fallen into a great error. But she was firm and I could not get her into any argument, so I temporarily gave up trying.

At that time I was in great need of physical help, as I was suffering from a number of ailments, but mental discord was the worst of all. For about two years I had been treated by several physicians, and I took their medicine many times a day, but grew worse all the time. No two of them agreed about my diseases, for each gave a different name and a different cause, until I lost faith in them all, as well as in their medicines. In my disappointed state of mind I yet believed there must be something by which I could be healed. I thought of hypnotism, so went to the library and obtained two books on the subject, written by some eminent doctors. I studied them carefully for several weeks, and also tried to practise will-power to a certain extent, and to think myself well; but instead of gaining my freedom I grew worse, especially mentally, so I lost faith in that method also.

I then started to investigate Christian Science. I attended one Wednesday evening meeting to learn of what kind of people the congregation was composed,—if they really were intelligent enough to judge between right and wrong. To my surprise I discovered that they were indeed intelligent, and not only this, but the happiest lot of people I had ever seen in any gathering. This impressed me very much. Every evening thereafter I borrowed my landlady's copy of Science and Health, which I read from cover to cover. There were some things in it which I could not account for at that time, but I was confident that it was due to my lack of understanding in regard to those things; so I accepted the whole, as it were. Next, I decided to take treatment in order to get rid of a chronic throat affection which had tormented me day and night for about four years. As a result, in about five weeks my throat was well, and I was also healed of rheumatism, stomach disorder, kidney trouble, and liver complaint, besides a chronic headache which seemed unbearable at times, also bleeding at the nose. I had worn glasses for about two years, but after several months' study of Christian Science, I laid them aside.

After experiencing all these physical benefits, I began to study the Bible and Science and Health with a great desire to know how and in what way the healing is accomplished, because not only had I been relieved of the physical ailments, but I was happy mentally; all day long I could sing hymns which I learned while attending the church meetings. I then began to work to get rid of using profane language. This seemed very hard at first, and it was nearly two years before I felt that the habit had been entirely overcome. I have also been helped in financial matters, as well as in a general business way.

I have great reason to be thankful for the physical benefits, but they are not to be compared with the peace and contentment of mind which I have gained through the study of Science and Health. It has made me more kind and unselfish toward others; in short, a better man. For these many blessings I am indeed thankful to God, and I am grateful to Mrs. Eddy for her untiring effort to give us this healing truth.

M. Peia, Los Angeles, Cal.

❖

[Translated from the German]

Through the understanding which the study of Christian Science has brought me I have been completely healed of a severe stomach trouble, of rheumatic pains, and of the effects of an eruption. Before I came to Christian Science I suffered a great deal from the effects of tobacco, as I used to smoke very heavily. My vision became blurred, I had spells of dizziness, and was very excitable. I am now free from these troubles and have no desire for tobacco.

I am indeed grateful for these instances of healing, but still more so for my spiritual growth in divine Love. For all the good which I daily receive through Christian Science I give thanks to God, and am deeply grateful to our beloved Leader, Mrs. Eddy.

Paul Rusch, Berlin-Tempelhof, Germany.

❖

It is with a heart full of gratitude that I tell of some of the blessings which our family have received through the study of Christian Science. On one occasion I was protected in a gasoline explosion, which occurred while I was cleaning a garment. The garment, being saturated in gasoline, became a sheet of flames in my hands, completely enveloping me. Every burnable substance in the room caught fire, and it seemed at first that the whole house was in danger; but the blaze was finally extinguished. My mother and I were all the while realizing the Bible truth as taught by Christian Science,—that God is all powerful and ever present, and that nothing can prevail against His power when He is earnestly sought. I was not hurt, none of my clothing was scorched, and my hair was only slightly singed. My sister and a visitor whom she was entertaining in the front part of the house were surprised when my mother and I went into the room and told them what had happened. In studying the Bible I had always been much impressed, and more especially after coming into Christian Science, by the account of the delivery of the three young Hebrews, Shadrach, Meshach, and Abed-nego, whom the king had sentenced to be cast into a burning furnace because they refused to worship any other but the true and living God; also by Daniel's deliverance from the lions. So, when passing through this experience I realized the power and presence of the true and living God to save His children from all harm.

My brother, a boy of fifteen, was healed by Christian Science from the effects of wounds caused by bullets from a rifle. He was accidentally shot twice within a year, the bullet entering and lodging the first time in the thigh, and the second time just beneath the shoulder-blade. A doctor came and tried to extract the bullet on each occasion, but failed to do so. Both bullets are still embedded in the boy's body, but they have never given him any trouble. The first time he was shot, he was confined indoors about four days, and the last time about half a day. He had no other help than Christian Science.

For these healings, as well as for many other blessings, we are indeed thankful to God, and grateful to Mrs. Eddy, who has shown us by her clear understanding and explanation of the Bible in her wonderful book, "Science and Health with Key to the Scriptures," how to lay hold of and apply this truth, which has always been within reach of all, but like a

Digitized by Google

buried treasure needed to be revealed. When understood and intelligently applied to the ills of mortal existence, it is able to prove its divinity and efficacy.

LIZZIE E. SMITH, Uvalde, Texas.

I am writing to verify my daughter's testimony, also to express thankfulness to God, and gratitude to Mrs. Eddy, and to all the dear Christian Science friends who have helped me as well as my loved ones in our journey from sense to Soul. Our blessings are so many that it is impossible to tell them all. The coming of no friend could be more welcomed in our home than the arrival of the Christian Science periodicals.

KATE A. MOLLOY, Uvalde, Texas.

❖

A few years ago my wife was very ill, and after having medical treatment for about eighteen months without any permanent results, she was in such a condition that the physician advised an operation. After hesitating for a few days, I decided to consult another doctor, a reputable surgeon, and he also advised the operation.

A day or two later, my wife was sitting up to have her bedding changed, and being near a window, she saw a Christian Science practitioner pass by. Seeing her helpless condition, this lady asked what the trouble was. My wife beckoned her to come into the house, and just afterward had a bad spell and became delirious, as she frequently did; but in the presence of the truth reflected by the practitioner, this attack seemed to have no power. The practitioner then presented Christian Science to her, and after it had been explained somewhat, my wife felt better. The next day the practitioner gave her treatment, with the result that she got up out of bed every day thereafter, and stayed up. She has since been doing all her housework and taking entire care of our two small children. This was in April, 1912, and several times since then we have had help from the practitioner. On one occasion our elder boy showed every symptom of chicken-pox, but he was perfectly healed in three days. About two weeks later the baby was taken with the same ailment and was also quickly healed.

We all try to live the truth the best we know how. It has brought wonderful good tidings to our home; for where there was continuous discord, harmony now reigns, and we are hopeful, contented, and much happier. We are all grateful for the blessings we have received from Christian Science.

RUDOLPH RICHTER, St. Louis, Mo.

I was permanently healed of the disorder from which I was suffering when Christian Science was presented to me. Although I do not attend church services regularly, as circumstances do not permit me to do so, I read Science and Health and try to live its teachings the best I can. I also wish to state that there have been many more demonstrations of healing in my family besides my own.

MRS. RUDOLPH RICHTER, St. Louis, Mo.

❖

Beset on all sides with the doubts and fears of mortal existence, Christian Science found me physically and mentally in a most unhealthy state, so that I was on the verge of nervous breakdown. I was a victim of stomach and catarrhal trouble, also of violent headaches, and was unable to read or work comfortably without the aid of glasses. During the winter months I was subject to severe coughs and colds. I also experienced much mental suffering, largely due to my seeming inability to express my thoughts and so become successful in the work I had chosen to do. I was regarded as a failure, a dependent, as being unable to find my place in the world. In my own consciousness, however, I knew I was not a failure, and I prayed earnestly to be shown the way to success, to gain the power to prove myself to the world; and this prayer was answered.

As Christian Science has come to many struggling alone in the darkness of human suffering, so it came to me, and with its message of Truth and Love lighting the way, it led me out of the gloom into the understanding of Life, God, the dawn of eternal day. Healing came, all things were changed, and I can now truthfully say that "the former things are passed away." God's words, "Behold, I make all things new," have been demonstrated to me, and I have come into man's rightful heritage of health, happiness, and present success.

The knowledge that "I can of mine own self do nothing," but that with God lies the power which enables me to demonstrate success in all my undertakings, is much to me. Christian Science to me is one with the teachings of the Master, a religion of Love, of God the impartial Father, who forgiveth all our iniquities and healeth all our diseases. The overflowing gratitude I feel for all blessings that have come to me through Christian Science I wish to express in watchfulness, work, and prayer,—"the prayer of fervent desire for growth in grace, expressed in patience, meekness, love, and good deeds" (Science and Health, p. 4).

INGEBORG CHRISTENSEN, Chicago, Ill.

❖

[Translated from the German]

It is a pleasant duty to testify to the blessings which have come to me through Christian Science. In October, 1911, I became afflicted with a diseased condition of the nasal passages and adjacent cavities, and had to have an immediate operation performed; but instead of being removed, the trouble grew worse. I was under medical treatment for two years, and during this time had to submit to three more operations. An air-cure which had been prescribed, and which, I had hoped, would bring an improvement, proved a failure. Upon the advice of our family physician I made another trial with one of the most eminent professors. After the first examination he held out to me the prospect of a cure within eight weeks, but when this time had elapsed, he informed me to my dismay of the necessity of another operation. This news almost drove me to despair, but an acquaintance who had found healing through Christian Science, told me of the benefits received from it.

I was, however, very diffident about going to a practitioner in Basel and asking for help, but when I left her, there was a sense of great hopefulness and of gratitude to God for the step which I had taken, and which was not to be followed by disappointment. From that hour on my trouble began to yield, and I gained the conviction that every ill can be healed in Christian Science through the power of God. With the loving help of a practitioner I was completely healed in two weeks' time.

Those who have experienced healing will be able to appreciate the sense of peace and happiness which has come to us through Christian Science. I give thanks to God, and am grateful to our Leader, Mrs. Eddy.

ELISE VOGEL, Blansingen (Grhzgt. Baden), Germany.

❖

Words cannot express my thankfulness to God, and my gratitude to Mrs. Eddy, also to the friends who have helped me to an understanding of Christian Science. Eight years ago I turned to this teaching for physical healing, as I was not able to work half a day at a time. After a few weeks of reading and church attendance, I again took up my work of

Digitized by Google

dressmaking, and have worked at it very constantly ever since. I have had no occasion or desire for medicine in any form whatever. The realization of the great spiritual truth that "I can of mine own self do nothing," is indeed a great blessing to all; also to know that God is the source of our supply, and that "man is the offspring of Spirit" (Science and Health, p. 63).

I have had many healings and blessings since I came into Science. The more I study, the clearer it seems to me that the permanency of our healing depends on how closely we realize the ever-presence of divine Love, and know in our own consciousness the truth of being instead of the old false beliefs that were the cause of our trouble and sickness. I am more grateful than words can express for this grandest teaching of the ages. The Principle of healing as explained by Mrs. Eddy in the first chapter of "Unity of Good" has been such a help to me in many times of darkness and persecution! I am very grateful for the overcomings because they bring us nearer to that divine Love which never faileth.

ELLA CASTETTER, Indianapolis, Ind.

✧

About two years ago I had an attack of rheumatism, which lasted over two months. After trying various remedies without any apparent result, a friend who was a Christian Science practitioner came to my home for a short visit. I asked for treatment, and in less than a week the rheumatism left me, and I have had no return of it. I would sincerely recommend those who are afflicted in any way to try the Christ-healing as understood by Christian Science. I am a member of another church, but am interested in the truth as taught in Christian Science, because of the many blessings it has brought to me and mine, and for which I am truly thankful to God.—MRS. A. MOREHOUSE, Atlantic Highlands, N. J.

✧

I have often thought that I should tell of the benefits I have received from Christian Science. Some twelve years ago I applied to a Christian Science practitioner for help, and was gradually healed, after about three years of sickness. I had had measles and typhoid fever, and finally I was ill with an abscess in my head. Then I was ready to try Christian Science, of which I had heard before; but not being able to understand its Principle, and still looking to personality, it took me a long time to see the way. As I had no one to help me and was not able to work or take care of myself, I can truly say that God's help and wonderful ways led me to accept Christian Science. This truth was most surely in my case that heavenly manna (bread) which fell from heaven down on the desert of want and sickness, and gave me hope and health.

I am now well and strong, and these sicknesses which I had and of which I was healed through treatment and the study of Christian Science, have never returned. I am trying to apply Christian Science to all my every-day problems.

AUGUST BARK, Forks, Wash.

✧

When I wish to overcome some difficulty, I often turn to the testimonies in the *Sentinel* or *Journal*, and I am sure to get the help I need. I therefore send my testimony, that it may in turn help some one else.

I had been in poor health for a number of years, and in the spring of 1900 I slipped on an icy step and fell, badly injuring my right wrist. Our children were in school and the housework depended on me, so in a few days I was using the hand, but it was soon in such a condition that I could do so no longer. The doctor said that rheumatism had set in and he could do nothing for it. I did my work until about the middle of the summer with my left hand, when that completely gave out, and I was so helpless that I could hardly feed myself. The trouble gradually spread all over me, so that I could not walk, and later it was very painful for me even to sit in a chair or lie on the bed, as I had to do most of the time for ten years. I tried different doctors but never got any permanent help.

In the summer of 1910 I went to visit my sisters, one of whom was studying Christian Science. Up to that time the most I had heard about the subject was antagonistic to it, and I was very much prejudiced against what I thought its teachings to be. As my sister talked to me, however, I began to wonder if I could be healed. Two months later she came to see me. I was so helpless and so anxious to get well, yet at the same time afraid to try Christian Science for fear it was not the teaching of the Bible. Nevertheless, before my sister went home I asked for help, which was kindly given. About two weeks later I began to read Science and Health, and the following day I was healed. I did some housework that day, and was soon doing it all, but I had to study and know the truth for myself. I am unable to express my thankfulness to God, and my gratitude to Mrs. Eddy for the spiritual interpretation of the Bible, which makes possible today the same work which Jesus did.

MRS. A. BARNHART, Minden, Neb.

✧

When my daughter was a baby she seemed to have stomach disorder. Food did not agree with her, as it caused distress and did not nourish her. I had had one baby pass on from this trouble and I feared this one would go the same way, but after trying different kinds of medicine I asked a Christian Science practitioner to treat her, and she was healed in a short time. When about fifteen months old she ate a quantity of green grapes and seemed quite ill, but the practitioner treated her for that, too, and she was soon well.

I am thankful to God for giving us "Science and Health with Key to the Scriptures" through Mrs. Eddy, wherein we may learn of Christ, Truth.

ANNA TELSCHOW, Ebenezer, N. Y.

✧

I am so grateful for what Christian Science has done for me that I can no longer keep from expressing my gratitude. One evening my son came home and said he did not feel well. As I looked at him, such fear took possession of me that I could not treat him, as I felt he had acute lung trouble in an alarming form. He had had this illness before, and the doctor had said he would be subject to it all his life. We called a Christian Science practitioner (this was Thursday), and Saturday he went to work, perfectly well.

My husband was working in a butcher shop, and one day he ran his second finger into the sausage-mill, grinding off the end of it, except for a piece of skin on one side. He called up a practitioner and asked whether he should have the end taken off or put back and dressed. She told him to put it back. He asked her to treat him and then went to a doctor's office. After waiting about an hour the doctor took a stitch in one side and tied the finger up, telling my husband to come back in the morning, as he would have to take the end off, since nothing of that kind ever healed. The next morning the finger looked quite a bit better, and the doctor said he would leave it another day; the third day it had improved so much that he took another stitch in it; and the tenth day it was entirely healed without a scar, and except that the nail showed where it had been slivered in being crushed, no one could tell it had ever been hurt.

Digitized by Google

My daughter has been healed of different ills, among them spinal meningitis. I have also been healed of several ailments, for which I am grateful; but most of all I am thankful for the spiritual understanding I have received from the Bible through Mrs. Eddy's interpretation of it in Science and Health.—KATHERINE GRANDJEAN, El Reno, Okla.

❖

From my earliest recollection I suffered more or less from a throat affection, and each attack seemed worse than the preceding one, until I lived in constant fear. A few years ago I was awakened, shortly after retiring, by a great sense of pain, and with all the symptoms of the disease I so dreaded. I immediately began to declare the truth and deny the testimony of the senses. I grew alarmingly worse, however, and my first thought was that I must call a friend over the telephone and ask for help, as I felt I could not handle the case. To do this I would have had to pass my mother's room, and as she, being critically ill at the time, would have been disturbed and caused to feel anxious about me, I was obliged to put into practice my little knowledge of Science. The pain was so severe I could not seem to get a clear thought; the only thing I could do was to repeat the "scientific statement of being" (Science and Health, p. 468). This I continued to do, working until about midnight, when every sense of pain left and I grew as calm and peaceful as a child. After giving thanks to God for the love and care He gives His children who trust Him, I fell asleep.

The next morning I arose as usual and attended to my duties during the day, no one knowing of the struggle I had had with error. If we could only learn to put our trust in God, who is an ever-present help in time of need, instead of asking for help from some one else whenever we come in contact with error, we would daily grow stronger and learn to put in practice our understanding of Science. In writing this, I hope I may help those who are laboring to overcome fear and discouragement.

I send this testimony with a heart full of love and thankfulness to God, and of gratitude to our revered Leader that we have been shown the way to live aright.

Miss C. B. FRAZIER, North Attleboro, Mass.

[Written for the *Sentinel*]

Mirage

MARTHA WEBSTER MERRIHEW

BEHIND a desert storm, the sea before,
A heat-dim beach and vibrant air between;
I glimpsed, then clear as thrown upon a screen
A city, as of smoke, masked yonder shore.
And drunken bold it seemed, illusory mirage;
Yet soon its seeming changed in picture there,
Till but distorted shapes and blurred were where
Had feigned majestic walls,—then scarce a lodge,—
Nor sign imposed upon the atmosphere.
Mirage, a falsity, finds no continuance here.

Oh, false the evidence of waking dreams
When pain's mirage would image forth its bond,
And doubt abandon sense to deep despond!
Illusion ne'er may prove that which it seems.
Our God, the Truth, e'er He our health renew,
Demands a cleansing; then His gift of peace
Is ours, and the suffering senses cease.
Dispel we must the false to claim the true.
Mirage-like sense, but argument, must fade
From out our ken when Truth is known, obeyed.

From Our Exchanges

[Rev. W. Harvey-Jellie, A.M., D.B., in *The Homiletic Review*]

Let us bear clearly in mind the fact that there is a very definite distinction between praying and uttering audible requests. Prayer does not consist in an attitude of devotion, the bowed head, the bent knee, and the uttering of words and expression of thoughts which are pious in tone and beautiful in phrase. These may often be valuable accessories of prayer, but they do not constitute prayer, and are not even essential to it. No one ever taught more clearly than Jesus of Nazareth that wordiness and prayer are often so different as to be antagonistic. "When ye pray," said he, "use not vain repetitions, as the heathen do: for they think that they shall be heard for their much speaking." Such wordiness is a mockery and a sinful waste of time in the sight of the Almighty. Yet we still find men who regard it as prayer. We have many who will "lead in public prayer" without ever praying. The beautifully worded compositions of our great and ancient liturgies and prayer-books are repeated by many a thousand lips which never express a true heart-appeal to God. No Sabbath ever wears toward evening without a multitude of vain repetitions uttered under the ignorant superstition that they are prayers which Jehovah deigns to hear.

No! We must get behind the form, behind the mere indifferent vehicle of expression, if we would discover the reality of prayer. It must be remembered that true prayer is the heartfelt, trustful utterance of felt needs, with heart and life and mind behind them, into the ear of an omnipotent hearer. This is the sense in which I am asserting that all men must and do pray.

[*The Christian Register*]

If there is one lesson that we need to learn more than all others in civic and national life, it is that real reform is of the center, and not of the circumference. In other words, the source of social righteousness is found in the individual citizen, and not in the collective citizenship. While the culmination is necessarily of the mass, the forces that make the culmination possible are always to be found in the aspirations and efforts of the individual. Life is ever more powerful than law. Legislation is powerless to work beneficent results unless the life of the individual and average citizen backs it up and is worthy of it. Always, law lags behind life. If it runs ahead, it falls to the ground, being without support. Where the law is the result of the imperative demand of righteous life, it becomes a factor in real progress, or better, it registers in terms of the social will what has been determined by the individual unit.

[*The Congregationalist and Christian World*]

Serious days, indeed, are these for the church,—the one institution that claims to represent Christianity. Because of that claim, because it is bound to serve Christ's ideals, it should not resent the words of those who say it is on trial. We do not disown the past of Christianity when we apply drastic tests to the religion of our time and summon believers to rise to the challenge of the hour. We simply declare that the emphasis has been misplaced and that the woe and welter of Europe are due in part to this wrong emphasis. It has been put upon creed, ritual, organization, outward form and ceremony and conformity, and too little on the Christian life—the life with Christ—itself.

When young or older people come into the church, they need to understand that pleasing emotional reactions are not the main concern, or even intellectual assent to certain doctrines, but a will firmly set to do the things Jesus wants done. Will you strive in his companionship and for his sake to be

Digitized by Google

pure and humble, meek and merciful, patient and brave, forgiving and loving? Do you intend to think and live as Jesus did, to care less for material good than for spiritual attainments, to go to the furthest limit of love, forgiveness, and ministration to others? Questions of this type must be faced today, not only by those who seek to join the church, but by the millions already within its fold.

God be thanked that the church has never lacked Christians of the finest type. But there have not been enough of them, and their impact upon the world has not been sufficiently powerful to shape the practices of society and to control the policies of nations. But they have kept alive the ideals of Jesus, and we may hope that from the cockpits of Europe to the coal mines of Colorado the beauty and power of that kind of a life is appealing to all classes of men as never before. In its actual embodiment in thousands of lives who will now for perhaps the first time catch the vision, lies the hope of Christianity and of humanity.

[*The Advance*]

Thankfulness is a habit. The thankful man is the man who is in the habit of considering; the thankless man is the man who rushes on, so eager to secure the next thing in sight that he fails to remember to be grateful for that which already has come to him. We need to cultivate thankfulness toward each other. We are too much disposed to take the kindnesses of our fellow men for granted. We accept without acknowledgment a thousand favors which cost somebody something, when both they and we would be the richer for a word of thanks.

Thankfulness to God is a habit,—a habit which too many men forget. God has filled life with a thousand joys. They spring from every sense; they blossom about us in the flowers; they play about us in the breezes; they smile upon us in the glory of the sunlight. All human comfort and hope springs from the blessing of Almighty God. It ill becomes us children to snatch our food from a Father's hand and snarl as we eat of His bounty. Men have been given minds capable of knowing the will of God in order that they may freely share the Father's joy in the good world which He has made and in the hopes which He has caused to abound in human life.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

Progress is to be measured by what deepens contact with God, quickens imagination, lifts life to a higher level. Not that which denies the past, not that which can only live by cutting itself off from the past, but that which takes up, carries on, and reinterprets the past, is true progress. Reformation rather than revolution is the great religious word; and we must always remember that if we are too occupied with expression at any time, we shall get carried out to the circumference of things. The letter killeth, even when it is a very good letter, if ever it is made all. Before we attempt to restate or reexpress religion, we need to be certain that we know the secret, that we understand what we are talking about; and this may be measured by the width of sympathy which we can find with all real religious life everywhere.

[*The Universalist Leader*]

Blessed is he or she, however great or noble or consecrated, who, over the hill, somewhere beyond the maddening crowd, knows a spot where the gentle mother heart of the world will brood and bless. Twice blessed are they who walk the silent, solitary places of life with a sense of the near presence and the eternal care of God. This is the meat which they eat, that most of us know not of.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ *inches* long by 8 inches wide. The price of this edition is *$7.50 per* copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. This book, the sub-title of which is "A Defense of Human Rights," contains a general review of the legal status of Christian Science, together with a table of statutory provisions relating thereto; also testimonies of healing through Christian Science. It is intended for general circulation, and will replace the pamphlet "Christian Science and Legislation," which has been discontinued. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

"Christian Science: The True Christianity," a lecture by Clarence C. Eaton, has been published in pamphlet form, and is now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Pamphlets

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $3.50; six or more, each $3.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. *Library* edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Items of Interest

The season of 1914 carried greater danger from fire to the national forests than any year since their establishment. To meet this emergency and to prevent great loss of public property, the department of agriculture was obliged to exceed the amount appropriated for fire protection and incur a deficiency of $349,243. The total number of fires which threatened the national forests and which had to be handled by the protective organization of the forest service, was 6,112. Eighty-one per cent of these were extinguished by the protective organization before they had covered ten acres. The percentage of fires that burned over more than this area was smaller than in any previous year. While detailed reports have not yet been received appraising the exact loss to the government through these fires, a preliminary estimate shows that the loss of merchantable timber will probably not exceed four hundred thousand dollars. In 1910 the corresponding estimate of loss was nearly fifteen million dollars, but later estimates materially reduced the amount. In Montana and Idaho alone, it is said that the value of specific bodies of timber which were threatened by the approximately two thousand fires which started and were extinguished, aggregated the enormous sum of over fifty-nine million dollars. It was in this section that the largest amount of money had to be spent to prevent a recurrence of the great disaster of 1910. In Oregon and Washington, the twelve hundred fires which were handled by the department threatened upward of twenty-four million dollars' worth of timber.

Influenced by the prospective heavy demand for grain by the conditions in Europe, American farmers this fall have sown a record area to winter wheat. It is estimated by the department of agriculture at 41,263,000 acres, which is an increase of 4,135,000 acres over the area sown last fall, and on which the record crop of 684,990,000 bushels of winter wheat was harvested this year. The area sown is 5,255,000 acres more than was harvested this year. A feature of the planting of winter wheat this year is the great increase in acreage in the southern states, where farmers are decreasing their acreage of cotton. The acreage in South Carolina has been increased 200 per cent, compared with the 1913 planting; in Alabama, 185 per cent; Mississippi, 125 per cent; Georgia, 118 per cent; North Carolina, 75 per cent; Arkansas, 44 per cent; Texas, Tennessee, and Oklahoma, 20 per cent, and Virginia, 60 per cent. In the great wheat-growing states the increases in acreage range from 5 to 15 per cent, except in the greatest of winter wheat states, Kansas, where a 2 per cent decrease is shown.

Why the general education board founded by John D. Rockefeller makes it a policy to give only a part of the funds required by a specific institution, is explained under the heading of "Conditional Giving" in the third instalment of a report outlining in detail its policies and achievements. The board says that, as a result of its efforts, institutions have themselves started campaigns to raise additional sums, and individuals have made bequests in their wills for their own institutions. Refusals by the board to make contributions, it is explained, "may be based on one or more of several reasons." The report gives these, in conclusion saying:—

"The board may have already contributed more than a fair share to the section represented; the institution may occupy a more or less unpromising situation; it may be in too close proximity to a stronger institution; it may be without backing; it may be one of several denominational institutions, which ought to be merged rather than separately developed. Some of these schools may at the moment be performing a useful function; yet unless they appear to be necessary factors in a well-organized and well-distributed permanent system of higher education, the general education board is compelled to pass them by."

The four years' efforts of about one hundred and twenty-five eastern railroads for a general advance of 5 per cent in freight rates has been won. The interstate commerce commission allow the increase, with a few exceptions. The commission made it plain that this action was taken to relieve the commercial crisis brought on by the war. Commissioner Clements dissented. The exceptions will include rates on bituminous coal and coke, anthracite coal, and iron ore. A flat 5 per cent increase is allowed on joint rates between "official classification territory,"—the East,—on one hand, and southeastern territory, the Southwest, and points on or east of the Missouri river, on the other; on interstate rates to and from New England from and to points in trunk-line or central freight association—mid-West—territory; on rates to and from New York, and throughout "official classification," or eastern territory.

The government's Sherman law monopoly suit against the Lehigh Valley Railroad Company and a number of other defendants engaged in the mining and transportation of anthracite, has been dismissed by Judge Charles M. Hough in the United States district court at New York city. In dismissing the suit the judge said: "No monopoly of interstate commerce, nor any attempt to monopolize, is shown. The proof of the pudding is in the eating thereof, and it is impossible to find any of the normal results of monopoly without also finding violations of the commodities' clause, and none is discovered. As to the restraint of interstate trade in coals transported over the Lehigh road, there can be no restraint without control, and since the railroad does not control the coal it carries, it has no means of restraint."

The fuel value of two pounds of wood is roughly equivalent to that of one pound of coal. Certain kinds of wood, such as hickory, oak, beech, birch, hard maple, ash, elm, locust, long-leafed pine, and cherry, have fairly high heat values, and only one cord of seasoned wood of these species is required to equal one ton of good coal. It takes a cord and a half of short-leafed pine, hemlock, red gum, Douglas fir, sycamore, and soft maple, and two cords of cedar, redwood, poplar, catalpa, Norway pine, cypress, basswood, spruce, and white pine, to equal a ton of coal. Equal weights of dry, nonresinous woods, however, are said to have practically the same heat value regardless of species, and as a consequence it can be stated as a general proposition that the heavier the wood the more heat to the cord. Weight for weight there is very little difference between various species.

Information available regarding the Japanese budget statement for 1915-16 shows that the revenue is estimated at 556,896,000 yen. The expenditure balances the revenue at the same figure. As compared with the budget of 1914-15 there is a decrease in revenue and expenditure. That in revenue is largely the result of reduction in taxation and partly the effect of war. The naval program includes the construction of eight destroyers and two submarines, besides three battleships already voted.

In his first annual report, Attorney-General Gregory favors legislation aimed at railroads controlling coal companies. He proposes an amendment to the "commodities clause" act that would prohibit railroads from transporting, in interstate commerce, articles which they manufacture or produce, or from having the same directors. He also urges the passage of a law giving broader search powers to federal officers seeking evidence against advertising swindlers.

Reduction of public expenditures continues to be a topic of interesting discussion at the capital of the Argentine Republic. In the war department, the reductions planned in the budget in force reach the sum of $2,226,066. As for the navy department, the present law allots it $29,533,955, but the new decree will make it $26,440,432.

The pack of California fruits in 1914 is a record breaker, being 20 per cent larger than that of last year. The heavy pack is said to be due to a decline in the price of raw material of 25 to 40 per cent below the range obtaining before the war began, and to advance sales to Great Britain and the Continent, the heaviest ever known.

The Spanish Senate has ratified the London convention relative to safety at sea. The international convention for sea safety, which was framed at London, was largely the result of the Titanic disaster. One of its principal clauses calls for sufficient life-boats aboard ships to handle all persons on board.

The handsome new Central station at Tokio, Japan, of the imperial government railways, will shortly be thrown open to traffic. It has been six years in building, and will cost, when completed, two million seven hundred thousand yen. The second story will be devoted to hotel accommodation and office suites.

The counsel of the Society of Naval Architects and Marine Engineers, in session at New York recently, endorsed President Wilson's plan for a merchant marine, and the services of the society were offered in behalf of it.

This year's principal farm crops in the United States are worth $4,945,852,000. The values are based on the farm price of the crops on Dec. 1.

The value of Kansas farm products in 1914 was $638,253,206, which was $58,000,000 greater than in any other year.

Finding the Higher Meaning

ROBERT NALL

BECAUSE Christian Science is the Science of Life, embracing the whole of man's spiritual and physical needs, it is of the highest importance that we bring to bear in its study and demonstration a sincere desire for well-balanced judgment and a clear apprehension of the truth. As our prayer in this respect is answered, we shall avoid two errors,—that of minimizing or ignoring certain facts, and that of failing to understand the spiritual meaning of fundamental terms. It is impossible to read Mrs. Eddy's writings without seeing that she recognized this danger. There was no obliquity in the wide sweep of her vision; rather, because of the spiritual altitude to which she had attained, she was able to steer with unerring accuracy between the Scylla of erroneous and misplaced emphasis on the one hand, and the Charybdis of belief that the disastrous effects of much unregenerate human thought can be lightly set aside as of little account.

Mrs. Eddy frankly admits the difficulty of expressing metaphysical statements in current language. "Mortal thought," she says, "does not at once catch the higher meaning, and can do so only as thought is educated up to spiritual apprehension" (Science and Health, p. 349). She took extraordinary pains, as we now know, so to use the symbols of words in imparting revealed truth to the world that no earnest inquirer after spiritual good can be disappointed. Christianity is a religion of basic truths rather than of mechanical rules, and Mrs. Eddy in expounding the Science of Christianity here followed the example of the Master. She repeats many times certain statements which are the bases of all effectual work for God and humanity. It is these that we need to understand and apply in their right relation, and about which some corrective thought may be requisite.

What is sometimes forgotten is that the affirmation of truth should always be accompanied by the denial of error, until the manifestation of error yields to the power of Truth as scientifically declared. Much emphasis is very properly laid upon good as expressing the highest and most comprehensive quality or attribute of God. Rightly speaking, we cannot think of good without thinking of God. But it is not possible in our present sense of things to demonstrate the allness of good, if its supposititious opposite, evil, is ignored. The one is real, because it is of God; the other is unreal, because it is a false sense of that which is not. But, it may be asked, how far have we gone beyond the mere affirmation of this? Are we proving evil to be a false belief, or are we attenuating good so that it stands to us for a sentiment rather than the greatest factor in the truth of being? When good is to us a synonym for the righteousness which is the active antithesis of evil, and which makes no concession to sin in any of its many forms, then we are catching its "higher meaning," and it will cease to be an uncertain concept. The Puritan made God's rule something akin to a reign of terror. The reaction from this is a tendency toward believing that God's rule and government are characterized by tolerance and lenity in respect to wrong-doing. Between these two extremes there comes legitimate Christian Science teaching, which, while it lays stress on the allness of good and fully believes that God is Love, recognizes that the human opposites of these must be sternly dealt with and their native nothingness demonstrated.

Again, we have the term "love," which both in relation to God and to man is often misunderstood and its application weakened. We are not called upon to reject the human sense of it; but in working out our salvation our sense of love must be purified, lifted into the higher realm of thought, where it will be cleansed from mental dross and its spiritual nature cognized. One effect of this will be to deepen our longing for righteousness, so that we shall be better equipped for sin's final destruction. It is only when we "stand before the awful detonations of Sinai" and "hear and record the thunderings of the spiritual law of Life" (Miscellaneous Writings, p. 16), —perfect, pure, holy, good,—that we can get some idea of what sin is as a human false concept. There is a possibility, while recognizing that metaphysically it has neither intelligence nor power, of underestimating or making light of it, but there is no justification for this, either in the Scriptures or in our text-book. In passage after passage of Science and Health the aggressiveness and tenacity of sin as a terrible human belief is admitted, and every Christian Scientist is urged to watch and pray that its impotence may be demonstrated. In Christian Science we do not attempt to classify sin. It is enough to know that it is any departure from the law of right or good, and that it will trouble mankind while the conflict between Spirit and the flesh continues. The victory is to him alone who is faithful and true.

There are other terms respecting which some of us would do well to make a fresh and careful study. Judging from testimonies which one sometimes hears, and the attempts to explain Christian Science that occasionally come under notice, this is eminently necessary. Spirit, matter, man, personality, body, salvation, repentance, death, and many other terms, have their specific meanings in Science, and it is here where a study of the Glossary in Science and Health is of incalculable benefit. There are colleges connected with certain religious institutions where it is the practice for the professors at intervals to go back to the fundamentals of their respective subjects, in order that they may ascertain whether they have departed from "first principles," and if so, how far. To do this in Christian Science would be not only to strengthen our faith, and make us cherish with more devotion the divine revelation that it is our privilege to make practical in human redemption, but it would help us to be more effective standard-bearers of Truth. We cannot help and direct others until we ourselves know the way. The wonderful body of teaching left to us by Jesus, and interpreted so clearly in Christian Science, is valuable to each one of us only in so far as we seek to enrich others with it. It is only as our vision is clear and positive that we can be faithful exponents of the truth. If we would be loyal, we must not seek to whittle down the supreme facts of life or weaken the force of spiritual knowledge. To paraphrase Ruskin, the difference between progress and non-progress in Christian Sci-

Digitized by Google

ence, between practical knowledge and inability to grasp the facts of being, lies often in not recognizing the "peerage of words," and not looking intensely into them so as to arrive at their real accuracy.

It is in line with this thought that in "Retrospection and Introspection" our Leader wrote, "Posterity will have the right to demand that Christian Science be stated and demonstrated in its godliness and grandeur,—that however little be taught or learned, that little shall be right" (p. 61). And "right" here means exactness, the clearest knowledge to which we can attain as we welcome the unfoldment of Truth, so that our demonstration of Christianity shall be rich in those works that attest its healing and regenerative power.

Harmony in Accordance with Law

CHARLES A. GRIFFITH

SINCE time immemorial, by some perversion of thought, mortals have associated suffering with religion, seeming to consider it a part of the divine plan that mankind should endure more or less of misery in order to be prepared for the heavenly joys which were supposed to await the sufferer after death. That such is not the teaching of the Bible must be clearly evident to any one who will consider for a moment to what an extent Jesus, the prophets, and the apostles devoted their time to the elimination of evil of every sort. This was certainly not Paul's idea of Jesus' teaching, for he says in his epistle to the Romans, "Be not overcome of evil, but overcome evil with good."

It is indeed remarkable that, in spite of all the Bible declares to the contrary, some can so far mistake God's beneficent purpose toward His children; that infinite Love could be so perverted as to delight in human suffering. This false concept has culminated, in some instances, in the organization of societies the members of which voluntarily torture one another and themselves in the belief that the suffering of the body "is good for the soul." This belief, unreasonable as it may seem, is but the logical conclusion of the hypothesis that the sufferer, by resignation to his suffering, may thereby enhance his hope of heaven.

So strong has been the tendency to associate misery with religion, that even Jesus' Sermon on the Mount has been perverted in its meaning and used as authority for the contention that misery and morality go hand in hand. This most wonderful of all sermons begins with a statement of blessed assurance to those who are poor in spirit, those who mourn, the meek, those who are hungering and thirsting after righteousness, the merciful, the pure in heart, the peacemakers, those who are persecuted for righteousness' sake, and lastly to those whom men shall revile and persecute, falsely, for Jesus' sake. The master Christian did not herein commend misfortune or untoward circumstance; he did not pronounce a blessing upon mortals because they were in trouble. Rather was he pointing mankind away from poverty,—spiritual and otherwise,—away from mourning, persecution, and false accusation, to the infinite goodness that awaits a clearer perception of God's allness; also to the blessed state of the meek, the merciful, the pure in heart, the peacemaker, and the seeker after righteousness.

All this seems to be contrary to the commonly accepted thought. It is too often with a feeling of resignation and willingness to accept the inevitable that humanity looks upon such conditions. What supreme wisdom Jesus shows in his statement regarding each phase of thought described, and as in all his statements, how strictly in accordance with divine law! "Blessed are the undefiled in the way, who walk in the law of the Lord," says the psalmist; "Blessed are they that keep his testimonies, and that seek him with the whole heart. They also do no iniquity: they walk in his ways." Righteousness is the bulwark of humanity. Righteousness means conformity to law, and it is evident that each of the beatitudes is supported by "the law of the Lord." Each is a scientific statement of a scientific fact, therefore wholly impersonal and applicable at any time or place. The whole tenor of Jesus' teachings points to the fact that limitation, disease, and discord of whatever nature, are not to be submitted to as though it were God's will that His children should be afflicted, but that affliction should be overcome by the application of divine law, which annuls all pretense of any other law, thus freeing thought and enabling us to assert successfully our God-given dominion.

The revelator, referring to the company of those "arrayed in white robes," declares, "These are they which came out of great tribulation." They are not commended for having been in tribulation, but for coming out and washing their robes "in the blood of the Lamb." Christian Science is today proclaiming freedom to the sons of men, freedom from the limitations of sense,—sin, disease, sorrow, and want,—and all in conformity with God's law. As mankind recognize this fact, they perceive the significance and import of these words of the psalmist: "Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. But his delight is in the law of the Lord; and in his law doth he meditate day and night. And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper."

It was with prophetic vision and keen perception that our Leader wrote (Science and Health, p. 226): "The voice of God in behalf of the African slave was still echoing in our land, when the voice of the herald of this new crusade sounded the keynote of universal freedom, asking a fuller acknowledgment of the rights of man as a Son of God, demanding that the fetters of sin, sickness, and death be stricken from the human mind and that its freedom be won, not through human warfare, not with bayonet and blood, but through Christ's divine Science."

God's Work and Man's Work

HELEN WARD BANKS

ONE Christian Scientist who was earnestly seeking to live by the truth set forth in Science and Health, found a sentence in the book that seemed difficult of comprehension. "Your true course is to destroy the foe, and leave the field to God" (p. 419). This seemed puzzling to her, for if the foe were destroyed would not the field be won?

One day an incident occurred that disturbed the student greatly. It was a case of injustice, and it seemed proper to be indignant, even though the indignation destroyed her harmony. Then to her mind came the words, "Destroy the foe, and leave the field to God." Suddenly she understood their meaning. Her foe was whatever took her out of the kingdom of heaven; and she could not dwell there while entertaining a sense of annoyance which was a tacit acknowledgment of a power opposed to God. The justice or the injustice of the case did not lie in her hands; that was God's business. Her part was to destroy her own belief in a foe and leave the situation to God.

It was only necessary to do what our Master bids us, namely, "Enter into thy closet, and . . . shut thy door."

Digitized by Google

This means, as interpreted by Mrs. Eddy, to "close the lips and silence the material senses" (Science and Health, p. 15), to know once more that God is omnipotent good and that the serenity of man as His reflection cannot be disturbed. A few moments of prayer brought calm and cheerfulness, and she was entirely sure that now, her foe being destroyed, she could safely "leave the field" to divine justice.

In every case of seeming evil, whether it be sickness, sin, trouble, or poverty, God's work is done, while ours is to be done. Sometimes we are so anxious to do God's part that we neglect our own. Results of work belong always to Him; it is for us not to obstruct those results. God never fails, so if there be seeming failure it is because our part of the work remains undone. In our eagerness to decide results according to our human opinions, we fix our gaze so far ahead that we overlook the foe, the belief in evil, whose destruction is our allotted task. Let us, instead of planning God's work, be alert to detect our foe, however it masquerades, and to smite it hip and thigh. In the fortieth chapter of Exodus we are told again and again that Moses did his part toward the tabernacle construction "as the Lord commanded" him. Then, man's part of the work being completed, the Bible record tells us "the glory of the Lord filled the tabernacle." God rewards all faithful work, but He does not take from man his responsibility. If we vigilantly and courageously destroy every foe that can interfere with our accomplishment, we may, with a contented mind, leave with God the crowning of our labor.

Faithfulness in Service

JOSEPHINE MC MASTER

In Science and Health we read, "Each successive stage of experience unfolds new views of divine goodness and love" (p. 66). As a Sunday school teacher, these words have been proven true, and I have found that one of the avenues of healing is the work of the Christian Science Sunday school. One day, when asked by the superintendent to take the beginners' class, the thought presented itself that I was not prepared (preparation having been made for older pupils), but immediately came the thought that Truth is the teacher, and Truth is always ready to meet our need.

In the class of six, five had never been to a Christian Science Sunday school before, but the thought soon began to unfold. Starting with the perfect Principle, God, one little boy said, "God is power," and it was then explained that when we give power to evil, we are breaking the first commandment, "Thou shalt have no other gods before me." A lad of six then said, "God is love," and it was easy to tell the children that this is the teaching of the Bible, and that as we are thinking good, we cannot think evil, and this is living with God, divine Love. When the children were asked how many of them had seen a candle, all had; and when asked what it does when lighted, a chorus of voices immediately responded, "It gives light." They were then told that every good thought is as a light, which shows us the right way to go.

The following Wednesday one of the little boys had a falling out with his brother. The mother, who was a student of Christian Science, held to the truth for herself, but all day the struggle seemingly went on. At night, however, when she tucked the little one in bed, preparatory to going to the Wednesday evening meeting, the boy had applied the truth as taught in Sunday school, for looking up he said, "Mother, my candle went out today, but it is lighted tonight."

Sometimes we hear it said that children gain the truth more quickly than their seniors, and in the Scriptures Christ Jesus, our Wayshower, has given us this rule to follow: "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." In Science and Health Mrs. Eddy speaks of "willingness to give up human beliefs" (p. 24). This willingness, with faithfulness in our application of the truth, will always restore harmony. We are again reminded of the words by our Master, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you."

No one can realize more than the teacher in a Christian Science Sunday school, that work faithfully done each day, brings healing to both teacher and pupil. Paul's words, "Whatsoever a man soweth, that shall he also reap," is demonstrated from week to week, for divine Love goes before us, preparing the way for the reception of the truth, and from such soil (the prepared thought) we can claim the promise, even now, of fruitage an hundredfold. When the one Mind has given us our work in the Sunday school, it is a great privilege, and we shall find constant opportunity to advance.

True Selfhood

MARY I. MESECHRE

We often hear voiced by way of self-excuse, or to condone the shortcomings of a loved one, "I am not myself today;" or, "Do pardon him, he is not quite himself just now." Recently, when betrayed into such attempted self-justification, the writer was led to ask, When not myself, who am I? and What does being myself mean? Brief reflection led to the acknowledgment: I am not myself when I am manifesting any error, mental or physical. When I do this, I am surely "not the idea of God," and am "little else than the expression of error" (Science and Health, p. 289). Turning to the second question, the writer began earnestly to search for the true answer. The dictionary defined "myself" as "emphasizing . . . normal condition of mind or body;" and further defined "yourself," the pronoun used by others in their kindly attempts to shield us from censure, as "you, in your own individuality." At first glance it was evident that it would be absurdly unnecessary to offer any excuse for being an individual, for being one's self, or for manifesting normality in mind or body; so another question arose,—What is individuality?

On page 336 of Science and Health we are told that "the spiritual man's consciousness and individuality are reflections of God." This explains that man in his true self is spiritual, and that individuality is true selfhood, which can never need excuse; so the plea for pardon on the grounds of not being one's self is but the unwitting attempt of mortal man to usurp an impossible place, since a mortal is not and can never manifest man's true selfhood. Again, on page 294, we read, "Man's genuine selfhood is recognizable only in what is good and true." By reason of the false belief that a mortal body is one's self, there is continued effort to excuse the faulty personality and to reclaim and reform the imperfect mortal,—an endeavor which must forever prove futile, since it is based upon erroneous premise and deals with transitory wrong instead of eternal right.

"If thou, Lord, shouldest mark iniquities, O Lord, who shall stand?" inquires the psalmist. Because God is too pure to behold iniquity, and can and does mark only the reflected good, we shall eventually recognize and manifest the genuine selfhood of man as the image and likeness of God. In the tenderly appealing story of the prodigal, we read that "when he came to himself, . . . he arose, and came to his father." Does not this indicate that true selfhood is at all

Digitized by Google

times one with the Father, and that when we are conscious thereof we "do always those things that please him"? Then instead of trying to hide ourselves behind a paltry excuse, let us repair the past ravages of the false sense of self and repel its future onslaughts by constantly refusing to recognize and admit any other than our true selfhood. Let us be ourselves, beyond all seeming.

A little verse from an unknown writer comes to mind in this connection, indicating the overcoming of all the untrue sense of selfhood through the constant acceptance of and adherence to God's standard for us:—

To be thyself is thy self to slay;
Or, lest thou follow not what I say,
Let being thyself be thus expressed:
'Tis to wear God's thought of thee as thy crest.

Joy of Service

FREDERICK M. O'MEARA

THE greatest joy possible to man is found in the service of God. It is the invariable experience of students of Christian Science that their highest and holiest joy is in helping others. Many of us who today are privileged to be numbered among that ever-increasing multitude, have not always sought happiness in service. We have imagined that satisfaction was to be found in catering to our own selfish and carnal desires. Frequently, if opportunity to do something worth while was presented to us, the first question was, "What am I going to get out of it?" But Christian Science is changing all this. We are beginning to see the immeasurable joy to be had by one's "seeking his own in another's good" (Science and Health, p. 518). Earth has nothing to compare with the joy of seeing the effects which follow when one has been privileged to be a channel for the "still small voice" of Truth. This joy of serving in Christian Science is not confined to those occupying posts of importance and responsibility; it is as open to those who are taking the first faltering steps in the way everlasting. There is no work in the Christian Science movement which is unimportant, and the student who regularly passes on or mails his copy of the *Monitor* or any of the other periodicals, is doing a service the significance of which may prove incalculable.

The writer recently had an experience in serving our cause which he would like to share with others. It was in distributing cards in stores and public places to announce a lecture on Christian Science, and he found pleasure in observing the increasing respect which the general public is coming to have for the Christian Science movement and its activities; but the greatest joy was experienced the day after the lecture. As the cards were gathered up, the storekeepers and others were sincerely thanked for their courtesy, and each was presented with a copy of *The Christian Science Monitor*. In every case the paper was received with what was evidently unfeigned interest and appreciation. To material sense it was a very gloomy and miserable day, but the joy of knowing that one was doing God's work completely eliminated all thoughts of inclement weather. When discouraging remarks were made about the weather, the Scientist stated that if one was happy the weather could not affect him whether good or bad, and he found his listeners ready to agree with him. The joy of knowing that the good each one of these copies of the *Monitor* would do was great, and there was brought home to him as never before the joy of service.

Opportunities of serving our cause are constantly presented. The distribution and *Monitor* committees offer unlimited scope to bless our neighbor. The church services and testimony meetings also offer every alert Scientist opportunity for service by being in his place in plenty of time before the service or meeting begins, and quietly realizing the all-presence and continuous activity of the one infinite Mind. As we come upon them we do well to remember these words of our Leader, on page 570 of Science and Health: "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink. Give them a cup of cold water in Christ's name, and never fear the consequences."

Stumbling-blocks Removed

MORRIS LEVI

MANY times I have been asked how one of the Jewish faith can consistently believe in Christian Science. I used to ask myself the same question, but since taking up the study of Christian Science this question has been satisfactorily answered. Christian Scientists do not worship the personality of Jesus of Nazareth, but they are grateful to him, and recognize him as the one commissioned to deliver the message of truth which the Bible teaches shall make us free. Christian Science has freed me from many misconceptions of man's nature and capacities, misconceptions which I as well as all mankind have held as realities. Among these are the following: the belief that there is real pleasure in drinking and smoking; that gambling is a good pastime; that lying, deceit, and selfishness are gainful; that revenge is satisfying; and that one needs to be subject to the material laws which mankind accept and fear.

When I learned through the study of Christian Science that I had been deceived by this misconception of what constitutes reality, I was then awakened to man's God-given dominion. This freed me from the bondage of fear, also from the influence of wrong thinking, which is destructive; and I began to be educated in right thinking, which is both instructive and constructive. Health then took the place of disease, success the place of failure, and harmony the place of discord. By putting these teachings into practice, I have been able to prove that instead of detracting from the teachings of Judaism, Christian Science will make one a better Jew. In place of the blind belief which I heretofore had, it has given me an understanding of what God really is, and of man's true relationship to his creator. Christian Science not alone does all this, but it also proves that when this understanding of God, divine Principle, is earnestly, honestly, and understandingly applied to our daily problems, it solves them here and now.

[Written for the *Sentinel*]

Understanding

CHARLES C. SANDELIN

O THOU that seemest tossed by wind and wave
On error's threatening sea, nor succor near
To lift thine anxious thought, o'erwhelmed with fear,
And from the tempest in thine own heart save!
Could thou but know thou art indeed no slave,
Nor error real and potent; could appear
Unto thy consciousness Truth's wondrous cheer,
Unvanquished by aught evil, e'en the grave,—

Thou would no more in moping sorrow go,
But scorn the dream of sense; thou would ascend
Far o'er the murky mist of mortal show,
And there, secure, Truth's fulness comprehend;
Nor e'er again a pain or sorrow know,
For joy alone doth Love forever send.

Selected Articles

[Editorial in *Transcript*, Little Falls, Minn.].

As an example of clean journalism *The Christian Science Monitor* takes first rank. A few years ago, when it was established, it met with the opposition of the whole journalistic field, whose *obiter dictum* was that such a venture could not prove permanent. But the *Monitor* proved the fallacy of its non-endurance, and today this paper has an astonishingly large circulation. Its whole tone is wholesome and healthful, and a plain refutation of the common idea which sometimes obtains that newspapers, in order to establish a sound circulation of such size as to be of value to the advertiser, must give space only to the sensational and the horrible.

It is a regrettable fact that too often in newspaper recital the space is given to accounts of crime, disaster, death, and the unpleasant happenings of life. Very little if anything is said of the quiet, unostentatious act of the worthy citizen, who could probably pass a lifetime in a certain community and "never get his name in the paper," while the worst citizen gets the greatest attention.

The Christian Science Monitor puts into active practice the basic truths on which Christian Science is founded. It emphasizes the good rather than the evil, and refuses to accord supremacy to the bad. The *Monitor* sets a good example to modern-day journalism which others could well follow to the profit and advantage of all.

✧

[Editorial in *The Camera*, Boulder, Col.]

The Greeley *Republican* takes a clergyman to task for repeating in Greeley his sermon on Christian Science that so stirred the people of Boulder. This is one of the doctor's worst efforts. It is going out of the way to sow the seed of discord, and the *Republican* tells the good man some real truths. If one were to ask us wherein Christian Scientists differ from other sects, we would say that it is in the breadth of view, the always manifest spirit of optimism, the determination to look at this world of ours as a pleasant sojourning place and to see good and God in everything. Christian Scientists try to do their best, and their unselfish devotion to humanity is one of the sweetest demonstrations of contemporary religion. Maybe they cannot curse, but they have cured. Maybe their conception of the Christ-faith and healing power in followers of the Christ is erroneous, but they make people forget their ills and have tried to make all happier. One gets nowhere by preaching chastisement and torment as the goads to righteousness and the penalties for sin. One scales the heights and looks from a proud eminence when he preaches the gospel of love and universal brotherhood.

✧

[Judge Clifford P. Smith in *Flandreau* (S. Dak.) *Herald*]

Your recent editorial entitled "Mental Healing as a Commercial Asset," based on an item in the *Journal of the American Medical Association*, while possibly intended to be kindly as well as facetious, was so written as to give further currency to certain misapprehensions or misrepresentations of Christian Science.

Christian Science is not calculated to deceive its adherents or any one else regarding the nature of disease, injury, or any human experience. The practice of this Science involves two factors: first, a spiritual understanding of the absolute truth of being; secondly, the use of this perception, with the divine law and power which it makes known, for the betterment of human character and conditions.

A contract of insurance against accidental injuries to the human body is not made on the plane of absolute truth or reality, in which, as Jesus said, "the flesh profiteth nothing." On the contrary, such a contract would inevitably be understood by both its parties as having been made on the plane of human belief, in which precautions of one kind or another must be taken for the safety of what is presently useful. Its obligations should, of course, be measured accordingly.

If an accident insurance company wished to fulfil its just obligations and to guard against fraudulent pretenses, there would be no reason why it should not employ a Christian Scientist to adjust doubtful claims. Christian Science develops the character and the capability which are prized by every honest employer. On the other hand, an insurance company that wished to avoid its just obligations, as determined by what it agreed to do and was paid for doing, could not count on the connivance of a Christian Scientist.

In short, Christian Science uses truth as truth; hence it has no use for suggestion or deception; and Christian Scientists have always consistently maintained the right of every man to choose his own religion and therapeutics.

✧

[Frank C. Barrett in *Lewiston* (Maine) *Journal*]

In a recent report of an address by Mr. —— before the Androscoggin Medical Association, it appears that Don Quixote engaged in a lively and spectacular tussle with a windmill while under the delusion that he was engaging in a real bout at tilts. Consequently the windmill was apparently in a much damaged condition after the fray. Fortunately, however, for those intelligent people who are Christian Scientists, the attack was not directed at Christian Science at all, and no harm was done except to the windmill, for Don's alleged explanations of Christian Science are as absurd and ridiculous to Christian Scientists as they must be to those who have not yet studied the subject sufficiently to discriminate.

The critic's attempted explanation of a statement attributed to a Christian Science lecturer, to the effect that the "water, salts, ash, etc., in the body have no pain," should have been brought to its logical conclusion,—that matter can indeed feel no pain for the reason that the belief of sensation in matter can only be attributed to mortal mind. Thus, when thought is removed from the body, as for instance when ether has been administered, no pain is felt even though a surgical operation is performed. This, however, is what everybody knows, and has nothing to do with Christian Science except that it illustrates the fact that it is the mortal mind alone which causes the seeming sensation in matter. Is it not, then, the mortal mind which demands food and water to eat and drink? Does the body (matter) really do any thinking? If not, the critic's little fable about bread nothing, water nothing, and body nothing, loses its significance, because mortal mind and not matter is the culprit. It is recorded that Jesus went forty days and forty nights without food or drink. He proved that when the mortal mind is silenced the body does not suffer. Truly, "man shall not live by bread alone, but by every word that proceedeth out of the mouth of God," our critic to the contrary notwithstanding.

Since the critic has taken the liberty to discredit the divine origin and nature of the healing "works" accomplished by Jesus, who himself said, "I can of mine own self do nothing," "the Father that dwelleth in me, he doeth the works," and who also said, "He that believeth on me, the works that I do shall he do also," it is not surprising that he should endeavor to discredit Christian Scientists, who rely on God in every hour, in sickness as in health. In attempting to explain a

Digitized by Google

quotation from Mrs. Eddy's writings he says that "these bodies of ours with which we deal in our life are ideas, and that our whole experience is mind." This is the exact opposite of what Christian Science does teach, just as much as the mortal is the antithesis of the immortal. Thus, when Mrs. Eddy says, "Christian Science reveals incontrovertibly that Mind is All-in-all, that the only realities are the divine Mind and idea" (Science and Health, p. 109), it is at once seen that God is the divine creative Mind referred to (not the human or mortal mind), and that the real man made in His image and likeness is God's spiritual idea; and this spiritual idea does not represent a mortal, but an immortal. Therefore, to say that our mortal bodies are ideas of divine Mind contradicts the teaching of Christian Science. So, every statement made by our critic is based on a misapprehension of Christianity and of what Christian Science teaches.

Perhaps the most ludicrous idea our critic presented was, that when Jesus anointed the blind man's eyes with clay he was acting in the capacity of a pharmacist. But it is recorded that the blind man washed and came seeing! If clay is to be given credit for healing this blind man, then we presume that the pharmacopœia contains this remedy for blindness and that the doctors who listened to the address will hereafter prescribe accordingly. If our critic had heeded the quotation he used, *i.e.*, "Thou shalt love thy neighbor as thyself," he might have been spared the humiliation of revealing to an unsuspecting world such profound inconsistencies.

Finally, the religion of Jesus Christ can no more be separated from healing sickness than drugs can be associated with religion. Jesus never used drugs, neither did he recommend them to his followers, yet he and his disciples healed diseases for which pharmacopœia has no remedy, by spiritual means alone. Today Christian Science is enabling Christians in this age to repeat in an ever-increasing measure these good works in the same way, often after every material prop has failed to sustain the hopes reposed in them. What God cannot do it were but vain for man, even though he is backed by the whole pharmacopœia, to attempt.

[Ezra W. Palmer in *Glenwood Springs* (Col.) *Avalanche*]

Considerable comment was aroused by the remarks on Christian Science by Prof. D. E. Phillips of Denver University, at the Teachers Normal Institute held in Glenwood Springs a short time ago. Professor Phillips attempted to tell his psychology class what he believed Christian Science to be. His conclusion was that Christian Science was merely the operation of mental suggestion. Because of the publicity given his remarks I beg space to correct the erroneous impression given.

Christian Science is as far from mental suggestion as the east is from the west. Christian Science recognizes that there is but one intelligence,—the infinite, divine God, in whom "we live, and move, and have our being," as St. Paul declares. Since Mind is omnipotent and omniscient, to know this Mind is to lay hold upon the Science of being. As a result, a clear line of demarcation is established between the things of Spirit and the things that are unlike Spirit. As the understanding of Mind is developed, it becomes clearly apparent that everything unlike the divine Mind, such as sin, sickness, disease, and death, is false human belief, the perversion of righteousness, the product of the human or carnal mind. The falsity of these being thus made apparent, they are obliterated from consciousness by the knowledge of the true nature of God, and of man, His perfect image and likeness. Jesus healed the sick by understanding God and His holy purpose. He ever declared that all power came to him from the Father, and through his understanding of the Father he was enabled to nullify and destroy all discordant material conditions, whether sickness, sin, poverty, storms at sea, or death itself. In this process the human mind was no factor whatsoever.

Suggestive therapeutics is merely another name for hypnotism; it is simply the action of one mind upon another, the intrusion of one mortal's thought into the consciousness of another. Upon consideration, it will be conceded that the human mind is not perfect; that it entertains evil and sinful thoughts as well as good thoughts. It is therefore just as likely to project evil thoughts and suggestions into the consciousness of the invalid as good thoughts, and therefore is capable of and frequently is used as an instrument of evil. As a matter of fact, it does not heal the person of his sick beliefs. A suggestion merely crowds out one erroneous state of mind and substitutes another human thought in its place, and this thought may be just as destructive to the harmony and happiness of the individual as the original belief. Furthermore, the patient is liable to relapse, as the erroneous state of mind is not destroyed but merely ignored, so that the patient may be, and usually is, in a worse state of thought than he was before.

This is the direct opposite of Christian Science, which teaches the supremacy of the divine Mind, and that in proportion as we understand this Mind, the clarifying and purifying ideas of God come to the human consciousness, destroying everything unlike Him. It was on this basis that Jesus healed, and it is on this basis that Christian Science is performing its beneficent work all over the civilized world.

✦

[Charles E. Jarvis in *Redlands* (Cal.) *Review and Facts*]

Results are what count in the last analysis, and even if the critics of Christian Science spend "years of careful research" among its avowed enemies, and attempt to verify these findings from "the highest scientific and ecclesiastical scholars" equally antagonistic, such efforts amount to little in the face of the actual mental, moral, and physical regeneration taking place daily in hundreds of cases under Christian Science treatment. The personal attacks directed at the Founder of the Christian Science movement have invariably failed because of these same results, and any fair-minded investigator can easily and quickly satisfy himself as to Mrs. Eddy's life and what Christian Science has done and is doing for humanity through the authorized literature of the movement.

One by one those who attempt through pulpit and press to traduce Christian Science and its Founder are learning that because of the unfairness of such misrepresentations they have but one result, namely, to stimulate interest in the very subject they have taken so little pains to inform themselves upon. In the words of Mrs. Eddy in "The First Church of Christ, Scientist, and Miscellany" (p. 148), "When these things cease to bless they will cease to occur."

✦

[Frank Bell in *The Record*, Coatesville, Pa.]

To say that Christian Science and Mormonism resemble each other because each has had a founder and an explanatory literature, is like saying that two houses are alike because both have foundations, walls, doors, windows, and roof. Yet such is one of the reasons assigned by an evangelist, as quoted in a recent issue, for disapproving of Christian Science. Only one other so-called resemblance is averred, namely, that these systems were "founded by individuals totally lacking in intellectual training." A theory that uneducated persons necessarily think alike on religion or any other subject would be, to say the least, unique. But it so happens that the gentleman's information is as faulty as his reasoning.

Digitized by Google

Mrs. Eddy, who founded the Christian Science church, was a woman of culture and refinement. Although she did not claim to be a great scholar, the volumes she wrote bear evidence of familiarity with the best of literature, art, philosophy, and so-called natural science. The quality of her intellectual attainments cannot be seriously disputed.

Our friend disapproves of Mrs. Eddy's putting her interpretations of the Bible into writing and calling the volume a "Key to the Scriptures." True workers, he says, are content to "place the Bible in the hands of the common people, knowing that it guides to life everlasting." And this from one who spends many hours, not in distributing Bibles without comment, but in proclaiming from a public platform his individual opinions as to Bible teachings. What is the essential difference between writing one's interpretations in a book and preaching them from a platform? Was there ever a sermon that was not intended as a key to the Scriptures? And are there not in print hundreds of books of sermons? May every one else freely undertake that which it is an offense for Mrs. Eddy to do? Of what avail is it to quote the familiar Scriptural warning against the false prophet who would deceive the very elect, unless one is able to offer some proof of the correctness of his assumption that the aforesaid false prophet is the other fellow and not one's self? The Bible mentions no names in this connection, and opinions may differ as to the application. Mrs. Eddy has carried her interpretations to no such presumptuous lengths.

The wonderful success of Christian Science is not due to anybody's being deceived, but to the demonstrated reliability of the promises as to what spiritual truth will accomplish in the overcoming of sin and the healing of disease, when properly applied. Nobody is asked to believe anything merely because Mrs. Eddy has said it, but those who have followed her instructions in the practical use of scientific Christianity are everywhere testifying to the good results obtained thereby. Since the critics appear to be unable to disprove these results or offer a better means of obtaining the same, they might as well spare themselves the trouble of trying to stop the spread of Christian Science.

✧

[William D. Kilpatrick in *St. Joseph* (Mich.) *Press*]

In a recent issue a critic finds considerable fault with a lecture delivered in your city on the subject of Christian Science. He nullifies his position as a critic on this subject by admitting his inability to understand the lecture, and therefore we must assume that his criticism is based on his own erroneous conception of something which he claims to be unable to understand. The charge that Christian Science is heretical, merely because it does not agree with some creed or dogma to which the critic has adhered or which may have been taught by some church or sect, gives poor foundation for the assumption that the charge is sustained by this *ipse dixit* argument. The assertion made by the lecturer that "Jesus was not God," is the only possible conclusion to be arrived at through the study of the Scriptures, the gentleman's creed notwithstanding. It is safe to assume that if Christian Science agreed wholly with all the creeds and dogmas of the centuries, and did not present to suffering humanity a reasonable and demonstrable departure therefrom, it would today be suffering the sting of oblivion rather than drawing to its fold the great army of people who are finding so much help in its teachings.

Christian Science in all its teachings is in strict accord with the Bible, and its position on the question whether or not Jesus was God, can best be explained directly from the Bible. Jesus called himself the Son of God, and is referred to in the Bible as the Wayshower, the Exemplar. Particularly significant are the following words of Jesus: "All things are delivered unto me of my Father: and no man knoweth the Son, but the Father; neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him." "Why callest thou me good? none is good, save one, that is, God." And again, his words to Mary: "Go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God, and your God."

In urging all who may be interested in this subject first to consult their ministers for guidance, the critic overlooks the fact that a large percentage of the members of Christian Science churches have at some time been members of other denominations and have amply availed themselves of the opportunity to be set right on this and other points by the method advocated by our critic. The critic further begs all those who may be inclined to investigate, to "play fair with their religion." It might be more to the point to ask them to play fair with themselves, to make their own investigation, unbiased and unhampered by the opinions of those opposed to Christian Science and avowedly incapable of understanding this religion. A careful study of the Bible with the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which can be found in almost every public library, will permit one conscientiously to reach right conclusions.

The exception taken to the effort of Christian Science to educate mankind into a better state of health, in accord with the instructions contained in the Bible and the express admonition of Jesus, is rather a poor one, we think, considering the vast amount of good already accomplished along this line through the practice of Christian Science. The argument that "everybody gets well of every disease but one," has never served to prevent mankind through the centuries from appealing to some curative method in time of sickness, and does little honor to Jesus' direction to "heal the sick, cleanse the lepers, raise the dead."

Any one today who does not concede the efficacy of Christian Science in the matter of health, has indeed limited his investigation. Living witnesses may be readily found in every corner of the globe who have been saved from the grave through Christian Science after having given every remedy known a fair and honest trial. On page 348 of Science and Health Mrs. Eddy writes: "I have never supposed the world would immediately witness the full fruitage of Christian Science, or that sin, disease, and death would not be believed for an indefinite time; but this I do aver, that, as a result of teaching Christian Science, ethics and temperance have received an impulse, health has been restored, and longevity increased. If such are the present fruits, what will the harvest be, when this Science is more generally understood?"

Sunset Light

ANNA DEWEY-MC NUTT

GLAD of the day! My day!
It is not always bright;
Not always do my roses bloom,
Nor all my songs ring right.
But I am sure ere evening's gloom
Shall have enshadowed earth and sky,
God's rapturous glory will illume
My sense, my faded garments dye
In purple pigment,—chilling doom
Of petty discords fly
Like mists o'er seas away,
Leaving me gladness of the day.

Editorial

"Redeeming the time"

THE prudent business man at the close of the year takes account of stock, figures up his profit or loss, and lays his plans for the future. So, too, the wise Christian Scientist takes this time to recall our Leader's characterization of the new year as "a prophecy and promise . . . redolent with grief and gratitude," and her further statement that "time past and time present, both, may pain us, but time *improved* is eloquent in God's praise" (Pulpit and Press, p. 1). It is a time frankly to recall the past and face the balance-sheet, then to pray as did David, "Lead me, O Lord, in thy righteousness . . . make thy way straight before my face," resolving that the year to come shall show the balance on the right side—that the time given us has been "improved."

In commencing a new calendar year, however, many are either cast down with the discouragement of unfulfilled hopes and plans of the year just closed, or else overstimulated by the expected fulfilment of new hopes and plans during the year to come. The wise man will give power to neither of these states of mind, but will be calm in the face of those circumstances which have made for discouragement in the past, and equally calm in entering upon the future. The question with him will not be whether his desires are to be fulfilled, but whether he is ready to do that which may rightly be required of him; in other words, he will reverentially say with the Master, "Not my will, but thine, be done."

This does not mean that we give ourselves up to be governed by a blind fatalism, but rather realize, as Christian Science teaches, that God, infinite Mind, is All and governs all, and that we must not depend on the weakness of mortal mind and material desires for inspiration or achievement. When Jesus said, "I can of mine own self do nothing," it was in no sense an admission of helplessness. On the contrary, he knew himself to be endowed with all the strength and power of the Father; he realized the omnipotence of God, and the consequent utter futility of mortal mind and its methods, and declared himself ready to be guided and governed by God alone. Jesus knew that hatred of the truth would assail him, and that to the will of the flesh it would seem to triumph; but he also knew that "success in error is defeat in Truth" (Science and Health, p. 239), and was unmoved by the seeming power of evil. He met every phase of temptation and evil in the firm conviction that good is the only reality; and this must be the attitude of all who would follow in his footsteps.

Mankind in its search for the truth of being must learn that our Master was "speaking of God's children, not the children of men," when he said, " 'The kingdom of God is within you;' that is, Truth and Love reign in the real man, showing that man in God's image is unfallen and eternal" (Science and Health, p. 476). With this understanding of God and man, the Christian Scientist will enter into the new year with the greatest possible compassion for those who are "distressed, in mind, body, or estate," and will gladly aid all who suffer in these ways; but he will not allow himself to be made to believe that the seeming greatness of evil can make real that which is unreal. He will know that as mankind give up their false beliefs, and stand ready to do the will of the Father, they will be regenerated and redeemed.

We have the Master's word that it is not God's will for even the least of His children to perish. Just as the shepherd left the ninety and nine that were safe in the fold and went out to seek and to save the one who was lost, so we are not to limit our endeavors to those who already have found the truth, but to let our light so shine out that those sitting in the darkness of grief and despair may be illumed with its radiance and be led to come unto him whose yoke is easy and his burden light. The world is waiting, on the threshold of the new year, for the hope and cheer that Christian Scientists can give, and if in our hearts there daily, hourly rises a prayer for guidance, for a leading "in the paths of righteousness for his name's sake," we shall be guided to do the Father's will in meeting the need of mankind, and be able to bear witness at the end of another year that we have been, in the words of the apostle, "redeeming the time."

ARCHIBALD MCLELLAN.

Unceasing Prayer

THERE are many sincere Christians who feel that the demands set forth in the Bible are beyond the possibilities of mortals, and to this students of Christian Science would agree. It is only as the spiritual facts of being are accepted that the Master's declaration, "With God all things are possible," is seen to be a definite promise to those who really desire to be "with God" in all they think, say, and do. This of course calls for the spiritualization of one's entire thought; indeed it reiterates the declaration of Christ Jesus, "Ye must be born again."

In the Old Testament are many religious requirements which called for so much time that a great number of men were set apart for the purpose of adequately carrying on the rites and ceremonies of the Jewish religion. This probably had the effect of satisfying the laity that all was being done in this direction which the law of Moses required, yet we find that the prophets saw much farther than this. They did not hesitate to say that obedience was better than sacrifice, and righteousness far more acceptable to God than slain beasts. Jeremiah even declared that God had never commanded these sacrifices, but that His requirements were wholly spiritual. The psalmist tells us that the sacrifices of God are "a broken and a contrite heart," and he says that seven times a day he offered this kind of sacrifice.

Although there is no hint that Daniel ever belonged to a priestly order, we find that he spent much time in prayer, and that it was the kind of prayer which brought him the aid of omnipotence. We read that on one occasion an edict went forth for the destruction of all the wise men in Babylon because the astrologers had failed to interpret a certain dream of the king. We are then told that Daniel and his three companions sought God with all their hearts, the result being their deliverance. Daniel's prayer as given in the second chapter of the book which bears his name is of profound significance to the student of Christian Science, in that it is a declaration of the wisdom and power of infinite Mind, and of the impartation of these divine qualities to those who refuse to acknowledge any power but the divine. This is further illustrated in his deliverance from the lions, which shows how true prayer lights the pathway to dominion over all that is unlike God.

St. Paul, who bids us "pray without ceasing," at once adds, "Quench not the Spirit." It would not be possible to pray unceasingly, indeed to pray at all in any true sense, if mortal belief were permitted to stifle "the spiritual intuitions" which Mrs. Eddy tells us "are our guardians in the gloom" (Science and Health, p. 174). Not only must we heed these messages of divine Truth, but we must strive to understand them in their relation to our own true being. The Bible tells us that God talks with men, and this should not seem strange, since it has always been believed that even little children could talk to God. The loving obedience which characterized the whole life of the Master was unceasing

Digitized by Google

prayer. It enabled him to declare that he knew God and that God knew him, also to say he knew that God heard him always.

In Science and Health (p. 12) we read that Jesus' prayers "were deep and conscientious protests of Truth,—of man's likeness to God and of man's unity with Truth and Love." This assuredly furnishes us with a model for unceasing prayer, for every hour of the day material sense presents its false evidence which would have us believe that man is separate from God; and the very instant the false evidence presents itself is the very best time to refute it with a declaration of the supremacy of infinite good. This assures us of the nothingness of evil, and in Christian Science we find that the truth carries with it the proof of its own verity. This process is truly unceasing prayer; and if any one should argue that it calls for very great effort, it may be answered that in life stagnation is impossible. It is only a question of making our activity count for the utmost, and this can best be done as our thought turns at each moment with unwavering trust to the Father, who not only hears but answers the prayer of His child.

ANNIE M. KNOTT.

Veiled Verities

GENERALLY speaking, men are most reserved about believing in that which is most foreign to experience, and this is especially true if the statement or event brings into question the religious opinions they and their fathers have always accepted as true. It is therefore not at all surprising that the teaching of Christian Science respecting the unreality of that which seems most substantial, should prove a poser for what is wont to call itself hard common sense, but which in fact is common thoughtlessness or non-sense. To accept things as they appear requires no effort whatever, and when we remember how averse the average mentality is to any kind of purposeful activity, we come upon another reason why prevailing thought is so assertively persistent. Every one is willing to concede, however, that in all probability what he knows about things is but a small part of what is to be known about them, and this being granted, it need not surprise one to find that even a very little investigation proves the falsity of much of his past thinking. He thus awakens to the fact that only an illumined sense can bring to any phenomenon its true interpretation.

To illustrate: If one were to look at the music known as "America," he would have no difficulty in realizing that these queer black marks are merely signs which appeal to musical intelligence alone, and that they are utterly unlike the various tones for which they stand. Further, if thoughtful, he will realize that this step is only the first in his passage from the sign to the thing signified, and that there is a colossal distinction between noise and music. One's dog would hear all these varied tones, no doubt; nevertheless, for him "My country, 'tis of thee" would still have no existence. Furthermore, while a South Sea islander might revel in these tones, he, too, would have no idea whatever of what they mean to a wide-awake American. Not having had our thought experience, he cannot bring to it our interpretation of its meaning. By a kindred course of thought we must come to see that literature does not exist in books or bindings, nor in words or phrases, but only in cultured thought, in the consciousness of certain people.

We thus apprehend the fact that truth-knowing, all science, is interpretative. Today the physicists are thinking of objective phenomena in terms of force; and while they would not undertake to explain the latter, they are perfectly sure, and have made most others sure, that things are not at all what they seem; that the ultimate fact cannot be measured either with a yardstick or a pint cup. For them the material-stuff world has passed away. Christian Science honors this order of procedure, and passing from the physical to the metaphysical, presses the inquiry as to the nature of substance. It agrees with the physicist's negative declaration, but is not content to stop there. It insists upon a positive conclusion, hence it demands a positive premise. This is found in the teaching of Christ Jesus that God, the source and support of all being, is Spirit. The basic teaching of Mrs. Eddy is that if we would determine the nature of reality, things must be resolved into thoughts (see Science and Health, p. 123), and that cause and effect, Principle and idea, the supreme agent and the act, are in their nature one and inseparable.

In all this the symbols with which we are familiar are not ignored; they are but reinterpreted in the light of the knowledge of the nature and glory of God. This spiritual interpretation of all things was to be the mission of the Comforter, according to the Master's words: "All things that the Father hath are mine: therefore said I, that he [the Spirit of truth] shall take of mine, and shall show it unto you." In declaring for the allness of God and His manifestation, the reality of spiritual being and the unreality of matter and evil, Christian Science is therefore fulfilling the ministry of the Comforter and establishing its own identity as "sent from God."

Slowly but surely men are recognizing the truth that real meanings are not found in the sense facts; that at their best these serve but as symbols of those spiritual verities with which right consciousness, the true man, has to do.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

ST. PETERSBURG, FLA.—A deal has been closed by which Noel A. Mitchell sells to the Christian Science church his very desirable lot on the corner of North Fourth avenue and Fifth street. The lot is 100 by 100 feet, facing south and east, with a frontage on Lake park, making it an ideal location for a church. The Christian Science church building, 406 Third Street South, is not adequate for the requirements of the Christian Science congregation, it being necessary to use the La Plaza theater on Sunday mornings in the winter season, and the building is not large enough to care for the people who desire to attend the Wednesday evening services.

St. Petersburg Times.

GEORGIA.—For nine months, ending Oct. 31, literature has been distributed as follows: *Journals* 652, *Sentinels* 11,193, *Monitors* 15,758, *Heralds* 92, pamphlets 283, newspapers and magazines 780, reprints 4,494, making a total of 33,252 pieces.—*Committee on Publication.*

Digitized by Google

MINNESOTA.—The churches of Minneapolis and St. Paul, the University society, and the society at Excelsior, maintained a tent at the Minnesota state fair this year, beginning Sept. 6 and continuing for one week. Profiting by the experience of last year a larger tent was used, and next year further extension will have to be seriously considered. The tent maintained its reputation for being the most attractive one on the grounds, and it seemed to be greatly appreciated by the large number of people who visited it. The attendance record showed approximately one thousand during the week. There were distributed a large number of the different pamphlets, which seemed to be in great demand, and also each day the current number of the *Monitor*.—*Correspondence.*

CINCINNATI, OHIO.—Sunday, Nov. 1, Second Church of Christ, Scientist, will hold the first service in its church edifice, 658 Rockdale avenue. The property was recently purchased from the St. Andrew's Catholic congregation, which bought it from First Church of Christ, Scientist. This change made by Second Church is due to the growth of attendance, which has greatly exceeded the seating capacity of the Æolian Hall, 25 West Fourth street, where services have been held for the past three years. The seating capacity of the auditorium of the acquired church is estimated to be six hundred.—*Cincinnati Enquirer.*

ATLANTA, GA.—The formal opening of the handsome auditorium of the new First Church of Christ, Scientist, at Peachtree and Fifteenth streets, will be held Tuesday night [Oct. 27] at eight o'clock. Bliss Knapp of Boston, a member of the board of lectureship of The Mother Church, will deliver an address on Christian Science. This will be the initiatory service held in the auditorium. The new building is one of the finest in the city and commands the entrance to Ansley Park. It is of brick and stone, and was erected at a cost of about one hundred and thirty thousand dollars.

The Atlanta Journal.

SAN FRANCISCO, CAL.—A contract has been awarded for the construction of Third Church of Christ, Scientist, for approximately eighty thousand dollars. A lot on Haight street east of Central avenue has been secured, and the building will have a frontage of 61 feet by a depth of 124 feet.

News Bureau.

STILLWATER, MINN.—Hereafter Christian Science services will be conducted in the auditorium of the prison every alternate Sunday. Those who are desirous of attending these services may do so by going direct to the auditorium as they march out from breakfast. Every one, any one, may attend.

Prison Mirror.

The Lectures

Durban, South Africa

A lecture on Christian Science was delivered in the Masonic Hall by Clarence C. Eaton. William McLarty, the chairman, said that when he was asked to preside over that meeting of Christian Scientists, he wondered why, and he could find no reason really, except the knowledge that he was an inquirer after truth. Some years ago at Tacoma, in northern Queensland, he heard the Rev. Mr. Drummond preach a sermon in a small Presbyterian church on the text, "What is a Christian?" He never forget that sermon preached by the saintly Drummond, for he was saintly, and did a great deal of good in his generation. The preacher endeavored to show that a Christian was a believer in Christ, and said that if a man believed in Christ he would do as Christ did, and he would carry that belief into his life, and not only live it but defend it. He would never be ashamed of the man Christ Jesus.

Now, as an inquirer after truth, the chairman asked himself, What is Christian Science? His own mind told him it was Christian truth. Many were afraid of truth; they were afraid to acknowledge it. Nevertheless, it was the duty of all who called themselves Christians to acknowledge truth wherever they found it. A very large number of people in the world had sincerely believed, and did believe, that they had found truth in Christian Science. Christ said, "By their fruits ye shall know them." The chairman stated that he had a large number of friends among Christian Scientists, and he knew them to be sincere people, to be people who lived up to their faith, and always told others what good things their religion had done for them. To his mind, that was one of the best tests of Christian truth. Everything that made men's lives happier and better, Christians should support and wish Godspeed. He had known many wonderful cures through Christian Science. They stood forth undenied.

The Natal Mercury.

❖

Grand Junction, Col.

William R. Rathvon delivered a lecture on Christian Science in the First Congregational church. William Weiser, district-attorney, in introducing the lecturer, said in part:—

Actuated sometimes by ignorance and very often by unkind motives, people have in times past sought to clothe Christian Science in the garb of mystery; but I believe I may safely say that not even the great expounder thereof ever claimed for it anything new or mysterious. Sacred and secular history alike agree that the early disciples of Jesus were endowed with the power to heal sickness as well as sin. Somehow and in some way the power over sickness was early sacrificed or relinquished, and with its loss went much of the church's power. A placid submission to the self-imposed limitation continued through centuries, until in 1866 Mrs. Eddy presented to the world the satisfying proof that God's premises were not mere platitudes, but were sufficient to supply every need, whether physical or spiritual.

Correspondence.

❖

Chicago, Ill.

A lecture on Christian Science by Bicknell Young was given in Fourth Church of Christ, Scientist. The introductory remarks by J. Edward Reilly, first reader, were as follows:—

Christian Science brings God nearer to human perception, and demonstrates the way for a clearer understanding of divine Life, including in its beneficent ministration physical healing, moral regeneration, spiritual progress, and an intelligent faith in the efficacy of prayer. It is natural for the religious man and woman to seek aid of God in time of need; and yet is it not true that, generally speaking, humanity approaches with timidity and doubt any proposal urging complete reliance on God? In the present stirring times, when the Christian nations of Europe are engaged in a warfare more tragic and devastating than the greatest wars of history, and when human events have drawn mankind into a maelstrom of evil conditions, our faith in the supremacy of God, good, is strained and tested to the utmost. The good to be seen through the midst of it all is that the human mind under stress of these conditions is brought to a realization of its own helplessness, and is impelled to seek refuge in that divine source which holds secure the destiny of men: but a more enlightened faith in God is the demand of the hour. It is the settled assurance of God's ever-presence and omnip-

Digitized by Google

otence—His availability in the affairs of men—that is essential to wean men from their present reliance on the force of arms and inhuman ways and means, and will lift them into the freedom of peace and love, good will to men.

This is what Christian Science is doing for the world today, and has been doing for the last half century, teaching men that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Christian Scientists have had so many proofs of God's willingness and power to heal sickness and correct evil conditions, that in this present-day problem affecting universal humanity they are thankful indeed for the great boon, Christian Science, which has brought them the sweet assurance of the apostle James: "The effectual fervent prayer of a righteous man availeth much."—*Correspondence.*

❖

Toronto, Ontario, Canada

A lecture on Christian Science by Jacob S. Shield was delivered for Third Church in the Royal Alexandra Theater, which seats about seventeen hundred, and it was almost completely filled. The lecturer was introduced by J. Edgar Fielding, first reader, who said in part:—

Of the many wonderful truths contained in the Bible, perhaps none is of greater importance today than that statement of Jesus, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." The great desire of mankind throughout the ages has been to know God aright, and through this right understanding or knowledge of God, or righteousness, to gain the positive assurance of life eternal. In the search for this knowledge of God, men have naturally turned to the Scriptures. As Jesus said on one occasion, "Search the scriptures; for in them ye think ye have eternal life." Christian Science has brought to the world an interpretation of the Scriptures which is demonstrable, and which enables us to prove the truth of our religion, to give the "signs following" which Jesus demanded, which signs, as you know, included the healing of the sick as well as the reforming of the sinner.

Correspondence.

❖

Kennebunk, Maine

The sixth annual lecture given under the auspices of the local Christian Science Society, was delivered in Mousam Opera House by Bliss Knapp. Introductory remarks were made by Harry F. Fairfield, first reader, who spoke as follows:—

As thinking men and women of today, we must admit that humanity's greatest need at the present time is absolute freedom from the evil conditions of the world, its wickedness, sorrow, suffering, sickness, and distress. All about us are evidences of misery and want; in every walk and calling of life we find disappointment and defeat; man seems to be in bondage everywhere to evil and to material laws. Humanity fails to show man created in the image and likeness of God, perfect and eternal, and having dominion over all the earth. Something must be radically wrong, and it behooves every man to investigate for himself and see wherein the trouble lies, and why he falls so far short of enjoying his divine birthright. We seem to forget that we are the sons of God.

Nearly two thousand years ago Christ Jesus came to show men the way back to God. His life and teachings were very plain, and yet how very few seem to be able to apply these teachings to daily living and every-day problems. He is "the way, the truth, and the life." We are told that we shall know the truth, and the truth shall make us free. Jesus' life was one grand demonstration of the verity and absoluteness of this knowledge. He freed men from sin, disease, and death by the same healing Principle, and he bade us do likewise, saying that "greater works than these" should we do if we were his disciples. Salvation is, then, to be found in being a disciple of Christ in thought, word, and deed.

Christian Science today is teaching men how to live, move, and have their being in God; how to be free from the bondage of sin and death, through the Mind of Christ, divine Principle, God.—*Eastern Star.*

❖

Orange, N. J.

Clarence W. Chadwick delivered two lectures on Christian Science before an aggregate of thirteen hundred persons. He was introduced by H. D. Whittlesay, president of the trustees of First Church of Christ, Scientist, who said:—

Throughout the world today, thinking people are eagerly searching for a clearer and deeper faith in God. True understanding and knowledge of Christian Science reveals to humanity the fatherhood of God and the brotherhood of man, and this quickened spiritual sense will eventually destroy faith in evil and all human discord. Christian Science increases man's capacity to live a wholesome, joyous daily life, and it will be observed that its platform is a simple system of demonstrable Christian metaphysics, which, when clearly understood, fully meets every human need. Christian Science is, therefore, a subject which merits close and serious attention.—*Correspondence.*

Testimonies of Healing

On page 272 of Science and Health, Mrs. Eddy writes, "The triumphs of Christian Science are recorded in the destruction of error and evil, from which are propagated the dismal beliefs of sin, sickness, and death." For several years my life has been a record of triumphs of Truth over error. The first touch of its transforming power came to me at a time when I had endured through human will, just as long as I could, the ravages of a terrible sorrow. I had been for some twenty-five years a member of a church and an ardent worker in its activities. I loved the church and humanity, and had gained much solace in helping to uplift and comfort others; but when my own loss came with all its pitiful and heart-breaking tragedy, I had nothing to hold to wherein to find comfort for myself.

I could not attribute any part of my sorrow, as theology would have it, to a "dispensation of Providence," neither could I see how God could be unconscious of it all. In my darkness I fought through two miserable years, until I was a wreck physically and mentally. I had one desire,—to die and be released; I knew of no other way in which my agony could end. I know now that even then Christ stood at the door knocking for admission; and when I said to a dear Christian Scientist who came to my home just at the right time, that I had gone as far as I could, and if she had anything for me I wanted it, I at that moment opened the door and admitted "The Prince of Peace."

From that hour the transformation has steadily gone on. I shall never forget how quietly and positively that good woman said to me, "I have just what you want;" and truly God had given her "the tongue of the learned," that she should "know how to speak a word in season to him that is weary." My thought was instantly lifted, and in a very short time my wish and determination to die was reversed, and I was desiring to live and love, and lift the thought of others as mine had been lifted. I was filled with wonder and amazement that I had been so blind to the truth, but there was joy and gratitude that the light had dawned at last. In Science and Health (p. 174) Mrs. Eddy says: "Truth is revealed. It needs only to be practised." I realize that as I put into practice every grain of Christian Science which I grasp, more and more of the understanding is gained,

Gradually, as I came into my birthright and dominion, every physical ill disappeared. All my life I had been extremely nervous. I had also suffered with severe headache, and hemorrhoids for which the doctors said I must undergo an operation. This condition disappeared the first year of my study; the second year I had the last headache, and it is a rare thing for me to feel even a touch of nervousness. All the words known and used to express gratitude do not even touch what I feel for Mrs. Eddy, who labored so unselfishly that we might better understand the teaching of Jesus the Christ. Surely she was used of God to prepare a table before us in the presence of our enemies. I have been permitted in some cases to help in bringing others to the feast, and this is indeed heavenly joy.

Recently dark clouds of misfortune, sorrow, and loss have seemed to darken my path, and I can say with David: "Unless thy law had been my delights, I should then have perished in mine affliction." Had I been without the understanding gained from Christian Science, the law of God would have been unknown to me; but through this revelation I rejoice in freedom, and in the realization that there still exists for me and for all "the everlasting light" of immortality.

ANNA GREENE, La Place, Ill.

It has been my greatest desire for some time to tell of the many benefits which have come to me and mine through Christian Science. I want to speak of the wonderful way in which I experienced God's help and ever-presence one day when my little grandson and I were on our way to spend the afternoon with some friends. As we were crossing one of our busiest streets to get on a car, a large sign was blown off a wagon, and it struck me with such force that I was thrown against a concrete curb. My first thought was that God is All-in-all and we could not be hurt. As I held to this thought some one came to our assistance, but I think I was up before he got near enough to aid me. He said, "What a narrow escape you have had!" Neither the little boy nor I felt any effects from the accident, and there was not even a bruise. We continued our journey and spent the afternoon as we had intended, our friends rejoicing with us in this new proof of God's protecting care. While I am grateful for the fact that I was not hurt, I am more grateful for the joy that came to me through the realization of God's allness and ever-presence.

This great truth was first presented to me by a dear sister who was healed through Christian Science. I knew how much she had suffered, and also that the loving ministrations of this teaching had healed her; but while I gave credit for the healing, I did not think much about the subject, except that I was somewhat inclined to ridicule it, as many others are who do not understand its worth. One morning, however, while I was suffering, my sister called me over the telephone, and on being told that I was not improving under *materia medica*, she recommended that I try Christian Science. As I turned from the telephone I remarked to my daughter, "I am going to try Christian Science." She seemed to think it was awful, but I followed my sister's advice, and taking up the study of Christian Science, I was healed of stomach disorder through reading our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was nine years ago. Since then all of my household have become interested in Science, besides many other relatives. My daughter is an earnest student, having accepted this teaching at once when reading the text-book.

At times I get discouraged; but when I have been unable to do my own Science work, I have been most grateful for the loving help of practitioners. When the days have been dark, these loving workers have always been faithful in pointing me to the right source for comfort. As a proof that Christian Science is simple and practical to the pure, receptive thought of little children, I wish to tell of relief from suffering which I experienced through the help of my little grandson. The distressing condition had continued throughout the day. Late in the afternoon the little boy came to me and asked if I wished him to help me. I replied that I did, and in a short time I was entirely well. During these years I have had many proofs of the healing efficacy of Christian Science. The constant cry of my heart is for a better understanding of this great truth, and the ability to help others as I have been helped.

I cannot close my testimony without expressing thankfulness to God for our beloved Leader, for her selfless work for humanity, and for her life of purity and holiness.

MARIE WEIL MANTOUX, Dallas, Texas.

✧

I give the following testimony as a proof that in Christian Science every material law can be overcome. A child was expected in our home about the middle of February. There were some slight complications which would have caused no anxiety had not my wife thoughtlessly overexerted herself, thus causing the conditions to become suddenly aggravated.

Digitized by Google

This occurred early in January, and when the midwife, a good Scientist, saw this change, she told us that under the circumstances she would be obliged to consult with a physician and have the case examined, as is required by law. For some weeks my wife had been under the daily treatment of an experienced Christian Science practitioner, who advised us to abide by the law and call the physician, one of the best specialists in Berlin, without delay.

After careful examination this physician said the condition was very serious, because the kidneys were affected, and on a second examination he declared that there were yet other abnormal conditions. There was also swelling of the feet, so that my wife could not walk; and although this was a month before the child was expected, the physician said that she should be taken to the hospital the next day, if possible, and the child removed with instruments. My wife told him kindly that she did not wish to go to the hospital, also that she was assured the birth would be natural, since with God all things are possible, no matter how serious may be the outlook from a material point of view.

We decided to trust all to divine Love as our only physician, and we realized that time plays no part in God's universe. A few days after this the child was born, safe and sound. All went wonderfully, although the midwife had told me two hours before the birth that she could give me no hope that the child would live (I must explain here that we could not get the midwife we had engaged at first and were obliged to have one who was not a Scientist). There were many other things that occurred which at the time seemed unfavorable, but everything discordant was quickly overcome in Science.

For this wonderful truth, which is a light shining in the darkness, we shall never cease to be thankful. Our earnest study of the Bible and the inspired writings of Mrs. Eddy, to whom we are deeply grateful, has brought us only blessings; and although the way did not seem easy, as we at first imagined it would be, we found that the overcoming of difficulties brought us priceless lessons. We gladly lay aside the old beliefs and pray daily for more light.

EDWARD GLEASON, Berlin, Germany.

✧

It was in 1906 that I first heard of Christian Science healing. I had never been in contact with Scientists, and none of the literature had ever come my way. Several years before this I had been operated on for internal disorders, and was left in a nervous condition which the medical authorities and physicians said was incurable. No similar case had ever been known to be healed. This condition undermined my whole system, so that for seven years I struggled to keep my head above the waves. My brother then advised me to try Christian Science, and I did so. With the first week's treatment I was healed of piles, stomach disorder of twenty years' standing, and bowel trouble. I had so many minor ailments that I thought I would ask to have the twigs broken off and then I would get at the root, so for two years I did not ask help for the nervous trouble; but when I did, I was healed in three weeks' treatment.

It was such a joy to know that I was free, that I fully realized the feeling of the young man when he said, after Jesus had healed him, "Whereas I was blind, now I see." For six years divine Love has been my only physician. Many blessings have come to me through this great truth, and it gives me much pleasure to express my gratitude for Christian Science and for the spiritual uplift I have received through its teachings. I have had and have seen so many demonstrations of the power of Truth to overcome error, in the way of toothache, earache, fever, mumps, measles, and accidents, that I feel this is truly the Christ-healing. Some one has said that "the most valuable gift of a man or woman to the world is not money or books, but a noble life," and I think if one will live up to the standard of Christian Science, he will reach the mark. I am thankful that during my lifetime there has been a way shown to humanity by which all may receive the healing truth.

MRS. J. T. SHEFFLER, Frankfort, Ind.

✧

[Translated from the German]

A feeling of deep gratitude for the many blessings received is the motive underlying this tribute to Christian Science. In 1908 I first heard of this teaching through a friend. After I had told her all about my various ailments, she said to me, "Why do you not try Christian Science, which has cured so many people?" She told me that she had been healed of severe headaches, and assured me that I too would be helped. Although it all seemed quite new to me, I was ready to give it a trial, and a practitioner was asked to help me. She first treated me for stomach trouble, and the next day I was able to eat a certain kind of food which I had been obliged to avoid for twenty-five years on account of the suffering it caused me. Oh, how happy I was! Sleep returned, and a rupture was healed in three weeks' time.

In January, for three years in succession, I had had attacks of illness which kept me in bed from two to three weeks, but for the past six years I have been entirely free from them. Then, too, my eyesight has greatly improved, and I have been able to read a great deal without glasses. This was quite impossible formerly. I enjoyed excellent health for several years, and then, in June, 1913, I had an attack of kidney and liver complaint; but through her understanding of God, the practitioner to whom I applied for help soon effected a cure. Many of my acquaintances passed on with this disease during the six months of my illness, and this makes me feel all the more grateful for the light, and for the deliverance which Truth and Love has brought me. Did not the Master say, "Whosoever liveth and believeth in me shall never die"? I know that God is my life, and that there is no death. I am most deeply grateful for Mrs. Eddy's glorious teachings.

ANNA M. E. ROHLFS, Jersey City, N. J.

✧

When on account of teaching in the evening schools I was for many months deprived of being at the Wednesday evening meetings, it was a great privilege to have the testimonies in the *Sentinel* and *Journal* to read. I therefore send my testimony with a heart full of gratitude for the many blessings which have come to me during the past six years of regular and earnest study of Christian Science literature.

An artist in a strange land, dissatisfied, without means, without a religion, and swayed by influences beyond my control, I cared little for my existence, trusted nobody, and was afraid of everything. The first Christian Science service I attended in First Church of Christ, Scientist, New York city, was a true Christmas eve for me. It filled my heart with hope and happiness, and though very skeptical in the beginning, I am glad I followed out my decision to look into this teaching to see if there was any truth in it. Now I can laugh, and am almost ashamed of myself to think I ever could have been so blind as not at once to understand that the very Christ was leading me, and was indeed before me. How everything has changed! I can see now how for ignorance I have gained knowledge; for limitation I have infinite possibilities for good; for poverty I have all that I need; for

Digitized by Google

fear of disease in myself and others I have a knowledge and understanding of Life.

As I studied Science and Health I began to see the possibility of improving my health, and I tested many sayings of Mrs. Eddy, thus working myself out of colds, hay-fever, pain, and all sorts of fears and habits of using material means for keeping well. As, like a feeble child, I grew out of many temptations and my horizon widened, I could understand more clearly than ever before the power of Truth. One day, after reading the pamphlet "Personal Contagion" and "What Our Leader Says," I had sufficient understanding instantaneously to heal a seemingly awful physical condition in a neighbor of mine. His wife wanted to run for a physician, since his throat, face, and eyes were swollen and he was unable to speak. A few words spoken, the reading of the pamphlet, and my study of the Lesson-Sermon, resulted in the fact that within eight hours the man was at work in his office. As a result of the giving of this experience in a testimony meeting last year in Buffalo, I am told that others realized for themselves the power of Truth to heal.

I am also most grateful for being able to speak to a large audience without fear, which was my secret wish for a long time. Teaching is now easy and natural without any special training for it. To understand the first commandment, to hear the Christian Science lecturers, and to read and study our literature, are privileges that cannot be too highly estimated. If it ever paid a man to be patient and honest in his work, it pays to be so in studying this religion with "signs following."—Paul H. Shramm, Buffalo, N. Y.

✧

In Paul's message to the Ephesians we read: "Put off concerning the former conversation the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind; and . . . put on the new man, which after God is created in righteousness and true holiness." Here I would like to give my experience in regard to this passage.

Being raised in a Christian church of which my parents were devout adherents, I was taught to fear God almost more than to love Him. As far back as I can remember, I was taught that if we were sick it was the will of God for us to be so. At the age of sixteen I lost my dear mother, and as the home seemed lonesome without her, I decided to leave. I went West and began to lead a life which was none of the best; in other words, I lived in what is commonly called the underworld. For almost ten years I was restless and miserable, and drifted from place to place. The more I saw or heard of religion the more I despised it; but away down in my heart I had a longing to be good. I wanted some one to love, and some one to love me. I was getting disgusted with this worldly life,—people striving for wealth, brother fighting against brother; I could not understand it. Those I met all preached to me about a hereafter, but nobody seemed to be able to tell me about now.

Some two years ago, on my second visit to the Pacific coast, I became acquainted with a young lady who was a Christian Scientist. I had known her quite a while before she broached the subject of Christian Science to me and asked me to attend church with her; and I went, just to be agreeable. I had been drinking a good deal at this time, and everything seemed to go wrong, so I confided to my friend, and she gave me a copy of Science and Health to read; but it seemed as though I could not understand it, so I returned the book. A short time afterward, while standing opposite a Christian Science reading-room, something seemed to direct me to cross the street and enter it. I did so, and sat down to read. When I left the room, I was surprised to see that I had been reading the Bible and Science and Health for over three hours. I had never read the Bible before. How happy I felt when I left that reading-room, and I resolved to know more of this wonderful truth.

Those who do not know about the life of the underworld, cannot realize how happy I am, and how my heart overflows with gratitude when I think of how good God is to His children and how good He has been to me in helping me to "put off . . . the old man," and to "put on the new." I am entirely cured of smoking and drinking, and do not use profane language, which was one of my worst habits. What I am most grateful for, however, is the understanding I am gaining through my daily study of Christian Science. I would like to state to the earnest seeker after Truth, that if his efforts are beset by false belief, he will be helped by Mrs. Eddy's words: "If your endeavors are beset by fearful odds, and you receive no present reward, go not back to error, nor become a sluggard in the race. When the smoke of battle clears away, you will discern the good you have done, and receive according to your deserving. Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health, p. 22). He will also be helped by Christ Jesus' saying, "Lo, I am with you alway, even unto the end of the world."

Joseph A. Ballmann, Jr., Los Angeles, Cal.

✧

Never will I forget the joy, peace, happiness, and freedom that took possession in my heart when I got my first glimpse of Christian Science at a Wednesday evening meeting about four years ago. In addition to the spiritual awakening which inspires and brings comfort, we have had much experience with the healing power of Truth in our home.

My little boy, injured at the time of birth, had been troubled for five years with a severe bladder difficulty that was very uncomfortable and annoying. We had faithfully tried material remedies and doctors without avail, but under Christian Science treatment he was completely healed in a comparatively short time, and now for some years there has been no indication of any return of the trouble. When my little daughter was quite young, I was told by the doctor that she would probably have to wear glasses for structural defect of the eye, and after starting to school she was troubled with severe headaches. With a few treatments in Christian Science, however, the eye became perfectly straight and the headaches stopped. I might mention many other instances in which our family has experienced the blessings of divine Love. Through the aid of the Christian Science literature we have been able to help ourselves and our children.

I cannot too cheerfully express my thankfulness for the comfort that this truth brings; the enlightenment of joy and peace that it brings, and how helpful we find it when the pathway is difficult and thorny. I am also deeply grateful for all those who have helped me to walk in the right way, especially for the better acquaintance with the true God as divine Love, and for His messenger, our Leader, Mrs. Eddy.

Mrs. C. E. B. Lochau, Chicago, Ill.

✧

[Translated from the French]

I first heard of Christian Science in September, 1912. I felt greatly attracted by this new way of understanding God and man and had the desire to become acquainted with its teachings, more especially as I had been subject for years to distressing and painful attacks of liver complaint. These would leave me in a state of great weakness. I was observing a severe regimen, but from the day when I had my first

Digitized by Google

Christian Science treatment I was able to eat everything without experiencing inconvenience, and I have not had another attack. Since then I have enjoyed very good health. I am convinced of the efficacy of Christian Science treatment, and I feel sure that the divine power to heal exceeds all material remedies. My first steps in this new way have been guided with so much loving-kindness, and the explanations necessary for the understanding of the subject have been so lucid and convincing, that they have led me to a better concept of God and have taught me how to find Him. I love Christian Science, and wish to express my deep gratitude to Mrs. Eddy, through whom this great truth has been revealed to us.—MLLE. JEANNE ARNAUD, Geneva, Switzerland.

❖

When Christian Science came to me, I had been given but six months to live, as I was said to be suffering from Bright's disease. In a short time I was entirely healed. I could eat anything, and life looked very different, for all my troubles had left me. I was also healed of influenza and a throat affection. I feel thankful to God, and grateful to Christian Science for the benefits received, including a great spiritual uplift.—FRANK BARNES, Kansas City, Kan.

❖

About nine years ago Christian Science found me a very sick woman, on the eve of an operation for stomach and bowel trouble and the many ills that accompany it. I had suffered all my life, but I was healed by reading Science and Health. Since then I have had many beautiful healings, some instantaneous. While the physical healing has meant a great deal, the spiritual uplift means much more to me. The Bible is now an open book, and I am indeed thankful to God, and grateful to our dear Leader, Mrs. Eddy, for expressing this wonderful truth to the world.

MRS. WILLIAM OKE, New York, N. Y.

[Written for the *Sentinel*]

The Holy City

GERTRUDE RING HOMANS

For the sake of the city that is to be,
Keep patient when things go wrong;
The very one who displeases thee
Shall join his breve to the song
Which is swelling into a jubilee
From the throats of a countless throng.

For the sake of the city that is to be,
Lay deep foundations of love,
That he who buildeth after thee
May rear strong walls above.
I can see it now rise splendidly,
The worth of the work to prove.

For the sake of the city that is to be,
Pave every street with truth,
That he whose feet shall follow thee
May therein find no ruth.
Plan them wide, as one who did foresee
Those who walk in perpetual youth.

For the sake of the city that is to be,
The city that is unseen,
Let light shine forth as 'tis given thee,
That all bless its ray serene.
God hasten the day of harmony
For the sake of the city terrene!

From Our Exchanges

[The Christian Register]

It is strange to find the word "intercession" used to designate meetings held for the purpose of praying for peace. One is at a loss to know whether it denotes a misconception concerning Deity, or simply the perpetuation of words and phrases outgrown. The term denotes the belief that God is able to stop the war and will not do it unless there is special supplication on behalf of those who suffer therefrom. Surely no modern mind can believe in such a conception. It repudiates the love and wisdom of God, and harks back to the Deity whose favorable action might be secured by frenzied appeal. To pray for peace may express the normal desire of the individual, but to beg God to "intercede," postulates either a God outside the universe or careless of what happens within it. Is it not rather true that God is doing for peace all that human power and will permit, and that the only kind of intercession that has any unpagan significance is that with those men and women who have the power to will and achieve peace? Is it not true that God through all the centuries has been praying to man to bring about the realization of the Christ-song of peace and good will, and that the highest duty of man is to discover within himself the answer to that prayer?

[J. H. E. in *The Homiletic Review*]

Salvation has been invited forth from its theological cloister cut into the highways and byways of practical life, and given a broader name and application—conservation. We have slowly come to see that the true business of the world is salvation, not destruction; use, not abuse. From the little kingdom of the human body, with its microcosm of mental and spiritual forces, out to the round world itself, the same law holds: normal use is life and health and growth; excess is waste, deterioration, death. What we have slowly learned in the small of personal life, we are now applying in the large to all human affairs. Conservation ought not to be narrowed down to a mere economy, but adopted as a commanding law of life for both the individual and the nation. The creator has made ample provision for the race. Nature's storehouses are full; her forces are unwasting. But she resents waste and destruction, and her inexorable laws exact the penalty to the last jot and tittle.

[American Lutheran Survey]

Life grows richer by sharing its riches. Disappointments in material and temporal things often open the life to the true riches. Service, unselfish service to one's fellow men, directs life toward the great channels through which wealth flows. The source of riches is God. He fills the soul with Himself. The richest life is the life that has uninterrupted communion with Him. When will men learn that the means to wealth are not to be held as wealth itself? When men learn how to enrich their lives truly, then occasion for jealousy, rivalry, and the host of other destructive forces among men will be removed.

[Christian Work]

We ought not to permit those who are not Christians to deride the Christian church because it has not abolished war, without entering a calm and earnest protest. Men often ascribe to the Christian church an authority which it does not have. They assume that it can coerce. They take it for granted that it can force men into courses which they do not like or want. The fact is, that the church can give only invitations and exhortations. It can point out a way and urge men to walk in it. It can hold up ideals and exhort men

Digitized by Google

to strive to come up to them. But doing this, what more is there for it to do? Men are free and can decide which ideals shall mold their life.

We must never forget that in many cities Jesus could "do no mighty work" because men would not listen to him, and that the city which he loved best and over which he sorrowed most, rejected his teaching and plunged headlong into irretrievable ruin. It is not true that if men are taught the truth they will accept it, that if they are shown the right path they will walk in it, or that if they have goodness revealed to them they will fall in love with it. The history of the world proves that the Bible is right when it declares that "the heart is deceitful . . . and desperately wicked," and that there is no hope for the world until men are born again. The final triumph of righteousness is certain, but the end is not yet.

[*The Watchman-Examiner*]

It cannot be too often reiterated that the reformation of society is not an external but an internal process. The elevation of the "masses" can only come through the transformation of the individual man. A new environment will not purify an impure heart. Our Lord's declaration, "Ye must be born again," was not a rhetorical phrase. It expressed a vital, fundamental truth. To substitute physical amelioration for spiritual cleansing, and call that the fulfilment of the great commission, is to displace God's method of saving the race by a man-made scheme that does not touch the root of the trouble. A true Christianity will not neglect the physical, moral, and intellectual needs of society; it will rather minister to them as no other system of religion can. But it will not commit the radical mistake of substituting the effect for the cause, the "all things . . . added" for the seeking first of the kingdom.

[*The Continent*]

Men are seeking now; they are not denying; they are on the sunward side of their doubt. It has always been true that a man with a deep and true message could get his hearing, but the hearing is more easily assured him now than for years past. The spiritual tide is rising. That appears in the constructive literature coming out today in the field of religious thought. The hesitant note is passing or gone. So is the belligerent note. The philosophers are side by side with the scientists in furnishing material to the religious thinker.

[Rev. Frederick A. Bisbee, D.D., in *The Universalist Leader*]

The longing of the ages is for the kingdom of heaven here upon the earth, and innumerable are the schemes for its attainment. But they all fail: asceticism fails, supernaturalism fails, prudentialism fails, social reform fails, mechanical schemes fail, war fails, possessions fail; everything fails save when we walk humbly with our God.

[*New-Church Messenger*]

Both war and disease arise from disordered thinking and living; or in other words, the primary cause of all disease and strife is evil and falsity. Let us make clean the inside of the cup and platter, whereupon the outside will also be cleansed. And this will be done as the world is taught spiritual truth, and as love for God and man comes into being.

[*The Advance*]

A large part of our investment in the joys of life should be in things that are permanent. So narrow is the margin between necessity and achievement that we must invest a considerable part of that margin in things that have enduring worth. We cannot afford to have all joy evanescent.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. This book, the sub-title of which is "A Defense of Human Rights," contains a general review of the legal status of Christian Science, together with a table of statutory provisions relating thereto; also testimonies of healing through Christian Science. It is intended for general circulation, and will replace the pamphlet "Christian Science and Legislation," which has been discontinued. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

"Christian Science: The True Christianity," a lecture by Clarence C. Eaton, has been published in pamphlet form, and is now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

Subscription Price, Payable in Advance, Postpaid: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. Sale Price: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. Sale Price: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. Sale Price: Single copy 25 cents; four or more copies to one address, each 20 cents.

Bound Volumes: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription and Sale: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the Monitor should be addressed, Editor, The Christian Science Monitor.

Subscription Price, Payable in Advance, Postpaid: For the United States, (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Subscription Price, Payable in Advance, Postpaid: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

Sale Price, Domestic Territory and Canada, Postpaid: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $1.50; twelve or more, each $1.25. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 361 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $1.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental laws and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A calm review of important events in Church History and to the readers of Christian Science; particularly the sermon or sermons written for the dedication of the Mother Church, January 6, 1895, and substitutes from the press of that occasion. Library edition, cloth, 53 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and comprehensive statement of Divine Science, after Christ the Science, in the form of questions and answers. Pebbled cloth covers, gilt tops, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PAMPHLETS in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 29 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

What developed from efforts made to promote education in the southern United States is summarized in the sixth instalment of the report of the general education board, founded by John D. Rockefeller. It soon became clear, according to the report, that adequate development could not take place until the available resources of the people were enlarged. "These conditions were not primarily due to lack of interest in popular education," the report continues. "While the average annual earnings of individuals engaged in agriculture in the West were upward of one thousand dollars, the average earnings of those similarly engaged in some of the southern states were as low as one hundred and fifty dollars. The great bulk of the people of the southern states simply were not earning enough to provide proper homes and to support good schools." The southern farmer suffered primarily from lack of money, but he also lacked extensive knowledge of farming; and the board therefore proceeded on the theory that if he could be helped in this direction he would gladly support better schools. This program could not be carried out by the federal government, because while it was taking measures to combat the boll weevil, it could not appropriate money for strictly educational purposes. The board decided to work in conjunction with the government.

The cooperation of the general education board brought about an immediate and rapid expansion of the demonstration movement in every direction. In 1906, 545 farms were reached; a year later, 2,834; in 1908, something more than 14,000; in 1910, 63,622; in 1912, 106,621. Twenty-five thousand adults were at the last-named date receiving instruction in Texas; more than 15,000 in Oklahoma; more than 15,000 in Arkansas; 10,500 in Alabama; 6,190 in Mississippi. In summarizing the total cost of the southern work to date, the report says that the government appropriated $1,922,300, and the general education board $925,750, while $1,069,405 was secured from other sources. The value of demonstration has been so clear that the federal government will now take over and extend purely educational farm demonstrations.

In his annual report, John Skelton Williams, comptroller of the currency, recommends to Congress a law to fine banks and bankers for making unlawful and excessive loans to bank employees, officers, and to other interests, through "dummies." "Among the many abuses and violations with which the department has to contend," Mr. Williams says, "are excessive loans, overdrafts, loose and unbusinesslike methods of accounting, excessive borrowing by the banks, investment of the bank's funds in securities not authorized by law, charging of usurious rates of interest, unlawful loans on real estate, excessive loans to officers, clerks, and employees of the bank employing them, loans to banks' officers or employees and others through 'dummies'; loaning money directly or indirectly upon the bank's own stock, transaction of brokerage or commission business by the banks' executive officers, commissions thus collected being sometimes appropriated personally by the officers and sometimes going directly or indirectly to the banks; false statements of directors as to stock ownership, and failure or refusal to charge off bad debts and other ascertained losses."

Twenty-five thousand horse-power of electrical energy becomes available ultimately, most of it in Milwaukee, with the completion of the Prairie du Sac water-power project on the Wisconsin river, about one hundred miles from the Wisconsin metropolis. Next to the Keokuk (Iowa) development of the Mississippi, the Prairie du Sac project is the greatest in the middle West, and the largest on the Wisconsin river. It is pointed out that there is now two hundred and twenty-five thousand horse-power developed on the rivers of the state. Three and a half years of hard work, a year more than was first estimated, was required for the harnessing of the Wisconsin at this point, the expenditure for the plant alone approximating two million dollars, not counting flowage rights. By means of forty-one gates fourteen feet high and twenty feet wide, on the spillway section of the dam, control of all stages of floods is permitted.

The Italian minister of agriculture, answering an interpolation in the Senate regarding the amount of wheat necessary for the country, said that Italy had produced forty-six million quintals and needs ten million more from abroad. A quintal is equal to two hundred and twenty pounds. The government, said the minister, had already provided for all the wheat required by the army and navy until August, 1915. When the war closed the Russian and Roumanian markets, from which most of the wheat was imported, it was found necessary to overcome many difficulties to reach the American market, principally the request for payment in gold, which was hampered by the Italian moratorium.

