Much has been said about neutrality, and we know that there is only one way to be neutral. The activity of the Christ shows us the way, and there is no other. The neutrality of Spirit reflected by man is the understanding of Truth, and we know that Truth alone can overcome evil. Our Leader tells us (Science and Health, p. 340) that "one infinite God, good, unifies men and nations; . . . ends wars." In the belief of mortal mind, war is only an outward expression of anger, hatred, malice, revenge. All of these are unknown to the purity of divine Mind and its infinite manifestation; they are unknown, unreal, untrue. Spiritual man is the only man there is and that man is immortal, the true image of divine Love, manifesting liberty and freedom in his pursuit of the understanding of the Christ. Christian Scientists must be more active than ever, must "at all times and under all circumstances, overcome evil with good" (Science and Health, p. 571).

We are marching to the rhythm of Mind, and we know that we cannot be separated from the divine Mind, from divine Love. Let me remind you that we should not fail to recognize the claims of evil as false, and never to impute them to person. It is too easy for mortals to claim that the person is evil; but that is not true. The claim of evil is false, and that which is false can never be true. Christian Scientists should become more consecrated to the cause than ever before. It is necessary to keep thought in close touch with God, and like the Israelites of old before the walls of Jericho, let us know that Truth is the only power, the power which protects, guides, and governs our cause; let us remind ourselves constantly of the Master's promise, "Ye shall know the truth, and the truth shall make you free."

Let us, then, as loyal Christian Scientists, promise ourselves that we will pray the "Daily Prayer" of the Manual (Art. VIII, Sect. 4); that we will obey the "Rule for Motives and Acts" (Art. VIII, Sect. 1); that we will keep the solemn import of the sixth tenet of our church (Manual, p. 16), and if it is necessary to mete out justice, let it be tempered with mercy and charity.

Let us endeavor to give our whole support to those who uphold the provisions of the Manual, and cooperate with them, not personally, but according to the divine Principle of Truth and Love. Let us rejoice always in the privilege of being Christian Scientists. The church binds us together with the bands of Soul. That is where God is. In our Lesson of yesterday there was given to us from the gospel of St. John this verse: "Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me." There is our true position of reflection—Love is substance. We live only as we love. We have life only as we love.

In "Pulpit and Press" (p. 10) our Leader declares: "Christian Scientists, you have planted your standard on the rock of Christ, the true, the spiritual idea." Error would like to interfere with the progress of our work and substitute itself for our consciousness of Truth and Love; but we can always know that the divine consciousness is the only consciousness that the right body, the right church, are included in the divine consciousness. Nothing false can enter therein.

Our Leader tells us in her latest book, "The First Church of Christ, Scientist, and Miscellany" (p. 185): "Truth, Life, and Love are formidable, wherever thought, felt, spoken, or written,—in the pulpit, in the court-room, by the wayside, or in our homes. They are the victors never to be vanquished."

Report of the Treasurer

The report of the Treasurer, which was given by Mr. Dickey, showed that the finances of the church were in their usual satisfactory condition.

The publishing house building fund has been consumed in the erection of the latest addition to the publishing house, and no further contributions are being solicited, as the fund is closed.

In regard to the fund for the monument to Mrs. Eddy, the Treasurer reported that, including interest, the amount totaled $75,604.43. A selection from the many designs submitted has been made, notice of which will be given in the periodicals in the near future.

The Salem relief fund showed that contributions of $9,608.43 in cash, together with large quantities of clothing and merchandise, were made by Christian Scientists for the benefit of sufferers from the fire in Salem, Mass., in June, 1914. These contributions were distributed through a committee appointed by First Church of Christ, Scientist, in Salem, and the fund has been closed. The work of this committee was greatly appreciated by the officials and citizens of Salem.

On Oct. 24, 1914, a notice was published in the *Christian Science Sentinel*, which provided an opportunity for Christian Scientists to send contributions to the different countries suffering as a result of the European war. In November, 1914, the Directors of The Mother Church sent William D. McCrackan to Europe for the purpose of appointing relief committees to distribute this fund. The work was organized and is now being conducted by Christian Scientists in most of the European countries affected by the war. Up to the present time the sum of $127,667.94 has been contributed; the disbursements have amounted to $122,740.66, leaving a balance on hand of $4,927.28.

The following countries have shared in the distribution of this fund: England, France, Germany, German-speaking Switzerland, French-speaking Switzerland, Holland, and Denmark. The needs of those for whose benefit this fund was established are still apparent, and further contributions will be gratefully received.

The Treasurer also read the report of the auditors, which is given below.

REPORT OF THE AUDITORS

"We have audited the books and accounts of the Treasurer of The First Church of Christ, Scientist, in Boston, Mass., from June 1, 1914, to June 1, 1915, and herewith certify to the correctness of the same.

"EDWIN L. PRIDE & CO. INC.,

"Certified Public Accountants.

"June 4, 1915."

REPORT OF THE CLERK OF THE MOTHER CHURCH

By Mr. Dittemore.—To report each year the continuous numerical growth and prosperity of this church, is but to record an inevitable fact, since The Church of Christ, Scientist, is what it is. The real Mother Church—an ideal in Mind, expressed and reflected in the consciousness of its members by works rather than words—is the most mighty force on earth today. This scientific fact is in no way altered because the world has not yet clearly discerned the source of the rays which are bringing it resisted blessings. Never will Christian Scientists be able to repeat more gratefully than at this period our Leader's words, "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii).

The world is proving the teaching of Christian Science, that human efficiency without divine direction is a bruised reed upon which humanity cannot lean. The present complex material systems are no more adequate for human salvation than when patriarchs and prophets of God's chosen people in ages past demonstrated to the uncertain thinkers of that day that neither reliance upon physical strength nor faith in the substantiality of worldly resources is equal to the protection and preservation of men or nations.

It has been much in evidence during the past year that Christian Scientists more fully appreciate the importance of restricting church-membership to those who have demonstrated their worthiness and eligibility beyond all question of doubt. To those whose previous experience and circumstances are for the present delaying their enrolment in active membership with The Mother Church, it should be said that nothing can delay or interfere with that unity of purpose which is at-one-ment in consciousness with the ideals and aspirations for which The Church of Christ, Scientist, stands. Through an understanding of Christian Science we have learned that "whatever blesses one blesses all" (Science and Health, p. 206), and the ultimate solution of every problem of church-membership depends largely upon the vigilance of the members of this church, which is a necessary accompaniment of real spiritual growth and discernment.

New Christian Science organizations have been formed during the year to the number of 86. Included in these are new organizations in England, Canada, Australia, and Germany. The columns of *The Christian Science Journal* show an increase during the year of 168 practitioners engaged exclusively in the healing work.

Fifteen hundred and thirty Christian Science lectures have been given during the past twelve months. The attendance at these lectures has been about 1,200,000 persons, an increase over the estimated attendance of last year of approximately 175,000. Many of these lectures have been given in distant localities, where the subject of Christian Science had not been publicly presented before.

Our Leader has provided four principal avenues of activity through which the members of The Mother Church may present the Science of Christianity to the world, these being the church services, the reading-rooms, the public lectures on Christian Science, and the Christian Science publications. Much of interest might be said on these subjects if time would permit, or if their discussion were strictly within the purpose of this report. It may here be mentioned with gratitude, however, that during the year a greater number of Christian Scientists have complied with our Leader's loving request that "every Christian Scientist . . . subscribe for and read our daily newspaper [*The Christian Science Monitor*]" (The First Church of Christ, Scientist, and Miscellany, p. 352), thus assisting in bringing to pass the earlier fulfilment of the spiritually discerned purpose of Mrs. Eddy in founding the *Monitor*, viz.: "to spread undivided" throughout the earth "the Science that operates unspent" (The First Church of Christ, Scientist, and Miscellany, p. 353).

The real direction of this great movement is in the hands of divine Mind, which is the only director. The constant realization of this fundamental fact must express itself in ways of inestimably far-reaching benefit. Therefore the abiding consciousness of this verity, in this great period of the world's development, is a constant responsibility of every member of The Mother Church.

Our Leader, while editor of *The Christian Science Journal*, once caused to be published therein (see Vol. III, p. 41) these prophetic words, which never were more appropriate for our consideration than today:—

"Earthly thrones tremble on their bases in these days of rebellion against despotism. It would seem as if the kingdoms of the world were all being weighed in balances to determine what boasted strength is real and what pretended. . . . All these rumblings of discord, to the watchers on Mount Zion, come fraught with assurance of the onward march of righteousness.

"Whether the people recognize the Presence or not, it is here, making for their freedom. And not the dominion of acknowledged kings and princes alone is threatened—but the dominion of man over man in any form must give way to the liberty, fraternity, and equality, toward which the unseen law, spiritual and eternal, forces humanity."

REPORT OF THE TRUSTEES UNDER THE WILL OF MRS. EDDY

By Mr. Neal, chairman.—At the annual meeting of The Mother Church last year, the Trustees under the Will of Mrs. Eddy announced their intention immediately to put into active operation four lines of work. They wish now to report progress in those and in some other lines of activity which have since been adopted.

First, it was decided to assist in paying the traveling expenses of the lecturers, on calls to fields outside of the United States, Canada, and Great Britain. During the year help has been granted in this way for seventy-one lectures, including those given in Great Britain. In each case the amount of the lecturer's traveling expenses, in excess of twenty-five dollars, has been paid from the trust fund. The total amount of money so spent was $7,574.06. Had it not been for the war, in which so many countries are engaged, many more lectures would have been given in Europe, but the lecturers felt it unwise to accept invitations to go abroad, when the conditions of travel were as difficult as they have been for some time.

Second, it was agreed to contribute to the churches and societies toward the free distribution of Christian Science literature. As a result there has been paid to nine hundred and five churches and societies 60 per cent of the sum which they spent for literature and postage during the ten months

Digitized by Google

ending Oct. 31, 1914. The total amount expended in this work has been $66,186.15.

Third, the expressed wish to aid lending libraries under the direction of Christian Science churches and societies, has resulted in ten hundred and twenty-one of such lending libraries receiving from this fund books, pamphlets, and periodicals as follows:—

Science and Health, 3,421; German translation of Science and Health, 681; "Miscellaneous Writings," 1,437; "The First Church of Christ, Scientist, and Miscellany," 1,391; Concordance to Science and Health, 757; "Unity of Good," 1,225; "Retrospection and Introspection," 1,155; "Pulpit and Press," 1,122; "Rudimental Divine Science," 1,096; "Rudimental Divine Science for the Blind," 287; "No and Yes," 1,155; Messages to The Mother Church, 1,194; "Christian Healing and The People's Idea of God," 1,152; Church Manuals, 518; "Christ and Christmas," 556; "Poems" by Mary Baker Eddy, 637; "Personal Contagion," 1,371; "The Life of Mary Baker Eddy," 2,710; "Editorial Comments," 955; "Christian Science: Its Legal Status," 514; "The Mother Church," 951; pamphlets, 19,220; Christian Science Hymnal, 462, making a total of 43,600 copies, besides 169 annual subscriptions to *The Christian Science Quarterly*.

In addition, there have been sent free to 2,262 public libraries, books and periodicals as follows:—

Science and Health, 2,635; German translation of Science and Health, 991; "Miscellaneous Writings," 1,633; "The First Church of Christ, Scientist, and Miscellany," 1,716; "Unity of Good," 1,553; "Retrospection and Introspection," 1,433; "Pulpit and Press," 1,417; "Rudimental Divine Science," 1,502; "Rudimental Divine Science for the Blind," 554; "No and Yes," 1,436; Messages to The Mother Church, 1,457; "Christian Healing and The People's Idea of God," 1,566; "The Life of Mary Baker Eddy," 1,506, making a total of 19,399 copies, together with 3,546 annual subscriptions to *The Christian Science Journal*, *Christian Science Sentinel*, *The Christian Science Monitor*, *Der Herold der Christian Science*, and *The Christian Science Quarterly*.

Fourth, the decision to assist in erecting new church buildings was announced, and in response two hundred and sixty-four churches and societies have requested application blanks, thus indicating their interest in this privilege. Up to date, twenty-six churches have applied for assistance. Half of the applications received are not yet in proper legal form to be voted upon, but the other half have been approved, and the sum of $34,178.70 has been set apart for their use. In no case, however, will the sum voted by the Trustees be paid, until that amount, plus the funds in the church treasury, is sufficient to free the church from debt.

Other work done which was not referred to at the last annual meeting, includes the free distribution of Christian Science literature to soldiers, sailors, and prisoners in all the countries engaged in the European war. The total number of *Journals*, *Sentinels*, *Monitors*, *Heralds*, and pamphlets so distributed has been 436,708. Certain churches and societies in the war zone, which have suffered great loss of financial support on account of the war, have been voted temporary assistance, the Trustees having already paid over to them for church maintenance the sum of $14,050.

In a few days a circular letter will be sent to all Christian Science churches and societies, making the following announcement:—

"The Trustees under the Will of Mary Baker Eddy, in their administration of the fund established by Mrs. Eddy 'for the purpose of more effectually promoting and extending the religion of Christian Science as taught by' her, have voted to encourage an increase in the lecture work by offering to pay to any Christian Science church or society, which gives one more lecture from Jan. 1, 1915, to Dec. 31, 1915, inclusive, than it gave from Jan. 1, 1914, to Dec. 31, 1914, inclusive, a sum not to exceed $100 toward the expense of said lecture. This arrangement includes societies which did not give a lecture during the year ending Dec. 31, 1914, also churches and societies giving their first lecture on and after Jan. 1, 1915."

Reports from the Field

The president having announced that the meeting was now open for reports from the field, a portion of the written reports which had been received were read by John W. Dean of Leeds, Yorkshire, England, and in substance were as follows:—

First Church of Christ, Scientist, of Buffalo, N. Y., reported greater spiritual progress and the use of its new edifice seating twelve hundred. It also mentioned that twenty-five of its former members had organized Second Church of Christ, Scientist, of that city.

The distribution of a large amount of literature to the soldiers going to the front, to those returning wounded and for recuperation, and to the hospitals and prison camps was reported by First Church of Christ, Scientist, of Berlin, Germany. An unbroken attendance at the meetings of the church was also remarked.

Letters from First Church of Christ, Scientist, of Chicago, telling of the distribution of seven thousand pieces of literature in one month, and from First Church of Christ, Scientist, of Edinburgh, Scotland, were next read.

First Church of Christ, Scientist, of Montreal, Quebec, recounted putting literature before the soldiers in the training camps, with the result that the glad message of peace had been carried to many, and placing other literature on the outgoing steamers carrying soldiers. Christian Science, it said, was calling forth wide-spread interest.

Sixteenth Church of Christ, Scientist, of Chicago, reported holding its first service during the past year.

Second Church of Christ, Scientist, of Indianapolis, wrote that its services were so largely attended that it had found necessary to adopt automobile service to convey the overflow attendance to First Church of Christ, Scientist, in that city; also that two sessions of the Sunday school were necessary.

Other reports read were from First Church of Christ, Scientist, of Norfolk, Va., Fifth Church of Christ, Scientist, of Chicago, the twelve Churches of Christ, Scientist, of Greater New York city (which made mention of a lecture given in Sing Sing prison), and First Church of Christ, Scientist, of Wilmington, Del. A letter from five Churches of Christ, Scientist, of Minneapolis, stated that the space in the reading room had been doubled, that the new edifice of First Church of Christ, Scientist, of that city was nearing completion, and that the new building of Sixth Church of Christ, Scientist, had been occupied since Jan. 1, 1915.

Reports from the field were then given from the audience. The speakers were from Sydney, Australia; Havana, Cuba; Reno, Nev.; Cincinnati, Ohio; Chicago, Ill.; Baltimore, Md.; Long Beach, Cal.; Second Church, Boston, Mass.; London, England. The last mentioned expressed thanks for contributions of money from Christian Scientists in the United States which, he said, enabled many to secure work. He added that the distribution of Christian Science literature among the soldiers and sailors and in the prison camps had brought many inquiries from those who saw the benefits reflected by those who had read the various articles.

Following these reports the Doxology was sung, and the meeting adjourned.

Selected Articles

[Judge Clifford P. Smith in *Quincy* (Mass.) *Ledger*]

Although the word blasphemous has been used before in support of strongly felt but ill-considered reasons for disapproval, your recent editorial headed "A Blasphemous Slur" must have put this epithet into a new setting. Properly used to mean "intentional indignity offered to God or sacred things," the word blasphemy had been, of course, loosely used before your editorial appeared; but never until now has any one become so thoroughly imbued with a reverential belief in material medicine as to utter the word blasphemous in its behalf. From now on, evidently, one must count the medical system among the "sacred things" of which it is blasphemous to speak without due respect.

You must admit, however, if you have frequently read *The Christian Science Monitor*, that it has not always spoken with entire disrespect for the achievements of those who have endeavored to develop and apply the practice of medicine and surgery. It has never aimed to do so. Indeed, the editorial in the *Monitor* which incurred your disapproval was not designed to be an attack on medicine or the medical profession. The editorial which you regarded as blasphemous was simply designed to be a protest against what some doctors are doing in the name of the American Medical Association,—a protest against a monopoly which is not desired by many of the most representative members of the medical profession,—and to be a defense of human rights.

Whether *The Christian Science Monitor* would strike a just or generous balance between the two sides of the account, if it should review and estimate what the medical profession has done, or has been unable to do, for the promotion of health, cannot be determined from the editorial which you have so violently condemned; for it did not undertake to do this. It is fairly certain, however, that not even the official organ of the American Medical Association would contend that the score of items which you have named would fairly present the balance between achievement and failure. Indeed, the largest item in your account—the building of the Panama canal—can be credited to medical science only by ignoring the difference between a medical doctor and a sanitary engineer. Medicine doubtless did a considerable work at Panama; so did nursing; and so did Christian Science.

The point and gist of what *The Christian Science Monitor* said about the insufficiency of medicine to cope with disease was this: Medicine is not safe and certain enough to be a natural monopoly; if it were, it would not need to be imposed on the public by statutes; and since it is not safe and certain enough to get a monopoly by the natural law of demand and supply, an artificial monopoly for material medicine in the field of health would be a monstrous violation of human rights. Other considerations could be added by way of emphasis, not the least among which is the fact that the practice of Christian Science is the practice of religion, involving, as Mrs. Eddy has said on page 152 of "The First Church of Christ, Scientist, and Miscellany," "spiritual understanding, spiritual worship, spiritual power."

In Massachusetts in 1915, for the first time in many years, the state board of registration in medicine has not proposed a law against the practice of Christian Science. For this respite or cessation Christian Scientists are thankful, and they are disposed to be appreciative of what seems to be a more considerate attitude on the part of the medical board. In New Hampshire a bill for such a law, proposed by the New Hampshire Medical Society, has just been amended, after a sharp contest, so as to protect the practice of Christian Science. In this contest before a legislative committee composed in major part of doctors, the pressure of public opinion in favor of justice for Christian Science was augmented by the tolerant views which were expressed to their fellows by certain members of the medical profession. In Minnesota, in Iowa, and in other states, bills designed to hinder or forbid the practice of Christian Science have been successfully contested during the present year; and though none of these bills came from a non-competitive quarter, in most cases they were also opposed, at least privately, by a substantial minority of the medical profession.

❖

[Henry Deutsch in *Duluth* (Minn.) *News Tribune*]

The article in a recent issue illustrates the present-day tendency to make broad statements of personal opinion which cannot be supported by facts, and therefore can produce no result except to mislead the public and convey erroneous impressions where the truth can be easily ascertained.

It would be very difficult for the speaker, in the sermon referred to, to point out a single case where a person who turned to Christian Science for healing and received proper treatment, has thereby sacrificed his life. On the contrary, the fact is that a large percentage of persons who turn to Christian Science for help, consists of those whose lives, from the standpoint of medical science, were at the last ebb and were saved through Christian Science treatment when *materia medica* announced itself as helpless. As a matter of fact, experience would seem to indicate that there are very few cases of organic disease that yield to medical treatment, whereas we have hundreds of such cases healed in Christian Science.

It would have been interesting if the lecturer had indicated what he meant by "acknowledged facts and science, disregard of which should be held as criminal neglect." It is certainly an acknowledged fact that drug medication has been a failure, because the medical profession today are ceasing to prescribe it to a very large extent and diminishing the prescriptions from day to day. It is also an acknowledged fact that medical so-called science is purely experimental, and that the heterodoxy of one decade becomes the orthodoxy, if not the obsolete, of the next. Surgery, the most exact branch of medical practice, is likewise falling under the ban. Some of the best surgeons do not hesitate to say that it has been too extensively exploited and that too many lives have been sacrificed to its experiments. The foundation of all medical practice, diagnosis, is admitted by some of its best experts to be faulty to the extent of at least 50 per cent, and in general practice to a much larger percentage. If physicians are not correct in their diagnoses, what may be expected of their treatment?

This is not intended to be a reflection on the work of conscientious and honest physicians, or to depreciate the splendid services which they have rendered to mankind. On the other hand, the word of God is entitled to credit for its power and wonderful work, and is not to be belittled simply because it is not understood. The reverend gentleman apparently has very vague, if any, information about Christian Science practice and healing, or else he would hesitate to declare its doctrines superstitions. Christian Science declares for the power of God and its efficacy for healing both sickness and sin in the way that was taught and demonstrated by Christ Jesus. It is based on that promise of the Master, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Digitized by Google

Christian Science Sentinel

Critics of Christian Science fail to understand that it is not merely a system of physical therapeutics, but a religion of salvation from both sin and physical ills. The physical healing is what attracts popular attention at first, but the healing is merely the result of the spiritual and mental regeneration. This religion teaches its adherents that by following and living implicitly the instructions of the Master, and thus attaining to a true understanding of God and man's relation to Him, the same wonderful works which abound in the Scriptures are possible of realization today. It offers a present-day salvation. The healing of Christian Science results from the operation of the law of God, or divine Principle, and certainly he would be presumptuous who assumed to limit the power of God.

In the history of Jesus and his apostles, and Paul and his disciples after him, we find no resort to medicine or any other method of healing than the power of real faith in and understanding of God. We do not find that Jesus or those after him ever resorted to drugs, systems of hygiene, or even surgery. In his final bodily demonstration, called the resurrection, we find that he needed no material assistance, but found God all sufficient for the mighty conquest over death itself. It surprises one that a minister of the gospel should decry divine healing, when he must have learned that Jesus himself prescribed this as an evidence of spiritual understanding and following in his footsteps: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Science is the voice of Truth to this age, calling men to return to the practice of primitive Christianity, which included healing the sick as well as preaching the gospel. It is not hypnotism, suggestion, nor superstition, but the word of God, stripped of dead forms and ceremonies and restored to its pristine power and glory. The Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, contains the statement of the Principle and the rules for the practice of Christian Science, and one need but honestly study and apply this teaching to be lifted to the understanding of its Principle and the realization of its power as shown in daily demonstration. It is indeed the union of faith and science, divorced from ignorance and bigotry; a faith that is not blind, but illuminated by the understanding of what God is, and through it a realization of His purpose, which is to bless, heal, and save, not to curse mankind. Christian Science teaches us what God is, and that man is His image and likeness, and furnishes the scientific rules whereby we may make this relationship of Father and children practical in daily experience.

Christian Scientists have discarded medicines because they have found something higher, better, and more dependable. They have done this only after much experimenting along the old lines, and they now prefer to trust rather to that God "with whom is no variableness, neither shadow of turning," than to the fallibility of human knowledge and experience; and in this, if we may judge by results, "wisdom is justified of her children."

✧

[Ezra W. Palmer in *The Grand Junction* (Col.) *News*]

In a recent issue, comments were made on Christian Science that were misleading. The writer stated that "Mrs. Eddy unfolds the teachings of Christ for the governing of the material man only." Christian Science teaches that man is spiritual, governed by God alone. Humanity has been led to believe that man is material, governed by material laws from which there is no appeal,—a belief which Christian Science has repeatedly proved to be false. A man may believe he has transgressed certain so-called health laws, the penalty of which would culminate in an illness known as a cold. Christian Science has demonstrated beyond question that a man can, in performing his duty, transgress so-called health laws and suffer no bad effects. This is accomplished not by attempting to have God control the material body, but by knowing that man is spiritual, perfect, and free, living under the laws of God, not health laws, and remembering that "where the Spirit of the Lord is, there is liberty."

The contention of this writer that we must gain control of material things before spiritual control is available, is not borne out by the teachings of Jesus. The great Teacher said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." The Bible makes clear that the material is valueless as a stepping stone to the spiritual. God is omnipotent, and to work out His divine purposes He needs no assistance from matter, which, in its last analysis, "is only a thing imagined," as Professor Ostwald of Leipsic university said. Jesus never employed material means as an aid to the spiritual. He proved that the might of Spirit was sufficient to calm the storm, pay tribute money, heal the sick, and raise the dead. He counseled His followers to rely on God alone, and to beware of the illusion that matter, or the flesh, has power to heal or save. We cannot serve both Spirit and matter, both God and mammon. On page 492 of Science and Health Mrs. Eddy says: "All is Mind and Mind's idea. You must fight it out on this line. Matter can afford you no aid."

✧

[W. D. Kilpatrick in *The Patriot*, Jackson, Mich.]

A recent issue has an account of a lecture by Doctor —— on the subject of Christian Science, from which one might draw the inference that this lecture is given in a Christianly spirit and as a duty. I take it this is the same lecture which this critic of Christian Science has delivered in Detroit and other places. Just how this spirit of religious intolerance can be characterized as "Christianity," or as comporting in any way with the teaching of Jesus the Christ, "Love thy neighbor as thyself," it would be difficult for an unbiased thinker to decide. The methods employed by the critic in dealing with the subject are unqualifiedly unjust. While it is true that he quotes freely from the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other Christian Science literature, yet by giving to his audience these quotations entirely removed from their context and so far diverted from their original meaning and import as entirely to obscure their intent, he very artfully and ingeniously conveys impressions (to one who has not thoroughly investigated for himself) entirely erroneous. The same methods used by this critic, if applied to the Bible, could so distort that holy book as to make it unrecognizable by those who love it most. The reverend gentleman may be correct on the point taken that Christian Science differs substantially from his interpretation of Holy Writ, but that, nevertheless, does not argue that Christian Science is not in strict accord with the Scriptures at every point, or is not Christian.

The Founder of Christianity himself indicated certain essential tests which were to determine for his time, and for all time to come, whether one were really a follower of Christ or not. He declared definitely, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if

Digitized by Google

they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Also, "He that believeth on me, the works that I do shall he do also." Christian Science is doing at least some of these works. It is healing hundreds and thousands of cases of so-called incurable and organic diseases; it is uplifting and regenerating those buried deep in beliefs of vice and sin, and it is bringing sunshine and joy and harmony into the homes of thousands.

[Avery Coonley in *The Danville* (Ill.) *Press*]

In the report of Pastor ——'s sermons on Christian Science, he continues his argument that the teachings of Christian Science are not in accord with the Scriptures. Each one of the long list of Christian sects is founded upon the Bible; each differs from all the others in its interpretation thereof; and each, if it chose to address itself to criticism, would declare all the others "unscriptural." Our critic's indictment of Christian Science on that score would therefore with as much reason be directed against all the other churches; but such discussion in the public press, if defensible at all, is certainly worse than useless when based upon ignorance of the teachings criticized, as in the present instance.

Christian Science deplores the universal belief in the phenomenon called death, but does not ignore it, and our critic's long disquisition on that point is wide of the mark. On page 487 of "Science and Health with Key to the Scriptures," Mrs. Eddy says: "Life is deathless. Life is the origin and ultimate of man, never attainable through death, but gained by walking in the pathway of Truth both before and after that which is called death;" also on page 324: "Jesus said substantially, 'He that believeth in me shall not see death.' That is, he who perceives the true idea of Life loses his belief in death. He who has the true idea of good loses all sense of evil, and by reason of this is being ushered into the undying realities of Spirit."

In another of her works, "Unity of Good" (p. 43), Mrs. Eddy writes: "This generation seems too material for any strong demonstration over death, and hence cannot bring out the infinite reality of Life,—namely, that there is no death, but only Life. . . . The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth. I have by no means spoken of myself, I *cannot* speak of myself as 'sufficient for these things.' I insist only upon the fact, as it exists in divine Science, that man dies not, and on the words of the Master in support of this verity,—words which can never 'pass away till all be fulfilled.'"

Again our critic is at sea in trying so elaborately to prove that Christian Scientists deny the existence of sickness. They do not deny it on the plane of mortal belief, but deny its reality and heal the sick on the basis of that denial and the correlative affirmation, supported by the Bible, that God made all that was made, and "behold, it was very good." The clergyman takes it upon himself to decide that "the church should not expect divine healing." This idea he derives, presumably, from the Bible, in spite of the fact that Jesus coupled with his command to teach and to preach, the command to heal, and in the face of the further fact that healing was characteristic of the activities of the Christian church for nearly three centuries after the crucifixion. Christian Science does not so interpret the Scripture, and its adherents are being liberally blessed in their efforts to put into practice all of the commands of the Master, healing diseases of every name and nature by spiritual means alone, as may be verified from the testimonies given at the Wednesday evening meetings and published in the *Christian Science Sentinel* and *The Christian Science Journal*.

Our critic protests at the acceptance of present salvation by Christian Science, but asserts that salvation may be had in the future. Paul took a different view of the matter when he declared, "Behold, now is the accepted time; behold, now is the day of salvation." Enough has been said to make it clear that the views of this clergyman, however valuable they may be on other matters, can prove only misleading and unprofitable to any one who wishes to be correctly informed regarding the teachings of Christian Science. The text-book, "Science and Health with Key to the Scriptures," and other works by Mrs. Eddy, which are to be found in practically every public library, are a reliable source of information on this religion which is so vital that in less than fifty years it has practically encircled the globe, through the reinstatement, as Mrs. Eddy says in the Manual of The Mother Church (p. 17), of "primitive Christianity and its lost element of healing."

[Dr. C. S. Carr in *Columbus* (Ohio) *Citizen*]

The Christian Science church is not a healing cult; it is a religious denomination, and healing is incidental. Exactly as Jesus went about teaching spiritual truths in Palestine and incidentally healed many people who came to him, so the Christian Scientists, in bringing their spiritual gospel into the world, incidentally heal a great many people. The Christian Scientists are asking the legislature, through a very brief bill, simply to leave them out of all legislation referring to the practice of medicine or the practice of the healing arts. In listening to the arguments against the Christian Science people at the meeting in the legislative rooms, it was apparent that no one who spoke on that occasion really understood the attitude of the Christian Scientist.

To heal a man, according to Christian Science, is simply to set him right spiritually before God. The man who believes that God has allowed evil things to come into the world, or else that God is not able to prevent evil things, such as sin and sickness, that man, according to Christian Science, needs to be corrected. His thinking ought to be revolutionized. Once corrected, his sin leaves him, his sickness leaves him, and he is restored to health. That is the Christian Science proposition. It is not a healing proposition *per se*. Healing is incidental, to be sure; so is financial prosperity. Continued health is incidental. Social decency, the dropping off of bad habits,—all these are incidental to the great central purpose of Christian Science to bring to every man and woman a recognition that God is all powerful and that God is good, hence any belief in evil is absolute error.

To require of a Christian Science practitioner a knowledge of physiology, pathology, anatomy, physical diagnosis, is exactly the same as if such requirements should be exacted of the clergyman, for healing sometimes occurs as incidental to his visitations, prayer, and preaching. The spiritual things of the gospel frequently heal the sick. If it be true that the gospel which the Christian Scientists bring to the sin-sick world heals people of their physical maladies oftener than the gospel brought by other denominations, this furnishes no reason why they should be regarded as a healing cult, and especially no reason why they should be subjected to examinations as if they were proposing to begin the practice of medicine. It is tyrannical, it is absurd, to require those who do not believe in disease, to be subjected to an examination the same as if they held the ordinary beliefs concerning disease, the same as if they were proposing to practise medicine.

Love's Guiding Hand

ALTHOUGH the Church Manual is addressed primarily to members of The Mother Church, and is of course mandatory only on those who are within its jurisdiction, it will be well for all who aspire to be Christian Scientists to give earnest heed to its prohibitions and to be guided by its loving counsels. The reason for this book is set forth in its Foreword by Mrs. Eddy as follows:—

"The rules and by-laws in the Manual of The First Church of Christ, Scientist, Boston, originated not in solemn conclave as in ancient Sanhedrim. They were not arbitrary opinions nor dictatorial demands, such as one person might impose on another. They were impelled by a power not one's own, were written at different dates, and as the occasion required. They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our cause; hence their simple, scientific basis, and detail so requisite to demonstrate genuine Christian Science, and which will do for the race what absolute doctrines destined for future generations might not accomplish."

Mrs. Eddy also writes on page 230 of "The First Church of Christ, Scientist, and Miscellany": "Of this I am sure, that each rule and by-law in this Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner." What else can this mean than that these by-laws are, as they stand today, for the guidance and conduct of every Christian Scientist, whether of this age or of the ages to come. They cannot be abrogated, nor their provisions suspended for certain favored individuals. No more potent counsel on this subject is needed than is afforded by the letter written by Mrs. Eddy to the Board of Directors under date of Feb. 27, 1903, and published for the first time in the *Sentinel* of Aug. 22, 1914. In this letter she says: "Never abandon the by-laws nor the denominational government of The Mother Church. If I am not personally with you, the Word of God and my instructions in the by-laws have led you hitherto and will remain to guide you safely on."

From these declarations it may reasonably be inferred that Mrs. Eddy was assured that the Manual contains much of great importance to the welfare of mankind, no matter what their religious affiliations may be, and with this assurance Christian Scientists who have studied diligently the spiritual import of the Manual will readily agree. They have found that these by-laws, either in the spirit or in the letter, form a basis for right decision in practically every problem that may present itself, whether it be of the individual or of the church. This has been proved again and again, and is in itself an eloquent testimony to the far-reaching and all-embracing wisdom of our Leader, and of her fostering care for the welfare of the members of this church of divine planting.

In view of all this, it seems strange that any Christian Scientist should be perfunctory in his reading of the Manual, or that he should regard it only as a book of reference, to be consulted when a difference of opinion arises in regard to some question of church polity. Those who do no more than this miss a great opportunity to advance further in Christian ethics, because the by-laws which the Manual contains not only furnish a complete government for The Mother Church, but are also a guide to righteousness. The Manual is far more than a compendium of church law; it is a text-book on Christian conduct,—the teachings of Christian Science in epitome,—and studied as such will save the unwary feet from many a snare and pitfall.

Doubtless the children of Israel regarded the ten commandments which came to them through Moses in the desert of Sinai, as a special dispensation from God to His chosen people, a set of rules applicable to their particular needs; but fortunately for mankind, God's laws, like His love, are for all nations and all peoples. So the Manual may seem to some Christian Scientists to have been prepared solely for the guidance of members of The Mother Church. This limited view, however, fails to recognize the universality of these laws, that they are "not arbitrary opinions nor dictatorial demands, such as one person might impose on another,"—not aimed at individuals in unreasonable restriction,—but rather the gentle guiding hand of Love, which "is impartial and universal in its adaptation and bestowals" (Science and Health, p. 1). When Christian Scientists, individually and as a body, realize this, they will have made great progress toward that condition of thought which is prefigured on page 340 of Science and Health, beginning at line 15, and also in "A Rule for Motives and Acts" on page 40 of the Manual.

ARCHIBALD MCLELLAN.

❖

Truth the Foundation

THE well known adage "Physician, heal thyself," expresses a thought of peculiar pertinence to all professing Christian Scientists. It speaks for the imperative requirement that they exhibit the genuineness, exemplariness, consistency, and efficiency which, as they aver, are the true tests of the practical worth of their idea, and which rebuke the cant and professional palaver that in the world's opinion characterizes the output of some religionists. If we are not taking our own medicine, and reaping therefrom results which are distinctly noticeable in a healthier, purer, more unselfish, more trustworthy, and more loving life, then we are sure to be accounted "liars," in frank estimate, because we are not only disappointing legitimate expectations, but are dishonoring our pledges. "Be ye . . . followers of God" is the supreme urgency of Christian Science, and "every day makes its demands upon us for higher proofs rather than professions of Christian power" (Science and Health, p. 233).

To take heed unto our ways is therefore vitally important, and yet not more so than that we remember the tremendous fact to which Mrs. Eddy calls attention on the first page of the Preface of Science and Health, viz., that Truth is independent of doctrines and systems, of imperfect concepts, and especially of sadly imperfect human living. Whatever our sense of unworthiness and self-depreciation, we must not let awareness of this fact blanket our confidence in and our readiness to declare the great unquestioned truths of being. That thought is to be Truth-centered and not self-centered is indicated in the Master's wondrous words, "I can of mine own self do nothing." Moses was in a very unideal state of mind, out of sorts with the complaining people if not with himself, when he smote the rock in the wilderness; nevertheless, though he paid to the last farthing the penalty of his unworthiness, the water of which there was such famishing need gushed forth.

If our freedom to declare and our capacity to do for God were dependent upon and determined by our sense of human selfhood, our feelings or mental states, our consciousness of worthiness or unworthiness, then our ministry would be meager indeed. Happily, the imperfection of the avenues of its expression does not affect the nature and redemptive power of divine Truth in itself, as St. Paul clearly indicated when he wrote, "Some indeed preach Christ even of envy and strife; . . . notwithstanding, every way, whether in pretense, or in truth, Christ is preached; and I therein do rejoice."

Digitized by Google

The hands of the thoughtless, of the blundering, and sometimes of the more unworthy, may drop the seed into soil that yields an hundredfold, and for this we may be glad, even at a time when the discovery of some signal stupidity, some inexcusable lapse from a long loved ideal, may tempt us to be utterly discouraged. If the man of one talent but remembers that the least divine idea may prove "mighty through God to the pulling down of strong holds," he will be prompted not only to profit by any opportunity to send it forth, but to prove more worthy of the privilege of so doing. It is ours to strive earnestly, thoughtfully, and continuously to live the Christ-life, to be and to do all that we commend to others, and it is also ours to disallow any sense of present inadequacy or unworthiness to engender distrust of the power and efficiency of divine Truth.

That one is able to heal another, when he has not yet gained his own perfect freedom, may be explained by the fact that his realization of the falsity of that other's claim is more clear than his realization of the nothingness of his own. The man of progressive poise will not allow his seemingly slow advance, or his failure to overcome, in a given struggle, to disturb his confidence in the power of God, despite the weakness of His would-be children, to work mightily through them,—a fact which has been abundantly shown in all the Christian centuries. When tempted to self-depreciation, let us rejoice that the "leaven of Truth is ever at work" and is able to "destroy the entire mass of error" (Science and Health, p. 118). The realization of the eternal presence and power of divine Love is the one immovable foundation for both faith and works.

JOHN B. WILLIS.

Health Contagious

THE belief that evil is contagious is firmly rooted in the thought of most people, whether it relates to moral or physical conditions. There are of course many theories as to so-called contagious diseases, but all are based upon the supposition that disease is an entity, expressing itself through well-defined laws both in acute and chronic ailments. It is therefore held to be positive, not merely negative.

It is hardly necessary to explain that Christian Science rejects this supposition, on the ground that disease is no part of man's being, even when humanly considered. At most it can only be regarded as a negation, and it is thus dealt with in Christian Science. The strange thing is that disease has been assigned more power by general belief than has health, for whoever heard of bringing a well person into proximity with a sick one for the benefit of the latter? On the contrary, it is almost universally believed that disease is communicable and that health is never so, from which point of view disease would be positive and health negative.

Long ago Christ Jesus said, "He that followeth me shall not walk in darkness, but shall have the light of life." Christian Scientists strive to follow the Christ-teaching so closely that the darkness of sin and disease can never encompass them. Through the teachings of their inspired Leader, Mrs. Eddy, they are daily proving for themselves that evil has no principle, that like darkness it does not radiate from a given center, and that it has neither intelligence nor power to communicate itself to any one. Even a child knows that darkness cannot be carried into a lighted room, but that light can instantaneously dispel darkness, and when the light appears it is not necessary to dispose of the darkness in any way. This may be said to explain in a simple yet conclusive way the healing work of Christ Jesus, as when he touched the lepers and healed them, proving that in the presence of spiritual law the widely held belief in contagion was inoperative, and spiritual law, like its divine source, is "from everlasting to everlasting."

He who believes that his health depends upon material conditions would have nothing worth communicating. He might seem a picture of health, yet be a veritable slave to the fear that disease might attack him at any time, either through the asserted law of contagion, of heredity, or through some other channel of mortal belief. Such an one could not say, as did Peter to the lame man at the "Beautiful" gate, "Such as I have give I thee: . . . rise up and walk." The apostles were rich in having an understanding of the Life which is eternally "the light of men," and when their understanding of this light was turned upon the afflicted, they were healed. In Christian Science we learn that health, like light, "is a symbol of Mind, of Life, Truth, and Love, and not a vitalizing property of matter" (Science and Health, p. 510). Without the understanding of this fact one can neither protect himself from disease nor heal others; yet Jesus said of his true followers, "Ye are the light of the world."

The health which is subject to disease would be of no value to another, even if it could be transmitted, but that which springs from the understanding of Truth and Love communicates itself spontaneously, and none can tell how far it may reach. Mortal mind holds this to be true of what it terms contagious diseases, which are propagated by mortal belief; but the "saving health" of which the psalmist wrote, grows out of the true understanding of God and man, and it spreads as when one candle is lighted by another. If we would make health contagious, we must radiate the light of Truth and Love, with its insistent demand for purity and its rich fruitage of fearlessness and faith. These words of an old hymn tell us what would happen if all were to let this light shine:—

> How all the dark places would brighten,
> How the mists would roll up and away!
> How the earth would laugh out in her gladness,
> To hail the millennial day!

ANNIE M. KNOTT.

Among the Churches

Current Notes

OAKLAND, CAL.—There is to be another church in the vicinity of Twenty-fourth street and Broadway, a neighborhood which now has several of the largest church buildings in the city. Plans are being prepared for an edifice for Seventh Church of Christ, Scientist, of Oakland. It is to be a frame structure with a front of pressed brick, and will cost, with the lot, approximately twenty thousand dollars.

Oakland Tribune.

MINNEAPOLIS, MINN.—Owing to the overcrowded condition of Second Church of Christ, Scientist, a number of its members have withdrawn and formed a new organization known as Fourth Church of Christ, Scientist. The organization follows the usual policy of Christian Science churches, providing for the formation of new churches from the overflow of others.—*Minneapolis News.*

NEW YORK, N. Y.—Fifth Church of Christ, Scientist, Madison avenue and Thirty-eighth street, has leased the concert hall of the Æolian Building, where regular services will be held, beginning June 6. It has been evident for some time that the present edifice of Fifth Church is too small for the steadily increasing attendance.—*New York Evening Sun.*

Digitized by Google

DETROIT, MICH.—An increase of 100 per cent in the number of adherents and students of Christian Science in Detroit in the last twelve months is probably the most remarkable development of the year. There are now three church organizations here, and two others are in prospect.

First Church, now meeting in the Arcadia while a church building is going up at Hancock and Cass avenues, will have more members than the church will hold by the time the building is completed. A new church will therefore be necessary for the central part of the city. Another church is projected in the west end of the city. Second Church, on the eastern boulevard, is crowded; and Third Church, in the north section, though it recently moved from Milburn Hall to Kenilworth Hall in order to get more room, is already cramped in its new quarters. When Third Church builds a separate edifice, it will be one of the largest in the city.

The growth of Christian Science in Detroit is in keeping with the growth throughout Michigan and throughout the country. Chicago has now nearly twenty churches, new ones are going up every little while, according to Detroit Scientists. The growth is also very remarkable in the Pacific coast cities. The Christian Science movement in Detroit developed slowly for many years, but the increase in the last year has attracted wide comment from both Scientists and outsiders.

Detroit Journal.

MARSHALL, MO.—One of the most beautiful recent improvements in the business portion of our city is the Christian Science hall and reading-room in the Campbell Block.

The Democrat-News.

The Lectures

Sacramento, Cal.

Miss Elizabeth Gregg, second reader of First Church of Christ, Scientist, in introducing Clarence W. Chadwick, who lectured on Christian Science in the Tuesday Club House, spoke in part as follows:—

That Christian Science has successfully withstood the attacks of malice, prejudice, scorn, ridicule, and even threatened popularity, should suggest to the thoughtful person that this is because it is based, not on the shifting sands of human theories, but on the one sure foundation, that of demonstration.

If Christian Science appealed to only one class of people, the ignorant and credulous, as some critics have affirmed, to the wealthy or the intellectual, as others have attempted to prove, it would not today have churches scattered generously over the globe, nor would it attract such audiences as this to listen to an exposition of its teachings. The appeal of Christian Science is universal; indeed, it is the answer to that world-wide invitation to salvation voiced by the prophet Isaiah: "Ho, every one that thirsteth, come ye to the waters." To the student of human nature no one fact is more interesting than this: that every individual, no matter how sinning, superficial, or cynical his outward seeming, has at heart a deep longing to know the answer to Pilate's question, "What is truth?" Consciously or unconsciously every one cherishes the desire to know the cause of things, to know what God is, and man, and what is their relation to each other.

It is on this common basis of inquiry that we meet tonight to learn why Christian Scientists are able to say so positively and joyfully that they have found the truth. They do not claim to have taken more than a few steps on the way, but so great have been the returns to them in health, harmony, and peace, that they are no longer wanderers, "tossed to and fro . . . with every wind of doctrine," but are earnestly pressing forward "toward the mark for the prize of the high calling," even the ultimate goal of perfection which Christian Science through its clear and logical interpretation of the Scriptures has revealed to them as not impossible of attainment.—*Correspondence.*

❖

New York, N. Y.

Edmund F. Burton, in introducing Jacob S. Shield, who lectured on Christian Science at Fourth Church of Christ, Scientist, said in part:—

Deeply implanted in the human heart is the love of life and the desire for good,—the desire to be good and to have that which is good. These instincts may express themselves in widely differing impulses at different times, according to the changing human sense of what life is and of what is good. We may be deceived to the extent of looking with desire upon that which is not at all good; nevertheless, this instinct for life and this basic urge toward good constitute the motive power back of every act of every man, whether he is aware of it or not.

God is the name for good, absolute good. Life is another name for God. Thus we see that every noble activity is a search for and a progress toward God, Life. In Job we read that "all that a man hath will he give for his life," and we know that whatever threatens to interject into man's experience anything opposed to life and good is repellent to him and is actually avoided until he is intimidated into accepting it as unavoidable. The words and works of Christ Jesus were a successful protest against all that is unlike God, and he taught that eternal life, the life of man, is simply the understanding of good, the knowledge of God. Christian Science is today reiterating these teachings of Jesus, and is repeating his healing works as an essential part of his teachings.

Correspondence.

❖

Fitchburg, Mass.

About seven hundred persons were present in City Hall to hear a lecture on Christian Science by Virgil O. Strickler, who was introduced by the Rev. Samuel G. Dunham, pastor of the First Universalist church of this city. Mr. Dunham spoke in part as follows:—

I am here as a friendly delegate to this assembly. As perhaps most of you know, I am pastor of the Universalist church, a church whose universalism is not exclusive but inclusive. I claim every individual who works for human betterment. To my mind, every person who is trying to get nearer God is a Universalist; so I welcome you all here in the name of my church. I have all sympathy and no criticism for your beliefs. I have no criticism to make of any people who are intensely religious, as I believe you to be.

Fitchburg News.

❖

Pawnee, Okla.

In introducing William R. Rathvon, who lectured on Christian Science, Mrs. Doll Wait Clark, past department president of the Woman's Relief Corps of Oklahoma, said in part:—

Since I heard the first lecture secured for us by the Christian Scientists of Pawnee, the thought has been in my mind of what we owe to this little band who bear the not inconsiderable expense, involving personal self-sacrifice, in giving us the benefit of speakers who have offered us some of the best thoughts in the world. If no other good were accom-

Digitized by Google

plished, anything that will make us think is of benefit to us. This is an era of thoughtful, earnest progress, and I am sure no one can listen to a Christian Science lecture without being benefited by being made to think. It is both the product and the producer of thought.

That theory of religion which is along the fullest and broadest lines of progressive thought, which not only allows but by its very inception compels us to think, will surely develop the truest realization of the golden rule and will become the religion of the future. I am pleased to be recognized as a friend of Christian Science, as I am of Methodism, Presbyterianism, and all other organizations of Christian workers for the uplift of mankind, and for leading men to follow the teachings of the meek and humble Nazarene. There is good in all of them, though perhaps not all the good in any one of them.

The gospel of Jesus Christ is the accepted standard of the highest conception of the human heart, and the united effort to understand it and to make it a part of our lives must be our greatest ambition. Our present civilization is the result of its teachings and practice, and a universal conformity to it is the beacon-light that points to the future destiny of our race. Every school of thought that enlarges our ideals and gives us a more perfect understanding, aids in the search for the truth as to our relation to the creator, and it is in this spirit that we greet the speaker of the evening.

Correspondence.

❖

Muskogee, Okla.

George Dick Rogers, attorney, in introducing Bliss Knapp on the occasion of his lecture on Christian Science, said in part:—

In my association with Christian Scientists I have been particularly impressed by two things: first, the high order of intelligence and mental poise of those who have adopted this belief; and secondly, the loving-kindness and happiness which seem fairly to radiate from them. Happiness is a mental state, and to be enduring here upon earth, must come to us from within. In order to have true, lasting happiness, we must rise above our environments, and to do this we must cultivate the attainment of a sound mind in a sound body. The followers of Christian Science, so far as my observations go, come nearer to attaining this desirable condition than any similar congregation I have ever seen. For these reasons, if for no other, I feel that its tenets are well worthy of careful investigation and study.—*Correspondence.*

❖

Maquoketa, Iowa

In the Olympic Theater, Jacob S. Shield delivered a lecture on Christian Science to a large and attentive audience. He was introduced by Mrs. Elizabeth Ellis, who said:—

Throughout the ages, mankind have ever been striving to attain to something better than they already knew; and regardless of race or color this desire seems to have crystallized into a belief in some creative power higher than man. Christians recognize this power as God; Christian Scientists go farther and recognize God as the only power.

Herein lies the distinction which was made of practical use to us by the Discoverer and Founder of Christian Science, Mrs. Eddy, who less than fifty years ago gave to the world the fundamental truth of this religion. In this brief space of time thousands have been healed, physically, mentally, and morally, by the spiritual understanding of God's word, which Jesus used to heal the sick and reform the sinning, and which he taught to his followers, to be used for all time. The Christian Science religion is based upon Love; the "perfect love" which "casteth out fear," and which heals and saves. Its adherents are continually striving to understand man as godlike, rather than God as manlike. There is a vast difference between what Christian Science really is and what many people think it is.—*Correspondence.*

❖

Ogden, Utah

The remarks of Judge S. T. Corn, in introducing George Shaw Cook, who lectured on Christian Science in the new church edifice, were as follows:—

I take it that the man who in this day and generation is not a believer in Christ Jesus, is simply behind the times; for whatever differences of belief and opinion there may be as to Jesus' birth, his inspiration, and his mission on earth, it is beyond dispute that he enunciated the one perfect system of morals which the world has known, and that his teachings are the basis of modern civilization, with its schools, its churches, and its thousand agencies for the care and comfort of the unfortunate.

One particular branch of the Master's followers that has attracted wide attention during the last half-century is the Christian Scientists. Not being a member of their organization myself, I am not thoroughly informed as to the particular tenets of their faith; but there are some things which I think I do know about them, and which commend them to the confidence and consideration of the community. For one thing, it is beyond reasonable controversy that by their method of treatment they have healed thousands upon thousands of cases of disease. It is also true that their theory of life has brought mental peace and satisfaction to thousands who have accepted it. Moreover, they have built up a membership of hundreds of thousands of men and women, not drawn from the ignorant and unthinking, but largely from the intelligent and educated classes. They constitute a body of good citizens which is an asset in the progress and prosperity of every important community in the country. Under the circumstances they have earned at least the right to be heard, and I count it an honor and a pleasure to introduce the speaker of the evening, one of their accredited lecturers.

Correspondence.

Testimonies of Healing

A few years ago I became very ill with chills that would last about two or three days at a time. I thought there must be something serious the matter with me, so I went to a doctor. Upon examination he found I had an abdominal growth. He said I must be operated on as soon as possible, for my life was in great danger. I consulted another doctor, but the verdict was the same, except that upon close examination he found two other growths. He said I had better have an operation performed immediately, for if one of the growths broke, the results would be fatal.

I though I would rather die than undergo an operation, so I went to see a Christian Science friend, who recommended a practitioner to me. I asked for treatment and began to improve from the very start. I was healed within four months, and I have not had a sick day since. The growths broke, but passed away without the slightest injury to me. I am now perfectly well. No words could express my thankfulness to God for Christian Science and for my wonderful healing.—Lovisa Rydberg, San Rafael, Cal.

✧

[Translated from the German]

In 1910, after having had trouble with my eyes for quite a while, I went to a physician, who informed me that I should have an operation performed on both eyes. Not having sufficient faith in this physician's ability, I consulted a specialist. He too considered an operation necessary, since the film would otherwise cover the eyes, as a membrane extended from the outer corner of both eyes across the eyeballs. I had medical treatment for two weeks, and a couple of months later had to submit to an operation, followed by another two weeks' treatment; but this proved a failure. I therefore went to Tübingen and had another operation performed on the left eye. This also failed to improve the condition. Three months later I went to Stuttgart for a third operation, the course of treatment this time lasting seven weeks. The pain and suffering I went through during that period is beyond description. A part of a rabbit's eye was sewed into mine, but was removed after three weeks; then a part of the inside of my under lip was cut out for the same purpose, but I had no sooner returned home than the old condition manifested itself again.

I then heard of Christian Science through my sister-in-law, whose daughter had been healed of insanity, and the thought came to me at once that I might be freed of my affliction by this means. When the Christian Science practitioner called again at the home of my sister-in-law, I expressed the desire to have a talk with her, and from that moment on I knew with a certainty whence cometh true help, for I experienced an improvement after the first conversation. I began doing a good deal of reading in the *Herold*, and upon my request the practitioner gave me several treatments. Today I am completely healed, and my sight is good.

I give thanks to God daily, and praise Him for having led me in the way of Truth, for without Christian Science I would have been looking forward to total blindness. I am also deeply grateful to our beloved Leader, Mrs. Eddy, for the good which I have received through her teachings.

Christine Ziegler, Essingen (Württemberg), Germany.

✧

It is with a heart full of gratitude for the privilege, that I give my testimony of what Christian Science has done for me. It was in March, 1909, while I was on a visit to relatives in Ohio, that one Sunday evening, on returning from a brief visit to Columbus, I met a friend whom I had not seen for sixteen years, as I had been away from the United States that length of time. I had heard practically nothing about Christian Science until then, but on questioning my friend regarding it, as I had been told that he had become a Christian Scientist, I became interested, and soon had a desire to hear more, which I did. I also visited the reading-rooms, attended the services on Sunday and the Wednesday evening testimony meetings, and was deeply impressed. I never heard or read so much about love before. I had to the best of my knowledge been seeking to know and to serve God, and here was just what I required,—something for me to understand and practise.

I could neither read nor write without glasses, for my eyes had been injured while I was living in Egypt some few years before, but in a few weeks, with the kind help of a practitioner, I was completely healed of this trouble. In August, 1911, I was healed of an acute stomach disease. I have also been able to demonstrate for myself the truth of Christian Science by overcoming toothache. I am very thankful for these demonstrations of the truth which makes us free.

The physical healing, however, is not all. I thank God for the spiritual uplift, the love which has come into my life, and the silent yet steady overcoming of the human element with the divine. Mrs. Eddy says, "The divine must overcome the human at every point" (Science and Health, p. 43). I am grateful to our beloved Leader for giving us Christian Science, and for what it is doing throughout the world. I know I can best express my thankfulness in deeds of kindness and in honest endeavor to reflect the Love which is God.

John Treweek, Rossland, British Columbia.

✧

I was living in Sioux City, Iowa, at the time I turned to Christian Science for healing, and for almost fifteen years it has met all my needs. I had never been well or strong, was always tired, it seemed to me, and finally I gave up completely when I was taken with what is called a nervous breakdown. When I began taking Christian Science treatment I was asked to read the text-book, "Science and Health with Key to the Scriptures," and the first time I read the book through it seemed a mere jumble of words. I was, however, told to begin again, so I did, and I had not read very far when this statement on page 203 stood out very clearly: "If God were understood instead of being merely believed, this understanding would establish health."

Through the study of Christian Science I am learning to understand God, whereas before I had merely believed: and as I gain this understanding I have better health and greater happiness than I have ever known. I am indeed grateful for the truth as revealed to this age by Mrs. Eddy.

Anna Ames Peavey, Machias, Maine.

✧

I am very grateful for what Christian Science has done for me and my family. I was sick for five years, and during that time was treated by three different physicians, who said my condition was due to an internal fibroid growth. They decided that an operation was necessary, and that it was the only thing which would do me any good. The time was agreed upon, and all necessary arrangements were made for me to go to the hospital. Then a dear friend told me about Christian Science, and begged me to try it before submitting to the operation. I therefore wrote to my physician and told him I was not going to the hospital for a week or so later than the date agreed upon. I am very glad, and grateful too, for this decision, as the growth disappeared and I have

Digitized by Google

never needed to have the operation performed. That was fifteen years ago.

My husband was healed of hemorrhoids and a severe case of rheumatism in a few treatments, while my youngest daughter was cured of appendicitis in a few days. Several years ago my eldest daughter was healed through Christian Science of what the doctors diagnosed as congestion of the brain in a most alarming form. For all of these benefits we are most thankful to God, and grateful to Mrs. Eddy for what she has done for mankind in giving us Science and Health.—Ella Burtner, Allerton, Ill.

✧

I am truly grateful for Christian Science, and I feel it is my duty to tell others some of the many blessings which I have received. Nearly all my life I had been a sufferer and was more or less under a doctor's care, but no doctor ever gave me any hope of permanent relief, and when I first heard of Christian Science I was weary of life. I was suffering from weak eyes and unable to do any kind of needlework without the use of glasses; moreover, I was told by an oculist that I would never again be able to do without them. I had, however, been reading Science and Health only a few days when my eyes were quite healed, and from that time, more than ten years ago, I have never used glasses. I had also for many years been wearing a bandage on each ankle, and could not walk without this assistance; but about six months after I began the study of Christian Science I was able to put these bandages aside, and I have not needed them since. I have much fine needlework to do and am very thankful for the recovery of my eyesight, but more especially am I grateful for the understanding of Truth gained through Christian Science, which has brought such peace and joy into my life.—Rose Carpenter, Beverley, England.

✧

I often feel that I am neglecting a duty in not sending in some of my experiences in Christian Science to express my appreciation and gratitude for this redemptive teaching. I am deeply grateful to our dear Leader, who discovered this Christ-healing, which destroys both sin and disease and has brought to a sick and sinning world a new-old light. It certainly has been a "lamp unto my feet, and a light unto my path."

In the early part of 1898 I came to Christian Science for the healing of chronic stomach disorder, bowel trouble, and nervousness. The first light I received was in being told that Jesus had said, "Take no thought for your life, what ye shall eat, or what ye shall drink." This impressed me, for it was a new application of the text, and decidedly different from what I had been doing, for I had given some years of experiment and study as to what to eat and drink, but was becoming only more and more confused, distressed, and nervous. I took Christian Science treatment, adopted this, to me, new truth at once, and began to eat and enjoy everything set before me. The world and everything in it seemed changed, while new joy, new hope, new ambitions and desires came to me. I gave up all medicine, and have never used any since. It is now some seventeen years since that time, and Christian Science has been my only means of cure.

I began also to read and enjoy the Bible, something I had not been able to do, though at one time I bought a child's Bible, thinking I might understand it, as it was arranged for children; but it only disturbed and confused me. Some things seemed absurd, and I was getting to the point where I could not accept or believe them, and was about ready to regard the whole thing as a myth; but the light that our dear Leader, Mrs. Eddy, has given us in our text-book, "Science and Health with Key to the Scriptures," has enabled me, in a degree, to appreciate, accept, and demonstrate in my life the great truths found in the Word of God, as well as the admonitions of our Master and Wayshower. Where I once thought it impossible, I now find it a great privilege to follow his teachings. The Bible no longer seems contradictory, but it is the greatest of books. I daily enjoy reading its clear expressions of the great scientific facts of God and His creation, the experiences and progress of our forefathers, and the prophecies, revelations, and fulfilments contained in its pages.

I thank God for His wonderful goodness to man, for the triumph of Calvary, for Christian Science and the faithfulness of our Leader, for our literature and the proficiency of our editors and publishers, and for the efficient work of the Directors, the lecturers, and the officers of The Mother Church. I am grateful to all who have helped me on my way from sense to Soul. "Great is our God above all gods."

Martha B. Prell, South Bend, Ind.

✧

Having in my youth been thoroughly steeped in agnosticism, I acknowledged nothing as truth but the dogmas of materialistic biology. Then at college I awoke to the necessary existence of an intelligence of which the universe is the expression, but that intelligence was to me obviously capricious and humanlike. While it seemed that God's caprice favored me, however, appearing veritably to hold me in the hollow of His hand, my anthropomorphic conception outlasted all assaults.

I recall clearly a conversation in 1901 with two Christian Scientists of Sterling, Ill., on a train, wherein their views of God and mine were clearly expressed and contrasted, but without altering my convictions. It continued so while I lived, talked, and traveled with Scientists, even though the supposed favor of God seemed to turn to disfavor. Early in 1912, while again on a train, the sight of a new copy of Science and Health in the hands of a friend prompted me to tease her about reading this book. In reply she handed it to me, and a half-hour's reading out of passing curiosity revealed the true character of God, as one who is not changed by prayer but understood through it.

After the new thought had germinated in my consciousness a week, I purchased a copy of Science and Health and began to read it. So far had the philosophy of despair supplanted trust in a God of human design, that the sweets of life had no permanent lure; life itself seemed of no consequence, and its end was contemplated with increasing complacency. Instead of such a condition, the truth of Christian Science has provided the understanding with a true fount of living water, at which one can freely drink and not thirst again. It is often said, and truly, that physical healing is the least of the blessings of Christian Science, perhaps as the rough stone of a foundation is less than the dome it supports; yet to our family, as to many others, it has been the proof that the foundation of Christian Science is indeed a rock, the consciousness of Christ, and it has brought with it that "sweet and certain sense that God is Love" (Science and Health, p. 569). We and the children of the household have suffered the conditions which demanded proof that physical ills are but the illusions of a baseless dream. Appetites, long supported by being resisted as realities, vanished completely at a recognition of their unreal character; the wearing of glasses and eye trouble of long standing ceased to be, and in ways too numerous to detail we have been privileged to watch the approach by degrees, in ourselves, our friends, and in the

Digitized by Google

life of the community and nation, of that day in which we shall know the truth, and knowing it, shall be entirely free.

Reflecting now on the incidents which made possible the awakening of our family to the great truth taught by Christian Science, it is definitely clear that the "cold conventionality of materialism," described as obsolete on the first page of the Preface to Science and Health, was undermined in us by the reading of several copies of *The Christian Science Monitor*, judiciously passed to us several weeks prior to the incident on the train before referred to. The broad sympathy with all movements for human betterment, evidenced by this paper, its obvious accuracy and good sense in presenting news items, and the good will with which it had been given to us, combined to build up a tolerance for the name of Mrs. Eddy and Christian Science the lack of which had theretofore been as a prison wall to us. By observing the workings of the leaven which the *Monitor* puts into the lives of individuals and communities, it has become clear to me that its editorial page motto exactly expresses Mrs. Eddy's intent in founding the paper, and that in my life it produced "the blade," from which sprang "the ear," that in turn gives promise of the "full grain in the ear."

THORWALD SIEGFRIED, Seattle, Wash.

✧

About four years ago, when Christian Science was first presented to me by a sister in England, I thought the teaching was too good to be true, but now I am thankful for the understanding that only the good is true. At that time I seemed to be all alone in the world, without a God and without hope. I longed to find some one who could enlighten me as to the why and wherefore of the awful inconsistencies of this world; but whenever I broached the subject of God, I found a cold shoulder turned upon me, until I was in utter despair. I then proved that "man's extremity is God's opportunity," for in thus turning wholly away from man to God, I found Him in Christian Science, a God who is Love, an ever present help.

This concept of God has brought healing to me, spiritually, morally, physically, and financially. Whereas I was formerly never well, although constantly taking medicine, I now enjoy almost perfect health. While I then could not sew or read without suffering intensely with my head and eyes, since taking up the study of Science and Health I have been able to use my eyes as much and as long as I wished, without any ill effects. Chronic stomach disorders, liver trouble, neuralgia, nervousness, and other ailments that made life a burden, have disappeared through the slight understanding of this teaching that I have already gained. Having in Christian Science a basis upon which to work, I am finding it a present possibility to love my enemies and return good for evil, something I could not do before.

About two years ago my husband experienced a quick and complete healing. One day he assisted a fellow worker to cross the road, the man being so crippled with rheumatism that he could not get across unaided, though he had been treated for this disease in the hospital for six weeks or more. The next day my husband found it impossible to move in bed on account of rheumatism. He lay for some hours undecided what treatment he should choose, but having watched the case of his comrade under *materia medica*, he decided to try Christian Science, so he asked me to telephone to a practitioner from whom he knew I had received much comfort and help.

Absent treatment was given when the message was received at nine o'clock that night, and in two days my husband was back at his work, putting in three hours overtime; in four days he was entirely free. Some weeks later one of my little girls ran a rusty nail into her foot, thus poisoning it, and u I felt a little fear, the child asked to have the practitioner treat her. Help was given at once, and during this experience, as in my husband's healing, the practitioner turned u thought to God so lovingly that we proved that "all things work together for good to them that love God." At other times, when I have had to ask for help for any one of my five children, so much love has been shown that the healings have been quick. Croup, colds, bowel trouble, toothache, headache, and earache have been overcome for the children through my own understanding. When I think of what Christian Science has done for us, is it any wonder that I long for all who are in distress to know of the healing power of Truth!

KATE E. LOCKE, Winnipeg, Manitoba, Canada.

✧

I take pleasure in testifying to the efficacy of Christian Science in the healing of diseases. Some time ago I was taken ill with a bad attack of articular rheumatism, and for eight weeks I had treatment from the best doctors in the city, who did all they could to relieve me. They, however, only succeeded in allaying the pain, and I was left with a badly crippled and stiff knee-joint. It seemed that I was doomed to be a cripple for the rest of my life, as the doctors could not give me any assurance that I would ever again be able to have the full use of my limb.

A friend then called my attention to Christian Science, but I could not believe it would do me any good, as the doctors had exhausted their skill and decided that nothing further could be done. I was, nevertheless, assured that there was relief for me, if I would only take advantage of the opportunity. I finally concluded to give Christian Science a trial, and was taken to a practitioner, who told me that my case was not hopeless, and talked to me very kindly, citing many cases of a similar nature that had found relief through the power of Truth. After taking four treatments I was able to go about without crutches, something I had not been able to do for nearly four weeks. I then realized that truth was stronger than error, and that Christian Science could overcome disease. In twelve days I was completely healed and returned to my work. I have also been relieved of several other inharmonies, the most notable of which was an unfavorable temper, and I now find myself a better man in many ways than I was before I became acquainted with this religion.

Over two years have passed since I was healed, and there has never been any recurrence of the ailment. I am more than grateful to our dear Leader, Mrs. Eddy, for showing us the way to an understanding of the truth, also for the spiritual light I have gained, for the broader outlook, and the greater love for all mankind.—WILLIAM BOSLEY, Mattoon, Ill.

✧

It is with a great deal of pleasure that I express my gratitude for what Christian Science has done for me. I have had several healings during the past few years, one of a severe burn on the face. I can also truthfully say that I experienced an absolutely painless childbirth with the help of a Christian Science practitioner. It was all over in less than five minutes. I was up and around the second day, as though nothing had happened. It certainly was proven to me that the physical has nothing to do with being, when we realize that substance is Spirit.

I am very grateful for what I know of Christian Science and for what it has proven to me. My little boy has been in perfect health, having had none of the ills to which babies are supposed to be subject. For this I am very grateful.

ESTELLE HAWES, Los Angeles, Cal.

When I was a very young child, I was taken ill with measles, and after my recovery it was found that I had lost my hearing, and both ears had running sores. I was placed under the care of an ear specialist, who treated me for a few years without bringing about any improvement. Then other doctors were tried, but none could help. I received treatment from a doctor who was known as the greatest ear specialist in the world, but after a short time he told me my case was hopeless, and I would probably never hear well again; that I would in fact grow worse, but that I should continue the treatments, as the stopping of the discharge might prove fatal. He could not, however, help me any more than the others did.

I had always been under the care of doctors, and they were kind to me, interested in my case, and did all they could, but they did not give me any relief from either the pain or the discharge. I had tried many methods of treatment and material remedies, besides undergoing an operation, but all to no avail. Furthermore, as a result of taking so much medicine all my life, I soon found myself with a severe and painful bowel trouble. I was nervous and irritable, and life held no joys for me. I suffered loss of appetite, and each winter I would have one long, continuous cold. I was so unhappy that I prayed for death to relieve me, as my prayers for health had not been answered. I thought God would not listen to me, for some reason, or perhaps it was His will for me to remain as I was. In 1907, when I came to Christian Science, I was what doctors call a physical wreck. I had no faith left, but thought no harm could be done; besides, all material means had been exhausted. Two treatments in one week gave me relief from the bowel difficulty, and soon I was entirely healed of that. I bought a copy of "Science and Health with Key to the Scriptures" and began to study the best I knew how, although I had received very little education, on account of the deafness. Within six months my hearing responded, and it has greatly improved since coming into Christian Science. While it is not absolutely perfect, there are times when it is nearly so.

My first winter in Christian Science the demonstration was made against the necessity of having a cold. I have regained my appetite, and the nervousness has left me. Before coming to Christian Science I could not breathe properly through my nose, and one morning I woke with my mouth very wide open. On trying to close it, I experienced great pain, and it was with difficulty that I managed to swallow even liquids. Having to hurry to business, I had no time to call up a practitioner, but I took a small pamphlet on Christian Science with me. At noon I broke off a small piece of bread, but I could hardly get my mouth open half an inch. A slight stiffness had now taken place, and I could not eat. I kept on reading the pamphlet, however, until I came across a sentence from which I gained the spiritual meaning so clearly that I made the demonstration right then and there. I moved my mouth, and the jaw slipped back into place, and I ate my lunch in peace. The words of the sentence, quoted from the Bible, were: "Peace be still . . . and there was a great calm;" and so it was. I now breathe perfectly at all times.

Another time I wrenched my knee, and the next day I found that the cords about the knee-joint were twisted out of place. I treated myself the best I knew how and received relief immediately, and in a few days the trouble was entirely gone. I am learning to be happy and more grateful for life. I am very thankful for all this healing, and for the spiritual uplift which Christian Science has brought to me, through our beloved Leader, Mrs. Eddy.

KATHERINE E. FREY, New York, N. Y.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

We have been accustomed in the calmer atmosphere of earlier times to recognize that society as a whole is responsible for many of the crimes for which it was content to punish individuals. The social solidarity of sin had become a new discovery to us. Whether it meant that only some abstraction, such as the social order, was the subject of sin, and that the individual was never responsible, we had not all decided. We had come to take the iniquity of each and lay it upon all. But whatever this discovery was worth, it was becoming clear to some that its corollary was, nevertheless, that no social advance was possible until the sins of society came to be felt by the individual conscience.

Can we suddenly repudiate these hardly won gains of ethical consciousness? Can any one of us dissociate himself from some responsibility for this war? . . . Especially if we belong to Christ's church, does heavy blame rest upon us. It must be evident that if Christ's church had been really united and alive, if it had taught its members not to bear arms, this war and many another would not have happened. The world does not believe that there is any other way than the resort to force, because it has not had the example before it which we ought to have provided. Our long trifling with the ethics of Christ, our unwillingness to take up the cross and follow him, our attempt to worship God and mammon,—these are our sins. The penalty of them is being paid by the bright young life of Europe, dying in the trenches for the sins of the world.

[*The Christian Work*]

It should be remembered that the seeming failures of those whose hearts are set upon big things have been the ultimate triumphs, if history teaches anything. We wish the churches and all Christians could take this sentence greatly to heart just now: "His heart was set upon great things." This is no time for the church or for Christians to be concerning themselves with anything but the gravest questions. An awful crisis is upon the world. Many of the wisest men in Europe are fearful for the future of Christianity. We met a great statesman the other day who told us that he had never seen such skepticism as to the power of Christianity to redeem the world as he had found among his compatriots. How can Christianity live in such deadly hatreds as now exist between Germans and Englishmen, and how Christianity seems to have been absolutely abrogated in the letters and utterances of scholars, professors, and clergymen of Europe! It would seem such a pity for the church at this time to be absorbing its energies over any questions smaller than these. This is not the time to be debating theories of inspiration, conformity to doctrinal standards as the orthodoxy of either men or institutions.

[Samuel Zane Batten in *The Standard*]

The churches today must lay heavier emphasis upon the great ethical demands of the gospel. They must make men know that a partial gospel is no gospel at all; they must make men know that he that doeth righteousness and loveth his neighbor is born of God; they must inspire and impel men to go out and apply the truth to every relation and realm of life; they must arouse men to go out to withstand injustice and to make justice prevail throughout the whole earth.

There are great possibilities of devotion, of heroism, of power in these people, but those possibilities are not developed and enlisted. In a word, the churches are full of latent

Digitized by Google

powers and unused resources. This, then, sums up the final call of the hour: In some way the churches must arouse the moral nature of the people. They must fan into flame the smoldering fire of moral passion; they must transform latent power into potential energy; they must arouse men to go forth to seek social justice and to make the will of God prevail.

[*American Lutheran Survey*]

Nothing short of an immense revolution would be worked in the habits of the world if there came a time when a realization of the earnestness of each man's individual life would take possession of the various ranks of society. Discriminating study of the many wrong deeds of men soon reveals that while men are all by nature inclined to evil, and while even after their regeneration there is still a strong inclination to this evil in them, their wayward acts are in a surprisingly large proportion of cases due to thoughtlessness rather than to maliciousness. This thoughtlessness becomes habitual. It is negative rather than positive. It is the absence of the appreciation of the truth that "life is real! life is earnest!" Any effort to make permanent changes in degenerated human conduct must take into account this underlying thoughtlessness in the nature of men.

[*The Watchman-Examiner*]

Jesus Christ declared that the two great commandments which are to govern his people are these: to love God supremely, and to love our neighbors as ourselves. The Christian can engage in no business which is contrary to the will of God or which will work evil to his neighbor. The willingness of God to cooperate with us, sets a limit upon the choice of business occupations, for "we are laborers together with God." God is the silent and unseen partner of every Christian man, and of course God cannot be a partner in a business which is essentially wrong. It may be reverently said that we are in an evil business unless we can add the name of Jesus Christ to the name of our present business firm. If Jesus Christ were on earth, could he consistently, with his high moral ideals, engage in the business which we now pursue?

[*Zion's Herald*]

There is to be strength enough for today, and for tomorrow, and for the day after that; there is to be strength enough for every day. Those days may be marked by difficulties without number, but they will not be enough to stay the supply of strength; the strength is to be adequate, sufficient for every event of all the days that are to come. That much is certain; and no wonder troubled souls have had their fears calmed by those words, and that harassed men and women have turned, quieted and chastened, from God's Word, their lips repeating, "As thy days, so shall thy strength be."

[Prof. John Wright Buckham, D.D., in *The Homiletic Review*]

It is the Spirit that consumes all the dross and unfaith and fear and selfishness that stand in one's way, and enables him to be his best self. Less intellectualism, less mechanism, less criticism; more reality, more prayerfulness, more vision,—this, it seems to me, is what the Spirit is saying to the pulpit today, through that revived interest in historical mysticism and in philosophical intuitivism, as well as in experiential religion, which promises a new springtide of the Spirit.

[*The Living Church*]

As we pass in and out amid the rush of busy life, we are preaching our sermons. Our passing will make men stronger or weaker. We bring comfort to the sorrowing, help to the weak, balm to the suffering, truth to the benighted, in such proportion as our own lives have been touched and kindled by the Holy Spirit.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of binding and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in which all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued as a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this pocket edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the Cosmopolitan magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The Tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership and extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Digitized by Google

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE. POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE. POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, bevelled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman P. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

A total of eight hundred and twenty-two conventions and congresses will gather during the two hundred and eighty-eight days of the Panama-Pacific international exposition at San Francisco. It is estimated that the total attendance at the conventions will top the half million mark by one hundred thousand. Of the eight hundred and twenty-two conventions and congresses, five hundred and twenty-five are national, fifty-seven international, one hundred and seventy-two state, and sixty-eight Pacific coast. During August, the main convention month, two hundred and forty-eight separate organizations will hold sessions. July will have one hundred and thirty-three gatherings, June eighty-one, and September eighty-six. There will be an average of nine conventions a day throughout the exposition's life. By far the largest convention, in point of importance and number of accredited delegates, is that of the great National Education Association, to which more than thirty thousand men and women educators, teachers, and thinkers of America will go. Oakland, the beautiful city which is just across the bay from San Francisco, and which is within a few minutes' ride of the exposition, will be the scene of the gathering, Aug. 16-28 inclusive.

Because the European supply of willow rods has been largely cut off, several American manufacturers of willow furniture and baskets have asked the department of agriculture for the addresses of persons in this country who have taken up willow growing. For some years the department has distributed willow cuttings of imported varieties with a view to developing the production of high-grade willow rods in the United States. The usual imports of willows come chiefly from England, Belgium, Holland, France, and Germany, but these sources have been practically closed for several months. One manufacturer reports that Japanese osiers are taking the market formerly supplied by Germany, at a slightly higher price. Finished willow baskets from Japan have come in where split bamboo was the only Japanese basketware on sale before the war. As a consequence of the shortage of imported osiers, it is said, the price of American willows has increased, and growers here are meeting with a heavy demand for their product.

Stonehenge, the most famous of British ruins, dating back to the bronze age, is to go under the auctioneer's hammer next September. The property to be sold includes sixty-four hundred acres of farm land, the estate of the Antrobus family. The principal building is Amesbury Abbey, past which flows the river Avon (East Avon). This property is located in a corner of Salisbury Plain and includes a considerable portion of the ancient town of Amesbury.

Stonehenge consists mainly of a circle of large stones, nearly half of them now prostrate, averaging about fourteen feet in height, which originally supported a number of huge horizontal stones. There is an inner circle of smaller stones, and within this several pairs of immense stone columns arranged elliptically. The exact purpose which the great structure served has never been definitely established. It is probable that Stonehenge will become public property, through purchase either by the state or by some historical society.

To the Rylands library, Manchester, England, belongs the credit of having first started the movement for the formation of a new library to take the place of the famous collection of books and manuscripts which was the glory of Louvain University before its destruction on Aug. 26, 1914. The Rylands library has announced its willingness to receive and store books contributed by either public bodies or individuals toward the restoration of the Cloth Hall collection. The gifts will be catalogued by the librarian and his staff. The foundation of the famous Flemish library by Laurent Beyerlinck took place three centuries ago, and the number of books collected during that time amounted to two hundred and thirty thousand, none of which remain, except a chance manuscript which one of the university professors had removed from the library for purposes of study.

The paper *Hardware and Metal* had a visit recently from one who has invented a new process for soldering without heat. The inventor claims that the solder can be applied to all pieced tinware without the aid of a soldering iron, flux, or heat. This solder, which is in a semiliquid form, is said to cost about one half the price of ordinary solder, at the same time doing away with the tools now used for soldering purposes. The inventor also claims that with the new method the work can be done in one quarter the time taken under the process at present in use. The inventor has not yet attained for his product the point of perfection he desires, but he feels sure that the results so far obtained are sufficient to demonstrate that the new process, when perfected, will be used to a large extent by manufacturers.

Announcement has been made by the National Association of Hosiery and Underwear Manufacturers, that a chemist of Philadelphia, Pa., has produced a jet black dye suitable for dyeing silk, wool, cotton, or any combination of them. This chemist says that the new dye is a combination of vegetable and mineral products, and that the finished product will cost less than German dyes. It is asserted that this black stands a test in boiling soap and water; is not affected in an 85 per cent solution of caustic soda, and is fast under the most severe tests. All the raw materials of this dyestuff are said to be obtainable in Pennsylvania. The dye contains no acid, none of the bases of explosives, and involves no use of coal tar products. It is said that it is not a formaldehyde, a salt, a sulphur, or a direct black.

It is said by officials of the United States coast and geodetic survey that the work of appropriately marking the boundary-line between the United States and Canada, and between Alaska and Canada, which has been going on for a number of years, will probably be finished so far as the field work is concerned, in 1916 or 1917. The survey has completed about twenty-three hundred miles of the boundary-line between the United States and Canada, from the Pacific ocean to the western end of Rainy lake, in northern Minnesota, the boundary has been monumented. The commission that is making the boundary surveys is composed of Americans and Canadians.

In a leaflet issued by the Transvaal Chamber of Mines, South Africa, it is stated that the total quantity of ore brought to the surface by the Witwatersrand gold mines to the end of 1913 was two hundred and eighty million tons, and up to the same date the amount of "backing" accomplished amounted to no less than 1,650 miles. At the present rate of work the approximate aggregate length of holes drilled in one day amounts to forty-six miles, and the amount of explosives used daily is fifty-two tons. The total world's production of gold from 1887 to 1913 amounted to 8,896 tons, of which these fields produced 3,669 tons.

The latest bulletin issued by the census and statistics office of Canada states that this year's wheat area is the largest which was ever sown in the provinces. Wheat is estimated to occupy this year a total of 12,896,000 acres, which is more by 14.8 per cent than the area sown for 1914, and more by 25 per cent than the area harvested in 1914. Oats are estimated to occupy a total area of 11,427,000 acres, while the number of acres of other grains is as follows: barley, 1,518,400; rye, 106,440; peas, 199,500; mixed grains, 453,000; hay and clover, 7,200,400; alfalfa, 94,480.

The new benzol plant of the Republic Iron & Steel Company at Lansingville, Ohio, has been placed in operation, and the first benzol ever produced in that section under an improved process is being turned out. The plant, when operating to capacity, will turn out twenty-six hundred gallons of benzol daily. The benzol at the Republic works is secured as a by-product of coal burned in the coke ovens.

The seventh national conference on city planning was in session at Detroit, Mich., June 7-9. In his annual report the secretary of the conference made a significant feature of the fact that in small towns and cities there is a growing conception of a city as a unit, a closely knit federation of neighborhoods. In 1907 there was only one city planning commission in the United States, that in Hartford, Conn. Now there are commissions in ninety-one cities.

The United States Supreme Court has just decided the long standing Virginia-West Virginia debt case. It holds that West Virginia should pay $12,393,929 as its net share of the Virginia debt at the time of the partition of the states.

A foreign trade balance in favor of the United States of $14,256,207 was shown by a report issued by the department of commerce for the week ended June 12. Imports were $32,621,619 and exports $46,877,826.

In his recent message to Congress, President Eduardo Schaerer of Paraguay called attention to the government's plan for dividing national lands into lots for the benefit of immigrants.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII June 26, 1915 No. 43

Design for Monument to Mrs. Eddy Selected

ANNOUNCEMENT was made at the annual meeting of The Mother Church that a design for the monument to Mrs. Eddy had been selected, and that further information would be given out through the periodicals at an early date. This information, accompanied by a sketch of the proposed monument, is published in *The Christian Science Monitor* of today, as follows:—

"THE MEMORIAL TO MRS. EDDY

"On the 3d of June, 1911, a notice signed by The Christian Science Board of Directors and headed 'A Memorial to Mrs. Eddy,' appeared in the *Christian Science Sentinel*. The notice ran as follows:—

" 'It has been truly said of our beloved Leader, Mrs. Eddy, that "the works she has done will remain as her monument;" also that she is one of those "who need no monument, for their names are graven on many hearts." Nevertheless, it is the desire of Christian Scientists to erect in Mount Auburn cemetery a memorial which shall be a fitting and dignified tribute to Mrs. Eddy, and through which they may evidence something of their love for her and of the gratitude they feel for the priceless blessings that have come into their lives through her Christian and self-sacrificing labors as the Discoverer and Founder of Christian Science.

" 'Because of the many letters which have been received by the Board of Directors of The Mother Church, expressing a desire to contribute toward the erection of a suitable memorial, it seems fitting that an opportunity should be given to all who wish to be represented; therefore the Board has arranged to have the treasurer of The Mother Church also act as treasurer of a fund for this purpose, which has already begun to accumulate. Remittances may be made to Stephen A. Chase, P. O. Box 56, Fall River, Mass., and it should be definitely stated that they are intended for this special purpose.'

"In consequence of this notice the treasurer began to receive subscriptions, with the result that in his report for the 1st of June, 1914, he was able to announce that between the 2d of June, 1911, and the 1st of June, 1914, the sum of $71,649.66 had been received for the fund. At the annual business meeting of The Mother Church for the present year the treasurer made a further report on the same subject. He stated that including interest the fund amounted to $75,604.43, and that a selection from the many designs submitted had been made, with the result that further particulars would be given in the periodicals in the near future.

"We are able to produce today an illustration of the memorial as it will appear when completed. It is from the accepted design by Egerton Swartwout, of New York city. The memorial, including a fund for its future maintenance, is estimated to cost $110,000. A general contract for its construction has been let to Elbert S. Barlow, of New York city, and the work has actually been begun.

"The site of the memorial is not only one of great natural beauty, but on account of its grade has rendered possible a more picturesque and interesting treatment architecturally than would be possible on a perfectly level lot. The plot, which is approximately eighty feet square, slopes gradually from the level of the roadway to the lake with a drop of about ten feet. The memorial consists of a circular open colonnade of eight columns, resting upon a stylobate of three steps, surrounded on the front by a circular platform slightly above the natural grade, from which platform a double flight of steps leads to a lower platform at the lake's edge. The scheme has no prototype, and is merely a screen of columns open to the sky, enclosing a flower grown circle.

"The material to be used for the memorial is white granite, the inscription in the frieze and upon the top of the pylons being of white bronze let deep into the stone work. The detail, which on account of the size of the reproduction is only indicated, is entirely floral in form and free in treatment, the wild rose and the morning glory being used as the main motives. It is interesting architecturally to note that while it is extremely free in treatment and not at all conventional, yet the effect obtained on a plaster model of full size, which is now in course of construction, is generally very classic in feeling. The extreme width of the memorial is about fifty feet, and the colonnade is eighteen feet in diameter. The columns themselves are fifteen feet in height, and are similar in general character to those in the Tower of the Winds erected by Andronicus of Cyrrhus.

"Mr. Swartwout, writing of his work, explains that, 'thanks to the cooperation of the Board of Directors, the scheme for the memorial has been developed entirely by the use of models. At least three complete models at a small scale have been made, and early in April a model in plaster at full size was begun out-of-doors in the modeler's yard. The profiles of the moldings and the ornamentation have been studied and restudied at the size of execution.' The success of the work is due largely to the skill and earnest application of the architect and modelers.

"Mr. Swartwout is one of the best known architects of the day. He is responsible for the design of the George Washington memorial for Washington, the new Missouri state capitol, the new Federal building in Denver, Col., and many other important works."

In erecting this beautiful and dignified monument to the Discoverer and Founder of Christian Science, her followers are aware that whatever they might do in this way could not in the slightest degree add to or assist in perpetuating the fame of Mrs. Eddy. Nor is such a monument necessary to tell this age or future ages that she labored for the uplifting of humanity. All this is being done through Mrs. Eddy's own writings, and will continue to be done so long as Christianity endures. Christian Scientists realize that they can neither add to nor take away from Mrs. Eddy's place in history through anything they may do, but by this tribute to her life they can show to the world their gratitude for her ministry, which has healed them and given them a priceless understanding of God and of His Son Christ Jesus.

Healing Natural and Normal

ROBERT NALL

CHRISTIAN SCIENCE is not only the unfoldment of truth to the individual, but it is a spiritual dynamic, a power for good. The unfoldment comes as gently as the falling of the dew or the opening of a rosebud. As we "rest in the Lord, and wait patiently for him," He comes in the beauty of holiness and healing. Impatience and doubt retard the gracious bestowals of divine Love. As these errors in their false nature are detected and overcome, we may rejoice in a Peniel experience, when we have a vision as if we had seen God "face to face." Truth then is very real to us, and we gain a clearer apprehension of its potency; but more than that, we begin to learn that the normal relation between God and man is that of Love manifested or expressed always in love that heals and blesses.

The tendency of human thought has always been to describe as miraculous or supernatural those works of God which seem to be departures from the traditional order, and modern enlightenment has not curbed this tendency in some directions. Even Christian Scientists are sometimes tempted into an expression of wonderment when Truth has served its legitimate purpose in uncovering and destroying error, bringing health in place of sickness, or moral regeneration where sin has hitherto reigned. Yet, if we stop to think, should we not rather express surprise if these beneficent results did not follow the realization of Truth? Can we imagine that Jesus ever thought or expressed astonishment, when with his spiritual understanding and his perception of all that is perfect the lame were made to walk, the blind to see, the deaf to hear? when the lepers were cleansed, and even the dead raised to life? With unfailing confidence in the Father, he never doubted the omnipotence of divine Mind over all sin and disease. His works of healing were the natural proofs of his mission; and the continuity of that mission has never been broken.

The Christ is here today, the same savior, healer, and comforter to all. What the immediate followers of Jesus did in this respect is a power and privilege that has never been withdrawn or canceled. They learned from the Master the legitimacy, the normality of goodness and purity, of health and peace, of freedom from anxiety. Wherever they went they took these blessings, until we can understand that, despite persecution and distresses, the early Christians were the happiest people on earth. Like their Master, the disciples lived by the power of the spirit of Truth, and demonstrated it. The fruits were seen in their simple but undaunted faith. Paul's question when before Agrippa, "Why should it be thought a thing incredible with you, that God should raise the dead?" the instantaneous healing of the lame man at the gate of the temple, and many other incidents that are recorded in The Acts, as well as the deep spiritual teaching of the epistles, show us today what advanced Christian Scientists the apostles were.

No doubt the sovereignty and immanence of Truth was to them a great spiritual fact, a fact still manifest to human receptivity. As we remember this, we may be led to guard ourselves against the use of extravagant expressions respecting the healing power of Truth. The impression that is sometimes conveyed to the listener or the inquirer, if we speak of healing, whether of sickness or of sin, as wonderful or miraculous or extraordinary, is that this healing is the spasmodic rather than the natural operation of divine law, and that therefore this law is mutable and inconstant, and operates only in answer to fitful suppliant appeals on the part of mortals. If this were so, then we should have to change our method of prayer from that of steadfast contemplation and apprehension of God's allness, and of His law always ready to destroy every erroneous belief, to that of intermittent pleadings to help us when we were in distress or suffering. God is unchangeable good, and His bestowal of royal bounty is not subject to human influence; it is the consistent and spontaneous outpouring of His whole nature, in order that humanity may be awakened from the mortal dream and find spiritual manhood.

On page xi of the Preface to Science and Health, our Leader speaks of the "mighty works" of healing "from the operation of divine Principle," in order that she shall declare that these "are not supernatural, but supremely natural," and that "they are the sign of Immanuel, or 'God with us,' divine influence ever present in human consciousness." The import of this will be more clearly discerned as we know that man in Science, as the spiritual idea of God, upright and perfect, does not need to undergo any transformation in order to be conscious of himself and enter upon his birthright, but simply to understand his at-one-ment with infinite Mind. It is not man as God's idea that needs changing, but the false beliefs of mortal mind. This is never brought about by any violent upheaval; its attainment is in proportion to one's patient, quiet elimination of sense-testimony and recognition of the truth of being. In this way one denies the validity of every mortal claim or belief, whatever it may be, and thought is thereby spiritualized.

In one of her communion addresses Mrs. Eddy said, "In comparison, it will be found that Christian Science possesses more of Christ's teachings and example than all other religions since the first century" (The First Church of Christ, Scientist, and Miscellany, p. 127). In no respect is this more manifest than in the practical, natural, and scientific demonstration of divine power; and Christian Scientists will do well if they can always think and act in conformity therewith. Precept and example are ours in abundance. Whether we are seeking to vanquish some discordant mental condition in ourselves or in others, we may with serenity know and apply the truth, recognizing that we have a fixed Principle upon which to rely. A Christian Science treatment is the realization of the ever-presence and all-power of the one Mind. Our faith should be so strong that we should expect, without a vestige of doubt, that this treatment will be followed by the substitution of harmony for discord, health for sickness, joy for gladness. Then we shall welcome it without surprise, but with a deep sense of love and gratitude to our heavenly Father.

✧

Wise Distribution

LUCY HAYS REYNOLDS

IT was a vision of plenty. Spring's planting and summer's blossoming had ripened into fruitage; red-cheeked apples and juicy pears hung heavily from the trees. The farmer had waited patiently for these results of his labor, and he gladly summoned his men to pick and pack the fruit, and load it into wagons. This was done with order and care, and in spite of the abundance, nothing was allowed to go to waste. Carefully distributed, the products of the farm supplied the needs of many thousands in a city near by, and brought just returns to the farmer.

Similarly human consciousness, when rightly cultivated, has its seasons of seed-time and harvest, bearing fruitage for multitudes as well as for the individual. Equally necessary is a wise distribution of its products, and each thought and word should be shared discreetly. As Christian Scientists we do not always remember this. With unwise zeal we often

Digitized by Google

give out our thoughts promiscuously and prematurely. Our motives are right, perhaps, but our methods wrong, so long as we allow human judgment instead of divine wisdom to govern our giving. The successful farmer must secure right channels for distribution, and conform to the rules of the markets with which he deals. Sharing thoughts with others before we have ourselves gained their substance, may cause us to become vain chatterers. A mere intellectual perception of the truth does not make it our own; we must win it through proof. Until a true idea has thus become a vital part of consciousness, it is hazardous to attempt to translate it to others.

Visions seen from the mountain top possibly remain clear for months, but perhaps only for moments. So delicate is exalted thought that it trembles at the least touch of materialism, lest the vision be lost. Even to Mary the Master said, "Touch me not; for I am not yet ascended." Moses covered his face with a veil when he came down from the mountain. True to spiritual intuition, the little Christian Science child, when asked what he has learned at Sunday school, often makes no reply, but later on—in his play perhaps—is discovered using what he was taught. When each revealed idea is thus kept secret with God and allowed to evolve in consciousness until self-expressed, it will give forth a radiance all divine. Then the deaf ear that could not have accepted its audible presentation, yet feels its glow, and all unconsciously reaches out for its blessings.

This self-containment of spiritual thinking never leads to stolidity or reserve; rather does it create that fervor of spirit which overflows with inspired expression. Biding time until the apple blossoms have scattered, and the hard little green balls have rounded into ripeness, we come to the autumn's maturity. So we do well to wait on Soul to mold the spiritual vision. As we hopefully ponder the revealed idea, we rise above empty enthusiasm. Ripe thoughts express themselves in right words; we have learned to shape what we say with wise consideration for our brother's view-point. How patiently the Master tendered the truth as he said to his disciples, "I have yet many things to say unto you, but ye cannot bear them now." Through such wisdom we escape that false sympathy which pours forth more than can be received; we avoid that false charity which casts pearls before swinish elements of thought. Animated with spiritual understanding, words kindle into light. Positive and clear-cut, they prove that "out of his mouth goeth a sharp sword, that with it he should smite the nations." If self-repression seems a long lesson to learn, let us not yield to discouragement, but rather remember these words of wisdom: "He that keepeth his mouth keepeth his life: but he that openeth wide his lips shall have destruction."

Spiritualized thought and words fulfil their promise in right actions. What abundant fruit that consciousness bears which is rooted and grounded in Love! And this fruit must all be distributed through proper channels to feed the multitudes. Rushing about in haste is not sharing wisely. Our activities should have both concentration of energy and unity of purpose. Governed by spiritual wisdom instead of human opinion, we will not be found working out of place or out of season, nor will we elbow our fellow worker and be buffeted by our failures.

How wonderfully Mrs. Eddy exemplified wise sharing! In the seclusion of three years' study and individual demonstration, she carefully guarded her revelation, offering it only to "the poor in spirit." Then, as the truth became the substance of her life, she gave it to all the world through the writing of Science and Health and the founding of the Christian Science movement. Following our Leader's example, we too will find wise ways and right channels through which to labor. Thought that is not ripe for outward expression can yet be actively shared in moments of silent prayer, in unselfish deeds done in secret. In the Manual (Art. VIII, Sect. 15) we read, "God requires our whole heart, and He supplies within the wide channels of The Mother Church dutiful and sufficient occupation for all its members." Let our activities, therefore, be gathered together in singleness of purpose, according to the wise provisions of the Christian Science movement. Conforming to law and order is neither confining nor narrowing, but is productive, as we again read in the Manual (Art. XXIV, Sect. 5), of that "wisdom, economy, and brotherly love" which should characterize all the proceedings of Christian Scientists.

As we learn to garner carefully each new idea, we obey more implicitly our Leader's wise admonition, "First purify thought, then put thought into words, and words into deeds" (Miscellaneous Writings, p. 341), and thus learn the lesson of wise distribution. Consciousness will then become a land of plenty, and none of its fruits will go to waste, but will feed the multitudes and bring just returns to the cultivator. Verily, "a man shall be satisfied with good by the fruit of his mouth: and the recompense of a man's hands shall be rendered unto him."

True Humility

WILLIAM G. GILLIES

THE man in the water was a swimmer of wide experience, who had rarely missed daily practice for twenty years, yet from the side of the swimming-bath a novice was shouting instructions to him. In response to an inquiry as to the reason for this unusual procedure, it was explained that the swimmer, who had won many prizes and medals, had learned from results that he was not making satisfactory progress, but while in the water was unable to discover wherein he was at fault. The novice, though with little more than a theoretical knowledge of the art, had been able, nevertheless, from his point of vantage, to discern and to explain to the prize-winner that he was swimming too low in the water, thereby swamping himself.

How often do we find ourselves confronted with a problem which threatens to swamp us, and yet fear of loss of prestige prevents us from confiding in one who, not being in the difficulty, might be able to give us the very advice that would meet our need. It is only ignorance that would keep us back from seeking help or advice when our understanding is not sufficient to solve the problem; and it is only the subtlety of this ignorance that would make us pretend to know what we have not proved. It is the experienced man who is not ashamed to say "I do not know;" and it is something closely allied to deceit which would assume to give the answer to a problem when not certain that the solution is correct.

Surely there is a great lesson to be learned from this attitude of thought manifested by the swimmer; for as soon as he realized that he was not getting a proper result, he knew the fault must be with himself. Then, not being able to detect the difficulty, he did not allow any thoughts of self-satisfaction or self-glorification to keep him from profiting by the advice of even the humblest beginner. The world's greatest demonstrator of real power said, "I can of mine own self do nothing."

Inasmuch as he is sincerely willing to do right for right's sake, and good for good's sake, without any calculation of gain or loss, the student of Christian Science finds that this true sense of humility, instead of making him lose his self-respect, gives him a poise and balance which he had never

Digitized by Google

believed possible. It brings into his consciousness a relative sense of things which increases his usefulness. He also finds that he can best help others when he can so exclude all sense of self, or arrogancy, from his thought as to see his patient's view-point, and thus lead him to the next step necessary for his freedom. What is the use of arguing with a man who is in a well and up to his neck in water? Is it not wiser, in the kindliest way we know, to encourage the poor fellow to seize the rope by which he may be raised out of his difficulty? On page 365 of Science and Health, Mrs. Eddy says, "If the Scientist has enough Christly affection to win his own pardon, and such commendation as the Magdalen gained from Jesus, then he is Christian enough to practise scientifically and deal with his patients compassionately; and the result will correspond with the spiritual intent."

The writer was greatly helped some years ago by an article in the *Christian Science Sentinel*. He had been doing his best to help some one out of trouble, but became discouraged, because he felt that he had failed miserably. On taking up that week's *Sentinel*, he found an article entitled "A soft answer turneth away wrath," and it plainly showed him where he had blundered. It was then he learned that it is not sufficient to mean well; one's effort must appear kind to the other man.

On page 356 of "Miscellaneous Writings," Mrs. Eddy says that humility "is the genius of Christian Science. One can never go up, until one has gone down in his own esteem. Humility is lens and prism to the understanding of Mind-healing; it must be had to understand our text-book; it is indispensable to personal growth, and points out the chart of its divine Principle and rule of practice."

Love's Power

FLORENCE STRATTON WEAVER

THE Bible tells us that "love is the fulfilling of the law." The writer lately had a case of healing brought to her attention which well exemplifies this. A young woman was living in an apartment with her husband and mother, and in the same apartment-house lived also her mother-in-law. The two families were constantly in a state of wrangle and misunderstanding, and this state of things wore heavily on our young friend. In time a large goiter developed on her neck. She went to doctors for relief, but in vain. Finally she went to a Christian Science practitioner, and work was taken up for her. One day the mother-in-law came into the apartment to ask some small favor, and to the young woman's surprise and joy her mother jumped up and said: "I have what you want; I'll get it for you." From that instant all was changed, and the young woman almost held her breath, for she felt it was perhaps too good to continue; but love and harmony were established.

In a few days the enlargement in the throat burst. The young woman went to the telephone, called up the practitioner, and said, "You know what you were treating me for? Well, it has burst and is all gone!" The practitioner replied, "I did not treat for disease, but for the realization of Love's presence and power in your home, and by this I know that Love is reflected there."

The Bible teaches us that "God is love," and that where love is, God is. Christian Science brings to light the fact that man is spiritual, the likeness or reflection of God, and so we awake to the fact that just as surely as we reflect the divine Life, which certainly does not "depend on bodily conditions, structure, or economy" (Science and Health, p. 228), so also do we reflect the divine Love which alters not though it alteration finds, but which loves on because divine Life expresses the one Principle, God, that is dependent in no wise upon personality or circumstance.

Christian Science also brings to light the truth of the Bible statement, "And God saw every thing that he had made, and, behold, it was very good;" so we gradually awake to the wonderful knowledge that there is nothing in the whole wide universe to hate. The Bible says, "Keep yourselves in the love of God," and this is the whole lesson of the Christian Scientist,—his chart, the beginning of his journey, his way, ascent, resting-place, and goal. On page 569 of Science and Health our Leader says: "He that touches the hem of Christ's robe and masters his mortal beliefs, animality, and hate, rejoices in the proof of healing,—in a sweet and pure sense that God is Love."

"As a hen gathereth her chickens"

ERNEST STEWART

THERE is no student of Christian Science who does not frequently ponder the assuring promises of the ninety-first psalm, one of these being, "He shall cover thee with his feathers, and under his wings shalt thou trust: his truth shall be thy shield and buckler." This conveys many lessons, and reminds us that in venturing but a short distance beyond the hearing of a mother hen's beckoning call, the brood may encounter snares and pitfalls. Above, a keen-eyed hawk may circle; in easy proximity a wily cat may crouch; while the pranks of the mischievous house-dog are not unknown to tiny chicks. The brood, or a part of it, may thus become a ready prey, while the anxious mother is vainly recalling her helpless band from unseen perils.

It would not be difficult just here to picture the shelter which the little ones find beneath the instinctively outspread wings; or to sense the comfort and content environing these tender mites when snuggling securely within the feathered castle of a mother's care, or to detect withal the hen's genuine satisfaction, and her steadfast vigilance, as with the nestlings thus trustfully reposing she exercises a self-chosen sovereignty akin to that of the proud monarch who wields jeweled scepter of empire.

The above simple portrayal is aptly imaged by the "child-trust" of the Christian mentioned in Science and Health (p. 495). Mortal mind's behests would fain lure us on, even to the encompassing of a scope just outside the borders of discretion; on into the "snare of the fowler," the "noisome pestilence," the far country where only swine's husks abound. Be this as it may, there is no escaping the fact that the shadowed confines of Truth's ever expanding, ever protecting wings are at all times available. The gentle, pleading cadences of the "still small voice" are borne in upon the hearing ear, as its ringing notes are wafted from yonder Jerusalem even to the sensual Jerusalem of today's mortal consciousness: "How often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not!"

The unfathomed comfort and safety beneath the wings of Truth may be apprehended slowly, but none the less surely; and in proportion as our faith and trust are nurtured and cherished by the unfailing solace found in Love's protecting care, do we realize our freedom from the pitfalls and allurements besetting the pathway of straying feet, and our immunity from being included in the ranks of those to whom might be applied the Master's compassionate yet sorrowful lament—"And ye would not!"

Selected Articles

[Judge Clifford P. Smith in *The Springfield* (Mass.) *Union*]

The reference to Christian Science in a lecture on the wonders of the ancient world, as reported the other day in *The Springfield Union*, was far-fetched in more ways than one. According to a papyrus dating from the time of Moses, one physician wrote to another: "If you have a nervous patient, who says she has a pain in a certain part of her body, place your hand upon the part and tell her she has no pain, whereupon she will have no pain." This was said to be Christian Science.

From a Christian Science point of view, the action thus advised was an effort to induce the mesmeric effect of deception or suggestion. To quote from Science and Health by Mrs. Eddy: "Mortal mind, acting from the basis of sensation in matter, is animal magnetism" (p. 178). The practice of Christian Science is not upon this basis; it "rests on the conception of God as the only Life, substance, and intelligence" (p. 185). A Christian Scientist, therefore, in conversation with his patients, does not attempt to manipulate or deceive them. What he endeavors to do is this: "Give them divine and wholesome understanding, with which to combat their erroneous sense, and so efface the images of sickness from mortal mind" (p. 396). The effect of this practice is thoroughly wholesome, and it has been proved to be applicable to every kind of disorder.

✧

[From *Detroit* (Mich.) *Times*]

When fifteen hundred to two thousand persons will gather for a prayer-meeting in the middle of the week, in these days when every one is supposed to be "movie mad," it is significant. To one who sat on the side-lines, so to speak, in Arcadia, Wednesday night, during the regular mid-week services of First Church of Christ, Scientist, the spectacle was a revelation. Yet this was merely one of thousands of such gatherings being held in all parts of the country. On this occasion, practically every seat in the great auditorium was filled. Sometimes even standing-room is at a premium. At other times, as many as twenty-five hundred persons have been in attendance. It is merely an evidence of a genuine interest locally in what might appropriately be termed "the gospel of good cheer," for cheerfulness seems to dominate the whole proceedings. A happier lot of people never gathered under one roof than congregates here in Arcadia every Sunday and Wednesday. There are no long faces; every one is smiling.

The Wednesday evening services are not unlike the old-fashioned prayer-meetings of the orthodox church. Beginning promptly at eight o'clock, the first twenty minutes is devoted to the singing of Christian Science hymns and readings from the Bible and the Christian Science text-book. The remainder of the time until nine o'clock, when the congregation goes home, is devoted to the giving of testimonies. Wonderful experiences are related; at least, they seem wonderful to the uninitiated. They vary in detail, but all are of the same general trend. They breathe of security, of confidence, of great comfort, and above all, of good cheer. A young woman told Wednesday night of a husband and wife being brought together through Science at a time when a divorce seemed inevitable. An elderly lady related her experiences in an earthquake in Mexico, and declared that she had known no fear. Many bore witness to the power of Science over disease. Men and women, old and young, joined in this testimony giving. There was no hesitation, no embarrassment, no faltering. Their message is for all, and they give it joyfully, almost exultantly in some instances. To one with a preconceived prejudice against the cult, it would be a convincing demonstration that its followers are at least sincere.

These weekly prayer-meetings are a revelation in another way. As likely as not you will bump into your next-door neighbor, whom you never suspected of being a Scientist. Men prominent in the business and professional life of the community thickly dot the audience, taking an active, earnest part in the work. They will tell you gladly, if you ask, what Christian Science means to them. After the closing hymn, the great audience files out amid a subdued chatter of happy voices as hands are clasped in friendly greetings. The feeling of welcome that marks our entrance is intensified a thousandfold; the sense of strangeness is gone. Yet there is no buttonholing in the interest of the cause. You are not urged to "join." If the subject is discussed, you are the one to bring it up. If you are to embrace Science, you must do so voluntarily, you are told. In that respect it is a good deal like Masonry.

First Church is housed in Arcadia only temporarily. The old church on Alexandrine avenue was recently given up when the congregation outgrew it, and Arcadia will be the church home until a new edifice can be built, the plans for which are going rapidly forward. In the mean time the temporary quarters serve the purpose admirably.

✧

[Editorial in *State Journal*, Columbus, Ohio]

According to Doctor ——, worry is the cause of many maladies. It has its seat in the nerves, which are badly used in the usual experience of people. We quote from a review of the doctor's new book on "Worry and Nervousness," as follows:—

"In conclusion, Doctor —— urges that man is not only a 'playing animal,' but that he is also a 'religious animal.' He holds that many persons fall victims to chronic worry because they fail to maintain their spiritual nutrition. 'The human soul must be watered and fed.' Perfect trust in a Supreme Being is one of the essentials, the author holds, to deliverance from the bondage of worry and nervousness."

That paragraph commands the attention of every thoughtful person. We talk so much about diet, but here is an expert on the subject who holds that spiritual nutrition is what people need most. And then note what is said about "trust in a Supreme Being." This is no whim of a reformer; it is the cool opinion of a scientist. That idea should be preached in every pulpit. There is a direct relation between health and faith. This may be Christian Science, but it is also medical science. The doctrine is that no man or woman can be thoroughly well who does not believe in God. It is something to think seriously about, whether a man accepts the idea or not.

✧

[Avery Coonley in *The Press*, Danville, Ill.]

In a recently printed sermon entitled "Christian Science: Is It Reasonable?" there are a number of points which need correction. Of all the Christian churches, the Christian Science church alone undertakes to obey all three of the Master's commands,—to teach, to preach, and to heal; and it finds the promises fulfilled, not only in the healing of sin and sorrow, but of sickness as well, in many cases even to the averting of death itself by spiritual means alone. The healing of tuberculosis, tumor, cancer, lameness, blindness, rheumatism, locomotor ataxia, and a host of other afflictions, through the understanding of God as ever present and omnipotent good, proves the truth of the glorious vision of Christian Science, that God is now as real, as good, as powerful, and as truly present as Jesus and his followers found Him to be nearly twenty centuries ago, and here and every-

Digitized by Google

where as truly as in the hills of Galilee and in the valleys of Judæa. It is the consciousness of what this means by way of daily blessing and limitless hope that brings the expression of gratitude which is so notable in Christian Scientists.

This clergyman intimates that the will is the source of Christian Science healing, when in fact the human will is of no assistance whatever, and in some cases presents one of the serious obstacles to be overcome. There are hundreds of cases of tobacco, liquor, and drug habits, where the will had been tried in vain, which under Christian Science treatment have yielded without a struggle, often within a very brief space, and at times instantaneously. Christian Science does not state that there is no sense of pain, but that in reality there is no pain, for man is the offspring of God, as the Bible states, and is therefore "above sin or frailty" (Science and Health, p. 266); and when this fact is perceived and realized, the sense of pain disappears into its native nothingness.

Our critic, while repudiating eternal torment, accepts and approves torment here and now, and while repudiating a local hell, holds tenaciously to a local heaven inhabited by an anthropomorphic God. Christian Science stops at no half-way conclusion, but recognizes both hell and heaven as states of consciousness. "Heaven is not a locality, but a divine state of Mind in which all the manifestations of Mind are harmonious and immortal, because sin is not there and man is found having no righteousness of his own, but in possession of 'the Mind of the Lord,' as the Scripture says" (Science and Health, p. 291). This heaven is to be reached by acquiring a right understanding of God. "Acquaint now thyself with him [God], and be at peace." With each step toward a better consciousness, we lose something of hell and gain something of heaven. As with sin and sorrow, so with disease. A better understanding of God is shown in better health, better morals, and greater happiness, as we thus prove our understanding with every advance.

The clergyman is also mistaken in thinking that it is "the absurdity" of the statements of Christian Science that has advertised them. It is rather their intense practical value and constant availability that has aroused such wide-spread interest, and it should be evident that a church whose teaching has in less than half a century practically encircled the globe, and which has justified its existence by meeting the needs of men and women in every condition of life, is not founded on absurdity. Christian Science makes no attempt to square itself with creeds, but goes back to the only basis for any Christian creed,—the Bible,—as set forth in the first of the tenets of the Christian Science church, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life," which is to be found on page 497 of its text-book, "Science and Health with Key to the Scriptures."

❖

[Ezra W. Palmer in *The Express*, Fort Collins, Col.]

A traveling evangelist in your city has aroused considerable comment on account of his bitter attacks on Christian Science. In making these attacks he is merely reiterating the same stock objections he used in other communities of the state. The fact that these charges have been repeatedly disproved elsewhere, apparently makes no difference to this reverend gentleman, who repeats the same distorted and partizan charges wherever he goes. Mrs. Eddy once said of Christian Scientists, "Your enemies will advertise for you" (The First Church of Christ, Scientist, and Miscellany, p. 191). Certainly the attacks of this evangelist have proved the truth of that statement. In all the towns of Colorado where this critic has made attacks, increased attendance has been at once noted at the Christian Science services.

If what this clergyman says about Christian Science were true, the movement would long ago have fallen of its own weight; but it steadily continues to grow in the estimation of the public, and constantly attracts to its standard men and women of intelligence, character, and integrity, and this despite fifty years of unfair and partizan attacks.

The reason for the growth of Christian Science is clearly discerned by the man who takes the trouble to investigate. Christian Science is essentially a practical, demonstrable religion. To the sick man it opens the riches of the religion of Christ Jesus, and he is healed. To the business man involved in financial difficulties it points to the limitless capacity of divine Love to supply his need and to save him from himself and his human sense of limitations, with the result that he learns, though perhaps slowly, to trust in the benign care of this loving Father, who ever supplies the needs of His children.

The man bound by drink, drugs, or evil passions, comes to Christian Science and finds relief. Instead of being a drag to himself and society, he becomes a genuine, enthusiastic Christian, rejoicing in the beauty of divine sonship. The list of those healed and freed could be indefinitely enlarged, but enough has been indicated to show why Christian Science grows, and why distorted and personal attacks utterly fail to move even the humblest of its adherents. The steamship, propelled by its hidden and powerful engines, moves steadily forward to the destined goal, despite the shrieking of adverse winds or the blows of surging waves. So too the Christian Scientist, to whom has been demonstrated the might, majesty, and immanence of divine Love, knows that his faith has laid hold on the deep things of God, and he cannot be swerved from his course by the opposing winds of human opinion. His way to unity with God is as clear before him as the path of a ray of light from the sun to earth. He knows that the healing and saving truth which Christ Jesus and his apostles demonstrated is again available on earth, and he points to his own spiritual healing, and to that of a vast multitude of others, in proof that "in our age Christianity is again demonstrating the power of divine Principle, as it did over nineteen hundred years ago, by healing the sick and triumphing over death" (Science and Health, p. 282).

Since Christian Science is again proving the availability of divine Mind to save mankind from sin, disease, poverty, or woe, the question naturally arises, Why the opposition, the attacks such as have been witnessed in your city? History furnishes a sufficient and convincing answer. Religion which concerns itself with words, forms, creeds, traditions, and doctrines, has ever been adverse to progress and has ever resisted to the utmost the attainment of a more spiritual concept of God. The life of Jesus gave proof of these remarks. He came to show men the way of eternal life. He healed the sick, raised the dead, overcame every form of error, illusion, and taught that through divine understanding spiritual freedom was possible for all men. He found the people ruled by a strict ecclesiastical system, a system of forms and observances, but barren of the vitality and power of genuine religion. What was the result of Christ Jesus' demonstration of the healing power of God? Hostility, uncompromising enmity from these same ecclesiastics, who knew that if Christianity triumphed, their day of personal domination was gone forever.

Knowing that the demonstrable religion he taught would be a target for envy, hatred, malice, and all the desires of the carnal mind, Jesus comforted his followers by saying, "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward

Digitized by Google

in heaven: for so persecuted they the prophets which were before you." The persecution accorded Jesus and his apostles has been the experience of every pioneer of truth. It is not surprising, therefore, that Christian Science should be misconstrued and the great Leader of this movement subjected to abuse and misrepresentation. But fifty years of these assaults have failed to destroy the inherent vitality of this teaching, which has for its object the full redemption of mankind from the bondage of material beliefs of sin, sickness, and death, through spiritual regeneration. Mrs. Eddy saw clearly that Christian Science would be railed at by those who failed to grasp the message she gave to the world. On page 97 of Science and Health she says: "Earth has no repayment for the persecutions which attend a new step in Christianity; but the spiritual recompense of the persecuted is assured in the elevation of existence above mortal discord and in the gift of divine Love."

The charge was made by the evangelist in your city that former members of other churches who became Christian Scientists were "renegades." While they were members of other churches, they were highly respected and honored, and their friendship and service were prized; but when the call came to "prove all things; hold fast that which is good," and they took their stand for Christian Science, then they were subjected to insult and obloquy. Why did these people sever their former church affiliations? Their oft-repeated reason is that in their former church home the healing power of God was not available in the hour of need; therefore they came to Christian Science. Sometimes the coming was attended with much misgiving and much surrender of pride, only to find to their joy, and frequently to their amazement, that faith even as small as a grain of mustard-seed can pluck up by the root the sycamine tree of fear, poverty, discord, and disease.

Because the critic claims to have studied Christian Science is no proof that he understands it. Understanding of Christian Science is demonstrable, and the only proof of understanding it is in the spiritualization of thought and the healing of sickness and sin which follow. Truth is not readily apparent to the mind filled with criticism and hostility. The Pharisees heard Jesus and saw his mighty works, but they in reality saw and heard nothing, because they had barred their minds by prejudice, envy, and religious intolerance against the greatest demonstrator of God's word the world has ever known.

Christian Science teaches with Jesus himself that he was not God, but the Son of God. Jesus partook of our human, fleshly nature, and overcame pain and death to show mortals the way of eternal life, declaring, "I am the way." He was tempted to believe in a power and existence apart from God, but he repudiated the temptation and declared, "Thou shalt worship the Lord thy God, and him only shalt thou serve." Neither Jesus nor his disciples ever taught that God created a devil. We have no warrant, then, for believing in a personal devil. The fleshly, carnal mind, which St. Paul declared "is enmity against God," is the only devil (evil) there is. Jesus said of Judas that he was a devil, because Judas manifested hate, malice, revenge. Of a certain scribe, because he manifested spiritual qualities of mind in acknowledging the allness of God and his duties to his fellow man, Jesus said, "Thou art not far from the kingdom of God."

Jesus' command to all his followers was to heal the sick as well as preach the gospel, a command which is just as binding upon the clergyman as upon Christian Scientists. Christian Scientists strive to obey this command, and that they have some success is proved by the many thousands who gladly testify to their healing by prayer to God. This clergyman has repeatedly denied the healing of sickness by prayer, and goes about the country spending a portion of his time in abusing other Christians whose good works he would do well to emulate. Has it ever occurred to this gentleman that the Master's rebuke to a disciple who forbade another because he followed not them, has a loving lesson he might heed with advantage?

❖

[G. S. Paine in *The Humboldt Star*, Winnemucca, Nev.]

Though the criticisms of Christian Science by the Binghamton (N. Y.) clergyman, as reported in a recent issue, seem intended in a not unkindly spirit, they show a thorough misconception of what Christian Science actually teaches, and therefore misrepresent the subject. Would it not be wiser, then, for a Christian pastor to refrain from public criticism of any religious doctrine until he has some real understanding of its teachings? A real understanding of Christian Science would involve the ability to demonstrate its effectiveness. The fact is, of course, that thousands who have been troubled in the past by the very points which this pastor brings up, have gone on and studied until these points have been completely cleared up for them; then they have had no criticisms to offer.

Instead of being convinced that there is a "supernatural power outside of man," Christian Scientists understand that this power is supremely natural. God is infinite intelligence, Spirit, Love, and the true man is His image and likeness, or expression. Proceeding logically step by step from this basis, Christian Science presents the truth that God, or intelligence, could create only good or the expression of intelligence, since God is "of purer eyes than to behold evil." Therefore good is all that is absolutely real—"real" in the sense of "eternal." Certainly this is the exact teaching of the Bible and in no sense a perversion.

This, however, is very different from any mere dictum that there is no evil, no sin, no death, as our critic would have us believe that Christian Science teaches. On page 14 of her Message for 1901, Mrs. Eddy says: "Do Christian Scientists believe that evil exists? We answer, Yes and No! Yes, inasmuch as we do know that evil, as a false claim, false entity, and utter falsity, does exist in thought; and No, as something that enjoys, suffers, or is *real*. Our only departure from ecclesiasticism on this subject is, that our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness." The Christian Scientist is in some measure proving the truth of these statements by overcoming sin, sickness, and death, and he is a Christian Scientist only in proportion as he is so overcoming what may seem very real relatively in human experience, with the understanding gained from the study of Science and Health, and Mrs. Eddy's other writings, of what is absolutely real and true of God and man in His image.

As to death, Christian Science does not declare that "whoever dies merely commits 'mortal error.'" Such a combination of words would be utterly foreign to Mrs. Eddy's teachings. A Christian Scientist does not "expect to get everlasting life;" he merely takes his stand on the teachings of Jesus that "he that heareth my word, and believeth on him that sent me, hath everlasting life," and that "this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." These statements of Jesus are in the present tense, and indicate to the Christian Scientist the need for turning very thoroughly to the true idea of immortal life here and now, and for demonstrating that this true idea of life, including really no element of destruction, does improve human conditions in every way.

Editorial

Not an Exclusive Privilege

ONE of the almost threadbare criticisms of Christian Science which is brought forward more or less regularly, is that which assumes the followers of this religion are guilty of impiety and almost blasphemy, because they believe that sickness not only may be, but is, healed today through the practice of Christianity, just as "all manner of sickness and all manner of disease among the people" was healed by Christ Jesus nineteen hundred years ago.

This criticism is primarily based upon a belief that the healing power exercised by our Master was a personal gift from the Father to him, and was by him communicated only to those with whom he was in personal touch—specifically, "the twelve" and "the seventy" disciples who were his immediate followers. That this belief is without foundation would seem to be amply proved by Jesus' own words, "These signs shall follow them that believe." Even this declaration by the great Teacher is not the only proof which has come to us that the healing power was not a limited gift to a limited few. The apostle Paul did not come upon the scene of action until a later period, and certainly none would dispute his possession of the healing power, to say nothing of the various books in the New Testament for which we are indebted to him and his coworkers.

Again, we have but to turn to the writings of the historians of the early Christian era to find that well into the third century the healing of sickness and even the raising of the dead was regarded as a normal hope and expectation of Christian living and the result of Christian prayer. This in itself is sufficient proof that the healing of the sick was continued after the ascension and the day of the apostles. For example, Justin Martyr said to the opponents of Christianity: "And now you can learn this from what is under your own observation, when numberless demoniacs through the whole world, and in your own city, many of our Christian men exorcising them in the name of Jesus Christ, who was crucified under Pontius Pilate, have healed and do heal, rendering helpless and driving the possessing devils out of the men, though they could not be cured by all the other exorcists and those who used incantations and drugs."

Irenæus, who lived between the years A.D. 120 and 202, wrote of Christian healing and the practice of it during his time: "Others still, heal the sick by laying their hands upon them, and they are made whole. Yea, moreover, as I have said, the dead even have been raised up, and remained among us many years." Origen also wrote of this healing work performed by contemporary Christians: "And the name of Jesus can still remove distractions from the minds of men, and expel demons, and also take away diseases."

Thus is the belief that Christian healing was reserved for but a few who had the privilege of personal companionship with our Master, refuted by both Scripture and history. That this healing ministry was revived by Mrs. Eddy, and that those who have accepted her teachings are doing the mighty works which the Master promised should be done in his name, is a matter of such easy proof that it is now admitted by many who a few years ago were unwilling to believe such things were possible in this age. To those who are unwilling to correlate the healing of Christian Science to that done by the Wayshower, Christian Scientists would say that Jesus declared he came not to destroy the law, but to fulfil it, and in doing this he demonstrated a universal and divine law.

Jesus was not a man upon whom individual and exclusive healing gifts had been conferred, but as Mrs. Eddy has declared on page 589 of Science and Health, he was "the highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality." As the "beloved Son" with whom the Father was "well pleased," he was more richly endowed with the knowledge and understanding of God than were his fellows, and his mission was to communicate this knowledge to all mankind, not creating anything new, but simply dispelling the mist of ignorance with the sunlight of Truth.

The early Christians through their righteousness, their right idea of God, were enabled to discern the falsity of the belief that God had created the evil of sickness or any other evil, and through this enlightening sense they were healed. The same enlightening sense is redeeming mankind today through Christian Science, and the experience of Christian Scientists in regard to the healing of sickness has demonstrated beyond question that this healing is not an exclusive privilege, but is free to all who understand God aright.

ARCHIBALD MCLELLAN

◆

A Talking Serpent

THE third chapter of Genesis is of profound interest to the student of Christian Science, who gathers from it wonderful lessons by the aid of "Science and Health with Key to the Scriptures." On page 529 of this book we find the story of the temptation as given in Genesis, then follows the question, "Whence comes a talking, lying serpent to tempt the children of divine Love?" It is noteworthy that at the beginning of this interview with the serpent the woman signified at least a desire to be obedient to the divine command to abstain from the knowledge of evil, or from a supposed blending of good and evil. It is made clear that no such blending is to be found in the fruit of the tree of life, and this fact should never be forgotten. In his first epistle Peter says, "He that will love life, and see good days, let him refrain his tongue from evil, and his lips that they speak no guile." In the allegory in Genesis we find that Eve disobeyed the divine command the very moment she listened to the suggestion of the serpent, to the effect that God's word was not final. Then she proceeded to repeat the offense of the serpent by tempting another as she had been tempted, by passing on the lie about God and man.

The literal interpretation of this Bible story has led many to believe that women are more prone to temptation through the ear and tongue than are men, even so good a man as St. Paul evidently holding against them this impeachment; but the question is so vital that it cannot be confined to one sex, and in Genesis we find that the terrible rebuke of Truth was directed to the talking serpent, not to either man or woman. The curse directed to the serpent, however, becomes a blessing to the whole race as its deep significance is seen: "I will put enmity between thee and the woman," and the attached promise that the seed of the woman would bruise the serpent's head. The woman was told that because she had listened to the serpent her sorrow would be greatly multiplied, nor was Adam exempt from this penalty; but the remedy is clearly outlined in Science and Health (p. 529), where we read of the revelation which will "reinstate reality, usher in Science and the glorious fact of creation, that both man and woman proceed from God and are His eternal children, believing in no lesser parent."

The great lesson to be learned from this allegory in Genesis is the importance of direct and intelligent obedience to divine law, and this requires us to turn away promptly from the

Digitized by Google

talking serpent which pretends to "make one wise" by a knowledge of evil. The example of our Master in his dealing with the tempter cannot be too closely followed. He promptly met the suggestions of the devil, the carnal mind, with direct and positive statements of truth, and from the victory then gained he went on to do the healing work which is the very foundation of the world's salvation. The tempter left Jesus because he could not be tempted; then "angels came and ministered unto him,"—an experience which will be ours as often as we turn away from the talking serpent. If we parley with this enemy of God and man, we shall lose our priceless birthright of dominion and have multiplied sorrows and disappointments.

If a woman made the first mistake, she was first to see her fault and in true penitence turn away from it. It now rests with all who see the truth in Christian Science to rise to the altitude of that purity and dignity which befits God's children, and refuse to be used as channels into which error may be poured and carried along to contaminate the stream of human consciousness. If error needs a rebuke it should be given in accordance with the Master's command in the case of an offender—"Go and tell him his fault between thee and him alone." The wise man tells us that "a wholesome tongue is a tree of life," and the apostle James says that if a man "bridleth not his tongue, . . . this man's religion is vain." It is for us to decide which we would choose. None can hinder us from keeping outside of our mental abode that which "loveth and maketh a lie," and through our rejection of evil we shall have "right to the tree of life."

ANNIE M. KNOTT.

Refuge in God

IN an important sense, the entire philosophy and teaching of Christian Science is summed up and expressed in the deeper meaning of that single declaration of the psalmist, "God is our refuge and strength." Through the long suffering that attends the education of stumbling sense, the Hebrew people learned in some degree the truth of this word, and theoretically, Christian believers in all the ages have thus named God as an actually available friend and helper, and their prayers have been in keeping therewith; but strange to say, the practice of such faith in God has been, and is today, simply tabooed by the great majority. So true is this that in standing for the healing of sickness by the word of Truth, Christian Scientists, though rated as "otherwise sane and sensible people," have seemed to them strangely abnormal, and to be venturing in a way which is altogether presumptuous and condemnable.

It is here, therefore, that the thought of God which Mrs. Eddy found healingly effective, presents its first distinct contrast to that of other Christians, and those who accept her teaching not infrequently shock good people about them by hazarding their most valued interests upon the verity of the apostle James' statement that "the prayer of faith shall heal the sick." This is but the beginning, however, of the removal of Christian Science teaching from the general view of God's relation to our every-day experience and overcoming.

When the only cause and creator is recognized as divine Principle, infinite Life, Truth, Love, then the divine nature is seen to compass and give character to all being, to be revealed in all goodness and beauty, to qualify all real existence, and to be the answer to all questions. God has to do with every individual at every moment, is the ground of all hope, the substance of man, hence the assurance of immortality,—in a word, He is All-in-all. To the Christian Scientist, the thought of God has thus become the Alpha and Omega of his every purpose and enterprise, the basis of his every judgment. It gives character to his every aspiration, brings rebuke to his every fault, is his stay in every doubt and temptation, and his physician in every sickness.

All this accounts for facts to which every true Scientist witnesses, viz., his entry into a new understanding of the divine presence, his gain of a new consciousness of inspiration, a new vision of possible efficiency, his attainment of a finer poise, a broader compassion, a more constant joy. This exalted sense of Deity has dawned in some degree upon every sage, every true poet of the centuries. It has marked the vital moment of every great life. It was voiced in Job's "I know that my redeemer liveth," in David's "The Lord is my light and my salvation," and no less certainly in Socrates' immortal words to Crito before he drank the fatal cup; and this surely is one of the most convincing evidences of the unity and divinity of man.

It is said that on the occasion of their last supper together, the twenty-one Girondist leaders conversed of many things. They were ardent young men of a culture, refinement, and social distinction which classed them as "the Flower of France," and they knew that their careers were to end on the morrow at the guillotine. At a late hour Vergniaud, their chief, said, "We have now but the question of immortality to consider," and then at the climax of their life tragedy these victims of a "ruthless opportunism" found the sufficient answer to this supreme question in the declaration of one of their number, that "in God's creation there is no imperfection." They had glimpsed the day-dawn of that scientific perception which St. Paul expressed to the Corinthians when he wrote, "Our sufficiency is of God." This is the consummate realization of Christian Science, this is the totality of its philosophy of healing, that the spiritual apprehension of the divine nature, the Principle of being, solves every problem, satisfies every want, banishes every fear, and imparts unfailing peace and power. "Eternal God," good, is our refuge.

JOHN B. WILLIS.

Among the Churches

Current Notes

VINCENNES, IND.—That the Christian Scientists will erect an edifice on the corner of Third and Hart streets was intimated today [May 18] when announcement was made of the purchase of the lot on that corner.—*The Vincennes Sun.*

WACO, TEXAS.—First Church of Christ, Scientist, maintained a booth at the "Made in Waco" exposition held in this city from April 26 to May 1. Approximately six hundred pieces of literature, including *Journals, Sentinels, Monitors*, pamphlets, etc., were distributed.—*Correspondence.*

UTICA, N. Y.—The new edifice of First Church of Christ, Scientist, at the corner of Genesee street and Avery place, was yesterday [May 2] opened for public worship. It is a roomy, modern structure, an ornament to the locality in which it is situated. The society was organized in March, 1894, and since 1897 it has held services in the New Century Club auditorium. The lot was purchased April 6, 1907, and excavation for the building was begun seven years later. The corner-stone was laid June 15, 1914. The edifice is 66 feet wide by 103 feet deep. The auditorium seats five hundred and twenty on the main floor and two hundred in the gallery. The Sunday school room is in the basement, and has two entrances, one from the vestibule, and the other from Avery place.—*Utica Press.*

The Lectures

Observations on the Lectures

It is possible for an intelligent student of a given subject to express in a single lecture conclusions that have been derived from years of application; and it may be done with such clearness as to be of great benefit to the beginner, who may lack the time to gain his information from books. Moreover, the lecture is particularly useful in putting an end to popular misconceptions by giving correct information, in removing misapprehension by defining the actual and the real.

That which soonest reaches the heart of mankind is, however, the Christ-healing. It is indeed the foundation of all true building. With the work of healing once established in a community, there follows in natural sequence the superstructure, or second stage of growth, which involves the organization of the society or church. To protect the organization there is need of instruction and correction, and the lecture is an essential factor in this work. Thus the third period of development in the work of Christian Science properly includes the lecture, which instructs, corrects, and points to "the Christ mode of understanding Life" (The First Church of Christ, Scientist, and Miscellany, p. 248).

Lecturers can respond only to calls from churches or societies that have a card in *The Christian Science Journal*. Reliable information about Christian Science is in such great demand that the Trustees under the Will of Mrs. Eddy have recently offered to assist churches and societies that wish to provide an additional lecture this present year. Greater freedom may thus be exercised in many instances in the arrangements. If the hall usually employed seems ill suited to all classes of hearers, then there may be opportunity to alternate from one hall to another, or from one district to another, within the sphere of activity of that church. Short noon-day lectures for business men have proved beneficial. In market towns there seems to be considerable merit in holding lectures on market days, in the afternoon. The same rule which protects a Wednesday evening service from being displaced by a lecture, is accepted as applicable to a Sunday evening service. But when there is no evening service, the evening is often as desirable for a lecture as the afternoon.

A church or society applying for a lecture should correspond, through its clerk, with that member of the board of lectureship whose services are desired. In every instance the clerk should correspond with only one lecturer at a time. The board of lectureship feels in regard to the correspondence about a date for a lecture, that mutual consideration gives that opportunity for the demonstration of Christian Science which should characterize all the details of a lecture. Experience has shown that in proportion as the demonstration of Christian Science is taking place in all these matters, everything is easily and intelligently accomplished. Should it be necessary to fix the date far in advance, it will naturally be most advantageous and altogether advisable to correspond with the lecturer early in the season.

The church-members are naturally the hosts in giving a lecture, and should be present to receive the guests. If there is insufficient room to seat all those present, the hosts and not the guests are the ones to stand or to return to their homes when their obligations are fulfilled. The lecture should be repeated a sufficient number of times to accommodate all who desire to accept the invitation.

Introductions are most acceptably made by a Christian Scientist. On rare occasions, when there can be no question as to the result, some one who is friendly to the teaching of Christian Science, and who is sufficiently interested to remain throughout the lecture, may be invited to introduce the lecturer.

All information needful for the orderly consummation of lecture arrangements is presented in the lecture circular issued by the board of lectureship. The circulars for the current year have already been mailed, and should be in the hands of the church clerks upon the receipt of this number of the *Sentinel*.

BLISS KNAPP,
Secretary to the Board of Lectureship.

❖

Lecturers Appointed for the Year Ending June 30, 1916

Frank Bell, C.S., Post Office Box 452, Harrisburg, Pennsylvania.

Hon. Clarence A. Buskirk, C.S., 405 South Michichiga Street, South Bend, Indiana.

Clarence W. Chadwick, C.S.B., 2235 Howard Street, Omaha, Nebraska.

George Shaw Cook, C.S.B., 525 Orchestra Building, Chicago, Illinois.

John W. Doorly, C.S.B., 8 Welburn Avenue, Far Headingley, Leeds, England.
(Address for all correspondence relating to lectures in America and Canada, Box 13, Fenway Post Office, Boston, Massachusetts.)

Clarence C. Eaton, C.S.B., 719 South Union Avenue, Tacoma, Washington.

Col. William E. Fell, C.S.B., Fowthorpe, Filey, England.
(Address for all correspondence relating to lectures in America and Canada, Box 13, Fenway Post Office, Boston, Massachusetts.)

Dr. Francis J. Fluno, C.S.D., 1732 Franklin Street, Oakland, California.

Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Massachusetts.

Prof. Hermann S. Hering, C.S.B., 42 North State Street, Concord, New Hampshire.

Bliss Knapp, C.S.B., 11 Hawes Street, Brookline, Massachusetts.

William D. McCrackan, C.S.B., Post Office Box 779, New York, New York.

Charles I. Ohrenstein, C.S.B., 722 Ackerman Avenue, Syracuse, New York.

William R. Rathvon, C.S.B., Post Office Box 1308, Denver, Colorado.

Jacob S. Shield, C.S.B., 58 East Washington Street, Chicago, Illinois.

Virgil O. Strickler, C.S., 219 West Eighty-first Street, New York, New York.

Bicknell Young, C.S.B., Virginia Hotel, Chicago, Illinois.

Letters and telegrams sent to the addresses given above will be duly forwarded. Use these addresses, unless for a special occasion a different address is given.

Notice

On account of lecture engagements abroad, Colonel Fell will not be available for lectures in America and Canada during the current lecture year. Mr. Doorly will be available for lectures in America and Canada during the months of February, March, April, and May, 1916.

❖

Westfield, N. Y.

The introductory remarks of S. W. Mason, in presenting Virgil O. Strickler, who lectured on Christian Science in Assembly Hall, were in part as follows:—

Christian Science is a great and important problem now

Digitized by Google

before the civilized world for settlement, and it cannot be brushed aside with a simple wave of the hand.

There are tens of thousands of educated, cultured, refined people all over this land, from all departments of life, who have become Christian Scientists; and if we were to ask them how it was that they became such, the answer would be, because of the great personal benefits they had received from this religion. If we were to press the question a little further, they would tell us there was a time when their life was despaired of,—when the physicians, surgeons, and specialists had exhausted all their skill in medical science and had failed. Then it was, as a means of last resort, that they turned to Christian Science, with the result that they were healed, and restored to health and happiness. There are thousands of these people today who are living, walking epistles of the great healing power of Christian Science. The motto of Christian Science is the same as that adopted by our own government, "In God we trust."—*Correspondence.*

Pensacola, Fla.

In introducing Bicknell Young at his lecture on Christian Science, Attorney Almon C. Binkley, first reader, said in part:—

Several years' study of the Science of Christianity, with a close observation of its influence on humanity, has convinced me that this Science is the greatest power for good in the world today; in fact, that Christian Science is the present-day name for that which Jesus taught and practised. While comparatively new under this name, there is scarcely a village in the civilized world where it is not known, and almost every community has some living example to prove the power of Truth as taught in Christian Science to heal from sickness and sin. Jesus spent much of his time in healing sickness as well as sin, and a careful study of his life-work reveals the fact that he used the same method to heal both phases of evil. But because his teaching and practice were at variance with the established church of his time, they aroused the bitter opposition of the church authorities, which finally resulted in his crucifixion. Strange as it may appear, after nineteen centuries of the Christian era there is still a tendency toward intolerance abroad in the world, and even to this day those who deviate from the orthodox teaching frequently find their motives and efforts subjected to unkind criticism and misrepresentation.—*Correspondence.*

Pasadena, Cal.

An appreciative audience listened to a Christian Science lecture by Bliss Knapp in the edifice of First Church of Christ, Scientist. The large auditorium was filled to the utmost. The speaker was introduced by S. W. Condon, who said:—

The presence of this splendid audience of intelligent, thoughtful, and open-minded citizens, and of other similar assemblages wherever and whenever the subject of Christian Science is presented, is proof that, after nearly twenty centuries of civilization which has called itself Christian, mankind still craves a demonstrable religion, and is still compelled to seek it outside the lines of the most commonly accepted theories and beliefs about God and man.

Jesus gave to the world a demonstrable religion. It was a singularly simple and practical faith. He appealed to those suffering from the results of selfishness, sensuousness, sin, disease, and the fear of death, to claim their full inheritance as the sons of God, and be transformed through the renewing of the mind—the healing and cleansing of the human consciousness. He taught that fear, discouragement, and despair, with their concomitants of sin, disease, and death, were not of the Father,—the God who is infinite Love. He pleaded in the sweetest eloquence the world has ever heard for the truth that should free us of all discord. He did more; he commanded his followers, throughout all time, to heal the world of this terrible bondage of material sense.

The attempt throughout these intervening centuries to adapt the religion of Jesus to the spiritual ease and convenience of men and organized and unorganized selfishness, sensuousness, and injustice, has been a sad failure. What wonder, then, that thinking people by thousands and by tens of thousands are turning in protest against a concept of God and man that has so utterly failed to heal and redeem society as a whole, or to free us as individuals from this slavery of material sense.

We read on page 131 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that "the central fact of the Bible"—which the Christian Scientist learns to love as he never loved it before—"is the superiority of spiritual over physical power."

If spiritual power is superior to physical power, God made it so, and it necessarily follows that the supremacy of the spiritual over the physical is a rational, a practical, and a realizable ideal. This was the teaching of Jesus nineteen centuries ago. It is the message of Christian Science to you and to me today. It is a message of hope and of optimism.

Pasadena Star.

Bliss Knapp, at a second lecture, addressed another large audience. He was introduced by F. S. Churchill, who said:—

Two thousand years ago there lived among the hills of Galilee a divine friend of man who came with a message so filled with truth and love that his words have come echoing down the centuries. Jesus of Nazareth was a scientific man, for he taught humanity that the power which rules the universe is love, not hate; that God is Love. He "went about doing good," healing the sick and reforming the sinner, causing the lame to walk, the deaf to hear, and the blind to see, all in accordance with the divine law of harmony and perfection, as opposed to discordant human theories. He taught his followers to do the works which he did, for history records the fact that healing in accordance with this spiritual law was performed for about three hundred years, and until its power was lost in a maze of creeds and ritualism.

Now in recent times, and in our own beloved country, there has come "the voice of one crying in the wilderness" of unbelief, and declaring again the power of God to heal sickness as well as sin, and that this power is given to each one of us in proportion to our understanding and application of this spiritual law. Mrs. Eddy has done a wonderful work of love, for in every civilized country may be found thousands of persons who are living witnesses to the healing power of Christian Science.—*Pasadena News.*

Lectures to be Delivered

Chicago, Ill. (Thirteenth Church).—Jacob S. Shield, Valentine's Hall, 3:30 p.m., June 27.

Dawson, Yukon, Canada.—William R. Rathvon, 9 p.m., July 6.

Juneau, Alaska.—William R. Rathvon, Orpheum Theater, 8:30 p.m., July 1.

Westcliff-on-Sea, Essex, England.—Col. William E. Fell, Kings Hall, Hamlet Court road, 3 p.m., July 11.