Interested New England parties are seeking to insure that the North, and especially New Hampshire, gets its proportion of the unappropriated one million two hundred thousand dollars to be expended under the Weeks forest reserve law. It is important, they say, that the government should acquire the high slope forests in the White mountains to prevent excessive erosion. Timber cutting is proceeding rapidly, they say, and should be stopped by federal purchase.

A one-million dollar campaign for new buildings and a larger endowment will be started early in the new year by the administration of the University of Pennsylvania museum. The annual report of the president sets forth the institution's great need of increased exhibition space and larger funds for maintaining its exploration projects. If the fund is acquired, new buildings will be erected as wings of the present structure.

Twenty thousand acres of land in the northern districts of Ontario and Quebec have been transferred to the Dominion by the provincial governments for the establishment of experimental farms. The farms will be located along the line of the National Transcontinental Railway, their intended use being to determine the agricultural value of the country traversed by the new railway.

There has been promulgated in Peking a new election law for the republic, containing certain amendments. The most notable clause of these regulations is that which fixes the term of office of the President of China at ten years. This term, however, may continue indefinitely if the Senate, by a two-thirds vote, considers that the actual political situation makes desirable such extension.

A compilation of the dividend declarations of ninety-seven leading cotton manufacturing corporations of New England shows that thirty-six of them did not distribute any dividends on all or part of their capital on their last dividend dates. The capital which thus did not yield any return to the stockholders amounted to $41,588,400, out of a total of $132,856,100 invested in these mills.

The minimum wage commission of the state of Washington has established ten dollars as the weekly minimum wage for women and girls employed in clerical work, to go into effect Feb. 20. Eight dollars was established as a minimum wage for office boys and girls between sixteen and eighteen, and six dollars for both sexes under sixteen years of age.

At a recent conference of Port Elizabeth and district fruit growers of South Africa, the under-secretary for agriculture informed the meeting that the exports of fruit for the past year had created a record, no fewer than six thousand tons, an increase of about 45 per cent, having been sent overseas.

The official announcement is now made that Egypt is a British protectorate, the suzerainty of Turkey over Egypt being thus terminated. His Majesty's government, the statement continues, will adopt all measures necessary for the defense of Egypt and the protection of its inhabitants and interests.

Consolidation of the Lake Shore Railroad Company with the New York Central Railroad Company was effected at Cleveland, Ohio, last week at a meeting of Lake Shore stockholders, when they ratified action taken by New York Central stockholders July 20 last. The merger involves three hundred million dollars.

The department of agriculture of the Argentine Republic has been authorised to grant concessions for the exploitation of forest land in the Andean slopes of the territories of Neuquen, Rio Negro, Chubut, Santa Cruz, and Tierra del Fuego.

During the twelve years of its activity, the general education board founded by John D. Rockefeller has spent $39,715,720 "to promote education within the United States without distinction of race, sect, or creed."

Compilations of gifts and bequests to the service of mankind by Americans during the year now closed, indicate a total of three hundred and fifteen million dollars.

A movement has been launched at Akron, Ohio, for the formation of an Ohio single tax league, composed of all single tax clubs in the state.

Man's Place in the First Commandment

SAMUEL GREENWOOD

"THE First Commandment," Mrs. Eddy writes, "demonstrates Christian Science" (Science and Health, p. 340). This commandment covers the whole ground of Christian endeavor. It is the foundation of all true religion and of all right thinking. It expresses the Science of eternal being, wherein and whereof good alone is. Its demand upon mankind is not because it is in the Bible, but because it is the law of infinity; not because there is something besides God, but because there is nothing besides Him. If it were really true that other gods exist, that other powers rule, and that other causes create, it were surely no sin to acknowledge them.

While the first commandment is generally accepted as embodying man's obligation to God, it is not so generally regarded as including one's rightful attitude toward man. Jesus taught that the Son is as perfect as the Father; and Christian Science, true to his teaching, declares the perfection of the ideal man to be as scientifically indispensable to divine Truth as is the perfection of God. The Scriptures indicate that God is the only creator; hence if the Scriptures are true, there can be no other man than God's man, despite material evidence to the contrary. We should not forget that it is evil, so called, and not good, that first argued and still argues against the validity of God's word, and that led and still leads, in belief, to the recognition of another man than God's image and likeness. To the false sense that believes in evil it may seem to exist, but to the inspired thought that recorded the spiritual facts of being in the first chapter of Genesis, and that today understands them in Christian Science, aught besides God, infinite good, is seen to be impossible.

Since all Christians agree there is but one God, infinite and perfect, they should likewise agree to acknowledge but one type of man, and that he is as perfect as his origin. The corollary of the first commandment would be: Thou shalt have no other man than God's image and likeness. If God is the same now as in the beginning, and if there is and has been no other power, then man, in the reality of his being and in his relation to God, must be the same. The theory frequently advanced, that God bestowed upon man the faculty to recognize evil and the will or power to obey it, would preclude any necessity for the first commandment; for in such a theory good and evil have the same source and are essentially one. Truth is self-evidently incapable of deterioration, and so must be its idea or product. The true God and man, today as in the beginning, are the only God and man that exist. To accept the argument of evil respecting man, would be as sacrilegious as to accept the argument of evil respecting God, such as is said to have seduced Adam in the garden of Eden.

The supposition that there is an evil man, must necessarily involve the supposition that there is an evil cause or creator to have made him thus. Since man was made in God's own image, all that can be real about any man is his likeness to God. Man in God's unlikeness would imply something that Deity does not create or manifest, and is therefore an infringement of the first commandment. The question is, Shall we acknowledge this unlikeness as man, or shall we in loyalty to God's allness deny it reality? We acknowledge unhesitatingly the absolute nature of Deity, His wisdom, goodness, love; we believe, or say we do, that He alone created us, and is our life; then we illogically and unchristianly forsake that position and identify ourselves with what is not God's likeness. Should we not be Christian enough to see that that which would separate man from God is not the truth, but is the illusion which mortals call evil, and so refuse to believe it?

Unhappily Christendom has not seen the inconsistency and virtual dishonesty of claiming to honor God as the sole creator, while at the same time honoring sinful mortals as His handiwork. This failure to discern man's rightful place in the first commandment, and to adhere to it, has obscured the truth from mankind, and has prevented them from asserting their freedom from evil as God's children. Had the Christian church concluded like Paul to know "no man after the flesh," and had thus taught, it would long ere this have ushered in Christ's kingdom upon earth. Cannot the Christian of today see the moral impossibility of accepting the perfection of God without accepting the perfection of all that He manifests, and without dishonoring or disbelieving the argument of evil to the contrary? Nothing is more certain than the conclusion that if evil and imperfection do not pertain to God, they do not pertain to man, who is made in His image.

As surely as the first commandment holds out the model of a perfect God, it holds out the model of a perfect man, and bids mankind have no other model in their thoughts. This does not mean that we are to regard human material personality as expressing the perfect man. Christian Science does not teach that a sinful mortal is the offspring of God, but on the contrary that a sinful mortal is a false concept of man which a knowledge of the truth will correct. God could not be the author of evil beings unless He were Himself evil. The theology which teaches that God's image and likeness has degenerated into a creature of evil, neither honors God nor blesses mankind.

To have no other than the one God, means that we should think of man as a child of the one Father, as expressing divine Mind, and as an heir of eternal life. It means that we should never think of man as less than perfect, and that we should demonstrate this perfection, if it means anything practical at all. This is not presumptuous, but Christian. "Be ye therefore perfect," said Jesus, "even as your Father . . . is perfect." In Christian Science, "perfect God and perfect man" is given as "the basis of thought and demonstration" (Science and Health, p. 259), and every Christian should know that no other basis makes possible the fulfilment of the law or the gospel.

If we would give man his rightful place, so far as we are individually concerned, we should not picture ourselves as sick or sinful or in any wise imperfect, for that would acknowledge another creator or power besides good. We should know our true selfhood as expressing God's perfect man, and should strive to be loyal to this divine ideal. This

may conflict with material testimony, but who can serve God as supreme without denying this material evidence! If there is no material God, and we believe there is not, there can be no material man; then why think of one's self as material! If God does not exist in matter, then man does not. If sin, disease, and death do not reflect the glory of God, neither does matter, for only through so-called material sense can these errors be experienced. Since we can worship God only "in spirit," we can know man only as spiritual. It is but a sense of evil that outlines man as material and sinful, and this evil sense is all that claims the power to break the first commandment.

The Christian Scientist finds no precedent in the Master's teachings for thinking of man as other than the child of God, spiritual and perfect. This mental attitude denies sin by ceasing to obey it, and denies disease and poverty by healing them. We should certainly think as God's children if we believe that we are His offspring. It is no more difficult to think this truth if we believe it, than it is to think the opposite if we believe it. The only difficulty is in trying to make one's self think the truth while believing in error. Let us be sure that we believe in God. Then if we have no other gods, no other creator and power, no other origin or Father, we shall honor no other man and have no other man in mind as true than God's image and likeness.

Right Thinking

SAMUEL JOHNSTONE MACDONALD

THE more thoroughly the student of Christian Science studies the writings of our revered Leader, the more profoundly impressed he is sure to become by her wonderful spiritual insight and marvelously incisive analysis of the word of Truth. On page 235 of "Miscellaneous Writings" is a marked instance of this. Speaking of Christian Science, she says, "It touches mind to more spiritual issues, systematizes action, gives a keener sense of Truth and a stronger desire for it."

Every earnest student experiences the truth of this clear statement, and becomes necessarily ambitious to make greater progress. To systematize thought and action is surely the proper method of attaining progress, and therefore the student's early attention should be directed to the best means of accomplishing this. One method we find ready at hand in the apostle Paul's letter to the Philippians. This may be called, indeed, a prescription for right thinking, and as such it should be taken in regular and systematic doses.

Let us first examine the prescription itself carefully. It cannot be read and pondered too often: "Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things." Here is a comprehensive, all-embracing prescription for right and fruitful thinking; how, then, can it best be taken to secure the highest results? Little good will result from it if it is followed only occasionally and in a haphazard, half-hearted manner. This is surely an instance where Christian Science should, and must, systematize thought by stimulating one to patient, conscientious endeavor. Earnest and sincere study will surely give "a keener sense of Truth and a stronger desire for it."

One method of taking the apostle Paul's prescription for right thinking commends itself. Let the student devote one day of each week to thinking on "whatsoever things are true." He will find abundant food for thought, and will rejoice to return to this rich feast of reason with each recurring week. One student studied and analyzed this topic as follows: What things are true? This is undoubtedly the question to be settled first, before we can determine what things are to be thought upon. And here, in the first instance, the thought must be directed to the word "things." Manifestly, the word "things" should be understood, and this is certainly one instance where "divine Science, rising above physical theories, excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas" (Science and Health, p. 123).

We read, then, "Whatsoever thoughts are true." *What* thoughts are true? God's thoughts alone are true. *God* being Truth, infinite and eternal, all true thoughts must be of God alone. Spiritual man, being God's image and likeness, God cannot know an evil thought, His image and likeness cannot reflect or be conscious of an evil thought; hence only spiritual, and therefore spiritual man can reflect only spiritual thoughts. God being infinite and eternal good, His thoughts must all be good, and only good; therefore spiritual man reflects only good thoughts. It also follows that as God cannot know an evil thought, His image and likeness cannot reflect or be conscious of an evil thought; hence only good thoughts can exist in God's universe, and evil thoughts cannot possibly have any real existence or power. How, then, can God's likeness become subject to any evil?

Each student can seek out individually the line of application best suited to his need, and he will not fail to find that a closer and more systematic daily study of this wonderful Scripture will give him, in the words of our Leader above quoted, "a keener sense of Truth and a stronger desire for it."

Reliance on Principle

ROBERT O. CAMPBELL

To the one who has repeatedly received benefit from the study and practice of Christian Science, who has been healed both morally and physically, and who has gained some ability to prove the helpfulness of reliance on Principle in whatever vocation he may be engaged, there is no instruction more desirable than that which enables one to replace reliance on self with trust in a present knowledge of God.

Beginning with the initial step into business or professional activity, the individual who has grasped in some degree the worth of a progressive life, is often taught, both by precept and example, that self-reliance is an essential characteristic if success is to be won. Such instruction would not be without merit, were it taught with the understanding that true reliance is possible only when we make selfhood subordinate and obedient to spiritual law; but this teaching is impossible where there is no perception of basic spiritual truths. As Mrs. Eddy writes, "Spiritual perception brings out the possibilities of being, destroys reliance on aught but God, and so makes man the image of his Maker in deed and in truth" (Science and Health, p. 203).

In the world of business affairs there are two ways of building up a successful enterprise into what is commercially known as a profitable establishment. One way is so to equip the workers engaged in the enterprise, by experience with the different tasks and responsibilities, that the combined force becomes effective, like a huge and more or less perfectly working machine. The other method is to make subservient all human energy and activity to the control of a dominant character, who holds within his grasp all responsible action and reserves all right of correction and elimination. In both of these plans some action and results are assumed to be lawful and generally operative; but the fact

Digitized by Google

that spiritual law underlies all reality, and that when this is understood it becomes possible to depend on the operation of such law, is unknown.

The one who is placed in the position of responsibility for the success of the enterprise has many moments and even hours when there appears to be no guidance, no light which points to a correct apprehension of the situation and provides for further progress in safety. At such times the individual generally known as self-reliant is aware that there is little in the term which is truly applicable. Precedent for further steps may not be apparent, and the self-reliance may become hazardous and result in failure, since dependence on human ability inevitably comes to a point of no progress. All who have reached similar positions in experience, know only too well that the burden of the day becomes almost unbearable, and furthermore, it often hints of a future which would make daily life not worth the living. At such times, if human weaknesses develop into physical maladies, bitter indeed may be the close of a career that apparently opened with the brightest promise.

Through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the practical understanding and provable knowledge of God as Principle, the understanding that this all-wise Principle, operating through laws of righteousness, can be trusted in safety, is now readily attainable. This understanding lifts the burden from the individual, and opens the way for each man to find himself an effective factor in a perfect plan of lawful progress in helpful endeavor. This is of priceless value; it paves the road to success in all meritorious undertakings, all projects which work for the good of humanity, where without it failure is too often the result.

❖

Isolation

EVA S. W. WILLIAMS

THERE are many words which, before the study of Christian Science enabled us to read them aright, bore sinister and unfavorable meanings, but which we now know to have meanings of a wholly different character. One such word is "isolation." It is derived from the Latin *insula*, an island, and has often been thought of as implying something like desolation. But among chemical definitions of the verb to isolate, Webster gives "to make pure; to obtain in a free state," and Christian Scientists prove that this explanation is very applicable to their own experience. Probably there is no student who is not at some time tempted to feel himself isolated from friends, kindred, associates of whatever description, and to cry out in his loneliness.

The Christian Science practitioner is always isolated from the world; but later he comes to rejoice in this separateness from his surroundings, wherein he is appreciably nearer to divine Mind, the Principle animating his work, nearer to God. The honest Christian Scientist whose lot is cast among many people and in busy surroundings, often longs for more time to be alone, and where this may not be outwardly demonstrated, he comes to realize that wherever he may be he actually is alone with God. It may with equal probability come about that he is enabled to withdraw to a great extent from society or other thought-disturbing conditions and give himself up to the work of healing.

There are others whose experience is just the reverse. Placed by circumstances, possibly also by temperament, where they are often alone, or brought into contact with very few fellow men, it is theirs to work out in the very midst of so-called actual loneliness and isolation the glorious truth that one friend is ever beside them. "Closer is he than breathing, and nearer than hands and feet," as Tennyson puts it, and from this aspect it may be immeasurably harder than where the multitude throngs; but the saving desire to touch Christ's robe brings the student at any moment into "the secret place." Isolation becomes, in fact, what is often called "a problem." It is a sense of separation, which needs to be met and overcome just as blindness, deafness, lameness need to be replaced by sight, hearing, strength, and activity of limb. We are told that as one "thinketh in his heart, so is he," and this is never more self-evidently true than in the case of a man hungering for human companionship and seeing it not. If he is wise, he will emphatically repudiate the illusion of loneliness, and declare resolutely the nearness of God, our Father and Mother, "man's only real relative on earth and in heaven" (Miscellaneous Writings, p. 151). His every need is met when he can accept this as all-sufficing, for he will no longer look in vain for even human affection and friendship.

There is no bond which, for the joy it brings, will bear comparison with that which unites those who are working together in a common cause; most of all, when that cause is the healing work of Christian Science,—the highest and noblest and most inspiring work that has ever been known. It is therefore well to pass through the crucible of isolation, that there may be obtained in a pure state the self-reliant, single-minded consciousness which is expressed in willingness to work alone with and for God, who "satisfieth the longing soul, and filleth the hungry soul with goodness."

❖

True Sensitiveness

REV. LEON G. MILES

WHEN a mental habit is known to be wrong, there is hope that it is well on its way to destruction. A habit which lies in the questionable zone where human opinion is divided, may persist for some time to come, though in the end Truth is bound to conquer. But when sin boldly calls itself virtue, or allows as its greatest concession that it is a justifiable and unavoidable "fault," and when it is accepted at its own valuation even by the "elect," it becomes evident that an extensive campaign of education is necessary before the error's hold upon human belief can be broken.

A certain mortal temper, which passes under the name of "sensitiveness," is more or less prevalent everywhere. It is not necessary to dwell upon its unpleasant manifestations, for we have all come to know people who are forever being offended. Friends and acquaintances, no matter how innocent and pure their motives may be, cannot feel quite easy in their presence or act naturally toward them without the imminent danger of hurting them. The sensitive person seems to carry the proverbial chip on his shoulder, where the slightest jar may dislodge it and bring about an inharmonious season of pained feelings.

The most unfortunate part of such a temper is the frequent tendency of its possessor to look upon its manifestation as a virtue. In his ignorance he is quite apt to tell every one of his disposition, often quite boastingly, as though it marked him as a superior being, made of a little finer stuff than the ordinary mortal. A little careful analysis, however, will reveal the fact that this is not really sensitiveness at all, but a subtle and extreme form of selfishness. "I" and "mine" will be found to bulk unusually large in the mentality that is so deceived. What is known in Christian Science as mortal mind, the fictitious source of all discord, is in control, and has succeeded in deceiving these folk into accepting its regimen as "natural" and unavoidable, if not justifiable. It is high time that this insidious form of ill temper were unmasked, to

Digitized by Google

be destroyed by Truth, and we are sure that if all who have such a tendency recognized it for what it is, the problem of "getting along" with people would be largely solved.

A student of Christian Science must soon apprehend the truth respecting this matter. True sensitiveness is a wholesome mental quality, and therefore one which should grow more marked in our spiritualized consciousness. It bears not the slightest resemblance to that counterfeit of which we have spoken. It springs out of an unselfed love, not from a love of self. It finds its Alpha and Omega in that love which "seeketh not her own" and "is not easily provoked." It is based upon spiritual understanding, not upon mortal misunderstanding. It is an expression of true wisdom and divine counsel. It shows appreciation of its own rights only as they harmonize with the rights and desires of others. It displays a true fineness and superiority which is indicative of spiritual advancement.

The Preacher of old said, "To everything there is a season, and a time to every purpose under the heaven." He is truly sensitive who knows that not only the word which is true, but the "word fitly spoken is like apples of gold in pictures of silver;" who knows with spiritual intuition the right season and the time. He is silent when silence is golden, and his words when they are uttered give no offense to any man. His sensitiveness gives him quick knowledge of what should be done to meet the requirements of any occasion. Seeing that he reserves the right to form opinions for himself, he ungrudgingly yields the same right to others. When men do wrong, he looks beyond the mortal offender to the perfect man in God's likeness, and he is not offended. He bears malice toward none. He senses and credits the good intent behind the blundering word or act. He grants honesty to the man who differs from him, though he may know the other to be wrong. He recognizes an apology in the conciliatory attitude of the man who wants to apologize but does not quite know how; and leaping the chasm of personal rights, he rejoices in making unnecessary any humiliation on the part of the other. He is blind and deaf to the trifling errors which all too often are magnified into mountains of discord. In short he knows, like the Master, what is in man, and judges "righteous judgment."

What a glowing example of this true sensitiveness we find in our Master! How simply and sweetly he relieved the embarrassment of Nicodemus and clarified his confused theological thought! Jesus knew himself and his ground, yet conscious of his Christhood, he took no offense at the evident intention of the old and experienced teacher to counsel him from his more material standpoint. Nicodemus had scarcely concluded his first conciliatory remark before the Master, discerning the well-meant sympathy and helpfulness, brushed aside all possible preludes and logical arguments and held before the wondering thought of this "master of Israel" the very heart of truth, the burden of his own message. When Nicodemus took his departure, it was with a new understanding of all things vital; and he went as a stanch friend whom false sensitiveness might have made a troublesome enemy.

Another notable example of the Saviour's intuitive right conduct is found in the incident of the woman of Samaria. That human judgment would have missed this opportunity for two glorious days in the Samaritan harvest field is indicated by two statements. First, the woman herself was surprised and asked, "How is it that thou, being a Jew, askest drink of me, which am a woman of Samaria? for the Jews have no dealings with the Samaritans." Second, the disciples "marveled that he talked with the woman." Surely it could have been nothing less than an inspired sensitiveness to the truth-seeking nature of this woman of no reputation that thus led Jesus to break over national traditions and social customs and choose such an unpromising avenue (to mortal sense) through which to work. Yet is not this just the kind of sensitiveness that we all need? "Say not ye, There are yet four months, and then cometh harvest? behold, I say unto you, Lift up your eyes [of Soul, not of sense], and look on the fields; for they are white already to harvest."

These are but two of numerous illustrations which might be chosen to show the function of that true sensitiveness which appears at its best in the record of him who "needed not that any should testify of man: for he knew what was in man." If we are bound by the once prevalent belief that these peculiar powers were confined uniquely to the one person, Christ Jesus, we need but to study his own words more closely, and remember that it was he himself who said of every faithful follower, "The works that I do shall he do also."

The earnest student of Christian Science speedily comes to see that true sensitiveness has nothing whatever to do with slights and insults and neglect and hurt feelings. The "touchy" person is never truly sensitive, and the really sensitive man is never "touchy." True sensitiveness is the ability to "read between the lines;" to pierce beyond the seeming and bring to light the truth of any situation; to disregard apparent neglect, or even insult, and do what is right for the sake of right; to know what to do appropriately in every situation. True sensitiveness is not an unpleasant, trouble-making vice, but a crowning virtue; not a curse to any one, but a gift of God. In proportion as that Mind is in us "which was also in Christ Jesus," we too shall be able to enter into the lives of men with benign power by our silent communion with Truth. On page 85 of Science and Health Mrs. Eddy says: "This Mind-reading is the opposite of clairvoyance. It is the illumination of the spiritual understanding which demonstrates the capacity of Soul, not of material sense. This Soul-sense comes to the human mind when the latter yields to the divine Mind. Such intuitions reveal whatever constitutes and perpetuates harmony, enabling one to do good, but not evil."

It is a false sensitiveness which is ever alert to personal slights and material seeming, a debilitating morbid selfishness which is never secure in its rare moments of peace. But "he that dwelleth in the secret place of the most High" can say with Isaiah, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee."

[Written for the *Sentinel*]

Only

MINNA MATHISON

It was only a drop of dew
That watered the heart of a rose;
But the rose bloomed out her gracious span,
A thing of beauty and praise for man,
In her fragrant garden close.

It was only the song of a bird
By her nest in the spreading tree;
But the song that burst from the tiny breast
Dispelled the gloom of a heart oppressed,
And set new gladness free.

It was only a tender thought
Of the Father's love and power;
But a heart with pain and woe oppressed
Through that loving thought found strength and rest,
And was healed that very hour.

Selected Articles

[Frank Bell in *The News-Times*, Reading, Pa.]

Your correspondent of recent date who asserts his belief that homeopathy and Christian Science are identical and are "faith-cure, pure and simple," is mistaken. Homeopathy, while dispensing largely with the so-called substance of the drug, clings to at least some of the form and all of the objects of the drugging system, whereas Christian Science eschews not only material means but the semblance thereof, and is intent upon an entirely different achievement. By diluting the drug until but an infinitesimal part remains in a given dose, and yet accomplishing therewith the same results as did the old school potion at full strength, homeopathy illustrates the extent to which "faith," or belief, and not the drug itself, is accountable for the effects produced by *materia medica*. Homeopathy represents a step forward in the emphasis it places on the mental quality of medicines, but homeopathy has not gotten away from the belief in the necessity of "giving something" to the body.

If the various schools of medicine and the several systems of so-called faith-healing were to achieve their admittedly impossible goal, so that nowhere on earth could be found a person whose body manifested a single symptom of disease, the work that is for Christian Science to do would not be thereby diminished in the slightest degree. The reason for this is, that Christian Science is a religion. Both its processes and its purposes are spiritual, not material. Its ministrations have been marked by an unparalleled record of diseases healed, but this healing is an incidental, though legitimate, result of an effort of an altogether higher order.

Christian Science is concerned primarily with the overcoming of sin. It cannot be successfully adopted as a mere substitute for medicine by those who are persistently unwilling to become better men and women. Healing in Christian Science is one of the fruits of intelligent righteousness, and because of this no other means of healing, whether physical or mental, which strives only to make humanity comfortable in matter, may be said to resemble it in any important respect.

✧

[Thomas F. Watson in *Register-Leader*, Mountain View, Cal.]

Jesus gave us a test whereby his true followers should be known, when he said: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." Notwithstanding the fact that Jesus said this, the critic says, "Miracles are no evidence of divine authority." Now Christian Science does not regard the healing of sin and sickness as a miracle or as supernatural, for these so-called miracles, both in Jesus' time and in the present, are accomplished in obedience to God's law. As Mrs. Eddy says in the Preface to Science and Health: "Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us'" (p. xi). That Jesus expected his followers to prove their faith by their works is evident, for he said: "By their fruits ye shall know them." And at one time, when the disciples brought one to him whom they had failed to heal, he said: "O ye of little faith."

This critic maintains that "the doctrine is the only true criterion of moral worth and divine sanction," but Jesus taught otherwise, and he commanded his followers to heal the sick and cast out devils. He said, "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." When the messengers from John the Baptist came to Jesus asking, "Art thou he that should come? or look we for another?" Jesus did not tell them of his doctrine, but said: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached," knowing that his Christly works would prove his divine authority.

Christian Science does not deny the atonement, as this critic avers, but explains it. Science and Health, on page 18, states: "The atonement of Christ reconciles man to God, not God to man;" and on page 19: "Every pang of repentance and suffering, every effort for reform, every good thought and deed, will help us to understand Jesus' atonement for sin and aid its efficacy." Christian Science stands on its merits. It must be judged by its fruits. In Bible language it says, "Show me thy faith without thy works, and I will show thee my faith by my works."

✧

[Judge Clifford P. Smith in *The Springfield* (Mass.) *Union*]

Now that the Rev. Mr. —— has renewed his attack upon Christian Science through your columns, I trust that you will again permit me to answer by the same means. In my former letter I offered as a definition of substance, "that which is real, in distinction from that which is apparent." The critic's comment on this is indeed interesting. He takes issue with it as being "in perfect accord with Christian Science definitions. That is to say, it is wide of the mark." Perhaps I should have saved him from this mistake by citing the New International dictionary, from which the definition was taken. It is practically the same as can be found in school books, encyclopedias, and other standard works of reference; hence it expresses natural science or philosophy as much as it does Christian Science.

Our critic's letter to the *Union* furnishes another reason for referring to those repositories of general information, the larger dictionaries. He challenges me to "tell us what principle is conscious." I will reply in the words of the Oxford English dictionary, "Soul, the principle of thought and action in man;" also in the words of the Century dictionary, "Spirit, the principle of life;" again, in the words of the New Standard dictionary, "Spirit, the principle of self-consciousness, self-activity, and of rational power in general; that which signifies a likeness in man to the Divine Being." It is also possible to answer in the words of St. Paul, "Not that we are sufficient of ourselves to think anything as of ourselves; but our sufficiency is of God;" and in the words of Mrs. Eddy, "Intelligence is . . . the primal and eternal quality of infinite Mind, of the triune Principle,—Life, Truth, and Love,—named God" (Science and Health, p. 469).

The reverend gentleman's letter shows very clearly the reason for his attitude toward Christian Science. He is a champion of "the established denominations," and his complaint against Christian Scientists is that they have been guilty of "proselyting conduct." A description of this offense is also to be gathered by inference from the same letter. Evidently, it is committed by those who preach the gospel and heal the sick without sanction from an "established" church. Those who do this, or part of it, within the pale of the established denominations, are entitled "missionaries of the cross," while Christian Scientists, for endeavoring to fulfil all the Christian commandments, are called "proselyters for a cult." I am loath to believe that such a position can be approved by the members of the churches for which this gentleman has spoken. It is only a brief span of time since the founders of those very churches were condemned in the same manner. History is easily forgotten unless all Christendom can re-

Digitized by Google

member that the Founder of the Christian religion was misrepresented, and accused "as one that perverteth the people," by representatives of an established denomination who had a mistaken sense of their duty.

Christian Scientists wish to be on good terms with other religionists, and their religion does not menace the legitimate interests of any person or institution. It is generally recognized that they have propagated their faith with a commendable reserve and moderation. Nevertheless, when Christian Science is misrepresented, Christian Scientists yearn to have it understood, not only because they have no relish for injustice, but for a more unselfish reason. Christian Science has been of great benefit to those who are now its adherents, and in simple gratitude they cannot help but wish that all other people might know its actual teachings and share its benefits.

[Herbert M. Beck in *Pine Bluff* (Ark.) *Commercial*]

In a recent issue appears the report of a paper which requires a reply in order to prevent injustice being done, and to make it known that Christian Science is based absolutely upon the Scriptures, and is neither unchristian nor Hindu in teaching or practice; that it does not deny the need of a Saviour, but preaches that Christ, Truth, is this Saviour, and heals both the sick and the sinner in this name and by this power, and that it does not place the name of its Discoverer and Founder, Mrs. Eddy, above that of Christ Jesus as a religious leader or otherwise. The statement that Christian Science calls Mrs. Eddy the "second incarnation of God" is without any warrant whatever.

It would seem that when a careless or false statement is made somewhere on the subject of Christian Science, it is ofttimes taken up and repeated regardless of its incorrectness. One may readily believe that the critic has been victimized by some such process, for there can be no legitimate source for that which in fact never had existence. Our critic is good and faithful enough to use this most commendable language: "We cannot shut our eyes to these facts; it is better to face and carefully consider what it is which is promising rest of soul to weary seekers and satisfying hungry hearts." Forethought on the part of a critic might well lead him to cite his reasons and his authorities for his conclusions, seeing that it is the truth alone that all want, rather than the bandying of personal bents and presumptions,—the latter too often but an accident of birth or environment or the mere inspiration of desire. In the present case, all that has been proved is that our critic believes Christian Science to be one thing, while Christian Scientists understand it to be another.

Those interested will find Christian Science fully stated in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which is based on the Bible. There are other works by the same author and other publications by The Christian Science Publishing Society in amplification of the subject, but nothing that shows any connection between Christian Science and what is known as Hinduism. Christian Science is quite the opposite, and none who are fairly acquainted with the average Christian Scientist (in Pine Bluff or in the world over) can say that its teachings produce undesirable results in human character.

In the text-book the definition of God reads as follows: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence" (p. 587). Christian Science does not deny the reality of sin on the basis implied by our critic, but teaches that sin and disease are destroyed by one and the same understanding of and reliance upon God. It teaches that the Christ which is "before Abraham was," is the saviôr of mortals from sin and from the grim wages of it. In Science and Health we read: "Since Jesus must have been tempted in all points, he, the immaculate, met and conquered sin in every form." "Jesus represented Christ, the true idea of God." "Jesus presented the ideal of God better than could any man whose origin was less spiritual" (pp. 564, 316, 25). God gave His only begotten Son to pass from death unto life, and so to overcome sin, disease, and death for us, and to show us how, through the Father, who Jesus said does the works, we too might become his followers and do the works which he did. Manifestly this does not mean that Jesus' work excused others from working out each his own salvation in fear and trembling.

Whatever may have been the cause of the discontinuance of the healing work by the churches some three hundred years after the beginning of the Christian era, the indisputable fact remains that no acceptable reason has been advanced for supposing that the command is less authoritative than before, since it still reads: "Preach the kingdom of God," "Heal the sick," or that there is not still conferred upon the followers of the Christ the power to "tread on . . . scorpions," or to "take up serpents" without hurt, or to "lay hands on the sick, and they shall recover," or that "he that believeth on me, the works that I do shall he do also." "Go ye therefore, and teach all nations," said the great Teacher, "to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world."

Why the prayer, "Thy will be done in earth, as it is in heaven"? Is it not time for Christianity to expect the answer? Christian Science says, Yes, that time is all the time. It says, "Now is the day of salvation," and that life—everlasting life—is now; that man as God made him is now in God's image and likeness. A man of flesh, with a carnal mind, is not God's image and likeness, but the new man, with the Mind "which was also in Christ Jesus," is that likeness. In the kingdom of heaven is sin still the aggressive tempter it is so generally recognized among mortals to be? Christian Science says, "The kingdom of heaven is at hand," and that "the former things are passed away."

Christian Scientists are, with rare exceptions, upright and good citizens, and they expect to keep on enjoying their citizenship, letting their works testify of their faith, and willing that none shall be denied equal civil and religious liberty.

[Ezra W. Palmer in *The Weld County Progressive*, Boulder, Col.]

During the past few days the peace-loving city of Greeley has witnessed an abnormal condition within her borders,—the stirring up of hate against some of her citizens, the fanning of religious intolerance, the attempted interference with the religious freedom of others, and a studied effort to cast stigma and odium on the Christian Science church and its adherents; all this in the name of Christ, by an evangelist who apparently has forgotten that the mission of Christ was love and not hate.

Jesus Christ plainly warned his followers against offending his children, and declared that "it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea." While the evangelist has assumed a great responsibility in his assault on the religion of others, the responsibility is not alone on him. His employers, the individuals who brought him to Greeley and who should have known the character of his intolerant utterances, have a like heavy responsibility, and this is the more evident from the fact that the evangelist in Greeley is merely repeating the performance he boasts to have staged in other cities. Last week he stormed against Christian Scientists in Boulder. So, too, the men and women who may have assented to his bitter attacks, should ponder well their course, weigh it by

Digitized by Google

the golden rule, and answer to themselves the question of the beloved disciple when he said, "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?"

Were the charges true which the evangelist made in the press and from the pulpit against Christian Science while preaching in your city, considerable difficulty would be found in attempting to explain the phenomenal growth of the Christian Science movement all over the civilized world. A similar difficulty would be met in attempting to account for the changed lives of the adherents of Christian Science, the spiritual awakening they have experienced, the love they manifest for God and man, the freedom from disease and sin they now enjoy, the profound gratitude they express to God for the light of divine Truth which has come to them for their guidance. To account rationally for these results, and accept the grotesque picture of Christian Scientists and Christian Science as painted by this evangelist, is an impossible feat, for the simple reason that he presents an utterly distorted view of Christian Science and its redemptive work for humanity.

This critic assumes to speak as an authority on what constitutes orthodox religion, and would convey the impression that this gives him the privilege of denouncing and ridiculing the religious convictions of Christian Scientists. He is a wise man indeed who can accurately define what is orthodox today and what is not. There are many other religious bodies besides the Christian Science church. The critic vehemently declares Christian Science is not orthodox, and therefore is false. Which church or which creed of the many in the world is true? All, indeed, cannot be. Since this critic presumes to judge the religious views of other denominations with which he is not in sympathy, he would necessarily have to assume that he and his particular band of coworkers are orthodox, and all others heterodox and anathema. This state of self-satisfaction has been well described in the phrase, "Orthodoxy is my doxy; heterodoxy is another man's doxy." The *autos da fé* of Madrid, the persecution of the Waldenses, of John Huss, the attacks on Quakers and other Nonconformists in Protestant England, all justified themselves by the same specious reasoning, and they prove how utterly inadequate the human mind is to weigh evidence accurately when blinded by prejudice or religious intolerance and when fearful that existing ecclesiastical systems will fall.

In describing this tendency of mortal man, Sir William Hamilton observed that "self-love has led men to close their eyes to the most evident truths which were not in harmony with their adopted opinions." The critic himself furnishes convincing evidence of the truth of the above remarks. In his sermon he detailed at some length his going to Boston and his study there and elsewhere of Christian Science, and yet he sees nothing in it but a subject to abuse and ridicule,—this, despite the fact that hundreds of thousands of people have found healing of body and mind, peace, harmony, and a priceless sense of God's love to man in Christian Science. It is literally true that many thousands count as among their richest blessings the lessons which Mrs. Eddy taught them of God and His love for man. Emerson once remarked that a traveler sees on a journey what he takes with him.

Although the reverend critic declares Christian Science is a fraud, he admits that it heals, and he declares that "it has brought to the consciousness of the church a function of its faith well-nigh, if not wholly, extinct." The critic did not explain how Christian Science could inspire faith in God and heal the sick if it were based on fraud, since the Scripture points out the impossibility of a fountain sending forth at the same time "sweet water and bitter." The fact is, that Christian Science healing is so well known that to deny it flatly would be of no avail. The Pharisees knew that Jesus healed the sick,—they could not deny it. But the human mind, as Bacon long ago noted, is prone "to contemn or, by distinction, extenuate or reject any doctrine not pleasing to it." The Pharisees therefore tried to undermine Jesus' works by imputing them to the action of the human mind or sorcery, or to use the modern terms, hypnotism and mesmerism. This antipode of spiritual healing, by sorcery, suggestion, or hypnotism, was well known throughout the ancient world; hence, the charge of the Pharisees against Jesus. Jesus denied the accusation and declared, "But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

This reverend critic, in endeavoring to discredit Christian Science healing, follows, perhaps unconsciously, the method of the Pharisees. He admits the healing, but declares it is "built upon mere psychic suggestion." This attitude of mind merely shows that the critic has no real knowledge of Christian Science. A Christian Scientist does not use hypnotism or suggestion. He knows that the human or carnal mind is not, and cannot be, a healer of disease. To attempt to heal with the human mind is as illogical as to attempt to pull one's self over a fence by the boot-straps. The power to heal mortals comes from God, the divine source, and prayer to God, who healeth all our diseases, is the only healing employed by Christian Scientists. "But," cries this critic, "Christian Science cures are not instantaneous; Jesus' were: ergo, Christian Science is false." This charge is interesting for two reasons,—all of Jesus' healings were not instantaneous, and Christian Science has frequently had instantaneous healings. The *Journal* and *Sentinel* contain testimonies of instantaneous healing, and testimonies of this kind are frequently given at the Wednesday evening meetings.

❖

[Robert S. Ross in *Rochester* (N. Y.) *Union and Advertiser*]

In reply to the article in a recent issue containing the address of Dr. Victor C. Vaughan, president, before the annual convention of the American Medical Association at Atlantic City, permit me to say that although enemies of Christian Science may endeavor to misrepresent it and confuse it with superstitious practices of both the past and the present, they are failing miserably to explain to this questioning age the fact that Christian Science is healing every disease known to the world today, many of them reported by the medical profession to be absolutely incurable. In addition to the healing of disease, Christian Science is proving to be equally efficacious in the work of moral regeneration. To be healed physically by Christian Science, is to be made better mentally and morally.

The "fanaticism and ignorance of the dark ages" to which our critic refers, have no place in the teachings and practice of Christian Science, any more than they had in the teachings and practice of Christ Jesus, and Christ Jesus certainly practised the Science of Christianity, or Christian Science. No one would dare to accuse the Founder of Christianity of being a fanatic or an ignoramus. Christian Science has simply reaffirmed to the people of the twentieth century what Christ Jesus gave to the world in the first century.

Editorial

Peace in the Midst of Alarms

Among the imaginative yet instructive tales of light literature is one about an Oriental king who employed a physician to keep him well. On the surface the arrangement seemed a simple and satisfactory one, but the outcome was less so—for the royal physician—as when the king fell ill, the doctor lost not only his employment, but his head as well.

In an address delivered not long ago by a physician and professor of a medical school before the social and economic sections of the American Association for the Advancement of Science, a proposition was advanced which in one respect at least reminds us of the tale referred to. The speaker is quoted as saying that "when a man of active affairs feels an exuberance of health, and is able to accomplish a greatly increased amount of work without sense of fatigue, he is in danger, and should consult a physician." By his failure to advocate that the physician consulted should lose his head in case the man of active affairs became ill, the professor avoided the deadly parallel, and took nothing from the romance or the orientalism of the proposition. Whether his remarks were taken seriously by his audience, is not disclosed by the newspaper reports, but these same reports indicate that the editors do not expect a large portion of the public to follow immediately his advice.

The *New York World*, speaking editorially, says: "From medicine, as from Africa, always something new; but is there not to be even a constructive recess between doctors' visits? If a man must seek medical advice when he feels well, just as when he feels ill, his bondage to *materia medica*, as Mrs. Eddy would say, will become a real servitude. . . . But are the doctors to dangle a *memento mori* before our eyes? Must a man have death in his mind at all times, whether he is feeling ill or well? Diagnosis takes a curious turn when it finds dangerous symptoms in what laymen have supposed were signs of good health."

Speaking seriously, however, the question is, How much longer will the medical profession be permitted to dangle a *memento mori* constantly before the eyes of the people? This is what has been going on for years, as a preliminary to the securing of legislation which will enlarge the powers and secure the continuance of the dominant school of medicine. How much longer will the public fail to see the object in view? Seemingly every possible device to induce thoughts of disease and death in the minds of the public has been employed. Not even the children have escaped, but must be "educated" to avoid the deadly perils with which the doctors would have them think themselves surrounded. And all for what? That the proponents of medical legislation may fasten another tentacle on the object for which they have so long been working, namely, the invasion of the precincts of the home, the superintendence of the family health, and dictation as to what measures to secure it shall be employed, under the guise of interest in the public welfare.

Now the line of advance is to be moved on the men and women who in spite of germs and theories persist in keeping well. Just when you are doing your best work, say these doctors, just when you are "feeling fine," drop everything and hunt up your family doctor, for there's trouble ahead! No peace for mortal man anywhere! Sleeping or waking, sick or well, he must hug to his bosom the cankerous thought that death is on his track. The puzzle is, how the doctors are going to keep themselves in condition to cope with the expected increase of business in their line.

The Christian Scientist evidently will have fresh cause for gratitude that in the midst of all these "alarms" he has a safe abiding-place, even "the secret place of the most High." If he is obedient to the counsel given her followers by Mrs. Eddy, he may go his way untroubled. In "The First Church of Christ, Scientist, and Miscellany" she writes (p. 210): "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. . . . Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort." A simple rule, yet obedience to it will ensure a consciousness akin to that of the psalmist when he wrote, "I will both lay me down in peace, and sleep."

Archibald McLellan.

Spiritual Healing

The emphasis which Jesus laid upon the healing of the sick begets the inference that he attached a value to this feature of his ministry which many of his professed followers seem indisposed to recognize. While all realize in some degree what such an experience must mean, the gain of physical freedom in the Christ-way measures but meagerly the significance which attaches to such an event, for if sickness is thus proven to be subject to the rule of spiritual apprehension, not only is the verity of Jesus' words, "The truth shall make you free," established, but his teaching about God and man and evil must be accepted as also true. This being the case, the skepticism which has so distinctly characterized modern thought is left without occasion or excuse.

For all who are open-minded, the indisputable healing effected through Christian Science settles forever the question of the possibility of annulling material law, a fact that instantly relates itself to all the deeper inquiries and problems of life. In the teaching of Christian Science, the physical betterment which is experienced by the truly believing figures as an incidental, as the sequence of a far greater salvation; and while many may have asked for treatment only that they might find relief from pain, the goal set before them has always been spiritual, and the logical relation of any immediate physical benefit to the higher, ultimate gain is well worth thinking about.

In world thought, and as well in the bulk of Christian thought, the reign of law has stood for the material order; hence the tragedy of world experience has ever assaulted the averred wisdom, justice, and compassion of the Almighty. Today the healing of sickness in Christian Science compels a recast of the prevailing concept of law, and makes clear that in overcoming sin, disease, and death the Master proved that divine law and material law are not one, and not correlatives but opposites.

This is one of the most transforming realizations that can come to human sense, and it effects an entire change of one's concept not only of law, but of the Lawgiver, of God and His government. Escape from disease through the attainment of spiritual consciousness makes it manifest that sickness, with all that pertains to it, is negative to truth. It can no more have the substance of Spirit than darkness can have the substance of light. Truth can eliminate nothing that is true, and the conclusion is irresistible that evil, with all its forces and laws, so called, is entirely apart from Truth and its manifestations; in a word, that it is unreal, a product of false sense which can but disappear as we acquire a knowledge of God. We are thus led through the demonstration of spiritual healing to a recognition of the verities of being, those eternal positives which Christ Jesus declared, and an apprehension of which constitutes the substance of faith. The immediate outcome of this arrival is a new sense of th

Digitized by Google

power of right consciousness, and of our privilege to attain to "the measure of the stature of the fulness of Christ."

In the same degree the fear of evil, that *bête noir* of the great bulk of even religious consciousness, must pass away. The realization that good alone is, inevitably banishes anxiety and dread. "Fear thou not; for I am with thee," is now understood as never before, and men are thus saved from a disability compared with which most physical ills seem trifling. To the true Christian Scientist, anxiety has become an outlaw, and the peace that "passeth all understanding" is his abiding possession.

This is the larger significance of spiritual healing, that it leads to the understanding of the nature of being; as Mrs. Eddy has said, it establishes "the Science of God's unchangeable law" (Science and Health, p. 135). It likewise begets an inspiring sense of the sovereignty of man, and so makes Christlike living a practical proposition.

JOHN B. WILLIS.

❖

Perfection and Reality

IN Christian Science perfection and reality are synonymous terms. Mrs. Eddy says: "Perfection underlies reality. Without perfection, nothing is wholly real. All things will continue to disappear, until perfection appears and reality is reached" (Science and Health, p. 353). In studying the ten commandments a Christian Scientist is instinctively led to think upon the demand uttered by Christ Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect." There are, however, few who realize the intense significance of the truth that in the scientific sense nothing is real but the perfect, and that nothing else endures.

It is simply astonishing how many professed Christians treat this subject lightly, almost taking the position that perfection is impossible of attainment, and that God does not expect it of us. There is no hint of this in Jesus' teachings; on the contrary, we find a solemn warning respecting those who "bring no fruit to perfection." In many such cases faithfulness and humility are lacking. Some students of Christian Science, thinking they can reach the heights at a bound, ignore, or, what is worse, disdain the steps by which perfection is reached. We must not forget that even the lowliest task should be undertaken with perfection in view. "Whatsoever thy hand findeth to do, do it with thy might," the wise man counsels, which means, do it with energy, diligence, intelligence, in obedience to the demand of Principle that perfection must be expressed in all things, from the least to the greatest. Keble's lines convey a much needed lesson,—

> The trivial round, the common task,
> Would furnish all we ought to ask;
> Room to deny ourselves; a road
> To bring us daily nearer God.

Few are aware that carelessness in any line of work violates the commandment, "Thou shalt not steal." It robs one of the opportunity to reach perfection and to express reality, whether the task lie in the schoolroom, the workshop, the office, or the home. It also robs these avenues of mental activity of their rightful privilege of expressing the Mind that governs the universe. Besides this, work ill done imposes needless burdens upon all who are in any way connected with it. It virtually denies the authority of the perfect Mind, whose unvarying demand is perfection.

The Christian Scientist knows that very little is asked of him in the way of formal religion, but he also knows that the demand forever rests upon him to strive after perfection in thought, word, and deed. Few stop to think of the very real happiness which is to be attained in doing things well, the actual joy which accompanies the mental effort to work as God works. Too many think of all work as an unwelcome task which would be shirked if the daily bread could be secured without it, when in reality all honest work honestly done leads to the perfection which spells dominion. It will not do to argue that some do splendid work—in art, for example—without any reference to divine law. It would be difficult to prove that anything worth while was ever accomplished apart from some thought of God and His perfect creation; but even if such were the case, it would only indicate how much more could be done by those who work "with God." Our revered Leader tells us that the "action of the divine energy, . . . entered into the minutiæ of the life of the personal Jesus. It made him an honest man, a good carpenter, and a good man, before it could make him the glorified" (Miscellaneous Writings, p. 166).

St. Paul says, "When that which is perfect is come, then that which is in part shall be done away." Surely this means that when the truth of being dawns upon one, the false and unreal beliefs of man as mortal, material, imperfect, shall be done away, and that with them will pass the outward manifestations of sin, disease, and death, because every thought turns toward perfection, reality,—perfect Life, perfect Truth, perfect Love. Thus will all the days be holy time, and all our activities divine service.

ANNIE M. KNOTT.

Among the Churches

Current Notes

PHILADELPHIA, PA.—After our organization as Second Church, June 1, 1912, attendance at the Sunday morning service in Masonic Hall, Germantown, so increased that we were obliged to seek larger quarters. Since Sunday, March 1, 1914, we have been holding service in the Orpheum Theater on Chelten avenue. More commodious quarters not being available, we are still compelled to hold our Sunday evening service and Wednesday evening meeting in the Masonic Hall. During the year we have bought and paid for a lot that cost thirty thousand dollars, whereon in the near future we expect to erect a church to seat twelve hundred people. The work of the distribution committee has increased wonderfully, literature being placed in all of our libraries, also in most of our theaters, hotels, steamers, institutions, and hospitals.

Correspondence.

LONDON, ENGLAND (Cablegram).—*The Christian Science Board of Directors, Boston:* Having overflowed from First Church of Christ, Scientist, London, England, under conditions of unity and progress, we the organizing members of Seventh Church of Christ, Scientist, London, England, take our first step in unanimously resolving to cable this expression of our grateful loyalty to the Directors of The Mother Church.—F. LOVELL LEE, *Chairman.*

ROCK ISLAND, ILL.—The corner-stone of the new Christian Science church, located at the corner of Twenty-second street and Seventh avenue, was laid Sunday morning [Nov. 29] with simple but fitting ceremonies. The new church edifice, which will comfortably seat eight hundred people and will cost in the neighborhood of eighty thousand dollars, is to be finished in September, 1915.—*The Rock Island Union.*

WEST CHESTER, PA.—We have been given an hour—from three to four o'clock in the afternoon—the fourth Sunday of every month for holding services in the Chester County jail. The first of these services was conducted Nov. 23 with an attendance of twenty-five.—*Correspondence.*

Digitized by Google

Los Angeles, Cal.—Ninth Church of Christ, Scientist, held its first services yesterday [Nov. 22] in its new temporary building at 430 South New Hampshire avenue. For some time past the need of a church in the Wilshire district has been apparent, and the new organization will not only serve the convenience of those living in that neighborhood, but will relieve the crowded condition of Third Church, from which Ninth Church was formed some two months ago. Three lots, fronting 165 feet on New Hampshire avenue and 155 feet deep, are under consideration, and on these lots the portable type of bungalow chapel has been erected. The building seats six hundred, cost less than five thousand dollars, and was completed in fourteen working days. Present quarters will meet the need until a permanent structure is ready for occupancy.—*Los Angeles Times.*

Toronto, Ontario, Canada.—The new First Church of Christ, Scientist, is to be erected on the site at the corner of St. George street and Lowther avenue, the foundation having already been laid. The total cost for land and building will be one hundred and forty-five thousand dollars, the lot having cost forty-five thousand dollars. The outside dimensions are 94 by 150 feet. The Sunday school room will have a seating capacity of six hundred, while the main auditorium will accommodate one thousand.—*Toronto Telegram.*

Jackson, Miss.—First Church of Christ, Scientist, opened the reading-room for the Mississippi state fair, Oct. 26-31, with an abundant supply of Christian Science literature. Many pieces were given out and kind expressions of thanks for a reading place were received. Special mention was made of *The Christian Science Monitor* as a representative of clean journalism.—*Correspondence.*

Duluth, Minn.—The first service was held in the new edifice of First Church of Christ, Scientist, Aug. 2. The building has been erected next to the site of the old one at Ninth avenue east and First street.—*News Tribune.*

The Lectures

Newport, R. I.

Atty. Alexander I. Peckham, in introducing the Rev. William P. McKenzie, who lectured on Christian Science, said:—

Christian Science is probably as little understood and as much misrepresented as any of the great religious forces of our day. If this Science is teaching people to lead clean, correct, healthy, moral lives, and I firmly believe it is, then we should be thankful for its presence and welcome it here. If you and I know that Christian Science has healed the sick after all material remedies have failed and the physician has said there is no hope, or if we know where it has given joy for sorrow or hope for despair, or perhaps lifted a heavy burden from our brother or removed the cause of fear from some one, or again, freed some man from sin, then it should not matter to us whether this belief was discovered or rediscovered or born in this or some other generation. All these things are claimed to be done by Christian Scientists through their knowledge of God and man's true relation to Him; and this knowledge they do not wish to keep to themselves, but desire that you receive it,—and it is yours for the study. They do not claim to have some new or strange religion, but rather to have the simple truth which Jesus taught and demonstrated. They say: Pray aright, and demonstrate your prayers. Pray quietly, and let your life attest your sincerity,—live as you should. Their faith has stood the test of years, and now Christian Science desires to be judged only by its fruits.

I am not a Christian Scientist,—rather I should say, I am not a member of the Christian Science church. In my desire to know something of this religion which stands for optimism and which is so dear to its followers and loved by them, I, physically well, mentally sane, about sixteen months ago visited for the first time their church service. Since then I have regularly attended their service and have *daily read* with profit to myself their Lesson-Sermons. It has satisfied me spiritually as nothing else has.—*Correspondence.*

❖

Excelsior, Minn.

Clarence W. Chadwick, who lectured on Christian Science, was introduced by the Rev. A. M. Hanson, who said:—

It may seem strange to some that a Congregational minister should be introducing the speaker of the evening. The strangeness would be absent were the speaker a Methodist or a Presbyterian instead of a Christian Scientist. Yet I introduce him as gladly as if he were one of them. But this does not signify that his faith is mine, for it is not. However, Christian Science is emphasizing one great phase of the truth, and has undoubtedly done much good. The same may be said of Congregationalism also. Further, I am here because I believe in working for the best and largest form of wholesome community life. To secure it, we must cooperate; it is possible in no other way.—*Correspondence.*

❖

Mansfield, Ohio

The Opera House was well filled when Bicknell Young delivered a lecture on the subject of Christian Science. The meeting was presided over by W. H. G. Kegg, first reader, who in presenting the lecturer said:—

People all over the world are earnestly seeking for permanent relief from the ills and worries of human existence. Thousands of them, unprejudiced seekers, are finding in Christian Science just such a remedy. St. Paul admonishes us to have that Mind in us "which was also in Christ Jesus." Now, to have the Christ-mind one must think, as did Jesus, only good thoughts. There must have been a very close relationship between his perfect thinking and his perfect life, and Christian Science comes to show us how to gain this correct way of thinking. Just to the extent that we forsake the old way of thinking for the Christian Science way, or the Christ way, just to that extent will men, women, and children be raised from beds of pain, and just to that extent will sin be abated, health be manifested, and the kingdom of heaven be established in the hearts and consciousness of men.

Instead of believing theories and doctrines that have never permanently healed or redeemed, we will come to understand —to know—and demonstrate the perfect Principle of life as taught by the Master. Jesus said, "By their fruits ye shall know them." Christian Science is willing to stand this test of fruitage. It asks only to be judged by its works.

The Mansfield Shield.

❖

Galesburg, Ill.

A large and interested audience listened to the lecture on Christian Science by Bliss Knapp. The speaker was introduced by Judge Rice, who said in part:—

The greater part of humanity has ever walked through the valley of fear. This valley is watered by the river of doubt, and the pathway is beset by pitfalls of sin, disease, and death. Two thousand years ago, Christ the Wayshower came

Digitized by Google

and pointed out a better way. He brought the truth, the knowledge of which made men free. He said: "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." For a while thereafter the people did hold on to that truth, and did walk upon the king's highway. Then the way was lost, and the people returned to the valley of fear.

Some forty years ago the king's highway was rediscovered and pointed out to the people under the name of Christian Science. Since then, this truth has had a wonderful growth, although it has had, and still has, many critics. Generally the severest criticism is made by those who know least of the subject. A Christian Scientist knows that through this teaching many wonderful things have been brought about. "By their fruits ye shall know them." If Christian Science makes the dark places brighter, the rough places smoother; if it casts out sorrow and brings joy; if it makes the sick well; if it throws out discord and brings harmony; if it deals with truth instead of error; if it makes people better,—then it is a good thing, and Christian Scientists are desirable citizens.—*Correspondence.*

❖

San Francisco, Cal.

William D. McCrackan, M.A., lectured before an audience of about forty-five hundred in Dreamland Rink, between three and four hundred being turned away. The introduction by Thomas F. Watson was as follows:—

The teachings of Christ Jesus as given in the Sermon on the Mount have been looked upon as ideal, but not practical in every-day life. As a consequence of this belief, the distance has widened between our ideals and our actual experience, until the world at large has settled into the conviction that its highest ideals are impossible of attainment, and God and heaven seem far off, instead of being "at hand," as Jesus taught. When Christ Jesus said: "Be ye therefore perfect, even as your Father which is in heaven is perfect," he also instructed his followers how to attain that perfect consciousness. Christian Science has come to prove that God is with us, when our ideals are true; that the good alone is the real. *Correspondence.*

❖

Portland, Ore.

The teachings of Christian Science were discussed in a lecture delivered by Francis J. Fluno, M.D., before a large audience at First Church of Christ, Scientist. Christian Anderson, who introduced the speaker, said:—

The fact that these lectures are so well attended is one of the proofs that Christian Science is engaging the attention of thinking people. The reason for this interest is not far to seek; for however we may differ in opinion generally, there is one subject on which we all agree: we all desire to be happy, therefore any system that makes for happiness is bound to be interesting. Christian Science is engaging attention because it is true. It shows that goodness and happiness are one and the same thing, and then proceeds to make us happier by making us better.—*Portland Oregonian.*

❖

Oshkosh, Wis.

E. A. Gilson, in introducing Jacob S. Shield, who lectured on Christian Science at the Opera House, said:—

The great question "What is truth?" is being answered today by a practical, demonstrable religion called Christian Science. Few great truths have been accepted by the people without protest, and Christian Science is no exception; but when erroneous opinions regarding it are eliminated, its friends increase. Those who have accepted this truth will testify that the sick are healed, the sinner is reformed, and business men receive much help through its application to business problems. This lecture is intended for those who have little or no understanding of Christian Science; and if any receive therefrom helpful information, which will better enable them to live a more healthful and righteous life, its object is accomplished.—*Correspondence.*

Testimonies of Healing

[Translated from the German]

In surveying my work some time ago, I could not help being mindful of the many blessings which have come to me during the past three years. Christian Science found me in a seemingly desperate mental condition. A copy of the *Herold* having been given to me by a friend, I looked over the cards in the back part, and the day after called on a Christian Science practitioner in this locality. Her presence inspired me with so much confidence that I told her of my griefs, which were not few. She spoke encouraging words to me, and when I left her I was in a much better frame of mind. I was then suffering with frequent and stubborn attacks of rheumatism, and was compelled to stay in bed for weeks at a time. The physician said that if I should have a return of the attacks, he could give me no assurance as to my life; that weak heart action would ensue, and after two years it would become altogether impossible for me to go up-stairs, as my knees would not support me. Since earliest childhood I had also been suffering with weakness of the eyes, besides which a hard film had formed over the left eye. In this instance, too, the physician told me that no help could be afforded. In addition to these troubles I was suffering at times with severe headaches and pain in the back, and despondency would prevail for days.

These are but a few of the many troubles which embittered my life; but I was gradually healed of all these errors, partly through having treatment and partly through the diligent reading of the *Herold*. I also felt impelled to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which at that time could be had only in the English language, and within a comparatively short time I succeeded in doing so with the assistance of the kind practitioner. Moreover, I began to study the Lesson-Sermons with the help of a dictionary. One day I read that ingratitude to God and to man was a hindrance to progress in Christian Science. This set me thinking, and it did not take me long to find out that the unselfish love of my practitioner had been met with great selfishness on my part. I was filled with gratitude for this discovery, and when I looked up, to my great surprise my vision had become much clearer, for I was able to distinguish the people on the street and the beautiful flowers which were blooming in the garden. My joy was great, and I will strive to show my gratitude to God for Christian Science by overcoming hate, envy, self-love, self-justification, etc., through love.

I have often rejoiced over small instances in which I was able to afford others help in Christian Science. Many inharmonious conditions in my home have been eliminated, and I look forward into the future with a sense of hopefulness, the reverse of which used to be the case. In carrying a heavy basket down-stairs one evening, I fell, and experienced such pain in getting up that for a moment I thought my ankle must be broken; but I immediately realized God's omnipresence, omnipotence, and love, and I was able to walk to the station. The sense of pain was great, but I denied it in Christian Science, with the result that it disappeared, although the foot remained much swollen, besides being discolored. I then applied for treatment, which was lovingly given, and when I awoke the next morning, the condition of my foot was almost normal.

Whereas formerly I wished death would come, believing that it would deliver me from all my troubles, I am now filled with the desire to live, for I may say with a joyful heart that I am sound in mind and body, and that this has been achieved through Christian Science. I have gained a better understanding of the Bible; and the text-book, which truly unlocks the treasures of Scripture, together with the *Herold*, which I love and prize, has become indispensable to me. Well is it with all who respond to our Master's loving call, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," for he says: "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid." I am indeed thankful to God, and would rejoice were these lines to be the means of helping some weary wanderer upon the road of happiness.

Frau Clara Rosenkranz, Wendisch-Fähre, b. Schandau a. Elbe, Sachsen, Germany.

✧

I am in my twenty-first year, and Christian Science has been the only physician and religion I have ever known. All my life I have had good health and have certainly enjoyed life as we are taught in Christian Science. I can honestly say that I have never been ill in my whole life for a longer period than three days at any one time. Under the guidance of the loving care of my mother, who is a loyal and true student of Christian Science, I have been enabled to help myself in meeting all the discords that daily come to us to be destroyed. Christian Science has taught me to love my brother as myself, for we are all brothers and sisters in God's kingdom, as we are the image and likeness of our Father. I know that I can never realize to the fullest extent my great blessing in having known Christian Science so early in life.

I think that never to have known or have been taught what fear was, is one of the things for which I am most grateful. When a child, my playmates would have seeming difficulties which mortal mind said were contagious, and though sometimes I was exposed to them, there were never any ill effects. Why? Because I had the knowledge with me every moment that man is God's perfect child, and I had no thought of fear, as I had never been taught to fear disease, but on the contrary had been taught its unreality and nothingness.

And so it has been in all my life. It was through Christian Science that I secured my present position, which is one of most harmonious surroundings, and this only helps to prove that Christian Science is not only for our physical needs, but for everything for which we turn to it.

I can see clearly enough that it is Christian Science alone that has kept me so well and happy, and words fail me in attempting to express my love and gratitude to Mrs. Eddy, the Discoverer of this spiritually enlightening truth. The only way I can prove my love for her and for Christian Science is to live it, and that is what I am trying to do.

Mary H. Adams, Reading, Mass.

✧

I have felt for some time that I should tell what God has done for me through Christian Science. Our home was formerly in Ohio. Our family then numbered five, and not one of us was equal to the duties of life. It seemed best for us to move to Texas, but just prior to going, we went to Philadelphia, Pa., to visit our relatives. My wife had a cousin who was a Christian Science practitioner, and she told us that if we would investigate Christian Science, there would be no need to go to Texas; but we did not heed what she said. On the first day of May, 1896, I was attempting to handle a vicious, unbroken horse, when he became unmanageable. As he sprang forward to run, in some way the rope caught my left wrist and I was hurled forward at a terrific rate. When I was extricated, I was to human sense in a very serious condition. My shoulder seemed to be dislocated, and I was

Digitized by Google

bruised and bleeding from head to foot. Having been dragged by the horse, I felt I was torn internally. I was taken to the house and a doctor was summoned. He made frequent visits, but gave me no relief. I told him my shoulder was dislocated, but he did not even examine it. He was very kind, but seemed to think I was too far gone for help.

At this juncture a visitor came to our home and recommended Christian Science, of which we knew nothing except in a casual way; but again it was proved that "man's extremity is God's opportunity." This lady recommended a practitioner eight hundred miles away. There was no telegraph or telephone service, so my wife described the case as best she could in writing, and asked for treatment. It required nearly four days for a letter to reach the practitioner, and the morning of the fourth day I shall never forget, for when she began treating me, I was thoroughly conscious of it. All the intense pain at once passed away, and I was healed. When I became free so suddenly, the attendants said mortification had set in and I would not be with them long. Instead, it was Christian Science, or "God with us." No one who knew me and knew what I had passed through, thought I would ever rise again. My healing was a case of surgery in which human hands performed no part. I have not been confined to bed a day since I was healed. Moreover, joy, peace, and blessedness have come with the attendant mental healing or transformation, and words are futile to express my unbounded gratitude for the blessings of Christian Science.

J. C. Harlan, San Diego, Cal.

Nearly eight years ago Christian Science was presented to me through a short talk, and my husband's instantaneous release from bondage to stomach trouble. I read the literature at first because I had promised the practitioner I would do so. I had read only a few days, however, when I became convinced that the words "obey" and "understand" were two of the greatest in our language. Then came the opportunity to test how much I could prove of their meaning. I caught the inside of one finger in the catch of an umbrella, and the sense of pain was great, but instantly I remembered that I must not look for the material evidence but deny its every suggestion. I recalled the first two lines of the scientific statement of being, as I had read it on page 468 of Science and Health, when suddenly I realized that the pain had gone as quickly as it came. I stood still in wonderment for a moment, and then there came the suggestion that I was not hurt after all. I therefore looked, only to find the open gash where the flesh had been cut, but there was no pain whatever, even when I pressed my thumb upon the opening, and it healed in a very short time without having been the least bit sore. I was amazed and uplifted beyond my ability then to explain.

The next thing I noticed was that though I had forgotten to take my regular doses of medicine for bowel trouble there had been normal action daily! Such freedom I had seldom known, for among my first remembrances was that of being held while a remedy was forced through my resisting teeth. And now I was filled with gladness, because I was free, and it was the reading of Science and Health that had healed me. From this time on I almost lived in the Bible and our textbook, "Science and Health with Key to the Scriptures." Demonstrations, one after another, were made over burns, cuts, pain in the feet, and a so-called chronic pain in the chest from which my husband suffered.

One day my husband returned from business about half past ten in the morning and called me to him. As I entered the room, he said, "Call the man and have the horse put out; I will not need him for many a day." The glimpse I got of his face as I entered was truly startling, but first of all I declared the truth of being. While doing so, he was telling me that the pipe to his large steam-boiler, having a heavy head of steam on, had parted within six inches of his face, and the end of the pipe hit him near the eye and knocked him down; that his eyes were filled with sediment from the pipe and the steam enveloped his face. Some fifteen or twenty of his men were on the works and rushed to him, but he sent them back to their work, got into his buggy, and came home, a distance of twelve or fifteen blocks.

After removing the dirt, my husband came into the room where I had gone. He had a large kerchief over his face, and I turned away at once and began to read aloud from Science and Health. In a few moments he wished to lie down on the couch. Then I put my books aside and lifted my heart to God as it seemed to me I had never done before. Inside of twenty minutes my husband sat up quickly and removing the cloth said, "Have my horse brought; I must go right back to the works." I looked at him, and many will know the humble reverence that filled me at that moment, for his face was as normal in appearance as my own,—not a blister, not a raw spot anywhere, not even a red or swollen place. Even his eyes looked normal, but later he said one eye felt as if something was still in it. I went to his side, and lifted my heart in thanksgiving; I was full of a joy that cannot be spoken. I asked him to wait till I got him some dinner and I would go with him. When he drove up to the works, the men tried not to stare, but covertly they could scarcely work for looking at one another, then at him, but not a word was said to him concerning the accident. Later one engineer said to him: "How on earth did you manage it? I should not have been surprised if you had never been able to see again. I would not have stood where you did when that thing happened for the whole state of Georgia." The next morning the eye was all right, and my husband said afterward that the pain all stopped in a very few moments after I began to treat him.

Since that time I have seen many ailments disappear never to return again. Among them were the drink and tobacco habit, scarlet fever, female trouble, severe burns, etc. A heavy refrigerator lid fell on my fingers from a height of some fifteen inches, the fall of the lid not being broken at all; but this, as many other ills, was instantaneously healed, not even a red mark or swelling being left to testify for the erring senses, when I looked at the fingers ten minutes later. My instant thought, when the lid dropped, was the statement on page 446 of Science and Health, "Resisting evil, you overcome it and prove its nothingness."

I feel very thankful that it was possible for our beloved Leader to make known to all mankind the great fact that God is a God of the living, and not a God of the dead, and that the Christ is ever present today, as it was promised he should be, and always with instant power to heal.

Lorena P. Hayes, Fitzgerald, Ga.

[Translated from the German]

My wife was ill during a period of six years,—since the birth of her first child in 1903,—and was confined to her bed the greater part of the time, suffering greatly. The pain never left her, so that according to her own testimony she had actually forgotten how it felt to be free from it. All these years she had been constantly under medical care, and no expense was spared. Finally she lost all faith in *materia medica* and decided to try Christian Science, though with but faint hope, as she had invariably met with disappointment

Digitized by Google

in former attempts to find relief by some new method. Abandoning the use of all material remedies, however, she left for Frankfort-on-the-Main in order to put herself under Christian Science treatment. She immediately experienced good results, and gradually returned to a normal condition of health. A little over a year afterward, she gave birth to a healthy boy and experienced hardly any pain. The child is now three and a half years old.

Drugs or other material means are no longer in use in my family, for the healing of my wife caused me to become interested in Christian Science, and I as well as my children have been completely restored in all cases of sickness through the spiritual power which is made available to us through these teachings.—HERMANN KLUM, Munich, Germany.

This is to certify that all my husband has said concerning me is true. Christian Science is the greatest blessing that has ever come to us. We use it constantly in the home life and in bringing up our two children, and find it an effectual help in accidents incidental to every-day life. I myself have been able to demonstrate the power of divine Love in cases of throat trouble, toothache, etc. A case of chicken-pox and one of measles were both overcome within a few hours, with the aid of a practitioner. Hourly we are thankful for this truth which smoothes and simplifies our ways.

MAMIE KLUM, Munich, Germany.

❖

I am very glad to have the opportunity to write a few words about what this wonderful truth, Christian Science, has done for me, hoping that they may help those who are looking for something to meet their human need. When we know God as He is revealed in Christian Science, an all-loving Father; when we gain a spiritual understanding of Truth, we begin to know how to live and meet every human experience.

I used to be in ill health most of the time, and subject to spells when I would have to go to bed. I grew from bad to worse, and once I was taken sick and for ten days could not sit up or move. I suffered great pain, and nothing would relieve me but a hypodermic. I had two doctors, also a specialist from the city, and they said I would not be any better until I had an operation. Knowing what my sister had suffered in this way, I could not think of submitting to this ordeal. Being advised to try Christian Science, I decided to do so, and my first treatment was at nine o'clock in the evening. At half-past nine I found I could raise myself up, and at midnight I got out of bed on to my feet. Next morning I walked to the dining-room and ate breakfast with the rest of the family. The pain was all gone, and I was only a little weak. After three weeks' treatment I was healed. I live up-stairs, and the steps do not bother me at all, as they once did. On one occasion I had an attack of acute lung trouble. I had had it twice before, and I knew what it was. This time there was very high fever and pain in my lungs, and I suffered terribly, but it was all overcome in two treatments. I got out of bed and did not miss one night from my work as telegraph operator.

Christian Science has also helped my little boy wonderfully. He came home from school sick, and I thought it was mumps, though he suffered dreadfully. My husband, not being a Christian Scientist, insisted on calling a doctor, who said it was a bad case of enlarged gland and that he would not be any better under ten days. I then called the practitioner and told her what the doctor had said. With the second treatment the discord was overcome, for when the child awoke the next morning he said he was well; and indeed he was. In the course of a few days the lump was gone. I forgot to say that the doctor also said the boy would probably have an abscess but no abscess developed. Surely this is divine Love meeting our human need,—and what more could we want?

My healing has been permanent. We are all well, and our home is harmonious. Christian Science is our daily bread. I am so glad I have found this wonderful truth which leads to health, happiness, and harmony. I have more and more each day for which to be thankful to God, and grateful to Mrs. Eddy.—MRS. L. V. SHELEY, Mayview, Mo.

❖

I feel it a duty and a privilege to relate some of the blessings which I have received through Christian Science, with the hope that others may be helped thereby. It is now over six years since I first became interested in this subject through the visit of a relative from America. She wished to attend the Christian Science church in Manchester and asked me if I would go along with her; but this first service did not appeal to me. However, some time later, having badly cut my finger, I jokingly asked her what Christian Science would do in such a case. Help being most kindly offered and accepted, the wound was completely healed within a quarter of an hour, although prior to this time I had always been much troubled with the healing of flesh wounds. I have since relied solely upon this truth which Jesus taught would set us free, and have not missed a day from work through sickness of any kind.

Through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures," the fear of becoming a slave to the drink habit, to which the male side of my family had been addicted for several generations, was completely destroyed. The smoking habit also left me after I had indulged in it about fourteen years, and an attack of illness was overcome in a few hours. A most severe cold, which eventually found me so weak that one morning upon rising from bed I collapsed, was cured, for in this final extremity came the healing thought: "Rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393). Again, in the case of a growth which appeared on my face for twelve months, though I failed to meet this condition myself, I sought the help of a Christian Science practitioner, and within a month it entirely disappeared.

For the physical help I am indeed grateful, but for the fuller knowledge of God as ever present, no words of mine can sufficiently express the gratitude I feel is due to the one who was pure enough to perceive and prove that Christ, Truth, is ever available for all mankind here and now.

ERNEST LEIGH, Manchester, England.

❖

I wish to express my gratitude for the benefits received through Christian Science, and I know of no better or more far-reaching way than through the columns of the *Sentinel*. For several years I was a great sufferer from stomach and liver trouble, also from severe attacks of illness which the doctors called gall-stones. After trying *materia medica* until I was satisfied that it was doing me no permanent good, I turned to Christian Science. I was healed, and have been well ever since. That was seven years ago.

I am more than thankful for this healing and for other benefits received,—not only thankful to God, but grateful to our Leader, through whose teachings I have been led to look away from personality and up to God.

ADDIE C. THORPE, Arlington, Mass.

Digitized by Google

Whenever I have been governed by Christian Science, the sense of pain, distress, and the myriad illusions that beset the human mind have been cast out of my consciousness. It is only when I have persisted in admitting the reality of error that benefits have been denied me. I am learning better each day that Christian Science never fails, though mortals often do. Some time ago I left my infant son in his carriage in front of a store while I entered to make some purchases. Soon I heard a scream, and rushing to the door I saw a man raising the child from the walk, where he had fallen from his carriage. Taking the little one in my arms, I reentered the store to gather together my purchases, striving meanwhile to clear my thought of fear. The child's face had become very dirty from the fall, and while I was gently washing it an attendant drew my attention to a swelling, which was quite large and red, on one side of his forehead.

I hurriedly left the store, declaring the truth, and in a few minutes had reached the hotel where we lived. The crying ceased almost as soon as we left the store. Quietly I reached my room without meeting any one, never ceasing in my efforts to know that God's child could not be injured. The swelling meanwhile seemed worse, and the flesh was badly discolored. Holding the little fellow in my arms, I read the ninety-first psalm, and in a short time he struggled to get down, so I put him on the floor. Behold, he began to play! I knew then, beyond a doubt, that he felt no pain. I clung steadfastly to the uplifting sense of divine harmony as something that can never be taken from us, never marred by human frailty, if only we are obedient to the teachings of Christian Science. For two hours I continued my work alone with God. The swelling had by that time subsided to a large extent.

That was a little after four o'clock, and at our usual dinner-hour we were in the café. There was no comment about the child's appearance, because the slight trace of disfigurement that remained was imperceptible to the casual glance, and that soon disappeared. My first thought while in the store was to ask for the assistance of a practitioner, but I quickly realized this to be an opportunity to do my own work. I, myself, have often been healed of various disorders. Perseverance in the knowledge that there is but one Mind, hence one reflection, continues to prove to me the all-sufficiency of Mind to overcome material sense and its ill effects. Deafness and a severe bowel disorder were early overcome in my study of Christian Science, and the healing has been permanent. I realize more fully, as my understanding in Christian Science enlarges, that the only worthy gratitude I can express is a life consecrated to Truth.

MAI A. ELLIS JANDRON, Lima, Ohio.

Contrast

ALAN ALEXANDER DICK

AT Truth's command forth from the tomb again,
Whom the last foe had held four long sad days,
One came; yet limited in many ways,
Through human aid his freedom to attain.
But Jesus, when he spurned the charnel cave,
Left in the tomb the trappings of the dead,
Folded aside the napkin from his head,
Walked free of all encumbrance of the grave.
Belief in death thus Jesus overcame,
Broke its false power and rose to higher spheres,
Leaving behind the dross of earthly fears.
But Lazarus died again; he did not frame
His consciousness to brave the coming years,
Nor meet the Master's call with loud acclaim.

From Our Exchanges

[American Lutheran Survey]

In a recent sermon a present-day preacher said: "The great need of our day is not the discovery of new truths, but the vitalization of the old ones; and the man of the hour would be he who could breathe new life into certain simple, elementary truths which have been in the church's possession throughout all the years of her continuance." Emphatically, the need is not for new truths. What proof is there that the old truth has ever worn out? What evidence is there in history that the gospel of Jesus Christ does not meet all the demands of the soul? If it does this, why do we need new truths? Again, if it is the truth, how can the philosophies which are actually different from it be truth? If they are not truth, how can they help? In so far as they are truth, are they not the same old gospel? If they are, is there need of them?

Why does the old truth need "vitalization"? Only because it does not reach the mature life for which God designed it until it becomes identified with men's inner and outer life. Its own vitality has never been impaired. The men who were to become one with it, and who were thus to complete God's design, have failed to respond to its vitalizing contact. This has sometimes been because the preacher of God's vitalizing truth has transmitted less than God would give him to transmit. The preacher from whom we have quoted probably meant simply this: If the preacher of this day, advanced as it is, will preach the old truth just as it is and for all that it is worth, he will need nothing more and his hearers will have abundant blessing.

[The Advance]

Men say that the old forms of belief are gone; some mourn and others rejoice over the decay of faith. What has gone? If some human speculations have gone, we can make others to order, and are none the poorer, however much we suffer in our own self-esteem. The discovery that we have been wrong in our thinking is matter for congratulation. We are well on the way to right thinking when we discover wherein we have been wrong.

But what have we given up? Have we discovered that we were mistaken about the wrong of evil-doing and the blessedness of goodness? No; the older the world grows the more we are sure that right is right and wrong is wrong. Have we given up the ethical and spiritual value of the Bible? No; we have modified some opinions about its literary character, but the moral truths of the Bible would be just as true if they had first appeared in a Chicago paper yesterday morning, and its spiritual realities are confirmed by nineteen centuries of Christian experience. Have we given up Jesus Christ? The farther we recede from him in time, the wider our comparison between him and all other teachers, the more he grows on human thought as "the chiefest among ten thousand," and "altogether lovely." It would be a sort of crime against reason not to believe in his goodness, his truth, and his abiding power over men. No; there are some things that have not been given up. What we have occasion to fear is not genuine honest unbelief, but indifference.

[The Universalist Leader]

The best things come slowly; and while our material and intellectual civilization is far advanced, the world is still in its spiritual childhood. Nevertheless the heroisms and martyrdoms of history, and the responses which in great emergencies very ordinary people so often make to the demands upon their justice and kindness, reveal spiritual possibilities

Digitized by Google

which, when their fulness has been reached, will more than fulfil the sublimest forecasts of poets and sages. That kingdom of heaven which Jesus had in mind, and for which he lived and died, was no delusion, but an ideal destined to be realized. Our world will some time be inhabited by a race of men and women whose goodness shall be equal to that of the best characters in history and the noblest creations of poetry and romance; men and women who have risen above every temptation and outgrown every weakness, and to whom the practice of every virtue will be as natural as the beating of the heart and the action of the lungs.

[*The Christian Commonwealth*]

This refusal to degrade God by bringing Him down to the level of a commander-in-chief and confusing His purposes with the plans of a general staff, witnesses to a genuinely religious faith. God is Spirit, and they that fight for Him, as well as those that worship Him, must fight for Him "in spirit and in truth." Running through the confused course of history is a spiritual purpose, worked out by spiritual means, wrestling with "spiritual wickedness in high places," winning spiritual victories, concluding a spiritual peace. The side issues of God's policy may coincide with our worldly estimate of failure and of success; but we have no right to assume that His main purposes are achieved by our material weapons or that His victories coincide with ours. No doubt a world in which spiritual values were always at cross-purposes with material would be no credit to God, but the two schemes of value as yet only partially correspond to one another; and there would be nothing strange if the victories of this war seemed to God to be defeats, and the defeats victories.

[*The Christian Register*]

People who say what for one reason or another they ought to keep to themselves, are quite apt to excuse their brutal frankness on the plea of honesty. "It is best to be honest," they say; but they hide a fallacy in their excuse. The honesty of an opinion is no permission to avow it. The expression of the opinion, not its honesty, is in question. Many a sundered tie of friendship, the intimacy of many an affection, has been strained by the presumption that anything may be said so long as it is honestly believed. It may be as honestly believed and yet kept for the right occasion, instead of being blurted out on the first occasion. The injuries honestly given are none the less to be resented. One may honestly reject what another honestly offers. To have peace we must sometimes muzzle honest people,—not for their honesty, but for their cruelty.

[*The Christian Intelligencer*]

Men as men have not lost their faith, and being men they cannot lose it. Their reason may be startled, their expectations denied, their hopes frustrated by the present cataclysm of national life, as, indeed, men have been so affected many times before in past history; but if the human race is to continue to exist and live and progress in days to come as in former times, faith must persist, and it will persist.

[*The Congregationalist and Christian World*]

For what shall we pray? For peace in God's own time and way; a peace that shall not forever humiliate and embitter any great or small nation; a peace that shall mark a new and wonderful stage in the world's life; a peace based on honor and the eternal laws of God; a peace that shall endure, and the outcome of which shall be one prosperous, happy, and holy human family.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: God's Lovingkindness Proved to Men," a lecture by Rev. William P. McKenzie, already published in the German language in pamphlet form, is now printed in English, and is on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

"Christian Science: The True Christianity," a lecture by Clarence C. Eaton, has been published in pamphlet form, and is now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to AUSTIN H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $5.50. On earlier volumes write for prices.

A committee of prominent fruit growers and business men, recently appointed at a large conference at Spokane, Wash., is attempting not only to bring together the big fruit marketing agencies of the Pacific Northwest, but to establish factories in all districts of Washington, Oregon, Idaho, and Montana to manufacture by-products of surplus fruits and vegetables. The committee is opposed to the sale of stock of canneries, evaporators, and other by-product plants by promoters, and recommends that in each district the growers perfect their own organizations for manufacturing purposes on a purely cooperative basis. In a report issued by the committee, the following statement is made: "For the protection of the existing plants and as a foundation for a logical expansion of business, we wish to go on record in favor of a central selling agency to be organized for the purpose of marketing the output of all the existing by-product plants now in operation in the North Pacific states and of all plants that may hereafter be formed; this organization to have a central board of control composed of one representative from each plant, and especially to endeavor to bring about a standardization of pack and a high standard of product by means of a general superintendence of the output of all plants."

Deschutes river, in Oregon, a tributary of the Columbia, is one of the unique streams of the United States, says the *United States Geological Survey*. Its natural flow is remarkably constant, rising in times of so-called floods only a few inches, owing to the fact that the river flows for a considerable portion of its course through a region of lava and loose volcanic material which acts as a huge sponge. The headwaters of the river afford reservoir sites so large and so well distributed that the total flow of the river may be utilized both for irrigation and for power. The irrigable lands in the valley, aggregating from three hundred thousand to five hundred thousand acres, are so situated on a plateau in the upper part of the basin that the total flow of the upper river and its principal tributaries may be utilized for irrigation. Below the irrigable area the river flows in a deep canyon having a fair slope and affording excellent opportunities for power development. A reliable water supply is assured by the return waters from the irrigated areas above, a large proportion of the water seeping back into the channel and by the lower tributaries of the river.

An offer by Theodore N. Vail, president of the American Telephone Company, to turn over to Vermont his large farm at Lyndonville as a school for girls, is announced in a circular letter addressed to all members-elect of the incoming legislature. Mr. Vail has already established at Lyndon an agricultural school for boys. "I now desire," he says, "to use my energy and means to demonstrate the utility, necessity, and advantage of schools for girls where they may be thoroughly trained in all the home-life industries and economics to make good homes and housewives." The Speedwell farm, Mr. Vail's home at Lyndonville, includes hundreds of acres of land and many fully equipped buildings. Mr. Vail estimates that for the state to provide such a plant as he now offers would entail an expense of one hundred and fifty thousand dollars. He believes that an annual appropriation of from twenty to thirty thousand dollars would be sufficient to maintain the school.

The Supreme Court of the United States, in a unanimous decision in the Danbury hatters' case, has put the labor unions squarely under the provisions of the Sherman antitrust act. The court also upholds the constitutionality of that section of the antitrust law providing for treble damages to the persons damaged by a conspiracy in restraint of trade. As a result of this decision, more than two hundred and fifty-two thousand dollars in cash damages, fixed under the treble damages act, will have to be paid to D. E. Loewe & Co., manufacturers of hats in Danbury, Conn., by those members of the United Hatters of America who were employed by that firm and who went on a strike some years ago and are alleged to have boycotted the firm. This case has been before the courts for nine years, during which time it has gone to the United States court of appeals twice, and once to the United States Supreme Court.

For the first time in the history of railroading in the United States some other country has exceeded this country in the mileage of new railroad built during the year, according to statistics compiled by the *Railway Age Gazette* and published in its annual review. In 1914 the total mileage of new railroad constructed in the United States was 1,531, as compared with 3,071 in 1913, while the Canadian roads built 1,978 miles, as compared with 3,010 in 1913. Cars and locomotives were built in the United States as follows: Freight, 104,541, against 207,684 in 1913; passenger, 3,691, against 3,296; locomotives, 2,235, against 5,382. On Dec. 31, 1914, 21,048 miles of road, with a total funded debt of $850,728,790 and a total capital stock of $484,599,738, were in the hands of receivers, the greatest since 1896.

A court of convenience—a court without lawyers, where the people may plead their own cases—will be established in Chicago in January, as a branch of the municipal court. Its aim will be to simplify justice and reduce the cost of "going to law." "The object of the new court will be to make litigation less expensive," Judge Olson said. "No lawyers will be needed to obtain justice. The complainant will present his own case, and the defendant will voice his own defense. Technicalities will be eliminated from decisions and much injustice may be averted. Under the present system both parties are obliged to retain lawyers." The court will at first consider cases in which amounts less than fifty dollars are involved.

The Senate commerce committee has favorably reported the Shields water-power bill in lieu of the Adamson bill passed by the House. The Shields bill is the antithesis of the measure favored by the conservationists and by the President, being similar to the original Adamson bill before the House conservation forces radically amended it. The conservationists' chief objection to it is that it provides no charge for the use of water, gives power companies the right of eminent domain, requires an act of Congress to terminate the lease at the end of fifty years, and provides for taking over the plant at "fair value" instead of at "actual cost."

In Cyrene, northern Africa, where a Venus, a Discobolus, and a group of the Three Graces were recently brought to light, there has just been uncovered a masterpiece of Greek art, a statue of Alexander the Great, the various parts of which were unearthed separately on the same spot where the other three works were discovered, and they are now being reunited. The statue is of Parian marble in splendid preservation, and represents a figure of great beauty with a strong, virile face.

Wellesley College has raised two million four hundred and thirty thousand dollars during the fourteen months' campaign for the restoration and endowment fund. Success in raising two million dollars before Jan. 1 secured four hundred and thirty thousand dollars previously pledged. Seven hundred and fifty thousand dollars will come from the Rockefeller Foundation, and two hundred thousand dollars from the general education board.

The *Electric Railway Journal*, in its report of new electric railway track built in 1914, gives the total mileage of the year as 946.38, showing a decrease of 7 per cent from that recorded for 1913. The total mileage of steam lines electrified is recorded at 229.94 miles. The electric railways of Canada built 59.67 miles of track in 1914 as compared with 147.86 in 1913.

According to preliminary returns from all the operating mills in the United States except one, it is estimated by Ernest F. Burchard of the *United States Geological Survey* that the quantity of Portland cement manufactured in the United States in 1914 was approximately 88,514,000 barrels, compared with 92,097,131 barrels in 1913.

Immigration through the port of New York for 1914 fell off to the extent of 601,410 persons, or 45 per cent as compared with 1913, when the arrivals numbered 1,285,914 persons. Of these, 170,921 were returning American citizens. The number of departing aliens was greater by 37,818 than last year.

In the year just ended American manufacturers turned out five hundred and fifteen thousand motor vehicles valued at four hundred and eighty-five million dollars, this output coming from four hundred and fifty concerns. One million five hundred thousand cars were registered in the various states.

The production of petroleum in the United States in 1914 surpassed that of any previous year in the history of the industry, the output being estimated at two hundred and ninety-two million barrels.

American farms during 1914 eclipsed all records for combined values of their products, with a total of almost ten billion dollars.

Proving All Things

WILLIS F. GROSS

THIS is the age of demonstration. Never has there been a greater demand for results; never have mortals been less satisfied with promises. Theories which appear reasonable and consistent may satisfy for the immediate present, but unless results are forthcoming, theories are not long adhered to. The tendency is to judge everything by what is accomplished. It may be that the demand for things practical has inclined thought toward the material, since to human thought the material seems more tangible, hence more susceptible of application. This is because spiritual things have been regarded more in a theoretical way, and it has been quite generally considered that they were not so vitally essential to success in the affairs of this world.

Since the discovery of Christian Science thousands have been made to see that the unseen things of Spirit are not only tangible, but that they are essential to health, happiness, and success. In other words, it is becoming apparent that spiritual understanding is the foundation of good health, true happiness, and enduring success. It is also becoming apparent that to seek first "the kingdom of God, and his righteousness," is to gain the consciousness of good which material sense can neither give nor take away.

When the healing power of Christianity was lost sight of, humanity was deprived of one of the practical proofs of faith, and religion became more a matter of belief than of actual demonstration. It is true that mortals continued to look to God as their only savior from sin, but since they were oftentimes more concerned about their health than they were about their morals, they were more interested in that which would restore them to health than they were in that which would save them from sin. Believing as they did that some material remedy for disease was necessary, it is not strange that in their search for relief so much dependence was placed on material means and so much attention was given to the observance of material health laws.

Notwithstanding the untiring efforts in this direction, the expectations of a great multitude have not been realized. Thousands of these unfortunates have turned to Christian Science in the hour of extremity and found relief. When they learned from experience that Truth does heal disease, they began to realize as never before the infinite possibilities of faith. They had reached the point where they could in some measure "prove all things; hold fast that which is good." They were beginning to realize what the apostle meant when he said, "Work out your own salvation."

Doubtless the majority of those who are interested in Christian Science turned their attention in this direction because of their need of physical healing. A few have been satisfied when their restoration to health was accomplished, but to the most of those who found help in this way, the physical healing was but the earnest of greater possibilities. While they were grateful for blessings received, they were not content to remain in ignorance of what had wrought such great good for them. When these persons took up the study of Christian Science, they soon learned that the text-book, "Science and Health with Key to the Scriptures," cannot be mastered intellectually. They began to realize what Mrs. Eddy means when she writes: "In Science we can use only what we understand. We must prove our faith by demonstration" (Science and Health, p. 329). The daily study of the Bible in connection with Science and Health is indispensable to the student's growth; and no less necessary is the continuous application of the truth thus gained. If one does not prove what he learns of this Science and make it his own by actual demonstration, he is like the unprofitable servant who hid his talent in the earth, and he will suffer the same penalty.

Progress in Christian Science without intelligent application is just as impossible as it would be to become a mathematician without demonstrating the basic law of numbers. The growth of Christian Science is due entirely to the fact that its teaching is practical, for it is healing the sick, reforming the sinner, comforting the sorrowing, and bringing into human experience whatever is necessary to enduring harmony and success. The Discoverer and Founder of Christian Science writes, "I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, p. 109). The student of this Science can gain the understanding thereof in no other way than through practical demonstration.

Paul asked, "Who did hinder you that ye should not obey the truth?" What is there to prevent the student from gaining in understanding daily, and proving his faith by his works? Nothing. The student's understanding increases in proportion to his faithfulness. The only thing that can hinder him is the error of false belief. If his own thought is right, the things from without, which seem to be obstacles in the way, only afford him the opportunity to prove that Truth can and does triumph over all evil. Since Truth has all power, we should examine ourselves to see if any false belief, ignorantly or willingly entertained, is hindering the unfoldment of the spiritual idea.

Divine Love never faileth. The psalmist sang, "Thou preparest a table before me in the presence of mine enemies;" and again, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." If we are convinced that the teachings of Christian Science are practical, the next thing of vital importance is for us to determine what is interfering with our demonstration of truth and cast it out. The human tendency is to look without, whereas we should first look within. Nothing from without can prevent one's knowing, and it is spiritual knowing that triumphs over evil. Failure is always due to lack of understanding. The wise man had gained an appreciation of this when he said, "With all thy getting get understanding."

It is ours to grow daily in this spiritual understanding. Perfection cannot be attained at a single bound, neither can we hope to solve every life-problem at once; but we can make a beginning today. If we have improved past opportunities, if we have been faithful to the light that has been given us,

Digitized by Google

we are prepared for yet higher revelations of Truth. If we have been unfaithful and are already reaping the harvest of past wrong-doing, then now is the time to strive for spiritual understanding and the demonstration thereof. Our good works "will prove what the understanding of God brings to man" (Science and Health, p. 496), and we will rejoice that we are learning to prove all things and to hold fast to that which is good.

The Father's House

LOUISE KNIGHT WHEATLEY

THERE was once a little company of men whose hearts were heavy. One of their number was about to leave them, why and whither they knew not; they only knew that he was going, and they sat sorrowful and silent in the fast-falling shadows of that impending tragedy. They had supped together, as friends will on the eve of a separation, and were now listening to that beloved voice as he, their Master, so soon to be parted from them, gave his last message of hope and courage; for he knew what was before them. He knew what was before him, also; yet he prayed not for himself, but for them, that when their crucial testing time should come, they would be able to prove that in losing sight of their best earthly friend they had not lost their teacher.

That which had to be learned by those grief-stricken hearts of nineteen centuries ago, must also be learned, sooner or later, by every true disciple. Jesus' disciples had not then risen to the altitude where the Master's true relation to them was understood, and so they grieved in an altogether earthly way. The breaking of human ties seems to be but a phase of universal experience. Human relationships, founded as they are upon that which is wholly transient and material, must from their very lack of the permanency of true substance be ever subject to chance and change. Perhaps some one who reads these lines may today be realizing as never before the truth of this statement. Human sense is telling him that he is separated from that which he holds most dear, that he is alone and unhappy, home-sick and heart-sick. Those passing through this experience are many more in number than we sometimes dream, since few persons wear the heart upon the sleeve, as the saying is, for the careless crowd to see.

Perhaps it would surprise some of us if we could know how many of those who present a brave front to the world have also their moments of agony to which the silent stars alone bear witness, wherein they battle with a heart hunger a thousand times more insistent than the cry of the starving man for bread. To such may these words come with healing in their wings, calming the wild unrest of human longing with a gentle "Peace, be still." For there yet echoes, from out the twilight shadows of that "upper room," the message of the Christ, telling us that we are never alone, even in what may seem the darkest hour of our lives. Does suffering sense still cry out for "the touch of a vanished hand"? One who knew what it was to be alone, once wrote (Miscellaneous Writings, p. 306): "Oh, may you feel *this* touch,—it is not the clasping of hands, nor a loved person present; it is more than this: it is a spiritual idea that lights your path!"

This spiritual idea of man as he really is, never solitary, never unsatisfied, never separated from aught that is real, never lacking anything, but ever joyous, perfect, and complete, comes indeed as an angel of light, making luminous the desolate places of earth. "Let not your heart be troubled," said that tender voice of long ago, "ye believe in God, believe also in me [the Son, the spiritual idea]." And then he added, "In my Father's house are many mansions: . . . I go to prepare a place for you . . . that where I am, there ye may be also." It was indeed in the Father's house that the Master ever dwelt, or, as Mrs. Eddy interprets it, in "the consciousness of Love" (see Science and Health, p. 578), wherein he knew there was a place not only for him but for every one, for Love, from the very nature of its boundless infinitude, must include all in its compassionate embrace.

Do we sometimes seem, however, to be almost anywhere but in the Father's house? Are some of us perhaps alone in a strange city, undertaking new work and surrounded by unfamiliar faces? And do we miss the smile that used to welcome us when we came, and the voice that used to bid us "God speed" when we went? Then let us rejoice, for an hour of development has come. It only means that we are struggling out of a finite and restricted sense of happiness to find a true and permanent joy, just as some butterfly struggles out of his chrysalis into purer air and freedom. It is true that he may not thoroughly enjoy the struggle. Finding one's wings is not always a painless process. The butterfly, if consulted, would probably much prefer to sleep away the entire summer in his snug little cradle, just as mortals, if they had their choice, would sometimes cry out, "Do not waken me; I want to keep on dreaming."

To dream, however, is not to grow. Mind's eternal plan involves activity, development, progress, not treacherous ease. Do we sometimes think that the struggle seems greater than human strength can bear? It is, for human strength is ever limited; but it is not beyond the strength which God bestows, and which is always in proportion to our need. Let us rest in Him. "Are not five sparrows sold for two farthings, and not one of them is forgotten before God?" Let us reach out for the Father's hand. "Love supports the struggling heart until it ceases to sigh over the world and begins to unfold its wings for heaven" (Science and Health, p. 57).

In the mean time, while these things are going on, how are we conducting ourselves? What are we doing? Are we clinging to a material sense of selfhood, with its demands for happiness in matter, or are we thinking a little more each day about the real man, whose happiness is to know and to do the Father's will, this man who ever knew an unsatisfied desire, an incomplete existence, home-sickness nor heart-sickness, because he already reflects and expresses and possesses the infinite All? Suppose we turn away from self and begin to think of others. Are we the only ones in all the world whose hearts are heavy? Have we ever stopped to think that there may be those who need us as much as we need them? There is nothing which may become so utterly selfish as sorrow. Many a man bars the doors and windows of his mental home, sits down beside the cold ashes of what he calls "the past," wraps himself in his pitiful robes of bitterness, self-pity, and rebellion, and then shivers because the world is such a cheerless place.

How often do we deliberately, if unconsciously, shut ourselves away from much that would be beautiful and right for us to have! For some time there has been a forbidding sign of "No admittance" over the door of our consciousness. Suppose we take it down. Let us unfasten the shutters, roll up the shades, throw open the windows, and let in the sunshine and the fresh air and the song of the birds. Let us kindle that smoldering fire with new hope and courage and endeavor. Nobody ever grew warm by looking down into ashes. Then, when all within is bright and peaceful, we may set the door ajar. God will do the rest. Some one, some day, will see our cheery blaze, and will slip in to warm himself; some one, perhaps, who has never yet heard the real truth about the Father's house, and how there is room in it for everybody. Would it not be a joy to tell him?

Digitized by Google

In thus forgetting self in seeking to bless others, we will learn something of that peace which the world can neither give nor take away, of that happiness which is wholly spiritual, of that love which is not confined to the few who first love us, but which is big enough and broad enough and godlike enough to go out impersonally and impartially to all the world. When the sheep roam over the hills all day, they sometimes wander into rough and rugged places. Their fleece gets torn on the briers, their feet are cut by the sharp stones, and they often slip and fall, until when night comes they are so weary that they can hardly seem to follow the shepherd when he calls. But that part does not matter to the shepherd. He gently leads them on, carrying "the littlest lambs" in his arms, until every one is safely gathered into the sheepfold. Could he himself be content to rest if even one of his flock were still out on the hills, separated from the others, forgotten and alone? In just the same sweet way does our tender Shepherd, divine Love, take care of His children, and gather them into the sheepfold, the consciousness of Love's abiding presence, where all dwell together in quietness and peace. Then let the struggling heart take courage. Our true home is not in one little house, in one little city, or even in one little world, but it is the Father's house of many mansions; and we are there today, wherever we may be and whatever we may be doing, for our home is where God is,—and that is everywhere.

Christian Unity

LEWIS C. STRANG

It is not uncommon for those who reverence Jesus the Christ and who are trying to follow his example, to wonder at the failure of the disciples, who were so closely associated with him, more fully to understand his mission and assimilate his teachings. It seems incongruous that in the presence of this marvelous exponent of divine wisdom and power the disciples should have wasted time in disputing about their personal worth, or that the sons of Zebedee should have had the effrontery to petition for personal aggrandizement.

Perhaps some have even thought that if they had been in the disciples' place, they would have made no such mistakes; their ears would not have been deaf to Jesus' teachings; they would never have lost the glory of the vision on the mount in the crude materialism of such a personal sense, under no circumstances would they have denied the Christ, as did Peter, or slept at Gethsemane, as did all the disciples. They do not stop to think that by expressing this criticism of others and this esteem of themselves they are doing precisely what they are sure they never would have done. Jesus' warning is far-reaching: "Judge not, that ye be not judged." And again, when you do judge, "judge righteous judgment."

The strength of the Christian Science movement is in its unity. To have one Mind is the ideal of Christian Scientists; it is also their salvation. Having a sound metaphysical basis in the fact that Mind by the very nature of its infinity is one, this unity is found to have a demonstrable basis just to the extent that the individual has sufficient understanding and confidence in the one Mind to enable him habitually to rely upon the activity of divine Principle for his good instead of upon human will. In order, therefore, to preserve the unity which is essential to the well-being of the cause of Christian Science, it is necessary that the individual Christian Scientist shall have consistent faith in good as the only power. This means that good must be to some extent dominant in his thought, and that, so far as he can, he must know only good, be only good, and see only good. This does not mean that one shall see evil as good, but rather that through his understanding of good as all, he shall so clearly perceive the unreality of evil that he is never deceived by evil's lies and false suggestions. This state of "not seeing evil" is in strict accord with Jesus' sense of things as expressed in his statement, "If a man keep my saying, he shall never see death."

Nor can one logically rest with only knowing that God is good; he must expand his concept to include both himself and his fellow man as the reflection of this ever-present good. When awakening a little from the dream of matter to the right idea of man as God's likeness, we may justly grant to ourselves honesty, sincerity, and right desire in our pursuit of spirituality, even though our shortcomings may be manifold. Therefore, we can do no less than grant to our fellow man, also awakening a little from material illusion, equal honesty, sincerity, and right desire in his pursuit of spirituality, though manifold may be his shortcomings.

For "brethren to dwell together in unity," it is not necessary that they shall have the same human opinions, but it is necessary that they shall have "love one for another." With love, which betokens mutual confidence and respect, there may come out of a conflict of human opinions, waged honestly and fairly, a higher and clearer sense of impersonal truth. On the other hand, a conflict of human opinions without love inevitably means the loss of a clear sense of impersonal truth in a contest between personalities. To refute a false argument with demonstrable truth promotes unity; but to question the honesty and sincerity of him who holds the opposing opinion kills confidence. To impugn the motives of an opponent is to appeal to the common court of mortal mind, a court which always sentences unity to death. Whatever destroys confidence, destroys love; and whatever destroys love, destroys unity.

The Christian Scientist has learned that to worship personality instead of Principle is to undermine unity. One may worship personality in a variety of ways,—he may unduly exalt his own personality, or that of some one else; again, he may reverse the process, and unduly debase his own personality or that of another. Whichever he does, he assuredly turns from Principle, is inordinately interested in the doings and sayings of people, approves this and condemns that according as it is pleasing or displeasing to his personal sense of things, becomes an open channel first for gossip and next for scandal, and in due course, if he does not handle and destroy the basic error of personal idolatry, loses whatever grasp of Principle he may have had, and declares himself by word and deed the most pitiful of all materialists,—the materialist who mistakes his materialism for spirituality.

All Christian Scientists recognize the wisdom of Mrs. Eddy in removing personal preaching from the pulpit of the Christian Science church and placing in its stead the impersonal teaching of the Bible and Science and Health. Possibly some Christian Scientists, who would never wittingly be disloyal to their Leader, have never stopped to consider that when they quote what some one has said,—especially if they do so with the purpose of citing the one quoted as an authority for or against some concept of Christian Science,—they are virtually placing personality in the pulpit. Misunderstandings are inevitable under such conditions, and misunderstandings are the enemies of unity.

Is it not evident that while we cannot today walk the hills of Galilee with the Master, we nevertheless have the ever-present privilege of climbing the mount of spiritual understanding with him? We can partake of his spirit of wisdom and charity; we can manifest something of his love and intelligence; we can let our yea be yea and our nay, nay;

Digitized by Google

we can refrain from judging and criticizing until through the lens of love we can perceive enough of infinite Truth to "judge righteous judgment." Finally, we can rest our cause as he rested his, on the "I knew that thou hearest me always," and it is possible that we, too, may see a Lazarus rising from the death-sleep of materiality into the demonstration of life eternal.

Sense of Hindrance Overcome

E. STEDFELD

In working to know the powerlessness of evil, we are sometimes led to believe that we are hindered in our work by some one who has not yet learned the importance of holding "thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261), and who constantly voices error. To learn how a mother overcame such a sense of hindrance may be helpful to some one else. This mother had been having a practitioner's help for her small son, but felt that the work was greatly hindered by a relative who was a member of the household, and who constantly gave out foreboding and pessimistic opinions of the situation. That this constant repetition of error constituted a real impediment to the restoration of harmony, bore heavily on the mother's thought, until the following experience came to her.

While up-stairs with the child, the mother heard a neighbor come in and ask about the child. She also heard the relative's answer, which was, as usual, apprehensive in the extreme. For a moment a sense of great discouragement came to the mother, but over and above this was a reaching out to divine Love for help, for light upon the situation, and instantly this line of reasoning came to her: The thought which my relative is repeating to the neighbor is not, as I know, the truth about the child, whose real being is spiritual and harmonious. Now a thought which is not the truth is not a reality,—is nothing, no-thing,—and bears the same relation to truth that the symbol naught bears to the science of mathematics. One times naught is, of course, nothing; a hundred or a million times naught is still nothing. The mere repetition or multiplication of the naught does not thereby add to its value or give it any power.

The mother then saw that the statement of discord made about her child, not being the truth, was naught, and the mere repetition or multiplication of the naught (*i.e.*, valueless statement) could not thereby give it value or give it one particle of power; that she need not therefore fear its repetition, nor should she try to give it value in her thought by allowing that she feared it, or by believing that it carried significance or weight. With the realization of the truth of this reasoning, which was based upon Principle, the sense of hindrance fell away from her thought, and the child's release from the discordant conditions followed quickly.

✧

Honor to Whom Honor is Due

ELOISE ALDEN

The question is frequently asked by persons mildly interested in Science, Why do Christian Scientists give thanks to Mrs. Eddy instead of to God? The question is not a fair one, because it shows on the part of the questioner a misconception of the attitude of Christian Scientists toward their Leader, and exhibits the common disposition to institute a comparison which has no basis in fact, since all true Christian Scientists do give thanks to God, and that devoutly and continually.

Let us suppose a case which will serve to make clear the point on which information is sought. A student in mathematics is confronted with a problem which does not lend itself to solution. He knows that it can be solved, but he cannot effect the solution because of his imperfect knowledge of the rule which governs this particular problem. In his extremity he appeals to his instructor, who at once perceives the difficulty, explains with patience and exactness the rule which was at hand all the time, though the student did not know it, and then the student is able by his own application of the rule to arrive at the desired result. Naturally the student is thankful for the aid extended, and highly esteems the ability of the instructor to know and apply the rules of mathematics which he himself has not discovered. But did the teacher originate the basic law of mathematics? Certainly not. The underlying principle of mathematics, of all exact science, is as old as creation. No human mind created it. It is an expression of Mind, of God. The teacher is honored because of his desire to know, because of his patient and extended investigation, and finally his command and application of the law to the attainment of a given desired end. It is apparent to all, that if one who by patient endeavor and studious application has gained an understanding of divine law receives a meed of honor and grateful appreciation, this in no way detracts from the full measure of praise due the source of that law.

Mrs. Eddy stands to her followers in the relation of a teacher to pupils. She rediscovered and stated what had so long been lost sight of by humanity, namely, the Principle of all science. She labored long and patiently to know its rule and operation, and in the face of obstacles which would have discouraged one less courageous, and which would have defeated one less grounded in truth, she gave to the world freely and impartially the result of her illumination, her study, and her demonstration. In giving thanks for the service rendered by her to humanity, there is no flavor of intent or desire to exalt her to a position which is not her due. Her followers simply seek to express that measure of gratitude which is due to one whose pioneer work has made possible the unmeasured benefits to all of this world-wide movement. Her teachings are transforming the age, and raising mankind to a higher and more satisfying conception of the allness of God and the perfection of man as His idea, and for this the many are indeed thankful.

[Written for the *Sentinel*]

"Thou art ever-present"*

LAURA GERAHTY

Out o'er a blood-stained field I wander far,
To succor one I love and bring him home,
Repeating still, through pain and death and war,
"Thy kingdom come."

Upon a storm-tossed deep, where night winds play
To drive my slender craft from harbor-home,
Terrors above, beneath, yet still I pray,
"Thy kingdom come,"—

Then wake from mortal dreams and smile again,
For sleeping I did wander, yet am home,
Where I can sing amid the seeming pain,
"Thy kingdom come."

No storm endures this waking, and no hate
Can hold man's consciousness outside its home;
No tears survive, though long perchance we wait:
"Thy kingdom come."

[Judge Clifford P. Smith in *Springfield* (Mass.) *Union*]

In the beginning of the Christian movement there was one fact the recognition of which was regarded as essential to the spread of Christianity. This central fact was the resurrection. To illustrate: When an apostle was about to be chosen to take the place of Judas, the announcement made by Peter for the eleven was that one must be "ordained to be a witness with us of his [Jesus'] resurrection." So in the speeches reported in the book of Acts, the resurrection is the theme of every address. It was the event on which the Christian church was founded and on which it grew. In these circumstances the whole accession of believers became a solid witness of the occurrence thus attested, and constitutes sufficient proof of it.

Likewise in the beginning of the Christian Science movement there has been one significant fact necessary to be affirmed and proved in spite of denials and doubts. This momentous fact is the healing,—the fact that Christian Science heals the sick. To it the spread of Christian Science throughout the world is mainly due. As Paul asked the people of the first century, "Why should it be thought a thing incredible with you, that God should raise the dead?" so it may be asked of the present generation, Why should it be thought a thing incredible with you, that God should heal the sick? Indeed, why should it seem incredible that the law and power of divine good should operate and be available to overcome every phase of evil?

Later generations marveled that so many of the people of the first century shut their eyes to the events which attended the inception of Christianity. The people of today have need to beware of starting a parallel to that chapter of history. Christian Science is doing a work of which no one need be ignorant,—a work which it were folly to ignore. That Christian Science has destroyed, in a vast number of cases, all manner of diseases, whether deemed curable or incurable by other means, is now an incontestable fact. It is a fact of authentic history, which cannot be reversed or turned back; and it is a fact which is of the utmost importance to the human race.

Why, it may be asked, is the healing so important? The value of health is obvious, and there are other reasons. Christian Science healing is Truth-healing; it belongs to salvation; it results from the power of good over evil; it depends on the nature and qualities of that which is divine in contrast with what is merely mortal; it involves the knowledge and proof of God. In the words of Mrs. Eddy (Message to The Mother Church for 1901, p. 1): "As Christian Scientists you seek to define God to your own consciousness by feeling and applying the nature and practical possibilities of divine Love: to gain the absolute and supreme certainty that Christianity is now what Christ Jesus taught and demonstrated,—health, holiness, immortality."

❖

[Willis D. McKinstry in *Independence* (Kan.) *Reporter*]

In his endeavor in a recent sermon to harmonize the practice of medicine with spiritual or divine healing, the Rev. Mr. —— chooses to criticize Christian Science. Christian Science opposes such an amalgamation. It demonstrates the theology of Christ Jesus; for Jesus set forth the way of salvation as purely spiritual, and no element of materialism or activity of physical law entered into his demonstrations of scientific being. To suppose that omnipotent good, the first great intelligent cause which created the universe, needs the aid or assistance of a non-intelligent, inanimate drug or lotion to promote or continue the health and harmony of man created in His likeness, is to belittle Deity.

Omnipotence can never be less than omnipotent. This all-power is divine Mind, and cannot be confounded with the carnal mind, or so-called intelligent matter, which "is enmity against God." It was this Mind of Christ Jesus that gave him a scientific knowledge of Truth and enabled him to know the difference between the spiritual universe and a material world, between man created in God's image and a sinning mortal.

The spiritual understanding of scientific being which Christian Science gives, obliterates human belief, and gives mankind a true knowledge of God's law as operative to meet his human need. Christian Science demonstration is not a blind faith or the mere repetition of words, but the realization of the presence and power of God. The teachings of Christ Jesus set forth the unmistakable way of salvation, and proclaim this way to be entirely separate from all material methods of living; yet the Master and his disciples ate and drank the same as others. The partaking of food and drink are some of the things Jesus found it necessary to suffer "to be so now," while overcoming the things of the flesh. Therefore it is not inconsistent for Christian Scientists to live in houses, wear clothes, and eat and drink; in fact, if they seek "first the kingdom of God," they are justly entitled to all the comforts of human life.

At this stage of growth in Christian Science no one has demonstrated the fulness of its teachings, so if some of its followers through lack of understanding feel that it is necessary to turn to material means, this does not disprove its teachings. There is no more valid reason for censuring or condemning one who is endeavoring to realize that "the Lord God omnipotent reigneth" at all times and under all circumstances and conditions, although he pass away, than there is for judging one who relies upon *materia medica* and passes away from the result of an operation performed in a hospital by a reputable surgeon.

❖

[G. W. Allan in *Ottawa* (Ontario) *Citizen*]

Viewed in one way, the Bible contains a record of man's growing concept of God. As the finite sense of Deity yielded its grosser elements, men's concept of God approached truth. We note in the Scriptures that God has been conceived to be a being of human form, a god of wrath, a warrior, a sovereign, a judge, and on in an ascending scale to John's revelation and Jesus' demonstration of God as Love. Human development in understanding is from the partial to the more inclusive truth, and it is only as we grasp the more inclusive truth that we realize the falsity of the former concept. While we held to the Ptolemaic theory in astronomy, we were blind to its limitations or falsities; but when we grasped and accepted the more inclusive truth of the Copernican theory, we saw not only the limitations of the former concept, but also the reason for our acceptance of it.

Even the casual reader of authorized Christian Science literature will early discover that God is therein defined, not as possessing the grosser elements of the carnal mind, but in terms expressing the highest qualities of which we are conscious, *e.g.*, infinite Life, Truth, Love. It will be conceded here that there is no return to positions outgrown in the realm of religion, any more than in the realm of astronomy. When we grasp and accept the fact that God is Love, we realize the falsity of any lower concept of God, and could no more teach that lower concept as our religious belief than we could now teach the Ptolemaic theory as our understanding of astronomy.

It is being more generally recognized that "the one important interpretation of Scripture is the spiritual." Indeed, Mrs. Eddy goes farther and states, "Take away the spiritual signification of Scripture, and that compilation can do no more for mortals than can moonbeams to melt a river of ice" (Science and Health, pp. 320, 241). It is this "spiritual signification" of the Word, today made known through Christian Science, that is making the Bible an open and loved book to thousands who had cast it aside; a text-book for their daily study; a practical guide to their feet and a light to their path, and an inspiration in their warfare to lessen evil and disease. The study of the Bible with the aid of our text-book, which has proven itself a veritable "Key to the Scriptures," has reformed sinners and healed the sick in untold instances. The evidence of the "fruits" of Christian Science is now so abundant that any one desiring to be informed, cannot long remain in ignorance of either the quality of the fruit or the character of the tree.