Testimonies of Healing

Christian Science was brought to my notice by a dear friend who had realized the power of Truth over error. She faithfully tried to impress upon me that all who wished to be free could be. I was a great sufferer for many years from ills too numerous to mention, and finally, in addition to the others, I was seized with a mental trouble which seemed to crush my every hope. I had tried several doctors and all kinds of medicines, all in vain. For years I dieted for stomach disorder, but as Mrs. Eddy says, "either here or hereafter, suffering or Science must destroy all illusions regarding life and mind" (Science and Health, p. 296), and I came into a knowledge of the truth through suffering.

One day, when it seemed to me that death could be my only relief, I picked up a *Sentinel* to read while I was waiting for my husband to come for dinner, and while reading the testimonies, I realized a great change. I went to the table knowing that I could eat anything I wanted. The members of my family thought I was not right in my mind and told me I would surely suffer for what I was eating. This happened in May, 1907, and I wish I could tell of the many wonderful proofs of the power of Truth that I have experienced since that time. This one was the first, and it was grand to me, such relief came instantly.

Another case in our family was the healing of my father, who is now seventy-eight years old. For three years he was a great sufferer from gall-stones. In the beginning he was seized with severe pain and vomiting, and these attacks returned oftener as time went on. As he was not willing to try Christian Science, we asked the doctor what he could do, and if he would operate, but he said not in this case, for my father's age was against him and he was very weak. I never ceased to declare the truth for him, but his suffering was so intense that fear seemed to destroy my work. It was not until the doctor gave him no hope that he would consent to try Christian Science. In the afternoon I called a practitioner from the nearest city, and she came to see him by the first train the following morning. His healing was marvelous. He took two weeks' treatment, and has not had the slightest return of the ailment since. I also wish to mention that at the same time we asked help for a domestic animal which had been suffering for over a year, and in three months' time there was no trace of the disease.

Words cannot express my thankfulness to God, or my gratitude to our Leader, Mrs. Eddy, for this glorious truth, which not only heals the sick but gives such a spiritual uplift.

MRS. JAMES FRASER, Clifford, Ontario, Canada.

❖

With heartfelt gratitude for many blessings received through Christian Science, I submit the following testimony. Late in the afternoon of Oct. 23, 1913, our little girl, then four years old, fell part way down the stairs, striking the lower part of her back on a sharp edge. The result was great distress, so that when we lifted her or moved her in any way, she would scream. A Christian Science practitioner was called that evening. The child slept a little during the night, but cried out whenever she moved. I did not sleep much, but read Science and Health most of the time.

The thought came to me early in the morning to have the little girl examined by a surgeon, for fear the hip might be out of place. We therefore again called the practitioner, who came in a short time and explained to us very clearly the first commandment, as well as many other points. I felt before she left that the work was done, and that the child would walk in due time. On the morning of Oct. 25, after a whole night of sound sleep, she stood upright on her feet on the bed, and after being dressed, took a few steps, leaning on her mother. She then walked rapidly across the room alone. After eating breakfast, she said she would like to go out, so she and I walked a good half mile in the park, the only manifestation of the injury being that she seemed a little unsteady at times. She gained right along, and lost no time from her play. She now attends kindergarten and walks about eight blocks a day.

For this and many other demonstrations, I am grateful to Christian Science and its interpretation of the Bible.

FRANCIS DRAKE, Chicago, Ill.

❖

I have awakened to the fact that the time has arrived for me to express my gratitude for the blessings that have come to me since I took up the study of Christian Science. Many seemingly discordant conditions have been overcome very quickly, both for my children and myself, through the power of Truth. I am most grateful for the strength and comfort that were given me recently when one of our loved ones passed on. The peace that can come to one at such a time by realizing a higher sense of this experience is unmeasured. The truth was a rod and a staff to me, and did indeed comfort me. I wish to give thanks here also to all those who have lovingly helped me along my way and smoothed out many rough places for me. The spiritual understanding that I have gained so far is my greatest treasure, and I mean to add to it by daily living the truth.

I am sincerely thankful to God for the many blessings, the happiness and contentment, that have been mine since I came into Christian Science, and am deeply grateful to our beloved Leader, Mrs. Eddy, for her untiring efforts in placing before the world again this healing and saving truth.

GLADYS C. FONTAINE, San Jose, Cal.

❖

I am thankful for the privilege of giving my testimony. I did not come to Christian Science for physical healing, but because I was looking for a people who practised what they preached, who lived according to the precepts of the Sermon on the Mount and the golden rule in their every-day life and dealings with others. I had been warned to "beware" of Christian Science, because it was "spooky." Now, I never liked mysterious things, but always wanted the full light on every subject; above all, I wanted the truth about everything. I was in great grief when I went to a Christian Science service for the first time; indeed, there is not a step on the road of human heartache that I do not know. I intended to go to one Sunday morning and one Wednesday evening service in order to satisfy myself about this "peculiar people" and not take the word of any one else about it; but I have never wished to stay away since.

I have had many proofs of God's all-presence, protection and care in my immediate family and with others. Glasses have been laid aside because there was no further use for them, and hay-fever of twenty-five years' standing has vanished. Speaking from the standpoint of a mother, I would say that it is not possible to overestimate the hourly help that the understanding of Christian Science, even in a slight degree, affords in every way. If patience means waiting and knowing that we shall have what is right for us, then in that one thing alone Christian Science is worth having. I have also found it valuable in acquiring a foreign language.

I am indeed filled with thankfulness to know that this religion is not only for me and mine, but for the entire human family under the one Father, who is "no respecter of persons," and that whosoever will, may come and "take the water of

Digitized by Google

life freely." Most of all, I am happy because I can help others, and I hope my experience may benefit some one who is in doubt as to the efficacy of Christian Science. I would say to such a one, Take courage; there is nothing impossible with God, and there is help for you.

I desire to avail myself of this opportunity to express our sincere gratitude for the loving aid from the dear Christian Scientists of the United States toward their brethren in the war zone. I wish to say that although my husband lost his position overnight as a consequence of the outbreak of the war, a position he had held for twenty-six years, and although I felt impelled to leave France upon the invitation of our American ambassador, who urged all not absolutely obliged to remain to return to this country, yet we have not for an instant felt a sense of depression, but have rejoiced "all the rugged way" as Mrs. Eddy says (Poems, p. 14), deeply grateful for our knowledge of the constant protection of divine Love. I am most grateful and happy to have proven once more that "loss is gain" (Poems, p. 4), and that I may at this moment be actively engaged in carrying the gospel of good cheer to others.

Mrs. C. W. Blondin, Detroit, Mich.

A few years ago I knew nothing of Christian Science except the name. At the time, I was very ill and under the care of a physician, who held out the little comforting prospect of two years of careful treatment along the lines that he would prescribe, strictest diet, etc., if I hoped to regain my health. I had suffered from congestion of the lungs six times in ten years, and the law of a return of this ailment every winter was held over me.

Aware of my wife's earnest interest in Christian Science and her conviction that it was the remedy for every ill and could also heal me, I became interested little by little, especially after she told me it required no faith on my part, an absolute refraining from taking any medicine or using remedial agents of any kind being the only condition imposed; and of my own free will I decided to try what Christian Science treatment could do for me. I thought that if it did no good, at any rate it could do no harm, and knowing that my wife had been successful in other cases, I asked her to help me. I do not know how the work was done, but I do know that I was a well man inside of three months, eating with relish everything set before me, and with a normal appetite for every meal. My friends consider it little less than a miracle, as they had been accustomed to look upon me as a chronic invalid. I have also gained in flesh since my healing. The physical freedom is, however, nothing compared to the release from fear, of which I was a victim. My nervousness was extreme, causing suffering not only to myself but to every one around me. That has all gone, and I can now always see the sun behind the clouds, whereas before I saw the cloud behind the sun in every instance. Now I am of a cheerful disposition, and no longer look at the dark side of everything.

I am thankful to say that my healing has been permanent and that I have ever since that time enjoyed good health. Needless to say, no drugs or medicine of any kind has been used by me. I attend the Christian Science services in Paris regularly twice a week, and understand that the healthy appearance and the cordial spirit manifested by those present are expressions of their satisfaction and gratitude. This comes from having a practical religion every hour of the day. I enjoy the reading of the Bible, which to me was a closed book, and of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, besides all our other literature, and know that I shall receive more benefits in proportion to my understanding of their teachings and the application of them in my daily life. For all the blessings I have received in Christian Science I am indeed grateful.—Charles Blondin, Asnières, Seine, France.

❖

[Translated from the German]

Five years ago Christian Science seemed to me like a light in the darkest night of despair. I had lost my nearest relatives in quick succession, and reproached myself bitterly with not having shown them sufficient love while they were yet here. For many years I had led a retired life in a beautiful garden-world, as it were, bathing in light and air, while my nourishment consisted practically of fruit only; and all this because it appealed so much to me. My health also seemed to have improved. At length, however, a rough hand startled me from these beautiful dreams. I felt as if the sun had ceased to emit light and warmth, as if my flowers had lost their smile, and presently old ills returned, such as severe headache, a stomach trouble, and great nervousness. Thus I saw that health is a mental state, and it also became gradually clear to me that all physical perceptions and concepts, whether beautiful or repulsive, are no more real than is a mirage, which may be beautiful but is always deceptive. Viewed in this light, our text-book became indeed a "Key to the Scriptures;" moreover, it furnished me with a higher interpretation of the events in nature. One glory was followed by another, one error yielded after another. Glasses which I had worn for twelve years and which had to be replaced at intervals by stronger ones, were discarded two years ago.

Not all wrong states of consciousness have yielded, but I know that God is on the side of honest endeavor. For this recognition, and the accompanying blessings, all of which I could not enumerate, and especially for the grace bestowed upon me in that I am able to help my brothers and sisters as I have been helped, I give thanks to the dispenser of all good. I have seen measles vanish before the recognition of the truth while I was yet reading the Lesson-Sermon. I have seen serious throat trouble healed with one treatment, and so-called bacteria return to their native nothingness as the parasites used to disappear in my garden. "Whatever blesses one blesses all" (Science and Health, p. 206), and every loving treatment, every testimony given, every one of our inspired Lesson-Sermons, every article in our periodicals, every triumph over error, and every word of encouragement from our brethren who command a wider outlook than ours, helps us to climb higher up Jacob's ladder, to emerge from sense-thraldom, to rise to the glorious heights where all fetters fall and man is recognized to be the child of God, where there is no false accuser, where is "neither sorrow, nor crying," and "Love sends forth her primal and everlasting strain" (Science and Health, p. 568).

We thank God here in our fatherland, and are grateful to our dear Leader, that we have in these seemingly so serious times the glad tidings of Christian Science, which has become more generally accessible through the translation of "Science and Health with Key to the Scriptures," whereby we have a firm support and may stand on the rock of truth, which cannot be shaken either by stress or storm. We know that there is no reality in error, and we can see that the wrath of the people must serve the Lord, clearing the mental atmosphere of the passions which have kindled the fire of the present conflict; that all people may see more and more clearly, while yet the storm is roaring, the Christ-idea walking on the waves, the ideal of perfect humanity; that the bonds of peace

Digitized by Google

"which passeth all understanding" may soon unite all nations under one Father who is in heaven, who forgiveth all our iniquities, who healeth all our diseases.

ELISE WERNER, Schwerin i.Mecklenburg, Germany.

✧

It is with heartfelt gratitude that I offer this testimony of my wonderful healing through Christian Science. For several years I was a semiinvalid, and was told by my physician that I never could be well. At that time I had been confined to my bed for some months, seemingly growing weaker every day. My people became alarmed at my condition, and after considerable persuasion induced me to see a Christian Science practitioner. With a few treatments I was able to sit up for half an hour, and I continued to gain in strength, till at the end of six months I was able to take a trip to Maine, where I spent the summer. Since then I have been ill, and at times was much discouraged, but I am thankful to say my needs were again met by Christian Science.

I cannot overestimate the help, both physical and spiritual, that this religion has been to me; it is the greatest blessing that has ever come into my life. The only way I can express my thankfulness to God, and my gratitude to Mrs. Eddy, as well as to all those who so kindly helped me, is by living the truth as nearly as I understand it.

JULIA E. DUDLEY, Providence, R. I.

✧

I wish to express my thankfulness to God, and my gratitude to Mrs. Eddy for the help I received while reading the Christian Science text-book, "Science and Health with Key to the Scriptures." When half-way through the book I was instantaneously healed of stomach disorder and a bowel complaint, both of long standing. Since then many other ailments have disappeared, and I am in better health now than I have been for years. I wish to thank all those who have encouraged me to go forward, for I sincerely appreciate their help and kindness. I am indeed grateful for all our Christian Science literature; I find the *Sentinel* very helpful. I am thankful to God for giving us this truth through Mrs. Eddy.

HARRIET DUCKER, Wandsworth, London S.W., England.

✧

I wish to express my gratitude for the great blessings received in Christian Science, mentally, physically, and spiritually. While I have been healed of many ailments during the past five years, my first healing, that of influenza in two treatments, was the most wonderful to me. I had suffered from this complaint nearly every winter, and the attacks would last for two or three weeks, but the after effects from two to three months. I had tried all the "sure cures" I could find in *materia medica* without relief. A friend then recommended Christian Science, but as I did not know anything about it, I was not very enthusiastic. When he offered to take me to see a practitioner, however, I was about ready to try anything that promised relief, so I went with him. I talked with the Christian Scientist, but about all I remembered was that I could be healed.

After giving me a treatment, the practitioner told me to call again the next morning. I did not feel any immediate change in my condition, but I did feel somewhat better during the day, and accordingly went to see him, as requested, the following morning. While I took several more treatments to make sure that I was healed, I did not feel any effects of the ailment after the second. I have never had a severe cold since, or any return of the influenza, except a slight attack about a year ago, which was promptly overcome through Christian Science. This is very wonderful to me, as I had suffered almost continually from coughs and colds every winter. At the time I was healed the practitioner advised me to get a copy of the Bible,—I had never owned one,—also a copy of Science and Health and a *Christian Science Quarterly*. This I did, and consider it the best investment I have ever made, as these books have been my constant companions ever since.

Even with my limited understanding of Christian Science, I have always found it a present help in my business and every-day affairs. I am daily striving to use it more and more in meeting discordant conditions, and it has never failed to meet these difficulties when rightly applied. I am more than thankful to God for His wonderful works, and grateful to Mrs. Eddy for showing us how to come to Him to obtain these blessings. I am also grateful for the privilege of having the Christian Science publications, which are spreading the truth to the whole world, and to the many Scientists who have helped me along my way from sense to Soul. I only hope that I can help others as I have been helped.—WILLIAM A. DOUGLASS, San Francisco, Cal.

✧

[Translated from the French]

It affords me great pleasure to testify to all the benefits which I have received through Christian Science. For several years, despite all manner of medical treatment, my eyes and the lower part of the body caused me constant suffering. I was troubled with continuous coughing, sleeplessness, and almost unbearable headaches, accompanied by dizziness and distress in my eyes. Especially distressing were sweats, followed by chills, as if I had a fever. I was discouraged and did not know what to do next, for the physicians whom I had consulted, besides contradicting each other, failed to say anything definite regarding the outcome of my case. My character was unfavorably affected by my suffering, for I became very sensitive, irritable, and had gloomy thoughts.

God did not, however, allow my suffering to go on, and in June, 1913, it was my good fortune to hear of Christian Science. Thanks to the teachings of Mrs. Eddy, which were so ably explained to me, and to the treatments in Science from a practitioner who assisted me in this way that seemed so new and at times difficult to me, the unreal conditions gradually vanished. At the time of this writing I am in perfect health, peaceful and trusting, full of thankfulness to God and gratitude to Mrs. Eddy. I am also thankful for the faithful assistance which helped me to understand that God is Love.—BERTHE ROTH, Geneva, Switzerland.

✧

After many years of suffering I was confined to my bed for more than eight months with what physicians termed an internal growth, which they said would have to be removed with the knife. They also said that I could never walk again without the operation, and that the growth would finally cause my death unless removed. I was taken to a hospital where three times the day was set for the operation and as many times postponed.

When my mother learned that the chance for recovery was about equal to that of death, she was unwilling to have the operation performed. I was therefore taken to her home where I grew gradually worse, until I could no longer take any nourishment, and it seemed that I could live but a few days. Then my mother asked if I would be willing to try Christian Science, saying that she thought it would do me no good, but that it could not hurt me, and she wanted to feel that she had tried everything for me, as she was sure I could not live. I told her I had no faith in it but was willing

Digitized by Google

try it, so she at once sent word to a practitioner in a neighboring town. Within one hour from the first treatment I was improving, and I walked the same evening. The next morning when I arose I dressed without assistance and went to the dining-room for my breakfast. I remained up practically all that day, and the fourth day I walked five blocks. From the first treatment I ate anything I wished, and experienced no discomfort whatever from the food.

My eyes had given me a great deal of trouble since childhood, and I had worn glasses for eleven years. A few months prior to the sickness above mentioned I had an operation on one of my eyes, but instead of relieving, it seemed to aggravate the growth. Specialists informed me that there was danger of losing the sight of my left eye unless I underwent another operation at once, but owing to my condition it could not be performed. The third day after I began the reading of Science and Health, the thought came to me that if God were going to heal me He needed no material help, so I at once laid off my glasses, and have had no further use for them. I have not suffered with my eyes since that time, whereas previously I had a great deal of trouble.

It is now eight years since my healing, and I find Christian Science sufficient for my every need, as it teaches me to look to God for all things. I had always longed for a religion that could be lived in our every-day life, but I was disappointed in my investigation along that line until I read Science and Health, which so beautifully explains the Bible to us. I feel very grateful for the physical healing, but this is small indeed as compared to the peace and comfort which the spiritual uplift brings.—Maud Guthrey-Evans, Hagerman, N. Mex.

I am very grateful for the healing of my daughter as stated in the above testimony. At the time I asked her to try Christian Science I believed that she could live only a few days longer, as the doctors had told me there was positively no hope for her unless she had the operation, and that there were many chances against her even then. I had no faith in Christian Science, but had tried everything else that I could for her, and felt that I wanted to leave nothing undone. While I did not believe it would do her any good, I knew it could not hurt her.

Since my daughter's healing I have had many proofs of the truth as revealed through Mrs. Eddy, and I feel very thankful to God for having shown her the Christ-way.

Margaret Ransom, Stroud, Okla.

My first healing in Christian Science took place over five years ago. At that time I was cured of a so-called organic disorder in five treatments. About a year later I had a severe attack of chills and fever, with night sweats, but I was completely healed of both in one week's treatment. I took no real interest in Science, however, until I experienced a case of slow healing about two years and a half ago, when I was not only healed physically, but greatly benefited morally; a result which is inevitable in Science. The smoking habit and profanity have also been overcome.

The reading of the Bible is now helpful and interesting, whereas before I had no desire for it. Then, too, my concepts of pleasure and enjoyment, which were mostly sensual and sinful, have been completely reversed. When I look back and see the change that has taken place in me, both physically and morally, through the study of Christian Science and the help of a faithful practitioner, and then realize the importance of Mrs. Eddy's life-work to all humanity, I feel that I have much for which to be thankful to God.

Gregory Doran, Kansas City, Mo.

From Our Exchanges

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

War is not Christian; let us ever remember that. The most that can be said for it is that it may be unavoidable for a Christian with the world as it is. Were the gospel victorious, it would mean the end of war, as of every other form of ill; if we tolerate war, it is only because our goal is a state of society in which there shall be no more room for it. We have to distinguish between what is ideally and what is practically right. The Christian ideal of marriage, for instance, is the union of one man and one woman for life, on a basis of pure mutual affection; but in practice we have to recognize that it is not always realizable with human nature as it is, and we legislate accordingly. The Christian ideal, again, is universal peace; but while tyranny, aggression, and cruelty remain, there must be war. But I utterly and entirely dissent from the view that there is something intrinsically uplifting in war as war.

The late Prof. William James of Harvard insisted that one great thing modern civilization had yet to do was to find a substitute for war,—a moral substitute he meant, something that will bring out the grandest qualities of human nature without the accompaniment of slaughter and the suffering and anguish that follow in its train. Oh, that we were sufficiently great of soul to do it! Every Christian must hate, loathe, and detest war, for if it reveals some things that savor of heaven, it reveals more that reek of hell.

[*The Christian Register*]

There are people who get a wonderful amount of good out of all sorts and conditions of men and women, and get it where most people would least expect good. They find it. They do not pretend it, or imagine it, or produce it; they find it. They are under no delusion as to the evil in all sorts and conditions of men and women; they even face their share of this evil. But they do not let this awareness stop their taking every bit of good they see, and saving it. They have a faith that there is good even where they cannot see it, and that faith keeps them hunting. They see indications which only some such good could produce, so they keep on hunting long after most people would give up. Then, when a new planet swims into their ken, or a radiant fact is born in their crucible, other people wonder how they knew, and wish it could fall to them to turn up treasures and do miracles of conversion.

The people with this gift, or attainment, are strangely happy people, though they see more to make men unhappy than the people who easily get unhappy. They go singing round in wretchedness, or have a cheerful tone that is like singing, not from a disposition that will not be infected with misery, nor from a hope and courage alone, but for what they have gathered in their round. Like a miner bringing a nugget into his hut, they are all the time finding nuggets of one good or another, which show them gold is there, and begin a hoard of future good.

[*The Christian Work*]

We have been proceeding on wrong lines, aiming at wrong things, focusing our interest in the wrong place. The cultivation of body or mind cannot compensate for the neglect of the soul. Civilization has not been following Christ; it has been deluding itself with promises of material betterment and consequent happiness; we have made an idol of progress, without seeing whither it was leading us or what would be the ultimate gain. We have been so sure of the future; very

Digitized by Google

positive that everything was moving in the right direction, and that at last we had solved the problem of a world-order that would not perish like the empires of old, but would become more and more efficient, more and more scientific, more and more master of every ill but death, and that even this must be kept longer at bay than in the days of our fathers.

[*The Congregationalist and Christian World*]

We have only to live on, accepting new-found duties, welcoming enlarging opportunities, and rejoicing in happinesses which, like the quiet growth of the season, steal in to clothe the arid, transform the barren, and wear away all bitterness, to know that God does make all things new,—not in formal, outward ways, but in experiences which, if they are anything at all, are His method with the soul, His answer to our prayers, and His perfect ministry of love. No task of regeneration is too great for His saving love, no red fruition of folly or of fault beyond His saving power. The ministry of His transforming grace does not end in grasses which carpet battlefields billowed with graves; He will resolve the bitterness of the nations, and plant anew in the soil we stain and furrow the radiant growths of a happier humanity. Nothing is impossible to those who go on living, if only we will seek the true meaning of life, obey its great and loving imperatives, and give place to His spirit who said, "Behold, I make all things new."

[*The Watchman-Examiner*]

If Christians are not going to act differently from other people, what is the use of being a Christian, or what difference is there between Christians and other people? Many of us have heard this question asked, and although we felt that the questioners did not always take into consideration all the facts, we could not avoid the conviction that the neglect of "the minor Christian morals" is a serious matter, both in itself and in its influence on the world. The case stands about like this: The laws forbid and punish the grosser sins prohibited by the decalogue, and the moral sense of the community puts others under its ban; so that a man, in order to be respected by his neighbors, must be outwardly honest, moral, and decent. If Christianity is to do anything for him that will mark him as one of "a peculiar people," it must go deeper, and affect him in what have come to be called the "minor morals."

[*The Homiletic Review*]

The earliest heresy on record was expressed in the words, "Am I my brother's keeper?" This was a challenge to social responsibility, and the selfishness of individualism has repeated the challenge through the centuries. The new world-life, with its profound social and economic changes, is answering that challenge, and men are finding that they are their brothers' keepers, whether they will or no. All mankind are becoming neighbors, and we shall not be able to neglect the well-being of any without peril to ourselves. This is as true in the spiritual sphere as in the material. It has been said that whether or not the non-Christian world can be saved without the gospel, the church cannot be saved without sending it.

[*American Lutheran Survey*]

There is, and can be, no real conflict between the truth of science and the truth of revelation. Conflict here indicates error, either in the apprehension of the truth of science, where men are prone to count human theories as final fact, or in the interpretation of the truth of revelation, where men are prone to give human reason the supremacy over pure faith.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of binding and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: The Resurrection and the Life," a letter by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the Cosmopolitan magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership and extracts from their by-laws, can be had at seventy-five cents per hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reduced from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Ad-quate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.13.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

Mount Lassen, Cal., has become the subject of an informal cooperative study by the geological survey and the forest service. At the request of the survey, a telegram has been sent from Washington instructing the officers of the Lassen national forest, in which the peak stands, to continue observations of the volcano's activity and keep a record to be used as a basis for a scientific investigation by a government geologist, who is expected at Lassen early in July. The observations are being made by forest rangers at the scene and from a fire lookout tower on Brokeoff mountain, a few miles north of the crater, where the forest service last year kept watch on the numerous eruptions which occurred from May to September.

It is not known whether a cloudburst started the last eruption by precipitating rain upon the molten lava in the crater, or whether the melting snow on the peak, with consequent flowing of water into the crater, caused the accumulation of steam which blew a river of mud out of the mountain. The bright glow reported as appearing on the clouds of smoke and steam over the crater is a reflection of the red-hot matter uncovered by the eruption, indicating that the volcano is in a more or less dangerous mood. The river of mud which was shot out of the north side of the crater and down Hat creek, damaged government and private property, destroying bridges which were necessary to permit the entrance of live stock that are grazed on the forest range during the summer. Some twelve thousand cattle and thirty thousand sheep are grazed on the Lassen forest every year. Mount Lassen, inasmuch as it is the only active volcano in the United States proper, according to the geological survey, is regarded as exceptionally interesting, as from its location it is very accessible to observers, and from a scientific view-point presents much in the way of possibilities.

The Supreme Court of the United States, in a decision just handed down, has annulled as unconstitutional the Oklahoma constitutional amendment, and the Annapolis, Md., voters' qualification law restricting the suffrage rights of those who could not vote or whose ancestors could not vote prior to the ratification of the fifteenth amendment to the federal constitution. Chief Justice White, a native of the South and a former Confederate soldier, announced the court's decision, which was unanimous. The court held that conditions that existed before the fifteenth amendment, which provides that "the right of citizens of the United States to vote shall not be denied or abridged . . . on account of race, color, or previous condition of servitude," could not be brought over to the present day in disregard of the self-executing amendment. It is generally believed that the court went a long way toward invalidating much of the so-called "grandfather clause" legislation.

The immediate effect of the court's decision was to uphold the conviction of two Oklahoma election officials who denied negroes the right to vote in a congressional election; also toward three Maryland negroes, damages from election officials in Annapolis who refused to register them. The court held that these election officials could not ignore the potency of the fifteenth amendment in wiping out of state constitutions the word "white" as a qualification for voting. In the Maryland case the court's decision established the point that the fifteenth amendment applies alike to municipal as well as to federal elections.

The United States government lost its suit in the Supreme Court to forfeit the unsold portion of the Oregon and California railroad land grant, amounting to some two million three hundred thousand acres and valued at more than fifty million dollars. The railroad company was enjoined, however, from future sales in violation of the conditions of the grant, until Congress has reasonable time to act. The suit was instituted in accordance with a resolution of Congress in the federal district court of Oregon, on Sept. 4, 1908. The government claimed that the railroad had forfeited its rights by having violated a provision which required it to sell in not more than one hundred and sixty acre tracts for not more than two dollars and a half an acre, and only to actual settlers. The government sought to prove that the company had sold in large tracts to timber companies at more than two dollars and a half an acre, and had adopted a policy to sell no more to any purchaser for the time being. The railroad contended that the provision was not effective, because the lands were unfit for settlement, and furthermore, urged that the government was stopped from raising the question of forfeiture because of long acquiescence in the company's disregard of the selling provision.

The Supreme Court of the United States has reversed the decision of the federal district court in New Jersey, which dismissed the government's Sherman law and commodities clause suit against the Delaware, Lackawanna & Western Railroad and the Delaware, Lackawanna & Western Coal Company. The government charged that the contract by which the railroad sold to the coal company its coal was not a bona fide transaction, and violated both the antitrust law and the commodities clause of the Hepburn rate law. It is the second suit of the government against the railroad under the commodities clause.

Justice Lamar announced the court's unanimous decision and sent the case back for further proceedings. He said that while it had not been proved, it was evident the railroad could at least affect the price of coal in New York, and so still had an interest in the coal affected by its action. The case was remanded without prejudice to any points which the government had not yet raised.

Ten sections of California oil lands, near the towns of McKittrick, Kern county, valued at fifteen million dollars, are declared to have been fraudulently patented by the Southern Pacific Railroad Company, in a decision by Robert S. Bean of the United States district court of Oregon, just filed at Los Angeles, Cal. The land, part of a large area which was alleged to have been claimed illegally by the railroad company, has been restored to the government. Another suit, involving oil lands in the same area which are valued by government experts at three hundred and twenty million dollars, is pending in the United States district court.

In Alabama the new law forbidding the publication of liquor advertisements in the newspapers of the state has been confirmed by a decision of the highest courts. On June 10 the supreme court held the law constitutional in all details. The court further held that it has been abrogated all contracts for liquor advertising, and prevented any agencies or firms from holding the newspapers responsible for damages resulting from the cancellation of contracts.

The Appalachian and White mountains forestry commission is expected to vote the future purchase of seven hundred and fifty thousand dollars' worth of forest lands in the White mountains, partially in the Lake Tupper region. The field men are expected to make this recommendation. This will almost exhaust the fund voted by Congress for the forest reserves.

The total Panama Zone excavation for April, including earth, rock, and gravel, was 1,028,417 cubic yards. Of this total, 28,357 cubic yards were removed between the Pacific entrance and Miraflores locks, 154,809 from Balboa inner harbor, 635,717 from the Gaillard cut, and 30,561 from Gatun locks to the Atlantic entrance.

The proposed free legal aid bureau of the city of Dallas, Texas, the first of its kind in that section of the country, became an actuality recently when Elmer L. Scott, commissioner of public welfare, announced the appointment of five attorneys of the city as members of the staff.

Secretary Redfield reports that the total trade balance in favor of the United States on June 19 was nine hundred and seventy-six million dollars. He predicted that the balance for the fiscal year ending July 1 would be in excess of a billion dollars.

The Italian state railways are said to have contracted with Chilean lumber interests for the purchase of ten million ties. Delivery is stated to be at the rate of two million ties a year.

An agricultural bureau has been opened recently in Rio de Janeiro, Brazil. The government announces its desire to cooperate with farmers throughout the republic.

The annual production of sugar in Costa Rica is placed at four thousand tons. The cane-planted area is between twenty-six and twenty-eight thousand acres.

Importations of automobiles into Argentina in 1914 were about one fifth of those for the preceding year, the total then amounting in value to $5,194,200.

Christian Science: Its Truth and Value

JUDGE CLIFFORD P. SMITH

CHRISTIAN SCIENCE is a way of living and thinking that finds its chief inspiration, its perfect illustration, as well as its complete proof, in the teachings and example of Jesus. It reveals, awakens, and develops the God-given possibilities that exist latently in every one. It shows how to throw off the inabilities, the disabilities, and the liabilities that have been imposed upon men by ages of wrong thinking, and how to gain true manhood. Its aim is not to prepare people for a heavenly hereafter, but to transform their present experience into health and harmony. It inculcates godliness, makes known the power thereof, and emphasizes the present effects no less than the enduring results of right thinking and right doing.

Christian Science changes its students into better men and women by giving them true motives, pure desires, and absolute ideals, by discovering to them the deceptive nature of evil impulses and the source and power of good thoughts. In like manner this Science equips its students for the cure and prevention of disease. It teaches them to analyze the conflicting elements of human consciousness, and to maintain the true sense of being against the false sense of disorder, thus destroying the essential cause of disease and establishing the conditions of health. So also the power of infinite Mind, acting with true thoughts, or truth, is found to be available in every case of human need. As the psalmist said, "His truth shall be thy shield and buckler."

It is well known that this movement has made steady progress, despite the clamor of an opposition for the futility of which there is an evident reason. Christian Science deserves what it has gained in the estimation of men. The vast majority of those who have sought its benefits in keeping with its rules, have been convinced that it is all it purports to be; while other people, in a fair proportion to their opportunities for observation, have recognized it as a thoroughly good influence in the lives of its adherents. Of the people who have accepted this teaching, about one third never were affiliated with any other religion. Of the other two thirds, many, perhaps most, were not active religionists before becoming interested in this teaching. Among those who were formerly active members of Christian or Jewish congregations, nearly all have become more devoted and enthusiastic than they were as adherents of other faiths. In short, it has converted a great multitude of people from disbelievers or passive believers into earnest and active Christians.

This truth has been known and taught long enough for its effects to be observed in a second generation. In Mrs. Eddy's Message to The Mother Church for 1900 (p. 6), she said, "The child not only accepts Christian Science more readily than the adult, but he practises it." The truth of these words is known to a great number of parents. Children who are brought up in the atmosphere of Christian Science are healthier, happier, and more capable by reason thereof. They are taught that good is normal and natural, while evil is unnatural, obnoxious, destructible, unreal; that the presence and power of God is an ever present reality of everyday experience, while sin, disease, and death are to be detected, rejected, and overcome. A child can be told first of heavenly things, and will then be able to hear of earthly things and to weigh them in the scale of eternal values. The attendance at Christian Science Sunday schools is one of the signs of these times. Not only do the children of Christian Scientists attend them until they reach the age limit of twenty years, but other children, whose parents are of other churches or no church, are frequently to be found therein as regular attendants.

The Christian Science view of man and the universe is simply that of pure and unadulterated Christianity. It does not begin with the negation of anything, nor end with a denial of anything that possesses the nature of substance, but it defines substance as that which is real in distinction from that which is apparent, and it attributes all creative power to God. Its view of man and the universe begins with the idea, "He that built all things is God." It proceeds consistently with the axiom, "That which is born of the Spirit is spirit." It concludes that spiritual facts must be "spiritually discerned." It therefore cultivates the faith which involves a conviction of unseen reality, and develops the spiritual understanding which sees all things as they really are,—as God made them to be. Moreover, the understanding thus conferred has been found to be capable of proof or demonstration when put into practical use for the betterment of human character and conditions.

This teaching has also been known and practised long enough for its effects to be observed in a very large number of cases. In this manner a great quantity of evidence has accumulated to prove that its effects are distinctly wholesome. Consistently practised, it is conducive to health, moral and spiritual as well as physical, and it brings a corresponding degree of happiness. Accepting the test of reality furnished by Christ Jesus in the words, "Every plant, which my heavenly Father hath not planted, shall be rooted up," Christian Science declares that all evil, everything in human experience which is not of God, can be abated and abolished by recourse to His law and power, and it gives to its students a spiritual understanding which lifts them more and more into the realm of the real, into the atmosphere of divine Truth and Love. In short, it meets human needs, and it does so in the way that promises to deliver humanity from the bondage of evil. It proves that one person can aid another to gain his victory and freedom. Such being the case, no one can afford to be either misinformed or uninformed concerning its truth and value.

Until after Christian Science had wrought wonderful cures in quite a number of places, and the influx of members from other systems of thought had begun to be noticeable, the readers of its text-book, "Science and Health with Key to the Scriptures," were permitted to peruse it for themselves, and to notice its pure ethics, its spiritual metaphysics, and its profound Christianity. Later on, self-appointed critics began to whisper or declaim perversions of its contents. The next period in the history of the movement was one in which misapprehension and misrepresentation were common or prev-

alent. When this period should be regarded as having come to an end, may be a matter of opinion, but the writer would put it at the close of the year 1910. That was the time when the world was moved by the passing of Mrs. Eddy to consider or reconsider, with the absence of passion and the abatement of prejudice which are possible at such a moment, the benefits which had accrued and were promised to mankind through her discovery and leadership of Christian Science. That occasion marked the beginning of a new era of public estimation.

This change was noted at the time by more than one editor accustomed to observe the drift of public sentiment. Take, for example, the following comment by the editor of *Current Literature:* "The column on column of news despatches and editorial comment evoked by the death of Mary Baker Eddy, the Founder of Christian Science, may be said to reveal an important change in the psychology of this country." Also, the following observation by the editor of *Harper's Weekly:* "The tone of the newspaper comments on the death of Mrs. Eddy indicates a decided increase of respect in recent years both for her character and for her achievements. Nor is it a case of *de mortuis nil nisi bonum*, but a taking of one consideration with another, and giving a judgment of net approbation." On the whole, it can be said with respect to the people and the secular press in the United States and Canada during the years 1911-14, that the popular attitude toward Christian Science was usually fair, often friendly, and not infrequently appreciative.

What can be said for the religious press and for the clergy? Some of the representatives of the older denominations have welcomed Christian Science as a new and potent factor in the field of religious endeavor, many others have shown varying degrees of recognition or tolerance; but it must be said that a few ecclesiastics have tried to turn people away from Christian Science by means which disinterested and fair-minded persons with knowledge of the circumstances have generally regarded as extremely unfair. Thus in a recent article in a religious periodical, the reverend author constructed sentences out of words taken from an index that was formerly printed with Science and Health, and quoted them as though they were part of the text. This index was not compiled by Mrs. Eddy, nor even by a Christian Scientist, which he may not have known; but he must have known the difference between the text of a book and its index, and he evidently knew that this index had been discontinued.

The clergyman referred to declared that all of Mrs. Eddy's utterances regarding sin "are condensed in a sentence on page 237 [p. 71 of the 1910 edition] of her precious book. 'Evil has no reality. It is neither person, place, nor thing, but is simply a belief, an illusion of material sense.' It is 'neither person,' i.e. there is no devil, 'nor place,' i.e. no hell, 'nor thing,' i.e. no act of sin and no accountability." In short, he publicly declared that all of Mrs. Eddy's statements respecting sin are condensed in a couple of sentences which declare the unreal and illusive nature of evil, and that her teachings include no accountability for sin! That a "minister of the gospel" could make such assertions,—presumably in good faith,—is itself an illustration of what Mrs. Eddy meant when she spoke of evil as "a belief, an illusion of material sense." She gave much more attention to the overcoming of evil than to defining its nature; and throughout her writings she has insisted on the imperative need of goodness and the responsibility of each individual for his own thoughts and acts.

Addressing the teachers of Christian Science, Mrs. Eddy has said: "Rest assured that the good you do unto others you do to yourselves as well, and the wrong you may commit must, will, rebound upon you. The entire purpose of true education is to make one not only know the truth but live it—to make one enjoy doing right, make one not work in the sunshine and run away in the storm, but work midst clouds of wrong, injustice, envy, hate; and wait on God, the strong deliverer, who will reward righteousness and punish iniquity. 'As thy days, so shall thy strength be'" (The First Church of Christ, Scientist, and Miscellany, p. 252).

Throughout her work as the Leader of a great religious movement, Mrs. Eddy consistently turned the attention of Christian Scientists away from herself to the message spoken through her. Her aim and hope, as she often said, were to "quicken and increase the beneficial effects of Christianity" (Science and Health, p. 367). The spiritual vitality of the message is proved by what it has already done, but this is only a foretaste of the benefits that will accrue to humanity as this Science is more widely understood and practised.

❖

Obedience

M. EVELYN LINCOLN

"COME unto me, all ye that labor and are heavy laden, and I will give you rest," were the words of one who well knew how to lift the burdens of mankind. Christ Jesus saw the strenuous labor self-imposed by the belief in materiality; he saw the hearts sorely laden with sin, sorrow, and with the fear of death, and out of his great love for those about him he uttered those compassionate words: "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls." His yoke is obedience. He obeyed God in every little daily item until, step by step, his strength increased and he was enabled to pass through Gethsemane to the cross.

Obedience pointed the way to the resurrection morn, and to spiritual ascension of thought above mortal vision. By scaling the rugged peaks of temptation, poverty, fear, desolateness, persecution, and every other error, Jesus reached the heights where he stood superior to any emergency or seeming trouble pertaining to human experience. From these heights fell his gentle words of comfort and strength. His marvelous works, and his loving invitations to every one to follow him out of the valley of materiality up to an understanding of God, our Father. But even he whom Mrs. Eddy calls "the most scientific man that ever trod the globe" (Science and Health, p. 313), must have felt something of the human shrinking from material torture. Here is a needful lesson for each one of us,—that we should not fall into discouragement and self-condemnation if we cannot at once accept cheerfully the cup which he drank to the dregs, and we must not forget that full obedience means that we are to rejoice always.

To take his yoke of obedience upon us is to level pride, resentment, and rebellion against God's will, and make us "meek and lowly in heart." Then, and not until then, do we attain to his rest. It is not the Father's will to make His children suffer. What would we think of a human parent who chastised his child just to show the power of his will? The God that Christian Science reveals to the world is merciful, loving, kind, and tender. We are chastened when we are wilful and headstrong, that we may be brought into closer relationship with divine Truth. When we make mistakes, experience teaches us to depend upon divine wisdom in every strait, and not to fear what mortal mind can do to us; thus ignorance is removed and we awaken to a better understanding of the law of Love. The sole need of chastisement is that the mesmeric power of material belief may be broken, so that thought may turn away from personality and become obedient to spiritual law.

Digitized by Google

God neither persecutes nor gives His consent to persecution to force obedience. It is the so-called carnal, or mortal, mind seeking to justify itself that afflicts, but this pushes us into heaven, or harmonious thought, if we but continue to love more. Take the case of Stephen, as given in the sixth and seventh chapters of Acts, who was stoned to death by his fellow countrymen because of his upward footsteps, his gentle yet bold voicing of the truth of Christianity, and his rebuke of their materiality. Faithful and loving to the end, "he kneeled down, and cried with a loud voice, Lord, lay not this sin to their charge," and then he "fell asleep." Which would we rather be, the persecuted or the persecutor? Persecution is the refiner's fire that shall cause us to come forth pure and "every whit whole," making it a habit to yield our human wills and desires to that of the one Mind, God.

Of all the New Testament writers, Paul seems to have best understood and preached that obedience is essential to full salvation from the belief of a mind separate from God. He says of Christ Jesus: "Though he were a Son, yet learned he obedience by the things which he suffered." Jesus trod the "thorn road," and by it we also come to a state of consciousness that realizes and patterns after the purity, the humbleness, the obedience of our Wayshower. There is no other way by which we may overcome every material obstacle. In the second chapter of Philippians, Paul gives a concise summary of the characteristics of Christ Jesus and admonishes us to be like minded. This one chapter, if read, and its precepts followed by every one, would bring universal peace without undue agitation and overturning of established institutions, for those which do not harmonize with Principle would fall naturally of their own lack of substance, and would be replaced normally by right ideas.

Obedience means to follow the leading of the Christ, not to bend to personal exaction. Mrs. Eddy says: "Divine Mind rightly demands man's entire obedience, affection, and strength. No reservation is made for any lesser loyalty. Obedience to Truth gives man power and strength" (Science and Health, p. 183). When one knows he is doing right, the one Mind sustains him in it, even though a multitude taunt him or implore him to give his consent to erroneous thought and actions, and some day they will find that they have cause to bless him for his courage and loyalty to the demands of Truth and Love. Obedience brings peace to the fainting and weary heart, it stills the voice of personality, and anchors thought firmly to the rock, the Christ, Truth.

Happiness

DUNCAN SINCLAIR, B. SC.

HAPPINESS is a term which most people find somewhat difficult to define till they have thought much over it. They are quite familiar with it in name if not in actuality; they all recognize it to be a state wherein is blended restfulness, peace, and joy; yet there are many who think of it as a far-away dream of a Utopian day in which it may never be their lot to participate. Not infrequently the word pleasure is mistakenly used as a synonym for happiness; but while there may be many occasions in which pleasure and happiness are hardly distinguishable, there are many others in which in no sense are they the same or even complementary to each other. In surveying the many phases of human experience, we can mention a list of emotional states to which the term pleasure may be applied, but happiness never. Happiness is a thing which stands out by itself, a serene mood, a mental condition unalloyed by extremes of temperament, a state of restfulness and joy akin to blessedness.

Christian Science is like a test-stone, when fundamental propositions are under discussion. Being the revelation of absolute Truth, it enables us to place a perfect standard over against every mental condition, thereby giving us the rationale whereby to weigh its claims and to overthrow them when worthless. If we examine the efforts of the human race to attain happiness, we shall find that they are largely of a sensuous nature. These are the pleasures of the material senses, and are based on the sensations which are supposed to be communicated through eye or ear, touch, taste, or smell. It is matter of common knowledge that the physical senses may be so abused as to reduce the abuser to depths of depravity and despair. Take, for instance, the sense of taste. A whim may induce to a first indulgence of it; and if persevered in, it may lead to intemperate degeneracy. It is the indulgence of sense in its myriad forms that gets at the heart of the race, to stifle its nobler impulses, to steal from its grasp that happiness which is man's birthright, a birthright from which it cannot for long be deprived. The poet Robert Burns wrote of the fleeting pleasures of sense:—

> But pleasures are like poppies spread,
> You seize the flower, its bloom is shed!
> Or like the snow-fall in the river,
> A moment white—then melts forever;
>
> Or like the borealis race,
> That flit ere you can point their place;
> Or like the rainbow's lovely form
> Evanishing amid the storm.

Speaking in a similar strain, the Preacher has said, "Vanity of vanities; all is vanity."

Is there then no sure way to find peace? Yes, there is,—through divine metaphysics, a knowledge of reality, of spiritual law, of the great I AM, God. Until Mrs. Eddy discovered Christian Science, the Principle of happiness was hid from mankind, who lay groaning under the crushing burden of materialism. Christ Jesus revealed God to humanity as Truth, and St. John inferred from his teachings that God is Love; but the centuries forgot to be logical. They have admitted with their lips that God is Life, Truth, and Love, but they have failed to conclude that since Life, Truth, and Love are God, they are therefore spiritual and omnipresent, the only real forces in the universe.

When Jesus said, "The kingdom of God is within you," he stated the metaphysical truism that harmony is omnipresent now for us to know and enjoy. When he exclaimed, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," he stated the method by which we should arrive at the certainty of this omnipresent reign of harmony. In Science and Health, Mrs. Eddy says, "Happiness is spiritual, born of Truth and Love." "For true happiness, man must harmonize with his Principle, divine Love" (pp. 57, 337). Here, then, is the open secret. Out of the plenitude of her purity this inspired woman discovered that men are self-bound, that the divine Principle which sustains the universe is Mind. She perceived that God is infinite, and that there is therefore no place where He is not active. The world had been going along entirely oblivious to what is lying at its hand. Happiness, she taught, is to be found in conscious communion with the creative Principle, God. As this is accomplished, men lose their sense of misery, become less and less the creatures of physical impulse, and enter gradually into their lasting heritage.

It staggers one at first to be told that misery, lack of peace, and material sense, with its fictitious pleasures, are illusions, and that a man must affirm his true status, realize for himself his perfect spiritual relationship to God, in order to enter into the enjoyment of health and happiness. All

Digitized by Google

down the years, since the Master taught and healed by the Galilean shores, his followers have prayed for the sinning and the suffering. Wails have gone up at midnight and at dawn alike, but they seem to have been lost in the starry distances. Tears have apparently flowed in vain, even as if God had closed His ears to the woes of humanity. This has all been a mistake; men have not received answers to their prayers because they have not prayed aright. Prayer is the knowledge of absolute Truth, the recognition of spiritual law as ever operative and all powerful; it is glad obedience to the divine Principle of Truth and Love. God is All-in-all, and we pray aright when we know that man cannot be separated, now or ever, from the divine Mind. We must affirm the allness of the "beatific presence" (Science and Health, p. 266) until we realize that we are at-one with it.

One may ask: What about innocent sports and amusements? How are we to look at these things? Can they bring us no happiness? These are natural questions, but they entirely miss the point. If we expect to find happiness in any physical occupation, we shall be disappointed. What must be done is to take happiness into them. The man who is striving to live in harmony with good, who is becoming more and more at-one with the divine Principle of his being, is becoming happier day by day. No matter what he turns his hand to, the impress of his thought will there be seen. He will bring his happiness into his garden as he digs and plants and waters; and the smile of the flowers will be brighter than before. He will bring his happiness into the counting-house, and there will be fewer business worries and better returns. He will bring his happiness into the playing-field, and his fellows will be the manlier for his presence and the game heartier than ever. Thus from the knowledge of God there will come about the healing of all the earth, and the happiness for which the nations sigh.

Physical and Spiritual Healing

CLAUDE M. SPAULDING

THE teachings of Christian Science appeal to the individual with an assurance and a promise of healing which bespeak God's love for humanity. As thought is occupied with the oneness and infinitude of God, fears, ignorance, and sorrow are removed, since light and darkness cannot dwell together. The experiences of those who have come under the beneficent influence of Christian Science are varied, but they all point to an ever present, ever operative divine Principle, according to which man is spiritual and perfect. This Principle of being proves the falsity and non-existence of all disease, physical and mental. It also leads one out of the darkness of doubt and materialistic dogma and gives him the undying joy that comes with the true knowledge of God.

Thus it is that one adherent of Christian Science testifies to physical healing, and lays emphasis upon the great fact that the Christ-teaching is healing those who turn to it today, just as it did in the days of Jesus of Nazareth; while another tells of spiritual healing, and expresses gratitude that he is privileged to help in turning mankind from blind belief and sinful sense to the worship of God with spiritual understanding. Many, while testifying to their healing through Christian Science after material means had failed them, go on to say that physical healing is as nothing to them in comparison with the spiritual uplift which has come into their lives through the teachings of Christian Science. There is a viewpoint from which this can be truly said, and there is another from which it can be said that the "signs following," or the healing of sickness and disease, must invariably attend, both as herald and guarantor, the correct understanding of the theology of Christian Science, which declares that "Jesus healed sickness and sin by one and the same metaphysical process" (Science and Health, p. 210).

Physical healing through spiritual means is the greatest of all factors in the conservation, protection, and promotion of public welfare. After he is healed, a one time sick man can work with renewed interest at his task. His genius and capabilities are enhanced and brought to fruition, instead of being stifled in fear and weakness. A man can better avoid the temptation to use poisonous beverages and drugs if he has good health. A man may serve the best interests of his family, his state, his country, his fellow men at large, if in the enjoyment of physical health, for he is not handicapped in seeking ways and means for doing this.

Those who have studied divine metaphysics know that it is natural and right for all men to have good health, and that sin, sickness, disease, and the fear of death—all correlated—will diminish in proportion as individual consciousness takes hold of the things of Spirit, the truth of being. They also know that it is incumbent upon men to seek a higher model than is afforded by the things of the flesh, to the end that they be no longer circumscribed and thwarted by limitation, chance, change, dissolution. In other words, they should consciously lay hold upon immortality; they should know and acknowledge the God who is Life, Truth, and Love.

This is the concept of God proclaimed by Christian Science, and referred to by Jesus when he said: "My Father worketh hitherto, and I work." It was this understanding of Life which enabled Jesus to emerge from the sepulcher where he was laid after the crucifixion. The concept of God which inspired the Sermon on the Mount made it the highest standard of ethics ever voiced. This concept of God as changeless and unswerving inspires that man of good works today, and before the true idea of God "every knee shall bow" and "every tongue shall confess," until none remain in ignorance, and "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

The teachings of Christian Science are advanced as revelation, and are subjected to proof by the individual in accordance with divine Principle. Nothing is more natural, real, permanent, practical, and to be desired, than a consciousness which abides superior to the things of the flesh and does not fear them, because it has the proof that they are false, and that spiritual realities alone are true.

[Written for the *Sentinel*]

Art More a Man?

CHARLES C. SANDELIN

ART more a man when thou art lade with rust
  Of envied wealth and puffed with vaunted power?
  Yet yield thou all thy treasure in an hour,
Like fleeting fancy of deceitful lust.
O vanity, upon a reed ye trust!
  Not all thy store with lasting joy may dower,
  Or gain for thee the grace of one sweet flower,
Or stay the hand that renders dust to dust!

Methinks an humble lot preferred to thine,
  However pleasing 'tis to outward gaze;
And better far did Love's true treasure shine,
  Instead of worldly gold, in all thy ways.
Aye, not for sordid aims did God design
  His precious likeness, man, to spend his days!

Selected Articles

[Henry Deutsch in *The Herald*, Duluth, Minn.]

Referring to the report of a lecture by the Rev. Mr. —— on Christian Science, in a recent issue, I would like to call attention to the essential difference between Christian Scientists and examples of other Christian sects, as exemplified by the lecturer, and possibly from this your readers may be able to draw for themselves the correct conclusion as to whether or not Christian Science is Christian.

Christian Scientists do not indulge in arguments, controversies, or public debates, because they cannot find that such was the method either prescribed or followed by the Founder of Christianity, his disciples and apostles, and the early Christians. An examination of the works and words of the Master and his followers seems to indicate that the real purpose in expounding the newer religion, which has since been called Christianity, was to break away from the older methods of religion, which consisted in dialectic discussions, controversies, and "doubtful disputations," and to establish religion on the basis of doing rather than mere talking.

When Jesus was asked to establish his title to the Messiahship, he did not deliver a lecture or sermon, but pointed to his works: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk; the lepers are cleansed, and the deaf hear; the dead are raised up, and the poor have the gospel preached to them." This Christian Scientists are doing today, and thereby they are demonstrating that religion is not a mere matter of sentimental emotion, passing exaltation, and excitement of the sentiments, but a fixed principle for daily application and practical demonstration in working out the problems of life.

Of course one who assumes to pass judgment upon what does or does not constitute a Christian, must be prepared to premise his judgment upon both his understanding of Christianity and his ability to prove that understanding, or his faith by his works. Failing in this, he becomes merely a carping critic, who substitutes words for deeds and offends the intelligence of his hearers by expecting them to accept polished platitudes and sophistries in place of demonstrable truths. Therefore let us see what constitutes a Christian,—and naturally the answer must be referred to the statements of him who founded Christianity.

We find that Jesus' first definition of a Christian was founded upon the Old Testament: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength . . . Thou shalt love thy neighbor as thyself." Having prescribed the rule of Christianity, he then indicated certain tests by which we might determine whether or not the rule was being followed, because it is without the necessity of argument that no matter how well versed one may be in the fundamentals or rules of a science or religion, he does not thereby, and simply through that process, become endowed with the title and attributes of that religion or science. A person does not inherit Christianity, neither does he acquire it by purchase or through the vicarious efforts of another. It is a matter of personal experience and demonstration, and must be judged with reference to the extent to which he measures up to the standard test. How did the Master indicate those evidences of a man's Christianity? "Ye shall know them by their fruits." Again, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Also, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Thus we have the statement of the rule of Christianity and the rule of evidence by which it can be determined whether or not a man is following those rules and thus establishing himself as a Christian. The apostle Paul also indicated a very splendid practical test when he said: "If I speak with the tongues of men and of angels, but have not love, I am become sounding brass, or a clanging cymbal. And if I have the gift of prophecy, and know all mysteries and all knowledge; and if I have all faith, so as to remove mountains, but have not love, I am nothing" (Rev. Ver.). Your readers are intelligent enough to make the application. They have read the sermon of the gentleman in question, mayhap heard it in person. They know of the hundreds and thousands of cases of so-called incurable and organic diseases that have been healed in Christian Science. They know of the uplifting and regenerating effect that it has upon its adherents. They recognize the sunshine, the joy and happiness that it has brought into the homes of thousands that have been healed not only from diseases of every nature and kind, but also saved from the effects of drink, drugs, and the dregs of human passions. They know of the marvelous growth of Christian Science, which constitutes the miracle in the history of religions,—a movement which is less than fifty years old, whose text-book has been published barely forty years, whose first church was organized only thirty-six years ago, and yet today encircles the entire civilized globe, with continually increasing numbers who not only believe but understand, who not only preach but practise, who not only talk but live the truth that was taught by the Nazarene.

The whole of Christian Science is in the Bible and in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It would be an insult to the intelligence of your readers to enter judgment for them. They can test Christian Science by what it has done and does, understand what it claims by the study of its text-book; and I am sure that a fair, unbiased examination of the Principle and the proven facts will leave no room for dispute that Christian Science is not only Christian but that it is a reversion to the original and primitive Christianity as it flowed in its purity from its original source, Jesus the Christ.

It is a strange fact that those who oppose themselves to Christian Science are the only ones who object to the price of its literature. Those who realize what the literature means and what it does for them, would gladly pay many times the price if the books could not be obtained otherwise; and when one considers the liberality with which Christian Science literature is dispensed and the munificent provision which Mrs. Eddy made in her will for the distribution of her books through the public libraries, no further comment need be made.

✧

[Marie Hartman in *Ons Godsdienstig Leven*, The Hague, Holland]

In *Ons Godsdienstig Leven* I read with much pleasure the account of a meeting which a clergyman held with members of his church, and at which he gave a sympathetic explanation of Christian Science. May I ask for space in your paper to elucidate some points of the speaker's discourse?

The purpose of Christian Science is to teach men to know and obey God more fully; it is based on God, the Principle of all that exists, as the Scriptures, and particularly through Jesus, reveal Him. It teaches that the only way to happiness and peace is described in Jesus' words, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you;" also that the more harmonious material conditions which result from the study and applica-

Digitized by Google

tion of Christian Science, are solely the effect of a changed attitude of mind, of a more intelligent obedience to the first commandment, which enjoins man in all his thoughts and acts to honor and serve God, good, only.

The Christian Scientists have no other Bible than the one that all Christians use. "Science and Health with Key to the Scriptures," as its name indicates, is used as a key to the Scriptures, and is not intended as a substitute for it. It seems to me that it is as self-evident that membership in a Christian Science church is not granted to persons who are still members of other denominations, as that one cannot belong at the same time to the Dutch Reformed church and to the Baptist church.

Does the clergyman consider the teachings of Jesus as in any wise expressing contempt of medical science? If it is possible to draw so near to God that the result is the healing of sin and sickness, this is not contempt of medical science, but rather the proof that there is still another (and as Scientists think, a better and surer) way to find relief. Christian Science does not teach us to strive for material things, but for spiritual riches, for a better understanding of God and of His omnipotence. Working in Christian Science is learning to know and obey God's will; to carry through one's own projects by human will is sheer hypnotism, and for this there is no room in Christian Science.

This clergyman fears that the Scientists must lack compassion, because their knowledge of God makes them see humanity's sufferings as the result of ignorance of God and of His laws, and not as something inevitable. Could true compassion in his eyes be to pity a sufferer as if we were "strangers from the covenants of promise, having no hope, and without God in the world"? Is not compassion helpful and beneficial only when it points out to the sufferer the way of escape from his misery, and makes him conscious of man's oneness with God?

Of course everything that is true in Christian Science is also true in Christianity; Christian Science is not a new religion, but it has again brought to light some helpful truths which were generally lost sight of, and has shown the way to communion with God.

✧

[W. D. Kilpatrick in *Ypsilantian-Press*, Ypsilanti, Mich.]

May I ask you for space to correct if possible some of the erroneous conclusions which may have resulted from the account, in a recent issue, of a lecture on the subject of Christian Science. Jesus said, "Love thy neighbor as thyself," and if the exhibition of religious intolerance which is being given to the people of the state of Michigan by this self-appointed critic is a result of the Christianity of the centuries, then we must truly concede its failure.

Contrast the lecture of the critic on the subject of Christian Science with that delivered in your city on the same subject the following Sunday by Virgil O. Strickler, a most excellent account of which appeared in your paper. On the one hand, we have an effort at destruction; on the other, one of construction. On the one hand we have a tirade instigated solely by a desire to tear down; on the other, a message of love, "with malice toward none, with charity for all," a message meant to uplift mankind, to relieve them of the thraldom of sin and disease. In the latter lecture there is not one word of denunciation of the religious beliefs of another; not one unchristianly or ungentlemanly reference to the religion of this critic or to the founder of his religious denomination. The query is pertinent, What is to be accomplished by wholesale denunciation of another's religion through misrepresentation and vilification? The effort of the first lecturer is not by any means an experience new to Christian Science, for Christian Science has been subjected to this class of attack for nearly fifty years, and through it all has experienced a growth unparalleled in religious history.

The critic characterizes Christian Science as a "get-rich-quick plan of its originator." This accusation has the finger marks of much usage, and has never in any way tended to thwart or hinder the steady march of this religion. Mrs. Eddy spent many years in toil and study, without means and in the most meager surroundings, before presenting Christian Science to the world; and it was not until later years that a comfortable competence awaited her. Her success in her efforts to give to the world this saving truth only increased her devotion to her work, and we find her to the last living simply and modestly, devoting every moment to her work, and using the revenues derived therefrom for the sole purpose of establishing and perpetuating the cause of Christian Science, which has meant so much to hundreds of thousands of the sick and the sinning throughout the entire world.

Mrs. Eddy was a descendant of one of the oldest New England families, and a woman of culture, having all her life been a profound student. The charge of illiteracy which the reverend gentleman is pleased to repeat, has often been made and as often refuted. Mrs. Eddy's work and worth have been recognized and acknowledged in all quarters, regardless of individual religious convictions and prejudices. Gov. Samuel D. Felker of New Hampshire has paid her the following tribute: "She has left the impress of her work not only on New England, but on the entire world, and we are proud of her." Leading newspapers and periodicals throughout the world have quite universally evidenced a just appreciation of her service to mankind.

The conclusion drawn by the critic that "Christian Science and Christianity are absolutely opposed," presents a question which it seems to me could justly be left to the decision of each individual who cares to investigate for himself. It would scarcely be supposed that any one interested in ascertaining the truth about this subject would attempt to gain enlightenment from one opposed to its teachings, and it would be trespassing somewhat upon the intelligence of a people to assume that they could not investigate and decide for themselves whether Christian Science is what its critics claim it to be, or what its friends hold it to be. Most public libraries have been amply supplied with authorized Christian Science literature, including the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, whereby investigation of this teaching may be made by any one.

The cunning and disingenuous method of attempting to discredit Christian Science by quoting isolated and fragmentary passages from its text-book and its other literature is as old as Christian Science, and the progress of the movement is the best evidence of the inefficacy of this method of attack. By similar means the Holy Bible might be so distorted and misrepresented as to be unrecognizable by its closest students, and these periodical and unjust attempts at the destruction of Christian Science will amount to just as much as would like attempts against the Bible.

Jesus said, "By their fruits ye shall know them," and "He that believeth on me, . . . greater works than these shall he do;" and he also admonished us not only to "preach the gospel" but to "heal the sick." In fact, there is not an instance recorded where Jesus sent his disciples out to preach that he did not couple with this admonition the one to "heal the sick." Christian Scientists believe that Jesus meant what he said, and that the Bible from beginning to end, when interpreted correctly, is an explanation of the divine Principle of exist-

Digitized by Google

ence, the understanding of which was more fully brought to man through the words and works of Jesus, by which we are all enabled to follow his example. In thus accepting the whole garment, seamless and unrent, can Christian Scientists be justly accused of being "absolutely opposed to Christianity?" In the words of Gamaliel found in the book of Acts, "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it."

✧

[Thomas F. Watson in *Hanford* (Cal.) *Sentinel*]

In Mr. ——'s article on Christian Science there are several misstatements which should be corrected. That the teaching of Christian Science is not a perversion of the Scriptures, as this critic claims, is proved by the many cases of those healed, not only of their physical diseases, but of alcohol, tobacco, and other evil habits, through its ministrations. Mrs. Eddy further states (p. 404): "Healing the sick and reforming the sinner are one and the same thing in Christian Science. Both cures require the same method and are inseparable in Truth."

Christian Science does not teach that sin, sickness, and death are non-existent to material sense, but its teaching that sin, disease, and death do not proceed from God, who is infinite good, coincides with the Scriptural statement that "God saw every thing that he had made, and, behold, it was very good." Mrs. Eddy has shown very clearly how "sin, sickness, and death are comprised in human material belief, and belong not to the divine Mind" (p. 286). The critic's statement that "the will is a powerful factor in resisting disease," is not the teaching of Christian Science, for Science and Health states, "Human will-power is not Science . . . and its use is to be condemned" (p. 144). Healing in Christian Science is accomplished through prayer, and James says, "The prayer of faith shall save the sick."

This critic commends Christian Scientists for their "endeavor to hold fast to the Bible," but declares the teaching of God's omnipresence is "pernicious and unscriptural." The psalmist wrote: "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." And in Jeremiah we read, "Do not I fill heaven and earth? saith the Lord." Mrs. Eddy tells us in "The First Church of Christ, Scientist, and Miscellany" (p. 114): "Christian Science teaches: Owe no man; be temperate; abstain from alcohol and tobacco; be honest, just, and pure; cast out evil and heal the sick; in short, Do unto others as ye would have others do to you."

It is not the teaching of Christian Science that "whoever dies merely commits 'mortal error.'" Mrs. Eddy taught plainly that "sin brought death, and death will disappear with the disappearance of sin" (Science and Health, p. 426). The critic asks, "How do our Christian Science friends expect to get everlasting life?" Jesus stated, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Then it is plain that eternal life is to be gained not by dying, but by a knowledge or understanding of God. Jesus taught his followers to preach the gospel and heal the sick. Not only in Mark xvi. (which the clergyman says is a later interpolation, and does not belong to the original Greek manuscript), but the whole New Testament is filled with accounts of healing. Not only Jesus and his immediate disciples healed sin and sickness and raised the dead, but their followers did likewise. The early Christians for about three hundred years after Jesus' time continued the work of spiritual healing, yet our critic says, "It is not the divine plan that they be released from sickness and death."

While the "scientific statement of being," on page 468 of Science and Health, may be regarded as an epitome of Christian Science, yet Mrs. Eddy strongly emphasizes the importance of the Lord's Prayer, which, she tells us, "covers all human needs" (p. 16). The proof that Christian Science when understood is not in conflict with the Bible, lies in the fact that the study of Science and Health has made more Bible students than any other book ever written. Any one who will without prejudice read the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will find that it is based on the Scriptures and is both reasonable and logical.

✧

[Willis D. McKinstry in *The Times*, Leavenworth, Kan.]

We notice in a recent issue a sermon in which the endeavor is made to bring Christian Science into disrepute by having the reading public believe that "Christian Science is not Scriptural." While Christian Science takes issue with the physical or material sense-testimony of existence, it adheres supremely to the injunction set forth in the first commandment, "Thou shalt have no other gods before me." Thus Christian Science admits of no mind, intelligence, substance, being, action, or law apart from God, Spirit. "God is a Spirit: and they that worship him must worship him in spirit and in truth."

Starting with an infinite, omnipresent, all-powerful God as the creator of all, it naturally and indisputably follows that by reason of the spiritual law of cause and effect, whatever proceeds from or manifests this infinite creator must be in nature, character, and quality like Him. That which appears according to the testimony of personal sense, is therefore in opposition to spiritual being, and thus its claim of existence—without Principle, substance, or law—is suppositional. Jesus' demonstrations clearly showed the infinitude of spiritual law, whereby every phase of so-called physical law was made void. He walked on the waters, stilled the storm, turned the water into wine, multiplied the loaves and fishes; he healed the sick, the halt, the blind, the dumb; he restored to life the brother of Mary and the daughter of Jairus. Existence is, and Jesus knew the truth about it.

When Jesus and his disciples were overtaken with a storm while at sea, and his disciples awoke him from his sleep, saying, "Lord, save us: we perish," he did not say to them, There is a storm, but he did say, knowing the omnipotence of God, "Peace, be still," and the storm abated. Nor did he say to the one sick of the palsy that he was a sick man, but rather, "Arise, take up thy bed, and go unto thine house." Christian Science teaches that the phenomena, or appearances, of sin, disease, and death are but errors of belief, emanating from the carnal mind, which is "enmity against God." Intelligence is a quality or attribute of the Mind which is God. This intelligence was expressed through Christ Jesus, who knew the unreality and unreliability of the teachings of the five physical senses and demonstrated the indestructibility of Truth and Truth's ideas. Jesus expressed this intelligent knowledge or understanding of scientific being when he said, "Ye shall know the truth, and the truth shall make you free."

The Scriptural truths of the Bible are demonstrable from the fact that they are true; the teachings of Christian Science impart a spiritual understanding of these Scriptural truths, hence it is also demonstrable. The boldness of the critic's assertion that "Christian Science is not Scriptural," amounts to naught in the judgment of Truth.

Editorial

Practical Christianity

For centuries humanity has more or less uncomplainingly submitted to the yoke of bondage imposed by its beliefs that evil is practically unescapable in human experience, and that sickness and death are as much a part of this human experience as are the hours of the day and the days of the year. The fact that these beliefs are in no wise consistent with the Scriptures has seemed to escape most Christian believers, as also has the fact that Christ Jesus in announcing his mission declared that he came to do the will of the Father, to fulfil and not to destroy the law, and that men "might have life, and that they might have it more abundantly."

Not from the early centuries of Christianity, until Christian Science—with its declaration that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), consequently that evil is unreal and good the only reality—was announced to the world by Mrs. Eddy, was any considerable portion of humanity able to divest itself of the fear which for ages, consciously or unconsciously, had done much toward shaping the course of human thought and human action, in what might be termed a blind submission to a relentless fate. Through Mrs. Eddy's teachings hundreds of thousands of people who have become Christian Scientists are emerging from the fears and superstitions which so long have bound them, and are waking up to the realization that instead of sickness and suffering as an inevitable fate, it is their divine right to be well and happy. It is likewise becoming evident to an ever increasing number that God is not and can not be the author of evil, and as there is no other creator, evil must of necessity be unreal and nothing more than a false belief which has deluded mankind and robbed them of their *birthright*.

To persons who have been brought up to believe in that theology which regards as supernatural the healing of the sick and the doing of the other mighty works by our Master, Christian Science no doubt appears mysterious, but this is because they do not realize that the works of Christ Jesus were done in demonstration of divine Principle and according to a law which like its author is "the same yesterday, and today, and forever." The operation of this law must of necessity bring about exactly the same results at this time and in the future as it has done in the past, and it is the duty of Christian Scientists so to shape their course that the workings of this law will not be perverted.

Occasionally we hear of Christian Scientists, or persons calling themselves by that name, who believe that they have discovered some simpler and better method for the practice of Christian Science than has been perceived by others, or who consider themselves so far advanced in understanding as to have outgrown the need of fellowship with the church instituted by our Leader. Conservative students of Mrs. Eddy's writings, however, especially those who were privileged to have the benefit of her personal teaching, have had no difficulty in seeing that these methods and practices amount to nothing more than an effort to read into Science and Health and Mrs. Eddy's other writings, not the interpretation which the words of the author will simply and reasonably bear, but some preconceived theological or medical theory which is no part of her teachings and therefore has no part in the consciousness of a genuine Christian Scientist.

The prime need for Christian Scientists is to understand that the spirit of this Science does not contradict its letter, nor does it need any abstruse or complicated interpretation of that letter in order to heal the sick. "If the Scientist has enough Christly affection to win his own pardon," Mrs. Eddy writes, "and such commendation as the Magdalen gained from Jesus, then he is Christian enough to practise scientifically and deal with his patients compassionately; and the result will correspond with the spiritual intent" (Science and Health, p. 365).

The gospel of Jesus is one of meekness and love, and he who would emulate the great Teacher must be "filled with compassion" for the sick and suffering, must have that practical Christianity which not only pardons the sinner, but makes him "every whit whole," physically as well as morally, that gives to "the poor suffering heart . . . its rightful nutriment, such as peace, patience in tribulation, and a priceless sense of the dear Father's loving-kindness" (Science and Health, p. 365). Nor will the Scientist arrogate credit for this to himself, but humbly say, as did the Master, "The Father that dwelleth in me, he doeth the works."

Archibald McLellan.