❖

[Paul Stark Seeley in *The Oregonian*, Portland, Ore.]

The *Oregonian* in a recent issue contained statements by three Portland ministers of as many denominations relative to Christian Science. With a pleasing sense of fair-mindedness two of them give measurable recognition to the good that Christian Science is accomplishing, even though they do not accept the full import of its teachings. The other, however, continues to misinterpret and misapply the teachings of Christian Science in regard to evil and sin; to insist that it teaches something which it does not teach; that Mrs. Eddy meant only what he thinks she meant; that her statements are contrary to the Bible, as he says "all Bible readers know;" and that finally to end it all and, I suppose, to put an end to Christian Science, he has written a book to prove that Christian Science is just what he thinks it is. Perchance this reverend doctor may learn by experience, if not otherwise, that many truth-seeking people will be turned by his mistaken criticisms to an honest investigation of the teachings which he deplores, and will find there good things that satisfy and make glad, things that for the time being the clouds of prejudice have put beyond the critic's ken.

The doctor seizes upon Mrs. Eddy's statement that "man is incapable of sin, sickness, and death" (Science and Health, p. 475) as proof positive that Christian Science proclaims the man in the street to be incapable of wrong-doing. Applying this mistaken conclusion to himself he says, "If I am incapable of sin I am warranted in giving myself little concern regarding it." Of course Mrs. Eddy did not mean that the critic or any other mortal is incapable of sin. What she meant, as every one who has studied her writings with an open mind knows, was that the spiritual man, made as the Scriptures state "in the image of God," is sinless and eternal. Nor is Mrs. Eddy's teaching contradictory to the Bible, as the critic opines. Referring to the God-created man, John said, "Whosoever is born of God doth not commit sin; . . . he cannot sin, because he is born of God." "Anybody," Mrs. Eddy writes in Science and Health (p. 345), "who is able to perceive the incongruity between God's idea and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's man, made in His image, and the sinning race of Adam." Certainly this is not too much to expect of the reverend critic.

While the doctor is making light of the negative nature of evil as taught by Christian Science, those seeking freedom from the bondage of sin and sickness are finding in its teachings nothing that encourages its followers carelessly to ignore sin, as he mistakenly believes, but rather a system of divine metaphysics that enables man to eradicate from human experience, in an ever increasing degree, sin, fear, sickness, and discord of every kind through correct scientific thinking. By this process of right thinking, the very same that enabled Jesus to overcome sin, disease, and death, Christian Science is enabling its adherents today to gain in some part the good things of God, and thus prove by works more than by words the potency of right-mindedness to master the *belief of* mortals that evil is coequal and coeval with God.

When the critic refers with some irreverence to Mrs. Eddy as the "high priestess of Christian Science," he but lays bare his own narrow conception of the life-work of a very great and good woman, whose years of labor had as their sole purpose the betterment of the lives of her fellow men. If he does not now see fit to give credit where credit is due, it is cause for passing regret. A rising tide of gratitude from the hearts of increasing multitudes is even now drowning the sneer of the ecclesiastic and the scoff of the uninformed. As a wise, devoted, and courageous leader, Christian Scientists honor and revere Mrs. Eddy, knowing full well that her place among the world's great benefactors is already established beyond the attack of those who cannot yet recognize her contribution to the world's betterment. The time is not far distant when even those who now are unable to see the importance of her life mission will be glad to accord her the place which she already holds in the hearts of unnumbered thousands as "the revelator to this age of the immortal truths testified to by Jesus and the prophets" (The First Church of Christ, Scientist, and Miscellany, Pref., p. vii).

❖

[Frank Bell in *The Herald*, Reading, Pa.]

That would be a rare commander in battle who could contrive not only to choose his field of conflict, but to designate the character and disposition of the forces with whom he contends. Success would be assured in advance, and his battles, so far as results were concerned, would be ended before they were begun. A similar brand of invincibility appears to distinguish the anonymous contributor in a recent issue, who undertakes to disprove Christian Science by the familiar process of setting up misrepresentations of this teaching and at convenience bowling them over.

It would seem that after observing that "Christian Science advances a theory of and cure for disease that is at complete variance with that of medical science," one would be impressed with the difficulties in the way of seeing Christian Science correctly through the medical man's spectacles, though it must be admitted that our friend is by no means the first to make the attempt. The materialist who permits himself to be convinced that disease has its origin in a micro-organism called a germ, and therefore concludes that all healing effort must be directed to thwarting the micro-organism, and who at the same time believes the practice of Christian Science consists merely in the reiteration of certain word formulas, may be impelled by the "logic" of his misinformation to adopt the opinion that Christian Science is helpless in the face of disease.

But in the first place nobody knows, and probably few really believe, that the germ is the actual source of the diseased condition with which it is associated in present-day medical theory. The bacteriologist must admit that the tiny organism to which he attributes such potency is at best (or worst) only an effect, not a cause. An effect of what? Does any learned advocate of the germ theory actually know what a germ is, or whence it comes, or why one differs from another? Can he name the source of the intelligence and power with which his theory would endow the micro-organism? In

Digitized by Google

view of the large preponderance of pure speculation in the germ theory, and the necessary admission that, whatever the germ may be, it is due to something else as yet undisclosed to the advocates of the theory, is it reasonable to set up the assumption that all systems of healing are to be judged by the microbe standard? Since the champion of the germ does not know the origin of the germ itself, he cannot really know that the "favorable conditions" in which the germ is supposed to thrive are not the direct or indirect product of a mental state.

Through ponderous argument our friend announces his arrival at the conviction that the Christian Scientist, "with the method he uses," simply cannot "control the disease germs of his own organism." The two serious defects in this proposition are, that there is no such method as he describes, nor any such object. The method of Christian Science is moral or spiritual, and its first object is of a similar nature. Christian Science is a religion. That for which it is applied is primarily the overcoming of sin. The destruction of all the micro-organisms of which the germ theorist ever dreamed would not bring about the state of affairs for which Christian Science strives. Until the advocate of the microbe has his theory better in hand, so that he no longer must resort to the excuse that it works out only where "conditions are favorable," he is scarcely in a position to demand that his "skeptical nature" be appeased by something "tangible" from the Christian Scientist. The latter is familiar with the statement that the "operation was successful but the shock proved fatal," and having learned through his own experience that he is best protected from disease and its consequences not through "controlling germs," but through the favorable conditions that result incidentally from the regenerative processes of Christian Science, he prefers the latter plan.

To prove the effectiveness of Christian Science it is not necessary that one should be able to "command his digestive apparatus to assimilate scrap-iron." Evidence of more practical value to mankind is found in the assimilation of ordinary food by digestive apparatuses that could not be induced to do so until Christian Science treatment was employed. Christian Science acquires a steadily increasing number of adherents, not because of its agreeing with this or that theory, but because of the completeness with which it meets the needs of all who earnestly study and consistently apply its teachings.

Finally, we submit that one who says involuntary bodily action is in no wise dependent on mind, and yet fails to say what it is dependent upon; who declares the most vital functions of the human organism to be utterly regardless of mind, and yet does not explain why these cease the instant the mind or life goes out of the body; who describes mind as "animated matter" and insists that the water and salts composing the brain possess "the faculty of perception," is going to some lengths when he demands that before he can accept Christian Science some one must "make it tangible."

❖

[William D. Kilpatrick in *News-Palladium*, Benton Harbor, Mich.]

In a recent issue appears a report of a local meeting wherein a critic misstates the attitude of Christian Science on the subject of sin. The critic's position is explained in his words: "Sin is no idle fancy! Sin is a fact. Sin is a moral disease which is destined to live as long as God lives." It is not only quite plain that the gentleman would have us accept God as the author of sin, but from his point of view it would be foolish and futile to attempt to rid ourselves of sin in any way.

Now, one of the two following conditions must be correct: First, if God created sin it must be true and a part of His creation, as permanent as God Himself, and incapable of destruction. Secondly, if God did not create sin it is no part of His creation, hence must be untrue, without permanency, having only such power and dominion as we wish to give it in our belief. We have ample Biblical authority for choosing the latter condition as a basis of endeavor in combating sin. If God did create sin, then it is part of His creation, and we could not if we would, and should not if we could, escape the dire results thereof.

In Genesis we read: "In the beginning God created the heaven and the earth. . . . And God saw every thing that he had made, and, behold, it was very good." Jesus said, "I am not come to destroy, but to fulfil," and aside from healing the sick, his one chief mission was to destroy sin. Is it logical, then, to conclude that as the Son of God, Jesus came to destroy the works of God? Most certainly it is not! But if we are to continue the belief that God is the author of sin, we may as well cease right now all attempts at ridding ourselves of its effects, for sin can never be mastered by any one, either for himself or for another, who believes that God is responsible for it. Christian Science teaches, as does the Bible, that God did not create sin, and that only through this understanding can the absolute nothingness of sin be perceived and its mastery be made possible. Sin will remain with us only so long as mankind is willing to concede its authority, and no longer.

❖

[S. T. Downs in *Muncie* (Ind.) *Star*]

An editorial in a recent issue entitled "A Thought Movement," is liable to mislead some of your readers, because it places Christian Science in a class where it does not belong. Christian Science is not occult, and to suggest that Christian Scientists join in the so-called "thought chain" for peace, is to state incorrectly the teaching and practice of Christian Science.

The attitude of Christian Science toward the question of war cannot be more correctly stated than as set forth by its Discoverer and Founder, Mrs. Eddy, in an article written for the *Boston Globe* in December, 1904, and reprinted in her book "The First Church of Christ, Scientist, and Miscellany": "The Principle of all power is God, and God is Love. Whatever brings into human thought or action an element opposed to Love, is never requisite, never a necessity, and is not sanctioned by the law of God, the law of Love" (p. 278).

Things Substantial

GERTRUDE TILDEN-THOMPSON

THE artist true paints not the world he sees
With eyes grown dim at scanning faultful things;
But to the landscape, face, and form he brings
The eyes of soul, to him real nature's keys.
In autumn, when the trees bright hues take on,
And wave their banners in exulting mood,
They say not, "For a time we'll part from good,"
But up to clearer heights they urge us on.
God's world is perfect; 'tis our sense that fails
To see true beauty as it lies in store;
'Tis limitation of our sense that veils
The mansion for us all prepared before.
God's tree is always growing in His sight,
God's man is always living in His might.

Editorial

"Conformed to the doctrines"

NOTWITHSTANDING the fact that a very large portion of the New Testament is given over to the account of our Master's work in healing the sick, the one point upon which many critics of Christian Science base their objection to this religion is that its followers profess to heal the sick by the same means which Christ Jesus employed. In fact, it seems that if it were not for this feature of Mrs. Eddy's teachings, these people would make little, if any, objection to the inclusion of Christian Science in the list of Christian and evangelical religions. As some of them even go so far as to question the right of Christian Scientists to be called Christians, or this teaching a Christian religion, it may be well to set forth an accepted definition of the word Christian, in order to clear up this misapprehension. We therefore quote from Webster as follows:—

"One who believes, or professes or is assumed to believe, in Jesus Christ, and the truth as taught by him; an adherent of Christianity; especially, one whose inward and outward life is conformed to the doctrines of Christ."

Those who in the face of this definition assail the Christianity of Mrs. Eddy's followers, must either deny the legitimacy of our Master's works, or take the position that these works were to be done only by a limited number and for a limited time. As to the legitimacy of all our Master's works, he himself said: "I came . . . not to do mine own will, but the will of him that sent me." As to their universality among Christians, he said: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." He also included this healing work in his command which set the standard for Christianity: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

The great Teacher said of them who should follow him and claim recognition in his name, "Ye shall know them by their fruits;" and it is because Christian Scientists are showing these fruits that so many who have vainly sought help and healing elsewhere are attracted to the religion which Mrs. Eddy founded. Christian Scientists have learned from their Leader's life and works that the real mission of her teachings is to lift mankind to that right apprehension of God and man's relation to Him which destroys all sin and casts out all error, whether this error be morally or physically manifested. This teaching she expresses in her writings time and again, but probably nowhere more completely than on page xi of the Preface to Science and Health, where she writes:—

"The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

Throughout Mrs. Eddy's teachings and throughout her life Christ Jesus was her model. To her he was the great Exemplar, and she once wrote to the members of her church, "Follow your Leader, only so far as she follows Christ" (Messages to The Mother Church, p. 78). Needless to say this is the highest endeavor of her every loyal follower, and in the degree of their understanding of the Christ-teaching and faithfulness in its application, they are bearing the "fruits" that are the signet of at-oneness with him who taught us to pray "Our Father."

ARCHIBALD MCLELLAN.

Eternal Life

THROUGHOUT Jesus' earthly ministry as set forth in the gospels, we find that his chief appeal to those around him was that they should accept eternal life. Before his time the prophets had spoken much of long life as the necessary outcome of right living, and the psalmist had not hesitated to say of the one who dwelt "under the shadow of the Almighty," that he would be forever safe, though a thousand should fall at his side and ten thousand at his right hand; that neither plague nor pestilence should come nigh his dwelling. He also declared that such a one would realize the "long life" that satisfies, as in the case of Moses, who was untouched by the sense of decay even when he had reached one hundred and twenty years. Christ Jesus had, however, a wider view than did Moses from mount Pisgah, when he assured his faithful followers of eternal life. In declaring man's unity with God he said, "No man is able to pluck them out of my Father's hand."

We would naturally suppose that those of his own nation and religion would gladly accept the truth of being which the Nazarene Prophet offered them; but such was not the case, for then as now material sense blinded the eyes of the many. This is brought out in the account of Paul's wonderful work at Antioch, when the whole city was stirred, as we read in the thirteenth chapter of Acts. Here we are told that Paul and Barnabas reminded the Jews that the word of God was first spoken to them; then the record goes on, "But seeing ye put it from you, and judge yourselves unworthy of everlasting life, lo, we turn to the Gentiles." Does not this fittingly describe the mental attitude of mankind at large today? In so far as men love the world and the things of the world, they judge themselves unworthy of eternal life as it is presented in the Bible, and also in Science and Health. They virtually say that it will be time enough to enter upon eternal life after they have died and wakened again, if they ever do. Paul says, "We shall not all sleep, but we shall all be changed." None can deny that this change is greatly needed, and those who have begun really to understand eternal life are the ones who most desire the change from error to truth, from the material to the spiritual, from the mortal to the immortal.

Mrs. Eddy, who wisely points the path for faltering footsteps, says (Science and Health, p. 246), "Except for the error of measuring and limiting all that is good and beautiful, man would enjoy more than threescore years and ten and still maintain his vigor, freshness, and promise." Then she quickly adds: "Life is eternal. We should find this out, and begin the demonstration thereof. Life and goodness are immortal." This explains it all. Divine Life and Love are deathless. No one would think of denying this, but few remember that God's image and likeness, the reflection of Life and Love, is no less so. The trouble is that humanity has too long judged itself unworthy of eternal life as Christ Jesus presented the idea, and has chosen rather a mutilated counterfeit of it, one in which death is given a prominent part. "Man is immortal till death," says the cynic, but the fact is that mortals express their own false concept of exist-

Digitized by Google

ence all the way, even though it may be pleaded that this concept is thrust upon them from birth up. It is well that evil is not immortal. If it were otherwise, there would be no hope for the race.

If goodness, the product of pure spirituality, is daily becoming dearer to us and is being demonstrated in all we do, then mortality is being "swallowed up of life." Hatred, selfishness, and lust are all mortal, and if we cling to these evil beliefs, we have, as Paul also says, "sentence of death in ourselves." There is, however, a sure way of escape, and that is to put off the false mortal concept and "lay hold on eternal life," proving man's immortality by walking in the light of Truth and radiating its healing power so that all may see it, feel its warmth, and follow it to its source, the Life divine.

ANNIE M. KNOTT.

❖

Kinship

IN human belief, individual experience is very largely shaped by family relationships. Not only do hereditary influences and parental example determine the disposition and course of the young, but the helpful or harmful intimacies of the home, and later perchance of married life, supply motives and ends in large part for the more mature, and thus fashion character and conduct through the whole span of human life.

While many have the sweetest memories of much that home and kindred have meant to them, there are relatively few who do not trace their deepest regrets and griefs to the unidealities—past or present—of family relations or conditions, or who do not feel that their greatest handicap of habit or impulse is a direct outcome of them. The skeleton in the home closet explains unnumbered heartaches, and one cannot overemphasize the need of having such a right apprehension of family relations as will enable us to profit by all that pertains to them of good, and escape from all that may pertain to them of ill. Hence the question of how this realm of the hearthstone may be cleansed and ennobled, is vitally significant to us all.

Like everything human, kinship bears the hall-mark of belief in both good and evil. It prompts the finest heroisms and the most selfish brutalities; it brings the sweetest joys and the most poignant griefs; it gives expression both to tender affection and to bitter hatred, so that the fireside may become the rendezvous either of angels or of devils, and like all else, its redemption can be effected only through the spiritualization of thought.

Christian Science enables one to see clearly that here as everywhere the physical must grow less and less dominant, the spiritual more and more controlling. Sensual impulse must give place to thoughtful consideration, animal instincts to unselfish attachment, personal absorption to individual recognition and respect, clannish fealty to fraternal affiliation, the claim of a possession that is devotedly kind today and cruelly domineering tomorrow, to that unexacting affection which would have nothing that its winsomeness has not won; and this transformation must go on until the sense of fleshly kinship has entirely yielded to the recognition of the family of God, the brotherhood which knows but the one infinite Father and Mother. Then spiritual realization and love will indeed be enthroned in every heart, and the spirit of that paradoxical requirement of the Master, "If any man come to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my disciple," will have been met.

Christian Science at once begins to effect this uplift of sense. It reveals the inevitability of the inharmonies and unmentionable wrongs recorded in the history of so many families. It discloses the unworthy and unsatisfying nature of all that mortal man hopes for in fostering the flesh and founding a home, and by purifying and expanding the affections it banishes the cause of every family sorrow and multiplies a thousandfold every family joy. In this ascension of thought there is no loss of the practical in the transcendental, no sacrifice of the spirit of true romance and chivalry. Every human relation is made more dear and happifying because it has become more divine. Christ Jesus inculcated the love of father and mother, brother and sister, and evinced in his own habits a spontaneous entrance into and sweet enjoyment of family relations; and yet how unequivocally he rebuked consent to the flesh as the basis of kinship and intimacy when he said, "Call no man your father upon the earth: for one is your Father, which is in heaven."

As revealed in Christian Science, the redemption of kinship is to be found in that perception of man in the image and likeness of God which brings escape from all thought of him as "of the earth, earthy," and in the cultivation of that pure attachment which has no taint of selfishness or sensuality. This divine ideal, loved and sincerely sought for in every human relation, will surely usher in the dawn of that consciousness and that home experience which is named heaven, and from all the borders of which sorrow and sighing have fled away.

JOHN B. WILLIS.

❖

Lectures in Suburbs of Boston

Under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., four lectures on Christian Science will be given by Bicknell Young, C.S.B., a member of the board of lectureship, as follows:—

Winthrop, Mass., in Elks Hall, Washington avenue (near Winthrop Beach station), Monday evening, Jan. 25, at eight o'clock.

Brookline, Mass., in Beacon Universalist Church, Harvard street (near Coolidge Corner), Tuesday evening, Jan. 26, at eight o'clock.

Roslindale and West Roxbury, Mass., in Highland Club Hall, West Roxbury (corner of Centre and Corey streets), Thursday evening, Jan. 28, at eight o'clock.

Milton, Mass., in Town Hall, Canton avenue (change cars at Milton Lower Mills for East Milton car; at Mattapan square for Brockton car, to Canton avenue), Friday evening, Jan. 29, at eight o'clock.

❖ ❖ ❖

Among the Churches

Current Notes

EUREKA, CAL.—There was a very good attendance yesterday [Nov. 29] at the first services held in the newly finished edifice of First Church of Christ, Scientist, at the corner of Eleventh and H streets. Dedicatory services will be held later. The new church occupies a lot 60 by 110 feet, and the outside dimensions are 50 by 90 feet. The seating capacity is about three hundred, with room available in the vestibule and gallery for about one hundred more.

The Humboldt Times.

BERKELEY, CAL.—With the opinion of Deputy District Attorney Burpee that there would be nothing illegal in renting the high school auditorium for religious meetings, it was voted to rent it to Second Church of Christ, Scientist, for Sunday morning and Wednesday evening services.

Berkeley Gazette.

Digitized by Google

HOPKINTON, IOWA.—The Christian Scientists now have their own place of worship. They have purchased from the J. Platt estate the residence and two and one half lots on the corner of Chestnut and Second streets just east of the Philipp hotel, the consideration being twenty-five hundred dollars. The location is an ideal one from every standpoint. For the present, two large rooms have been fitted up, and will be used for the services. The congregation expects eventually to renovate and remodel the entire building for the church and Sunday school, with a reading-room attached. The first service was held there last Sunday [Nov. 22].

The Hopkinton Leader.

KINGSTON, N. Y.—A congregation that nearly filled the church, met Sunday morning [Dec. 6] at eleven o'clock for the first service of First Church of Christ, Scientist, in the new edifice at 161 Fair street. For several years the congregation has held its Sunday services and Wednesday evening testimony meetings in the chapel, 38 Sterling street, but a change of location was found to be desirable. A lot was purchased by the organization, and ground was broken for the church building in April, 1914. The church occupies a space twenty-four by fifty feet, and as to location and construction presents every possibility for real service and usefulness.

Kingston Freeman.

CONCORD, MASS.—The handsome new edifice of First Church of Christ, Scientist, was opened for services on Sunday, Dec. 27. The building is in the colonial style of architecture and occupies a prominent position on the central square of the town. It has a seating capacity of between three and four hundred. The church was organized in 1908, and has been holding services in Insurance Hall.—*Correspondence.*

❖ ❖ ❖

The Lectures

Boston, Mass.

Clarence W. Chadwick delivered a lecture on Christian Science Friday evening [Jan. 1] in The Mother Church, The First Church of Christ, Scientist, Boston, Mass. The first reader, H. Cornell Wilson, introduced Mr. Chadwick and said:—

Among those who early came into possession of Mrs. Eddy's first published work on Christian Science was Amos Bronson Alcott, one of that renowned coterie of Massachusetts men who constituted the Concord School of Philosophy. In a letter to Mrs. Eddy expressing his appreciation of her book, "Science and Health with Key to the Scriptures," this sage thinker wrote: "The profound truths which you announce, sustained by facts of the immortal life, give to your work the seal of inspiration,—reaffirm in modern phrase the Christian revelations. In times like these, so sunk in sensualism, I hail with joy your voice, speaking an assured word for God and immortality, and my joy is heightened that these words are of woman's divinings."

This gracious recognition of the work of the Discoverer and Founder of Christian Science, vouchsafed in the very early stages of her leadership, has been amply justified in the little more than a generation that has intervened. So rapidly has human thought been moving that even now the inspiration of Mrs. Eddy's spiritual service to mankind is felt and acknowledged the world over. There is an ever increasing multitude that is giving testimony in favor of Christian Science, testimony which clearly is all to the effect that sin and sickness of every nature has yielded completely to the application of this Science. Nor does the world generally yet know the half that Christian Science is doing to annihilate sin and prevent disease. Slight wonder, then, at the manifest interest in Christian Science which is evidenced by the large audience here present tonight.

The Christian Science Monitor.

❖

Cape Town, Cape Colony, South Africa

A lecture on Christian Science was given in City Hall by Clarence C. Eaton. About seven hundred people were present, and a very attentive hearing was given. The lecturer was introduced by Mrs. Jenny W. Forsyth, who said in part:—

Christian Science is not a new name in Cape Town. Its good effects in the lives of those who are trying to follow its teachings are being recognized and acknowledged on every side,—pain, suffering, and sorrow giving place to health, joy, and peace. Not only its efficacy in the healing of physical pain and suffering, but its effect in the betterment of human conditions, is being experienced by all who seek help through its teachings. It makes better men and women, better Christians, and inspires a greater love for the Bible and a higher reverence for the teachings of Jesus.

In these times of stress it is the message of "on earth peace, good will toward men," ushered in by Jesus the Christ. Through its silent ministrations we are learning more about the fatherhood of God and the brotherhood of man, and striving for that Mind which was in Christ Jesus, and which alone can bring that peace which passeth human understanding.—*Correspondence.*

❖

Oak Park, Ill.

The words of Oliver Marble Gale, in introducing Bliss Knapp, who lectured in the Warrington Opera House on Christian Science, were in part as follows:—

When we look about us and see certain people, whom we know as Christian Scientists, meeting the circumstances and emergencies of our common existence with a composed and serene happiness, a complete confidence and freedom from fear which very few, if any, of us are able to attain through the philosophies which we have been taught; when we see them day by day going up and down among us, reviving health in the sick, hope in the desperate, and right living in those who have been too heavily tempted,—see them surely solving the problems of life which baffle and defeat us,—it is quite natural that we should want to know how they do it. We want to know what they have that we have not; what they think that we do not seem to be able to think for ourselves. With some of us the desire to know about Christian Science is merely a wholesome, critical curiosity. In others it is a deeper and more vital interest. And there are some of us who want to know about it with an eager, anxious hunger which nothing else has satisfied,—the hunger, often, of a last hope.

Christian Scientists are just as eager to have us know as we are to know. They want us to share with them their blessings and their benefits, and they are ready to tell us when we are ready to listen.—*Correspondence.*

❖

Davenport, Iowa

At the lecture on Christian Science by George Shaw Cook, the introductory remarks by Maj. L. P. Davison, United States Army, retired, on active duty in charge of the Davenport recruiting district, were in part as follows:—

One of the most insistent requirements of modern thought is the demand for proof. Today practically everything we

Digitized by Google

purchase or otherwise acquire is taken on approval. This attitude is to be encouraged, because it is essentially safe, sane, and scientific; indeed, it is distinctly improving, since it infers receptivity when proof is properly made.

Christian Science meets this demand just as it meets every other human need, squarely and fully. In unnumbered Christian Science homes the Scriptures are read, interpreted, and applied in its light with consequent social, physical, moral, and economic benefits. Christian Science churches in practically every habitable part of the globe are preaching this new-old gospel of "on earth peace" each Sunday. Every Wednesday evening in each of these churches men and women are rising to testify that today as of old the sick are healed and the sorrowing are comforted. The Master said, "By their fruits ye shall know them."—*Correspondence.*

Boulder, Col.

William R. Rathvon lectured on Christian Science before a large audience at the Curran Opera House. He was introduced by F. C. Moys, who spoke in part as follows:—

A few short years ago a noble woman discovered what may be termed a lost art. Biblical history of the earlier Christian era is full of instances of physical ailments being cured through Christ and the apostles, and through the discovery and teachings of Mrs. Eddy a skeptical world has been shown that the healings of those earlier days may be repeated in our time. Those of us who do not understand the methods of Christian Science healing are forced to acknowledge its mysterious power when we see personal friends raised from beds of sickness and restored to health and happiness through this means. We have assembled here this afternoon to learn something more of this new-old religion.—*Boulder Herald.*

Duluth, Minn.

At the first of two lectures on Christian Science, Bicknell Young was introduced by Edward C. Kennedy, first reader, who said in part:—

Half a century ago Mrs. Eddy discovered the fact that the healing power of divine Truth which the Saviour employed when on earth, and which was practised by his followers for three centuries after his ascension for the cure of sickness and disease, is as present, as near at hand, and as efficacious to heal in this age as it was nineteen centuries ago. Through years of constant study and self-abnegation she also discovered the method or system by which this healing by divine power was accomplished, and named her discovery Christian Science.

Christian Science has no quarrel with any other religious belief or doctrine, nor does it proselyte among other churches or denominations to add to its numbers. Its phenomenal growth is the natural result of its work in the cause of humanity. It wages war only upon sin, sickness, disease, and death, and in its forward march against these enemies of mankind it blazes the way and illumines the path for all to follow that would give heed to the voice of him who said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

The introductory remarks of John Coventry at the second lecture were in part as follows:—

Christian Science is a reinstatement of "primitive Christianity and its lost element of healing" (Manual, p. 17). It is recorded in the Scriptures that Jesus said to the twelve disciples: "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick." To the seventy others whom he sent forth he gave the same dual instructions to preach the gospel and heal the sick, and declared, "He that believeth on me, the works that I do shall he do also." It is well authenticated by historians that the early Christians practised spiritual healing, even to the raising of the dead, for three hundred years after the ascension, when the power was lost until it was discovered by our Leader, Mrs. Eddy, in the year 1866.—*Correspondence.*

Lectures to be Delivered

Abilene, Kan.—Virgil O. Strickler, Seelye Theater, 8 p.m., Jan. 29.

Testimonies of Healing

Several years ago, in despair, I turned to Christian Science for help for my baby boy, who had been ill from the time he was a month old. He had been under the care of two doctors and in a hospital for two months. The last doctor frankly told me that he thought my baby had "lived its life." I felt that this could not possibly be, if God was good, and upon hearing of a children's hospital where only babies under the age of twelve months were taken in, I hurriedly rushed there with him one day, when he seemed to be rapidly getting worse. They gave me little hope, but promised to do their best, though they advised me to get him christened at once. They kept him for two months, but he grew worse, until his appearance became dreadful, as he was emaciated to the last degree. They then sent for me and told me they could do nothing more; that all I could do was to take him and keep him out in the air as much as possible. At this time he weighed no more than many babies at birth, although he was eight months old. All signs of intelligence had quite left him. He just lay in his cot and moaned incessantly.

I then thought of the little I had heard of Christian Science, and eagerly went to a lady living in the neighborhood whom I had heard spoken of in connection with Christian Science. She very kindly told me somewhat of the meaning of this teaching, and I asked her to direct me to a practitioner. Eventually I went with her to First Church of Christ, Scientist, London, and met a lady who consented to take the case. I arranged a meeting at the practitioner's house, whither I carried my baby. The first treatment was given there, and upon reaching home again I praised God for His goodness, for into my baby's face had come the first sign of restored intelligence. He looked into my face and smiled. From that time the healing work went on. I threw away the material remedies and just left him to God. When he was twelve months old he was a bonny baby and quite average in size; at fifteen months he was much above the average. Very soon after the first treatment the little face lost the prematurely aged look, and the moaning ceased, sleep came, and peace seemed to rest upon him. He is today as healthy and happy a child of nearly six as it would be possible to meet with, and we have depended wholly, ever since his healing, on the power of Truth as taught in Christian Science. I am more than thankful to God for this healing truth.

MINNIE C. APLIN, Mitcham, England.

I am not a Christian Scientist, but write to confirm the fact mentioned in the above testimony, and gratefully testify to the many blessings realized in our home since my wife took up the study of Christian Science.

C. CLARKE APLIN, Mitcham, England.

❖

While confined in a hospital for the insane as a direct result of fifteen years of liquor drinking and wrong thinking, with its consequent lapses into dishonesty and misery, culminating in a final attempt to end it all by drowning, I received a note from a Christian Scientist asking me to read daily the fifty-second and fifty-fifth chapters of Isaiah. Knowing her faith, and remembering that I had been successfully treated years before by a Christian Science practitioner, I tried to grasp the spiritual meaning of those comforting words; but after being discharged from the hospital (disgraced in the sight of God and man, as I then saw it), alone in a great city where there seemed to be nothing but liquor, I took to drinking again, and on going on the road, fell in with a drinking crowd. It was not until a devoted mother had sent me a copy of Science and Health along with a Bible of my childhood days that I again threw off the yoke. Just by reading Mrs. Eddy's book, all desire for liquor, tobacco, and evil thoughts, in fact inharmony of all kinds, departed, and a realization came to me of the prophet's meaning when he said, "Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord, and he will have mercy upon him; and to our God, for he will abundantly pardon." This healing took place two years ago.

I have "returned unto the Lord," with the glorious knowledge that evil has no power; and my years of bondage to dishonesty, drunkenness, and other false gods, are over. "The kingdom of God is not meat and drink; but righteousness, and peace, and joy in the Holy Ghost." Through the application of Christian Science I have made demonstrations over physical ailments, and have overcome a hasty temper and much selfishness. All this proves to me that through the understanding of this teaching, all good is possible to man. I am most thankful to God, and grateful to Mrs. Eddy for showing me the way.

ELDRIDGE G. NORTON, New Orleans, La.

❖

When I first came to Christian Science, the physical healings seemed very wonderful indeed; today, after nearly ten years of practical application of the truth, they appear to be natural results of the action of divine Principle, and all good seems possible. Of the healings which I have had, the demonstration over a burn in February, 1913, especially impressed me, because it showed the infinite possibilities attending a greater understanding of the power of Mind over all physical conditions.

About noon one day I went into the kitchen to light the oven of the gas-stove. It seems that the gas had been lighted some time before, but had gone out. I struck a match, and on opening the oven door, my face being directly in front of it, with a loud explosion a ball of fire struck me squarely like a blow, especially, it seemed, in the eyes. Pieces of the stove flew in all directions, and in the next room pictures fell. There was another lesser explosion, and I jumped to my feet declaring that Truth was all and absolute. I got Science and Health and read it, and felt no sensation at all for some time. Suddenly realizing that in less than an hour and a half I was to serve in the Christian Science reading-room from one to nine o'clock, it occurred to me that I ought to have the help of a practitioner.

At that moment, in removing my reliance from Principle to person, fear touched me, and I began to suffer terribly. Sight left me, and my eyes began to close. I felt that my hands, arms, face, and neck were burned. The agony seemed almost unbearable, and I began to feel faint. I tried to call, but could not speak for a few minutes; then the thought came to me that this was the hour in which to prove the power of Truth. I made a great effort, reached the telephone, and called a practitioner. We worked together, and in fifteen minutes I was relieved of suffering. What came to me most clearly then, was the realization that pain is not physical but mental, and as it gradually left me it seemed to be fading out of my thought, not my body. Help came to me from the story of the three Hebrew captives who walked through the fiery furnace unharmed. While I was suffering, I was called to the telephone to talk to a patient. She noticed nothing unusual in me, and I was able to give her a little help.

I went at the appointed hour to fill my engagement, perfectly free from pain. During that afternoon and evening,

Digitized by Google

though I talked with many people who knew me, no one noticed that my eyebrows and eyelashes were gone and that my hair had been burned. I had a great sense of freedom and happiness, of thanksgiving even, for the experience showed me the naturalness of the spiritual healing, and that one can retain peace of mind and health in spite of accident, also in spite of false belief and opposition. My eyebrows and eyelashes grew in a remarkably short time, and no mark remained on my face to tell of the accident.

The condition of my eyes and my general health is excellent. During the last year, through an understanding of the spiritual meaning of health, I have had practically nothing to meet physically. To say that I am grateful for Christian Science is expressing in but small measure what I feel for its continuous blessings.—Beatrice Slote, Chicago, Ill.

❖

I wish to testify to my wonderful healing through Christian Science about a year and a half ago. My eyesight was so impaired by physical and mental overexertion that our family physician and two specialists, besides a trained nurse, felt convinced I would never have more than a working vision, meaning that I would be able to avoid bumping into large objects. Through a friend I was persuaded to try Christian Science, and I am most thankful to say that my eyesight was completely restored, and I can read and sew without glasses. I was also healed of bowel trouble, from which I had always suffered. I have taken no medicine at all since my healing, and am in perfect health. My husband and two little boys also depend entirely upon Christian Science, and for the peace and happiness this teaching brings, in addition to the physical benefits, I am truly grateful.

Mrs. C. C. Burger, Asbury Park, N. J.

❖

I did not take up the study of Christian Science for physical healing, as I had been unusually well all my life, with the exception of severe colds, from which I suffered two or three times a year. These attacks were often accompanied with neuralgia, and they lasted from two to four weeks. During my study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, however, I was seized with poisoning in my right arm, and a few months later with erysipelas, both of which kept me ill for many weeks, although I was attended twice a day by a well-known physician.

About the time the doctor recommended sending me to the hospital, against which I rebelled, a sudden change for the better began. I did not then attribute the change to my reading of Science and Health, but I now fully believe the truth was working, though I was filled with antagonism. Sometimes I would read page after page of the book before I would come upon a statement which aroused my antagonism. Then I would throw the book aside with the determination never to read any more of it; but somehow I would be impelled to take it up again. Each time my prejudice grew less, until finally the light of Truth began to dawn, and at length became full-orbed. Since then the Bible and Science and Health have been my daily companions. I often wonder how I could have been so blind to the truth of Mrs. Eddy's interpretation of the Scriptures, for it all seems so plain now; and yet I feel that I am only a beginner, as new thoughts continually present themselves, enabling me to catch brighter gleams of what is yet in store for all truth-seekers.

Since coming into a realization of the Christ-cure, I have almost entirely overcome the tendency to colds, and a simple denial and affirmation is sufficient to meet every attack, no matter how severe, while all fear of the so-called causes which produce them is gone. The old fear of blood-poison, however, developed a few months ago, assuming symptoms most alarming to the physical senses; but I successfully overcame this condition by the application of Christian Science, and later I healed myself of a second attack of erysipelas. I was also healed of an injured ankle in one treatment.

A few months ago I had a bad fall, striking my side on the edge of a lounge with such force as to take away my breath. I finally managed to get on my feet while repeating "the scientific statement of being" (Science and Health, p. 468). The pain was excruciating, and I was seized with fear of an internal injury and hemorrhage, but I had Christian Science treatment, and in less than an hour was perfectly healed. Upon looking that night for the bruise which I thought must result, I found none, and there was no soreness. In my gratitude for the wonderful demonstration, I opened the Bible, and my eyes fell upon a passage in Isaiah about "bruises" and "sores." I then opened Science and Health and knew that I had done wrong in trying to bring back an evil belief in my consciousness, even though my object was to show my family, who were away when the accident happened, some proofs of the demonstration I had made. I am deeply thankful to God, and grateful to Mrs. Eddy for her book "Science and Health with Key to the Scriptures."

When I look back over the past, I often wonder how I ever managed to live without Christian Science. When the law of divine Love is applied understandingly, it cannot fail to produce results. Constant recourse to God and His law not only meets our daily need, but the attendant spiritual uplift is of inestimable value.

Clara Virginia Leonard, New York, N. Y.

❖

It is with thanksgiving and rejoicing that I give this testimony to the many blessings received through Christian Science. It is now eight years since I put this teaching to a practical test and proved its efficacy in the overcoming of bad habits, including the obnoxious habit of chewing snuff, which is generally considered even worse than using tobacco. This habit had ruined me physically, for I had been a slave to it since I was ten years old. Other means for overcoming it having failed, I turned to Christian Science, and there found help and health, for I was freed from this bondage in three treatments. Physical healing followed fast, and with this came my gratitude and joy for knowing that I was free indeed. Then fear of all kinds disappeared through reading Science and Health and our other Christian Science literature. I would say that the years I have studied Christian Science have been the best of my life.

I have learned that it is always worth while to try to overcome, even though the condition may often seem most discouraging. With thousands of others I can truly say that the spiritual uplift is worth much more than anything else in Christian Science, for it has enabled me in a greater measure to see my fellow man as God's child and love him as such. While there are yet hard struggles sometimes, still I know that by adhering to the teachings of the Bible and Science and Health, I shall some day reach the goal, which is man's at-one-ment with his Maker.

I am thankful to God, also grateful to the many friends who have helped me on the way, and my prayer and desire is that I may demonstrate the truth of Christian Science by my living.—Arvid C. Skoog, Willmar, Minn.

The greatest blessing that has come into my life, and that for which I am most grateful, is Christian Science. As long as I can remember I have been a searcher for the truth. I was not satisfied with the religious teaching of the church in which

Digitized by Google

I was brought up, and when opportunity came, I attended one church after another to find what each might have to offer; but it seemed to me that there was something wanting. Thus I was in the wilderness of doubt for a number of years, and then the truth for which I had been seeking came to me in a way that I had never thought of.

Seven years ago, while in the city of St. Paul, I was taken very ill with what was pronounced inflammatory rheumatism. Kind friends took me into their home and did all they could for me, as did also the physician in attendance; but the suffering was intense, and it seemed that nothing could be done for me. At the end of six weeks I was taken about one hundred miles to my home. Shortly after, my condition grew most alarming, as my heart became affected, and little or no hope was held out that I could ever recover.

It was at this time that Christian Science was first mentioned to me by a dear friend who had come to help my relatives in caring for me. At first I did not wish to hear of it, as I believed that the time had come for me to die and that I should be satisfied with what I had been told was the will of God. But somehow I could not dispel the thought of being healed in the way I had read of in the Bible, and after thinking about it almost constantly, praying for divine guidance, and reading the Bible whenever I was able to do so, I decided to have Christian Science treatment, and asked that a practitioner be written to. It was a couple of days before she was able to come to see me, and I know now that my healing came in that first treatment, as a great change took place, and I felt a peace and rest that I had never known before. I had absent treatment for some weeks, however, as I was very fearful and knew nothing whatever about Christian Science, and also had some opposition to overcome. The practitioner came to see me only twice in this time, but she sent me literature and wrote letters, besides loaning me a copy of Science and Health. At first I was not able to read the book for myself, except a few sentences at a time, and my sister would read to me. I could understand only very little of it, but I knew this truth would make me free.

There are no words to express the joy and gratitude which I experienced when I was again able to be about and was free from pain. Yet I knew that it was not the physical healing alone that was the cause for this unspeakable joy, but rather the spiritual awakening, for I realized that with my returning health I had gained, at least in a measure, that truth for which I had long sought. Later, when I came to this city and was invited to attend the Christian Science church, I felt at once that I should never again have to look for a church home, and it was not long before I joined the little band here. Since that time I have had many problems to work out, and sometimes the way has seemed dark, but there has always been the firm conviction that through Truth all things will be solved in the best way.

A year ago I had the privilege of class instruction, and I have also been able to help others through the understanding I have gained. I have one desire before me constantly,—that I may so live that my life shall express the gratitude I feel for the many blessings received, and that I may never yield to discouragement, but know that "all things work together for good to them that love God."

I know that all I have of love, health, and happiness I owe to Christian Science. I am thankful to God for His love and guidance, and grateful to Mrs. Eddy for the rich legacy she has left us in the Christian Science text-book, "Science and Health with Key to the Scriptures," and her other writings. I am also grateful every day for the good that comes to me and mine.—M. Sophia Skoog, Willmar, Minn.

In February, 1913, a baby was born to us. I was awakened from a sound sleep at two o'clock, and telephoned to a Christian Science practitioner for help, but I said I had no fear. After that, fear crept in and I suffered some pain. My husband therefore telephoned the practitioner, and very soon all pain was gone. The baby was born shortly after five, and the midwife reached the house only thirty minutes before the birth. I was up the third day, and doing my work the fifth day. This seemed a miracle to us, as we had had six children before and on each occasion I had suffered untold agony at the birth.

When we first took up the study of Science and Health it seemed as though we had lost faith in everything. We had always tried to do right, but we were very discouraged through the loss of a little boy, and we had previously lost two other children. Before coming to Christian Science the children and I were church-members, but I found we had not the right concept of God; in fact, I doubted whether there was a God. If there was, I thought He surely must be angry with me and mine, but now I know that God is Love and we have nothing to fear. I would not take a king's ransom for the knowledge I have obtained through the study of the Bible and Science and Health.

At the present time I am in perfect health, and the baby is a big, robust child of one year and nine months. He has never taken medicine or had anything but Christian Science treatment. I was healed of organic heart trouble nearly three years ago, and of asthma in a very severe form more than a year ago. Indeed, I have had nothing but Christian Science treatment in the past three years.

Mrs. H. M. Truman, Los Angeles, Cal.

[Translated from the German]

I gratefully acknowledge the many benefits which I have received through Christian Science. Four years ago I spent the last months of my commercial apprenticeship in a large concern in this locality, for the purpose of acquiring a practical knowledge of the technical part of the business. I was assigned to a place in the foundry, where all the workmen predicted that I would get a fever as an effect of the fumes of melting metals. I told my mother of these prognostications, and she advised me to protect myself against the erroneous beliefs involved by strictly maintaining a Christianly scientific attitude of thought. To the great astonishment of all my fellow workers, six weeks elapsed without the dreaded condition manifesting itself. One day, however, while melting fourteen skillets of metal I must have allowed thoughts of fear to enter my consciousness, for, briefly, I dragged myself home in a half-conscious condition with barely enough strength left to tumble into bed, where my mother, who was away just then, found me later, totally unconscious. She remained in my room and read from the text-book, "Science and Health with Key to the Scriptures," for quite a while, holding to the thought that nothing which our duty requires us to do, can harm us. (See Science and Health, p. 385.) My mother told me later that my father, upon returning home, was terribly frightened when he saw me. All I know is that I fell asleep late that night and went to work very early the next morning, feeling entirely well, and that I never experienced any after effect from the condition above described.

One year later I was taken ill with a severe attack of appendicitis, accompanied by high fever and ague, and although much fear and anxiety was expressed by those surrounding us, my mother and I remained firm in our stand not to call in a physician but to ask for treatment in Chris-

Digitized by Google

tian Science. The result was complete healing within a few days. At Christmas, 1911, during my stay at Montreux (Switzerland), where I was acquiring a knowledge of the French language, a severe pulmonary affection set in, and the physician for whom I was obliged to send in order to get a certificate to explain my absence from business, stated the case to be pleurisy, and that I must be given the greatest of care. Being unable to overcome the illness myself, I wrote, while in bed, to my mother in Frankfort-on-the-Main. She came immediately, after having asked the practitioner who had often and lovingly assisted us on previous occasions, to take up treatment for me. I was completely restored within a very short time, without any medical help or physician in attendance, but solely through the power of God, who, as the psalmist says and as Christian Science explains, is "a very present help in trouble."

ALFRED G. HOFFMANN, Frankfort-on-the-Main, Germany.

❖

I am very grateful for Christian Science. Recently I have learned that in sorrow as well as in sickness God is an ever-present help. I have had demonstrations over poison-ivy, seasickness, coughs, colds, throat trouble, and other ailments, but I am more thankful that in Christian Science when we have health, we learn how to keep it. Through the spiritual insight into the Bible which we gain by the study of Mrs. Eddy's writings, we are enabled to see God's goodness manifested in our daily life, and for this I am most grateful.

SUSETTE KUHN, San Diego, Cal.

❖

I am thankful to God for the many blessings I have received through Christian Science. From my youth I was a sufferer from an organic disease and unable to do any hard work. The physician said that I would never get strong.

I lost my husband and was left in a hopeless condition. I had to work for my living, and yet could not keep a position for any length of time. I became interested in Christian Science through friends who had been healed, and who advised me to try Christian Science, telling me that I would find relief in a short time. With this hope I therefore went to a practitioner. I meant to give up my position, for I had charge of a house of ten rooms, and had to do the work all alone. I told the practitioner I would have to do this, as I could not work so hard; but she advised me to keep my place, saying that I could do whatever it was right to do, for God would help me. I also had to take care of a sick person; but while I was under treatment I felt that I was growing stronger, and so I kept my place. I went twice a week for treatment and attended the church services. I devoted myself to the study of the Bible and the Christian Science textbook, "Science and Health with Key to the Scriptures," and I received such strength that I was able to do all the housework, and for nine months waited on the invalid, who was under medical treatment, and that without getting tired.

I know that without divine help neither I nor any one else could have done the work which I had to do. This was six years ago, and I am still at the same place. I have been healed physically and mentally, also helped financially. The healing was very slow, but thereby I gained a better understanding of God. I am now strong and well.

All I am and have I owe to Christian Science. I want to add that when I first got Science and Health I was not able to read it or understand it, for I did not know the English language, but today I am thankful for the understanding which enables me to write my testimony in plain words.

MRS. A. MAHLKE, Milwaukee, Wis.

From Our Exchanges

[Zion's Herald]

It is a common experience to hear men complain that they "cannot see things" as the Christian views them. Of course they do not, for they live too low to glimpse the verities of a spiritualizing faith. The curvature of the earth is so considerable that those who hug the surface of things cannot make out the peaks that loom only for the watcher in the crosstrees. Men see then as much as they care to see. Christmas island—which may mean any good and beauteous thing—is there all the while in absolute fact, but it exists relatively only for the man who climbs to gain the vision.

Life is one vast potential, and it is ours, by the grace of God, to translate its possibilities into a series of actualized achievements, rising from plane to plane, going from strength to strength, and passing from glory to glory. Great views are to be had from up aloft.

[American Lutheran Survey]

The most read book today is that of which one of its publishers spoke when he said, "Ye are our epistle . . . known and read of all men." Paul's life business was to make Christians,—they were the epistles which emanated from his activity,—and he had insight enough to know, even though in his day the book of Christian life had been on the world's market for only a brief space of time, that it was being known and read by all the world. Whatever may be the world's motive for scrutinizing the Christian's individual Christianity, the fact is that nothing is subjected to more study and to more merciless examination than the heart-life and the outward conduct of those who profess faith in Jesus. Remorseless as has been the analysis to which the claims of Christian doctrine have been made to submit, it is as nothing to the crucible test which the results of faith in these doctrines are daily and hourly undergoing.

[New-Church Messenger]

Under the clouds of the letter, when John beheld the "new Jerusalem" of the Lord's second coming, and beheld the kings of the earth bringing their glory and honor into it, he may have thought of the triumphal entry of David into Jerusalem of old, bringing the spoils of war, and hanging up the swords and shields of the vanquished in the temple to give to God the glory of it all. But not so is its meaning revealed by the Lord in his second coming; for the victories of real Christians are the conquests of his love in their own hearts and lives first, and thence in the hearts and lives of the nations. . . . In this light of real Christianity the nations will learn to fulfil the prophecy of the kingdom of "The Prince of Peace," by beating "their swords into plowshares, and their spears into pruning-hooks." Then in the progress of a real Christian civilization John's vision of the "new Jerusalem" will be realized. "The nations of them which are saved shall walk in the light of it. . . . And they shall bring the glory and honor of the nations into it."

[The Watchman-Examiner]

There is no doubt whatever that the gospel was intended to make men boundlessly cheerful. Have we wandered too far from childhood days to be really merry now and then? Has the hearty and somewhat uproarious laugh dwindled to a formal smile, and the smile to a mere twitching of the corners of the mouth? A woman who looks too much on the gloomy side of things, joined in the laughter of a company of happy people at a social gathering not long ago. When they became quiet again she said, with one big tear on each

Digitized by Google

cheek: "Oh, I have not laughed like that for years. It makes me tired all over." She was tired, but she was happy; and we thought as we saw her radiant face: "If you would only laugh like that several times a day, you would look ten years younger soon, and you would feel ten years younger, too. Yes, and the children would go to school feeling happier, and your husband would go down to the store feeling happier, and everybody would feel happier. Why don't you do it?" The Christmas spirit, being brimful of joy, banishes crossness, and crossness is the meanest vice that vexes the home circle.

[*The Homiletic Review*]

Just as soon as we begin to analyze patriotism as ordinarily conceived, we find that it is divisive, provincial, unsympathetic, barbarous, and unchristian. Jesus Christ has said the last word upon this subject in his words and in his life. He revealed a God who is not tribal, provincial, and prejudiced, but a God who is a universal Father,—a God of all nations. He revealed bonds of human relationship that are not tribal, provincial, and prejudiced, but bonds of universal brotherhood. To Jesus Christ there is no such thing as nationality, with its narrow limitations of love or hate in what is called "patriotism." To the man or woman who has really caught the essential inspiration of Christ's attitude to mankind, there can be no patriotism that will impel to the destruction of another nation. There should then be substituted for this tribal and provincial feeling that now throbs in the heart of warring mankind, patriotism for humanity,—the patriotism that is not divisive, but all-inclusive; the patriotism whose loves and hates will not expend themselves in behalf of one nation against another, but in behalf of the whole human race. This is the transvaluation of patriotism. This is the revolution to be wrought in human nature before wars will cease. Here is the opportunity for the spiritual leaders of men during these days of sensitized emotions and confused graspings toward new and stronger principles upon which to ground international life.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

There was one of old of whom the Saviour said, "He was a burning and a shining light: and ye were willing for a season to rejoice in his light." Would that that could always be true of us! There is a peculiar radiance that streams from those whose lives are "hid with Christ in God;" there is no mistaking it. The man or woman who lives habitually near to God, consciously or unconsciously manifests the fact by the unearthly brightness, the mystic translucence, "the light that never was, on sea or land," by which he or she is always attended. And, on the contrary, there are very wise people, very great and strong, of such amazing mental ability and stores of learning as to strike their contemporaries with awe, who have not a glimmer of it. Round the good there clings, as it were a golden mist, a transfiguring splendor, which every one can perceive, though none can analyze it. Is it not divine reality, the flame of eternal love forcing its way through the clouds and shadows of mortality?

[*The Christian Register*]

The practice of courtesy will always prove its grace. It is not decorative and superficial. It is not a mere ornament of life. It is for substantial good. It is of an efficacy truly marvelous. It is a growth of the beauty of the soul; and when we see its lines tempering the stones of life with grace as of flowers, merging itself into the mass of experience, imparting to the whole a nameless charm, we feel that a might above might has been shown us,—the might of the spirit.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," by William D. McCrackan, M.A., originally printed by the National Alumni Association of New York, and sold by the Publishing Society, has now been translated into the German language, by permission, and is printed in the regular pamphlet form.

"Christian Science: God's Lovingkindness Proved to Men," a lecture by Rev. William P. McKenzie, already published in the German language in pamphlet form, is now printed in English, and is on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Further development of Alaska's system of roads and trails cannot be expected unless Congress increases the allotment of funds, declares Col. William P. Richardson, president of the Alaskan board of road commissioners, in his annual report to the war department. He submitted a plan for the extension of the roads covering a period of three years, with an estimate of seven hundred and fifty thousand dollars for the first year. The funds allotted, he says, are now entirely consumed in repairing and maintaining the existing roads. This, he says, will virtually become a fixed condition from year to year, with the amount of mileage now required to be maintained, and although additional new projects, all more or less meritorious, are being presented to the board every year, with petitions for aid, it is impossible for the board to respond, except to a very limited degree.

Commissioned by Gen. Venustiano Carranza, first chief of the Constitutionalists in Mexico, five women and two men, teachers in schools in Mexico City, are in Boston to study educational institutions preparatory to an upbuilding of Mexico through educational channels, should Carranza come into permanent power. The teachers are to remain from one to three years, learning the English language and thoroughly acquainting themselves with the educational ideals, systems, and methods of the city. At the end of that time they are expected to be in a position to act as advisers to the Mexican government in educational matters and take the lead in educational activities.

Radical reform in the structure and application of law is the aim of the Association of the Bar of the city of New York. This is expressed in the report of the law reform committee of that body just issued. The needed reforms, according to the committee, are almost wholly in the direction of criminal law, and while they apply directly to the laws of New York, from the wide interest taken in them and from the extensive inquiry prosecuted by the committee, any action taken by the New York association is considered likely to affect to an important degree the status of law throughout the land. The first recommendation is in the direction of curtailing to some extent the rights enjoyed by an accused person on trial in any criminal action.

A full account of Canada's 1914 grain supply has been published by the government, and from Montreal harbor comes the report that during the last season the grain output from that point has been the largest in the history of the country. Over 75,000,000 bushels have gone through Montreal for exportation, and over 10,000,000 for local consumption. The total yield of wheat alone in Canada was 231,717,000 bushels. The exportation of wheat and flour has totaled 187,500,000 bushels, the greatest wheat supply Canada has ever been able to offer the outside world.

Signor Cavasola of Italy has completed arrangements with the Argentine Republic for the purchase by the Italian government of one hundred and twenty shiploads of wheat. An agent will sail from Genoa immediately to carry out this contract between the governments of Italy and Buenos Aires. A large proportion of the necessary transport steamers have been chartered and transhipments will be begun without delay. It is thought that this will assure Italy against a bread famine until next year's harvests. The government will sell the wheat to the millers without any profit, and the price of bread will be controlled accordingly.

Advices received from New South Wales by the trade commission sent by that government to the United States contained the following: "The government of Australia recently issued a royal commission to Justice Street of the New South Wales Supreme Court to inquire into the operation in Australia of the American beef trust. The commissioner has reported that there is no evidence of anything in the nature of a combination or concerted action on the part of these companies in the commonwealth."

On New Year's eve Secretary Lane of the department of the interior signed the regulations by which the coal lands in Alaska, outside of the Bering river and Matanuska fields, are opened in ten-acre tracts to the people of Alaska. The regulations are extremely simple, calling for nothing except the staking of the ground and application to the local receiver for the use of it, which is to be granted for two years. The government charges no royalty and makes no other charge.

The financial statement which was read in the Italian Chamber recently by Signor Carcano, minister of the treasury, showed that the balance-sheet to the end of June last would have revealed a deficit of one hundred and sixty-four million lire. This was, however, more than covered by loans and other financial operations, leaving a surplus of about nineteen million lire. The estimates for the current financial year show that a big deficit is anticipated.

The effect of the war on England's foreign trade is clearly shown in the yearly returns of the board of trade. Exports in 1914 decreased more than four hundred and seventy-five million dollars, as compared with the preceding year. Imports decreased more than three hundred and fifty-five million dollars.

Recent sales by the government, totaling one hundred and twenty-six million feet of sawtimber in the Olympic national forest in western Washington, mark the opening of this hitherto inaccessible storehouse of timber, estimated to contain a stand of thirty-three billion board feet.

It is estimated that one hundred million feet of good timber is at the bottom of the St. Croix river. The work of raising it has been started by the St. Croix Boom Company of Stillwater, Minn. Already eight hundred thousand feet of lumber, made from logs raised last summer, has been shipped by the company.

Three bills, one to appropriate two million dollars for state highways, another to increase the power of the public service commission, and a third to establish a land bank for rural credits, are included in an extensive report that the special western Massachusetts transportation commission has filed with the Legislature.

The total output of the Baldwin Locomotive Works in 1914 was 800 locomotives, compared with 2,025 in 1913. Besides this heavy falling off in numbers, there was a material curtailment in size of equipment ordered so that the production was less than one third that of 1913 in weight and value.

The Panama-California Exposition, San Diego's twelve months' celebration of the completion of the Panama canal, was opened at midnight, Dec. 31, 1914, by President Wilson in Washington, by pressing an electric button which turned on the lights in the buildings and grounds.

Last year's apple crop was the largest ever produced in the United States. Estimates by the department of agriculture place the 1914 yield at two hundred and fifty-nine million bushels, or one hundred and fourteen million more than was produced last year.

The United States forest service is cooperating with fifty-four railroads, mining companies, pole companies, and cities in making tests of wooden ties, timbers, poles, piling, and paving blocks which have been given preservative treatments.

Indiana mines produced 16,685,178 short tons of coal in 1914 and gave employment to 22,113 miners. Indiana miners earned $15,067,984.67 in the year. The production reported for 1914 represented a decrease of 611,387 tons, in comparison with the production in 1913.

Secretary Lane of the department of the interior has decided that it would be inexpedient and an unwise policy to annul or modify the rule by which Indian leases of oil lands in Oklahoma are restricted to forty-eight hundred acres.

News print paper has been made by the United States forest service laboratory from twenty-four different woods, and a number compare favorably with standard spruce pulp paper.

The Chilean engineer, Francisco del Campo, reports that the petroleum deposits in the Chilean Patagonia region and in the Magallanes territory are undoubtedly of a promising nature.

Lodgepole pine, one of the principal trees of the Rocky mountains, makes good strong wrapping paper and pulp board.

Forest fires in British Columbia covered more than three hundred thousand acres during the past year.

On June 30 last the public debt of Queensland was £55,023,506.

Vol. XVII | January 23, 1915 | No. 21

"Safety first"

HENRY B. CORBETT, PH.M.

A NATION-WIDE crusade to prevent accidents has been taken up by newspapers and magazines, and it seems to have the commendation of public sentiment everywhere. Railways and automobile clubs are falling into line, condemning the sacrifice of safety to speed. In all the centers of industrial activity, corporations, labor unions, and indemnity companies have united in posting and sounding the words, "Safety first." It is gratifying to see such a salutary purpose curbing the speed mania of the day, and it is cause for rejoicing when any earnest effort is made to exalt a thoughtful regard for human welfare above the desire for dividends and other material results. So it becomes important to consider whether these beneficent efforts are well directed, and whether our participation in them is along the most effective lines.

On page 196 of Science and Health Mrs. Eddy says, "Man has 'sought out many inventions,' but he has not yet found it true that knowledge can save him from the dire effects of knowledge." The material senses of mankind interpret everything materially. They tell us nothing about Spirit or spiritual law, hence mankind fail to seek welfare the better way, namely, through spiritual means.

All kindly welfare work is commonly spoken of as Christian in spirit, with a motive based on the teachings of the Bible; and this is certainly true in the sense that every movement toward the expression of more perfect love and harmony comes from the one divine source of all true being. But the Bible plainly lays down a basis of safety of which nothing whatever has been said in this human campaign for the prevention of accidents and the preservation of life. In the ninety-first psalm, among the results that ensue from dwelling "in the secret place of the most High" we find the words, "Thou shalt not be afraid for the terror by night; nor for the arrow that flieth by day. . . . A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee."

In another psalm we read, "Thou, Lord, only makest me dwell in safety;" and again, in Proverbs, "Whoso hearkeneth unto me shall dwell safely, and shall be quiet from fear of evil." In Jesus' memorable statement of the signs that "shall follow them that believe," we are told that serpents and poisons shall not hurt them,—these being used, no doubt, as types of dreaded danger. Such passages as these clearly set forth a basis of security which is entirely apart from mere precautions respecting material causes of injury, and it is certainly in order to ask professed Christian people whether these considerations are receiving due weight in this Christian campaign for safety. Is the spiritual basis so insistently declared in the Bible receiving due attention, or is it passed by as having only an uplifting mental effect, but devoid of any practical value in insuring actual freedom from accident and harm?

The essential fact is, that while in prevailing belief today man lives and moves and has his being in matter, in truth he has his being in Spirit. In Science and Health Mrs. Eddy says: "Mortal belief, misnamed *man*, is error, saying: 'Matter has intelligence and sensation. Nerves feel. Brain thinks and sins. . . . Injury can cripple and matter can kill man.' This verdict of the so-called material senses victimizes mortals, taught, as they are by physiology and pathology, to revere false testimony, even the errors that are destroyed by Truth through spiritual sense and Science" (p. 294). The vital distinctions between appearance and reality brought out in this text-book of Christian Science have a direct bearing upon the subject of accidents, for we read on page 424: "Accidents are unknown to God, or immortal Mind, and we must leave the mortal basis of belief and unite with the one Mind, in order to change the notion of chance to the proper sense of God's unerring direction and thus bring out harmony. Under divine Providence there can be no accidents, since there is no room for imperfection in perfection."

It was Mrs. Eddy's priceless discovery, that when the divine perfection is actually understood, it can be demonstrated; that the power of God acts without variableness, and that this action is always effective, always perfect and harmonious, because He is what He is, wherever He is; in other words, because He is divine Principle. In the universal presence of this infinite Love and almighty power, danger and destruction are inconceivable. Even when false material sense announces them insistently, their supposed presence belongs to appearance and not to reality. They are not the works of divine Love but of the devil; and the devil is a liar from the beginning, the father of lies, whose works Jesus came to destroy. A lie is harmless unless somebody believes it. A false appearance will not continue, even as appearance, any longer than while it is believed to be true. The moment the actual truth is fully understood, the illusion vanishes. This fact is the liberator from the claims of evil. Jesus referred to it in the words, "The truth shall make you free." The truth destroys the false consciousness or sense of danger, and that is all the danger there is.

This is the best way, in fact the only real way, to reach freedom for ourselves or for others from supposed material harm or injury. It is undoubtedly the method used by Jesus, and is available today to all who earnestly seek to follow his blessed teaching and example. It has again been given to the world in our age in Science and Health, in which it is fully explained and clearly exemplified. The Bible tells us that angels delivered Jacob from peril, Peter from prison, and Paul from shipwreck. "He shall give his angels charge over thee, to keep thee in all thy ways," is the language of the psalmist. Since danger and accident are but evil beliefs, they cannot reach us except through wrong thinking, which is impossible in the constant presence of these guardian angels that whisper to us the protecting truth.

How, then, can we help the most in this nation-wide and altogether commendable campaign for safety? We shall of course gladly unite with all well-disposed people to express in every external way within our own sphere the care and calm consideration for others that this movement demands; but far more than in these visible ways, we can help by gaining and using the knowledge of divine Truth which Jesus pos-

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

sessed and demonstrated. Christian Science has made clear to us this "more excellent way;" and that it is indeed practical today as a safeguard against danger, is proved by the testimony of thousands of competent witnesses in private and in public. They may be heard in the testimony meetings held in all Christian Science churches, or read in the publications of the Christian Science movement. By applying a right understanding of the true nature of God and of man, we can transform our present experience, and so step by step eliminate all sense of accident, danger, and fear. If in this way we seek "safety first," by seeking "first the kingdom of God," then all the externals of safety will be added as a by-product, according to Jesus' teaching.

If all who today favor the humane movement for safety would thus strive to realize the Mind that was in Christ Jesus, they could hasten the day foretold by the prophet, when all shall know that all real forces are the activities of Love, and that "they shall not hurt nor destroy . . . for the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

❖

Certainty

CHARLES T. ROOT

ST. LUKE's explanation of his reason for writing as he did to Theophilus, to wit, "that thou mightest know the certainty of those things, wherein thou hast been instructed," must make forceful appeal to any thoughtful Christian believer, and provide many particular occasions for thanksgiving, one or more of which are recognized by every individual who has entered upon the journey from sense to Soul. Healing of sickness in one's own case or in that of a dear one, a sin overcome or a bad habit corrected, fear replaced with courage, a business tangle straightened out, or some family discord destroyed,—these results, and others, form the basis of thousands of written and spoken testimonies to the efficacy of Christian Science in individual experience. But besides, and underlying such particular reasons for loving acknowledgment by beneficiaries of the Science of sciences, there is one cause for continuing gratitude which is common to them all, and that is the certainty in regard to the essentials of life which the apprehension of the divine Principle of Christian Science confers upon its recipients.

Christian Science is unique in that it is free from any trace of theory, opinion, or belief. It is definite science; it courts and sustains every test of logic, and also meets the severer and final test of demonstration. So surely is this the fact that the one who professes doubt or ignorance concerning the nature of God, man, and the universe, and of their relations to one another, thereby furnishes conclusive proof that he has never understood the fundamental postulates of Christian Science. The perception of the inevitable truth of these postulates comes in widely different manner to different individuals. In one case it may break upon consciousness with the sudden splendor of a tropical sunrise; in another, it may grow upon the mental vision slowly, like the creeping dawn of the long arctic day. But in both cases and in all cases it is the same sun that rises, the sun that knows no shadow, and whose rays leave unrevealed no fact necessary for correct thinking and for consequent salvation from the ills of mortal existence.

He who by patient and earnest study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has finally grasped its basic revelation, has experienced the first fulfilment of that grandest of all promises, "Ye shall know the truth, and the truth shall make you free," in that he has been, once for all, emancipated from unnumbered beliefs. Respecting many vital things he has achieved positive certainty. No longer does his thought shift and waver in the winds of doctrine; never again will he seek human opinion or lean upon authority, for he knows! Whatever obstacles or slowness of progress may seek to discourage him in his task of conforming his thinking and living to the standard set before him by Christian Science, he can always recover himself and gather new strength as he recurs to the certainty which is his priceless possession,—that he is on the right road, and that, indeed, there is no other.

How many thousands of men and women have spent weary years groping for the truth which would satisfy both *their* reason and their spiritual instincts! How they *have fruitlessly* explored every suggested byway of philosophy and theological theory, and then halted bewildered, and doubting even the existence of ascertainable knowledge, until the sense of absolute certainty was finally found in Christian Science. Their experience in the search for truth may be likened somewhat to that of a navigator who, nearing a port reached only by a narrow but well-marked channel, finds himself enveloped in a dense fog just outside its entrance. He can hear the waves on the rocks but can see neither lighthouse nor buoy,—nothing but a narrow circle of restless water close about his ship. He has a chart, but it is useless, because he does not know his own position and can make out no landmarks. He can only drop anchor and wait. Then the shore wind comes up, tearing the fog to shreds and rolling it back to the horizon. The headlands grow distinct and one after another the landmarks and buoys appear. Uncertainty has gone with the fog, and with anchor up, chart restored to service, and anxiety banished, the pilot steers with caution but with full assurance toward the desired haven.

❖

Acknowledging the Divine Idea

NELLIE E. ROBINSON

NOT infrequently we hear some one say, when speaking of a healing brought about through his understanding of the truth, "Of course, you know God did the healing; I had nothing whatever to do with it." Unquestionably such a statement is made in the righteous desire to turn the listener's attention away from personality to the healing Principle, and a right motive must ever have its reward; but may not a danger lurk in such a statement none the less, the danger of shutting God's idea out of His divine plan, and of thereby robbing the hungering, ready thought of man's birthright?

On page 560 of Science and Health, Mrs. Eddy writes: "To misunderstand Paul, was to be ignorant of the divine idea he taught. Ignorance of the divine idea betrays at once a greater ignorance of the divine Principle of the idea—ignorance of Truth and Love." How, then, is it possible for us to acknowledge God, divine Mind, without giving due credit to the idea through which this Mind finds expression? As surely as the sunbeams bear the message of the sun to a darkened world, just so surely do God's ideas bring the message of salvation to benighted humanity, and therefore their place in His great healing plan is fixed and assured.

To say that we as mortals could effect a cure of the ills of the flesh would most certainly be a mistake, for mortals express only a belief of life in matter. But we are told to acknowledge God in all our ways, and to do this would mean the giving up of all that is mortal for that which is immortal, the replacing of mortal beliefs with divine ideas, and this process naturally and necessarily accomplishes the healing of all that those beliefs include or imply.

The fear of being personal would sometimes deter one

Digitized by Google

from giving expression even to his gratitude, an attitude of mind indispensable to his further growth and unfoldment. In several of her writings our Leader has set forth in unmistakable terms the difference between the just acknowledgment of good and the error of personalizing that good. She writes: "Declaring the truth regarding an individual or leader, rendering praise to whom praise is due, is not a symptom of this contagious malady [personal contagion], but persistent pursuit of his or her person is" (The First Church of Christ, Scientist, and Miscellany, p. 116). And again on page 8 of the Message of 1900 she writes: "If the right thinker and worker's servitude is duly valued, he is not thereby worshiped. . . . And they who love a good work or good workers are themselves workers who appreciate a life, and labor to awake the slumbering capability of man." Let us then fear not to acknowledge good whenever and wherever found. It is for this very good that we should watch, wait, and strive.

Denial of Error

WILLIAM LLOYD

When people take a decided stand on any subject, they nearly always have a reason. So when we come in contact with one who criticizes or condemns Christian Science, we generally find one uninformed as to what Christian Science is, and therefore one who is looking at the subject from a different view-point than ours. It is therefore easy for us to be loving and patient with critics, but at the same time we should be ready, as Peter directed, to give a logical "reason of the hope" that is in us.

One of the chief stumbling-blocks to those superficially informed is the fact that Christian Science requires the denial of the evidence of the material senses and the affirmation of the reality of spiritual existence; and the necessity for this denial is responsible for a large part of the criticism directed against our religion and ourselves. Critics say we must believe what we see and feel, and that if we deny this, we simply tell an untruth. One superficially informed might say: "I had a dreadful headache and I used Christian Science. I said I did not have one, and this did me no good—I had one just the same." The essential part, the conviction of man's spiritual existence, based on the understanding of spiritual law, was absent in this case, hence the failure to realize harmony.

Several years ago, one winter morning I hastily entered an office, and just inside the door stood a small gas-heater, burning full blast. I struck my foot against it, and the small round ornamental top fell off. A new carpet was on the floor. I saw the thin stream of smoke ascend and smelled the burning carpet. Without thought I stooped and picked up the iron knob with my bare fingers and set it in place. I felt the pain, and as I opened my fingers, I saw the white burn and smelled the scorched skin. The gentleman in the office had seen all, and said, "You are burned." I replied, "I am not." He answered, "Oh, yes, you are." Rather vehemently I returned, "No, I am not." I went to the next room where I had work, all the while holding steadfastly to the truth of spiritual existence as stated in Science and Health (p. 468). I did not look again at my hand, and in a few minutes the pain was gone. That afternoon the gentleman called at my office; he smiled at me and said, "You were burned this morning." For reply I held out my hand. There was not the least mark on it. That morning he thought I had told a lie, yet that afternoon he saw it was the truth.

The denial of sin, sickness, and death, without the affirmative knowledge of why they are unreal, accomplishes nothing; but with the knowledge it is the first step, a negative but important one that leads to the positive, the affirmative, comprised in the knowledge of man's spiritual unity with his Maker, God. Here some one may ask, "Have we authority for this denial?" If our critics paused a moment to think, they would admit that we have the very highest. Let us consider a few, of many instances. Christ Jesus, when called to raise Jairus' daughter, said she was not dead, but asleep. The critics present "laughed him to scorn;" but he answered them by saying, "Maid, arise." Then he restored her to her parents. When Paul preached all night and Eutychus "fell down from the third loft, and was taken up dead," Paul said, "Trouble not yourselves; for his life is in him."

Our Master said, when referring to the Christ, "Before Abraham was, I am." This Christ-spirit, this healing, saving presence of infinite Mind, has always been, is now, and ever will be with us. In II Kings there is given a remarkable account of divine metaphysical healing. The Shunammite woman's son died on her knees at noon. She was evidently alone in the house. She quietly carried the body to a vacant room, the room of "the man of God," and "shut the door." No doubt she literally did so, but also in her consciousness she left the child with God, with the only Life, and shut the door of her thought on the evidence of material sense. Then she asked her husband to send her to "the man of God." He assailed her with questions, but to all she answered simply, "It shall be well." On her arrival at the abode of the prophet she is asked, "Is it well with thee? is it well with thy husband? is it well with the child?" And she answered, "It is well." Elisha had evidently imparted to her a very thorough grounding as to the requirements of divine metaphysics, or Christian Science, for never once was the error admitted. Her son was raised from the dead. Who can say whether Elisha's affirmative understanding of Life would have been sufficient if it had not been preceded by the mother's denial of the evidence of the material senses?

This same Christ is here today, and in the Bible and "Science and Health with Key to the Scriptures" we each can learn in the quiet of home that Science of Christian healing perceived and taught in part by Elisha and the other prophets, demonstrated fully by Christ Jesus, and now clearly explained and made demonstrable for all by our inspired Leader, who says on page 242 of Science and Health, "Denial of the claims of matter is a great step toward the joys of Spirit."

"Let there be light"

FRANCIS O. CASS

Standing upon a mountain top, one of the mighty Sierras of southern California, in the early dawn, with the mist and fog rolling and tossing all around and below like the great billows of a mighty sea, with no land visible save that on which one is standing, thought is lifted in wonder and awe at the seeming might and majesty expressed in this grand view. As one gazes upon the limitless expanse of mist, beautiful as it appears, he realizes that it typifies the unrest of mortal mind, and he knows that it will be dissipated into its native nothingness by the coming of the orb of light. Then one's thought is turned to the story of the creation, when God said, "Let there be light: and there was light."

Soon from the east there come the first rays of the rising sun, typifying the dawn of Truth, and in seeming terror and more wild discord, if possible, the billows of fog or error gradually disperse as more and more light appears, until at length

Digitized by Google

the mists are driven back, mountain top after mountain top comes into view, and again one is led to recall the command, "Let the dry land appear: and it was so." Then as the full-orbed light of the morning sun beams over the mountain tops, dispelling all fog or error, thought is exalted above the surrounding scene and dwells in heaven, the firmament above the waters, and as never before one says understandingly, "Our Father." Thus alone with his God, remembrance brings again Truth's inquiry: "'Adam, where art thou? Consciousness, where art thou? Art thou dwelling in the belief that mind is in matter, and that evil is mind, or art thou in the living faith that there is and can be but one God?'" (Science and Health, p. 307.) And one's prayer is for more light: "Open thou my understanding."

As one begins the study of Christian Science with honest purpose, the first gleams of divine light or enlightenment which come to the student encourage him and elevate thought as never before, until he begins to realize what is meant by being born again. He commences to see and prove for himself that the whole of the redemptive work of our great Master is, and of necessity must be, possible here and now; and as he faithfully strives to put into practice in his daily life the little light or understanding already gained, by cultivating a better, more kindly and loving disposition, and by striving for that Mind "which was also in Christ Jesus," he sees that a full salvation means salvation from both sickness and sin. As his improved thought is being daily manifested in better bodily conditions and mental freedom,—for right thought must ever externalize itself,—he realizes that the carnal mind, as Paul calls it, is indeed "enmity against God," good; that the mortal mind is truly the mortal or death mind, and that what it calls pleasure is neither pleasure nor power, but the counterfeit of man's God-given dominion, and leads to all defilement. He begins to understand that every right desire is prayer, and as thought is brought into subjection to Truth and the demands of right living, more light dawns on his consciousness. The unfoldment of spiritual ideas expresses the eternal command, "Let there be light." One rejoices to find that in this light all mists or mystifications, doubts and fears, are dispelled. He realizes his new birth through spiritual enlightenment, his increasing at-one-ement with God; that now as in the beginning there is light for all who will see light, and that all things are provable through him who said, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life."

As one studies the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures," it becomes indeed a lamp unto his feet, and a light unto his path on his way to a higher spiritual knowledge of the Christian Science concept of God. He comprehends as never before that the nation, people, man or woman whose thought is nearest in attune with the creator, is doing most for the enlightenment of mankind. The command will ever go forth, "Let there be light," for man's greatest desire is for more light, a clearer understanding of God, man's divine Principle.

David sang, "With thee is the fountain of life: in thy light shall we see light;" and our beloved Leader, Mrs. Eddy, tells us that "light is a symbol of Mind," that "the time for thinkers has come" (Science and Health, p. 510; Pref., p. vii), and today by scientific or right thinking one can obey Paul's admonition, "Work out your own salvation," which includes freedom from bondage to a false concept of God, and all the evils resulting therefrom. Casting aside all fear, he finds God to be a God of love only. This right concept of God, bringing both mental and bodily improvement, must also necessarily bring about improvement in one's business affairs; and as he thus proves God an ever-present help, his gratitude will spontaneously go out to her who in the full-orbed light of divine Science studied the Scriptures, saw God revealed, and was able to give her spiritual apprehension to mankind. He is also grateful to that ever-increasing army of practitioners who are arousing the darkened and dormant thought to the reality of good, the unreality of evil, even as did St. Paul in his appeal to the Ephesians, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." These are they who are leading the willing ones ever onward and upward to a better and more enlightened understanding of the God who is all light, and in whom is no darkness at all.

Through the consecrated efforts of these faithful workers, and the teaching of Mrs. Eddy, the prophecy of Isaiah is again being fulfilled today: "The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined;" and Christian Science is this light.

Preservation

ELLA B. RESCH

MANY times through the year do Christian Scientists pause to offer thanks to God for the ever-ascending pathway outlined by our Lesson-Sermons in the refreshing and healing references given us month after month, and also for the demonstrations which follow their study.

One of these Lessons had brought peace and joy throughout the week, for each day unfolded new beauties, with added strength and better understanding. Late Saturday evening a Christian Science student turned once more to this wonderful subject, "God the Preserver of Man," to find what the "clear straining of truth" (Science and Health, p. 65) would yet give for class work in the Sunday school, as well as for individual need. Suddenly, upon reading this Bible reference, "There shall not an hair of your head perish," a great sense of impending danger for a far-distant dear one's family came to thought. The Lesson was laid aside while God's loving omnipresence was realized and declared. Soon a light shone in consciousness, peace was restored, and the Lesson was finished.

A night of peaceful repose followed, while the song of harmony was, "All is well." A day like a foretaste of heaven on earth followed. The church service brought a greater unfolding of the truth and a sense of being on "the rock." In the Sunday school class work, the careful preparation of the Lesson was evidenced by all in the clear and helpful responses of the pupils.

Two days later came a hurriedly written letter expressing the gratitude and joy of a mother's heart for Christian Science. It seems that late on Saturday evening her son, while skating, went through a hole into deep water far from shore. Burdened as he was with a heavy coat, he scarcely made any headway in his efforts to reach shore. Numbed, and the thin ice breaking at the touch, he was about to give up, when his feet touched bottom. He was able to get out, and after walking home was made comfortable by his startled parents. The mother, who had been troubled about his late arrival, had turned to God for help, and when the boy came home her tears of gratitude were abundant as she realized the loving and saving omnipresence of the one Mind. Neither cold nor exhaustion followed, and the trial proved to be but another opportunity to publish salvation through Christ, Truth, as revealed in Christian Science.

Selected Articles

[Judge Clifford P. Smith in the *Pittsburg* (Pa.) *Dispatch*]

People have differed about almost everything involved in the destiny of mankind, but there is one point on which thoughtful men are quite generally agreed. This agreement is upon the possibility, for each and every person, of a larger and freer life. Those who call themselves Christians, although they differ widely with respect to the meaning of what he said and did, unite in believing that Jesus of Nazareth actually knew and taught how to gain this true and abundant life. Among those who believe on Jesus there is also a growing recognition of the fact that Christianity has not yet accomplished what he predicted for it.

To any thoughtful and observant reader of the four gospels, it should be quite evident that the Christian religion has not yet wrought the changes in human life which its Founder declared would follow its acceptance or practice. There is still a wide difference between the fruits which he said it would bring forth and the results that are to be observed in the lives of its adherents. He declared, in effect, that the truth which he taught would give joy and peace and power over evil, with health and freedom and life that is not subject to death. It must be admitted, however, that these qualities of being are exhibited by professed Christians only in a measure; some of them are usually sought through other means, while some of them are not expected presently at all.

For the failure of Christians to get the distinctive results of Christianity, there are two possible explanations: either Christ Jesus claimed too much for what he taught, or his professed followers have failed to grasp its true and full import. As for the first of these explanations, one who knew enough to accomplish what he did must have known the Principle and method of his own achievements, as well as the possibility of similar attainments by others. His work rises above that of all other teachers, because he illustrated or demonstrated all that he taught. Hence, the only conclusion just to him is that the great majority of those who believe on him have somehow failed to perceive or follow the way which he showed.

Christian Scientists, therefore, invite all men to reexamine the Scriptures in the light thrown upon them by Christian Science, with the view to beginning anew the working out of the salvation which Jesus taught and exemplified. In support of this appeal, they point to the complete changes of theory which ecclesiastical Christianity has more than once undergone regarding the way of Christian salvation, to the evident correspondence of Christian Science to all the teachings of Jesus, and to the increased benefits of Christianity which have come to pass since the advent of its Science. Christian Science has come to repeat what Jesus knew and taught; to be that "Spirit of truth" which he foretold and promised; to revive his original gospel, without the limitations which have arisen in human belief; to restore the scope and complete the mission of primitive Christianity.

Although immediate and lasting benefits resulted to the world from the ministry of Christ Jesus, the absolute truth which he taught was soon adulterated in human belief, so that the religion which took his name failed to bear the very fruits by which he said his system should be known. His religion differed from all others by reason of its practical theology; and by its fruits it was to be known or identified. The distinctive feature of the religion founded by Christ Jesus was its saving quality; and this was a present salvation from all evil,—from sin, disease, and death. In fine, his Christianity was as broad as human needs, and the truth of it was proved by demonstration.

In the course of time, however, the understanding of true Christianity became diluted, and demonstration failed accordingly, until a consistency between theory and practice was obtained by modifying the scope of Christian salvation. A distinction was made between moral disorder and physical, and the healing of the latter was left outside the Christian ministry. The Master, as St. Peter said, "went about doing good, and healing all that were oppressed of the devil;" but the distinction to which reference has just been made, left half of this work to a profession which does not pretend to have a remedy for evil, and does not deal with disease on that basis. Consequently, even the nature of evil ceased to be comprehended; and for fifteen centuries before the discovery of Christian Science, Christendom suffered disease, death, and certain other forms of evil as though there were no divine remedy for them, while faith looked hence for a better life which might be gained, it was hoped, by death.

This was the scene on which Christian Science entered. Some persons are not disposed to consider this Science seriously, because it was not discovered by either a physical scientist or a doctor of divinity. But St. John, for instance, was not graduated from a theological school, and there is no reason why the vision of spiritual reality should come to those scientists whose researches are confined to the elements, properties, and phenomena of matter. It is more reasonable to expect that understanding will come to those who are gaining the Mind of Christ.

For these reasons there is nothing abnormal in the fact that the world has gained a great accession of spiritual understanding through Mrs. Eddy, who had been brought up in the atmosphere of piety and devoutness that pervaded a New England home of nearly a century ago. From childhood she was a profound student of the Scriptures. She was compassionate, helpful, spiritual; she was a Christian in the true sense of that name. She had grown in the love for God and neighbor until her desire and aspiration were to heal and to save. She had turned away from matter to Spirit with an unusual degree of understanding. In these circumstances, the normal operation of divine law enabled her to discern the true nature of God and His universe, including man, and to penetrate the mystery of evil. The discovery of Christian Science declared the one divine Principle of the universe, separated the error from the truth in human thought, and furnished the scientific method by which the belief in evil can be overcome and abolished.

❖

[Paul Stark Sceley in *The Oregonian*, Portland, Ore.]

Within less than half a century Christian Science has been discovered, propounded to the world, and accepted by a large number of thinking people. Advancing in the face of lay, legal, and clerical attack, it has in a comparatively few years gained the esteem of thousands. Fair play from the press and honest investigation from the unprejudiced have helped greatly to remove the misconceptions gained from careless and malicious criticism. Most pleasing, perhaps, among the signs of increasing good feeling and respect toward this youngest yet oldest of the world's religions, are the more frequent expressions of tolerance, recognition, and good will from those of differing faiths.

Occasionally, however, a critic with little knowledge of Christian Science beyond the fact that it does not accord with his own belief, looking through the lenses of ecclesiasticism or dogma, holds before his hearers his erroneous opinions of what Christian Science teaches, and batters them with attacks as futile as they are misplaced. Such criticisms are well illustrated in an interesting sermon published in the Sunday

Digitized by Google

Oregonian. The clergyman there discusses the sleep of sin and the necessity for men to awaken therefrom. Dwelling upon the soporific influence of what he chose to term the "devil's opiates," he said, "Christian Science, with its denial of sin and Calvary, may have, siren-like, sung you into deep slumber." In other words, "Don't be deceived, my friends, by Christian Science, which teaches that sin is unreal and there is therefore no need to stop sinning." If any one ever tried to be a Christian Scientist on that basis, it must have been because he believed it to be anything its opponents called it, even the devil's opiate. His utter failure to find in it a sweet narcotic to still his mortal sense, could be the only consequence of his complete misunderstanding of its teachings.

The critic, like many others before him, has simply failed to grasp the difference clearly drawn by Christian Science between what exists to mortal sense, or relatively, and what exists to spiritual sense, which cognizes only the absolute and real. Sin as God-created, Christian Science denies most emphatically. Does the critic believe God creates sin and then punishes man for sinning? But this is not the full statement of its teachings, for it recognizes that in mortal existence sin is a most odious verity. Of these statements one is as necessary as the other to a correct understanding of Christian Science. Sin's elimination and destruction through an understanding of good's supremacy, is being proved to be a present-day possibility for each individual.

The teachings of Christian Science in regard to sin and evil offer no attraction or allurement to the sinfully disposed. Rather do they teach that "sin makes its own hell, and goodness its own heaven," and that "the belief in sin is punished so long as the belief lasts" (Science and Health, pp. 196, 497). "The evil-doer," Mrs. Eddy writes in her Message to The Mother Church for 1901, "receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality" (p. 14). The ill logic with which orthodoxy holds so tenaciously to the reality of evil while trying to destroy it, may well cause the questioner to ask if orthodoxy really knows what the nature of evil is. Indeed, it more than hints that the failure of the church to make the greater progress toward evil's final destruction is because the church has failed to learn the nature and the tactics of its opponent. Men, shackled with the ball and chain of belief in evil's reality, find it a hopeless task to gain moral freedom.

Christian Science teaches that sin and suffering are not of God, the one and only creator, and that they can therefore have no place in His creation. Their temporal existence must then be found only in mistaken belief, and can be overcome and destroyed, as proved by Jesus, when men attain the Mind of Christ. Then they cognize good as the real and indestructible, and its opposite, evil, as temporal and destructible, having neither power nor dominion over God's man, when opposed by Truth. The works and teachings of Jesus, his crucifixion, resurrection, and ascension beyond material sense, exemplify to the Christian Scientist the inevitable destruction of sin and mortality which follows the acquisition of that demonstrable understanding of God possessed by the Nazarene. This indeed is Christ's way, as we read on page 458 of Science and Health, "the only one by which mortals are radically saved from sin and sickness."

❖

[John L. Rendall in *The Des Moines* (Iowa) *News*]

In the report of Mr. ——'s sermon, I find that this evangelist took occasion gratuitously to assail the teachings of Christian Science. It is of course plainly evident that in his arraignment he speaks from the bias of prejudice and ignorance of those things which Christian Science is endeavoring to teach, and he therefore permits himself to use intemperate denunciations, a practice which from the standpoint of right-thinking people is somewhat incompatible with the religion of Jesus Christ that he professes. It is of course vain and without much by way of results to enter into a discussion of theological differences of opinion, and where one's view-point is that of crass materialism it is perhaps expecting a great deal to reconcile this with the spiritual ideals which are so plainly taught in the Christian Science religion.

Covering this point, St. Paul states that "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." The two standpoints being diametrically opposed, there is no possible point of agreement between the critic's concept of Christian Science and Christian Science as it really is. I will therefore not attempt to enter into a general denial of his misstatements, but will say Christian Scientists do not deny the reality of anything that is real in God's kingdom; rather do they affirm its reality on the only possible basis, namely, the spiritual.

It may be true that the Christian Science teachings differ from the peculiar theological views held to by the critic. They do not, however, differ from the teachings of Jesus Christ as recorded in the Scriptures. Neither is there in the Christian Science teachings any warrant for the assumption that sin may be indulged without suffering the consequences. Everywhere in the teachings of Christian Science it is very clearly brought out that sin brings its own punishment, and that if one would be free from the consequences of sin, he must cease sinning. Christian Science teaches the highest ideals of morality and Christian living. This is abundantly proved in the individual lives and characters of those people who adhere to it. The drunkard has been reformed, the sick have been healed, and those filled with hopelessness and despair have been given the positive, certain knowledge of God's infinite ever-presence and all-power. These are the fruits of Christian Science, and Jesus said, "By their fruits ye shall know them."

In this day and age of practical affairs, it is customary to judge a teaching, not by what some one may say of it, whether friend or foe, but by what it is actually accomplishing. On the basis of accomplishment in the overcoming of sin and sickness, Christian Science has nothing to fear.

❖

[Frank Bell in *The Daily Democrat*, Lock Haven, Pa.]

If it were true, as stated in the summary of a sermon in a recent issue, that the practice of Christian Science is merely mind over matter, or Mr. Quimby's magnetic treatment good only for "nervous" diseases, it might be difficult to accept the statement in the report of the sermon, that the Christian Science church "has more than one million members and is growing rapidly in every part of the world."

Undoubtedly Christian Science is growing rapidly throughout the world, and the quality of this growth is even more significant than the quantity thereof, for the adherents of Christian Science have been recruited in a very large degree from among those who turned to it only in the greatest need, —the desperately sick, the deeply distressed and fearful ones, who required prompt, substantial, and practical help, and who evidently have found what they so earnestly sought. The nature of the experiences of its followers is the most effective answer to any and all attempts to connect it with irrational teachings which no sensible individual would accept.

Christian Science is not pantheism. It acknowledges both creator and creation, and that the one is not the other. If it were a contention of Christian Science that there is no

Digitized by Google

evil in the world, Christian Scientists would not be found everywhere devoting themselves diligently to the overcoming of evil. In fact Christian Science reveals the whole truth about evil, a knowledge essential to an intelligent handling of the problem, and thus eliminates the necessity of ignoring anything. This Science ignores no facts, but the same cannot be said of one who shuts his eyes to the evidence that Christian Science healing is in no sense limited to so-called nervous disorders. Proof of the healing of various forms of organic disease is just as abundant and complete as of the alleged simpler cases.

✧

[Thomas F. Watson in *Emanu-El*, San Francisco, Cal.]

A recent copy of *Emanu-El* contains an article entitled "Jews and Christian Science," by Dr. ——, in which he deplores the fact that many Jewish people have taken up the study of Christian Science, a religion which, he claims, was "mothered by a woman of little education." Now, even if Mrs. Eddy had been uneducated, which is not the case, that alone need not have interfered with the fact that her keen spiritual perception enabled her to hear the "still small voice," and give to a hungry world what she had learned of the law of God through communion with Him.

We have no record that Enoch was a college man, yet he "walked with God" to such an extent that he was translated, and did not pass through death. Samuel, as a young child, heard the voice of God plainly; and David was a shepherd boy. Spirituality is not dependent upon the education of the schools, for "the wisdom of this world is foolishness with God." Moses was "learned in all the wisdom of the Egyptians," but this did not enable him to free the Hebrews from bondage to Pharaoh. Only after years of hardship and experience as a humble shepherd did he arrive at the spiritual altitude of thought where he could see the burning bush and hear the voice of God commanding him to lead the children of Israel out of bondage.

Mrs. Eddy was an educated woman of broad culture and great literary ability. She wrote for the leading magazines of the day and lectured and preached from a number of New England pulpits. But it was not until she discovered the law of God, or Christ-principle, which she named Christian Science, that she was enabled to lead us out of bondage, as she says in Science and Health (p. 226), to the "educational systems of the Pharaohs" of today, which would hold us in subjection to sin, disease, and death. There is no "confusion" in this teaching, unless it be in the mind of the critic. Christian Science is in no way allied to mesmerism and hypnotism, as this critic avers, but is diametrically opposed to it. There is one whole chapter in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which emphatically denounces mesmerism, hypnotism, and all other forms of esoteric magic.

The Jews who have taken up the study of Christian Science have in no way departed from the one true God. Christian Science is founded on the first commandment, "Thou shalt have no other gods before me," and this it understands to mean, "Thou shalt have no intelligence, no life, no substance, no truth, no love, but that which is spiritual" (Science and Health, p. 467). Jesus Christ was the most humble of all men. He did not claim to be "apart from" or "above all humanity," nor did he claim to heal through his own power. He said, "I am not come to destroy, but to fulfil" the law of God. He stated plainly, "I can of mine own self do nothing;" and again, "The Father that dwelleth in me, he doeth the works." In Science and Health Mrs. Eddy tells us that "Jesus demonstrated Christ," and she defines the Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error" (pp. 332, 583). Jesus said, "The works that I do shall he do also," showing that all may demonstrate the Christ-principle when they understand it. Science and Health (p. 495) states, "God will heal the sick through man, whenever man is governed by God."

Again, on page 333 of Science and Health we read, "Abraham, Jacob, Moses, and the prophets caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the divine nature, the essence of Love;" and on page 361: "Christ, as the true spiritual idea, is the ideal of God now and forever, here and everywhere. The Jew who believes in the first commandment is a monotheist; he has one omnipresent God. Thus the Jew unites with the Christian's doctrine that God is come and is present now and forever. The Christian who believes in the first commandment is a monotheist. Thus he virtually unites with the Jew's belief in one God, and recognizes that Jesus Christ is not God, as Jesus himself declared, but is the Son of God. This declaration of Jesus, understood, conflicts not at all with another of his sayings: 'I and my Father are one,'—that is, one in quality, not in quantity. As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being. The Scripture reads: 'For in him we live, and move, and have our being.'"

✧

[Avery Coonley in *Oak Leaves*, Oak Park, Ill.]

As reported in a recent issue, under the caption "Miracles of Jesus," Dr. —— maintains that the healing of disease through Christian Science, as well as the "miracles" of Jesus which he mentions, are not to be attributed to God's power, and undertakes to explain both away. While Christian Scientists will be gratified to find this acknowledgment of their "works," they must protest as a matter of their own experience that the doctor's conclusions are unwarranted. One thing is certain: that Christian Science depends upon no power but that of God, whether it be confronted by the appearance of sin, sorrow, degradation, or disease, and consistently denies all other seeming power. It is obvious that Christian Scientists cannot be adept in the use of powers they do not believe in, and as the healing work of Christian Science goes on successfully in all parts of the world and has been proved effective for over forty years with all sorts of disease, the conclusion is unavoidable to Christian Scientists that God does heal the sick, for the proof lies within their own experience. They consequently find it easy to realize how Jesus with his unequaled understanding could have performed the miracles recounted in the Bible.

✧ ✧ ✧

O blessed means of ease, whereby to bring
Our burdens, hopes, ambitions to His feet
In meekness, trusting in His mercy sweet,—
The worthiness of our eternal King!
Thus to the winds may we our worries fling,
For faith is honored at the mercy-seat;
According to His will must we entreat,
For then the song of victory we may sing.
Sweet privilege of every child of God,—
To know God is, and really does reward
The earnest who intelligently plod
And hold communion with the risen Lord,
Although proud carnal interests beck and nod,—
These find His blessing on their spirits poured.

ARTHUR F. FULLER.

Editorial

Overcoming Fear

THERE is a natural desire on the part of the majority of the beneficiaries of Christian Science to understand why and how it is that they have been healed, even after *materia medica* has pronounced them hopeless or incurable. In most instances they are not content until they have entered upon the study of the text-book and begun to demonstrate its teachings. When they have once put the truth to the test for themselves, they begin to realize its possibilities in the incidents of every-day living,—in the office, the store, or the home,—and are eager for a full understanding. As in all other sciences, however, there is no royal road to learning, and he who would know the truth for himself must study Science and Health and faithfully solve his problems by the rules there laid down.

The more Christian Scientists know of this wonderful truth the keener is their realization that their most urgent need is to make practical use of the teachings of their text-book, Science and Health. As a first step in this direction they should turn to page 410 of this book and read and ponder these words: "Christian scientific practice begins with Christ's keynote of harmony, 'Be not afraid!'" then to page 192, where they will find the statement, "Evil is not power." To be afraid, or to give power to evil, is to admit that there is a creator apart from God, good, an admission which in effect denies that first and fundamental plank of Christianity, "Thou shalt have no other gods before me."

Elsewhere in Science and Health Mrs. Eddy makes many statements of similar nature, notably the one on page 454, where she writes, "The understanding, even in a degree, of the divine All-power destroys fear, and plants the feet in the true path,—the path which leads to the house built without hands 'eternal in the heavens.' Human hate has no legitimate mandate and no kingdom. Love is enthroned. That evil or matter has neither intelligence nor power, is the doctrine of absolute Christian Science, and this is the great truth which strips all disguise from error." To admit fear is to deny the omnipresence and omnipotence of Truth, for if God is everywhere, filling all space, evil has no place nor power. It is from such statements as these that Christian Scientists have been able to draw the courage and inspiration which has enabled them to meet practically every phase of evil without flinching. The understanding that God is omnipotent does not tolerate a belief that there is or can be another power called evil, nor does it tolerate a fear of that which it knows does not exist.

In order to be consistent, Christian Scientists must know that no harm can come to them if they "do right and fear not," and if they know this they will have no fear. Mrs. Eddy, on page 442 of the text-book, lays special emphasis on the importance of this duty, and if we heed her admonition we shall know that neither person, place, nor thing can harm the Christian Scientist who is "clad in the panoply of Love" and is faithfully following Christ. Every student of the text-book who has absorbed even the smallest grain of Christian Science has obtained enough understanding to free himself from fear, and it is his duty and his privilege to assert his God-given right to freedom from every belief of mortal mind which would enslave him.

The psalmist said, "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me." He had that assurance in the protecting power of divine Love to which the apostle referred when he said, "There is no fear in love; but perfect love casteth out fear;" and Christian Scientists are fortunate in having learned how to make "perfect love" available. No matter how dark the cloud of discouragement or doubt that has settled about us, we know that behind it is the eternal radiance of "the Sun of righteousness . . . with healing in his wings," ready to dissipate every last shadow and enfold us in the glory of His coming. None can harm us, none can make us afraid, while our trust is in Him "with whom is no variableness, neither shadow of turning."

ARCHIBALD MCLELLAN.

"No other gods"

NOTHING could be more definite or more inclusive than the requirement of the first commandment of the decalogue, and nothing more manifest or more lamentable than the universality of mankind's disobedience thereto. Its demand is that apart from Him whom Christ Jesus named "our Father," gods of every name and nature, whether honored among the nations or ruling in but a single life, each and all are not only to be denied place and power, they are to remain forever unknown.

This commandment is the chief emphasis of Scripture teaching. Nevertheless, how numerous and how influentially colossal are the gods to which Christian peoples have paid and are still paying devotion,—Mars, the god of war; money, the god of greed; lust, the god of sensualism; and material sense, the god of false belief,—these are some of the principalities and powers which error has enthroned and with which awakened thought is called to wrestle. Along with them, a legion of lesser deities have been privileged to usurp a place and command a service which in every degree of faith is pledged and professionally consecrated to God alone.

The pettiness of the Penates to which individual idolatry yields obeisance would be amusing ofttimes, were the fact less tragically significant in its effects upon character. To see a man, perchance of splendid capabilities, in bondage to some ignoble weakness or governed in important judgments by an utterly silly prejudice; to find that women of ability and culture are the slaves of the inanities of fashion or prevailing caste customs,—such discoveries of "what fools these mortals be," to follow Shakespeare's phrase, would make one smile, did he not remember that in effect "all these be gods," whose rule in human living speaks for the violation of the most fundamental requisite of Christianity and for the individual's practical consent to an ignoble enslavement, instead of claiming and entering into the enjoyment of the liberty of the sons of God.

"The human mind," writes Mrs. Eddy, "has been an idolater from the beginning, having other gods and believing in more than the one Mind" (Science and Health, p. 186), and the explanation of this fact was given by Isaiah in the words, "Therefore my people are gone into captivity, because they have no knowledge." It was stated yet more explicitly by St. Paul, when he wrote to the Galatians, "Howbeit then, when ye knew not God, ye did service unto them which by nature are no gods." This fact that idolatry always witnesses to ignorance of God, and that men can be saved from it only by gaining a demonstrable apprehension of Truth, is the basic teaching of Christian Science, which declares that the first commandment is not an exaction, but the expression of a natural, an eternal order.

Here much Christian teaching has come short, because it has not brought to men a satisfying sense of the divine nearness and availability; nor yet of the divine integrity, since in consenting to the reality of evil it has made God responsible for it, to the utter confusion of human thought about

Digitized by Google

Him. The practical helpfulness of Christian Science inheres in this, that it awakens a thought of God which begets the habit of thinking of Him and looking to Him in every event and situation of the day. Thus honoring Him, thus having Him ever in view, one's false gods are cast down and freedom is gained, in fulfilment of the promise, "Look unto me, and be ye saved, all the ends of the earth: for I am God, and there is none else."

The entire appeal of Christian Science may be epitomized in the words, "Acquaint now thyself with him [God], and be at peace," and the rule imposed by it upon all who would escape from idolatrous habits is this, that they keep the mind filled with Truth and Love. When the sun is risen, all questioning ceases as to light upon our way, and so, too, when through spiritual illumination the law of Love becomes demonstrably operative in our lives, then all thought of relying upon or finding satisfaction in aught else is removed.

JOHN B. WILLIS.

Mystery Ended

THE human mind has always regarded spiritual things as mysterious, and this fact receives due consideration from prophets, apostles, and Christ Jesus himself. The word "mystery" has several definitions, one of them being "that which is beyond human comprehension." Paul tells us that the carnal mind cannot comprehend spiritual things, for the reason that they must be "spiritually discerned." He also says that spiritual things are "foolishness" to mortal man, but he at the same time tells us that with the aid of omnipotent Spirit we shall "know the things that are freely given to us of God." Christ Jesus told his disciples, who were learning to look away from the material to the spiritual, that to them it was given "to know the mysteries of the kingdom of heaven,"—the things which could not be comprehended by the unillumined human mind.

In Science and Health (p. 90) Mrs. Eddy counsels us to "improve our time in solving the mysteries of being through an apprehension of divine Principle." To this she adds, "At present we know not what man is, but we certainly shall know this when man reflects God." It is too true that mystery enshrouds the mortal concept of both God and man. The material senses offer no evidence of the existence of God at all, and practically none as to man in His likeness. Today we have a glimpse of what we call man, and tomorrow he is gone to mingle with the material elements from which he sprang, so physical science tells us.

But the unsatisfied human heart asks, Why? Did not Jesus say, "If a man keep my saying, he shall never see death"? Why then should we have forever this unexplained mystery of a life that ends in death? Must it ever be so? Assuredly no, if we are willing to follow the path trod by the Master and marked out by him, a path long covered up by the tangled growths of material theories, but opened up anew in Christian Science, which "lifts the veil of mystery from Soul and body," and which "shows the scientific relation of man to God" (Science and Health, p. 114). As this view-point is gained, man's immortality rises upon one's consciousness, like the morning star which foretells endless day.

In the book of Revelation is much which is so far beyond the range of mortal thought that few have attempted to penetrate its depths, although the vision of the holy city, coming down from God to men, has ofttimes given new hope to those who else were hopeless. In the tenth chapter, however, there is a promise which few have grasped, namely, that "the mystery of God should be finished." Coincident with this declaration is the announcement of "a little book," standing for a new revelation of divine Truth, which should uncover the illusions and dispel the woes of mortal existence. God was to be revealed to men, who would love God with heart and soul and strength and mind when they came to know Him; therefore the angelic voices rang out: "The kingdoms of this world are become the kingdoms of our Lord, and of his Christ; and he shall reign for ever and ever." No longer the mystery of disease and death, of stupefying opiates that shut out from humanity the might of Mind, but spiritual cause and its effect,—perpetual harmony,—the divine law and order governing men and nations.

In the sixteenth chapter of Romans, Paul speaks of that which "was kept secret since the world began," but he also says that the mystery vanishes before the preaching or teaching of Christ Jesus, and the revelation of Truth is "made known to all nations for the obedience of faith." To the Christian Scientist, mystery is ended when he begins to understand God as divine Principle, Life, and Mind, and to live in obedience to divine Truth. Nor is this great promise a mere abstraction, for it deals concretely with all the personal problems of human experience. It dispels all darkness, ends all mystery, and points the path to harmonious unfoldment. The veil of sense taken away, we behold in the mirror of divine Science "the glory of the Lord," to quote Paul again; then we "are changed into the same image . . . even as by the Spirit of the Lord."

ANNIE M. KNOTT.

Among the Churches

Current Notes

ROXBURY, MASS.—The corner-stone of First Church of Christ, Scientist, Roxbury, was laid Saturday morning, Jan. 16, at half past seven. There were present the officers of the church, a member of the firm of architects, and a representative of the builders. The building is to be of fireproof construction, the exterior of brick, soft gray in tone, crowned with dome and cresting. The auditorium, seating one thousand people, is to have a sloping floor, without galleries or obstructions of any kind, and will be lighted from three sides and from a central light in the dome. The main entrance will be from Elm Hill avenue. The Sunday school is to be in the basement, Howland street level. On the whole, the building will be simple, yet dignified and strong, truly typifying the cause for which it stands. It will be completed about Dec. 1, 1915.—*Correspondence.*

MONTANA.—The Christian Science churches and societies of Montana maintained a booth for the distribution of authorized Christian Science literature at the Montana state fair, held in Helena, Mont., Sept. 21-26 inclusive. There were distributed 558 pamphlets, 137 *Sentinels*, 53 *Journals*, 28 Editorial Comments, 27 *Heralds*, and 1,005 *Monitors*. About five hundred of these *Monitors* were distributed by newsboys in the business section of Helena. The issue of Sept. 19 contained an article on the Montana state fair. The *Monitors* which were left over from this distribution work were sent to the state penitentiary at Deer Lodge, to be distributed among the prisoners.—*Correspondence.*

NEWBURYPORT, MASS.—After a delay of nearly a month, occasioned by the filing of the deed and other legal business at Salem, the document conveying the old Whitefield church building to First Church of Christ, Scientist, of this city, has been passed. Various alterations will be made.

MILWAUKEE, WIS.—According to the decision of the members of Fourth Church of Christ, Scientist, Milwaukee is to have another church. The present congregation have worshiped in the Athenæum, corner Cass and Biddle streets, for a year and a half. They expect to start next spring on the construction of the first unit of the new church, which will be located at the corner of Kenwood boulevard and Stowell avenue, across from the Milwaukee normal school. This lot was purchased about two years ago, and is 120 by 130 feet. Most of the members of the congregation live on the upper east side. When the church was formed four years and a half ago, there were about thirty-five members. Unable to secure suitable quarters north of Juneau avenue, those in charge of this detail went farther down town. The congregation grew steadily despite the distance from the center of the residential district of most of its members. Two years were spent in the consideration of a site for the coming church building. The land finally purchased represents an investment of about ten thousand dollars, all indebtedness for which has been met. This unit is to cost between fifteen and twenty thousand dollars.—*Milwaukee Sentinel.*

The Lectures

Philadelphia, Pa.

Clarence W. Chadwick, who lectured on Christian Science, was introduced by Thomas E. Boland, who said in part:—

Christian Science is teaching and demonstrating only what Jesus taught and demonstrated long ago. Great numbers of people are receiving a truer sense of the universal brotherhood of men and the common fatherhood and all-power of a loving God, are finding refuge from fear, relief from sickness, and release from sin through the precepts and ministrations of Christian Science, because these ministrations and precepts bring a clearer understanding of our one Father and a deeper insight into the meaning of the Bible.—*Correspondence.*

❖

Vancouver, British Columbia, Canada

Francis J. Fluno, M.D., who delivered two lectures on Christian Science in Loew's Theater, was introduced at the first lecture by A. L. P. Hunter, barrister and solicitor, who said in part:—

We are here because we are seeking for the truth; and we are agreed, I think, that in the Bible, the Book of books, the truth about God and man is to be found; and the people are studying their Bibles more diligently and with greater understanding today than ever before. This is to a large extent due to the light that is thrown upon the Scriptures by that excellent commentary, the Christian Science text-book, "Science and Health with Key to the Scriptures," written by a remarkably fearless, spiritually-minded woman, Mrs. Eddy. The effect of the study of this book has been to reestablish the Christ-healing in this age, and thousands of hopeless sufferers have been cured of their sicknesses and have had their doubts, fears, and discouragements dispelled.

We are living in a practical era. You cannot interest business and professional men in religion today unless it is practical. Any system of religion which is endeavoring to reduce Christianity to a scientific basis, so that it can be used by all of us in solving the trials and problems that confront us daily, should be encouraged.

At the second lecture F. C. Raney said:—

If the element of fear could be eradicated from human consciousness, the millennium—at least a millennium—would not be far distant. Fear may well be indicted as the most paralyzing and destructive suggestion that can enter the mind. It makes the little child afraid of the dark, and will send a regiment of stalwart troopers tearing to the rear in senseless rout. Its baneful touch leaves the mother in trembling agony for her absent boy, when he needs the protection of her courage and confidence. It shuts the doors of banks in the faces of terror-stricken depositors, and tacks sheriffs' notices on business houses. It is the father of panics. It strangles courage and spreads over the world a withering curse. If Mrs. Eddy and her followers had done nothing more than wage relentless war on this universal bogey, they would not have lived and labored in vain. The world needs more men and women who are unafraid.—*Correspondence.*

❖

Gary, Ind.

Seldom has there gathered in this city so attentive an audience as that which listened to the lecture on Christian Science by Bicknell Young. The spacious hall of the Commercial Club, where the lecture was given, was completely filled. The lecturer was introduced by Frederick W. Carr, managing editor of the *Gary Tribune*, who spoke in part as follows:—

To many of you the subject of Christian Science is not familiar; to many others in this audience it is the burning bush of mount Horeb, healing sickness and sorrow in desert places. These latter are witnesses that the hope of the ages has at last been realized in the discovery of the greatest of all sciences,—the Science of Life. Since the beginning of time men have sought it. Indeed, with so many striving to gain an understanding of the laws of life and so many millions on the globe, the wonder is not that these laws were discovered within our own day, but that they were not discovered before. Yet this discovery of the ultimate science must come some day. That question born of man's unhappiness, "What is truth?" had to be answered some time. That it has been answered, and truly answered, well-nigh every hamlet of the civilized earth bears testimony in at least one made happier, healthier, better.

Christian Scientists, while rejoicing in the apprehension of the "pearl of great price," do not obtrude this discovery upon others. But to those who care to hear they are always happy to give the reason for the hope that is in them. They are also solicitous to disabuse the public mind of various misconceptions which have arisen regarding this teaching.

❖

Portland, Ore.

Prof. Hermann S. Hering delivered three lectures on Christian Science for First Church. The introductory remarks of F. Elmo Robinson, first reader, were in part as follows:—

Nineteen hundred years ago there appeared upon earth one who healed all manner of sickness and all manner of disease, reclaimed the sinner, and even raised the dead without recourse to material means. He did not claim that these redemptive works were possible to himself alone, or in his generation alone, but rather that they were evidence of a perpetually operative divine Principle which could and should be universally understood and demonstrated throughout all ages. He said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." For three hundred years thereafter the healing works of the divine Christ were performed by his followers; then the vision of the Christ, Truth, gradually became dimmed through adherence to mere doctrine, form, and ceremony, until, as one historian has said,

Digitized by Google

"the church became a strange mixture of Christian show and pagan vice." The healing sense had departed.

It is perhaps not strange that the reappearing of this Christ Science in our generation, after so many centuries of devotion to creeds and dogmas, should not be readily understood, or that some should fancy that this Science denies the atonement, the divinity of the Christ, the virgin birth, the crucifixion, resurrection, and ascension of our Lord, the inspiration and sufficiency of the Scriptures, and the necessity of prayer. As a former clergyman, for several years I myself entertained some of these misconceptions of Christian Science teaching, but I now know, after some years of close study and demonstration of Christian Science, that no people believe more implicitly in the divinity of Christ, the divine inspiration of the Bible, and the efficacy of prayer, than do Christian Scientists.

John F. Carroll, editor of *The Evening Telegram*, in his introduction said:—

During twenty-five years of active newspaper work I have been brought into intimate contact with Christian Science, and have enjoyed close and sometimes confidential relations with its teachers and with those who have exemplified its teachings in the pews. I have seen it pass through the bitterest stages of criticism, then of toleration, until now it enjoys world-wide recognition and the fealty of thousands upon thousands of the worthiest men and women I would care to know. For a score of years and more I have seen it exemplified in my own home, under the acid test of everyday needs, and have known it to emerge serenely triumphant from the sadness, sorrow, and irritating exigencies which confront an average American household.

While the fundamentals and essences of Christian Science have so far eluded me, I feel that with even better grace than one of its adherents I can pay to it the tribute of my respect and admiration for the many worthy things it has done, for the efficacy of its teachings, for the delightfully high standard it maintains in its own membership, and for the high ideals which the church itself teaches and which its members so blithely maintain, to the wonder and perhaps envy of the struggling outlander who often falls so far short of them. On such an occasion and to such an audience as this, the usual overflowing Christian Science audience, I could not say less than was in my heart to say.

The introductory words of Miss Caroline Barnes were in part as follows:—

I am sure the one motive that has brought us together this evening is the hope that a better understanding of Christian Science will give us a better understanding of God. Mrs. Eddy has defined Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). The primary purpose of Christian Science is to bring to the world the healing work which our Master declared his followers should do, but which was dormant for centuries for lack of faith.

Jesus once asked those Jews who believed not on him, "Why do ye not understand my speech?" and answered his own question by saying, "Even because ye cannot hear my word." All through the Scriptures we find this demand for understanding. The Christian Scientists all over the world are demonstrating the fact that they do at least in part understand the words and works of Jesus by healing all manner of disease and all kinds of sin, thus being obedient to his teaching, his example, and his commands: "Go ye into all the world, and preach the gospel," "Heal the sick."

Lectures to be Delivered

Baltimore, Md. (First and Second Churches).—Clarence C. Eaton, The Lyric, 3:30 p.m., Jan. 31.

Beaver Falls, Pa.—George Shaw Cook, Lyceum Theater, 3 p.m., Jan. 31.

Bethlehem, Pa.—Bliss Knapp, High School Auditorium, North and Centre streets, 8 p.m., Feb. 2.

Butler, Mo.—Virgil O. Strickler, Butler Opera House, Feb. 1.

Charleston, S. C.—Hon. Clarence A. Buskirk, Christian Science Hall, 145 Meeting street, 8:30 p.m., Jan. 28.

Chicago, Ill. (Ninth Church).—Clarence C. Eaton, Woodlawn Masonic Temple, University avenue and 64th street, 8 p.m., Feb. 1 and 2.

Chicago, Ill. (Twelfth Church).—Bicknell Young, Temple Sholem, 3760 Pine Grove avenue, 3 p.m., Jan. 31, and 8 p.m., Feb. 1.

Enid, Okla.—Jacob S. Shield, American Theater, 3 p.m., Jan. 31.

Fairbury, Ill.—Virgil O. Strickler, Feb. 5.

Joplin, Mo. (Second Church).—Jacob S. Shield, New Joplin Theater, 8 p.m., Feb. 1.

Kansas City, Mo. (Second Church).—Bicknell Young, Church Edifice, 31st street and Troost avenue, 8 p.m., Feb. 4 and 5.

Keokuk, Iowa.—Bicknell Young, Elks Hall, 8 p.m., Feb. 2.

Kirksville, Mo.—Virgil O. Strickler, Elks Hall, 8 p.m., Feb. 2.

Klamath Falls, Ore.—Clarence W. Chadwick, Houston Opera House, 8 p.m., Feb. 4.

Lansing, Mich.—Jacob S. Shield, Gladmer Theater, 8 p.m., Feb. 4.

La Porte, Ind.—Virgil O. Strickler, Masonic Temple, 8 p.m., Feb. 5.

Lima, Ohio (Second Church).—Bliss Knapp, Faurot Opera House, 8 p.m., Feb. 5.

Lockport, N. Y. (Second Church).—Col. William E. Fell, Universalist Church, 8 p.m., Feb. 4.

Los Angeles, Cal. (First Church).—Clarence W. Chadwick, Church Edifice, 1866 South Alvarado street, 8 p.m., Jan. 28, 29, and 30, and 3 p.m., Jan. 31.

Manhattan, Kan.—Virgil O. Strickler, Wareham's Opera House, 3:30 p.m., Jan. 31.

New York, N. Y. (Fifth Church).—Col. William E. Fell, Church Edifice, corner Madison avenue and 38th street, 3:30 p.m., Jan. 31, and 8 p.m., Feb. 1.

Ogden, Utah.—George Shaw Cook, Church Edifice, 8 p.m., Feb. 5.

Palestine, Texas.—Jacob S. Shield, Temple Theater Building, Avenue A, 8 p.m., Jan. 28.

Port Huron, Mich.—Jacob S. Shield, Masonic Temple, 8 p.m., Feb. 5.

Sacramento, Cal.—Clarence W. Chadwick, Tuesday Club House, 2722 L street, 8 p.m., Feb. 2.

Tallahassee, Fla.—Hon. Clarence A. Buskirk, Leon County High School Auditorium, 8 p.m., Feb. 2.

Warrensburg, Mo.—Jacob S. Shield, Magnolia Opera House, 8 p.m., Feb. 2.

Washington, D. C. (First and Second Churches).—William D. McCrackan, Poli's Theater, 3:30 p.m., Jan. 31.

Wilmington, N. C.—William R. Rathvon, Bijou Theater, 3:30 p.m., Jan. 30.

Testimonies of Healing

My interest in Christian Science was awakened through the reading of some copies of the *Sentinel* and the *Journal* given to me by a friend. While carefully perusing these periodicals, the Bible, which I studied in connection therewith, became a book of inspiration, although it had formerly brought me a sense of confusion in that I could not reconcile myself to its seeming contradictions. I now feel that it is only a just acknowledgment of my thankfulness to God, and my present attitude toward this living truth so beautifully revealed to us by Mrs. Eddy, to tell of some of the ways in which I was benefited at that time, for I had not yet read Science and Health.

It was in April, 1899, that I received and read the periodicals, and the twenty-first of the following month I discontinued the use of drugs and began to rely upon Christian Science as my guide to health and harmony; since the idea of a religion that could heal the sick appealed to me and brought me new hope. From the days of my childhood I frequently had severe headache, and for several years had suffered a great deal from stomach trouble and bilious attacks, which had sometimes resulted in bilious colic. Not unlike other sufferers from these physical ailments, I had become a slave to certain dietetic rules, but the truth was now taking root. As I began to learn that everything God made is eternal and indestructible, and that He governs the universe, including man, the afflictions correspondingly disappeared, and I began to eat without fear whatever came my way, and to enjoy it. The benefit which I had received up to this time, however, was only the twilight of a fuller realization of the power of infinite Love.

I now began to read Science and Health together with the Bible, and in June of the following year I took up the work of healing myself of a diseased condition of the ears, supposedly inherited, which from year to year was becoming more annoying, gradually developing into deafness. From my earliest remembrance there seemed to be various sounds echoing and reechoing, which were not the result of any action of anything apart from myself, but were due to hardened wax pressing the ear-drums, at this time having nearly closed both ears. Not only in an ever-increasing measure did this detract from my already dull sense of hearing, but it added to the sense of roaring and buzzing, from which for several years I had not had an hour of freedom.

Until the latter part of December, 1901, about a year and a half after taking up the study of Christian Science, I saw no improvement in my hearing, although I had otherwise improved, both physically and mentally. But at this time I told my wife that my ears would soon be healed, for I had that assurance. On Jan. 10 there was apparent evidence of the previous mental assurance, for on that day the wax began to crumble. Following this, I noticed several times in the morning, when I arose, that on my pillow were pieces of wax that had fallen from my ear; also during the day wax voluntarily passed off. This process of discharging continued at intervals of two or three days for about three weeks, when the secretion took a more natural condition; and on Feb. 8, while working where I was surrounded by the buzz of machinery, I instantaneously received perfect hearing, the quickness of which I can only compare to darkness giving place to a sudden flash of light. At first I did not realize what had happened, thinking that some of the machinery had broken, but a moment later it dawned upon me what had taken place. Upon returning home from work in the evening I thought my wife was terribly noisy doing her work, for I was not able immediately to accustom myself to a normal sense of hearing; but the next day I seemed to be living in a new world. I continued to study the Bible and Science and Health, each day applying what I gained of the truth, and in the early part of September of the same year the wax in the left ear began to crumble and pass off, just as it had from the right ear about nine months prior to this time. On Oct. 1 the hearing in this ear also followed in like manner.

For this healing, and the many blessings which both my wife and I have since received, I am truly grateful. I am especially thankful that I have learned to know in some measure my true relation to the divine saving Principle, Love, which is everywhere blessing mankind in all ways.

ARTHUR H. WOLFE, Scranton, Pa.

✦

I am so thankful for what Christian Science has done for me that I feel I want to give my testimony to the world, with the hope that it may benefit others and be the means of leading them to our loving Father. I was completely healed of an internal growth which had been increasing for more than a year, and finally became so painful that I thought I could not endure it much longer. Many were the sleepless nights that I passed. This growth developed to such an extent that it became necessary to alter all my clothes in order to wear them. My condition became so alarming to my husband as well as myself that we consulted two doctors, who both said that if I expected to live much longer, it would be absolutely necessary to go to a hospital without delay and have an operation performed. In my exhausted condition I could not think of doing this, and I reasoned that God had healed others and He could heal me. I then resolved to trust myself to God's care and take up Christian Science. I sent at once for a practitioner. After the first treatment there was such a decided improvement that for the first time in months I slept peacefully all night, and in less than a week the growth had entirely disappeared, so that I was again my normal size. There has been no return of the trouble.

I have since been healed of a severe throat affection, with which I was troubled at times for a number of years, and also of rheumatism. An injured ankle was relieved in fifteen minutes, so that I kept right on with my work the rest of the day. Influenza was healed in one night, and a growth removed from my eye which had been there twenty-five years. Besides these I have received many other benefits.

While I am indeed very thankful for these blessings, I am also deeply grateful for the light, truth, comfort, and spiritual understanding that come to me every day through Christian Science. Truly life is now worth living.

MRS. ALLEN G. MYGRANT, Los Angeles, Cal.

✦

I am one who can truly say I have come out of great tribulation. I have proven many times in the past ten years that "God is our refuge and strength, a very present help in trouble." I never knew what it was to feel well, strong, and happy, until Christian Science taught me how to know God as Life, Truth, and Love.

In 1901, after trying many physicians and having everything done for me that a kind husband could do, I was taken to a hospital in Chicago and operated on. I was on the operating-table seven times and made four trips to the hospital. A trained nurse accompanied me home, and I still continued with different physicians, taking electrical treatments, etc., for six months. I was a wreck, and did not care to look in the faces of even my loved ones. I prayed to die, for after having paid out large sums of money for physicians,

Digitized by Google

surgeons, and nurses, I suffered more than ever. The minister of the church of which I was at that time a member, offered many an earnest prayer for me.

One day a relative who was a minister called to see me, and during the conversation spoke of having visited a relative in New York who had been an invalid for years but had been healed through Christian Science. I immediately thought, Why cannot God heal me? This was the first case of healing in Christian Science of which I had heard, and I longed to know more about it. God surely knew my desire, for in a short time a neighbor who was not a Christian Scientist at that time, gave me a *Sentinel*. I eagerly read every word, and returned it with the remark that there was something there for me. A little later she gave me a *Journal*, from which I selected the name of a practitioner of whom I had never heard, and I wrote asking her for help. In a few days I went forty miles to see her, and stayed overnight. My healing came slowly, as it seemed to take me a long time to understand God as we are taught in Christian Science, but it has been permanent. The patience this faithful practitioner manifested will never be forgotten.

Today I thank God for every word of encouragement from many dear Christian Science friends. I daily praise God for His goodness, and I am grateful to Mrs. Eddy. I am also thankful for the many blessings that Truth has brought to my family, including my husband and our only daughter.

MAE VAN HORN, Wenona, Ill.

❖

I wish to testify to the wonderful healing that took place in my family. My son, then ten years old, was suddenly taken sick. Our family doctor was called, and he pronounced the trouble appendicitis. He also said that an operation was the only means that would save the boy. We then called three other doctors, one the leading surgeon of the city. They said that I had delayed too long and they could do nothing, but that an operation would be taking eight chances to one. They also said that peritonitis had set in and that there was no hope. I then called a Christian Science practitioner to treat the boy. Very soon thereafter I discharged the physicians and left the case with the practitioner, with the result that in a week's time the boy was thoroughly healed, and has never been ill since. He is a big, healthy boy today, in his eighteenth year.

We are very thankful to God, and grateful to Christian Science for the good it has done for our family and for the saving of our son.

D. A. MCRAE, Winnipeg, Manitoba, Canada.

❖

I wish to express my gratitude for all the benefits received through the study and practice of Christian Science. We have been in Science a little more than two years, and in that time I have had to call on a practitioner only once. I have been healed of a stomach disorder in its worst form, just by the reading of the Bible and Science and Health.

My husband has also been healed of many ailments. For over eighteen years he suffered from headaches and stomach troubles; also a defect of the eye, the sight being almost gone. He consulted some of the most prominent oculists in Chicago, and they told him the nerves of the eye were dead; that it would be only a matter of time when the other eye would be affected, leaving him blind. They advised him to quit work, as it was too much of a strain on the eyes. Christian Science has broken these material laws, and we are so glad to say that although the healing is not quite complete, his sight is getting stronger day by day, and we are sure it will be perfect soon. My husband had not attended any church for over fifteen years until we came to Science, and now he seldom misses a Sunday evening service. I hope the time will come when he can also attend the Wednesday evening meetings. We are indeed grateful for what Christian Science has done for us.—LILLIAN SALS, Chicago, Ill.

❖

I feel it a duty to write my testimony, it being only another witness to the truth contained in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I did not accept Christian Science on account of any healing of my own, but after seeing my wife, who had been a great sufferer from many ailments, restored to perfect health with only a few treatments in Christian Science, I felt that it was worth looking into. I had become an agnostic in early life, and also an unbeliever in *materia medica*. After my wife's healing I immediately took up the study of the text-book and other Christian Science literature. Through this study many errors have been overcome, among them the tobacco habit of thirty years' standing, social drinking, and profanity, as well as a quick temper and thoughts of malice and revenge.

Christian Science has been our only remedy for all ills for the past six years. I am thankful to God, and grateful to Mrs. Eddy for this truth.—N. L. HOBART, Medford, Mass.

❖

Twenty-five years ago I came to Christian Science, not for physical healing, but because this teaching was presented to me as a beautiful religion. At that time I was active in the church in which I had been raised, being a teacher in the Sunday school and also leader of the young people's Sunday evening meetings. The same year I took class instruction in Christian Science under a teacher who had been healed by Mrs. Eddy, and who went to Boston every year. I always watched anxiously for her return, for she was sure to bring us loving messages from our Leader.

Shortly after coming into the understanding of Christian Science I was healed of a severe case of catarrh, which I had had from the age of six and for which the oldest physician in the place said there was absolutely no cure. He said he might be able to give me something that would help me, but there was nothing that would effect a cure. I also had two growths in my head, which discharged blood continually, and for six and eight months at a time I could not breathe through my nose; but this condition was entirely overcome in less than six months through Christian Science, and I am exceedingly grateful. I am so thankful that Jesus' method of healing, so many centuries lost to the world, was rediscovered by Mrs. Eddy and by her made plain to us in that most wonderful book, "Science and Health with Key to the Scriptures."

Soon after coming into the understanding of Christian Science, my mother was healed of an immense and very painful goiter, which she had had for twenty years and which no medicines had relieved. The growth disappeared entirely. I had left home for a short time, and on returning found her wearing a smaller collar than I did myself. For this healing I am exceedingly grateful.

I can truthfully say that for twenty-five years there has been no time in which I have not affirmed the omnipresence of God, good, and like Daniel, I am trying to serve Him continually.—MRS. N. SPELLMAN, Chicago, Ill.

❖

Words cannot express my gratitude to Christian Science for the wonderful healing of my little girl. She was in a terrible condition when Christian Science found her. Some of the ills from which she suffered at that time were abscesses in her head and all over it, kidney trouble, and convulsions

Digitized by Google

in the worst form. Her legs and arms were deformed from the many spasms that she had had, but this condition was entirely overcome through the application of this saving truth, and her limbs are now as straight and perfect as though nothing had ever been wrong with them.

This was a case of slow but thorough healing, although we could notice the change in the child's condition from the very beginning. Treatment in Christian Science was kept up for about a year, and after that time every one who knew about the child could not help but see and make some remark about the wonderful improvement that had taken place, for nobody that had known about her condition expected her to get well. The doctor expressed his regret, but said there was nothing more to do for such a case, as he had done all he could do for the poor child. For the last five years she has been in perfect health, and is a living witness to Christian Science.

This is only one of the many blessings which we have received through the application of this wonderful truth, and for which I am very thankful to God.

Mrs. J. Ringeisen, Jr., Milwaukee, Wis.

❖

Christian Science was first brought to my notice by a friend who had left our chapel and Sunday school for the study of this teaching, and being concerned about his leaving the truth, as I then thought, I decided to study the subject myself in order to show him where he was wrong. At the same time I told him that if I found it to be the truth, I wanted it, and would follow it at any cost. This friend did his work with me so well, answering my questions in so reasonable a manner, that all my former prejudice was soon broken down, for nothing inconsistent would appeal to me, as I was of a reasoning turn of mind and would accept nothing but what was consistently Scriptural. I at first began the study in the same spirit with which St. Paul went to Damascus, to persecute what I then thought was false teaching; but having come to a standstill in the doctrines taught me from childhood, and wishing to advance in the spiritual understanding of the Scriptures, I was ready to see the truth from whatever source presented.

While reading the text-book, "Science and Health with Key to the Scriptures," it appealed to me at every page, and I then wanted to prove it, although I had not up to that time believed in its healing efficacy. As I had been suffering from a very painful condition of my foot for about ten years, I prayed that God would guide me in the way of truth, and reveal Himself to me as He did to Gideon; and I mentally added that if my foot was healed in answer to this prayer, I should know that it was accomplished by the understanding of the Christian Science teaching which I was then assimilating. In ten days my foot was permanently healed.

I was then called upon to leave all—home, friends, church-membership—and start life afresh, to follow in this line of light. During the next eighteen months I was healed of anemia, sleeplessness, and chronic biliousness, each of lifelong standing, and since taking my stand for Christian Science, fifteen years ago, my health and strength have become more and more established, and this truth has been applied to every detail of my daily life. I also had a deformity, produced in childhood, but during the last seven years, while working in a new field, my limbs have become straighter, so that an inch and a half is added to my stature.

For all these material benefits I am truly grateful, but yet more so for the fact that it has been my great privilege, during the last twelve years, to be the means of bringing this healing truth to many others. Is it any wonder that daily my heart goes out in loving gratitude to Mrs. Eddy, that noble and brave woman who pressed on in the face of prejudice, scorn, and derision from those who were blind to the glorious truths which she taught? May this experience of one who has proved the omnipotence and omnipresence of Truth, help any who are finding the way difficult and toilsome, and aid in bringing them into "the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

Rose Giddings, Bromsgrove, Worcestershire, England.

❖

My purpose in sending my testimony to the *Sentinel* is twofold,—primarily to help some earnest seeker who wishes to know if Christian Science really does heal and if it helps one to a clearer understanding of God, but also to express my thankfulness to God and to let the many kind friends who helped me to an understanding of the truth know that they did help, both by words and actions, even though I paid no attention at the time.

It is several years since I was healed of a dreadful condition in one treatment, after two doctors had been in attendance for six weeks. My daughter had been told that I could not live, that the lining was all gone from my stomach, and that I would never be able to eat solid food again. I had had only milk during this time. I knew a little about Christian Science, so I had a practitioner called in, and with one treatment I was healed. I ate a hearty dinner that evening at the table with the family, and did not feel any bad effects from it. I have seen wonderful things done in our family, for we are all seeking the truth, the love of God, and the good things as taught by Mrs. Eddy.

My healing has been permanent. I am well in every way,—a thing unknown in all my life before. I feel very thankful for Christian Science and what it is doing for me daily.—Mrs. D. E. Stephens, Los Angeles, Cal.

❖

In August, 1911, I went into the country, and after being there about three weeks I was taken with whooping-cough very severely. After suffering for a couple of days I decided to go home. My mother at once telephoned a Christian Science practitioner for treatment, and it proved effective from the very first. In about two weeks the ailment had disappeared, for which I was very thankful. I have never been in better health than at the present time.

Beatrice Cross, Ottawa, Ontario, Canada.

❖

I wish to express my thankfulness to God for Christian Science and what it has done for me. While following my occupation as a carpenter, the scaffold on which I was working gave way, and I fell in a position which threw all my weight on my ankles and feet. I was severely injured, so was carried to the home of the contractor, and a cab was called to take me home. It was some time before the cab arrived, and as I was in great agony, my shoes were taken off, for my feet and ankles were badly swollen. My friend then went to a neighbor's house and telephoned to a Christian Science practitioner for treatment, so that long before the carriage came for me the pain had ceased and I was perfectly comfortable.

This was all done without my knowledge, but when I reached home I found I could put my feet on the floor without any pain at all, and my friends advised me to try Christian Science. I told them, however, that I preferred my doctor, so my wife called him over the telephone; but from that minute the pain started again, and continued day and night.

Digitized by Google

When the doctor came he told me, after examination, that the bones in my feet were all spread apart, that the cartilage in both ankles was broken loose from the bone, and that I could not leave my bed for several weeks. Three weeks passed, my wife dressing my feet several times a day, and in the mean time my friend told me what the Christian Science practitioner had done for me at his request. He also gave me Science and Health to read and told me what this teaching had done for his family.

I then made up my mind to try Christian Science, so the next morning I started for the practitioner's office on crutches. I walked one block to the car, and on arriving down-town had another block to go before I came to the office. I finally got there and had treatment. The practitioner then told me to see how I could get along without crutches, so I tried, and found I did not need them at all. I asked her if putting my weight on my feet would not separate the bones, but she told me that God, Mind, was governing me, not matter. I also asked if I had not better keep the bandages on, but was told to take them off as I did not need them. I left the office and went out to my friend's house, where I had dinner and looked his new home over, then returned to town, and after walking five or six blocks took the car home; yet after all this I felt only a little tired. I slept well that night for the first time since the accident, but the next morning I was positive it would be better for me to put the bandages back, and I did so. Finding I could not walk a step, however, I took them off again, with the result that I walked all right. In a little less than a week I was back at work and could climb a ladder as well as ever.

I am indeed thankful for this healing, which occurred about nine years ago, as well as for the overcoming of the tobacco habit, about four years ago, and of many other ills which I have had since. In every case the cure has been permanent.—BARNEY RUCKER, Sr., Portland, Ore.

It is with deep gratitude that I tell of a blessing I have received in Christian Science. I had treatment from several doctors for many years for a distressing heart trouble, but could get no help. Finally a Christian Science friend called one day and told me that I need not suffer from any ailments. She gave me a treatment and I was completely cured. That was in 1899, and I have never had any sickness since. I realize more and more each day that God is All-in-all, and I put my trust in Him.—MARY BENSON, Ebenezer, N. Y.

[Written for the *Sentinel*]

Thought-bells

LILLIAN BARKER BEEDE

Ring soft, ring low, thought-bells in my heart,
For attuned by Love you're winging
An angel-truth to some burdened one,
That awakes to join your singing.

Ring sweet, ring clear, your glad matin song
To the dawn of light now breaking,
The dusky dreams of sin's starless night
From its silvery pinions shaking.

Ring soft, ring low, thought-bells in my heart,
With your love-tuned music stealing
Through aisles of peace to a chanceled truth,
Where a quiet joy is kneeling.

From Our Exchanges

[Prof. Charles R. Henderson in *The Universalist Leader*]

Jesus was the only practical statesman, world ruler. He would not condescend to be a Herod, a Pilate, or a Cæsar; he would rule by truth, goodness, justice; he would make the world new within. He was right. . . . Above all little nationalism arises the vision of Jesus, the kingdom of God. That glorifies the work of the Christian minister and of the Christian church, now temporarily eclipsed by materialism, insolent commercialism, and arrogant militarism! Christian faith and belief have never had their day; their supreme day is yet to come, and has already dawned. Those who climb to the mountain tops have caught the first glorious rays; the dark valleys will soon rejoice in the radiance.

[*The Watchman-Examiner*]

Every holiday or holy day has its own peculiar influence, its atmosphere, its spirit. The spirit of Christmas is the spirit of youth. Christianity gave new youth and new heart to humanity. To a world grown gray and old and weary it brought a message tingling with vitality, thrilling in its freshness and purity, full of the promise and potency of endless growth. Christianity forever renews its youth, and it begins with the story of a child and its mother.

The Christmas spirit is the spirit of hope, for youth is always hopeful. It sees afar; it lives in the blessed tomorrows of life; it builds for eternity. So the gospel is good news of a better day to be. Christianity is a religion of hopeful enthusiasm. Christ was an optimist. The New Testament, from its first page to its last, is the annunciation of a great hope for mankind. Melted in the magician's crucible, all substances, however seemingly worthless, would change to finest gold. So experience worketh hope. To the Christian all experiences, suffering, trial, sorrow, failure, evil-speaking, —it matters not what,—cast into the divine crucible, are transformed into the precious gold of an eternal hope. All "are saved by hope."

[*American Lutheran Survey*]

God wants Christianity to be the biggest thing in the universe; but He has long since set Himself irrevocably against any extension of its bigness except by way of its working through human hearts. If it does not grow stronger there, it will not grow stronger at all. But, on the other hand, since true Christianity is the exercise of love to God and fellow man in the strength of soul-companionship with the Redeemer, it stands to reason that all the talk which speaks of Christianity as a failure is pure absurdity. As everlasting as God's power itself is the power of living Christianity. What ails the world today is that it refuses to be Christian. And—let that not be forgotten—its refusal is to a large extent the result of its reading the most read book,—the hearts and lives of the professed followers of Jesus Christ.

[Rev. M. H. Moore in *The Homiletic Review*]

How simple are the conditions of spiritual sight and knowledge! Jesus says: "If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him." And again: "He that loveth me shall be loved of my Father, and I will love him, and will manifest myself to him." Indeed, the very simplicity of the process is to many a soul a stumbling-block. It rebukes our pride. It requires a surrender of our stubborn will. It can make no compromise with our self-sufficiency.

That which eye hath not seen and ear hath not heard and

Digitized by Google

the heart of man hath not imagined, is revealed to the poor in spirit, the humble, the penitent, who come to love God with all their hearts and their neighbors as themselves. They are in every community today, as they have been in every age and nation in the past. They are not morose or scornful. They are not narrow and dictatorial. They are not spiritually proud and forbidding. They attract and do not repel the children of men. By their fruits we must know them, for they do not boast of their spiritual attainments. Yet they have learned the secret of joyous existence. They have lost their lives for Christ's sake and found life eternal and abundant. They have found themselves by giving all. They have learned the blessedness of simple faith. They have learned the joy of self-forgetting service. They are God's little children in faith and love and helpfulness.

[*The Christian Register*]

Let there be no tinge of doubt that, far as we are from fulfilling all that the birth of Christ signified and his life forwarded, the centuries have not been in vain. Let no voice fail, no faith falter, no good works languish, nor this Christmas be less productive of joy than others because of the gloom that spreads over the face of heaven. Less than we had thought came to pass has really been gained, but much more has been gained than men of the ancient world dreamed could come. The task before the world is seen now in truer proportions. Centuries are but as hours before such mighty consummations as Christmas contemplates. But in the Christmas spirit the power also is mighty. It is not vanquished, nor even checked. It leads on the minds of men. "Behold my servant, whom I uphold," still saith the Lord; "mine elect, in whom my soul delighteth; I have put my spirit upon him . . . He shall not fail nor be discouraged, till he have set judgment in the earth."

[*The Outlook*]

The birth of the Christ was a beginning, not an ending. It was the beginning of many sorrows and much burden-bearing, because it was the promise of those spiritual and imperishable joys into which men enter only through the gate of suffering. The great gifts cannot be received until the spirit is prepared to receive them. Heaven would be hell to the corrupt nature; the very bliss of it would sting and torture.

Peace on earth was offered nineteen hundred years ago, but God cannot force it upon us until we are ready to receive it; and it will be ours the very hour in which we establish justice and good will among men. The vision of heaven which the shepherds saw was not an idle dream; it was prophetic of realities that are coming; it was one of those dreams which invite noble effort and are changed by noble effort into the sublime realities on which eternal life securely rests.

[The Ven. Archdeacon Basil Wilberforce, D.D., in *The Christian Commonwealth*]

To me the "advent" of the Lord is not a movement in space, but a mode of manifestation. The only "coming" of the Christ that is true to me is the "coming" of the Christ-spirit, the hidden spiritual nature, into recognition in the individual man. The mystic advent is a new understanding of the Christ, a coming into human consciousness of the truth that the historic Christ is the manifestation of the universally diffused mystic Christ, which is God's consciousness germinal in every one born into the world. The historic Christ is the mystic Christ specialized in one individual life-center, in absolute perfection, for purposes of recognition. The "advent" to each separate soul is when each one recognizes that he is an individualization of the Christ.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," by William D. McCrackan, M.A., originally printed by the National Alumni Association of New York, and sold by the Publishing Society, has now been translated into the German language, by permission, and is printed in the regular pamphlet form.

"Christian Science: God's Lovingkindness Proved to Men," a lecture by Rev. William P. McKenzie, already published in the German language in pamphlet form, is now printed in English, and is on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, is for sale at the following prices: 8-inch (mount 12 x 16), single copy $1; six copies $5.25; twelve copies $9.50; 12-inch (mount 15 x 20), single copy $2; six copies $10.50; twelve copies $19; 16-inch (mount 21 x 29), specially adapted for Reading Rooms, single copy $3.50; three copies $9.50; six copies $18.50; twelve copies $33.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, each $5; on India paper without remarque, each $3. Ten per cent discount to Reading Rooms. Smaller reproduction of the above picture, size 11 x 14 inches, on Japanese vellum, single copy $1; six copies $5; twelve copies $9.50. Photogravure Post Cards, reproduction of the large picture of the Church and the Publishing House, each 5 cents; twenty-five $1.15; one hundred $4.25.

QUARTERLY COVERS, in black morocco. Pocket size, 4½ x 6½ inches, each $1.15; twelve $11. With change pocket, each $1.40; twelve $14.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows: "THE MOTHER'S EVENING PRAYER," 75 cents; "CHRIST MY REFUGE," 75 cents; "LOVE," 40 cents; COMMUNION HYMN—"SAW YE MY SAVIOUR?" (Johnson), 50 cents; "BLEST CHAIRMAN MORN," 27 cents; "O'ER WAITING HARPSTRINGS OF THE MIND," 27 cents; "SHEPHERD, SHOW ME HOW TO GO," 27 cents; "SAW YE MY SAVIOUR?" (Root), 27 cents. Quantity prices will be furnished on application.

The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 864 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The General Electric Review says: "A process has been discovered for heating metals in revolving drums with mixtures containing, among other things, finely divided aluminum, by which a surface alloy containing aluminum is produced. With copper, this alloy is of the nature of an aluminum bronze, but richer in aluminum than the ordinary alloy of that name and more resistant to heat, so that copper thus treated is protected up to the melting period of the alloy. . . . The same general result was obtained in the case of iron and steel. Some use was made of this process, which has been called 'calorizing,' for treating copper soldering-irons and iron resistance wires for heating devices. Modifications of the process, extending it to further applications, have also been made. Pieces which because of their shape or size are not adapted for tumbling, may be calorized by packing them in or painting them with a suitable mixture and heating them. Thus, the size of the heater is the only limitation on the size of the piece that may be calorized. There appear to be many places where it is desirable to use iron vessels or apparatus at temperatures above red heat, and at such temperatures ordinary iron rapidly oxidizes and scales away. After iron is calorized the effect of heating is slight. Instead of burning and the scale falling off, as in the case of untreated iron, practically no effect can be detected after a considerable time,—certainly none which injures the surface."

"With possibly few exceptions," says Secretary Lane of the interior department, who is defending the conservation bills for the administration, "the valuable power sites on lands not owned by the federal government have passed into private ownership in perpetuity. They cannot be recovered except at a prohibitive cost, nor can any control be exercised over them in any manner, except it be by regulation of transmission and delivery as a public utility. Out of 7,000,000 horse-power developed in the United States in 1913, twenty companies or groups of interests controlled 2,710,886 developed horse-power, and 3,556,500 undeveloped horse-power. According to a table compiled by the forest service, out of a total of 1,135,400 developed horse-power in California, Colorado, Idaho, Montana, Nevada, Oregon, Utah, and Washington, 1,023,700 horse-power is owned by large corporations, while but 111,700 horse-power is owned by small developers. In California, 92 per cent of the developed power is owned by the large corporations and but 8 per cent by small developers. In Oregon 90 per cent is owned by large companies, and 10 per cent by the small developers. In California, one corporation owns 27 per cent of the total developed horse-power in the state, and two groups own 57 per cent of the total development."

"We have remaining at the present time a total acreage of coal in the public land states which is believed to exceed fifty million acres," says Secretary Lane of the interior department. "Probably three fourths of this is in public ownership. Not all of this coal land is available for immediate utilization under any kind of law, because of its remoteness from settlement and transportation lines. The director of the geological survey, however, estimates that about twenty per cent of the full acreage, or between seven and eight million acres, is available for use, or will be so within the next decade or two. Translated into tons, it seems probable that this acreage of public domain, now or soon to become available, contains something like ten billion tons of bituminous coal, thirty billion tons of sub-bituminous, and about fifty billion tons of lignite; or altogether about ninety billion tons of coal. It is estimated that we have in sight enough coal to last us for something like twelve hundred years, allowing for very large increase in consumption. To permit those who are now holding lands out of use to acquire more lands and make the grasp of monopoly more throttling, is unthinkable. To open the remaining resources to use, under a system which encourages use, will check monopoly."

Strawberry and other fruit growers west of St. Joseph in Kansas are giving close attention, it is said, to plans of A. W. Themanson to take up the production of essential oils for perfumes. The soil and climate of the district is very similar to the soil and climate of the great rose-growing districts of Bulgaria, where most of the attar, or otto, of roses is produced. This industry was almost ruined by the two Balkan wars, and in consequence, prices for the various floral oils are very high. Practically all of the perfume oils used in the United States are imported. Violet oil, for instance, brings one hundred and thirty-six dollars a pound. While violets are easy to grow, vast quantities of the flowers are needed to produce a pound of oil, and yet Mr. Themanson believes that violets will be more profitable than strawberries. He has laid out a plot of forty acres for flowers of various kinds, and will erect a still to extract the various oils.

The old corner-stone recently recovered from the ruins of the burned College Hall at Wellesley, Mass., was laid on the 15th as the corner-stone of the central dormitory of the new College Hall quadrangle, the first building of the new Wellesley. The college authorities have issued the following statement regarding the recent nation-wide campaign for funds for the restoration and endowment of the college. The total amount raised was $2,460,500, which was nearly $61,000 in excess of the sum required to secure the conditional gifts. Of the total amount raised, $1,147,000 is in cash and securities, besides insurance amounting to $560,000, and $1,353,000 is in pledges. The fund will be used as follows: For endowment, $1,000,000; for maintaining new buildings, $250,000; for erecting seven new buildings, $740,000.

A total of $117,362,710 has been used for education in the United States through funds from John D. Rockefeller and the efforts of the general education board in inducing others to give, according to a report of the board covering twelve years since its organization. Using the general education board as a medium, the report states that Mr. Rockefeller has provided more than seventy-three million dollars. Contributions to colleges and universities, the report also states, are subject to four conditions: gifts to be conditional upon additional sums by others; preference for centers of wealth and population; systematic cooperation with institutions established by religious denominations; concentration of gifts in the form of endowment.

The National Forward-to-the-Land League held a three days' conference this week in New York city. Rural credit, colonization, general home welfare, and markets were discussed by specialists. A permanent land exhibit and a bureau of land information, located in New York, is to be the first step of this league in its campaign to coordinate idle men and idle land for the solution of the problem of the unemployed and for the increase of the nation's productiveness.

Housing reform was looked at from all angles by experts at an "institute," or informal conference just held in Boston at the Twentieth Century Club by the National Housing Association. Men and women from many parts of New England, New York, and New Jersey, who are giving personal attention to the subject of housing improvements, came to exchange views, compare notes, and plan for the future.

A firm at Webster, Mass., has received orders for more than two hundred thousand yards of khaki cloth. The cloth will be shipped to New York, where it is manufactured into overcoats for armies at war in Europe. Another firm has received an eight hundred thousand-dollar order for shoes to be sent to the same destination.

Dr. Giuseppe Motta, President of Switzerland, in an interview says that neutrality is costing Switzerland enormous sacrifices in money and trade, amounting for the last current year in the neighborhood of five million dollars.

The Splitdorf Electrical Company of Connecticut has closed contracts with automobile manufacturers for the manufacture of a high-tension magneto-ignition system amounting to approximately two million dollars.

The 1914 production of Louisiana oil fields, estimated at 15,407,893 barrels, shows an increase of 2,909,065 barrels over 1913. Total production since 1906 is nearly ninety million barrels.

The Senate bill to establish the Rocky Mountain national park, comprising two hundred and thirty-one thousand acres in Colorado, mostly in forest reserves, has passed the house.

The *Iron Age* says that steel works are slightly increasing their rate of operations, and a number of large companies are running at 40 to 50 per cent of capacity.

The steamer Matanzas from Rotterdam has arrived at New York with one million dollars' worth of dyestuffs from Germany.

The total income of American foreign mission boards during the year 1914 was $17,168,611.

Prayerful Activity

REV. JAMES J. ROME

No one can be very long acquainted with Christian Science without noticing the small importance it attaches to profession and its insistence that one's convictions be demonstrated in practical life. This frequently incites irritation and impatience in the human consciousness, for the general tendency of the mortal is to stagnate. Indolence and ease too often seem to be the acme of human desire, hence the too frequent willingness that others take the responsibility and do the work. This may also account for the fact that the doctrine of redemption through vicarious suffering has found such ready acceptance. On the other hand, however, many who have been awakened to the need of activity, allow themselves to be carried away by the impulse of a desire to accomplish something, and in their haste to pull up the tares they "root up also the wheat with them," and so cause destruction more than production.

Both of these phases of human consciousness have to be dealt with in Christian Science. The first, the desire for ease, may not be the most prevalent, but it is by no means uncommon. It is generally found among that class who have for a lifetime been seeking medical treatment whenever some physical ailment appeared, until their diseases have become so complicated that the doctors fail to bring relief. Then perchance they are persuaded to try Christian Science, and as a result find healing for their physical distress. Accordingly they willingly accept this teaching; but they are possibly not so ready to be healed of their habit of running to some one for help, so they substitute a Christian Science practitioner for the doctor, and go to him to have their work done for them, without putting forth any earnest effort to help themselves. Others, again, who have found relief from their trouble and ease from their pain through Christian Science, have fallen into the mistake of thinking that the chief mission of this religion is to produce a material sense of restfulness and ease instead of activity. There are still others whose submission to a sense of mental indolence hinders them from recognizing the importance of persistent effort in order to gain progress.

All these various classes are making a terrible mistake, and need to be aroused from their lethargy. It was to such as these, no doubt, that Paul addressed the words, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." Christian Science does not permit any such attitude of thought, but comes to each one with the Scriptural command, "Work out your own salvation with fear and trembling." "Eternal vigilance is the price of liberty" here as elsewhere. We must be ever on guard, sleeping or waking, against that which is waiting to catch us unawares. Working, watching, and praying is our safeguard, and gives that sense of protection which enables us to go our way unharmed and unafraid. On page 340 of "Miscellaneous Writings" we read: "There is no excellence without labor; and the time to work, is *now*. Only by persistent, unremitting, straightforward toil; by turning neither to the right nor to the left, seeking no other pursuit or pleasure than that which cometh from God, can you win and wear the crown of the faithful." The secret of all success is wisely directed action. Activity is the law of Mind,—is necessary, in fact, to its very existence. How can we conceive of Mind without action; for without action Mind would indeed be a nonentity. The only evidence of Mind's existence is its activity. It was when Mind, God, spoke that creation appeared. It is when Mind finds expression that action is manifested in the evolution of the universe and the harmony of the stars. In Christian Science, man is understood to be the reflection of God, and herein it accords with the Scripture, which says, "God created man in his own image, in the image of God created he him." Since, then, Mind is ever active, man must express action, and the mental state that would produce inactivity or stagnation is unspiritual and unnatural.

The argument, "I have so little opportunity," may present itself, but this is only another form of evil suggestion. When it is understood that man's action is but the reflection of the activity of Mind, God, then the demand for action brings its own opportunity. The effort to overcome the temptation to idleness and sloth is in itself enough to keep one at least from being entirely idle. The study of Science and Health and the other works of our Leader will expose enough of error to keep every one busy who is willing to work and apply the method given for its destruction. Right mental action is the only way of salvation for mankind, and continued right mental action is their only means of protection. Since the outward or seeming material action is only the result or manifestation of the mental, the importance of giving earnest heed to the nature of all thought-action is evident. We need to "watch and pray" as well as "work;" for if the thought be wrong, the resulting action cannot be right.

To "watch" is to examine the motives and purposes that prompt action. "In a world of sin and sensuality hastening to a greater development of power, it is wise earnestly to consider whether it is the human mind or the divine Mind which is influencing one," Mrs. Eddy writes in Science and Health (p. 82). It is well to remember that activity is not always usefulness. True work is the right action proceeding from the right thought; but on the other hand, the injurious and destructive results produced by the incessant activity of thought wrongly influenced, or impelled it may be by ambition, mistaken zeal, or ignorance, have been too often in evidence to be ignored. To avoid these serious consequences, much watching and praying is necessary,—watching that one's thought be not dominated by selfish desires or personal influence. To do so, we must pray, that is, lift our thought above the mere human impulse, and contemplate the perfection, the purity, the love of infinite Mind, and so bring thought into such close association with the divine sense of things that self-will and human purpose will be superseded by divine guidance. "Desire is prayer," Mrs. Eddy says, "and no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). Such an attitude of thought will lead us to forget self,—it will

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

create only a desire to shed abroad an influence that will help and bless others; it will lift us above the petty annoyances of personal conflict, and bring to the heart "the peace of God, which passeth all understanding." With thought thus attuned to the harmony of spiritual Life and Love, there must necessarily emanate therefrom a holy activity that will bring healing and salvation to mankind.

Enthusiasm

EVELYN SYLVESTER KNOWLES

When a child first meets with a flower, a butterfly, or any other attractive bit of color, it is as though creation existed for him alone. Gleefully he shows his little treasures with a joy far exceeding their importance. The moon fills him with wonder, the stars excite his inquiry, all the world about him makes instant appeal to his curiosity; and as he grows more and more perceptive, he responds for a time to each new impression with increasing enthusiasm. With advancing youth, however, these early impressions often lose their spontaneity. More unusual objects and experiences are requisite to awaken his interest, and manhood sometimes finds him wholly unresponsive to the simple beauties of nature in which he once delighted.

Why is this? The flower is not less lovely, the insect's wing less brilliant, or the bird's song less melodious; yet their appeal is no longer felt. In the instance of an artist, these early impressions are not only retained, but they grow more keen, and this because he sees not less but more in all things. The mature painter perceives colors to which he was formerly a stranger; the musician is able to evolve a symphony from the theme furnished by a bit of bird song; while the poet weaves a sonnet out of a simple starbeam. To these a new world is ever being revealed, that wonderful world which is sometimes called "the realm of the imagination." Evidently the intrinsic worth of these sources of inspiration remains unchanged, and any lack of joy in them is due only to lack of growth within ourselves. Through inaction, our sensibilities become blunted, our estimate of real values dulled, while our enthusiasm, that concomitant of eternal youth, has grown old along with our false concept of age.

When Christian Science is first apprehended, one may grasp it eagerly, and hasten to share his joy; but as he progresses in Science, his own discouraging experiences, the doubts advanced by others, together with the dense materialism of humanity at large, sometimes tend to dull his faith, cloud his perception, and dampen his ardor. The wings of enthusiasm which had so ably buoyed him up, seem to falter and fail, and he feels himself falling to the earth. Need this be? The beauty of the truth has not altered, and why should his delight in it abate? Should not joy increase as he gains in the knowledge of that which gave it birth? The psalmist seems to have felt an almost unvarying joy. While he had his moments of depression, as do all while wending their way from matter to Spirit, he seems to have recovered himself quickly, and from his subsequent bursts of song we gather that he was heartily ashamed that he had temporarily fallen away.

Outward expressions of enthusiasm are of course subject to change. The abandon—possible gushings—of the young student may be replaced by quieter, saner manifestations of joy, even as a river flows more softly as it widens toward its goal. Joys may deepen, but their spontaneity need not lessen, for true enthusiasm is joy ever freshening itself through well-directed activity. If we sometimes find ourselves wondering at the ardor of a young Scientist, instead of dolefully telling him that he will lose this exuberance of spirit, perhaps even insisting that it is more or less superficial, might it not be well to scrutinize our own hearts, and seek the cause of that spiritual ennui which seems to stifle enthusiasm?

Nothing is more discreditable to a Christian Scientist than the entertainment of the belief that he is growing old, not only in years but in his knowledge of Science, which is far worse. It is no less unfortunate than for one to become mentally *blasé* because he thinks his understanding of Truth exceeds that of the neophyte. The one error renders us unteachable and begets pride; the other breeds self-depreciation and self-excuse, and we thus become the prey of *listlessness* and inefficiency. Eternal youth is that *normal mental* state in which we are ever seeking and ever assimilating the truth. We can never reach the point where we are too old to learn, otherwise deterioration would become inevitable. Youth is characterized by strength, and the source of strength is spiritual joy. In order to renew our youth "like the eagle's," we must abound in the joy of the Lord, and in spontaneously beneficent activity, seeing more and more in every common thing about us, even as the poet sees more day by day in the simple field flower, the drifting cloud, the spreading tree.

On page 244 of Science and Health, Mrs. Eddy speaks of "assigning to man the everlasting grandeur and immortality of development, power, and prestige." This possibility being admitted, we should not wait for stupendous problems to awaken our ardor, nor for marvelous demonstrations of divine power to arouse our enthusiasm. We should exercise these qualities of thought amid even the simpler objects and events of our daily life. By the thought we bring to bear upon it, experience is debased or glorified. Not the object of our love but the love itself is what exalts us. Let us not be frugal, therefore, in our giving. Let us freely and joyously give our thought, our effort, our love, ourselves, and all at their best always, thus perpetuating youth, quickening age, sweetening experience, and reflecting in some degree the full-orbed nature of our Father-Mother God.

Let me but give, and give, and give again;
Myself desiring nothing in return;
Let me but bravely work and watch, and then
Let no self-seeking in my conscience burn!
Let me but think alone Thy holy thought,
Living the life Thou biddest to the end;
Then shall I find that joy by earth untaught,—
Then shall my life with Thine forever blend.

Receiving and Giving

FREDERICK MANN

Occasionally a testimony appears in the *Sentinel* in which the writer mentions regret at being unable to go to church because of living in an isolated place or where there are no other Scientists. Does it ever occur to Christian Scientists who are not thus limited, what a privilege is theirs in living where they can attend not only one but ofttimes two services; and do they ever question whether they are availing themselves of this privilege as they should each Sunday? If so, there is surely an opportunity to show their appreciation by attending not merely the Sunday morning service, but also the one held in the afternoon or evening.

In some of the churches that find it necessary to hold two services in order to accommodate all who desire to attend, the second service seems to be looked upon by some Christian Scientists as designed more especially for those who may find it inconvenient to attend church in the morning. The extra service is, however, held to benefit and bless all who can avail themselves of the privilege of attendance, and as Christian

Digitized by Google

Scientists we can by no means afford to neglect it. Would it not be well, then, for those of us who have any doubt on the subject, to take up the matter prayerfully, in order to decide the question in the right way?

It may require some sacrifice on our part, or perhaps a little better planning of our work or home duties; but surely we are willing to make this effort, especially in view of the fact that the evening service needs our presence, so that visiting friends may feel our welcome. A loving counsel for the conduct of the church service is given in the by-law which provides that "the prayers in Christian Science churches shall be offered for the congregations collectively and exclusively" (Manual, Art. VIII, Sect. 5). With what wisdom did our revered Leader, Mrs. Eddy, thus provide for "thy stranger that is within thy gates"! Our attendance in the evening will furnish us a fine opportunity to give freely to the strangers who are wont to attend this service, even as we have ourselves freely received at the morning service. If we come with the thought of gratefully giving out, reflecting the truth with which we have already been blessed, our own increase of good will be in proportion.

We can never tire of hearing "the old, old story," because we know it is true; and others will love to hear it, too, when the invitation to attend our services is generally accepted by Scientists themselves. The sacrifice it may require of some of us will bring us an hundredfold reward in joy, happiness, and health. Dear fellow workers, let us all try it, and if we come in the right spirit the blessing is already ours. "All are welcome to attend our services," is the message from the reader's desk, and it should not be forgotten that Scientists themselves are included in this invitation.

"Ye must be born again"

ALICE FROST LORD

CHRISTIAN people are familiar with the story of Saul of Tarsus, and how by a sudden illumination he was converted to a follower of the once despised Nazarene. In a few days, according to the story told in the New Testament, this Roman citizen had been transformed from a persecutor of Christians to an active worker in the cause of Truth. Today the miracle is being repeated by many people who turn to Christian Science in some hour of need, or perhaps in a moment of investigation. With minds indifferent, where they are not actually prejudiced by current misinterpretations, they have taken up some of the literature of this faith to read, or perhaps have attended for the first time a service in some Christian Science church.

It may be the very first chapter in Science and Health, that beautiful one on Prayer, which suddenly illumines the thought of the inquirer; or perhaps it is one of Mrs. Eddy's hymns sung with spiritual uplift during the Sunday morning service; or again it may be the simple, straightforward, earnest testimony of those present at the Wednesday evening testimony meeting which points the truth of the practical character of this gospel and starts that transformation of thought which sooner or later will change one's outlook on life as completely as Saul's was changed.

Men and women who had never wished to become saints, even though they held for themselves the ideal of law-abiding, moral, respectable citizens, suddenly find that the Christ-ideal seems to them not only lovely but supremely desirable, so far as they are concerned. Why is this? Because the sincere seeker finds that his health and genuine happiness, as well as the power to help others in their hour of greatest need,—whether it be to raise them from beds of sickness, to lift them from byways of sin, or to inspire them with new courage in solving the manifold problems of life, social or industrial,—are all directly related to and dependent upon his spirituality. Christian Science teaches men that this is true, and it demonstrates the fact.

It may not be until after a struggle that the inquirer surrenders to this truth, but when he does, the transformation takes place, and like Saul, stricken by the truth, he shortly recovers from the blindness of material sense to serve in word and deed him who was the Wayshower. Like Paul, the spiritually enlightened of today go forth to preach the gospel and heal the sick, realizing for themselves and for others the full gospel of salvation. The world may marvel at their transformation and fail to understand how it took place; it may persecute and pursue with malice and hatred; but the "works" of the true follower of Christ Jesus will be manifest in this generation, even as Jesus said they always would be manifest as a proof of the spiritual understanding of Truth.

True Spiritual Healing

GRAY MONTGOMERY

THE world today has already received wonderful benefits through Christian Science, and not the least of these is the revolutionized thought of the medical fraternity and all others engaged in the endeavor to relieve humanity of its suffering. An interesting article, widely published throughout the country, gives an account of a lecture by the professor of physiology at one of our large universities, in which he said that certain diseases were caused by fear or anger entertained. Of late years we frequently read or hear of some noted physician affirming the mental origin of disease. Many years ago Mrs. Eddy informed the world that the origin of all disease is wholly mental. On page 411 of Science and Health she says: "The procuring cause and foundation of all sickness is fear, ignorance, or sin. Disease is always induced by a false sense mentally entertained, not destroyed. Disease is an image of thought externalized." Today some of the most advanced physicians accept this teaching in part, while they reject the healing power of God as taught and practised in Christian Science. They still attempt to heal through material means, substituting mental suggestion in the place of drugs, and failing to bring about a cure, they continue to classify certain diseases as incurable.

Mrs. Eddy first recognized the mental origin of the mortal body and of disease, then she perceived that disease could be healed through the power of divine Mind. She proved conclusively the correctness of her discovery by healing many cases of so-called incurable disease. In her writings she explains that it is through the realization of spiritual existence, of man's perfect existence as a spiritual idea of perfect infinite Mind, that true spiritual healing can be accomplished. It was through this spiritual realization that Mrs. Eddy did such remarkable healing work, and her followers can bring into their experiences success in healing sickness and sin only as they attain this spiritual realization in their own consciousness. Our Leader's teaching must be followed with exactness. It will not do to believe in the possibility of initiating the healing by the use of drugs or through any material means, nor can it be admitted that there is something real to be overcome, for such admissions, recognizing the existence of a power apart from infinite Mind, prevent the realization of Truth and its demonstration in the healing of disease. God being All, there is no matter, no other power, no other Mind.

Merely to repeat the absolute statements of Truth will not

Digitized by Google

cause us to reach the spiritual realization of Truth; we must so live that our consciousness may become permeated with the understanding of God, infinite Spirit. Truth will then radiate its light into the darkened places of mortal mind where wrong thinking has had its abode, and thus dispel all that is unlike the glory of reality. The healer, when thus endowed with spiritual power by right thinking and right living, is able to realize for his patient that man is spiritual, created in God's own image; and thus reflecting the harmony and immortality bestowed upon the sons of God, he cures his patient, saves him from the destructive beliefs of wrong thinking and wrong living. In "Miscellaneous Writings" (p. 185) Mrs. Eddy says: "Self-renunciation of all that constitutes a so-called material man, and the acknowledgment and achievement of his spiritual identity as the child of God, is Science that opens the very flood-gates of heaven; whence good flows into every avenue of being, cleansing mortals of all uncleanness, destroying all suffering, and demonstrating the true image and likeness. There is no other way under heaven whereby we can be saved, and man be clothed with might, majesty, and immortality."

Spiritual Offerings

OSCAR M. ANDERSON

People who attend the Wednesday evening meetings may be divided into two classes, namely, Scientists and non-Scientists. The non-Scientist is usually attracted more by that part of the meeting which consists of "experiences, testimonies, and remarks on Christian Science" (Manual, p. 122), and it is therefore well to consider the matter of testimonies from his point of view. The question as to what the testimonies in these meetings should be, is largely a matter of personal choice, and as the question is an important and oft-recurring one, it is worthy of the prayerful consideration of all. Here it may be said that Mrs. Eddy's letter to The Mother Church found on page 148 of "Miscellaneous Writings," indicates very clearly the nature of the offerings which students of Christian Science should bring to these meetings.

Sometimes the non-Scientist is impelled to go thither by mere curiosity, but he is more often there because he is the victim of some kind of disease or other trouble and hopes to get relief. He has heard what Christian Science has done for this one or that, and he hungers for a crumb of encouragement from some one who has been nourished by that "bread of life" for which he himself is starving. He longs to hear the personal experiences of those who have been healed. Tiresome and obscure theological discussions do not interest but rather tend to discourage him. He is looking for "the true Light, which lighteth every man that cometh into the world," and he yearns for a comforting word from those who have sought and found that light.

The living witnesses of benefits received from Christian Science are its mightiest champions, and the proof of this is apparent in every Wednesday evening meeting that is marked by prompt, brief, and earnest testimonies of actual healing. Tedious sermonizing, long waits, and doctrinal arguments are worse than useless, for they interest neither the Scientist nor the non-Scientist. The Scientist may get ample instruction from the writings of Mrs. Eddy and from accredited Christian Science literature and lectures. The non-Scientist does not want sermons, he wants personal assurance of the healing power of divine Love and inspiring thought about it, from those who have experienced it.

The Wednesday evening meetings should be a source of great blessing to all. They are not intended for the benefit of the non-Scientist alone; but since it is to these that the testimonial part of the meetings makes special appeal, the talks should be such as will inspire with new hope those who are struggling under the burden of error, and lead them to a higher and fuller faith in the saving power of omnipotent Love.

Desire

GUSTAVUS S. PAINE, PH.M.

Many a one who has turned to Christian Science has felt an instinctive satisfaction, a joyful sense of the reasonableness of Mrs. Eddy's statements, upon reading the very first page of the chapter on Prayer in the text-book, "Science and Health with Key to the Scriptures." As we read the words "Desire is prayer," we straightway rejoice in the simplicity of this fact, the simplicity of the fundamental requirement of Science. Perhaps all we have been able to do at this point has been to turn in seeming hopelessness; but here is something with a message for us,—"Desire is prayer,"—even though we have been praying without knowing how or why!

As one studies Christian Science more deeply, however, he asks himself, Why is it that "desire is prayer"? and sooner or later he reasons out the answer. Prayer is a turning to God, and unsatisfied desire is a sense of incompleteness. Mortal thought is ever incomplete, lacking enough to satisfy itself; and whenever it turns away from its seeming self at all, it must turn toward all there really is, God and His image and likeness. God is Love, and He is also intelligence, the infinite consciousness which is all we can prove truly to exist. This All-intelligence, constantly active and unfolding to us its limitlessness, is the one perfect whole which satisfies completely. Whenever the mortal sense of incompleteness turns away from self at all, it necessarily loses the sense of self and disappears in the presence of the completeness of God, good. Thus in studying Christian Science, the work of human sense, with all its seeming limitations, is just to strive to turn wholly toward loving intelligence and to lose self in the actuality of intelligent activity.

Could anything be simpler than Mrs. Eddy's statement that "desire is prayer," and yet could any statement be more pregnant with meaning? The desire for healing is merely the desire for the wholeness of right and normal activity, since disease is always a belief in either underactivity or overactivity. The desire for abundance is again only a turning toward the completeness which alone is plenty, and is to be found in the consciousness of good. The desire for the overcoming of sin is desire for the true satisfaction which is realized in the complete control that intelligence has over its infinite expression. Every one of these desires or prayers is fulfilled in human experience in proportion as one understands and applies Christian Science, which is indeed the expression of good for the benefit of all mankind. "But to understand God," Mrs. Eddy admonishes us, with her ever keen insight into the very heart of things (Science and Health, p. 8), "is the work of eternity, and demands absolute consecration of thought, energy, and desire."

So let it be. In God's own might
We gird us for the coming fight,
And, strong in Him whose cause is ours
In conflict with unholy powers,
We grasp the weapons He has given,—
The light, and truth, and love of heaven.

WHITTIER.

Selected Articles

[Charles W. J. Tennant in *Herts Advertiser and St. Albans Times*, England]

With regard to a critic's assertion that our Lord believed in the evidence of the corporeal senses because he said, "Behold my hands and my feet, that it is I myself: handle me, and see," this is certainly not borne out by Isaiah, who prophetically said that when the Saviour of the world should appear he would not judge after the seeing of the eyes nor after the hearing of the ears, but would judge righteous (correct) judgment. Jesus himself said, "Judge not according to the appearance, but judge righteous judgment," and he fulfilled this saying at the death-beds of many. Had he believed the testimony of the corporeal senses, he would never have said, "Loose him, and let him go," at the tomb of Lazarus.

Our critic remarks: "I do not deny that Christian Science effects cures, and possibly remarkable ones, but I do deny that such cures are peculiar to this system, or that its absurdities are necessary for their production. Its cures clearly rest on the well-established principle of suggestion." Such a statement shows as great an ignorance of that which heals in Christian Science as of the methods of suggestion. Christian Science healing results from the prayer of spiritual understanding; whereas suggestion arises from the belief that one human mind can influence another for good or evil. The two systems are very clearly contrasted by Jesus in the twelfth chapter of Matthew. A man was brought to him "possessed with a devil, blind, and dumb," and Jesus healed him. But when the Pharisees heard of it, they said, "This fellow doth not cast out devils, but by Beelzebub the prince of the devils." These Pharisees, not comprehending that it was through spiritual understanding that Jesus cast out the error, accused him of doing it through Beelzebub. Jesus then went on to show how impossible it was for a mind possessed of the knowledge of both good and evil to overcome evil, and said, "But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." Does our critic imagine that the kingdom of God has ever been brought into being by a suggestion of the human mind? St. James tells us that "the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him." This is the prayer of Christian Science, and it demonstrates the saying of our Master, "Ye shall know the truth, and the truth shall make you free."

Christian Science teaches emphatically that the Christ is the Son of God, and this includes his divinity. Jesus never called himself God, but he did say, "I and my Father are one," and "My Father is greater than I." This is quite comprehensible in Christian Science, in which God is divine Mind and the Christ the image and likeness of God, the divine idea. Jesus, referring to his spiritual selfhood, said he was "the way, the truth, and the life;" also, "Before Abraham was I am."

The climax of the critic's remarks is reached in the following statement: "But one denial alone is enough to stamp Mrs. Eddy's teaching as fundamentally unscriptural. She writes, 'Evil has no reality,' and again, 'Evil is but an illusion, . . . a false belief' (Science and Health, pp. 71, 480). Now, surely, if there is one thing that undeniably underlies the whole Bible from Genesis to Revelation, it is the awful reality of evil." If Mrs. Eddy has been unscriptural in denying the reality of evil, so has our Master. Just here let me quote his definition of evil. Referring to the devil, evil, he says: "He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Now, I ask, can that be real which has no truth in it? Does our critic not see that by upholding the reality of evil, he is thereby denying the allness or infinitude of God? Christian Science teaches that evil has to be recognized as a lie, a deception, the suppositious absence of good, and that it has to be overcome by knowing the allness of God, good, as the Bible teaches.

✧

[Frank Bell in *The Reading* (Pa.) *Eagle*]

Referring to an editorial from an American medical journal as quoted in a recent issue, the British committee of ten medical physicians and ten orthodox clergymen whose inquiry failed to convince them of the general efficacy of healing by spiritual means, is scarcely to be regarded as a wholly unprejudiced jury. Christian Science could hardly have come to be the great world-wide movement that it is today, if it had waited for the recognition and endorsement of adherents of systems in the light of whose theories the daily and hourly achievements of Christian Science are impossible.

In the report of the aforesaid committee it is admitted that the only testimony accepted was that which was based upon the conclusions of medical men, of whom it should be said that with all due respect to their sincerity of purpose, they might find it extremely difficult to discern a healing process which they were thoroughly convinced, in advance of their inquiry, had no existence in fact. An American medical publication need not have waited for England to produce twenty gentlemen of the clerical and medical professions who take no stock in that which they believe Christian Science to be. As many at least might have been found on this side of the Atlantic. It is pertinent also to observe that in a court of justice a juror whose opinion is found to be determined in advance of the hearing is not permitted to sit in the case, but no such rule appears to have been employed in the selection of this body of eminent professionals.

Fortunately the continued progress of the Christian Science movement is not dependent upon the endorsement of a self-appointed committee. The average lay citizen nowadays knows enough of what Christian Science has done for one or more individuals of his acquaintance to be fairly well convinced that he, too, may share its blessings whenever he is ready to meet the moral requirements that are inseparable from its successful application. That organic disease yields to this form of treatment as well as functional disorder is a matter of common knowledge, supported by abundant evidence of a character that could not be ignored by an open-minded observer. Forms of so-called faith-healing may be, as the committee inclines to believe, the effect of suggestion, but this has nothing to do with Christian Science, as any one would discover who tried by means of suggestion to duplicate the good work that is being accomplished by Christian Science.

The writer of the article above mentioned is mistaken in assuming that the question of the legality of Christian Science practice in New York has been finally determined against the Christian Scientist. On the contrary, the case is still pending in court. It is well known that the legislature did not intend the act to be construed as restricting the practice of Christian Science. In fact, as soon as a lower court had expressed the view that the act could be so construed, the legislature proceeded to repeal it. A governor who has not been reelected vetoed the repeal, giving as his reason not that it would legalize Christian Science practice, but that it might have other effects which he considered undesirable. The legislature

Digitized by Google

no doubt will find a way to carry out its twice expressed purpose to place the practice of Christian Science beyond the reach of interference. As a matter of fact, Christian Scientists are practising as freely in New York today as ever.

The statement that "it is insisted upon by the law" that no person shall practise any system of healing without having passed an examination in the medical system, is therefore not correct. Such a law would be in violation of the simplest of human rights, that of the free choice of means of relief in sickness or distress, and it would not be tolerated by the people of New York. As for the "danger" of the spread of "communicable disease," it will be time enough to talk of that when it ceases to be true that not a single epidemic has been laid at the door of Christian Science in all the years it has been practised throughout the world.

❖

[Robert S. Ross in *Ithaca* (N. Y.) *News*]

If reported correctly in a recent issue, our critic at one moment declares that Christian Science is not Christian, and the next moment that he does not deny that Christian Scientists are good people. In other words, our critic declares that what he assumes to be a corrupt tree can bring forth good fruit. This is what logicians term "loose reasoning." Jesus said, "By their fruits ye shall know them;" and James asked: "Doth a fountain send forth at the same place sweet water and bitter? Can the fig tree, my brethren, bear olive berries? either a vine, figs? so can no fountain both yield salt water and fresh." Christian Science makes people Christian because it is the unadulterated teaching of Christ Jesus, whose standard of measurement of Christian discipleship was one's ability to repeat the works that he did. But for the fact that religious history is a continuous record of the suffering of the so-called heterodox at the hands of the so-called orthodox, such untempered attacks on Christian Science by professed Christians would be unthinkable.

Christian Science gives answer to such attacks as that of our critic by industriously going about the Father's business of regenerating the sinner, healing the sick, and binding up the broken-hearted. Christian Scientists are preaching and practising a complete gospel, even while some professed Christians—themselves unable to do these "mighty works"—are accusing Christian Science of being unchristian. Jesus declared that he came to do the works of the Father, and among these works was the healing of the sick. If God were the author of sickness, Jesus would have been doing contrary to God's will in destroying sickness. If our critic attacks Christian Scientists for healing the sick, then he is attacking them for doing the very thing that Jesus declared his followers must do in order to prove that they understand his teachings.

The world in general believes that God is responsible for evil, and that evil is, therefore, real and indestructible. Christian Science, however, declares, in the words of the Scriptures, that God is "of purer eyes than to behold evil, and canst not look on iniquity." If God is good and the only creator, His creation must be filled with His goodness, and there is no room left for evil. Evil can therefore have only a suppositional existence, with power to control mankind in the exact ratio that mankind believe in the reality of a lie. In no other way than by stripping evil of its self-assumed power can evil be destroyed.

It is as impossible to scare a sinner into goodness by telling him he is going to hell, as it is to restore a sick person to health by telling him that he is going to die. On page 248 of Science and Health Mrs. Eddy tells us that in order for us to overcome evil in our lives "we must first turn our gaze in the right direction, and then walk that way. We must form perfect models in thought and look at them continually, or we shall never carve them out in grand and noble lives. Let unselfishness, goodness, mercy, justice, health, holiness, love —the kingdom of heaven—reign within us, and sin, disease, and death will diminish until they finally disappear."

❖

[John L. Rendall in *The Hopkinton* (Iowa) *Leader*]

My attention has been called to a booklet which has been circulated in your vicinity by an evangelist, and which presents a perverted and distorted interpretation of the teachings of Christian Science. I am also informed that this critic has taken occasion to preach against what he conceives Christian Science to be.

It is difficult for one who knows what Christian Science really teaches, to understand the reason for all this misdirected energy. It would seem to the casual observer that the same amount of effort expended in right directions would accomplish very much by way of good, whereas the sort of thing indulged in by the critic serves only to emphasize his ignorance of Christian Science, the study of which is at present engaging the respectful attention of hundreds of thousands of Christian people in this and other countries. The discussion of purely theological differences of opinion is vain and fruitless. There are more than one hundred and fifty denominations of the Christian religion, each based upon a real or fancied fundamental difference of belief. It stands to reason that the only power that can possibly overcome these differences of opinion, is the power of Truth, which is infinite and eternal, admitting of no variations.

In this connection, Mrs. Eddy states in "Science and Health with Key to the Scriptures" (p. 138): "Jesus established in the Christian era the precedent for all Christianity, theology, and healing. Christians are under as direct orders now, as they were then, to be Christlike, to possess the Christ-spirit, to follow the Christ-example, and to heal the sick as well as the sinning." And again on the same page: "Our Master said to every follower: 'Go ye into all the world, and preach the gospel to every creature! . . . Heal the sick! . . . Love thy neighbor as thyself!' It was this theology of Jesus which healed the sick and the sinning. It is his theology in this book and the spiritual meaning of this theology, which heals the sick and causes the wicked to 'forsake his way, and the unrighteous man his thoughts.' It was our Master's theology which the impious sought to destroy."

The theology of Christian Science, as above indicated, is identical with that of Jesus the Christ. Its precepts, followed, result in the overcoming of sin and in the healing of the sick. The results of its teachings are responsible for the growth and progress of the movement, and it is vain and foolish for any one to expect by fallacious argument or the intricacies of theological discussion to disturb, interfere with, or prevent the onward march of this Christian religious teaching, which has done and is doing so much for the betterment of humanity.

❖

[S. T. Downs in *News-Times*, South Bend, Ind.]

Those who have not given time and effort to a careful investigation of the teachings and practice of Christian Science, sometimes say things about it publicly, through their lack of information, that misrepresent it. This probably explains why the reverend gentleman in a sermon reported in a recent issue, included Christian Science among other things named by him as denying the fundamentals of the Bible.

Christian Science declares absolutely that God is the supreme and infinite creator; that man is, in reality, God's image and likeness; that the universe, including man, is gov-

Digitized by Google

erned by the law of God; and it finds this teaching in the very first chapter of the Bible. Christian Science insists that the Bible teaches spiritual law and spiritual fact, because God is Spirit, and "the true worshipers shall worship the Father in spirit and in truth," as Jesus said. It also insists that God is omnipresent, omnipotent, omniscient Truth, Life, and Love, and puts this teaching into practice. The Christian Science teaching regarding Christ Jesus is set forth very clearly in its fourth church tenet: "We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death" (Science and Health, p. 497).

It will be seen from the foregoing that, instead of denying the fundamentals of the Bible, Christian Science emphasizes them and makes them useful every day of our lives. It says to its critics, as did an early defender of the faith, "Show me thy faith without thy works, and I will show thee my faith by my works." Christian Science has healed all manner of sin and every disease known to mankind through divine Mind, the same Mind that was in Christ Jesus, and claims that these "signs following" are the testimony of its accurate interpretation and understanding of the Scriptures according to the test of understanding given by the Master, "He that believeth on me, the works that I do shall he do also."

✧

[W. D. Kilpatrick in *Detroit* (Mich.) *Times*]

An issue of recent date quotes Archdeacon —— of Grand Rapids as asserting that "the synod lacks a great asset which Christian Scientists possess, namely, well-directed advertising." He adds, "I believe that this accounts, in a large measure, for the wonderful growth of Christian Science."

Granting the speaker the best of motives and intentions, these statements are not in accord with the facts, undoubtedly due to misinformation, and I ask permission to make some corrections for the benefit of your readers. Exception must be taken to the reference to Christian Scientists as newspaper advertisers, also to the exploitation of Christian Science through motion pictures. Notice of their church services, and of lectures on Christian Science given under the auspices of the various churches, are inserted in newspapers, but outside of these notices and reports of lectures, printed solely at the discretion of the newspapers themselves, Christian Scientists do not resort to newspaper publicity in any manner whatever, except to make necessary corrections of misrepresentations and misstatements. Christian Scientists seek recognition in no other way than by the fruits of their efforts, and it is by no other means that this religion, in a few short years, has had so remarkable a growth throughout the world.

✧

[Engolfar in *The Ossining* (N. Y.) *Sentinel*]

Although Sing Sing prison has been for several years the furnisher of many columns of stories for the public press, stories which in some cases have been of great interest, though perhaps a trifle exaggerated either for political or other purposes, the writer did not remember ever to have seen in any of these stories the barest mention of religion, or of anything pertaining to religion. For this reason he had concluded that religion could scarcely find a foothold among the inmates of the prison. It was therefore with some surprise that the writer heard, while in conversation with one of the keepers at Sing Sing, that among a certain number of the inmates of this institution there had crept in a strong religious influence; that meetings were being held every Sunday in the chapel on the southern side of the prison, and that the prison officials were astonished by the numbers in attendance and the fervor and enthusiasm of the "boys." The writer's astonishment grew by bounds when he was finally given to understand that these services were being conducted by Christian Scientists,—two from the city of New York and one from the village of Ossining.

This information was amazing. Here was a religion—about which the average reader knows scarcely anything—established in an institution where one would hardly expect religion to show its head, an institution in which all classes of criminals are confined; and in such a place quiet and devout meetings were being held, conducted by Christian Scientists, and regularly attended by over a hundred and fifty of the gray-clad inmates, none of whom, it is said, were Christian Scientists when they entered the prison.

✧

[John W. Doorly in *The Yorkshire Telegraph and Star*, Sheffield, England]

In a recent issue I notice a small extract in your column "By the Way." In this column you make a kindly reference to the Christian Science lecture, but state that you consider that "the theory of the mental nature of evil would take a good deal of upholding just now." As a matter of fact, to any one who thinks for a moment, it is quite evident that the whole of the present condition is due entirely to wrong thinking. It is quite apparent also that had the nations all thought along the lines laid down by Jesus Christ, to love your neighbor as yourself, right ideals would have prevented the awful catastrophe which wrong thinking has brought upon humanity. Under such circumstances the Christian Science teaching that evil is wholly a result of wrong thinking and ignorance of God, does not take very much upholding at present.

Waymarks

MARY WHEELER

No shadow falls upon the ground
But points unto the sun;
No streamlet lies in frost-chains bound
But shall in summer run.

No discord jangles from the lute
But hints at harmony;
No desert stretches void and mute
But tells of sounding sea.

So ne'er a lie flaunts aping face
But counterfeits the truth;
So hate and strife but claim the place
Decreed to love and ruth.

So evil has but seeming sway,
And good is not in thrall;
So sense and finiteness give way
To Soul, the All-in-all.

E'en death can boast no victory,
The grave must yield its sting:
Life is,—enough this verity,—
Faith asks no surer wing.

And man, that seems to earth-blind eyes
So poor, an earthy clod,
Seen true, is heir of all the skies,
The very son of God.

Editorial

"In perfect peace"

RECENTLY we called attention to an editorial criticism by the *New York World* of an address delivered by a physician before a section of the American Association for the Advancement of Science, in which the speaker was quoted as saying that "when a man of active affairs feels an exuberance of health, and is able to accomplish a greatly increased amount of work without sense of fatigue, he is in danger and should consult a physician." More recently the *New York Evening Post* comments, in much the same strain of gentle ridicule as did the *World*, on a slightly different statement of the same medical contention, viz., "A man of active affairs is in danger when he loses the fatigue sense so that his capacity for work seems to be increased at fifty, when it ought to be the same or even less than in youth." We regret that our space will not permit us to reprint in full the *Post* editorial, but we quote in part as follows:—

Do you get eight hours of unbroken sleep every night? Do you rise refreshed and eager for the work of the day? Do you approach your meals with a pleasant sense of anticipation? Is your complexion clean and ruddy? Is your eye exceptionally clear? Are you capable of long stretches of hard application to your desk in time of emergency? Are you a stranger to the sense of fatigue? If any of these symptoms manifest themselves you had better see a doctor. For it is plain that one of the Subtler Ailments has got hold of you. Pitiful enough is the case of the man who must fight against pain and ill-health. Infinitely more pitiful, according to the Higher Medicine, is the victim of bouncing good health. Look about you at the men of fifty and over who work hard, sleep hard, eat well, and laugh loud and long; mark them carefully; they are sturdy, hearty, ruddy sepulchers, who have absorbed too many proteins. . . .

Is that the reason, after all, why Cæsar wanted fat and jocund men about him? He knew that if the worst came to worst, it was only a question of a few years when progressive hardening of the arteries would make a clean sweep of his well-fed retinue, whereas there was no telling how long his lean and hungry counselors would continue to be in the way.

It was high time that the searching scrutiny of an epoch which abhors appearances, which takes nothing for granted, which searches for the truth beneath the phenomenon, should be trained upon one of the most prevalent of our conventional lies, the lie of good health. That long array of hale and hearty fellows, florid invalids of a romantic literature, we know them now for what they were. Pickwick, probably the most pitiful arteriosclerotic in history; Wardle, Cheeryble, even Dan Peggotty—they now take their proper place as tragic examples of a wrong diagnosis. Sir Peter Teasle and Sir Roger de Coverley carry the sad tale back through Falstaff to Chaucer, who has unwittingly charted two shattering examples of arterial degeneration in the Canterbury miller and the Wife of Bath.

The most significant thing to us, however, about this whole incident is the extent to which the medical profession seems ready to go in frightening the public, so that for safety's sake, men, women, and children must be placed wholly and unquestioningly under the care of physicians during every hour of their mortal existence. It is time to wake up and realize that there is a very intimate connection between such statements as this physician has made and the statement of a committee of physicians who wrote, "Medicine as a livelihood has arrived at the most critical period of its existence. The economical status and outlook of the profession is nothing if not pitiful." This, if true, may explain in part the overweening anxiety for the public health which has been so much to the front the last few years.

Where is it all tending and where will it stop? It seemed as if the limit had been reached when the army and navy and the children of our public schools became economic factors in providing a livelihood for the profession of medicine. It is easy to foresee that unless a halt is soon called we shall have to face a house-to-house canvass and inspection. This attempt to frighten the men of affairs, the men and women who are doing the work of the world today, into a visit to a doctor and its consequent prescription and bill, is the next step to a wholesale inspection and condemnation.

It has been the experience of most of us to know of some one who has been plunged into despair through a medical diagnosis, and who under Christian Science treatment has found health and happiness and been able to take an active part in the world's affairs. Now not only these, but the able-bodied active workers who have almost never known a physical disability, must yield up their peace of mind to this latest dictum of the doctors, unless common sense comes to the rescue. "Life, liberty, and the pursuit of happiness," which surely includes health, are inalienable rights of mankind, and there is neither rhyme nor reason in any interference which would tend to destroy the peace of mind and body which is essential to the best work.

We have the highest authority for expecting to have strength and ability sufficient to do the world's work. Long ago Isaiah declared: "They that wait upon the Lord shall renew their strength: . . . they shall run, and not be weary; and they shall walk, and not faint." Speaking of the meaning of this passage, Mrs. Eddy writes (Science and Health, p. 218) that it "is not perverted by applying it literally to moments of fatigue, for the moral and physical are as one in their results." Let us be glad and rejoice then, rather than fear, first because we have abounding health, and second because we know how to keep well without recourse to anything other than the truth that makes free from every phase of error. "Thou wilt keep him in perfect peace," said the prophet, "whose mind is stayed on thee: because he trusteth in thee."

ARCHIBALD MCLELLAN.

❖

Sacraments

THOSE who attend the Christian Science services will note that the sacrament is observed without the material elements of bread and wine which are used in most of the other Christian churches. Its observance in Christian Science is explained by Mrs. Eddy on page 35 of Science and Health, where she says, "Our Eucharist is spiritual communion with the one God." On the same page she says, "Our baptism is a purification from all error."

These statements will answer, at least in part, the sincere inquirer who may assume that there are no sacraments in the Christian Science church, but he will find a fuller explanation of the subject in the Lesson-Sermon called "Sacrament." Here he will see how human thought has been gently led through the long night of materialism, by various symbolic observances, up to the clearer perception of the truths which these rites were intended to typify. It may be said that other religions than the Christian have had their sacraments, all of which point to the one necessity of all men, namely, to reach out for God, "if haply they might . . . find him, though he be not far from every one of us." Paul said this, and he touched the vital truth which gives the real reason for this reaching out when he added, "For in him we live, and move, and have our being." He did not hesitate to give a further reason for this divine quest, when he quoted the Greek poet who said, "For we are also his offspring."

It does not seem that Christ Jesus intended to establish any outward ritual in place of the ceremonies and sacrifices of the Jewish church which were passing away, because like all law based upon a material sense of things, they "made nothing perfect," as we read in the epistle to the Hebrews, where it is added, "but the bringing in of a better hope did; by the which we draw nigh unto God." The Christian Scientist has learned by actual experience that it is not enough to draw nigh to God for a few moments of deep religious feeling, inspired

Digitized by Google

largely by the thought of Jesus' betrayal and crucifixion. He finds that he must be baptized of the Holy Spirit, and so guard each thought, word, and deed in daily living that he shall not himself betray his Master for any price that the world or the flesh can offer. To do this he must realize the uplifting influence of silent and ceaseless communion with the infinite Mind, our Father in heaven.

There are of course many Christian people who insist that Jesus permitted his disciples to baptize, though he himself did not, and that he established the rite which came to be known as the Lord's supper. It is possible that Jesus may have known that his followers were not ready to give up all symbolism in religion, and for this reason he may have permitted them to adopt the simple rites of baptism and the Lord's supper, although Paul says, "Christ sent me not to baptize, but to preach the gospel." Christ Jesus found in all the things about him object-lessons which helped to lift thought, even though it were slowly, to the apprehension of spiritual ideas. The washing of the disciples' feet, recorded in the thirteenth chapter of John, is a marked instance of this kind of teaching, and there are several Christian sects that practise it as a sacramental rite, for which there is at least as much authority as for baptism and the Lord's supper.

What Christ Jesus did most urgently command, namely the continuance of his own healing ministry, until sin, sickness, sorrow, and death were forever destroyed, has been sadly overlooked by the Christian church since the earlier centuries of its history; but today, thanks to Mrs. Eddy's inspired teaching, it is going steadily forward. Doubt and denial on the part of religionists count for very little when men and women of standing avow firm faith in Christ's teachings because of their own healing in Christian Science. As to sacraments, these take on a higher meaning for us as we ponder the words of our text-book in the chapter on Atonement and Eucharist, especially lines 10 to 29 on page 35. Here we learn the necessity for daily partaking of the bread "which cometh down from heaven," and drinking of that wine which is "the inspiration of Love, the draught our Master drank and commended to his followers."

ANNIE M. KNOTT.

"Whom Satan hath bound"

EVERY question of correction or improvement is, or ought to be, a question of cause and effect. The effort to remove an ill condition without paying any attention to that which occasions it, is a manifest folly, in which it is hardly to be expected that intelligent people would be interested, since, as they know, superficial endeavor in any line cannot possibly yield valuable returns. How many failures of well-intentioned efforts in all the years find their full explanation in the fact that they have been devoted to the attempted remedying of effects, the amelioration of human ills, rather than to the removal of the cause of these ills! and it is this fact which gives such pertinence to the emphasis laid by the Founder of Christian Science, in all her teaching, upon the subject of causation.

In the story narrated in the thirteenth chapter of Luke, Christ Jesus declared the woman's pitiful state to be the result of the activity of evil, Satan, whom upon another occasion he named "a liar, and the father of it." He thus affirmed that falsity was immediately responsible for this human ill, and no one can fail to see that this could have come about only through the deception of human sense, and that the false belief which thus empowers untruth, which gives it efficiency in this way, can be corrected only by that demonstration of truth which makes the retention of this belief no longer possible. This is illustrated a hundred times in every schoolroom, every day. It is a matter of fact and of good common sense which nobody can question; and yet the teaching of Christian Science seems to have proved an offense to many Christian people because it insists upon the wisdom of being governed by this simple logic in our thought of the nature of sickness, and of the proper way to heal it.

It is not so difficult to explain how the thought of the early Christians was led astray regarding this matter, as it is to explain how intelligent Christians can fail to respond to the elemental sanity of the Christian Science point of view when the subject is brought to their attention today. Their attitude becomes the more surprising when it is remembered that the church has always declared sin to be the occasion of all disharmony, and accepted Jesus' statement that truth-knowing is the gateway to freedom. The utter incongruity of this doubting-Thomas, self-contradictory state of mind is rapidly dawning upon general thought.

That the doctrine of material evolution, which regards man as a product of a physical order whose every cycle includes decay and death, has had much to do with the prevailing sense of the inevitability if not the naturalness of sickness, is no doubt true. Yet the effort to escape from sickness upon the part of Christian believers is continuous, and the query why they should not be loyal to Christ Jesus' philosophy respecting the right way to accomplish this end, remains a matter of ever-increasing surprise.

He who accepts the material order as divine, and who, disbelieving in the possibility of its annulment, affirms that the so-called miracle of spiritual healing never has been and never can be accomplished, is at least consistent. The man, however, who accepts the verity of the Scripture statements respecting the healing of disease, who avers that sin is the cause of sickness and yet quite ignores these concessions in his efforts to find freedom for himself and others from it,—this man, and his name is legion, is maintaining such a palpably inconsistent position that its untenability must become more and more apparent every day. The antagonistic attitude of some Christian believers toward Christian Science is the more inexcusable, because of the fact that it is concededly accomplishing with such marked success that healing work to which the life of the Master was ever devoted.

JOHN B. WILLIS.

❖

Correction

In the Lesson-Sermon for April 18 the verses given in the first Bible reference were accidentally transposed. The reference should read: (1) Ex. 29:36, 42, 45.

Among the Churches

Current Notes

CITY AND COUNTY OF DENVER, COL.—A summary of the work of the distribution committee for the past year shows that there were distributed: 36,252 *Monitors* (besides 4,928 sold by street salesmen), 2,665 *Sentinels*, 142 *Journals*, 125 *Heralds;* also 7 copies of Science and Health, 11 of "The First Church of Christ, Scientist, and Miscellany," 1 of "The Life of Mary Baker Eddy" by Sibyl Wilbur, 3 of "Miscellaneous Writings," and 6,616 other periodicals with Christian Science articles, making a total of 50,745 pieces.

Committee for Distribution of Literature.

BERKELEY, CAL.—So great is the increase in membership in First and Second Churches of Christ, Scientist, that a third church is to be founded by members of the denomination living in the Claremont district.—*San Francisco Examiner.*

Digitized by Google

WASHINGTON, PA.—During 1914 the publication committee distributed 804 *Monitors*, 320 *Sentinels*, 44 *Journals*, 12 *Heralds*, 252 papers containing articles with kindly reference to Christian Science, 15 pamphlets, and 14 *Quarterlies*, making a total of 1,461. Literature is left regularly on the public tables of two hotels, at a public boarding-house, and at a centrally located barber shop. Also much literature is mailed to interested persons and to those kindly disposed toward Christian Science.—*Correspondence.*

SPRINGFIELD, MO.—A site for the new church to be erected by First Church of Christ, Scientist, was acquired yesterday [Nov. 14] when trustees for the church organization closed a deal purchasing a lot owned by Mrs. Mary L. Hoy, almost opposite the Springfield public library on Center street.

Springfield Republican.

GREELEY, COL.—First Church of Christ, Scientist, has purchased the old home property belonging to W. J. Farr, at Tenth street and Eleventh avenue. This corner is one of the most desirable locations in the city. It is the intention to erect a church building later.—*The Tribune-Republican.*

MIAMI, OKLA.—The first service in the new edifice of First Church of Christ, Scientist, on the corner of Second and Olive streets, was held on Sunday, Dec. 20. The church is built of brick and cement, and seats one hundred and twenty-five people.—*Correspondence.*

The Lectures

Golden, Col.

A lecture on Christian Science was given in the Golden Opera House. The lecturer, William R. Rathvon, was introduced by Ezra W. Palmer, Christian Science state committee on publication, who said in part:—

For centuries the Christian world has believed that God is sufficient for the complete salvation of men, to save them from sin, sickness, and death. Contrary to the teachings of Jesus, Christians have believed that this saving power of God is not fully practicable here and now, but can be realized only in some far-off hereafter. Christian Science brings a message of the all-sufficiency of divine Love to heal and save men at the present time. It emphasizes and reiterates the works and words of Jesus, who destroyed sin, sickness, and death by the power of God.—*Correspondence.*

❖

Hartford, Conn.

On the occasion of the lecture on Christian Science for Second Church by Jacob S. Shield, the church edifice was filled to its capacity with an audience of one thousand. The introductory remarks were made by the Hon. Herbert Knox Smith, former United States commissioner of corporations, who spoke as follows:—

There is but one honest mental attitude that is unpardonable,—when man, finite man, rises from the dust and says, I know, and I only, all the ways and purposes of God. Therefore, when sober, sane men and women, who like the Christian Scientists prove their faith by their conduct, come before you with a message dealing with the issues of life, there is but one way to meet it, and that is to listen.

It was characteristic of Christian Science to invite me, who am not a Christian Scientist, to preside at this meeting. It assumed that whatever my own view of the truth may be, I am willing fairly to listen to others. It appeals thus to the one spirit that will advance humanity, the willingness to perceive the truth. To know, to understand, to learn from other men and of other men, is our only hope in this life. I have spent many of my years in those areas of storm where men strive to interpret and enforce in government the wishes of the great people, and the only clear path through that turmoil is the earnest desire to gain the other man's knowledge. We of this generation and this hour are having this driven home upon us in one of the climaxes of history, for tonight as we sit here, in northern France under the search-lights men by the millions are hunting each others' lives because each sees only one side, his own little side, of the interests of mankind. To listen, to learn, to receive the truth from all men,—there, and there only, lies the advance of our race.

Correspondence.

❖

Evanston, Ill.

Ernest H. Lyons, in introducing Bicknell Young, who lectured on Christian Science, said:—

Christian Science is indeed a religion of promise, and also of fulfilment. It is proven beyond question that those who with sincerity and love seek to apply its teachings practically to the conditions of their daily lives, have found health, peace, prosperity, and spiritual growth as results. Christ Jesus made this affirmation to encourage mankind in following his example and in explanation of the source of his healing power: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Recognizing that the Master did go to the Father for the intelligence and understanding which healed and uplifted humanity, Christian Scientists are turning confidently to the same infinite source, and are doing so with more happiness as they perceive the certain good result of this recognition of the divine. Christian Science teaches a direct, normal, and exact method of thinking which is easily understood.—*Correspondence.*

❖

Racine, Wis.

A large and cultured audience assembled at Guild Hall and listened to a lecture on Christian Science, entitled "God is Love," by George Shaw Cook. The speaker was introduced by Leslie M. Fowler, who said in part:—

We are here tonight to listen to an address on a subject that has attracted wide attention for a half century: to hear expounded a doctrine predicated, as I understand, on infinite Love. Even the casual observer of Christian Science cannot but be impressed with the type of people whom this doctrine attracts, as well as with the attitude of its adherents toward their fellow men. Is it not fitting, therefore, particularly in these days of abnormal fear and uncertainty, when at times it seems that the ideals of civilization have been wholly lost sight of by an entire continent and the effects of this turmoil are felt the world over, that we should willingly and seriously consider the proposition of these people who tell us that "divine Love always has met and always will meet every human need" (Science and Health, p. 494)?

Is it not a privilege for us to learn of an interpretation of the divine law which thousands of the best minds of the world assure us will eventually produce that perfect state of peace and harmony which we all long for but despair of ever attaining? Christian Scientists tell us that their religion, properly demonstrated, will eliminate fear, poverty, disease, crime,

Digitized by Google

and vice; in fact, every form of sin and discord. This assurance comes from people of exceptional mentality and unquestioned integrity, who have proven for themselves the efficacy of their religion, and for this, if for no other reason, we cannot consistently disregard it.

Racine Journal News.

❖

Newton, Mass.

A large audience listened to the lecture of Virgil O. Strickler on Christian Science at Players' Hall, evidencing the interest taken in this subject by Newton and Waltham people. The lecturer was introduced by George H. Moore, first reader, as follows:—

The teachings of Christian Science have brought to the world a renewal and a restatement of the gospel of "The Prince of Peace." Its message should be doubly welcome at this time, if for no other reason than that Christian Science has become one of the most vital influences for the ultimate peace and unity of mankind that the world has yet seen. The attack of Christian Science is directed against the very foundations of human discord; it is displacing the spirit of intolerance and hate, of strife and bitterness and fear from the hearts of men, and is substituting therefor an intelligent confidence in the overruling power of divine Principle. Christian Science is thereby not only enabling men to live at peace with God and their fellows, but what is even more significant, it qualifies man to live at peace with himself.

The Newton Graphic.

❖

Kansas City, Mo.

In presenting the Hon. Clarence A. Buskirk, who lectured on Christian Science for Fourth Church, Z. R. Moorman said in part:—

Doubtless all of you will recall the parable of the woman who recovered her lost treasure through lighting a candle and sweeping her house, and how her first impulse was to call in all her neighbors to rejoice with her. Thus Christian Scientists, having illumined their mental houses with a clearer understanding of Truth and having swept away some of the accumulated rubbish of wrong thinking, are bringing to light again a long lost treasure,—the Christianly scientific method for the healing of sickness and sin,—and their natural impulse is to call in their neighbors, as we have been called here today, to hear the good news and to rejoice with them.

Christian Science has been called by some a new religion; but it is not new in fundamentals, since its tenets and teachings are founded purely and absolutely on the teachings and practices of Christ Jesus. You will not hear anything from this rostrum which conflicts with the words and deeds of the lowly Nazarene. Two thousand years ago Jesus of Nazareth saw the truth concerning man's relationship to God and to his fellow men. He gave this truth to the world, and men have been made free and happy and helpful to the extent that they have known and demonstrated this truth. In this our day a woman communed with the infinite, and made known to the world what she saw of the truth of life and existence.—*Correspondence.*

❖

Janesville, Wis.

Clarence W. Chadwick, who lectured on Christian Science, was introduced by Marshall Pease Richardson, whose remarks were in part as follows:—

The increasing demand for the utilization of power latent in Christian religion for the betterment and uplift of the human race, together with a realization by more and more of the people of this country that Christian Science is utilizing this latent power, causes many who feel some lack or want, be it physical, mental, moral, or spiritual, to turn to Christian Science—to its text-book, "Science and Health with Key to the Scriptures," and the other writings of our Leader, Mrs. Eddy, or to those who have espoused this cause—for information as to how they can get the help which they are persuaded their Christian Science friends have received. As to the Word of God, Christian Science is not and can not be any respecter of persons. All alike can benefit from its teachings, if with an open mind they receive what it has to give.—*Correspondence.*

Testimonies of Healing

[Translated from the German]

It is with a deep sense of gratitude that I testify to the many blessings which I have received through Christian Science. Four and a half years ago I became acquainted with its teachings, and was soon convinced that I had found the one thing needful. Until then I had lacked the proper concept of God, and man created in His image and likeness. My life having been largely an experience of suffering, I was of the opinion that this was in conformity with God's will. Christian Science taught me differently, and an opportunity was afforded me to test its truth five weeks later, in the case of severe toothache. After five months I was able to lay aside spectacles which I had used for twenty-seven years, and the trouble has been almost completely overcome.

I suffered with an affection of the throat for about the same length of time. It would manifest itself every year at different times, and often interfere with my activities. The physicians held various opinions regarding the trouble, although the accompanying symptoms were always the same. Then I was advised to have the tonsils removed. Seventeen years ago I submitted to a minor but premature operation, the result of which was that the trouble broke out externally on the throat. The physician under whose care I was, stated that there was a tubercular condition, and his verdict made me feel sick of life, for this was a disease which I greatly feared. This state of mind lasted until another physician diagnosed the case as scrofula, and thus I experienced the suffering caused by a mistaken diagnosis. Although the wound healed, the throat trouble appeared again internally the following year, and my application to an insurance company was refused on account of the first verdict.

Last summer, during a stay in my former home, I was led to experience the power of Truth with regard to the above case. After having been free from the trouble for several years, I had a return of it with all the accompanying symptoms. Fear, and the thought of my former suffering, weakened my attempts to work in Christian Science in my own behalf. I therefore wrote to my relatives, and they applied for treatment for me, which was taken up absently. The next day there was an improvement, and on the following morning I was perfectly free and able to take a short trip.

It would be impossible for me to put into words all that Christian Science has brought to me and my family, but it shall be my endeavor to gain more and more understanding of the truth which makes free. I praise God, and am filled with joy and gratitude for Mrs. Eddy's discovery of this healing Science.—Wilhelm Voss, Berlin, Germany.

✧

I wish to testify to the efficacy of Christian Science healing as proven to me in the spring of 1912, when I was healed of an abscess which had formed in my gums and cheek. All through the spring I was troubled every two or three weeks with a swelling which would last a couple of days and then subside. Finally an abscess formed and became very painful, while my face was so swollen that I could not close my mouth. I had become interested in Christian Science a short time before, and I declared the truth to the best of my understanding, but I did not seem to get any better. All through the night I suffered intensely and was unable to sleep. By morning there was no apparent change, though the pain was less severe, and through fear that I would have to spend another such miserable night I telephoned for absent treatment in the evening, with the result that the pain began to lessen and I went to sleep and slept soundly till morning, when I found that the abscess had opened and the swelling had gone down considerably. There was absolutely no pain, and in three days I was entirely healed.

Though I am only a beginner in the understanding of Christian Science, I have been able to banish such minor ills as headaches, burns, fatigue. There are still many wrong habits of thought to be corrected and erroneous beliefs to be eradicated, but I am confident that I have found the way, and with the goal ever in view I shall strive for the Christ-mind, where Spirit is enthroned, and where sin, sickness, and death are unknown. I am indeed grateful for the knowledge of a God who is omnipotent good, Life, Truth, and Love unchangeable.—Eva Petersen, Billings, Mont.

✧

I wish to express my gratitude for what Christian Science has done for me, and especially for our little boy. He seemed to have what is called "ringworm" on his face. I declared the truth to the best of my understanding, and the eruption would seem better for a while, then it would spread again, until several people said if I did not use material means it would spread all over the child's face. Finally I thought it best to call on a Christian Science practitioner, and she most kindly helped us to hold to the truth, and by doing so the eruption disappeared without spreading any more. I feel thankful that the truth was proved again, not only to me but to others. This is but one of the many blessings I and my family have received through Christian Science.—Mrs. W. S. Cleghorn, Gaza, Iowa.

✧

It is with a thankful heart that I write this testimony, in the hope that it may reach some one as a ray of sunshine, which puts forth its beam into a seemingly dismal room and makes one realize that there is indeed a world of light. For six years I had been miserable in both mind and body. Under one doctor's advice I had the appendix removed, while under another there was a more serious operation. One doctor would decide this and another that to be the cause of my nervousness and ill health. My husband finally grew discouraged, for everything seemed wrong and I was filled with fear. At last he decided to sell out his business, and we came, with our two children, to California. I was so weak after we arrived that I often had fainting spells and night sweats. Although we had two doctors, I thought I was going to die, and my husband called in a neighbor, who asked me if I had ever heard of Christian Science. As all else had failed, I had little hope, but we called a practitioner. I remember how dismal the day was, indoors and out. It was the rainy season in California, and we were having the heaviest rain for years, but the practitioner came with such a cheerful face. She said very little, but gave me a treatment. Her mere presence seemed to soothe, and I fell asleep.

I awoke in the morning wonderfully better, and under her care grew stronger, but I did not come to realize my natural gift of health from God until a month later, when I was taken very sick again. The practitioner came during the night, treated me, and said I would be all right in the morning, and I was, for I got up and went out of doors. About noon I came in and examined my throat, using a hand mirror, and when I saw the evidence, fear came over me so strongly that I fell on the floor in a faint. When I came to, I telephoned to the practitioner and asked if I had not better see a doctor. She said certainly, if I felt that way, but that she would be obliged to give up the case. I stood, figuratively speaking, at the fork of the road, not knowing which way to go. I then took up Science and Health and began to read. The way

Digitized by Google

was decided, and how plain it all was,—"Thou shalt have no other gods before me," "I am the way, the truth, and the life." By the help of Christian Science and through the goodness of God I was healed, and today the peace that "passeth all understanding," for which I had tried in vain through material sources, blesses our home.

I am indeed thankful to our heavenly Father, divine Love, for my healing, and grateful to Mrs. Eddy for so lovingly and obediently doing His will that we might receive this blessed truth.—GRACE M. CAMPBELL, Hermosa Beach, Cal.

✧

I am glad to testify to the wonderful transformation that has taken place in my life through the healing and saving truth as taught in Science and Health. About Sept. 1, 1910, I was healed of nervous and stomach trouble, and a serious intestinal difficulty of ten years' standing, after exhausting the methods of *materia medica* and dietetic theories. Fear, despair, temper, and hopelessness were paramount. I was practically at the end of the coil of mortal existence, and I cried out in my extremity that I would accept anything which promised relief. At this period Christian Science was brought to me, and I sought a practitioner who gave me treatment. I had never read the Bible or even touched it, but the practitioner loaned me one, and eventually I borrowed a copy of Science and Health and was shown how to study the Lesson-Sermon. After the first treatment I could eat anything I wished, and have done so ever since. Many ailments have been destroyed, such as colds, headaches, etc.

The year after my healing I met with an accident,—was dragged by a trolley car several feet, and sustained a severe injury to both foot and ankle. My wife called for help from the practitioner, and I was able to go to business the next day. While I am grateful for the physical healing, it is nothing to be compared with the joy and peace which the knowledge of the truth has brought to me.

JOHN SCHUBERT, Newark, N. J.

✧

We have had many wonderful experiences and seen many demonstrations of the healing power of divine Love as taught in Christian Science during the past seven years, for which we thought we were very grateful. We have now experienced the protecting and healing power of Truth, whereby our sense of gratitude has been really awakened.

On Aug. 1, 1913, our boy, fifteen and a half years old, was run over by an ice wagon weighing thirty-seven hundred pounds. The front wheel passed over his foot and the back wheel went diagonally from his right hip across his chest and over his left shoulder. He was taken to the hospital in an ambulance, and the doctors said that practically every bone above the hips was broken or dislocated. We telephoned to a Christian Science practitioner, who gave absent treatment immediately. An attempt was made to get a practitioner who could come to the hospital, but it was eight hours after the accident had occurred before he came, and even then he did not see the patient. In the mean time one or two more treatments had been given by the first practitioner and his wife. The hospital authorities asked permission to operate, but this was repeatedly refused, because we were confident that God is all-power. Only absent treatments were given.

On the third day an X-ray picture failed to show the slightest sign of a fracture. On the eleventh day the boy was taken out of the hospital and examined by a specialist, who found no evidence of a fracture except a slight injury to the left collar-bone, which he said was of no consequence, as it would heal where it was in a few weeks and be as good as ever. Six weeks after the occurrence the boy was away on a vacation and preparing to resume work. He felt no ill effects, and is today strong and healthy. Words are inadequate to express our gratitude. We are in the position of the blind man healed by Jesus, who said, "One thing I know, that, whereas I was blind, now I see."

MRS. W. F. WILLIAMS, New York, N. Y.

✧

I send this testimony with a thankful heart and a deep sense of gratitude. I did not come to Christian Science through the healing of a serious disorder, but I have been healed of many minor ills since I began its study. Through its teachings as set forth in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have received many blessings. At both the Wednesday evening meetings and the Sunday services I have received much benefit, and I am thankful to God for the help and the understanding I have gained. I am also very grateful for our Christian Science literature; it is indeed uplifting, and teaches us to know how to think. Many times I have been lifted out of a sense of gloom into man's rightful inheritance of joy and peace. If we follow our Leader's admonition to watch and pray, we will always have the joy and peace "which passeth all understanding."

I thank those who have helped me so kindly, and I am very grateful that there was one pure enough and patient enough to reveal this truth to the world. It was through Mrs. Eddy's diligent work and untiring Christian faith that she was enabled to receive the understanding of the Bible and demonstrate God's omnipotent power and love.

EMMA HAUSEN, Chicago, Ill.

✧

I wish to express my gratitude for all that Christian Science has done for me. When this healing truth found me, I was not expected to live much longer, as I was failing fast. I had been under the doctor's care for two months when he said that I should be taken home and given plenty of fresh air and nourishing food, and if I did not improve a little I would have to be operated on. He said, however, that he was afraid to operate owing to my condition, and that I stood only one chance out of a thousand of recovering, for I had a large internal ulcer and other very serious symptoms. I could walk only a few steps without increasing the fever, and the doctor said all the abdominal organs were inflamed. I also had bowel trouble, and was taking several different kinds of medicine, besides using other material means; but there was no improvement.

Christian Science found me in this condition. I was entirely healed in three weeks' treatment from a faithful practitioner, and am a well and happy woman today. My skin, which had been sallow ever since I was a child, is now clear and white as it should be. I thank God, and am grateful to Mrs. Eddy for all that Christian Science has done and is doing for me. I have a little boy four years old who has had many beautiful demonstrations. My baby girl, now one year and three months old, has never tasted a drop of medicine, and is well and happy. I enjoy the Lesson-Sermon each day, and am very thankful for Science and Health, which is indeed the key to the Bible.

EMILIE HOLZ, Kapowsin, Wash.

✧

During the four years since I came into Christian Science, I have had much for which to be thankful. Although at times the way has seemed very dark, Truth has on each occasion cleared away all the clouds. When first coming into Christian Science I was taken with what seemed a bad attack of bronchitis. My condition was such that it seemed impossible to

Digitized by Google

put into practice even the little of its teachings that I knew at the time, and after sending for a practitioner to come and treat me I lay in bed, fearing that I would not be able to bear her talking to me; but in place of all this, a calm and peace came over me which at the time I did not understand. I can now see that the practitioner came with such loving and pure thought, and was able to realize the truth so clearly that I was healed then. I was able to get up the next morning, well!

My heart indeed rejoices, and I thank God most fervently when I think how on a previous occasion I was laid up for weeks with the same ailment. This year again it tried to present itself, and was overcome in Science but not so quickly, although I was not prevented from attending to my daily duties. It is not until we ponder and go back over our many blessings that we find how much one really has for which to be thankful.

On another occasion I was taken with what seemed an attack of lumbago, keeping me in bed nearly all Sunday, quite unable to turn on the one side. I however worked steadily on, declaring the truth, until the next morning came when I had to get up and go to my business. I knew I could only do this in one way, so I arose knowing that God was my strength and nothing could impede the action of truth. At first I found walking a little difficult, but as the day advanced I felt nothing of it. This was a tremendous help to me for I found if I held firmly to the truth no matter what the physical condition seemed to present, health, strength, perfect action were there all the time; it was only for us to see and to know. I have not given my thanks publicly before, so my heart rejoices now in sending this testimony. My thanks go out to our loving Father, God, and to Mrs. Eddy, who has brought us this practical knowledge.

Frances M. Page, Southgate N., England.

It is with deep gratitude and a sense of a great privilege that I go over and try to count the many blessings which have come to me from the understanding I now have of God, through the teaching of Christian Science.

I have been healed of many ailments, among them severe headaches, which, before I came into Christian Science, meant keeping my own room the whole day. These were healed almost instantaneously through the loving help of a practitioner; also colds and chest troubles have been quickly overcome. But I appreciate more than I can express the wonderful healing I have had of three attacks of influenza, the illness each time being almost instantaneously healed.

For all this, I am very thankful, and my gratitude goes out to Mrs. Eddy, through whom this wonderful truth was given us. My fervent prayer is for more understanding of God so that I shall be able to help others.

Rose Page, Southgate N., England.

✦

When Christian Science was brought to me, it was like a ray of sunshine upon a dark sky. I had been a sufferer from appendicitis and other troubles for several years. An operation was fought off as long as it could be, but in June, 1910, I had to submit to it, that being the only remedy of which we then knew. I expected to be well and strong in at least three months, but I was sadly mistaken, for I was under the doctor's care continuously for eleven months, yet did not gain; in fact, I became a nervous wreck. Christian Science had been mentioned to me, but so many objections were raised that I did not try it until my relatives were convinced that the doctors could not help me. It was then I sought a practitioner. I began to improve after the first treatment, and in three weeks was healed. I had always been troubled with bowel disorder and severe headaches, but now I am free from both these ills also.

For all these blessings I am truly grateful, but even more so for the promise, "Ye shall know the truth, and the truth shall make you free." My healing has been permanent, and I have always found Christian Science to be a present help whenever any discordant thought arises.

Mrs. Arch Winton, Indianapolis, Ind.

✦

From my appearance today, no one would consider that I had once been sickly and delicate. For several years material remedies were constantly used, both internally and externally, but my condition seemed no better. My mother had a beautiful healing in Christian Science, and therefore I thought that if it could cure in one case, it would in another; and it did, for from that day to this I have been robust and well. At first there was only blind belief in this power of good, but I determined to gain in understanding and know the workings of Truth. After conscientious study it became clear that God cares for us, and therefore we may trust in Him always. With this new confidence came the overcoming of fears that held me in bondage. I was afraid of insects, afraid of robbers, afraid of disease, and the very fear seemed to attract the dreaded objects. Only those who have been thus liberated from fear can understand my deep sense of gratitude.

Best of all, however, is the knowledge that we can apply this Principle to work out our every problem, and that we finally come to know that peace "which passeth all understanding." I deem it a privilege to be living in this day and age, when through the prayerful efforts of a good woman the works of the greatest teacher the world has known have been brought to light, and made the basis for a practical Christianity. I am truly thankful to God, and grateful to Mrs. Eddy.—Myrtle Birnbaum, Los Angeles, Cal.

✦

My heart is so filled with gladness for what Christian Science has done for me that I want to express something of my joy in words. I was healed in Christian Science after seven years of suffering. I had been under the care of six different physicians, including a number of specialists, but they failed to cure me. How well I remember the last treatment I took under *materia medica!* After saying to the specialist, as I had said to all the rest of the doctors, that he had failed to do for me what he claimed he could do, I left his office downhearted and discouraged. As I walked slowly up the street, wondering if there was anything in this world that I could do or take that would help me, the thought came to me that the Christian Scientists had reading-rooms near by, and I would look them up and see what kind of people they were. I had heard a little about them through my wife, who had tried to get me to read some literature which friends had given her for me, but which I would glance at and then toss aside with some uncomplimentary remark.

On entering the rooms I was met by a lady who asked me kindly if there was anything they could do for me. I said I guessed not; that if they could do anything, it would be more than anybody else had done. She looked at me, and then said that nothing is impossible with God. I shall never forget the way she said this; it set me thinking about something which I had never thought much about, and that was, what our heavenly Father can do for us. I sat down, and a gentleman from Kansas City talked with me a little while and gave me a card to one of the workers here in Denver. I went to see her, and she lovingly talked with me about God. I realize now that He came into my life then.

Digitized by Google

This practitioner was so busy just then, she said I would have to wait a few days if I wanted her to help me, but if I did not choose to wait,—and I think she saw I did not,—she would call up a friend and see if she could help me. Accordingly I made an engagement with her friend for that evening, and began treatment at once, with the result that I was healed of chronic stomach trouble in its last stages, also of rheumatism of many years' standing. The fear of paralysis, of which I had a stroke while under the care of two physicians, the tobacco habit of thirty years' standing, together with profanity, left me without any effort on my part. My healing, which took place eleven years ago, has been permanent. Not one day has passed since then that I have not been able to perform whatever duties have come to me.

Words cannot express my gratitude for all the blessings I have received through Christian Science. I thank God and acknowledge His allness every day of my life. May the sunshine that is in my heart reflect joy and gladness to all, and increase their affections, and may the love, joy, and gladness left to the world by our dear Leader live forever.

D. W. Paine, Denver, Col.

❖

It is with pleasure that I tell of what Christian Science has done for us. Three years ago last June my father was fixing a belt on a line shaft, when his sleeve became entangled in the set screw of a fly-wheel going at the rate of one hundred and thirty-five revolutions a minute. He had been on the shaft about twenty minutes when I found him. His clothes were torn off to his waist and his body was terribly lacerated. I stopped the engine, cut him down, and by that time my mother had called a Christian Science practitioner. The result of the treatment was that in one week my father was able to go down-town. He never lost a night's sleep. His healing was truly wonderful.

One evening a short time ago I stepped off a street-car, breaking a bone in my ankle. In the morning I called for Christian Science treatment, and in a few days I was able to wear my shoe and walk. I am very grateful for what Christian Science has done for me and mine.

Ena Reynolds, Kewanee, Ill.

I am the father of Mrs. Ena Reynolds and can verify the statements she has made as true.—T. H. Woodruff.

❖

I wish to express my gratitude for what Christian Science has done for me. My little girl, eight years old, was healed of a very severe illness having the symptoms of infantile paralysis, which was at that time, the summer of 1912, an epidemic here. I was healed of hay-fever in a few treatments, and of other ailments, among them uterine trouble. I am truly grateful for Christian Science.

Mary Boles, Los Angeles, Cal.

❖

I began to use an opiate internally in the year 1882. After that I not only became addicted to the drug habit, but I also smoked incessantly. When I heard of Christian Science five years ago, I hardly looked like a human being, but from that day my regeneration began. First the drug and then the tobacco habit left me, and I have used no opiates or tobacco, and have had no desire for liquor, in four and a half years. Today I am happy and healthy, and I know that it was only the power of God that could have saved me. I give the glory to God, and I am deeply grateful to our beloved Leader, Mrs. Eddy, for Christian Science.

E. L. Fendler, Ph.G., D.D.S., New York, N. Y.

From Our Exchanges

[Zion's Herald]

Let us often turn in our Bibles to the passage where Paul says that he plants and Apollos waters, but God gives the increase. In this day there are so many who, if they would plant at all, would do it hurriedly. And then they would turn impatiently to the reaping, overlooking entirely the watering process. It seems to be the spirit of the age to demand results, and that right quickly. If no vision of accomplishment appears upon our little horizon, our courage ebbs away, and we say that God's Word is losing its hold upon men,—forgetting, the while, that a thousand years in God's sight are but as yesterday.

What we should keep in mind is that all cannot be reapers. There are those who must plant and those who must water, and they should perform their God-given work with a gentleness of spirit and a thoroughness that will implant the Word so firmly that the reapers, when God sends them, will rejoice at the abundance of the harvest, and will praise God for the lives of those who have planted and who have watered so lovingly. Our devotion for the Master cannot be too loyal, our faith in the great commission cannot be too strong, and our concern for our fellow men cannot be too compelling, for the noble work of planting and watering in the Lord's vineyard. It demands our best,—our faith, our love, our courage, our hope, our patience. And above all it demands a sweet and willing and undiscouraged spirit, which is content to labor and to pray at a work where the finished fruit is seldom seen.

[The Watchman-Examiner]

No man who despises the moments can meet with large success, either in his own character-building or in his service to his day and generation. Our lives must keep pace with the passing moments, if our work is to be telling and lasting. "Practise not slothful sleep, lest the duties and good works which it is necessary for thee to do remain undone," says one of the world's greatest counselors. Alertness, watchfulness, readiness, are necessary to use the moments wisely.

Granting that a man must work,—work diligently and laboriously,—how shall he fashion the passing moments to make his life count for the best for himself and his fellow men? Briefly answered, he must exercise choice. He must use just discrimination. He must have a high purpose, a rule of action that will apply to all his thoughts, activities, and recreations. The conduct of his life can be neither haphazard nor opportunist. It must be founded upon the eternal verities, the highest human and divine ideals. Fortunately for us, we are not obliged to depend upon our own initiative here. The right motive for life has been provided for us. More than that, it has been exemplified for us. That motive is truth, and Christ is the truth. The Christian motive, rightly pursued, furnishes the sure rule for wise and effective living. We need go no farther than this, for it is the divine rule, foreordained, revealed, and exemplified, the solution of human perplexities, the preparation for human destiny.

[J. Bruce Wallace, M.A., in *The Christian Commonwealth*]

For us our Lord is the great Example, the perfect sample man, the revelation that every man's nature is essentially divine. He is the promise and pledge of what at length every man shall know himself to be when he comes completely to himself, the demonstration that the true self of mankind is the divine nature and life, the eternal life, coming forth into manifestation. The divine humanity is thus not only the

Digitized by Google

humanity of our Lord; it is also ours, to be through faith on our part gratefully and joyously recognized as ours, to be confidently drawn upon for our growth away from low levels of consciousness, to be progressively brought forth, and to be finally realized throughout the whole reconciled and united brotherhood of the human race, a fellowship "with the Father, and with his Son Jesus Christ."

[*The Living Church*]

The real preventive of war is a relationship between nations which shall be based upon Christian love. It is not enough for us now to deny the charge that Christianity has failed. Certainly Christianity has not prevented this outbreak of hostilities between nations that have professed the Christian religion for a thousand years, and there is therefore failure somewhere. That somewhere is in international relations. They are not based on Christian love. Nobody ever pretended they were. Up to very recent years they were generally not even based on honor, though in this they have made great advance in our own generation.

The failure in our Christianity has been that it was too individual in its conception. It made Christian people; it did not make Christian nations. Men and women have tried, in many cases with real success, to live personal lives of holiness. Nowhere have they tried to make nations holy in their dealings with each other, or even, perhaps, in their internal relations with their own people. Perhaps we never would have learned this, if this war had not taught us so forcibly this limitation of our too individual Christianity.

[Rev. Harold E. Brierley in *The Homiletic Review*]

Do not think it manly to put away childhood's things. Paul never said that! What he did say was "childish" things —a distinction with a vital difference. Do not let the world crowd the child out of your heart. The secret of perennial youth is very much the secret of the eternal child Jesus. Was it not he who said: Except ye change—ye old hardened fossils of men, sin-petrified and sapless—unless ye change, "and become as little children, ye shall not enter into the kingdom of heaven." If you want to be happy, cherish your dreams, cling to your visions, keep the child heart. Remember Bethlehem, and the well "which is by the gate." Do not be ashamed of the romance of life, and let nothing dim it. The world is not suffering from too much romance, but from too little.

[*The Christian Work*]

All men are feeling the impotency of human agencies alone to reach a stage of brotherhood and justice where wars shall be no more. We have had Hague conferences, arbitration treaties, peace conferences, and innumerable other agencies, and they have failed to prevent these unspeakable things. The world is feeling that without Christ in the heart first, they are unavailing. We believe that all the world will turn to him, after these awful days are over, as never before, saying, "To whom else shall we go? 'Thou hast the words of eternal life.'" Let us gather about the manger and see if he cannot do for us what we cannot do for ourselves.