Compassion, Limited

The old-fashioned teaching about everlasting punishment can no longer be said to be popular, even among dyed-in-the-wool theologians. Yet one often comes upon indisputable evidence of a disposition to honor this antique dogma by subjecting certain persons and acts to unending condemnation. Even earnest Christians have been known to illustrate the fact that the momentum of habit often expresses itself in practice a long time after one's theory respecting the truth Christian attitude toward a given fact or situation has been fully righted.

How often has the saying, "Once a jail-bird, always a jail-bird," been given crushing significance for some unfortunate at the moment when a word of confidence and hearty good will would have given him the courage to struggle on until he had worked out his problem. How often, too, have sisters and daughters, who perchance have been sinned against far more than they have sinned, been made to feel that the hand of every man, and especially of every woman, is against them, and that their blight is thereby made unremovable. The heart of "the new penology," and the explanation of its interesting facts being chronicled at Sing Sing and elsewhere today, is found in the proof being given to convicts that belief in human redemption has been substituted for the long-time belief in everlasting punishment. Little can be done for wayward men or women so long as their would-be helpers are governed by the belief that their sins cannot be pardoned, much less forgotten, by "good society."

The teaching of Christian Science finds an end to punishment in the infinite and eternal reality of good alone. It declares that while "the belief in sin is punished so long as the belief lasts," the "process of higher spiritual understanding improves mankind until error disappears, and nothing is left which deserves to perish or to be punished" (Science and Health, pp. 497, 251). The habit of looking askance at an individual, and of warning others that he is "in error" and cannot be safely trusted, supplies painful proof that the spirit of "everlasting punishment" is yet extant.

The wrong one may do his brother man in thus maintaining an unjust mental attitude is immeasurable, and if any of us have thus sinned in the past, in heaven's name let us punish that fact by its everlasting quittance. The unbrotherliness of false sense is the one haunt and hiding-place of this evil, and Christian Science corrects the impulse by separating between man and materiality. It declares that the divine idea remains forever perfect; that no stain of error of any kind or degree can penetrate or affect aught but the seeming per-

Digitized by Google

onality of false sense; that the true selfhood is inviolate, and annot be made unclean or untrustworthy. This realization enders it possible to fulfil St. Paul's pertinent injunction, Brethren, if a man be overtaken in a fault, ye which are piritual, restore such an one in the spirit of meekness; conidering thyself, lest thou also be tempted."

When we see a painter or plasterer covered with dirt, we now that it all pertains simply to his overalls, and so attach o significance to it. So, too, since evil belongs only to false ense, it must appear that when this sense is "put off" hrough the apprehension of divine Truth, all the stains go ith it. A Christian Scientist who fails to be governed by his fact is surely missing the very heart of the truth for hich he may be showing a zeal that is unholy because nkind. It is ours not to recognize any condition of thought r life as hopeless or incurable. Though surrounded by very claim of evil, we do well to remember Mrs. Eddy's sigificant statement in Science and Health (p. 476): "Jesus eheld in Science the perfect man, who appeared to him here sinning mortal man appears to mortals. In this perect man the Saviour saw God's own likeness, and this correct iew of man healed the sick."

JOHN B. WILLIS.

True Iconoclasm

THERE is great difference of opinion respecting the value f iconoclasm, or image-breaking; and well there may be, ince so much that is classed in this way is destructive to he good in human consciousness as well as to the bad. The ord iconoclast, indeed, has come to include those who attack he cherished beliefs of others, and especially with respect to eligion. According to sacred history, Abraham was the first otable iconoclast. It is said that Terah, his father, was a aker of images, and from his boyhood Abraham was closely ssociated with gods made by men's hands. At length spirtual enlightenment came to him, and he not only renounced dolatry, but proceeded to destroy the images which he had elped to make; for which offense he was sentenced by the riests to die by fire. Tradition has it that he came out of his ordeal unharmed, and soon received and obeyed the livine command to leave behind him his country and kindred, nd under divine guidance to found a great nation in a land which God would show him.

It is not necessary here to pass upon the literal correctness of these accounts. What concerns us is to know that Abraham not only emerged from idolatry, but gained such a concept of God that he could commune with the one perfect Mind and be conscious of divine guidance at every step of the way. Nor was this all, for his abandonment of false gods did not leave him stranded on the dreary shores of materialism, as have been many since his day who essayed to break the idols of an unreasoning and unreasonable theology, but who failed to give men something better in the place of that which they took away. It matters not that many of these have pleaded sincerity, for those who would probe the wounds of humanity can never bring to it healing by offering a mere negation. God is the one necessity of our existence from childhood up, and whether we pray well or ill, pray we must.

It is true that inconsistent concepts of Deity cannot last, because they fail to meet human need, and it requires no "image-breaker" to make this apparent sooner or later. Of the true reformer it may be said, "He taketh away the first, that he may establish the second." Such was Abraham, who in turning away from idols found "the living and true God;" found, too, "the faith that makes faithful" and made it a living power in all the ages since his day. Christ Jesus is sometimes called the great iconoclast. He indeed lifted thought above an imperfect concept of God to the open vision of the Father, who not only "hath life in himself," but who also gives to the Son the understanding by which to have "life in himself," which in Christian Science would mean the reflection of the Life divine. The great Teacher was stern and unsparing in his denunciations of idolatry, by whatever name it might be called, but he was ever ready with the proof that God is Love as well as Life.

In our own day there have been some who unsparingly assailed concepts of religion which had long been sacred to others, and often these attacks were made in the name of science. Sad to tell, the faith of many wavered when they were told that the stories of the Bible were mainly myths, and that the keenest research along material lines could offer no proof of the existence of God or of spiritual law, and that this discredited the so-called miracles of the Bible. Happily, however, another spoke for science, in the name of God and spiritual law, and although Mrs. Eddy, the Discoverer of Christian Science, was regarded by some as a relentless iconoclast, she kept close to the lines laid down by Christ Jesus, and offered the kind of proof which he held to be inseparable from his teaching, namely, works of healing.

Mrs. Eddy's teachings call for "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259). This necessarily demands pure morality and deep spirituality, and as we read on page 535, it "dooms idolatry." Divine Science, like a refiner's fire, tries men and their ideals; but as the gold cannot suffer in being separated from the dross, no more can those who are willing to give up their idols for God and His idea, lose aught in the process of spiritualization.

ANNIE M. KNOTT.

Notice

As the Treasurer of The Mother Church is also acting as Treasurer of the fund for the memorial to Mrs. Eddy, in sending remittances for this fund care should be taken to specify that the money is intended for this purpose. Correspondence should be addressed and checks made payable to Adam H. Dickey, Treasurer, 103 Falmouth street, Boston, Mass.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m. (during July and August the Sunday evening service is omitted); Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

NEVADA, MO.—The members of the Christian Science church have purchased a corner lot on South Main street and will soon erect a handsome and substantial church building. The lot is 80 by 160 feet, and is splendidly located on one of the best streets of this city.—*The Nevada Mail.*

Digitized by Google

SOMERVILLE, MASS.—The distribution committee reports literature distributed from Jan. 1 to Dec. 31, 1914, as follows: 9,350 *Monitors*, 2,142 *Sentinels*, 393 *Journals*, 86 *Heralds*, 222 pamphlets, 129 lectures, and 245 reprints. The committee supplies our four libraries, also Tufts College library, with subscriptions to the *Monitor*, the *Journal*, and the *Sentinel*. The *Monitor* is sent to eight fraternity houses of Tufts and Jackson colleges, the home for the aged, six engine-houses, the police station, boys' club, high school, Somerville hospital, and is also sent as an exchange to two newspaper offices. Literature is carried or sent each week to various public institutions and offices and is left on street-cars. In three railroad stations we had literature boxes in which over one hundred *Sentinels* and *Monitors* were used each month. In addition the *Monitor* is sent to a camp for women. There have been loaned or given away fifteen copies of Science and Health, four copies of "The Life of Mary Baker Eddy" by Sibyl Wilbur, four copies of "Miscellaneous Writings," three copies of "The First Church of Christ, Scientist, and Miscellany," and two Hymnals. The librarian of the public libraries has agreed to have all writings on Christian Science classified and listed either as "Christian Science, authorized," or "Christian Science, unauthorized and critical."—*Correspondence.*

❖ ❖ ❖

The Lectures

Berkeley, Cal., and University of California

Under the auspices of the Christian Science Society of the University of California, a lecture on Christian Science was given in First Church of Christ, Scientist. To this all present and former students of the university, with the faculty, were invited. A second lecture was given at the high school auditorium, under the direction of Second Church of Christ, Scientist. The auditorium was crowded, fifteen hundred people gaining admittance, while more than four hundred were turned away. In both instances the speaker of the evening was Jacob S. Shield. In introducing the speaker at the first lecture, Doctor Cross said:—

All of us have seen the Japanese expression of the thought, "See no evil, hear no evil, speak no evil," so effectively presented in the three monkeys with hands over eyes, ears, and mouth. I have often felt that that trio of monkeys more excellently expressed, on the other hand, the attitude of most people toward new ideas and new lines of action. For the most part we refuse to listen open-mindedly to the presentation of anything that departs from the paths of past and present thought. We close our eyes and refuse to glance over the literature given us for our perusal. Instead of keeping our hands over our mouths so as to speak no evil of others who have ideas that differ from ours, we speak much and unkindly of them, and at the same time, if possible, place our hands over their mouths so as to prevent them from reaching others with their propaganda.

The history of the world is filled with instances of persecution of leaders in new fields of thought and action. May the twentieth century bring to the people of all nations a bigger and nobler desire to learn not only "how the other half lives," but also "what the other half thinks and believes." You who are here tonight represent this newer ideal. You, or at least a large number of you, are not Christian Scientists, yet you are desirous of listening to the presentation of the ideals of that faith which has made such rapid strides in later years in gaining recruits and spreading its influence throughout the world. I am not a Christian Scientist, and I know but little concerning its teachings, yet it is indeed a pleasure to me to introduce tonight one whose mission is not to convert you to this new belief, but merely to explain the fundamental laws upon which it rests.

Reginald Markham, first reader of Second Church, gave the introductory address at the second lecture. He said:—

In the twenty-eighth and twenty-ninth verses of the eleventh chapter of Matthew's gospel are these words: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls." In making this statement, Jesus did not refer to his corporeal person, but to divine, ever operative Principle, to which mankind may look for healing and rest from fear and discouragement, from sin and suffering. Mankind has been seeking this savior throughout the ages. It was comprehended and demonstrated by Christ Jesus and his followers over nineteen hundred years ago in healing the sick and the sinning and in raising the dead. These demonstrations of the power of God were continued, by those who comprehended this glorious Principle, for a few hundred years after Jesus' ascension, but materialism closed in upon the followers of Truth, and it was again obscured from human vision, while a corporeal God and man became the rule for thought.

About fifty years ago Mrs. Eddy discovered and proved this Principle, and gave her discovery to the world in the book "Science and Health with Key to the Scriptures." During the brief time since the appearance of this book thousands upon thousands of healings have resulted from its ministrations, where other systems have failed, because, as Mrs. Eddy tells us on page 116, "they never crown the power of Mind as the Messiah." Again she tells us, on page 224 of the same book: "A higher and more practical Christianity, demonstrating justice and meeting the needs of mortals in sickness and in health, stands at the door of this age, knocking for admission. Will you open or close the door upon the angel visitant . . . ?"—*Berkeley Gazette.*

❖

Ottumwa, Iowa

William R. Rathvon lectured on Christian Science before a good-sized audience at the Grand Opera House. City Attorney E. K. Daugherty acted as chairman of the evening and introduced the lecturer with the following remarks:—

We are assembled here tonight for one common purpose—to hear, weigh, and, let us hope, to understand the truth. The spirit of our times demands that we keep our minds open to conviction. Dogmatic theology and hide-bound creeds are disappearing, and in their places we find the liberality of earnest seekers after truth. In our efforts to find what is that perfect rule for faith and conduct, we have made many mistakes, but we have been and still are earnestly striving to learn.

Our differing creeds and widely diverging views on religion, politics, philosophy, and economics, indicate how earnestly and generally the struggle is going on to find the truth that gives victory to the right and brings peace to the heart of man. Those same widely differing opinions indicate how little we have learned of the law of that infinite, omnipotent Mind which is ever present, and which created all and governs all. Speaking for myself, I will say that for most of my life I have been a God-fearing man, but it was only when I came in contact with Christian Science that religion became a practical reality to me. Up to that time, "I seem to have been only like a boy playing on the seashore, and diverting myself

Digitized by Google

now and then finding a smoother pebble or a prettier shell than ordinary, while the great ocean of truth lay all undiscovered before me."

Less than fifty years ago, Christian Science was brought to the world by a woman. Since then, its growth has been the marvel of the age. It reminds me of a maple-seed securely lodged in its feathery sheath, light as thistle-down, and lifted hither and thither on the wings of the wind, until at last it finds a lodging place in the moist earth, thence to spring up a mighty tree with broad spreading branches, whence are shaken down millions of new seeds to be carried by the winds to the planting of a mighty forest. Since its discovery, Christian Science has found lodgment on every continent of the globe and as well in the islands of the sea. It numbers its adherents by the million, and tens of thousands gladly testify to having found in it that peace "which passeth all understanding."—*Ottumwa Courier.*

Worcester, Mass.

Col. William E. Fell lectured to a crowded house in Mechanics Hall on the subject of Christian Science. Herbert C. Cather, first reader, in his introduction said:—

Down the line of centuries since Pilate propounded the great question "What is truth?" Christendom has been striving to answer it with creed and dogma. Many succeeding beliefs, as they became dominant, attempted by persecution and sword to force humanity to accept their teachings, until religious history is so stained that it bears but slight resemblance to the original teaching of Jesus the Christ. Yet out of all this chaos came the "still small voice" of God, and it remained for a gentle New England woman to hear and again proclaim to sinning, suffering humanity the healing message of its redeemer, Christ Jesus.

The world is to some extent acknowledging its debt to Mrs. Eddy, the Discoverer and Founder of Christian Science. She took Jesus' promises at their face value, and again preached and practised the gospel of "on earth peace, good will toward men." Under her leadership, Christian Science has kept a clean record. All it asks is to be judged according to Jesus' method,—"By their fruits ye shall know them." When reviled by pulpit or press, instead of reviling again, it has gone on its way, calmly presenting to the world its fruits in the lives of those redeemed from sorrow, sin, and sickness by its message of love. Thousands from every part of the globe can today bear witness to the healing power of God as revealed in Christian Science.—*Correspondence.*

Abilene, Kan.

In the Seelye Theater a large and appreciative audience heard Virgil O. Strickler explain how the healing in Christian Science is accomplished. Mr. Strickler was introduced by M. H. Malott of this city, formerly president of the State Bankers' Association, who said in substance:—

The truly successful man of today is not he that heapeth up riches unto himself, nor he that strives to win the applause of the multitude or caters to the grand stand and the gallery; rather it is he that loves and does good to his fellow man. Environment and the home are important factors in influencing our political views, in molding our religious beliefs, and in deciding our vocations in life. The early teachings of childhood in a large degree shape our destinies, and the angle of vision by which we measure things in later life is the result of the mother's love and affection and of the father's watchful care.

We do not all think alike along religious lines, and because of this we have many churches, all teaching the brotherhood of man, yet with enough difference in doctrine and in creed to make the heathen believe we have as many different religions as we have denominations. Were I a minister, I would rather preach on love for mankind than dwell on the punishment of the wicked. This love is one of the cardinal principles of the friends with whom we are gathered tonight, and I am sure, too, that we can all subscribe to it.

The Abilene Chronicle.

Albert Lea, Minn.

A lecture on Christian Science was delivered by Clarence W. Chadwick at the Idle Hour Theater to a good-sized and very interested audience. T. V. Knatvold introduced the speaker, saying in part:—

Christian Science comes with a message of love and good will to all men. Christian Scientists have no quarrel with any sect or denomination; no criticism of any creed or doctrine; no fault to find with any profession or faith. They try faithfully to follow and practise the command of the Master, "Whatsoever ye would that men should do to you, do ye even so to them." They come with no boasting or claim to superiority, but humbly and meekly seek to obey those other commands of Jesus to go "into all the world, and preach the gospel," and "heal the sick." They see in the words of the Master and in the promises of Holy Writ the possibility of spiritual growth, even to the perfect man. This is no new religion, but the primitive religion taught by the Nazarene more than nineteen hundred years ago; and it is this primitive religion which never grows old that the lecturer of the evening will tell us more about, at the same time clearing away some of the errors and misconceptions many people have of Christian Science.—*The Tribune.*

Key West, Fla.

In introducing Bicknell Young, who lectured on Christian Science, Capt. Percy Willis, U.S.A., said in part:—

If Christian Science was not doing good in the world, it would have no legitimate claim for consideration; but it is doing good, and in large measure, wherever its influence is felt. Thousands of intelligent people are testifying every week, at the Wednesday evening meeting of the Christian Science churches throughout the world, of their relief from sorrow, sin, sickness, and fear, and giving to Christian Science the entire credit for these beneficent ministrations. Christian Science goes about meekly and lovingly, doing the works approved by Jesus, the master Christian, who said, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Christian Science is a religion of love and good deeds. It draws back the veil of mystery about God and man and reveals God as Spirit, divine Mind, and man as His image and likeness, spiritual and not material.—*Correspondence.*

Lectures to be Delivered

WASHINGTON—Seattle (Churches and Society): Bicknell Young, University State Bank Hall, corner 45th avenue and 14th avenue N.E., 8 p.m., July 9; auditorium First Church, 16th avenue and East Denny way, 8 p.m., July 10; Hippodrome, 5th avenue and University street, 8 p.m., July 11.

Correction

In the list of "lecturers appointed for the year ending June 30, 1916," as printed in the *Sentinel* of June 26, the address of the Hon. Clarence A. Buskirk, C.S., should read: 405 North Michigan Street, South Bend, Ind.

Testimonies of Healing

It is with a heart full of gratitude that I try to tell of some of the things which Christian Science has done for me. Fourteen years ago I was healed of acute lung trouble through Christian Science, and at the same time regained the use of my right arm. Then in 1910, when I was visiting my daughter at Colville, Wash., I was taken with heart trouble, also had something the matter with my knee—I could not walk and I suffered much. I thought my condition was due to rheumatism; but when the knee was examined by a doctor, he said it was caused by an injury and a misplacement. He did not think there could be anything done. I then called for help from a Christian Science practitioner, who worked lovingly and faithfully for me. My healing was a little slow, but I thank God that during the experience I learned more and more of the truth by which I was indeed made free. My health has been very good since that time.

The physical healing was a blessing, but not to be compared with the spiritual uplift. I have learned to help myself, and this has meant much to me, for I am sometimes far away from any Science people for months; but I find God is "a very present help in trouble." I am now in my seventy-eighth year, and people who do not understand Christian Science, marvel that I am so well and active. I have indeed much for which to be grateful. I thank God I can read and understand that He is my life, thanks to Mrs. Eddy, our beloved Leader, through whom the way has been shown. I am grateful for all our literature, and for the Lesson-Sermons which we have the privilege of studying each day. I pray that I may always be worthy to be called a Christian Scientist.

MARY B. EVANS, Oshawa, Ontario, Canada.

✧

Christmas, 1912, found me physically ill and utterly discouraged, though surrounded by every comfort that loving parents could provide; but as has so often been said, "man's extremity is God's opportunity." After years of prejudice and theological scruples, I at last determined to apply for help in Christian Science, to prove for myself whether it was the truth, with the result that I at once began to improve in health and despair gave place to hope.

During the year 1913, as spiritual understanding unfolded to me through the study of "Science and Health with Key to the Scriptures," I gained health and strength hitherto unknown, and lost all fear that past ills could come back to torment me, as they had done under medical treatment. Prejudice against our dear Leader gave place to an ever increasing sense of gratitude and love, while I began to strive earnestly to put into practice the clearer understanding of the Bible which I was gaining through the study of our text-book.

From childhood it had been my custom and delight to surprise my mother and father each Christmas morning by singing Christmas songs, a custom discontinued in later years because of my ill health. Very early on Christmas morning, about a year after turning to Christian Science, I awakened, my heart filled with such gratitude and thankfulness that song seemed its only adequate expression. I went down to the piano, and starting with the simple German Christmas songs of childhood, I went on to the beautiful hymns in the Christian Science Hymnal, ending with the one by Mrs. Eddy, "Blest Christmas Morn," for this last seemed the most fitting expression of my happiness. To be awakened to this reminder of returned blessings pleased my parents, they said, more than any material gift I could have offered them.

As I continued to read Science and Health I gained a deeper understanding of the angels' message of "on earth peace, good will toward men," for I realized that material things have in themselves no power to give happiness or peace. Through Christian Science has come the joy that is spiritual, the gift of our heavenly Father. Since accepting this teaching I have had many proofs of the healing and saving power of Truth, and I am continuing an earnest study of Science and Health and Mrs. Eddy's other writings.

ELLA E. SAALFELD, Detroit, Mich.

✧

I offer the following testimony in gratitude for benefits received through Christian Science, and in the hope that it may encourage others in their journey from sense to Soul. The entrance to our home is up a flight of thirteen concrete steps, with one turn near the bottom. One morning I stepped on the top step and fell forward head first to the bottom. I landed with my head next to the last step and under my body, my feet toward the street, evidently having turned completely over.

To mortal sense I was quite badly hurt, but as soon as I was able to pull myself together I declared the truth to the best of my understanding, repeating the "scientific statement of being" (Science and Health, p. 468). It then occurred to me that I had broken my thermos bottle (I was carrying my lunch), and it was necessary to remove it quickly in order to save my lunch. As I did not wish to leave the bottle on the sidewalk and my car was already due, I rose, ran up the thirteen steps and two flights of stairs to the upper floor as fast as I had ever gone before, left the bottle in the kitchen, and ran down again and out to my car. After leaving the car I had to walk fourteen blocks. If there was any sense of pain from the time I started up-stairs until I reached the office, it was so slight as to be unworthy of mention, and I returned home at night under the same pleasant conditions.

The thought came to me that under similar circumstances in the past, I would have had a sense of soreness and lameness the next day, and I went right to work to deny this possibility. I rested comfortably that night, with the exception that for a time I perspired very freely, but next morning I got up and was around as usual, with practically no sense of discomfort. I am very thankful to God for this wonderful truth, and grateful to our dear Leader for revealing it to us.

WILLIAM H. ENGLE, Oakland, Cal.

✧

Since my childhood I was robbed of nearly all that would seem needful,—a mother's care, a cheerful home, and the advantage of a good education. Before I reached womanhood, I had the responsibility of raising three young members of the family, and witnessed all sorts of domestic discords, moral, physical, and financial. As a result, these seeming conditions caused me to brood and fret myself into a general breakdown, physical and mental. I suffered from nervousness, stomach trouble, and sleeplessness, which held me in bondage for over fifteen years.

It was while I was undergoing some mental disturbance that my attention was attracted to Christian Science by a dear girl with whom I was employed at the time. Through her clear understanding of God's power, she had helped me to overcome that which was troubling me, and the consequence was, I wanted to know something of that power. I purchased a copy of "Science and Health with Key to the Scriptures," and spent much time in the perusal of this wonderful book. The understanding came rather slowly at first, but through the help of a Christian Science practitioner I soon

Digitized by Google

egan to see some of the truth that makes men free. Just
i the degree that I gained a spiritual knowledge of God
nd man, my former troubles faded away into their native
othingness, and I began to be molded anew. Jesus said to
icodemus, "Ye must be born again;" and just in the measure
iat I was willing to give up and let go of old false beliefs, I
as being born again. I can now truthfully say that I am
ijoying the best of health, and am perfectly contented, for
am gaining more and more each day of that spiritual good
hich is man's rightful heritage, and which does free man
om all that is unlike God, good.

Being of Jewish parentage, I had never had a proper
nception of Christ Jesus and his mission, but this has now
en cleared up for me. I am sure that just as soon as the
ewish people learn who Jesus was and understand the Christ-
lea which he presented, they will all come into their own.
am immeasurably grateful to God for giving to the world
iat noble character, Mrs. Eddy, who so unselfishly searched
ie Scriptures in order to give us a light by which we could
alize the truths contained therein.

Mrs. H. Astrowski, Chicago, Ill.

❖

As I look back to the many blessings received through
hristian Science, I feel I should express my gratitude
irough the *Sentinel*. At one time I was bitterly prejudiced
gainst this religion, but "man's extremity is God's oppor-
inity," and at a dark hour, when I was greatly in need of
hysical healing, a dear friend came to visit among us. She
ad experienced a wonderful healing through Christian Sci-
ice, and I did not doubt what she told me, but I said, "Oh,
could never give up my God," for I was at that time an
tive church-member. My friend, however, told me that I
ed not give up anything, for this teaching would only help
e to be a better Christian. I therefore finally consented to
t her try to help me, and had her order a copy of "Science
id Health with Key to the Scriptures" for me, as she said
I read this with the Bible I would be healed. The result
as that in about a month I discovered I was getting better,
nd with the greatest joy I also recognized that I was learn-
ig to know God aright.

I am now well, and rejoicing in the truth each day. My
hildren, a boy twelve years of age and two girls ten and
even years old, have never tasted medicine. They have had
ttacks of illness to which children are believed to be subject,
ut these have always been overcome through Christian Sci-
nce. For the spiritual and physical healings I am thankful
o God, and grateful to Mrs. Eddy.

Ida Parsons, Sparks, Nev.

❖

For over five years I had been suffering from what the
nedical faculty called a typhoid leg. I had undergone an
nternal operation, and the condition of the leg was the result
of the complaint for which I was operated on. During these
ears I never knew a minute's peace, for the leg troubled
ne continually, and I went about all the time in fear that it
night even cause death.

In the beginning of September, 1912, I was induced to
seek the aid of a Christian Science practitioner, and with two
weeks' absent treatment I was healed. From that time until
last September I did not feel the slightest symptoms of re-
lapse; but one morning I awoke with a sense that my leg was
paining me. At this time I was being treated for supposed
internal strain, so I asked the practitioner to treat me for
this other ailment also. In three days I was cured of both
troubles, and have been in perfect health ever since. I rejoice
greatly over the fact that I have been brought into a fuller
understanding of the allness of God, that I am His child, and
that my life must be devoted to His service. I am also truly
grateful for the revelation of Truth given to our revered
Leader and handed on to us by her. I joyfully pass on the
good news to others.

Christian Science has opened up for me a new view of life,
and I am deeply grateful for all it has done for me.

Charles T. D. Farley, Kare Kare, Auckland, New
Zealand.

I have much pleasure in stating that what my husband has
written is perfectly true; he is a different man since taking
up Christian Science and is in every way benefited. I cannot
speak too highly of the peace and comfort this religion has
brought to me and other members of our family.

Mrs. M. M. Farley.

❖

Nine years ago I was led to investigate Christian Science,
not for any physical healing for myself, but for my son, then
eleven years old. One day in September he had gone with
some playmates to the shore. In jumping from the end of a
bridge, he struck on a sunken log and hurt the ball of his foot,
which pained him so much that he came home. I examined
the foot, bathed it, and thought it would be all right, but
in the morning he could not put it on the floor, as it seemed
to be drawn up; so I sent for a physician, who examined it
and said that the foot was badly strained. He attended
my son for two months, using liniments and bandages, and
at last tried an electric battery, but each time the battery
was used the boy's whole side was affected, so that it was
almost useless for a while.

About this time a neighbor came in, and in speaking of
the boy's foot, asked why I did not try Christian Science.
I inquired what it was, for I had heard of this religion but
knew nothing about it. She told me that she was not a
Christian Scientist, but she had a relative who was, and she
knew that Scientists did some wonderful work. Then she
gave me the lady's address, and after my son and I had
talked the matter over we decided to write for treatment.
This I did, and the practitioner wrote me that God would
heal my son, explained something of the teaching of Christian
Science, and said she would take up treatment at once. She
also advised me to go to a lady living near me, who would
lend me a copy of Science and Health; so I got the book, and
my son and I started to read. It seemed difficult to under-
stand at first, but after a while I began to see and believe.

My son's healing began from the first treatment. His toe,
which would stick up straight in spite of all we could do, went
down where it belonged; and his leg, which had shrunken to
half its natural size, began slowly to fill out. We kept on
with the treatment until March. One morning I got up early
to read and pray, and I had the feeling that my son would
walk that day; but he came out on one foot as usual. I told
him I felt sure he would walk that day, and he said he
thought so, too. I therefore told him to read and pray while
I was getting breakfast, and he did so, with the result that
in half an hour he came out walking on both feet. In a few
days he could put his shoe on, and from that time he gained
very fast. He is now twenty years old and in the navy, hav-
ing passed a physical examination, and he has never had any
more trouble with his foot or leg. He is a stanch Christian
Scientist, and so am I.

I have had many demonstrations for myself since then, and
can truly say that Christian Science is my all. The slow
healing gave us a chance to study, and so to learn more of

Digitized by Google

the truth; but it also gave us the spiritual uplift which no one can take away. I find I need this teaching more every day in my work, and I do thank God that there was one so pure and good that she could and did make the way clear for us.—CARRIE A. BALLARD, Cambridge, Mass.

❖

Ill health drove me out of business, then out West, and after that it cornered me. This meant either utter defeat, or else that I must turn and defend myself with the sword of Truth. At a very critical moment, when all material remedies had failed and the physicians said I could not live, I found this weapon of defense in Christian Science. I had been in the street railway service about ten months, when some one left a *Christian Science Sentinel* in my car. I read this out of mere curiosity, but immediately called on a practitioner for treatment and purchased the text-book, "Science and Health with Key to the Scriptures." As a result, I was cured of severe heart trouble, stomach disorder, nervousness, constant headache, backache, also of weak eyes, for which I had been wearing glasses six years. Where I used to consider almost every one who came on my car as an enemy, with no respect for a conductor, I am now able to see the real man in my passengers,—at least in a degree. My one great desire is to know God, and man in His image and likeness.

My work has become play as compared with four years ago. I have had Christian Science class instruction, which is indeed a "pearl of great price." Our fifteen months' old baby has known hardly an hour's illness, and has never had a drop of medicine, as Christian Science is our only remedy. Our little boy was healed of rupture through my understanding of Christian Science, after he had worn a truss for three years. Jesus said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," and Christian Science has indeed proved his words to be true in this age. I am very thankful to God, also grateful to our beloved Leader, who has again given this wonderful truth to the world.

LEE A. BARNETT, Los Angeles, Cal.

❖

I have long felt a desire to express through the *Sentinel* my thankfulness to God, and my gratitude to our dear Leader, Mrs. Eddy, for the change of thought which has given me that peace "which passeth all understanding." My past life had been nothing but disappointment, ill health, and failure, with no satisfaction. Since coming into Christian Science I have gained a better understanding of God, and the Bible is my daily comfort. My life has changed completely, and I have found God an ever present help in trouble. I have been healed through Christian Science of rheumatism, gout, neuralgia, varicose veins, and erysipelas. Surely no one has more cause than I to be thankful for this wonderful truth which makes us free.

Miss E. HENLEY, Bexhill-on-Sea, London, England.

❖

Some time ago I had a very convincing proof of the protecting power of God that we learn to utilize through knowledge gained in Christian Science. My employment is that of a trainman on one of New England's railroads, and in that capacity I have experienced many instances of this healing and protecting power. In October, 1913, we had what seemed to be a very serious wreck. Our train was running at a high rate of speed, when I noticed the head cars pitch to one side, and the thought immediately came to me that we were off the track. Instantly I began to declare the allness of God and to know that He did not cause accidents. The cars did not go down a steep embankment, which was just beside them they were derailed, neither did they overturn; but they rested at an angle of considerably over forty-five degrees.

I was thrown on my head against some steam pipes, but in less than two minutes I was out of the car to make sure that we had not blocked the other track. I did not know that I was hurt until my attention was called to a flow of blood which came from a cut I had received on the head. I was startled at first, but immediately began to hold steadfastly to the Science of being, and I was able to go about helping passengers out of the cars, taking the names and addresses of over fifty people. I did not have my head dressed until after the surgeon had attended to all the passengers who were hurt, but no one was seriously injured. The doctor who dressed my head told me that I was hurt more seriously than any one in the wreck, but I worked through on my run to the terminal of the road, and ate a good supper when I reached there. The next morning I took off the bandages and have not had any trouble with my head since, as the cut healed quickly and without any soreness whatever. At the time of the accident it was raining hard, in consequence of which I was soaked through, and did not get dry until I reached home several hours afterward; but I suffered no bad effects from this exposure.

Eight years ago I was healed, through the study of Mrs. Eddy's works and the Bible, of the liquor and tobacco habit and of a very immoral way of living. Since that time Christian Science has been my only help for every mental or physical trouble that I have experienced, and my life has been ever so much happier, healthier, and more beneficial to mankind. This is the sure result for every one who will seek God first. I offer this testimony as evidence of my heartfelt gratitude for all that Christian Science has done for me.

GEORGE M. SWAN, Providence, R. I.

❖

My mother was healed through Christian Science of lung trouble and a severe cough, to which she had been a victim for several years. The practitioner came to the house several times and did good work for her, but at last my mother decided she did not need further treatment, and she has not had any ailment since. Christian Science has done very remarkable work for my father and the rest of the family. We are all deeply thankful to God, and grateful to our beloved Leader, Mrs. Eddy, for Christian Science.

MAYBELL BAUD, Strong, Maine.

❖

I am very grateful for the healing power of Truth as manifested through Christian Science. The proof of God's all-power came to me through the healing of my mother, who is eighty-eight years old. Some three years ago she became very ill, and I sent at once for a Christian Science practitioner, who gave her a treatment the next day; but she seemed to get worse, and as some friends who were visiting at our home at that time thought it was awful that no physician was called, fear overcame me and I called in a doctor. He said he could not do much for her, but left a prescription which, however, I did not have filled. He told a friend of mine that my mother had acute lung trouble.

I then called up the Christian Science practitioner and told her all about it and what I had done. She said it was all right, and then took up the thought for my mother, saying we would work for her just for today and let tomorrow take care of itself. My mother began to improve and soon was quite well, until one day she began to have trouble with her limbs and was not able to walk. Help was again called

Digitized by Google

n Science, and in two treatments she was healed. Some time after this, she fell one day, cutting her hands and face, and her arm began to swell and turn black, so I at once declared he truth to the best of my understanding, and read to her rom the Bible and Science and Health all night, when the ain stopped. In the morning I called up the practitioner, as he arm was still badly swollen. After the first treatment the welling began to go down, and two days later my mother was ble to dress herself and be around again. For all this I m indeed thankful to God, and grateful to Mrs. Eddy, who rought this truth to us in such a practical way.

ETTA HAYATT, Milwaukee, Wis.

[Translated from the German]

We are thankful to God for the good that has come to us hrough Christian Science. In 1911 my daughter became ientally deranged, as the result of an accident with which he met while in the last stages of confinement. The condition emed to affect her so much that the presence of two physiians became necessary during the birth, after which she had o be taken to an asylum. A three and a half months' stay here brought no improvement, and we had but little hope of er recovery. I then happened to hear of Christian Science, nd wrote to a practitioner, asking her to take the case and o enlighten me with regard to the subject, and this she illingly did. I put all my trust in God, and the power of 'ruth was soon manifest.

With a few treatments my daughter was completely healed, nd this caused a good deal of surprise among our acquaintnces. This healing, however, is not the sole cause of our ratitude, for the spiritual understanding which we have ained through Christian Science is indeed a great blessing, nd it is our most sincere desire that some sufferer may be d through this testimony to find his way to Christian Sci-nce, and thereby become a partaker of that peace which the orld cannot give.

FRAU MARIE ZIEGLER, Aalen (Württemberg), Germany.

I should long before this have availed myself of the privege of expressing gratitude for what Christian Science has one for me. I was healed of organic stomach trouble of ears' standing. The various physicians consulted were nable to cure me, although I was obliged to take medicine aily. I had been a sufferer for five years. After trying all inds of doctors and different climates in the hope of regainng my health, I had given up in despair when a friend urged ne to try Christian Science. I had no faith in it, but as I ad tried every other remedy and thought this could do me o harm, I went to see a practitioner, and after a few weeks' reatment was entirely cured, and I have had no return of he trouble. That was a number of years ago, and I have ad many demonstrations since. I am indeed grateful for hat Christian Science has done for me, and to know that God s All-in-all.—NORA MANN, Los Angeles, Cal.

Some time ago, while suffering from an attack of chronic tomach trouble, Christian Science was recommended to me y a friend who is a member of First Church in this city. secured a copy of "Science and Health with Key to the criptures," and through study of its teachings I was not nly healed of this ailment, but harmony has come into my ife to replace previous discord.

For this healing and many other blessings I am profoundly hankful to God, whose love brings the peace "which passeth ll understanding." I am also grateful to Mrs. Eddy.

CHARLES A. CAMPBELL, Washington, D. C.

From Our Exchanges

[Rev. Harry Luts in *The Christian Register*]

The main object of the movement or tendency of progressive liberalism toward the universal religion of humanity is the improvement of man's moral, mental, and physical condition here in this present world,—in a word, the enlightenment and elevation of mankind. This rationalistic, human religion does not ignore a life hereafter,—some future world for man,—but it affirms that man's chief and all-controlling duty is here and now in this present world. If we take proper care of this life now, we shall be abundantly able to take care of the next one when we get to it.

It takes very decided exceptions to the popular Christian theology as drawing people's thought and interest too much away to the life hereafter, so that duties here are liable to be neglected in the midst of their dreamings and visions of future bliss. The new way of thinking would say, Let the vision of the future remain a vision, a hope, a faith, if you can, but let it not entice moral interest and energy away from the pressing responsibilities and stern realities of the present time. Here on earth, and in this most real present, lie our duty, our tasks, our life business. It rests with us to bring that hoped for felicity into this present life by discharging our duties to our fellow men and to ourselves, and by a faithful obedience to our own highest ideals of duty. Ruskin said, "That is the true mother church where every man takes the hand of every other man helpfully." This is the aim of the new tendency in religion: to remove as far as possible the burdens that oppress men, to enlighten ignorance, lessen misery, assuage suffering, prevent sin, and uplift human life.

[*The Congregationalist and Christian World*]

The battles fought and won in the past are mile-stones in the progress of the race,—mile-stones that should be left behind us. Our future mile-stones should stand not only to mark the triumph of the right when it has clashed with wrong, but to show that in the progress of Christian civilization bad old methods have been dropped and better new ones have taken their places. There are mile-stones that mark the progress of the world toward international peace. In the clear light of history and of present awful events we see the folly of war and we see the better way.

[*Zion's Herald*]

"Arise, let us go hence." The Master's words to the disciples are repeated for our benefit today. We tend to settle down too contentedly into some congenial habitat, or fall into deep ruts, or limit our views by some narrow horizon. Then comes the call, Arise, go hence! If we obey,—it may be with shrinking of heart, or timid apprehension of unknown difficulties,—we find that God strengthens us for each successive onward step, and much as we may miss the old, new scenes bring to us fresh charms and nobler inspirations. So God is continually disturbing us for our own good; so Providence jolts and jars the soul, as the nestling is thrust out of the nest that it may try to train its powers in longer flights. All true life is dynamic, not static,—a state of expectation looking forward to improved conditions and larger triumphs. And if we cheerfully obey God's calls hence, we may, like Abraham of old, happen finally upon a Canaan in place of a Chaldea, and become a nation instead of a clan.

[*The Universalist Leader*]

A truth which Jesus taught and lived is, that, no matter what may happen to us, it is always possible to win and keep the joys that are best. He insisted that those who sought a

Digitized by Google

real and abiding happiness in the practice of those virtues which his gospel commended, would never be disappointed. He affirmed that, in its security amid all the vicissitudes of outward fortune, the essential welfare of the pure in heart, the merciful, the peacemakers, and those who loved their neighbors as themselves, was like a house built upon a rock,—impregnable to all assaults of winds and floods.

[*The Christian Work*]

It seems irony to speak at this time of the ideal of Jesus, springing from his fundamental revelation of God, which carries in its bosom the inevitable conclusion of human brotherhood. Yet the Christian ideal, however far away it seems, needs to be asserted; for it cuts across the very spirit of the world, and cuts across a common way of thinking to be found more or less everywhere. Sometimes it appears as a pretentious philosophy, which declares war to be a necessity and to be the true test of the vitality and progress of a nation. It bases itself on a pseudo-science about the survival of the fit and the elimination of the unfit. The definitions are all made in terms of the grossest materialism. Force, efficiency, and a ruthless machine, are its watchwords. Fitness to survive is measured by brute strength, and so war is God's test for nations as struggle is the test for life. The creed finds its varied illustrations through the centuries, and "Corsica has conquered Galilee." Surely it has, if that be all. When Jesus of Nazareth came before the machine, he was easily eliminated. The world today is testing the bitter fruit of its own creed.

The Christian faith gives this theory the lie—and must unless it forgets Calvary. The two ideals come to death grips. Indeed this deification of force is the Antichrist, the absolute denial of all for which Jesus lived and for which he died. We believe that the purpose of Jesus is in line with the ultimate facts of the world and life. It is no dream of a visionary, but the eternal truth, and history is strewn with evidence that the nation which lives by the sword perishes by the sword.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

We are never really taken by surprise in life. I mean that the way we shall behave in any given emergency is the direct outcome of the life we have been living. How much of the grace of God have we been appropriating in our quiet hours? What ideals have we been cherishing? What thoughts have we been keeping company with? Have we been storing or wasting moral energy, watching or trifling with the duty of self-formation? For soon or late the cry goes forth, "Behold, the bridegroom cometh," and then what we are worth is seen. Trial, temptation, calamity, affliction come, and Christ comes with them, comes with a demand upon our loyalty and truth; and the question is, What have we to draw upon to keep our light shining to his glory in the midnight hour?

[*American Lutheran Survey*]

Great events are forcing individuals to stop and think, though they were formerly content to get their daily bread, and a little more, and to drift with whatever current might be strongest. Thinking, real thinking, leads to convictions; and convictions, where there is conscience, lead to a sense of responsibility, and a sense of responsibility makes men independent and brave. Present tendencies are hopeful in the political world. They promise gradual, but deep and sound, reformation. Such reformation is a thousand times better than revolution. This is the time for all good citizens to give momentum to the movements which are clearly for permanent betterment.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¼ inches long by 8 inches wide. The price of this edition is $7.00 a copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in which all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, before published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this new edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"The Sons of God," a lecture by Col. William R. Fell, C.S., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Contemporain* magazine is now printed with the English and French versions on opposite pages.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for the delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

From the Clerk of The Mother Church

CHURCH TENETS.—The Tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership and extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 864 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 32 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.13.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season of The Mother Church in Boston, June, 1898. A clear and concise refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

The United States department of agriculture is at present superintending another bird census. The first comprehensive census of this kind was taken last year, and with good results. Ultimately it is expected that the entire country can be included in this annual count of the bird population, and when this has come about, it will be possible for the government to begin the collection of statistics that will possess permanent value. The census of 1914 was the most nearly complete in the northeastern states. South of the Potomac river and west of the Alleghanies it was not all that could have been desired. It is the belief of departmental officials that within a decade—perhaps sooner than that—the annual bird census will fully cover the entire country. When that is done, the department's experts will be in a position to know what additional protection is needed and for what particular kinds of birds.

The census of 1914 disclosed the interesting fact that there are sixty pairs of English sparrows to the square mile, on the average, throughout the United States, or seven to every one hundred native birds; and that seemingly the bird found most abundantly in the country is the robin, with the English sparrow a close second. In the northeastern states, where the count was most thorough, there were on an average six pairs of robins to each farm of fifty-eight acres. Of English sparrows there were five pairs to a farm. No other bird is anywhere near so numerous as either of these, but some are numerous enough to make their total run well into the millions. Taking the one hundred robins as a unit, other desirable birds were noted in the following proportions: catbirds, 49; house wrens, 28; brown thrashers, 37; kingbirds, 27; bluebirds, 26. The statistics regarding bluebirds are particularly gratifying, say departmental authorities. Only a few years ago nearly the total bluebird population of eastern United States was destroyed by a severe winter, but there are now, it is said, several million bluebirds in that locality.

Upon the recommendation of the secretary of the interior and of the chairman of the Alaskan engineering commission, the President of the United States, in accordance with the Alaskan railway act, has signed an order establishing an extensive timber reserve, approximately two hundred miles in length and from five to ten miles in width, in that territory, to be known as "Alaskan timber reserve No. 1." The reserved timber is on the public lands north of the Chugach national forest, extending five miles in width along the northern shores of Knik Arm and Cook inlet, between the mouth of the Knik river on the east and the mouth of the Susitna river on the west, thence north five miles on each side of the Susitna river from its mouth on the south to the mouth of the Ventna river on the north. The reserve also embraces the timber on areas five miles in width on each side of the right of way of the main line of the proposed railroad through the Susitna valley to Broad pass, and similar areas on each side of the right of way of the proposed branch line extending into the Matanuska coal fields.

The purpose of the reservation is to prevent the timber needed for the construction of the government railroad and its branches in Alaska from falling into the possession of individuals or corporations, in which event it would be necessary for the government to purchase timber which it once owned.

Important new halibut grounds have been located by the bureau of fisheries. They are twenty-seven to thirty-five miles due west of North Head, Wash., at the mouth of the Columbia river. These grounds, whose area and exact location are still unknown, probably constitute, the authorities believe, a veritable bank, lying immediately between the two areas which the bureau of fisheries surveyed with the steamer Albatross last year. This new bank is reported to be from ninety to ninety-five fathoms deep and beyond the one hundred-fathom line given on the charts. Arrangements will be made to have the Albatross survey this new bank and determine its exact limits and fishery possibilities. It is reported that a small fishing vessel out of Puget sound caught eighteen thousand pounds of halibut on these grounds in one day, the largest day's take the vessel ever had made. During the three weeks ending June 2, more than two hundred thousand pounds of halibut were brought in from these newly discovered grounds.

The scenic preserve centering about Long's peak, passed officially under the control of the United States government as a national park on July 1. The park is in a way two parks in one. The national park itself extends over the Continental divide like a great saddle. It is approximately twenty-six miles long and eighteen miles wide, and falls evenly in the Atlantic and Pacific watersheds. Consequently, most of its area is high and rugged. In the park proper there has been a good trail up Long's peak, which has been used for years by mountain climbers. There are a few other trails on both sides of the divide. Efforts are being made to have the roads and trails developed systematically, and with proper consideration for fine prospects. The region is one of great natural beauty.

The state of Yucatan, of which Progreso is the only port, has reaped great wealth in the past from growing henequen, or sisal. The development of the henequen industry in Yucatan was started in 1850. This section was for centuries considered worthless by the Spaniards. The profits of growing henequen are said to be enormous. The abundance of labor in time of peace made it possible for the planters to reap profits of from three hundred to four hundred per cent on their investments. Exports of henequen from Progreso amounted in five years to 8,856,408 bales. The United States in 1914 bought henequen to the value of $2,480. Most of it was for the use of the twine factories.

In just one year of rehabilitation since the destructive fire, there have been completed or in process of erection in Salem, Mass., new buildings to the total value of six million five hundred thousand dollars, or one million one hundred thousand dollars more in value than the structures they replace. Permits have been issued during the past twelve months for three hundred and four buildings, of which three hundred and seventeen are located in the district where the eighteen hundred old structures are being replaced by the new. To replace the eighteen five hundred apartments, there are now built or still under construction fourteen hundred apartments, some eight hundred and fifty of which are actually occupied by families today.

Through the department of commerce comes the announcement that the last session of the Provincial Legislature of Nova Scotia passed a law for town planning which is generally regarded throughout Canada as being a very advanced piece of legislation. The provincial commissioner of public works is to enforce the provisions of the law, assisted by local boards to be appointed in every city and town. In three years from the time of their appointment, these local boards are to prepare suitable by-laws governing town planning. The mandatory provisions of the law cover streets, thoroughfares, building lines, building restrictions, etc.

The impressions and experiences gained on a thirty-day tour of the national forests by Secretary of Agriculture Houston are described in a letter which, on his return to Washington, he sent to the chief forester, expressing his approval of the administrative work and methods of the forest service. Secretary Houston visited typical forests in each of the six great lumber districts of the West, penetrating into the forests on logging locomotives, automobiles, horseback and at times on foot, and getting into personal touch not only with the rangers and supervisors but with homesteaders, cattlemen, lumberjacks and others among whom the forest officers do their work.

Dallas, Texas, is to be the junction of a split route now being laid out for cross-country touring and known as the "Ocean-to-Ocean Dixie Overland highway. One prong of the route will lead directly west to Fort Worth and from there to El Paso and Los Angeles; the other will go south via Waxahachie, Waco, Austin and San Antonio, and join the northern route at Pecos. The termini of the routes are Savannah, Ga., and Los Angeles, Cal.

The government of Chile has compiled figures showing the foreign trade of this country in 1914. Of the total international commerce, amounting to five hundred and seventy-two million pesos, two hundred and seventy-two million pesos were for imports and three hundred million for exports. In comparison with 1913, these figures show a decrease of one hundred and fifty-two million pesos in the foreign trade of Chile.

The Ecuadorean fibre known as [illegible] is expected to become a rival to Mexican henequen in the manufacture of twine and rope. The plant is a species of cactus.

The National Retail Hardware Association in convention at St. Paul, Minn., has voted to hold the convention in 1916 at Boston.

"What I say unto you, I say unto all, WATCH" Jesus

ol. XVII July 10, 1915 No. 43

[Editorial in *The Christian Science Monitor*]

The Memorial to Mrs. Eddy

A famous writer, speaking of a famous Fleming, made e of an expression which has become almost a proverb the English language. It was of Philip van Artevelde, the rchant prince of Ghent, that Sir Henry Taylor wrote, The world knows nothing of its greatest men." For many ars the world knew nothing of Mrs. Eddy, for other years knew practically nothing of her that was true. Only little little has her real worth and the incalculable significance her work begun to be appreciated. As the world goes, this not strange. The workers for the welfare of humanity are rdly known to the public in comparison with its conquerors d statesmen. Some day the "village Hampdens" and the nute inglorious Miltons" will take their place with the exanders and the Richelieus in the world's esteem, but that y is not yet. After all, Hampden in his own time was a ain English squire, and Milton an obscure Latin secretary o wrote a book, which after-centuries have prized as the eatest poem in the English language, but which sold for e pounds in his own time. The great example of all amples, however, is the Founder of the Christian religion. e of the greatest living masters in literature has given pression to this in an almost faultless way. He has scribed a Roman patrician who had visited Pilate in Jerulem, meeting the procurator of Judæa years later, borne a litter by his slaves up a Roman hillside. The two men op to talk over the old days in Jerusalem. They talk of Pilate's troubles, and of other insignificant matters. As they e parting, the guest suddenly asks what became of Jesus Nazareth. The procurator pauses, passing his hand over s forehead, and replies, after a moment's puzzled hesitation, Jesus of Nazareth? I do not recall the man."

No human being ever understood the mission of Jesus of azareth more clearly than Mrs. Eddy. She saw the child the Nazareth carpenter's house growing up to be the man ho was to speak to the fishermen of Galilee and the shepherds Judæa in the words of a rapidly vanishing language. The hilosophers of Greece and Rome were pacing their groveed gardens, accompanied by disciples eager to take down eir words in the great classical languages of the day, in ar lest a syllable should perish. The disciples of Jesus ere a tax gatherer and a handful of fishermen, men incapable f playing the part which Plato played to Socrates and ucian or Celsus to Epictetus. His academia was a Syrian illside, his rostrum the bow of a fishing-boat, yet, as Mrs. Eddy has said in a wonderful passage on page 163 of Miscellaneous Writings," "his words were articulated in he language of a declining race, and committed to the provience of God. In no one thing seemed he less human and ore divine than in his unfaltering faith in the immortality f truth. Referring to this, he said, 'Heaven and earth shall ass away, but my words shall not pass away!'"

It was because Mrs. Eddy knew, and knew why, truth ould not be destroyed, that she gained the courage for the ork of reviving in the nineteenth century the teaching preached in Palestine at the beginning of the Christian era, and carried by that handful of fishermen and their friends throughout the civilized world of their day. It was because Mrs. Eddy realized what the beloved disciple meant by absolute truth, because she had learned what Peter meant by a scientific knowledge of God, that she was able to make practical, in the nineteenth and twentieth centuries, something not merely of the preaching, but of the practice, which had filled Judæa and Attica with wonder, when Peter came to Joppa, and Paul was preaching on Mars Hill. Mrs. Eddy had seen that because truth is truth, it is the same yesterday, today, and tomorrow. She had realized that the demand of the Founder of Christianity had been not only for words but for deeds, not merely for precept but for practice. In such circumstances she understood that a return to primitive healing entailed not only the preaching but the practice of Paul and Peter. She realized that that preaching would be with Paul's power when it was with works following, and that that healing was only regarded as miraculous because men had ceased to understand the power of a scientific understanding of Truth.

This was Mrs. Eddy's great discovery. This knowledge it was which she gave to mankind. It made Christianity the vital, practical factor it had been to the men of the first century. Those who grasped her meaning realized that they too had dominion as did the men who traversed the Mediterranean shores in the first century, explaining the Science of Christianity to astonished listeners and demonstrating this Science to a sin laden and sickness stricken world. The very fact that she taught something which was contrary to men's sensuous inclinations and to their orthodox beliefs, constituted a passport to the cynical disbelief and brutal intolerance of the world. Just as Greece could find no better reward for the adamantine truth of Socrates in the fifth century before Christ than the hemlock cup, just as Italy could find no better reward for the discoveries of Bruno in the sixteenth century than the stake, just as orthodoxy could find no better resting-place for Tyndale in the sixteenth century than the dungeon, so the same passions, stirred to violence in the nineteenth century, found expression in the attempt to silence Mrs. Eddy by condemnation.

It is, of course, impossible for humanity to pay its debt to those who have acted as pioneers along the road leading to an understanding of divine Principle, except by the effort to follow in their steps. Still humanity, not altogether unwisely, loves to record its appreciation of these pioneers as it records its appreciation of men who have gained distinction in any walk of life. It is impossible to repay the debt which the world owes Socrates for his fearless advocacy of truth, but the figure of Socrates has been carved again and again. It is impossible for the English speaking races to repay the debt they owe to Tyndale, perhaps more than any other man, for giving them the English Bible and for his uncompromising advocacy of truth, but the statue of Tyndale stands on the banks of the Thames. It is impossible for humanity to repay the debt it owes to Bruno for his unwavering assertion of truth and for his unquailing fight

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

for the right of humanity to knowledge, but the statue of Bruno stands where the stake at which he was burned once stood in Rome. It is absolutely impossible that the world can repay Mrs. Eddy for the life of toil, rewarded so largely by obloquy and persecution, which she faced with such unswerving courage, such indomitable patience, and such invincible love, as she guided the Christian Science movement to the place it holds today. Christian Scientists, least of all people, believe any monument is necessary to record her efforts or is capable of increasing her influence. They have felt, however, that there is a fitness which demands that the spot where her human form was laid, should be preserved in a dignified and lasting manner. The monument they are placing in Mount Auburn will mark their appreciation of this necessity, and of this alone.

Over the door of the northern transept of St. Paul's cathedral there is cut in the stone that famous epitaph of Sir Christopher Wren, "*Lector, si monumentum requiris, circumspice*" (Reader, if his monument you desire, look around). The monument of the great architect who rebuilt London from its ashes, is the cathedral which stands at the top of Ludgate Hill, and the visitor standing beneath the famous dome looks around him and views this monument. It might be said of Mrs. Eddy, by the man under the vault of heaven, If her monument you require, look around. Her real monument is the men and women of every country and of every race lifted out of sin, rescued from disease, saved from despair. It is not in one spot alone that this monument is raised, it is wherever the power of Truth, as understood through Christian Science, is powerful to the throwing down of the strongholds of evil. Wherever a man stands, with the dome of heaven above him, he may say of Mrs. Eddy, "*Si monumentum requiris, circumspice.*"

Study of Christian Science

GRAY MONTGOMERY

ALL are as yet pupils in the study of Christian Science, having acquired a smaller or greater degree of understanding in proportion as they have put its teachings into practice by demonstrating the power of Spirit, as Jesus did, in healing sickness and sin. The understanding of Christian Science usually unfolds to the student gradually, as the carnal mentality, termed mortal mind, is put off and the Christ-mind is gained.

The statements of absolute truth may at first appear difficult to understand, but their spiritual discernment is gained as the truth is steadfastly held in thought and received in childlike trust, without question or doubt. Then, through this spiritual discernment the more simple problems will be solved. With their demonstration will come a more complete spiritual understanding of the deeper truths, and as our text-book, "Science and Health with Key to the Scriptures," is more thoroughly studied, the larger problems will become less perplexing and will in turn be solved through higher understanding. Each victory gained will bring the courage of conviction and more absolute faith in God's healing and saving power.

Through the study of Christian Science, the Bible ceases to be to the student merely a literal statement. Instead, the thoughts and lessons contained therein become living messages from divine Love, uplifting and purifying human thought and aiding in the destruction of error. The study of Christian Science brings out the higher metaphysical meaning of the Scriptures, and thus aids the student in his effort to demonstrate control over material conditions through the power of God, divine Mind; and as he inclines his thought toward G and yearns for holiness, he finds his whole mentality bec purer. The beautiful, unchanging, and spiritual will su his entire thought and become an actuality in his life; a the solution of all problems presented in daily expe will become clearer and easier as he gains the right attitude.

The Bible and the Christian Science text-book ma plain that the right mental attitude is attained only b ing "first the kingdom of God, and his righteousness page 4 of Science and Health, Mrs. Eddy writes, "The to be better and holier, expressed in daily watchfulne striving to assimilate more of the divine character, w and fashion us anew, until we awake in His likenes seek righteousness is the only scientific way of demo God's divine power to heal and save. It removes fear diseased thought from the body and turns it to God which is the foundation of all disease, and which may a myriad different names, is banished by the realiz the protecting and preserving government of divi The body then responds to the corrected condition of and health is made manifest in place of disease.

Through the study of Christian Science the sin learn that all real happiness is from God, and he w to find any satisfaction in sin, for he will learn that the slave of sin, but is the master of his destiny by r his understanding that man as God's idea reflects the of God to do good, and good only. This awakening ignorance will also free him from the fear of sin and stop sinning. The thief will learn that real substance itual, therefore he can gain nothing by stealing; and drunkard will lose all pleasure in his cups, when he learn joy is spiritual and matter is powerless to give pleasure pain. On page 202 of Science and Health we read: "If would bring to bear upon the study of the Science of M half the faith they bestow upon the so-called pleasures of material sense, they would not go on from to worse, until disciplined by the prison and the scaffold the whole human family would be redeemed through the of Christ,—through the perception and acceptance of T

Betrothed in Faithfulness

FLORENCE E. B. DONALDSON

IT has often been maintained that the very general ment of symbol and metaphor throughout the book Bible has made it difficult for western thought to regar teaching as practical and adequate to the daily needs of ern life. Yet there is something in the poetic imagery Scriptures which rivets attention and helps to elucidate meaning of the text in a very striking way. The w attention was especially drawn to this fact when the fol verse was read during a Christian Science service: "I even betroth thee unto me in faithfulness: and thou know the Lord."

The use of the term betroth implies a covenant, or tract, for that which is to be fulfilled at a future ti condition binding upon both parties. It holds up to the necessity for working out our own salvation, and it w be difficult to convey so full a meaning in any other w Faithfulness demands continuity of action, prolonged and proof. The knowledge of God is the sure pro unswerving obedience to our highest understanding of T There must be constant readiness to fulfil the calls made our faith and loyalty in the service of God. It is indeed, that the crown of faithfulness has been attai

Digitized by Google

his sphere of action. To Moses was given the tribute of igh achievement, since of him it is recounted that he was aithful "as a servant, for a testimony of those things which ere to be spoken after." Of Christ Jesus it is written that e "was faithful to him that appointed him," and "as a son ver his own house;" and in the first chapter of the Revelation f St. John the apostle speaks of Christ Jesus as "the aithful witness."

Christian Science is gaining adherents in all parts of the orld, among all conditions and classes, just because it is npressing them as a practical religion, a demonstrable truth. : is indeed a call to strenuous overcoming, to an admittedly renuous warfare with material belief, dogma, and sense-stimony. All these must be combated and conquered, as aught in "Science and Health with Key to the Scriptures," arough the demonstration of divine law, and the individual nsciousness is the place for the contest. Mrs. Eddy says: Love must triumph over hate. Truth and Life must seal se victory over error and death, before the thorns can be id aside for a crown, the benediction follow, 'Well done, ood and faithful servant,' and the supremacy of Spirit be monstrated." "Let us be faithful in pointing the way arough Christ, as we understand it, but let us also be careful ways to 'judge righteous judgment,' and never to condemn ashly" (Science and Health, pp. 43, 444).

Faithfulness is an attribute of God, and is reflected by His age and likeness. We know that the promises of God are ire; that He "with whom is no variableness, neither shadow turning," can never do less than fulfil the law which is ove, the word which is Truth. As Christian Scientists we on learn the essential nature of this quality of Mind. It is manded of us in all the phases of the work we have to do. we are not faithful in the little things of daily life, neither all we be in the greater. If we do not at least try to stroy the lesser errors presented to our thought,—that is, far as we are able to discern their false character,—we all not be fitted to cope with the greater ones. But if we rnestly and honestly are striving to overcome, and to per-rm faithfully that which seems given to us to do, we shall nd that we are growing in understanding and in the right pprehension of what the faithfulness of God toward His ildren really means.

Such an attainment will bring with it a fuller assurance f faith, a trust and confidence in the all-protecting power of ivine Love which will make the greater tasks, when they ome, seem easier than we could ever have hoped to find them. t is not by remaining in the darkness and by submitting to vil that wrong is righted, but by faithfully keeping guard nd watching for the light, by turning continually to good, eclaring its all-power, that the false claims of mortal mind re fairly met and overcome.

Another gain that is ours in the faithful keeping watch ver our thought, and the consequent unfolding of God's aithfulness, is the ability to leave results to the Almighty. The calm trust in and certainty of the word declared, forbid loubt or anxiety, or any sense of our inadequacy to the task, or we know of a truth that He will bring it to pass. God lone gives the increase, and the knowledge of having faith-ully done our best to declare Him aright is enough to bring he conviction that, as all results lie with God alone, there is o possible failure, no returning void, whatever sense-testi-nony may claim to affirm. When Jesus of Nazareth mourned is seeming failure to attract to Love's protecting care the wilful inhabitants of Jerusalem, discouragement claimed tem-porary admittance; but when spiritual insight kept truth clearly in view, he declared, in the face of the most formidable opposition, that no jot or tittle of the truth he taught, or the words he uttered as taught of the Father, could ever pass away.

In considering for a moment the continuity of effort which faithfulness demands, we find how impossible it is that there should be anything spasmodic or emotional about Christian Science. It is quiet, purposeful, steady work that counts. Faithful service is not the effort of a passing moment, but the willing and desired life-work of the one who serves. In human affairs a valued and faithful retainer may at times manifest undesirable characteristics of self-importance, but humility and self-abnegation must ever accompany the followers of Christ Jesus. It is this alone that brings the joy and gladness of the certainty of the sure reward, the "crown of righteousness."

It is equally clear that a right understanding of the service to be rendered is of the highest importance. The fact that we learn this in Christian Science is a reason for deep gratitude with those who have been led to study it. That this study must be continuous is self-evident, since the subject is limitless. Although the way out of material belief may seem long and arduous, we know "he is faithful that promised," and we too shall be betrothed unto the Lord in faithfulness.

Taking Up Arms

ELIZABETH C. WICKERSHAM

In reading the Bible, the writer has often been impressed with the statement that the prophets and others, looking to their heavenly Father for guidance in their extremity, in many instances "heard the voice of the Lord." The constant longing to have this same experience, and the knowledge that God is "the same yesterday, and today, and forever;" that He is "no respecter of persons," blossomed into fruition one day as she read the following words from our text-book (p. 456): "Science and Health . . . is the voice of Truth to this age." Then there came pouring into the awakened thought the innumerable times when, on turning to God for light and help, some familiar passage from this "Key to the Scriptures" had come with such force as to cause her to turn involuntarily to see who had spoken it.

Hearing the voice of God in this way brought great comfort in a recent experience. After listening for a while to discussions of the great war in Europe, and of the hosts of men who were taking up arms against one another, the writer found that a sense of the reality and awfulness of the situation was defining her thought, so she retired to her room to gain a more scientific sense and thereby keep her peace of mind and do her duty as a Christian Scientist. While in this attitude of expectancy, there came to her consciousness this passage from page 29 of the text-book: "Christians must take up arms against error at home and abroad."

To one unfamiliar with the teachings of Christian Science, these words would seem to imply the necessity of taking up arms as they are now being taken up in the conflict across the sea; but not so, as understood in Christian Science. St. Paul says, "The weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds," and this gives us instruction as to what the weapons must be with which we are to overcome "error at home and abroad." Further light is thrown on the subject by the apostle Paul's counsel to "take the helmet of salvation, and the sword of the Spirit, which is the word of God." This word of God, which is our true weapon, he declares to be "quick, and powerful, and sharper than any two-edged sword," while

Digitized by Google

he adds that this sword of Spirit is "a discerner of the thoughts and intents of the heart."

In Revelation we learn that out of the mouth of the Christ-idea goeth a sharp sword, that with it he might smite the nations. We know that back of all words are thoughts, and this brings us to the fundamental teaching of Christian Science, that Mind is the only cause and creator. Acknowledging only the one Mind and spiritual consciousness, we realize that this Mind, being infinite, must be expressed in an infinity of ideas. We are told that God is omnipresent Mind, and in the prophecy of Daniel we read: "Thousand thousands ministered unto him, and ten thousand times ten thousand stood before him." This undoubtedly refers to the divine ideas, and infinite space being thus filled, there can be no space or room outside of this infinity. These spiritual ideas have no capacity underived from their cause or creator, and must express immortal Life, spiritual substance, eternal Truth, and boundless Love; therefore they have no element of destruction or evil to impart, and are incapable of enmity or strife.

There can be no conflict between God's ideas. Ignorance of man's spiritual origin is the parent of all discord. Not recognizing the nature of man as a son of God, men are drawn into mortal conflict. If they had a correct understanding of man's origin as purely spiritual, they would realize that he is endowed only with the attributes of the divine nature,—mercy, justice, peace, loving-kindness, and immortality, and this recognition of the brotherhood of man would end all strife. In Science and Health (p. 209) Mrs. Eddy says, "Mind, supreme over all its formations and governing them all, is the central sun of its own system of ideas." The supremacy of divine Mind being established, the ideas of God, reflecting the spiritual attributes of this Mind, are incapable of any struggle for supremacy, but forever express the harmonious government established in the universe of omnipresent and omnipotent Love.

❖

A Puzzle Picture

MILDRED CORNING HAMILTON

In one of the Chicago evening papers there appears quite frequently what is called a puzzle picture. In a maze of intricate lines, oftentimes depicting a tree and shrubs, there is concealed somewhere the face of a man or a woman, or perhaps an entire figure. Only by holding the picture at a certain angle and searching diligently can the object be discerned among the twisted lines of the drawing.

Looking at one of these pictures, I was led to think how much they are like many of our own problems. In seeing our fellow men about us, how often the real man seems marred if not hidden by a myriad of lines. Selfishness, pride, hypocrisy, rudeness, dishonesty, injustice, self-righteousness, self-pity,—all these tend to obscure the manifestation of the real man, the true man, made in God's image and likeness; and it is the work of the genuine Christian Scientist to look beyond these obscuring phases of materiality, just as we look beyond the obscuring lines in the puzzle picture, and seek for the true concept. We do not need to examine each false feature to see what it represents; it is enough to know that it is no part of the real man, and as such is entitled to no place in our consciousness.

On page 476 of Science and Health, Mrs. Eddy says that "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals." It was with this in mind that I neared home one day, a few years ago, and saw some one sweeping the front steps. This man was taking the place of the regular janitor for a short time and according to material sense was shiftless and [illegible]. A courteous request a few days before, that he attend to some work which he had neglected for several days, had brought out an obstinate refusal. As I approached the building, however, I held steadfastly to the perfect concept of man, declaring that I would see this man only as God sees His idea, expressing courtesy, justice, and kindness, and governed by Principle. In other words, I was trying to look through the maze of materiality to behold the real man. As I came in at the walk the man looked up from his work, [illegible] touched his hat, and stepping forward opened the door for me to enter the building.

This was indeed a beautiful proof that behind every mask of mortal personality is the nobler self, and if we but diligently look for him, we will not only work out our own problems, but will aid humanity as well in the destruction of "every high thing that exalteth itself against the knowledge of God," of good. Lowell caught a glimpse of this truth when he said,—

> Be noble! and the nobleness that lies
> In other men, sleeping but never dead,
> Will rise in majesty to meet thine own.

❖

Distribution

ALICE CROSS

The writer enjoys and appreciates all the Christian Science literature so much that she longs to share her pleasure with others, and so she often leaves a copy of the *Monitor* on the street-car seat when she has finished reading it. It has been a great joy and satisfaction to see how eagerly many different classes of people take up the paper and read it. The conductor at the end of the line will nearly always tuck it away in his pocket if no one else has done so.

Not long ago a small boy who was sitting across the aisle from me almost fell off the seat in his eagerness to see pictures in a copy I was reading, and I should have handed the paper to him if a man sitting next to me had not been looking longingly at it. When I put the paper down between us, however, the man hesitated to take it, so I moved to the opposite side of the car, and before I was aware he had taken it up and was looking it over; then he carefully tucked it away in his market-basket. The *Monitor* has come to be a splendid channel through which to distribute the truth, and each one should appreciate the privilege of passing along his own copy.

One morning, while on the car, I was reading the Christian Science article in the *Monitor* which had a title something like this: "Solving Life's Problems." I noticed that the woman next to me moved up closer, and I was conscious that she was looking over my shoulder. Finally she said, "That's a pretty big subject for a newspaper to deal with." I answered, "Yes, and this does it excellently." She was much interested when I explained the subject from the Christian Science standpoint and to the best of my ability answered her many questions. She knew nothing about Christian Science, but seemed delighted to hear about it. When we parted, she assured me she was going home to get out her Bible and read it.

I have often glanced up from reading this paper to see several men looking at it with mingled interest and surprise, and have thought that perhaps just to see one reading it in the street-car would lead them to investigate a point of view which found expression in such a splendid newspaper. With gratitude and thanksgiving let us share our [illegible] with others.

[Editorial in *Journal*, Belgrade, Mont.]

Judge Law of Gallatin county, by sustaining the demurrs to the complaints against certain people in Bozeman ho were accused of violating the law in practising Christian ience, has in effect held that the medical practice act of ontana does not apply to the practitioners of that cult. dge Law's decision is, of course, not to be construed as any degree expressive of his personal views regarding the iency of the Science treatment. It is to be taken merely his judgment of the law as applied to the facts of the rticular case under consideration. Nevertheless, sensible ople everywhere will applaud the ruling on general prinples. If the mere death of the patient as a result of a rticular kind of treatment is to result in the prosecution d punishment of the person administering the treatment, ere are hundreds, nay, thousands of the doctors of the called "regular" schools who would be in the penitentiaries the country.

If one who is sick in mind or body, or both, has faith the efficacy of Christian Science and no faith in the thods of the "regulars," what reason is there in sense or stice why such person should be compelled to employ a egular" in whom he has no faith, or go without any healing lp whatever? This business of trying to give the allo-ths, and the homeopaths, and the osteopaths, and all the her "paths" of the so-called "regular" schools a monopoly law for the treatment of the sick, will never be popular th thinking people. There should be as much freedom in tters of healing as there is in matters of religion.