[*The Pacific Baptist*]

The new year is an especially favorable time for seeing the invisible. Eternity is real; time is apparent. Perhaps never more than with the passing of an old year do men in general become conscious of the permanence of eternity as contrasted with the transiency of time. Perhaps never more than on Jan. 1 does a community as a whole come so near to seeing the unseen.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: Its Discovery and Development," by William D. McCrackan, M.A., originally printed by the National Alumni Association of New York, and sold by the Publishing Society, has now been translated into the German language, by permission, and is printed in the regular pamphlet form.

"Christian Science: God's Lovingkindness Proved to Men," a lecture by Rev. William P. McKenzie, already published in the German language in pamphlet form, is now printed in English, and is on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: Its Legal Status," by Judge Clifford P. Smith, a paper bound book of 128 pages and cover, has been issued by the Publishing Society and is now on sale. Single copy 10 cents; twelve copies to one address $1.00; twenty-five copies $1.85; fifty copies $3.50.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.20 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. *Library* edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

Official announcement has been made by Secretary of Commerce Redfield of the discovery of a practical navigable channel from Bering sea into the mouth of the Kuskokwim river, thus opening the second greatest river in Alaska to commerce. The discovery was made by Captain Lukens of the coast and geodetic survey. In a statement announcing the discovery, Secretary Redfield says that although it cannot be predicted with certainty what this new region will develop when thoroughly prospected, it is not unreasonable to suppose that the near future will see the Kuskokwim river of commercial importance compared with that of the Yukon river.

"The Kuskokwim river," says Secretary Redfield, "is nine miles wide at its mouth and navigable for over six hundred miles inland. The great submerged flats of the delta of this river extend one hundred miles out to sea, and it was through this uncharted delta that the surveying steamer 'Yukon' made the discovery of the channel which means so much to the commerce of that section of Alaska. The Kuskokwim is one of the three great Alaskan rivers emptying into the Bering sea which has been opened to commerce as a result of the charting operations of the coast and geodetic survey. The mouth of the Yukon was surveyed in 1898, and in a few years that river became one of the greatest commercial arteries of Alaska. In 1909 and in 1910 Nuskagak bay was charted, and now the Kuskokwim, by far the most dreaded and unknown of these rivers, will no longer be a menace or a mystery to the navigator who has one of the new charts of its entrance about to be issued by the survey."

The big reinforced concrete dam across the Colorado river at Austin, Texas, which backs up the water in a lake twenty-six miles long, supplying the city with water and power, has been completed under the direction of the City Water Company. The dam was built primarily as a source of water supply for the city, and also for the generation of electric current for distribution in and around Austin. The enterprise was started in 1912. It is expected that about seventy-five hundred horse-power of hydro-electric energy may be developed, and the entire cost of construction and equipment is estimated at one million seven hundred and fifty thousand dollars. The new dam replaces the first one, which was built in 1893 and swept away in April, 1900. Under an ordinance passed by the city council and ratified by popular vote, an agreement was authorized under which the entire property of the company will be owned by the city of Austin upon payment to the trustees of sixty-four thousand dollars per annum for twenty-five years. This sum will pay the interest and redeem the principal of the bonds.

The big Swedish liner "Rhodesia" left Christiania, Norway, recently on her outward voyage to San Francisco. The steamer will call at Teneriffe and make for the Golden Gate by way of the Panama canal. Besides a considerable shipment of general cargo, the "Rhodesia" took on board at Copenhagen four hundred packages of goods intended for exhibition at the San Francisco exposition, at Gothenburg, nine hundred cases, and from Christiania twenty-six large cases. This shipment of exhibition goods will be followed by several others. Norway announced her participation in the exposition very late, but in spite of this it is believed that her section will be in no way an inferior one. The state contribution amounts to one hundred and fifty thousand kroners, and to this sum will be added large amounts subscribed by Norwegian-Americans in the United States.

Three forms of reorganization of the Boston & Maine railroad are contemplated in a bill which the board of trustees have sent to the Massachusetts Legislature. Two of the plans provide for reorganization or consolidation without receivership, and the third makes provision for the conservation of the property in the event of receivership. All of the plans contemplate the maintenance of the whole system as a unit. Except for the receivership, neither plan can be forced upon the stockholders, and their consent is required to bring about what the trustees want. All that is contemplated in the bill is to provide legislation that will enable the stockholders of the Boston & Maine and of the leased lines to reorganize or consolidate their properties. Such enabling legislation is to be sought in Massachusetts, Maine, New Hampshire, Vermont, and possibly in New York.

The Tasmanian government has prepared a very important bill on the subject of water rights, entitled the water bill. Its object is to settle the question of riparian rights, and to put on a clear and definite basis other matters connected with the use of the water of the state. It is proposed to give the holders of land on the banks of any stream or river the right to raise as much water as might be required for domestic purposes and for watering stock, and also for irrigating three acres of land. Apart from this, all the water is to be vested in the crown, and any one taking it must obtain a license to do so. The object of the bill is to avoid the complications that arise under the present state of the law.

During 1914 the two well-known Belfast (Ireland) shipbuilding firms, Messrs. Harland & Wolff, Ltd., and Messrs. Workman, Clark & Co., Ltd., together launched a total tonnage of 257,947 tons, or 78,839 tons above the previous record of 1911. Harland & Wolff turned out eleven ships of 182,759 tons, while their engine output was 149,500 indicated horse-power. The White Star liner "Britannic," with 50,000 tons, makes a good part of the total tonnage, and the other big ships turned out include the "Statendan" of the Holland-America line, tonnage 33,000; the "Belgenland," 27,000, and the "Almanzeya," 15,600. These four vessels make a total tonnage of 125,600.

A game refuge containing 55,040 acres in the Lake Minnetonka district has been authorized by the Minnesota fish and game commission, at the request of the Minnesota Game and Fish Protective League and the lake residents. The new preserve, which is intended to be a refuge and breeding-ground for all birds and small animals, includes the area of Lake Minnetonka and eighteen sections of land in the northern part of Carver county. Eighty-six sections in all will be protected. The land includes the heaviest wooded districts of Hennepin and Carver counties.

Representatives of the University of Texas and the Agricultural and Mechanical College, in conference recently with the commissioner of agriculture, the superintendent of public instruction, and the general manager of the permanent warehouse and marketing system, decided upon a permanent organization among the educational institutions of the state and the departments of agriculture and education, for the purpose of cooperating with the farmers of Texas in marketing their products to the best advantage and in improving agricultural conditions.

An annual ground rental is now charged for all lots leased to individuals and companies in the Canal Zone, including employees of the Panama canal and the Panama Railroad Company. The only exception made to this rule is in the case of lots assigned to church societies. The rentals are to cover the cost of street improvements, outside lighting, fire protection, etc., and must be sufficient to reimburse the Panama canal for any outlay connected with the occupancy of lots that may be leased.

Particulars furnished by the annual report of the Queensland (Australia) commissioner for income tax show the net amount received by the income tax officer, after deducting refunds, as £472,918 8s. 1d., an increase over the amount received in the financial year 1912-13. Assessments in respect of property were made on 4,189 persons, the number of persons paying tax on income from personal exertion being 18,861.

Direct telephone conversation between Boston and San Francisco, with a third voice breaking in from Jekyl island, off the coast of Georgia, connected the Atlantic coast with the Pacific on the evening of Jan. 25, when the new transcontinental telephone line was officially opened. The messages were exchanged over 3,595 miles of mountain, valley, and plain lying between New England and California, with an addition 1,200 miles down the coast to Georgia.

In the year just ended there were taken from the seacoast waters of Maine more than seven million six hundred thousand pounds of lobster, or about five million lobsters. The Maine sea and shore fisheries commissioner, assisted by the United States fisheries department, has just completed the planting of one hundred and eighty million lobster fry in the same waters whence last year's great catch was taken.

The total foreign commerce of the port of New York during the fiscal year ending June 30, 1914, amounted to $2,079,375,997. The total foreign commerce of the rest of the country, outside of New York, in 1914, was $2,442,997,628.

The gross earnings of the Panama railway from 1894 to 1914 are said to have exceeded one hundred and forty million dollars.

Evil a Deception

CLARENCE W. CHADWICK

THE intent of evil is and ever has been to deceive. There can be no mistake as to its proper characterization if we study earnestly the words of the great Teacher. In John's gospel we read: "Every one that doeth evil hateth the light." Its activity, therefore, is unholy, which fact of itself ought to satisfy any professing Christian that evil is not of God, and that its activities are not in any way sanctioned by Him. Evil's only hope of success is to get some one to call it good. If Eve had requested the allegorical talking serpent to announce its name, and if it could have been truthful, it would have answered, "I am a lie and the father of the lie," and the problem of evil would have been solved for the world. But this was not and is not the purpose of mesmeric belief in evil. It never tells the truth about itself, but through subtlety and lying would deceive its victim into believing that its claims are reasonable, rational, and legitimate, therefore desirable. And just to the extent that they are admitted to be good, does evil wield its imaginary power over those who believe in it. Evil or mesmerism could not tell the truth about itself, for it has no intelligence. Truth alone can call evil by its right name.

With Jesus' clear-cut definition of evil as "a liar, and the father of it," and his wonderful healing works in proof of its utter powerlessness and unreality, it seems strange that many professing Christians should array themselves against the teachings of Christian Science, which is proving in the same practical way the unreality of evil. If Jesus himself were personally here demonstrating the truth of being as he did in Palestine, he would without doubt encounter the same opposition as in that earlier day. There would be the same effort to oppose him. Why? Because the carnal or mortal mind "is enmity against God," enmity against the manifestation of good which proves evil to be but a worthless counterfeit.

Millions profess belief in God, but put this belief to the test and it is found to be disbelief in the omnipotence of God. They claim to have faith, but it is too often far from being faith in God. It is "faith without works," which the apostle declares to be "dead." It is found in practice that such so-called faith is often more vehemently opposed to Christian healing than that lack of faith which makes no outward profession of religion. Those who think they have no God, are generally glad to acknowledge the practical proof of a Supreme Being in the demonstration over sin and disease. They are quite ready to admit that no one could perform such works unless God were with him. A professed infidel once applied to a practitioner for help in Christian Science, remarking that he did not believe in a God, but from what he had seen accomplished for a neighbor he saw no reason why Christian Science could not do as much for him. He was asked whether he was willing to do whatever was required of him. He said he was. He accordingly purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to read it thoughtfully. The result was, that he experienced quick healing and early became a stanch advocate of Christian Science. Others professing faith in God have often wondered why their own healing seemed to be more protracted, notwithstanding the fact of their reluctance to read a book which might from their view-point conflict with the Bible, besides their objection to making any return for the practitioner's time unselfishly given them.

Whoever places health on a par with disease, righteousness on a par with unrighteousness, calling one as real as the other, has not opened his door to receive the healing Christ-idea, which comes as of old for the express purpose of separating the tares (evil thoughts) from the wheat (good thoughts). Were it not for these healing signs of "God with us," the world would be without any tangible proof of the powerlessness and unreality of evil. Evil can never be disposed of and thus proven to be a mortal counterfeit of good except through a spiritual or demonstrable understanding of God. The mission of Christ Jesus was to "destroy the works of the devil," or evil. There could be no more profound and grateful believer in Christ, Truth, than he who has proved by actual demonstration the utter powerlessness of evil to make him sick or a sinner. He who has not had this positive proof is in no position to judge him who has, or to call evil a counterfeit. A truly honest man always destroys a counterfeit bill the moment he finds out that it is a counterfeit. He no longer keeps it in circulation. He honestly admits that he has been deceived in accepting it as genuine, and profits by the experience.

This is the mental attitude of the Christian Scientist toward the human belief in evil. Having proven this belief to be a counterfeit whose only mission is to deceive and mesmerize human thought, he begins at once to cross swords with it by purifying his consciousness of every thought which would deny the omnipotence and omnipresence of spiritual and eternal good. He thus identifies himself with the ever-operative activity of good, and to the extent that he guards his mental gateway against the intrusion of evil or counterfeit thoughts, does he cease to keep evil in circulation. Let those who imagine that Christian Science is something to be shunned, because it teaches and proves the unreality or counterfeit nature of evil, give to the world some more effectual way of disposing of evil than by ceasing to think, talk, and act evil, and Christian Scientists will be glad to learn of it. In the mean time they will not cease to preach and to demonstrate the gospel of good, to do as they would be done by, to love their neighbor as themselves, and to refuse to circulate evil in any form. By letting this Mind be in them which was in Christ Jesus, they will cease thinking and talking about that which does not exist in this Mind. They will gladly undertake the all-important work of overcoming or destroying the unchristian argument of the existence of any evil power or presence which the right idea of God, good, cannot eradicate from individual consciousness.

Since the suggestion of suppositional evil came into human presence through the legendary channel of a talking serpent, it must be admitted to be purely mythical and deceptive, and Christian Science is here to prove absolutely that good

is All-in-all, the sum and substance of being. Let no one be deceived into thinking that such doctrine is "too good to be true." In telling of her discovery of Christian Science, based upon the omnipotence, omnipresence, and omniscience of God, Mrs. Eddy says, "These eternal verities reveal primeval existence as the radiant reality of God's creation, in which all that He has made is pronounced by His wisdom good." To this she adds, "Thus it was that I beheld, as never before, the awful unreality called evil" (Science and Health, p. 110), and this is an inevitable deduction from the allness, the infinitude, of God, good.

Support

DR. EDMUND F. BURTON

THE definitions of church and of man as given in Science and Health (pp. 583, 475) are practically interchangeable; also the Scriptural description of man as the image and likeness of God stands good for church, while Paul's thought of church as the "body" whose head is Christ is equally applicable to man. In the definition of man, Mrs. Eddy says that he "reflects spiritually all that belongs to his Maker." Applying this to church means that the church reflects God's quality of omnipresence, as does also man. There is no place where God's church does not exist; there is no place where God's man does not exist.

Mortals do not fully grasp either the idea of unity or that of ubiquity, and they therefore see men here and there as their best conception of man. They also see the church as made up of separate organizations, various centers of Christian activity. It seems, therefore, that one of these church organizations and its problems may be treated in Christian Science exactly as a mortal man and his problems are treated. In such treatment mortality and separation are denied, and there is the declaration and realization of unity and divinity of structure, eternality and omnipresence of being; also of existence and sustenance based upon the conception of the one Ego, as expressed in various parts of "Science and Health with Key to the Scriptures." These realizations and declarations applied to church as a divine manifestation show it to be eternal, comprising all that makes up harmonious and God-reflecting existence, indestructible, irresistible, resting forever on the rock, Christ, never in danger, never weak or ineffective, never in any other condition than that of manifesting divine Life and eternal vigor.

To regard the church as a material structure or organization, supported by matter, in danger from material loss or lack, as having a beginning and therefore in danger of having an end, that end which is depending upon the whim of mortal man, would be the same sort of malpractice as thus to regard one who is under Christian Science treatment. It would be to hasten its disappearance, since it would belie its name and nature. Moreover, thus to regard it would be to lose sight altogether of the real church in its symbol, to make an idol of the symbol and thereby doom it to destruction, for as a human organization its usefulness would soon come to an end, were a so-called Christian Science church to be conducted on the belief that it is supported by the money contributed by its members or that it is dependent upon their money for its existence. Christian Science declared and not practised, would fail utterly.

An individual who is truly endeavoring today to be a Christian Scientist, looks to God directly for his support, and knows that this support comes to him from God, the eternal source of his life. It may be that it comes to him through channels and in quantities and qualities which are appreciable to his mental state; nevertheless, it is for him to know that real supply is spiritual and inexhaustible; that there is no other kind or amount. The moment he looks upon that which he receives or the channel through which he receives it as anything but symbolic of the real, that moment he has mentally separated his life, his supply, from its eternal base, mentally placed it upon a false foundation, and that moment commences his experience of lack and disintegration. A Christian Scientist or a Christian Science church which attempts to live and manifest scientific activity while basing expectation of the means of existence upon the volition of mortals, is in a sense dishonest, and is likely to manifest its anomalous and contradictory platform in discord and disintegration, mental, physical, and financial.

The familiar and precious words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), teach us not only that "Christ, Truth, gives mortals temporary food and clothing" (p. 442), but that the need of man to be a channel for divine Love is also met; that we as human beings and human organizations should be such channels, symbols of divine Mind. We must therefore recognize constantly that divine Mind does all that is done, either for us or through us. We must beware of looking upon ourselves or others as the original sources of good. If the church is faithful to its office of carrying the truth to the world, it need not and will not fear for lack of the means to carry on its work, any more than a practitioner need fear any lack of the divine Mind which heals.

A church of Christ, Scientist, is based on the knowledge that it is a representative of God; that fidelity to Principle is the one requisite for life as spiritual consciousness; that unswerving obedience and trust in God holds the advancing thought in the path which leads to holiness, harmony, and health, alike in the experience of an individual and a church.

"Priests unto God"

LUCY H. MC DONALD

THE office of priesthood has been regarded as an important one for many centuries. The belief has prevailed among men that it was an absolute necessity to have one who could approach God in a way that others could not, that it must be through a priest's prayers and offered sacrifices, and not through one's own efforts, that God is to be approached. Jewish theology was darkened by this belief; and exacting ordinances and an elaborate ceremonial system were its accompaniments. The Jews were not, however, the only nation who depended upon priests to carry on their worship of God; the history of mankind reveals the steady growth of the priestly order, ameliorated in later times by a spirit of democracy which discards the belief that one man has privileges above another.

In his "Cotter's Saturday Night" Robert Burns describes the evening devotions of a family where "the priest-like father reads the sacred page,"

> Then kneeling down, to heaven's eternal King,
> The saint, the father, and the husband prays.

Later in the poem Burns, who recognized that "a man's a man for a' that," says that it is "from scenes like these old Scotia's grandeur springs." We recognize that he is right in thus seeing where real worth resides; that it must be in the heart, the home, the affections, the simple faith which trusts in God and which goes to Him direct, without form or ceremony, or dependence on human power or prestige. But there is a step higher, and Christian Science shows us this step. It is for every man to know himself as a priest.

Digitized by Google

The writer of the epistle to the Hebrews makes a close study of this subject of priesthood for the benefit of the Israelites. He shows them that the only high priest is the Christ-man represented on earth to them through Jesus. In the seventh chapter he reviews the history of Abraham's relations with Melchisedec, "king of Salem, priest of the most high God." This Melchisedec, he says, was "without father, without mother, without descent, having neither beginning of days, nor end of life; but made like unto the Son of God; abideth a priest continually." Abraham paid tithes to this wonderful type of the Christ-idea, an example on earth of the real man made in God's image. The writer goes on to show that it is not a Levitical order or material descent which constitutes priesthood, but the recognition of "the power of an endless life." He shows that it was the great demonstration which Christ Jesus made over death, thus bringing to mankind the idea of immortality, that made him a priest "after the order of Melchisedec." He also shows that as each individual understands Christ Jesus' life and work and puts into practice the understanding of divine Truth, each individual becomes his own priest "after the order of Melchisedec," knowing "the power of an endless life."

Today this teaching is made more clear to us in Christian Science,—every man is to be a priest; his altar, divine Science; his work among men, the demonstration of Christ's Christianity. Jesus' precept, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is a call to each to enter upon his duties as "priest after the order of Melchisedec." In Science and Health (p. 200) Mrs. Eddy says, "The great truth in the Science of being, that the real man was, is, and ever shall be perfect, is incontrovertible." The apprehension of spiritual truth which is gained through the study of Christian Science enables one to enter the holy of holies, even the consciousness of the allness of God, and the non-existence of the material beliefs that oppose themselves to His spiritual law. We go behind the veil of material sense, rending it with the understanding of divine Love. This spiritualized consciousness is the true priest; it does away with human beliefs, creeds, and opinions, and sees the kingdom of heaven at hand. So the mortal order changeth, giving place to the spiritual, where each has his own priesthood to maintain. No system of theology or philosophy since time began has demanded so much of the individual as did Christ Jesus when he demanded perfection of his followers.

In Science and Health (p. 141) we read: "In healing the sick and sinning, Jesus elaborated the fact that the healing effect followed the understanding of the divine Principle and of the Christ-spirit which governed the corporeal Jesus. For this Principle there is no dynasty, no ecclesiastical monopoly: Its only crowned head is immortal sovereignty. Its only priest is the spiritualized man. The Bible declares that all believers are made 'kings and priests unto God.'"

Nothing Lost

MRS. I. N. GATES

THE following experience, which to me was beautiful, I am sending in the hope that it may cheer some others. Several days before Christmas, I missed a ring which had been presented to me by my two sisters years before, and which I therefore prized very highly. I had removed my glove several times during the day, but on inquiring at the places where I had been, no trace of the ring was found. I held fast to the truth that the ring was not lost, for we know that in the realm of Mind nothing is lost or out of place, and that we should look for a reflection of divine harmony on the human plane, just as Peter found the needed coin in the fish's mouth. I did not advertise the apparent loss, believing that Mind knows all things and that what was truly mine would come to me.

Within a few days, while at a family reunion, my nephew's wife from San Francisco handed me my ring. The day I missed it I had unpacked some porcelain from San Francisco, and although I had looked through the excelsior, I failed to find the lost article. Afterward I repacked the box and sent it to my nephew with some gifts. This nephew unpacked the box at his place of business and then put it where it would be taken away; but it was left there, and about a week later, needing a box, he emptied out the excelsior, and hearing something rattle, discovered my ring. I need not say that I was most thankful for this proof of God's care for the smallest needs of His children.

How often we are fearful for many things,—for our loved ones, perhaps, who are not in Christian Science, and who are not conscious of the divine ever-presence! Yet we are told that the very hairs of our heads are all numbered. In God's creation all is well, all is perfect; then let not our hearts be troubled. Let us know the truth about all things, and peace like a river shall attend our way.

Testing Times

EMILY J. JEWELL

IN the *Sentinel* of Dec. 20, 1913, there appeared a testimony given by a survivor of the "Titanic" disaster, the reading of which determined me to tell of a similar experience in which divine Love was proved a sure deliverer. The mental processes of the writer of that testimony and myself seemed very much alike, and this to me is fresh proof of the existence of only one Mind.

The experience to which I refer was the passing through the flood of March, 1913, at Dayton, Ohio. The verdict of sense-testimony was that we were surrounded by fourteen feet of surging water, with imprisoned, frightened humanity, drowning animals, wrecked buildings, and fires in all directions, and that there was little chance of escape. We were in this condition from Tuesday until Friday, when we were taken out in boats. Through those terrible days and nights, primitive mortal man was revealed, while habits of civilization fell away like unnecessary and useless garments. Thus mortals stood, crude, naked, stripped of their boasted strength, and one primal cry went up for preservation. Instinctively all turned to a God,—professed believer and unbeliever, black and white, Jew and Gentile, their cry was the same,—"God save us."

The last call that went out over the telephone from our apartment-house, was the connection I was able to get with a Christian Science practitioner who had often helped me. His home was out of the flood district, and to my request for help his reply came clear, "God is caring for you," and then the line was dead! I sat with the silent instrument in my hand and saw the electric light fade out. I tried the gas, but that would not ignite. I began dimly to realize that so far as human ingenuity was concerned we were helpless, for no one could reach us through the flood outside. I took the Bible and Science and Health and tried to read, but words seemed idle, so I closed the book, and into my seemingly paralyzed thought came automatically the ninety-first psalm, which is so dear to Christian Scientists, and which I knew by heart. I said it over, and the words began to mean something, until the truth it declares was meat and drink for the following days. I literally lived on it until we were released.

Digitized by Google

When the water went down, there came the sense of loss. A business in which we had an interest was burned, another was washed out; banks, building associations, and other concerns from which we believed we drew our incomes, were in a state of wreckage. It would be weeks, probably months, before we could know the outcome, but through this period I held steadfastly to the truth,—that divine Principle is the source of all supply. Sometimes, indeed, it was literally a "still small voice," so still and small that human sense could scarcely hear it; but the thought held fast. Finally, as matters adjusted themselves, one thing after another stood revealed, and when the whole problem was worked out there was not one dear one lost, and there was not even one dollar lost. I had proven to the fullest extent that when we trust entirely and completely, divine Love is unfailing.

Now, what I am about to say may sound strange, but it seems to me that this experience, while trying, was not the test of faith that the ordinary problems of life are. The flood was unique; it was hardly an occasion to test one's faith, for it was God or nothing. Men called on Him who had not spoken His name in years, unless lightly or profanely. The true test, it seems to me, is the test of every-day experience, when we are under no undue pressure. To me the overcoming of a sharp tongue and a quick temper, especially when subtle error calls the anger just, is a greater victory. To hold one's faith steadfastly, to withhold judgment and subdue anger when this same subtle error keeps saying, "You are doing a fine thing by being a good hater," or mentally pats you on the back when you have flayed some one with a sharp and unruly tongue for some seeming injustice,—this takes a steady faith of the growing kind, and he that doeth these things is greater than "he that taketh a city."

This wonderful truth, made known to humanity in Christian Science, has brought me innumerable other blessings. Headaches, insomnia, discords mental and physical, have melted before its sunlight. Nevertheless, in the face of all these proofs, dismal doubts and discouragements sometimes creep in; progress seems slow, and I find myself yielding to a belief that there is no growth. But I also find that the remedy for this is calmly to review the situation, to remember the condition of things a few, very few, short years ago,—what I suffered, a creature of aches and pains, hating and loving, and suffering as much from the loving as from the hating; a victim of self-will, self-pity, and self-love. Today, through the teachings of Science and Health, I know these mortal qualities for what they are, and they are gradually fading out of consciousness. I am in possession of the truth, an understanding which, if honestly applied, gives me the right answer to all my problems. Above all, I have gained the blessed knowledge that I have been made a "friend of God."

"They have taken away my Lord"

EDWARD BERNARD MOSS

When Mary exclaimed at the tomb of Jesus, "They have taken away my Lord," she uttered a cry that has been ringing through the ages from that day to this. In every revolutionary period of religious history those who stood for the old order of things have cried out against the more progressive, You have taken away our Lord. Christian Scientists, thinking in advance of other religionists, have been subjected to the same accusation by many well-meaning Christians; but a careful analysis of the cause of their apprehension reveals no more of fact on which to base a fear than is found in the usual ghost-stories. The Bible tells us that God is the same throughout all the ages. God changes not; it is the mortal concept of Him that changes. If we have had erroneous concepts of Deity, and Christian Science reveals a clearer, truer sense, it has not taken away our Lord; it has only given a better understanding of a loving heavenly Father.

A child separated from a parent during the years of youth may reach maturity with an exaggerated remembrance of a stern, austere father; but a closer association may later reveal a parental tenderness which will dispel forever the accumulated false opinions of years. So we who have known God only as a stern, just judge, as ready to punish as to reward, have learned through Christian Science how false were our theories concerning Him. Not that God has changed one iota, but our newer conception of Him, as Life, Truth, and Love, dissipates the fear and uncertainty which characterized our earlier misunderstanding.

To assert that Christian Science has taken away our Lord is evidence of either prejudice or ignorance; for no one can truthfully make such a statement if he has ever attended a Christian Science service, or if he has read the literature of the denomination, and certainly one would not be accepted as a competent witness who had done neither. There has never been an authorized Christian Science publication, and probably never a Christian Science meeting, in which God and His Christ were not given reverential preeminence. The individual members of this church are as one in their acknowledgment of benefits received directly through their better understanding of God as divine Love, and of Christ as the Saviour of men from disease as well as from sin.

Christian Science has not taken away our Lord, but it has taken away our false concepts of God, and this is sufficient cause for boundless gratitude.

[Written for the *Sentinel*]

Yussuf Ben Orem

SAMUEL JOHNSTONE MACDONALD

Yussuf Ben Orem at his door
Admitted all whose need was sore,
And freely gave to all who came
What aid he might in God's high name.

One came, a friend, and on his knees
Spake thus: O friend, if that thou please
To prove thyself indeed a friend,
I prithee, fourscore talents lend!

Didst thou, friend, first at God's throne pray?
Hast thou then there been turned away?
Do not the Holy Scriptures read,
God is our help in every need?

And hath not God said, Cursed be he
Who bends to fellow man his knee,
And seeks before a human throne
The aid that comes from God alone?

The suppliant rose with face aglow:
A priceless gift dost thou bestow
In making plain wherein I erred,
Departing from God's holy word.

He leadeth me, His erring child,
Back to His house from dreary wild,
And lovingly His grace supplies,
Makes rich the poor, the foolish wise.

Selected Articles

[From an editorial in *Steamboat Springs* (Col.) *Pilot*]

They are having quite a time up in northern Colorado over an evangelist. . . . Boulder has a number of splendid, able, and independent editors, but perhaps it was because it was campaign time that they paid no attention to the evangelist with his usual attacks on religious beliefs in that town. When he went to Greeley, however, and repeated a sermon that seems to be a specialty of his,—a violent and unseemly attack upon Christian Science, denouncing its followers as straight on the road to perdition and as copartners with Satan,—the Greeley *Tribune-Republican*, one of the most staid and conservative papers in the state, published a rebuke so pointed and timely that it awakened the newspapers of Boulder, Fort Collins, Windsor, and other towns, and they unanimously joined in denouncing the intolerance and bigotry which this gentleman has spread in his sermons throughout that section. The people backed them up in many letters of approval, and the controversy waxes hot. What is the religion of Christ getting out of all this? Are the people better for the bitterness and animosity that has been stirred up? Have the thousands of dollars contributed to this evangelist been repaid in a better town, more of the spirit of brotherhood, more helpfulness, more charity, more peace?

There is one thing that may in all truth be said of the followers of Christian Science. If they follow the tenets of their order, they never proselyte, never condemn, never denounce. They follow the even tenor of their way with the kindest feeling toward other denominations and toward the world. One of the strongest charges ever brought against Mrs. Eddy, the Founder of the Christian Science movement, is that she discouraged proselyting, evangelism, emotional religion. Yet the fact of the wonderful and continued growth of the sect without the usual methods of gaining converts, would seem to prove that they have something to offer that the world needs. If they have attained some portion of the truth, the order will continue in a growth which has attracted the attention of the religious world; if they are wrong, all the denunciation of this evangelist and his kind is wasted effort. In the end, the truth is mighty and will prevail.

❖

[Judge Clifford P. Smith in *Haverhill* (Mass.) *Sunday Recorder*]

For ages humanity has accepted evil as a fearful reality, never doubting that the wretched havoc following as the consequence of this belief was in some manner ordained by an actual power. Intelligent Truth-seekers have sometimes perceived more or less clearly that the government of the universe could not possibly be divided between two opposite and antagonistic powers; and sometimes they have inquired how evil can exist in spite of divine and infinite Love; but no explanation consistent with the omnipotence and goodness of God has ever been furnished by scholastic theology. So Christendom has taken its choice between evil as an independent and actual power and a concept of God which includes evil as His agent. In either view the resistance to evil has been vitiated by the admission of its reality; for no effort which concedes the truth of evil can ever overcome it; it can be abolished only with the understanding which dispels it as illusion or error. Therefore, although Christ Jesus plainly taught the omnipotence and the absolute goodness of God and the consequent unreality and nothingness of evil, the adulteration or dilution of his instruction has postponed for centuries the fruition of his work.

One reason—perhaps the main reason—why Christianity has not yet accomplished all that Christ Jesus foretold for it, is that his ministry has been misunderstood. The various theories which have been formulated to explain his life-work need to be reconsidered; they need to be reexamined in the light of both reason and revelation; and in the final decision, predominance should be ascribed to what he himself said concerning his mission.

Whatever may have been the earlier view of Christian salvation, it was succeeded by a theory which no one entertains today, but which was generally accepted by Christendom for eight or nine centuries. From the time of Irenæus in the third century to the time of Anselm in the twelfth, the accepted theory was that Jesus, by his sufferings, paid a ransom to the devil, and thus wrought the deliverance of those who believed on him. This was followed by the substitutional-sacrificial doctrine of atonement as formulated by medieval theology. According to this belief, the career of Jesus, culminating in his suffering and death, was designed as a sacrificial offering which should expiate the sins of other people, and thus make possible their salvation after death, the main act required of them before death being the acceptance, through faith, of his sacrifice. This is the view still entertained by millions of people who profess the Christian religion.

In order to determine the actual basis of the religion founded by Christ Jesus, we should of course concede the utmost importance to what he said on this point. For one thing, he said that he came "not to be ministered unto, but to minister, and to give his life a ransom for many." If the last clause were not a figurative expression, it could be cited in support of the first theory heretofore mentioned—the doctrine attributed to Irenæus. Jesus also spoke of a cup of wine as typifying his blood, "which is shed for many for the remission of sins." This saying may with equal propriety be cited in support of the other theory,—the doctrine attributed to Anselm, though it is equally inconclusive. Of course there are other variations of belief in Jesus, and each group of believers doubtless finds some degree of support in his sayings.

Taken as a whole, however, the utterances of Christ Jesus point clearly away from the doctrines of medieval theology, and show that he was fulfilling his mission when he was satisfying the desire of the people to know God. For instance, he described himself as the Master, or the Teacher, the latter term being uniformly adopted by modern translators. (See Matthew xxvi. 18 and the same incident in other gospels.) He expressly connected his work with the Scriptural promise, "They shall be all taught of God." Near the end of his ministry he said, "I ever taught in the synagogue, and in the temple, whither the Jews always resort." He referred to himself as a prophet, which meant, in the vernacular of the Jews of that period, that he was a great moral and religious teacher. By saying, "I am the light of the world," he emphatically claimed to be the greatest of teachers; and to distinguish himself and his disciples from other religionists, he said, "We know what we worship."

The final statement, perhaps also the most deliberate, which Christ Jesus made concerning his mission and the method of his service for humanity, is to be found in his last conversation with Pilate. It was then that he said, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." Instead of asking, "What is truth?" a question which Jesus did not answer, Pilate would better have asked, The truth of what? The Teacher might have answered that question. He might have said, The truth concerning God and man; the truth regarding Life and its manifestation; the truth of being. This is the answer to be

Digitized by Google

gathered from his many utterances and likewise from his many mighty works.

Now a witness is one who furnishes evidence or proof. It was therefore the great Teacher's purpose to furnish evidence of the truth; to prove the true nature of God and man; to attest the reality of being. To do this he used both words and works. He bore witness unto the truth not only by what he said but by what he did. When he destroyed sin, sickness, and death, he bore witness unto the truth; he did it to demonstrate their unreality; to prove that man is not really subject to evil; to show forth the actual qualities and power of man as the son of God. These acts of power were Jesus' answer to his own question, "Is it lawful to do good . . . or to do evil? to save life, or to kill?" (See Mark iii. 4 and context.) The so-called miracles which Jesus wrought would be perfectly natural to any man who fully understood the Principle and law of his own being.

The most wonderful sign of all—the crucifixion and resurrection—was an object-lesson in the Science of being. It was intended to give us an understanding, that we might know Life as the reality and death as the unreality. It was designed to destroy death, that is to say, the belief in death, and to give us the knowledge of Life. The Christ became "the light of the world" when the truth of being was taught and demonstrated so as to make it evident and available to all.

"I live by the Father," said Jesus, and "all live unto him." Mrs. Eddy has consistently said in Science and Health (p. 42): "The belief that man has existence or mind separate from God is a dying error. This error Jesus met with divine Science and proved its nothingness. Because of the wondrous glory which God bestowed on His anointed, temptation, sin, sickness, and death had no terror for Jesus. Let men think they had killed the body! Afterward he would show it to them unchanged. This demonstrates that in Christian Science the true man is governed by God—by good, not evil—and is therefore not a mortal but an immortal."

✧

[W. D. Kilpatrick in *Owosso* (Mich.) *Press-American*]

The teachings of the Bible, and especially of the New Testament, are the teachings of Christian Science, for it is founded unreservedly and unalterably on the Bible, and there is no divergence of thought or intent between the two. Christian Science is an explanation of the spiritual import of the Bible which has been accepted by thousands of thinking people of the world, and this simply because it practises what it preaches and it preaches what Jesus taught.

Our critic says that the Christian Scientists' view of atonement is not Scriptural. She possibly means "orthodox." There is nothing clearer to the unbiased reader than the fact that the Christian Science views of Jesus' atonement accord with Scriptural teachings. If our critic holds to the idea that the persecutions, the trials, the suffering on the cross, the death, and the resurrection of Jesus removed the sin and suffering of the world, how does she account for the world's sin and suffering today? How does she account for her illness, which she admits Christian Science cured? The very fact that the world is full of sin and suffering should be sufficient evidence that the trials and triumphs of Jesus were necessary wholly as an example and proof to mankind that as one follows his teachings and practices he can be freed from the thraldom of these man-made bonds. There is nothing in Scripture to indicate that because Jesus suffered we are to be spared by simply believing on him. "Faith without works is dead." His lesson to us was not so much in his trials as in his triumphs, and they show us that sin, sickness, death, and the grave have absolutely no power or authority when combated with that clear understanding of God and man's relation to Him as taught by the Nazarene.

In "Science and Health with Key to the Scriptures" (p. 18) Mrs. Eddy says: "Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love. Jesus of Nazareth taught and demonstrated man's oneness with the Father, and for this we owe him endless homage. His mission was both individual and collective. He did life's work aright not only in justice to himself, but in mercy to mortals,—to show them how to do theirs, but not to do it for them nor to relieve them of a single responsibility." On page 23 she further says: "The atonement requires constant self-immolation on the sinner's part. That God's wrath should be vented upon His beloved Son, is divinely unnatural. Such a theory is man-made. The atonement is a hard problem in theology, but its scientific explanation is, that suffering is an error of sinful sense which Truth destroys, and that eventually both sin and suffering will fall at the feet of everlasting Love." In Timothy we read, "For there is one God, and one mediator between God and men, the man Christ Jesus;" in Thessalonians, "For God hath not appointed us to wrath, but to obtain salvation by our Lord Jesus Christ;" and in Hebrews, "In burnt offerings and sacrifices for sin thou hast had no pleasure."

Jesus' demonstration of the truth and his example to mankind were made solely on a Scriptural basis, apart and distinct from any material condition or conception, and in gaining our lessons from his life-work we must interpret his words and deeds in the manner in which they are given. Interpreting the Scriptures in their spiritual import and as taught by Jesus, we find the word "blood" to be symbolic and that it has no reference to the material concept; thus in giving to this word its true signification, many obtuse and obscure passages of Scripture become clarified and are finally demonstrable.

Christian Science teaches, as Jesus taught, that "the hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth;" and in following this command they are bringing forth the fruits of the Spirit. Christian Scientists do not hold that "they are possessed by spirits," and there is no interpretation that can be put upon any passage of the text-book to warrant the assertion. Christian Science teaches that God is Spirit, and that there is but one God, hence but one Spirit. It teaches that there are not spirits many, but that the universe, including man, is a reflection of God, as stated in the Scriptures, and there is nothing outside the radius of infinite Spirit or Mind that can influence, govern, or annul God's dominion.

Christian Science teaches that sin is not of God, and hence has no power, existence, or immortality, but that the belief of sin, when indulged in, brings its own punishment. God is "of purer eyes than to behold evil," says Scripture. It is only through the understanding of the unreality of sin or evil that these enemies of mankind can ever be overcome. To admit for an instant that God is the author of sin, is to dishonor an omnipotent Father and to controvert the very foundation of the teachings and work of Jesus. If sin is the work of God and is immortal, as our critic would have us believe, mankind is surely wasting time in any attempt to be good.

✧

[Thomas F. Watson in *Santa Cruz* (Cal.) *Sentinel*]

An article appeared in a recent issue of *The Ivy Leaf*, published by the rector of Calvary Episcopal church, and through the columns of your paper I would like to make reply.

The Ivy Leaf quotes the arguments of Dr. —— in support of the statement that "Christian Science contradicts the

Digitized by Google

church's creed at every point." There are many creeds and many interpretations of those creeds, but Christ Jesus said: "I am the way, the truth, and the life." He also said, "Follow me." He formulated no creed, but said, "Ye are my friends, if ye do whatsoever I command you." While the Pharisees were debating over the propriety of healing on the Sabbath day, Jesus healed the man with the withered hand, and while the advocates of different creeds are arguing over theological technicalities, Christian Scientists are obeying Jesus' command to "preach the gospel" and "heal the sick."

Christian Science teaches the availability of God's law in this and every age. Its practice is the realization of God's omnipresence, and it is this realization or consciousness that heals sin and sickness. We read in Jeremiah, "Do not I fill heaven and earth?" The understanding of the omnipresence of God and its manifestation in the healing of the sick is not a new teaching, but because the church had seemingly lost sight of the power this understanding gives, it had to be rediscovered to this age by one who was spiritually minded enough to discern the meaning of Christ Jesus' teaching.

This critic maintains that "suffering and death are factors even in perfect life," yet the Bible calls death an "enemy," "the last enemy that shall be destroyed," and Jesus, who came to do the will of the Father, overcame sickness, suffering, and death. Christ Jesus would not have healed sickness and raised from death had they been factors in the "perfect life," —such teaching contradicts the Scriptures. The critic greatly errs in his statement respecting the teachings of Christian Science in regard to "Christ," as Christian Scientists believe in the one Christ, the Christ mentioned in the Scriptures. On page 497 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read: "We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Christian Science inculcates a love for and an understanding of the Bible. It is the practice of the golden rule, "Therefore all things whatsoever ye would that men should do to you, do ye even so to them."

❖

[S. T. Downs in *The New Albany* (Ind.) *Tribune*]

When Jesus was proving the power of spiritual law to reform the sinner and heal the sick, he was charged with casting out devils through Beelzebub. To this charge he gave the clear and logical reasoning that it would be impossible to cast out devils through the chief of devils, because a "house divided against itself" cannot stand, and he explained to his critics that he cast out devils through the law of God. It will be seen, therefore, that the charge of the reverend critic in a sermon printed in a recent issue of your paper, that Christian Science is of Satan, is but repeating the charge that the incredulous have always made against the power of divine Mind to heal sickness and every discordant condition, as well as sin. Faith without works has always cried "devil" at the proof of faith through works.

No other person has ever been quite so well qualified to give a test of discipleship as was the Master himself, and in a number of ways he states, "He that believeth on me, the works that I do shall he do also." It is a matter of history that Jesus' followers performed these works for three centuries, then the power was lost in the erroneous belief that a changeable God sent both good and evil, that causation was in matter, and in the following of personality. The divine Principle by which Jesus and his disciples performed their works was discovered, or rediscovered, by Mrs. Eddy, and named by her Christian Science. That Christian Science is of God is proved by every test given by Christ Jesus. Through its ministrations mankind is turned away from sin of every description; poverty and degradation are destroyed; the business man is given an unfailing guide in the solution of his problems; the love of the Father and His care for His children are proved in the every-day affairs of life, and the sick are healed of every disease to which flesh is heir.

❖

[Robert S. Ross in *Newburgh* (N. Y.) *News*]

It was the beloved John who wrote that God was Spirit. It was the same consistent student of Jesus' teachings who wrote that "all things were made by him; and without him was not any thing made." Now if like produces like, Spirit's creation must be spiritual; and if Spirit created all that really is, matter does not exist as a reality. Pursued to its logical conclusion, such a line of reasoning must inevitably lead to the extinction of the belief in suppositional evil and matter. It was on this basis of contending persistently for the allness of God and the consequent nothingness of matter that Christ Jesus rebuked the testimony of the so-called material senses by healing the sick, walking on the waves, stilling the tempest, feeding the multitudes, and raising the dead. This was the process to which Jesus referred when he said, "Ye shall know the truth, and the truth shall make you free."

Thus, if our critic differs with Christian Science regarding the unreality of matter, he differs also with the teachings of the Founder of Christianity, for the Christian Science of the first century and of the twentieth are identical. If our critic doubts this but is open to conviction, he has but to make an unbiased and consistent study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and put into practice what he reads. Christian Science is Christian, because it destroys sin and sickness in every form; it is scientific, because it is demonstrated according to rule.

❖

[Charles W. J. Tennant in *Wallington and Carshalton Record*, England]

In an issue of recent date there appears a letter from one writing under the *nom de plume* "Alpha," unfavorably commenting upon Colonel Fell's lecture on Christian Science. It is very evident that our critic cannot discern the meaning of a parable. Can he not see that the story of the lamp was figurative, and illustrated the impossibility of light and darkness being present at the same moment? When our Master compared the kingdom of heaven unto a mustard-seed, it is not to be supposed that he did so from a physical point of view.

Christian Science teaches that the absolute truth cannot be discerned by the physical senses, but must be "spiritually discerned," as St. Paul puts it. Our critic says that, granting the assumption that God is All-in-all, there would still be room for evil in the fabric of good, as poison is part of the best food and physics. I think he is here guilty of the illogic of which he accuses the lecturer. If God, good, is All-in-all, and evil is the opposite of good, then evil cannot be part of the All-in-all of good. If evil were present as a reality, then good must be absent to that extent, and could not be All-in-all. Now, the fact that two plus two equals four, is an omnipresent fact throughout the universe. The belief that two plus two equals five, is false throughout the universe; therefore it has no real presence. This is an example of all truth and error. The only place that error seems to dwell in is the false consciousness of the "carnal mind," which St. Paul tells us is "enmity against God," Truth. It would be well for the critic to consider the saying of Jesus the Christ: "Therefore speak I to them in parables: because they seeing see not; and hearing they hear not, neither do they understand."

Editorial

"Chance and change"

"CHANCE and change are busy ever," an old hymn tells us, and the constantly changing beliefs about diseases and their origin which are features of so-called preventive medicine, are well illustrated in a recent editorial in the *New York Herald* under the title "The Vanishing of the 'Heredity' Specter." We quote from this editorial as follows:—

It has been well said that ghosts and haunted houses decrease in frequency in a definite inverse ratio to the increase in our means of lighting. No self-respecting ghost will live in a house lighted with electricity, in which the person who should receive the ghostly visitant with due awe can just lean quietly out of bed, touch a button, and flash the whole room full of light. The candle-lighted dwelling was the favorite ghostly haunt. The same is true of the specter of the heredity of disease. The more light is thrown on the subject, the less significance heredity has.

This is confirmed by a recent careful study in detail of the spread of tuberculosis in five counties in Minnesota, made by an expert for the state department of health. Tuberculosis is proved once more by this study, as shown in the current "Public Health Reports," to be an infectious and not a hereditary disease.

We may assume, we suppose, that if this newer theory obtains general acceptance among physicians, all the laws and rules which have been made for the "conservation of public health" in the past, so far as they relate to the disease mentioned, will be changed, and that the public will be compelled to readjust itself to the new order of things, just as it has had to readjust itself so many times before.

This gives rise to the question as to how those who have needlessly suffered mentally and physically from the fear which has been engendered by the belief that tuberculosis is hereditary, are to be recompensed for their sufferings. The individual physicians who first evolved the theory which it is now claimed was a mistaken one, are not able to make restitution; neither are those who, relying upon the belief of the moment, followed the course of treatment outlined. In the very nature of the case, not even the state can make restitution. There is, however, one thing the state can do, and that is to stop giving to these theorists the power to treat as criminals all those who do not subscribe to their empirical views. The record of four thousand years of medicine is the record of four thousand years of beliefs and opinions loudly proclaimed to be scientific facts, and as such given wide publicity, only to be discarded and laughed at later as exploded theories. In the present instance, that the theory of infection will give place to some other theory about the cause and cure of tuberculosis, is as certain as it is that "in the space of less than forty years we have gone through three revolutions of opinion with respect to our treatment of typhoid" (John Stileman Bostock, M.R.C.S., L.S.A., in his history of medicine).

It may not be out of place to note in passing that Mrs. Eddy antedated the Minnesota state department of health more than forty years in the discovery that tuberculosis is not hereditary. During this period she and her followers have proved the truth of her discovery by healing not only tuberculosis, but all manner of disease, by the same method as was employed by Christ Jesus and his immediate followers. In her book Science and Health Mrs. Eddy wrote: "The Scientist knows that there can be no hereditary disease, since matter is not intelligent and cannot transmit good or evil intelligence to man, and God, the only Mind, does not produce pain in matter;" also, "If you have sound and capacious lungs and want them to remain so, be always ready with the mental protest against the opposite belief in heredity. Discard all notions about lungs, tubercles, inherited consumption, or disease arising from any circumstance, and you will find that mortal mind, when instructed by Truth, yields to divine power, which steers the body into health" (Science and Health, pp. 412, 425).

For a number of years, at almost every session of the state legislatures, bills have been introduced by physicians, or by those acting for them, which gave almost unlimited powers to state and municipal boards of health, even to the extent of legislative and judicial functions. Some of these bills have become law, others have been rejected; but the efforts of those behind them seemingly have not abated in the slightest. It is time, however, that all legislators realized there is no public demand for the enactment of these laws, which at best are based only on shifting theories and opinions, sure to give place sooner or later to others equally unstable.

"There is none good but one, that is, God," said the great Teacher; and there is none wise but one, infinite Mind, "with whom is no variableness, neither shadow of turning." God's mercy "waneth never," the same old hymn above quoted assures us, and those who turn to God in their hour of need will find in Him neither chance nor change, but unfailing wisdom and love.

ARCHIBALD MCLELLAN.

❖

Patching versus Purification

STRANGE as it may appear, the method or modus of spiritual healing seems altogether puzzling to many Christian people. Yet it can but be understood by every one who accepts the Master's teaching as to the nature of substance, and who apprehends the fact that Spirit and matter are opposites; that their relation, like that of truth and error or light and darkness, is one of mutual exclusiveness, so that they cannot exist together. There can be no possible affiliation, interblend, or touch between opposites, since when one is present the other is necessarily absent. To say that the knowledge of a given fact is not able to dispel ignorance of that fact, would be to talk manifest foolishness; and yet to one acquainted with the teaching of Christian Science this statement is just as rational as is the declaration that spiritual apprehension cannot heal the sick.

Christian Science teaches that the only proof of progress is found in the purification of human sense, the transformation of the mind; and the great difficulty in the way of the acceptance of this teaching is this, that mortal sense lives in the flesh, and thus thinks of healing as a remedial process by which broken-down or decaying materiality can be patched up and made to resume its functions. That material means seem essential to one having this point of view, is not surprising, and unconscious consent to this prevailing belief is an enemy against which every Christian Scientist needs to be on guard. Even when spiritual means have been substituted for material in our thought and practice, the patching-up sense of the healing process may remain to hinder, if it does not thwart, the realization of that mental emancipation and sequent elimination of human ills which constitutes the true healing.

In large part Christian philanthropy has been thought of only as a process of repair, and this explains why it fails to meet the need, though it may bring much relief and hence be altogether commendable. Today physical healing is also thought of as a patching up of materiality, but St. Paul recognizes the scientific fact of all true healing when he declares that it is a putting off of the old man, not merely an improvement of human conditions. So too St. Peter identifies true believers as those who have purified their souls (human sense) by obeying the truth. This is the nature of the healing for which Christian Science stands and which it is effecting.

Digitized by Google

If one were to come to us in bondage to some statement respecting an every-day affair which was placing him at a disadvantage and which we knew to be wholly untrue, we would tell him the facts of the matter,—not to make his thought less discomforting, but to bring him entire freedom from it. This is the activity and office of truth; it causes error to disappear with all its effects. "It is the spiritualization of thought" which attests the "operation of Christian Science," and "leaves nothing that can sin, suffer, be punished or destroyed" (Science and Health, pp. 272, 340). As one has well said, it is not the purpose of Christian Science to demonstrate physical health, but the real man. Improved health witnesses to the fact that the purification of sense has begun, but the desire for physical health as an end rather than an incident of spiritual cleansing, is a looking to hypnotism rather than to the "saving Principle, or divine Love" (Science and Health, p. 285).

The spiritual healing of the Master and of Christian Science means the purification of consciousness, and it is of the utmost significance that this fact be kept constantly in view. There is nothing about right consciousness, God's man, that calls for healing, and this manliness is to be gained, not by patching unmanliness, but by getting rid of it. Christ Jesus taught that the mortal self was not to be improved but denied, canceled, and two hundred years later Plotinus repeated his counsel when he said, "Purify your soul from all undue hope and fear . . . deny self,—affections as well as appetites,—and the inner eye will begin to exercise its clear and solemn vision."

JOHN B. WILLIS.

❖

"We would see Jesus"

THE twelfth chapter of John's gospel is of the most intense interest to students of Christian Science. The events recorded follow close upon the raising of Lazarus, although in the preceding chapter we read that the rulers declared Jesus should be put to death, before his influence extended any farther. In spite of this, the sisters of Lazarus gave a supper in honor of their brother's deliverer, and to this they invited some of their fellow townsmen, who doubtless came eagerly to see the one who had been four days in the grave. They were probably not aware that the priests were even then conspiring to put Lazarus to death, as well as Jesus.

We are told that at this supper Mary poured upon Jesus' feet a perfumed ointment which, according to some writers of that time, was worth a king's ransom; but even this she doubtless felt would be but a small token of love and gratitude for all that he had brought to their home. The next day, as the Master and his disciples were on their way to Jerusalem, the crowds that were going up to the Passover, and who had heard of the raising of Lazarus, went out to meet Jesus with palm branches and loud hosannas. We also read that those who had witnessed the raising of Lazarus "bore record" on this glad occasion, while a low murmur went out from the ranks of superstition and envy, "Behold, the world is gone after him." We next read that following the triumphal entry into Jerusalem the eager, inquiring Greek mind led certain of that nation to seek an interview with the one who had broken the age-long tyranny of the tomb. These men came to Philip and said, "Sir, we would see Jesus."

We are not told that any deep personal need impelled this quest, nor do we gather from the record any hint as to whether their request was granted, but their words have been echoing down the centuries, whenever and wherever professed Christians have been in deep distress that no human power could relieve. Alas that the words, "We would see Jesus," should so often have implied a belief that the help given so freely by Christ Jesus is no longer available; that there is no one now who can say, as in the case of the blind man, "Be of good comfort, rise; he calleth thee." It would almost seem as if the cruel edict of the rulers of that early day held sway even over those who called themselves followers of the Nazarene Prophet, that in time of sickness and sorrow they should forget his words, "Lo, I am with you alway, even unto the end of the world;" also his message to his sorrowing disciples, "I ascend unto my Father, and your Father; and to my God, and your God."

Happily for many of us, there was one in our day who believed that if we could "see Jesus" aright, our woes would be taken away. To Mrs. Eddy, as to many other sincere Christians, there came gleams of light in the darkness of mortal experience; but in the darkest hour, when the shadows of death were fast closing in upon her earthly sense, the light of Truth broke through the clouds, and she was healed. On page 24 of "Miscellaneous Writings" she offers us what she there names "death-bed testimony to the daystar that dawned on the night of material sense." She tells of calling for the Bible and of reading in Matthew's gospel the account of the healing of a paralytic man. She was able to "see Jesus" in the way he intended, not as a human personality, but as the Son of God, who would have all men become sons of God by their understanding of divine law and obedience thereto.

After Mrs. Eddy's own wonderful healing, she taught unnumbered thousands, directly and through her published works, what the real seeing of Jesus means,—that it is much more than a mental glimpse of one both great and good, which is anon forgotten. She constantly strives to make us acquainted with the divine Principle which ever animated Christ Jesus, and which explains all his wonderful works. As a result of her teaching, Christian Scientists can never lose sight of the Christ-man, known to the world as Jesus of Nazareth; and as they strive in their healing work to follow him, they love him more and understand him better.

ANNIE M. KNOTT.

❖ ❖ ❖

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SACRAMENTO, CAL.—Because of the constant increase in membership and attendance in First Church of Christ, Scientist, there is now forming a second church in Sacramento. Announcement of this was made yesterday [Nov. 29] during the services of the church. The announcement is also made by the congregation of First Church of the intended erection of a Sunday school building on the lot recently purchased by the church next to the present edifice, Twenty-third street, between K and L streets.—*The Union.*

Digitized by Google

NEW YORK.—The total number of reprints of the article "Must Protestantism Adopt Christian Science," from *The North American Review*, sold throughout the world by this office was four hundred and thirty-three thousand. Literature presented to individuals by the field in New York state during the year 1914 totaled 518,896 pieces; to institutions, 264,295 pieces, making a grand total of 783,191.

Committee on Publication.

PORTLAND, MAINE.—For the past month [to Dec. 18] rapid progress has been accomplished on the new church edifice of First Church of Christ, Scientist, of Portland, now being constructed on Neal street, near Carroll. Indications point to the church being ready for occupancy within five or six weeks.—*Express-Advertiser.*

OXNARD, CAL.—T. A. Rice has made the Christian Scientists of this city a Christmas gift of a church building costing forty-three hundred dollars, located on two lots desirably situated. The building is that of the Christian church here, which has not been open for some time. The Christian Scientists were in need of a place of worship, for they were holding services in the Masonic club-room.—*Ontario Report.*

❖

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Cleveland, Ohio

Clarence W. Chadwick delivered two lectures on Christian Science for Fourth Church of Christ, Scientist. At the first lecture the introduction by Louis A. Heller was in part as follows:—

While one informed upon the subject finds it difficult to understand how anybody could fall into the error of believing that the primary object of Christian Science is the healing of bodily ills, yet there is nothing which makes a stronger appeal to the one "without God in the world" than the words of the master Christian, addressed to the impotent man at the pool of Bethesda,—"Wilt thou be made whole?" The answer, "Sir, I have no man . . . to put me into the pool," would seem to indicate that then, as now, there was great need to reveal to mankind the truth that health or wholeness is something vastly more than mere physical well-being; that health cannot be separated from holiness, that freedom from suffering comes with freedom from sin, and that to win that freedom is to enter into the "glorious liberty of the children of God."

At the second lecture the introduction by Arthur W. Marriott, first reader, was in part as follows:—

Among Christians, regardless of creed, there has always existed a belief, sometimes vaguely expressed, sometimes boldly proclaimed, that some day, in some way, Christ would come again in the flesh upon this earth. Sin-weary and disease-laden humanity have hoped and prayed for the coming of that day these many centuries. Like the ancient Jews, however, Christians today seek the Messiah in their own particular form; and as the Jewish nation was only ready to accept a Messiah who would be a mighty hero and conqueror, so the Christians of the following centuries have been only ready to accept a fleshly appearance of the Christ, and during these years they have overlooked the promises of the Master. The words, "Lo, I am with you alway, even unto the end of the world," have fallen meaningless on human ears, until in the last half century there came a woman in New England who taught anew the promises of Holy Writ and who pointed out through her religion, which she denominated Christian Science, the fact that Christ, or Truth, is with us always, here and now available to heal all our diseases, to comfort humanity in all its distresses.—*Correspondence.*

❖

Rochester, N. Y.

The Hon. William E. Werner, of the court of appeals of the state of New York, in introducing Bicknell Young, who lectured on Christian Science, said in part:—

The purpose of Christian Science, as I understand it, is not to supplant primitive Christianity, but to render our understanding of it more complete and practical. In this simple statement we find the cause of the wonderful growth and success of Christian Science in the half century that has passed since Mrs. Eddy first began her great work in the development of a newer and larger faith in the divine immanence in everything that is. Christian Scientists believe that the ruling providence of God should find practical expression in all the affairs of men. The principal mission of Christian Science is to spread abroad an enlarged spiritual explanation of the infinite personality of God as Spirit, and thereby to increase human faith and trust in Him. In this mission the Christian Science church should have, and I believe it has, the good will of all other Christian denominations. This is an age of extreme tolerance of all religious beliefs. Men are brushing away the cobwebs of man-made theology in their search for the essential and simple truths of primary religion. They are beginning to realize that true Christianity must find its expression, not in the dogmas of scholars or the refinements of doctrinaires, but in the daily life of men and women imbued with the divine Spirit.

Christian Science has transplanted religion from an atmosphere of gloom and pessimism into the sunlight of hope, joy, courage, and happiness. Thousands upon thousands have been lifted from the depths of despair to the heights of a sublime faith in the salvation of all who faithfully and earnestly strive for it. Christian Science has brought to pass many other wonderful things, but if it had never accomplished anything else than the conversion of thousands of hypochondriacs into happy men and women who are spreading the gospel of good cheer, it would be entitled to a place in history with the great movements that have worked and are working for the ultimate redemption of the human race.

Correspondence.

❖

Clinton, Mass.

The remarks of E. R. B. Allardice, civil engineer, in introducing William R. Rathvon, who lectured on Christian Science in the Globe Theater, were in part as follows:—

Digitized by Google

The presence of this large gathering here tonight clearly indicates the important fact that in this town, as throughout the civilized world, thinking people are eagerly seeking to learn more about the subject of Christian Science, the ever-practical, demonstrable truth. When I first began my earnest study of this subject, about two years ago, the phase which interested me most was the linking of the word Science with Christianity. As my school training and life-practice had been along lines of material science, I had come to know that a thing to be scientific must be provable, and therefore my interest in Christian Science naturally developed along that line. I soon found that this new-old religion was neither more nor less than that which Jesus preached and demonstrated (proved) by healing the sick, casting out sin, and raising the dead.

Little by little and step by step I have proved that Christian Science is all that its thousands of followers claim it to be, and that we are able to meet the problems of this present false sense of life in proportion to the correct understanding we have of the true nature of man and his relation to God. Christian Science proves its statements by exact demonstration, and even the world of material science declares that this must be done by all who desire a hearing.—*Correspondence.*

❖

Vancouver, Wash.

Virgil O. Strickler lectured on Christian Science to a crowded house in the Rex Theater. Edward Curran, editor of the *Clarke County Sun*, in introducing the speaker, said in part:—

Long years ago the Master said, "Seek, and ye shall find; knock, and it shall be opened unto you." The obligation is imposed on us to "seek," and when we sincerely obey this command we always find more than we seek. Years ago the wise men came from the east to the gates of the holy city seeking and asking, "Where is he that is born King of the Jews?" and guided by the star of Truth they were led to the manger, where they found not only the King of the Jews, but also him of whom Moses in the law and the prophets did write, namely, the Messiah and Saviour.

Again in the long ago came Moses, a seeker. "The angel of the Lord appeared unto him in a flame of fire out of the midst of a bush," yet the bush was not consumed, and he also received a commission to go down into Egypt with the demand, "Let my people go." In recent years, as a divine seeker, came a woman of beautiful life and character, Mrs. Eddy, and she, true to the infinite, discovered more than that for which she sought. Part of the results of her faithful search and discoveries are found in that wonderful, yes, in many respects that matchless book, "Science and Health with Key to the Scriptures."—*Correspondence.*

❖

Sioux City, Iowa

An audience of about twelve hundred had the opportunity of listening to a lecture on Christian Science delivered at the Auditorium by William D. McCrackan, M.A. The speaker was introduced by the Rev. O. N. Verenius of this city, who said in part:—

All theological systems of men and schools are more or less characterized by false interpretations of the Bible. As schools change, their theology must necessarily change. Truth is everlasting and unchangeable, but man-made systems are not. Therefore, to begin a Christian life is not to study man-made theology, doctrines, and dogmas, because truth must be spiritually and scientifically understood. Reformation and demonstration must be the consequences of spiritual understanding, and spiritual understanding of the truth always affords us a firm platform on which to stand.

Christian Science brings us good tidings about freedom from sin, sickness, and death, whereunto we do well to "take heed, as unto a light that shineth in a dark place, until the day dawn, and the day-star arise" in our hearts; and that great promise which the Master gave to his followers concerns us here and now: "Ye shall know the truth, and the truth shall make you free."—*Correspondence.*

❖

Erie, Pa.

Jacob S. Shield spoke in Masonic Temple on Christian Science. The Rev. Thomas P. Byrnes, pastor of the First Unitarian church, introduced the lecturer, and said:—

As I meet with my religious neighbors I always like to discover the things we have in common rather than the things in which we differ. So I wish to say that I am so in the habit of interpreting religion in terms of life that I feel a bond of kinship with all other people who do the same thing. To me the Christian man is the man with the deepest, noblest, strongest, and most wholesome and transcendent life. Therefore among the great teachers and prophets of the higher life of humanity I place Mrs. Eddy, one of the pioneers in that great modern awakening which has given a new appreciation of life and its deeper sources to thousands of people in the modern world.—*Erie Dispatch.*

❖

Lectures to be Delivered

Testimonies of Healing

I would like publicly to express my gratitude for all the blessings I have experienced through the study of that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In my youth I had the advantages of a Christian home, and all my life have been associated with religious institutions, though I have not been a member of any church since I was quite a young man. I was always very anxious to fathom the apparent mysteries and problems of life, and though firmly convinced of a good, wise, omnipotent, and perfect creator, I was constantly coming into contact with a condition of things diametrically opposed to the view of a perfect God and a perfect plan, such as sorrow, pain, disease, discord, and war. During my studies I had been referred to Mrs. Eddy's book, but after a slight perusal, I returned it without having found the Principle it reveals; in fact, the book failed to impress me in the least. However, some years afterward I was invited to one of the Wednesday evening meetings, and from what I heard there I was induced to read it again, with the result that I was enlightened as to the true meaning of Christian Science. I have demonstrated the divine Principle ever since, and with effects that seem wonderful from the old point of view.

All my life long I had considered myself a chronic dyspeptic and had to diet myself. I was also subject to rheumatism, gout, and other ills; but as I have realized that divine Mind is the only real power, I have overcome all these infirmities. I am sincerely grateful for this happy change in my physical condition, and for the spiritual uplift which is always associated with the freedom that the understanding of Truth brings to all. A special demonstration of physical healing was over an attack of what would be diagnosed as malignant blood-poisoning. My face and head were much disfigured by sores and ulcers, a condition which could not be concealed or denied, except from the standpoint of spiritual reality. I sought the aid of a Christian Science practitioner, as my understanding was not sufficiently clear to meet the case, and after three or four treatments I was completely restored to health. I had a similar attack ten years previous to this, though not so diffused, and it took three months to cure it under medical treatment.

I cannot adequately express my gratitude for the benefits I have derived from the study of Christian Science, and for the new light it brings to the Bible and the teaching of Jesus Christ. My great desire is to bring the good news to others, and in the mean time, by word and act I am humbly trying to set forth my thankfulness to God, also to His servant, Mrs. Eddy, for the glorious truth again revealed so clearly to the world.—R. H. Wesencrapt, Westcliff-on-Sea, England.

The saying, "Man's extremity is God's opportunity," has been most beautifully proven to me. I could not enumerate the many blessings that have come to me since taking up the study of Christian Science, for God has truly opened the windows of heaven, and poured me out blessings so great that there has hardly been room enough to receive them.

Christian Science found me suffering from severe internal injuries received through a fall, also from a badly injured limb. My condition was such that at times I could not turn over in bed without assistance. Again, I had no control over my limb at all, and would have to move it with my hands in getting in and out of bed. I had been under the care of physicians for a long time, but they all told me the same thing, namely, that an operation was the only way through which I could ever hope for relief or cure. In addition, I had suffered from liver and kidney troubles for over ten years. I was consumed with fear of lack, worry over the future, and a great sense of sorrow, as to mortal sense everything worth living for had been taken from me. I was in the deep valley of despair, had almost lost all faith in God, and I felt very resentful for what I deemed my unmerited sufferings. I had reached the point where it did not seem worth while trying to live, but the internal injuries and the injured limb were absolutely and perfectly healed as the result of six months' study of Science and Health. The other ills were slower to yield to the power of Truth, and I have had considerable help to overcome them, but they finally all disappeared into their native nothingness. God has been my physician for the last three years, and my health is perfect. I feel twenty years younger than I did three years ago, and look at least ten years younger. I can truthfully say that I am free.

To say I am thankful for this beautiful religion only feebly expresses my feeling. My heart is filled with thankfulness to God, with love for our Saviour, Christ Jesus, and with gratitude to our Leader for her untiring labors for mankind. I am also grateful to all those who have been instrumental in leading me into the light. My earnest desire is that I may grow in the understanding of this blessed truth, and that I may glorify God by daily demonstrations of His supremacy and power.

Josephine M. Parizek, Los Angeles, Cal.

I wish to express my sincere gratitude for the many blessings received since coming into Christian Science about two and a half years ago. On Dec. 6, 1911, I was taken violently ill with pain in the abdomen and vomiting. A physician was called, and he pronounced it a case of ptomaine poisoning. He treated me for three days, but without alleviating my suffering. Then he said it had become an acute attack of appendicitis, for which he treated me about three weeks. The last two weeks I had nothing to eat and only water to drink. At the end of that time I was able to leave my bed, but in a few days was down again, suffering more than ever. This time the doctor said that only an operation would afford relief. I did not want to consider an operation, knowing the results in the case of my brother, who had been operated on for the same trouble.

I then dismissed the physician. I had nothing but water for another two weeks, and tried osteopathy, which had been recommended to me. This seemed to help me for a while, and I was able to get up and partly attend to my business; but in a few days the third attack came, very severe, and I was greatly discouraged. I was about two thousand miles from any relatives, and on account of my absence, my business was running at a considerable loss. Although a strong, healthy man when first taken ill, I was by this time so weak that I could not stand up for more than a few minutes. I did not know what to do, and began to believe, as some of my friends said, that I would just keep getting weaker and weaker until I passed on.

I had heard of Christian Science but knew nothing about it, and felt rather antagonistic toward what I thought it was. It might be all right for minor ills, but I had little faith in it for a case like mine. My friends were much opposed to Christian Science also, and insisted on an operation; in fact, they were almost ready to have me removed by force to a hospital, all except the faithful lady who took care of me and who is now my wife. She had been benefited much in Christian Science, and kept urging me to give it a trial, constantly affirming that it would heal me. Finally I consented to have treatment, and did so. I was greatly helped, for

Digitized by Google

the intense suffering became much less, and a sense of peace and comfort, which I had not felt for weeks, came to me. But my faith in Christian Science was not sufficient to rely on it absolutely, and I still occasionally resorted to material means, thinking to hasten my recovery by so doing. This went on for some time, until I thought I would be able to leave my bed soon, and then a fourth and the most severe of all the attacks came. Another Christian Science practitioner was called, and this time Truth was entirely relied upon. The healing was almost instantaneous, and it has been permanent.

Thus was proved to me the truth of Mrs. Eddy's statement on page 167 of Science and Health, "Only through radical reliance on Truth can scientific healing power be realized." I find Christian Science a great help daily. In business it teaches me how to deal with my fellow men, and how to bring about right conditions and circumstances by knowing the truth about them. My earnest desire is to express my love and thankfulness to God by daily trying, to the best of my understanding, to live this saving truth as taught and demonstrated by our beloved Leader in the Christian Science textbook, "Science and Health with Key to the Scriptures."

JAMES PARIZEK, Los Angeles, Cal.

✧

Six or seven years ago, while employed alone in a store, I found on arising one morning that I could not use my feet without intense pain, but I had to go to the store. On reaching home three hours later, I was compelled to crawl upstairs, being unable to stand up. My mother, who is a Christian Scientist, declared the truth, and after calling a practitioner she at once began to read Science and Health. I was as helpless as a babe, unable to move hand or foot. Within a few days, however, I was back at the store, standing twelve or fourteen hours each day. The first time I went out after my recovery was a rainy and snowy day, and my skirts were wet to the knees, but I felt no ill effects, in fact was better the next day. On previous occasions, when under medical treatment, I had lain in bed four to six weeks. Last winter I had another attack, but it was overcome after a few treatments.

I am very grateful for all Christian Science has taught us. I am now reading and trying to learn more of this healing power, and I am also doing my own work in Science instead of depending on others, which I believe was the reason for my last attack.—JANE D. PALMER, New York, N. Y.

✧

Christian Science found me, about fifteen years ago, weary and heavy-laden. I was not strong, and after a severe illness was left, according to *materia medica*, with a weak heart. Whenever I overdid in study or work or became frightened, I would have a sinking spell, supposedly caused by heart failure. This would sometimes last several hours before I fully recovered, and usually it was necessary to call a doctor before I could be revived. This condition had continued about ten years. Notwithstanding all this, I had positive proof of the absolute cure of this trouble through Christian Science treatment. One day, while sitting at my window doing some mending, a bullet suddenly crashed through the double pane of glass. I did not faint, and my heart was filled with gratitude for the understanding that God is always with us and that we do not have to be afraid. I am indeed grateful for Christian Science.

About two years after my healing, my father was healed of apoplexy when he was sixty-five years old, through Christian Science. He had had several severe strokes, and had not been able to go far from the house for six years, but was just able to do a little marketing for us sometimes. Since his healing, however, he goes to town daily, and attends to the bookkeeping for my sister's business. He walks about six blocks to the elevated, and prefers climbing all those stairs to riding on the street-cars. He is almost eighty years old now, and says he is getting younger every day. He has been well ever since his healing.

MALVINA A. KORTEN, Chicago, Ill.

✧

[Translated from the German]

I am alive today solely through Christian Science. In January, 1914, I was suddenly taken ill, and the physician who was called in at once declared the case to be diabetes. After I followed the medical prescriptions for several weeks, my condition improved. In March, however, spinal disease and a cerebral affection were added, and the physician told my family to be prepared for the worst. Paralysis had begun to set in, and this made walking impossible.

While in this condition I heard of Christian Science and asked for treatment, which was taken up immediately, though absently. Four weeks later all these troubles had left me, and the words indeed came true in my experience, "Man's extremity is God's opportunity." It seems impossible to describe the great benefits which have come to me through the power of God and the understanding of Him as revealed in this glorious teaching. In our family many diseases have been overcome through Christian Science, such as nervous trouble, whooping-cough, eye and stomach trouble, and we are most deeply grateful to God for the quick and permanent healing which we have experienced.

ANTON AGSTEN, Oberlichtenau b. Chemnitz, Germany.

✧

It is several years since I learned what Christian Science teaches, and I am deeply grateful for the blessings I have received from this wonderful revelation of Truth, especially for the better understanding of God. Through Christian Science as explained by Mrs. Eddy in Science and Health, the whole aspect of life is changed, and instead of gloomy forebodings of evil, we realize God as ever present, and this consciousness makes our safety very real.

I was prejudiced for a long time against Christian Science, owing to a misconception. I had read pamphlets and arguments against this teaching, and looking at it from a material standpoint, I thought they had right on their side. Then I saw a letter in a newspaper, written by a Scientist, at the close of which she stated that it was a singular fact that those who were most opposed to Christian Science were those who knew nothing about it. I included myself in that list, and thought it only fair to know what Christian Scientists believed before condemning, so I wrote inquiring for information. A reply came, directing me to get a copy of Science and Health from the loan library. This I did, and on reading the book I felt convinced it was the truth, so I asked for help in Christian Science.

I had been an invalid for over six years, and for nearly three had suffered from paralysis. I was unable to move without the aid of crutches, and had to be carried in a chair up and down stairs. Before I read Science and Health I felt my strength failing, and I could not have continued the struggle much longer, as the weakness was extending to my neck. The practitioner came on Monday, Nov. 29, 1909. Her explanations convinced me of the truth of this teaching, and her kindness and patience were most helpful. For two days there was a fierce conflict between the flesh and the spirit, and on Wednesday I saw clearly that as the child of

Digitized by Google

God I had a right to all good. On Thursday I sat up all day without support, and on Friday I moved my leg in bed, but did not speak of it until the next morning, when I told the members of the household, and they were greatly rejoiced. The foot was still limp, and as I rose after lunch and was on my crutches, I felt my weight on the heel but could not move the foot. I thought that as it had taken one day to heal the leg, it might require another to heal the foot.

Reasoning thus, I went across to the dressing-table to put on my foot the strap which I used to prevent the leg from dragging, when the words of the Master came to me, "Be not faithless, but believing." They were so distinct that I looked round to see if any one was in the room. I felt impelled to put the support down, and when I did this my foot sprang into position at once. I put the crutches away and walked into the drawing-room without help of any kind. The following day I went up and down stairs twice, and since then I have constantly increased in strength. I am able to walk about four miles without any sense of fatigue, daily proving the truth of Christ's words, "Ye shall know the truth, and the truth shall make you free." God had been a reality to me for many years, and I found great comfort in the knowledge gained through the teaching of the church I belonged to, but I am convinced that Christian Science as taught by Mrs. Eddy is a clearer exposition of Truth than I have known before. The Bible has become a new book to me, and I am reading it constantly, together with our text-book, "Science and Health with Key to the Scriptures." No one can read the chapter on Prayer in Science and Health (if understood) without realizing the sense of God's presence. It is this sense of oneness with God through the Christ-idea that gives such a peace and calm. Every day I thank God for Christian Science, and long for the time when all men will be willing to accept the truth and become acquainted with God.

MARGARET BROWN BAXTER, Birmingham, England.

✦

In 1912 my husband had Christian Science treatment for an injured finger, and the following winter for an ulcerated tooth, both of which were healed. I have been healed of a bilious attack, and my two children have received help at different times through the power of Truth. The healings have been permanent, and I am still studying Christian Science.

EVALINA WILLIAMS, Iola, Kan.

✦

In the year 1907 Christian Science literature was brought into my home, and since that time there have been many proofs that God is a very present help. The truth was vividly presented, when after only one day's illness in December, 1907, I was enabled to continue my duties with but the slightest symptom of weakness, and this ceased the following day. The attack was seemingly a severe one, but through the loving help of a Christian Science practitioner I realized that in God "we live, and move, and have our being." This was a wonderful healing, as the same experience had been passed through before, and had resulted in weeks of prostration while under medical treatment.

Yet another proof of the allness of God was shown in the knowledge that "accidents are unknown to God, or immortal Mind" (Science and Health, p. 424). While trying to reach for something, I fell against the sharp edge of a dresser and struck the side of my face very near the eye. For an instant I was stunned, but soon recovered. I was, however, unable to help myself, so I called on the practitioner again. The pain was great, while the swelling and discoloration were unpleasant to have or to behold. Indeed my family were alarmed at my condition, but in about a week there was nothing left to show that I had ever been hurt.

This is only a minor part of what Christian Science has done for me in the line of physical healing. At numerous other times I have been helped through the realization of the truth as presented by Mrs. Eddy. I am striving to learn more of this truth every day.

CARRIE JEWESSON, Newark, N. J.

✦

I am sending this testimony in thankfulness to God for the healing I have received through Christian Science, hoping it may be beneficial to some earnest seeker of the truth. After being examined by three doctors in as many cities, all of whom declared I had a very serious form of appendicitis, I was hastily taken to a hospital, where every preparation deemed necessary for an operation was made, as the time had been set for eleven o'clock the following morning.

My wife, who had become interested in Christian Science, came quite early in the morning, and seeing the seriousness of things, pleaded with me to accept Christian Science treatment. I at last consented, and a practitioner was sent for immediately. She arrived at twenty minutes of nine, and after reading Science and Health and showing me the truth of my relation to God, she declared that the same divine power is here today as when Jesus walked the earth. As Jesus said to the man sick with the palsy, "Arise, take up thy bed, and go unto thine house," so she bade me arise and walk; and I said I would. A few minutes later she left me, and I arose, dressed, and rang for the nurse, telling her I wished to leave the hospital as soon as possible, as we had decided to postpone the operation, because I felt perfectly well. She was very much astonished at my attitude, but wished me to wait until the doctor arrived, as it was getting near the time set for the operation. I consented to this, but was met a few moments later by one in authority, with a strong protest at my leaving the hospital.

When the doctors arrived, they were more than surprised to find me walking around the room in perfect health and prepared to go home. They still insisted that it was the worst case they had ever seen, but finally agreed to my departure under the promise that I would engage them for the operation if one proved necessary. I then left the hospital, a healthier, wealthier, and wiser man, and on reaching home enjoyed a hearty meal. A few days afterward I went into business, and have never had a sign of this ailment since.

Again I thank God for His help, and am deeply grateful to our dear Leader for showing us the truth as revealed in "Science and Health with Key to the Scriptures."

JOSEPH CREWSON, Guelph, Ontario, Canada.

I, wife of Joseph Crewson, certify that everything contained in my husband's testimony is correct.

WINIFRED CREWSON.

✦

I wish to testify to the goodness of God and to tell something of what Christian Science has done for me. I am not a member of the Christian Science church, but have belonged for many years to the church in which I was raised. Christian Science found me completely worn out with nervous prostration. I had been sick a long time and was unable to make any money, so that my family and myself were in destitute circumstances. Three prominent physicians had given me up, saying there was no method known to medical science whereby they could put in a new set of nerves; but I am thankful to God that Christian Science healed me, and has clothed and fed us bountifully for the past three years.

J. D. THATCHER, Kansas City, Mo.

Digitized by Google

It has been wonderfully proven to me that God is indeed the great Physician. I was in very poor health for fourteen years after the birth of my only child,—even before that, for most of my life I was delicate. I had tried many kinds of remedies,—deep breathing, physical culture, hygiene, and dieting, besides homeopathy and allopathy. I had been operated on three times. Finally, when I was worse than I had been for some time, I was told by two prominent physicians in Kansas City that I would have to undergo another very serious operation. I shrank from this, as the last operation took over three hours, and I afterward nearly passed on.

At this time Christian Science was lovingly brought to my attention. Quite skeptically I went to a practitioner for treatment, and then began to study Mrs. Eddy's wonderful book, "Science and Health with Key to the Scriptures." My healing seemed slow at first, but several minor ailments were healed. Then I gradually gained strength and the most wonderful health I have ever known. Instead of going to a hospital and enduring another long siege of semistarvation and slow convalescing, throughout the beautiful fall I was going to a Christian Science practitioner, eating three meals a day, and enjoying the study of the Bible together with Mrs. Eddy's books,—books that brought peace and joy and made "all things new." I was gaining an understanding of and a love for the Bible such as I had never expected to have, although I had been a teacher in a Sunday school for several years. This was over six years ago. Then I was anemic, delicate, and irritable; now I am strong and happy, and have gained greatly in weight.

Not long ago I was with some relatives whom I had not seen since my healing. They marveled at my good health and happy spirits, and one day my aunt said that I had not told them about all the changes in my health. When I asked what other change there had been, she replied, "You used to be very nervous, but are not so any more." This was one of the blessings I had overlooked.

My healing brought my husband to investigate Christian Science. At that time he had retired from business because of the condition of his health. It was a great joy to us both when he bought his first Bible, and as its beautiful passages began to unfold to him, he carried it with him, for convenient reference. Before this I had never seen him look into a Bible, and he very seldom went to church with me. He is now actively engaged in business. Our son soon saw the change that came into our lives, so he began to attend the Christian Science Sunday school, and before long owned his own Bible and Mrs. Eddy's books. He is at college now, and at his request the *Monitor* is sent him. This daily newspaper is an education in itself, and from its pages my son has obtained many things helpful in his school work. We all belong to The Mother Church and a local church. My husband and I have had the privilege of class instruction, which greatly illumined the study of the Bible and "Science and Health with Key to the Scriptures," and is enabling us to help ourselves and others out of darkness into light.

This truth as rediscovered by Mrs. Eddy has proved for us "a very present help in trouble," and has been our only physician for over six years. It has made a happy home happier and given us wonderful health. For all these blessings, and more, which have come through spiritual understanding, I am indeed thankful to God, and grateful that through Mrs. Eddy this wonderful truth is again setting free sin-sick humanity. I send this testimony with the prayer that it may assist others to see the blessings of Christian Science and may lead them into the paths of peace in the real Christian life.—LILLIAN I. SIMPSON, La Mesa, Texas.

From Our Exchanges

[The Christian Intelligencer]

From this terrific struggle will come an impetus to enlarge the scope and application of the gospel of love and peace to all the world. The church has been playing with the great task of evangelization committed to her by her Master. She has viewed with something of complacency the spread of a so-called "Christian civilization" among the nations of the earth, rather than given herself to the more difficult but far more essential task of implanting among them the real seed of gospel truth and life. Now she has seen the calamitous consequences of such substitution. The fields of the world have been sown with tares more freely than with wheat, and the inevitable harvest is being reaped.

But if in the coming year or years the lesson shall have been learned and the church shall bend its energies more wholly to the work of the intensive rather than the extensive cultivation of the spiritual life of men, and shall be more concerned to bring men into a spiritual relation to Christ rather than to a formal relation to the church, even the leanness of these years of famine will have been well endured for the fulness of the blessings which will be hereafter experienced. Such, then, should be the prayer and wish of every Christian for the year upon which we are entering, and such will be the outcome of even the cruelty and passion of the present strife, if men shall thus be convinced that only through the Christ can the world be brought to temporal or spiritual peace and blessing; because there is no "salvation in any other: for there is none other name under heaven given among men," than the name of Jesus, whereby they can be saved.

[The Christian Church]

Has not the fact that the church as a whole has not proclaimed war *anathema* and utterly and absolutely contradictory to the religion of Jesus Christ, and that no man who took part in it except in self-defense, and that as a last resort, after courts and all else had been tried, could have any part in the Christian church,—has not this fact, we say, been just the thing that has so weakened the church's authority in this regard that if now she attempts to speak it is with weak voice? But we believe that if she should put before the world now just what war means, and then in one mighty and unanimous voice condemned it absolutely, that the world would listen. The world's very surprise would cause it to listen. The time has come to do this.

[George E. Burlingame, D.D., in *The Watchman-Examiner*]

The sky-line may shift, and our field of vision and of experience may widen, but always God is our home, and "in him we live, and move, and have our being." By faith the soul, awed by the mystery of the future, burdened for its grave responsibilities, and coveting the enjoyment of its richest possibilities, may enter so fully into the secret of abiding in God through all change, that the most vital reality of life shall be God Himself.

[Rev. Paul Sperry in *New-Church Messenger*]

Many today are looking slightingly at the ten commandments and calling them obsolete and inapplicable to modern conditions. But no more divine laws are needed today, and comparatively few human statutes, and these latter only to make clearer the practical application of God's laws. The one crying need is a spirit of obedience, a love for orderly ways, a yielding to divine guidance and instruction; in other words, grace and truth. The one law that must underlie all the laws of a city, state, and nation, in fact that must be

Digitized by Google

the essence of international laws, is that which our Lord came into the world to establish on a practical working basis, —the law of love. Only as his promised second coming shall usher that law into modern conditions can international warfare cease forever, industrial strife give place to cooperation, and personal antagonisms be superseded by the spirit of mutual helpfulness. It will not mean that law has been set aside, but rather that it has been enthroned where it belongs, at the left hand of and close beside righteousness in the temple of practical religion.

[*American Lutheran Survey*]

Shall we grow more and more into the similitude of Christ? We cannot grow except as we feed upon the spiritual food which is Christ. We cannot learn except as we hear and hearken to God's voice. We cannot walk circumspectly except as we walk with Him. Shall we listen only with the ear of sense? Then we shall not hear His voice. The voice cannot be heard with the ear of sense; its tones make no impression upon the surrounding air, nor do they stir the waves of the physical atmosphere. Its accents are too still and small to be caught by the natural ear: they are speaking constantly, but they are drowned by the thunder, the earthquake, and the fire.

We hear His voice only by the inner ear; only as we enter the inner, sacred tabernacle are His words audible. There we may hear Him speaking to us even as He called to the boy Samuel in the night-time.

[*Western Christian Advocate*]

God is in His heaven. Christianity, rightly understood and fearlessly accepted and put to trial and test, is no failure. Civilization has not gone down to utter wrack and ruin. The centuries cannot be rolled back into chaos by any outbreak of passion, undoing all the patient labors of thousands of years. Much may indeed be grievously affected. Advancement, for a time, may be checked disastrously. "High hopes," that had risen "like stars sublime," may "go down the heavens of freedom." The hearts of thousands, a few months ago elate with expectation and glowing with belief in and anticipations of universal love and peace and the brotherhood of man, may be bracing themselves against chill and desolation. But truth is mighty, and it will prevail.

"Well roars the storm to those that hear a deeper voice across the storm." "I make all things new," declared the enthroned Christ.

[*The Christian Register*]

The question of going to church is not whether one who goes is better than one who does not, but whether he does more in one way than in the other to keep alive the light of religion in the community. It is not so much how he may save himself, as how much he may help save others, that a conscientious man ought to ask. And if he puts this question to himself fairly in his early life, he will rather choose to take that course which makes life best worth living to many persons than that which simply contents himself.

[*The Universalist Leader*]

Mental atheism is often like a cloud which, while it hides the sun, cannot prevent some measure of its light and warmth from reaching the earth. The heart that is obedient to God's will feels the glow of His approval, and rejoices in the light of His countenance, thought it may not perceive the source from which its peace and gladness come. The commendation of our conscience is the voice of God's approval, whether we know it or not.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5⅓ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Permission has been obtained to translate into German the article "Mary Baker Eddy," by Arthur Brisbane, and it is now published in pamphlet form.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: God's Lovingkindness Proved to Men," a lecture by Rev. William P. McKenzie, already published in the German language in pamphlet form, is now printed in English, and is on sale at prices shown on the opposite page for our regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 15 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

Employers may require employees to sever their connection with labor unions as a condition to employment, if they so desire, according to a far-reaching decision just handed down by the United States Supreme Court. The case came before the court from Kansas, where a switchman was threatened with dismissal if he did not withdraw from the Switchmen's Union. That the superintendent who made this request was within his right, is the sum of the decision, which makes unconstitutional a Kansas law known as the coercion statute. The legitimacy of labor unions was not questioned by the court.

One may become a member of a union if he desires, but "the individual," so reads the decision, "has no inherent right to join the union and still remain in the employ of one who is unwilling to employ a union man any more than the same individual has a right to join the union without the consent of that organization. Just as labor organizations have the inherent and constitutional right to deny membership to any man who will not agree that during such membership he will not accept or retain employment in the company with non-union men, and just as a union man has the constitutional right to decline proffered employment unless the employer will agree not to employ any non-union men, so the employer has the constitutional right to insist that the employee shall refrain from affiliation with the union during the term of employment. There cannot be one rule of liberty for the labor organization or its members and a different and more restrictive rule for employers."

The decision is said to affect laws in California, Colorado, Connecticut, Indiana, Kansas, Massachusetts, Minnesota, New Hampshire, New Jersey, New York, Oklahoma, Oregon, Pennsylvania, Wisconsin, and Porto Rico.

The city of Cleveland, Ohio, has formally taken possession of thirty acres of lake-front land, estimated to be worth twenty million dollars, for which the city has fought the Pennsylvania and New York Central Railroad companies for the last twenty-three years. Armed with a writ of ejectment issued by the county clerk, Mayor Baker invaded the network of railroad tracks covering the ground and formally declared the territory to belong to the city. The United States Supreme Court on Oct. 16 decided the land was the city's property. The Farmers Loan and Trust Company of New York then sought an injunction and asked that the city's title to the land be declared invalid on the ground that the Cleveland & Pittsburgh Railroad Company holds a ten million dollar mortgage on the property. The federal court refused to issue the injunction, and the mayor was advised by his attorneys that the city could take immediate possession of the land.

The suits of the United States under the Sherman law against the Prince line, the Hamburg-American line, the Lamport and Holt line, and others, charging restraint of trade in connection with freight and passenger steamship business between American ports and Brazil, and against the America Asiatic Steamship Company and others whose steamships ply between New York and Asiatic ports, have been dismissed. The suits were filed about two years ago.

In dismissing the petition against the Prince line and its codefendants, one of which is a British line and two are German lines, Judge Lacombe in his opinion asserts that the combination complained of has been practically dissolved as a result of the European war, and "in consequence the questions presented have become largely academic, and it seems unnecessary to undertake any exhaustive discussion of the facts."

In the new scheme of water supply from the O'Shanassy river, a third system of water supply for Melbourne, Australia, and suburbs has been added to the existing Yan Yean and Maroondah systems, and provides an entirely new and independent daily supply of twenty million gallons, which may be augmented in the future to sixty million gallons per day, all the tunnels being capable of discharging the larger quantity. The O'Shanassy scheme covers a watershed of thirty-two thousand six hundred acres, and the supply is directed through a conduit of forty-nine and a half miles, the cost of the works amounting to about four hundred and fifty thousand pounds.

The case of the United States government against the Eastman Kodak Company of Rochester, N. Y., charging that the company is a combination in restraint of trade in violation of the Sherman antitrust law, has been closed in the United States district court at Buffalo. Evidence in surrebuttal will be offered by the defense later, after which both sides will present arguments and submit briefs. The case has been in the courts for a year. More than one hundred witnesses have been examined, and up to date six thousand pages of testimony have been taken. The exhibits offered by both sides exceed five hundred, and include virtually every type of camera and camera attachments in the history of the photographic art.

Three million acres of desert land have been made to bloom and produce good crops since the government instituted its reclamation department in 1902, C. J. Blanchard, statistician of the reclamation and forest conservation service, told the Southwestern Lumber Dealers' Association, in recent convention in Kansas City, Mo. "This project is more important than the Panama Canal in results," he said. "Plans are already under way, and part of the work is accomplished, to add thirty million acres to the three million already made possible of cultivation."

The draft of a complete new state constitution, prepared after three years of study by a special state commission, is being considered by the Rhode Island Legislature. The present constitution was adopted in 1842, and has fourteen amendments. In 1897 a constitution was prepared, and in 1898 it was referred to the people. There was a majority vote for the new document, but it required a three fifths vote to carry it, and it failed by 1,042. The commission's report, recently presented, states that the amendments to the old constitution have practically transformed it into that defeated as a whole by the people in 1898.

The work on the bridge across the Ganges at Sara, India, is nearing completion. The bridge, which is the second largest ever constructed by British engineers, has a total river length of five thousand nine hundred feet, or, including land approaches, measures fifteen miles, and has cost roughly four and seven eighths crore of rupees ($2,340,000). One of the main advantages afforded by the building of this bridge will be a direct train connection between Calcutta and Darjeeling, as up to the present the journey was broken by steamer transit across the river.

A ten-year term of office for the President of China, with eligibility to further terms, is the principal feature of the new election law passed by the provisional Constitution conference. In a covering note, published with the law, the conference declares that China cannot be subjected to the dangers and alarms of frequent presidential elections.

President Wilson has vetoed the Burnett immigration bill because of its proposal to exclude aliens who cannot read and write in English or their own language. The President suggested that the decision of the country is needed before Congress can feel warranted in acting upon this subject.

Without opposition, the concurrent resolution of the Senate and Assembly to submit the woman's suffrage question to New York voters has passed the lower house. Its passage by the upper house and its signing by Governor Whitman within the near future is considered certain.

The Parliament of Iceland, thirty-four of whose forty members are elected by popular suffrage, has passed a measure forbidding the sale of alcoholic liquors. All the remaining stock of liquors in the Danish dependency has been exported.

A company formed with privileges to cut cedar and mahogany in the lands between the Aguan river and its tributaries in Honduras, agrees to pay the government $8.40 in American gold for each tree cut.

Montana's wool clip for 1914 was twenty-seven million three hundred thousand pounds, approximately nine million pounds short of the 1913 yield, but netting about the same return in cash,—almost five million dollars.

London's proposed postal tube is to be nine feet in diameter and six and a half miles long. It is to be fitted for two tracks, each two feet wide, carrying steel trucks operated by motors.

Two professors from Louvain University, Belgium, have been invited by Harvard University to give instruction at the college during the second half-year.

The city of Winnipeg, Manitoba, will receive $122,226.90 from the street railway company as its share of the profits made by the road this past year.

Government wireless stations have been planned for Indo-China that will be powerful enough to communicate with points more than three thousand miles away.

Chile has eight thousand miles of telephone operated by an English company.

Conservation

IRVING C. TOMLINSON, M.A.

MUCH is said today, and well said, upon the subject of conservation. Careful thought is being given in many directions to what is called the conservation of natural resources. Active societies are at work to prevent waste of power, to save American forests, to preserve abundant water-supply, and to care for the best interests of our wide-spread farming lands, as well as the mineral deposits which are so essential to the temporal well-being of our people.

Attention thus given to the preservation of physical resources, is symbolical of that spiritual conservation which Christian Science is accomplishing for those who are its earnest students. The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is making it plain that all the resources of man are in his Maker, divine Mind, the one infinite God. This spiritual teaching shows that children of the heavenly Father may always rely upon Him to maintain their highest interests. The origin of all spiritual blessings is infinite Love, and man, if he will but rely upon this source of supply, has abundance for every need. He will waste no time in regretting or delaying, but will persistently strive to lay hold of the truth taught and demonstrated by Christ Jesus, till it so abides in his consciousness that he knows himself victorious.

In the conservation of so-called natural resources it is found necessary to guard against damage and decay. Rightly to preserve the forests, the trees must be protected from fire and pest. So Christian Science teaches one how to conserve his spiritual interests, to cultivate spiritual receptivity, that he may be free from lassitude and decadence. The teachings of Jesus show that man has dominion over all things; that he is not the slave, but the master, of sin and sickness. In confident acceptance of this Mrs. Eddy writes: "Be firm in your understanding that the divine Mind governs," and "hold thought steadfastly to the enduring, the good, and the true" (Science and Health, pp. 393, 261). It should never be forgotten that God always does His part. The infinite creator never forgets His creation, and if loss or destruction seems to occur anywhere, it only goes to show that men are not availing themselves of divine protection. In the book of Deuteronomy we read that blasting mildew and destructive insects would come upon the land when the people forgot God,—when they separated themselves, as it were, from divine aid.

In the work of upholding the best interests of the farm, watchful care is given to the subject of soil enrichment. If the lands are what is termed "run out," only a small harvest is gathered. Just so does Christian Science help mankind to enrich their spiritual nature, and it does this by making plain man's sonship to his Father in heaven. It teaches that he is not a miserable sinner, a worm of the dust, or an outcast, for it relies upon the words of the Bible that "now are we the sons of God," and ours is the "liberty of the children of God." In that remarkable article entitled "What Our Leader Says," in "The First Church of Christ, Scientist, and Miscellany," is this sentence which deals with conservation: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them;" and the concluding words of this helpful teaching are: "The right thinker abides under the shadow of the Almighty. His thoughts can only reflect peace, good will toward men, health, and holiness" (p. 210). As this quotation implies, spiritual preservation is the outcome of right thinking. Mortals are saved from plague and decay when their thoughts are fixed upon that which is real and eternal. They are enriching their spiritual nature when they are dwelling upon the good, the beautiful, and the true.

"The conservation of energy" is a foremost topic for discussion among natural and physical scientists. The natural scientist finds that in generating power from coal or other so-called sources of energy there is much waste. The desire of the expert is so to conserve the units of power in the coal that waste may be eliminated. The physical scientist observes what he calls lamentable waste of energy in men, due to sickness and false nervous conditions. He would have mortals so conserve their physical well-being that what he calls strength or vigor will not be squandered. Christian Science puts no obstacle in the pathway of these earnest men, but simply shows a better way. Human efforts sometimes fail, divine resources never. This Science of man teaches that the source of all power is God; that as man is rightly related to the one cause and creator, he reflects this power, which is inexhaustible. The psalmist tells us that "God is our refuge and strength," and that He "giveth strength and power unto his people." Well might the psalmist say, "Blessed is the man whose strength is in thee;" and he adds of all such, "They go from strength to strength."

The Master said, "My Father worketh hitherto, and I work." He looked upon himself as an instrument whose guidance and power rested in the divine Mind. He found no power in himself separate from the one divine source, for he said, "I can of mine own self do nothing," and again, "The Father that dwelleth in me, he doeth the works." With Jesus there was no waste of energy, because there was perfect correlation between his desire and its fulfilment, his will being a reflection of the divine. His purpose in life was to do continually the will of his Father, and therefore he reflected, without loss, the divine activity. He was so obedient to the divine commands that he stands as a perfect example of the conservation of spiritual energy. Christian Science is teaching mankind that the works of Christ Jesus are not to be separated from the works expected of all men, but that those who rightly understand God may do as he did, for he said of such, "The works that I do shall he do also." Only by aiming at perfection can we approach it.

It will be remembered how much careful thought and earnest labor is expended to produce from broad acres a rich harvest; then how much more time and thought should be given to conserving spiritual interests, that there may be an abundant fruitage of peace, joy, health, and freedom! "We cannot be good by yesterday's action, or wise by yesterday's thought alone," writes Mrs. Griggs, and she continues: "The good actions of the past are merely so much power to do good

Digitized by Google

today. If the capacity does not receive new expression, it rapidly deteriorates." We watch with satisfaction the growing harvest; and it is with a deep abiding joy that we behold the spiritual progress of our brethren. A great exultant host is enlisted in this noble work of conservation, and the numbers are constantly growing. It is a privilege and joy to be one with these workers for the unfoldment and maintenance of man's freedom and power.

Light

ADDINGTON C. CRONK

To a great many people human existence has seemed like the groping about in a tunnel which is dark, but which has never been entirely without light. Christianity and other uplifting influences have been at work through the ages, and they have meant that one has seen in the distance, though sometimes very faintly, the light at the end of the tunnel bespeaking the glorious daylight beyond and above.

Christian Science has been given to the world by a brave woman, who believed that obedience to God is the highest function of life; and through what she has made known to us, the light in the distance has been thrown upon our path. Although humanity still seems to have to walk in the tunnel of materiality, Christian Science has brought "a great light," which has already meant to thousands health and happiness that would not otherwise have been theirs; and to those who felt they possessed these, it has brought an increased sense of harmony, with the inspiring certitude for all of the ultimate realization of perfection.

What a glorious privilege it is at our Wednesday evening meetings to be able to say what this light has been to us, and thus make known what it can do for all! Not a single ray of it should be ignored. This light has come in no mysterious way; it has come in clear, distinct mental enlightenment, dissipating our fears and making us conscious of the omnipotence of good. This spiritual understanding is what so many have longed for and have striven to attain, but without the aid of Christian Science it seemed impossible.

Are we tempted to yield to fear in our progress? Does it all seem too good to be true? What does the light of Truth do for humanity? St. John tells us that it "lighteth every man that cometh into the world." There is infinite good provided for all men, and no one will live in the fullest sense until he realizes this fact and expresses it. There is nothing to fear as to human progress, whether regarded individually or collectively, for the light which once shone in the darkness is now being comprehended by thousands who rejoice that they may "bear witness of the Light."

Abiding in Good

LUCY HAYS EASTMAN

Mrs. Eddy has given us this great truism: "There is but one way of *doing* good, and that is to *do* it! There is but one way of *being* good, and that is to *be* good!" (Retrospection and Introspection, p. 86.) Manifestly, we cannot be anything without being in some state of consciousness. To express good, then, is to abide in the consciousness of good, whence we look out upon man and the universe with eyes that behold only perfection. Through the inspiration of this vision we come to be and to do good in the relative human experience as involuntarily and naturally as the rays of light express the sun and give forth its warmth.

To abide in good is not to talk about it either abstractly or concretely, not to moralize or theorize over it, nor to have a blind faith in it or human opinions about it. The child would cease to be a child were he conscious of his innocence, were he to analyze and comment upon it or to think of it as a personal possession. Because he is dwelling in the child-consciousness, which is always pure and innocent, he involuntarily expresses all the qualities of that state of consciousness. To abide in good is to acquire such a godlike consciousness that there remains no sense whereby to cognize evil. No matter how clear a view we may perceive of good, or how much we may preach it and individualize it, if we are at the same time entertaining concepts of evil, we are not yet abiding in good; we are but dimly regarding it from an outside standpoint.

Once within the consciousness of good, however, we see and feel its actual substance with the spiritual senses, with the consecrated heart, the single eye, as tangibly and naturally as we think we see and feel what is called matter. "To feel" means to experience, to fix deeply in mind; thus we feel with mind as well as think with mind. Perhaps we perceive certain truths afar off and readily accept them, but we feel their substance only as they become so deeply fixed within our hearts that we experience their touch in uplifted thought. Likewise with good, we feel its touch as naturally as we perceive its worth, if we have learned how to use the spiritual senses. With these senses we lay hold upon the very substance of wisdom, purity, and health, perceive their radiation, and hear the rhythm of their harmony.

Christian Science teaches that in reality there is but one consciousness, even the consciousness of universal good. Realizing this fact, we look about us and behold everywhere the infinite being of goodness, just as the sailor out in mid-ocean beholds water as far as the eye can see. Then we understand that the real ego can never be outside of good, and that nothing but good can come to man or go out from him. Thus are satisfied the inward cravings that would see the beauty of holiness and "touch and handle things unseen." Perceiving and feeling this substance of good, consciousness drops theory and belief, and animates every word and deed with the living power of Truth. Moreover, because good is indivisible, even its least expression identifies man with universal goodness. One kind thought, for instance, links consciousness to the power and activity of all kindness, to the stupendous whole of goodness. Is it a strange thing, then, that abiding in good should determine greatness, or that it should impart a peace, joy, and power to men which heals both sin and disease?

If we would abide in good, we must do more than merely long for its righteousness, or vainly strive for its virtues by striking out right and left to attain them with human will or blind faith; we must pass beyond the point of perceiving them as personal characteristics, dependent upon a mortal's moral fiber, which may at any moment be overpowered by a belief in evil. Rather must we learn through spiritual law how to remove intelligently whatever claims to bar our advance into the realm of good. Christian Science teaches us that this is neither an impossible nor even a difficult task. We have only to prove our love for good by obeying its laws, and then the Father will be manifest unto us and abide with us.

When human consciousness learns how to let good draw nearer to it, instead of attempting the impossible task of making its own self good, there will be no evil to resist, for evil disappears with the appearing of good. This appearing should not be the outcome of a weary, lifelong battle with the supposed forces of evil, but the natural unfoldment in human consciousness of Truth and Love. If perfection is our goal,—and we should be satisfied with nothing less,—why

Digitized by Google

are mortals so ignorant about it? Because perfection is true, there must be a science of perfection. Then we should study this science until we can demonstrate its laws, instead of blindly waiting for the supposed material laws of disintegration to usher us into spiritual understanding at some future day. "Whither I go ye know, and the way ye know," declared he who taught that we should be perfect even as the Father is perfect. Ready admittance into the temple of good is gained as we remember that no man cometh unto the Father but by the conscious possession of right ideas.

The student who scientifically turns his back upon error and learns understandingly to abide in good, finds a marvelous change taking place in his every-day life. He is astonished to find how much easier it is for him to do right instead of wrong. He learns that much which he hitherto considered good was only a false sense of it, and he therefore relinquishes it as quickly as he would a counterfeit. The finer, deeper spiritual intuitions and feelings unfold their blessings and supplant selfish, animal instincts that have perhaps hitherto lain dormant and all unknown in latent consciousness. As he begins to detect the quality of thought from which his desires and impulses spring, he talks less and thinks more. He learns that he must first be all that he says, and then what he says will express what he is, and bring forth the fruitage of the consciousness in which he is dwelling. For instance, the man who is controlled by temper, finds it difficult to repress his feelings, while the lover finds it difficult to express his. The one quality of thought soon expends itself in boastful explosiveness; the other, if true, lives on to bless.

Back of every word and deed of the man who seeks refuge in the secret place of right thinking, is the enduring substance of good. Others, not understanding, marvel at this man's happiness, until finding that it is contagious, they too, perchance, awaken to the fact that it is as natural for one to be both happy and good, when he learns how, as for a bird to sing. Confronted by personal problems, aggravated church difficulties, or universal beliefs, the spiritually scientific thinker knows that it is not for him to weigh the pros and cons with human reason, or to haggle over the right and wrong of conditions, or vainly to attempt to right them through personal effort. He knows that the one thing needful is first to get into a right state of consciousness; then he will see the right thing to do and be fearless and free in doing it. If, on the other hand, he is abiding in a wrong consciousness, everything will appear wrong, and he will do wrong until lifted out of mistaken thought. According to our states and stages of consciousness, are we happy or unhappy, the masters or the slaves of circumstance.

The work of the Christian Scientist should be "quick, and powerful;" yet we sometimes hear it said, "I have worked and worked on that problem, but have had no results." And why? Is error so strong as to resist the law of God? No. Then the efforts of the student can lack fruitage only when, all unknown to himself, his statements of Truth are governed by some quality of the human mind instead of the divine. The Scientist who argues with error, engages in a conflict which sometimes discloses that human will and tension, rather than Spirit, are behind his work and words. Let such a one dwell thoughtfully upon the picture in "Christ and Christmas," where by the bedside of pain a woman quietly sits in prayer, with her eyes gently covered by her hand. The relaxation of the whole figure is expressive of perfect tranquillity, mingled with the dominion of humility. Serene in the consciousness of good, she is unmoved by sense-testimony. Before the raging elements of error, we may at times be so sorely tempted as to feel we must do something. But wait, impatient, doubting heart! "Except ye abide in me [good] . . . ye can do nothing." "Pure Mind," Mrs. Eddy says, "gives out an atmosphere that heals and saves. Words are not always the auxiliaries of Truth" (Miscellaneous Writings, p. 260). How clearly this was proved in the case of the woman who but touched the hem of the Master's garment and was immediately made whole! If we would heal easily and quickly, we cannot be too honest in searching the heart-depths to detect the quality of thought lying back of our desires and motives, our words and deeds.

To abide in good is an arduous effort only as we attempt the impossible task of making a mortal good, instead of laying him off and putting on the immortal idea of man who is already good. Why, then, make such hard work of being good? Is it strange to think of a frail mortal, bound as he is by beliefs of fear and sin, as able to resist the control of the higher selfhood, the image of omnipotence? Let us no longer lag wearily behind through doubt in the attainment of perfection, or permit uplifted desires for the ideal to droop through lack of the world's endorsement; neither let us whine with self-condemnation nor stride with self-righteousness. Instead, let us awaken to our privilege in Christ, and with a stout heart claim all good as our divine heritage. Then will we express goodness with all the ease and grace and power which comes with a God-bestowed gift. It is not difficult for God's image to reflect Him.

Abiding in good fulfils every worthy desire, gives us life and happiness, yea, all and more than we can ask. Call it not sacrifice, then, that relinquishes its love for materiality to lay hold upon the substance of things not seen; that gives up cherished beliefs for the ideas of truth; that departs from the mechanism of mortal-thought processes to enter into the unlimited activities of good. There is no effort too great to make for the understanding of the Science that teaches us how to be and do good naturally, nor is there any gratitude too deep with which to give thanks to the inspired woman who by continually abiding in good was able to give its Science to the hungering children of today. Through Christian Science, every man, woman, and child who will, can prove the blessed truth of these words of our Master: "If ye abide in me [good], and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Obedience and Success

ROBERT L. SAWYER

OBEDIENCE is the watchword to success. This holds true in the application of every department of science. Mathematics, music, mechanics, and every other field of research, bear ample testimony to the fact that there can be no gain without obedience. The student who is most obedient to the basic law governing within the realm of a particular line of work, will of necessity attain the highest degree of success, and if wise he will not credit achievement to personal ability, but to the fundamental truth operating through obedient channels. If this is true in the material realm, how much more must it be true in that higher line of activity which deals only with the Science of being, and which recognizes "all causation as vested in divine Mind" (Science and Health, p. 379).

The many promises given to God's people as recorded in the Old Testament invariably contain the one condition, "If ye obey." In the first chapter of Joshua we hear this chosen leader encouraged to constant meditation upon "this book of the law," for "then thou shalt have good success." In the

Digitized by Google

first psalm we find this promise reechoed, while in the first chapter of Isaiah is the declaration, "If ye be willing and obedient, ye shall eat the good of the land." On the other hand, the people were taught, through many a hard experience, that disobedience brings limitation; as Mrs. Eddy writes in Science and Health (p. 5), "There is no discount in the law of justice and . . . we must pay 'the uttermost farthing.'"

"In quietness and in confidence shall be your strength," said the "Holy One of Israel;" the faithful were quiet because confident, and confident because obedient. Beginners in the study of Christian Science sometimes get a false sense of what this confidence means. It is as far from the self-will, bravado, and bluster of egotism as the perfume of the rose is from the sharpness of the thorn. It is the meekness of perfect obedience to God, divine Principle, and Jesus said the meek "shall inherit the earth."

It is manifestly true that the needful supply of the universe exists according to law, that this law is perfect, and that its beneficent effects will be experienced wherever and whenever its demands are complied with. Christian Science is teaching citizens of the world to understand this all-governing law as the operation of God, wherein "He holdeth the wealth of the world in His hands" and "the wind in his fists." Every evil known to mankind is the direct result of disobedience, and whether malicious or ignorant, the final result is much the same. War, limitation of every kind, sin, disease, and death will disappear just in proportion as mankind comes to understand and obey the law of infinite Love.

Living in harmony with the divine law, Jesus exercised an authority which was the marvel of those about him. The winds and the waves would never have obeyed his voice, nor would he have been able to demonstrate supply, as in the case of the loaves and fishes, but for his entire reliance upon Him of whom he spake, saying, "My meat [supply] is to do the will of him that sent me;" and he further taught his students to pray, "Thy will be done [obeyed]." If, then, we would "abide" in Him, every phase of limitation should be promptly met, not through the desire for a greater supply, but through our more perfect obedience to that law divine which alone quickens to profit and success. Our Leader says, "Obedience to Truth gives man power and strength" (Science and Health, p. 183), and if we listen we may hear the voice of Israel's sweet singer coming down through the ages, "I have been young, and now am old; yet have I not seen the righteous [obedient] forsaken, nor his seed begging bread."

Blind Faith versus Understanding

CORA F. COLLISON

Apart from the teachings of Christian Science, any instance of healing without the use of material means is ordinarily looked upon as a "miracle." It is believed that something strange and marvelous has occurred, that God has heard and answered prayer. It is thought that He has for once set aside His own law. No one understands why this is so, for to the unenlightened the prayer of faith is a mystery. Blind faith is not unlike a lottery, where one takes a chance and may win a prize.

We learn in Christian Science that the healing of the sick is not a strange or mysterious happening, but simply the fulfilment of divine law. Jesus understood the law of God so well that it was as natural and easy for him to heal the sick as it is for us to turn on an electric light, though to one who did not understand the latter process it would seem a miracle. Mrs. Eddy was once healed in what seemed a miraculous manner; then she devoted several years to prayer and to study of the Bible, finally discovering that it was through the ever-operative law of divine Mind that she had been healed. This law has always existed, but because it was not understood it was not believed to be available. Electricity existed thousands of years ago, but ignorance prevented it from being used. So ignorance, fear, and superstition have blinded mortals and kept them in darkness and bondage to the so-called laws of sin, sickness, and death. God's law is a law of health and holiness (wholeness); when understood, it annuls the asserted laws which mortals have made for themselves. Through the study of the Bible in connection with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, faith ripens into understanding, and in time we shall be entirely freed from the wrong thoughts and habits that for so many ages have bound mankind.

The Bible says that in God "we live, and move, and have our being," and in Science and Health we read that "man, being immortal, has a perfect indestructible life." Also, that "whatever is governed by God, is never for an instant deprived of the light and might of intelligence and Life" (pp. 209, 215). In the first chapter of Genesis we learn that God made man in His image and likeness, and since God is Spirit, it must follow that man in His image and likeness must be spiritual and immortal. This is one of the fundamental teachings of Christian Science. Jesus knew this so well that no material evidence to the contrary could deceive him. His knowledge of the truth concerning God and the law of Life brought man's real identity to light. Jesus never submitted to mortal decrees; he rose above all mortal laws and man-made doctrines, because his faith was enlightened by spiritual understanding. A clear, spiritual realization of the truth must always bring an answer to prayer.

The healing of the sick by prayer has seemed to mortal sense marvelous and mysterious, for to mortal thought, spiritual ideas are incomprehensible. Blind faith, impelled through suffering to pass beyond the border of its own material beliefs, occasionally attains to the truth of being; a brief illumination may dispel fear and doubt, inspire peace and confidence, and bring its due reward, but such healing might be termed accidental. Unlike healing in Christian Science, ignorance of how the work was accomplished may leave one quite unable to repeat the experience. Christian Science advances faith to understanding, so that a true Christian Scientist can know why and how the light of Truth is always operative and available. Thus we learn that "understanding is a wellspring of life unto him that hath it."

Our boundless gratitude goes out to God for the revelation of Truth which has come to this age through the enlightened faith, the spiritual apprehension of Mrs. Eddy. Through faithful study and application of her teachings, we may emulate her life by following in the footsteps of the Master, and prove with absolute certainty that "the prayer of faith shall save the sick."

To love God, to rejoice in His world, to see and feel its beauty, to let the heart open in gratitude as naturally as the flowers blossom, to stand ready to serve in even the humblest way, seeking no reward except such as flows out of serving our fellows in the spirit of Christ, to rise above petty annoyances and be calm, to trust God amid the hardest trials, and to find life sweet amid the deepest sorrows, to have faith in the power of love to conquer even enmity, sin, and death,—this is to have the spirit of Easter, is to be "risen with Christ."

Rodney F. Johnnot.