[Ezra W. Palmer in *The Grand Junction* (Col.) *News*]

The Rev. Dr. —— in a recent issue continues his attacks Christian Science. From his remarks he is evidently der the impression that ignorance of Christian Science a qualification to pass judgment on it, a misconcepon which does no harm to Christian Science but renders isstatements ridiculous to every person who has made e least investigation of this teaching. If this critic will udy Christian Science with an eye single to the truth, he ill find how far afield his present views are, and thus preude the necessity for them to be publicly corrected in the ress. Christian Science is too well known, has proved its orth in too many battles with sin, sickness, poverty, and her ills of humanity, to be brushed aside by the *ipse dixits* f a writer who is evidently laboring under the illusion that is bald statements will be accepted unconditionally.

The reverend critic starts his attack by attempting to make appear that the Christian Science lecturer was wrong in eclaring that "religion can heal sickness and destroy sin," o which the lecturer added that the "words of Jesus made plain," the contention of this writer being that religion ad nothing to do with the matter. Evidently he had in mind system of doctrines, forms, ceremonies, and creeds which e quite agree are totally inadequate to demonstrate the ealing power of God as Jesus and his apostles did, and as ll believers who understand the life, works, and words of Jesus can do today. His concept is foreign to Christian Science, which teaches that religion is a vital, genuine fellowhip with God, which manifests itself in healing the sick, restoring the sinner, and bringing the kingdom of God to nen here and now. "Jesus established his church and mainained his mission on a spiritual foundation of Christ-healing. He taught his followers that his religion had a divine Principle, which would cast out error and heal both the sick and the sinning" (Science and Health, p. 136). It is this religion the Christian Science lecturer referred to when he added, "The words of Jesus made it plain" how religion can heal sickness and destroy sin.

The emptiness of the further claim of this critic will then be seen when he declared, "It is difficult to find any words in the Bible that warrant us in saying that religion heals sickness." Evidently this critic has overlooked the healing works accomplished by Jesus and recorded all through the four gospels. He has also overlooked the glorious works of the great apostles who healed the sick and raised the dead, and the wonderful story of the early Christians who carried the healing power of God throughout the length and breadth of the then civilized world. These healing works, proving by actual demonstration the might of God, caused the tremendous spread of early Christianity and gave it power to demolish the entrenched systems of pagan worship. Spiritual healing was lost three hundred years after the ascension, because Christians ceased to rely wholly on God. Pagan rites, dead formulas, and empty ceremonies took the place of spiritual unity with the Father, with the consequent degeneracy of Christianity and the evils and sufferings of the centuries that followed. How can this critic assume that the Bible gives no warrant for healing sickness by prayer when we have these words of Jesus: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

Assumption is made by this critic that the Bible teaches the wrongness of sin but not of sickness. Repeatedly in the Old Testament the prophets warned of sickness and pestilence as the result of departing from the worship of the only true God. Jesus regarded sin and sickness as wrong conditions, obstructive of spiritual vision, and impartially healed them both. That he regarded them as oftentimes correlative and synonymous, is clearly evident from his statements in healing the man sick of the palsy: "Whether is it easier to say to the sick of the palsy, Thy sins be forgiven thee; or to say, Arise, and take up thy bed, and walk? But that ye may know that the Son of man hath power on earth to forgive sins, (he saith to the sick of the palsy,) I say unto thee, Arise, and take up thy bed, and go thy way into thine house." Christian Science does not teach that all sick people have consciously sinned. Sick people are frequently the victims of mortal, material health laws, from the penalties of which they could escape if they knew and would rely upon the abundant power of God, ever available for their relief. These so-called laws of health are contrary to God's government, and are annulled and destroyed when the divine mode is understood.

The attempt is next made by this reverend gentleman to convey the impression that Christian Science is available for the intellectual and scholarly but not for those less fortunate in educational advantages. How the critic arrived at this amazing conclusion is difficult to see. Certainly it is very far from the truth. Christian Science is the Science of Christianity. It is therefore open to every man, woman, and child in the world who sincerely desires and seeks the healing and saving power Jesus gave to the world. To grasp spiritual verities, an open, candid, and honest heart is the first essential. This the little children had whom Jesus loved. On the other hand, when thought is bound by false theology, dogmas, and traditions, little progress is made. These are they whose "ears are dull of hearing, and their eyes they have closed." Educated human beliefs and opinions may be a positive bar to spiritual insight; they darken and enslave the mind, refusing assent to everything beyond their self-imposed limits. Christian Science can be understood and proved by every sincere

Digitized by Google

seeker of truth. Its effect is to purify, inspire, and free the thought, and to make the saving grace of God free to every man, no matter how ignorant he may previously have been.

Christian Science teaches that knowledge of divine Truth is equal to every human need, but this does not mean that the mere knowing of a wrong condition is sufficient to cure it; knowledge of evil never overcomes evil. "Ye shall know the truth, and the truth shall make you free," Jesus said, and this is the teaching of Christian Science. The critic's concept of Christian Science teaching, that "if I break my leg, so long as I locate the fracture, and get a clear idea of the fracture, I am right," is wholly wrong, and is a travesty both on Christian Science and the Bible.

❖

[Mrs. Elizabeth T. Bell in *The Charleston* (S. C.) *Review*]

The sermon dealing with Christian Science, published in a recent issue, is filled with erroneous statements about the teaching and practice of this religion. The entire structure of Christian Science is built on the knowledge of God, revealed in the Bible as omnipresent Spirit. God is infinite; therefore He cannot be limited to a locality. Christian Science does not teach that He is "in the soil, the chair, the table." The belief that Spirit is in matter, or is associated with it, is pantheism; and this belief of a dual existence is the basis of all false religious teaching and all suffering. As spiritual things must be "spiritually discerned," it is only as thought is purified of the belief in duality that clear thinking along religious lines can be accomplished.

In the spiritual creation, as recorded in the first chapter of Genesis, there is no sin or suffering; these falsities are the logical result of the belief in a material existence, starting with Adam. The man made in God's image and likeness must of necessity be spiritual and perfect, hence the standpoint of Christian Science,—"perfect God and perfect man" (Science and Health, p. 259). Christian Science proceeds from this standpoint as Jesus did,—"I and my Father are one;" and through this conscious unity it destroys whatever is imperfect or unlike God,—breaking down "the middle wall of partition," the belief in fleshly reality. "Heaven is not a locality, but a divine state of Mind in which all the manifestations of Mind are harmonious and immortal, because sin is not there and man is found having no righteousness of his own, but in possession of 'the mind of the Lord,' as the Scripture says" (Science and Health, p. 291).

Human will, or "the carnal mind," being "enmity against God," Christian Science teaches the necessity for complete self-surrender, that God's infinite good will may be revealed in us. The text-book of Christian Science, "Science and Health with Key to the Scriptures," interprets the Bible from a purely spiritual view-point. The accusation that it "sticks to the letter," is directly contrary to the fact. That which will "pass away" is the false concept of God and His creation; of a sinning, suffering, dying world, giving place to a realization through spiritual enlightenment of God's perfect world, with which He was satisfied.

As to "readers and practitioners," to be elevated in Christian Science is to be spiritually enlightened (not placed in office), and spiritual culture brings a demonstrable understanding of the Science of Life based upon honest conviction. It is not "being lifted from the ordinary walks of life to places of distinction in Christianity," but from spiritual ignorance and blind belief to an apprehension of Him whom to know, to understand, is to have eternal life. Thus equipped, Christian Scientists are in the divine order when "reading" the Bible, and "practising" its vital teachings.

The Christian Science Publishing Society publishes and sells the literature at moderate prices, perfectly satisfactory to its purchasers. Beneficiaries healed of sin or of so-called incurable disease, find no fault with the outlay of a few dollars which has brought such rich return. The literature may also be borrowed from public libraries; and every church maintains a loan library, besides distributing liberally to those who desire it.

❖

[Julia Moschauer in *Brooklyn* (N. Y.) *Eagle*]

I respect the sincerity of Pastor ——. Like most of the leaders of Christian thought, he is inspired with his vision of the truth. But oh, for the man who will some day arise in this world of controversy, a man who will preach his revelation of truth so earnestly, so enthusiastically, that he will forget to criticize or misrepresent the creed of his neighbor who is serving Christ along a road he has never trod. Now, I am not a Christian Scientist; but I love fair play. In his two sermons, this critic has misrepresented Christian Science. I have read and reread Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I do not agree with it, but above all things, I must admit its chief merit, consistency. I disagree with its premises; but those who accept its premises must accept its conclusions.

I will take one statement—the principal one—of the critic's attack on Christian Science. These are the critic's own words: "Christian Science denies these facts, declaring that there is no death, and that whoever dies merely commits 'mortal error.' It is surely against Christian Science, but confirmatory of the Bible, that for more than six thousand years mankind have been dying. What answer can our Christian Science friends make to this?" Now I do not for one moment believe the clergyman is insincere, but turn to page 348 in Science and Health. Here are Mrs. Eddy's own words: "I have never supposed the world would immediately witness the full fruitage of Christian Science, or that sin, disease, and death would not be believed for an indefinite time; but this I do aver, that, as a result of teaching Christian Science, virtue and temperance have received an impulse, health has been restored, and longevity increased. If such are the present fruits, what will the harvest be, when this Science is more generally understood?" In another part of the book Mrs. Eddy says she believes death is the last thing to be overcome.

Let those who wish really to understand Christian Science read the six hundred pages in Science and Health, written by Mrs. Eddy, who after years of invalidism was made into a strong, energetic leader by the Science she expounds.

❖

[Henry A. Teasdel in *The Ogden* (Utah) *Standard*]

In the columns of your paper there appeared recently a synopsis of a sermon, the subject being, "Christian Science: Is It Reasonable?" Our critic seems to lose sight of the difference between the mortal concept of man and the real spiritual man created in God's image and likeness, described in the first chapter of Genesis, who was given dominion over all materiality. Is it any wonder that with such God-given power, God's children are able to destroy disease and sickness as well as sin, the procuring cause of most sickness?

Our friend, in referring to Mrs. Eddy, says: "She built the Bible, though she perverted its teachings. She laid stress on healing, and settled all doctrinal difficulties with the dictum that there is no evil; there is no sin, no disease." If this critic would spare the time to study Mrs. Eddy's book, "Science and Health with Key to the Scriptures," instead of relying on what he can learn by conversing with others, he would find that she did not pervert the teachings of the Bible, but by interpreting them spiritually, threw greater light on them, perhaps, than any one else has.

Digitized by Google

done. She laid stress on healing. Why not? When Jesus issued the instructions to his followers to preach the gospel, did he not also command them to heal the sick? Furthermore, this command was obeyed by Christians for three hundred years after Jesus went to the Father, until the spiritual healing power was seemingly lost through the same beliefs held by so many of our churches today, in materiality to the exclusion of spirituality. The statement that there is no evil, no sin, no death, refers to the real man, the spiritual man made in God's image. These errors are unreal in the sense that they are not eternal or God-created. Christian Science teaches that the God-created man is a spiritual being, and has power, through a correct understanding of God, to overcome the ills of the flesh, the discordant conditions of the material body.

Our friend refers to Christian Science as being born owing to certain existing conditions, whereas it is the Christ Science practised by Jesus nineteen hundred years ago, and discovered by Mrs. Eddy through the spiritual life which she led. This preacher says that the teachings of Christian Science appeal to a very intelligent class of people of considerable mental independence. That surely should be a strong point in its favor, and would suggest the wisdom of more thorough investigation. He further says that owing to the physical healing of its followers, a religious sentiment has been aroused such as has never been known before. It is not religious sentiment, but gratitude to God for His wonderful power among men. When John doubted the ministry of Christ Jesus nineteen hundred years ago, he sent two of his disciples to Jesus with the inquiry, "Art thou he that should come? or look we for another?" Our Master's answer was merely a reference to his works of preaching and healing. On another occasion, when referring to his followers, Jesus said, "By their fruits ye shall know them." Christian Scientists are willing to be judged by their fruits.

❖

[Harry I. Hunt in *Newark (N. J.) News*]

Misstatements concerning Christian Science appeared in the report of an evangelist's sermon published in your paper of recent date. In attacking Christian Scientists, as well as others whose religious convictions differ from his own, our critic has altogether overlooked the admonition of Jesus to the multitude in the temple courts, "Judge righteous judgment," or, in a more modern translation, "Judge justly."

Our brother is scarcely justified in his comparison of Christian Scientists with the prophets of Baal, "who prayed to their god to light the fire on their altar, but without result," to use the critic's words. To be exact, the analogy is clearly with the experience of the prophet Elijah, whose prayer was answered. Christian Scientists have been proving for forty odd years that Jesus meant what he said when he promised, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." They have been doing these works, and are doing them today, healing sickness and "all manner of disease," just as Jesus commanded his followers to do, and just as the early Christians did for nearly three centuries. As the prayer of Elijah was answered, to the great discomfiture of the prophets of Baal, so the prayers of Christian Scientists are answered, and people are healed of sickness and sin, of want and wretchedness, of bad habits and bad tempers.

All Christians accept the teaching of the Bible that God is good. All Christians believe in the omnipotence of God, and of course will agree with Christian Scientists that the goodness of God is therefore omnipotent good. Omnipotence means all-power, and shuts out the presence and possibility of any other power. Christian Science, therefore, is in accord with the Bible, and with the general belief in its assertion that good is the only power in God's universe; but it goes farther, and declares that this can be demonstrated in the proportion that one understands the spiritual import of the Bible teachings. Jesus knew that good was the only power, for he said, "There is none good but one, that is, God," and he proved that he knew it by overcoming every manifestation of evil or of a power opposed to God or good. Paul knew it, for he cautioned the Christians in Rome, "Be not overcome of evil, but overcome evil with good." Christian Scientists are striving to know this also, and are able to demonstrate it in proportion as they understand spiritual law.

Because, as our brother says, "reason can be overthrown," our critic implies that what he calls "religion of the mind" does not rest upon a firm basis. Mrs. Eddy, as every one should know, makes a very clear distinction between the human or fleshly mind, which St. Paul calls the "carnal mind," at enmity with God, and the divine Mind, the one intelligence, or God. On page 297 of Science and Health, Mrs. Eddy says: "Mortal testimony can be shaken. Until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine."

Thus we see that our critic's fling at believing "something that some one like Mrs. Eddy tells them," is quite undeserved, for the reason that Christian Scientists do not rely upon mere belief in anything to get them anywhere in a search for truth. The fact is, a Christian Scientist accepts the teachings of the Bible as interpreted by Mrs. Eddy's writings, not as a matter of belief, but as teachings to be understood and demonstrated. To the questioning disciples of John the Baptist, Jesus cited his works as proofs of the truth of what he taught; and James insisted upon the necessity of works as proofs of one's faith in Jesus' teachings, saying that "faith without works" is a dead or inactive faith. Hence the importance Christian Scientists place upon doing the works that Jesus commanded; namely, "to preach the kingdom of God, and to heal the sick," hence also their desire to be judged justly. "By their fruits ye shall know them," is the rule laid down by the Founder of Christianity, and it leads to "righteous judgment."

❖

[Robert Nall in *The Sun*, Sydney, Australia]

Your genial contributor, who in a recent issue wrote under the heading "Teuton Science," had no desire, I am sure, to do any injustice to Christian Science; but his reference to it, given on the alleged authority of another genial writer, may convey a wrong impression. If Christian Science was anything akin to the curious and absurd notions that some people seem to have about it, then it would justifiably lend itself to ridicule; but seeing that its sole mission is to benefit humanity physically, morally, and spiritually, it is of immense importance that it should be understood aright. When it is so understood, then it is at once seen that such statements as that of your contributor about the result of "thinking hard," come under the category of harmless witticism. It is not to think hard that the world needs, but to think rightly, and it is in this respect that Christian Science has revived, emphasized, and is everywhere proclaiming by its beneficent results the teachings of Christ Jesus. It has no relation, as you suggest, to what is called New Thought; but it is the old thought of the Bible, especially of the New Testament, applied in its pristine purity, and making its compassionate appeal to all who are in any kind of trouble.

Editorial

"Overcome evil with good"

For ages mankind has believed that evil is real and always impending, and in this belief is the foundation for the fears which so largely influence the thought and actions of humanity. If Mrs. Eddy had done nothing else but convince a large number of men and women that "evil is neither quality nor quantity: it is not intelligence, a person or a principle, a man or a woman, a place or a thing, and God never made it" (Messages to The Mother Church, p. 48), she would have earned a large place in the record of the world's benefactors. She has, however, done much more than this, for her teachings go to the root of all being, the true exposition of what God is and what His creation is.

In her revelation of Christian Science Mrs. Eddy has clearly set out the proposition that God is by His very nature incapable of creating that which is not good, and that because He is omnipotent, omniscient, and omnipresent, there is no other creator and consequently no reality to the belief that evil is an entity and capable of controlling or even indirectly influencing the affairs of mankind. This might, of course, be called the negative side of Christian Science, and to those who believe that positive statements of good are all that is required in stating this Science and in applying it to the help of those in distress, the discussion of evil and its unreality may seem a waste of time. It is, however, quite apparent from Mrs. Eddy's discussion of this subject in the Message above referred to, and throughout her writings, that those who would dismiss evil with a wave of the hand have not entirely mastered the teachings of the Discoverer and Founder of Christian Science.

It will not be found by an examination of these writings that Mrs. Eddy ignores in the slightest degree the false claims of evil, but it will be found that she has ever been alert in counseling her followers to "be watchful, sober, and vigilant" (Science and Health, p. 324) in denying and mastering these mistaken beliefs. To be consistent Christian Scientists, therefore, we must faithfully demonstrate the falseness of the claims of evil, and thus prove their nothingness. The Master admonished his followers to beware of evil and not to allow themselves to be overcome by it, and the apostle Paul also counseled that we "be not overcome of evil, but overcome evil with good."

It is for us, then, to make effective before the world our professions that God, good, is all. Our duty in this regard, as well as the remedy which must be applied to the false belief of evil, is made clear in Section 6 of Article VIII of the Church Manual. Again, at the close of page 442 of Science and Health, Mrs. Eddy writes, "Christian Scientists, be a law to yourselves that mental malpractice cannot harm you either when asleep or when awake." Men need to know that God is not the creator of evil, but that evil is "a lie, an illusion, therefore as unreal as a mirage that misleads the traveler on his way home;" also that it "cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness" (Messages to The Mother Church, p. 50).

The section of the Manual to which attention has been directed clearly indicates that the denial of evil is not simply an inferential process, but an active and aggressive handling of that which claims to be real and able to set aside the harmony of God's creation. Evil is unreal and powerless so long as we keep our thought clear of any doubt as to the omniscience and omnipotence of God, omnipresent good. In the maintenance of this truth is our defense against its insidious attacks; in their vigorous repulsion and overcoming lies our own safety. It was because Mrs. Eddy recognized this that she gave to her followers this wise counsel (The First Church of Christ, Scientist, and Miscellany, p. 23): "Keep your minds so filled with Truth and Love, that disease, and death cannot enter . . . Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort."

ARCHIBALD McLELLAN

❖

Advancing Steps

It is of the utmost importance to all students of Christian Science that they ponder the question of their own progress and watch carefully their thoughts, words, and deeds, in order to see whether they are advancing toward a fuller realization of the kingdom of God, with its perfect harmony. The sooner they unreservedly admit to themselves that nothing can hold them back, even in belief, except it be their own assent to the arguments of error, the better it will be for them. On page 513 of Science and Health, Mrs. Eddy writes: "Advancing spiritual steps in the teeming universe of God lead on to spiritual spheres and exalted beings." It is therefore well for us to ask ourselves very often whether we are taking the steps thus indicated, and laying hold upon the glorious things which mortal eye hath not seen or ear heard, but which we are assured "God hath prepared for them that love him."

Advancing steps of course imply that we are leaving behind us certain things, and always for the reason that we do not and are seeking better things. Even on the material plane the one who aspires to be rich and who is willing to put forth the needed effort, leaves behind him the state of poverty and limitation, and the same is true of the one who strives to attain knowledge. It should be noted here that the things left behind are negative, hence unreal from the Christian Science standpoint. It cannot be denied that poverty and ignorance are negative conditions, but they, unfortunately, seem to usurp the place of realities. Moreover, they continue to do so until some advancing steps are taken in the realm of Mind, where each possibility of good is made into an assured fact.

The Christian Scientist begins by getting away from the bondage of disease and fear, and the next step is to advance beyond the enslaving tendencies of material sense and sin. St. Paul puts it simply yet forcefully when he says that we were once "far off," but that we have been brought nigh to God and His Christ, which shows that we have taken some of the advancing steps demanded by divine Truth. The things left behind are various in their deceitful claim to place and power, yet never once do they possess reality, or are they ever any part of man's true being. Malice, hate, and envy at times may seem to obscure the vision of man as God's child, and self-righteousness, a base counterfeit of goodness, sometimes shuts out the light which is greatly needed for progress; but now, even as at the side of the Red sea, The bidding is, "Speak unto the children of Israel, that they go forward." On page 536 of Science and Health we are told that the sea typifies a mental state which is "tossed," and is "advancing and receding," but in sharp contrast with this state is presented that other in which divine understanding reigns, is *all*, and there is no consciousness." There can be no backward steps when true understanding of God is gained.

When the attraction of Spirit and spiritual things becomes the dominant influence in one's life, every step is a free-

Digitized by Google

one, and though the ascending path may at times appear steep and rugged, new strength comes with the effort put forth and new joy attends the wider outlook and the rarefied atmosphere. As we thus progress, we begin to understand the reason for the changes made in the text of Science and Health. In the earlier editions many of the statements were so forcible that certain readers were, like some of Jesus' earlier disciples, "offended" by them, so changes were made by the author of this book, as she explains on page 361, where she also says, "Spiritual ideas unfold as we advance." Never once, however, has the divine Principle of this teaching been departed from in the different revisions of our text-book, but its wider application to all human experience has been insisted upon. These revisions really mark the spiritual unfoldment of humanity, and the mental path is so clearly shown that we only need greater consecration in following it. The long night of materialism draws to a close, and the promise concerning each faithful one is, "I will give him the morning star."

ANNIE M. KNOTT.

Abundantly Enriched

THE teaching of Christian Science begets a new and most significant sense of the greatness of man, of the Christlikeness of his nature, the richness of his endowments, the relatively unlimited range of his appointed rule. It thus awakens a new thought of individual worth, and of what one may do and accomplish the moment when, having come to himself, he escapes from that weakening sense of good-for-nothingness which is not only entertained, but consented to and insisted upon as a fact, by very many Christian believers. To know a really respectable self that one can have a good opinion of and abiding confidence in, is manifestly vital to our realization of freedom for great undertakings.

The visitor to St. Mark's, Venice, is at once impressed with the quality of the building, the choiceness and rarity of its marbles, and the richness and profusion of its decorations. From base-line to dome its walls and columns and arches bring to the eye a wealth of delicate natural colorings to which nothing is comparable save the tinted fields of a sunset sky. It is perhaps the finest product of the constructive genius and the orientally luxuriant taste of a great temple building era; and when one remembers that it was the pride of a prosperous and artistic people, whose far-ruling thrift made it possible for them to gather votive offerings for its embellishment from many lands, he may find in it a symbol of that enriched and beautified character, that adorned excellence and efficiency, which was outlined by St. Paul when he said to the Corinthians, "God is able to make all grace abound toward you; that ye, always having all sufficiency in all things, may abound to every good work . . . being enriched in every thing."

That the Christian man, and especially the Christian Scientist of today, has received a wondrous inheritance of good through the heroic devotion of his predecessors, and that larger command of facts and of natural law which inquiry and invention have brought him, goes without saying; and the query, "What would my forbears, who with relatively meager means did so much, have accomplished with my possessions?" can but be a pertinent stimulus to every man of alert moral sense. Moreover, the recognition of man as the image and likeness of God, a perfect expression of the infinite wisdom, and having at his command all the resources of divine law, can but vastly enhance a man's concept of his individual privilege and possibility of achievement upon this plane of consciousness. It is just here that the teaching of Christian Science vitally relates itself to his spiritual growth and efficiency, to his calmness, courage, and that practical helpfulness to humanity which all men at their best will frankly acknowledge to be the only thing really worth while. It is surely ours "to hold the banner of Christianity aloft with unflinching faith in God" (Science and Health, p. 426).

When we remember that our exertions and performance are determined in large part by our sense of capacity, the significance of this awakening which Science brings to the measure of a man, begins to appear. Following it, one may experience a great sense of humiliation if not self-condemnation. The perception of what one might have been often precipitates at least a temporary tumble into the dumps. The wisely aspiring, however, will be led to let their "dead past bury its dead," and respond as did St. Paul to "the heavenly vision." Poverty, poor health, ill dispositions, all the actual and imagined disabilities of mortal sense, may seem arrayed against one, and so far as we concede their reality our hands are hopelessly tied; but when through Science one accepts man's glorious patrimony and estate, he thereby gains an entirely new basis of estimate as to his ability to be and do, and enters at once upon a nobler, more efficient manhood. This is one of the great inspirations of Christian Science; it evokes greatness by disclosing the splendors of the Christ-ideal.

JOHN B. WILLIS.

Among the Churches

Current Notes

BANGOR, MAINE.—During the ten months ending May 1, there have been distributed in this vicinity, through the local committee, 20,278 pieces of literature. Classified, this distribution has been as follows: *Journals*, 738; *Sentinels*, 4,403; *Monitors*, 13,621; miscellaneous, 1,516. The committee has furnished subscriptions to the publications for the Bangor public library, and for several libraries in near-by towns, including the one at the University of Maine, Orono. The Penobscot county jail has been supplied with a copy of Science and Health, also with the *Monitor* and the *Sentinel*. Several schools, among them the Bangor high school and the state normal school at Castine, have likewise been provided with literature.

The *Monitor* is on file at the rooms of the Bangor Chamber of Commerce, and at several department stores and club-rooms. A box is maintained by the committee in the street railway general waiting-room, which is frequented by many people during the day, and literature from this supply is freely taken. This means of distribution seems to meet a definite need, and has led to several cases of healing, which have been brought to the attention of the committee. In this single source of activity 2,354 pieces of literature have been given circulation. The month of March was made a special *Monitor* month, during which the local field was asked to assist in the dissemination of this publication. Fifty-four new subscriptions, ranging from one month to one year each, resulted from this work.—*Correspondence.*

PUEBLO, COL.—Work on the construction of First Church of Christ, Scientist, is ready to start. The plans have been approved, the property has been purchased, and bids for the construction work will be asked for in a short time. The church is to be located on the northwest corner of Main and Twelfth streets, the principal entrance facing Main street. The auditorium itself will seat four hundred and fifty persons, while the balcony and foyer will accommodate about two hundred more. The estimated cost is twenty thousand dollars.—*Pueblo Chieftain.*

Digitized by Google

OAKLAND, CAL.—Placing the contract for one structure, and starting actual construction of another, the Christian Scientists of Oakland this week [May 16] came to the fore as the city's heaviest building operators among congregations. Edifices for Second and Seventh Churches of Christ, Scientist, are under way, one to cost seventy-five thousand dollars and the other something over twenty thousand dollars. Second Church, at Thirty-fourth and Elm streets, one block east of Telegraph avenue, will seat twelve hundred in the auditorium and six hundred and fifty in the Sunday school room.

The contract has been awarded for the construction of Seventh Church, to be located on the church property on Harrison boulevard between Twenty-third and Twenty-fourth streets, facing the new city park. The building is designed to seat seven hundred at present, with provision for enlargement, which will soon be required, to seat twelve hundred. The accommodation for services now being held in Ebell Hall has proven insufficient, and larger quarters are necessary.

Oakland Tribune.

LONDON, ENGLAND.—The design for the edifice of Second Church of Christ, Scientist, embodies the requirements of the committee to secure a church capable of seating one thousand people, a maximum number of whom shall have a clear view of the platform; a hall to accommodate about four hundred, with class-rooms for the children adjoining, and a house to contain the church-room and other offices, with the heating-plant and caretaker's premises. The remaining space is to be treated as a garden, railed off from the street but open to view. The new church will take the place of the present one on the site, and continuous use will be secured by erecting the new hall, class-rooms, and church-house first.

The Lectures

Leavenworth, Kan.

At the Shrine Temple on Shawnee street, a large audience heard Virgil O. Strickler lecture on Christian Science. He was introduced by F. C. Runkle, first reader, who said in part:—

Today, as never before during the Christian era, Christianity meets with acceptance through its demonstrable quality. Christian Science asks to be judged only upon its demonstrable quality, the proof of Immanuel, or "God with us," dawning in the human consciousness, as witnessed by thousands of sufferers throughout the world. At its healing touch, bodies racked by pain and disease have been transformed into health; care, sorrow, and sin have been banished, and man's birthright of dominion over the whole earth has been revealed. Thus it is that the Christ-idea, typified in the man Jesus by his wonderful works,—healing the sick, casting out evil, raising the dead,—and Christian Science as given to mankind by its Discoverer and Founder, Mrs. Eddy, coincide and illustrate the truth which Jesus promised we should know, and, knowing it, should be made free. This freedom awakens within the heart of every true Christian Scientist the yearning desire to share this truth with others.

Leavenworth Times.

❖

Long Beach, Cal.

In introducing Jacob S. Shield, who lectured on Christian Science, William A. McClelland, M.D., said:—

Centuries ago the multitudes gathered to hear the wonderful words of Jesus, and went away healed and blessed. Today all over the world the people are gathering, eager to hear this new-old story in the message of Christian Science, and are finding freedom from sickness and sin. Now, as then, humanity with one impulse is seeking to know more about God and man in His image. This is an age of progress, and progress to most of us means the casting away of our false ideas and notions, while the truth continues to assert itself until that comes "whose right it is" to reign. Paul said, "Prove all things; hold fast that which is good." Christian Science comes with its message and asks you to accept only what may be proven true.

These lectures are given that the public may hear the fundamental teachings of Christian Science stated correctly, and thus avoid wrong conceptions of it. Personally, I am one who allowed my wrong beliefs about Christian Science to keep me away from it for a number of years. Then through a very important case of healing which came under my observation as a physician, the authenticity of which I was forced to admit, I was finally led, though reluctantly, to investigate Christian Science, with the result that I found it not at all what I had thought it to be, but the one thing in all the world I had most desired and had always blindly sought for,—a practical, demonstrable understanding of God. During the years that I have been trying to apply the simple truths of Christian Science, I have been able to prove each proposition in the degree that I have honestly put it to the test.—*Correspondence.*

❖

Hempstead, N. Y.

The Rev. Willard F. Ottarson of New York city, in introducing William R. Rathvon, who lectured on Christian Science, said:—

The appearance and rapid growth of Christian Science in our day is one of the most remarkable of modern religious phenomena. Less than fifty years have passed since the discovery of this Science, and already it has found its way into every country of the known world. It has passed the stage of experimentation, in which its evidential proofs were meager and restricted, and has gone forward with increasing confidence, until now it has boldly entered every branch of human activity,—social, domestic, economic, and religious. Today it is recognized as a great factor of good, and is more and more commending itself to all classes of men by its beneficent activities.

While the wide-spread influence of Christian Science is a thing of large inspiration to all true lovers of good, its extensive growth is not by any means its most marked characteristic or greatest claim to recognition; it is also intensive in its influence and transforming power. It has entered the home and the business house, the church and the prison cell, the trades' union and the private office, bringing blessing and loving-kindness in its hands. Wheresoever it enters, it carries new courage and life. Its touch brings gladness and hope. It lays its tender hand upon the sore heart and heals its bitterness. The palace and the hovel equally feel its gentle presence and equally respond to its transforming touch.

No longer is Christian Science looked upon by intelligent men as a cultus to be treated with contempt or to be ignored as a superstition worthy of adoption only by people of so-called neurotic temperament and against which irresponsible children are to be protected. The earnest minds in the more serious fields of the world's thought are studying it deeply and with growing respect, both for its Founder and for its important results. As a tree is known by its fruits, so Christian Science is proving itself worthy of careful investigation.

Digitized by Google

which it invites and courts to the fullest degree, confident of possessing demonstrable quality. Its adherents are men and women of strength of character. It summons to itself every splendid quality of the biggest manhood and the finest type of true womanhood. In all the spread of this truly wonderful religion there is no effort made at persuading or forcing it upon people. It is accepted, if at all, only after its own inherent truth has won its silent way. Indeed, one of the most interesting things about its wide acceptance is the fact that a very large percentage of those who are now Christian Scientists were at first bitterly opposed to what they thought it was, but now are fully convinced of its truth.

Another remarkable thing which Christian Science does, is to make people study the Bible with a new and absorbing interest,—a habit almost lost in our twentieth century rush. To the thousands of Scientists it is a book of daily and engrossing study. They love the Bible; it is their meat and drink. They depend upon it for wisdom and for guidance in business, in the home, and in the street. This Science has rescued the Scriptures from the débris of formalism in this materialistic age of doubt, and has placed them again on the high throne of authority to which Christ Jesus had long ago exalted them. For this work of moral salvage every Christian, of whatever denominational name, owes Christian Science a lasting debt of gratitude and friendliness; and every right-thinking and honest man ought, for this reason alone, to love his Christian Science brethren, and open his arms wide to welcome them into fellowship on the ground of Christian brotherhood.

The day for a narrow and intolerant Christianity is past and gone forever, please God, and no ecclesiastical or intellectual egotism shall force a crown of thorns upon the head of the eternal Christ. Those who were the most ready in the past to stone Mrs. Eddy, the Discoverer and Founder of Christian Science, are the ones whose children will be the first to come reverently and build to her loved memory a monument that neither time nor storm can ever wear away.

Correspondence.

Virginia, Minn.

The lecture on Christian Science given at Socialist Hall proved very interesting and instructive. The hall was crowded, and many were present from other range towns. Paul F. Chamberlain, who introduced William D. McCrackan, the speaker of the evening, said:—

Throughout the whole civilized world today thousands of people are investigating Christian Science. Their investigations are naturally leading to the asking of questions. They are asking if it is true that through a knowledge of this Science the sick are made well, the lame are made to walk, and the troubled are made happy. They want to know how it is done, and also if it is possible for them to learn to do it for themselves. Anticipating these questions, and desiring that they should be correctly answered, Mrs. Eddy very wisely organized a board of Christian Science lecturers. It is the duty as well as the privilege of these men to appear under the auspices of the Christian Science church in this and other countries to elucidate the truths of this greatest of all sciences.—*The Virginian.*

Iola, Kan.

Virgil O. Strickler, who lectured on Christian Science, was introduced by Baxter McClain, attorney, who said in part:—

I hold no affiliation with this or any other church, but I do say there are many things for which this church contends, to attract the people of this day and age. It advocates a religion that is good for every day in the week, and to be practised every minute and hour of the day and year. It is unquestionable that it is doing a good work, and this is the thing which brings it to the attention of Christian people.

Correspondence.

Fort Lauderdale, Fla.

The Rex Theater was crowded when Bicknell Young gave a lecture on Christian Science. He was introduced by C. E. Farrington, an attorney of this city, in the following words:—

At a time when the world was under the lead of misguided ecclesiasticism, when the voice of the prophet was not heard and the righteous ones were helpless without a leader, Jesus of Nazareth came, and he initiated a movement of reform so advanced that it was generally not understood even by his closest followers. He brought comfort to the distressed, health to the suffering, soundness to the afflicted, and at the same time revealed a life so pure and altogether lovable that it will be an inspiration to mankind through all ages. What he did he also commissioned others to do.

At various times and with changing effort, mankind has sought to bring itself into full possession of the powers and privileges bestowed by Jesus. Christian Science has laid aside useless and burdensome traditions, and has gone back to the commission of Christ. In harmony with science, it has reestablished the love-work of Jesus, and is restoring the knowledge of man's unity with God and a proper standard for living.—*Fort Lauderdale Herald.*

Madison, Wis.

Clarence W. Chadwick lectured on Christian Science in the Woman's Building, which was filled to its capacity. Louis J. Marsh, chairman of the board of directors of the local church, introduced the speaker as follows:—

It is not the purpose of this lecture to urge or persuade any one to become a Christian Scientist. While we have decided views on the subject of salvation from sin, disease, and all manner of discord, we respect the honest convictions of those who differ from us, and recognize the inalienable right of the individual to accept or reject that which is offered to him. When mankind awakes to see that human knowledge is to a large extent made up of the varied influences and impressions due to an uncertain environment and education, it will not block with either indifference or prejudice any avenue which promises emancipation.

The master Christian, Jesus of Nazareth, said, "Ye shall know the truth, and the truth shall make you free." The Science of Christianity, or knowledge of the truth which Jesus taught and practised, belongs to all, for "God is no respecter of persons." Christian Scientists claim no monopoly of divine healing; they have merely identified themselves with it, and to a degree availed themselves of it. The motive which prompts these public lectures is the desire to present accurately the facts pertaining to Christian Science, and so correct any mistaken opinion regarding it.

Testimonies of Healing

It is quite generally admitted by the open-minded, that through the ministrations of Christian Science the sick are healed and the sinful are reformed. They are, however, loath to admit that what is termed or classed as organic disease can be healed. I am thankful to be able to testify that the Christ-teaching known to this age as Christian Science, does heal all manner of disease. My case, according to *materia medica*, was one of clearly defined heart and arterial trouble, from which there was no likelihood of my recovering, and no hope even of a possible improvement. I was told that a total collapse could be postponed only by the use of certain stimulating drugs, the exercise of extreme care, and an immediate cessation from all business.

I followed the carefully laid down instructions and took a sea voyage in the latter part of April, 1907, for the purpose of visiting my business correspondents. During the voyage I continued to lose ground, and a physician on the ship confirmed my home doctor's diagnosis and verdict, that there was nothing known to medical science which would restore my health or improve my condition. A day or so later I was kindly spoken to by a Christian Science practitioner, who had noticed my difficulty in getting on deck. Her sympathetic manner and kind inquiries so interested me, and particularly her clear, confident answers in response to my questions regarding Christian Science, of which up to that time I had heard very little, that I asked for help. An immediate arrest in the downward course was noticeable. I laid aside medicine bottle and prescription, and asked my new-found friend to give me Christian Science treatment. Upon our separating at the next port of call, she loaned me, with many words of encouragement, her copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had never seen this book before, but became intensely interested in it at once. About a week after I heard of Christian Science,—I had been reading Science and Health for a couple of days only, and was at the same time receiving absent treatment,—I first noticed full and regular pulsation. I immediately got out of bed and knelt in thankfulness to God. I have never had any return of the trouble.

In July, 1912, after several years given over to hard work, I had an interview with the doctor who had formerly attended me, and he remarked upon my appearance, saying, "You must have taken extraordinary care of yourself." He also said: "I remember you case very distinctly. You had valvular heart trouble and hardened arteries, but I must have been mistaken about the heart trouble, as I see you have none now." In 1913 this doctor gave me a written diagnosis of the case, but omitted mentioning the heart trouble, as he said he must have been mistaken in 1907. I had become friendly with a doctor in London, England, who told me of a case of arterial trouble he had at the hospital, and I asked him what he thought of my experience. He examined me very thoroughly the following day and pronounced my eyes, heart, and arteries in splendid condition. This was in the autumn of 1912.

Christian Science has made clear to me the loving power of God, and that He is the only source of intelligence, faith, courage, and all goodness. By the steady and thoughtful reading of our wonderful text-book, I gradually realized that Christian Science is a practical religion and just what I had longed for,—not merely a religious belief, but a religion of deeds rather than words, and one which must not only be believed, but must be known, for only by knowing could the living truth about God and man be understood and realized. The phrases "child of God" and "inheritor of the kingdom of heaven" had dim associations with a catechism, but had always been quite meaningless to me. Our Lord's Prayer had become stereotyped, until I read it in the light of Christian Science and as explained on pages 16 and 17 of Science and Health, in Mrs. Eddy's beautiful interpretation, when it stood out in its all-embracing grandeur.

By the application of Christian Science to my daily life I have gradually realized that activity and industry for good is being "about my Father's business." "Thou shalt have no other gods before me" has become to me a new and vital commandment. What better way can we prove our gratitude for our Leader's stupendous work, than by adopting it as our very own, sticking to it with all our might, holding fast to that imperative yet withal most beautiful command as our constant daily thought. On page 276 of Science and Health we read: "Having one God, one Mind, unfolds the power that heals the sick, and fulfils these sayings of Scripture, 'I am the Lord that healeth thee,' and 'I have found a ransom.'"

WALTER J. STETHEM, Westmount, Province of Quebec, Canada.

❖

Since taking up the study of Christian Science a few years ago, I have had enough proof of its healing power to convince me that it is the truth. I did not come to it for physical healing, but was gently led by divine Love. I had attended various Sunday schools when I was a young girl, seeking for something I could not find and never agreeing with the conception of a God who punished. I had implicit faith in knowing God to be Love, but where the sin and disease came from I knew not.

Two years prior to taking up the study of Christian Science, I ceased to attend any church or Sunday school. In the mean time I had heard of "Science and Health with Key to the Scriptures," and also noticed that its adherents expressed more love than the members of other religious denominations; therefore one Sunday morning in January I attended a Christian Science service with a relative. It happened to be communion Sunday, and I was so impressed with the simplicity of the service that I immediately resolved to take up the study. I was still young enough to attend Sunday school, and for this privilege I am truly grateful.

My demonstrations of healing have been few, as the understanding of God and man's relation to Him has kept me well; but one experience, which occurred in May, 1913, I would like to mention, as it gave me an opportunity to prove God's allness. Since early childhood I have had considerable trouble with my ears, the pain sometimes being almost unbearable, and a number of years ago the mastoid bone of the right ear was seriously affected, so that the drum had to be lanced. One night the severe pain in my ear awakened me after two hours of sleep, but I began at once to realize the omnipresence of God by repeating the Lord's Prayer and its spiritual interpretation, as given on page 16 of Science and Health. In one hour the demonstration was made and the cold was broken, whereas in similar cases, before I turned to Christian Science, the pain would last three hours and sometimes all night. I was unable to sleep the remainder of the night, however, as the ear had not cleared up, though all pain had vanished. The following day happened to be the heaviest day of the year in the office where I was employed, and I rejoice to say I was able to do my share of the work perfectly. I had lost my rest the night before, but it was proven to me that my strength is in divine Mind, and my share of the work that day was accomplished. I left the office at half past seven and immediately attended a busines-

Digitized by Google

meeting at the church. Later, I returned home without a thought of being tired or hungry, and it is needless to say I was grateful.

To Mrs. Eddy I owe unbounded gratitude for bringing again to human thought this saving truth, which demonstrates the unreality of all things material and the allness of God, good. I strive daily to "rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393).—Liveria Crumb, Long Beach, Cal.

Christian Science, the greatest blessing that can come to any one, was brought to me five years ago by a dear friend who saw my great need. Since that time it has been our only physician, and we have had many proofs that it not only heals all our diseases, but that "Truth, Life, and Love are a law of annihilation to everything unlike themselves" (Science and Health, p. 243). I owe everything I have to Christian Science,—health, prosperity, and greatest of all, a knowledge of a God who is Love, and a perfect Principle by which we can work out every problem, no matter how small or great.

There has never been any return of the condition from which I was healed. From a nervous wreck, Christian Science has changed me into a perfectly well woman. Friends who knew me before I turned to Christian Science are astonished at the change. Since my healing, my husband and all the members of my family have asked for help in Christian Science and have received it. I have reason to be, and am, more thankful each day to God, and grateful to Mrs. Eddy for this wonderful truth which frees us from the bondage of false beliefs. I am also grateful for a renewed love of the Bible, in which I had entirely lost interest before I took up the study of Science and Health.

Margaret Keith, Chicago, Ill.

[Translated from the German]

I feel impelled to express my gratitude for all the benefits which I have received through Christian Science. About two years ago my youngest daughter was taken ill with severe inflammation of the lungs. Having been acquainted with Christian Science for quite a while, I immediately applied to a practitioner, whose treatment was attended by a wonderful result: the child was able to get up on the following day and felt quite well. The same child had caused us to feel worried on account of stuttering. I therefore again applied for help with regard to this difficulty, and with two weeks' treatment the condition was completely overcome, and there has been no recurrence. This was a renewed proof to me of the power of divine Love.

For all the good that I have received along other lines through this teaching, I am most deeply grateful, and my earnest desire is that all mankind may have knowledge of this glorious truth taught by Christ Jesus and revealed to us anew by Mrs. Eddy. I thank God for His great goodness, which is renewed to us with every morning.

Frau Elsa Roth, Leonberg near Stuttgart, Germany.

I wish to tell what Christian Science has done for me. Up to five years ago I had always been a great sufferer from skin disease; in fact, when I was a boy I was continually having medical treatment for my blood, but every year I grew worse. The last two doctors who treated me said they could not do much for me, that I had inherited the disease and would probably be troubled with it for the rest of my life. I could not sleep, my nerves were in bad condition, and I was disgusted with this world and wanted to get out of it.

About this time I heard of Christian Science through the healing of a friend who had typhoid fever. He was so ill that it was thought he could not recover, but he returned to his business perfectly well in four weeks. This interested me very much, and I decided to try the same "remedy." I went to see the practitioner, and in that first treatment was healed of the worst of all diseases,—fear. That night I slept better than I had for years, and that without medicine or the usual material applications. In four treatments my body was free from the burning sensation and my skin clearer than for years. I was interested, and continued my visits to the practitioner, as I wanted to understand how this had been accomplished. During this time my eyes were healed, although I had worn glasses for over six years, and I was cured of smoking after being a heavy smoker for thirty years. Other troubles disappeared also. For all this I was indeed grateful, but much more so for the spiritual healing which I received.

I had not been inside of a church for over thirty years. I believed in a God, but could not understand why He should make His children suffer and be sick; but since I have found God, and know where He is and what He is, and obey His laws, I have found great happiness, abiding peace, and perfect health. I had never read the Bible, because I thought I could not understand it, but now I take great pleasure in studying our Lesson-Sermons and attending our services. I am very grateful to our dear Leader that I have found God, also to those who have made this beautiful truth plain to me; and I know I can best express this gratitude by living up to the teachings of Christian Science.

Edmund W. Gleason, Boston, Mass.

The accompanying account of my husband's healing is entirely true, except that words can hardly express the misery he was in before taking up Christian Science. I am very grateful for his healing, and also for my own healing from rheumatism.—Mrs. Edmund W. Gleason.

It seems impossible to find words to express my thankfulness to God, and my gratitude to Christian Science for the blessings I have received. For two years I suffered so much from asthma that I lived out on a screened porch in order to breathe. In all I had six physicians. One thought my nerves were the cause of my condition, and he worked on them until paralysis set in on one side of my body, weakening my eyes so that I could see only with strong glasses. The next physician thought my nose caused the trouble, so I was taken to a specialist, and for two hours sat in the operating-chair while he removed bones from my nose and head. One month later I returned and had a similar operation performed on the other side. Still the asthma grew worse. During this time, an opiate was injected into my body and I was also obliged to take it internally; but soon even that failed to put me to sleep. Moreover, my memory began to fail from the use of the drug, and I would hear voices calling me until I thought I was going insane. We then consulted a physician who had a new asthma cure, but a trial of it weakened me to such an extent that we had to give it up, and the physician said that nothing more could be done for me.

The next day my mother told me about a lady who had been cured by Christian Science, and that afternoon this lady sent me a copy of "Science and Health with Key to the Scriptures." I read it all the afternoon and evening, and at night I went to bed and slept peacefully for the first time in two years. The next morning I called in a practitioner, and from that time I have never been troubled with asthma. My

Digitized by Google

memory is clear, and my eyesight has improved so that I can thread a needle without glasses. I have also gained greatly in weight, and have been perfectly well ever since my healing. All our sorrow and darkness have turned to gladness and sunshine.—Lillie Beck, Milwaukee, Wis.

❖

It is now six years since I first began the study of Christian Science. I did not come to it for the healing, but because I was looking for a religion which was satisfying, and I am glad to say that I have found Christian Science to be all that it claims to be. I have been healed of stomach trouble and an abscess of years' standing, just through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, after a number of physicians had declared that an operation would be the only means of relief, and that would be very doubtful.

I am, however, more grateful for the spiritual uplift and the healed thought than for the physical benefits. Through many severe trials I have been upheld both spiritually and physically by the knowledge that God is Life and Love, and every day I am rejoicing in a better understanding. I am deeply grateful to Mrs. Eddy for giving us Christian Science.

Elizabeth McKay, Battle Creek, Mich.

❖

It has been seven years since the book "Science and Health with Key to the Scriptures" by Mrs. Eddy, was placed in my hands and I was told to study it. This truth enlightens the mortal thought as the leaven permeates the meal, and by the time I had studied the chapter on Prayer, I was surprised to find I was healed of sleeplessness of nearly ten years' duration. Nervous exhaustion and goiter left me when I awakened to the fact that God is the life of man, and as His image and likeness man stands now and forever perfect.

The joy of perfect freedom from physical ills has been small compared to the joy in the knowledge that a loving Father created man and keeps him forever in His loving care. I know now that, even though I knew it not, He girded me, as the consciousness of God's presence has been my strength in hours when I was seemingly being overtaxed. No sense of weariness followed months of constant care and nights devoid of rest or sleep. Verily we may rest in Truth, and suffer no weariness from doing what it is our duty to do. That Christian Science heals instantaneously, and heals all forms of disease, I can gratefully testify. Organic heart trouble, so diagnosed by eminent medical doctors, was healed by studying and trying to apply the Christian Science rules as given us in our text-book. Influenza, appendicitis, and other seemingly serious conditions have been cured instantaneously by a realization of my true birthright as a child of God. I have never enjoyed such health and power of endurance as during the years I have been studying Christian Science literature.

I am most grateful to know we do not have to take any one's word that Christian Science heals, but all can prove it for themselves by honestly and humbly applying the rules given in Science and Health. For this saving truth I am most grateful. The sweet sense of joy and peace which comes from the knowledge of God as Love, cannot be taken from us. My prayer is that I may reflect more love, more of the divine nature, so that I may be worthy to bear the name of Christian Scientist, and that I may hold to thirsty lips the cup of living water in Christ's name.

Nannie Geoghegan, Albany, Ga.

I can vouch for the truth of the foregoing testimony, as I am a witness to the results, and they are permanent.

Brooks Geoghegan.

I feel it is my duty to testify to the value of Christian Science, as I have found it to be the healing truth, and it is with gratitude that I send this testimony. Since taking up the study of the Bible and "Science and Health with Key to the Scriptures," my life has been made brighter and happier, and I have found God to be "a very present help in trouble," and "able to do exceeding abundantly above all that we ask or think."

With the help of a Christian Science practitioner many inharmonies have been destroyed, and I have gained a better understanding of the truth. I find that as I give up mortal beliefs and think only God's thoughts, all goes well. Each day I have a stronger desire to know God, "whom to know aright is Life eternal" (Science and Health, Pref., p. v). I am very thankful to God, also grateful to Mrs. Eddy for the glorious truth revealed to us through diligent study of the Bible and our text-book.

Mrs. P. H. Hellyer, Cuba, Ill.

❖

Jesus said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." This saying of the Master was truly verified to me in the healing of sleeplessness, in which I was in bondage for many years and which at various times resulted in complete exhaustion. I would often be laid up with nervous breakdown from six to eight weeks, undergoing what is known as the rest-cure, with its usual accompaniments,—drugs, diet, massage, etc.,—but all failed to produce the desired natural sleep. The days that followed these nights are positively indescribable. The physicians diagnosed the case as a complication of stomach and liver trouble, and every available remedy was resorted to, but without benefit. This condition has been entirely overcome in Christian Science, and I sleep most peacefully. I wore glasses for many years, but they were discarded soon after taking up this study.

Christian Science has proved the greatest blessing of all in the overcoming of deep sorrow, by showing me that God knows no separation, and that in Him is fulness of joy. It has been my glorious privilege to do healing work, and in doing so my grief has been turned into joy. I was born a Jewess, and it was extremely difficult for me to understand and accept the Christ; but on close application to the study of Christian Science I soon found this to be the truth that Jesus came to teach, and I am grateful for a religion which enables me to solve any problem that comes into my life by bringing the right thought to bear upon it.

My daily prayer is that I may be a channel for all good. I am deeply thankful to God, who gives us "richly all things to enjoy," and grateful to Mrs. Eddy for this wonderful discovery, which is leading me so beautifully from sense to Soul.—Sarah Meyerstein, San Francisco, Cal.

❖

It is nearly three years since Christian Science first came to our notice. It found me a very delicate woman, but with the help of a practitioner I have been cured of many sicknesses, including rheumatism and nervous exhaustion, bronchitis, ulcerated teeth, and influenza. I might say that I was in such a nervous condition that at times I thought I would end my life in an asylum; but thanks to Christian Science all this has been overcome. I had always been delicate, and one doctor had told me if I were not careful I would go into a decline. I had been taking medicine on and off for ten years, but it did me good only for a time, and I was beginning to lose all faith in doctors and drugs. Since coming into Christian Science I am much stronger and different in every way.

Digitized by Google

Christian Science is helping me to overcome an irritable temper, and instead of dwelling on the dark side, to look for brighter things. The Bible seems a different book to me; I used to read it as a duty, but now I love to read it. I have three little children, and all have been helped and are much stronger than they were. I am so glad that they are being taught to know who and what God really is. I am most grateful to know that God does not send sickness or trouble, as I was always taught to believe, but that He is Life, Truth, and Love. My one great desire is to push on and learn more of this new-old religion. I am more than grateful for the understanding and knowledge of the true God which I have gained through the study of Science and Health.

MRS. ALFRED HAYSOM, London, Ontario, Canada.

✧

From a heart filled with thankfulness to God, and gratitude to our Leader, I wish to give the testimony of my healing through Christian Science. I have been healed of sleeplessness, nervousness, and a great depression. For five months I could not sleep, and after trying material remedies without any relief, I at last took up Christian Science, which I have found to be an ever present help in time of trouble.

A sense of great fear came over me at times, and I was afraid to stay in my home, but I have found that "perfect love casteth out fear." I have overcome many other weaknesses, and find as I go on each day, step by step, trying to demonstrate that God is Life, the fetters fall. I can say as did Job, "I have heard of thee by the hearing of the ear: but now mine eye seeth thee." I want to conquer all that is unlike God. I am permanently healed and gaining every day in spiritual understanding. My health is better than it ever was, and I never get tired any more. I have had class instruction since my healing, and I am very grateful for the privilege. I have also been called on to help others, and all have received help.

I am grateful for every blessing that has come to me, and I hope my testimony may benefit others. I shall ever continue to study the Lesson-Sermon and learn more of Christian Science.—EMMA HILLDRUP, Windfall, Ind.

✧

I have much for which to be grateful to Christian Science. Twenty-one years ago, through the reading of Science and Health, I was healed of stomach trouble and a very bad rupture, also of the tobacco and liquor habits and the use of profane language. I saw at the time I began to read the book that it was the truth, and I have never doubted its teaching from that day to this. I have had many proofs of the power of Truth, and for this I am surely grateful to Mrs. Eddy, who has given us in her writings the means whereby to prove it for ourselves. Jesus said he would send a Comforter that would teach us all truth, and bring the things of which he told us to our remembrance, and to me this Comforter is Christian Science. I am very sure the understanding of this teaching has brought peace and happiness to me many times, when nothing else could.

In Science and Health (p. 57) Mrs. Eddy tells us that "happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it." It is required of us to take up this truth and prove it for ourselves, and one proof makes us stronger, and more patient to stand and see the glory of God. Christian Science has given me an understanding of God that I can apply to my business and in my every-day needs. I am indeed grateful for this teaching.

F. C. HACKETT, Indianapolis, Ind.

From Our Exchanges

[Rev. Philip S. Moxom in *The Christian Register*]

We need to cultivate patience with ourselves. I have no encouragement for such as have sunk into supine contentment with their condition and attainments. They need to be aroused to a holy discontent, to a divine impatience with themselves. Apparently there are such, but they are few compared with the many who needlessly and harmfully fret over their own lot, their own attainments, their own little progress in the art of living. What they wish to achieve in days takes weeks, months, perhaps years. It is well to learn that most progress is made by doing today's task well, seizing today's opportunity, and meeting the present exigency with courage and steadfast loyalty to the highest that one knows.

As to our personal growth in character, if we are faithfully doing our duty, we need not greatly concern ourselves. Yet it is just this matter of personal growth over which many become anxious and despondent. But if we do not always clearly see our defects, neither do we see our points of strength and our actual achievement. Hence the need of patience. It is wise to think less about ourselves and more about our duties and privileges; and if we are amazed and cast down by a sudden perception of unsuspected weakness and unexpected defeat, there is always the possibility of improvement. Trust God and "do out the duty," leaving the issue to God. Then patience with ourselves resolves itself into patience with God, whose workmanship we are. He is making us while we are making ourselves, and if we lend ourselves to His disciplining hand, the workmanship will at last be complete, a worthy result of the long and often weary struggle with sin and pain and sorrow.

[*The Congregationalist and Christian World*]

Every holy purpose, breaking out in lives haunted by the consciousness of dereliction, is God's way of forgetting our unhappy past and offering a more blessed future. Each mounting desire is God's life within us,—the very spring of the soul. New opportunities for love and service are His absolution. The rebirth of powers which we had thought too nearly perished to bud again, is the divine proffer of that regeneration in which the prophets established their hope, of which the cross is the deathless assurance. The growing interest in life and its meanings, which wins its way into sorrow-stricken souls and there does its healing work, is God comforting the troubled. Regrets and bitter memories and unhappy repinings are the dead waste of vanished things. Life bids us be done with them.

[*The Watchman-Examiner*]

A Christian man's regard for the "minor morals" ought to find such expression in his business transactions as shall not only place him above reproach, but bring him the respect and confidence of those with whom he deals. In the family, in the social circle, and among one's neighbors, there is also large opportunity for the practice of the "minor morals." Christianity certainly ought to make one a kinder parent or child, a more agreeable host or guest, and a better neighbor than he would otherwise be, since it goes beyond all systems of morality and justice that merely forbid evil, and requires one to seek the good of others.

The Christian ought to feel how great is his influence for good or bad in the common things of life; to remember that, whether justly or unjustly, the sincerity of his profession is judged by his actions and temper in little things. To all these he ought to apply the test: Are they Christlike? Would

Digitized by Google

Christ regard this and that, and speak of them as I do? It is not enough that some things are not positively bad, for the influence of Christians ought to be positively good. Paul puts under the Christian ban whatever is not becoming to saints, and commends the things whereby we may "edify one another."

[*American Lutheran Survey*]

True refinement is heart culture. It expresses itself through good manners, but it does not consist in good manners. Many a man is polished who is not refined. True refinement seeks knowledge, but does not consist in knowledge. Intellectual culture is a great boon to refinement, but it does not produce refinement. True refinement finds boundless satisfaction in the contemplation of the beautiful, in nature, in art, and in thought, but even the love of the beautiful is only a mark and not the essence of true refinement. Heart culture means heart purity, and heart purity means a deep and thorough application of that which is good. True refinement is the opposite of grossness, rudeness, thoughtlessness, egotism, pride and selfishness in all forms. True refinement is quick in its perception of and response to that which is good and true and beautiful, wherever found. The highest type of Christian possesses the greatest degree of true refinement.

[*The Universalist Leader*]

If Jesus was greatest among the sons of men, it is because he was most loving and trustful and obedient among the children of God, and lived in closest companionship with the universal Father. The greatness and beneficence of his life were related to the help that he sought and found in prayer, as a stream is related to its fountain, or the marvels wrought by the electric current to the source of its supply. Through prayer he kept his own in touch with his Father's will. Through prayer he rose above the discouragements by which he was surrounded, and received daily strength for daily need. Through prayer he gained and kept that fulness of love and sympathy for all mankind which fitted him to be the universal Saviour. Through prayer his vision of the life immortal made earth and heaven one.

[*Zion's Herald*]

We may never know what our small strivings have done for some of the waste places we have tried to people with pleasanter things; but there is every reason why we should keep on trying. Some of the efforts we put forth will be of avail. Kind words, cheery smiles, hearty handshakes, generous thoughts, timely promptings, thoughtful gifts, are some of the best things in life. If we but will, we may have them all as our portion, and we may feel very certain, if we do, that there will be waste places that we shall make to bloom.

[*The Advance*]

There is a difference between childishness and childlikeness. Jesus did not intend to require of us that we should be childish, but he did intend that his disciples should be childlike. He intended that we should preserve not merely the docility, but the spontaneity, the freshness, the originality of childhood. The world has occupied itself very largely in teaching children how to be grown people.

[*The Christian Intelligencer*]

The knowledge of God in Christ is absolutely essential to our happiness in this world and to the realization of our possibilities. To know God as our Father, to trust in Christ as our redeemer, and to live in the Spirit day by day, is an equipment for life which will vitalize every other equipment and make our contact with men a service of lasting power.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

"Christian Science: The Resurrection and the Life," a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Contemporain* magazine is now printed with the English and French versions on opposite pages.

Both these pamphlets are now on sale at prices shown on the opposite page for our regular pamphlets.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.41.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and able refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year of two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Plans for the leasing of oil and gas lands on the Osage reservation, Oklahoma, have been concluded between the government and representatives of the tribe, after conferences lasting ten days. The Indians will get far more oil and gas than heretofore. Existing leases, made long before the oil and gas possibilities of the lands were known, or those commodities had assumed their present importance, are to be definitely terminated. All middlemen, with their profits, are to be eliminated, and in a general way a system is to be established in which fair dealing, scrupulous regard for the rights of others, and a determination to see that the Indians are fairly treated, will prevail.

Heretofore the Osages have been receiving one hundred dollars a year for each gas well. Under the new system their revenues from this source will be greatly augmented, and their total gas income will be about one hundred thousand dollars. The system of disposing of oil and gas leases and properties at public auction, to the highest bidders, is recognized in the new agreement, and the amount of land that may be held under a lease will be cut down from thirty thousand acres, and even more, to forty-eight hundred acres.

What may prove of importance is the recent discovery of large deposits of molybdenite ore near Stave lake, Vancouver, B. C. The discovery, which was made several months ago, of a ledge of this mineral was followed by an examination by mining engineers. Molybdenite is extensively used for the purpose of hardening steel, and forms an important ingredient in the manufacture of heavy armament. Up to the present time the output of molybdenite has been practically controlled by Germany, owing to the fact that in that country alone were there any extensive refining works, the concentrates being treated by a process of electrical treatment. The greatest deposits of molybdenite were found in Hungary, but extensive supply areas are worked in Tasmania and New Zealand, the concentrates formerly being shipped to Germany for treatment.

The British government has lately, however, through its agents, established a refinery at Swansea, Wales, for the treatment of ores from the antipodes and from the United States, where molybdenite is also found. While it is found throughout eastern Canada in flakes, large workable bodies of the ore were not located in the Dominion until several years ago a deposit was uncovered near Nelson. The ledge discovered near Stave lake is situated above the valley of Stump creek, on the side of a steep mountain. It is approximately two thousand feet in length and shows a face on the side of the hill approximately three hundred feet in thickness. It is a low-grade ore, but from the examinations made of it, there appears to be a very extensive body of it.

At midnight, July 1, the manufacturing district of Chicago, and neighboring territory, began an attempt to force arbitration of the carpenters' strike. James Fryer, president of the Builders Commercial Agency, says: "I estimate that two hundred thousand men employed by Chicago mills, and probably an additional three hundred thousand in the Wisconsin, Ohio, and Indiana plants which furnish supplies to Chicago builders, will be out of employment. I estimate the loss at three dollars per man each day, or one million five hundred thousand dollars in all, and the loss will run indefinitely. The question of arbitration must now be settled for all time."

Iowa's weeds cause farmers a loss of not less than twenty-five million dollars a year, according to a bulletin on weeds just put out by the agricultural extension department at Iowa State College. "This loss," it says, "could be avoided in large part, if more thorough steps were taken with weeds. Weeds are harmful in a good many ways. They consume plant food that should go to the agricultural crop; they rob cultivated plants of sunlight; they take the moisture so essential for a crop, especially in a dry year. Weeds like the morning-glory pull down a crop like corn, wheat, or oats, and many others harbor insects destructive to the grain."

The annual report of the department of mines shows that the mineral output of Queensland, Australia, in 1914 was £2,976,280, compared with an output of £3,857,881 in the previous year. The gold yield was 249,468 fine ounces, valued at £1,059,674. Of minerals other than gold raised during the year, the following figures are given: silver, 253,964 ounces, valued at £26,506; tin, 2,085.4 tons, valued at £176,197; lead, 724 tons, valued at £12,134; and copper, 18,435.6 tons, of the value of £1,188,648. Opals representing £2,000, and sapphires and other gems, to the value of £15,800, were also produced during the year.

More than 48,000,000 cent pieces, 4,375,539 nickels, 22,430,000 dimes, nearly 2,000,000 quarters, 1,422,550 half-dollars, and $40,533,810 in gold were coined by the United States government in the last fiscal year. Official mint figures also show a coinage of 22,157,700 pieces for foreign governments. Nearly 2,000,000 pieces were coined for the Philippine government.

Texas, with taxable wealth amounting to $52,740,473 in 1850, giving it a rating of twenty-fourth in the list of states of the Union of that day, was rated seventh in 1912, with a total taxable wealth of $6,552,242,164 and a total wealth measured by property value of $10,000 per capita. The United States, with total property reaching $37,135,000,000 in 1912, or $365 per capita, in 1912 had $173,423,000,000 taxable and $12,813,000,000 exempted wealth, or $1,965 per capita.

The Vistula-Oder waterway has been opened, after having been rebuilt and altered in such a manner as to render it of far greater importance than ever before. According to the *Berliner Tageblatt*, the old waterway between the Vistula and the Oder, consisting of a portion of the lower Brahe, the Bromberg canal, the Netze, and the Warta, has been inadequate for modern requirements for the past half century. When the canal was built in 1773-4 the wooden sluices were adapted for ships of about forty tons' capacity.

July 1, it is announced officially, two-cent letter postage became effective between the United States and the Dutch West Indies. The postal agreement includes Aruba, Bonaire, Curaçao, Saba, St. Eustatius, and the Dutch part of St. Martins. British Honduras, the Bahamas, Barbados, and the Leeward islands, all British dependencies, recently entered into the two-cent agreement, which means that about half of the Caribbean islands have now adopted the cheaper letter rate with this country.

It is announced in the official reports that the Chinese-Eastern railway has placed an order for ten thousand steel freight-cars in the United States, and that the cars are to be shipped to Harbin in sections and there assembled and put up. The cost of putting the cars together in this way will, it is said, be upward of two hundred and fifty thousand dollars. About five thousand men will be employed on the work, and it is expected that between fifty and sixty cars will be completed, ready for use, each day.

Nineteen persons received fatal injuries and nine hundred and three were wounded in the two days' celebration of the Fourth of July, according to figures compiled by the Chicago *Tribune*. These figures show an increase over the totals of 1914, when there were two fatalities and eight hundred and seventy-one persons injured. A large increase was also shown in the fire loss, the total for this year being $239,325, as compared with $99,545 last year.

China, as the result of the war, is compelled to manufacture its own postage stamps. Until now she has been having her stamps made in foreign countries, principally countries of Europe; but her supply has run out, and there is no chance that it can be renewed in the old way. The government engraving bureau at Peking has accordingly taken over this work.

The exports of automobiles for nine months, ending March, 1915, almost equaled in value the exports for the entire year of 1914. During the ten months ended last April, there were exported 8,580 commercial vehicles, worth $2,977,968, and 14,641 passenger cars, worth $18,856,472, making a total of $36,834,440, against $21,598,810 for the corresponding ten months a year ago.

The thirty-six hundred miles of government roads of the Argentine Republic extend to the richest zones of the republic and give at the present time valuable service.

On Thursday, June 24, New York celebrated the two hundred and fiftieth anniversary of its establishment as a city under municipal government.

It is expected that the treasury at Washington will close its fiscal year June 30 with a deficit of forty million dollars.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII July 17, 1915 No. 46

"I have sinned"

WILLIS F. GROSS

THE parable of the prodigal son is so universal in its appeal that it has well been called the pearl of parables. It has been the basis of more sermons and written messages than any other of the Master's illustrations. It portrays mortal man's waywardness, teaches the unceasing, unchanging love of God, and makes clear what is required if we would regain the Father's house, the consciousness of infinite good. The student of Christian Science reads this story with great pleasure and profit, for he has learned to make a practical application of its wholesome teachings.

Christian Science requires "a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259). Man is created in the image and likeness of God, and since there is no evil in God there can be no evil in the divine likeness. God did not create evil, hence evil does not exist as a real entity, but only as a false belief. On this basis evil must be recognized and overcome. In Christian Science one's concept of evil, and his attitude thereto, is greatly changed, and unless he is thoroughly instructed in the fundamental teachings of this Science he cannot understand what disposition is to be made of the mortal belief in the reality and power of evil. This may account for the many erroneous conclusions as to how much or how little attention should be given to the consideration of evil.

In Christian Science the term error is applied to all evil. Error means that which is not true. When it is understood that evil is not true, it becomes evident that the consciousness of what is true, what is real in an absolute sense, will effectually destroy the belief in evil. The right concept of good reveals possibilities hitherto unrecognized and enables one to deal with evil in an intelligent manner. An erroneous belief can never become anything more than a belief, whether it is manifest as sickness or sin. To ignore a belief may be to indulge it, and to indulge it is to prolong its seeming existence. All men must grapple with and overcome the multifarious beliefs of evil. They must see clearly what is required of them and their work must be faithfully done.

One of the most helpful lessons to be learned from this parable is that mortal man must acknowledge his wrongdoing, all his errors. A false sense of what would make his life harmonious, led the prodigal away from his father's house into a far country; but when the error of this belief was made manifest, "he came to himself," and determined that he would return to his father and ask to be received as a hired servant. He would offer no excuse and make no attempt to justify himself. His only plea would be the simple acknowledgment, "I have sinned." It was this right attitude of thought toward his transgressions that made it possible for him to be healed and restored to his rightful place as a son. A partial recognition of his errors, and a correspondingly half-hearted effort to forsake his evil ways, might have gained for him the place of a hired servant, but surely nothing less than the humble confession of all his sins and a sincere desire to be delivered therefrom could restore him to sonship with the father.

That evil must be acknowledged before it can be overcome, is the emphatic teaching of the Scriptures and of Christian Science. The wise man wrote, "He that covereth his sins shall not prosper: but whoso confesseth and forsaketh them shall have mercy." To those who deem it possible to gain good without recognizing the errors of human thought and deed, John gave this definite word of instruction: "If we say that we have no sin, we deceive ourselves, and the truth is not in us." He who best demonstrated his ability to overcome evil in all its forms, declared that "every plant, which my heavenly Father hath not planted, shall be rooted up;" in other words, every thought which emanates not from divine Principle, must be recognized as evil and forsaken.

There is no evil in good and no good in evil. This is not a mere theory; it is demonstrable science. If it were not for the belief of good in evil, no mortal could find pleasure in the indulgence of evil, wittingly or unwittingly; hence the necessity of recognizing wherein one has been deceived. To attempt to justify one's self is but to temporize with evil and never gain the victory over it. If evil has been indulged, it must be acknowledged, stripped of all false pretenses, that its true nature may be revealed. The truly repentant thought is no longer fearful of Truth's condemnation of error, for the destruction of evil means freedom, harmony, happiness. The prayer of David: "Wash me throughly from mine iniquity, and cleanse me from my sin. For I acknowledge my transgressions," expresses that genuine repentance which merits and receives divine pardon. Evil cannot be destroyed so long as its baseless claim is unrecognized. A person could not consistently endeavor to correct that which he believed needed no correction. If he made the attempt, he would accomplish nothing, for he would be working in the dark.

So long as mortal man refuses to acknowledge his errors, he will continue in them, since he has no motive or incentive to forsake that which he regards as good. He has not reached the place where he is willing to say, as did the prodigal, "I have sinned," and so he is impelled to follow the path he has chosen until in some way he is awakened "to the awful unreality by which he has been deceived" (Science and Health, p. 339). Without repentance it is impossible to gain a more harmonious state of existence. So long as one is unwilling to give up error, it is impossible for him to make satisfactory progress in the demonstration of Truth.

Jesus once astonished his hearers by declaring, "The publicans and the harlots go into the kingdom of God before you." On another occasion he said that the publican went down to his house justified rather than the Pharisee. These sayings go to show that the sin of self-righteousness is one of the greatest barriers to progress. It requires moral courage for a man to acknowledge his errors, even to himself. His reluctance to do so shows how great is the need of a more just appreciation of his daily living. The two extremes, self-righteousness and self-condemnation, are to be consistently avoided. The former makes further progress impossible, while the latter fails to gain the good because it clings to past

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

mistakes. One should let the nothingness of evil be demonstrated. Evil has no more power than mortal belief permits. If one really desires to be healed, physically and morally, nothing can prevent the accomplishment of this good work.

The parable of the prodigal son demonstrates that nothing mortal man may do, can make God's love less than infinite. Science and Health assures us that "divine Love always has met and always will meet every human need" (p. 494). When one earnestly desires to be saved in God's appointed way, he rejoices to do whatever is required of him. He is not disturbed by the uncovering of error in his own thought, for he sees even in this the proof that Truth is with him, and he is striving to obey the divine law. Each victory over evil gives him increased wisdom and strength, and he is ready for the next step in the upward journey. The acknowledgment of his errors, and the recognition of God's ever-presence, power, and love, make progress not only possible but sure.

❖

Efficient Work

FLORENCE HOMER SNOW

As a feature of the general belief that a man's living has to be earned, the topic of vocation is receiving ever increasing emphasis. Much time is spent upon preparation for one's work in life, and many agencies assist in the choice of an occupation. The actual execution of the work, however, is too often based upon a merely human sense of man's capabilities, and consequently fails to be "characterized by energetic and useful activity," according to the dictionary definition of efficiency.

Behind all the work there seems to be a more or less patient resignation to the servitude of tilling the ground, an acceptance of the decree passed upon Adam: "Cursed is the ground for thy sake; in sorrow shalt thou eat of it all the days of thy life." And often as a variant of rebellious discontent we find pride in the sense of martyrdom, self clamoring for recognition by glorying in the heaviness of its burdens, forgetting that Jesus defined his burden as light. Again, as an instance of self-justification, we see a conviction that exhaustion must follow any great effort, that the pendulum of man's being must swing back to weakness from strength, a result of the belief that energy is physical and limited. Oftentimes achievement of any sort is denied; there seems to be only a purposeless round of effort. If results are visible, diligence and striving are rarely begrudged, but lack of progress makes labor a mere treadmill.

Christian Science declares these human characteristics to be unauthorized and unnecessary. It teaches that if man is God's image and likeness, he must work as God works,—with dominion. On page 263 of Science and Health, Mrs. Eddy says, "When mortal man blends his thoughts of existence with the spiritual and works only as God works, he will no longer grope in the dark and cling to earth because he has not tasted heaven." In the German translation the word used for "work" is significant in that it denotes effect, accomplishment, rather than the more common word with the meaning of toil or labor.

"The unlabored motion of the divine energy," of which Mrs. Eddy speaks on page 445 of Science and Health, is expressed through us when we learn that the spiritual man was never condemned to serfdom. In the history of the true creation, "the Lord God made the earth and the heavens, and every plant of the field before it was in the earth, and every herb of the field before it grew: . . . and there was not a man to till the ground." God's man not only works as God works, but he works with Him, a thought which takes away the heavy sense of personal responsibility. In the gospel of Mark we read that the Lord worked with the disciples, "confirming the word with signs following."

When the disciples were fishing on the sea of Tiberias, the night of material methods, they were unsuccessful; when Christ, Truth, was with them, in the dawn of a fuller understanding, the net was overflowing. And a reflection of spiritual efficiency, "for all there were so many [great fishes], yet was not the net broken." Accomplishment is not followed by any impairment of equipment when source of energy is recognized as spiritual, and therefore abundant at the end of the endeavor as at the beginning. Every human purpose which is righteous enough to demand achievement, will be more speedily and harmoniously brought about if one looks beyond to God's righteousness, just as in searching the sky for a star of small magnitude, if the eye is directed to the heavens beyond the star, it will spring into view with the greater brightness.

The only true achievement is the demonstration of Truth, and toward this one must progress as he learns to reflect the qualities of God's activity in his physical and intellectual work. On page 520 of Science and Health, Mrs. Eddy says: "Spirit acts through the Science of Mind, never causing man to till the ground, but making him superior to the sod. Knowledge of this lifts man above the sod, above earth and its environments, to conscious spiritual harmony and eternal being."

❖

[Translated from the German]

Spiritual Ideas and Material Concepts

DR. CURT GENTSCH

It is a startling fact that with the general drift of human thought toward worldliness, many spiritual ideas have sunk to the level of mere material concepts, and this has led to great confusion. Much disappointment, if not despair, would have been spared mankind, had they been sufficiently enlightened with regard to the nature of these concepts, which often have ceased to have anything in common with true ideas.

To illustrate, most people believe that they will get their rights by going to court. The judges there may be impartial, and earnestly bent upon passing righteous judgment; but when it is remembered that often what is considered right in one city means almost an offense in a town not far distant, and that a court sentence is frequently the result of a vote which some three people happen to believe to be right at a certain time, such and such circumstances being considered, one begins to understand why a sentence is sometimes far removed from the realization of justice. According to the law books, justice and human rights are often distinctly different from that which mistaken human sense is apt to call them.

The same is true of the concept of love. Who would claim that the concept of the majority of people with regard to love is distinctly material or sensual, far removed from the higher though still human love of a mother for her child, one's love toward friends or native country, and yet how far farther from the love referred to by the beloved disciple when he wrote: "Love not the world, neither the things that are in the world. If any man love the world, the love of the Father is not in him." How futile seems the endeavor to use the same word to designate concepts which are so diametrically opposed to each other!

So, too, the idea of liberty corresponds more or less in the thought of most of us to material experience, to living according to one's human nature and inclination, and it is

Digitized by Google

o be limited to the personal enjoyment of unrestricted power. Yet Goethe warns us most emphatically against such a misconception when he says: "Vainly will the unrestrained pirit strive to attain the heights of perfection. The master s revealed in self-restraint, and law only can bring us reedom."

It cannot be denied that there are great differences between the human concepts of truth and life. The physiologist as so material a concept of life that certain forms of motion, ertain chemical and physical changes, are regarded by him s characteristics of it or of its opposite; indeed, he has efined life as the function of certain material laws. But ow different is John's definition, when he says, "He that ath the Son hath life; and he that hath not the Son of God ath not life"! Like Pilate we ask, "What is truth?" The hysical sciences declare that the testimony of the senses is ie only means whereby the human understanding may be nlarged, and in so doing they point to the many changes rought by them in our environment. But does the sensibly isible, the material, reflect Truth? or are the words of Jesus o the Father, when he prayed for his disciples, valid,—Sanctify them through thy truth: thy word is truth"?

Thus we see that through a material interpretation of real oncepts, mankind has reached unawares the point where it ives one designation to the most heterogeneous things. It s manifest that people cannot understand one another, speakng as they do in different tongues. It is also manifest why, n preparing Science and Health for publication, Mrs. Eddy ave special attention to the changes in human thought, in iew of which she found it necessary to define anew many xpressions in order that people at large might understand er discovery of the Christ-healing, as well as her ideas ith regard to eternal verities.

Lesson From a Tree

MARY E. TUCKER

One December some friends from the old home in the North were visiting me, and were enjoying the delights of a winter spent mostly on an open porch. A chance remark of mine about our live-oaks and their peculiarities, elicited from my Christian Science friend a spiritual thought which has been of assistance many times in the solving of my own financial problems, so I pass it on, hoping some one else may get the needed help.

All winter, when the sycamore and umbrella trees are lifting long, leafless branches to the eternal blue, my live-oak stands "in verdure clad," furnishing shade to all, and this where shade is appreciated at every season of the year. Very early the new leaves begin to come on the bare branches of the other shade-trees, and long before Easter the city is decked in brilliant green. My oak, however, seems not to notice that its own coat begins to look shabby, and seemingly, too, is not concerned at the vital importance of the fresh new dress of the other trees. It puts forth no effort to coax new leaves by shaking off the old ones, nor does it change the dark green color of them.

At last, however, patience is rewarded, for a small yellow bud appears in front of each leaf where it joins the stem. A little later the buds turn brown and grow rapidly, while a tiny green leaf-point shows on each. A few more days and my oak tree has shed its leaves (the new crowding the old off), and in its new dress it stands "a thing of beauty" for another year. To me it is an annual illustration of God's promise given in Isaiah, "Before they call, I will answer; and while they are yet speaking, I will hear." As the hundreds of live-oak trees in this city are being transformed each spring, what a wonderful spiritual lesson is spread out, that even "he that runs may read."

Several times since becoming interested in Christian Science I have had this lesson brought prominently to my thought. In "Miscellaneous Writings" (p. 307) Mrs. Eddy says, "God gives you His spiritual ideas, and in turn, they give you daily supplies." Then we have St. Paul's advice to "prove all things; hold fast that which is good." Working with these two thoughts in mind, I have proved that God's spiritual ideas are much more satisfactory as a source of supply than aught that mere human thought could devise. I took up the thought of all supply as being here and now; that my supply was meant for me, sometimes coming before I realized a need; that there is no power apart from God, divine Love, and that I should have what rightfully belonged to me. The Master's words as given in Luke plainly say, "Your Father knoweth that ye have need of these things," and accepting this, my part is also plainly indicated, "Neither be ye of doubtful mind." As one never questions the ability of divine Love, why doubt the Father's willingness to bestow abundantly, when the Master's promise was, "Whatsoever ye shall ask the Father in my name, he will give it you"? With me the result has justified this new line of right thinking.

Before knowing anything of Christian Science, life was a continual struggle to secure needed supplies, work seemed scarce, and the pay check not always adequate to provide all we thought we needed. Just here I was taught another lesson,—to differentiate between my wants and my needs,—and I have learned to be content when my needs are supplied. No marvelous changes have taken place in our circumstances, only a gradual growth into better conditions. After several years of trying always to think rightly, I can truthfully say that we are better clothed, have much better home surroundings, and our table is more abundantly supplied than ever before. Best of all is the freedom from any sense of lack, and the realization of a genuine spiritual growth into a knowledge of the truth as taught in Christian Science.

"By their fruits"

ALICE FROST LORD

It has sometimes been said by superficial investigators of Christian Science that it is "too easy a religion." The followers of this faith seem to them to have nothing to do but to believe there is no evil, no sin, and that God sees man as perfect. The critics fancy the Christian Scientist privileged by reason of this belief to enjoy his comfortable pew in peace on Sundays, while he may live as he chooses through the week,—selfish, dishonest, revengeful, possibly impure.

How far this conception is from the truth, is known by all who have studied at first hand the literature of Christian Science, or who have known personally the accredited adherents of this faith. It is safe to say that no other Christian denomination is committed to loftier ideals of practical living, nor does any other exact more as proof of the person's spirituality. It is not enough that he attends the services of the church regularly. It is not enough that he never fails to take part in the Wednesday evening meetings. Truth, like a two-edged sword, cleaves profession from practice, if these be not one in the "unity of the faith."

This, indeed, is the crowning glory of Christian Science teaching, as made plain by Mrs. Eddy in "Science and Health with Key to the Scriptures," the text-book of this denomination, when she says, "While respecting all that is good in the

Digitized by Google

church or out of it, one's consecration to Christ is more on the ground of demonstration than of profession" (p. 28). In other words, Christian Science summons its followers to do the works that Jesus bade them do,—"heal the sick, cleanse the lepers, raise the dead, cast out devils."

It is a homely adage, but true, that there would be more miracles if only there were more saints. The Christian Science interpretation of the gospel makes one's religion so vital to every-day life that one must be godlike, honest, kind, truthful, pure, in other words, saintly, if indeed one may realize enough spiritual power to do these works of healing. "By their fruits ye shall know them," said Jesus. By tracing physical ills to their mental causes, Christian Science clearly shows that "the wages of sin is death," and leaves no escape from the logic that when man reflects God, divine Love, in thought, word, and deed, and lives in accordance with spiritual law, harmony must appear. Under such conditions, peace fills the thought, concord reigns in all one's social relations, and health is manifest in the body.

Moreover, only one who so ruleth his spirit can wield the healing rod for others. To demonstrate power over evil, whether manifest as sin, disease, or death, is final proof that the Christian of the twentieth century is living close to the Master's teachings of two thousand years ago. Furthermore, Christian Science teaches that "sin is forgiven only as it is destroyed" (Science and Health, p. 5), and surely this is a far cry from the erroneous assertion or implication that because evil is nothing, one may sin with impunity. The student of this faith early learns that to follow the Wayshower and to do the works he did, one must leave on the ash-heap all that is unlike God, thus making the supreme surrender to things spiritual.

Sweet indeed are the peace and power that follow obedience to divine Love. There may be days in the wilderness in preparation for God's holy work; there may be hours when the bitter cup of the garden of Gethsemane must be quaffed to the last drop; yet is Love's burden light, and in the bearing of it man finds a heaven on earth, a peace that the world cannot give, the demonstration of spiritual power over evil, until even "death is swallowed up in victory."

Complete Demonstration

THOMAS B. LOOMIS

THE progress of the Christian Science movement presents one of the profoundest problems of the age. Christian Science keeps close to the teachings of Christ Jesus, yet to human sense it seems unsolvable, and not until it is approached from a spiritual basis can it be understood.

In John's gospel we are told that "the Jews marveled, saying, How knoweth this man letters, having never learned?" In early boyhood Jesus went into the temple and taught the wise men, both asking and answering questions; but they, being blinded by scholastic theology, did not discover the source of his power, which was divine, or God's reflection. He knew no other power than God, and consequently demonstrated that only which expresses God; and the Father gave him all power, so that he caused the blind to see and the lame to walk; he cleansed the lepers, turned water into wine, raised the dead, went through the multitude unseen, and stilled the tempest. The Scriptures state that he "was in all points tempted like as we are, yet without sin," and we can understand how it was that temptations were nothing to him, for, as Mrs. Eddy points out, "he plunged beneath the material surface of things, and found the spiritual cause" (Science and Health, p. 313). He served only the one true God, and so must we, if we would find the same deliverance from the one evil.

In Christian Science we learn that man, a progressive being, is forever unfolding. Does not this knowledge of [illegible] for unmeasured gratitude? If we know that man is made in the image and likeness of God, dare we murmur with [illegible] great gift at our command? When one tries to grasp the magnitude of this thought, its infinitude, he is awed at the very conception, and human speech is totally inadequate for its expression. To solve our problem it is absolutely necessary to have a right concept of God. With unmeasured gratitude the writer approaches this subject, for its basis is the spiritual uplift which brings peace, joy, and contentment unbounded, together with a degree of satisfaction which only a true life can afford. Enough has already been experienced to show that he is following the right course, for what seemed a load of misery and despair has been lightened, and gratefully he thanks God for His gentle leading.

The grand truth taught by our Master has been kept out of sight under tradition handed down from remote generations which has kept us in bondage to an unreal master—the belief in sin, sickness, and death. A material and traditional sense of Jesus' teachings constitutes the tragedy which is being enacted every day and every hour, and which will continue until the belief in evil is destroyed. When in Christian Science we discover our divine inheritance, what a privilege it is to know that man in the image and likeness of God can not be separated from Him. By way of illustration, the higher the fish-hawk ascends, the plainer it can see to dive into the water and secure its food. So also the higher we rise in godlikeness, in realizing man's infinite capacity to reflect God, and understand that there can be but one supreme power, the more clearly the divine fatherhood and motherhood appears, the more unmeasured our capacity becomes for endless progress.

O Love divine! what endless homage and boundless joy spring up to greet Thy bountiful benefactions and inspire a tender humility, with this sweet assurance of Jesus: "And I, if I be lifted up from the earth, will draw all men unto me." Our prayer goes out to God for that selfless love which His children are admonished to manifest in their daily living. When we contemplate the eternal fact that God is the source of all real power, we can but acknowledge the truth of what Mrs. Eddy has declared, namely, that "mortal existence is a state of self-deception and not the truth of being" (Science and Health, p. 403). Take the struggles and heart-breaking trials and disappointments in one's own life, when he seems helpless to ward off cruel afflictions; then through Christian Science, many years after, in mature life, to have the revealed, the living Christ break upon his enraptured vision, fills him with gratitude that knows no limit, and exaltation of thought which purifies the affections and reveals to man his birthright of immortality. Acknowledging the grand truth that God is All-in-all, and that materiality cannot affiliate or assimilate in any degree with His infinite allness, we deal with only one power.

Since the writer came to understand the Bible through the interpretation of Christian Science, it has been his richest legacy. It opens up an undreamed of field of research, and carries the thoughtful student back into secular history, which becomes a wonderful instructor. Through Mrs. Eddy's discovery of the Science of being, the desire has been intensified to know more of Truth, of that divine character who was indeed "the light of the world," who did not forget his mission or fail under the severest tests, and then came to exemplify the Christ-ideal that all who will may follow.

[Editorial in *The Evening Mail*, New York, N. Y.]

A very beautiful monument is erecting in Mount Auburn, the famous cemetery at Cambridge, Mass., where Longfellow, Lowell, Sumner, Phillips Brooks, and other great men are buried. When completed, the splendor and classic emphasis of this new monument may make the memorials of the famous men we have just named look like village gravestones in comparison. It is a lofty open colonnade eighteen feet in diameter, occupying an elevated position surrounding a beautiful little garden, and flanked by a white granite stylobate fifty feet broad. By its grace and distinction this memorial, which has been raised by a national subscription, will rank among the greatest of American mortuary monuments.

To whom is this monument reared? Not to a man who raised a sword in his country's defense or who shaped the policies of a nation, but to a woman, and to one whose message to the world was wholly spiritual. It is raised to the memory of Mary Baker Eddy, the Founder of Christian Science.

To read a lesson in this memorial it is not necessary to agree with the doctrine of spiritual cure for physical ills which Mrs. Eddy proclaimed. The most striking fact about the matter is that the force which this remarkable monument commemorates was wholly the force of thought—or perhaps not even so much the force of thought as the power of feeling. The work of Mrs. Eddy was purely the promulgation of an idea, and of an idea in the original Greek or Platonic sense, which carries with it an implication of a revelation from within.

We can at least be glad, in a time when the only valid influence in the world seems to be the explosive force of a melinite shell or the range of a great howitzer, that in America the chiefest memorial now rising, honors the memory of a thinking woman, not a fighting man.

✧

[Charles F. Williams in *The Selma* (Ala.) *Journal*]

There appeared in your esteemed paper recently, a news item telling of two criminals, condemned to be hanged, who had embraced the teachings of Christian Science, they having studied the literature for a year. Since a statement made by one of the men involves the teaching of Christian Science in regard to man and the hereafter, I will ask for space in which to make an explanation, and to make a few other remarks in connection with prison work from the Christian Science point of view.

In reply to the question "What sins?" Mrs. Eddy says in "Miscellaneous Writings" (p. 61): "According to the Word, man is the image and likeness of God. Does God's essential likeness sin, or dangle at the end of a rope? If not, what does? A culprit, a sinner,—anything but a man! Then, what is a sinner? A mortal; but man is *immortal*." Christian Science teaches mortals what man really is, and this teaching lifts them above the sod, and gives them a clearer, purer, more spiritual idea of life. It also teaches that Soul is God, Spirit, never in nor of matter, that man is the reflection of Soul; and this is according to the Scripture, which says that man was created in the image and likeness of God. Soul has never been seen to go into or come out of matter.

According to human belief, under certain conditions the mind leaves the body, and this process is called death. In Ecclesiastes we read, "In the place where the tree falleth, there it shall be;" and in Science and Health (p. 291) Mrs. Eddy says that "as death findeth mortal man, so shall he be after death, until probation and growth shall effect the needed change." A man is neither better nor worse because of dying. Probation and progression are necessary to effect a change for the better. A realization of the fact that man and the universe are spiritual, together with a constant turning away from the erroneous notions that man is sick, sinning, and dying,—a conception wholly material and unreal,—is a surer way of attaining salvation.

The practicability of the teachings of Christian Science is seen in the reformation of some of the worst criminals. The natural result of the study and application of the Science of Mind is a cleaner, healthier body and a cleaner mind; better morals and higher ideals,—in other words, a better citizen. "Cleanliness is next to godliness" is a true saying; and it can be added that cleanliness depends upon godlikeness. Jesus told the Pharisees and the Sadducees to beware of making clean simply the outside of the platter. It is impossible to legislate morals or health into individuals, nor should they be forced to accept a certain system of treatment for disease against their convictions, for such methods trample upon personal liberty, the most cherished right they possess. Along with the practical application of the word of God in the cure of disease and the elimination of its cause, there would be clean jails and almshouses. That there is a lack of cleanliness in these places, is an indication that there is a woeful lack of spiritual understanding and obedience to God's laws.

Jesus said that to know the truth would make free, and he healed all manner of diseases and cast out all unclean spirits. He taught the only true sanitation, and his teaching is the only safeguard against disease. Christian Science is demonstrating his teachings by healing the sick and sinful.

[Harry I. Hunt in *Atlantic City* (N. J.) *Press*]

In a report of a sermon by the Rev. Mr. ——, misstatements are made concerning Christian Science. Our critic says that Christian Science is nonsense, because it teaches that pain, affliction, and sin do not exist. If our brother had studied Christian Science ever so little, he would have discovered that it does not deny that pain and affliction seem real to the physical senses. Mrs. Eddy writes on page 460 of Science and Health: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." This false sense to which Mrs. Eddy refers is the mind of the flesh, the "carnal mind," of which Paul writes to the Romans: "To be carnally minded is death; but to be spiritually minded is life and peace. Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

According to Paul, therefore, it is this carnal, or as Mrs. Eddy terms it, mortal mind, which is responsible for death, and so for the experiences of pain which lead up to it. To be spiritually minded, then, is to escape from the sufferings entailed by the carnal mind; and this is what is meant by the apostle's injunction: "Let this mind be in you, which was also in Christ Jesus." That "mind," which was certainly the divine Mind, overcame all manner of sickness, raised the dead, and finally enabled Jesus himself to triumph over death and the grave.

The works of healing which Jesus did, he distinctly declared in the first, second, and fourth gospels that his disciples would be able to perform. St. John's report of his explicit statement reads, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." If these words mean anything, they mean that a claim of Christianity is substan-

Digitized by Google

tiated in proportion as the claimant is able to do the works Jesus did. In these words, also, the Master issued his proclamation of emancipation from all pain and suffering, and made it plain to all the world that the Christian healing which he taught and practised, and which was practised by the Christian church for nearly three hundred years after his ascension, is the way out of suffering for all mankind.

Our critic is in error in stating that Christian Scientists simply ignore sickness and disease. As a matter of fact, they do nothing of the kind. The Christian Scientist learns to meet and grapple with sickness as well as with sin, on the ground that neither is created by God, but that both are the product of that same carnal mind to which Jesus referred as personified evil: "He is a liar, and the father of it." "Suffer no claim of sin or of sickness to grow upon the thought," Mrs. Eddy writes on page 390 of Science and Health. "Dismiss it with an abiding conviction that it is illegitimate, because you know that God is no more the author of sickness than He is of sin."

Let Christian Science be judged fairly, on the basis laid down by the Master: "By their fruits ye shall know them." Then will criticism give way to a desire to learn more of the spiritual truth of the Bible, an understanding of which is necessary to overcome sickness and sin.

❖

[Ezra W. Palmer in *Loveland* (Col.) *Herald*]

There appeared in a recent issue a résumé of a sermon on Christian Science delivered by a clergyman at Binghamton, N. Y. While the sermon was free from vindictiveness, it gave a number of erroneous impressions of Christian Science. It stated that "Mrs. Eddy held to the Bible while she perverted its teachings," a statement absurd on its face, since it is impossible to be loyal to the Bible and its teachings and at the same time pervert these teachings. Mrs. Eddy never perverted the Scriptures, and her teachings, when understood, make the Holy Scriptures glow with new beauty and spiritual life. Mrs. Eddy laid stress on healing the sick by prayer, and in so doing she had the authority and precedent of Christ Jesus, his disciples, the apostles and prophets. Christ Jesus commanded his followers to heal the sick and preach the gospel. Surely it cannot be argued that obeying the Master constitutes a perversion of the Holy Scriptures.

This preacher deems it absurd that Mrs. Eddy should teach that evil, sin, disease, and death are errors of the human mind, but the sermon as printed nowhere shows what this critic believes sin, disease, and death to be. He assumes they are something else than errors of the carnal mind, but carefully avoids telling the readers of your paper what that something else is. The fact is, no teaching of the Bible is more conclusive than that sin, disease, and death are errors of the human mind. Jesus emphatically declared that the whole duty of man was to love God and his fellow man. How can we love except through mentality? He repeatedly pointed out that we understand God and gain eternal life through believing, knowing, and having faith. Can we believe, understand, have faith, except through intelligence, which is the primary quality of mind? Paul indicated that regeneration was a mental unfoldment, when he said, "Be ye transformed by the renewing of your mind;" also, "Let this mind be in you, which was also in Christ Jesus."

Since, therefore, spiritual unity with God is gained through thought-processes of knowledge and understanding of things divine, it of necessity follows that whatever obstructs or obscures this spiritual vision must be error in mentality. This Paul clearly taught in that immortal eighth chapter of Romans, when he said: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death. . . . For to be carnally minded is death; but to be spiritually minded is life and peace." In that wonderful classification of the results of erroneous evil thinking and the fruits of spiritual understanding, in the fifth chapter of Galatians, Paul again clearly draws the line of demarcation between fleshly, evil thoughts and the divine ideas of God which come to inspire, bless, and save men when their minds are open to receive the things of Spirit. "The works of the flesh," classified in this chapter, are the evil, malicious, perverted beliefs of the human or mortal mind. "The fruit of the Spirit" is inspired thoughts of God, which purify, elevate, and regenerate mankind.

❖

[Mrs. Elizabeth T. Bell in *The Sumter* (S. C.) *Item*]

A recent issue reports an evangelist as saying: "Christian Scientists can't pray at all, because they do away with atonement." Let the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, speak for itself: "We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death." Also: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (pp. 497, 1). An "effectual" prayer must be accompanied by works.

Jesus' prayers as found in the gospels were vital, bearing evidence of conscious unity or at-one-ment with the Father. Christian Science repeats this prayer of demonstration, bringing humanity to a realization that God is ever present, ever available good, and that man can become conscious of this here and now by turning away from the false testimony of material sense and apprehending that for which also he is "apprehended of Christ Jesus,"—indissoluble at-one-ment with the Father. If those who "preach the gospel" would obey the full command and "heal the sick," they would not waste time and effort in futile criticism. Christian Science rests on achievement.

❖

[A. E. Brandt in *The Herald*, Reading, Pa.]

A late issue of your paper reports that Doctor —— has assailed Christian Science. A perusal of the article published shows, however, that he was not really attacking Christian Science, but only belaboring his own ludicrous concepts of the subject. This will readily indicate why the Christian Scientists who were present "seemed to enjoy the lecture immensely," as reported. Christian Scientists occasionally show a predilection for the amusing.

Knowing the progress that Christian Science has made in the face of every possible adverse criticism launched against it from the pulpit in the past, and the profound respect in which it is now held by the most intelligent in the land, Christian Scientists certainly could not have feared the effects of remarks so evidently misrepresenting their religion. Perhaps they even felt grateful for the interest such remarks would create, and so lead to an unbiased investigation of a religion which "destroys" nothing good, but proves "every fundamental doctrine of Christianity," and thus honors the Christ by its works. The writer was happily brought to Christian Science, and consequently enjoys its saving influence, through literature denouncing it, which created in him a desire to know the truth about it. No resentment, there-

Digitized by Google

fore, is felt toward the unintentional instrument that led to such results; but Christian Scientists should be, and usually are, accorded the privilege of correcting erroneous presentations of their faith to the public, and should also be "ready always to give an answer to every man" and "a reason of the hope" that is in them. They have no desire to attack any man or his religion, and certainly do not consider physicians and surgeons as enemies of the race, as alleged.

Mrs. Eddy says on page 151 of the text-book, "Science and Health with Key to the Scriptures": "Great respect is due the motives and philanthropy of the higher class of physicians. We know that if they understood the Science of Mind-healing, and were in possession of the enlarged power it confers to benefit the race physically and spiritually, they would rejoice with us." While not approving their methods, she does not question their good motives. The reverend gentleman finds fault with Christian Science because it is claimed that its text-book is a "Key to the Scriptures." Even so Christian Scientists find it to be, and the joy and comfort they derive from the Holy Scriptures by its use no man taketh from them. Again, he makes the surprising charge and criticism that students of Christian Science "return to the study of the Bible," and states that this is "one of the marks of these false religious movements." Christian Science creates an interest in the Bible, because it reveals a wealth of spiritual truth therein and gives an understanding by which to apply the truths in Christian warfare.

The gentleman states that "healing is taught in the Bible, but the church has dropped it," and then without attempting to do these good works himself, attacks Christian Scientists for doing that which he admits should be done. What he expects to gain from his attitude is not apparent. The Christian Science organization of defense against attacks upon it, also comes under the observation of this gentleman, and he rather commends it for its zeal. It may be said that its activity is directed toward good purposes and mainly toward the correction of misleading statements given out to those who are entitled to know the truth about it, and who are seeking for that present salvation from sin and disease which Christian Science gives.

The threadbare question of matter as substance is also brought up in this discourse, according to the article published, and the gentleman endeavors to ridicule Mrs. Eddy's statement that a stone "is a small manifestation of Mind." Our critic has made the mistake of separating this statement from its context. Mrs. Eddy says, "To unerring spiritual sense, it [a stone] is a small manifestation of Mind, a type of spiritual substance, 'the substance of things hoped for'" (Miscellaneous Writings, p. 27). Spirit being God, omniscient, omnipotent, and omnipresent, it must therefore be the only real substance. Matter being non-intelligent, and therefore contrary to Spirit, cannot be substance. The world is being daily and hourly enriched by the priceless discovery, made by Mrs. Eddy, of this unalterable fact, that materiality, in which humanity buried its hopes for ages, is the stone which must be rolled away from the mental sepulcher in order that the risen Christ, or Truth, may appear in the hearts and minds of men. The book of Job, and other portions of the Bible, clearly imply that this material world is a shadow.

To the gentleman's statement that Mrs. Eddy taught that the Christ was hiding in the sepulcher and not dead, we have to say that the Christ is only hidden to those who bury their faith and intelligence in unintelligent matter. The Christ was never hidden anywhere, nor at any time, except in the unenlightened human concepts called matter, the shadows cast by belief in a suppositious material substance, the darkness that comprehended not the light. Christian Science no more teaches that a fleshly hand is an idea, as claimed by the gentleman, than it asserts that the "arm of the Lord" is flesh. The latter is a compound idea which includes within it all right ideas of power. Neither does it teach that an idea has a headache; it does explain, however (Science and Health, p. 591), that man, "the compound idea of infinite Spirit; the spiritual image and likeness of God; the full representation of Mind," is never sick, in the same sense that there can be no mathematical error, because a mistake in numbers is not mathematical and is no part of mathematics. The science of numbers is never affected by a mistake; and sickness, sin, and death never affect the spiritual man of God's creation, the hairs of whose head are all numbered by the Father, and "shall not fall." The material physical body, born of flesh, which profits nothing, is not that man. Neither are the five physical senses of the so-called bodily man, whose knowledge is limited to matter, the avenues through which Mrs. Eddy discovered Christian Science, as the gentleman alleges. Spiritual things are spiritually discerned. "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

The gentleman is incorrect in quoting from Mrs. Eddy's writings to the effect that the Virgin Mary did not give birth to the child Jesus, but it may be truthfully said that Christ is not physical; the Christ, to whom Jesus referred when he said, "Before Abraham was, I am," was not born of Mary, but of God. On page 473 of the text-book Mrs. Eddy says: "Christ is the ideal Truth, that comes to heal sickness and sin . . . and attributes all power to God. Jesus is the name of the man who, more than all other men, has presented Christ, the true idea of God." On page 332 she says, "Jesus was born of Mary," and on the following page: "The word *Christ* is not properly a synonym for Jesus, though it is commonly so used. . . . Christ is not a name so much as the divine title of Jesus. Christ expresses God's spiritual, eternal nature. The name is synonymous with Messiah, and alludes to the spirituality which is taught, illustrated, and demonstrated in the life of which Christ Jesus was the embodiment."

The gentleman's discussion that Christian Scientists teach "that Jesus was his own devil, and that the only devil that tempted Christ was himself," is not found in any Christian Science literature and is too absurd for comment. Mrs. Eddy does not deny, as alleged, the personality of "God, the Son, and the Holy Ghost," unless the term personality is used in a finite sense. She says: "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense. An infinite Mind in a finite form is an absolute impossibility" (Science and Health, p. 116).

Mrs. Eddy does not deny the reality of prayer, as contended, neither does she say in any of her writings that prayer to God is a hindrance. The chapter on Prayer in her text-book will convince any fair-minded reader of her faith in the efficacy of true prayer to overcome every evil that besets mankind. Through the understanding of prayer as taught in Christian Science, the sick are healed, the sinning reformed, and the sorrowing comforted. The study of Christian Science preeminently avails to overcome immoral tendencies. It is a refiner of character, and creates a natural desire for reading the Scriptures and gaining an understanding of spiritual truth in its application to human problems. If these good works offend evangelists, then "woe unto the world because of offenses! for it must needs be that offenses come."

Editorial

War Relief Fund

While the generous contributions of Christian Scientists in this country for the relief of their brethren—and non-Scientists as well—in Europe have enabled the committees appointed to distribute the fund to alleviate the prevailing distress, the need for assistance is still apparent. As announced in the annual report of the Treasurer of The Mother Church, who is also acting as Treasurer of the war relief fund, "further contributions will be gratefully received." As the sum previously contributed is now practically exhausted, prompt action on the part of our people will be doubly appreciated. Contributions should be designated as intended for the war relief fund, and sent direct to Adam H. Dickey, Treasurer, 103 Falmouth St., Boston, Mass.

The following excerpts from a few of the letters that have been received by the Treasurer, are eloquent in their appreciation of the relief already extended, and afford a glimpse at least of the conditions still to be met.

"On behalf of us all I beg to thank you very heartily for this new sum purposed to allay the distress caused by the war. We are very happy to have been enabled already to do much good in relieving many distressed families. All who have been helped by this fund feel deeply grateful to The Mother Church and to all the dear contributors, and we are requested to transmit you their thanks. This new sum which you have sent, even without being asked for it, stands out as a new proof for us that 'divine Love always has met and always will meet every human need' (Science and Health, p. 494)."

"I need hardly tell you once more how grateful we are for this gift, which has already accomplished untold good. This evidence of God's care for His children has brought a great sense of security to many who were apparently deprived of their means of livelihood, and it has aroused among Christian Scientists a greater appreciation of the loving watchfulness of the Directors of The Mother Church."

"The fund sent to us has, however, been almost exhausted, and demands for help continue to come in and become more pressing as the economic conditions become less favorable. May we take the liberty to inform you of this and to ask if the Directors will be so kind as to help us once more? Please accept the expression of our sincere gratitude for all the Directors are doing for us."

"Your letter of March 23 came duly to hand, informing me that a further sum of one thousand dollars has been credited to us for relief work to needy Christian Scientists. The news was greatly appreciated by all the sub-relief committees, and moneys have already been drawn upon for the present month. Please accept our sincere thanks."

"Our committee has already received quite a number of applications for support, and the joy of those who have been helped is very great."

"We are all so full of gratitude to our dear friends in America that we would like to be able to express it to each one in particular. The demands for relief are increasing every day, but some fears have been broken and demonstrations made. The healing of sin is also showing what the fund is doing. We are more and more grateful for these beautiful proofs of the ever-presence of divine Love. We are very thankful for the supply which meets the need of the sufferers, and not a penny of it is disbursed without careful consideration from the whole committee."

"With deep thankfulness and rejoicing I acknowledge the receipt of an unexpected help from the distribution of the relief fund, having lost my work on account of the war. And now, I have not only regained it, but above all a surer and increased sense of God's omnipotent care, which has been unfolded to me by the 'still small voice' of Truth."

"I am sure you would like to hear how grateful the people here are for the relief fund, and how it has helped many who are in great need. One house we went into had not a scrap of fire, and they were quite unable to cook any food, with only a little flash of sticks. When we handed them the money, the mother broke down and wept, as her husband had not been able to work for about three years. At each place we left *Monitors* and *Sentinels*. We are so grateful to you all there in America for this great help sent over here to us, and we know that back of it all is Love. It has been a great privilege to leave Christian Science literature where otherwise they would have been unable to get it. Foodstuffs are going up to such a price the poor people find it very hard to meet their needs, but I know that all our needs will be met by trusting God, for only good can come. Some of the people expressed their wish for us to come again with some more literature. Their faces beam with joy when we hand them their portion, and it makes me feel so humble and grateful to God for His goodness."

❖

Who Am I?

The queries, Who am I? What my nature? Whence? Where to? assault every human intelligence, and the consequent mental wonderment and turmoil puts a man in a class by himself. He is the only creature who is troubled about the things he does not yet know. Here he has no kin; he is quite unique and peculiar.

The attempted answers which men have given to these questions constitute the supreme contradiction of religious literature, and yet the statement that man is a contradiction by nature is an offense to one's highest intuition. However many make the colossal mistake of identifying selfhood with mortal consciousness, and however familiar we all may be with the rule of ignoble impulse, nevertheless the "Dr. Jekyl and Mr. Hyde" concept of man's make-up is instinctively objected to by all nobility within. The sense of individuality and of indivisibility clasp hands in right consciousness, and the aversion to being broken up into warring and opposing parts is both assertive and universal.

With respect to the nature of man it is both an interesting and an incongruous fact that, without intending it, theology has always stood for superficial sense rather than for spiritual intuition, and today man is being thus materialistically conceived and brought forth by the great body of religious believers. Thus the teaching of Christian Science, that God "the infinite Principle is reflected by . . . spiritual individuality" alone, and that "the material so-called senses have no cognizance of either Principle or its idea," as stated by Mrs. Eddy on page 258 of Science and Health, has broken in upon complacent religious sense as a startling if not threatening destructive innovation. While we have been taught that men were to become a unity of goodness and truth in a future life, prevailing sense has denied the present possibility of the attainment of this ideal, and we have the ignorant self-depreciation of the average man, a stupid, uncouraging counterfeit of the humility of Moses when he said, "Who am I, that I should . . . bring forth the children of Israel."

Digitized by Google

In answering the question Who am I? Christian Science declares that man is indeed the image of God; that the material sense of man is a delusion and a snare, and that only through the maintenance of this discrimination can the integrity of man be preserved in human thought and self-depreciation be consistently rebuked. To disparage or decry the man of God's making is just as blasphemous as to exalt the man of material sense, and yet this cannot be escaped from by those who fail to perceive "the difference between the offspring of Soul and of material sense, of Truth and of error" (Science and Health, p. 30).

The greatest thing about a man is that he is able to think about God, and Christian Science is eventful to its every student in that it awakens a sense of self that would lay hold upon and scientifically attach itself to the infinite intelligence, divine Love. In declaring for the sonship of man, Christian Science opens the door for his compass of the universe. Likeness to God removes every limit to one's companionship with greatness, and conscious at-one-ment with God becomes his inevitable goal. To be able to think a thing is to be able to understand and so to assimilate it, hence in the best sense it is to gain for our very own the substance of all good.

"All things are yours," said the great apostle, and having gained this realization the saints and sages have always been rich, because in their ever recurring flights to the plane of higher spiritual perception, they have entered into the inheritance of real wealth, the possible possession of every divine idea. Thus they have disclosed to others the secret of greatness, the nature of man. In their habit of claiming for their own everything that is good, beautiful, and true, they have illustrated the fact that ignorance always speaks for the poverty rule of an unworthy material sense of self; wisdom for the freedom and enrichment of a spiritual sense of self.

One hears much said about putting self out of the way, but the phrase has acquired quite a new meaning to one who through Christian Science has learned that not self but false sense is to be contemned, and that to "put off the old man" is not to give up self, but to gain it.

JOHN B. WILLIS.

Humility versus Pride

IT is admitted by all earnest students of Christian Science that in order to progress they must cast out of their consciousness whatever is unlike God. Christian Science throws a wonderful light upon all human problems, and thus shows that many things which are regarded by mortals as quite creditable, or at least permissible, are phases of error which should be gotten rid of as soon as possible. There are few perhaps who see that the pride which they entertained before coming to Christian Science,—pride of personal appearance, learning, possessions, or even personal goodness, —may thereafter assume more subtle forms, and until detected and destroyed by Truth greatly hinder progress. Christ Jesus undoubtedly had this in mind when in his Sermon on the Mount he referred to those who boasted of their "many wonderful works," yet his response was, "I never knew you,"—a just rebuke to the pride which sought to exalt self instead of unfolding the humility of the Christ-character.

It is of profound interest to note the many references to pride which are to be found in the Bible, and also in Science and Health. Mrs. Eddy evidently wished to show us how to overcome this error which shut out spiritual blessings from those of olden time, as will be seen by reading her definition of Jerusalem, given in the Glossary of our text-book, which reads in part: "Mortal belief and knowledge obtained from the five corporeal senses; the pride of power and the power of pride; sensuality; envy; oppression; tyranny." In the twenty-sixth chapter of Leviticus we are told of the boundless blessings which come to those who obey divine law, —of peace and plenty, of mighty conquests over evil, of the presence of divine Love in their midst. We read of the sad effects of disobedience,—of sickness, fear, and poverty, then comes the stern decree of Truth: "I will break the pride of your power." The wise man tells us that pride brings contention, and that it goes before destruction, while Christ Jesus classed this evil belief with many others which dwell in the heart of mortal man and "defile" him.

In marked contrast with this mental state is the beautiful humility of the Syrophenician woman, who did not resent even the term "dogs," so often applied by the Jews to those outside of their own faith; indeed she eagerly seized upon it with a plea for the "children's crumbs," and her humility and faith were richly rewarded with the bread itself, for her daughter was healed. Our revered Leader gives us a wonderful lesson in humility on page 35 of Science and Health, where we read of Jesus' meeting with his disciples after his resurrection, of the passing of their grief and the coming of repentance,—"hearts chastened and pride rebuked." Not so long before this some of them had been desirous of place and power in the Master's kingdom, quite unaware that these mortal concepts could never exist therein; but as humility took the place of pride, their fear vanished, and they were ready to respond to the rule given by their Master, "He that humbleth himself shall be exalted."

Paul tells us that Jesus "made himself of no reputation," that he humbled himself in submitting to "the death of the cross," but that God "highly exalted him," and gave him a name which is "above every name." Without lowliness and humility he would not have attained this high honor, nor can his professed followers tread in his footsteps if they are blinded by pride. The one who is thus enslaved, knows not that he is worshiping a graven image of self and asking others to bow down to it; as did Nebuchadnezzar, who was "hardened in pride" and did not know that God alone is great and "giveth grace unto the humble."

Pride and real greatness have nothing in common, and pride fades out before advancing spirituality, for this is a constant reminder of how much there is to be overcome before perfection is reached and the divine likeness realized. In Proverbs we read, "By humility and the fear of the Lord are riches, and honor, and life."

ANNIE M. KNOTT.

Among the Churches

Current Notes

EUREKA SPRINGS, ARK.—The opening service in the new Christian Science church, on Mountain street, was held last Sunday morning [April 25] at eleven o'clock. The Christian Scientists have had an organization here for a good many years. More than a quarter of a century ago, the study of Christian Science was introduced into Eureka Springs. Since that time, the movement has grown, and some ten years ago the lots on Mountain street, on which this beautiful church now stands, were purchased. Later, the stone in the basement walls was purchased, at the time excavation was made for the new Carnegie Library, but not until June 1, 1914, was the contract let for the building, and a month later, ground was broken on the construction work. When the church is entirely paid for, dedicatory services will be held.—*Eureka Springs Times-Echo.*

ST. LOUIS, MO.—The literature distribution office of First Church of Christ, Scientist, is closed, as it was decided at a church-membership meeting to work jointly with the other churches. For the year 1914, the following literature was mailed direct from this office: 23,642 *Monitors*, 12,113 *Sentinels*, 440 *Journals*, 6,107 pamphlets, 2,511 miscellaneous matter, making a total of 44,813. The literature distributed in the church after lectures, and in other ways than mailing, totaled 13,266. The total number of books donated to libraries was 115. Yearly subscriptions for the *Monitor*, the *Sentinel*, the *Herold*, and the *Journal* totaled 23.

During the four months of 1915 that the committee has been operating, literature has been mailed to the number of 17,892; distributed, 8,892; and donated to libraries, 148; with yearly subscriptions to periodicals, 21.

Literature Distribution Committee.

LUDINGTON, MICH.—The Christian Science church of this city is to be remodeled and enlarged, the alterations to cost approximately four thousand dollars. When completed, the building will be one of the most commodious and attractive church homes here. The builders are under contract to have the church ready for occupancy by July 1.

Grand Rapids Herald.

DAYTONA, FLA.—The Christian Science Society has purchased a lot, 55 feet by 110 feet, corner of Live Oak and Palmetto avenues, on which they intend to build in the near future. The price paid was twenty-seven hundred and fifty dollars.—*Correspondence.*

COSHOCTON, OHIO.—The Christian Scientists have leased the large hall in the new Hall Building on South Sixth street, and beginning Sunday, May 16, their service will be transferred from Carnegie Library to the new quarters.

Coshocton Tribune.

MAQUOKETA, IOWA.—The Christian Scientists have purchased a fine lot on South Second street, and on this lot in the very near future they expect to erect a fine church.

Excelsior Record.

❖ ❖ ❖

The Lectures

Portland, Ore.

Under the auspices of Second Church, Jacob S. Shield delivered three lectures on Christian Science. They were attended by large and attentive audiences. The introductory remarks by Eugene W. Amesbury at the first lecture were as follows:—

The fact is quite generally established at this time that Christian Science is a religion of good works. The achievements of Christian Science are causing many to believe that the healing power of God, the God "with whom is no variableness, neither shadow of turning," is as efficacious and available to mankind now as it was nineteen centuries ago. Christian Science is educating its followers to a higher understanding of God, and a deeper insight into the truth as set forth in the Bible. While I am not a member of the Christian Science church, I gratefully acknowledge the physical and spiritual benefits which I have received from the study of this subject for over a year and a half.

My earliest favorable impressions of this truth were received in conversation with one whose understanding was very clear. I was told that Christian Science was a return to primitive Christianity, foundational truth. The logic of the statements made by this friend caused me to review my own experience in the search for truth, which had not always been so uniformly satisfying as I desired. As I listened, there flashed across my memory many of the sayings of the great Christian, who spake as never man spake: "The kingdom of God is within you." "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Also Paul's question of King Agrippa, "Why should it be thought a thing incredible with you, that God should raise the dead?" These, with other sayings, which previously seemed to belong to an age long past, and were not to be applied literally to present-day needs.

I learned in that interview to discard my prejudice, and a desire was quickened within me to know more of this way, this approach to God from the spiritual side. With the very slight understanding gained in that conversation, I realized that I was not opposed to Christian Science, but only to what I had thought it to be. I am also convinced that the uninformed public entertains numberless misconceptions as to what Christian Science is. These lectures are for the purpose of affording, to those who honestly desire to know, opportunity to learn what is so taught.

At the second lecture Mrs. Gertrude Deane Houk in her introductory remarks said:—

For many centuries sinning, sorrowing humanity has longed for and have tried to believe that at some time and in some way they would find surcease from their suffering and sorrow through the reappearing of the Christ. One of the distinguishing marks of the last century was a great spiritual awakening, and an ever increasing demand for the laying aside of creeds and dogmas, and the longing for a practical Christianity. Since every need is met as soon as the human mind is prepared to receive the blessing, to meet this need Christian Science was given to the world, and it came, bearing its burden of proof, redeeming the sinner, healing the sick, and comforting the sorrowing. The seed sown by an inspired woman nearly half a century ago has borne immortal fruit, and today unnumbered thousands are turning to Christian Science and finding in it the solution of life's problems.

Miss Anna Friendlich in introducing the speaker at the third lecture spoke as follows:—

Long ago in Judæa, in parting from his disciples, Jesus promised the world a Comforter. Today, out of the wilderness of tribulation and doubt, of inquiry and longing, men are asking of Christian Science, "Art thou he that should come?" Christian Science answers in words twenty centuries old: "The blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

In turn, Christian Science propounds a question to this age,—an ancient, familiar question: "Whom do men say that I am?" In other words, "What do men pronounce Christian Science to be?" And those who have experienced the benefits of Christian Science, and have apprehended a measure of its meaning, reply, "Thou art the Comforter,—Christian Science is the promised 'Spirit of truth.'"—*Correspondence.*

❖

San Francisco, Cal.

Bliss Knapp delivered a lecture on Christian Science in the Exposition Civic Auditorium. There were between seventy-five hundred and eight thousand people present. The building has a seating capacity of ten thousand six hundred. The

Digitized by Google

ecture was printed in full by the *San Francisco Examiner* on its press in the Machinery Hall on the Exposition grounds, and from this account we take the following report. The ecture was given under the auspices of First Church of Christ, Scientist, and the first reader, Floyd Shank, introduced the speaker saying:—

It is indeed a joyous welcome that is extended to you—to you each and every one individually—to receive a message of good cheer and healing. The lecture this afternoon is the first of a series of ten to be given in this auditorium during the year under the supervision of the six Churches of Christ, Scientist, in San Francisco, in cooperation with the other Christian Science churches and societies in the state. These lectures are all to be delivered by members of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass.

However correct or incorrect our understanding of Christian Science may be, let us for the moment lay aside our own personal feelings and remember that we are all children of the same Father, seeking liberation from the same difficulties in various forms, and let us listen attentively to the lecture, to get from it all we can that will help us to be happier and healthier, and to manifest more good will and brotherly love toward each other.

❖

Orlando, Fla.

The Hon. John M. Cheney, on introducing Bicknell Young, who lectured at the Lucerne Theater on Christian Science, spoke in part as follows:—

If we accept history, we can almost believe that it is a part of our human nature to be intolerant of all religions except our own. Inquisitions, tortures, persecutions, and banishments seem a part of world life in all our past. The Pilgrim fathers came to our new world for freedom to worship their God, but even they wanted all who came under their sway to worship as they did and were intolerant of heretics. But a new spirit is abroad, and today who but the narrow-minded will assert that all of the many churches of many creeds are not doing their own work for the bettering of mankind?

Within the past few years the Christian Science church has come into the field, and in so far as it combats sin and error and teaches the children of men to seek for truth, it has a mission whose greatness is bounded only by its true worth and the zeal of its disciples. Any creed that numbers as its disciples so many intelligent and God-fearing people as the Christian Science church, commands our respect and is entitled to an attentive hearing.—*Correspondence.*

❖

San Diego, Cal.

George Shaw Cook lectured twice on Christian Science at the edifice of First Church of Christ, Scientist. The first lecture was under the auspices of First Church of Christ, Scientist, and the lecturer was introduced by Edward Champion, first reader, in the following words:—

Both Biblical and other history show that mankind has always had a desire for a better understanding of God, and like Job is ever crying: "Oh that I knew where I might find him! that I might come even to his seat!" Christian Science is giving us a better comprehension of God, and man's relationship to Him; the knowledge that we are ever near "his seat" when we are striving to serve Him. It is teaching that God is a God of love, not hate; of good, not evil; and with this interpretation there comes a fuller appreciation of the fatherhood of God, which inspires with trust, hope, confidence, hence happiness.

The second lecture was under the auspices of Second Church of Christ, Scientist, the speaker being introduced by Edwin F. Hammond, first reader, as follows:—

The Bible tells us in the first chapter of Genesis that God created man in His own image and likeness and gave him dominion over all things. For many generations theology has taught that mankind must be good in order to go to heaven some time. But as the world has not fully understood just how to be good, it has dwelt throughout the ages in a state of uncertainty, doubt, fear. Now Christian Science, scientific Christianity, not only teaches how to be good enough to go to heaven, but it teaches by exact rules how to be good enough to experience and realize and enjoy heaven right here and now. Jesus declared, "The kingdom of God is within you."—*The San Diego Union.*

❖

Bremerton, Wash.

Before an audience that filled every available seat in Eagle Hall, Virgil O. Strickler delivered a lecture on Christian Science. He was introduced by C. W. Fisher, naval constructor, who said:—

Mankind today demands relief from the suffering and strife so sorely trying humanity,—relief from physical ills, from useless contests, from doubt and despair. A demonstrable religion, one whose statements can be proved, whose promises are fulfilled here and now, is available for this relief and has been embraced by thousands. This religion is Christian Science. Centuries ago Christ Jesus said, "Go ye into all the world, and preach the gospel;" also, "Heal the sick." How? An earnest, devoted woman, Mrs. Eddy, found the answer to this question in the Scriptures and gave it to the world as Christian Science,—a religion of health and healing, joy and peace, truth and love, which is today healing all manner of diseases and breaking the bonds of sin.

Bremerton News.

Waterville, Maine

The Rev. Frank L. Phalen, on the occasion of a lecture on Christian Science in the Unitarian church by William R. Rathvon, said in his introduction:—

It is one of the characteristics of the Unitarian church that our windows and doors as well as our minds open in all directions to truth. We hold with John Robinson the Puritan, who told the Pilgrims as they set forth for this new world, that "there is more truth to break forth from God's word." I recall a famous remark of John Stuart Mill, that "he who knows only his own side of a question only half knows that question."—*Correspondence.*

Testimonies of Healing

Six years ago I was a miserable invalid with no hope of recovery, and in addition a great sorrow had come to me. I had been treated by many doctors, among them four of the leading nerve specialists in London, but they failed to cure me. As a last resource I thought I would try Christian Science, though I had no great faith in it and no knowledge of its teachings.

I was put in the way of obtaining a copy of Science and Health, and after reading a few pages found I was healed. Naturally my gratitude was intense, so I began to study that wonderful book, and I find as the years roll on that it becomes more and more enlightening and makes the Bible inexpressibly more helpful than ever before. Christian Science teaches us to make a friend of God. Nothing is too trivial to lay before Him, and a load of care and responsibility is lifted from us when we rely on His guidance in all things. I so often feel inclined to rejoice, and do rejoice, in this happy feeling of God's nearness.

Quite lately one of my eyes became dim. The dimness was just over the retina, so that if I closed the other eye it was difficult to read. At first I was filled with fear and foreboding, but I worked very hard to put it out of thought and clung to God as the All-power. This I did for several days, and would not allow myself to dwell upon the difficulty or to test the sight. After about a week, with the help of a Christian Science practitioner, to my great joy I found that the mist had cleared away and my eye had become almost normal. I again thank the Giver of all goodness for His loving care, and also for sending us a knowledge of Christian Science through His servant, Mrs. Eddy.

EMILY DURNFORD, Guernsey, England.

❖

It is with a sense of joy and gratitude that I add my testimony of the healing which came to me through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been suffering for many years from a so-called incurable disease commonly known as hereditary lung trouble, and was seemingly at the brink of the grave. At this time the Christian Science text-book was placed in my hands and I was told to read it. I did so, and the result was that through my earnest study and the loving help of a practitioner I was completely healed. I was able to resume my work within two weeks, and have not missed one day on account of any physical disability since.

This healing took place six years ago, and since then I have received numerous blessings. Many vicious habits have been overcome, some slowly and others more readily. For these blessings I am indeed thankful, but above all I am grateful for the spiritual uplift which has come into my life and brought peace and joy where there was once despair without hope. Our dear Leader has shown us how to find and utilize man's God-given dominion in working out all our daily problems through the teachings of Christian Science and the light it throws on the Scriptures. I am truly grateful.

C. W. ANDERSON, Claremont, Cal.

❖

A few years ago our family physician, after an examination, told me I should undergo an operation as soon as possible. He claimed there was a serious displacement and a diseased appendix, with adhesions. I told him I did not think my family would consent to an operation, as my mother had just been healed through Christian Science treatment; but he laughed at the idea of my being healed that way.

I had unlimited faith in this physician's opinion, but thought I would first talk the matter over with my mother and did so. She agreed to my having the operation provided I would first try Christian Science treatment for a week, and this I consented to do. After the first week I became interested, and before the month was up I was so much improved that I felt the operation was unnecessary. After the lapse of several weeks more I realized that I was perfectly healed, not only of the trouble for which I had treatment, but of other ailments as well, especially of a displacement, which disappeared after the first treatment, and the healing has been permanent. A few months ago the doctor who pronounced the operation necessary, asked permission to examine me, as he could not understand my appearance of perfect health, and upon examination found no evidence of the trouble. For this I was very grateful, although I did not need this proof, as I knew I was perfectly well.

The most wonderful part of Christian Science is the new and broader interest it awakens in one to gain a greater understanding of God and his fellow men. Moreover, the study of this truth quieted all my old doubts and fears. Up to the time I began this study the Bible had seemed little more than a mass of impossible fables and contradictions. But studied in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy, I find it an ever present help and guide.

I wish to express my gratitude for all Christian Science has done for me, also for the help so patiently and lovingly given me, which opened up the beauties of this Science and to make it applicable in daily life.

CHRISTINE ELIZABETH WOODALL, Houston, Texas.

❖

I became interested in Christian Science in the year 1905. The first time I attended a Christian Science church was one Sunday morning, and I was very much impressed. For several years I had felt quite antagonistic toward this healing, but after attending that service, which I thought very beautiful, Christian Science seemed a wonderful religion. Some literature had been lying around my home for a number of years before this, but I would not read it. I was also troubled with catarrh, having suffered from this ailment for a long period of time. I had tried many remedies, but without benefit. I had also suffered from very weak eyes since childhood,—to such an extent, in fact, that I was often unable to keep my eyes open in a bright light, and even under ordinary conditions the eyelids were perpetually blistered. Then too I had headaches and a number of other ills including stomach disorder, besides a bad temper.

In April, 1906, I determined to go to a Christian Science practitioner for treatment for the catarrh, which was very annoying to me. I took treatment for three weeks and was not entirely healed, but my condition was so much improved that I saw the great good Christian Science could do me, and was determined to study it thoroughly. I therefore purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and could not spend enough time over its study. I found it, indeed, a wonderful book. Soon after this, a lady with whom I was at that time unacquainted, came to me after church service and called attention to my eyes, which were well and strong, for she had noticed that when I first attended the church they seemed very weak; and I then discovered that this difficulty, from which I had suffered since childhood, had vanished. Through this study the catarrh also vanished, as well as the other discordant conditions already mentioned, and the bad temper. Moreover, there have been many other cases of healing in the years since then, proving the wonders that Truth can do.

Digitized by Google

I have good reason to be grateful for Christian Science, and I certainly have found from experience that it is far superior to *materia medica;* in fact, I feel it would be sacrilegious to compare Science with any material method of healing, for it is a fulfilling of "on earth peace."

CHARLES C. SANDELIN, Oakland, Cal.

Since coming into Christian Science, I have received so many blessings I could never begin to tell them all. I have also had the benefit of class instruction, for which I am most grateful.

My first physical healing took place about five years ago. For three or four years I had suffered a great deal with pain in my side, and other attending inharmonious conditions, until finally I could hardly walk, as every move caused me pain. I gave up my position and went home, where I had an examination by one physician, then consulted with another, the result being that an operation was declared necessary. I told my parents I would never consent to this; I would rather die as I was. They did not know what to do, so my father then asked me if I would try Christian Science, and I readily consented, although we knew scarcely anything about it. I went to a practitioner, and in less than a week was completely healed, and have never had the slightest return of the trouble. After this healing, and even after the first treatment, I believed Christian Science was the truth, but was not sufficiently awakened to the greatness of it to study. I even went back to the church of which I was a member, but always upheld Christian Science if any one mentioned it.

About two years later I was again taken ill. I had a severe spell of headache every day, and suffered terribly; in fact, I had to lie in a dark room and could not stand the slightest noise. This time I had a doctor, and was in bed about a month, on a diet, but did not get any better, and did not weigh a hundred pounds; indeed, I had arrived at the state where I did not expect to get well and did not care very much whether I did or not, I was so terribly unhappy and miserable. There seemed to be nothing in the world for me but misery. Finally, I thought of Christian Science and had my mother telephone for a practitioner, who came to see me on Saturday, and told me to come to her house on Monday. She did not say "If you are able," but just told me to come, and I did. I was rather weak upon my arrival there, as I had quite a walk and a long car ride, but she gave me another treatment, and as I left she said, "Remember, God is your strength." All the way home I felt better and better, until by the time I reached our house it seemed there was nothing I could not do, I felt so happy and so strong.

After this I thought it was time to begin to study Christian Science and try to understand it, so I went to church and also read some of the periodicals. A little later a copy of Science and Health was given me by one who is now my husband, also a *Quarterly.* I read these every spare moment; I could not get enough. It was just what I was hungry for. Then after about six months I had another attack of this headache. Some one had helped me before; now it was time for me to work out my own salvation and begin to prove the things I was learning. I had several of these spells, but they were not nearly so severe as formerly and soon passed away. I seldom ever have one now, and when I do, it is so slight I would hardly recognize it as the old trouble, and I can always trace it to some inharmony in my thought. I know that as I am faithful in applying my knowledge of the truth, this difficulty will be entirely eradicated from my consciousness. I am very glad I have been forced to work this out for myself, for I know I have learned a great deal in so doing. During these three years of study I have had many demonstrations of the power of divine Love, and know for a surety that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I suffered for several years with severe throat trouble, but this has disappeared, as has also a trouble that had been caused by dislocation of the jaws while I was having some dental work done.

Thus from extreme unhappiness and despair I have been brought into peace and joy. I feel stronger than ever before in my life; in fact I think I can walk as far, if not farther, than most people, and can do as much work without any ill effects, something I could never say before taking up Christian Science. Best of all, Christian Science has given me a God who is Love, a God whom I can trust, and who I now know is a "very present help in trouble." The Bible and Science and Health are my daily companions. There is no sin so terrible, no sickness so severe, no sorrow so great, that it cannot be healed in Christian Science, and all any one has to do to prove this is to give it a fair trial.

All that I am and all that I hope to be I owe to God through Christian Science, as given to us by Mrs. Eddy, and my daily prayer is that I may prove my gratitude by my daily life.—MATTIE C. SANDELIN, Oakland, Cal.

I am indeed grateful for all that Christian Science has done for me and mine. The doctor said I had liver and stomach disorder. I had Christian Science treatment, under which I sometimes seemed to improve, but then again to get worse. My condition was distressing to my friends and discouraging to myself. Then the time came when my husband was advised to call a doctor, to meet the requirements of the law, as it was thought I would pass on. The doctor was therefore called, but he gave no encouragement. I knew in my heart that *materia medica* could do no good.

At this time, when I was almost hopeless, a practitioner in an adjoining town undertook the case. The first treatment destroyed much fear, and her happy face and cheerful manner, together with her positive assurance that God loved me and would heal me, lifted my thought and I began to gain. She explained to me man's relation to infinite Mind, and the all powerful, ever operative law of Love. My fears and doubts vanished, and through her loving, faithful work I began to grasp the truth as I never had before. Trouble and worry were destroyed in our home. My husband began to read Christian Science and to have confidence in it. My healing was a little slow, but it was sure, and finally complete. Then about a year later I was stricken down with severe pain, so that I was not able to move. This attack, however, was not at all like the ailments of which I had been healed. I called the same practitioner, and she remained with me all night. The trouble disappeared, and God was again proved to be a present help in my hour of need. Those who saw me that day were surprised to find me up and free the next day.

I am thankful to God, also grateful to Mrs. Eddy for her teaching and the understanding I have gained which enables me to watch my thinking and not allow false claims to get my attention and manifest inharmony. My prayer is that I may be faithful in the application of the word of God and the power of Truth in my every-day life, overcoming self and reflecting Love. I read the Lesson-Sermon daily, and I am thankful for our periodicals and for Mrs. Eddy's writings.

NETTIE REIST, Berlin, Ontario, Canada.

In March, 1912, I was taken ill, and the condition seemed serious. A doctor who was called in diagnosed the trouble as influenza and measles. He left some medicine, but I did not take it. At nine o'clock in the morning a telephone message

Digitized by Google

was sent to a Christian Science practitioner several hundred miles away. In the afternoon there was a change for the better; that same day I became conscious, and my recovery was rapid. I was up and around in a few days, and soon back to business. Although the high temperature led to the loss of my finger nails, they grew out smooth and perfect.

Previous to this experience I had some dental work done, with the result that poisoning set in and the chances of recovery were against me. The condition was alarming, and my wife began to fear. The practitioner appeared at the right moment, however, and told my wife to turn her back on the scene of error and read aloud from Science and Health to quiet her fear. She then declared the truth, and told me to repeat the words after her; but it was some minutes before I could do this. I do not know how long the practitioner kept me going over and over the inspired statements, but I do know that the sweet sense of the presence and power of God came gently into my consciousness, and soon afterward we heard from the adjoining room the voice of my wife, now free from fear, repeating the beautiful promises with us. The pervading sense of Love swept over all, and every phase of error vanished. "Peace, be still" was spoken, and amid the thanksgiving to God I fell asleep, sleeping restfully until morning, when I rose, dressed, and had breakfast with the family.

That night there came into my experience that which cannot be taken from me, and I promised my heavenly Father I would recall those words every day, and strive to live in accord with the teaching of Christ Jesus, as revealed through the one whom I love to call revered Leader. I also wish to add a word of thanks for the healing of my beloved wife, who was saved from the grave through treatment in Christian Science.—PHILIP REIST, Berlin, Ontario, Canada.

✧

I have been healed through Christian Science of ills too numerous to mention, but I would especially like to tell about one healing. A year or so ago I fell down the cellar steps and struck my shoulder, and the pain was so great that I could not raise my arm. A Christian Science practitioner was called, and with three treatments I was perfectly healed. About five years ago I came to Christian Science through the healing of my daughter, who had been given up by the physician after several months of medical treatment for appendicitis and gall-stones. She had not eaten any solid food for nearly four months, so her husband decided to try Christian Science. She had seven treatments and was cured, and she has been well ever since. For this healing, and for many other blessings which have come to me and mine through Christian Science, I am most thankful to God. My grandson has been healed of a throat affection and a severely sprained wrist.

I write this testimony in thankfulness to God, and with much gratitude to Mrs. Eddy, who has shown us the way. My daily prayer is for more understanding, that I may do what God would have me do.

MRS. JOHN ROCHETTE, Canton, Ohio.

✧

Several years ago I came into Christian Science to be healed of what is called anemia. After telling the practitioner all my troubles, she said I would be as Paul some day,—that I would even be grateful for my afflictions. At that time I did not see how I could ever be grateful for the state I was in, for I had just been operated on and was left in a very weak condition; besides, my husband was having business reverses.

My healing seemed rather slow, as I had steady treatment for a little more than a year. About two months before healing took place I wondered why I was gaining so slowly, then I found that I was not willing to become "as a little child." There were many "ifs" and "whys" and "buts," but when I willingly accepted and practised the truth, I was healed. Since that time, I have had many beautiful demonstrations, one of which was a case of childbirth. The birth was perfectly normal, taking just a short time and with little pain. I am grateful for all the blessings that have come to us through Christian Science, and for the understanding I have of the truth as given in Science and Health; also for a growing realization that to know more of God is the bread of life."—MINNIE A. GAGE, Chicago, Ill.

✧

It is with a grateful heart that I think of the wonderful help which Christian Science has been to me and my family, and I feel it a duty to tell others about some of the many blessings received through its teachings. It has made our home a place of peace and harmony. I became interested in this religion about ten years ago, through the healing of a friend, but I was very young and let error persuade me to discontinue the study. I was then living in the country where I could not attend church, but a little over a year ago I moved to Kinston, N. C. I again became interested in Christian Science and have been studying it ever since. I am truly thankful for the many benefits received through the study of the literature.

My wife and I have been healed in several instances, and have had some good demonstrations with our two children. When our little boy was about three years old, he was taken with what seemed to be spasms one afternoon, right after waking from sleep, but a Christian Science practitioner was quickly called in and the child was soon quieted. That night another attack came on, worse than the first; but after the child quieted down that time, the fever cooled off, and he went to sleep and slept all night. When he awoke the next morning the fever was gone and he was as well as ever, as he has been ever since. For this one demonstration I feel very thankful to God for the truth that makes us free. I cannot be too grateful for being led into Christian Science, and shall endeavor to advance daily in the understanding of Truth.

TROY TYNDALL, Kinston, N. C.

✧

I am most grateful for the benefits I have received through Christian Science. I suffered for twenty-three years from what was diagnosed as hysteria, and my physician told me that I ought to work only half a day or I would never be well. He also advised me to try Christian Science, because he could not help me, and accordingly I did so. The power of Truth, as made known in Christian Science, at once made such a change in me that I could work a whole day and every day of the week, and I have done so ever since. During the six years that I have been studying Christian Science I have not had one attack, although I have done sewing and other work I never thought I would be able to do again. I have likewise had several demonstrations over colds. My heart is overflowing with thankfulness to God, and with gratitude to Mrs. Eddy for the great help I have received.

HATTIE SCHULTE, Milwaukee, Wis.

I can testify that the statement my sister makes is true.

MRS. A. M. SAUER

✧

I wish to express my gratitude for what Christian Science has done for me. Three years ago I suffered from nervous exhaustion and stomach disorder, so that I was unable to work for a year. Then a friend advised me to have Christian

Digitized by Google

cience treatment. I had tried several medical doctors, also ectric and other treatment, but had received little benefit nd was very much discouraged. I accordingly took my iend's advice and turned to Christian Science, with the sult that I was healed of the nervous trouble in three weeks, that I was able to return to my work. The stomach disrder was also overcome in a few weeks.

I am grateful to all who have helped me on the way, as ell as for our literature, and I thank God that Christian cience with its great blessings has come to me.

FLORENCE L. BECKWITH, South Manchester, Conn.

❖

With loving gratitude to God for Christian Science I give is testimony of what it has done for me through the study f the Bible and "Science and Health with Key to the Scripures" by Mrs. Eddy.

About four years ago I was healed of what is called ppendicitis. Some time ago I had a bilious attack and was o very ill that my husband wanted me to have a doctor, but nstead I called for a Christian Science practitioner, and the econd day I realized that the ever present help was at hand. had to be down-town for business at noon that day, but I as so weak I had to ask the practitioner for more help. p to eleven o'clock I did not know how I could dress myself, ut I sat down and read the week's Lesson-Sermon, until truth overcame error and I was well and strong again. dressed and had lunch, then went to town to my place of usiness, and helped until nine o'clock that evening. I could ardly believe I was the same person. While in the old elief, I would be sick from such an attack from four to six lays and under a doctor's care. I am more than thankful o God, and grateful to our beloved Leader, Mrs. Eddy, for hristian Science.—MRS. A. WILLIAMSON, Los Angeles, Cal.