Selected Articles

[Judge Clifford P. Smith in *The Springfield* (Mass.) *Union*]

A letter from "J. R. V." in the *Union* of recent date requires a concise statement of certain facts, and calls for a brief examination of the rule for the use of words which he has formulated for the restriction of Christian Scientists. There lately appeared at Springfield a gentleman who was announced as an "evangelist," or bearer of good tidings. While engaging public attention in this character, he delivered an attack on Christian Science and Christian Scientists. According to the published reports, most of his condemnation centered about the use by Christian Scientists of the word "Principle" as a synonym for God. One of his pronouncements was that God, as thus defined, would be "no more conscious than a stick or stone." Another was that Christian Scientists, for this reason, "worship a dead God," and he concluded by applying to them such epithets as "idolaters" and "Hottentots."

Your correspondent now attempts to justify all this as "free speech;" but I believe that your fair-minded readers will agree with me that the gentleman thus sought to be upheld should not have spoken as he did without first learning the ordinary meanings of the word upon which he pounced, nor without noticing the form and meaning of that word as used by Mrs. Eddy. Had he done this, he could hardly have spoken as he did; surely he could not, unless he was determined to speak ill of Christian Science anyway,—and that is not to be supposed.

In the larger dictionaries the primary meaning of the word "principle" is origin, source, cause, in the widest sense; that from which anything proceeds; fundamental substance; primordial substance. Lexicographers and authors have used this word when speaking of the source of life and consciousness in man; also when referring to the agent of the vital and conscious functions in man. For example, in Hastings dictionary of the Bible (p. 872), Spirit is spoken of as "the universal principle imparting life from the creator;" while in the "Popular and Critical Bible Encyclopedia" (Vol. III, p. 1606), soul is spoken of as "that active, vital principle in man which perceives, remembers, reasons, loves, hopes, etc." In short, the word "principle," as commonly used, does not necessarily denote something as dead as a stick or a stone; on the contrary, it expresses life and consciousness,—indeed, it is sometimes used as a synonym for Spirit, God.

Furthermore, it is to be observed that Mrs. Eddy throughout her writings has consistently used the word "Principle," when given a capital letter, to signify infinite Life. For example, on page 465 of Science and Health, at the beginning of the chapter entitled Recapitulation, which even the most critical would hardly pass by, Mrs. Eddy uses the words "Principle" and "Life," together with other names, in answering the question, "What is God?" Then she proceeds as follows: "*Question.*—Are these terms synonymous? *Answer.*—They are. They refer to one absolute God. They are also intended to express the nature, essence, and wholeness of Deity." Again, on page 487 of the same book, we read: "The understanding that Life is God, Spirit, lengthens our days by strengthening our trust in the deathless reality of Life, its almightiness and immortality. This faith relies upon an understood Principle." In short, there is neither basis nor pretext for any one to say that Christian Scientists "worship a dead God;" for whoever wishes to know, may learn that they worship the Deity in whom, as Paul declared, "we live, and move, and have our being."

But now comes this correspondent and says, "The 'principle' idea is used by consent of men, under certain restrictions, but when used apart from its qualified sense, it establishes a false hypothesis and must inevitably lead to a false conclusion." If this were the case, no one could use a word with a new meaning without obtaining general consent, and every new hypothesis would have to be regarded as false. Fortunately, human progress has never been bound by any such rule. To illustrate: When John said, "God is love," he used the word "love" with a new meaning; and there is no evidence that he waited for ecclesiastical consent. Professor Rauschenbusch of the Rochester Theological Seminary, on page 57 of his "Christianity and the Social Crisis," describes "the process with every great creative religious mind" as follows: "The connection with the past is maintained and the old terms are used, but they are set in new connections and filled with new qualities." Professor Kent of Yale University makes a similar observation on page 138 of his "Life of Jesus."

Since words are but an expression of thought, they develop as it does; and original, constructive thinkers are not obliged to wait upon the dictionaries, they make the usage which the dictionaries subsequently record.

❖

[Rev. Frank L. Loveland as reported in *Portland* (Ore.) *Oregonian*]

Here is a question worth while. If the human body can be healed of disease by simple prayer and faith, we ought to know it. If prayer is to bring healing, I declare to you that the church of Jesus Christ has been criminal in its negligence in the past and Christianity stands indicted at the bar of justice. Are you conscious of the fact that within the last fifty years all the many movements for relief and betterment of humanity have come up? Things have happened that we never dreamed of before. The church of Jesus Christ has swung into a new orbit, and many things spring up that are almost bewildering. It is only by the grace of God that this has not resulted in another wave of intolerance. Among the many strange new things are the so-called modern ways of healing.

Christian Science has come, and it has grown by leaps and bounds. There is one thing, by the way, that I would like to know about, and that is, how do they raise so much money with so little noise? What does it all mean? What is this faith? It is worth your while and mine to study and find out; not for the purpose of antagonism, but for the purpose of understanding. Do not let us be like the people who are so narrow and whose eyes are so close together that they never can see but one thing. We may discover there is something in this belief that demands more than a sneer and a passing glance.

We know that sick people are easily hoodwinked. People are wandering everywhere in search of health. The fear in the mind of the sick person makes him a mark for the fakir and the fanatic, and because of this, Christian people must study this question. Legislation has taken up as important the matter of health, and we have our pure food laws. Public health, public morals, and public safety are subjects that must be considered in the pulpit. It is worth while for our religion to be big enough and our philosophy broad enough to get hold of God's truth, no matter whence it comes. All truth is God's truth.

"I am the Lord that healeth thee." I would we could all waken to the truth of this statement. I would we could all use our intelligence to the advancement of the public weal. When a man's faith is rooted in reason, he will have a good reason for his faith. I would rather have thinking infidelity

Digitized by Google

than blind credulity. There is hope for the man who thinks. I say unto you, it is God who heals.

It is not the method of baptism or ritual that saves; it is God. The great mistake of the past has been in the church as well as elsewhere. We have had exaltation of method above the high moral altitude of principle. I remember the day when men of various denominations hated each other. Even now there are some Methodists, Baptists, Presbyterians, and others, I have no doubt, that think the Christian Scientists will go to hell. The Christian church is beginning to feel that something has been lost out of Christianity. Did Jesus heal the sick? He did. In the beginning Christianity was meant for all humanity as a whole, but as time went on, unfortunately something was dropped out. We have been busy putting up partitions between the various denominations and have lost sight of important things. The Christian church has got to pay less attention to modes of baptism and "isms" and all get on a plane where we can deal with humanity as a mighty whole.

The Christian Science church has been growing and taking our members because it offers something of value that can be cashed now, in freedom from disease. The church of Jesus Christ should have been doing that all these years.

❖

[From an editorial in *Boulder* (Col.) *Camera*]

An evangelist is conducting meetings in Loveland. We wish the great converter of souls well. We also wish that he would cut out two of his sermons,—the one dealing with hell, the other with Christian Science. He is too able a man to try to frighten people into accepting a religion he makes so attractive, and too good a man to set neighbors at ears. The Christian Scientist is taken at a disadvantage when attacked, because he will not war. He will not meet attack by counter attack, for he is tolerant of all faith. He goes his way serenely confident in the belief that God is good and that man is God's child. We hold no brief for the Christian Scientists, but we wish all people were as consistent and optimistic of the present and the future as they are.

❖

[From *Spectator*, Portland, Ore.]

An unusual thing has happened. Among the newsboys' cries of "Extra!" was heard this one: "Here's the *Spectator!* All about"— What do you think? All about a lecture on Christian Science! And the strangest thing about this unusual happening was that the newsboys who handled last week's issue of the *Spectator* sold more copies of it than were sold of any daily in the city. It is doubtful if in any other city in the country the newsboys could make a paying "Extra" of a lecture; and it is more doubtful if in any other city in the world the newsboys could make a successful "Extra" of a lecture on Christian Science. The lecture on Christian Science that the *Spectator* published in full, and of which the newsboys made an "Extra," was delivered in First Church of Christ, Scientist, and was heard by between four and five thousand persons, while many others could not gain admittance to the church. Such was the interest, that the *Spectator* had to publish two extra editions. The sale on the streets was extraordinary. At the news stands the usual supply was soon exhausted, and newsdealers were all calling for more papers before noon. Orders are pouring in for the *Spectator* from Walla Walla, Hood River, Spokane, Medford, Tacoma, and Seattle.

It is pleasant to know that it is not necessary to print stories of war, flood, murder, sudden death, accident, or scandal to make an "Extra," and that newsboys and newsdealers find profit in selling a paper that contains a lecture. It is good, too, to know that many thousands of persons in Portland have thought and inclination above the shock and shame and horror that are obtruded on us through a press that pretends it is printing the unprintable because the people demand it. Probably if the papers consulted the wishes of their readers they would find that the demand for the horrible is neither so great nor so insistent as they think it is.

❖

[Thomas F. Watson in *Palo Alto* (Cal.) *Times*]

In his address on "Mental State Affects Health" the Rev. Mr. —— shows the evil effects of fear, anger, and worry on the human mind and body, and the good effects produced by the Christian graces of "faith, love, and gladness," of which he says that "faith is the mightiest and divinest of all." But this writer errs in enumerating Christian Science among the faith-cures of today, and when he states that "Christian Science and the efficacy of hypnotism are all simply different illustrations of the basic principles of the healing power of suggestion," he makes a serious mistake. Christian Science is not "faith-cure" in the ordinary acceptation of the word, for Christian Science healing requires more than faith, namely spiritual understanding.

As Mrs. Eddy says on the first page of "Science and Health with Key to the Scriptures," "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." Therefore nothing could be farther from the practice of Christian Science than hypnotism and mesmerism. The hypnotist or mesmerist seeks to control the patient's thought and to make him think he is not sick, though in fact he believes him to be so, thereby working on a dishonest basis. Even though he should apparently succeed for a time, he is robbing the patient of his individual power of thought, from which a relapse would bring confusion and prove the last state of that man to be "worse than the first."

The Christian Scientist, understanding even in a measure that God is Spirit, and all that He made is spiritual and is "very good," proceeds to lift his thought to the consciousness of the allness of God, good, which excludes all belief in evil, manifested either as sin or sickness, and this spiritual consciousness brings the light which destroys all darkness. As Mrs. Eddy says, "Light emits light without effort" (Science and Health, p. 262). The Christian Science practitioner thereby imparts enough of God's love to the patient to lift him above the desire to sin or the fear of sickness. In other words, he lifts his own thought to the consciousness of God, or the "kingdom of heaven," and takes his patient with him.

Human will-power is not a factor in Christian Science healing: the practitioner's work is to realize the omnipotence and omniscience of God, and this is having the Mind which was in Christ Jesus. It is true, as this writer states, that "love has a tremendous enabling power." It is divine Love that enables us to enter into the kingdom of God "within," to which Jesus referred. Jesus stated a spiritual fact when he said, "I and my Father are one," and the truth which he knew for himself he knew for others, and this truth healed them.

❖

[Paul Stark Seeley in *The Telegram*, Portland, Ore.]

I believe that it is the rule rather than the exception for students of religion, whether Protestant, Catholic, or Jew, to use commentaries and explanatory writings in their Scriptural study. Probably the commentary that the student

Digitized by Google

finds most helpful he uses most often. In the same way Christian Scientists use "Science and Health with Key to the Scriptures" by Mrs. Eddy. They do not follow through blind belief the statements made therein, nor do they base their hope for eternal life upon any personal interpretation of the Scriptures, as a recent contributor to your columns mistakenly believes.

Those who have chosen to accept the teachings of Christian Science as they are set forth by its Discoverer, Mrs. Eddy, have done so not from any belief in her personal infallibility, but rather because they have found in those teachings an explanation of Christianity which has appealed to them not only as reasonable and logical, but more important still, as adaptable to the every-day needs of man. Her devotion to the divine Principle of Christ's teachings, which it was her life endeavor to make better understood, and her refusal to permit personal adoration to cloud this all-important purpose, is evidenced many times in her writings, as instanced by a quotation from "The First Church of Christ, Scientist, and Miscellany" (p. 129), where she admonishes the members of her church as follows: "Accept my counsel and teachings only as they include the spirit and the letter of the Ten Commandments, the Beatitudes, and the teachings and example of Christ Jesus."

❖

[Avery Coonley in *Journal-Standard*, Freeport, Ill.]

Permit me to refer by way of information to the three criticisms of Christian Science made by Mr. ——, as reported in a recent issue. As to the first of these criticisms, that Christian Science "builds itself up" from the other churches, let me say that while the Christian Science church offers through its publications and its free lectures the opportunity for all who are interested to learn what its teachings are and to compare them with those of Jesus Christ, it is not engaged in the business of building itself up, but of putting into daily practice the precepts of the Master; and it has placed many a hopeless drunkard upon the path of happiness and success. The second criticism is in fact a commendation, for the critic admits the good training of Christian Scientists, but attributes it to the churches from which some of them came, and predicts a reversal in the second generation. He is probably not aware that the Christian Science church has been in existence and thriving for much more than a generation—nearer two. A considerable proportion of those whom he commends are of that second generation, so that his admission serves to refute his prophecy. If by the third criticism, that Christian Scientists have to "backslide to die," the critic refers to the fact that Christian Science shows that it is life and not death that brings us into the kingdom of heaven, and that the road to that state of harmony leads away from both backsliding and dying, we will offer no denial, but refer to Jesus' statement to Martha: "And whosoever liveth and believeth in me shall never die. Believest thou this?"

❖

[Frank Bell in *The American*, Mahanoy City, Pa.]

In a recent issue reference is made to certain uncomplimentary remarks on Christian Science as uttered by a Methodist minister. That this individual's opinion is not shared by all the clergy of his denomination, is made evident by the published report of a sermon preached by a Methodist clergyman of Portland, Ore., who in the course of his remarks said:—

"The blind sectarian in religion is a standing menace to church progress. Toleration is a Christian virtue. I believe there was a reason for the Lutheran church springing into existence; that there was a reason for the Presbyterian and for the Methodist. I also believe there is a reason for the Christian Science church coming into being. I am a Methodist, not a Christian Scientist, but may God keep me from being such a Methodist that I cannot see good in any church, no matter where it may exist. I believe in the good things in all denominations. I do not think any of us have so much of the truth that we can afford to shake our fists in the faces of any of the others."

The clergyman added that while he did not accept the "metaphysics" of Christian Science, as it appeared to him, yet he "believed people had been helped and healed in the Christian Science church," and that the same help and healing could be made available in the Methodist church. The spirit of toleration displayed in the remarks of this gentleman is, we believe, typical of the best thought today, in not only his own but many other denominations.

❖

[Robert S. Ross in *The Truth Seeker*, New York, N. Y.]

Christian Science is the restoration to human understanding of the divine Principle underlying the teachings and practice of Christ Jesus. It declares that God, good, is the Principle underlying all real being, the only Life, Truth, and intelligence of the universe, including man. When mankind thoroughly understand this Principle, they will be able to demonstrate it with the same unerring skill with which Jesus demonstrated it. The fact that, through the understanding of Christian Science, students of Mrs. Eddy's writings are repeating the works of Jesus as recorded in the Bible, proves beyond cavil that neither Christ Jesus nor his works are legendary, as our critic, Mr. ——, implies in his letter published in a recent issue. By repeating the works of Jesus, Christian Science is performing a great service to mankind; it is entrenching the sacred Scriptures against the attacks of skepticism and doubt by again placing Christianity in the realm of demonstrable truth.

Christian Science acknowledges good wherever it is found, whether in literature, song, or sermon. It declares, however, that only through the application of the Science of Christianity can the long-lost art of Christian healing be practised as Christ Jesus practised it. The statement that Christian Science is largely superstition, does not hold, for this Science is understood only in the proportion that ignorance and superstition give place to understanding. Superstition implies ignorance and fear, while Christian Science is the law of Truth, dispelling the illusions of the senses and bringing out the true, the real sense of things. Jesus said, "Ye shall know the truth, and the truth shall make you free,"—free from fear, sin, disease, and death.

Neither does our critic's inference that Christian Science is suggestion, hold good. Suggestion is the action of one human mind upon another human mind; it is only another name for will-power, mesmerism, or hypnotism. Our critic's explanation cannot explain the fact that thousands of people are daily being healed simply by reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Surely, this is not the work of suggestion! If critics of Christian Science would learn what it is, they should be willing to go to its text-book and study it with the same sincerity as those desirous of learning mathematics turn to books on that subject and follow the rules laid down therein. "Christian Science is not an exception to the general rule, that there is no excellence without labor in a direct line" (Science and Health, p. 457).

Editorial

Unfounded Criticism

MANY of those who array themselves against Christian Science assume to justify their antagonism toward this religion by reason of its teaching that evil is unreal. It is no uncommon thing, indeed, to find these critics claiming that Christian Science countenances sin by asserting the unreality of evil.

It is apparent that those who criticize Christian Science in this way, fail to apprehend that by contending for the belief that evil is real they are dishonoring God, yet this is the inherent logic of their position. To allege that God is the creator of evil, is to assume that He is not even so good as the ordinary moral person who does no evil. It is to allege that He is not so good as the man who has carelessly or by reason of temptation fallen into sin. Were a good man to commit sin, his character would at once be changed, and he would no longer be classed as a good man. How much greater would be the change in God, whom the prophet declares to be "of purer eyes than to behold evil," should He become the creator of evil!

On the other hand, if God is not the creator of evil, and evil exists, the plain inference is that God is not omnipotent, and His power is secondary to that of the creator of evil. This is of course unthinkable nonsense, but it is the horn of the dilemma which the critic of Christian Science must grasp if he contends for a belief in the reality of evil as a test of Christianity. What Mrs. Eddy teaches in regard to evil and its unreality, is clearly stated in her various writings; and, to cite only one instance, we would call attention to what was written by her on this point in her Message to The Mother Church in 1901 (p. 14):—

"Do Christian Scientists believe that evil exists? We answer, Yes and No! Yes, inasmuch as we do know that evil, as a false claim, false entity, and utter falsity, does exist in thought; and No, as something that enjoys, suffers, or is *real*. Our only departure from ecclesiasticism on this subject is, that our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness. We regard evil as a lie, an illusion, therefore as unreal as a mirage that misleads the traveler on his way home. . . . The evil-doer receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality."

That criticism of Christian Science is coupled with an utter ignoring of our Master's demand that his followers should do the works of healing which he taught them, is not strange, when we remember that these works were done on the basis that both sin and sickness are unreal. The Christian who is obeying the Master's command to preach the gospel, in order to be consistent with his profession, as one who is manifesting the spirit of Christ, must also obey the command to heal the sick. It is for this reason that the Christian Scientist cannot be content with preaching alone, nor can he consistently postpone the healing of the sick to a more "convenient season," or turn the work of healing over to one who may not be even a professing Christian.

It is the mission of the Christian Scientist to heal those who come to him for relief from bodily and mental distress, and in so doing he must also point out to them the way of salvation and direct their thought thereto. Christian Scientists understand, in proportion as they apprehend the teachings of their text-book, Science and Health, that sin and disease have one and the same basis, namely, a false sense of God and man. The sin which besets one person is no more real than the sickness which besets another; and the object of those who are endeavoring to fulfil the commandment to love their neighbor as themselves, is to set him free, whether his bonds be those of sickness or of sin. John's declaration, "Perfect love casteth out fear," is the summing up of the beloved apostle's understanding, and Christian Scientists have learned the truth of Mrs. Eddy's teaching (Science and Health, p. 270), that "the human mind alone suffers, is sick, and that the divine Mind alone heals."

ARCHIBALD MCLELLAN.

❖

"Many mansions"

As human thought peers into futurity with a vague, undefined longing to know what it holds for us individually, those who have followed closely the teachings of Christ Jesus ponder his words, "In my Father's house are many mansions," and the related promise, "I go to prepare a place for you." It goes without saying that the old concepts of heaven are disappearing, as Christ Jesus declared they would, and the reason for this is undoubtedly that they not only failed to satisfy the immortal cravings, but that they did little to promote spiritual growth. If these concepts had been taken at their face value, if people had really believed that their dear ones had gone to eternal bliss, there would have been no reasonable ground for sorrow; but they have failed to stand the test of a spiritual interpretation of the Scriptures, hence they do not satisfy, and there is always a depressing sense of uncertainty which is most keenly felt when assurance is most needed.

Deeply thoughtful people, whether avowed religionists or not, have usually agreed that Jesus' recorded utterances offer little or nothing which would sustain a material sense of man's place of abode when he has passed from this sphere of existence, and the same may be said of Mrs. Eddy's teachings. This is explained by the fact that all profound thinkers deal with eternal verities, with spiritual realities, and not with the passing things of sense. Of old, Moses said, "Lord, thou hast been our dwelling-place in all generations," and yet how few have grasped the deep significance of these words. In Christian Science, however, all such declarations become intensely practical. If our dwelling-place is in God, can any one ever be homeless, or have a poor home?

Christian Science comes to explain that one's place in the Father's house of many mansions is determined by his understanding of Truth and Love and his reflection of the divine nature in the Christ-way; but the true home is wholly independent of material things. It is, however, vitally dependent upon Truth, intelligence, divine law and order, for its manifestation, and without these there is no real place of shelter from the discords of mortal sense. Here some one may say that in Revelation we read of splendors which surpass aught that earth has known,—the gates of pearl, the streets of gold, the foundations of "all manner of precious stones." It is, however, well to note that the first manifestation of this city of our God is the passing away of pain, sin, sorrow, and death.

Let us pause for a moment here, and ponder the words which announce its presence, "There shall be no more death"! No, the grim shadows of mortal belief could have no place in the home our Father provides, and Christian Science has come to show us how we may discover the many mansions and find our own place therein. These mansions are all about us; scientifically speaking, we are in them now, and what we need is to have the false concepts of mortal sense,

Digitized by Google

the fear, selfishness, pride, envy, and hate, vanish as in dissolving views, and then the home provided for each one of us "from the foundation of the world" will begin to dawn upon us and we shall be satisfied. Our activities will assume new meanings, become definite and purposeful, when we know that we are not what Mrs. Eddy calls "independent workers" (Science and Health, p. 263), but that we are working as our Father works and as He wills.

Christ Jesus said he was going to the Father's house to prepare a place for his followers, and we too may help to prepare places in the many mansions for those who are seeking a home. As we do this, we shall both "serve," as the Word reads, and "see his face." After all is said, the light of the home is love, and nothing mortal or material has power to separate us from divine Love or shut us out from its shelter. When Jesus spoke of the "many mansions," the disciples evidently thought of death, as so many do today, but he told them anew of the way of life and of the Comforter, who is to abide with us forever,—the divine ever-presence, leading each one of us gently to the place where rest and service alike tell us of the Father's house, the boundless abode of infinite Mind.

ANNIE M. KNOTT.

❖

Fulness of Life

EVERY one wants to be happy, and though the many have not thought the matter out, there is an indefinite yearning for that fulness, that completion of life which will insure the coveted satisfaction. Whatever experience may have brought of poverty and pain, it is universally felt that life should mean freshness and strength, blossoming and fruitage. It is interesting, therefore, to find this fulness of life so frequently referred to in the Scriptures as normal and obtainable.

It is yet more interesting that the Master should have said he came that all men might have more abundant life, and most interesting of all that he should have identified the attainment of this fuller life with the fulfilment of "the law and the prophets." Christian Science reaffirms this teaching of the Master, and is proving that to know God aright is to experience here and now that fulness of joy and those "pleasures for evermore" of which the psalmist sang so long ago and for which we all so instinctively long. It teaches that all divine law makes for life not death, for joy not sorrow, for the beauty of perfection; and that this fulfilment of law which fills full the cup of life, is the unchanging will of God.

Law is the order of the activity of Love, and this once seen, the philosophy of the relation of the fulfilment of law to human happiness is made apparent. A happy life apart from love is quite unthinkable. Pleasure is always associated with the possession or attainment of that which is loved, or liked, as we say; and when God is known as Love, and law is understood to be Love's method of manifestation, then it is made perfectly clear that fulness of life must come by way of the fulfilment of law. Then man, the image of God, is seen to be a being who naturally expresses Life and Truth, Love and beauty, in so perfect a degree as to warrant those wondrous descriptive words of St. Paul respecting him, "filled with all the fulness of God."

This is the true selfhood which is revealed in Jesus' words, "And the glory which thou gavest me I have given them; that they may be one [in quality and kind], even as we are one"! It is the selfhood which, in contrast with the thought and habit even of most good people, Christian Science teaches us to recognize and to seek to realize as the true meaning in Christ of the pronoun I. As thus apprehended, to become law-ful is to be life-full. Consciousness becomes the arena for the exhibition and interplay not only of all goodness and beauty, but of all wisdom and power!

No less exalted and inspiring is the thought of life as the fulfilment of prophecy. The Christ-idea comes to bring to its noontide radiance every dawn of Truth which uplifted thought has glimpsed in all the centuries. Let one gather up the visions of man triumphant, of humanity redeemed, which are found in the glowing words of Isaiah, of Joel, of Malachi, and others, and remember the declaration of the Master that the acceptance of his rule in our lives is to bring the fulfilment of every word of prophecy respecting the splendors of God manifest through man,—and individual privilege begins to appear as fully measuring up to the psalmist's marvelous words, "Thou . . . hast crowned him with glory and honor"!

When one thus thinks of the possibilities of Christian living, its efficiency and completeness, its beauty and joy, and contrasts therewith the leanness, the superficiality, and perchance the depression to which he has consented in the past, he is impelled to say with immeasurable sincerity, "God be merciful to me a sinner;" and having thus sounded the depths of mortal unworthiness, he will no less surely be impelled to say, "I will arise and go to my Father. I will earnestly seek to apprehend all that for which I am apprehended of Christ Jesus."

This is the awakening, this the consecration to the attainment of fulness of life, and this the glorious hope, yea, the expectation, to which every true Christian Scientist has come. In his thought of the greatness of man, he is perceiving and beginning to enter upon the possession of the idealities of being.

JOHN B. WILLIS.

❖ ❖ ❖

Among the Churches

Current Notes

COLUMBIA CITY, IND.—A deal was consummated New Year's day by which the Christian Science Society of this city became the owner of property built and occupied as a residence for many years by the late A. Y. Hooper and family, corner Chauncey and Jefferson streets. This is one of the most desirable corners in the city. The society will remodel and improve the property. The lot is one hundred and fifty feet in length and has a frontage of eighty feet on Chauncey street.—*Commercial-Mail.*

MINNEAPOLIS, MINN.—First Church of Christ, Scientist, has for some time past occupied a modest brick structure on Fifteenth street, between Portland and Park avenues, which has the distinction of being the first church edifice built by Christian Scientists in this state. This organization is now building a beautiful classical church edifice on Nicollet avenue and Twenty-fourth street. Work has progressed so far that it is now possible to occupy the Sunday school rooms, and the regular church services will be held there hereafter, beginning today [Dec. 27, 1914].—*The Minneapolis Sunday Tribune.*

GARDINER, MAINE.—A fine church edifice belongs to First Church of Christ, Scientist. It is situated on Lincoln avenue, close by the city park, on land given to the church in 1889, seven years after Christian Science was first introduced into Gardiner. It was not until ten years ago that work was begun on the foundation of the new church, although a reading-room had been established in 1900. The first service was held in the new building in 1905.

This edifice was the gift of an interested friend, whose name has never been given to the public. This fact is a reminder

Digitized by Google

that Christian Scientists have a habit of losing sight of personality in the good they do. Generosity which asks no personal recognition of self, is ever the token of genuine gratitude to God. The first six years during which Christian Science services were held in Gardiner, a private residence was used. Then services were held in the A. O. U. Hall in Danforth Block. It was in 1897 that the church was regularly organized; and in December of the same year it was duly incorporated.—*Lewiston Journal.*

NORWALK, CONN.—The Christian Science Society, which has been occupying rooms at 59 Wall street for nearly twelve years, will remove to its new home, and will hold its first service in the auditorium, 57 West avenue, corner Butler street, on Sunday, Jan. 3.—*The South Norwalk Sentinel.*

❖ ❖ ❖

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

Notice to Librarians

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel.* Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖ ❖ ❖

The Lectures

Chicago, Ill.

Bicknell Young delivered three lectures on Christian Science in Seventh Church. At the first lecture he was introduced by George M. Spangler, Jr., who said in part:—

Christian Science is today being looked into by many people, and in the course of their investigations they are asking many questions about Christian Science; questions both as to whether it heals the sick and as to how it heals them. Anticipating that these and similar questions would be asked, and desiring that correct answers might be given thereto, also with the desire that there might be a dissemination of correct information generally relative to Christian Science, Mrs. Eddy wisely instituted the Christian Science board of lectureship.

In introducing Mr. Young at the second lecture, Walter H. Van Zwoll said in part:—

As we look upon this great audience assembled here tonight to hear a lecture on Christian Science, we realize that the voice of Truth has never ceased uttering with deepest significance the immortal words of the humble Nazarene, "I, if I be lifted up . . . will draw all men unto me." The star of Bethlehem which brightened the eastern sky two thousand years ago, is still shining for those who are prepared to receive its wondrous light; but its radiance can be seen only in the higher atmosphere of divine Mind, far above the horison of material hopes.

The angel chorus which sang to the watching shepherds its diapason of praise, "Glory to God in the highest, and on earth peace, good will toward men," has not been silenced, but is still to be heard by those who, like the shepherds of old, are keeping watch,—who are ever guarding their thoughts against the beliefs and fears that throng the material consciousness till the song of God's peace and power destroys the dream of sin and disease.

At the third lecture, Philip R. Kellar in his introduction said in part:—

It is of great importance to every one that the human race should learn how it may be saved from sin, sorrow, and sickness. When we have learned this and practise what we have learned, then we shall have found the correct answer to that momentous question, "What is truth?" which Pilate asked of Jesus at the close of the ministry of the Master. Christian Science is this truth which all are seeking, and it says to the world: "Test me by my own rules. I do not ask you to accept me as a new creed or doctrine, but as a practical religion. My reason for being is that I offer a present salvation from present as well as future evils." Christian Science is the same truth which upheld Jesus throughout his wonderful human existence; the same truth which Moses discerned, and whose power he utilized to lead the Israelites safely out of the house of bondage; the same truth which has made possible the accomplishment of all good in the history of the human race.—*Correspondence.*

❖

Amsterdam, N. Y.

Miss S. L. Flansburg, first reader, in introducing Jacob S. Shield, who lectured on Christian Science, spoke as follows:—

The gentleman who will address you is not a mere theorist, but he has a practical, demonstrable knowledge of Christian Science, its scope, and its power to heal all manner of evil. He is telling to the world the good news that again, in Christian Science as revealed through Mrs. Eddy, a fountain is opened for sin and uncleanness, as the Bible has promised, and whosoever will may drink of the water of life, health, freely.—*Correspondence.*

❖

Omaha, Neb.

Clarence C. Eaton delivered two lectures on Christian Science in the church edifice. At the first lecture he was introduced by Carl E. Herring, who said in part:—

Christian Scientists have no quarrel with any religion. They do not make claim to any exclusive right to approach the throne of grace, nor is there any assumption of the discovery of a new plan of salvation. They are criticized for failing to establish missionary bureaus, and are charged with emphasizing the Master's command to "heal the sick" at the expense of his command to "preach the gospel." In answer to this it is well to remember that since about the third century of the Christian era the command to "heal the sick" has been practically ignored, until within the last fifty years, dating from the establishment of the Christian Science religion. It should also be borne in mind that even during this short period Christian Science has become firmly entrenched in nearly every country in Europe, and societies

Digitized by Google

have been formed in Africa, China, the Philippine Islands, Australia, New Zealand, Argentina, and other remote places. In addition to this, Christian Scientists are somewhat imbued with the idea that if we have anything that will benefit mankind, the missionary field is not a locality, but a need. So, after all, it is not so much a lacking spirit for missionary work that is complained of, as a difference in thought and in methods of work; but it is these differences that distinguish Christian Science. To change them and conform to the standards fixed by other churches, would simply make of Christian Scientists another denomination, and they have no zeal for the establishment of more denominations.

At the second lecture Mrs. Kate E. Turner said in part:—

Over nineteen centuries ago, he who was divinely appointed to show the way of eternal life, stated to his disciples that those who continued in his word should know the truth, and the truth would make them free. Not until the last fifty years has there been a demonstrable understanding of that statement and promise. Christian Science teaches what that truth is and how to know it.—*Correspondence.*

❖

Lindsay, Cal.

Willis F. Gross, who lectured on Christian Science, was introduced by Mrs. Frances B. Sophy, first reader, as follows:—

Over nineteen hundred years ago Jesus of Nazareth healed the sick. When John the Baptist sent to inquire whether or not he were the Christ, Jesus' only reply was to point to his works, saying, "Tell John what things ye have seen and heard." Jesus left us the command: "Go ye into all the world, and preach the gospel;" "Heal the sick;" together with the promise, "He that believeth on me, the works that I do shall he do also." Today Christian Science is again healing the sick, and when we are asked whether or not it is the truth, we can only point to the works and say that the lame do walk, the blind see, the deaf hear, and the sick are healed.—*Correspondence.*

❖

Newark, N. J.

The Hon. Clarence A. Buskirk, who lectured on Christian Science, was introduced as follows by Herbert L. Fritz, first reader:—

First Church of Christ, Scientist, of this city is pleased to welcome you to another correct exposition of Christian Science. In the world today there are many people who firmly believe that they are opposed to Christian Science, when in fact they are not opposed to it in the least, but are simply combating their own concept of what Christian Science is. It is in order to overcome this misapprehension that the lecture is to be given this afternoon by one well qualified to speak upon the subject.—*Correspondence.*

❖

Oakland, Cal.

Virgil O. Strickler lectured on Christian Science for Second Church at Idora Park Theater. He was introduced by Fred B. Kerrick, who said in part:—

In order to attain righteousness, one must be ever on the alert to hear that "still small voice" which comes to each of us. It was by listening to this "voice" that Mrs. Eddy became the Discoverer and also the Founder of Christian Science, the new-old religion which was taught and practised by the Galilean Prophet nearly two thousand years ago. The teachings of Christian Science are expressed in a few very appropriate words from Science and Health: "Science is an emanation of divine Mind, and is alone able to interpret God aright. It has a spiritual, and not a material origin. It is a divine utterance,—the Comforter which leadeth into all truth" (p. 127). It is not the purpose of this lecture to tell you of any defects in other religions, but rather to tell you of the joy and love there is in Christian Science.

Correspondence.

Testimonies of Healing

[Translated from the German]

I am filled with gratitude for the blessings which have come to me through Christian Science. In 1908 my right arm was operated on, and later another incision was made, but on that day I was led to find God through people who until then were strangers to me. I asked them to give me some soup, as I was hungry, and so they did. I was then told by them about Christian Science and the *Herold*, and the truth was explained to me. These explanations filled me with joy, and I leaned, so to speak, on the truth thus imparted. I was not hungry any more, for the joy which I experienced as I sat listening in their kitchen satisfied me. I went home feeling light-hearted and as if I beheld the world for the first time, and my husband rejoiced over me. Three days later, when I went to the physician by appointment, he said, "Why, your arm is healed!" and manifested surprise; but I did not tell him of my experience as to the healing power of Truth. When I left him, I went back to the Christian Science people in order to learn more about God. I was given a copy of the *Herold*, which I read diligently, as well as a Christian Science pamphlet, and I strove to grasp the meaning of what I read. Since that time I have experienced help in many instances with my husband and children through the truth. I prayed earnestly to God, and my prayers have been availing. My husband has stopped drinking, I have broken myself of the habit of using profane language, and everything has improved and become more beautiful.

I am deeply thankful to God, and grateful to Mrs. Eddy and to my dear helpers. I have secured a copy of "Science and Health with Key to the Scriptures," and also of the Bible, in order to learn more of this truth and improve myself.

Frau Wilhelmine Bleidner, Dotzheim near Wiesbaden, Germany.

It is with unspeakable thankfulness to God, the giver of all good, and with gratitude to our dearly beloved Leader, Mrs. Eddy, for her spiritual interpretation of the teachings of the Master, that I give this testimony of the many healings experienced, and the great happiness that has come to me through the reading of the Christian Science text-book, "Science and Health with Key to the Scriptures."

For thirty years I had been an almost constant sufferer from many physical ailments, the more serious of them being organic heart trouble, nervousness, stomach disorder, sleeplessness, asthma, brain trouble, and rheumatism in its varied forms. Besides all these I had a severe fall, which caused both external and internal injuries that partly paralyzed my left leg and arm. During the earlier years of my life and sufferings I was an active member of church and Sabbath school, earnestly striving to obey the divine command, "If ye love me, keep my commandments," and to live an honest, upright Christian life, doing unto others as I would that they should do unto me. The reading of God's Word in the home, around the family altar, was my daily duty, and every day I asked our heavenly Father to help me according to His many and oft-repeated promises; but months and years passed, and no help seemed to come to me from that source.

Eminent physicians in some of the largest Eastern cities had been consulted and had treated me for one or more of the troubles, at great expense to me. I was temporarily helped. Change of climate had been recommended for some of the ailments, and the extreme boundaries of the United States were visited, but no substantial benefit was obtained. The God whom I loved and trusted, and according to my understanding at that time had for years endeavored to serve, had seemingly deserted me. With the savings of years spent in a vain search for health, with my loved ones torn from me and my faith in God and His promises shattered, life seemed to me to be made up of one misfortune after another, and I determined to take the matter into my own hands and end it; but the knowledge that such an act would bring unmerited disgrace upon my family deterred me.

It is said that "man's extremity is God's opportunity," and this proved to be true in my case, for about that time a dearly loved friend of the family, who had become as a "brand snatched from the burning" by a wonderful demonstration of God's power to heal, called at the home, and all of us were astonished at her changed condition since we last saw her. Her trouble and sufferings were over, and she was again the laughing, joyful friend of earlier years, a picture of health and happiness. When asked by what methods she regained her health, she joyfully exclaimed, "Christian Science;" and while I could not doubt her evident sincerity, intense interest, and strong faith in the power of God to perform what seemed to me nothing short of a miracle, yet I could not think that a like result would obtain for me, with my atheistic views, which at that time were pretty strongly grounded.

This friend told me of Science and Health and asked me if I would read one chapter in the book if she sent a copy to me. Here was one of God's ministering angels bringing to me the olive-branch. I could not refuse such a request, and very reluctantly I consented. The book came the next day, and although I had no faith in its teachings, I began to read a chapter with much curiosity, to ascertain what occult science had been used to bring about my friend's healing. Prayer is the subject of the first chapter, and before proceeding very far I began to be interested, and before reaching the end of it I was made to know that I had at last found the key to fervent and acceptable prayer, the foundation-stone to the temple of Truth. At last I had found the "pearl of great price," which brought me brighter hope and joy in the knowledge of God, good, of His exceeding great love for the children of His creation, and of our relation and duty to Him. I had been born again into newness of life with Christ Jesus, and it gave me great happiness to know that in my true selfhood I was not an outcast, but a child of God, created in His image and likeness. I saw that God was always with me, ever ready and willing to help me.

I had been so much interested in the reading of the book that I had not thought of my mental and physical condition. I soon found, however, that all but one of the ills had vanished. The paralytic condition was unchanged, yet I felt certain that as with God "all things are possible," in time that too would disappear. Notwithstanding the demonstration of God's goodness to me, I would sometimes question whether I were really healed and whether my sufferings were at an end, or if they would return after a while. Thanks be to our God, who "giveth us the victory," the answer was always a prompt and forcible declaration that there would be no return. The study of the Bible and the reading of Science and Health became more earnest and more interesting, and in a short time the paralytic condition vanished as quickly and as quietly as had the other discords. The words of the Master, "Ye shall know the truth, and the truth shall make you free," came to me vividly and forcefully. I was free,—free from sickness and suffering.

God's word had been my only physician, and I was healed by the same heavenly Father who in former years would not listen to my pleading, as I then thought; and no words can

Digitized by Google

express the joy and gratitude that I at that moment experienced. The "good shepherd" had heard the voice of the lost one out on the mountainside of despair, and had gently and tenderly brought him back into the fold. I have since been able to overcome minor ills by demonstrating the all-presence of God.

An injury similar to the one previously mentioned, but not quite so serious, was at once left in the hands of a Christian Science practitioner, and in two days I was at the office performing my usual duties. Following this, diabetes manifested itself in a very aggressive form and put up a stubborn resistance to treatment. At times, when it seemed to material sense that the tide was against me and the waves of uncertainty were tossing me around, hindering the efforts of the faithful practitioner, she would have me come to her, and I would be made to understand distinctly that my fears were needless; that it was my ignorance of the truth about God and man which was hindering my speedy recovery. During those visits I was brought nearer to God and His allness, and all doubts as to the final destruction of the ailment would materially diminish as each time I drew nearer to the right understanding of God. I had become very weak, and greatly reduced in weight, but Truth is mighty. The healing is complete, and another wonderful cure through omnipotent good has been accomplished. I am here after a lapse of two years, in a perfectly healthy and normal condition, to tell the story and emphasize those beautiful words of our revered Leader, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494).

This testimony is a loving tribute to the power and application of the revealed truth as given to us in our text-book, and with David I can say, "Who is so great a God as our God?"—C. L. Knight, Kansas City, Mo.

❖

Mrs. Eddy says, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79); and it is with the hope of sharing the good that has come to me that I write this testimony.

As a child I was considered delicate, and from the age of five had fainting spells, which were supposed to be inherited. While at boarding-school I had St. Vitus' dance, and as my father was a druggist, naturally many material means were tried. At times I seemed benefited, but the trouble returned, and there was the constant fear of its recurrence. After I married, my whole thought was of my sickness,—and how wretched I felt! I was trying many remedies, but with no permanent results.

My mother, who was an invalid, was seeking relief at a health resort, but her search was fruitless. On her way home she visited a cousin, who she found had been healed of tuberculosis through Christian Science. This so impressed her that she, too, immediately took up the study of Science and Health and was healed by reading the book. These manifestations awakened my thought, and I began to study Science and Health. I was perfectly satisfied with this study without reading the Bible, for in former years I had read the Scriptures from a sense of duty, though with little understanding or pleasure. Presently my attention was called to the fact that I was not reading the Bible or giving daily study to the Lesson-Sermon. I was told that Science and Health was a "Key" to the Scriptures. "If some one gave you a key to a house filled with treasures, would you hold the key? No, you would use the key and go in and possess the treasure. The Bible is filled with treasures which Science and Health unlocks." Then I took an interest in the Bible, and saw how Christian Science teaches as Jesus taught, for we read: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476).

The result of this study was that I have never had a fainting spell or a return of the St. Vitus' dance; ptomaine poisoning has been overcome, and a dislocated hip has gone into place; an abdominal brace, which I had vainly tried by will-power to get along without, has been laid aside; while with the help of a practitioner, a severe case of bladder trouble went to its "native nothingness." Best of all, however, I am being healed of a selfish, discontented disposition. I have been helped mentally, morally, physically, and financially. My desire is to let that Mind be in me "which was also in Christ Jesus;" to do unto others as I would have them do unto me; "and to be merciful, just, and pure" (Science and Health, p. 497).

Mrs. B Myers Morris, Los Angeles, Cal.

❖

It is with heartfelt gratitude that I wish to acknowledge the healing in Christian Science of an organic trouble from which I had suffered for years. When severe attacks of pain came on, nothing but an opiate would relieve the suffering, and physicians said that an immediate operation would be necessary.

In the mean time my niece had been healed in Christian Science, and when I saw what it had done for her, I at once decided to try it. I was healed in the first treatment, although I did not realize this for quite a while afterward, and was cured of stomach disorder at the same time. I went home, took a ten-room house, and did all the work connected with cleaning and settling it. I also took care of the furnace all winter. Prior to this I had boarded, and I never expected to keep house again, as I did not feel equal to the task; but after the first treatment in Christian Science I was lifted out of this condition so completely that I felt I could do anything which was necessary.

I have been healed of many minor ailments, and am able to do fine needlework without glasses, after having worn them for fifteen years. I am very grateful for the knowledge of Christian Science, and that I am able to help others.

Lottie E. Kerr, Minneapolis, Minn.

❖

I desire to express my gratitude for Christian Science, for the regenerating effect it has had in my life, lifting thought from self, and so making me easier to live with and also a happier being. One healing I wish specially to mention. A corn, which had twice been surgically treated before I came into Christian Science, came out and completely vanished under the right thought. But it is the mental healing, the difference in the outlook on life, for which I am chiefly thankful. The opposition I encountered at the outset has melted away entirely, and all is more peaceful than ever before.

Mary L. Phillip, Lynmouth, England.

❖

In September, 1912, I was taken suddenly ill with typhoid fever. All necessary precautions under *materia medica* were adhered to and every necessary care was given me, but from the first there was little hope of my recovery. The fever ran its course for four weeks, when I seemed to be improving, but a relapse, together with pleurisy, added to the doubt of recovery. The two diseases were fought bravely for three weeks, but with the best medical aid available I was rapidly growing worse, and death seemed inevitable.

Digitized by Google

At the end of seven weeks I was so weak I could not move, and then acute lung trouble set in. As a last resort, I was persuaded by my brother, who had been my nurse (he was a Christian Scientist), to have Christian Science treatment substituted for the medical means which had done nothing for my recovery, despite the doctor's conscientious efforts. From the moment the practitioner began to treat me I improved, and in five days I was well. Moreover, two sisters who had contracted the fever were also healed by Science treatment. One sister was in the worst stages, and the other had just been taken down.

Besides these wonderful demonstrations, I have witnessed several others. Eye trouble has been healed, stomach disorder has been cured, and bone-spavin in the case of my horse has been overcome. Today, though not a member of the Christian Science organization, I am a firm believer in its teachings, and am more thankful for what it has done for me and my friends than for anything else.

ROY F. IVES, Anthony, Kan.

❖

I should like to express some of the gratitude I feel for the healing that has come to me through Christian Science. Ten years ago, when I first heard of Mrs. Eddy's discovery, I was suffering from an acute form of mental depression, accompanied by such physical prostration that sometimes for months I was hardly able to move in bed without help. I had suffered in this way for a great many years, and although I had undergone an operation, had tried baths, massage, and the "rest-cure" several times, I was in no way helped, beyond the relief that I received from the unfailing kindness of my doctor. In this condition I began to read "Science and Health with Key to the Scriptures," and to have treatment from a Christian Science practitioner.

For a long time my recovery was so slow as to be practically imperceptible, but it has been so complete that now I never have the slightest return of the mental depression and confusion from which I previously suffered. It is not possible for me to tell from what a condition of distress I have been lifted. My healing came through understanding, in a small degree, the teachings of Christ Jesus, and that I have been able to understand them sufficiently to recover, I owe solely and entirely to Christian Science.

JOANNA SCOTT MONCRIEFF, Edinburgh, Scotland.

❖

I want to express my deep gratitude for this wonderful truth taught in Christian Science. I had the pleasure of attending my first Thanksgiving service in 1912, and since then have realized what thanksgiving really means. It has made me more anxious to tell what has been done for me.

In May, 1909, I went to a Christian Science practitioner for treatment for my little daughter, but the practitioner found that I was more in need of Christian Science than the child. I was disheartened, full of doubt, jealousy, fear, and looking forward to the time when I would be confined to a wheeled chair, unable to be a companion to this little girl, as I had been a cripple, due to what the doctors called spinal meningitis, since I was three years old. My family had tried well known medical professors in Chicago and other cities, but I received little help. The last relief was obtained in Indianapolis, when I was sixteen years old. Instead of gaining after that, things began to get worse, and the outlook was indeed dark, as the cords of my foot and ankle started to contract. My ankle got weaker every day; my leg shortened, the toes drawing under, and without an artificial shoe, heavy and large, I was unable to walk across the room without support. It was at this point that I found Christian Science.

After three months' treatment my foot improved, the cords slackened, and the limb lengthened an inch and three quarters. I discarded all pads and ankle supports, could walk with an ordinary shoe, and did walk to church, over a mile each way. I ceased treatment for some time, but kept up my work and study in Christian Science literature, and then took up the treatment again for a while. I want to say right here that I am a hundred per cent better, and while the cure has not been quite complete to the outward eye, I feel sure that the work is almost done.

I have had two children born in Science, without pain. I was joyful, happy, and comfortable from the hour the children were born, and in less than a week was out riding, in perfect health and comfort. I want to say that Christian Science has been to me what a mother's loving care is to a baby. I find that its constant application means peace and happiness, love toward all mankind, and gratefulness for life and love. We have found its application in business affairs to be a marvelous blessing, for prosperity in this line has been multiplied tenfold.

I am indeed thankful to God for this power that heals the sick. In my own personal experience I have proof of the truth of the Scripture statement that it causes the lame to walk. It has opened the eyes of the blind, spiritually, both for me and for my husband. It is therefore no wonder that I am also grateful to our Leader, Mrs. Eddy, for the revelation of this truth that has brought so much health to myself and family and peace and prosperity to our home.

EMILY BRADLEY BODE, Oak Park, Ill.

❖

For eight years I suffered from a chronic organic trouble. First a number of allopathic physicians were given a thorough trial. One advised an operation, which was performed, but it left me in a worse condition than before, with other sufferings added. Then I turned to homeopathy. After going to one doctor for six months, he said he could not help me, and advised osteopathy or Christian Science, so I tried the former for about a year. All did what they could for me, but to no avail.

At last I turned to Christian Science, and went to a faithful practitioner, who led me to see that God is indeed Love. I had reached a point where everything about me seemed confusion, and her clear statements led me on until I realized that "happiness is spiritual, born of Truth and Love" (Science and Health, p. 57). I was healed of the organic trouble, also of chronic bowel disorder, severe headaches, neuritis, and bladder trouble. I had worn glasses for eight years, but in one treatment my eyes were healed.

Words cannot express my thankfulness to God, and my gratitude to Mrs. Eddy and to all who have helped me. My desire is to follow in the path that leads on and up to God.

NELLIE A. KAUFMAN, Chicago, Ill.

❖

The Master said, "Freely ye have received, freely give." I have received so much in Christian Science that it is indeed a joy to give. I was healed of hip disease and a broken kneepan after being lame for three years. The kneepan was broken in several pieces, and the broken pieces could be easily felt. The limb was about two inches short and the hip out of place. The hip was set and reset, but it never remained in place longer than a few days at most, and the pain was almost unbearable, except when I was under the influence of an opiate.

Everything was done that was possible, and eight doctors were tried, but with only temporary help. I went from one brace to another, and also used crutches, while sometimes for

Digitized by Google

months I would lie in bed unable to move. At last, in desperation, I was taken to a New York specialist of world-wide reputation. He gave me no hope of entire recovery, but said that when I was stronger he would operate and remove the broken parts, and perhaps I would suffer less. He fitted me with an eight-pound weight, and I carried it day and night, in order to make the limbs about the same length; but if the brace was removed the limb would spring back. Then, too, it had wasted away, till it was about the size of an arm. Things seemed hopeless, for I was only about fifteen years old. Still, knowing nothing better, I went twice a week to New York for treatment and tried to be reconciled to the thought of being a cripple for life. Finally, through the help of dear friends I was led to Christian Science, and no one can know the joy I experienced when the practitioner told me I could be healed. I had five days' present and two weeks' absent treatment. At the end of that time I was absolutely healed. I no longer limped or used braces. The limb and hip were normal in size, and the broken pieces found their right places without an operation.

Nearly five years have passed and I have never had the slightest sign of the old trouble. In every way I am a perfectly healthy and normal girl. Words cannot express my gratitude to the dear friends for their loving help, and only by letting my light shine can I prove my love and gratitude for Christian Science.

MARION C. LAWSON, Newburgh, N. Y.

✧

I am thankful to God that through the efforts of friends I was induced to read Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I had trouble with my eyes, and my sight became so affected that I could not read even the plainest of print, and could not recognize my most intimate friends a few feet away. This made it very hard for me to do my work. My friends wanted me to consult a Christian Science practitioner, but I could not believe that anything could restore my impaired vision, as several eye specialists had failed to do me any good. Finally, however, as a last resort, I called on a Christian Science practitioner of this city, and through her help I began to have a better and clearer understanding of God's work. The Bible and Science and Health had to be read to me by my wife, and the more I heard the more I felt that at last I was going to receive the good desired. One night, upon retiring, my eyes were about as usual, but the next morning, while at my place of business, on glancing across the street I found that I could read a sign which I had never been able to see before. I then hastily picked up a newspaper and could read that too. Surely, God is good.

The healing has been permanent, and since then I have relied on Christian Science in all cases of sickness. The more I read the Bible and the Christian Science text-book the less wonderful the healing appears, because the good is for us if we will only accept it. I am more thankful every day for the many blessings my family and I have received through Christian Science.—A. G. GRIFFEY, Shelbyville, Ind.

✧ ✧ ✧

Kind hearts are the gardens,
Kind thoughts are the roots,
Kind words are the blossoms,
Kind deeds are the fruits;
Love is the sweet sunshine
That warms into life,
For only in darkness
Grow hatred and strife.

ANON.

From Our Exchanges

[The Christian Intelligencer]

"The husks that the swine did eat" are not fit nutriment for immortal souls. It must occur to many, if they reflect at all, that they are living on the lower planes of life. Their interests and activities are strictly within the confines of the physical, the natural and the material. They are laying up treasures, but not in heaven. How sordid life becomes when spiritual interests and moral riches are lost sight of. "Where there is no vision, the people perish." One of the marks of this present age is the absorption of men in the things that are seen. Religious indifference among those who have made the great profession, reveals the hold material things have upon the present generation. How better can we enter upon the new year than by placing ourselves before the judgment-seat of conscience and Christian ideals! Life is too precious a gift and too great a prize to be trodden under foot. If indeed we are "born, not of blood, nor of the will of the flesh, nor of the will of man, but of God," it becomes us to walk worthily as sons of God.

Add to the fact that man is a spiritual and moral being, the further fact that great things have been done for him, and it will appear that imperative obligations to live unto God rest upon every one. The life any one is living must be measured by the possibilities opened up to it and the grace expended for its enrichment.

[The Christian Register]

We have heard the speedy coming of the millennium predicted for many years, but have been rudely awakened as to the facts of unregenerate human nature. We must constantly remind ourselves that the spirit of the true God has not left the world; it glows still in some hearts. Its love and fervor are working, we know not how, toward new revelations of the divine,—a new evangel. Men will be raised up to utter new truth, to lay bare the hollowness and hypocrisy of the immediate past that seems going up in smoke and flames. Though the material world perish in part, what matters it, if it points the way to spiritual regeneration? Truth and righteousness, love and brotherhood, will, it may be predicted, assert themselves with new power when the old false and rotten foundations of force and greed have crumbled in the dust.

[The Universalist Leader]

Every right endeavor, no less than every trustful petition, by which men seek one or another benefit from the providence which they recognize as the source of all their blessings, is a prayer addressed to God. By our acts as well as our supplications we invoke the divine bounty. And whatever the providential reason may be, the best gifts are bestowed on those who persistently seek them; who are not discouraged by one or two failures; who work and wait with a purpose that never falters, an industry that never abates, and a patience that is never worn out, until success is achieved. Whether we seek wealth, or fame, or social distinction, or knowledge, or virtue, we do not usually get them in answer to a single application.

[The Pacific Baptist]

Several times of late we have seen some such astonishing statement as this: "War is the natural outcome of the application of Christian principles; Jesus himself said, 'I came not to send peace, but a sword.'" But any candid reader of the New Testament will readily admit that its whole teaching is concerning spiritual realities and relations. All the New Testament emphasis upon warfare has to do entirely with the

Digitized by Google

conflict between good and evil. The weapons of that warfare are spiritual, not carnal. . . . Spiritual things are spiritually discerned, and it is too much to expect that the man who wilfully walks in another realm should approve or even understand the New Testament teaching. He does not wish to. Only those who will do God's will can expect to know the teaching. Christ's familiar words are only a figurative reference to the struggle between light and darkness, righteousness and unrighteousness.

Let it be admitted that Christ brings strife to men so long as they are at strife with God. Every truth that ever pleaded for confession and application in life sent a sword into the circle where it was discussed; according as the members of that circle were lovers of the true or lovers of the false were they divided against one another. Every great cause that ever was presented among men has set a man at variance with those of his household who did not accept it with him.

[*The Advance*]

The quality of sonship had to be born again in the prodigal. He had been content to ask the father for less than the father's best. So sadly must the consciousness of God's children be born anew in the lives of many of those who now consider themselves but servants. It was a gracious word of the Lord Jesus, spoken to his disciples on the last night he was with them in the upper room, "Henceforth I call you not servants; . . . but I have called you friends." It was even a more tender word which he said to Mary after he had risen from the dead, "Go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God, and your God."

There is potential progress in every Christian life. It is our privilege not to remain long on the basis of servitude. We have our Master's own invitation and the Father's gracious command to rise above the relationship of the servant into the closer intimacy of friendship, into the near and tender tie of sonship. The Christian who does not know this, wrongs not only his own life of its largest achievement and sweetest experience, but wrongs also the God who stands ready with a larger gift.

[Prof. Edward C. Moore, D.D., in *The Congregationalist and Christian World*]

The war has brought to some a great disillusionment as to the Christianity of Christendom. That disillusionment is in itself a challenge. The only possible defense for Christianity at the present moment lies in the repudiation of those things in Christendom which have nothing to do with Christianity. Even that defense is none too good. We ought not to have needed to awaken to the true state of things by this atrocious war. Those only have clean hands who repudiated these evils and sought to change them long ago. The best we can do is to fight against them now. If, however, we take refuge behind this defense and, after the blasting revelation which the war has given, if we still fail to do all we can to alter these conditions both at home and in all the world, have we the right to call ourselves Christians at all?

[*The Watchman-Examiner*]

On the principles of the religion of Jesus Christ there is a demand for the supremacy of a broad enthusiasm for the real brotherhood of all mankind that shall be stronger than racial ties or loyalty to any government. And we assert that the teachings of Jesus Christ require his followers to believe that neither the political necessities of any human government nor the social or economic requirements of any people can, under any conditions, justify the cruelties, the slaughter, and the suffering of such a war as is now being carried on in Europe.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Permission has been obtained to translate into German the article "Mary Baker Eddy," by Arthur Brisbane, and it is now published in pamphlet form.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: God's Lovingkindness Proved to Men," a lecture by Rev. William P. McKenzie, already published in the German language in pamphlet form, is now printed in English, and is on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

On every pay check issued by the Escanaba Manfacturing Company of Michigan are printed these words: "Not to be cashed at a saloon." Then there is a further statement that the check is subject to the conditions printed on the back of it, which read as follows:—

"This order will not be paid or honored by the drawer or by the bank upon which it is drawn, if it becomes endorsed by or the property of any person, firm, or corporation engaged in the business of selling spirituous or intoxicating liquors, either at wholesale or retail, or if it becomes endorsed by or the property of any person who conducts a hotel or boarding-house in connection with any place where such liquors are sold; and the person in whose favor it is drawn and every person in whose hands this shall come, accepts it subject to these conditions, and in full payment of the amount named on its face and of the claim against the drawer for which it is given. The undersigned each agrees to the foregoing."

Oakland, Cal., is to have a thirty-five hundred dollar book on city planning. It is said to be the first city on the Pacific coast to take up seriously the matter of laying out streets and planning generally in advance for future growth. The city council has appropriated twelve hundred dollars as its share of the expense of bringing out the book, and the rest of the money has been pledged by other communities in Alameda county and by private subscriptions. The book was written by Dr. Werner Hegemann, a German expert on city planning, who was engaged to come from Berlin to study local conditions. The city intends to use the volume as a text-book in the high schools, thus developing interest in city conditions and their improvement.

In a recent issue of *Engineering* there is given an interesting account, taken from the Milan journal *L'Industria*, of the scheme for the electrification of certain sections of the Swiss railways. The electrification of 3017 kilometers of Swiss state railways has been decided on, the article declares, and the work will be started on the Gothard line, the most important line of the whole system. A portion of the required hydraulic power is already available, and the necessary means for this were taken in the cantons through which the Gothard line runs. The Swiss state railways are to own the power stations, and in no case will the supply of current be entrusted to private companies. This has been found to be the most economical way. The electrification of the railways will render Switzerland independent of outside supplies of coal for the railways, and will do away with the smoke nuisance in the tunnels.

Five huge pumps, the largest in the world, began Feb. 18 the task of draining forty thousand acres of land, partly in New Orleans, in order to make ready for habitation and farming the rich alluvial soil of the Mississippi delta. This gigantic work of conservation, backed by the state of Louisiana, is part of the vast scheme of systematic reclamation of alluvial lands which was put under way a few years ago, and which will eventually bring into use ten million acres of land now idle. Holland, it is said, drained forty thousand acres of her soil after seventy-five years, and with an expenditure of three million two hundred thousand dollars. This so-called "drainage district" of Louisiana, with an equal number of acres, will be drained in three days after the pumps are started and after a year of construction. The cost will be two hundred and thirty-four thousand dollars.

The ninth annual report of the Victorian rivers and water supply commission of Australia shows that 317,287 acres were irrigated during the year 1913-14, being an increase of 67,304 acres over the previous year, and that the total revenue of the commission, amounting to £194,857, was £18,717 in excess of the amount received for the year 1912-13. The revenue from irrigation and water supply districts showed an increase of £9,507 over the previous year. The loan liability of the state for works of water supply at the close of the year was £8,036,263.

There being no opportunity, apparently, to pass at this session of Congress the Linthicum bill, which provides for the protection of the fish supply of Chesapeake bay and its tributaries, the war department, through the chief of engineers, has issued an order which will, it is expected, do much to relieve the present situation. The order radically restricts fish-net operations in the lower part of Chesapeake bay and in the lower reaches of the Potomac, York, and Rappahannock rivers, and its effect will be to permit spawning fish to reach fresh water.

The government of Norway has lately purchased over one hundred thousand bags of sugar in order to secure a reserve stock for the country. Further purchases will be made shortly, the intention being to procure a supply of twenty thousand tons of sugar for disposal in case of emergency. Whether a state monopoly on sugar will be imposed has not yet been decided, but it is being considered, and a decision is expected in the near future.

Final reports are now being published of the result of the last five months' campaign in Canada for increased food production. The most conservative estimate is that 20 per cent has been added to the area under cultivation; and the more general opinion is that the 1915 acreage will prove to be 25 per cent greater than that of the 1914 season. With this computation of the increase, there will be 41,845,000 acres under cultivation next season.

The question of a uniform gage for Australian railways will be discussed early in the present year, in accordance with the decision arrived at by the meeting of federal and state ministers. This meeting was the outcome of the premier's conference. The 1918 conference of state and federal engineers reported in favor of the 4ft. 8½in. gage, and to convert all the lines to this gage would cost, they estimated, £37,164,000. Conversion to the 5ft. 3in. gage was estimated to cost £51,659,000.

Increasing use of the national forests of the United States by local farmers and settlers to supply their needs for timber, is shown in the fact that small timber sales on the forests numbered 8,298 in 1914, against 6,182 the previous year.

Postmaster-General Burleson has awarded an eight million dollar contract to the Middle West Supply Company of Columbus, Ohio, which will furnish nine billion stamped envelopes to the government during the next four years.

More than nine million young trees and ten thousand pounds of seed were planted on the national forests of the United States in 1914, and more than two thousand miles of trail and three thousand miles of telephone line were built.

At the dedication of the Ohio State University forestry building recently, the principal address was delivered by F. W. Rane, state forester of Massachusetts, whose topic was "The Evolution of American Forestry."

Success has followed forest planting on the sand-hills of Nebraska. Jack-pines planted there by the government forest service ten years ago now have a height of over fifteen feet and a diameter of four inches.

The report of the British Board of Trade, giving the complete trade results for 1914, shows a falling off of approximately one hundred and eighty million pounds compared with the report for 1913.

At least twenty-five per cent of the larch timber over large areas in eastern Oregon has been killed or weakened by mistletoe, and the forest service is taking steps to combat the pest.

Plans for the new fifteen million dollar passenger terminal at St. Paul, Minn., to replace the Union station, destroyed by fire over a year ago, have been approved by the city council.

The gross sales of the five leading packing companies of the United States for their fiscal year 1914, which ended Nov. 1, were approximately one billion two hundred million dollars.

Two of the leading mail-order houses of the country, Sears-Roebuck and Montgomery Ward, did between them a gross business of almost one hundred and forty million dollars.

The total amount in dividends declared in the first quarter of 1915 by the thirty-seven cotton cloth manufacturing corporations of Fall River, Mass., is $258,775.

More than eighty million passenger tickets were issued on the Argentine railroads last year. The capital invested in the systems is more than one billion dollars.

It is estimated that the United States government's game refuge in the Grand Cañon in Arizona now contains about ten thousand deer.

River Plata, Argentine Republic, shipments of beef to the United States in 1914 amounted to almost eight hundred thousand quarters.

President Wilson has signed the coast guard bill, which combines the revenue cutter service and the life-saving service.

Vol. XVII | February 20, 1915 | No. 25

Income and Outgo

WILLARD S. MATTOX

FROM Aristotle to Carlyle and Emerson, philosophers have discussed what is called wealth from as many angles as there have been philosophers. What wealth consists of, where it comes from, how much it is safe and desirable to have, how much is enough, to what uses it should be put, and how it affects those who possess it, in little or great degree, have been the subjects of discussion by wit, financier, and cynic. Some one has said that "enough will carry you: more you yourself must carry." Emerson sagely remarks that the poor man is he who wishes to be rich, meaning, of course, that wealth is merely a point of view; there is no fixed standard. Seneca relates the case of a man who, when he had squandered a fortune but still had left two hundred and fifty thousand crowns, took his own life for fear of dying from hunger. This proves that Midas was not the only man who suffered from having too much money.

Wiser and better than all the world's thinkers was he who spake such words as "never man spake" before, when he said: "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal: but lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: for where your treasure is, there will your heart be also." This last statement of the Master clearly answers the question which has so long troubled mortals, What is wealth, and where shall I find it? Wealth, according to Jesus, is spiritual substance. Possession is understanding. What we have is evidently what we know, and not anything we believe about material things. Here the famous epitaph of the Earl of Devonshire is apropos:—

> What we gave, we have;
> What we spent, we had;
> What we left, we lost.

Wealth may be defined as anything worth while, and it is not necessarily either temporal or material, nor is it ever to be gained by selfish striving, by taking from others, by theft or injustice, fraud or dishonesty. Anything that is worth having must be a treasure, and Jesus plainly tells us that where our treasure is, there will our heart be also. Our treasure, then, is found to be valuable thoughts about spiritual things. It is what we know about a universe of ideas that constitutes our riches. Assets, according to the Master's teaching, must be read in terms of consciousness, not in terms of dollars. On page 307 of "Miscellaneous Writings" Mrs. Eddy says, "God gives you His spiritual ideas, and in turn, they give you daily supplies." In Science and Health (p. 442) she expresses the same truism as follows: "Christ, Truth, gives mortals temporary food and clothing until the material, transformed with the ideal, disappears, and man is clothed and fed spiritually."

When it dawns upon the understanding of those who are seeking wealth that the real man exists always at the standpoint of infinite opportunity, always expressing or reflecting infinite abundance and supply, fear of ever lacking any good thing is at once lessened. Paul's reminder that we must not "trust in uncertain riches, but in the living God, who giveth us richly all things to enjoy," becomes clearer in its meaning and affords a practical basis for a demonstration of constant and sufficient supply. To be miserly is to misunderstand God as the abundant source of supply. To be foolishly and recklessly extravagant is selfishness, and it betrays a false sense of substance. Satisfaction with what mortals have, is very often embittered by regret for what they lack. There is noticeable today a complex state of mind, on the part of society in general, with regard to the broad subject of supply. The disturbance of thought is such that it threatens success, health, peace of mind, morals, and a continued sense of existence. To those whose supreme end in life is to get money or to acquire other material possessions, the real sense of living is practically lost. Those who, on the other hand, regard the true life service as giving, rather than getting at whatever cost, gain a fine sense of living which bears much fruit. This agrees with Jesus' teaching, that "he that findeth his life shall lose it: and he that loseth his life for my sake shall find it."

Under the teaching of Christian Science it is being discovered that wise spending does not necessarily mean depletion. "There is that scattereth," Solomon says, "and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty." Whatever we have, comes not to be retained, not to be our exclusive possession, but rather to bless us, and then to continue its journey to countless others. This is entirely in keeping with Mrs. Eddy's statement that "whatever blesses one blesses all" (Science and Health, p. 206). Supply and the capacity of man to receive are always scientifically equalized. Man reflects infinite substance, and we cannot hoard the substance that we reflect. What comes to us must be given out, in order to receive more. The normal function of reflection is a constant receiving and giving out, and this function would be deranged by a false sense of limitation, or fear, and by any attempt to hoard.

It never occurs to us to take a deep, long draught of air into the lungs, and then try to hold it there because we are afraid we may never be able to get any more air! Without specially thinking about it, we know the supply of air is limitless. Moreover, the effort to retain or store up a particular supply of air, if persisted in, would result in death, according to material belief. So, too, according to the economy of the human body, the law of assimilation and elimination must be evenly balanced to maintain harmony. Air that has been taken into the lungs serves its purpose and is expelled. If for any reason we should endeavor to retain the air that has fulfilled its mission, the results would be dangerous. It is the constant act of inhalation and exhalation that keeps the lungs healthy, in mortal belief; but what we often forget is that exhalation is just as important as inhalation.

The similarity of the operation and relation of the so-called laws of organized matter to the broader question of supply in a metaphysical sense, is apparent. The mortal who tries to "hold his breath" because he wants to economize on air, will eventually destroy himself. The mortal who holds fast to

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

money because he is afraid he may not be able to get more, is impoverishing himself, whether he knows it or not. Any motive for saving or withholding which is based on a limited sense of supply, produces stagnation. Exhalation is as necessary as inhalation! In order to receive, we must be willing to give! Dishonesty and greed are false arguments that our supply is not inexhaustible, that we would better get all we can now and hold fast to it, never let it go. The false law of defective elimination is just as harmful in finance as it is in physiology.

In order to receive more abundantly and more continuously, we must reflect, give out abundantly and incessantly, with no apprehension as to future supply or our continued ability to reflect, to receive it. The supply that seems to come to mortals may appear to be money, income, salary, but substance is always spiritual; it comes always by way of rich ideas, of right thinking. In true spiritual living, income is always evenly and rightly balanced by outgo, for the whole process is nothing more or less than scientific reflection, which is dependent not upon man's effort or initiative, but upon the ceaseless, affluent, abundant, infinite action of infallible and inexhaustible Principle, expressing itself forever through all of its ideas.

School Days

KATE W. BUCK

In studying Christian Science, it sometimes happens that when one begins to gain some knowledge of the value of its teachings, and to realize with great joy that it does indeed lead to an understanding of that truth which makes men free from "the law of sin and death," there comes also an overwhelming desire that those nearest and dearest should seek it too. Perhaps there may be some special one with whom the joys of life have always been shared, and to whom the student of Christian Science turns as naturally with this new-found treasure, and much more joyously, because it means more to him than anything else ever has. With sure expectancy that it will be welcome, he presents the gift he is so eager to share, and perhaps for the first time in his life he meets with a lack of responsiveness and a decided unwillingness to receive the proffered good. Surprised, grieved, it may happen that such a one will feel, because of unity of purpose in other things, that this new joy must be given up, or repressed.

If the study is quietly kept up, and the seeking is rewarded by finding more and more of the true, and a consequent discarding of the false, there may come a time when the student feels that he must call a halt, because he fears that he may be getting too far away from the one who is not yet ready to follow. Striving then to wait, on the one hand, crying out at the same time to go on, as wonderful vistas are revealed through the study of the Word, the situation seems a difficult one. Then possibly the question comes, Is it right for me to keep on going and growing if it means leaving behind another who is dear to me? This may be answered, perhaps, by thinking of ourselves as just scholars every day at school. We are now striving to learn what the great Teacher has to teach us, and if we wish to enter the different schoolrooms and classes, fully prepared and equipped for the varying lessons we are to be taught therein, we must be willing to begin in the primary school and learn its lessons well ourselves.

Now suppose that in this primary school a child, by faithful performance of the duties given, has so mastered the first steps on an upward pathway that he is ready to enter a higher grade. Would it be fair or just that he should be held back because a loved schoolmate, with whom perhaps he had started side by side, was not yet ready or willing to go up higher, and must therefore stay a while longer in the primary grade? Surely the other must needs go on, and the temporary separation be made,—temporary, because of the certain knowledge that the other must eventually progress and pass through all grades too, till at last, together, they finish their course with joy.

At the beginning of a new school year, the writer chanced to come upon three children sitting by the roadside, evidently on their way home from school. In response to some friendly questioning, the spokesman of the party gave out the following information: "I'm in the first grade, she's in the second, and say! [cuttingly] he's only in the kindergarten!" pointing to an atom of humanity so absorbed in sifting gravel through his fingers that he was quite oblivious of the scorn directed his way. So are we all, at one time or another, in the kindergarten, and as we advance to other grades, it behooves us to remember these earlier experiences, and be gently patient with those who are still "only in the kindergarten." Or, having advanced to the dignity of the first grade, let us recollect that there are always higher grades beyond, and so much more yet to learn, that the desire to achieve and go still higher becomes so absorbing that we have no time for self-righteousness because of what has already been accomplished.

Carlyle writes that "they only are wise who know that they know nothing." In Christian Science that statement might be modified and enlarged a bit by saying that they only are wise who know that they know nothing of themselves, independently of the infinite intelligence, which is God. To realize that the more one acquires, the more conscious he becomes of yet greater tasks to be undertaken, greater glories to be revealed, helps to hold him in a proper state of humility, coupled with the joyous, confident expectancy of promotion, as soon as the wise and loving Father finds His child is ready to advance.

How we all look forward to the day of graduation! Though that day seems a long way off sometimes, it is only by striving step by step, steadily overcoming all that is unlike the "pattern" which we are bidden to keep constantly in thought, that we climb (often on "stepping-stones of our dead selves") to better things and higher grades. Mrs. Eddy tells us that "progress is the law of God, whose law demands of us only what we can certainly fulfil" (Science and Health, p. 233). Graduation can only be that glad day when "we all come in the unity of the faith, . . . unto a perfect man, unto the measure of the stature of the fulness of Christ." Then will each scholar have learned that throughout all eternity God exists, and He alone; that no child of His has ever for a second been apart from Him, tossed about at the mercy of every wind that blows, but always at-one with Him,—enfolded and sheltered in His love, existing because He exists. The one who sees this will let go forever all thought of self, all fear of circumstances (the products of mortal thought), and find himself clinging to that which is real and therefore eternal.

When all belief in materiality passes out of consciousness it ceases to exist for the individual who has so attained, and thus he is free to follow after good, for he knows nothing else. Thus he finds himself ready to enter into the fulness when "there shall be one fold and one shepherd," and there shall not be even one stray lamb, for, as Paul tells us, God "will have all men to be saved." "All men". Then why trouble if one seems to lag a bit behind another? Rather rejoice, because of the sure victory to be won some time and in some way, knowing that God's will is done, and that the actual operation of that will can bring only good to every scholar in Life's great school.

Digitized by Google

Each child, then, should surely go on from grade to grade, "from glory to glory," as he, individually, sees the light ahead clearly enough to walk in it. Moving steadily, confidently, freely, in that light, he can give earnest thanks, and gladly anticipate the road ahead. In his journeying he must trustingly know, too, that though the brother with whom he is accustomed to travel may not be visibly close beside him, he also must needs be going on. The pathway may be somewhat different, but the goal is the same: the overcoming of all false beliefs, and a complete restoration to the knowledge of that perfect creation which has been theirs, together, from the very beginning, throughout all time. Then will the mortal dreams and shadows be forever laid aside, and He "whose right it is" will reign.

Ark of the Covenant

RICHARD P. VERRALL

THE significance of the ark as a type of divine protection becomes apparent at three distinct periods of Hebrew history. First, Noah and his family are saved from the flood in an ark of gopher-wood; second, Moses is hidden from Pharaoh for three months in an ark made of bulrushes; and third, the Israelites are guided through the wilderness of sin by the ark of the covenant.

It must be remembered that prior to their emancipation from Egyptian bondage, the children of Israel had lived for four centuries in the land of Goshen. It is probable that they there learned and adopted many of the pagan customs which prevailed so generally in Egypt. After crossing the Red sea, instead of attempting to elevate these recently emancipated slaves to a plane of spiritual worship at a single bound, Moses was wise enough to begin at the kindergarten of religious instruction. Through divine inspiration it was made apparent to him that the thought of the people could best be developed by gradual stages of mental discipline. In this respect Moses did what all wise and successful teachers of children have always done, he led human thought along the line of least resistance, from the known to the unknown, from symbol to idea.

In the thirty-first chapter of Exodus it is related that the Lord filled "Bezaleel the son of Uri" with wisdom and understanding "in all manner of workmanship," in order that he might make the ark and the tabernacle according to the pattern revealed to Moses on the mount. The ark was remarkably similar in appearance to the sacred shrines used on Egyptian festal occasions. Thus the children of Israel were only ready to elevate their thought one degree at a time in the scale of spiritual ascension.

From that time onward, the presence of God among the Hebrew people was identified with the ark. It was kept in "the most holy place," in the inner sanctuary of the tabernacle, and it was carried by the priests before the people when they journeyed or made war. Like the brazen serpent, however, it eventually became a national fetish, and it finally disappeared altogether, about the time of the capture of Jerusalem by Nebuchadnezzar. During the seventy years of captivity in Babylon, and for five centuries after, the Jews had to bear the intense humiliation of believing that they had lost their most sacred national treasure. As a matter of fact, however, their real loss was not of the symbolic ark, the need of which they should long ago have outgrown, but of the spiritual idea of God's ever-presence, for which it had stood merely as a symbol.

The eternal coexistence of God and man was never quite lost sight of by the seers of Israel, even when the hour seemed darkest. Such spiritual thinkers as Daniel and his three companions in captivity, and later Zerubbabel, Ezra, and Nehemiah, helped to illuminate the firmament of human consciousness and to prove that the divine idea, when once conceived, is never entirely without a manifestation. Later, the advent of the gospel, with its spirit of healing, not only fulfilled the Mosaic law, but abolished its symbols. The ark was now revealed as a living presentation of Immanuel, "God with us." This higher manifestation of the Christ, or Saviour, while expressed by the human Jesus, was in reality incorporeal and spiritual. To those who still limit the Messiah to the person of Jesus, the Christ has not yet come; but those who recognize in his teachings the word of God, of Life and Truth, have the Comforter promised by Jesus, and this Comforter is now leading mankind into an understanding of all truth.

In her definition of "ark" in the Christian Science textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy interprets it as "the understanding of Spirit, destroying belief in matter;" also as "God and man coexistent and eternal" (p. 581). This sense of the word completely annihilates any remaining necessity for a type or symbol, and reveals the spiritual idea, or word of God, in its pristine purity. The demonstration of man's oneness with God in divine Science, redeeming mortals from sickness and sin, is the acme of true religion. This proof that the same Mind may be in us "which was also in Christ Jesus," is surely the second coming, and this coexistence of God and man, according to Mrs. Eddy, is the true "ark," which she says, on the page above quoted, "indicates temptation overcome and followed by exaltation."

Eleventh-hour Men

BARBARA COOPER-CUSHMAN

IN the gospel of Matthew a parable is told by Jesus to his disciples which by the human sense of justice has often been regarded as a stumbling-block, because it demonstrates the divine economy, not the human. The story is of a "householder," or owner of a vineyard, who went out early in the morning to seek laborers. He found men standing in the market-place waiting to be engaged for the day's work. These he sent into his vineyard, after making an agreement with them for a certain sum of money for their day's work, namely, a penny. After three hours he returned to the market-place and there saw others, whom he likewise hired. He continued to return and hire at intervals throughout the day, and even "about the eleventh hour" he found others still standing idle, and inquired of them, "Why stand ye here all the day idle?" Their answer was, "Because no man hath hired us." They also were sent into the vineyard, with the assurance, "Whatsoever is right, that shall ye receive."

When the day's work was done and the workers received their reward, each man was given a penny,—the man who had worked twelve hours and the man who had worked one. Then those who had worked twelve hours grumbled, and their murmur has come down to the present time: "Thou hast made them equal unto us, which have borne the burden and heat of the day." And the gentle rebuke was simply given: "Friend, I do thee no wrong." Mortal mind, slow to perceive real issues but quick to judge, says here: "These men were justified. They had worked hard and long. The others had simply stood still in the market-place all day." Ah, but that was perhaps the most difficult thing they could have done, while others were called to work, while others were being chosen, given opportunities for accomplishment! Do we suppose that the sun did not beat fiercely down on the rough stones of the market-place, or that it was at all pleasant to

Digitized by Google

stand there? Let us think of the opportunities for discouragement afforded by those eleven hours of waiting; think of the patience required to stand there and wait, and the faith; for it was the eleventh hour, we must remember! Others had been chosen again and again from among them, and yet there they simply stood and waited for their work. Evidently the men who had worked all day would not have been equal to the test, for they grumbled and were impatient and envious over the good fortune, as they considered it, of their fellow workers.

Oh, the sweetness and the joy and gratefulness of the summons! These eleventh-hour men did not even inquire what they should receive for their labor. The master had promised that they should receive whatever was right, and they accepted without question his invitation. They had achieved a measure of patience and steadfast faith which indeed merited a full reward; they had tilled the soil of human will and desire, and were ready for the blessing. May those of us who seemingly have to stand still in the market-place and wait through weary hours of self-correction and discipline, have courage and patience and faith, that "having done all," we may be able "to stand."

On page 204 of "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy writes, "My faith in God and in His followers rests in the fact that He is infinite good, and that He gives His followers opportunity to use their hidden virtues;" while on the next page we read, "Wisdom is won through faith, prayer, experience; and God is the giver."

Our Church

GERTRUDE SMITH

"Look away from the body into Truth and Love, the Principle of all happiness, harmony, and immortality" (Science and Health, p. 261). This is our Leader's wise caution when evil seems in any degree real to us. The material concept or body that we call church, is but a symbol of the spiritual idea of church as understood in Christian Science. Only in the perfect concept can we find ourselves "members one of another."

When through the door of realization we enter the sanctuary of Spirit and breathe its holy calm, all material views, opinions, and desires fade away, and we joyfully exclaim, "I had rather be a doorkeeper in the house of my God, than to dwell in the tents of wickedness." To materialize our concept of church is to lose sight of the true church and "dwell in the tents of wickedness." Even a faint realization of the "house not made with hands," eternal in the heaven of divine consciousness, is a benediction beyond words; and a complete turning aside from the material concept of church to the spiritual must in time heal the body politic of an untrue manifestation.

A material sense of church is almost sure to cause faction and friction, to feed pride of opinion and human domination. Diametrically opposite is the church our revered Leader beheld,—the temple of universal Love in human consciousness. We have an inspired Leader who speaks to us in her written word. Her teaching leaves no important point untouched to guide and help us. The goal she made very clear, and the way to avoid danger in the footsteps to that goal she has plainly pointed out. We cannot be too wide-awake to the rich heritage of her teaching. Are we obedient, or do we believe that she is in advance of our day, or that she does not always mean exactly what she says? What must have been her prayer when she sent forth the word for democratic government in the branches? Was it not that the universal love of God be realized in a more inclusive opportunity for growth in service? The grace, growth, and persecution that come with serving in the church militant is truly a schoolmaster leading to Christ. There follows a clearer discernment of the impersonal, fleeting nature of evil, and of all that men call great, and there is expressed a permanent and abiding conviction of the reality of God, divine Love, and His unchanging law.

Mrs. Eddy's teaching exempts no class or clan from the privilege of development in any department. Her full realization of unlimited Love broke down the barriers of ages, and is silencing the war of tongues as well as the war of weapons. Consciousness needs to be held very clearly to the spiritual idea of church, that one's joy in membership may increase. Isaiah said, "Thou meetest him that rejoiceth and worketh righteousness." Divine Love is meeting the need in each consciousness that abides in the spiritual idea of man. The rejoicing of those who behold the tabernacle of God with men is bringing health and cleansing to the dark places of the earth. When man is seen to be the unlimited idea of universal Love, sight is unobstructed, and our church becomes a glorious expression of "God with us."

"Fowls of the air"

JULIA C. ODREN

As I was on my way to church one Sunday in January, I saw what to me was a great object-lesson. I was looking out of the street-car window, when suddenly my attention was attracted by a group of little birds with wings spread, seemingly having a joyous time. As the car passed them I saw that they were bathing in a pool of water, utterly unconscious of the winter weather. I thought that if we were but as free from fear as were those little creatures, what a vast field of possibilities would be unfolded to us, and what glorious liberty we would have! They were enjoying themselves just as freely as though it had been midsummer, with no fear of catching cold and having a lung fever because they were not in a warm bath-room. They had no false education, no acquaintance with "the tree of the knowledge of good and evil," therefore their eye was single, seeing only the good. The rain that had fallen the night before had furnished them a fine opportunity, and they were making the most of it.

How often do we blind ourselves to the good that is ever present with us, because of our fear of the evil which we believe grows on the same tree as good. The Bible says, "Either make the tree good, and his fruit good; or else make the tree corrupt, and his fruit corrupt." Let us know that as nothing but good can come from God, we may find in every circumstance an opportunity to prove His allness and so take advantage of the opportunity to demonstrate our freedom, as did the little birds.

❖ ❖ ❖

I prayed for wealth:
  Then what I had, all that I lost.
I prayed for fame:
  It came to others, but me it mocked.
I prayed for health:
  But strength grew less, and with it heart and hope.
I prayed for courage:
  But cruel, heartless fate gave only fear for what I asked.
I prayed to die:
  But awful answer this—a living death.
I prayed at last, Thy will alone be done:
  Then heaven heard and gave me all the good
  I asked before, a thousandfold;
  And with it love to God and all mankind,
  And deathless Life.

Selected Articles

[Charles W. J. Tennant in *Herts Advertiser and St. Albans Times*, England]

The Rev. Mr. —— seems to consider that he is holding a strong position in his attitude toward Christian Science, whereas the mere fact of his having classified it as fundamentally unscriptural and antichristian, reveals such a lack of knowledge of the subject as to render his position untenable. When he understands Christian Science sufficiently to enable him to prove its teaching by demonstration, as thousands are doing today, he will then be in a position to offer a statement concerning it.

The first tenet of Christian Science, given on page 497 of "Science and Health with Key to the Scriptures," reads as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life;" and again on page 319 Mrs. Eddy writes: "The divine Science taught in the original language of the Bible came through inspiration, and needs inspiration to be understood." When our Master commanded his followers to do the works which he did, I presume our critic will acknowledge that Jesus intended them to use the same spiritual means he employed. Has humanity found a better way of healing than that of Jesus, who was never known to fail in a single case he undertook, whether it was the healing of the sick or the raising of the dead? The world has got to acknowledge Christ as the way sooner or later, and the sooner the better. Every conceivable material way or means has been tried by suffering humanity since the days of Adam to get rid of its disease and suffering, and been found wanting. Down through the centuries of Old Testament history we have examples of the healing of sin and sickness, the raising of the dead, the multiplying of oil and meal, which involved exactly the same demonstration of divine Principle as in the similar works of our Lord centuries later.

Christ Jesus in his simple though profound statement, "Ye shall know the truth, and the truth shall make you free," virtually said that freedom from every human discord lay in the knowing of the truth, not in the taking or applying of anything material. In Christian Science Mrs. Eddy rediscovered the divine Principle by which he performed his mighty works. He declared that any one who believed on him (understood his teaching) would be able to do the works that he did, and it is just in proportion to his having the Mind which was in Christ Jesus that a man can perform the same works today.

❖

[Judge Clifford P. Smith in *Springfield* (Mass.) *Union*]

The report of a sermon on Christian Science, which was published in a recent issue, is my reason for asking a portion of your valuable space. The speaker "called the Christian Scientists idolaters," so your report read, "as they worship a principle, not a personal God. . . . The Hottentot has just as good a religion."

Invective is a projectile which carries, not forward, but backward. It is a verbal torpedo, which always explodes when you try to launch it. It is a wordy fusee, which casts a light only on the person who uses it. As for the word "Principle," or the term "divine Principle," as one of seven synonyms for God, its propriety is acknowledged by nearly all who have observed its use in Mrs. Eddy's writings. Any sincere reader of her works on Christian Science is likely to find that each and all of the synonyms which she has employed help to discover or bring into view the infinite attributes of the infinite One. Christ Jesus said, "We worship that which we know" (Rev. Ver.).

"Christian Scientists are antichrist," your report also read, "in denying that Christ is the living manifestation of God." If Christian Scientists are "antichrist," it must be for some other reason. This one is a complete failure, as any one may observe who reads Mrs. Eddy's writings in an unbiased manner. For example, on page 54 of Science and Health, speaking of Jesus, Mrs. Eddy has said, "Through the magnitude of his human life, he demonstrated the divine Life;" and on page 583 of the same book she has spoken of Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error."

According to your report, the speaker made one other point. He took issue with Christian Scientists, who say that all things of God's creating are spiritual, and "pounded on the desk while he challenged any one to call that spirit." The nature of God's creation cannot be proved by pounding on a pulpit. The question, What is substance? cannot be answered in that manner, for substance is that which is real, in distinction from that which is apparent. Christ Jesus defined substance in these related sayings: "God is a Spirit." "That which is born of the Spirit is spirit." "The flesh [the opposite of Spirit] profiteth nothing." This is the absolute fact, and the proof of it is involved in every case of Christian Science healing; for such healing is the spiritual overcoming of material discord.

We are also indebted to your report of this occasion for the testimony of a woman who has been cured, through Christian Science, of a serious illness and a bad temper. Her remarks were most pertinent and significant. Denunciation is always futile, debate is often fruitless, but a concrete case of Christian Science healing, duly authenticated, should carry a message of joy to all who hear it; for every case of healing wrought by the operation of divine Principle implies man's complete dominion over evil. To the wise of this time, Christian Science healing signifies that no ill or evil, no harmful event or condition, is either lawful or natural; none is indestructible or inevitable; none but what can be progressively overcome with the law and power of God.

❖

[Thomas F. Watson in *San Francisco* (Cal.) *Examiner*]

The *California Christian Advocate* recently published an article in which the author claims to have made a careful study of Christian Science, and then quotes from Mark Twain and others who had written adversely on the subject. This proves that our critic did not look to reliable sources for his information. One who wished to understand the Bible would not study Ingersoll's or Paine's books, nor would he look to an advocate of allopathy for an elucidation of the homeopath's method of treatment.

There are thousands who gladly and gratefully testify to the fact that the study of the Bible in connection with the Christian Science text-book, "Science and Health with Key to the Scriptures," has brought them health and happiness and made them better men and women than they were before. The testimony of these thousands of earnest students has more weight than the opinions of a few who have never laid aside their prejudices long enough honestly to investigate the subject of Christian Science. Christian Science does not ignore evil, but shows how it is to be overcome with the truth. In Science and Health Mrs. Eddy says: "At all times and under all circumstances, overcome evil with good" (p. 571). The Bible teaches us that God is the only power, and Science and Health states, "Every mortal at some period, here or

Digitized by Google

hereafter, must grapple with and overcome the mortal belief in a power opposed to God" (p. 569).

This writer's remarks in regard to the dishonesty of some Christian Scientists are too absurd for consideration, and the time has passed when such an unfounded assertion would have any weight with thinking people. There were those in Jesus' time who called the Master a wine-bibber and a glutton, and refused to see any good in him because of their blindness and prejudice. This critic says that if "Christian Science survives this age, business methods will have to be rigidly revised, as a result of the training the children are getting in denying the realities of things their horse-sense shows them to be hard facts." Christian Science teaches a higher sense than "horse-sense"—even spiritual sense. Because Christian Science is demonstrable truth, it will undoubtedly survive this age, and aid in the overcoming of all selfishness, greed, and dishonesty in the business methods of today, for it stands for the highest honesty and integrity. As Science and Health states on page 453, "Honesty is spiritual power," and Christian Science teaches the overcoming of all evil, including sin and illness, through the knowledge of the omnipotence of God, good.

While this critic is condemning that which he does not understand, calling it a "monster of iniquity," Christian Science is comforting the sorrowing, lifting up the fallen, cleansing the sinner, and healing the sick, as the Master commanded. In Bible language one might ask, "For which of those works do ye stone me?" Our critic might well read in Romans: "Therefore thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself; for thou that judgest doest the same things."

❖

[Ezra W. Palmer in *Denver (Col.) Express*]

The Rev. Mr. —— is reported in a recent issue to have indulged in some intemperate and unjust reflections on Christian Science, and it is not the first time the gentleman has been guilty of unchristian comment on this teaching. While Christian Scientists have on these different occasions been subject to these attacks, they have endeavored on all occasions to maintain a right Christian attitude toward this evangelist and his work. They have indulged in no vituperation, no denunciations. While his methods and his dissertations on religion may not have appealed to them, they have had no wish to interfere with him or to embarrass him with caustic criticism. He, however, has not been so considerate, but indulges in coarse and abusive language in expressing his attitude toward them.

The charge of this evangelist that Christian Science cannot save a soul is merely puerile, in view of the well-known efficacy of Christian Science in reclaiming the sinner and healing the sick. The evangelist makes no pretense of following the command of Jesus to "heal the sick," but proclaims from his desk that Christian Science, which does heal the sick, is the devil's trick scheme. Perhaps he has overlooked the fact that he is following the Pharisees, who made exactly the same charge against Jesus.

❖

[W. D. Kilpatrick in *News-Palladium*, Benton Harbor, Mich.]

Will you allow me space to explain to your readers some of the points touched on in a recent issue in reporting an attack on Christian Science by an evangelist? Just how the gentleman reconciles his untempered and blindly prejudiced remarks concerning Christian Science to the doctrine "on earth peace, good will toward men," taught by Jesus, I would not attempt a conjecture; but as his entire effort does not indicate any marked familiarity with the Scriptures, it seems as if the attack was intended to discredit the religious views of many of his fellow men rather than to point the way to salvation by the light of Bible teaching.

The Christian Science text-book, "Science and Health with Key to the Scriptures," is the outcome of many years of devoted study of the Bible on the part of its author, Mrs. Eddy. In the Preface of this book it is stated by the author that "as early as 1862 she began to write down and give to friends the results of her Scriptural study, for the Bible was her sole teacher" (p. viii). She further states: "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles. The Bible has been my only authority. I have had no other guide in 'the straight and narrow way' of Truth" (p. 126). This emphasizes the fact that Christian Science is based solely on Scripture, and that in its text-book Christian Scientists claim nothing more than an elucidation of the Scriptures in their spiritual import, corresponding in intent to the articles of faith and ritualistic text-books of other denominations. The allusion to Christian Science as a religion without a Bible is, therefore, either the result of gross ignorance or a desire to misrepresent. As a matter of fact, Christian Scientists are most consistent students of the Bible, and it is doubtful if one could be found who is not giving more devout and prayerful study to the Bible than ever before.

Anent the challenge to Christian Scientists to walk on the water, it is not reported that any of Jesus' disciples did all the works that Jesus did, but that fact renders his injunction none the less binding on all who believe. His admonition to "heal the sick" and "raise the dead" cannot in honesty be divorced from his direction to save the sinner, nor do his instructions in those particulars admit of any misunderstanding or halting and half-way position. We are either healing the sick by spiritual means alone, or we are not following Jesus in the way of his appointing,—one of the two,—and all the facetiousness at the command of our critic will never alter that fact. All of Jesus' disciples, in following his direction, left record of much healing by spiritual means only, and the early church for three hundred years after the time of Jesus was renowned for its healing in conformity with his teachings. This spiritual knowledge which enabled the early Christians to carry on the healing work long after the time of Jesus, was lost only as a result of the crass materialism of the times. It did not cease with the ascension, nor was it intended ever to cease, and Christian Science claims that the many injunctions in the Bible to this end are as applicable today as in the time of Jesus.

The reference of the critic to will-power as a healing agent might tend to confuse some as to the method whereby the many cures are wrought through Christian Science. Christian Science does not employ the use of will-power in any way, but teaches that all healing is effected through a clear understanding of God and man's relation to Him. The Scriptures command, "Let this mind be in you, which was also in Christ Jesus," and in replying to the accusation that his healing was done through the "prince of the devils" (will-power), Jesus said, "Every kingdom divided against itself is brought to desolation; . . . if I by Beelzebub cast out devils, by whom do your children cast them out? . . . But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

In this we clearly see that Jesus recognized but one Mind, one God, and in proportion to our understanding of this one Mind are we enabled to follow his example in healing the sick and casting out demons. The use of will-power is not countenanced by Christian Science any more than it was by Jesus.

Digitized by Google

The human will may go to many extremes, and it would not be in the line of reason to suppose that a mind capable of hating could also be capable of healing. "Doth a fountain send forth at the same place sweet water and bitter?" Paul said, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." Mrs. Eddy says, "The Bible contains the recipe for all healing" (Science and Health, p. 406), and a careful study thereof would make clear to the earnest investigator the fact that will-power, hypnotism, mesmerism, drugs, and the like, were never employed by Jesus and his disciples in accomplishing their wonderful works. The divine Mind, or God, alone heals.

❖

[Duncan Sinclair in *The Eskdale and Liddesdale Advertiser*, Scotland]

My attention has been drawn to a reference to Christian Science in an issue of recent date, and with your kind permission I would like to point out that there is not the remotest connection between Christian Science and spiritualism. The whole structure of Christian Science is based on the fact that the infinite Being whom we call God, is Mind or Spirit. Being infinite, all that really exists is the manifestation of the divine Mind—in ideas. Thus there are not many spirits or minds, since there is but one infinite Mind. Christian Science further maintains that God, the infinite Mind, is infinitely good; and the Christian Science movement is engaged in the endeavor to prove that the Principle of good is omnipresent and omnipotent.

Mrs. Eddy, the Discoverer of Christian Science, in her book "Rudimental Divine Science" (p. 1), defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony." And in the Christian Science text-book, "Science and Health with Key to the Scriptures," in the chapter entitled Christian Science versus Spiritualism, she has stated the attitude of Christian Science toward spiritualism without hesitancy and without ambiguity.

❖

[Frank Bell in *The City Item*, Allentown, Pa.]

The statement in a recent issue, that a lawyer, in seeking the acquittal of a client accused of practising a form of necromancy in alleged violation of law, for the purposes of his argument compared Christian Science with such practice, should not be accepted as establishing any similarity between the two. To attempt to employ necromancy, spells, charms, magnetism, hypnotism, mesmerism, mental suggestion, or anything of the kind, in the treatment of the sick, is to depart absolutely from the teaching and practice of Christian Science, and no person entitled to be termed a Christian Scientist would use or countenance such methods. In the light of Christian Science teaching it is apparent that one who yields his mentality to the control of another, must pay dearly for any temporary relief that may be attributed to such a course, the ultimate effect being not helpful, but tending to demoralization.

An essential difference between Christian Science and all so-called systems of mental treatment is that the latter are concerned only with physical results, whereas the concern of Christian Science is not primarily with physical conditions, but with moral or spiritual conditions. There never was a healing in Christian Science that did not reduce the sum total of human belief in and submission to evil, because this healing is always and only the incidental effect of spiritual regeneration. The object is to demonstrate not a healthy animal, but the real man. Christian Science can be practised best by those who are the purest in heart, and its effects are invariably good. The other systems require no moral standard whatever, nor is it claimed for them that they are less effective for improper than for proper purposes. Thus Christian Science is distinguished by the fact that in method, means, and aims, it is Christian. With this clearly in view one may apprehend how far removed it is from any of the things with which it is sometimes thoughtlessly compared.

❖

[John W. Doorly in *Sheffield* (England) *Telegraph*]

In a recent issue I notice the remarks of the bishop of Sheffield at the Sale Memorial church. The bishop is reported as coupling Christian Science with spiritualism, and condemning them both for always wanting to try to look beyond what had been revealed; and he is also reported as stating that God said: "Follow thou me. If I have not revealed it, then you can be quite sure that it is not for you to know." In the first place, I would like to state that Christian Science and spiritualism have absolutely nothing in common. With regard to the bishop's subsequent remarks, they are plainly nothing more or less than a plea for stagnation. The objection of the bishop is a very old one, and is exactly similar to the one adopted by the rabbis of old when they refused the teachings of Christ Jesus. To them his progressive teachings only meant the uprooting of effete doctrines, and they failed to recognize what enormous benefits these teachings brought to mankind. Christ Jesus, on the other hand, promised that "the Spirit of truth" would guide men into all truth, and the Bible states that to know God aright "is life eternal."

Today is a day of progress, and Christian Science is growing because it is bringing to men a clearer understanding of God and His Christ.

[Written for the *Sentinel*]

Alone with God

KATHERINE FINNIGAN ANDERSON

Alone with God!
Wrapped in the solitude of peace,
There comes a sense of sweet release
From dark despair.
I mount the altar-stairs of life,
My spirit with new impulse rife
To do and dare.

Alone with God!
I seem to roam in pastures green,
Where all is quiet and serene,
Where rivers run
Complacently to meet the sea,
And babbling brooks greet joyously
The rising sun.

Alone with God!
With every other thought shut out,
Without a fear, without a doubt,
I lay my head
Upon the loving Father's breast,
And there no footfall stirs my rest
Save angels' tread.

Alone with God!
I have no need of sun or moon
Or stars to keep my heart in tune,
When I abide
Within the sunshine of His love,
And know all good gifts from above
Will be supplied.

Editorial

More Abundant Life

One of the most prevalent beliefs, and probably the most harmful to the world as a whole, is the one which has been held by the medical profession for centuries, namely, that sickness can be cured and human life prolonged only by the employment of material means and methods. That this belief should have been and is today accepted as true by the great majority of Christian people seems somewhat anomalous, when we stop to consider that both the Old and the New Testament contain records of the most convincing kind that the prophets, the holy men and women of God of the older Scriptures, as well as the Master and his disciples of the newer gospel, ignored material remedies in accomplishing the marvelous cures which they wrought upon those who turned to them for help.

Jesus himself expressly declared that he had come among men to do "the will of the Father," nor did he arrogate to himself any personal credit for the multitudes of people who were healed in the fulfilment of this mission, but attributed the power and the glory to the Father. "The Father that dwelleth in me," he said, "he doeth the works," and with these words he clearly placed upon a spiritual basis the healing power which he displayed. His success in this work not only proved his understanding of a more certain and speedier means for the healing of the sick than the material systems which were in practice in those days, but it also negatived for all time the claim of the physicians that mankind are dependent upon drugs or surgery for relief from physical and mental ills.

The fact that spiritual healing has been done at any time, no matter how remote, is proof enough that it is possible for the sick to be healed today by spiritual means. It is a self-evident fact that what has been done once can be done again. Inasmuch as that which was accomplished by the prophets, who according to the Scriptures were recognized and acknowledged as men of God by reason of their healing work, must have been done according to spiritual law, and that law is unfailing and ever operative, there is nothing to prevent such healing as was done in Bible times being done today by those who sufficiently understand the Master's teachings and his promise that even "greater works" should be done by them that believe.

In the columns of this paper there appear week after week authentic testimonies of those who through Christian Science have been healed of all manner of disease. Many of these people had turned to Christian Science for possible help, after months and years of medical treatment had failed to cure them; others, after the dread sentence "incurable" had been passed and hope had become but a glimmer, and yet others when the limit of a few days or a few hours had been placed as the bound of life. These testimonies are from people in all walks of life, people whose testimony would be accepted as true in any court, but this is not all. In Christian Science churches, on every Wednesday evening of the year, a service is held at which thousands of persons give similar testimonies to the healing power of Truth.

It is time for mankind to reject entirely the belief that its only hope of health is in reliance upon medicine, and through Christian Science the opportunity to do so has been provided. Mrs. Eddy was not only healed herself through the understanding of God which came to her in the hour of her extremity,—the apprehension that today as of old "the prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God" (Science and Health, p. 1),—but after her deliverance she gave to the world the sum total of her experience, that the truth which for long centuries had been obscured might again become available for "the healing of the nations."

What is needed for the liberation of mankind from all its false beliefs about life and health, is that they shall not continue to follow blindly the ever varying theories of the medical profession, but instead carefully weigh the evidence, pro and con, form their own conclusions without fear, and act upon these conclusions. Let them dismiss once and for all the mistaken belief that it is "the will of the Father" for even the least of His children to perish, and remember that Jesus came that all men "might have life, and that they might have it more abundantly."

Archibald McLellan.

❖

All-protecting Love

While most Christian people would admit that God protects and provides for all His creatures, some are shocked if they are told that Christian Scientists sometimes extend their help to animals and birds. It would seem, however, that any protest along this line has no support, as on page 550 of Science and Health we have this unequivocal statement: "God is the Life, or intelligence, which forms and preserves the individuality and identity of animals as well as of men."

It is quite true that the animal kingdom as seen through the lens of material sense does not express the divine creation, which is never less than spiritual, but neither does humanity as thus seen reveal the man of God's creating. So far as the mortal sense of things is concerned, Paul is right in saying that "the whole creation groaneth and travaileth in pain together until now." No one can deny that many of the qualities which prove man to be quite other than a thing of clay, are reflected by the lower creatures; as, for instance, fidelity, affection, gentleness, etc. Mrs. Eddy tells us (Miscellaneous Writings, p. 36) that "the ferocious mind seen in the beast is mortal mind, which is harmful and proceeds not from God; for His beast is the lion that lieth down with the lamb." In so far as the student of Christian Science does any work for a sick or suffering creature, it is to demonstrate to himself and others the perfection of God's creation and the universality of the spiritual law which protects and governs all that expresses the creative Mind.

Here we may remember that the safety of animals as well as of men was provided for in the ark, and we note in the fourth commandment provision is made for the cattle as well as for their owners; also from other passages in the Old Testament we learn that when the people obeyed God's law its protection extended to their flocks and herds. A Christian Scientist, knowing that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), would not use spiritual means for his own relief and turn to materiality for the creatures under his care, knowing that the spiritual law which heals him is, like light, unlimited in its operation, and needs but to be applied with understanding to bring good results in all cases. The psalmist says, "Thy judgments are a great deep: O Lord, thou preservest man and beast."

There are some who ask why animals should suffer, if fear produces suffering, thinking as they do that animals can have no fear in the way that people do; but this is a mistake, since domestic creatures especially reflect the feelings and emotions of those about them. It cannot be denied that wild animals are freer in this way than even the most petted domestic animals; but as humanity learns to rely upon God and understand His law, evidences of the divine care will be

Digitized by Google

seen everywhere; there will be no blight or destruction, and even "the trees of the field shall clap their hands." Our Master has assured us that not even one sparrow would fall to the ground "without your Father;" and if God's care extends to these creatures, there can be no valid reason why Christian Scientists should not help them when occasion arises. At the same time it should be remembered that the work of redemption, so wonderfully presented by St. Paul in the eighth chapter of Romans, must begin with "the manifestation of the sons of God,"—the spiritualization of human consciousness,—not with the lower animals; yet as the Syrophenician woman said, "The dogs under the table eat of the children's crumbs," a saying which Jesus greatly approved.

It is very clear that Daniel must have known the power of divine law over the lions when he stood fearless and unharmed in their den. Isaiah tells us that when God is our lawgiver, "the inhabitant shall not say, I am sick;" and it is he who tells us of the harmless serpents with which a little child can play, of lambs and wolves lying down together, all of which is to be realized when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea."

ANNIE M. KNOTT.

❖

"So shine"

As a general proposition this is true, that an effect is greatly heightened if the means by which it is produced are undisclosed. The attention which would be directed to the mechanism, were it visible, is thereby centered on the phenomenon itself, and the impression received is correspondingly intensified. The non-appearance of the means has increased their effectiveness. This is illustrated in the unique impressiveness of the aurora borealis, that matchless marvel which thrills the more by virtue of its inscrutable disconnections.

The writer experienced a somewhat kindred feeling on first entering a church which was flooded with light from unseen sources. Thought of chandeliers, dynamos, coal burning, etc., no longer intruded itself upon the attention, and there was awakened an altogether new and gladdening sense of the wondrous beauty of the tender light in which all were bathed. Fixtures had yielded their place to the one absorbing fact, the glory of the unseen. He was thus led to realize that the Master's meaning might perhaps have been more fully conveyed if his celebrated saying had been translated to read, Let your light so shine before men that they may see, not you, but your good works, and glorify, not you, but your Father which is in heaven. This ideal is attained when the medium by which Love is reflected is made so unobtrusive, so perfect, that the light divine becomes the one absorbing thing; when we know, and through our unselfed thought lead others to perceive, that there is "no other reality . . . than good, God and His reflection" (Science and Health, p. 242).

In his teaching the Master was not unmindful of the subtlety of the temptations to self-consideration which assault even the aspiring. Mortal sense is forever pushing itself into prominence, and how pleased it is when it finds that it has become an object of even trivial distinction. Personal vanity in this respect may be said to be a common possession. We have all loved to sit near the foot-lights, all tried to be noticeable as first, or fashionable, in many petty matters,—yes, even in our efforts to be humble and to do good. Jesus rebuked this weakness when he said, "Take heed that ye do not your alms before men, to be seen of them," and "when thou prayest, enter into thy closet, and . . . shut thy door."

This old self-parading habit, upon the part of the mortal element, is one of the great obstacles to spiritual progress. We are likely to stumble over it any day, and we shall get rid of it for good and all only when through Christian Science we discern the falsity, the utter emptiness of the nuisance. When the real status of error, the truth about it, is known, it is robbed of that power to deceive which has constituted its only hold upon us. Then, too, as we realize the dignity of man, the incongruity of our subjection to the glamour of cheap pretense begins to appear, and we awaken to that nobler consciousness which cannot be tempted by it.

Christ Jesus emphasized the possibilities of the human reflection of Love's light quite as distinctly as he rebuked all consent to the spirit of self-glorification. When Christ is manifest in our lives, when we have learned to glorify God alone in our body and spirit, which are His, as St. Paul says, no plainness of person or crudity of speech will hinder our all-happifying and ever-healing radiation of the light of Love. Said one, "Did you ever see such a homely face?" and his companion answered, "I thought she was perfectly beautiful." He had noted the physical plainness of a field-working peasant; she had seen the divine light reflected by an obscure but wondrously gentle, spiritually aspiring woman, the light which has transformed the wrinkled face of many a mother, and given it the aureole, the irresistible charm of a Madonna.

When we have gained that control of mortal selfhood which enables us to put it out of the way, then our light will so shine that "the Father of lights" will indeed be glorified.

JOHN B. WILLIS.

Among the Churches

Current Notes

PASADENA, CAL.—One of the most beautiful and helpful features of last New Year's day was the public reading-tent at the corner of Colorado street and Los Robles avenue, maintained by the Christian Science church. The count of visitors showed that over four thousand availed themselves of the comfort and convenience of the tent during the day and evening. Here the sick, faint, footsore, and weary men, women, and children found rest and refreshment "without money and without price." The fact that everything was free seemed very hard for the public to realize, and many offers were made to pay for the service rendered.

When the owner of the lot on which the tent was located discovered that the enterprise was for the benefit of the public and that the church was not making anything, he generously returned the check for twenty-five dollars which the committee had paid for the use of the lot, saying that he was more than glad to share in the good work. The tent was not formally opened until seven o'clock Friday morning, but the attendant in charge was kept up all night New Year's eve, with people coming and going. Crowds visited the tent throughout New Year's day and until far into the night.

Pasadena Star.

COLORADO.—The attitude of the press has been one of respect and kindness for Christian Science, and this has been exemplified in many ways. Frequently articles from the *Monitor* are quoted in the state papers, and little or no difficulty is experienced in securing full publication of lectures in all parts of the state. The press of the state has also opened its columns to replies to criticisms, and little difficulty has been experienced in securing correction of attacks or erroneous statements. The leading weekly paper of the state, *The Great Divide*, with a circulation of one hundred and fourteen thousand, prints an article on Christian Science in each issue, and articles from our periodicals are frequently printed in other newspapers of the state.

Committee on Publication.

DURBAN, NATAL, SOUTH AFRICA.—It is gratifying to note that the sale of Christian Science literature is much in advance of last year. We have passed the splendid record of 1913 for the textbook, "Science and Health with Key to the Scriptures," while as regards Mrs. Eddy's other works the sales of the present year have been more than doubled. The sales of literature for 1914 were: Science and Health, 91; Mrs. Eddy's other works, 197; pamphlets, 532; Hymnals, [illegible] per quarter, 180; *Journals* (per month), 121; *Sentinels* (per week), 29.

The report of the committee on distribution shows that good progress has been made in this important branch of our work. There are now twenty-six institutions and refreshment rooms receiving Christian Science literature, as compared with fourteen at the end of last year. The number of periodicals distributed in 1914 was: *Monitors*, 1,112; *Sentinels*, 628; *Journals*, 139.

During the year a sum of £92 5s. 1d. has been added to the building fund, which now stands at £296 12s. 6d., the collections of the first Sunday in each month being added to that fund.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

❖ ❖ ❖

The Lectures

Memphis, Tenn.

George Shaw Cook delivered two lectures on Christian Science in the church edifice. C. C. Ogilvie, superintendent of the Goodwyn Institute, introduced the lecturer the first evening, saying in part:—

I am not a member of the Christian Science church, but I have always been much impressed with the splendid optimism of its followers, with their tolerant, charitable spirit under attack, and with their absolute confidence in and unreserved reliance upon the principles of philosophy, healing, and religion taught by Christian Science.

At the second lecture Atty. A. Y. Scott in his introduction said in part:—

The latter half of the last century produced many remarkable characters. Among these was one who declared a spiritual truth, and prescribed a spiritual remedy for all ills. In 1875 Mrs. Eddy published her great work, "Science and Health with Key to the Scriptures." She affirmed an infinite God, the Father, creator of all that was and is and shall be, and with sublime intellectual courage followed this premise to its logical conclusion. She dared to accept literally these words of Jesus, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do;" also his commands to "preach the gospel" and "heal the sick." Whether we agree with her or not, we must recognize the incontrovertible fact that she has builded a religion; for hundreds of thousands she has made the waste places to blossom; into the darkened, sin-bound soul she has brought the sunshine of hope and joy. To thousands racked with disease and pain she has given health and peace, and for them a faith that was dead has revived. She has given the world a new religion, based upon love and not upon fear; a religion which makes of this earth, to them that believe, a heaven now and for all eternity. Can we marvel that those thousands regard their Leader with reverence and deep affection?—*Correspondence.*

❖

Peoria, Ill.

A large and representative audience listened to a lecture on Christian Science by Jacob S. Shield, given in Mohamed Temple under the auspices of First Church of Christ, Scientist. The lecturer was introduced by W. J. Leach of *The Peoria Journal*, who, after quoting the parable of the sower, said in part:—

I am persuaded that no class of religious teachers has ever more perfectly conceived the pedagogic truth which lies behind this parable, than have the Christian Scientists. Calmly, dispassionately, they set forth what truth they have learned, troubling themselves not at all about the reception of it. More than any other class of teachers, they seem willing to leave the truth to win its own way, once they have told what they know of it. All classes of soil mentioned in the story of Jesus are represented in this audience. The lecturer is concerned only with the seed. When he shall have brought the word to us, it is not his to worry as to what will become of his message.—*The Peoria Journal.*

❖

Newburgh, N. Y.

Willis F. Gross, who lectured on Christian Science, was introduced by Lieut. W. C. Jacobs of West Point, who said in part:—

Nearly fifty years ago Christian Science was first presented to the world by Mrs. Eddy. For centuries mankind had been struggling toward the light, but was held in check by the accumulated dogmas and theories of materialism. In itself, Christian Science was not a new religion, as it was the rebirth of the truths taught by Jesus Christ; but these spiritual truths had been hidden under a covering of material errors, until their practical application had been lost sight of. However, what is really true is always true, and today the spiritual methods used by Jesus to destroy sin, disease, and death, are being applied by the followers of Mrs. Eddy to accomplish the same results as those obtained by the followers of our Lord. Thousands of unimpeachable testimonies prove that Christian Science, honestly and intelligently applied, does refute material theories as to sin, disease, and death, and in their stead brings health and happiness, and a spiritual freedom that surpasses all material comprehension.