❖

[Translated from the German]

Four years ago I got into business difficulties, and was finally unable to meet my liabilities, so that I was facing bankruptcy. Conditions were such that I could not expect help from any side. At that time I heard of Christian Science through a dear friend, and while listening to his talk on the subject, I gained confidence in it. Then I went to see a Christian Science practitioner, and after a lengthy conversation it became absolutely clear to me that this was my only chance of being spared the pending disaster. I asked her to lend me her assistance in Christian Science, and she was very willing to do so.

The result of the first treatment was, that the declaration of insolvency was withdrawn and my creditors allowed me a stated time in which to make my payments. It was indeed wonderful to experience on several occasions the straightening out of business difficulties and to be able to pay dues at the last moment. I often needed encouragement from the practitioner when I was under severe strain,—when old bills, current obligations, and all those matters which are part of the running of a factory, would come up. Frequently I did not know where to get the necessary funds, and yet I could not afford to lose confidence, but endeavored to realize that everything we need is right here. This trust and confidence is realized only in Christian Science; no other religion could possibly afford such help.

Today my affairs are in good order; and I know this will always be the case, for I have learned to put my trust in God and am striving to grow in spiritual understanding. For this revelation, be glory and praise to our heavenly Father!

WILHELM GRUONER, Winterbach near Schorndorf (Württemberg), Germany.

From Our Exchanges

[*Zion's Herald*]

Time was when we could say with those of old, "That which we have seen and heard declare we unto you." Not so today. There is little positive teaching of youth, as once there was,—at least, to no such extent as there should be. And this is in itself a result of our unbelief. That accent on the word "now" in the question, Do we believe in hell now? reveals the temper of the age. Belief is shifting, changing. There is no eternal verity; there is nothing settled! Such a condition is fatal. It makes for empty pews, sterile spiritual life, instability in faith. It makes for agnosticism in our religion and leaves the church emaciated and weak, impotent in the hour of great trial.

If the crisis through which the world is now passing shall serve to open our eyes to this fact, it will not have been in vain. With the foundations shaken beneath our feet and the skies dark with hate, there is no soul-satisfaction in the impersonal God of a cold science without faith, nor in the mere ministry of social helpfulness. Only one thing holds then, and that is the anchor within the veil, where the spiritual realities are to be found. What this age needs is a faith that can lead one to say, "I know whom I have believed, and am persuaded that he is able to keep that which I have committed unto him against that day."

[Walter Rauschenbusch in *The Standard*]

Christianity stands for the reign of God on earth, for social redemption, for faith in a just and Christian social order. It must be the inspirational prophetic power inside our commonwealths. It must point to the unrealized will of God. It must show our young men and women a vision of the nobler nation we might be, and set them the task of realizing it throughout their lives; a nation just, sober, wise; a nation that loves liberty and offers to all an equal chance to live a glad life and to unfold their powers; a nation that stands by its aged and weaker members; a nation that honors work and despises parasitism; a nation that crushes none by vindictive punishments and starves none by hopeless work; a nation that binds all in a great bond of cooperative work, and makes the service of the common good the best way of realizing a man's best self.

[Rev. David Hanson Christensen in *The Christian Intelligencer*]

There is no institution in all the world that so deplores the present war as the church of the Lord Jesus Christ. Let men but respond to her efforts and yield to her truth, and as they learn to put God first, there will be an advance in all of those things that make for peace among men and between nations. This war is the penalty of the sin of nations. "The church has eternity in her heart" and cannot collapse. When the nations receive and apply the truth of Jesus, they will cease to learn the arts of war, and their greatness shall increase. Truly, "it is high time to put away pretenses and face realities," and in doing this to bear in mind that the pretenses are on the human side; the realities are of God.

[*The Watchman-Examiner*]

A revival of religion is the most unexpected result of the great war in Europe. At the outbreak of the war it was cynically said that Christianity had been disproved and religion had broken down. On the contrary, religion has not been so dominant in the minds and hearts of men for centuries as it is today. Testimonies have abundantly come from all the countries engaged in the war that the people are bowed before the Lord and are filling the churches. This is

Digitized by Google

especially true in rationalistic Germany and in what used to be called godless France. The day of pure intellectualism is over. The revolt against it which has been growing in recent years, has been brought to a climax by the war. Men have ceased to trust their unaided reason, and are learning to trust in God. The heart is asserting its place against the undue supremacy of the head.

[*Pacific Christian Advocate*]

Character excels all things. Horace Greeley exclaimed, "Fame is a vapor; popularity an accident; riches take wing; only one thing endures, character." The book of Job teaches a striking lesson. Greater than all earthly possessions was the character of that one man. If character is the flower and fruitage of existence, how important then that our theory of life be correct, for our conception of the meaning of life must determine our final character. Principles regulate actions, actions crystallize into habits, habits regulate character, character determines destiny. Underneath every noble life are noble principles.

[The Venerable Archdeacon Wilberforce in *The Christian Commonwealth*]

"No man hath ascended into heaven, but he that descended out of heaven, even the Son of man, which is in heaven." It is not a conundrum; it is an inspired, compendious statement of your place and my place in the infinite creative Mind, and in the cosmos. Our Lord spoke those words in his representative character, as the unique sample of the race. Heaven is not a local habitation; it is a condition of consciousness; it is an overwhelming, thrilling vision of the ultimate cause of all causes, the infinite Spirit. "Ascending into heaven" is a mental ascension; it is a gradual realization of God, leading on to the actualized experience of oneness with the "All."

[*American Lutheran Survey*]

The Christian is the only rational optimist. He has reason for the hope that is in him. He does not despair of any human being,—not for the reason that there is something of good in everybody, which after all is only a relative term, but for the reason that the gospel of Jesus Christ is able to save to the uttermost them that believe. Because he believes in the regeneration of the individual, he does not despair of humanity, but hopes against hope that the saving power of the gospel may some day restore the image of God in men.

[*The Christian Register*]

Spirituality is the most practical thing in the world now; and all that makes the spirit strong within us must be drawn out and trained. The opinions that divide men become nothing to the central faiths which avail to quiet and sustain them. As people in a flood flee from their homes to seek the high places, so people in the flood that overwhelms so many today must fly to the rock that is higher than they. Herein lies the splendid timeliness of the purest religion; and he can be of true good cheer who finds a religion which overcomes the world.

[*The Advance*]

We are far from understanding the simplicity of the gospel of Christ. We have missed many of its finer meanings through our attempts to force it into a philosophy. It is very difficult to torture the teachings of Jesus into a formal creed, or to form them into the terms of speculative theology.

[*The Christian Work*]

You are to an extent the trustee of every life over which you have any influence,—and who is to say where that influence stops? Day by day, by the spirit you show and the level on which you live, by the deeds you do or leave undone, you are discharging that stewardship well or ill.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A large type edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, before published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this pocket edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"The Sons of God," a lecture by Col. William E. Fell, C.S., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: The Resurrection and the Life," a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Contemporain* magazine is now printed with the English and French versions on opposite pages.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which are to reach the reading-rooms at a given date.

From the Clerk of The Mother Church

CHURCH TENETS.—The Tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership and extracts from their by-laws, can be had at seventy-five cents per hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1885 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 864 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.05; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.05; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 32 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second class matter.

Items of Interest

Authorities give warning that before long all the newspapers of the middle West will feel the pinch of the greatly increased cost of print-paper, because the spruce in northern Wisconsin, Michigan, and Minnesota is fast being eaten up by the hungry paper-mills. This means that a substitute must be used in place of spruce. Sixteen successful substitutes have been developed through the careful laboratory experiments carried on by the United States forest service at Madison, Wis., and also at the branch laboratory at Wausau, but none of them produce papers quite as white as the spruce paper.

The government's paper experts experimented upon over forty different kinds of wood during the years 1911, 1912, and 1913, and of that great variety the following proved to be the most acceptable substitutes for spruce ground-wood in making white print-paper: western hemlock, Sitka spruce, lodgepole pine, western yellow pine, balsam-fir, California lodgepole pine, red fir, white spruce with hemlock, white spruce with balsam-fir, tamarack, tamarack with white spruce, Alpine fir, white fir, Englemann spruce, Amabilis fir, and Noble fir. Cooperating with the government, two newspapers, the St. Louis *Republic* and the New York *Herald*, each gave the substitute print-papers a thorough try-out on their presses by running out parts of regular editions under ordinary pressroom conditions, on rolls of paper shipped from the experimental laboratory, and each reported that the substitute papers were in every way practicable for their use.

Adoption of the so-called uniform partnership law for the state of Massachusetts is a subject being studied by the members of the Massachusetts Bar Association in anticipation of its coming before the next session of the legislature for action. The act has been drafted under the auspices of the board of commissioners for the promotion of uniformity of legislation in the United States. Pennsylvania is the first state to adopt it, and it is understood that Wisconsin has now followed suit, and that at least one other state has done likewise.

The committee on commercial law of the conference of uniform laws' commissioners reported the final draft of the act in October, 1914. The chairman of the committee says in explanation of the act: "Uniformity of the law of partnerships is constantly becoming more important as the number of firms increase which not only carry on business in more than one state, but have among the members residents of different states."

Since the inauguration of its wood waste exchange, on April 15 last, the forest service has been requested to list one hundred and forty-seven mills and factories as having waste material for sale, while during the same time seventy-six other wood-using concerns have asked to be listed as desiring to purchase waste of a wide range of species in specified dimensions or as mill or factory run.

Buyers are now, through the wood waste exchange, obtaining material of good quality at a cost lower than they had been paying for raw material in the form of logs or standard lumber, and without themselves having to accumulate waste by cutting raw material into required sizes. The forest service desires the cooperation of all manufacturers of small wooden commodities, and invites them to list their requirements with the wood waste exchange. There is no charge for this service.

Approximately one hundred and forty-five thousand acres of the former Flathead Indian reservation, in Montana, will be offered for sale at Kalispell and Missoula, Mont., during August, under regulations announced by Secretary Lane. One hundred thousand acres classified as agricultural land will be sold to the highest bidders, in tracts of one hundred and sixty acres each, or less, for cash, most of it at prices varying from a dollar and a quarter to two dollars. A portion will be offered at Kalispell on Aug. 16, and a portion at Missoula on Aug. 23. No one person will be permitted to purchase more than six hundred and forty acres. The remaining forty-five thousand acres, classified as barren, burned over, and small timber land, will be sold to the highest bidders in tracts of one hundred and sixty acres or less, at not less than its appraised value, which does not exceed one dollar an acre.

All lobster-producing states and the federal government were represented at a national lobster conference convening at the marine fishery station at Woods Hole, Mass., last week. Means for increasing the efficiency of lobster culture and securing cooperation between the states occupied the attention of the delegates. The conference is held by the department of commerce, which has no control over the lobster industry, but carries on the government hatcheries in Maine and Massachusetts. The fact that a large proportion of the government-hatched lobsters are potted before they reach maturity has aroused the concern of the federal officers.

Missouri's new state capitol will be finished, it is now thought, by January, 1917. "The site of the capitol," according to a description given by the architect, "is superb. It is situated on a great bluff one hundred feet or so above the river, on a promontory which projects so well into the stream that it can be seen fifteen miles or so up and down the river, the bluff ending in a jagged cliff and with natural terraces to the water. With excellent soil and well wooded, it is not only naturally beautiful, but presents an extraordinary chance for artistic development."

The second lot of economic plants presented to the Panama canal by the United States department of agriculture, through the office of horticulturist, is being distributed from the nurseries at Ancon. This collection includes over four hundred specimens, of some two hundred five species. The number of new fruits represented is regarded as remarkably large. They are included the jaboticaba from Brazil, the lansan of the Philippines, and other trees from New Zealand, Paraguay, Mozambique, Italy, and Guatemala.

In the cultivation of bananas, Costa Rica today holds first place in Latin America, almost fifteen million bunches are exported annually, at a value of not less than three dollars wholesale. The by-products of the banana are few, but it is believed that the banana flour will occupy an important place among food products, for it is said to be very nutritious. Another by-product is fiber, of which a coarse cloth is woven, while both vinegar and sugar are other products for which a market may be developed.

Postmaster-General Burleson has ordered that the size limit of packages for parcel-post shipment be increased to a combined length and girth of eighty-three inches, which will permit the mailing of standard-sized fruit and vegetable crates. The old limit was seventy-two inches in length and girth, and there has been a widespread demand for its increase. The postmaster-general has also authorized the establishment of a receipt system for parcel-post packages similar to that employed by express companies.

Protection of the wealthy Indian minors in Oklahoma from so-called "professional guardians," and others who seek to get the control and property inherited by these children, is the purpose of an effort being made by the commissioner of Indian affairs. He plans to safeguard the interests of these minors by securing cooperation of the Oklahoma courts in the establishment of adequate rules of procedure in probate cases. These rules have been adopted by the courts of the state and the various counties, without exception.

It is estimated that probably one third of Utah's population saw the Liberty Bell as it passed through that state en route to the San Francisco Exposition. People from scattered ranches as well as from the towns gathered to see the relic, and some of them, in order to do so, rode horseback fifty miles.

The main walls of dry dock No. 1 at Balboa, Canal Zone, which, like the locks of the canal, will be capable of handling the largest vessels afloat, have been completed, with the exception of minor work around the entrance and at the tops where machinery is to be installed. At the erection of the steel gate at the entrance is in progress.

During the first six months of the year there was exported to the United States and American possessions from Hamburg, Bremen, and Kiel, goods to the value of $1,153,000. Statistics on this trade for the first six months of 1914 show the export of goods valued at $994,000.

Three officials and an agent of the old Central Dairy Company have been found guilty of defrauding the United States government out of revenue taxes on oleomargarine amounting to one million dollars, by a jury in the United States district court at Columbus, O.

The motion-picture today is the basis of the second largest industry in the United States. Gross earnings approximate three hundred million dollars per year, and the profits are said to have been three hundred and seventy million dollars during 1913.

Mote and Beam

CLARENCE W. CHADWICK

ONE of the every-day inconsistencies of human existence is the attempt to reform one's neighbor before having reformed one's self. This attempt is usually supposed to be justified by the belief that the error with the neighbor is so apparent and seems so real that it must be dealt with immediately, without stopping to consider the requirements of divine wisdom and justice. Thus it is that the ignorant or overzealous rush in oftentimes where even "angels fear to tread," and bring untold trouble upon those who are making an honest effort to solve their problems in their own way.

Jesus uses the very striking illustration of the mote and the beam in rebuking this inexcusable weakness of mortals. He says: "Why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye? . . . Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye." No more important lesson could possibly be brought home to the would-be follower of Christ, Truth. The disposition to look for error in others is one that cannot be too severely condemned. It is one of the curses of the human race. Its very presence and indulgence is proof positive that mortals are not the children of God, for "whosoever is born of God sinneth not."

The Master tells us plainly how to get rid of this obnoxious habit, and Christian Science insists that it shall be done: "First cast out the beam out of thine own eye." A beam is a very ponderous thing as compared with the diminutive mote. It is very evident, then, that any abnormal or enlarged sense of error rests with the individual who thinks he sees it in his neighbor. When this individual has cast it out of his own consciousness, reduced it to its primal nothingness, it will necessarily appear as a very small thing in his neighbor. This, therefore, is the only way to dispose of the error.

If a patient comes for help in Christian Science, the work of the practitioner is to see and realize the unreality of the trouble, whatever it may call itself. If the practitioner admits the evidence of the outward senses, the trouble will appear as a veritable beam, and he will be powerless to help his patient. If he be "instant in season" to disagree with the senses, and to agree with spiritual sense only, the error will soon be to him nothing more than a mote. This ability to see the nothingness or unreality of evil betokens a healing consciousness; it is the only Christianly scientific attitude of thought to maintain at all times and under all circumstances, for it cannot see evil as a reality any more than did the Saviour. If one strives persistently for this healing consciousness, he will not fall into the trap of personalizing error, whether sin, or sickness, but will see clearly how to cast out the mote from another's eye. If the beam is "cast out," then there is no evil eye to personalize and to magnify error in another.

Error is never uncovered so long as one sees it as a beam. Seeing it as something in another, does not uncover it with any sense of forgiveness, but often only ruthlessly exposes it to the gaze of an enemy. It must be reduced to a mote in one's self before one is qualified to uncover it for another. This holds true with error of every description. If one has been grossly wronged, he must first wrestle with and overcome the beam in his own eye, before the power of divine Love can be utilized to correct the error in another. To go in the heat of passion and resentment to tell another's errors to some one else, is as unkind and unmerciful as it is inexcusable; it is mental lawlessness. The overzealous critic or reformer should think twice before attempting to correct error in his fellow man. He should make sure that his motive is not simply to bring about public or official exposure of wrong, rather than the Christlike uncovering and destruction of it. There is usually very little left to find fault with after one has "cast out the beam" in one's own eye, for it is then that one sees clearly to cast out the mote from another's eye, that is, to uncover it scientifically. St. Paul said, "Thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself: for thou that judgest doest the same things."

The great Master did his stupendous work for humanity first within his own consciousness. This is evidenced by his comforting words to his followers, "Be of good cheer; I have overcome the world." He had conquered that false material sense of the world which claimed to be a divine reality, but which he proved to be only a mortal concept. This placed him in a position not to judge or condemn others, but to show them how to judge themselves; in other words, how to be saved from themselves. If a mortal is in trouble of any kind, his one need is to be saved from himself, for he firmly believes the trouble to be himself, or at least a very conspicuous part of himself. When he can be brought to see it as no part of the real man, but as a falsity or unreality of the so-called carnal mind, he will not only be healed himself, but he will be enabled to show others the way out of their difficulties. Just so long as he is considering the mote in his brother's eye, he forfeits man's God-given ability to heal, and only places a stumbling-block in another's way. If one would be a follower of Christ, Truth, he must remember that his only work is to save, not to condemn the world. And the one way to save any one is to appeal to the good that is in him. Fighting the evil from which one needs to be saved, trying to expose it through selfish human methods, does not heal or save. Oftentimes it only hinders one's progress heavenward, unless one knows the truth that protects from the lawlessness of envy, hatred, and revenge.

It is only through the gateway of unselfish love that we can reach the heart of mankind and bring joy and peace to the world. The world is famishing for that love which "thinketh no evil." Love never inspires one with the desire to see evil in one's neighbor; it is always looking for good, and always finds it. It never sits in judgment, yet it is the sole judge of the universe. Its judgment is true, because it always sees man as the spiritual image and likeness of God. This man has neither a beam nor a mote in his eye, since he reflects or expresses the nature of his creator. "The sweet amenities of Love" are made manifest "in rebuking sin, in

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

true brotherliness, charitableness, and forgiveness" (Church Manual, Art. VIII, Sect. 1). Love alone uncovers the nothingness of error, because it cannot think or see evil. It simply radiates love, and Love is the light which dispels darkness. As finite human consciousness yields its belief in the reality of evil, it acknowledges its errors, and thereby the vision of the mote and the beam gradually gives way to that of the Christ, Truth.

"Commercializing" Prayer

MILDRED SPRING CASE

We sometimes hear it said by hostile critics that the practice of Christian Science is the "commercializing" of prayer. It may be asked if the prayer which is spiritual enough to raise the sick from their beds of pain can be materialized by an expression of gratitude in the form of worthy compensation. The one who takes such a position may not realize that in so judging he is condemning all the ministers of the gospel, first among whom is Christ Jesus himself. To be sure, economic conditions were then quite different. Even in the last few years the world has changed in this respect. It was not so long ago that our school-teachers in country districts "boarded around" with the different families of the district, and this without any cost to the teacher. Now, however, our teachers prefer to be given a certain salary sufficient to board themselves in the place and manner of their own choosing. This does not dishonor or lower teaching; it is simply an economic change, and surely a wise one.

Similarly in Jesus' time the disciples healed the sick, and then ate and lived in the homes of different people in the towns through which they passed. Peter, we are told in the Acts of the Apostles, lodged in the house of Simon the tanner, by the sea, and after he had preached to the people in Cæsarea and had healed them, he was asked to "tarry certain days," and he did. That we cannot imagine Peter being definitely paid for his services is due to our ideas of economic conditions at that time. Can we, for instance, imagine that one of our school-teachers on meeting the parent of one of his pupils would say, Come, follow me; I wish to take dinner at your house this evening? And yet this is the very thing that Jesus did many times. To Zacchæus he said: "Make haste, and come down; for today I must abide at thy house. And he made haste, and came down, and received him joyfully." And to "Levi the son of Alphæus sitting at the receipt of custom" (collector of internal revenues), he said, "Follow me," and he dined in his home.

When Jesus sent out the seventy disciples to preach the gospel and heal the sick, he did not tell them that this should be done without material compensation, but rather he told them, as recorded in the tenth chapter of Luke: "Carry neither purse, nor scrip, nor shoes . . . And into whatsoever house ye enter, first say, Peace be to this house . . . And in the same house remain, eating and drinking such things as they give: for the laborer is worthy of his hire." Did this commercialize their preaching or prayer? Jesus felt that the disciples should be compensated for their efforts in a manner which was customary at that time.

Today the ministers of Christian churches in general prefer to be given a definite salary, by which they can live in the manner that they choose, instead of living with their parishioners. They obtain this salary for preaching the gospel and for their prayers for the sick and sinning. Does this commercialize prayer? We surely would not criticize them for it, after the Master's declaration that "the laborer is worthy of his hire." To be sure, their manner of receiving their "hire" is not like that of the seventy disciples; but this is due not necessarily to a more commercial attitude, but to a change in the economic conditions of the world.

The Christian Science practitioners who labor hour after hour in the endeavor to heal the sick by Jesus' method, that is, through pure, intelligent, undoubting prayer,—are they too are worthy of their hire. Were they living some centuries ago instead of in the twentieth century, they would undoubtedly go from house to house doing the healing work; but must we expect first-century economic conditions of twentieth-century practitioners, when we do not demand of school-teachers or of clergymen? Rather than condemn these loving laborers in God's vineyard, who have given up their lives "to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised," ought we not to affirm again the saying of Jesus, "The laborer is worthy of his hire"?

✧

Scientific Citizenship

JOHN MONTGOMERY TURNER

On page 313 of Science and Health, Mrs. Eddy writes: "Jesus of Nazareth was the most scientific man that ever trod the globe." Christ Jesus, the world's greatest teacher, is now generally recognized as the best citizen of all times. He applied the one perfect Principle to his every thought and act, both public and private. His citizenship and teaching being of the highest order, the rules he laid down for his followers must be perfect guides. Indeed, all that is good in moral codes and systems evolved and promulgated for the civic and economic advancement of mankind are epitomized in his immortal words, "Thou shalt love thy neighbor as thyself." With each citizen measuring his thought and acts by this standard, conforming thereto as nearly as in him lies, we should soon be living in a perfect world, one which knew no need for those disciplinary or eleemosynary institutions which are the signs external and the direct results of wrong thinking. The millennial state prognosticated in the eleventh chapter of Isaiah would then exist to human consciousness: none of God's children would be preying upon one another. So gladly would man be sharing his brother's burden that it would soon be realized there is no burden to bear; that, as Isaiah says of the Christ-man, "the government shall be upon his shoulder." Temperance, soberness, and chastity, universal harmony, would reign.

"Unto whomsoever much is given, of him shall be much required." To the student of Christian Science is given the privilege of applying the specific remedy for every wrong in human affairs, including human government. Wrong thinking, selfishness, mad ambition, lust of place and power, have wrought in civic, state, and national affairs conditions which require correction, and it logically follows that what the world calls right thinking, and what the Christian Scientist understands to be right knowing, alone can bring about the needed changes. Inasmuch as his is the highest ideal, an ideal capable of realization here and now through the application of the immutable Principle of good, it is but reasonable to expect from the student of the one perfect Science more than is looked for from another. He should be, and usually is, the best type of citizen.

Inharmony in governmental functions is healed in precisely the same manner as are physical ailments. In the case of the latter, the realization that man is the idea of God, reflecting and so possessing only the qualities of his Maker,—divine Mind, good,—and the use of such contributory arguments as will better enable the human mind to understand these truths and consent to them (physical beliefs being superseded by spiritual facts), brings about a condition of

Digitized by Google

bodily harmony. Likewise, knowing that "the Lord God omnipotent reigneth," that nothing can resist the power of divine Love, is certain to cause the present amelioration and eventual destruction of evil in public affairs and institutions. In each case we must "emerge gently" (Science and Health, p. 485). The declaration and realization that man is not material, but is spiritual, does not result in immediate translation out of the flesh, but it does bring us health, strength, and vigor. The knowledge that in reality there is one government, that of divine Principle, and that God's rule is universal, beneficent, and just, does not bear fruit in immediate perfection, but it does bring us a greater degree of righteousness in human government.

It has always been the idealist, the man with a high, definite goal before him, who has accomplished what has been done for humanity's uplift, and having the highest ideal toward which and from which to work, the Christian Scientist is the truest representative of this type. In the positive knowing and understanding that there is but one lawmaker and one law, a law divinely created and perfectly administered, he is realizing what the altruists of all time have agreed would be the model government: unlimited power vested in a perfect individual. Mrs. Eddy's teachings spiritualize this high human concept, and proving by present demonstration that God alone governs, guides, and directs man's destiny, they reveal exactly what the ages have groped and hungered for, though they seldom and but faintly glimpsed the real goal toward which they were striving.

Wisely the Master counseled his followers to obey the law as it stood. Witness his payment of tribute to Cæsar. Today Christian Science teaches its students strict and implicit obedience to the law of the land. "If ye have not been faithful in that which is another man's, who shall give you that which is your own?" was Jesus' trite question, which may be paraphrased: If you yield not cheerful obedience to the human law, you are not mentally fitted to obey the spiritual. All must make concessions to the thoughts and privileges of individuals as well as to the general phases and stages of mortal belief. Incidentally, a scratch on a child's arm made with a vaccinating instrument can do no more harm than we allow it to do, nor can a piece of red cardboard on a house prevent the healing of a so-called contagious disease.

The great Teacher saw that by living as nearly as possible (but always consistently with his words) in conformity with the customs of the time and locality, he would come into closer touch with the people, more readily reach their thoughts, and accomplish much good which habits of aloofness might have precluded. He ate and drank with the common people, and joined to some extent in their social activities. In the highest sense he was the "friend of publicans and sinners;" by so doing he was enabled to help them. It is clear that Paul's injunction, "Come out from among them, and be ye separate," referred not to physical proximity or distance; it was an admonition to keep thought above the material surroundings, that the environment may be purified and so benefited.

These precepts and this example may well be taken home by the Scientist citizen. He can do inestimable good through an active, intelligent interest in civic and economic affairs,—living a clean, moral, and normal life; conforming his actions at times to the requirements of the age, but never lowering his standard of thinking. "They that be whole need not a physician," the Master said, "but they that are sick." The entire material world needs healing. In his thought, act, and speech regarding public affairs, let the student make the Master's epitome, "Thou shalt love thy neighbor as thyself," his model. Let him put Principle, as understood in Christian Science, before party, the general good before selfish interest, and he will be putting God first.

It was our Leader's perception that her students could do the most good by mingling with the world, being in it though not of it. This is attested by the fact that she counseled many of them to locate in the large cities, where humanity was most in need of healing. The wisdom of her advice is proved, as is the wisdom of every project, by its fruits.

Let us always think kindly of human government. Although we cannot agree with its every phase, in by far the most of its branches and activities it aims at the common good, and we all enjoy its protection. Let us think of the good that scientific prayer can do for those who are in high and therefore difficult places. For the government of his own thoughts and acts let the Christian Scientist take the Manual of The Mother Church and follow it. Its requirements have been pronounced rigid by some critics; they contend that it infringes upon the individual's personal liberty. In reality it confers a fuller degree of genuine liberty than was before known. "'Twas the Truth that made us free," our Leader wrote in her beautiful Communion hymn (Hymnal, p. 212). The by-laws of The Mother Church, terse, succinct, and comprehensive, are the statement of the perfect government alluded to; namely, unlimited power vested in an infallible individual (God). The stricter the inhibition against evil, the greater liberty and freedom is there in good; and Christian Science shows us that only in the way of God, good, is liberty desirable.

"Rebuking sin"

MARGARET I. FERGUSSON

WHILE pondering over the "Rule for Motives and Acts," as given in our Manual (Art. VIII, Sect. 1), which is read in all Christian Science churches on the first Sunday of each month, that we may be reminded to act daily upon it, these thoughts came to me as to what the rebuking of sin, as given in the rule, means: "A Christian Scientist reflects the sweet amenities of Love, in rebuking sin, in true brotherliness." I looked up the word "rebuke" in the dictionary, and found it thus defined: "To check, silence, or put down with reproof; also to reprehend sharply and summarily, *i.e.*, quickly." The question then arose, How are we to rebuke sin, and when and where are we to do it? Manifestly it means something quite different from telling one's brother of his faults, though on occasion it may mean this too. It seems to me it means the conscientious and quick denial of sin and the scientific declaration of the omnipotence of God, good, whenever sin presents itself to our consciousness, either in our own mentality or through the word or deed of a brother.

We must at once mentally meet all claims of sin, no matter how we become cognizant of them, as Jesus did when in the words "Get thee behind me, Satan," he rebuked a material sense of things voiced through Peter. And we can but believe that this command cast out that particular devil or evil sense from Peter. The point to be noticed particularly, however, is that it was not Peter who was rebuked, but error, or Satan. If at all times we could rebuke error in this impersonal way, never for one second seeing it as personal, either as ourselves or as our brother, surely then this one little sentence lived in its entirety would fulfil the whole law of Love. Sin would be conquered, and with this victory would come also the victory over "animosity" and "mere personal attachment" (against which we are also warned), over disease, and even over death itself,—a wonderful vista, and worthy of our best efforts to attain.

The habit of rebuking sin in this impersonal and instan-

Digitized by Google

taneous manner is not gained in a moment. Like everything worth while, we must cultivate it and watch our thoughts, lest we see sin as part of our brother instead of as an evil belief attacking him. Sin is never any part of man's real being, it is merely in belief; and we conquer belief with the knowledge that God gives of Himself, together with a knowledge of man in His image and of God's perfect, harmonious universe. This knowledge is revealed to us through the life and works of Jesus, and of all the prophets and teachers of whom we read in the Bible.

Through Mrs. Eddy's faithful life, and her writings, especially our text-book, "Science and Health with Key to the Scriptures," we gain the spiritual meaning of the teaching of the Bible; we also learn how to rebuke sin, and so help to bring the kingdom of God into human experience. Suppose we saw a friend attacked by a serpent, would we not quickly try to save him from it without any thought of hurting him? We certainly would not blame our friend, or think of the snake as part of him. Really, the serpent of sin is no more part of our brother man or ourselves than is the snake, and both must be destroyed quickly and utterly. The point that seems to me very insistent is that sin must be rebuked quickly, or, as the dictionary puts it, "reprehended summarily," ere it has taken hold in thought of either ourselves or our brother man; and this is to love our neighbor as ourselves.

While each sentence in the "Rule for Motives and Acts" seems a separate thought, yet in the most wonderful way each sentence is related to all the others, when we study them closely with the aid of a dictionary. If we would gain for ourselves the fullest understanding of this rule, so as to live it better and better, we cannot too frequently ponder and practise it.

Quiet Work

PETER B. BIGGINS

ONE of the most beautiful features of the understanding of Christian Science is that it enables the student to do a great deal of good in a quiet way. In this respect, as in many others, it is the polar opposite of the world's method. Christian Science indicates that while it is abnormal to hide one's light under a bushel, the joy and success of good work are enhanced by quietness. The great Master's injunction was, "When thou doest alms, let not thy left hand know what thy right hand doeth: that thine alms may be in secret."

In Gray's "Elegy in a Country Churchyard" we read:—

> Some village Hampden, that with dauntless breast
> The little tyrant of his fields withstood;
> Some mute, inglorious Milton here may rest,
> Some Cromwell guiltless of his country's blood.

What is needed further to supplement a recognition of sequestered and perhaps undeveloped talent, is an understanding of divine Science. Through this understanding the "village Hampden" may realize that he is not merely working in a village amid limited and limiting conditions; he is working in the realm of infinite divine Mind, wherein Mind's infinite ideas are ever present. This recognition breaks the claim of limitation and reveals countless opportunities to demonstrate divine Science fearlessly. In every part of the field he has the opportunity to withstand "with dauntless breast the little tyrant" or the great, whatever manifestation of the one evil needs to be withstood and destroyed. Under such circumstances his muse need not be mute, but should burst forth in streams of spiritual eloquence. He has the opportunity to wage a bloodless battle—but a decisive one, nevertheless—with the errors of mortal mind, the greater portion of this conflict being probably waged with his own belief in the power of evil.

The sweetness of such work can never be wasted "on the desert air." A beautiful flower found in a lonely spot may seem all the more beautiful by reason of its very loneliness. Its fragrance may invite and refresh the traveler as really as though many more fragrant perfumes pervaded the surrounding atmosphere. The faithful worker, utilizing all opportunities to demonstrate the truth wherever God has placed him, may outgrow a limited environment, and in God's time be located in a larger field. This promotion, however, is governed by God, and rests largely on individual demonstration.

For a student of Christian Science to seek promotion dependent upon human favor, is to give way to a phase of error only too obvious in political circles, and colloquially termed "graft." To bemoan the fact, or rather the false belief, that his efforts are not appreciated as they ought to be, shows that he is regarding human personality instead of divine Principle, and this would indicate that he has failed to grasp the fundamental truth of Christian Science. The wise Scientist will not be affected by any subtle falsities disseminated throughout the field. The design of such whisperings is malicious, in whatever fair guise they come.

Loyal students of Christian Science are content with the method of administration established by their revered Leader, Mrs. Eddy. They are content to see the government of the church which she established "evolve scientifically" (The First Church of Christ, Scientist, and Miscellany, p. 34); but they also know that this evolution is the natural result of scientific demonstration, and can never be accomplished by any spirit of mutiny. Meanwhile, they rejoice in the growth of the movement, unite joyously with those whose present requirements place in positions of authority, and are grateful when the necessary exercise of this authority checks a phase of evil which, unhindered, might cause trouble. They are content to prove in daily life that Christian Science heals, regenerates, and comforts, and rejoice to find that, wherever they are, there are abundant opportunities to serve God in this way.

[Written for the *Sentinel*]

Immanuel

SAMUEL JOHNSTONE MACDONALD

YUSSUF BEN OREM sat one day
Within the gate where trade held sway,
And one, a merchant, came to him
And spake: "O Master, day grows dim;
Withdraw, I pray, with me apart,
Far from the buzz of babbling mart,
Where I may speak and thou may'st hear
Words only meant for thine own ear."

Yussuf Ben Orem led the way
Unto his house without delay.
"Here, friend, thou mayest speak, nor fear
Another than myself may hear.
Be seated, then, if that thou please,
And speak thy message at thine ease,
And for thy comfort here is wine.
Break silence, then; my ear is thine."

"Nay, not thine ear: I seek thy heart.
For this I led thee, fool, apart,
That, none to hear and none to stay,
I might thee quickly, surely slay!"
"Nay, friend, hast thou forgotten, then,
That God still rules the thoughts of men?
And God is here thy hand to stay?
Give up thy weapon; kneel and pray."

[Charles F. Williams in *The Selma* (Ala.) *Journal*]

Spiritual understanding is what Jesus came to teach mortals. He also showed them how to demonstrate this understanding in order that they might be able to distinguish between the real and the unreal, between the works of God and the works of the devil (evil), and thus destroy sin in the human consciousness. This is the divine method of pardon which comes through Christ, Truth.

Our critic quotes from I John, "If we say that we have not sinned, we make him [God] a liar, and his word is not in us." Here the critic betrays his ignorance of what Christian Science teaches, and of the Scriptures also. John was of course speaking about human beings, or the sinning race of Adam, who were sinners and needed to be saved. Speaking in the absolute, and of God's children, not the children of men, he says: "Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is. . . . Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." Again, "We know that whosoever is born of God sinneth not; but he that is begotten of God keepeth himself, and that wicked one toucheth him not."

In justice to God, we must admit that all He made was spiritual and perfect, and He made all that was made. He could not have made evil, materiality, or mortal man, because there is nothing in Spirit out of which they could be made. In James we read: "Doth a fountain send forth at the same place sweet water and bitter?" Spirit and matter, good and evil, are opposites, even as light and darkness are opposites. Neither can you say "black is white," or vice versa. One will not mingle with the other.

Jesus may not have mentioned the words Christian Science, but he did say that when the "Spirit of truth" came, it would guide into all truth. This "Spirit of truth" is that which furnishes the facts about God, man, and the universe, and which can be demonstrated. Science is an exact knowledge of facts, a scientific statement of the facts promulgated by Jesus the Christ.

❖

[Robert Nall in *Uralla* (New South Wales) *Times*]

In a recent issue you class Christian Science as one of those "apostles of demagogism" which, when the chief secretary has selected certain places in the city of Sydney for open-air speaking, "can pour out the vial of their wrath and knowledge unimpeded by the heavy hand of the law." Will you permit me briefly to say that in so classing Christian Science you have fallen into an error. This Science is entirely opposed to a method of propagation such as you suggest. Its nature and object being peaceful and law-abiding, it works in harmony therewith, and its adherents are scrupulously careful in the use of the means they adopt to spread what they believe is the truth of Christianity.

Demagogism is defined as popular and factious oratory. Christian Science lays no stress on oratory as such, and avoids everything that is in any way factious or turbulent; while if by mistake any of its "apostles" found themselves possessed of a vial of wrath, they would, in pouring out, temper the wrath with that courtesy and gentleness which, as followers of the great Master, they always endeavor to manifest. Open-air speaking or preaching in advocacy of Christian Science is not practised in any part of the world. Its public gatherings are strictly limited to Sunday services, Wednesday evening testimony meetings, and occasional lectures in some building. Added to these, there is of course the circulation of authorized literature. Yet in this quiet, unobtrusive way there is, to quote from page 149 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, "hardly a city, village, or hamlet, in which are not to be found living witnesses and monuments to the virtue and power of Truth, as applied through this Christian system of healing disease."

❖

[Ezra W. Palmer in *The Star-Journal*, Pueblo, Col.]

The Rev. Mr. —— announces his intention to continue his attacks on Christian Science all summer. Because his attempts to discredit Christian Science have been corrected, the reverend gentleman apparently has the impression that he must continue his attacks, even to the point of wearying the public with his distorted references to Mrs. Eddy and his perversions of the teaching of Christian Science.

Christian Scientists have no desire to discredit this critic or the religious organization to which he belongs. The object of the answers to his attacks is not to discredit him, or even to offend him, but merely to protect the cause of Christian Science from the effects of his mistaken and perverted views. Contrary to his assertions, Christian Scientists do not attack other denominations, either in lectures or in the Christian Science periodicals. The critic will search in vain throughout the literature of Christian Science for such attacks. To comment upon and make clear the teachings of the Bible is a blessed privilege all Christians have. To interpret these teachings according to the Christian's highest understanding is also a privilege open to all.

That the Christian Science interpretation of the Scriptures does not conform to the theological concepts of this clergyman, seems to be his grievance, and because of this grievance he deems it his duty, as the self-appointed guardian of other people's religious views, to ridicule and abuse these views in the public press with a choice collection of adjectives and innuendoes. I am quite sure that the gentleman will protest that what he has done and is doing is in the interest of Christianity. But as a student of Christianity, he should know that the same specious plea has been advanced by every inquisitor that ever lighted the fagots at a martyr's stake or tightened the ropes on a torturing rack.

Unfortunately for mankind, established forms of religion have not taken kindly to new advances in Christianity. Jesus found his most implacable enemies among the Pharisees and scribes who controlled the ecclesiastical system of Judæa. The raging of human belief against a more spiritual religion is strikingly illustrated by Paul, who before his conversion "was zealous toward God," and showed it by "breathing out threatenings and slaughter against the disciples of the Lord." Jesus' sharpest denunciations were not for the tax-collectors and Roman rulers, but for religious classes who pretended to teach the religion of Moses and the prophets, yet whose teachings were lifeless forms, "whited sepulchres, . . . full of dead men's bones," totally inadequate to satisfy the hunger of humanity for that bread "which cometh down from heaven" to destroy sin, sorrow, and death, and reconcile man to his God.

Christian Science was given to the world because the world needed "a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Church Manual, p. 17). From its inception this church has met a reception similar to that which was accorded to Jesus and his apostles, and this has been strikingly exemplified by the persistent attacks of the clergyman in your city. This has not, however,

Digitized by Google

prevented Christian Science from continuing its mission of healing the sick and opening the way, for the sincere student, to a harmonious and a right understanding of God and His universe.

This clergyman claims to be perturbed because he does not understand the term "mortal mind" as used in Science and Health. As a student of Christian Science, claiming repeatedly that he has sounded its depths, he is hardly consistent to rush into print asking questions as naively as a child in a kindergarten. Mrs. Eddy means by "mortal mind" the same as Paul meant by the term "carnal mind," and Jesus by the term "heart" (mind), when he said, "For out of the heart [carnal mind] proceed evil thoughts, murders, adulteries, fornications, thefts, false witness, blasphemies." The critic next demands to know of Christian Scientists where this mortal, carnal mind originated. Why demand this of Christian Scientists? Is it possible this critic, "a master of Israel," knows his Bible, claims to know enough to lecture Christian Scientists in the public press, and yet confesses he does not know where the carnal mind originates? When he can satisfactorily account for the origin of evil, sin, sickness, and death, he will then be in a fair way to account for "mortal mind," and not before. The critic confessed in a recent article that God was not the author of evil. He carefully refrained, however, from stating who was the author of it. Evil not being of God, where did it originate? Since the critic has repudiated a heavenly origin for it, he is perhaps prepared to accept the definition that evil is a false, human, corporeal sense of life and existence apart from God. Perhaps if the reverend gentleman would study Jesus' definition of devil (evil) as "a liar, and the father of it," he would gain some light on this subject.

The reverend gentleman, however, unwittingly impaled his argument on the horn of a dilemma when he confessed that God is not the author of evil. In a previous article he declared that God is the author of mortal man. As quoted above, Jesus pointed out that in mortal man originate "evil thoughts, murders, adulteries," and so on. The question naturally arises, Would an infinitely wise God create man in His image and likeness and then abandon him to all the chaos and destruction of evil? Christian Science solves the question by clearly teaching that God created neither evil nor mortal man.

✧

[Robert S. Ross in *Brooklyn* (N. Y.) *Eagle*]

If the vitalizing Principle of Jesus' teachings had not been lost to human consciousness in the third century, the "materialism and commercialism" to which the Rev. Mr. —— referred in his recent sermon would by this time have lost their grip, the unity of men and of nations would have been established, and war would be unknown. It was this lost Principle of Christianity which was discovered by Mrs. Eddy. The Science of this Principle is taught in this age by the Christian Science text-book, "Science and Health with Key to the Scriptures," which was first published by Mrs. Eddy in 1875. There was as much analogy between the Christianity of the first century and occultism as there is between the Christian Science of the twentieth century and occultism, which is none at all, the critic notwithstanding.

Our critic acknowledges that "the material is not the real," and that "the real is the spiritual;" nevertheless, he attacks Christian Science, which for nearly fifty years has been declaring and demonstrating this very fact. He further acknowledges that it is not so much the province of the minister to criticize and denounce Christian Science, as it is his province to get hold of this tendency toward the true and abiding reality. Now, if orthodox theology were giving the people a satisfying sense of Truth, these searchers will never turn away. Furthermore, our ministerial critics can hardly hope to teach that which they themselves obviously do not understand. When they do understand it, they will gladly acclaim the truth of Christian Science.

Christ Jesus laid great stress on the necessity of demonstration. Merely to repeat his words meant nothing to him who at one time said, "Ye shall know them by their fruits," and at another time, "Heal the sick, cleanse the lepers, raise the dead, cast out devils." To Jesus the only acceptable proof of discipleship was the healing, and this is the proof that Christian Science is daily submitting to the world.

✧

[Henry A. Teasdel in *The Salt Lake* (Utah) *Tribune*]

Recently there appeared an article under the heading "Trains the Voice by Mental Suggestion," in which Christian Science is linked with mental science and mental suggestion. As this will undoubtedly give many of your readers an erroneous impression regarding Christian Science, I trust in the fairness you will permit me to correct it.

Christian Science teaches that God is Mind, and that man is the reflection or expression of Mind, and is governed only by the law of divine Mind. It teaches entire obedience to and reliance on that divine Mind which can produce only good. Mental science, or mental suggestion, is the operation of the human mind. It is the belief of one mortal mind controlling another mortal mind, and is productive of both good and evil. It is allied to will-power, and Mrs. Eddy in "Science and Health with Key to the Scriptures" (p. 490) says: "Will-power is but a product of belief, and this belief commits depredations on harmony. Human will is an animal propensity, not a faculty of Soul. Hence it cannot govern man aright." Christian Science teaches that the attempt to practise mental suggestion will gradually destroy the power to heal through the law of God. Therefore the one is in direct opposition to the other.

✧

[George A. Law in *The Hartford* (Conn.) *Post*]

The review of a book dealing with the subject of Christian Science, recently published in your columns, calls for a few words of comment. It appears that the author is a clergyman, and the book is issued by a publishing house of the Methodist Episcopal church. According to the review, after an attempt to assure the reader that no "hard things against Christian Science" are to be said and the purpose is to allow "all to see it as it is and judge for themselves," the writer says: "What does Christian Science offer us in the place of the learned and skilful surgeon? It offers us the mental surgeon, without knowledge, experience, or instruments." The injustice of such a statement is that it assumes there is no way in which the sick may be healed except the one prescribed by the medical schools. Jesus' teaching with respect to healing the sick is entirely ignored, and also the vast amount of indisputable evidence represented by the unnumbered thousands who, even after having been pronounced incurable by physicians, have been healed in Christian Science by the same spiritual means the Master employed.

Jesus, the greatest healer of disease who ever trod the globe, had no so-called scientific knowledge of the "structure of the body," surgery, or the instruments which our critic endeavors to insist upon as required. If such an education were essential, undoubtedly Jesus would have been so equipped. On the contrary, he eschewed all material means, and relying entirely upon spiritual law, of which he was master, he healed multitudes of "all manner of sickness and all manner of disease." Moreover, he taught his disciples and others to heal

Digitized by Google

as he did, and augmented his teaching with these very definite instructions, "Go ye into all the world, and preach the gospel," "Heal the sick." Now it ill becomes a preacher of the gospel of Christ Jesus who fails, neglects, and refuses to comply with this command to "heal the sick," to find fault with those who are honestly endeavoring so to do, and who show by the healing already accomplished that they (in some degree at least) understand Jesus' teaching; for he declared that the healing work would be the sign which would "follow them that believe;" in other words, understand his teaching.

Inasmuch as authorized Christian Science publications are readily available at public libraries and Christian Science reading-rooms, those who seek reliable information upon this subject cannot be deceived by such publications as the one under consideration.

✧

[Translated from the *Süd-California Deutsche Zeitung*, San Diego, Cal.]

No thinking person can deny that the greatest religious question of the day is Christian Science. It is represented in every large as well as every small city from Alaska to the Cape of Good Hope, and from the Netherlands to Australia. As we can see from the large attendance at the Christian Science churches, this religion must, after all, have something extraordinary that attracts the public, and be something different from other religions. As a means of healing for the sick and also of overcoming sin, it has to bear much criticism from physicians and churches. Truth, nevertheless, scatters all criticism of those who do not understand Christian Science and do not know how to practise it. We are not supporters of Christian Science, but we love honesty.

Christian Science brings a new and clear conception of God. It sets forth that God does not punish, but that He is goodness itself, and always present with us. He created man perfect, without sickness or sin, and it rests with mankind to keep off sickness and sin by obeying God's commandments and doing only good. This idea surely is new, and a contradiction of the old theology, whereby God takes man's life or sends sickness and disease. The Founder of Christian Science, Mrs. Eddy, wrote a book entitled "Science and Health with Key to the Scriptures," which has a very large circulation. It is translated into German to aid the growth of Christian Science among the Germans. Mrs. Eddy passed away some time since, and is mourned more generally perhaps than any other woman of history.

✧

[Avery Coonley in *Edwardsville* (Ill.) *Intelligencer*]

The action of the Illinois State Medical Society in adopting a program for securing prohibitive legislation against the practice of Christian Science, as reported in the *Intelligencer* of recent date, implies that opposition to certain provisions of House bill 582 is in some way reprehensible; that such opposition was confined to Christian Scientists; and further, that the bill merely provides for reporting incipient *ophthalmia neonatorum* in infants. Its action in opposing "the licensing of Christian Science practitioners" implies that the latter are seeking a license to practise medicine. All of the above implications are incorrect.

Christian Scientists have found the healing of disease through spiritual means, as practised by Jesus and his immediate followers and by the early Christian church, more efficacious and more satisfactory than medicine. Therefore they have no wish to practise medicine or to be licensed to do so. The purpose of bringing up the question of license would appear to be to influence the legislature so to distort the interpretation of the term "practice of medicine," that laws containing that term, and intended to protect the public against the unskilled use of dangerous drugs, can be made to forbid the healing of the sick through Christian Science. It is safe to assume that the legislature will not lend itself to such a program.

As to the Thon bill (House bill 582), it was so sweeping and so drastic, as first introduced, that it invited opposition from many directions, a number of its critics being members of the medical profession. An entirely misleading impression of its character is conveyed by the description given by the medical society that it "provides for the reporting of all cases of *ophthalmia neonatorum*." If that were all, there would have been no occasion for opposition or amendment, and the bill in spite of the amendments complained of still provides for reporting. The fact is, that far from being a mere provision for reporting, it was an objectionable piece of compulsory legislation, permitting entrance to any home after childbirth and making obligatory the application of medicine to the infant's eyes in case of any redness, regardless of the approval or disapproval of the parent or of the practitioner, medical or otherwise. Refusal to administer the medicine was made punishable by fine. One of the most vigorous opponents of the bill on the floor of the House was a member who is a physician, and other physicians entered objections.

Christian Scientists would not intentionally put a single stone in the path of those who choose to rely upon medicine, but they do not forfeit their rights as citizens when they become convinced of the truth of Christian Science, nor is there any reason why they should refrain from enlightening their representatives when their rights are endangered by ill-considered legislation.

Harmony

LAURA GERAHTY

Oh, for a broader love, that clasps a while
  Both friend and seeming enemy in one embrace;
That sees the true reflection of God's smile
  'Neath earth's cold frown in every brother's face!

Oh, for a deeper hope, whose anchors lie
  Not on the shallow ground or shifting sand,
That, passing fortune's fickle favors by,
  Leaves all within the hollow of His hand!

Oh, for a purer faith, that steadfast stands
  'Mid mortal threats and life-long honored fears;
That holds the lamp of life, though death commands
  Obeisance to its will of grief and tears!

Oh, for a slower tongue when tumults swell
  Within the breast for blame unmerited,
When one short word of silent prayer might quell
  The troubled tide with peace inherited!

Oh, for a greater kindness as we flee
  O'er stone and thorn-bush in life's comfort quest,
When faltering ones less surely shod than we
  Seek, by thy sighs perchance, more needed rest!

Oh, for a brighter life, a longer day,
  A holier, grander sense of something done!
'Tis our own nightfall when we turn away
  And lose the brilliancy of God's full sun.

Ours be the tranquil eve, the fearless night,
  The dawn that breaks in white-robed purity,
When on the tablet of our waking thought
  God leaves His angel-touch of harmony!

Editorial

"Thy neighbor as thyself"

It is a strange commentary upon the preaching of the gospel to which men have listened for centuries, that today the world seems far from the fraternity which should be the fruit of all this endeavor and the logical outcome of the Christianity epitomized by Christ Jesus in his Sermon on the Mount. It is only fair to the multitude of noble men who have devoted themselves to this work, to admit that this preaching has supposedly been founded upon and in explanation of the Scriptures which declare that God is good and man is created in His image and likeness; but somewhere or somehow it has fallen short of its purpose. Despite all this preaching, and the hope men cherish of their ability to do right, it is a lamentable fact that multitudes have failed to reach a higher plane of living and to bring out in their daily lives that sense of brotherhood which Mrs. Eddy so inspiringly describes on page 340 of Science and Health.

To the thoughtful Christian Scientist the explanation of this failure is quite simple, and it should be plain to all who accept the doctrine of divine omnipotence, unless this acceptance includes a belief that God is the creator of sin and all evil, a belief which Christian Scientists realize is self-contradictory and illogical. This explanation is that so many men rely largely upon human will-power for all they wish to do or hope to bring about, and are thus depriving themselves of access to the only power which really exists. Instead of this false and illusory belief in mortal mind and human will as being able to govern and control mankind, Christian Scientists are learning that God, divine Mind, alone reigns, and they are seeking that constant at-one-ment with this Mind which makes them masters of their bodies as well as of their fate. When mankind learns that human will is like a broken reed,—not to be depended upon for any purpose,—the road to health and holiness will become more definite to them and they will more successfully travel it. Men need to know that God is not the creator of evil, and that He alone possesses power, no matter how plausibly evil may present its claims. "Our proportionate admission of the claims of good or of evil," Mrs. Eddy writes on page 167 of Science and Health, "determines the harmony of our existence,—our health, our longevity, and our Christianity." None need to realize this fact more definitely than do those who are struggling in the grasp of what has best been described as the demon intemperance.

To the thousands of men who are fighting what seems to them and to their friends a losing battle with this demon, Christian Science comes with the offer of deliverance. That the promise has been fulfilled to many of them, is evident from the testimonies which from time to time appear in the *Sentinel* and *Journal*, as well as those given orally at the Wednesday evening meetings wherever a Christian Science organization exists. The most impressive testimony of all, however, is that which is furnished by the lives and actions of these men in their relations with their business associates and in their home life. The number of such cases is very large, and the proof they afford of the direct efficacy of Christian Science is most convincing to other men, for the evil of intemperance is wide-spread, and will-power and "cures" alike have long been recognized as but palliative.

Almost as much in the way of deliverance may be claimed for the victims of the drug habit, so subtle and so demoralizing that the men and women who have come under its bondage lose hope, courage, and all that makes for happiness in their seemingly vain efforts to break the fetters that bind them. We hear a great deal about laws to prohibit or govern the manufacture and sale of these destroyers of bodily and mental well-being, and any law that puts even a check on these practices is to be commended, if it lessens in any degree the temptations that present themselves on every hand. In the mean time, thousands of these helpless, hopeless ones are groping with feeble hands for the light, and it is to many of these that Christian Science has come, often as a last chance —a life-line to rescue them from the yawning abyss of despair that is beyond words to depict; and gratitude for this deliverance is correspondingly profound.

Those who know how comprehensive is the work that Christian Science is doing in bringing about the redemption of humanity, giving them salvation from sickness as well as sin, rejoice that the new-old gospel preached by Christ Jesus and his immediate followers has again been made available to mankind through the consecrated labors of Mrs. Eddy. They have come to know through its teachings the truth which the Master declared should make men free, and their greatest desire is that those whom the most stringent laws seem unable to protect, may likewise find the open door to that brotherhood of men which is the fruit of obedience to the greatest of the commandments.

Archibald McLellan.

❖

Salvation Demonstrated

There is perhaps no statement in Science and Health of greater importance to its students than the definition of salvation given on page 593, which reads as follows: "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed." A dictionary definition of the word is, "Preservation or deliverance from destruction, danger, or great calamity." While there are theological definitions which deal to a large extent with the future, this one recalls in a most vivid way the experience of the Israelites at the Red sea, when Moses said, "Fear ye not, stand still, and see the salvation of the Lord, which he will show to you today." This text in turn reminds us of Paul's statement, "Behold, now is the day of salvation;" for to the Christian Scientist every day brings an opportunity to prove in fuller measure the meaning of salvation; and with the psalmist each one can say, "I will rejoice in thy salvation,"—rejoice in it today and every day.

All who come to Christian Science come seeking salvation, though few perhaps think of it in this way. Many would indeed be offended were they told their real need is salvation, which, according to St. Peter, is "ready to be revealed in the last time." To many such it is indeed their "last time," when all earthly expedients have failed and hope is well-nigh dead; but when the real intent of Christian Science dawns upon them, it is the beginning of a new day, one "with the Lord," which means more than a thousand years of uncertain beliefs as to the power and goodness of God. When help is sought and found in Christian Science, it is not mere relief from suffering which is gained, but the "knowledge of salvation" of which we read in Luke's gospel, knowledge which gives "light to them that sit in darkness and in the shadow of death." Christ Jesus said that to know God is life. This knowing is salvation, for it unfolds into a demonstration of the supremacy of Life, Truth, and Love over all evil. Would any one argue that aught less than this is salvation? It certainly would not be to the one who has begun to work out his problem in the Christ-way. He reaches out for "full salvation" (Science and Health, p. 406), and here our re-

Digitized by Google

vered Leader assures us that this will be attained when, "in place of modes and forms, the power of God is understood and demonstrated in the healing of mortals, both mind and body."

There are a good many who when they begin to seek healing in Christian Science are too timid or too indolent to respond in the true way to Paul's counsel, "Work out your own salvation;" or if they see the advisability of so doing, they are apt to think and speak of the undertaking as if it were a slow and uncertain process, largely dependent upon the time element, although Paul says it is "now." Salvation is beyond all question an eternal fact to God, infinite Mind, and if we would oftener drop the mortal sense of things and know that man as God's idea mirrors divine perfection, we should address ourselves to our task with new courage and joy. This does not mean that the helping hand of another should be rejected, but it does mean that the truest aid which a Christian Scientist can give to any sufferer is so to liberate his thought from the bondage of pain and its attendant fear that he can bravely and intelligently work out his own salvation from all that is unlike God.

In the twelfth chapter of Revelation we read of a most momentous struggle between Truth and error, and there we find the glorious promise that the "old serpent" which has so long deceived the whole world will be cast out and overcome by those who fearlessly enter the conflict. Then we are told of a loud voice from heaven, declaring that "salvation, and strength"—not weakness—are the result of this mighty wrestling, for God and His Christ are revealed as ever present, while sin, sorrow, and death are no longer present. This is the salvation for which we give thanks at every step of the way.

ANNIE M. KNOTT.

Science and Salvation

THE prominence which Mrs. Eddy has given to science as the form under which demonstrable faith must present itself, has awakened interest not only because of the newness of the idea, but because science as a whole is dissociated from faith in theological literature. Until recently the word has connoted that which, if not opposed to religious teaching, certainly is not essential to it, and that this sense still sways human thought is not infrequently made distinctly apparent to those who honor Mrs. Eddy's teaching. When therefore one comes to think of its relation to prevailing thought in this regard, he finds another sufficient reason why with peculiar pertinence Mrs. Eddy adopted the name Christian Science, and he will be the more deeply impressed with the revolutionary character of the proposition that science and salvation are indissolubly wedded.

In seeking to bring this fact into every-day demonstration, the Christian Scientist is really identifying himself with human progress by conforming to its most elemental basis and requirement. The blight which must ever attend the effort to maintain a faith which is not shaped by science, is illustrated so abundantly in religious history that it would be difficult to read a single chapter without coming upon contradictions in the human conduct of even those who have been enrolled among the most noble and heroic.

He who has gained a demonstrable knowledge of a universal law is always freed from the pettiness of dogmatism. He is positive respecting propositions which he can prove, but modestly reserved respecting that which lies beyond this possibility. He may be sure in his own mind of the truth of a given theory, but until he is able to prove his concept true, he is neither condemnatory nor disrespectful toward those who cannot agree with him, but willing to grant them the freedom of opinion and of action which he demands for himself.

This is characteristic of every physical scientist, and it should be conspicuously true of those who have gained even a glimpse of the divine law and order as revealed in the Master's words and works. It is a fundamental postulate of the gospel that the divine illumination may come to every man; that the revelations of Truth are not reserved for the few, but may become the patrimony of all who are spiritually aspiring. Moreover, it is universally conceded that every man should be true to his highest sense of right and duty, if he would maintain his integrity and prove worthy of public confidence. These things being true, that scientific attitude which is kind, charitable, and compassionate, willing that others should work out their own salvation in loyalty to their convictions, not ours, is the only bearing which the truly broad-minded Christian man can take toward the representatives of any movement or teaching which stands for wholesome things and which does not trespass upon the personal liberty and welfare of others.

Physicists have always honored their profession in this respect, and this fully explains the unbroken peace and unmeasured progress which has reigned in the realm of nature-study since the renaissance. He who discloses a lack of this consideration and poise, whether in his words or in his bearing toward others, gives evidence that he has not yet gained a demonstrable knowledge of what Mrs. Eddy names "the Science of Spirit" (Science and Health, p. 270). He is still identified with the "Agar" of material sense which, as St. Paul says, "is in bondage with her children."

This is the lesson for us all, a lesson which has been illustrated in the lives of so many otherwise splendid characters, namely, that there can be no harmony, no true brotherliness, no true self-command, no salvation, apart from a scientific and therefore demonstrable apprehension of divine Principle and its rule,—that opening of the eyes which enables one to "behold wondrous things" out of God's law. It is this fact which gives Christian Science such a vital relation to the world's redemption.

JOHN B. WILLIS.

Among the Churches

Current Notes

PEORIA, ILL.—Work on the new Christian Science church on the West Bluff will begin soon. This was announced last night [March 3] at a meeting of First Church. A gift of $6,485 was also announced. This money was contributed within the week to the building fund of the new church by the members of First Church, and this, with gifts already made, brings the church's contribution up to more than ten thousand dollars. The money will all be in hand in time for the beginning of the work, which will be pushed, as the West Bluff worshipers are anxious to be in their own house of worship. They hold services at present in the auditorium of the Washington school. The plans for the new church, which is to be built on Barker avenue, call for a building to cost thirty-five thousand dollars.—*Peoria Journal.*

FARGO, N. DAK.—The new edifice of First Church of Christ, Scientist, was formally opened upon the occasion of a lecture delivered by George Shaw Cook on Feb. 18 last. It is on a corner lot, conveniently located near the business section of the city, and with easy street-car accommodations. The seating capacity is four hundred. The cost of the lot was four thousand dollars, and of the building, twenty-four thousand dollars.—*Correspondence.*

OAKLAND, CAL.—On March 1, 1911, First, Second, and Fourth Churches of Christ, Scientist, together with the society of Elmhurst, known later as Fifth Church of Christ, Scientist, united in the support of Christian Science free reading-rooms in the Bacon Building. In August of the same year, Third Church joined with the others, while Sixth Church did so in October, 1912, and Seventh Church in October, 1914. These rooms had been occupied as reading-rooms by Second Church, and during the latter part of the year 1911 it became evident that larger quarters were needed. On Feb. 29, 1912, the seventh floor of the Perry Building, then known as the Stocker & Holland Building, became the new home. The attendance increased so that now, at the close of the year 1914, six double reading-desks, together with four places at the large table, provide accommodation for sixteen individuals to study the Lesson-Sermon at one time. There have been 3,112 applications received and cards issued for use of books, from July, 1911, to Jan. 1, 1915.

Correspondence.

COLUMBUS, OHIO.—Columbus will have occasion to be thankful to the Christian Science people for adding to its beauty one of the finest gems of architecture in the city, as their new church in Broad street will be. That beautiful edifice is rising as quietly and as modestly as a flower, which is characteristic of the way our Christian Science friends do things. Riding past there with a prominent gentleman the other day, he asked with some touch of astonishment, "Why, what is that?" When we told him, he said that was the first he had heard of it; but he will hear of it much in the future as an architectural beauty of which the whole community will be proud. A temple like this will be an inspiration to all who pass our way, and will contribute much to the glory of the city.—*State Journal.*

❖ ❖ ❖

The Lectures

Bellingham, Wash.

Jacob S. Shield, who lectured on Christian Science at the Metropolitan Theater, was introduced by George Livesey, one of the leading attorneys of the city, who said in part:—

It is said by some that the Christian Science church is practising new ideas and promulgating new thoughts, and that it is a comparatively new religion. If it be new, it would seem to be only because it is again practising those precepts and teachings which have been lost or forgotten for the last sixteen or seventeen centuries; in fact, forgotten so long that when they are now brought into prominence they seem new. Call it new if you will, or say it is old, the fact remains that at this date it is satisfying thousands of persons whose minds for years had been tossing on a religious sea, charted with so many dogmas and creeds that their minds, and bodies too, had been almost wrecked in trying to navigate it.

I speak only as an observer, but my observation has been such that I am convinced Christian Science has given the world a practical church, whose members seem happy and contented day by day, following in their Master's steps.

Correspondence.

❖

Minneapolis, Minn.

A lecture on Christian Science was delivered by William D. McCrackan, under the auspices of Fifth Church. The introductory remarks by Ernest G. Lorenzen, professor of law at the University of Minnesota, were in part as follows:—

Christian Science does bring happiness, perfect happiness, to every human heart opening the door to its reception, and a peace "which passeth all understanding." Hence the wonderful story of its growth during the fifty years since its discovery, its commanding figure and world-wide recognition today. Thousands upon thousands in all parts of the globe are grateful witnesses to the fact that through Christian Science, hope and cheer have been restored to their lives, peace has come to the sorrowing, plenty to the poor, and health to bodies on the verge of the grave with no hope of recovery from the standpoint of *materia medica*.

Thanks to the deep spiritual understanding and the courage of a woman, Mrs. Eddy, it has been proved beyond the possibility of doubt that there is a spiritual remedy which heals all ills, sickness as well as sin, and solves all problems with which men are confronted, and that the words of the Master, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," are literally true and meant to be fulfilled here and now. Wherever may Christian Scientists go about their daily tasks with hearts filled with love and joy, for they know through demonstration that heaven is a state of consciousness attainable on earth, and that, as Mrs. Eddy says in Science and Health (p. 494), "divine Love always has met and always will meet every human need."—*Correspondence.*

❖

Washington, D. C.

Senator John D. Works, in introducing William R. Ravenson, who lectured on Christian Science at Poli's Theater, said in part:—

Again we have assembled to listen to a lecture on Christian Science, a subject of profound interest and of vital importance to the whole human race. Jesus of Nazareth centuries ago taught and practised the gospel of healing, and the multitude gathered about him to listen to his teaching and to be healed of their sins and diseases. For more than half a century Mrs. Eddy and her followers, seeking to follow in his footsteps, have been teaching and practising Christian Science, and the multitudes are again gathering to listen to its teaching, to learn of its Principle, God, and to be healed of their sins and diseases as in times past.—*Correspondence.*

❖

Forest Grove, Ore.

Verts Hall was completely filled by those who desired to hear the lecture on Christian Science by Virgil O. Strickler. The lecturer was introduced by President C. J. Bushnell of Pacific University, who said in part:—

Although I have not the honor of counting myself a member of the Christian Science fellowship within the church itself, I am happy to introduce to you our distinguished friend from the East, for at least three reasons. First, because I count many of my friends among our Christian Science neighbors; second, because I enjoy the genial, happy and intelligent spirit of Christian Science people, and third and chiefly, because I am deeply interested in having us all seek earnestly to know the truth wherever it may be found.

Christian Science has come into existence at a time of tremendous spiritual revolution. The chief events in the founding of this religion are familiar to all of us. We simply note that it was practically established and began to be felt in the last quarter of the nineteenth century, and its adherents are to be found in every city and town in the land. This remarkable growth is due, in my judgment, to several important merits of the doctrine. First, it insists upon the reality of the spiritual at a time when men are becoming tired of one-sided doctrines which emphasize the mechanical and material conceptions of life. Second, at a time of some wide-spread

Digitized by Google

cepticism and cynicism, Christian Science courageously insists upon the dignity and power of the divinely ordained nd divinely directed human spirit as able to control undeirable circumstances of life by spiritual means. Taking esus at his word, our Christian Science friends are endeavorig to achieve his works by the use of his means. In the iird place, the adherents of this doctrine have the great ractical advantage of assuming a persistently and deterinedly cheerful view of the universe.

Probably the chief difficulty which thinking people outside f this church have in understanding its teaching is twofold: rst, a set of images of God, heaven, and other religious conptions, colored by traditions of past ages and not wholly accordance with modern interpretations of Christianity self; and second, connected with this, a failure to appreend the new sense in which Christian Scientists employ cerain metaphysical terms, such as mind, reality, matter, and rror. The statement that all evil is an error of mortal mind nd an illusion, is a stumbling-block to many people, chiefly ecause of the failure to use these terms in the new sense ntended by Christian Science.

Mrs. Eddy, in suffering the attacks of the myriads of more r less small-minded or short-sighted assailants who have riticized her, has met the common lot of the greater leaders f mankind, who have pierced in solitude the mists and trackess wildernesses of human belief, and by their illustrious leeds have set the flags and lighted the beacon-fires that cheer nd guide the oncoming hosts of civilization.

The thing I should especially wish to emphasize in introducing the lecturer is the fact that Christian Science is making tremendous appeal to strong-minded, intellectual people, nd that we should earnestly endeavor, in the case of any great and widely accepted doctrine, to find out the truth that t contains, and in so doing to understand one another etter.—*Washington County News-Times.*

Pacific Grove, Cal.

The lecture on Christian Science which was delivered in T. A. Work Hall by George Shaw Cook, was largely attended, the hall being filled to its capacity with a deeply interested audience. The lecturer was introduced by Edward Simpson, president of the chamber of commerce, who said in part:—

I am not a member of this church, and frankly confess that I know very little about it or its teachings, but I have been impressed with the effect it has upon its followers. "With malice toward none," and friendship for all,—their clouds having silver linings,—they seem to have reached a high degree of happiness. As to the healing power of Christian Science, I have nothing to say further than that I can recall two cases at least in which I consider it has done a world of good, and in closing I will say that anything which betters humanity I heartily commend.—*The Review.*

Kansas City, Mo.

Two lectures on Christian Science were given by Bliss Knapp in First Church, about thirty-seven hundred persons attending. Mrs. Ella P. Stone, second reader, in introducing the speaker at the first lecture, said:—

Christian Science comes to awaken the human thought from its doubts, fears, and deep despair, to realize peace and contentment amidst human conditions. It shows the distinction between the real and the unreal as gained by spiritually understanding God and His Christ. It comes to cheer and bless, giving freedom from the bondage of sin, disease, and limitation of every kind, thus fulfilling spiritual law. Then in the words of the prophet, Christian Science brings to us —to the whole world—"beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."

The introduction the second evening was made by Lewis B. Sawyer, first reader, who said in part:—

The large audiences that come out everywhere to greet the lecturers on Christian Science are a splendid testimonial to the great influence this teaching is having in the affairs of men. The reason is apparent to those who are in close touch with this movement. It has its foundation in the fact that Christian Science not only offers a plan for future salvation, but also a perfect plan for demonstration of both health and harmony here and now.—*Correspondence.*

Wilkes-Barre, Pa.

Bicknell Young delivered a lecture on Christian Science in Irem Temple, to an audience of about eight hundred and fifty people. He was introduced by Col. William C. Price, a prominent lawyer of this city and at present one of the prison commissioners of Luzerne county, with the following remarks:—

The Christian Science church has in the few years of its existence built up a membership which is surprisingly large, and you will find among its followers many of the most intelligent professional and business men of the day. If you ask where they all come from, you will learn that a large number of them come from an abyss of doubt, unhappiness, and ill health, from the verge of despair, from the shadow of the grave. By coming into contact with the Christian Science church and its teachings, they develop into healthy, happy, harmonious individuals, conscious of the truth, conscious that as God is all, all must be good, and therefore there can in reality be no such thing as ill health, unhappiness, or evil.—*Correspondence.*

Norman, Okla.