Paris, Texas

A lecture on Christian Science by William D. McCrackan, M.A., was given at the high school auditorium to an audience of about three hundred people. Introductory remarks were made by William B. Connor, first reader, who said:—

In the most memorable sermon that was ever preached, the Sermon on the Mount, Jesus said, "Therefore all things

Digitized by Google

whatsoever ye would that men should do to you, do ye even so to them." In speaking of Christian Science, its Discoverer, Mrs. Eddy, says on page 271 of Science and Health, "The Sermon on the Mount is the essence of this Science, and the eternal life, not the death of Jesus, is its outcome." As followers of Jesus the Christ, Christian Scientists are endeavoring to put into daily practice the lessons which he taught in this wonderful sermon. Through the study of this and other Scripture in the light of Christian Science, they have been healed, some of sickness and some of sin; some have had harmony restored where once discord reigned, and they all know God better than they ever knew Him before. They feel that the greatest good which has ever come into their lives is the understanding they have gained through this Science, and that in helping others to understand something of it they are putting into practice the golden rule of doing unto others as they would have others do to them.—*Correspondence.*

Chicago, Ill.

Jacob S. Shield, who was announced to lecture on Christian Science for Sixteenth Church, at the Armstrong school, received a welcome that exceeded expectations. The chairs which at first had been provided, about eight hundred, proved entirely inadequate to meet the demand, and additional ones had to be secured. It is thought there were between ten and twelve hundred people present. The speaker was introduced by Frank C. Rogers, who said in part:—

To one and all who are ready to accept the Christ-principle, it comes as it did to Saul of Tarsus, as a revelation, as the voice of God speaking to the human consciousness. When the great light of Truth came to Saul on the road to Damascus, it caused a complete transformation in his thought, and the proud and pitiless Saul became the compassionate and loving Paul, endowed with a spiritual understanding of the Christ which enabled him to heal the sick and raise the dead.

Today Christian Science is revealing to mankind this same light of Truth, and is proving that the promises of the Bible may be made practical here and now in better lives and healthier bodies. There are probably many within the territory served by this church who are seeking surcease from sin and sickness, and longing for an understanding of the Christ, Truth, which this religion gives, but who hesitate to investigate because of having been misinformed concerning its teachings. This lecture is for the purpose of correcting misrepresentations and to give authentic information about Christian Science.—*North Shore News.*

Helena, Mont.

Bicknell Young lectured on Christian Science at the Unitarian church. He was introduced by L. E. Rudd, first reader, who said:—

Nearly two thousand years ago there was born into this world one who has since been called (Science and Health, p. 52) "the best man that ever trod the globe,"—Jesus the Christ. His mission was to demonstrate the power of God and to show us by example how most surely to gain the kingdom of heaven, but his teachings as given to us in the Bible have not always been heeded. Take, for example, his direct commands: "Go ye into all the world, and preach the gospel;" "Heal the sick." Many have been willing to obey the first of these, but others have felt that the latter was intended only for a select few, his immediate disciples. Mrs. Eddy awoke to the realization that the commands of Jesus were intended for us all, as much so today as during the time of his ministry, and after years of struggle and self-denial she gave to the world that wonderful text-book, "Science and Health with Key to the Scriptures." It has been our guide to a better and clearer understanding of Jesus' promises, and is enabling those who are willing to study it in connection with the Bible, to prove by actual demonstration that God is Love, and therefore is not responsible for the dire calamities so commonly attributed to Him.

The Helena Independent.

Glendale, Cal.

The high school auditorium was filled to its capacity when Prof. Hermann S. Hering lectured on Christian Science. He was introduced by Atty. Frederick Baker, who said in part:—

Christian Science offers a solution of the vital problems of life based upon a spiritual interpretation of the Bible. It is a restatement in modern terms of the truth taught by Jesus, for he instructed his followers how to overcome sin, sickness, and death, and proved the truth of his words by his mighty works. In the same way Christian Science teaches the laws of life, health, and happiness, and thousands upon thousands are today demonstrating the truth of this teaching.

Testimonies of Healing

Sentenced to die by the unanimous vote of a council of physicians held Tuesday, March 11, 1913, my daughter, Mrs. Elden Lord Packard, is not only alive today, but is in normal health, and her restoration is due solely to the divine power manifested through Christian Science.

This is the story of a non-Scientist, but one who is, by reason of this marvelous demonstration, no longer a skeptic. On March 4 the physician, retained because of the law in maternity cases, told my daughter she could not live. "You are in the last stages of Bright's disease," he said, "and are apt to die any moment. You are apt to have convulsions and never come out of them, or to go to sleep and never wake up. You will have to flag your Christian Science, for positively your only chance is to go to a hospital and have your child taken away immediately." "If the case is as serious as you say it is," my daughter replied, "I need Science more than I ever needed it before." The physician insisted on seeing the husband, a non-Scientist, and he repeated to him what he had said to his wife, adding that the practitioner could be arrested if she took the case and it resulted as he predicted. He was keen to operate at once, but neither my daughter nor her husband would consent.

My daughter told her parents on the following Sunday, March 10, and the next day I went to see the doctor. He repeated to me what he had told his patient and her husband, and was unequivocably positive that nothing but an operation could save my daughter's life. I asked him, in case of an operation, what chance the child would have to live. "Well, we sometimes save them," was his reply. "If the child were sacrificed," was my next question, "what chance would the mother have?" "She would have more chance than the child," he answered, and this was the most encouragement he could give.

We asked for a consultation of physicians, and it was held the following morning, March 11. The physicians agreed, positively and without any qualifications, that my daughter's only chance for life was an operation within twenty-four hours. They urged with all the emphasis possible that she be sent to a hospital immediately, but even with an operation they would give no hope, or at least a hope so exceedingly fragile it was worse than none. A family consultation was held, at which strong pressure was exerted to have my daughter accept the doctor's advice. She resisted firmly, and though I felt I was signing her death-warrant, I advised that they let her decide the question for herself; and this was done.

Throughout the trying scenes of these two days, the Christian Science practitioner stood firm and was a tower of strength. From start to finish her faith never wavered, and this cheered and comforted all of us, besides aiding her patient perceptibly. At the time the decision to stick to Christian Science was reached by us, the patient's condition seemed most alarming. When I saw her the next morning, a marked change for the better was noticeable. Her mind was no longer torn with the doubts and fears of those who loved her and whom she loved, and from that moment her improvement continued until the time for the final trial came. Meantime, the doctor was becoming so worried about the case because the patient would not diet or carry out his other directions, that she offered to release him if he wished to give up the case. He replied that he would keep it, so she wrote a letter formally exonerating him from all responsibility and all blame in event of her death. He prescribed a diet, but she made no change whatever in her usual fare.

On April 2, I was told at my club that the doctor wanted me to call up my daughter's house at once. I did so, and the nurse who answered the telephone would not tell me what the trouble was, but sent for the doctor himself. "Your daughter has had two convulsions," the doctor told me, "and you had better come down as quickly as possible." As he had told us that her chances for surviving even one convulsion were practically nil, I jumped into a car and sped to the house. Upon my arrival I found two doctors there, and a nurse, who was a graduate nurse as well as a Scientist. They were gathered around my daughter, who lay white and still, without the slightest sign of life. Looking at her long and earnestly I feared the worst, and said to the doctor who stood near, "Is she dead?" She heard me and tried to open her eyes; then she smiled feebly and said, "I am not going to die." And she kept her word. An hour later she was the mother of a boy.

Only a minute or two before the birth, the doctor said to the patient's mother that he did not think her daughter could possibly live, and that he also thought the child had been dead for several days. The next day he told the Christian Science practitioner that poisoning would set in and that the patient could not survive; but the practitioner never wavered in her faith and understanding, which she imparted in full measure to her patient. Two other Scientist nurses were called in to help, and not a drop of medicine was taken. The swelling disappeared very quickly. As one of the nurses phrased it, "Under Christian Science treatment the poison disappeared like the gas escaping from a balloon." Mother and child gained steadily, and every condition became absolutely normal.

When I left my daughter the Friday following the birth of the baby, she seemed so low that I never hoped to see her alive again, although she had seen friends who called that day. The next morning her change for the better was marvelous, and after that we never had any cause for worry. She sat up the ninth day after the baby came, and was downstairs the seventeenth. Throughout the case, from start to finish, no medicines were used, and the entire treatment was Christian Science. Is it any wonder that one doubter is no longer unconvinced? After the patient's recovery was assured, even from the medical view-point, the attending physician told her that he had reviewed the case before a medical meeting and all but two of the doctors present agreed that she "had not the ghost of a chance." The two thought she "had a bad chance," and all agreed that they thought the doctor was "a fool for taking the case."

To say that we are grateful for the triumph of Science over asserted material laws, expresses but feebly our heartfelt thankfulness. My daughter and her son, now eighteen months old, are pictures of health, and splendid living examples of the truth of Christian Science.

FRED ARTHUR MALLERY, Passaic, N. J.

We, the undersigned, having read the statement written by Fred Arthur Mallery of the Christian Science demonstration in the case of his daughter, Mrs. Elden Lord Packard of Rutherford, N. J., hereby certify that the facts as given are an exact and correct statement of the case.

MRS. E. L. PACKARD. MRS. FRED A. MALLERY.
ELDEN LORD PACKARD. MRS. IDA KATE SCHULTZE.

❖

I learned of Christian Science a few years ago. Six months before this time I was taken very ill, and was unable to walk or do any housework. The physicians first called the trouble rheumatism, but after a few months' treatment for this ailment, they decided that it was something more serious, and

Digitized by Google

advised an operation. Another kind of treatment was tried for three months, when I was told it could do no more for me. The last physician who examined me said I had but a few weeks to live. I was at that time in intense pain and had a growth on my side. I had heard of Christian Science, but thought it was for people who imagined they were sick. At last, however, when weary of everything and about to have an operation, my husband's mother, although not a Christian Scientist, proposed that I should try Christian Science first. She called in a practitioner, and two weeks after the first treatment I started to do my housework and take care of my husband and two children. After three months' treatment I was entirely cured, and was not even lame. It is nearly four years since my complete healing, and I have never felt the slightest return of the trouble.

To say that I am grateful to Mrs. Eddy for her book "Science and Health with Key to the Scriptures," and to all who helped me to get the true understanding of God, seems hardly enough; but I am trying to live this truth so as to reflect some light to others, and to tell the glad news when I see any one in need of help.

Mrs. E. Dwyer, San Diego, Cal.

[Translated from the German]

In our text-book, "Science and Health with Key to the Scriptures," we read that Christian Science "dissolves tumors" (p. 162), and it is to this effect that I herewith wish to offer my testimony. About three years ago a hard swelling formed on my back underneath the skin. A very painful incision was made by the physician, and after applying hot poultices for several days the abscess disappeared. Six months later, however, it manifested itself again at the same place. In the mean time I had become acquainted with Christian Science, and while I was under treatment, the abscess grew larger at first, but one day was entirely dissolved without surgical means and without my experiencing the slightest pain. The trouble has never appeared again, for what is healed through divine Love is healed forever. Christian Science has also cured me of nervous, stomach, and bowel troubles, accompanied by a sensitive condition of the appendix, and of severe nervous debility.

I thank God from the depths of my heart for the understanding of His ever-present help, and for the assurance, "I will be with him in trouble; I will deliver him."

Willy Kortmann, Hermsdorf near Berlin, Germany.

For several years it has been my privilege to read the testimonies published in the Christian Science periodicals, and gratitude for the help and encouragement I have received from these loving acknowledgments, prompts me to tell what Christian Science has done for me.

I was freed from the necessity of using glasses, which I had worn for twelve years, having been told that I would never be able to do without them. This healing came through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. For four years my eyes have given me no trouble, and I have done much close, fine work, which would have been impossible without Christian Science. I was almost instantaneously healed of all the symptoms of acute lung trouble, and this quick and permanent healing gave me absolute confidence in God's power to cure physical disease. Through the explanation made to me by a practitioner that God is our Father and Mother, and hence I could inherit nothing but good, I was healed of a lifelong fear of insanity. Words cannot express my gratitude for deliverance from this bondage. Chronic throat trouble, from which I had suffered for years, rheumatism, stomach disorder, and colds, have been overcome through the study of Science and Health.

Although I did not look into the subject of Christian Science for my own benefit, I soon found what I had long been seeking,—peace, comfort, and a right understanding of God and man's relation to Him. I found a practical religion, one which has taught me how to overcome all difficulties. My heart is filled with thankfulness to God for our dear Leader, whose purity enabled her to receive the message of Christian Science and deliver it to the world.

Vernette H. Huntley, Rochester, N. Y.

I wish to give my testimony of the health, peace, and joy obtained through the healing agency of Christian Science. While I was a student in school my health failed, and eventually I was compelled to abandon my studies, as heart, lungs, and stomach were in a badly disordered condition. I could move about only at a mere snail's pace, and was unable to do work of any kind. Later, physicians informed me that I had appendicitis, also tuberculosis of the bowels, and that I must be operated on for the former and go to another climate to overcome the latter. The appendicitis seemed to yield to the operation, and for a time I improved and appeared to regain some of my old-time vigor, but I had come to be so governed by fear, discord, and inharmony, of both body and mind, that I began to decline, and the physicians insisted that I should go West. This I did, coming to Texas from Illinois, and it was here that the gospel of Christian Science was proposed to me as a way to health and strength. At first I was skeptical, for I knew absolutely nothing about it; but I had been under the bondage of disease, sin, and discordant thought so long that anything which would relieve me must find favor in my judgment.

Then the kind-hearted woman who had proposed Christian Science to me, loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and advised me to go to a practitioner for treatment. I did so, with the result that during the first week the tubercular affection disappeared, and I discovered that I was being transformed, becoming a new man. I was under treatment for four weeks, during which time I devoted all my leisure to the study of Science and Health and other Christian Science literature which was given to me. I could offer no opposition, and my old-time skepticism was compelled to yield to the power of divine Truth, for I had not read an hour before I realized that here at last was the righteousness for which my soul had hungered so long. It was as though I had been resurrected—and I really was—from the grave of mortal belief, fear, and discord, into the spiritual consciousness of omnipotent, immortal Truth, the eternal Life, Love, which overwhelms evil and all its manifestations, and proves Christ's declaration that "the kingdom of God is within you" by bringing peace and harmony into lives formerly governed by the erring precepts of mortal mind. I rejoice with Paul that "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

My gratitude for the power and demonstration of divine Truth in the physical benefits received is no greater than for the spiritual understanding, uplift, and hope that have come to me in my study, and for the illumination of the Scriptures which increases as I grow in understanding. Truly I have great occasion for rejoicing, for now I am well and strong, and I thank God daily for this divine Science which saves mankind, and for the wonderful woman through whom it has been revealed to suffering humanity.

Since my healing in February, 1913, I have not had the

Digitized by Google

slightest symptom of a return of the tubercular trouble. The following autumn I was obliged to submit to a physical examination by a physician before entering the local college, and was pronounced by him entirely free from any contagious malady. From the day I was healed, Christian Science has not failed me in the hour of need, but has proved in every instance "a very present help in trouble."

A. W. Blough, Canyon, Texas.

✧

I send this testimony with a heart overflowing with gratitude for the study of Christian Science and what it is doing for me daily. A few years ago, when I felt that life held nothing for me but sorrows and disappointments, as a last resort I turned to God for relief. I am thankful to say I found it in the study of the Bible, as explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have also been healed of many minor physical ailments, one of which was a severe attack of headache and nervousness. Through Christian Science fear in its many phases has practically been overcome, and my life-problem is becoming easier for me to handle as I apply its rule and Principle as taught in our text-book. The Bible is now my ever-present help, as it means something to me.

I have been a member of another church for ten years, but it never seemed to mean much to me, and the Bible was a closed book until I took up the study of Christian Science. Well may we be grateful to our dear Leader for the discovery of this wonderful truth which frees us from sin, sickness, and sorrow! To all those seeking the truth and the narrow way which leads to the kingdom of God and health and happiness, I hope this testimony will prove beneficial.

Dorothy Cooke, Los Angeles, Cal.

✧

As I always enjoy reading the testimonies, I send my experience in the hope that it may help some one. I had been ill for over a year, and as a result of continued bad health my eyes had become so weak I could not read; therefore I consulted an oculist, who prescribed a remedy which caused me great suffering. I got two pairs of spectacles, one pair for reading and one for general use, and was told I would never be able to read without them, but they did not help me at all in reading. At last I thought something more ought to be done, so I went to London to consult a specialist for nervous complaints. He told me my health was in a very critical condition, that unless I went at once to a nursing-home, I might not live three weeks. Accordingly, I went to one in Ventnor, where I stayed five weeks and was most kindly treated. Although I had not been able to read the Bible for a long time, thoughts kept crowding on me of the presence of Christ and of the power of God.

After leaving the home, my sister and I stayed three weeks in lodgings in Ventnor and then returned to London, staying there two days to break the journey before our return to Norfolk. We called on an old friend who lived close to the hotel where we were stopping, and were greeted with the words, "I have been longing to see you to tell you about my son, who has been ill for two years and has been healed through Christian Science." Soon afterward the son came to stay with us in Norfolk and brought "Science and Health with Key to the Scriptures," the *Sentinel*, *Journal*, and *Quarterly*. He told us what wonderful healings were taking place every day through the knowledge of God as the great Physician, and that it was quite as possible to be healed today as it was when Jesus walked the earth. As soon as we could, we went to London and attended the Christian Science services on Sunday, and the next day I received my first treatment. That was July 16, 1910. Imagine my joy when on the following Thursday I realized I could read easily without spectacles. My strength also came back very rapidly.

I had been a seeker after truth many years, as the teaching in the church I attended did not satisfy me. My freedom came so suddenly that I had to study the Christian Science literature to try to understand how the healing had been accomplished. My thought had to be cleared of wrong concepts of God and man. When I realized that Christ Jesus had come to earth to give men a new conception of God, it was a revelation to me. As I read, "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works;" and again, "I do nothing of myself; but as my Father hath taught me," I understood for the first time something of the greatness of the work Christ Jesus had done. I began to know that God is the Father of all, and that He has planned all for man's happiness, but that mortals through their wrong mental attitude have lived in an imaginary "far country," suffering from sin, sickness, and untold and unnecessary misery. In 1911 I had the privilege of class instruction, and this was a great help.

I feel so thankful to God for inspiring Mrs. Eddy with such glorious thoughts of Himself that she could reveal the truth for which so many people are waiting. God never changes, but mortals' conception of God must of necessity change with the ages. The human mind must learn that sickness is a dream from which it needs awakening; that "the only reality of sin, sickness, or death is the awful fact that unrealities seem real to human, erring belief, until God strips off their disguise" (Science and Health, p. 472).

Joy and gratitude arise in one's heart when he knows the truth of Mrs. Eddy's saying, "Not death, but the understanding of Life, makes man immortal" (Science and Health, p. 485). Truth is always changeless, and man as God's reflection, the real man, never varies; our false beliefs about God, man, and the universe do not alter them in any way. Man is never less than spiritual, and is always capable of reflecting divine intelligence. We find the literature very helpful, and we are deeply grateful to all who are responsible for it.—Emily Harding, King's Lynn, England.

I am the sister mentioned in the above testimony, and I know that it is all true. For a great many years I had been wishing to meet with a text-book to explain the Bible, therefore it was a great joy to have "Science and Health with Key to the Scriptures" by Mrs. Eddy brought to the house, and I am very grateful for it. Each day it is impressed upon me more and more that Jesus Christ is "the same yesterday, and today, and forever," and that through the power of God the sick are healed.

I did not originally take up Christian Science for my health, but have received great benefit from it. My digestion has improved; I can now always see to read Science and Health without spectacles; also I have lately had two demonstrations of painless dentistry. Every day I see countless ways in which I am preserved from accident and unpleasant experiences, as I get to understand more and more the promises in the ninety-first psalm. Mrs. Eddy expresses it so beautifully in Science and Health when she says, "As human thought changes from one stage to another of conscious pain and painlessness, sorrow and joy,—from fear to hope and from faith to understanding,—the visible manifestation will at last be man governed by Soul, not by material sense" (p. 125). Until I had my spiritual sense opened to understand more of the omnipotence, omniscience, and omnipres-

Digitized by Google

ence of God, good, to a great extent I took all these blessings as a matter of course.

I first heard of Christian Science in 1910, and am grateful for having had the privilege of going through class.

Mrs. E. Hawkins, King's Lynn, England.

❖

I am deeply grateful for what Christian Science has done for me. Like many others, I came to Christian Science only as a last resort, as I had been a member of another church for a number of years. Praying to an unknown God, somewhere in the heavens, I opened my Bible and read of Jesus' teachings, and I believed that this healing was for us if we only understood it. When all material means had failed and I had no other hope, I turned to God and was healed. I found that Christian Science is the truth of Jesus' teaching for which I had been longing.

In May, 1912, I came to Christian Science through some Scientists living in a near-by town. I was suffering from a complication of diseases, namely, stomach disorder, anemia, heart disease, sleeplessness, and a serious bladder trouble for which the doctors advised an operation, as well as from extreme nervousness and mental depression. After having suffered this way for seven months, getting only such sleep as could be produced by opiates, it seemed to me I would either go crazy or die of a broken heart. I was healed by a faithful Christian Science practitioner after six weeks' treatment, a part of which was absent.

I feel grateful not only for my healing, but for the spiritual uplift which I am receiving each day through the study of our text-book, "Science and Health with Key to the Scriptures," and all our literature. We have had so many proofs of God's power to heal in our family! My husband was healed of influenza and a cough. I have been healed of a female complaint of seventeen years' standing, which had caused me to have a very weak back. With only a little understanding of Science and Health I have been able to overcome toothache, neuralgia, and headache, to which I had been subject for a number of years. As I began to apply the teaching of Christian Science, one by one these ailments have yielded to the power of Truth, until they dissolved into their native nothingness. Now every day is beautiful, each one bringing added blessings. Here I would like to express my great thankfulness for this proof of God's love, and my gratitude to those who have so lovingly and kindly helped to show me the way. I am also deeply grateful for Mrs. Eddy's writings, which have been the means of bringing to my understanding the wonderful truth taught by her.

Ella B. Payne, Okarche, Okla.

❖

Some time ago I had a violent attack of influenza, which overpowered me so that I could not treat myself. I then asked a Christian Science practitioner to give me treatment. In the night I felt very cold, and this frightened me, but the next morning I got up at the usual time, though I did it with difficulty. I did the work which was most needed and then went to bed again. The following morning I again got up at the usual hour, and did all the work that had to be done, although I was somewhat afraid of the cold. The next afternoon, however, it was as if I heard a voice say, "You are protected by God," and then I was quite well. Not only in this case, but in other cases too, I have received much benefit through Christian Science treatment.

For all that I have learned through Christian Science, I am deeply grateful.—Miss A. Westra, The Hague, Holland.

From Our Exchanges

[*Zion's Herald*]

In all study of science, philosophy, and theology, we need to have the temper which will search whether or not such and such things are so, without setting up an artificial bound to investigation, or prematurely, previous to proof, hardening an incipient prejudice into a rigid opinion. This principle, so important for science and philosophy (and by sinning against which too many teachers fall into narrowing individualisms or eccentric intellectual fads), also deserves to be applied in the domain of theology, whose materials for research are afforded by the sacred Scriptures of the Old and New Testaments. This would be a good rule to propound: Whenever in doubt, look in the Bible! The Bible, however, is not a magical book to be conjured with, out of which here or there we may cite a stray text by way of special pleading to reenforce a view which we have ourselves already decided shall be right, but a collection of consistent deliverances concerning faith and duty whose full meaning can be explicated only by patient, candid, and prayerful comparison of Scripture with Scripture, in order that, as the result of systematic search, we may know whether these things are so.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

"Earth changes, but thy soul and God stand sure." Everything in life that is really an imparting of God to our experience, an incoming of the divine into our life, is a permanent possession; nothing can ever destroy it or rob us of it, whatever may happen to it on the plane of the outer man. And through whatever affinities God speaks to us concerning things eternal; in whatsoever mode He makes His demand upon our deepest and best,—be the experience never so fleeting, never so ephemeral and insecure,—it comes as a call upward, and will fulfil itself only at the very heart and center of the glory divine. The voice of God is always calling,—higher, higher, ever higher,—compelling us onward through the fading of every earthly dream, through the ruin of every earthly habitation of content. Not here, not here, He seems to say; not here is the perfection of any blessedness the soul has ever sought. Follow, follow, whither your blessing has fled, till you greet it again, undisguised and unafraid, in the place where truth and love and joy are one, and naught shall part them evermore.

[*The Universalist Leader*]

We cannot think of Jesus as seeking chiefly for his own sake that spiritual excellence of which he constitutes our highest ideal. If he had thus sought, he would never have obtained it. The master passions of his life were an absolute devotion to the will of God and an unselfish desire to minister to human welfare. If his life became richest in all the elements of personal righteousness, it was because he sought them from the heart of God, not merely for the sake of what they would do for him, but that he might give them to others. We become most truly his disciples, not when we obey his precepts and imitate his example in order to insure our own salvation, but when we say with him, concerning all whose needs are thereby served, "For their sakes I sanctify myself."

[Rev. Herbert Booth Smith in *The Homiletic Review*]

One of the greatest things which Jesus did for religion was to make it practical in its nature. There are other systems of faith which merely require their devotees to memorize the creed or to turn the prayer-wheel mechanically. But Christ

Digitized by Google

teaches a religion which finds a practical outlet in life. The Acts of the Apostles is not merely a New Testament volume; it is a daily reincarnation of the spirit of the Nazarene. We talk about translations of the Bible. The best translation of the Bible is the Bible translated into life, into new manhood and womanhood and childhood. When Jesus took the twelve disciples into his school of training, his object was not to tell them a lot of new things and then graduate them with cap and gown and degree. No, he took them to transform their lives, and make them epistles "known and read of all men." Instead of knowing books, they were to be books.

[*The Christian Register*]

No one can claim so much for reason in religion as to demand that religion shall never go beyond it. What we can assert is that religion shall not go contrary to our reason. It is the essence of religion to lead reason where it feels awe of mystery and inexhaustible resource. But no religion can do this by requiring reason to stultify itself. The sincerity of the mind, the reliance upon it as the sole entrance of all revelation to our nature, the respect for it as God's endowment,—all these elevate and dignify reason. Religion is the one exercise of our nature which lifts us above the reach even of reason. But it never does violence to reason. And it remains a valid test of a good religion that it shall not offend our sense of truth and injure or discredit any power of acquiring truth. Those who belittle reason, tear it away as if thus to see religion more clearly, are unconsciously committing religious suicide, and agnosticism gains most of its recruits from those who in the interest of piety knock away the foundations of conviction and then find that piety alone will not support them.

[*American Lutheran Survey*]

There never was a time when men of clear and correct convictions were needed more than now. Clear and correct convictions constitute the foundation for character, and conduct is the expression of character. No man can do much in the conflicts of life who does not have confidence in the truthfulness of the principles, and in the righteousness of the cause, and in the fulfilment of the purpose for which he stands. Conviction makes confidence possible, and confidence makes conviction powerful.

[*The Christian Intelligencer*]

The Bible is our one infallible guide-book to character and glory. Those who feed on it become the saviors of the race. It is a never-failing source of spiritual wisdom and guidance. If we recognize that much of the hostility which men manifest toward it arises from ungodliness, we shall be less liable to be influenced by its traducers. We shall love the Word and honor it by obedience, and teach it by testimony and example.

[*The Christian Work*]

If there was any note more distinctive than another in the teaching of our Master, it was the worth of the single life. Barbaric militarism and the rule of force make no account of this, but it is the essence of the Christian view. Our ideal is not the dominance of a race or a nation or a class, but a world of free persons making the contribution of their full personality to the world.

[*The Watchman-Examiner*]

It will always be a truth beyond all dispute that the man who has sinned has made a bad bargain. He has parted with something of infinite value and received in exchange that which is absolutely worthless in the spiritual realm. He is dependent on the free gift of God for restoration to the kingdom of heaven.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Permission has been obtained to translate into German the article "Mary Baker Eddy," by Arthur Brisbane, and it is now published in pamphlet form.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.18; two to eleven copies inclusive (cloth only), each $1.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10½ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1885 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

A summary of the world's output of mercantile tonnage, steam and sail, during 1914, just issued by Lloyd's Register of Shipping, shows that vessels aggregating 2,852,753 tons were launched during the twelve months. This total was about 480,000 tons less than in 1913. Holland, Japan, and Norway were the only ones among the principal ship-building countries to show an increased output. Vessels launched in the United Kingdom aggregated 1,674,358 tons steam and 9,195 tons sail. Of these vessels 621 were steamers and thirty-five sailing craft. The United Kingdom's output was 248,600 tons less than in the previous year, when the total of 1,932,153 tons was the highest ever reached. The amount of tonnage launched for other countries from British shipyards in 1914 was 410,923 tons, or slightly more than 24 per cent of the total output. Fifteen vessels of 88,097 tons were for Holland, 67,827 tons were for Norway, 41,584 tons for Greece, and 85,951 tons for Belgium. Only one vessel of 5,102 tons, was launched in the United Kingdom for the United States.

Vessels launched in the United States during the year totaled 200,762 tons, or nearly 76,000 tons less than in 1913. The output included sixty-seven steam and twenty-seven sailing vessels. The bulk of the building was done in Maryland and Virginia, there being twenty-five vessels of a total of 67,470 tons launched from yards in those states. Eleven vessels, aggregating 12,572 tons, were launched in Maine and Massachusetts; 47,270 tons in New Jersey, Pennsylvania, and Delaware; 5,459 tons in New Hampshire, Connecticut, and New York; 87,825 tons on the Great Lakes; 28,642 tons on the Pacific coast; and 1,504 tons at other Atlantic coast ports. Fifteen of the vessels launched on the coast were seagoing merchant steamers of between five and eighty-five hundred tons each.

The tonnage output of other countries follows: Holland, 118,153 tons; France, 114,052 tons; Japan, 85,861 tons; Norway, 54,204 tons; Italy, 42,981 tons; Denmark, 32,815 tons; Germany, 887,192 tons; Austria-Hungary, 34,335 tons.

The Southern Pacific Company must dispose of its holdings in the Pacific Mail Steamship Company, unless operation of Pacific Mail vessels through the Panama canal is stopped within sixty days, according to a decision by the interstate commerce commission. Operation through the canal would make the Southern Pacific holdings in the steamship line illegal, the commission ruled.

Under the Panama canal act, a steam carrier may not lawfully hold stock in a steamship line operating through the canal, which may be a possible competitor of the steam carrier. The commission ruled that there are potential possibilities of competition in this case. It is set forth that the Southern Pacific owns eleven million dollars' worth of the twenty million dollars of the capital of the Pacific Mail.

The commission held that unless the proposed service through the canal to Colon on the Atlantic side is changed, and the steamships run only from San Francisco to Balboa on the western side, it will refuse to allow the steamship company to operate through the canal, under its present status as a Southern Pacific subsidiary.

Almost within an hour's ride of Chicago the great swelling sand-dunes of northern Indiana shelter the growth of orchids and other tropical plants, such a range of vegetation as is hardly to be found elsewhere on the North American continent. The preservation of these dunes is the chief aim of the Friends of Our Native Landscape, organized in Chicago two years ago, and attention is called anew to the society just now, by its employment of a field secretary, Martyn Johnson, and the attendant promise of a broader activity.

The continual talk about the dunes by the president of the Friends, has helped to make the people of Chicago acquainted with the primitive wilderness at their right hand. Walking parties visit them every week, and a club or two has been formed, with club-houses frequented all the year round. It once was the hope of many that the dunes could be preserved as a national park, but as the possibility of government action has been realized to be slight, the greater hope now is for some one to purchase a big tract of the dunes and set it aside for posterity.

Secretary Lane's usual monthly summary of classification work of the interior department, issued for January, indicates little change in the status of withdrawn land. No withdrawals or restorations of coal, oil, phosphate, or potash lands were promulgated during the week. Those withdrawals which were approved by the President involved only water-power lands and lands valuable for the preservation of water supplies on the public range. Somewhat more than forty-six thousand acres of power lands were withdrawn, and a little less than two thousand acres of public water reserves. Arizona and California are the states chiefly affected by this action.

A surprising idea of the vast extent of the business done by the federal forest service of the United States is gained from a review of the 1914 report of the forester. The domain controlled by the service comprises about one hundred and eighty-five million acres. During the year just passed a billion and a half board feet of timber were sold, timber-cutting on several thousand different areas was supervised, the grazing of more than one million five hundred thousand cattle and seven million five hundred thousand sheep was overseen, while more than six hundred miles of road, two thousand miles of trail, three thousand miles of telephone line, and seven hundred miles of fire line were built.

About four hundred thousand dollars was spent by the forest service of the United States during the year for permanent improvements on the national forests, to make them accessible and to insure their protection from fire. These improvements include 270 miles of new road, 2,153 miles of trail, 3,063 miles of telephone line, 775 miles of fire line; and 106 lookout structures, besides bridges, corrals, fences, and cabins. In addition, 642 miles of road were built for the public by the use of 10 per cent of the national forest receipts, as authorized by Congress.

Under another law, 25 per cent of the national forest receipts for the year, amounting to $586,593.39, were paid over to the various states in which the forests lie, for the benefit of county schools and roads.

Increase in Boston's tax rate of two dollars a thousand is proposed in a bill which the mayor of the city has sent to the state Senate. In the bill it is provided that the new financial plan for Boston will have to be passed by the Senate and the House, signed by the Governor, approved by the city council and the mayor, before being submitted to the voters by a referendum next fall. The bill provides that all authority to borrow except for rapid transit purposes, be revoked from the city council and the mayor. No other debts can be assumed aside from self-supporting loans. This additional two dollars per thousand of assessment would take care of the amount that is now permitted to be borrowed within the debt limit.

The January number of the Bulletin of Agricultural and Commercial Statistics, issued by the International Institute of Agriculture at Rome, Italy, publishes reports on sowing and the condition of winter cereal crops in the northern hemisphere.

Regarding the extent of crops, there is an increase in the area cultivated in comparison with the 1914 area for wheat: in Italy 5,000,000 hectares, an increase of 5 per cent; in Canada, 523,656 hectares, an increase of 33 per cent; in the United States, 16,698,723 hectares, an increase of 11 per cent; and in India, 11,611,888 hectares, an increase of 22 per cent. For the present, crop conditions are not generally stated to be abnormal.

Judge Marshall of the United States district court of Utah has ordered a decree holding that the Utah Power & Light Company and the Beaver River Power Company are illegally occupying government land, and enjoining such further occupancy. The property involved is said to be worth about fifteen million dollars, and consists of power plants, transmission lines, reservoirs, and machinery in the Cache, Fillmore, and Wasatch national forests of Utah. The cases have been pending about three years. Attorneys for the defendants announced that they would appeal to the United States Supreme Court.

The national forest reservation commission has approved the purchase of 36,870 acres in addition to the 1,114,208 acres already approved for purchase, for national forests in the White Mountains of New England and the southern Appalachians. The land consists of 11,970 acres in New Hampshire, 10,588 acres in Virginia, and 12,867 acres in North Carolina. The total amount of money involved is $233,038.

The public debt of the commonwealth of Australia amounts to £19,182,282 10s. 4d., in addition to which there is the war loan of £18,000,000, obtained from the imperial government, the actual debt therefor amounting to over £37,000,000.

Trusting to Demonstration

REV. WILLIAM P. MC KENZIE

How much reluctance there is among men who dwell in pride of power, to acknowledge "that the most High ruleth in the kingdom of men"! Let the monarch think it is he who rules over men, and he will arrogate to himself what they accomplish. Nebuchadnezzar is a noted historic example. Unwarned by the dream of the spreading tree,—"whose leaves were fair, and the fruit thereof much,"—which at the heavenly watcher's bidding was hewn down, the leaves shaken off, and the fruit scattered, he continued to develop the insanity of pride, until his self-glorification broke forth in the boast, "Is not this great Babylon, that I have built for the house of the kingdom by the might of my power, and for the honor of my majesty?"

But who had builded the city? Were not the builders the legions of men who knew the art of making bricks; those who had learned the secrets of the potter's oven, who knew how to temper bitumen aright, who could carve stone and swing the slabs and monoliths into exact place? A host of carpenters and builders, gardeners and farmers, importers and merchants, artificers and jewelers, dyemakers and weavers, through obedience to the law and order of their trades, had contributed to the making of the city. A host unseen—in ships on the sea, with caravans in the desert, in mulberry groves where the silkworms fed, on snow-clad heights and sunny plains—were also at work contributing to the city's glory and honor. The very slaves by their ceaseless toil were maintainers of the city's order. How absurd, then, was the boast of him who said he had built "this great Babylon"! Ungrateful for the labors to which his greatness was largely due, uncognizant of the fidelity with which the laborers had wrought, he was disposed to arrogate to himself all the credit for the demonstrations of unnumbered others. No wonder that "his heart was made like the beasts, and his dwelling was with the wild asses . . . till he knew that the most high God ruled in the kingdom of men."

The Talmud gives credit to Solomon for having deeper discernment, for the story is told that when the temple was finished, he provided a feast for the craftsmen within its court. At his right hand there was placed an empty chair. At this place was to sit the worker who had contributed most to the beauty of the structure. Now when the guests gathered and the throng in long procession came to the throne seat, they saw at its right hand the seat already occupied, and by an iron-worker, or smith, whom none of them had seen at work upon the walls or engaged in carving the pillars. Cries of indignation were therefore heard; but the king called for silence, and bade the smith justify himself. He claimed the seat to be his by right, since he had made all the tools for the other crafts, and without him the workmen could have done nothing. "And Solomon spake his judgment on the matter, The seat is his by right. All honor to the iron-worker."

A prophet who came after the time of this wise king, and who knew rather the action of selfish and destructive will, foretold the coming of "The Prince of Peace," whose dominion would be established universally. When the Christ of God was made manifest in the meekness and spiritual might of Jesus of Nazareth, we find his teaching uncompromising in regard to the way. Using a figure of speech he says: "He that entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber." His speech was mystery to his disciples. Dimly as yet were they able to see how their Master was unfolding God's goodness to them, but in no way using them for his own advantage. He was trusting to demonstration that he might bless mankind, and thus was unique, for every antecedent human ruler had sought to bless himself through control of men.

Patient with their slow apprehension, the Master made his teaching clear for the ages, so that the slow of heart may be freed from any lingering doubt as to the right way of thinking. "All that ever came before me," he said, "are thieves and robbers." Then after showing how as a veritable "door" he was enabling mankind to enter in to salvation, he made the contrast between the intent and action of human will-power, and the purpose and demonstration of divinely guided love: "The thief cometh not, but for to steal, and to kill, and to destroy: I am come that they might have life, and that they might have it more abundantly."

It is in keeping with universal experience that one of the temptations faced by Jesus in the wilderness was the offer of "the kingdoms of the world, and the glory of them." To every Christian Scientist comes this quality of temptation, and in this way usually, that whatever ambition for place and for honor from men he may have cherished, on his decision to leave the old for the new, that which he once desired will be offered to him. If he then truly takes up the cross, which he will find to be "the world's hatred of Truth and Love" (Science and Health, p. 50), he will find a warmth and joy within, comforting him beyond any satisfaction the world can give.

One who is wise will remember that a right attitude must be maintained, and that what is called cross-bearing is not a merely occasional and ceremonious performance. The Master's words leave no doubt in this regard. "If any man will come after me," he said, "let him deny himself and take up his cross daily, and follow me." It is evident, then, that if we begin to be demonstrators of Truth and Love, we must continue in this way, and not even for one day lapse back into former worldly methods, which rely upon the human will as cause and potency. A worker cannot be trusting to demonstration, whereby harmony comes as the result of divine causation, and at the same time be claiming the result as personal triumph.

Furthermore, even when one has learned meekness through the discovery of the might of divine Principle, and finds that his working is crowned with success which he understands to be the result of demonstration, he must have care lest others make the attempt to substitute his demonstration for theirs, and thus come to depend upon it, instead of upon revealed Truth.

The purpose of the true worker is to reveal the Principle,

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

so that every one may know God for himself, even "from the least of them unto the greatest of them." But those benefited by the work often mistranslate the benefit. A multitude followed Jesus because they saw the healing of those who were diseased, and "in number about five thousand" they were fed with "five barley loaves, and two small fishes;" and thereafter the disciples "filled twelve baskets with the fragments of the five barley loaves, which remained over and above unto them that had eaten." But the men of that crowd apparently failed to learn about divine supply, for they formed a plan to come and take Jesus "by force, to make him a king." They would profess to honor him, but only in order to make him their convenience.

The Christian Scientist is wise who avoids every such offered coronation at the hands of men. Uneasy is the life of one who is considered the only wise one for counsel, the only capable one for office, the only one equipped for leadership; for to accept the pleasing flattery that person rather than Principle is good, evidences a blindness which may cause both leader and led to fall into the ditch.

What then? The wisdom of the worker is to trust to demonstration. Allow others the freedom to follow light, instead of demanding that they follow a particular light. Even if a grouping of workers in a church should make a plan which is incomplete, and one worker should see the solution of the problem entire, what more can he do than trust? Shall he contend and oppose the others, and become their adversary? Then he will be acting from personal will, and ceasing to be a demonstrator of Truth. Rather let him find peace in knowing that if he can see what is clearly right, and thus be guided by Principle, the very same guidance awaits all, and that obedience to this guidance is sure to be induced in every one who sees in the life of another an example of obedience to God,—of sonship with the Father.

❖

Praying Aright

RUTH INGRAHAM

THE writer was a Bible student for many years before coming into Christian Science, and was in the habit of turning, in moments of trial or indecision, to the comfort and good counsel of sacred texts. Upon one occasion, when an important question was to be met, one upon which seemed to depend the making or marring of much human happiness, the Psalms were opened at these words: "Let my sentence come forth from thy presence; let thine eyes behold the things that are equal. Thou hast proved mine heart; . . . I am purposed that my mouth shall not transgress." With a deep assurance that prayer had been answered, the seeker for guidance closed the book, and went forth from that supposed conference with divine wisdom to one of the most mistaken actions of her life, one that involved herself and others in a complication of snarls which were several years in the unwinding, though the mistake was obvious in as many weeks. Not the least of this bitter experience was the dismayed and heart-chilling belief that the Bible had failed her, that God could not always be depended upon.

Not until the writer had been studying Science for a number of years did the reason for this seeming failure appear to her; then in the dawning light she perceived it, with relief and great humility. She had made her decision before turning to the Bible, and had sought there simply for its confirmation, ready to read into any verse the answer that would accord with her preconceived opinion. Not yet voiced, but latent in thought, her course was fully determined upon when she came to confer with the Father. Instead of accepting the divinely loving invitation, "Come now, and let us reason together," it was as though she had said: "I have decided thus and thus in this matter, and should like to feel that Thy will coincides with mine. I shall in any event so interpret the answer, as I am quite sure that I have chosen for the best." Into such a condition of self-deceived self-will, what ray of divine leading could penetrate to keep one from going astray in the mazes of a vain and desolate dream? Yet even there, as it afterward became clear, Love was protecting and guiding and saving the seeker, despite this stubborn blindness; for the experience could easily have been a much sadder one and of longer duration.

How grateful are we, as Scientists, that this prayer of prayers is answered for us: "Lord, teach us to pray"! The opening chapter of our text-book, "Science and Health with Key to the Scriptures," may be called a key to the kingdom. In such profound yet simple statements as these we find the way of Life: "Desire is prayer; and no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds." "Prayer cannot change the Science of being, but it tends to bring us into harmony with it" (pp. 1, 2). These and many other statements in the same chapter tend to spiritualize our concept of prayer, and to make it of real value in working out our human problems. On page 453 Mrs. Eddy says, "Honesty is spiritual power." With the devout purpose to be led aright, we can but pray aright, and such prayer is always answered. Witness the grand humility of our Master himself, who, with all his spiritual wisdom, never outlined his course, although he foresaw it, which is a very different thing.

To purify and consecrate thought to the service of God, to be honest with ourselves, to love less humanly and more divinely, to be willing at every step of progress to give up the most cherished plan for the better way as it is revealed to us,—this is to follow along the line of light "that shineth more and more unto the perfect day," leading us out of the mortal dream into a glad perception of "the things which God hath prepared for them that love him."

❖

Democratic Church Government

ERNEST C. MOSES

IN Section 10 of Article XXIII of the Manual of The Mother Church, Mrs. Eddy has laid down a fundamental law which is very important. It declares that "in Christian Science each branch church shall be distinctly democratic in its government;" and while each one must interpret this for himself, the meaning of this word "democratic" is so vital as to merit our careful consideration. It is sometimes used in a broadly metaphysical sense; more often it is used to express political prejudice, and in this latter sense it is shorn of much of its higher significance. The democracy of Spirit, as Mrs. Eddy teaches, means the fatherhood of God and the brotherhood of man,—a universal spiritual idea which can be demonstrated in practical good for all individuals and governments. Whittier had in mind this purely religious idea of democracy when he wrote:—

> The generous feeling pure and warm
> Which owns the right of all divine;
> The pitying heart, the helping arm,
> The prompt self-sacrifice, are thine.

Democracy in civil affairs means government by the people as distinguished from government by the few or by one.

Digitized by Google

In a speech in the Senate, Daniel Webster referred to the government of the United States as "the people's government, made for the people, made by the people, and answerable to the people." In a speech delivered in Boston in 1850, Theodore Parker declared that the right idea of democracy should be expressed in "a government of the principles of eternal justice, the unchanging law of God." Lincoln endorsed this idea of democracy in his Gettysburg speech, when he made the plea that the people should learn a lesson from the self-sacrifice of the soldiers who had given their lives for their country on that field, and resolve "under God" that the nation should have "a new birth of freedom," so that "government of the people, by the people, for the people, shall not perish from the earth."

More comprehensive definitions of democracy could not well be given. Let us, however, consider the ways and means employed to sustain civil governments which are called democratic, and see if they represent the democracy which our Leader has commended. In such governments the people often accept and elect for important offices a candidate named by a political machine which is controlled by one man. Personal influence and money may have been illegally used to nominate and elect him; promises of reciprocal favors may have been freely made and the public weal set aside for personal or party gains. Manifestly such methods find no warrant in the democracy of Christian Science; for methods which are prompted by selfish human ambition, and which serve the purposes of avowed candidates for church positions, are not in any way akin to true democracy. It is well to know that the counterfeit cannot blind our eyes and displace the genuine.

In the government of a Christian Science church there should be no seeking for any office. The democracy of Christian Science is established when its divine Principle is demonstrated in the lives of Christian Scientists,—and this is clearly evidenced when we prove that Principle fills every church position. This word Principle is the most comprehensive name which we have for God. On page 587 of Science and Health Mrs. Eddy defines heaven as "government by divine Principle." The ultimate of Christian life was set forth by Christ Jesus when he said, "Thy will be done in earth, as it is in heaven,"—God's government in everything. So it is clear that a Christian democracy must be expressed through people; but instead of being a government of persons it must always be a government which has resulted from devotion to Principle, and which is manifested in demonstrations of wisdom and unity. How else are we to reach the ultimate of spiritual reality and harmony expressed by Paul when he wrote, "For of him, and through him, and to him, are all things"?

The "Rule for Motives and Acts" (Art. VIII, Sect. 1) and other rules of the Manual tell every church-member how to fulfil the demands of church democracy in Christian Science. The election of church officers and attempts to promote any kind of church work through personal urgency or individual opinions, are distinct violations of the Manual. Such methods are undemocratic, according to Christian Science, and the individual member who participates in them is doing himself and the church a great wrong. Just here we do well to remember the word which saith, "He that leadeth into captivity shall go into captivity."

In "Miscellaneous Writings" (p. 119) Mrs. Eddy says, "Insubordination to the law of Love even in the least, or strict obedience thereto, tests and discriminates between the real and the unreal Scientist." If we strive for cheerful obedience to this main "law of Love" as itemized in the church by-laws, and honestly practise from this standpoint, true progress will be made; the sick will be healed and sinners reformed. Through this willing obedience the membership of each church will prove that its structure "rests upon and proceeds from divine Principle" (Science and Health, p. 583), and its democracy will then be the spiritual cooperation of the ideas of Truth and Love established in human consciousness by Christ and Christian Science.

Gentleness versus Violence

ANNE DODGE

In his epistle to the Galatians, St. Paul mentions gentleness as one of the fruits of the Spirit against which there is no law. The dove is often used as a type, or symbol, of gentleness and peace. Christ Jesus said, "Be ye therefore wise as serpents, and harmless as doves," coupling this simile with the wisdom which outwits evil. This is best done by knowing evil's powerlessness, nothingness, and unreality. Violence has never really accomplished anything except to demolish its own superstructure. It is destructive, a twin brother to desolation, born of hatred, envy, malice, revenge. Void of divine Mind and spiritual impulse, it rushes madly onward, like the cyclone, lashing its victims into a seething rage of helpless fury, making them the playthings of demoniacal purpose and baseless anger, condemning them to reap the harvest of their own sowing of fear, jealousy, cowardice, shame, remorse, forever pursued by the cry of the outcast, "My punishment is greater than I can bear."

Gentleness is constructive, a builder up of waste places; it makes the desert to "rejoice, and blossom as the rose;" it rests upon the foundation of spiritual understanding and has dominion over all things; it blesses with divine grace and strength, mercy and tenderness, temperance and forbearance, forgiveness and peace. Born of Truth and Love, springing from Life eternal ("The everlasting Father"), it is founded on the higher law of Christ, "Thou shalt love thy neighbor as thyself;" for, as Paul says, "love worketh no ill to his neighbor: therefore love is the fulfilling of the law." Gentleness heralds the coming of a brighter dawn, in whose light violence, fear, wrath, revenge, murder, destruction are unknown, and the omnipotence of Spirit is demonstrated, "for the former things are passed away." Its only weapon is the divine Word, "Not by might, nor by power, but by my spirit, saith the Lord of hosts," and holiness, confidence, and peace are the manifestation of its coming. The sweet breath of the modest violet; the humility typified by the lowly lily; the blessed dews of righteousness and mercy, reviving the humble; the heavenly manna of spiritual being, comforting the mourner; the pure love that "thinketh no evil,"—all these teach the supreme power of gentleness which blesses only, and it alone can remove the curse of violence and bring salvation to the weary slave of anger and revenge.

Our Master's words make strong appeal for gentleness. "I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." Again, "Resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also." This is the divine law of gentleness taught and practised by him who was oppressed and afflicted, "yet he opened not his mouth: . . . brought as a lamb to the slaughter, and as a sheep before her shearers is dumb, so he openeth not his mouth."

In this age and generation one has appeared entrusted by God with a high and holy message and mission, which she has fulfilled undeterred by the violence of hatred, jealousy, and envy. Though misrepresented and reviled, our beloved

Leader returned not "railing for railing," but oft reminded her followers of the Saviour's command that we love our enemies. Her spiritual vision never wavered, was never deflected, and in founding the *Monitor*, which is destined to light up mortal darkness, degradation, and misery, to bring hope, consolation, and redemption, her words were, Its object "is to injure no man, but to bless all mankind" (The First Church of Christ, Scientist, and Miscellany, p. 353). This was the key-note of her character, her mission among men, the spiritual influence that emanates from all her words and works.

Silent Witnesses

AMY C. FARISS

THE lament of a certain English author as she laid down her work upon this plane, was that her most beautiful ideas had not been the ones which found their way before the public. This woman was famed for her achievements, yet her most precious treasures of thought were unappreciated,—they failed to lighten the hearts and homes which she fondly hoped might grow brighter for her message.

Recently, after returning from a Wednesday evening testimony meeting, although many beautiful healings had been attested to, the thought of those other myriad healings of which the world has not heard, brought to mind the English author's experience. Christian Science has startled the age with its achievements, but could mortal mind either grasp or appreciate the silent wonders that are daily seen by the more spiritualized consciousness? Were these hidden treasures brought forth and given to an understanding people, who could measure the gain to humanity?

On page 255 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "Mortal man has made a covenant with his eyes to belittle Deity with human conceptions. In league with material sense, mortals take limited views of all things." Paul, endeavoring to lift mortal thought from its narrow and incredulous outlook, exclaimed, "Why should it be thought a thing incredible with you, that God should raise the dead?" Were it not so nearly a tragedy, it would be amusing to watch mortal mind evade the giving of credit where credit is due, and its persistency in giving credit where no credit is due. Much rather does it suit material sense thus to "belittle Deity."

Where evidence on evidence accumulates to prove the beneficial workings of Science, the human mind, by its refusal to recognize these blessings as the result of God's law set in action, is doing what it can to plunge into still deeper darkness those who allow themselves to be so deceived. To live in ignorance of Love's helpful presence is gloomy indeed; but it is the farthest stretch of materialism to fail to perceive when Truth has actually severed one's bonds, and instead of this realization look into midnight darkness for the cause, thus turning from the light that would safely lead and guide. On the Wednesday evening above mentioned, while thoughts ran in this strain, many instances were recalled where the recipient had utterly failed to lift thought to the heaven-born source of blessings, thus missing all the joy of the occurrence and depriving others of needful encouragement.

At a shipping port a sweet-faced girl gave faithful hours to her first Christian Science case, and the outcome was a victory for Truth, since upon a turbulent sea a young person gloried in her freedom from the seasickness she usually experienced. God's laws, realized even by so young a student, had not failed; yet when the expected letter of appreciation arrived, the student found words to this effect: "Had splendid trip. Thank aunty for pill she gave me a few days before starting." This interpretation of mortal sense would be seized upon as a jest by the forces of evil, if intelligence existed outside of the one Mind.

In another instance a most interesting healing was brought about simply by a Scientist's correct thought when a case of rheumatism was rehearsed in her hearing. A fine youth lay bound hand and foot, so the speaker stated. The Scientist knew the young man. The lying evidence that he could be so bound was instantly but silently refuted. Life in its glorious freedom alone possessed her thought. Possibly no one was more surprised than she to find, when within a few days she called on her young friend, that his bands had been loosened at the hour when a clearer sense of Life had flowed into her consciousness. Love had set the captive free; but blind eyes saw it not, and hidden away from those whom it might bless is this song of praise. Instead, drugs which till that hour had proved inefficacious, were believed to be suddenly endowed with a mighty power. In this case mortal eyes did look half fearfully at the Scientist, as if they were afraid the honor for the healing might be snatched from the inanimate drug and given to God, even though the Scientist had not thought it wise to claim this as God's work.

These individual beneficiaries might be enumerated almost without number; they are the unconscious witnesses to Love's power. Songs of thanksgiving which would startle the world might be added to the voice of gratitude that now swells in ever rising chorus in its circle round the earth. But we have the promise that "every knee shall bow." So the day draws ever nearer when Truth's hidden secrets shall come forth; when eyes that now see not, shall open and behold; when all these treasures of experience and thought shall add their weight to the side of greater enlightenment. Then indeed "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." Then will a waiting world know more of what Christian Science is now doing for humanity; more of its mighty energy for good; more of its least thought of help; more of its radiant life, its boundless truth, its eternal power and beauty and joy; more of its recognition of the brotherhood of man.

One Thought of Love

ALICIA C. HUBBARD

WHO can tell what flows
From the heart of a rose
As into the air its fragrance goes;
As it sends through the gloom
Its sweet perfume;
Whom it cheers and blesses
With fragrant caresses;
What it gives
Where it goes,—
Who can tell
But the rose?

So one thought of love, how much it may do,
In passing a world of sorrow through,
To the heart bowed low with grief and pain,
Bringing peace and joy and health again;
And the lesson to trust through earth's dark day
Him that ne'er changes though oft we may stray,—
One thought of love,
Like a white-winged dove,
Who can measure its flight
But the heart of Love?

[Judge Clifford P. Smith in *St. Petersburg* (Fla.) *Independent*]

Christian Science does not deny that sin, disease, and death, want, woe, and suffering, have a relative existence in human experience. But this Science does deny that any evil has the reality of absolute substance or being; it declares that every phase of evil can be scientifically abated and abolished; and to this end it utilizes the power of divine law. In this manner Christian Science is transforming personal experience and is advancing the general progress.

Christian Science is based on the teachings and practice of Christ Jesus. Although he taught as absolute truth that God is Spirit, and man is "that which is born of the Spirit," he also recognized a relative difference between physical health and physical disorder. In this he was perfectly consistent. Although he knew and declared that "it is the spirit that quickeneth; the flesh profiteth nothing," he consistently used this divine knowledge for the betterment of human conditions. Christian Scientists also, in so far as they have acquired the same spiritual understanding, are doing likewise. Therefore when Christian Science is tested according to what was said and done by Christ Jesus, it is found to be good in Principle and in practice; good in cause and in effect. It is, indeed, meeting human needs to an extent and by a method which promises ultimately to deliver humanity from the bondage of evil.

❖

[Charles W. J. Tennant in *West Cumberland Times*, Cockermouth, England]

I have read, in your issue of recent date, the Rev. Mr. ——'s answer to the question, "Can a Christian accept 'Science and Health with Key to the Scriptures' as true Christian teaching?" Now, there are many definitions of a Christian, but I presume a Christian, as named in the above question, might be styled one who believes, or is assumed to believe, in Jesus the Christ and the truth as taught by him. Let us see what he taught, and compare it with the teaching of Science and Health.

Jesus gave us two commandments on which he said hung "all the law and the prophets." They are as follows: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind," and "Thou shalt love thy neighbor as thyself." Now, to love God with all one's mind is to have that Mind "which was also in Christ Jesus," which is termed in Science and Health the divine Mind. It is to bring "every thought to the obedience of Christ." It may be asked from what standpoint did Jesus think,—from the standpoint of physical sense-testimony, or from the standpoint of spiritual understanding? Let us take an example. When Jesus met the man with the withered hand in the synagogue, did he speak from the view-point of the physical senses, or from spiritual understanding, when he said, "Stretch forth thy hand"? I think from the latter. This conforms exactly with what Mrs. Eddy writes: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476).

Our critic has fallen into the mistake of criticizing the logic of Science and Health, because he has not discerned with what clearness Mrs. Eddy has distinguished between the absolute and the relative. She writes: "The temporal and unreal never touch the eternal and real. The mutable and imperfect never touch the immutable and perfect. The inharmonious and self-destructive never touch the harmonious and self-existent" (p. 300). When referring to the relative, she says: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (p. 460). This conforms to St. Paul's statement that "the things which are seen are temporal; but the things which are not seen are eternal." Christian Science teaches the unreality of the temporal and the reality of the eternal. In Hebrews we are told that "through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear."

With regard to those whom Jesus considered to be his true followers, he said, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." He also said, "He that believeth on me, the works that I do shall he do also." The mental, moral, and physical healing which is taking place daily through the beneficent influence of Christian Science, throughout the entire civilized world, is much more convincing than controversy.

❖

[Ezra W. Palmer in *Greeley* (Col.) *Standard*]

Christian Science recognizes one Supreme Being, infinite God, Spirit, the great I AM, as All-in-all of the universe. God is omnipotent, omniscient, omnipresent, and from this fundamental conception of God flow in orderly and logical sequence all the propositions of Christian Science. The Christian Science text-book, "Science and Health with Key to the Scriptures," is written from this basis, and when its scientific view-point is gained, the logical unfoldment of its teachings is grasped by the unbiased thought.

Since God is infinite Spirit, His creation must be like Him, spiritual. Since He is Love, as St. John declares, His creation must be good and not evil. Christian Science therefore declares that God is not the author of evil. To affirm that God creates evil would be to clothe evil with omnipotence, and would make God responsible for all pain, sin, pestilence, disease, and death with which mortals suffer. It would be useless to resist evil, since in so doing mortals would be fighting against God. Christian Science makes clear that only God and His creation have reality, since they alone have immortality, immutability, enduring substance. Evil is not real, because not a part of the kingdom of God. Jesus defined evil as "a liar, and the father of it," and this is the teaching of Christian Science. Evil obtains in mortal thought only. Mrs. Eddy says, "The corporeal senses are the only source of evil or error" (Science and Health, p. 489), and from this source flow all the ills of humanity.

Jesus, knowing the immanence of Spirit and the lie of evil, destroyed by the power of God all forms of evil, sin, sickness, and death. He furthermore taught his disciples that they too could overcome these errors through the might of omnipotent God. This gift of healing was universal, since "God is no respecter of persons." All who believed, understood, Jesus' teachings could use it. "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Because he taught and proved the supremacy of Spirit and the finity of evil, he incurred the enmity of the blind and barren religious systems of his day. The carnal mind, the mind of the flesh, the source of all sin, is "enmity against God," and in all ages, both before and after the ascension, has persecuted and resisted the coming of spiritual understanding, which heals

Digitized by Google

sickness and sin and unfolds the ever-presence of God. When Mrs. Eddy again gave to the world the spiritual import of the Scriptures which heals and saves, she found the same reception accorded to Truth as Jesus and his disciples had encountered before her. Christian Scientists likewise have found that courage is required to voice the truth of being, but the evidences of the truth of Christian Science are so convincing that they rejoice to live it, knowing that it is only a question of time when the supremacy of Spirit will be seen and acknowledged by all men.

Christian Scientists accept the Bible as the word of God. They accept Christ Jesus, the Wayshower; they acknowledge their debt to him for exposing and destroying the illusions of sin and death and showing the way of eternal life; they accept his atonement, his at-one-ment with the Father, his divine unity with Spirit, which gave him the power to destroy sin, calm the tempest, and break the bonds of death. This at-one-ment, this unity with the Father, was frequently alluded to by Jesus: "As the Father knoweth me, even so know I the Father." "The Father that sent me beareth witness of me." Jesus suffered the pangs of materiality to show mortals the way of salvation, the way out of mortal beliefs, mortal error, and mortal illusions. He knew there was no salvation in pain, sin, sickness, or death; that men gained peace and happiness through the light of divine understanding of God, before which all evil disappears as shadows before the sunlight. "I am the light of the world," said Jesus. "Behold, I make all things new," was the declaration of Him "that sat upon the throne" (Rev. xxi. 5), showing that as the allness of Spirit dawns on the thought, old beliefs, human misconceptions, disappear, and a new sense of spiritual verities illumines the consciousness. This transformation in thought goes on until man proves his perfect sonship with God; hence Jesus' words, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

[John H. Wheeler in *Kansas City* (Mo.) *Journal*]

A recent issue contained a sketch of Dr. ——'s opinion concerning the religious theory and practice of Christian Science. While the doctor frankly stated that "the faith of Christian Scientists has its 'strong point' in that it brings conviction to the minds of its members who have been healed by it," yet he says that "the church is not in entire sympathy with the poor." It is not stated why he assumes this, but possibly because Scientists do not publicly foster institutions for the indigent poor. This would not imply that the hands of Christian Scientists are not open toward the needy and deserving poor. Mrs. Eddy, the Founder of Christian Science, says that love, "as a human quality, . . . is the tender, unselfish deed done in secret; . . . the veiled form stealing on an errand of mercy, out of a side door; . . . the gentle hand opening the door that turns toward want and woe, sickness and sorrow, and thus lighting the dark places of earth" (Miscellaneous Writings, p. 250).

Students of economic problems, seeking causes for poverty, generally agree that the best way to help the indigent is to teach them how to develop their own resources and self-reliance. Christian Scientists, with their usual energy, seek to do this. Their faith accounts for their general prosperity, and is not due to their being a wealthy class, as the doctor avers. They are from all walks of life, and Christian Science teaches them how to approach more nearly a general standard of normal living, even as Jesus commanded: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." The doctor suggests that diseases cured by Christian Science are functional rather than organic; but his acknowledgment of the healing carries with it a consent that the statements were also truthful concerning the disease of which patients were healed. Conclusively, then, there is no difference between organic and functional diseases, with the great Physician, for "God is no respecter of persons."

❖

[W. D. Kilpatrick in *Grand Rapids* (Mich.) *Press*]

A recent issue reports a sermon wherein Christian Science is pointed out as "representative of the spirit of antichrist." The article does not outline wherein Christian Science is considered in this light, but for the information of your readers I ask permission to state briefly where, as a Christian Scientist, I consider the critic errs in his conclusions.

The "spirit of antichrist" is manifestly that state of mind wherein one assumes an attitude of opposition to the Christ, Truth, as demonstrated by Jesus; in fact, wherein one undertakes to deny God, for the Christ cannot be denied without denying God. The denial of Christ, Truth, that is, the God-principle which Jesus manifested to us and which he explained and demonstrated by "signs following," must necessarily constitute the "spirit of antichrist" alluded to. Therefore to include any person or set of persons under this term "antichrist," it is self-evident that all so included must be holding a position diametrically opposed to God, to Christ Jesus, or the God-idea, which it was Jesus' mission more firmly to establish with men. The question then remains, Does Christian Science deny the Christ-teaching, or does it affirm it? In reply it is well for us to remember Jesus' words, "By their fruits ye shall know them." According to the teaching of Christian Science, the only true test of one's belief in or understanding of any fundamental truth is that of actual results by the application of that truth. Jesus taught that the "fruits" by which we are to be known are humbleness, meekness, purity, love, and the like, and spiritual understanding, that understanding of the Christ which enables us to follow the Master's injunction when he said, "Heal the sick, cleanse the lepers, raise the dead, cast out devils."

Christian Science is a religion of love. It teaches that with love we should overcome hate, envy, jealousy, and kindred elements of the carnal mind, and that with the more complete understanding of the divine Mind, or God, we are to follow the example of the Master in overcoming sin, sickness, want, woe, unhappiness, and all inharmony. From the Bible we learn that God creates and governs all things; that the divine Mind includes all true phenomena. On page 169 of Science and Health Mrs. Eddy writes, "Whatever teaches man to have other laws and to acknowledge other powers than the divine Mind, is antichristian."

❖

[Henry Deutsch in *Dakota County Tribune*, Farmington, Minn.]

Permit me to correct an erroneous impression that might seem to be gained from your editorial on "Christian Science and Hog Cholera." Like other subjects, Christian Science is not immune from misinterpretation, and what its adherents say is too often garbled and misconstrued. Christian Scientists are not devoting themselves especially to the healing of dumb animals, hence the statements quoted in your editorial were ill advised, to say the least. Christian Science is a great religious system, which explains the omnipotence, omniscience, omnipresence of God and His great love for His children, and as a result of a realization of its teachings God becomes Immanuel, or "God with us," in the lives and experiences of Christian Scientists, and His healing presence dissipates disease and destroys sin.

Digitized by Google

The logical aim and a result of Christian Science is to produce harmony, and its ultimate effect will be to make this entire universe one of peace and concord, with no room or place for discord or disturbance of any kind or nature. We would not now disparage that faith in God which seeks Him as a remedy for ills of any kind, even in the dumb creation; and from our experiences today we can readily realize that the effects of thought are not limited to the human creation. The man who has faith in God and discredits the view that His love could bring disaster and injury to any of His creation, certainly reflects a greater possibility for relieving the discomforts of the animal creation and promoting their better condition.

Christian Science is interested in instilling into the consciousness of men not only the faith in but the understanding of God, and it does not presume to limit the effects that such understanding will produce in any of the world's activities. It should not be unnatural or unusual for dumb animals to experience the effects of divine Love as reflected through humanity.

❖

[Paul Stark Seeley in *The Telegram*, Portland, Ore.]

A gentleman whose orthodox convictions date back, it would appear, to the middle ages, when men believed in a devil of horned head and cloven hoof, has had his peace of mind somewhat upset by the friendly remarks of a local minister relative to Christian Science, and in consequence contributes a letter of length to a recent issue of *The Telegram*. He asserts with some vehemence that Christian Science is unchristian, that it really is "a delusion of the devil," and that being what it is, the healing which it accomplishes must be that of Beelzebub. Perchance the history of Christianity in the nineteenth and twentieth centuries, when finally written, will not differ much from that of the first.

Among a variety of misstatements, the critic says Christian Science teaches there is no personal God. In her Message to The Mother Church for 1901, Mrs. Eddy wrote upon this subject: "We hear it said the Christian Scientists have no God because their God is not a person. Let us examine this. The loyal Christian Scientists absolutely adopt Webster's definition of God, 'A Supreme Being,' and the Standard dictionary's definition of God, 'The one Supreme Being, self-existent and eternal.' Also, we accept God, emphatically, in the higher definition derived from the Bible, and this accords with the literal sense of the lexicons: 'God is Spirit,' 'God is Love.' Then, to define Love in divine Science we use this phrase for God—divine Principle. By this we mean Mind, a permanent, fundamental, intelligent, divine Being, called in Scripture, Spirit, Love." "We understand that God is personal in a scientific sense, but is not corporeal nor anthropomorphic. We understand that God is not finite; He is the infinite Person" (pp. 3, 4). If Jesus and John were correct in their conception of Deity as Love, Spirit, surely Deity cannot be in finite form or physical embodiment. Far too long, as the world is finding out, has it been trying to make of God a corporeal manlike being, when the truth lay in the opposite direction,—to know God as infinite Love, Spirit, Mind, and the true man as His image and likeness.

The critic also questions the teachings of Christian Science concerning a personal Christ. The Christ of which Christian Science teaches is the saving and healing power of Truth, inherent in the true individuality of every man, exemplified in the life of Jesus and referred to many times by the apostles. "The Christ," says Mrs. Eddy in the same Message, "was Jesus' spiritual selfhood." "The Christ was not human. Jesus was human, but the Christ Jesus represented both the divine and the human, God and man" (pp. 8, 10). The impersonal and incorporeal nature of Christ, considered in the usual acceptance of the word personal as referring to a corporeal being, could not be more strongly stated than by the Master himself when speaking of the spiritual selfhood which he manifested. He said, "Before Abraham was, I am;" "Lo, I am with you alway, even unto the end of the world."

Christian Science, as the critic correctly says, teaches that there is no personal devil. "Out of the heart proceed evil thoughts," said Jesus; not from a personal devil or an apostate angel who "hovers in the sky and pours down mischief." The devil against which Christian Science is contending with a reasonable degree of success, is the devil in human consciousness, the "carnal mind," which believes in the reality and might of evil and is opposed to God; or, as St. Paul put it, "is enmity against God." Christian Science teaches that the devil or evil exists to each individual at the point where he is thinking. Ridding one's self of evil is, as Jesus made clear, not a work accomplished by blindly believing in a future deliverance through some power exterior to one's thinking. Rather is it brought about through an inward reformation in the consciousness of each individual, a turning from the false standards of material existence and putting on the mental garments of right thinking; thinking that follows the full import of the first commandment in its application to every need of man.

This gentleman, who seems to be viewing Christian Science with one eye closed and the other looking through a glass well ground with ecclesiasticism, says too that while Christian Science heals the body it cannot save the soul, a conclusion which he seems to have reached because its teachings do not agree with his particular method of soul saving. "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin" (Rudimental Divine Science, p. 2). The salvation of man morally and physically has been made by Christian Science a matter for present-day concern, as Jesus indicated it should be. From being pushed off into a mysterious future by dogma and superstition, Christian Science has brought back and reestablished it as the process of Christlike thinking and right living, in which all who choose may share, and know with the revelator, who saw with unerring vision, that "now is come salvation, and strength, and the kingdom of our God, and the power of his Christ."

Knowing

F. MARION RALSTON

I KNOW that God is good,
That Love is true,
That Truth divine abides,
And doth endue
The heart of every woman,
Man, or child,
With purity and faith,
And instincts mild.

There can no harm befall
His little one:
He guardeth him from rise
To set of sun;
And all the child doth need
Is to obey,
And listen for the words
His Lord may say.

Editorial

Living the Truth

In "No and Yes" (p. 1) Mrs. Eddy writes: "To kindle in all minds a common sentiment of regard for the spiritual idea emanating from the infinite, is a most needful work; but this must be done gradually, for Truth is as 'the still, small voice,' which comes to our recognition only as our natures are changed by its silent influence." On page 2 of the same book we find the further caution: "The honest student of Christian Science is modest in his claims and conscientious in duty, waiting and working to mature what he has been taught."

From these words we may well understand that there is not only a time and a place which are best suited for the presentation of Christian Science to our friends, but also that the best preliminary to this presentation is to let our lives attest the sincerity of our profession. This does not mean that we should not be ready at all times and under all circumstances to present Christian Science to those who desire it, but it does mean that the forcing of this teaching upon those who are not ready to receive it, is not a kindness to such persons, nor can it be of advantage to our cause. It is recorded of the Master that in "his own country, he taught them in their synagogue . . . And they were offended in him. . . . And he did not many mighty works there because of their unbelief." This goes to prove that even the great Teacher found prejudiced or unwilling auditors unfruitful ground for the sowing of the seed of Truth.

It would be difficult to estimate the number who have been turned away altogether from the consideration of Christian Science, or whose serious consideration of it has been delayed by reason of the overpersistence of friends whose enthusiasm exceeded their good judgment. Many of us may recall how in our early days as Christian Scientists we supposed that nothing more was necessary than that we should tell our friends about Christian Science, and they would gladly acclaim it as we had done. Many rebuffs and disappointments, however, taught us that something more than mere words was required to overcome the subtle beliefs of those who were unready for this spiritual truth, and that the most convincing and effective testimony that could be offered was where the daily living of Christian Scientists had attested—shown forth—the reason for the faith that was in them.

When Jesus sent forth the disciples, he not only commanded them to preach the gospel and to heal the sick, but he also instructed them to "go not into the way of the Gentiles, and into any city of the Samaritans enter ye not." Even in the cities and towns of the Jews he foresaw that they would not always be received with kindness and their words with attention, for he counseled them: "Whosoever shall not receive you, nor hear your words, when ye depart out of that house or city, shake off the dust of your feet."

We are thus counseled not to present Christian Science promiscuously, without any thought as to whether those to whom we are speaking or who are within sound of our voice are either indifferent or prejudiced. This brings up another instance where there is need for thoughtfulness, namely, in the discussion of subjects for intimate conversation in public or semipublic places and conveyances, heedless of who may be forced into the position of listener, either for good or ill. Statements carelessly made, or perchance misunderstood by those who overhear them, may do undreamed of harm in prejudicing those who really are hungering and thirsting for the truth, or in unwittingly forging a weapon for offense.

Is it not significant that when, following our Master's instructions to the twelve, John's messengers came to him, he should give a concrete illustration? He did not try to win them over by a wordy discourse or smoothly phrased arguments, but rather by citing those marvelous restorations to wholeness (holiness) which had been wrought before their eyes as they awaited his answer. Shall not we take this lesson to ourselves? Is it not the exemplification of the teachings of Christian Science in our daily living, rather than empty protestations, that will win others to the better way? Live Christian Science, not talk it, is safe counsel for those who have been long in the way, as well as for the beginner.

ARCHIBALD MCLELLAN.

Getting and Giving

It would be well for all of us to analyze carefully each morning our motives and desires, in order that the day may be enriched by real spiritual gain. It is almost startling to think of the extent to which prayers are shaped by a desire to get all that we can from God! It may be health, strength, or temporal supply, or the desire may be a sincere one for personal betterment; but after all, this means getting rather than giving. Well does Mrs. Eddy say, "No loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). It is well to remember here that the needed change should come in our desires, as come it must if we are advancing spiritually and leaving behind us the grasping tendencies of mortal mind.

Some one contrasts in a very telling way the character of Christ Jesus and that of the average mortal, in these words: "We take, he gave; self-preservation is the first law of our lives, his life was all self-sacrifice; we focus all rays like a sun-glass, he shone upon all like the sun." From this viewpoint we may indeed ask ourselves very earnestly what our real desire is when we declare the truth in a Christian Science prayer. If it is that we may shine upon all we meet each day with the reflected radiance of Truth and Love, we shall miss no blessing for ourselves. We shall in this way most surely find preservation and protection, and no matter what the mortal seeming, we shall prove true the Master's words, "Your joy no man taketh from you." We shall also find, in ways hitherto unperceived, opportunities to bless others, to share our joy with them,—our strength, our courage, our hope,—and we shall do it in such a way that they will not become mere dependents upon us, but themselves distributers of the divine bounty.

Our Master said, "It is more blessed to give than to receive," and in these words, which were an echo of his own life, we are clearly shown how the greatest blessedness is to be realized. Some one may ask if the giving here indicated is to be only along spiritual lines. To this it may be answered that all true giving is spiritual; that it springs from the inspiration of Love, even though it reaches humanity through such symbols as a cup of cold water, or the loaves which fed the five thousand in the wilderness, or if it comes in the more direct way of the healing practised, taught, and enjoined upon his followers by Christ Jesus.

One day two students of Christian Science were walking in a beautiful park, talking with gladness and gratitude of all that this truth had done for them, when suddenly one of them stepped aside to where an aged and evidently poor man was seated on the grass, and handed him a generous sum of money. He was a foreigner, and no mendicant, for he was at first unwilling to accept the gift, but seeing the token as such, he took it with both tears and smiles. The kind donor then turned apologetically to her friend, an older Scientist, and

Digitized by Google

said, "You would have given him something better, wouldn't you?" Her companion replied, "You gave both, and I did not miss my share!"

This little incident marked in memory a happy day, and knowing as we do in Christian Science the infinite source of all good, we may enrich all the days and all the hours by giving, and giving ever more freely and wisely, of the truth that heals, purifies, and strengthens, reaching down to the depths of human need, in obedience to the admonition of Christ Jesus: "Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again."

ANNIE M. KNOTT.

"Let us alone"

ONE of the distinguishing features of every great reform is this, that its leaders are forever being asked to let things alone, and will not do it. The demand of those possessed of devils in the land of the Gadarenes, was met by the Master in a way which takes on a new significance in Christian Science. He emancipated the victim of deception by dispelling the evils which dominated him. At another time, the falsity which had enslaved a poor man declared that it knew Jesus, and his scientific and sufficient answer in effect was this: I do not and will not know you.

Now as then the cry "Let us alone" comes up from many quarters, and especially from the realms of precedent and tradition, custom and vested interest, creedal self-content and fleshly satisfaction. If a thing has existed for a long time, has been believed in by a great many people, is supported by law, it is wont to assert its rights and to insist that it shall be left undisturbed. If it can gain this point, it is content, and will not quarrel with any one, but rather pose as a champion of the progress it would interdict, by maintaining the *status quo*. It makes but this single demand, and it finds its chief ally in the fear of that vast body of well-meaning people who hesitate to disturb even an acknowledged temple of Moloch, lest its falling pillars come upon them.

Mrs. Eddy sounded the key-note of Christ Jesus' Christianly scientific attitude toward all evil when she said, "Truth and error are irreconcilable" (Science and Health, p. 19). Our Lord was no less positive than patient. In him unvarying compassion toward the erring joined hands with unequivocal condemnation of error; and the only thought any true Christian can entertain toward every least protesting devil of false sense is this, that it shall be immediately and forever cast out. We do well if we are neither mesmerized by the pleading of long coddled errors nor frightened by the turmoil of thought and experience which the scientific condemnation of them is likely to beget. When Jesus spoke to the epileptic boy, the devil tare him until he foamed at the mouth; but in the Master's loyalty to Truth and Love he was moved neither by the appeals nor by the curses of false sense. His was the true light, which knows no darkness at all.

Mrs. Eddy has defined the genius of Christianity as "a calm and steadfast communion with God; a tumult on earth" (Christian Healing, p. 2), and this because spirituality rebukes carnality and right condemns wrong. Today's most serious social problems are the direct outcome of the timidity of men who do not lack a clear conviction respecting the ethics of the situation, but who consent to let conceded wrongs alone, lest some possible political or economic catastrophe be precipitated. Some unjust advantage, like the private appropriation of communal gains, through which the few secure their ease by burdening the many, is first made lawful, and thus respectable; whereupon every protest against it is met with the cry, "Let things alone; don't be radical; don't disturb existing law and order." And yet the Master stood for truth and right regardless. He dared to condemn respected wrong and entrenched iniquity, and so must every man who stands with him.

Here as everywhere the individual experience is but an epitome of world experience. The cry "Let us alone" is heard in every unredeemed chamber of human impulse, and every least concession thereto delays the day of our salvation. Error certainly will not let go of us so long as we do not choose to let go of it. Whether, therefore, in the domain of the individual or of the community, the only fitting and seasonable address to error is this, "Begone!" The rebuke of evil must be scientific, it must be brave, and it must be continuous; otherwise, there can be neither progress nor peace. The call of Christian Science is that we shall not let unrighteousness alone, either in our own hearts or in the communal life, but recognize it for what it is,—a devil,—and cast it out through that irresistible power which the Christ-coming confers.

JOHN B. WILLIS.

Lectures in The Mother Church and Suburbs of Boston

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science, by Col. William E. Fell, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Friday evening, March 5, 1915, at eight o'clock. The public is cordially invited.

Under the auspices of The Mother Church, Colonel Fell will also deliver three lectures on Christian Science in the suburbs of Boston, as follows:—

East Boston, in Maverick Congregational Church, Central square, Tuesday evening, March 2, at eight o'clock.

Watertown, in Town Hall, Main street, Saturday evening, March 6, at eight o'clock.

Everett, in Whittier Hall, Everett square, Tuesday evening, March 9, at eight o'clock.

Among the Churches

Current Notes

SNOHOMISH, WASH.—Several years ago a little band of seekers of Truth met together at their several homes to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible. This led to the renting of a room where the study of divine Science could be open to all. For a time an up-stairs room of the Otten Block was occupied, but it was soon found necessary to seek another location, and arrangements were made to use the lodge room of the Odd Fellows Hall for Sunday services, while the testimony meetings were held in one of the private homes until the church was built. First Church of Christ, Scientist, was organized in April, 1898, and a charter was granted in April, 1899. In 1900 a lot was purchased, and the corner-stone was laid Sept. 14, 1903. Easter Sunday, April 12, 1914, dedication services were held.—*Correspondence.*

OHIO.—First Church of Christ, Scientist, of Canton, First Church of Christ, Scientist, of Massillon, and the Christian Science Society of Alliance, joined in maintaining a booth at the Stark County fair, held in Canton Sept. 22-26. There were distributed 1,028 *Sentinels*, 141 *Journals*, 2,112 *Monitors*, and 300 pamphlets, a total of 3,581 pieces, yet these were not enough to supply the demand.—*Correspondence.*

Digitized by Google

Dover, N. H.—When First Church of Christ, Scientist, was invited to participate in the celebration of "old home week" in Dover, Aug. 25-27, 1914, this was looked upon as an opportunity to serve the public and bring before them the subject of clean journalism.

A vacant store on the ground floor in Odd Fellows Block was obtained for a free waiting and reading room, and was kept open day and evening. Tables, comfortable chairs, and potted plants gave the room a restful appearance, as was evidenced by its many appreciative visitors, who gave testimony thereto. Here *The Christian Science Monitor* was freely distributed, and other Christian Science literature given to those expressing a desire for it. An automobile covered with white bunting and trimmed with blue, carrying a large white banner with the words, "*The Christian Science Monitor*, a clean newspaper for the home, pure food for thought," in blue letters on one side, and the words, "Clean journalism, *The Christian Science Monitor*, four editions daily," on the other, held a conspicuous place in the parade, which was viewed by thousands of people.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Syracuse, N. Y.

The introductory remarks of the Rev. John A. Applebee, pastor of the May Memorial (Unitarian) church, in presenting Bicknell Young, who lectured on Christian Science, were in part as follows:—

I deeply appreciate the honor of the invitation to introduce to you the speaker of the evening. It is a privilege to listen to an earnest, authoritative, and virile presentation of a great faith that has had a profound influence on the thought and life of our time. Such a faith is Christian Science, and such a privilege is ours tonight. The lecturer is an earnest believer in the faith he holds, and he has reached that belief by the way of reason and life.—*Correspondence.*

Grand Rapids, Mich.

Powers Theater was crowded by an audience which assembled to hear a lecture on Christian Science by George Shaw Cook. The speaker was introduced by Paul Leake, who said:—

The trend of today is toward a higher plane of thought. This is reflected in various movements for reform, for cleaner politics, temperance, social purity, and in the almost universal desire for peace expressed through our public prints. Chief among the most hopeful "signs of the times" is the increasing number of those who seek divine guidance, turning for it to Christian Science, that higher and more practical Christianity which Mrs. Eddy says "stands at the door of this age, knocking for admission" (Science and Health, p. 224). That Christian Science, practical and demonstrable, is making a deep impression on humanity, is evident from the fact that millions of people as adherents of Truth are through it receiving the blessings which flow from a slight knowledge and consciousness of divine Principle,—God, good, —which provides, directs, and governs.

The Grand Rapids News.

Fort Smith, Ark.

A lecture on Christian Science was given by Virgil Strickler at the New Theater, which was filled to its capacity. Judge Daniel Hon, in introducing the speaker, said in part:—

The growing ascendency of Christian Science is being felt all over the world. A clearer sense of the relationship of man with divinity and with things divine is a desideratum that appeals with equal force to the man of culture and to his less fortunate brother. These, in the name of the Master and in the Master's cause,—the amelioration of the discords of the human family, battling against the frailties and the ills that flesh is heir to,—are the commendable acts and accomplishments to which Christian Science finds itself appointed. The attainment of the faith that makes one whole, and the lasting impress of man's duty to love his brother man, are matters that should deeply interest all.

Fort Smith Times Record.

Holyoke, Mass.

Prof. Hermann S. Hering gave a lecture on Christian Science at the City Hall auditorium. There were fully eight hundred people present. President J. B. Weis of the Chamber of Commerce introduced the speaker, saying:—

It is a great privilege to introduce one who is to speak on Christian Science. Within the last half century there has come into existence a new religious faith founded upon the belief that God is All-in-all, and it has made wonderful progress in all parts of the civilized world. Personally, I can bear witness to this fact. When I was in Chicago some twenty-five years ago, there was only one little society there. Now there are fifteen churches with thousands of members. To my personal knowledge, the adherents of this faith know neither heat nor cold nor rain, as they are always to be found attending Sunday services as well as those on Wednesday evenings.

Christian Scientists are not what many people think they are,—a set of religious fanatics. On the contrary, they are a set of clean-living and right-thinking people who endeavor to live up to the practice of the highest type of a Christian being. It is therefore highly proper, in order to enlighten you still further, that I should introduce the lecturer, so that he may tell you something of what he knows concerning Christian Science.—*Holyoke Telegram.*

Beloit, Kan.

Clarence W. Chadwick, who lectured on Christian Science, was introduced by Philip J. Chubbic, acting first reader, who said in part:—

We who are interested in Christian Science remember that we were at one time very much prejudiced against what we thought Christian Science to be. Later, when we had learned what this Science really is, we realized how unjust our criti-

Digitized by Google

cism had been, and since then we have been anxious that those who cared to know, might get correct information on the subject, instead of the erroneous idea we entertained.

The atheist and the infidel have always scoffed at the Bible, because of its lack of agreement with material science, and the Christian has searched the records of scientific experts for evidence that material science and the Bible were in accord. Within the last half century the Science of being, with the Bible as its only foundation, has been discovered and given to the world. This Science is a knowledge of the truth; and the Scriptures declare, "Ye shall know the truth, and the truth shall make you free." It has been taught and demonstrated the world over, and the ability to prove the Principle by solving the problems of daily life is the test of one's knowledge.—*Correspondence.*

❖

St. Cloud, Minn.

At the lecture on Christian Science given by Jacob S. Shield, the speaker was introduced by the Rev. Walter J. Smith, pastor of Unity church, who said:—

I stand here tonight to introduce a Christian Science lecturer. I have stood here at other times, unbound by creed or dogma, church council or bishop, to preach the gospel of liberal religion, a gospel of the fatherhood of God and the brotherhood of man. Liberal religion banks only on character, draws inspiration from Jesus of Nazareth and all heroic souls, and asserts its belief in the eternal onward and upward progress of mankind. It is as an exponent of that religion that I stand here tonight to introduce a fellow laborer, who, though his avenue of approach to the larger life be not my own, is nevertheless upon the highway of truth, and is a sincere and earnest seeker after the things that become the children of God. As such I welcome him here. I am not afraid of the influence of any man whose credentials invite the fullest light of day, as do those of the lecturer.

My first word, then, is to the lecturer, and to those before me who are of the same manner of life and thought. That I personally have difficulty with some of your tenets is of no concern here and now. I honor you for the persistency and the determination with which you attack the evil in the world, going as you do to its very stronghold, to the very point of its inception, the human mind. Your warfare is within, and rightly so. Your emphasis is on right thinking. You strive to live in an atmosphere of beauty, and seek to create by your positive assertions conditions which make for health, happiness, and a higher humanity. Surely it is by the strength of some souls that are beautiful that others are sustained in life, and I know of no grander employment to which the gift of life may be put than to make it one's all-absorbing passion to radiate all about him thoughts of peace and joy and love, thoughts of health and happiness and beauty. Many of us have indeed lived too long upon the miasmatic levels of life, and the summons from you to come up higher we shall do well to observe.

My second word is to you who are not followers of Christian Science, but who by your attendance here testify to the awakening of your minds, your dissatisfaction with the old order, and your readiness to follow whatever gleam seems most promising to you. The people who have invited us here, follow out more truly than any other group that I know the apostle's injunction to think on those things which are true, honest, just, pure, lovely, and of good report; and since they as systematically reject and seek to put out of mind whatever taints of evil, we need fear no baneful or harmful influence from anything they may say to us. I am sure there is much that we can learn from them, and many ways in which they can be a positive help to each of us. I bespeak for them, then, an open-minded reception and a careful consideration of the thoughts and ideas the lecturer shall bring. Accept what you can, reject what you must, but above all appreciate the sincerity and purity of motive which I am convinced lies back of their utterances. By inviting us here they have asked us to go one mile with them. Some of us will perhaps continue and go all the way, while others will not find that they can. Let us all, however, seeing that in all brotherliness we have come together, go with them the one mile, and go with them twain. There is good here in abundance, and each of us may profit.—*Correspondence.*

Lectures to be Delivered

Ann Arbor, Mich.—William R. Rathvon, Church Edifice, 409 South Division street, 8 p.m., March 4.

Athol, Mass.—Col. William E. Fell, Moose Hall, 487 Main street, 8:15 p.m., March 8.

Augusta, Ga.—Bicknell Young, Tubman High School Auditorium, 8:15 p.m., March 9.

Boston, Mass. (The Mother Church).—Col. William E. Fell, Church Edifice, Falmouth, Norway, and St. Paul streets, Back Bay, 8 p.m., March 5.

Bremerton, Wash.—Virgil O. Strickler, Eagle Hall, 6th and Pacific avenue, 3 p.m., March 7.

Cambridge, Mass.—Col. William E. Fell, Scenic Temple, Temple street, near Central square, 3:30 p.m., March 7.

Cleveland, Ohio (Third Church).—William R. Rathvon, Grays' Armory, 3 p.m., March 7.

Danbury, Conn.—Willis F. Gross, Odd Fellows Building, West street, 3 p.m., March 7.

East Boston, Mass. (auspices The Mother Church).—Col. William E. Fell, Maverick Congregational Church, Central square, 8 p.m., March 2.

Everett, Mass. (auspices The Mother Church).—Col. William E. Fell, Whittier Hall, Everett square, 8 p.m., March 9.

Everett, Wash.—Virgil O. Strickler, Everett Theater, March 8.

Forest Grove, Ore.—Virgil O. Strickler, Vert's Hall, March 11.

Hannibal, Mo.—Bliss Knapp, High School Auditorium, Broadway and Eleventh street, 8:15 p.m., March 12.

Indianapolis, Ind. (First Church).—William R. Rathvon, Church Edifice, 8 p.m., March 8 and 9.

Jacksonville, Fla.—Bicknell Young, Morocco Temple, Newman and Monroe streets, 3 p.m., March 7.

Macon, Ga.—Bicknell Young, City Auditorium, 8 p.m., March 8.

Minneapolis, Minn. (Fifth Church).—William D. McCrackan, Auditorium, 8 p.m., March 9.

Oakland, Cal. (Seventh Church).—Jacob S. Shield, Macdonough Theater, 3 p.m., March 7.

Port Angeles, Wash.—Virgil O. Strickler, Opera House, March 9.

South Haven, Mich.—Hon. Clarence A. Buskirk, 3 p.m., March 7.

Twin Falls, Idaho.—Bliss Knapp, High School Building, 3:30 p.m., March 7.

Wallace, Idaho.—Virgil O. Strickler, Masonic Temple, 8:30 p.m., March 13.

Walla Walla, Wash.—Virgil O. Strickler, Keylor Opera Grand Theater, 8:15 p.m., March 12.

Watertown, Mass. (auspices The Mother Church).—Col. William E. Fell, Town Hall, Main street, 8 p.m., March 6.

Waterville, Maine.—William R. Rathvon, Unitarian Church, Main street, 8 p.m., March 12.

York, Neb.—Bliss Knapp, Opera House, 8:15 p.m., March 11.

Testimonies of Healing

It would be wrong longer to delay in sending this my public expression of thankfulness to Almighty God for the blessings received from Him, through the agency of Christian Science. It is several years since I first secured a copy of the text-book, "Science and Health with Key to the Scriptures," and devoted some months to its careful though critical study. I now see how natural it was that no benefits, spiritual or physical, followed such study, though I was sadly in need of both. I nevertheless felt that the author taught of a God for whom I had been searching from boyhood, so I determined to learn more of Christian Science. To this end I secured a so-called biography of the life of Mrs. Eddy, and regret that I was so foolish as to believe it and to say that I could never follow such a woman; and for three years I did not, though I continued to read her book.

In my early boyhood I gradually lost the hearing of my right ear, and at the age of eighteen I suffered agonies at the hands of an aurist, who said that the hearing could never be restored, as the drum had fallen too far. When I was nineteen I had to give up a valuable position, as an oculist's decision was that I would lose my sight if I continued the work. My eyes were then fitted with spectacles, which I wore with repeated changes for twenty-five years. Soon after I was seventeen I had rheumatic fever, and the heart was said to be seriously affected. In nine years I had six further attacks of the same illness, being absent from business each time for some months; then during these years obstinate bowel trouble developed. My heart has been examined by no less than twenty-two physicians in this country and in Great Britain, and all declared that the condition was a very serious one. I never left home for a day without carrying restoratives with me, and I often had to use them. Twelve years ago I was told by my physician that I would never do another day's work. Then came change of diet and hydropathic treatment, with the study of hypnotism, will-power, etc., and these seemed to help for a time. Many isms were studied in the search for spiritual comfort, but all to no purpose. Before I was thirty I became weary of Christianity as preached in the church of my parents.

In 1905 a stricture, piles, and fistula added seriously to a life already overburdened with pain and ill health. In 1910 dropsy, the final stage of my chief trouble, developed, and in two years brought me so low that I was on the brink of the grave. My feet were so swollen that I was compelled for months to wear slippers most of the time. I could not work at my profession of public accountant for more than an hour at a time, and spent the greater part of each day on a couch in a private office, simply waiting for death. It was in this condition that a Christian Science friend found me, early in June, 1912. Truly man's extremity was God's opportunity. This friend, to whom I explained what I thought I knew of Christian Science, kindly lent me the true biography of our Leader by Sibyl Wilbur, and I read it in a humble way quite new to me. Then I hailed Mrs. Eddy as one I would be prepared to follow all the way, if I could find the strength.

Mrs. Eddy says: "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter,—and the body will then utter no complaints. If suffering from a belief in sickness, you will find yourself suddenly well" (Science and Health, p. 14). Such a moment must have come to me on the twenty-first of June, for I found myself suddenly well. I saw in a flash that in my true selfhood I was God's spiritual child, though to material sense I seemed to be a self-righteous and sinful mortal; and with a measure of self-surrender I prayed, "God be merciful to me a sinner." My strength returned in an instant, and I was quite well and strong. There are many who can testify to the absolute truth of what I write. Not understanding the degree of my restoration, I sought the assistance of a Christian Science practitioner. Within three weeks my spectacles were forgotten, my sight was perfect, my hearing to a great degree restored, and the bowels had resumed their natural functions. All material aids were thrown aside. As far as I am personally aware, the heart disease and the dropsy are absolutely cured; I cannot trace a symptom of either.

My testimony would not be the whole truth if I failed to record that, owing to an old belief in the effects of a change of climate and hotel diet, in December I had a return of the bowel disorder and piles. I suffered greatly and was unable to help myself. Fear took possession, and once again, after struggling against the temptation for some weeks, I resorted to material means, but without finding relief. Daily I suffered agonies. I then saw clearly that in God was my only hope. I asked for help from a Christian Science practitioner and threw away the material remedies. The way in which my excessive fear was allayed in a few hours was a revelation to me, and the difficulty was overcome in two days. I am now rejoicing in and worshiping a God who has clearly shown that He is indeed "a very present help in trouble." All my friends regard my restoration to health as a miracle. To those who may be of the same opinion, I can only say that God will do the same for them as He has done for me, and in Christian Science they will learn the way if they are willing.

With such a record as the foregoing it would indeed be surprising if I could find words adequate to express my gratitude to our Leader, Mrs. Eddy. Great as is my gratitude for the physical healing, it is still greater for the spiritual uplift, for the knowledge of God, and for the love of the Bible which a daily study of Christian Science is bringing to me. I feel that the only way to express my gratitude is by trying to remember, moment by moment, that I am God's child, and by endeavoring to learn to love my neighbor as myself. In this distant land, so far from The Mother Church, we, but a handful of followers, are all deeply grateful for the *Journal*, the *Sentinel*, and the *Monitor*, those silent messengers that are doing so much to bring "on earth peace, good will toward men." I rejoice to think that through them I have been led to see that I do not need to wait for further spiritual improvement openly to identify myself with the work of Christian Science.

JAMES N. NOBLE, Durban, Natal, South Africa.

❖

I wish to express my appreciation for a better understanding of God and His goodness, as revealed to us through the study of Science and Health. The power of Truth and Love has been demonstrated many times where error seemed to abound. The first healing in our home, and the first we knew of Christian Science, was in 1904, when my sister was cured of an attack of rheumatism. She was confined to her bed, barely able to move, when a practitioner was called; but within two or three days she was walking again, and there has been no relapse. Having been afflicted for years with deafness, and receiving no encouragement from physicians, I too turned to Christian Science about a year later. After my first visit to a practitioner the words of Jesus kept coming into my thought, "Ye shall know the truth, and the truth shall make you free;" and the truth has unstopped my ears, so that I can now sit in church and hear with joy our Lesson-Sermon. We know that the truth does make us free, and it will complete its work in us in proportion to its occupancy of our thoughts.

Digitized by Google

Another healing in our home for which we are grateful was that of poisoning. My mother had a felon on her finger, and a doctor was called to lance it. This gave no relief, and in a day or so poisoning set in, the whole hand being affected. I asked my mother to let me write to a Christian Science practitioner, and she readily consented. She was given absent treatment, and her hand was healed in a short time. Thus again God's power and goodness were revealed. It is my desire to reflect this teaching in my life.

BLANCHE M. CORDER, Kansas City, Mo.

✧

[Translated from the German]

At the age of thirteen I became afflicted with curvature of the spine, which caused the right side of my back to protrude considerably. My parents felt that something must be done immediately, and they took me to a physician, according to whose advice I had gymnastics in connection with massage at regular intervals. Six months later we consulted another physician, who also diagnosed the case as curvature of the spine, and prescribed the use of a corset to correct it. None was secured, however, on account of the expense it involved, which my parents were unable to meet. About six years later I heard of Christian Science, and soon after attending the Wednesday evening meetings we asked a practitioner for treatment, the result being that in about one year's time I was healed. We feel very happy about my healing, and thankful indeed to God, as well as grateful to our Leader, Mrs. Eddy. Six years have elapsed since my healing, and I have been entirely well during that time, and able to attend to my business.—FRIDA GOSSE, Berlin, Germany.

✧

Some years ago I suffered from a severe throat affection and coughs. A doctor who was considered an authority on chest troubles, told my people that he always feared I would develop tuberculosis. Several years later I was in South Africa. I was not then really a Christian Scientist, but was much interested in this teaching. I had a bad cough with a high temperature, and I felt so ill that I thought, as I was staying alone in a hotel, I ought perhaps to write down the name of my lawyer in England, for I was afraid of becoming unconscious, and perhaps dying. I asked some one to telephone to a Christian Science friend, and say that I felt too ill to go to see her the next morning. The following day the friend came to see me, and told me that she had treated me. That was on a Wednesday. By Friday I attended a social function, and as the weather was very hot, I went out several times into the open air, sat down, and walked about. I did not even trouble to put a scarf or any wrap over my evening dress, for the healing was complete. I am now in excellent health, whereas years ago I was considered very delicate, and was nearly always in a doctor's hands.

My gratitude to Mrs. Eddy for Christian Science is far deeper than when I was first healed. I have had some ailments present themselves since, but they have all been overcome in Christian Science. Truth is more to me now than it was then, and I am building on the rock, Christ.

BERTHA WEBB, Brighton, England.

✧

With a thankful heart I wish to acknowledge the many blessings we have received since coming to Christian Science about fourteen years ago. I suffered every winter from throat trouble, so that sometimes I was unable to eat for three or four days; but this was overcome through the reading of Science and Health. Christian Science not only heals disease but prevents it. This has been proven in our family through my little son, who was born in Christian Science. He attends Sunday school, where he is being taught the truth about God and man. My daughter was healed of nervousness. She was also unable to walk right, and received little help from the doctor, but she is now in good health and is working every day. My arm became paralyzed, disabling me and causing me great pain, but this was entirely overcome in five treatments in Christian Science about four years ago.

Words are inadequate to express my love and thankfulness to God, and my gratitude to our beloved Leader, Mrs. Eddy, for the good that has come to me through this wonderful revelation of Truth. It is my earnest desire to be able to demonstrate by deeds, by leading a consistent life, all that I know to be true. I hope some day to become more worthy to be called a Christian Scientist. I am also very grateful for the German version of Science and Health.

G. ROSA ECKENFELS, Chicago, Ill.

✧

I desire to express my gratitude for what God has done for me through the truth as revealed in Christian Science. Since earliest childhood I had been sickly, and the conditions grew worse each year. No physician seemed able to determine the nature of the trouble, and all prescribed remedies failed to relieve me. As I grew older I was for six years under medical treatment without any relief. I was a nervous wreck, and did not care whether I lived or not. One day a neighbor advised me to try Christian Science, so I attended a Wednesday evening meeting and there heard a testimony which impressed me very much. I asked my friend if the lady was a practitioner, and being told that she was, I called on her. I am glad to say that with the first treatment I felt better, and after three weeks was healed. This was Aug. 5, 1912, and the change was so wonderful that all my friends were surprised, and remarked that surely Christian Science is a great healing agency.

I am thankful to say that this truth has not only helped me in sickness, but in every way. I am deeply grateful to Mrs. Eddy for reflecting this spiritual light whereby all mankind can be saved from sin, sickness, and death. I am also thankful for the spiritual understanding which I have gained through the study of the Bible and Science and Health.

FREDA LOIS LESER, Bay City, Mich.

✧

Like many others, the writer has witnessed unmistakable evidences of the power of divine Love as revealed in our textbook, "Science and Health with Key to the Scriptures," in which the author has unselfishly given to the world the result of many years of prayerful study, during which she demonstrated the truth of every statement before giving it a place in the work mentioned. Today thousands of grateful students are following where she led, though with less opposition than the author was forced to encounter at almost every step of what was truly a thorny way.

This tardy testimony on the part of the writer is not due to lack of appreciation, but to the fact that some of the most remarkable demonstrations witnessed have to do with benefits received by others who thus far have not made the acknowledgment which a deep sense of love and gratitude would seem to call forth. I may, however, mention as a personal experience the great uplift that followed the study of the Principle upon which all true healing, mental or physical, depends; namely, the recognition of the basic truth, the allness of God, the eternal, unchanging good, from which, as the grand old hymn declares, "all blessings flow," and which responds instantly to every appeal, if made in faith, "nothing doubting." Thus I am free to say that where there was discord, now

Digitized by Google

there is harmony; in the place of seeming lack there is sufficiency; in place of fear there is faith; consequently, where darkness and doubt prevailed there is light and hope,—blessings, these, that the poverty of language makes it impossible adequately to express.

Many of the ills termed physical have been overcome. One such, that seemed a striking example, was the almost instantaneous healing of a deep and painful wound in my left hand. The pain was so severe and the flow of blood so free that the truth of being was for a brief moment forgotten, but it was almost instantly called to mind. As soon as it was realized, the pain ceased, the flow of blood was arrested, and although the wound was deep and gaping, the healing was so rapid that it seemed a miracle. What is equally remarkable to others, not the slightest scar remains. I may add, that after using tobacco constantly from childhood, all desire for the cigar or pipe that had seemed a necessity for so many years, was forgotten. No thought of abandoning this lifelong habit had occurred to me, and I cannot now say precisely when the craving ceased.

For these and many unnamed blessings that have come to myself and family, I am devoutly thankful; and I hope that this late acknowledgment will encourage others who may be similarly situated to seek the truth that makes free in the broadest sense of the word.

ALBERT MORLAN, Indianapolis, Ind.

✧

I am very grateful for the many blessings I have received in Christian Science. A few years ago I was in very poor health. I had suffered from asthma for years, and was much discouraged when my physician told me that I would have to go away from the coast in order to get any relief, and that it was useless for me to take any more medicine. I knew it would be impossible for me to go away, so I decided to try Christian Science. I called on a faithful practitioner, who gave me my first treatment. I was relieved at once, but was not entirely free from asthma for about a year and a half, during which time I received a number of treatments. I was also healed of nervousness. I have had a cough all my life, but it is growing less, and I am sure it too will disappear. My son had what the physician called tubercular glands in his neck, and very weak eyes, the latter trouble being supposedly caused by poor health. Just a short time before I turned to Christian Science, the physician said it would be necessary to operate on him. Now he is a big, strong boy. He was healed in three Christian Science treatments.

For these blessings, and for the peace of mind which has come to me through the understanding I have gained of Christian Science, I am indeed grateful.

MARY P. SMITH, Santa Barbara, Cal.

✧

Recently it occurred to me that I must add my offering of praise for the knowledge and proof of God's love which I have obtained. I came to Christian Science for healing, after receiving very little benefit from operations which doctors said would restore my health. From the first I felt this teaching to be the truth, and through the help of a practitioner I immediately received great benefit. There is still much to be overcome, but I am learning that as I clear my consciousness of all discord, the truth shines more clearly, so I am sure that soon I will be able to record complete freedom. I wish now to testify to a wonderful and instantaneous healing which has given me great encouragement.

One evening I was suffering from a severe headache, which I tried to relieve through my understanding of Christian Science. I had been treating myself for some time, but the more I worked, the more severe the headache seemed to grow. Finally I grew tired, and said unthinkingly, "Thy will be done," for it seemed at that moment as if it must be God's will for me to suffer so; but quickly the clear realization came to me that it was not God's will, and with the last thought the headache suddenly vanished. My heart was filled with a great joy, not alone on account of the healing, but for this proof of God's nearness to me. Had the headache diminished gradually, I might not have thought it so wonderful, but to have it disappear instantly, when at its worst, was to me a wondrous proof of God's power and love.

In our family, stomach and bowel troubles, measles, colds, and various other ills have been healed through Christian Science, and all the benefits received by myself or family have been permanent. I have everything to be grateful for, and owe it all to Christian Science. Before coming to Christian Science I had about lost all hope, and I took it up as a last resort, feeling that if it did not help me there was nothing else to turn to. I am thankful to say that almost every phase connected with my illness has been healed by the truth, although I am still working to overcome one or two discordant conditions which seem to cling.

Words cannot express the gratitude I feel that I have been able to prove that God really is, and that He is always with us, a loving Father-Mother. Christian Science has shown me logically how a perfect creator could not possibly conceive or create anything imperfect. The *Journal*, *Sentinel*, and *Monitor* mean everything to me, helping me to progress, and many times giving me just the help I need. I am very grateful to Mrs. Eddy for Christian Science, also for the loving help I have received.

KATHERINE S. MURPHY, West Roxbury, Mass.

✧

Words can but poorly express the gratitude I feel for what Christian Science has done for my wife and myself. Before I became interested in this teaching, I was leading a very wasteful life. Still a young man, I had retired from active business, and my principal occupation was to crowd as much selfish pleasure as possible into the day. My wife had been under the almost constant care of physicians for many years, and this practically made my time my own, with the result that I was going the pace which kills.

With the almost instantaneous healing of my wife came the change in my mode of living. I was introduced to her practitioner, became interested in Christian Science at once, and in a short time had lost all appetite for alcohol and tobacco. I was also healed of neuralgia, which had troubled me for years; and the realization was brought home to me that an idle life is a wasted one.

I am again engaged in a useful occupation, and instead of thoughts of discontent and unrest, my consciousness is now filled with love and thankfulness to God, whom I have learned to know through Christian Science.

H. VON BERGEN, San Francisco, Cal.

With gratitude I corroborate my husband's testimony. When I applied for Christian Science treatment I was utterly hopeless, and had reached the point where life seemed not worth living. The almost instantaneous help I received, gave me courage, and soon neuritis, from which I had long been a great sufferer, vanished; and with it went a goodly portion of selfishness, which I had thought legitimate during my invalidism. Acute lung trouble, ear trouble, and many other ailments have also yielded to the application of the truth; but I am especially grateful for the spiritual light I have gained, for the broader outlook, and the greater love for all mankind.—EMILIE VON BERGEN.

I wish to express my gratitude for the help my little child received in April, 1913. While playing with her sister, one arm was dislocated at the shoulder. The next day a Christian Scientist came in and saw her, and went immediately with me to a practitioner, who gave the child treatment, and advised me to take her to a surgeon to have the arm set. I did so, with the result that she had no pain, and slept well all night. She had no ill effects from this accident, which occurred when she was two years old; and that arm is no different from the other. Several months later she was very ill from inflammation of the kidneys, and the doctor gave her only a few days to live. The same practitioner treated her, however, and today she is in perfect health, and a well-grown child.

I am thankful to God, and grateful to our beloved Leader, who made it possible for us to receive this Truth-healing.

MRS. W. ARCHARD, Maidenhead, England.

✧

[Translated from the German]

"Were there not ten cleansed? but where are the nine?" asked the Master. As I would not be found among the ungrateful ones, I herewith wish to offer my testimony. For eight years I was afflicted with a severe abdominal trouble. I suffered with pain in the back, with weariness and headaches, the latter dating since childhood, and whenever I did hard work, I would have to stay in bed for days at a time. Besides this, I never knew what it was to have good sleep. How often did I wish I might be one hour without pain! But all these conditions have disappeared. A dear neighbor of mine brought a copy of the *Herold* for me to read, and I soon decided to have Christian Science treatment. A practitioner in Basel led my thought away from my ills, whereupon the healing went on steadily though slowly. Almost a year has gone by and now I am entirely well. I feel that I cannot be too grateful to Mrs. Eddy and to all who have helped me.

FRAU PFULG, Olten, Kt. Solothurn, Switzerland.

Reflection

FLORRIE ASHCROFT

INTO the night the lighthouse sends
Its guiding ray,
Cheering the bark that landward wends
Its storm-tossed way.

Firm on the rock, unmoved by storm
Or wind or foam,
It shines, unfailing, bright and warm,
To lead men home.

And weary sailors in the gale
Fresh courage find,
Until at length they furl the sail—
The storm behind.

Thus shining through the night's dark pall,
With gentle might,
Each separate beam unites with all
In one great light.

Let your light shine, the Master said;
And so may we
By faithful work Truth's brightness shed
O'er earth's dark sea.

From Our Exchanges

[*The Christian Register*]

Never since civilization began to make its mark upon modern nations has there been a time that could be more perfectly described as one that tried men's souls. Not only are the hearts of men and women and little children failing them for fear, not only is panic, pestilence, starvation, and earthquake threatening all the inhabited places of Europe, but also every principle of religion, every doctrine of the divine Providence, every relation between humanity and the infinite wisdom, is now upon trial and scrutinized anew. Is there any God? Is there any Providence? Is there any efficacy in prayer? Is there a Lord of hosts, a God of battles, who directs the movements of armies and to some gives victory and to others defeat and despair, and have the prayers of men and nations anything to do with the outcome of the tremendous upheavals which now affright human beings of every race and nation?

In times like these it is by a natural instinct that men are moved to seek the help of some higher power and to entreat for displays of omnipotence in guiding the counsels of nations and deciding the fate of battles. Beliefs concerning what prayer is, what it has done, and what it may be expected to accomplish, are numerous, and the discussion of them is useless.

[*Zion's Herald*]

This age is obsessed with social, economic, industrial, civic, and even religious fads and propositions. Conferences without number, even within the church, are held to consider and debate upon new ideals and schemes in social, economic, and industrial improvement. Specialists, socialistic and even anarchistic, are heard condemning business and the church and our best representative men in all communities, because the millennial dawn has not already appeared. Good and true women as well as men, listening to such addresses, are confused and distressed, and led to doubt the truths which they have believed and upon which they have shaped their excellent lives. The worst result observed from such addresses and agitation is the effect produced upon faithful ministers, who are thrown into confusion with the heated ideas presented and the exhortations to the effect that the church and the ministry are blamable unless the new, partial, and extreme views are adopted and echoed from pulpit and platform. The best and most complete reply to all this ardent "bosh" is found in the apostle Paul's remarkable epistle to the Galatians.

[*Pacific Christian Advocate*]

The grand idea of Samson's life is that his strength abode with him so long as he was faithful to his Nazarite vow, and departed as soon as, for the sake of a fleshly lust, he tampered with that vow. When a Nazarite cut his hair, it was understood that his vow was at an end, and that he no longer was God's servant. The loss of Samson's hair represented the loss of spiritual life, the loss of a fit apprehension of the sacredness of his person as one vowed to God.

[*The Christian Intelligencer*]

If the world is full of medicines and holds forth large but unfulfilled promises to man for his bodily needs, it is likewise full of isms, ologies, sects, and movements which are labeled curative for the spiritual needs of man. But simple obedience to God's will as expressed in the laws of nature and in the moral law of Sinai and in the spiritual teachings of the

Digitized by Google

Bible are fundamental to the health and blessedness of the soul. And if through weakness we fall into sin, there is only "one mediator between God and men," Jesus Christ the righteous, who is able to save to the uttermost all that come unto God by him. Prayer is the Christian's native breath, and if we dwell continually in the holy atmosphere of communion with our Lord, we shall find His grace sufficient for every need.

[*The Advance*]

If we were to bring the eleventh chapter of Hebrews down to date,—and the Bible author intended that we should do that mentally,—we might read that "by faith Noah, being warned of God of things not seen as yet, . . . prepared an ark," and might add to that what Washington and Lincoln did through faith, in the days of the deluge which came upon the earth when they lived. Great crises rise, and overwhelm the sinful and the stupid, but here and there a great soul, being warned of God concerning things which the commonplace do not see, prepares an ark for the saving of the world. Again and again has the world been saved by the vision and faith and courage of some such man.

The flood comes. A great wave of selfishness submerges the man who might be a leader; another is swept inshore, or perhaps out to sea, by an undertow of timidity; another is carried off his feet and over his head in a tide of personal ambition; another climbs to a position which he shrewdly guesses is just out of reach of the high-water mark of public censure, and all these are overwhelmed by the rising tide. Sad is the age that experiences a flood and has no Noah; sad is the nation that comes to its hour of opportunity and has no Washington, no Lincoln. But the rainbow of hope is above the flood. The covenant of God is sure. The world cannot be hopelessly lost to the God who made it and redeemed it. There is an ark of safety for the individual soul. There is hope for humanity in the fidelity of God and in the courage of true men.

[*American Lutheran Survey*]

Never in the history of the world have there been too many good specimens of any kind of worker. This big hive of a world is supporting so many drones that it sometimes looks as though there were no room for working bees. You need not fret about that. Be the real article, and the world will find it out, and your place will find you. As sure as the working of the law of gravitation is the law that worth will be recognized. As surely as the force of compression breaks through and fills vacuums, that surely the man who is a man will find the space that is vacant for him.

[*The Watchman-Examiner*]

Christ found the individual, but we sometimes fear the churches have lost him. They have become so interested in methods of work, music, the art of worship, and the magical things that delight the multitude, that the individual seems of slight importance. They are working to get the crowds, and as a man counts only one, he is lost. They have forgotten that now, as long ago, a leader developed out of unpromising material may chase a thousand, and two put ten thousand foes of the Lord to flight.