The remarks of Victor H. Kulp, professor of law in the University of Oklahoma Law School, who introduced Col. William E. Fell at the lecture on Christian Science at the Franing Opera House, were in part as follows:—

You are assembled this afternoon to hear a brief explanation of Christian Science,—what it is, and what it is doing for the advancement of civilization. It comes to you with a message of "on earth peace, good will toward men." As a science, I believe it is truly scientific, and from the standpoint of reason, absolutely logical. Of its practicability as a curative agency, I became firmly convinced some seven years ago, when I was healed of tuberculosis of the lungs. Since that time I have experienced a number of healings and observed many others; but the changed mental condition, a greater hopefulness of the future, and freedom from the bondage of a nameless fear, have been even greater blessings.

Correspondence.

Lectures to be Delivered

NEW YORK—Buffalo (First Church): Prof. Hermann S. Hering, Teck Theatre, Main and Edward streets, 8 p.m., Aug. 1.

CALIFORNIA—San Diego (First and Second Churches): Dr. Francis J. Fluno, First Church Edifice, 8 p.m., July 29 and 30.

ILLINOIS—Galesburg: George Shaw Cook, Auditorium, 3:30 p.m., July 25.

Testimonies of Healing

It is with a deep sense of gratitude that I give my testimony to what Christian Science has done for me. For over five years I was constantly under the care of a physician, never knowing an hour's freedom from pain during this time. Indeed, I seemed to have every disease "that flesh is heir to." I suffered from stomach disorder in a severe form, and if I ate anything aside from the diet prescribed by the physician, the pain was terrible. The things I relished most the doctor said I would never be able to eat. It was believed that the trouble was inherited, as my father had passed on from it. I also wore glasses for five years, and was never able to recognize people across the street without them. I had backache constantly, caused from trouble at the birth of our child, and was a nervous wreck,—so nervous that I was afraid to stay in the house alone during the day. I had five doctors, but received no help. I then went to a specialist, and when he told my husband that I would never be well, we were indeed discouraged.

It was at this point that we decided to give Christian Science a trial. After the third treatment I began to improve, and I continued to do so until every ailment had vanished. That was four years and a half ago, and since then Christian Science has destroyed every discordant condition that has come up in our family. Our little boy is now nine years old, and he has been healed of mumps, measles, and other ailments common to children; all these have been overcome through Christian Science in a very short time, while his playmates would be in the care of a doctor for weeks.

Words fail me when I try to express my thankfulness to God, and my gratitude to Mrs. Eddy for the peace and happiness this blessed truth has brought to our home. We realize that, as our Leader says (Science and Health, p. 4), "to keep the commandments of our Master and follow his example, is our proper debt to him and the only worthy evidence of our gratitude for all that he has done."

Mary E. Steiner, Canton, Ohio.

I desire to add a few lines to my wife's testimony, and to say that Christian Science has wrought a great change in our home. For over five years suffering and discord seemed to have taken possession of it; now it is filled with love and harmony, and we have certainly experienced many beautiful demonstrations in the last four years and a half. I was healed of a carbuncle in a few days. Then on one occasion I jumped on a nail, which went through my foot, but I did not lose an hour's work on account of the accident. I am grateful for the spiritual understanding of the Bible I have gained since studying this religion, and my daily prayer is to know more of this healing power. I am sincerely thankful to God, and grateful to Mrs. Eddy for Christian Science.

Emil L. Steiner.

❖

For more than half a century I blamed an unknown God for nearly all my troubles, and my neighbors for the rest, always—or nearly always—exonerating self. For ten years prior to my liberation from bondage I was afflicted with what was diagnosed as catarrh of the stomach and bowels. Different doctors prescribed for me, and at last I went to a distant city to see a noted physician and surgeon. While there I submitted to an operation, but it afforded only temporary relief, and soon I was in as bad condition as ever.

Like many others, I turned to Christian Science for relief as a last resort, and for the physical healing alone. In early youth I was a member of one of the orthodox churches, but as I grew older it failed to satisfy me, and I became a deist, holding to that belief until I began to study the Christian Science text-book, "Science and Health with Key to the Scriptures." At this period my home was anything but a place of harmony. My wife and I were both in ill health, and both had a high temper, on which we placed but little restraint. After we had been reading Science and Health for quite a while, however, trying to decipher its true meaning, I told my wife she was getting better. She said it was I that was getting better; whereas in fact we were both improving. I then got out the Bible, which had so long been regarded as a dream-book, and in the light of Christian Science found it to be a new book to me.

My healing, like my understanding, came slowly. I had been an unbeliever so long that I demanded proof at every step of the way, but finally it was made plain that the evils of discord were false and erected upon a false foundation. My wife also had treatment, and her ills vanished into their native nothingness. Neither of us has taken a dose of medicine since; in fact, it would be hard to find two people more happy, healthy, and contented than we are. Though in mortal sense we are poor, yet all our daily needs have been met, and we have had many demonstrations of the ever-present presence of divine Love. We know what it is to "run, and not be weary; . . . walk, and not faint."

Nearly five years have now passed since Christian Science came to us, and like our Leader, while "rejoicing in some progress," we still find ourselves willing disciples "at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix). We are now in good health, and at peace not only with ourselves, but with the whole world. We are indeed thankful to God for His many blessings, and grateful to our Leader for showing us the way.

E. S. Tippin, Monticello, Ark.

I vouch for the above testimony of my husband. I also wish to say I was healed by Christian Science of bowel trouble supposed to be hereditary. I am grateful to loving friends who have helped us to know more of this teaching. I thank God, and feel deep gratitude to Mrs. Eddy for her untiring efforts to benefit humanity by showing the way to find this divine heritage.—Ida M. Tippin.

❖

Five years ago I was suffering from a disease of the throat, and there was great fear of its going to my lungs. I was under a very good doctor in the south of England, who did all he could for me, but I got no better; in fact, I was getting worse, as I had so much fever and a bad cough. The doctor then ordered me to South Africa, saying that was the last service he could render me, and I therefore booked my passage and engaged a deck cabin, to be in the open as much as possible.

Just six weeks before I was to sail, a lady whom I had met once or twice the year before, came to see me. That day I was feeling particularly ill and depressed from the distress in my throat and lungs; besides, I was trying so hard to keep up for the sake of my dear people. This friend asked me if I had ever heard of Christian Science. Though my ignorance may seem surprising, I had not. I told her that as Christian Science was a new "cure," I did not want to hear about it, as I was sure I had tried everything that the medical profession could do for me, and I meant to die smiling. She then asked if I thought God had sent the disease to me, and I said I supposed so; but it seemed horrible to think that He had, after I had done my best for five years

Digitized by Google

to nurse a dear one suffering from the same illness. I could not understand how a God of love could do such a thing, when I had always tried to obey and worship Him. I shall never forget her next words,—"God did not send it to you." That was enough for me, and I begged her to tell me all about this loving God, for I had been losing my faith, and this grieved me.

As my friend told me about Christian Science, tenderly and lovingly, I hung on every word. I said that I did not care a bit about the healing, but wanted to hear about God as Love; yet while she was talking the pain in my lungs ceased, and it has never returned. After that I asked her to treat me, and the following week I had the first test of my faith. I was away on the moors at the time, and could not let my friend know. A bad attack of fever came on and my face broke out in big blotches. Then too I had the worst thoughts I have ever had. Every wrong thing I had ever done or thought of came up and mocked me, saying that this great love was not for me. At the thought I groaned aloud, so that my dear sisters became quite worried. After a while, however, this passed, as through it all I kept declaring "God is Love;" it was all I could think of.

My sisters hurried me home and put me to bed, but I did not touch any of the medicine, although the cough was worse than ever. I felt that if God was all-powerful, He could heal me without the use of material remedies, and I would trust Him. In the middle of the night the most glorious feeling came over me; I felt damp and cool, instead of the dry, burning heat, and my cough suddenly stopped, while I seemed to hear a voice saying, "Thy faith hath made thee whole." I fell into a restful sleep, the first real sleep for eight months, and in the morning, when my friend came, I ran to her and said, "Oh, I do understand now, and I shall never be afraid again." I cannot tell how glad I am that I clung to the little truth I knew, for I have never since been tried so hard. I felt at the time that if I only held on the battle would be won.

After this I improved each day, and such a spring of happiness was born in me! I went through all the preparations for my journey without getting at all tired, and instead of taking the trip as an invalid, I was one of the most energetic on board the ship, and went in for all the sports; even the captain, in whose care I had been placed, was surprised. The cough was the last difficulty to go. I think I kept myself back in this, as I used to have the thought that people would not believe in my healing while it lasted. I wrote to my friend in England about this, and she told me not to worry, but to deny its power to do anything at all. I did so, and all at once found myself free.

Ever since then I have relied only on Truth. How could I do otherwise? I am better than I have ever been in my life. A complaint of the stomach has been healed (for years I had not eaten fruit without suffering pain), and also lumps in my throat, to which I had been subject from a child. Quite recently I was treated for a rectal trouble which was supposed to be hereditary, and I am entirely healed. I have relied on Truth alone to heal all climatic complaints, and I go about and do everything in the hottest weather, and have taken cold baths all through the winter without any discomfort.

When I came to Klerksdorp, there was as far as I knew only one other person interested in Christian Science; all the others ridiculed it, while one of the clergy preached against it. Nevertheless we have worked on quietly, and now quite a few are interested, so that we meet every Sunday to study the Lesson-Sermon, and hope soon to form a society. We are gaining the respect and love of those who were once antagonistic, and we know this religion will go on growing, for everybody wants it, really.

Over and above the physical healing I cannot describe the peace and joy that is mine through this wonderful Science. It is indeed the "pearl of great price," and I could not live without it. I pray each day to be able to pass it on by helping others. When I think of that brave woman, our Leader, my only desire is to be even a little like her who so bravely bore scorn and persecution. With me it was hard enough, but she had the whole world against her. Thanks be to God that she was brave, or I should never have heard of Christian Science, and I was surely a thirsty one in the desert if any one ever was. I cannot finish without saying how kind and loving all the Scientists in Johannesburg and elsewhere have been to me, and especially the friend in England, who has gently led me away from personality to the one Principle, God, and has never been too busy, but has again and again sent me comforting and encouraging thoughts across the sea. I hope my experience will be of as much benefit to some one else as the testimonies in the *Journal* and the *Sentinel* have been to me. The *Monitor* too is a great help. I read it every day, and then pass it on to some one else who is longing for clean news.

KATE EMILY AUSTIN, Klerksdorp, Transvaal, South Africa.

As a living witness to the healing power of Truth as revealed in Christian Science, and with a heart overflowing with gratitude to God, I write this testimony. Having been greatly helped by reading the experiences of others, I hope some one may get the same good from my testimony. After having been to some of the best physicians in Chicago (not less than seven), and going before a clinic, I went to one of the large hospitals and consulted an eminent surgeon. I was told that I must stay in the hospital two weeks before he would say what he could do for me. The doctors had said that I had locomotor ataxia, and extreme remedies had been applied in an effort to reach the seat of the trouble. Through a *Sentinel*, which was given me by a friend, I became interested in Christian Science, and it has healed me, not only of this trouble but also of headaches and many other ills. I had used tobacco in all forms for twenty-seven years, but as I began to understand the truth about God, this habit left me.

The Bible and Science and Health have been my only teachers. I have enjoyed the privilege of helping others, also of attending the regular services in one of the Chicago churches and telling the story of my great blessing. I thank God that He found some one good enough to give this truth to the world, that all may be free.

J. E. RHOADES, Chicago, Ill.

When I think of all the blessings I have received through Christian Science, I feel impelled to give my testimony, as that seems the only way to express my gratitude, and by so doing I may help some one else. When I came into Christian Science I used crutches, as I suffered from what is known to *materia medica* as tuberculosis of the ankle-bone. I had not walked without them for two years, and thought I would never do so again, as that is what the doctor told me, for I had undergone an operation in which one of the large bones had been removed.

I took treatment in Christian Science for a little over a year, as I did not get the healing immediately. I am now glad that recovery was slow, as it gave me an opportunity to study, whereas if the healing had been instantaneous, I might

Digitized by Google

not have studied so faithfully. To show just how my ankle is, I will say that last May I went on a walking trip and covered nearly twenty-three miles of hill-climbing in one day. When I arrived home, I did not have any trouble with my ankle at all; in fact, I was not nearly so tired as were some of the others in the party.

I can never be grateful enough for the practical understanding of God which I have gained in Christian Science.

DOROTHY RATH, San Rafael, Cal.

✧

On June 10, 1912, my little boy, then eight years old, fell from the nursery window three stories high, a distance of about thirty feet. I was away from home at the time, and when I returned he had been taken to a hospital, where it was found that he had sustained what was pronounced a double compound fracture of both thighs, the bones protruding through his clothing. The collar-bone also was broken.

The boy had Christian Science treatment from the first, and when I saw him at the hospital a short time after the bones had been set, he said he had no pain. He was crying, however, and when I asked him why he was doing that if he had no pain, he said that he wanted to go home and have Christian Science treatment. I explained to him that he was having Science treatment, and that God was in the hospital just the same as at home. He then became calm and told me how the accident occurred, and was quite cheerful. I was with him for six hours daily for six weeks, and during that time never again saw a look of suffering on his face. At the end of this period I took him home, and he stood alone that night for a few seconds. The doctors said he would have to go on crutches for weeks, but he never did so at all. At first he walked by holding to the table, then with the aid of a stick, and he went back to school the first day of the term, early in September, perfectly well, without a limp or any sort of stiffness. He was able to take up his gymnasium work and play foot-ball just as if nothing had happened, and he has not missed an hour from school since.

I am most grateful for this wonderful healing, and for the help Christian Science was to me during this time. It enabled me to be quite calm when I heard of the accident, and to interview the doctors and the matron at the hospital. The matron said she did not think I realized the dreadful thing that had happened, and she was right—I only realized that God is the one power and presence, and that evil has no power.

I am indeed thankful to God, and grateful to Mrs. Eddy for giving us Christian Science.

MARIANNE DICKINSON, Rosbryn, Altrincham, England.

I vouch for the accuracy of all the statements contained in my wife's testimony. I was at home when our boy was carried in, and to mortal sense the accident seemed a terrible one. At such a moment as this Christian Science proved indeed a stay and support, and for this we are most grateful.

WALTER DICKINSON.

✧

Such a wonderful demonstration has been made for me in Christian Science that I wish others to know of it. About nine years ago I was very ill for several months with acute lung trouble, and submitted to an operation for the purpose of opening an abscess in my side. Although I recovered sufficiently to return to school and was comparatively well, this abscess refused to heal under any treatment of doctor or surgeon; so a second operation was undergone, but to no purpose. After a long course of treatment I was told that nothing more could be done, and nature would have to be left to do the work. For some months I lived out-of-[illegible] and grew stronger, while the abscess apparently healed, only to break out again in a few months. Thus for [illegible] years it continued to discharge,—sometimes it was [illegible] sometimes worse. Then Christian Science was recommended to me by friends, and a few years ago I took up the study of it.

It was nearly a year and a half after my entrance into Science before the perfect demonstration of the healing of my side was made, although I received much benefit mentally and physically during all of this time. Through the [illegible] guidance and work of a Christian Science practitioner I learned to overcome fear and doubt and discouragement, and I gained in the understanding of God and man's relation to Him. The falsity of many old and cherished material beliefs was uncovered in the light of this clear and convincing truth, before my side was at last perfectly healed.

This absolute proof in my experience of the allness of good and the power of divine Love, has been most wonderful and convincing to me, and I am very grateful, not only for the physical healing, which is small in comparison to the mental uplift, but for my understanding, limited though it is as yet, of divine Principle. For this blessing, and for others, I would express my gratitude to God for Christian Science.—MARIE WILKINS, Grand Rapids, Mich.

✧

It is with the deepest sense of gratitude that I testify to the healing and regenerating power of Christian Science. Persistent study and application of its Principle are resulting in a constant unfoldment of harmony and a corresponding casting out of many discords.

I began a study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to obtain relief from physical suffering. I studied carefully and critically at first, understanding little and doubting much of what I read. Nevertheless, within a week the healing ministry of Truth began to free me from pride, ignorance, doubt, and pain. Then followed the healing of an abdominal trouble which had failed to yield to years of medical treatment. During the six years that have intervened, the honest application of the truth has successfully solved problems of every conceivable nature. A structural defect of the eyes was healed, freeing me from the bondage of glasses; stomach disorder was entirely destroyed, and a severely sprained ankle yielded in a few hours. Not only has Christian Science healed me when necessary, but its preventive power is making the necessity of physical healing of rare occurrence.

I found an understanding of the Principle of Christian Science especially applicable to the work of school-teaching. In proportion to my own growth in understanding of the normal inheritance of intelligence, the love and order belonging to God's children, these qualities were manifested in the class-room. I am gratefully conscious that Christian Science is working a marked change in character, slowly but surely eliminating criticism, envy, false pride, resentment, and other traits that do not belong to a child of God. With this transformation of character there is an unfolding of greater love, a strengthening and broadening of the sense of human affection.

I am grateful for our Christian Science literature with its abundance of good. One day, when seemingly overwhelmed with grief, I opened the *Monitor* to find healing in an article entitled "Reasons for Rejoicing." My testimony would be incomplete without a thought of appreciation for that noble woman, Mrs. Eddy, whose beautiful life and wonderful work continue to inspire and illumine the way.

ISABEL PETERSON, Rockford, Ill.

Digitized by Google

It is with great pleasure that I send my testimony of aling and express thankfulness to God, also gratitude to rs. Eddy. For two years I suffered from nervous exhaus-on in its worst form, and was subject to melancholy and steria. I had doctored in Chicago, Canada, and New ork, but the physicians could give me no hope. They told e that time would either heal me or place me in an asylum. bout every three weeks, sometimes oftener, I would fall into sleep which always lasted twenty-four hours, and occasionly longer, and from which nothing could awaken me. The ext day the pain in my head and spine would be so severe at it was almost unbearable. My stomach also was in rrible condition, and altogether I was in bad shape. I had st all interest in home and family, and it seemed as though had nothing to live for. At this time, after everything else ad failed, I was persuaded to take up the study of Christian cience, with the result that I am a well woman, better and tronger than I have ever been before. I have also been able o leave off wearing glasses, which were so thick that the dges were beveled so I could bear their weight.

My little daughter had a severe attack of influenza. Not eing able to overcome it myself, I called on a Christian Science practitioner. The next day the demonstration was made, and there were no after effects whatever. We are indeed grateful for all these benefits, but more so for the understanding we have gained of man's true relation to God. It is with a heart full of gratitude that I send this testimony in the hope that it may be of some help to others.

MRS. THOMAS BRIERLEY, Los Angeles, Cal.

✧

I feel that the time has come to tell others what Christian Science has done for me. In the spring of 1910, I was suffering from a severe attack of heart trouble, and according to custom the family doctor was called. Instead of gaining, as on other occasions, I grew constantly weaker, until my parents feared the outcome. I was put on a diet, and forbidden to talk, walk, ride, or even move, for to do so might prove fatal. I was in this condition, a physical wreck, when a friend mentioned Christian Science to me. Knowing nothing of this Mind-healing, I had little faith in it; nevertheless, being in need of instant help, a practitioner was sent for, who called at once. I rejoice to say that through her understanding of divine Mind the case was met instantaneously, and that very evening I went with the rest of the family to the dinner table, and enjoyed my food as never before. The next day I went about the house with a freer feeling than I had ever known, but I kept on taking treatments for nearly three weeks, as there was a great deal of fear to be destroyed. I am glad to say that through the understanding of divine Love headaches, nervousness, and catarrh have also disappeared. I had worn glasses for eight years, and rejoice to say that I have no need of them now.

My daily prayer is that I may gain in wisdom and knowledge so as to help others as I have been helped. It is with a heart full of love and thankfulness to God, and gratitude to Mrs. Eddy, that this testimony is written.

BERTHA D. GLUESING, DeWitt, Iowa.

✧

This is to state that my little boy, aged six, was healed in Christian Science of an illness which at first seemed to be a cold, but which developed into acute lung trouble. We asked for help from a practitioner and in a week he was out of danger, the fever being destroyed in two or three days. This and other healings have been permanent.

MRS. E. M. DUDLEY, Whitman, Mass.

From Our Exchanges

[*The Universalist Leader*]

Those who came in contact with the personality of Jesus, and were capable of appreciating the virtues it manifested, were enabled to fashion from the elements which it supplied a better conception of the goodness of God than the world had ever held before. They had known men who in some degree were just and generous, sympathetic and helpful; but here was a higher type of moral excellence than they had ever seen or dreamed of, and they embodied it in their divine ideal. Beholding his gentleness and tenderness, his patience and forgiveness, his compassion which was measured only by the need of those on whom it was bestowed, his joy in rendering constant service, his love embracing all mankind, they said, "This is what the goodness of God is like." Therefore they were encouraged, when they no longer had access to him, to go direct to the Father, with whose mind and heart he had made them acquainted, for strength in trial, companionship in loneliness, and comfort in sorrow. This also was the gospel which they preached in his name. As best they could, they repeated his sayings; they pictured his character; they told the story of his life. They said, "This is what our master was, and what God is."

[*The Christian Register*]

Religion changes life. The change is not the product of discussion and argument. It is not to be produced by reducing religion to terms of improved doctrines, or arriving at agreement about just what words shall be permitted and what rejected. Getting things precise, as nearly precise as is humanly possible, is a desirable thing, but it is not the main thing in religion. The main thing is such change of heart as shall sweeten and purify and enlighten and harmonize life. The spiritual nature is concerned far more than the mental attitude, or even the moral attainment. These will be affected toward better things most by alteration of the central spirit.

Intellectual heights will shine with more than their own light, and truth become not divisive but uniting; the struggle toward perfection will gain an incentive and energy; and these will come, not through acceptance of a proposition, nor through a code of morals, but through participation in the divine Spirit, communion with God, realization that under all differences is the unity of the spirit, and that "round our incompleteness His completeness lies." When this spirit is supreme, we do not have to wait for men to agree together what they shall say and what they shall do, for they are united by sympathy deeper than word or deed. There comes indeed from heaven a sound as of the rushing of a mighty wind, and "tongues like as of fire" on tribes and centuries sit.

[A. T. Belknap in *The Standard*]

Jesus taught that right conduct is essential to true religion and that religion is essential to conduct. The salvation he gave his life to purchase was a salvation that saves. There were no legal fictions in his teaching; he dealt with realities. The seed and the leaven rather than the courtroom illustrated his thought. Faith is the atmosphere in which conduct grows, but conduct is the living plant which keeps fit for mortal breathing the atmosphere of faith. Jesus brought a genuine not a sham salvation. He tolerated no break between faith and conduct.

The great heresy of the ages is to substitute a sham salvation for the reality Jesus proclaimed. This was done once when the fiction of salvation through sacramental grace was

Digitized by Google

substituted for the plain teachings of the gospel concerning conduct and piety. It was done again when assent to a theological system was substituted for sacramental grace as the basis of salvation. The gospel is still something deeper and better than any human improvement or substitute.

It would pay us to read the gospels more, for they are in danger of joining the long list of famous volumes more praised than read. They are still the best books ever written on the conduct of life, and they enthrone both faith and conduct in a living and indivisible union. There we read of one who came to save men from sin "that they might have life," and "have it more abundantly." And with the gospels in our hands we busy Marthas of the twentieth century ought to sit long and silent at the Master's feet.

[Rev. Charles F. Macfarland, Ph.D., in *The Homiletic Review*]

Our education, sacred and secular, is not yet ablaze with the sense of social justice; nor does it melt with a passionate feeling of an infinitely tender world brotherhood. We are not yet imparting to our children the ineffable sense, the knowledge and the burning affection, of a kingdom that shall become the sovereign compulsion of their life, that shall open a way out of human selfishness, and reduce the inherited effect of our own wild egoism; which shall lift them up out of a confused social conscience and the bewildered order of our day upon the height of vision, unclouded by the mists of the human conflict of our own selfish interests. Here is the fundamental problem of religious education at this moment.

[*Zion's Herald*]

Men need today to stop disputing over particular theories of inspiration and to lay more stress on the fact of inspiration; to cease from acrimonious controversies as to the finer points of Biblical criticism, and to press on the world, with redoubled force, the claims of the Bible itself as essentially a revelation from God and a guide for faith and practice. The world does not much care as to what we think some other man has thought about the Bible, but wants to know whether we ourselves believe enough in the Bible to preach it, live it, and publish it. It has become not so much a question as to what kind of Bible we have, as to whether we have any Bible at all.

[*The Christian Intelligencer*]

In these days much emphasis is placed, and rightly so, upon intellectual qualifications for leadership among men, but there is no fact of human society more clearly and more frequently demonstrated than that intellect can never, under any conditions, take the place of character and spirituality. Mental culture, unsupported by the spiritual nature, is shifting sand, and the house of achievement built upon it is preordained to destruction. Power from on high, flowing from an humble yet fervent faith in the Lord Jesus Christ as the only divine Saviour of men, is the one indispensable quality in all true spiritual leadership.

[*American Lutheran Survey*]

Lawlessness should be so thoroughly detested, so heartily feared, that one of our constant questions as citizens might well be, Have I done anything today, carelessly or wilfully, to encourage disrespect for law? And since it is uphill work to teach new tricks to old dogs, it behooves every citizen who cares for law and order to do all that lies in his power to imbue the rising generation with a wholesome respect for authority. The way to crowd the outlaw out of civilization is to fill the land with a generation which holds law sacred.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A large edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, before published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"The Sons of God," a lecture by Col. William R. Fell, C.S.B., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: The Resurrection and the Life," a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

Inasmuch as postal regulations require that monthly and quarterly periodicals intended for the middle and western states must be carried by freight from Boston to central distributing points, five to twelve days more time should be allowed for their delivery than is necessary for the *Monitor* or *Sentinel*. Librarians will please remember this in placing orders which must reach the reading-rooms at a given date.

From the Clerk of The Mother Church

CHURCH TENETS.—The Tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership and extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 105 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $5. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $5 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, Quarterly, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01561 x. Large type Bible, 7½ x 6¼ inches, 1½ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 35 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco $1.40; full morocco $2.50; levant $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harp-strings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Rood), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8 inch (mount 12 x 16), $1; 12 inch (mount 15 x 20), $2; 16 inch (mount 21 x 28), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 31 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

How violators of the oleomargarine law have defrauded the federal government out of at least twenty-seven million dollars, due in stamp and special taxes, is revealed by Secretary McAdoo in a statement based upon a preliminary report on a sweeping investigation conducted by Commissioner Osborne of the internal revenue bureau. Frauds committed as long ago as 1902, immediately after the enactment of the law, have been uncovered by the commissioner. Unpaid taxes, aggregating eight hundred and fifty-one thousand dollars, have been recovered and deposited in the treasury, "with the prospect of further very large collections." Forty-two violators of the law have been convicted since the first of January, and twenty-nine of these have been given prison sentences. Fines aggregating one hundred and forty-eight thousand dollars have been assessed, in addition to the recoveries actually made, and the announcement declares that while fraudulent practices of this sort probably have been checked, the investigation will be continued and "every law-breaker brought to justice."

The announcement shows that since 1902 more than two hundred million pounds of colored oleomargarine have been manufactured, and fraudulently sold as uncolored oleomargarine. The law imposes a tax of ten cents per pound on colored oleomargarine, and one quarter of a cent per pound on the uncolored product. In perpetrating these frauds, the oleomargarine manufacturers have paid only the one quarter cent, when they should have paid ten cents; in the case of butter manufacturers who sold the product as butter, no tax was paid, when the government should have received ten cents per pound.

This is the first season under national control of the Rocky Mountain national park. There are many mountains in the Colorado Rockies that exceed fourteen thousand feet in height, but only one of them is included in the park. On July 1 Secretary Lane took formal possession. The work of building a road by the Fall River cañon from Estes park across the range to Grand lake on the west is now actively under way. This road is the state's contribution to the park. Rocky Mountain national park lies about seventy miles northwest of Denver. It contains about three hundred and fifty square miles, not a foot of which is less than eight thousand feet above sea-level. It lies on each side of the continental divide, which at this point runs irregularly north and south. There are more than sixty peaks that rise above twelve thousand feet, and a number between thirteen thousand and fourteen thousand feet, and one that rises above fourteen thousand feet. Between these peaks are nearly two hundred mountain lakes. These vary in size from a few acres up to fifty or sixty acres. The timber line in the Alps is generally about sixty-five hundred feet, but on these mountains it is about eleven thousand five hundred feet and over to timber line. There are more than forty species of plants growing and not less than one thousand varieties of wild flowers.

A royal commission is to be appointed by the Canadian government to investigate the question of increased agricultural production in the dominion, together with the related questions of wider markets, the unemployed, etc. The commission, which is to be appointed at the recommendation of the prime minister and in response to a request made by the congress of mayors which visited the capital some weeks ago, will be authorized to employ such technical and professional assistance as its members may determine.

In connection with opportunities for increased agricultural production, the following considerations are advanced: First, improved methods of production with a view to a better return to the producer; second, assisting this purpose by proper instruction and demonstration; third, increasing the acreage under production; fourth, efforts to attract large and permanent agricultural population; fifth, stimulating and encouraging cooperation among the producers; sixth, providing cold storage and allied facilities.

Construction work on the new five million dollar Field Museum of Natural History, which is to be built on Chicago's lake front, just south of Twelfth street, has begun after twelve years of planning and negotiation. The structure will be completed in less than three years, according to plans, and more than three thousand men will be employed in the work. When finished, it will be the largest marble building in the world and one of the largest museums. It will consist of three stories and a basement, and will cover an area of 700 by 350 feet. The floor area of the museum will be six hundred and seventy thousand square feet, four hundred thousand of which will be devoted to exhibition purposes. The remainder will be used for scientific laboratories, lecture halls, offices, and a restaurant. The late Marshall Field gave nine million five hundred thousand dollars for the building and endowment fund of the museum.

In the Penobscot river basin is now being built an immense concrete dam, which on its completion will merge the waters of three large lakes—Ripogenus, Chesuncook, and Caribou—into a magnificent body of water twenty-five miles long, with a storage capacity of more than twenty-one billion cubic feet, and said to be fourth in size of all artificial basins in the United States and seventh in the world. After four months of preliminary work the dam is now well under way, and will be ready in the spring of 1916. The Great Northern Paper Company is the owner of the property. A natural site for a dam at the head of the Ripogenus gorge has been utilized. The dam will be about one thousand feet long, and eighty feet from top to bottom in its deepest place, but the includes a bridge and roadway across the to thirteen feet above the crest or spillway of the dam, the bridge being set on piers twenty fee apart.

The remarkable increase in the rice crop of the Argentine Republic has led the government to take steps to insure the raising of a pure quality by the latest and best methods. The first step has been to import a quantity of reed rice from Japan of the "Okambo" variety and to distribute this among the farmers, with instructions as to the preparation of the land and sowing. They have employed a Japanese rice expert to aid them in their plans as general director, while under him are a corps of competent assistants. In 1913, which is the latest year that statistics are available, the cultivation in the province of Tucuman alone amounted to 60,506,765 kilos, worth $20,991 mn. (paper dollars).

According to official reports, it has been found that the ash of the seaweed found on the shore of Manila bay, in Tondo, yields 15 per cent of potash. This discovery is greeted with considerable interest, owing to the war-time scarcity of potash. No data are yet at hand to show just the amount of seaweed available, but it is known in a general way that the supply is very large. Explorations and further experimentation are to be made at once by the Philippine government with a view to the increase of the supply of potash for the United States markets.

The silver cup offered as a prize during the week of the New England clean-up and paint-up campaign has been awarded by the judges to the city of Hartford, Conn. The prize must be won three times in succession before it can become the property of a city or town. Eighty-one cities and towns entered the contest, the reports of twenty-two of these being very close in their showing of what had been done in the communities during the campaign week.

Through the efforts of the commercial organizations in Easton, Phillipsburg, Trenton, and intermediate towns along the Lehigh river, and the Philadelphia *North American*, an appropriation has been obtained from Congress for a preliminary survey of the river between Trenton and Easton-Phillipsburg, to determine the possibility of providing a twelve-foot channel which would accommodate boats up to one thousand tons.

Panama city and Colon expect soon to have gas plants in operation. The prime object, it is asserted, is not illumination, although illuminating gas will be furnished if desired, but to furnish gas for cooking and washing purposes. A representative of the company, who made an investigation, said that such fuel could be furnished to the natives at less than the cost of charcoal and wood used now.

All records were broken during the last fiscal year in the making of surveys of public lands, according to reports submitted to Secretary Lane by the general land office. The total of accepted and approved surveys aggregated 14,389,849 acres. This was nearly double the amount surveyed during the preceding year.

The American consul at Calgary, Alberta, Canada, reports that a herd of wild buffalo 400 to 500 strong is still at large in the northern part of that province and in the adjoining McKenzie district.

Since the middle of last year the mint at Lima, Peru, has coined 1,419,000 soles for delivery to mining companies, to use in paying for labor.

Last year's apple crop in the United States approximated eighty-six million three hundred thousand barrels.

Moral Courage

REV. WILLIAM P. MC KENZIE

SOME one whimsically defined courage as "having done the thing before," by this meaning that a man who had been in one fight would have less trepidation in entering the next, and so by a process of experience in contest come to be intrepid. Possibly this may be the course of physical courage, and in result it may follow from a learning of the bodily powers and endurance, or sometimes from a trying out of the resources of cunning.

In the first year of Saul's reign, his son Jonathan induced a contest with the Philistines by taking possession of the garrison at Geba. Later, when the war was in operation, he performed a feat which made the whole army love him. With only his armor-bearer to assist him, he clambered up the rocks into a garrison of the Philistines, and with vehement slaughter laid low a score of their men, so that a panic spread through the enemies' ranks. When later he satisfied his hunger, unaware of his father's foolish adjuration cursing any one who should eat food before sundown, and the king after the drawing of lots had discovered him and thought that he must put him to death, the people rescued him because of their admiration for his courage.

But the courage which is of value in the world is distinct from that which has destruction as its purpose, and it carries with it its own descriptive adjective. It is spoken of as moral courage. Sometimes it is shown simply by living a true life under difficulties. Alexander Pope, whose "Essay on Man" presents so many quotable sayings declaring his vision of the dominion and duty of man, was in his mere living an example of courage which illustrates in a degree what Mrs. Eddy says in Science and Health (p. 172), that "the unfortunate cripple may present more nobility than the statuesque athlete." Moral courage has been exhibited by every great man who has tried to lift his brethren above the degradation of the times. It is a great test of a man when he is willing to be the object of misunderstanding and ridicule in his own age in order that a better age may come. The development of this courageousness proceeds by degrees, and it is more often a combat with that which is within than with what is externally visible.

Daniel had moral courage when he stood fast against the proposal that he and the other Hebrew children should be treated as others were in the civil service school. "Daniel purposed in his heart that he would not defile himself with the portion of the king's meat, nor with the wine which he drank." This was so connected with the idolatry of the court that the pure-minded youth revolted from the contamination. He had the wisdom to release his friend the prince of the eunuchs from solicitude regarding the result, and to find a way out of the difficulty for him by showing how his charges could thrive better on the simple food of their own choice. Throughout the glory of two reigns Daniel held his strength as the revelator of truth to the monarchs who ruled. Then came the overthrow of Babylon and the dominion of Darius, who in bringing order into the kingdom made Daniel the prime president over the princes set over the kingdom. The plot of the presidents and princes is familiar to Bible students, as is the demonstration of Daniel whereby animality was controlled, and he found no hurt when thrown among the lions, "because he believed in his God." By his moral courage he thus proved to Darius the power of God, and caused him to say, "He is the living God, and steadfast forever."

We might say, then, that the office of the man of moral courage is to convince men concerning God. Christian Science gives a new meaning to the term so often used to describe the man of integrity,—"a man of principle." The opposite of this is the unprincipled man, who is a seeker after present advantage and a time-server. When the meaning of Principle becomes clear in the world through the witness borne by men and women obedient thereto, then multitudes on earth will be as those who from a troubled dream awake to find that the sin and error whereby they were in torment can no more control. It may soon be said that the prophecy is fulfilled which declares that "a nation shall be born in a day."

Across the continent heavy trains like elongated shuttles roll swiftly from ocean to ocean. The observer finds that city groups of houses, buildings by the way, or roadside stations, bulk largely for a moment to the sight, then rapidly dwindle behind till they are lost in the gray distance; but at intervals are semaphores guarding the right of way, and at night each light twinkles faithfully, as if it were a star set steadfastly to guide. So in history: the exalted, the rich, the powerful of each period, dwindle into common oblivion, but here and there is the beacon-light of some noble life "of whom the world was not worthy," whose example of moral courage remains like a star testifying to God's light.

It is hard to put into language a description of the aggressive contempt, infidelity, and personal hostility expressed to Washington by some of his contemporaries, by the very men for whose benefit his brave life was spent. Later generations, which look not through the red mists of hate, increasingly value his work, seeing that for the world it was accomplished. The nation which was then his antagonist in war, acknowledges his rectitude and its own mistake; and hemisphere joins with hemisphere in gratitude for his moral courage, whereby the political freedom of mankind was advanced.

Another light shines out as the years recede, and we increasingly appreciate the kindness and strength of Lincoln the emancipator. He too experienced in his time the utmost of vituperation, and carried on his gentle life's labor unsuspected of the greatness which time is revealing. He chose for important duty men capable of serving the country, ignoring their personal insults, because he held a philosophy of life that could not reciprocate hatred. One of a multitude of schemes of murderous hate was finally worked out, and his name was thus placed upon the list of martyrs to whom succeeding generations raise monuments. The martyrs were men in advance of their times, bringing good for which their age was incompletely ready, that this good should be the inheritance of those following.

Mrs. Eddy speaks of moral courage as being "the king of the mental realm" (Science and Health, p. 514). If ever

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

there was a time when moral courage was requisite, it is now. The world is testing to an extreme a long lasting false belief. When discernment comes that to "overcome evil with good" is the way of settlement whereby the "honor" of nations is made secure; when reliance on brute force, subtlety, and the "emergency measures" of hatred, discloses itself as the reed upon which if a man leans it not only breaks, but also pierces his hand in the process,—then will come the lifting of hands in prayer, and the call of many voices inquiring for the better way. The Christian Scientists of the world know the answer; but it is not by chatter of the tongue that it is given to others. By demonstration alone it is revealed.

Our thought would be incomplete did we omit to speak of the champion of the freedom of man who followed the country's founder and the great emancipator, and "sounded the keynote of universal freedom, asking a fuller acknowledgment of the rights of man as a Son of God, demanding that the fetters of sin, sickness, and death be stricken from the human mind and that its freedom be won, not through human warfare, not with bayonet and blood, but through Christ's divine Science" (Science and Health, p. 226). To return for evil a greater evil seems the ideal of physical courage, but to return good for evil shows moral courage, and reveals manliness dominant above animality.

When the Discoverer of Christian Science, a gentle, loving woman holding forth to her contemporaries a treasure of incomputable value, first experienced the shock of knowing the world's hatred of goodness, she may have been tempted to refrain from giving to the world the results of her discovery; but it was her moral courage, tested in many a conflict of greater moment than any battle recorded by historians, which enabled her to endure, to return blessing for vituperation, and thus to become the whole world's benefactor as the Founder of Christian Science. We need not waste words in describing the mental wickedness that opposed her efforts. The victory is not greatened by description of the vanquished, as in the historian's page. It is the demonstration of divine power, which is as light appearing,—and who that rejoices in the light cares to have the superseded darkness described?

❖

Life Eternal

FRANK H. SPRAGUE

THE field of human observation has been pretty thoroughly explored by men of learning in the hope of ascertaining what life is. Crediting the testimony of the physical senses to the effect that the seat of life is in organic matter, the majority of investigators have been beguiled into pursuing their researches at least primarily in that direction. Although the insistent demand of the higher intuitions has constrained theologians to take account of a spiritual nature, the spiritual has been treated as an adjunct to or outgrowth of the physical. In spite of Jesus' trenchant declarations anent material existence, logic and consistency have been put to severe straits by the exponents of traditional religion in the attempt to bridge the impassable gulf between Spirit and matter.

To the thought steeped in materialism it seems incredible that the great Teacher's utterances on the subject were intended to be taken at their face value, for he never dignified sentient existence with the status of life or admitted that such existence was even a stepping-stone to life. He acknowledged but one kind of life, namely, the spiritual impartation of divine Mind; and to this he gave the descriptive name "life eternal," in contradistinction to animate existence, the falsifying sense which purports to evolve from a physical basis and eventuate in death. He even spoke with disapproval of the notion that the manifestation of life could in any way be involved in or comprised by such conditions as material existence implies.

But instead of taking his pregnant declarations as a criterion of scientific knowledge and testing their value by demonstration, as Jesus bade men do, the schools have undertaken to establish science on a foundation which largely divorces human experience from the Principle of Christ. In no merely figurative sense the Master referred to those who were laboring under the delusion that life is a matter of sensation, as "dead." He accepted but one estimate, standard of living,—that which testifies to the perfection the creator as exhibited in the phenomena of holiness, purity, integrity, and harmony. The blunder of looking for the origin of life in atomic structure, electricity, or some energy, has beclouded thought and robbed religion of vitality.

Nevertheless, there have arisen at intervals spiritually discerning individuals who, breaking away from traditional restraints and prescribed courses of reasoning, have seen the mesmeric delusion in which the belief of life as matter is conceived. According to the Wayshower's declaration it came that men "might have life, and that they might have more abundantly;" and he taught that to know God aright is life eternal. The Christian, the true follower of Christ Jesus, is therefore one who allies his thought and affections with the spiritual ideal of life, with the type of consciousness which has the quality of eternality, because it is from above, and not one who pins his faith to mystifying, falsifying, earth-born concepts of mortal belief which are doomed to perish.

It is through the understanding of Life as Spirit, God, that Christian Science counteracts manifested belief of disease and stays the hand of death. Life is eternal activity and blessedness; death denotes a suppositional state of eternal stagnation. Therefore in order to manifest Life, thought must be kept in constant relation with divine Principle; it must correspond with the reflection of Spirit. Such a condition is of necessity instinct with intelligence, freshness, alertness, originality, spontaneity, initiative. Deliberate and constant watchfulness is requisite on the part of every individual to prevent thought from lapsing into the mesmeric state of belief in which the dream of material sense is mistaken for life.

Without the quickening, self-renewing, revivifying influence of spiritual sense, human consciousness, like molten metal, tends to cool and crystallize into inert, conventional stereotyped forms, which are the essence of material manifestation. Jesus likened spiritual sense to "a well of water springing up into everlasting life." This spiritual consciousness, like the spring, purifies itself by giving out freely, while material sense, like the cistern fed from without, breeds stagnation. How important, then, that Christian Scientists should keep their thought-channels open for the spiritual influx by giving out the living water, by unselfishly applying the truth to human needs.

Christian Science demonstration denotes the awakening of spiritual sense which breaks the mesmeric spell of life in matter. The healing of the body marks but the first step of awakening to real life. If this initial step is not followed up by the endeavor to win higher and more impersonal views of the quickening influence of Truth, a condition of religious stagnation sets in, in which one only believes himself awake to spiritual realities,—like the individual who, overcome by drowsiness, falls into a doze and dreams he is awake. To the church in Sardis the revelator was instructed to write:

Digitized by Google

know thy works, that thou hast a name that thou livest, and art dead. . . . If therefore thou shalt not watch, I will come on thee as a thief, and thou shalt not know what hour I will come upon thee."

The genius of true leadership appears in the timely words of counsel and admonition with which Mrs. Eddy sought, as occasion required, to dispel the apathy of mortal belief by keeping her followers at work on spiritual lines. Thus under the caption "Alertness to Duty" in the Church Manual (p. 42), she says: "It shall be the duty of every member of this Church to defend himself daily against aggressive mental suggestion, and not be made to forget nor to neglect his duty to God, to his Leader, and to mankind." With the departure of our Leader from the scene of our earthly operations, the movement entered upon a new stage. Where formerly her incisive messages, dealing with each fresh issue as it arose, were relied on to stimulate the lagging thought, it now rests with Christian Scientists individually to exercise the greater diligence, lest numerical growth, financial prosperity, popular favor, and other material considerations, be allowed to divert attention from the higher demand of spiritual demonstration, which alone attests life.

❖

"Comfort ye my people"

ISABEL H. EASLEY

A LITTLE child who had been left much to the care of a kind but ignorant nurse became deeply imbued with the belief in ghosts. The beautiful forest near her home was for her the abode of mysterious and unfriendly spirits, while the depths of every green shrub concealed hideous shapes that lurked in the shadows. The darkness, too, was peopled by unknown and terrible foes that threatened constantly to destroy her, and so strong was the influence of these fears that whenever she found herself alone, her terror was expressed in piercing outcries.

The mother at length discovered the cause of the little one's distress and lovingly explained to her the falsity and unreality of her fears. The child's faith in her mother made it easy for her to accept as true all that was told her of the reality of God's constant presence and loving care, so that any appeal to the old terror was afterward met with the positive declaration, "There are no ghosts, for my mother told me so." With this comforting assurance all superstitious fears were overcome, and the world became for her a place filled with love and beauty.

This state of mind continued until the phenomena of death came for the first time into the child's experience. Because the kind mother was ignorant of the vast depths of the Father's love, the child received, instead of comfort, a stone that pressed heavily upon her heart. That which had been done in accordance with the will of God, as she was told, did not seem a very loving thing. Why did He make the little children and their mothers die when they wanted so much to live and be happy? If He was omnipotent, why did He let Satan enter the hearts of people and make them sin? Why did He not destroy Satan? Deeply she pondered these questions in her heart, but because her mother had assured her that the explanations given her were true and right, her childish faith sorrowfully accepted this travesty of God's love. A new terror, however, took the place of the ghosts of her infancy. She was now afraid of God, and even more afraid of that mysterious being who was called the devil.

The child grew to womanhood with this belief in a dualistic power, accepting as legitimate and inevitable the cruel experiences which seemed a part of existence. Always there was in her heart the desire to do right, but there were humiliating times when evil seemed very real to her, and she suffered much from the fear that Satan would be able, in spite of her resistance, to beat down her will and snatch her away from God. Indeed, it seemed almost a hopeless task to contend with that great, mysterious power which God Himself had not succeeded in overpowering. At length there came into this woman's life an overwhelming sorrow, and a sickness that was almost welcomed, because it promised a speedy release from the weary burden of living. Meekly accepting it all as the will of a loving Father, she waited in patience for the coming of death as the only relief from suffering. There was no mother now to comfort and encourage her, but because of her childish faith she made a friend of God and trusted His word, even when she could not understand.

It is through faith like this that divine Love finds His own, even when hidden in the shadows of the dark valley, and tenderly the Good Shepherd carried this lamb in His bosom, leading the way into light. In the hands of the sufferer there was placed a copy of Science and Health, and the voice of Love whispered to her consciousness to take and eat of this truth. Obeying this voice, she found the answer to all the puzzling questions of her childhood and solace for the griefs of maturer years. Wonderingly she read in its pages: "Immortal Mind is the only cause; therefore disease is neither a cause nor an effect. Mind in every case is the eternal God, good. Sin, disease, and death have no foundations in Truth" (p. 415). What, then, she questioned, were the various forms of evil which had terrified her? Were they indeed nothing but ghosts? As the truth of this declaration dawned upon her consciousness, she affirmed with the joyous faith of her childhood, "There are no ghosts, for my Father-Mother God has told me so." Thus comforted, the weary heart found rest and peace in the eternal beauty of the universe of Spirit, where there is nothing to molest or make afraid.

In the dim ages of the past the will of God was expressed by one of His prophets in these words: "Comfort ye, comfort ye my people;" and in fulfilment of this mission Christian Science has been given to the world today. Its teachings take away the mystery that seemed to intervene like a cloud between God and His children. By showing the needlessness of fear it destroys the effects thereof, and gives increased confidence in God as infinite Love. Truly does it fulfil its mission by bringing to remembrance the promise of the Father, "As one whom his mother comforteth, so will I comfort you," and happy are they who receive this comforting message as a little child, and thereby enter into rest.

❖

Understanding

WILLIAM HALE COOMBER

IN the book of Proverbs much is said as to the desirability of obtaining understanding. For instance, we read, "Understanding shall keep thee: to deliver thee from the way of the evil man;" and again, "With all thy getting get understanding." Through the illumination of the Scriptures by the study of Christian Science, a clearer apprehension of the meaning of the word understanding is obtained. It is discerned that the great need of mankind is to obtain a correct knowledge of the true nature of God, man, and the universe, and how to apply this knowledge in human experience to the overcoming of evil of every description with good. We find that an accurate and scientific understanding of God, and of man's relation to Him, if faithfully applied, is our aid and safeguard at all times, in all ways, and under all circumstances.

Digitized by Google

Understanding is defined as a "full and clear knowledge or mastery of." Through lack of understanding of the power and availability of God, good, and through failure to comprehend the unreality and powerlessness of evil, and how to overcome its seeming presence, mankind have become the victims of evil in every direction. Does not this show that the understanding of how to avail one's self of merely material knowledge, ways, and means, is not sufficient to meet the needs of men and to guide them safely through every experience?

In "Science and Health with Key to the Scriptures" Mrs. Eddy points the way to this understanding. Referring to man, she says, "He reflects the infinite understanding" (p. 253), and she has written much else to help us to grasp in a greater degree the correlationship of divine Principle, Love, and the spiritual idea, the real man.

The work of a student of Christian Science may be said to be parallel to that of a student of mathematics. The latter, with the aid of a basic law, and rules for practice, finds that in order to work out his problems successfully, he must faithfully obey and use the rules; and that he cannot possibly work out the higher problems before he has worked out the lower. He has therefore to make his way in the understanding of mathematics step by step. It is very much the same in Christian Science. The student must faithfully make use of what he does understand, since thus only is he enabled to understand more. He comes to see that although the spiritual man of God's creating reflects the infinite understanding now, it is only possible for the awakening human sense to do so step by step, until all belief in materiality is overcome. He also knows that the kingdom of heaven cannot be taken by violence.

This scientific understanding of God and man, and of the unreal nature of evil, enables the student to give up his fear of the seeming power and presence of evil, and to overcome it, since its claims to reality and intelligence are absolutely spurious. If he is alert to know the truth, through persistent right thinking, by keeping his thought above the suggestions of evil, he will pass through the most trying experiences unharmed. He will also prove that it is possible to be a law unto one's self, and that just in proportion to one's understanding of God and man's relationship to the divine Mind, it is possible to prove that the right thinker is under Love's care and protection wherever he may be.

Our Literature

ADDA H. MENTZER

THE writer has always been most grateful for our Leader's writings and our Christian Science literature. On the walls of our local church is this verse from the Psalms, "He sent his word, and healed them, and delivered them from their destructions;" and Christian Science daily gives proof of the truth of this statement. As a Christian Science practitioner, and for many years the head of a family where human channels have been closed and material wealth dissolved, each day bringing its requirements which have to be met by the understanding of Truth, our literature has been veritably as "the arm of the Lord."

One week the *Sentinel* contained an article on systematic reading, which showed me that I, too, could rise a little earlier each day, and in that freshness of the morning get time for daily reading. This has been a most blessed experience, and I am truly grateful for it, and for the spiritual uplift which has followed from it. Some fourteen years ago I went to live on a mountain ranch, and soon after going there I learned from a young man who came for help in Christian Science, of a lady living far up the canyon who was slowly becoming helpless with what was called "creeping paralysis." I gave him five copies of the *Sentinel*, and asked him to take them to her after he had read them. Some time later the lady sent to me for a copy of "that book, Science and Health, so often referred to in the *Sentinels*." It was sent to her, and she was healed through the reading of it. An account of this healing has appeared in our *Journal*. Her mother had lain nine years helpless with this ailment, and then passed away.

Several years afterward this lady wrote me: "We would be a very lonely old couple were it not for Christian Science, but we are not. We have all the books of our beloved Leader, also the *Journal* and *Sentinel*, and occasionally a Monitor, and we are very happy in the activity of this truth." So the white-winged messengers of love are doing their work in the city and the mountain homes, among the sick and the isolated. They are bread and meat for all who are hungering and thirsting for righteousness (right thinking). By they mean affection, home, family, friends, to a vast concourse of people bereft of these and seemingly alone. That is Truth's living presence, "the Word . . . made flesh" among us, that fills all space with love, gratitude, and joy, heaven here and now, which "no man [no material condition] taketh from you."

Thank God for all the Christian Science workers, true and consecrated, who in the broad fields of our beloved country everywhere are helping humanity to look up, and to lift from their hearts, helping those with broken and disappointed lives to forget the past and all its sorrows in the presence of the loving God today, and to fear no future, for the promise is also be there,—"Lo, I am with you alway." In the epistle to the Hebrews we read: "Ye are not come unto the mount . . . that burned with fire, nor unto blackness, and darkness, and tempest, . . . but ye are come unto mount Sion, and unto the city of the living God, . . . and to an innumerable company of angels, . . . to Jesus the mediator of the new covenant . . . a kingdom which cannot be moved." This our literature is demonstrating to a listening world.

Is it any wonder that Christian Scientists are always thanking God for the patient, tireless, loving work of our lone woman, who lived an unselfed life among us for many years, and bore this spiritual bread to a world of men, giving it "grace for today," and feeding "the famished affections" (Science and Health, p. 17), even as our loved Master taught. For a time our "eyes were holden," but now that they are opened, it is for us to labor so lovingly and loyally that all the world shall awaken to this glorious truth, made real in the teaching of our literature.

[Written for the *Sentinel*]

Freedom

SAMUEL JOHNSTONE MACDONALD

An ant was toiling patiently
From twining cords to struggle free.
Enmeshed in these, its only thought
Was the escape it bravely sought;
And neither wailing nor regret
Held its resolve in strangling net.

Yussuf Ben Orem gazed and thought:
Were I in toils of habit caught
And striving freedom to regain,
This little ant makes very plain,
Regret, self-pity, grief ne'er aid,
But faith in freedom unafraid.

Selected Articles

[Judge Clifford P. Smith in *Portland (Ore.) Jewish Tribune*]

It is well known that a considerable number of Jews have become Christian Scientists. Quite naturally, therefore, the relation of Christian Science to Judaism has been discussed by other Jews; and there is no reason why the editors of Jewish periodicals who believe that a Jew cannot consistently adopt Christian Science, should not express this belief and give their reasons for it. Such an opinion, of course, would be weighty or otherwise, according to the nature of the reasons offered for its support. To be of any value at all, it would need to come from some one who had read the Jewish Scriptures and the authorized literature of Christian Science with a certain degree of fairness, appreciation, and insight. It is a very significant fact, therefore, that the editors of Jewish periodicals who have stepped in between their readers and Christian Science, have seldom shown any considerable apprehension of this subject. As a whole, their editorials have not been accompanied by veritable reasons. In most cases they have not dealt with actual Christian Science at all.

An instance within the scope of these observations is furnished by a recent editorial in *The Jewish Tribune*. It was based on the very opposite of what Christian Science teaches. Christian Scientists have not "changed the God of Israel with Jesus." Many Christians regard Jesus as God, but Scientists do not, although they accept his teachings in full. When a scribe asked, "Which is the first commandment of all?" the answer which Jesus gave included the words, "Hear, O Israel; The Lord our God is one Lord," and the scribe's reply, which Jesus expressly approved, included the words, "There is one God; and there is none other but he." Again the Master said, "Why callest thou me good? none is good, save one, that is, God." And Jesus plainly said to them that he was "a man that hath told you the truth." Conversing with a Samaritan woman who said, "I know that Messias cometh, which is called Christ," Jesus replied, "I that speak unto thee am he." The office of the Christ is, of course, to liberate or deliver, to heal and to save. Beyond all questions respecting ways and means, this is the teaching of both the Jewish and the Christian Scriptures. So Jesus was rightly entitled the Christ, because of what he did for the welfare of mankind.

[Jesse Pickard in *The Yonkers* (N. Y.) *Herald*]

The remarks of the Rev. Mr. —— on the subject of Christian Science, as quoted in a recent issue, are misleading. In attempting to show that the teachings of Christian Science cannot be acceptable to a scientific thinker, our critic fails to give the proper definition of Christian Science, or of the term Scientist itself. Science is defined as "knowledge classified and made available in work, life, or the search for truth." A Christian Scientist, therefore, strictly speaking, is one who is thoroughly grounded in the knowledge of the teachings of Christ Jesus and who applies these teachings in his life.

This is just what the present Christian Science church stands for and is doing. Strange to say, however, Christian Science is criticized because of this by those who should be the chief exponents of the Master's teachings, on the ground that such teaching and practice are not according to the ordinary material trend of thought. This teaching rests, nevertheless, upon the truth concerning God and the universe taught by Christ Jesus, and this is admittedly wholly spiritual. It is impossible to be a true Christian without being scientific in one's consciousness, just as it is impossible to be absolutely scientific or consistently true in one's thought about the universe and its creator without being at the same time Christian. Those who apply themselves to the destruction of evil through the spiritual understanding of God and man in the way taught and demonstrated by Christ Jesus, should not be accused of foolishness, however much their premises or conclusions may disagree with pure materialism.

Our friend quoted a statement from a New York clergyman to the effect that whereas Christian Science has brought health and happiness wherever it has gone, it has at the same time brought also suffering and destruction. I am tempted to quote the Scripture statement concerning the impossibility of a fountain producing at the same time "sweet water and bitter." The health and purity that have come as the result of Christian Science, spring from an enlightened sense of the power and presence of infinite good. It is impossible that enlightened faith and spirituality of thought should have produced evil, and there is no support for such a statement. Ignorance and misunderstanding have coupled such results, probably without a single exception, with every distinct advance which human thought and activity has made, particularly in the realm of religions; and as in the past, progress will undoubtedly clear up the misconception of Christian Science and reveal the fact that good alone has come or could come from its teachings and practice.

Our critic makes the very common mistake of quoting passages from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which he admits he does not understand, and then deduces from them certain assumptions which are manifestly absurd. Christian Science could not have reached its present successful growth from any nonsensical standpoint. Christian Scientists are at work constantly toward the demonstration of that perfect state of consciousness wherein God, good, alone rules, and this surely should not provoke the attack of those who claim to be spiritually minded.

[From *Sunset-The Pacific Monthly*, San Francisco, Cal.]

There is chronic complaint concerning the chronic emptiness of the pews in the American churches. "What is the matter with our churches?" is the theme of never ending controversy. Efficiency experts have advised scores of remedies, from consolidation to advertising, yet the number of vacant seats does not become less.

Is it true, then, that man's spiritual nature is being smothered under the increasing size and pressure of his physical needs? Late in April a New York attorney and a Baptist minister debated for three evenings in one of the largest of the Los Angeles auditoriums, the subject being the state of the dead according to the teachings of the Scripture. The attorney's interpretation denied the existence of a state of everlasting torment; the minister interpreted the Bible to prove that the wicked and unbelievers would find eternal punishment in hell.

During these debates the vast auditorium was crowded to the doors. There was no music; motion-pictures were not shown; no white-robed choir lifted its voice. The program consisted merely of an interchange of opinions concerning the proper interpretation of the Bible. No one appealed to the emotions; no magnetic, well advertised evangelists painted lurid word-pictures, yet the auditorium was crowded to its capacity. Does this attendance show a lack of interest in things spiritual? Or does the interest in the debate show that vast multitudes of thoughtful men and women are deeply concerned in the fundamental truths underlying every religion; that they are sincerely seeking light on the path that leads into the darkness beyond the grave; whereas imi-

Digitized by Google

tation vaudeville shows and the mere expounding of hair-splitting differences in sectarian doctrines fail to move them?

Christian Science congregations employ no eloquent, soul-stirring orators; they have no sermons, little music, no auxiliary societies, no entertainments, bazaars, or missionary campaigns. Yet the Christian Science churches are filled to overflowing everywhere, at almost every service. Whatever opinion the pastors of other sects may have concerning the doctrines of Christian Science, the overflow meetings in the churches of Mrs. Eddy's followers, the effortless manner in which the financial needs of the Christian Science churches are met, should be of great interest to them, should induce them to seek for the spiritual cause that fills the rival churches and their coffers.

✧

[J. L. Greenlee in *Gentry* (Ark.) *Journal-Advance*]

When Jesus the Christ began his ministry, the Jews were "astonished at his doctrine," and still further perplexed because he spoke "as one having authority." The divinity of the Christ gave him full understanding of all things spiritual, and there is small cause for wonder that the Jews, whose religion had seemingly lost its spiritual import, leaving in its stead a series of exacting formalities, should be surprised at his teachings. For three hundred years after the crucifixion, Jesus' disciples followed closely in his footsteps, preaching the gospel and healing sin and sickness as they had been instructed by the Master. It was not until the Christian religion was made a state religion by imperial decree that the degree of spirituality which enabled his followers to emulate his example in healing the sick, as well as pointing the way to salvation from sin, was lost.

Christian Science teaches that God and His Christ are still with mankind, and that the Scriptures, when spiritually discerned and their precepts followed, will enable the followers of the meek and lowly Jesus to do the works that he did. Of this they were repeatedly assured, as all Bible students know, and as they may prove for themselves.

✧

[John Ashcroft in *The St. Louis* (Mo.) *Times*]

Although we appreciate the clergyman's expressed desire, according to a sermon in a recent issue, to treat Christian Science fairly, it is apparent that his repudiation of the omnipresence of God, and his belief that the teaching of such omnipresence is pernicious and unscriptural, must of necessity deprive him of the point of view from which he could concede the logic of Christian Science. Paul apparently believed in this omnipresence when he taught the Athenians that "in him we live, and move, and have our being." David evidently shared this belief when he wrote so confidently, "Whither shall I go from thy spirit?" The question in the book of Jeremiah, "Do not I fill heaven and earth?" is added corroboration of Immanuel, "God with us," though it be not supported by the testimony of physical sense. Mrs. Eddy is therefore only reiterating these inspired utterances when she declares that God "is all-inclusive, and is reflected by all that is real and eternal and by nothing else." She further adds, "He fills all space, and it is impossible to conceive of such omnipresence and individuality except as infinite Spirit or Mind" (p. 331). It is wide of the mark to say this view of Deity involves increasing vagueness in man's sense of his relation to God; the experience of countless Christian Scientists has been that it intensifies the consciousness of His nearness, and makes Him indeed "a very present help in trouble."

This recognition of the infinity of Mind, Spirit, necessarily involves the rejection of belief in the reality of matter. Starting from this premise, the Christian Scientist logically concludes that all that really is, is spiritual, and that everything that does not measure up to this immaculate standard is not entitled to be conceived of as real. He therefore refuses to acquiesce in the seeming reality of evil, sickness, death, much as the mathematician refuses to accept as real an error in a problem of mathematics. He does not deny the existence of the error as an error, but corrects it with the truth. Human will plays as little part in the process of Christian Science as it does in mathematics. It is a matter of knowing,—knowing the truth.

✧

[Robert S. Ross in *Brooklyn* (N. Y.) *Eagle*]

In a recent issue a writer, referring to a certain [illegible] evangelist, states that "he cannot be ignored as a Christian Scientist ignores pain." The statement displays such a painful lack of understanding of the teachings of Christian Science that I should like to correct it.

The Bible tells us that "God is love." It also tells us that "all things were made by him; and without him was not anything made that was made." The logic is very clear. If God is good, and if God made all, the conclusion is inevitable that evil—sin, disease, and death—has no divine authority and was never created. It is therefore a supposition, an illusion, a lie, which the truth dispels. The logic of Christian Science is irrefutable. It explains matter and evil—sin, disease, and death included—by explaining them away, and substitutes in their stead the glorious reality of God's all. Christian Science is in strict accord with the teaching of Christ Jesus, who, healing sin and disease by the same process, said, "Ye shall know the truth, and the truth shall make you free."

"The dream that matter and error are something to yield to reason and revelation," Mrs. Eddy writes on page 407 of "Science and Health with Key to the Scriptures," the text-book of Christian Science. "Then," she continues, "mortals will behold the nothingness of sickness and sin, and disease and sickness will disappear from consciousness." Instead of attempting to exalt the lie of sin and sickness to the height of reality, Christian Science reduces it to its native nothingness. Our critic should know that Christian Science is daily proving itself to be the most efficacious healing system known. The absurdity of his statement that Christian Science must ignore pain, will therefore be immediately evident to its readers. "Ye shall know them by their fruits."

✧

[S. T. Downs in *Columbia City* (Ind.) *Commercial-Mail*]

Almost any of the statements made by Doctor —— of Christian Science, in a sermon announced in a recent issue could be used as a basis for showing that he is not correctly informed, and is for this reason incompetent to discuss the subject properly. For instance: "The mind has a great influence upon the health of an individual, but this was known and conceded by medical men long before Mrs. Eddy was born." This statement shows clearly that the speaker was thinking of the effect of the human mind on the body, or that he has mental suggestion confused with Christian Science, while Christian Science is as different from suggestion as night is from day.

This difference may readily be seen through the understanding which Christian Science gives of God as Mind and of man in His image and likeness, governed only by divine Mind, God. Suggestion, on the other hand, is the dream of many minds, with each mind having power to control another. Christian Science can be used for not only but the greatest good for the greatest number, while

Digitized by Google

herents of suggestion claim to use it to promote their own selfish ends at the expense and to the detriment of others. Christian Science awakens a desire to be more godlike, more spiritual; while the most earnest advocates of suggestion admit that sometimes it is used in an attempt to accomplish the most evil results. Christian Science shows that the malicious forms of suggestion lead to moral idiocy.

The desire to refuse Christian Science the right to do missionary work is not likely to find a response from those who stand for a square deal to all alike, and the proposal that Christian Science confine its efforts to those now outside the orthodox churches is interesting. It should be noted that Christian Science has never attacked any denomination, nor has it questioned the right or put a stone in the way of a fair hearing to any religious teaching. Christian Science would not urge or strive to get people to join its ranks, because "numbering the people" (Manual, Art. VIII, Sect. 28) is not Christian Science, and there is no place in the Christian Science church for members who are not able, in a reasonable degree at least, to demonstrate Christian Science teaching. Christian Science is waging a warfare against sin, sickness, and death, however, and has no intention of retreating.

The charge of mercenary motives in the Christian Science movement has been disproved so often, and the injustice of the statement is so self-evident, that it seems strange indeed that it should be voiced again. It has been but a comparatively short time since the newspapers heralded the fact that Mrs. Eddy willed practically her entire estate to the cause she founded, and it is likewise a matter of common knowledge that she, as the Discoverer and Founder of Christian Science, and also through her will, provided that the profits from her copyrighted works and the Christian Science periodicals can be used only for the purpose of promoting the interests of Christian Science. It is particularly significant that complaints about the price of Science and Health come principally from those who have never purchased a copy, or from those who have bought the book in the hope of disproving its teachings.

The reiterated charge of "humbug," and the reference to Christian Science testimonies, evidence a lame attempt to bring into question the veracity of thousands of the most estimable men and women, in many cases leading citizens from all parts of the world, whose integrity is beyond dispute.

[Thomas F. Watson in *The Wasp*, San Francisco, Cal.]

The life of Mrs. Eddy needs no defense. It was an open book, "read of all men." All who knew her, loved and honored her for the good she had achieved. Countless thousands who never saw her, loved her for the good she had brought into their lives through her writings. When she passed away, the press all over the civilized world united in eulogizing her as a noble woman and a great benefactor of mankind. Notwithstanding the *Wasp's* sarcastic reference to Mrs. Eddy and a few others as being in "direct communication with the Lord," the fact remains that there are multitudes today whose hearts are filled with gratitude to and love for her, because her spirituality enabled her to discover and demonstrate the law of God for herself and others, with its resultant manifestation, health and harmony. She claimed no more "direct communication" with God than is open to all who seek Him "in spirit and in truth."

Mrs. Eddy's charities were world renowned. She gave most liberally, not alone to those in harmony with her teachings, but to those who differed from her as well. That she received financial reward, like other great writers whose tireless pens have contributed to the world's literary gain, is only just and as it should be. Her literary ability was recognized long before she became renowned as the Discoverer and Founder of Christian Science. For several years, while quite a young woman, she wrote for the leading magazines of the day, and supported herself by her pen. Her life was one of tireless, endless labor for the world's betterment, and she left all her earnings, except the portion given to her heirs, for the promulgation of the truths she had discovered. There are multitudes who, while not accepting her teachings, yet have acknowledged her greatness as a reformer in the world's moral progress, for she lived the golden rule, "Whatsoever ye would that men should do to you, do ye even so to them;" and she taught in Science and Health (p. 201), that "the best sermon ever preached is Truth practised and demonstrated."

[Arthur C. Whitney in *Burlington* (Vt.) *Free Press*]

A recent issue commented on the case of an elderly lady, a Christian Scientist, who passed away, the head-line of the item reading, "Christian Scientist Dies; Refused Doctor." It perhaps will not be out of place to call attention to the fact that a young doctor's death was made note of in the same edition. He passed away under medical treatment when ill but five days, and was reported to have had the same disease. It is just as absurd to make public comment on the former case in the manner in which this was done, as to head the latter article, "Doctor Dies; Refused Christian Science Help." People will become more convinced of this fact when a just comparison is made of the efficacy of these two systems of healing.

The thousands of cases of healing by Christian Science of diseases which were considered incurable and given up by *materia medica*, are seldom referred to by the newspapers; but the growing number of these cases can leave no doubt in the minds of the general public that Christian Science does heal, and a majority of its cases are of those who have been given up by other systems of healing. It is hardly to be wondered at that once in a while a person passes away under Christian Science treatment, and it seems rather unfair and far-fetched to make mention of an occasional case in the manner above stated.

In the gospels it is related that on one occasion the disciples failed to heal a boy brought to them, and again it is recorded that in a certain place Jesus "did not many mighty works." These experiences did not imply that God's power to heal had waned; rather did it show a spirit of unbelief, and the questioning of the power of God to heal in His own way. Christian Science today meets these same conditions, and a like experience causes a Scientist no loss of faith or trust in God, who is "infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17). It can safely be stated that when the demands of Christian Science are complied with by the individuals concerned, the efficacy of its healing power is proven in every instance, for, as Mrs. Eddy asks (p. 135), "What cannot God do?" Its Principle is as absolute and sure in its power to heal as was that relied upon by Jesus, for it is the selfsame Principle. His commands were, "Preach the gospel" and "Heal the sick," and Christian Scientists are striving to follow the example and commands of the Master.

External objects present us only with appearances. Concerning them, therefore, we may be said to possess opinion rather than knowledge. . . . Our question lies with the ideal reality that exists behind appearance. . . . This region of truth is not to be investigated as a thing external to us, and so only imperfectly known; it is within us.—PLOTINUS.

Editorial

Freedom in the Truth

One of the leading postulates of Christian Science being that good alone is real, it necessarily follows that this religion teaches the unreality and nothingness of evil. Nevertheless there are many critics of Christian Science who have failed to understand that the positive statement of the reality and allness of good, God, is a logical foundation for the declaration that evil is unreal, untrue, and consequently without power. It is for this reason that they fall into the mistake of believing, as many of them have done, that Christian Scientists, because of their belief that evil is unreal, not only ignore evil but are encouraged to do evil.

This erroneous belief about Christian Science and its adherents is largely responsible for the many ridiculous statements made by critics, who imagine and claim that Christian Scientists heartlessly brush aside with empty words the appeals of those who are in need. These critics are quite fond of alleging that the methods of