[*The Universalist Leader*]

Is your religion workable? After all, that is the final test. A religion may satisfy all the requirements of logic, as a theory it may be beautiful and perfect, but is it workable? There are a great many who hold to a certain faith but have never tried it out.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 105 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.15; two to eleven copies inclusive (cloth only), each $2.60; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10½ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

The president of the National Conservation Association has issued a statement on the Shields water-power bill recently reported to the Senate, in which he says: "The Shields bill for the granting of water-powers on navigable streams is the bill of the water-power monopolists. There has been no clearer attempt to defeat the conservation policy since water-power first became a great national problem. It is a direct reversal of the wise and fair conservation provisions contained in the Adamson bill as it passed the House, for which the Shields bill was substituted in the Senate committee.

"President Wilson endorsed the final Adamson bill. The Shields bill is directly opposed to the water-power policy which President Wilson thus endorsed. But the Shields bill has been approved by Secretary Garrison.

"The Shields bill does not require the water-power interests to pay for the enormously valuable privileges which it proposes to give them, although the Adamson bill for which it is substituted does protect the public interest in precisely this way. The Shields bill fails to provide for the necessary publicity and uniformity of accounts, so as to make possible the proper supervision of the affairs of the company, as the Adamson bill did.

"The Shields bill ostensibly provides for a method of terminating the water-power grant at the end of fifty years. As a matter of fact it appears to have been carefully drawn so as to make it practically impossible for the United States to resume its rights. This it does by opening the way for indefinite litigation over the fair value of the property to be taken back, and by the use of language under which the United States might be required to take over the whole electric lighting plant of a city to get possession again of a water-power owned by the people.

"The Shields bill gives to the water-power interests the right to condemn any land, public or private, a right which they should never have, but which should be exercised when required for water-power development either by the states or the national government; and it requires the people, on again taking back the property whose use they have granted, to pay the unearned increment on land condemned or otherwise acquired by the company."

Secretary Lane of the department of the interior has recently made orders designating as non-irrigable and subject to entry under the enlarged homestead act the following lands, and such of them as are vacant public lands will become available for homestead settlement and entry in tracts of three hundred and twenty acres on the dates mentioned:—

Nearly half a million acres of land throughout the state of Montana, under order effective April 10, 1915, and nearly one hundred thousand acres in eastern and central Montana, under order effective March 10, 1915. Nearly one hundred thousand acres in Idaho, order effective March 10, 1915. Nearly two hundred thousand acres in Oregon, order effective March 10, 1915. Nearly one hundred and seventy-five thousand acres in New Mexico, order effective March 10, 1915. Nearly one hundred and seventy-five thousand acres in California, order effective March 10, 1915. More than one hundred and seventy-five thousand acres in Arizona, order effective March 10, 1915. More than eight thousand acres in the eastern part of Washington, order effective April 10, 1915. More than four hundred and thirty thousand acres throughout Wyoming, order effective March 10, 1915, and more than seventy thousand acres in Wyoming, order effective April 10, 1915. More than one hundred and forty thousand acres in Utah, order effective April 10, 1915.

Fire in the national forests of the West in 1914 caused a loss to the government of nearly three hundred and forty million board feet of merchantable timber, valued at $397,303, and of reproduction, or young growth of trees, valued at $192,408. Statistics made public by the forest service show there were 6,805 fires, of which 1,545 burned over an area of ten acres or more. About 77 per cent of all the fires did damage of less than one hundred dollars each. In addition to the losses suffered by the government, timber on state and private lands within the forests, totaling 228,008,000 board feet and valued at $175,302, was lost. The total area burned over was 690,240 acres, of which 310,583 acres were state and private lands. Notwithstanding it was an exceptionally bad year for fires, on account of high temperatures, heavy winds, and prolonged drought, the average loss per fire was $103, as against $151 in 1911, when there were only about half as many fires.

The new route from New York to New Zealand, by way of the Panama canal, is now in active use. Masters of ships report that it is far superior to the old roundabout course, and is to shorten materially the time between the east coast cities of the United States and all Australian and New Zealand ports. The first ship to arrive from New York was the "Purley," British, whose captain is enthusiastic over the new route, both because it is shorter and because of the better weather conditions. He says that by the old route vessels bound for New Zealand from New York occupied about seventy-two days' time, while his time through the canal was only thirty-seven days. The distance by way of Cape Horn is 11,571 miles, while by way of the canal it is only 8,500 miles. It is understood that Auckland will be the first port of call for American vessels going to Australasia through the canal.

The metropolitan county of New York is engaged in perfecting a plan that will save its citizens approximately five million dollars yearly in the land and title transfers, simplify that process, and reduce the cost to property owners of registering deeds and encumbrances. In order to effect this the city has spent five hundred thousand dollars in providing a "plant" for title searching and registration. Prior to 1885 title searching in this county and city was done by private conveyancers. At this time arose the title companies, who for a fee undertook to guarantee any title. It is officially stated that the three companies now engaged in title searching in New York have reaped a gross harvest of more than one hundred million dollars since their beginning, and are now clearing upward of five million dollars between them each year.

A statue of Florence Nightingale, the pioneer of army nurses, was unveiled in London, England, last week. It is the first instance in which a statue of a woman, aside from royalty, has been erected publicly in London. On account of the war there were no ceremonies in connection with the unveiling. The figure bears a lamp in the right hand. It forms a part of the Crimean memorial group in Waterloo place, the cost of which was provided by small subscriptions, largely from nurses, soldiers, and sailors.

Property not used for railroad purposes, valued as running into the hundred millions of dollars, will be disposed of by the Pennsylvania railroad East and West. In Chicago it is estimated that two thousand parcels of land held for possible future terminal purposes and valued at many millions of dollars will be thrown on the market without delay. "The Pennsylvania railroad is one of the first railroads to abandon the policy of heavy land holding," said Vice-President Schoyer, "except for strictly railroad purposes. In our buying we have often had to include more land than we really needed, and all this accumulated property is to be sold."

After eight years of experience, stockmen are well satisfied, says the chief forester of the United States, with the way the grazing of live stock on the forests is regulated, and have even urged upon Congress the application of the same method of control to the unreserved public range. Almost twenty-nine thousand permittees graze stock on the national forests, and these paid to the government in the fiscal year 1914 fees amounting to over one million dollars. The present tendency is to raise fewer sheep and goats and more cattle and horses.

Licorice imports into the United States during 1913 were 105,032,429 pounds of the root, valued at $1,806,756, and 796,222 pounds of licorice paste, valued at $101,823. The source of supply has been Asiatic Turkey. This business has been thrown out of joint by the war, and the result has been a wonderful stimulation of the licorice industry in Sutter county, Cal., where a large crop will be grown this year.

The Southern Pacific Railroad Company, the Associated Oil Company, the Union Oil Company, and the Standard Oil Company of California are cited defendants with thirty-six other corporations and individuals in a suit filed in Los Angeles by the United States government to recover lands in Kern county, Cal., valued at more than one hundred million dollars. This is the seventh suit begun by the government to recover oil lands said to have been illegally patented.

During the first eleven months of the year 1914 Argentina shipped a total of 2,064,124 hides, of which amount the United States bought 1,236,444.

Vol. XVII March 6, 1915 No. 27

Equipped for Service

ROBERT NALL

It is an inspiration to read how faithfully, yet how tenderly, our beloved Leader guided the early students of Christian Science. Unerringly she led them through the labyrinths of mortal ways and temptations. Following carefully the Master's methods, and speaking and acting always from the point of view gained through long, toilsome, yet joyous experience, she taught them lessons which they never forgot and which are fresh and vital for us today. She admonished them to adhere to the rules of Science, and never to forget the omnipotence of Truth; she praised them and encouraged them. She spoke to them of mighty victories yet to be won, urged them to be obedient and always ready for work, to press patiently on, to keep their lamps trimmed and burning, and to be careful not to seek light from matter instead of Spirit. She also taught them to work out their own problems and never to be disheartened, remembering that they were building for time and eternity. She warned them that materiality clogs progress, that spiritual truth is not limited, and that when all have one Mind and one Principle, then the forward path is clear.

No one can read these gentle outpourings of love and fidelity to the highest service without recognizing that Mrs. Eddy's vision was one of world-wide conquest for Truth, and that her work was freely to reveal to others what had been revealed to her, so that the seed of Truth might be sown in many hearts. The result she left to divine Love, never doubting what it would be. This is the faith that does not shrink; the faith that finds its perfect embodiment in Christ Jesus and that is also the precious heritage of all God's children.

The seed-time passed, and Mrs. Eddy began to remind students that the harvest-time had come. As they had been helped, so they must help; as they had been healed, so they must bring the healing truth to others,—and what a wondrous privilege this is! All along the line of divine revelation we see how the propagation of truth must follow its reception, otherwise the recipient becomes but a cumberer of the ground. Not faith alone or works alone, but faith and works: this is the scientific order, from which there can be no deviation. To know this is of supreme importance. The fructifying influences of Spirit are a necessary concomitant to healthy spiritual life. Growth, as we soon learn, comes from Mind; but there will be no growth unless the channels of love are kept freely flowing.

Do we remember that apposite metaphor used by the prophet Isaiah about "the shadow of a great rock in a weary land"? It was a picture drawn from nature, to illustrate how love which flows from righteousness, spiritualized thought, from a conscious union with our divine source, becomes active in those loving words and deeds which are like the balm of Gilead to the mourner and the distressed. You have the arid desert, without a sign of vegetation, and with sand-drifts that destroy all fertility and perpetuate the awful barrenness. The prospect is as bleak as that of the thought which can see no light because of the blank wall of sin; but it is not quite hopeless. The desert drift is stayed by a rock; and near by, after rain, green blades appear, and in time there is one of those oases that are the delight of the traveler. The rock does its work; it stops the drift, and under its shadow and protection verdure springs up in all its beauty and utility. Some of the Old Testament writers frequently used the symbol of a shadow in relation to the sustaining and protecting power of divine Love, the most familiar illustration being that in the ninety-first psalm, where we have the promise which has been a strength and comfort to Christians of all time: "He that dwelleth in the secret place of the most High [he who has awakened to his royal birthright and is growing in spiritual understanding] shall abide under the shadow of the Almighty."

Now the temptation that comes to many Christian Scientists is to cling to one's old self; and a very useless, troublous self it is. It is our privilege to rise above it, and to find that spiritual status in the Science of Mind which will establish within us a new consciousness. The old self will say that because we have not entirely conquered mortal mind, and are not perfectly free from physical trouble and care, we cannot follow Jesus' direction to Simon, "Strengthen thy brethren," but we must study more and increase the number of our demonstrations, and then we shall be ready for the ambassador's call. Yet what does divine Love expect of us but that we shall be faithful even in the least? One loving thought breathed with a prayer of faith may be, indeed will be, a messenger of love to some one. Imagine the simplicity of it!

God does not demand great things from us, but that we be true to our real selfhood in Him. Then we shall be always in touch with Him, and we shall see that every spiritual thought is a power which makes for Christlikeness. With this there will be gratitude and self-immolation, and we shall soon learn to see, and be able to reply to the question, "What can God's man do?" with the apostle's declaration, "All things through Christ [Truth] which strengtheneth me." And does not this include such a reflection of Love that we shall perhaps unconsciously be to some not only "an hiding place from the wind," from the sickness and sorrow that befall so many, but such a benefactor of the Spirit's measure of goodness in a "weary land" that we shall rejoice in a greater unfoldment of Truth. "What grander ambition is there," Mrs. Eddy said in her first address to The Mother Church (Miscellaneous Writings, p. 110), "than to maintain in yourselves what Jesus loved, and to know that your example, more than words, makes morals for mankind!"

It is one of the glories of Christian Science that it is a universal religion, a compendium of all-embracing truth, which by its very nature will touch the heart of humanity everywhere and bring in the fulness of the kingdom of God. The contemplation of this comes with an appealing force to each one who is rejoicing in sins forgiven and in physical well-being through Truth. If we are doing our work aright, we never miss a day without a loving thought of thankfulness to God, and of gratitude to our Leader and all others who have helped us along the way. And if we do that, we shall do more. Wherever we are, we shall become beacons of love.

We may not yet have put on "the whole armor of God;" we may be painfully conscious that our spiritual equipment, so far as we apprehend it, is far from perfect,—but what of that? We will stand where we are and do what we can, in the measure of our understanding, to make an oasis for some of that great multitude who are still drifting in the deserts of materialistic concepts which blast every human hope. And the best of all equipment for this Christly ministry is that prayer so scientifically and beautifully interpreted in Christian Science. It was after long hours of prayer, of communion with the Father, that Jesus did his wonderful healing and thus manifested the works of God. Our Leader, too, not only by precept but by example, constantly enjoined that without daily and hourly prayer, drawing inspiration from Love's healing stream, the sick and sorrowing could not be helped. On this she has a striking passage in "Miscellaneous Writings" (p. 154) that we would all do well to ponder: "Bring forth fruit—'signs following'—that your prayers be not hindered." In other words, we may limit our own blessings, because we are not seeking to share them with others.

❖

The Beatitudes

LOUISE C. MARTIN

THE simple story of the woman who came unbidden to the house of Simon the Pharisee, and her self-forgetful tribute to the Master as he "sat at meat" amid the luxurious surroundings of Simon's dwelling, brings the inspiration of love, humility, and gratitude. The incident is rich in symbolism, and full of gentle admonition to the Christian Scientist, while the lesson conveyed is fraught with even sweeter meaning when considered in connection with the beatitudes. Viewed in this light the Oriental scene is tinted with a glow of sacred beauty.

The profound metaphysical truths set forth by Christ Jesus in the beatitudes were remarkably exemplified by this woman in her mental awakening to a spiritual sense of life as portrayed in the Bible narrative. She had been a woman of the city, a sinner, according to Luke. Perhaps she had seen the Nazarene as he went about doing good, and had heard the heavenly words that fell from his lips. We can almost hear her saying, "The sight of thee unveiled my sins, and turned my misnamed joys to sorrow" (Miscellaneous Writings, p. 326). Heart-weary and sin-stained, she had perceived that the pleasures of the flesh are but bubbles upon the stream of mortal experience. In trembling shame she felt the spiritual poverty of her barren life, and became receptive to the glorified sense of spiritual being, and this mental state illustrates the first beatitude.

This woman's unsolicited—yea, even forbidden—entrance into the Pharisee's house, and her irrepressible desire to find the Master, indicate that she had caught a gleam of the spiritual consciousness of the real man, a perception so pure and unalloyed that in its presence vanished all belief of caste, social prestige, or class distinction. No sensitive thought of self (which is but a false sense of humility), no weight of self-condemnation, no fear of reproach, held her back from the presence of him who came to teach men how to find themselves in God's great plan. With eager joy she approached the Master, bearing the alabaster box of ointment,—a token of the purity of her motive and the newly-dawned spirit of consecration. The tears that fell upon his feet were tears of repentance, and they help us to understand the Master's words, "Blessed are they that mourn: for they shall be comforted." Already was Jesus' compassionate thought shedding upon her the hallowed benediction, "Thy sins are forgiven."

After this marvelous mental transformation the spirit of meekness descended upon the purified consciousness, like the dove after the deluge. Immediately the woman's uplifted thought felt its inheritance, whose sphere is eternity and whose scope is infinity. Wonderful legacy! Could the meek be promised aught that is greater than this, "They shall inherit the earth"? Mrs. Eddy defines earth as "a sphere; a type of eternity and immortality, which are likewise without beginning or end" (Science and Health, p. 585).

Following the order of the beatitudes, we can see how divinely natural it is for the awakened thought to "hunger and thirst after righteousness." Indeed, how heart-hungry was this woman for the things of Spirit! The kisses and ointment bestowed in unsparing affection on the Master's feet tell the story of the completeness of the self-surrender of one who was hungering and thirsting for divine Love.

Especially interesting is the next beatitude: "Blessed are the merciful: for they shall obtain mercy." The unbridled sins of his fellow countrymen had stained with persecution the steps of the Man of Galilee; and the wicked minds of those who saw not his purity, pierced him with weapons of ignorance and vice. But from the consciousness freshly purged of sin and baptized of Spirit, welled up thoughts of mercy and love for the Wayshower; and in return this woman obtained the flood of divine mercy portrayed in the words, "Her sins, which are many, are forgiven; for she loved much." The unquestionable purification of her affections, her motives and purposes, together with her moral assertion,—these assure us that the chastened heart was beginning to "see God." Ineffable peace then clothed the regenerated heart like a garment. The spontaneous expression of repentance and love, and the wondrous blessing which followed, must have brought a peace that cometh to none save the children of God. Her sense of at-one-ment with divine Truth and Love gave a foretaste of the joy that awaited her as a "peacemaker" among men.

Swift upon the footsteps of righteousness, however, came the persecution "for righteousness' sake." The arrogant Pharisee and his materially-minded guests condemned Jesus for permitting this woman's approach, and they further doubted that Jesus was really a prophet. Not only did this dense materiality blind Simon and his friends to the Master's true nature and mission, and to the woman's contrition, but it brought upon both of them persecution, reviling, and the uttering of all manner of evil against them falsely. Nevertheless, the spiritually-minded Saviour quickly detected this wrong sense, and with his characteristic wisdom and patience he uncovered and denounced the pharisaical fault by relating the story of the two debtors and by compelling Simon to draw the inevitable conclusion. As the scene comes to its close, it goes without saying that she, the erstwhile sinner, could "rejoice, and be exceeding glad," for great was her reward in heaven,—the reward of harmony and holiness which crowned her experience. And last we hear the ringing words, "Go in peace."

Not a little significance pertains to the fact that Mrs. Eddy opens the chapter on Christian Science Practice by referring to this gospel narrative. Deep-searching and far-reaching are her questions to the Christian Scientists of today who go forth to practise Christian healing, and we cannot pray too earnestly or watch too diligently that we be not found sitting in the Pharisee's seat at the festal board where Christ dines with us. Are we sitting in the "seat of the scornful," to judge and condemn the weary one already overburdened with sin? or do we reach forth with willing hands and forgiving hearts to welcome the belated comer to the feast? Can we, like our wise Exemplar, gently silence the

Digitized by Google

unwarranted persecution which helps no one? Let us ponder the lesson in silence; then we shall feel the touch of that unquenchable love which is the very essence of Christianity. If like the repentant woman we bring a pure offering and sit at the feet of Christ, Truth, in humility, gratitude, and affection, then we may arise, go forth into the world, preaching the gospel and healing the sick. And we too shall be sped on our way with the comforting benediction, "Go in peace."

Church Ushers

ARCHIE E. VAN OSTRAND

THE duties of the church usher are to dispense hospitality, to maintain the order and dignity of the service, and to insure protection for all. His true mental attitude is well expressed in the call of Isaiah, "Ho, every one that thirsteth, come ye to the waters," and at all times the golden rule is his basis of action.

There are three classes to be served by the usher. First, the stranger, who is likely to be deeply influenced for or against Christian Science by the way he is met and cared for on entering a church. This may determine for him the question not only of satisfaction and comfort, but of open-mindedness during the entire service. He is an invited guest and should be treated with corresponding courtesy, being consulted whenever possible as to his choice of seat. The second class is made up of the regular members or attendants who have a distinct preference as to the location of their seats. The effective usher will soon become familiar with their wishes and always gratify them when it is possible. The third class includes those Christian Scientists who are willing to be seated wherever seats are available, or quite as willing to stand if there are strangers or visitors who cannot be accommodated otherwise.

In caring for all these classes, the one effort of the usher should be to avoid precipitating any inharmony or irritation of thought which would mar the receptivity of the individual to the Lesson-Sermon. Any show of objection (unless a necessary rule is likely to be dishonored) or indifference to an expressed preference as to the location of seat is entirely out of keeping, and is likely to lessen seriously the benefit that otherwise might be gained. An usher has the opportunity to express his gratitude for the benefits he has received through Christian Science in loving service, and it is well for him always to remember Jesus' words, "Whosoever of you will be the chiefest, shall be servant of all."

Difficulties sometimes arise in the effort to be fair and to do the right thing. Not all Christian Scientists have arrived at the point of progress where they are always governed by "unselfed love" (Science and Health, p. 1); but the usher must remember that self-will never heals selfishness, its antidote being selflessness. If he is knowing ever that each one has his proper place and that it is the usher's privilege to find it for him, and if he maintains a courteous serenity under all circumstances, and tactfully assumes the person's disposition to accommodate as well as to be accommodated, he will seldom have any difficulty, and will have the satisfaction of knowing that he has not only rendered another a service, but that he is making distinct advance himself. No arbitrary plan of seating would prove satisfactory to the majority of the congregation, and if the usher is right in his attitude toward all, there will be orderly seating and general satisfaction. The question of heat, light, and air determines the comfort of many people, and until they have risen above these limitations they should be promptly accommodated without criticism.

All who attend a Christian Science service for the first time, whether they are aware of it or not, come to be healed. It may be they are suffering from a sense of disease, fear, poverty, sin, prejudice, false appetite, heartache, or possibly an undefined longing for something they know not what; but the reason they are there is surely because of a hope that they may find their way to the possession of a larger sense of freedom and harmony. What nobler ambition can inspire the usher, therefore, than to know that he can help to facilitate this healing by greeting the seeker with such a loving thought that he will instinctively feel the kindness, hospitality, and friendliness which help so much to make one receptive to the truth presented in the Lesson-Sermon!

It is important, then, that all who serve in this as in other official capacities, should be well prepared by faithful and conscientious study of the Bible and our text-book, "Science and Health with Key to the Scriptures." The ushers should study the weekly Lesson from the *Quarterly*, and not feel dependent upon hearing it read at the service. They should come to the service with consciousness so uplifted spiritually that they can but contribute to that healing atmosphere which is one of the distinctive features of a Christian Science church. Our revered Leader, Mrs. Eddy, has left us this admonition and pertinent promise in "Miscellaneous Writings" (p. 155): "Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity."

"There am I in the midst of them"

ELIZABETH H. MURDOCK

IN looking over some old copies of the *Journal*, I came upon an article in which the writer emphasizes the need of an "uninfluenced majority" in our business meetings, and of protecting and trusting that majority as the avenue through which God's will may be made manifest. The expression an "uninfluenced majority" attracted my attention, and brought up certain questions which I have found it profitable to think about: Why do we need such a majority? How shall it be protected? Why may we trust it to express God's way? As I tried to answer these questions there came to me the familiar words of the Master, "Where two or three are gathered together in my name, there am I in the midst of them." Now who is the "I" in our midst? The Glossary in Science and Health tells us: "Divine Principle; Spirit; Soul; incorporeal, unerring, immortal, and eternal Mind" (p. 588). But if "I" is Mind, and Mind is ever present, must it not be just as near the individual as the group? So why is the promise given to the two or three gathered together?

This leads us to consider first of all why it is that any one of us can ever at any time fail to know and reflect this omnipotent, unerring Mind. Is it not because we are sometimes so governed by the personal sense of things that Truth is hidden from us for the time? Personal sense,—the view of things which comes to us as an outgrowth of the testimony of material sense, combined with the influences of heredity, environment, temperament, education, and similar human forces,—which also means personal prejudices, personal preferences, personal selves, and all that obscuring, dividing thought whose name is legion,—this is all that can prevent our gaining and manifesting a clear and conquering sense of Truth as ever present, one and indivisible.

It follows that the thing we need to do, if we wish to know the truth, is to free ourselves from personal sense. This is not an easy undertaking, since it is so ingrained in mortal thought that we often cannot seem to see what we are being influenced by. Fortunately, however, no two of us have

Digitized by Google

exactly the same personal opinions, and so it is easier to see the absurdity of another's false view when we do not share it. In this way, when a number of persons are gathered together to consider a question in free and open discussion, as widely differing views are presented, manifestly incorrect when considered together, the personal sense of first one and then another is shown to be inadequate, illogical, prejudiced, or otherwise erroneous, and is so recognized even by the individual himself, if he has come with a willingness to have the truth revealed and a readiness to receive it.

It is usually true that the dropping of the personal sense of the members of a group through the exchange of opinions is more thorough and complete than it is in the case of a separate individual, dealing only with his own view points; and it is also true that the remnant of personal sense left over will continue to neutralize itself. Then is it not clear that since freedom from personal sense is the necessity if we are to be anxious for the truth, and since this freedom is more perfectly obtained in the group, this explains why the promise is given to the "two or three"? So when we come together in business meetings for the discussion of church problems, if each comes ready to give up his own as yet undiscovered personal sense as soon as he sees it, even glad to be shown his mistaken concepts, and joyfully ready to accept what is better, we have the right to claim the promise, "There am I in the midst of them." We should be able to prove that such a condition of thought is transparent to the light, and that we can stand for those things which are Christlike. Such is the work of an "unadulterated majority."

That we need such a majority is self evident; but is our responsibility met if each seeks to purify his own thought before attending the meeting, as has been shown? Would it not be well, some one may ask, to seek to purify a brother's thought also? Let us consider. Suppose that some of us under the influence of this apparently innocent and commendable purpose convinced that we are right in our views, should go about among the church members before the meeting, and quietly help them to arrange and settle their thoughts. What are we doing if not trying to impress our own personal sense of measures and persons upon them? Who gives us the right to do this? Are we so wise? Do we suppose that we have sufficiently searched out the task? And what would follow such a course?

For one thing, it would intensify the power or spell of personal sense upon us, and it would further blur our vision so that we could discern and argue others into seeing as we do. To the extent of allowing them how to vote, and to begin even at this point to pledge their votes. What kind of a meeting would we be to go to? Was it we really desired to see the "unadulterated majority" and how else could it come but as we had accepted it ourselves? What does our personal sense accept as right? As it would more likely be that which we like, we should be simply bringing our own views to the meeting, and would be unable to see those we have already formed as less unanimously [illegible]

[illegible]

ilege and duty, namely, that of letting our fellow members alone, leaving them free to work out their problems under divine guidance. When we have done this, we have done what we can to permit all to come together in Christ's name, free to reap the benefits of the open discussion, to have personal sense destroyed, to find divine Truth and Love in our midst, and to manifest "unerring, immortal, and eternal Mind" in every decision reached.

❖

Life

ANNIE M. SYMONDS

In Science and Health we read: "The plant grows, not because of seed or soil, but because growth is the eternal mandate of Mind. Mortal thought drops into the ground, but the immortal creating thought is from above, not from beneath" (p. 520). We begin to understand this as we learn more of the Principle which governs the universe.

Some thirty-five years ago, one who resided in the home which I afterward purchased, cultivated a garden in which a great variety of flowers grew and flourished. It was beautiful to look upon, and among the flowers were petunias, marigolds, asters, and many other kinds. Ten years later, the garden was converted into a lawn; and some fifteen years after that, in order to have the grade higher, the sod was removed in the month of March and the loam thrown into the back yard, where we had a flower bed at that time. The following May and June I noticed a new plant growing very abundantly, so I watched the garden, and in a short time a bed of petunias blossomed out in all their beauty and fragrance, although no seed had been planted there for twenty-five years. It was a very clear lesson, also a revelation to me, that whatever reflects Life cannot lose its power to express that Life.

Those who came to Jesus asked for a sign. Jesus answered, "There shall no sign be given . . . but the sign of Jesus the prophet." When we awaken to the truth as revealed in Christian Science, we do not look for signs, but we are sure that the signs will "follow them that believe," and in Christian Science we are entitled to discern somewhat the life which expresses God, in beauty, purity, and perfection. Thus it is ours to do what Jesus told his followers to do, namely, "heal the sick, cleanse the lepers, raise the dead," all the while knowing that as we have freely received, therefore we should freely give.

Selected Articles

[Judge Clifford P. Smith in *Boston* (Mass.) *Sunday American*]

The notion that a satisfying life can be gained by death is one of the most palpable errors of human thought. It is equivalent to supposing that you can go and get a thing by moving in the opposite direction. Death is a change incident to the belief of life in matter; it is a liability pertaining to the personal and mortal sense of existence. Each person must outgrow or overcome it as he eliminates the false and mortal elements of human consciousness by gaining the true and spiritual sense of Life. With Christian Scientists death has already lost much of its pain and fear; they have discovered the cause of mortality and the nature of that which is subject to it; they have learned the conditions and qualities of immortality; and they have begun to put into practice the Science which is destined to abolish death and its cause, evil and its effects.

This view of the situation dispels fear, gives confidence, strengthens endeavor, and shows that the ultimate victory is certain for all who perceive and are assimilating the truth of being. With them death would be only a momentary yielding to the consensus of belief that man must die. The course of spiritual progress would be immediately resumed, with the evidences of everlasting Life strengthened by the experience. It is not only in the belief called "this world" that we have hope in Christ; the true idea must reign in our thoughts until it wholly excludes the temptations of evil. And though death is called the last enemy, we need to remember that all error is alike,—it has neither Principle, substance, nor reality; it is neither truth nor true, but is like the darkness which disappears in the presence of the light. As Jesus said, "He that followeth me shall not walk in darkness, but shall have the light of life."

✧

[Frank Bell in *The Times-Leader*, Wilkes-Barre, Pa.]

The clerical critic who is quoted in a recent issue as disapproving of Christian Science, because in his opinion its appeal is only to the "educated class," might well be recommended to a fellow clergyman who in a neighboring Pennsylvania city a few weeks ago declared that persons of education could not be attracted to Christian Science. When theories of experts thus disagree, the layman is reduced to the necessity of arriving at his independent opinion upon a basis of mere fact. The fact is that both critics are wrong, since the adherents of Christian Science include representative proportions of the highly educated and those who have had little or no schooling.

It is somewhat difficult to understand why Christian Scientists should be denounced for not carrying their religion into the slums, if their religion is such a reprehensible thing as our friend professes to believe. If church-members need to be warned against Christian Science, why this apparent disregard for the fate of the slums? Here again the fact is helpful in arriving at a conclusion, and the fact is that no denomination can compare with the Christian Science church in the proportion of adherents who profess to have been rescued through its ministrations from the habits, practices, and conditions of the slums.

We do not know how the critic acquired the impression indicated in the charge that "Christian Science denies the fact of sin and pooh-poohs confession," but we do know that the Christian Science text-book, "Science and Health with Key to the Scriptures," on page 448, contains this statement, which is typical of many others in the same volume: "Christian Science rises above the evidence of the corporeal senses; but if you have not risen above sin yourself, do not congratulate yourself upon your blindness to evil or upon the good you know and *do* not. A dishonest position is far from Christianly scientific. 'He that covereth his sins shall not prosper: but whoso confesseth and forsaketh them shall have mercy.'"

It is no fault of Christian Science that ill-informed critics arrive at nothing but self-evident absurdities when they try to apply to temporal, material things the statements made by Mrs. Eddy with regard to things spiritual and eternal. The extraordinary growth of Christian Science is no doubt accounted for in part by the fact that it asks to be judged by its fruits, and does not hesitate to invite comparison between the present benefits achieved by its followers and the followers of other systems.

✧

[Henry Deutsch in *News Tribune*, Duluth, Minn.]

The report of Dr. ——'s lecture in a recent issue contains a reference to Christian Science which is complimentary, but, as is often the case, it is liable to give your readers a wrong impression of Christian Science healing. From a purely material standpoint it would look as though Christian Scientists "made a business of being well." But even if that were true, the Principle by which this is effected is not only radically different, but is the antithesis of the so-called or alleged principle of persons who "make a business of being sick." The point really is, that persons who make a business of being sick are sick because they lack a knowledge of the Principle of health.

Christian Scientists are well, not because they make it a business to be well, but because in thought and action they are applying the divine Principle of being, existence, and living. In other words, they are making manifest the real and true relation between God and man, which is based upon the law of absolute harmony. Sickness is a condition of discord, or, to divide its synonymous term, it is a condition of dis-ease, that is, a lack of ease in the sense of harmony and an absence of friction or trouble. Even as in Jesus' time, when his work was first recognized as simply the healing of disease instead of as a spiritual mission, so Christian Science has in most instances been viewed as a new system of therapeutics, and because its basic proposition is the allness of Mind, persons who have not studied it carefully have gotten the impression that it is allied with the psychological theory of mind over matter, that is, the influence of the human mind. Mind, as used in Christian Science, refers to the divine Mind, or God, and is distinguishable from the so-called mortal mind, which, as Mrs. Eddy says, "is not a factor in the Principle of Christian Science" (Science and Health, Pref., p. x). This mortal mind is the one to which Paul refers as the "carnal mind," which is "enmity against God," or "the old man with his deeds," which must be "put off."

It is true that we have the physical healing in Christian Science in thousands of cases which have refused to respond to any and all medical and other material theories, including so-called psychological methods, hypnotism, suggestive therapeutics, and other human forms of so-called mental healing. These cases are evidences of the correctness of the basic law of Christian Science. They are the "signs following," but, as Mrs. Eddy says, "the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150).

Digitized by Google

Christian Science is a religion. It is Christian, because it follows in the footsteps and emulates the example of the great original Christian, Jesus the Christ. It is scientific, because it is an exact demonstrable statement of the character and real relation between God and the universe, including man, and it furnishes a rule by which its Principle can be illustrated and proven. Its primary purpose is the regeneration of mankind, and that not only mentally and spiritually, but as a logical result, physically. Christian Scientists are well because through the understanding and realization of the power of God they reflect His attributes and qualities; and as they more nearly approach the ultimate understanding, they will progressively attain "unto perfect manhood, unto the measure of the stature of the fulness of Christ,"—man in the image and likeness of God, in whom is no imperfection, sin, sickness, or disease.

The healing in Christian Science is differentiated again by the fact that it is permanent, and not subject to the ebb and flow of material conditions and so-called physical laws. Being based upon the law of the eternal Mind, God, it reflects Him "with whom is no variableness, neither shadow of turning." The so-called healing of disease which is based upon the action of the human mind, is but the exchange of one belief for another, the belief in the power of matter for the belief in the power of mind, or, what is more concrete, the power of the weak human ego. This is a house built upon the shifting sands, which cannot endure, because it is not founded upon the rock.

When the healing results from faith in and understanding of God, His omnipotence and omnipresence, and is an effect of the omniaction of His law, it rests upon a foundation firmer than the rock of Gibraltar, and is unaffected by the ebb and flow of human tides of fear, ignorance, or unbelief. Christian Science is a spiritual phenomenon, not a material one, and when it is viewed from this standpoint, confusion of thought as to its purpose and effects will cease. Its results must be interpreted from the spiritual standpoint, and then they will be easily understood and not confused with so-called mental or psychological manifestations. The healing power in Christian Science is God, not hypnotism or human will. As Mrs. Eddy says in the Preface to Science and Health (p. xi), "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation."

✧

[W. D. Kilpatrick in *St. Joseph* (Mich.) *Press*]

Jesus said: "They shall put you out of the synagogues: yea, the time cometh, that whosoever killeth you will think that he doeth God service. And these things will they do unto you, because they have not known the Father, nor me." The Rev. Mr. —— seems obsessed with the conviction that he is doing "God service" in his endeavor to discredit the religion of many of the good people of your city; and in asking for space to correct the gentleman's strictures on Christian Science I have no desire to continue a religious controversy further than to protect this religion from an unjust attack.

Christian Science has been subjected to vilification and criticism from the pulpit far more than any other religious denomination of which there is any record, yet in the less than fifty short years of its existence, and in spite of these unjust and almost wholly untrue attacks, it has encircled the globe with its beneficence, showing to the world a permanent growth unparalleled in the history of religious movements. No people have been watched and compelled to give a reason for the hope that is in them as have Christian Scientists, and may it be said to their credit, their cause has not suffered thereby. Christian Scientists claim that Christian Science is the religion of Jesus, and that in the working out of life's problems they are demonstrating a little more each day the religion that Jesus taught.

Christian Scientists submit that Christian Science is based wholly and unalterably on the teachings of the Bible, in explication of which they do not pick out isolated passages, tear them from their context, and endeavor to substantiate their position by these Scriptural fragments. They have taken the Bible as a whole, from Genesis to Revelation, in its spiritual import, as the sole foundation for their religion; and nothing in the Bible, interpreted spiritually, can be found contrary to its teachings. Likewise nothing in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, can be found in contravention of Bible teachings. Christian Scientists believe that the divine Principle of being has always existed, unchanged in its eternal harmony by human beliefs and conditions; and that the Bible throughout records explanations and demonstrations of this Principle of being which have come to light through the lives of those who have risen high enough in the understanding of God, and the universe as created by God, to be able in a measure to prove and explain, according to the light given them, this great Principle. It must be plain to any one conceding the existence of an omnipotent, omniscient, and omnipresent God, that the creations of such a God must be governed and controlled eternally and unchangingly by that God, and that this government and control must be embraced in an unvarying Principle. It is this divine Principle of existence, this unchanging law of God, that Christian Scientists claim as the basis for all Scripture, which in turn is the basis for Christian Science.

The gentleman's allegiance to materiality, as indicated in his last attack in your columns, is not shared by the most prominent material scientists of the world today, many of whom are now conceding the non-existence of matter as something real and substantial. The Bible throughout accredits no authority to matter, and the words and demonstrations of Jesus put to flight any faltering faith in or hope of life as existent in and dependent upon matter. Christian Science maintains that the Bible makes plain that all causation is in God, and that there is naught beside Him and His creation; that God is Spirit, Mind, Life, Truth, Love, divine Principle, and that His creation cannot manifest any qualities not existent in the original cause; therefore, that all true phenomena are spiritual and in conformity with spiritual perfection. Jesus could not have wrought his wonderful demonstrations of healing the sick and raising the dead if he had attributed causation to aught but God; and therefore Christian Scientists claim that in their work of regeneration and healing the sick, in disclaiming any power in matter to affect man, they are working out that Principle of being which it was Jesus' mission to magnify among men.

✧

[Campbell MacCulloch in *Post-Standard*, Syracuse, N. Y.]

You inquire, "Is there on earth another legislative body besides the United States Senate which would listen to, or pretend to listen to, and admit in full to its official minutes, a five-hour lecture on Christian Science?"

Senator John D. Works did not "lecture" on Christian Science. He followed his previous course of two years or so ago, when the Owen bill for the establishment of a department of health was up, and argued against the unconstitu-

Digitized by Google

tionality of the Congress of the United States allying itself with a state form of medicine, and lending its authorization thereto. In the present instance, Senator Works spoke upon the efforts of the hospital and health services of the United States in endeavoring to foster again just that very thing, state medicine. He also pointed out that as state religion is abhorrent to American ideals, so is the placing of great power and dominion over the individual welfare and the bodies of its citizens abhorrent to the spirit of freedom and right of choice that was guaranteed when our forefathers signed the Declaration of Independence. Senator Works was engaged in defending the rights not alone of the one or two millions of American citizens allied with the teachings of Christian Science, but of the other millions who do not place their reliance upon the allopathic school of medicine, and who claim for themselves the privilege of worshiping God and healing their bodies in their own way.

May I remark in closing, that Christian Scientists have no wish to deny any one the right to make use of any mode of healing he may choose; that they are zealous in fulfilling sanitary codes to the exact letter, and that they only claim for themselves the justice they desire all to possess.

❖

[Duncan Sinclair in *Dalbeattie Stewartry* (Scotland) *Observer*]

Christian Science explains the life and words and work of Jesus the Christ, and shows how his teachings are as practicable today as when he walked the Galilean shore, healing the sick and the sinning. It proves that Jesus did his wonderful acts through an exact knowledge of spiritual law, knowledge which nullified so-called material law, under which humanity suffered and was held in bondage then as now. Not only so, but it instructs whoever will in this knowledge, so that it becomes as available in our day as in his, or in that of the early church.

When the lawyer tempted Jesus with the question, "Master, what shall I do to inherit eternal life?" our Lord's answer was, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." This reply centers around God; and if we have fallacious notions about the nature of God, our obedience to Him is bound to be equally faulty. Christian Science declares, without reservation, that God is infinite Mind, or Spirit, and that He is infinitely or altogether good; and this, it may be urged, all Christians would admit. But Christian Science holds that, to be logical, since God is infinitely good and since He is omnipotent, no other power has ever existed to create evil; hence evil is unreal in the light of the absolute truth about God. If God had created evil, or allowed it to be created as an entity, it would be a part of His consciousness, and so eternal.

Christian Scientists, however, do not shut their eyes to the tremendous hold that evil appears to have over mortals who believe in its reality. They are well aware that to many it seems to be far more real than good; but they also know that all the power it ever seemed to possess was the power mortals themselves gave it in belief; it certainly, since God is infinitely good, has no God-given power. It is only when God is understood to be infinite good, and evil in consequence is seen to be mere belief and not reality, that Jesus' command above quoted becomes possible of obedience. When we so understand Him, we perceive the truth of the statement in the first chapter of Genesis to the effect that God's creation was "very good." God's creation must be like Himself—spiritual. Hence man, man created by God in His image and likeness, is also spiritual; so that the real man, our neighbor, he who lives and moves and has his being in God, must be good. Thus is revealed the manner whereby the master Metaphysician's wonderful summary of the law, so simply stated, may be put into the practice of every-day life.

❖

[Editorial in *Alhambra* (Cal.) *Advocate*]

However many of us may differ in our religious opinions, there is much food for thought in the excellent address on Christian Science given by Bicknell Young in the high school. This is an age of progress in Christian development through religious freedom. There is an independence of thought along religious lines that would not have been tolerated in this country half a century ago. Millions are seeking for knowledge of God and the divinity that shapes their ends. In this the Christian Scientists seem to be making splendid progress.

❖

[Robert S. Ross in *The Truth Seeker*, New York, N. Y.]

Most critics realize today that there is little hope of successfully combating Christian Science by merely declaring that it does not heal. This method of attack has been frequently employed in the past; but the growth of Christian Science has been so rapid and steady, and its healing effects so irrefutable, that an observing and inquiring public is no longer misled by such an abrupt dismissal of the subject.

Jesus of Nazareth taught and practised the Science of Christianity. It was the discovery of the divine Principle of Jesus' teachings by Mrs. Eddy that reestablished Christian healing throughout the civilized world. "This system," Mrs. Eddy writes on page 147 of "Science and Health with Key to the Scriptures," "enables the learner to demonstrate the divine Principle, upon which Jesus' healing was based, and the sacred rules for its present application to the cure of disease."

❖

[Ezra W. Palmer in *The Gunnison* (Col.) *Republican*]

The comment on Christian Science practitioners in a recent issue is misleading. Christian Scientists do not tell people they are "not sick and have no pain," when they may be suffering from both; neither do they tell them to "think you are well and you will be." They know very well that sickness and pain are real to the senses of the patient. "Sickness," writes Mrs. Eddy, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (Science and Health, p. 460). Christian Science teaches that God is not the author of pain or sickness, and that they are unreal in the sense that they are not created of God. It also teaches that by right prayer to omnipotent God, sickness and sin are healed, just as Jesus, the apostles, and the prophets healed by prayer.

❖ ❖ ❖

If it is hard for us, amid these little ills of life, to keep God's providence continually in view, and if we hesitate, in every struggle, to step out of the commonplaces of life into the presence of the Divine, then life ought to appear to us at least an art, if not a duty. Nothing is more beautiful than the child in whose tearful eyes the sunshine of joy and innocence soon beams again, like the flower which quivers and trembles in the spring shower, and soon after blossoms and exhales its fragrance, as the sun dries the tears upon its cheeks.—Max Müller.

Editorial

"Let us have grace"

COMPLAINT is sometimes made by members and others who attend the services in Christian Science churches, that not all who come to these services are as considerate of the rights of those within their immediate vicinity as they should be. Sometimes this inconsiderateness is merely thoughtlessness, but it is none the less distracting. There are some who on reaching the church remain in the foyer to greet incoming friends, meanwhile indulging in conversation keyed to a quite unnecessary pitch and penetrating to the inner room; but this is not all, for it is even alleged that some persons, both at the Sunday services and at the Wednesday evening meetings, are in the habit, after they have entered the auditorium proper and seated themselves, of indulging in quite audible conversation which is entirely at variance with the spirit and intent of these occasions, and that this seriously disturbs the quiet contemplation of spiritual things which those within earshot might otherwise enjoy. It is said that in many instances there is a distinct hum of conversation, which not only goes on before the services have actually commenced, but in some cases even continues until the reading of the Lesson-Sermon is begun.

Unfortunately, many of these complaints seem to be well founded. To those who have come to church at an early hour, with the hope and expectation that they may thus have an opportunity to preface the service by a few minutes of silent preparation which will enable them to understand the Lesson-Sermon more clearly and to assimilate the teachings of the Scripture it sets forth, it is somewhat trying to be compelled to *listen* to a conversation of the kind referred to. The great majority of those who comprise our congregations go to the services in a devotional frame of mind, and they welcome the few minutes preceding the commencement of the regular order as an opportunity to dismiss from their thought the consideration of those material things which through force of circumstances so largely occupy their attention at other times. They look forward to these few minutes as a time for self-examination, so that they may not bring into the service itself any discordant thought or any condition of mind which would be at variance with its purpose, or which might interfere with the healing of the sick or the reform of the sinful.

Mrs. Eddy has said, on page 345 of Science and Health, "When the omnipotence of God is preached and His absoluteness is set forth, Christian sermons will heal the sick," and the truth of these words has been demonstrated many times. She has also said, on page 241 of the same book, "The substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin," and our services must necessarily be filled with this sense of devotion and demonstration if they are to fulfil their mission.

It is but fair to those who complain of this talking in church to say that there is no intention on their part to interfere with the quiet interchange of greetings of friends which takes place so pleasantly and so lovingly at the services. What they object to is the conversation which might be entirely suitable at some other time and place, but which under the circumstances simply distracts thought and fails to display that kindly consideration for the rights of others which is of benefit to all. To be seated in one's place before the opening of the service, in a quiet and devotional frame of mind, is to invite a blessing.

Reverence for God, and appreciation of the church service, which is in fact communion with Him, are the motives which prompt Christian Scientists to attend church, and they surely desire that everything that has to do with the church founded by our revered Leader shall be in keeping with her counsel: "Sacrifice self to bless one another, even as God has blessed you . . . then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity" (Miscellaneous Writings, p. 155). "Wherefore," wrote the apostle Paul, "we receiving a kingdom which cannot be moved, let us have grace, whereby we may serve God acceptably with reverence and godly fear."

ARCHIBALD MCLELLAN.

✧

Waiting on the Lord

HUMAN life is full of what Phillips Brooks named "withheld completions." Men have to learn to wait for the appearing of many very worthy and greatly longed for things, and having reached the conviction that their purposes respecting these things are unselfish and good, they are and ever have been wont to attribute the explanation of delays to the ways of a higher wisdom! To wait on the Lord has thus come to mean with the many that they should be patient with His seemingly slow performance rather than that they should be impatient with their own unresponsiveness to the call of Truth and Love.

From the beginning, mankind have thus woefully erred in their thought of God as having their point of view and being actuated by their relative, imperfect sense of things, instead of remembering ever the declaration of Scripture which reads: "My thoughts are not your thoughts, neither are your ways my ways, saith the Lord. For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts." The reactionary and penal effects of this anthropomorphism obtain very largely today throughout the Christian world, and they practically cancel all hope of progress for the man who is possessed of the idea that Christianity's meager achievements of good are due to the fact that the plans of Providence are being worked out at an *adagio* pace which it is not ours to hasten. Such a man is impelled to be content with unideal, not to say unchristian conditions, and to wait upon God, when in fact what he needs is not to wait, but to wake up—to escape from the mesmerism of an utterly false sense of the divine nature and will.

Christian Science preeminently conduces to spiritual progress by making it logically clear that Truth is forever instant in its operations; that it is the Father's will and therefore possible that we be saved at once and unto the uttermost. It teaches that in the very nature of things we truly wait on God when we honor and seek to be conformed to divine law, when we make patient, intelligent, and determined effort to "put off the old man,"—that dominating deadness of mortal mentality referred to by Mrs. Eddy when she says, "The illusion of material sense, not divine law, has bound you, entangled your free limbs, crippled your capacities, enfeebled your body, and defaced the tablet of your being" (Science and Health, p. 227).

That the prevailing thought of God as being actuated by considerations which sufficiently earnest, beseeching prayer will induce Him to give up, has immediately to do with prevailing spiritual apathy and ineffectiveness, is logically clear and lamentably true. The divine manifestation is conceived of as being not a continuous unfoldment which is always and instantly responsive to human receptivity, but a variable order which is advanced or retarded according to impulses that are not unlike those of a human personality.

The uncertainty respecting the divine attitude and action

Digitized by Google

which necessarily attends this sense of things can but beget a spirit of irresponsibility and reserve upon the part of all who entertain it. No man can have confidence in himself if he is wavering in his confidence toward God. Who would think of having to wait for the pull of gravitation or for light to bring illumination? The chemist does not expect to be delayed by any dallying of what he calls molecular affinity, and all this hints at the eternal fact that the activities of Mind, of Truth and Love, wait ever to serve and save, and we truly wait on God when we adjust our thought to the unvarying order of His appearing.

Divine Truth neither knows nor brooks delays. "He that keepeth Israel" neither slumbers nor sleeps, and the only thing ever waited for is the sluggish withdrawal of that mortal sense which in human experience has delayed Truth's illumination of every innermost court of consciousness.

JOHN B. WILLIS.

The Voice of Truth

STUDENTS of the Bible find therein many statements respecting the divine voice being heard by those who were spiritually prepared to hear it. Mrs. Eddy usually characterizes this voice as the voice of Truth, and in one instance she refers to it as "a voice from harmony" (Science and Health, p. 559). The voice of God, when heeded and obeyed, never fails to bring harmony, even though its message may at first seem to be a sharp rebuke to error. We may therefore be glad and rejoice, whether Truth demands, "Where art thou?" or says, "This is the way, walk ye in it."

Mrs. Eddy further says (p. 308) that "the Soul-inspired patriarchs heard the voice of Truth, and talked with God as consciously as man talks with man." Christian Scientists understand this statement, and therefore they accept it, even though others might argue that if this had ever occurred, it was no longer possible; yet many devout people insist that it has come within the range of their own experience in some hour of great trial, when help greater than the human was urgently needed. All students of the Bible are familiar with the account of the divine call to the child Samuel, and those acquainted with Mrs. Eddy's writings will remember that in the chapter called "Voices Not Our Own" (Retrospection and Introspection, p. 8) she describes a similar experience. The chapter closes with these lines, quoted from Mrs. Hemans:—

Shall I not rejoice
That I have learned at last to know His voice
From man's?—I will rejoice!

Unless thought is spiritually alert, the harsh sounds of mortal discord, or the seductive tones in which the unwary are wooed from the straight and narrow path of righteousness, would often mislead the wayfarer. At many stages of the journey from sense to Soul the call to Zion, "Awake, awake; put on thy strength . . . Shake thyself from the dust," is what we most need, even if it does not come in these very words. Many make the mistake of thinking that the voice of Truth, of Spirit, can be heard by material sense, a belief which Jesus rebuked when he said to those who sought to condemn him for healing the impotent man at the pool of Bethesda, that they had never at any time heard the voice of God, for the reason that God's word did not abide in them.

In the twelfth chapter of John we read that a voice from heaven came to assure Christ Jesus of the divine presence and support. The message was not, however, understood by those who were present, some of whom said that it thundered, while others, whose spiritual sense was doubtless much clearer, said that an angel had spoken to Jesus. It is surely clear that if "the pure in heart" see God, they may also hear His voice and understand the message. This may be illustrated on the human plane, where an animal can hear the human voice but can gather nothing from a learned discourse, nor can an unlettered person grasp much of its meaning. It requires a knowledge of the subject presented to do this, but it calls for something far above material knowledge to hear the voice of God and to grasp what He would have us know. If we really desire to hear the divine voice, we have the gracious invitation of the Master, "Learn of me." As we do this, and as our spiritual sense unfolds, we shall hear, it may be in the hour of our deepest need, that great voice from heaven which St. John heard on Patmos, saying to us, "There shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Let us be glad and rejoice that our former belief in a distant deity, whose voice we could not hear, has passed away with the coming of Christian Science, and with this change has come, in the measure that our thought is spiritualized, the passing of pain and sorrow. Christ Jesus said, "I do always those things that please him," and if we desire above all else to obey the divine will, we shall hear the voice of Truth and so never lack divine guidance.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

BERKELEY, CAL.—Within a year after the establishment of Second Church of Christ, Scientist, in this city, the auditorium of First Church of Christ, Scientist, has again been found inadequate for the accommodation of the audiences attending the services, and plans are being perfected for the organization of Third Church of Christ, Scientist, by members of the denomination living in the Claremont district. The organization of the new church will be completed this week, and services will be held next Sunday morning [Dec. 20, 1914]. No plans have yet been made for the erection of a new building, and for the present services will be conducted in Athens Hall, 2740 College avenue.

First Church of Christ, Scientist, was organized in this city nine years ago. It now occupies one of the handsomest church buildings in the city, at Dwight way and Bowditch street. Although the fifty thousand dollar structure has been occupied less than three years, it was overcrowded at all services a year ago, which led to the establishment of Second Church. The same condition prevailing this year has led to the organization of Third Church. Second Church of Christ, Scientist, which has held services at the Hillside Club during the last year, has also outgrown its present quarters and has secured the high school auditorium, which has a seating capacity of twelve hundred.—*Berkeley Gazette.*

Digitized by Google

ANCON, CANAL ZONE.—The Ancon Christian Science Society has applied for the purchase of the old circuit court building at Ancon, together with a lease of the ground on which it stands. The committee on church sites has taken favorable action on the society's application, and has recommended that a price be fixed for the building by the chief quartermaster and surveying officer.—*Canal Record.*

NEW HAMPSHIRE.—Correspondence with three hundred public libraries has resulted in placing Mrs. Eddy's works, offered by the Trustees under the Will of Mary Baker Eddy, in about one hundred libraries not previously supplied otherwise. Through assistance given the distributing work, a total of seven thousand copies of the article "Must Protestantism Adopt Christian Science?" thousands of copies of the *Monitor*, besides copies of an article on Mrs. Eddy published in the woman's edition of the *Manchester Union*, were distributed.

To place the legal rights of Christian Scientists before the people of the state in their true light, and dislodge the false and misleading arguments behind which certain special interests affected by the progress of Christian Science are seeking a defense of their compulsory legislative schemes, has been the main task to which we have addressed ourselves during the past year.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 4, 1915. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 12, 1915.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 6, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

St. John, New Brunswick, Canada

In presenting Willis F. Gross, who lectured on Christian Science, the Rev. Ralph J. Haughton said:—

The appearance of a Congregational minister, in good and regular standing, upon this platform this afternoon may seem to some persons something of an anomaly. While I have no apologies to offer to any man, there are just three reasons which it seems to me fully justify my acceptance of the very kind invitation extended to me a few days ago to preside over this gathering today. The first reason is, that the longer I live the more charitable I seem to be, and the greatest thing in all this world is charity. The second reason is the fact that I have lived long enough to discover that no one sect or denomination or individual has a monopoly of divine truth. The third reason is the glorious fact that Jesus the good Shepherd has his sheep in many folds.

The highest revelation which we have of God is that He is love, and love is both the test and the badge of Christian discipleship. It was Jesus himself who said: "By this shall all men know that ye are my disciples, if ye have love one to another." There is a very beautiful incident in the life of Jesus, standing out before my mental vision today. It took place in Capernaum. John said unto him, "Master, we saw one casting out devils in thy name, . . . and we forbade him, because he followeth not us." Jesus replied, "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." That is the spirit in which I have accepted the kind invitation to be here.

In regard to Christian Science, which I fear is too often misjudged and condemned without being given a fair trial, I have only this to say, namely, what Gamaliel said to the Sanhedrin on behalf of the apostles whom they had arrested and imprisoned: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."—*Correspondence.*

Bournemouth, England

At the lecture on Christian Science given by Col. William E. Fell, at the Westover Rink, J. S. Braithwaite, M.A., first reader of First Church of Christ, Scientist, of London, introduced the lecturer with the following remarks:—

As one who has been a close student of Christian Science for some eleven years, and who has much cause for gratitude for physical, moral, and spiritual benefits accruing from that study, I feel I can say with no uncertain voice that the message Christian Science has for mankind today is the one great need of this time. It is a spiritual message, a call to us all to gain a clearer understanding of God, and a more exact knowledge of His scientific relation to His creation, man. There is no other way by which we can recognize that this scientific relation exists, than by the practical demonstration of it, and that is just what Christian Science is achieving in its work of healing the sick, comforting the sorrowing, and reforming the sinner. All science must rest on demonstration, and these are the methods on which Christian Science bases its claim.

When a man sees deep down in his heart that Christian Science is the truth, no amount of argument to the contrary is going to upset him. It is nevertheless a very helpful thing for him to have an opportunity of listening to such a lecture as the one we are privileged to hear this evening, because he hears an authoritative answer to these very arguments, such as he may not himself have felt equal to making. It is also helpful to his friends, who are perhaps desirous themselves of gaining a first-hand acquaintance with this subject.

Correspondence.

Fairmont, Minn.

Jacob S. Shield delivered a lecture on Christian Science in the court-house. He was introduced by David H. Larson, first reader, who said in part:—

To any one who thoughtfully considers the subject of human progress, there is evident in the hearts of men a fervent desire for a greater knowledge of Truth, for a practical understanding of that spiritual influence which Isaiah said shall give us the "oil of joy for mourning, the garment of praise for the spirit of heaviness," that we may be called "trees of righteousness, the planting of the Lord." Jesus of Nazareth lived and demonstrated this truth. He healed the sick and reformed the sinner by spiritual means only, and said of his followers in all ages, "He that believeth on me, the works that I do shall he do also." During the first centuries of the Christian era Jesus' followers performed these healing works, but in later years men lost sight of this gospel power. It remained hidden until in our day, at a time when

Digitized by Google

materialism threatened to engulf the last hope of freedom from sickness and sin, Christian Science was given to the world and brought again the message of "on earth peace, good will toward men," a message of health, hope, and happiness, of Life, Truth, and Love.—*Correspondence.*

❖

Oklahoma City, Okla.

George Shaw Cook, who lectured on Christian Science, was presented to the audience by O. P. Workman, a business man of this city, who said:—

Less than fifty years after the close of the American revolution, in a community of citizens among the rugged hills of New Hampshire, in which atmosphere had prospered the spirit of the revolution that absolved the colonies from the despotism of an unsatisfactory government, a child was born. This child, on attaining womanhood, became not the patriot in a revolution, but the Discoverer and Founder of a teaching that has caused a revolution spiritual in character. This revolution, unlike the material one of our forefathers, has not confined its benefits to the people of the thirteen colonies, but has gone into all parts of the earth.—*Correspondence.*

❖

Huntington, W. Va.

An audience estimated at five hundred people heard a lecture on Christian Science given by Virgil O. Strickler at the Carnegie Library auditorium. H. T. Lovett, a well-known attorney, in introducing the speaker, said in part:—

Your presence here indicates either that you are believers in Christian Science or that you are open-minded seekers after truth, and therefore willing to appropriate it anywhere and at any time found. Some may be here for information simply; perchance some may be here out of idle curiosity; and an occasional one may be here for the purpose of catching or deducing an additional ground of opposition to the faith; but certain we may be, in this day, that none are here to scoff. Why may we on such an occasion be so sure of an audience? Simply because this is a day of great liberality of thought, broad-mindedness, and toleration in all religious matters. Creeds today are but loosely held together. Lines of demarcation between the different Christian denominations have dimmed in the light of this age, so that now only the essentials of religion are stressed, and the old-time heated arguments on non-essential questions of religion are no longer heard. This is as it should be.—*Huntington Advertiser.*

❖

Muncie, Ind.

Clarence C. Eaton, on the occasion of a lecture on Christian Science at the Wysor Grand Opera House, was introduced by Chester Budd, who said:—

The Bible has always been considered a necessary guide to those seeking a life free from sin; but as a guide to those seeking a life free from sickness, it has seldom been considered of much if any importance whatsoever. After her discovery of the great truth that God is an unfailing help in every need, Mrs. Eddy's life was devoted wholly to helping others believe, understand, and apply this truth.

The Scriptures declare that we each have our own salvation to work out. This surely indicates that to reach the kingdom of heaven is a matter for individual realization. When the Christ appeared to mortals nineteen centuries ago, his true nature was not recognized by the unbelievers, else they would not have crucified him. To them he was not "the way." Only by those who believed in him was he accepted as the Son of God. Those who understood his doctrines, gained that knowledge of Truth which makes man free. To them he was, as he himself declared, "the way, the truth, and the life." Those early Christians who reproduced the works of the Master surely received salvation.

The works of the Christian Scientist are causing many to believe that the healing power of God is as efficacious and as accessible to mankind now as it was nineteen centuries ago. Many are gaining a satisfying interpretation of the Bible through the guidance of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. By proving this Science of Christianity, many are experiencing today more than ever before a life of love, happiness, and health.—*Correspondence.*

Lectures to be Delivered

Austin, Texas.—William R. Rathvon, Hancock Opera House, 8 p.m., March 19.

Bellingham, Wash.—Jacob S. Shield, Metropolitan Theater, 8 p.m., March 18.

Chicago, Ill. (Seventh Church).—Willis F. Gross, Church Edifice, 5318 Kenmore avenue, 3:30 p.m., March 14, and 8 p.m., March 15 and 16.

Chillicothe, Ohio.—Willis F. Gross, Masonic Opera House, 16 East Second street, 8 p.m., March 11.

Cincinnati, Ohio (First Church).—William D. McCrackan, Music Hall, 8:15 p.m., March 19.

Cœur d'Alene, Idaho.—Virgil O. Strickler, Rex Theater, 3 p.m., March 14.

Colfax, Wash.—Virgil O. Strickler, Church Edifice, 8 p.m., March 16.

Columbia City, Ind.—Bliss Knapp, Tuttle's Opera House, 8 p.m., March 18.

Dallas, Texas.—Col. William E. Fell, Dallas Opera House, 8 p.m., March 16.

Hempstead, Long Island, N. Y.—William R. Rathvon, Star Theater, Main street, 7:50 p.m., March 15.

Idaho Falls, Idaho.—Virgil O. Strickler, Scenic Theater, 8 p.m., March 18.

La Crosse, Wis.—Bliss Knapp, La Crosse Theater, 8 p.m., March 16.

Lewiston, Idaho.—Virgil O. Strickler, Temple Theater, 8 p.m., March 8.

Mahanoy City, Pa.—Willis F. Gross, Armory Hall, 133 East Pine street, 8 p.m., March 8.

Mankato, Minn.—Bliss Knapp, Mankato Opera House, 8 p.m., March 15.

New York, N. Y. (Fifth Church).—Bicknell Young, Church Edifice, corner Madison avenue and 38th street, 8 p.m., March 15 and 16.

Palo Alto, Cal.—George Shaw Cook, Marquee Theater, 8 p.m., March 16.

Paris, Texas.—Col. William E. Fell, High School Auditorium, 8 p.m., March 15.

Portland, Ore. (Second Church).—Jacob S. Shield, 8 p.m., March 15, and 3 p.m. and 8 p.m., March 16.

Riverside, Cal. (First Church).—George Shaw Cook, Church Edifice, 6th and Lemon streets, 3 p.m., March 14.

Stockholm, Sweden.—Prof. Hermann S. Hering, Wicktoria Hall, Tunnelgatan 19, 7:30 p.m., March 13 (in German), 2:30 p.m., March 14 (in English).

Waco, Texas.—Col. William E. Fell, Carnegie Library, 12th and Austin streets, 8 p.m., March 19.

Washington, D. C. (First and Second Churches).—William R. Rathvon, Poli's Theater, 3:30 p.m., March 14.

Wilkes-Barre, Pa.—Bicknell Young, Irem Temple, 3 p.m., March 14.

Testimonies of Healing

I hope that my testimony may prove a blessing to some poor sufferer seeking for health and happiness. When I attempt to make plain what Christian Science has done for me, words fail me. For years I had suffered from a nervous breakdown and rupture, and after a long period of slavery to drugs, diet, and exercise, my condition was much more serious than at the beginning. I then tried a specialist, and after three months I seemed to be worse than ever, so much so that I could not follow my occupation in the mine. It was just at this time that I lost my mother, who seemed the only real friend I had, and I began to lose interest in everything and gave my case up as hopeless. My only desire was to put an end to things.

I began to ramble from one place to another, till finally I found myself one morning in a London shelter, homeless, friendless, and hopeless. It was then that I saw myself as I never had before, a complete physical wreck. Filled with despair, and seeing no hope, I began to study how to get out of my condition. I could think of nothing except the river to put an end to my difficulty, and as I sat there I tried to pray, when something prompted me to look up, and this has proved to me that "man's extremity is God's opportunity." As I lifted my head, my eyes caught these words written on the wall: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." I had seen these words before, but they never appealed to me as they did that morning. I thought there were a lot of things I needed, but no matter which way I looked, I could not get those words out of my mind, so I pulled myself together and said that whatever the consequences I would seek the kingdom of God.

Then began my search. I read every book or article dealing with religion that I could find. I attended religious services also, but could not get any satisfaction. I began to go back into the slough of despond, till one day I went into a library with the hope that I would find some words that would give me courage to press on. When I came across a copy of *The Christian Science Journal* I saw on the cover the words, "Heal the sick," and I thought, This is just what I want. Out of curiosity I began to read, and I read it over and over again.

As I began to learn of God in Christian Science, and of my relation to Him, only those who know the attitude of mind that I was in can understand the joy and peace that came to me. Christian Science pointed out to me that there is no poverty or disease in God's kingdom, and that man is God's perfect child. But what impressed me most were the words of Mrs. Eddy, "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). Having nothing else to lean on, is it any wonder that I tried to lean on "the sustaining infinite"?

I might say that I studied Christian Science for two years before I met a Christian Scientist, but in that time I proved it was the truth. Foods that I had feared to eat, I now ate with no bad result. A belt that was worn for rupture was thrown aside. I looked in the *Journal* to find where the nearest church was, made my way there, and though the service seemed strange to me, yet there was a feeling of peace not experienced before in any religious service. After the service I stood and watched the congregation, and I thought they were the happiest lot of people I had ever met. They seemed to have something I did not have, and I felt determined to get it. I was introduced to a Christian Science practitioner, and after a few weeks' treatment the words of our Master were proved true, "Ye shall know the truth, and the truth shall make you free."

I would like to tell of a beautiful demonstration during the course of treatment, for it proved to me that a grain of Christian Science will work wonders if rightly applied. One night while working, I was lifting some heavy weights, when a pain struck across my chest and something seemed to snap just like a cord. I tried to stoop, but could not for pain. I was thinking of going home, when I thought that here was a test for Christian Science. I began to put into practice what little I knew, repeating the "scientific statement of being" (Science and Health, p. 468), and then the thought came to me that I must not depend on matter, that God was my strength. As I held to this thought, all fear left me, and I resumed my work then and there; in fact, immediately afterward I lifted the weight that had caused the trouble. The week following, I met the practitioner and told him of my experience. He said that it was wonderful. Having been in medical practice he understood the case, and explained to me that apart from Christian Science this would have meant at least a month's rest under the best medical care. He said only spiritual help could have healed me so quickly.

I have since been healed of a serious eye trouble, though it was slow to yield. I often got discouraged and despondent, for it seemed as if the healing would never come; but it was a constant stimulus to greater effort for spiritual growth, which was sorely needed. I would like to say here that a month after my eyes were healed I had to pass a doctor's examination, owing to a change of occupation. I was examined from head to foot, my eyes were tested, and I was passed as perfectly sound. To say that I was thankful would be saying very little, for I was full to overflowing at the manifestations of God's great power at this time.

Although my growth has seemed slow, yet when I view myself as I was before I found Christian Science, and compare it with my life as it now is, I can only close my eyes to the picture and rejoice that I have been born again, and that I have daily been putting off "the old man with his deeds," and putting on "the new man." To me it has been a time of wonderful and happy experiences. I am truly grateful to the kind friends who have often spoken so lovingly, cheerfully, and encouragingly to me. When at times I have felt depressed, the truth spoken has given me many an uplift and helped me to go on.

For all these blessings, and the wonderful spiritual enlightenment which Christian Science has brought me, I am more grateful than I can find words to express. I am thankful to know that God is Love, and grateful to Mrs. Eddy, who has given humanity the wonderful understanding of God as All-in-all. I love Christian Science, and hope some day I may be worthy to be known as a Christian Scientist.

JAMES MEYERS, Hindley, Lancashire, England.

✧

I give my testimony in grateful acknowledgment of the many blessings which have come to me through Christian Science. I had suffered all my life from various ailments, and after many years of medical treatment without obtaining permanent relief, I turned as a last resort to Christian Science. I was healed within a short time of a supposedly chronic disorder of thirty years' standing by the faithful reading of our text-book, "Science and Health with Key to the Scriptures," and the Lesson-Sermon. Numerous forms of error yielded as my understanding of the truth became clearer, until now I can truthfully say that all former discordant conditions have completely vanished and I am enjoying perfect health. Fear and ignorance were the two great

Digitized by Google

obstacles to be overcome; constant fear of a recurrence of suffering, of which I had endured much and for which there seemed no relief, with ignorance of God's laws and of His infinite power and goodness.

God has indeed proved to be an ever-present help in times of trouble. Christian Science showed me the power of His protecting love and care when I was passing through what to a material concept would be a great sorrow. With the realization of the truth and the help of a faithful practitioner, I was enabled to meet with perfect calmness and assurance, and with an all-abiding faith in the Father's mercy, the loss of a dear one. This spiritual healing meant more to me than all else. It is my desire so to live each day that I may show "my faith by my works." My thankfulness goes out to God, and my gratitude to Mrs. Eddy for her courage in presenting to mankind the beneficent teachings of Christian Science.

MARGARET LUETGE, Pittsfield, Mass.

❖

[Translated from the German]

I am glad to tell others of the good that has come to me through Christian Science. Five years ago last spring my attention was called to this religion, and like the awakening of nature which seems to take place in that season of the year, so was new life awakened within my consciousness. Little did I know at the time of the peace and health which it would bring me, but I surely have been blessed abundantly through the new understanding of God and of the teachings of the Bible in the light of Christian Science. The recognition of the spiritual fact that God's creation is, like Him, perfect now and through all eternity, has lifted my thought considerably above the material and temporal and has eliminated from my consciousness many errors. It has healed me of so-called organic heart trouble and a stubborn bowel disorder which had resisted many material remedies.

Christian Science has been a great help to me in daily life as well as in my work, and for this I am very grateful. It is also a cause of great inner rejoicing for me to know that this teaching will increasingly bless mankind and establish the brotherhood of man on earth. I am deeply thankful to God, and grateful to Mrs. Eddy for Christian Science. The revelation which has come through her has made this age a blessed and memorable one.

JEAN MOSER, Zurich, Switzerland.

❖

It is with a deep sense of gratitude that I ponder over the innumerable blessings which have come to me and my family since taking up the study of Christian Science. My first healing was practically a complete transformation from invalidism to a normal condition, after having previously traveled the route of *materia medica*, operations, etc. Chronic bowel disorder, which resulted from a severe form of peritonitis, rheumatic conditions, chronic headaches, and other ailments, had been experienced with great suffering. Being a professional singer and teacher of music, I finally became disheartened when chronic asthma and hay-fever became manifest, so that I had to give up singing. Only those who have had such an experience can possibly realize the anguish produced by the loss of one's voice.

As a last resort, after being told by physicians that I could not live a year, I turned to Christian Science for help. I first began to read the text-book, "Science and Health with Key to the Scriptures," in the search for help for a loved one who had long been an invalid. I was wearing glasses all the time, but before I had read many pages in Science and Health I laid them aside, and have not used them for nine years. Later I had treatment for the other conditions, which were soon overcome, and for some years I have been blessed with most excellent health. The voice was restored also, and is better than before. One of my sons was completely cured of granulated eyelids of a most trying nature in only four treatments. Later he was instantaneously healed of a serious condition of the lungs, threatening acute lung trouble.

The healings have all been permanent, and in addition to those mentioned I have experienced untold blessings in many ways. I have rejoiced at a wonderful healing which took place in March, 1914, in our local Christian Science church. During the reading of the Lesson-Sermon a sense of growing deafness, which had been manifesting itself for several years and which had caused much pain and suffering as well as great inconvenience at times, as the hearing seemed to mortal sense to have been greatly impaired, was instantaneously healed, the hearing being completely and perfectly restored.

Recently our younger son was healed of a very serious attack of typhoid fever. It is my honest conviction that the case was so critical to material sense that nothing but the all-power of God as revealed in Christian Science could have healed him. Our older son was entirely relieved through Science treatment of an ulcer on the lower lid of one of his eyes. It had eaten through the flesh to the extent that the skin on his face was badly discolored and almost broken through. Despite the very stubborn thought on the part of close and interested friends that an operation of a most trying and delicate nature was necessary in order to save the eye and the sight, he was perfectly healed in two weeks' treatment by a Christian Science practitioner.

As Christian Scientists we have cause for unlimited gratitude for the loving help that is always at hand,—the blessed privileges of our churches with the impersonal Lesson-Sermons, the various committees on publication and distribution, our reading-rooms which are open to the public each day, where "without money and without price" one may read and study the literature, and the lectures, which ever carry messages of healing to the needy. A deep and sincere appreciation should go to our faithful and loving practitioners, who are the channels for many demonstrations and proofs of the allness of God's power. The publications are a wonderful inspiration and assistance to their readers, and the *Monitor* should receive a royal welcome into every home, since it stands as an evangel for good, and good only, and for progress along the various lines of business and social affairs, a veritable library of valuable information on all subjects which go toward making one well informed along essential lines.

LEDA C. STEELE, Muskogee, Okla.

❖

For two or three years I wore glasses when setting type or reading, the difficulty seeming to be a structural defect of the eye; then in 1902 a Chicago oculist said I must wear them all the time. I took his advice and wore glasses constantly for more than six years, but with very little satisfaction, as I was unable, after eight hours of work, to read a book or a newspaper more than five minutes without pain and smarting of the eyes. After my appointment to the government printing office, I was assigned to a dark room (in a building since abandoned), and in consequence was obliged to substitute a twenty-candle electric bulb for the sixteen-candle light I had. In February, 1908, through a neighbor who had been greatly benefited in a few weeks by Christian Science treatment for what had been called heart disease, I attended a Christian Science service for the first time, and began the study of "Science and Health with Key to the Scriptures." The following month I was enabled to

Digitized by Google

lay aside my glasses, and have never worn them since, except occasionally to read music. For the greater part of the past five years I have been engaged in proof-reading, now and then having to read fractions set in small type known as six-point, and sometimes readers wearing glasses have asked me to decide what a somewhat blurred fraction was. Shortly after I commenced the study of our text-book, all desire for tobacco, although I had indulged moderately for about sixteen years, left me, and it has not returned.

In the summer of 1908 our boy, then in his second summer and teething, was taken ill with severe bowel trouble. As my wife had great confidence in a certain physician (considered one of the best in Washington), he was called, and for a week he prescribed different remedies; but the child steadily lost ground from day to day, and fell away from a noticeable plumpness to an equally noticeable thinness. At the end of the week my wife asked me to see a Christian Science practitioner and request her to help the child. In half an hour after she came the little one was fed, and he retained the food for the first time in a week. He improved so rapidly that in a week or ten days he was the picture of health. We feel that we owe the boy's life to Christian Science.

For these and many other blessings we are indeed thankful to God, and grateful to our beloved Leader, Mrs. Eddy, who has shown us the way in Christian Science.

Cyrus F. Cook, Washington, D. C.

❖

As the mother of a large family, my heart goes out in love and gratitude to that good woman whom we are privileged to call our Leader, for all she has done for me and mine through her book, "Science and Health with Key to the Scriptures." When Christian Science found me, I was suffering from many ailments, among them a severe pain in my left side. This difficulty was of ten years' standing, and at times the pain was so great that it was almost impossible for me to sit still. I thought it best to take Christian Science treatment, so I sought the aid of a practitioner and was healed with one treatment. Through the constant study of the Bible and Science and Health I have been healed of many minor ills, and am now sound and well. I am no longer a sufferer, but rejoice in Christian Science; and my one desire is so to live that I may be a consistent representative of this wonderful truth. Christ's promise has been fulfilled to me, "Ye shall know the truth, and the truth shall make you free."

Kittie E. Howland, De Smet, S. Dak.

❖

I want to acknowledge with heartfelt gratitude some of the benefits we have received through Christian Science. Six years ago my husband was very ill with what is known as appendicitis. He suffered intense pain, could not eat, and was greatly reduced in flesh. The doctor insisted on an immediate operation, but instead, a Christian Science practitioner was called. The patient was soon relieved of pain and began to eat whatever he desired. In ten days from the beginning of the attack he was back at his work, and he has had no recurrence of the illness.

One month later the same practitioner was called to my bedside, and in half an hour a baby girl was born to us. The doctor said I would suffer several hours, but there was absolutely no pain whatever. About three years previous to this experience, what is called phlebitis developed in one of my limbs while receiving treatment in a hospital for chronic bowel disorder. The limb was swollen to almost twice its normal size and was very much inflamed, so that the suffering was intense. An operation was performed in three places and I was taken home in an almost hopeless condition. It was several months before I could use the limb at all, and longer still before I could bend it at the knee. Shortly after childbirth my other limb was attacked in the same way. Christian Science treatment was given immediately, and about the fifth day, while lying in bed on my back, apparently helpless, but trying to use the thoughts the practitioner had given me, I suddenly began to bend my limb at the knee. In a few more days I was walking across the room, and in a short time the swelling had gone down and I was free from the trouble. This was nearly six years ago, and the condition has not returned.

As to the child, she is in perfect health and has never taken any medicine. When about six months old her food did not agree with her; a very serious bowel trouble developed, and she was greatly emaciated. We took her to the city where the practitioner resided who had helped us so wonderfully before, and after a few days' treatment the child was normal in every way, and she has since gained rapidly in weight.

I cannot be thankful enough that this new-old truth has again been revealed to the world, and that we have a practical religion in this age, as in the beginning of the Christian era.—Florence Newburn, Edgewood Park, Pa.

❖

I want to testify to the healing power of Christian Science. Late in February, 1913, an abscess became manifest on the upper part of my limb. I had no idea what the trouble was, but there was much pain, fever, and a great sense of fear. As I did not feel able to treat myself, I called upon a Christian Science practitioner for help. In three days the pain was entirely gone, and the fifth day the abscess broke externally. It took two months to complete my healing; but with the exception of ten days, although the cavity was two inches long and very deep, I was able to do all my housework and take long walks besides. I was in perfect health all the time, eating and sleeping naturally.

As my healing was rather slow, I had much time for studying the Bible and "Science and Health with Key to the Scriptures," and for this I am grateful. The healing is permanent, and I am thankful to God, and grateful to Mrs. Eddy for this blessing, as well as for many others.

Mrs. J. S. Baley, San Francisco, Cal.

I desire to add my testimony to the one given by my wife. I can state that her cure from the abscess she speaks of was truly marvelous to one who for many years knew not of the healing power of Christian Science. I became interested in this practical religion about four years ago, and have proved its efficacy many times. I have been healed of facial neuralgia and bowel trouble, both of many years' duration, and various other ailments have disappeared. I was also able to stop wearing glasses, although I had worn them for twenty-two years, and oculists had stated I would never be able to do without them.

I want to speak in particular of an instantaneous healing which came to me shortly after arriving in San Francisco from the East. I was taken with violent cramps and neuralgia of the stomach, attacks to which I had been subject for years; but I was unable to overcome the trouble myself, though I worked for three days to do so. Finally, on Sunday night, the pains became so distressing that a great fear possessed me, fear that I was rapidly growing worse, and that the attack was more serious than any experienced before; so in desperation I asked my wife to telephone a practitioner, while I paced the floor and sank upon the couch alternately. Five minutes after the message was received by the practi-

Digitized by Google

tioner I stopped short, for the pain was gone. I could scarcely believe the healing had taken place, as it seemed to me so sudden and so marvelous. I waited for a moment, and then realized the great truth that I was free. To me the healing was wonderful, and that it has also been permanent, is proof to me of the unbounded power of Christian Science.

I wish to express my thankfulness to God, also my gratitude to Mrs. Eddy, and to the practitioners who are making the burdens grow lighter each day, and bringing happiness and health to all those who are willing to accept the truth.

J. S. Baley, San Francisco, Cal.

❖

A few years ago I had a very beautiful proof of the power of Truth to heal almost instantaneously. I was taken suddenly ill with what is called appendicitis, and a Christian Science practitioner was at once sent for. The pain was relieved almost instantly, and I was healed in a short time. I have also been cured of severe stomach disorder and granulated eyelids through the understanding of Christian Science. After becoming interested in this teaching, I soon learned that it is our ignorance of God which causes disease, sin, and death, and that in proportion as we understand the allness of God, good, these false beliefs are destroyed. I am truly grateful for this spiritual awakening and for the blessings I have received.—Nellie E. Mason, St. Joseph, Mo.

I wish to verify the statements made by my sister. The healing of appendicitis was a wonderful demonstration. I also desire to express my gratitude for what I have received through Christian Science. This truth has brought to me an understanding of what God is, and a purification of thought through which I have been healed of many physical ills. I know that Christian Science is the same truth taught by Jesus nineteen hundred years ago, and will eventually be so recognized by all.—Frank H. Mason.

[Written for the *Sentinel*]

Woman

Martha Webster Merrihew

The Father called His child. She, answering, stood;
Then inly-wise unfolding years fled straightly on,
Till youth timed her its measure and was gone,
And promise called at dawn of womanhood.

But lo, earth's promises disclosed but fears;
Much chastening she bore. Long yearned the pierced heart
Of her whom Truth had called apart
To purify; full measure fell of crystal tears.

Yea, outstretched hands seemed turned aside nor blest
Where, creed wise, many stumbled in the way
Of a conjectural and sense-dimmed day.
Her intuition clear benignity exprest;

Philanthropies she knew, neared comfort's art;
Of God divinest skill at length she learned;
Through gentle years, with thrust in sickle, she returned
Discomfort to its nothingness apart.

The path of one who, steadfast, comforted,
Awaits the tread of others living such
Sweet lives of sympathy and Christlike touch.
Wilt follow one who followed God where'er He led?

From Our Exchanges

[*The Living Church*]

The vision of the pure in heart sees the divine in ourselves, and sees it in others. It is so easy to see the bad in human life. Christianity is seeing the good which comes from the divine in the heart of man. The nearer one comes to God, the more of the divine he sees in man. The brotherhood of man in Christ is the brotherhood of the divine within ourselves. Christ did not reveal himself simply to show us what righteousness is or what God is, but to show men how they could be *righteous*, how they could be like God. He did not come with a message of despair, but with a message of hope. If a man of physical prowess should show to incurables the strength of sinew and muscle, he would carry to them nothing but disappointment. Christ came not only to reveal perfect righteousness, but to show how we can become righteous. He came not only to reveal God in man, but to show us how our divine life is to grow until we become like Him.

[*The Christian Register*]

There is danger that in the religious world there will be something like a freshet, in which all ecclesiastical rigidities will be broken up and in a destructive flood swept down the current of human life, destroying many precious things which will not easily be replaced. The break-up of institutions is inevitable, and it behooves our spiritual guardians to see to it that the destruction is not too great. Some precious things like those destroyed at Rheims and Antwerp can never be replaced. Sentiments, customs, and traditions, hallowed by a thousand tender associations reaching through the centuries, will be rudely shaken, but it may be possible, if religious leaders will put away ambition, pride of place, theological odium, and traditional formalities, to keep alive sentiments, hopes, and sanctions such as have built themselves into the religions of the past.

Religion and morality are active forces in every form of ecclesiasticism which has been an important element in human progress. The religious leaders of the future who will exert power in the right direction must put aside every aim and purpose which does not assist in the building of the new temple of a redeemed humanity in which religion and morality will be freed from all impediment.

[*The Watchman-Examiner*]

It is shameful for us to be ignorant of our Lord's teachings, and yet many among us know almost nothing about the book which our Lord has given us for our instruction in spiritual matters. Ignorance is not simply a misfortune, it is really a crime. The church of God may be charged with unpardonable sloth in the study of the Scriptures, which are able to make us wise unto salvation. If our Lord were to speak to us now, taking for granted a knowledge of his former teachings, many of us would have to cover our faces, for we are criminally ignorant.

[*The Universalist Leader*]

We are continually missing the truth and worth of other lives, because we are continually looking for the bad in them instead of the good. It is a habit we form early and continue late, and thus shut ourselves out from much if not most of the joy of living. Of course other people are different, and for that we should be thankful; for what could be worse than a world full of people just like us! The other people are failing, it may be, where we are succeeding, but not less are they succeeding where we are failing. Their sin is so awful to us

Digitized by Google

because it is different from our sin! We are quick to excuse our own wrong and cast the responsibility upon another, or upon conditions. Why can we not apply the golden rule of judgment, and judge others even as we would that others should judge us? We have some very good traits, to which others often seem very blind; not less have the people all about us something good, which we can find if we look for it. There is something of the Christ in every human soul—"Seek, and ye shall find."

[*Zion's Herald*]

There are times when we fail, though we console ourselves with the thought that we have tried. If the truth were stated, we should really find that we had tried but feebly, if at all, and that it was because we had tried so half-heartedly that we had failed. When we really try, we do not fail; to try is to win a victory nearly every time.

Trying is trying; it is nothing less. To play with temptation for an instant, is not to try. To fail to fortify ourselves, either through inertia or negligence, with all the helps which are offered, through our knowledge of Christ and our intercourse with our fellows, is to deny ourselves the right to say that we have tried. To be selfish or petulant or unloving or impatient in the front we show to the world, or to be indifferent or lukewarm in the efforts we put forth in behalf of any good work, is to miss the God-given privilege of trying.

Trying calls for stout hearts. It calls for effort of a persistent and painstaking brand. It calls for energy, tempered with wisdom and love. It calls for—no! it demands that our faces shall be forever turned toward the sun. To stop, to falter, to look back, for an instant, is not to try; it is to fail, and to fail because, to our shame, we have not tried.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Never shrink from the unknown again; it is better than the known. Never be afraid of what is undisclosed; it contains greater blessing for you than in your highest moments you have ever imagined. Anticipate what you will, you will never outdistance God; picture what you please of the glory that is to be, you will never get beyond the reality—you will never get up to it. How people worry about what never comes! How they fear and tremble lest they should be expecting too much from the bounty of God, fretting themselves as to what He means to do! You have never yet come anywhere near to an estimate of what He has prepared for them that love Him.

[*The Christian Intelligencer*]

We are living in a day of judgment. It is likewise still a day of grace. But the salvation of our civilization and of us men lies in restoring the worship of God. This age has had and still has many "other gods." The gods of self, of power, of pleasure, of lust, and of money, receive homage and worship before the only true God. This practice must cease. We cannot permanently kick against the pricks. We cannot forever trample on God's day and God's book and neglect God's house. Religious indifference has omnipotence arrayed against it.

[*New-Church Messenger*]

A man's enemies are "they of his own household," his own affections and thoughts. These are the enemies that can do harm to the soul and to the eternal life. The greatest of these foes is self-love, and its strongest and most inveterate form is the love of dominion for the sake of self. Humility is the priceless virtue that it is, because it is opposite to the love of dominion.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Friede auf Erden" ("Peace on Earth"), a new German pamphlet containing translations of three articles on this subject, is now ready for distribution.

"Then the Full Grain in the Ear." This pamphlet contains three articles dealing with *The Christian Science Monitor* and its mission.

Both of these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 864 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second class matter.

Items of Interest

That five million acres of non-agricultural land should be secured by the federal government in the southern Appalachians and six hundred thousand acres in the White Mountain region of New England to form national forests for the protection of the watersheds of navigable streams in the East, is urged by the national forest reservation commission in its latest report. The commission has approved for purchase so far, 1,104,529 acres in New Hampshire, Virginia, West Virginia, North and South Carolina, Tennessee, and Georgia, in accordance with the Weeks law, which appropriated eleven million dollars for this work, though only about eight million will have been spent by July 1, when the appropriation will expire. A further appropriation, providing for continued purchases until 1920 at the current rate of two million dollars a year, is recommended by the commission. Under the terms of the Weeks law, passed March 1, 1911, one million dollars was made available for expenditure prior to July 1 of that year and two million annually thereafter for five years. Because of the time required to examine and survey the lands and negotiate with owners, the expenditures in the early years of the work were less than the amounts appropriated.

The lands thus far approved for purchase have been obtained on what are regarded as very reasonable terms. The average price is $5.03 the acre, involving a total expenditure of $5,560,202.21, exclusive of the cost of examination and survey. About one third of the area is virgin timber land, and while most of the remainder has been cut over or culled, much valuable timber is standing on it also. In 1914 the purchases approved comprised 391,114 acres at the relatively low price of $4.96 the acre. Areas in which land is to be purchased have been designated also in Alabama, Maine, and Maryland, but no purchases in these states have yet been approved by the commission.

Many of the tracts which are being acquired, says the report, present attractive scenery and afford delightful places in which to travel or rest. Some of the most attractive spots have been inaccessible, but the roads and trails which are being built by the forest service will make it easier to reach them. Persons who desire to occupy permanent camp sites, or places in which to erect resorts, may obtain them on payment of a moderate fee.

The forest service has already begun to make improvements. Ninety-two miles of roadway, five hundred and twenty miles of trail, and twenty-five miles of telephone line have been constructed. This work can be still further extended as soon as proceeds from timber sales begin to come in, as 10 per cent of the forest receipts is specifically set apart by law for road and trail construction. Not only will the localities affected benefit in this way, but it is provided by law also that 25 per cent of the forest receipts be paid over to the counties affected for roads and schools.

President Taft's withdrawal of oil lands in California and Wyoming in 1909 without empowering legislation has been upheld by the Supreme Court, and entry claims of individuals and corporations valued at hundreds of millions of dollars were annulled thereby. President Taft withdrew the lands as a conservation measure, and on June 25, 1910, Congress passed a law ratifying his action. Oil corporations, principally, entered many tracts between the two dates and have resisted attempts of the government to put them out. The government defended the withdrawal, partly as being for the purpose of preserving an oil supply for the navy. Justice Lamar announced the court's decision, from which Justices Day, McKenna, and Van Devanter dissented. The retention by the government of very valuable oil lands in California, Arizona, Wyoming, Utah, and Colorado is confirmed by the decision.

The problem of unemployment may be solved for a part of Chicago's idle population by the offer of the sanitary district to throw open fifteen hundred acres of tillable land in the vicinity of the city to the unemployed and to the partly employed residents of the municipality. The land is not now usable. Some of it would have to be drained, fertilization would be needed, and seeds would have to be secured, together with agricultural tools. The City Gardeners Association has named a committee to inspect the land and report on what opportunities it offers. Tentative offer of the necessary tools has been received by the association, and the government is expected to furnish the seeds. The clearing of the land would give immediate employment to a large number of men.

There is need, says the chief forester of the United States, to increase the cut of timber from the national forests wherever a fair price can be obtained for the stumpage, because a great deal of it is mature and ought to be taken out to make room for young growth. Unfavorable conditions in the lumber trade caused new sales of national forest timber to fall off somewhat during the past year, although the operations on outstanding sales contracts brought the total cut above that of the previous year by one hundred and thirty million board feet. All told, the government received $1,304,053.06 from the sale of timber on the forests in 1914. The receipts from all sources totalled $2,437,710.21.

Since 1909, when systematic classification of national forest lands of the United States was begun, more than ten million acres have been eliminated. Scattered interior tracts which it is not practical to eliminate, are opened to settlement through listing, which allows them to be taken up under the forest homestead law. Any one may apply to have land within a forest examined to determine whether it is best suited for agriculture, and if found so it is opened to settlement under this law. During the year, 2,690 tracts, totaling 282,483 acres, applied for by individuals, were opened for entry.

The exploitation of Finland's large water-power has several times been under discussion and various schemes have been put forward, but none of the important projects having so far been realized. At present the exploitation of the large Vuoksen falls is being seriously considered. At the instance of the government a committee was appointed, and two well-known Swedish experts were instructed to examine and report upon the falls in question. According to their report the Imatra fall could be exploited with a capacity of about 86,000 horse-power, at a cost of about 20,600,000 Finnish marks, and by damming the Linnakoski, situated higher up, a capacity of some 115,000 horse-power could be reckoned upon at a cost of 26,600,000 marks.

A small claims court, in which a creditor without means to employ counsel may bring his debtors to account, has been created as a branch of the Chicago municipal court. The judge, according to the present plans, will act chiefly as referee, and the court is expected to provide an opportunity to a creditor to collect small claims, which under former conditions would have been consumed in attorney's fees and court charges. Claims of more than thirty-five dollars will not be considered. Although lawyers will not be debarred from practice, the court itself is expected to question both parties to each suit and to substitute the judicial for the controversial atmosphere.

Senator Newlands has introduced a bill to empower the interstate commerce commission to examine all papers of a common carrier, including correspondence. It would amend the law to meet the Supreme Court's decision that the commission has not the power to make such inspection.

The world's record for ski jumping has passed from America to Norway. Rasmus Omtvedt, the Chicago professional, whose leap of 166 feet at Ironwood, Mich., established a world's record, Feb. 16, 1913, was outjumped by Anuble Omundsen of Christiania recently, when he jumped 177 feet on the Eker Ski Club slide.

The industrial relations commission will take up land problems, beginning with a Dallas, Texas, hearing, March 15. Matters to be considered include the tendency toward ownership concentration, rent increases, growth of class feeling, and the interracial competition between Mexicans, negroes, Europeans, and native whites.

The legislative committee investigating the telephone situation in New York has forwarded to the Legislature a report recommending changes in the public service law designed to bring telephone companies within the scope and under the supervision of the public service commission.

A contract has been made for the delivery of four hundred and fifty thousand barrels of fuel oil, the estimated requirements for the Panama canal during the year.

Since the Panama canal was opened on Aug. 15, it has earned $1,966,137 in tolls. The total tonnage to Feb. 1 was 2,492,856.

Norwood, Mass., which adopted a commission form of government last fall, has appointed a town manager.

Educated Narrow-mindedness

HON. CLARENCE A. BUSKIRK

IGNORANCE is the father of narrow-mindedness and the grandfather of intolerance. The more limited their mental horizon and the more impoverished their mental environment, the more flagrant usually are the narrow-mindedness and intolerance of the ignorant. Such was the attitude of rulers in Jerusalem who were forced to admit the wonderful healing of the lame man by Peter and John; yet they contemptuously characterized the apostles as "unlearned and ignorant men," because the knowledge which these apostles possessed was beyond their ken, though they claimed for themselves a profound knowledge of divine law. Mrs. Eddy makes a telling plea for Christian Science when she says, "Give to it the place in our institutions of learning now occupied by scholastic theology and physiology, and it will eradicate sickness and sin in less time than the old systems, devised for subduing them, have required for self-establishment and propagation" (Science and Health, p. 141).

Ignorance is worse than illiteracy. Frequently those who are literate must be classified as really ignorant. There is a marked tendency of those who are truly educated to become humble; for none are so keenly aware as they how limited are the boundaries of human knowledge. Self-complacency, however, is too often the brand of literate as well as illiterate ignorance; and the literate ignorance seems, as a general rule, to be more stubborn and difficult to influence than the illiterate. Besides, there are some branches of study which, when a person permits himself to deal with them too exclusively, narrow instead of broaden the mental horizon, even as would a lifetime devoted entirely to hard labor.

Such a person may have been inclined at the start to be broad and liberal in his view-points, but gradually and surely he gets into a few ever deepening ruts of rule and formula; and it comes to pass with him that when anything falls under his impatient attention which his rule and formula cannot measure or estimate satisfactorily to himself,—such, for instance, as the teaching of Christian Science,—he proves himself to be pitiably narrow-minded and intolerant. And his bigotry seems too often to be mimicked by those who are disposed to admire him and who seek to pursue his particular pathway. Some of those who have studied and practised *materia medica* for a long time, even though ranked with the intelligent, well illustrate this fact. The basis of their profession is materialistic, and their habits of observation and reasoning are therefore likewise materialistic. Gradually and surely they get into ever deepening ruts of materialistic thinking, and thus often become wholly irreligious.

The materialistic drug physician, following his rule and formula, deals with man as an animal of a higher grade, and does not need, according to this rule and formula, to do otherwise than ignore God in his work. It is scarcely to be wondered at, therefore, that many representatives of the drug profession contemptuously shrug their shoulders when Christian Science is mentioned, because its methods and means, being wholly mental and spiritual, are not to be measured or estimated by the particular square and compass to which these physicians have become accustomed. They have grown to be narrow-minded, because their specific education has narrowed instead of broadened their mental horizon. Of the things "which are seen" they have tried to learn, but their business has left them in ignorance of the things "which are not seen," and their vision is correspondingly limited with respect to everything connected therewith. There are many exceptions which are notable, where the greater breadth and higher altitude of mental and spiritual outlook could not be seriously narrowed or lowered by false education, and the instances illustrating this fact are steadily growing more abundant.

In a book entitled "Memories and Studies," published in 1911 by the late Professor James, who for many years had filled with great distinction the chair of psychology at Harvard, the author quotes a prominent medical man in England as having said to the British Medical Association that "the best sleep-producing agent which his practice had revealed to him, was prayer. I say this, he added (I am sorry here that I must quote from memory), purely as a medical man. The exercise of prayer, in those who habitually exert it, must be regarded by us doctors as the most adequate and normal of all pacifiers of the mind and calmers of the nerves. But in few of us are functions not tied up by the exercise of other functions. Relatively, few medical men and scientific men, I fancy, can pray. Few can carry on any living commerce with 'God.' Yet many of us are well aware of how much freer and abler our lives would be, were such important energizing activities not interdicted by the critical atmosphere in which we have been reared. There are in every one potential forms of activity that actually are shunted out from use."

It is surely a good thing that such illuminating rays should find their way into the zealously guarded domain of so-called "medical science." It is a most excellent thing that such views as the above appear now and then, and that some men are broad enough and brave enough to discover and declare the needs of students in this field, so that the self-satisfied may be made to see that "there are more things in heaven and earth" in their philosophy "than are dreamt of." On the other hand, there are large numbers of physicians who are capable of earnest, self-searching work, and whose mental breadth and outlook cannot much longer be sealed up, as confessed in the excerpt, by the influences under which they have been reared. They have discovered that the critical atmosphere of materialism and agnosticism tends to produce an atrophy of the religious nature which negatives prayer and hinders a "living commerce with 'God.'" The further discovery can but soon follow, that "prayer," the true prayer rightly made, not only is "the most adequate and normal of all the pacifiers of the mind and calmers of the nerves," but likewise that it can energize all the functions of both mind and body into healthful and harmonious activities as no insensate drugs have ever done or ever can do.

May that glad hour soon strike! Then the erstwhile materialists among medical and scientific men will emerge from the critical atmosphere which has been stifling them,

Digitized by Google

and walk free-born in "the glorious liberty of the children of God." Then will they gratefully manifest the "potential forms of activity that actually are shunted out from use," and they and all the children of men be able to utter the words of Ulysses,—

> No pent-up Utica contracts your powers,
> But the whole boundless universe is yours.

Peace and Peacemakers

FLORENCE G. MERROW

To the majority of people, the first thought of a peacemaker calls to mind a person of serene temperament, one who seeks to replace discord with harmony, and to bring about amicable relations between individuals or nations. It may be a self-sacrificing mother who, to "keep peace" in the family, shields her froward child; it may be a friend who never makes objections, or advances any differences of opinion; or a worker in public life who is not aggressive, never takes the initiative, never raises questions, but tactfully avoids all controversy by accepting the opinions and judgment of others, though he may not fully agree with them, and may even think he sees a way by which present methods might be improved. But upon further reflection, we find that smoothing things over in this manner is but the temporary stilling of the storm; it is the mocking cry of mortal mind, "Peace, peace; when there is no peace," and may bring stagnation to progress, prove fatal to the demonstration of divine Principle.

Peace is defined as a state of quiet or tranquillity; calm; repose; absence or cessation of war; general order; a state of reconciliation; concord. From this it follows that the peacemaker is one who makes peace by eradicating fear, selfishness, and sin, all of which are destructive to harmony. This cannot be accomplished by the mere use of tact, diplomacy, or approbation in one's association with the world, by yielding to the stronger will or submitting to wrong conditions, for these methods do not reach the cause of the discord; hence they are but palliative. More than this, they make the "last state" of the offender "worse than the first." Peace can never be established by overlooking, but by overcoming error; and this can be done only by beginning at the root, or first cause of the trouble.

Back of discordant conditions individual forces are often found to be operating through selfishness. The true reformer is the one who sees the error and seeks to correct it at the demand of justice, observing the golden rule, uncovering error in the spirit of love, and for the sole purpose of removing it, of righting wrong. He is thus equipped with the most powerful weapons for the warfare against evil forces,—weapons which are "not carnal, but mighty through God to the pulling down of strong holds."

It was once said of one who endeavored to have everything that he did as nearly right as possible, and required the same of others, that he was a crank. The person to whom the remark was made, replied, "The machinery of the world is kept running by cranks." The common concept of cranks is far from that of peacemakers; but if those people who do not pass over careless mistakes, indifference to duty on the part of others, or accept imperfect work, but who require efficiency, justice, right, fair play,—if these are cranks, then we are faced with the paradox that cranks are peacemakers, for the work of both is essentially constructive.

In Science and Health Mrs. Eddy says, "It requires the spirit of our blessed Master to tell a man his faults, and so risk human displeasure for the sake of doing right and benefiting our race" (p. 571). But one can never overcome the effects of his own or other people's errors by indifference to them. Is not dis-ease in error, therefore, preferable to ease, since discomfort from sin is better adapted to deliver one from its effects than content therein? It is obvious, moreover, that in any case of questionable methods, the better way is to discuss the matters in question, thus furnishing opportunity whereby the issues may be justly settled.

So long as a lie can exploit itself for truth, it remains hidden in ambush; but like the serpent which it is, when its falsity is seen,—the truth about the error is made known,—it springs forth from its hiding-place, and makes a last desperate fight for power by turning the lie on the one who dealt its death-blow, who, it would say, is the cause of all the tumult. Then ensues a battle for truth; but the champion of truth is protected by Truth, which also gives him courage and serenity in the face of attack, and if he holds his ground until the sky has cleared he will perceive his victory. He needs wisdom to know when to speak and how to speak, and must himself adhere strictly to the fundamental truth for which he stands, since "the ideal leader is the obedient follower."

In the breaking up of material beliefs, the "cleansing upheaval" referred to by our Leader in Science and Health (p. 540) as the divine law "stirring up the belief in evil to its utmost, when bringing it to the surface and reducing it to its common denominator, nothingness," seems to be not peace, but a sword; and from the material point of view it would at times appear that we as individuals can do little toward quelling the tumult. To the Christian Scientist, however, who knows that the conflict is not with individuals, but between truth and error, such a chaotic state of affairs is but the interval between the uncovering of errors that have been allowed to rule, and the right adjustment of conditions. He knows that because Truth is infinite, supreme, error is powerless. It can destroy no part of Truth, Life, or Love; it can do nothing but spend itself. He knows also the value and power of right thinking; that it alone is intelligent; that no idea of Truth can ever be lost, but every idea which goes forth makes for peace in the ratio of its truthfulness. Thus with the aid of this most powerful equipment, right thought, all may aid in the ultimate demonstration of peace, which has its beginning in the individual consciousness.

"Lack of time"

EDWARD G. WRIGHT

AT stated times new boards of directors are elected in our churches, new committees formed, and members of the churches are appointed or elected to serve in the several positions and branches of the work; therefore it is right and also our duty to hold ourselves ready when called upon, and willing always to do what we can, either as members or officers. Christian Science organizations are growing rapidly in every part of the world, and not only does the church work require our metaphysical support, but as students of Christian Science we have need of that spiritual broadening and uplifting which we receive when we enter into active service.

"Lack of time" is an argument of error which might be voiced by some of us, if we are not ready to refute it and ever watchful to "stand porter at the door of thought" (Science and Health, p. 392); but divine Love will never allow us to think that we have been asked to do something beyond our power, for we know that "with God all things are possible," and that we, as children of God, know no limitation. We must know, too, that God rules us, and when we are needed in some branch of the church work, if we realize that divine Mind is governing us, we will find it possible to

Digitized by Google

perform lovingly any act which will aid in uplifting mankind to a better and grander understanding of Truth.

"The harvest truly is great, but the laborers are few: pray ye therefore the Lord of the harvest, that he would send forth laborers into his harvest." These words of our Master may be applied very appropriately to the present conditions in our steadily increasing churches, and fortunately there are requirements enough which make it possible for all to have the opportunity of taking some active part in this harvesting. It has been the experience of those who have had the privilege of holding office in the church, whether elective or appointive, that they themselves have received greater blessings than were anticipated, and they have become richer and stronger in the knowledge and spirit of Christian Science. After becoming actively engaged in the church work, many mortal and material activities which before had been thought important, and which were taking up valuable time, were in several instances found to be non-essentials, and those fundamental truths which are spiritual and eternal have been brought to view, making it possible to demonstrate higher proofs of the Christ-power.

In Science and Health (p. 79) Mrs. Eddy says, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us." These words apply as much to the giving of time as to anything else; therefore we must not allow ourselves to entertain thoughts complainingly of how much we have to do. The parable of the five talents teaches us to make good use of our opportunities, also that those who are given the most to do are generally the ones who produce the required results. On the other hand, if we make no use of our opportunities and abilities to serve the Master, we are apt to be failures in his vineyard. The servant to whom was given the five talents might have said to himself: "Why did not the master give me but one talent? That servant with only one talent has it the easiest, and I am going to be too busy to take care of all this." There is no record, however, of complaint or of fear to take the responsibility, excepting from him to whom was given the least to do.

That beautiful poem by Archbishop Trench, "Make Channels for the Streams of Love," which may be found in the Christian Science Hymnal (p. 89), expresses what should be the object and desire of every Christian Scientist, and the third verse may well be considered here:—

> For we must share, if we would keep
> That blessing from above:
> Ceasing to give, we cease to have,
> Such is the law of love.

Our Sunday schools give us an excellent opportunity to be "channels for the streams of love," and for the metaphysical advancement not only of the scholars, but of the teacher also; for new truths are ever unfolding, which are brought to view when studying the Lesson-Sermon in keeping with the wise counsels given us in the Manual of The Mother Church. Between the teacher and the scholar there is an acquaintanceship formed which has been the means of correcting a mistaken thought in the minds of some of the parents regarding Christian Science, for our pupils are not all from homes where the truth is known and practised. Likewise, the distribution of our literature offers great opportunity to garner the harvest and win adherents to Christ. The last few years have seen Christian Science periodicals placed in the hands of thousands with beneficent effect. Many persons in this way have learned for the first time what things "God hath prepared for them that love him." Committees are working judiciously, and great good is being accomplished; but the future is before us, and there is more to be done, for the Christian Science cause is progressing, and these committees need our help and support.

Then there is the reading-room work. What a great privilege we have in being able to help maintain these places where people may go and acquaint themselves with God and be at peace; where they may refresh the human sense with spiritual truths and rid it of mortal and material beliefs! Many beautiful demonstrations are witnessed every day in these quiet sanctuaries, where physical manifestations of inharmony and incapacity have been overcome by the healing power of Truth. The thought that there is a lack of time in which to assist in the several activities of the church work, or that one should wait until she or he has had more experience, sometimes means that there is a lack of interest. The church work is a means of preparing one for higher advancement. Should a child wait until it is advanced before starting to school?

When we consider the heaven we have already gained by knowing the truth, and the many blessings we have received, all because of the untiring efforts of our Leader, all we can possibly do for God in spreading the gospel of Christ is not enough. Let us therefore labor willingly, without thought of reward, knowing always that time or its alleged laws can never hinder or limit the expression of good.

Joy

LAURA GERAHTY

It has been said that the expression of joy "is the peculiar privilege of the true Christian Scientist." Joy, the sweet and natural expression of the change in his mental home, of the perpetual recognition and realization of omnipotent good; joy, gentle yet uncontrolled, unmeasured even by the gratitude he feels for his health, the quiet peace which pervades and permeates the home, the office, and even the sick-room! Joy, that gentle presence which though it may not instantly silence the cry of the fatherless child or fill the empty chair which speaks his mother's sorrow, yet dwells within the quiet walls of the place called home, and silences every doubt and fear that would rise to destroy its harmony!

There is an intimacy between the student of Christian Science and joy which is almost unapprehensible to some. Joy knocks boldly at the door which appears to the outsider as bolted and barred against everything but sorrow and distress. The door is opened willingly and hopefully, fearlessly and hospitably, for the Christian Scientist has demonstrated that the iron bands of mortal belief yield to the gentle force of prayer. Once within the threshold, that gracious presence is likely to be an honored and long welcomed guest; and as time goes on, its departure is out of the question, not even dimly contemplated.

Joy is often quite unrecognizable to those who have not offered it hospitality, and one may say: "Oh, but you have your troubles just the same as we. You lose your dear ones; you are poor; you are attacked by sickness or malice," and so on. Yes, these mortal beliefs present themselves, and are felt or suffered just in the proportion that the human consciousness entertains them. At such times the faithful Christian Scientist turns to the Bible to read, "My joy I leave with you," or to Science and Health to read that "joy cannot be turned into sorrow, for sorrow is not the master of joy" (p. 304), and then he does what St. Paul counsels when he says, "Rejoice evermore."

The kick from a horse is just the same, whether directed to the bark of a tree or a man's tender skin. The difference lies only in the reception of that kick, the consciousness upon which it operates. The belief of death is operating continu-

Digitized by Google

ally in mortal thought, but we do not suffer from its seeming power until it attacks ourselves in our homes or by coming under our immediate notice, and then is the time to prove that joy is the natural heritage of man, abundantly and continuously flowing from the great fount of Love. If we do not avail ourselves of the draught, it is because our own lips are closed, not that it has ceased to flow for us. Sorrow and grief are the negations of reality, the absence of light and joy; pain and loss are but beliefs of mortal mind, the absence of the absolute knowledge of the allness of God, good.

Jesus, so often termed the "man of sorrows," is better understood as the man of joy. Did not his whole career radiate the joy and freedom of oneness with the Father? Did not his every action give out joy to the object of his ministration? "Be it unto thee even as thou wilt;" "Arise, take up thy bed;" "Ephatha," or "Be opened," to the closed eyes; and so on all through the gospels. And those who follow in his footsteps, however feebly and faintly they may imitate his example, must necessarily participate in some measure in his joy, for he said, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full."

Efficiency

GEORGE SILAS HADDOCK

WE hear much of the word efficiency, these days. Lectures are based upon it. Preachers use it for a text. Magazines utilize it to express all that is worth striving for, and then try to point the way to its attainment. Classes on the subject are given to their salesmen by enterprising business houses; while correspondence schools solicit patronage and promise much to those who desire to gain this marvelous thing. Efficiency may be said to be the slogan of the moment.

Now, efficiency in itself is a wonderful thing and well worth striving for. It means the ability to produce results; the competent and effective application of knowledge. It stands for capability, activity, accomplishment, summing up in one word all that stands for successful achievement. But the question arises, Is the teaching usually given on this subject correct; is it on the true basis? A close analysis of the methods in vogue and the lines mainly followed, reveals a dependence upon and utilization of the human will, until in many cases it could only be classified as hypnotism or mental suggestion. True efficiency was taught and demonstrated by Jesus of Nazareth, and his wonderfully effective work was not based upon the human will, for he distinctly said: "Not my will, but thine, be done." "The Father [Mind] that dwelleth in me, he doeth the works." Neither did Paul depend upon the human will to force its way, whether or no, for he wrote in his epistle to the Corinthians, "Not that we are sufficient of ourselves to think anything as of ourselves; but our sufficiency is of God."

Christian Science today is teaching true efficiency. Its Discoverer, Mrs. Eddy, discerned the secret of the power back of the mighty works of Jesus, and gave it to the world in "Science and Health with Key to the Scriptures" and her other writings. The faithful student of Christian Science has every opportunity to become truly efficient. He knows, as did the Master and Paul, where real power lies, and that he must place full and complete dependence upon divine Principle, the one Mind. He also knows that he must strive earnestly to set aside the human or carnal mentality, well knowing it to be the seat or parent of all discord and failure. He understands that nothing from without a man can harm him, but that which cometh out of his own thought. He is not, therefore, a trembler before external conditions, but a zealous worker at the task of purifying his own thinking. He is a law unto himself, and is not subject to material conditions, but controls them; he is not in bondage to circumstances, but governs them. With the psalmist, his trust is in God, and he knows God not as a far-away ruler but as ever-present good, infinite Love.

To do as he would be done by is the Christian Scientist's rule of conduct. He does not strive to force his way for the purpose of making a sale, or swelling a total, or of having a large practice. His prayer is that all concerned shall be guided only by Truth and Love. He never "wills," but leaves all to the Father's will. He has faith that Truth will fight the battle, and is aware that no good comes from the endeavor to dictate the course to be pursued. He honestly states his case, and has confidence in his position. He knows that divine Love never takes from one at the expense of another, but blesses all alike.

In this safe place care is left behind, but not alertness to duty; worry is forgotten, but not diligence or perseverance; anxiety is dropped, but not one's inspiration; fear is lost, but not the joy of endeavor. Success shines upon his path, for divine Love, ever present to his consciousness, "cannot be deprived of its manifestation, or object" (Science and Health, p. 304). Lifting up the true idea, or Christ, as did the Master, all men are drawn to him. He knows what substance is, what constitutes true wealth and power, and he gives the glory to the all-knowing Mind, in whom he lives, moves, and has being. He is willing to have the human give way to the divine, till the divine takes full possession, guiding every step, supplying right ideas, lighting up the way. He knows that to "individualize infinite power" (The First Church of Christ, Scientist, and Miscellany, p. 160) is the very essence of true efficiency; therefore he is satisfied.

"Sunlight of Truth"

GRACE KNOX COOPER

THE question is often asked by those inquiring into Christian Science, How can God heal if He knows nothing of error? Last summer a simple illustration clearly unfolded to my consciousness the answer to this inquiry.

The children in the home had darkened the cellar windows in order to have lantern-slide pictures, and soon after this we went away for a few weeks, forgetting all about this fact. Upon returning home, however, we found the cellar damp and dark, but after removing the coverings from the windows and letting in the light, the darkness disappeared, and soon also the dampness. The sun did not need to know of the discordant conditions in order to remove them, but as soon as there was an opening for its rays to penetrate, conditions changed. This led me to see that divine Love does not need to know the falsities and discords in human consciousness in order to heal them, but as thought becomes receptive to the truth about God and man and is thus flooded with the true sense of being, fears and doubts disappear like mist before the morning light.

Mrs. Eddy makes this plain where she writes in Science and Health (p. 162), "Christian Science brings to the body the sunlight of Truth, which invigorates and purifies." As the glorious light of Christian Science unfolds more and more to our awakening thought, we long to go higher, thus getting clearer glimpses of this "sunlight of Truth," and finding our way "out of darkness" into God's "marvelous light." In the sixth beatitude Jesus in a clear statement describes the only way to this attainment: "Blessed are the pure in heart: for they shall see God."

[Editorial in *Lowell* (Mass.) *Courier-Citizen*]

Christian Scientists did the handsome thing by sending a check for five hundred dollars to the First Baptist Society of Malden to help rebuild its beautiful church destroyed by fire. Religious denominations of all kinds are more charitable to one another today than they used to be, and that fact has been conspicuously illustrated in the Malden case. The Scientists, the latest among them, were the first to show that "money talks," though all the religious societies in the city hastened to express practical sympathy.

❖

[Editorial in *New York* (N. Y.) *American*]

The report from the judiciary committee to the Assembly, of the Thorn bill legitimatizing the practice of Christian Science in New York, is a first step in the right direction.

There are, as is generally known, hundreds of Christian Science practitioners in New York state today ministering to the needs of several hundred thousand people who hold that faith. Their position before the law regulating the practice of medicine is, however, ill defined, and they practise under toleration until their exact status shall be fixed, either by new legislation or by the final interpretation of the existing law by a court of last resort.

The numbers and standing in their home communities of the believers in Christian Science today exclude the argument that their cardinal precept of healing disease without material means is to be discarded as a mere vagary. The enormous volume of testimony to the efficacy of their method of treatment condemns the state that would attempt to outlaw its practitioners.
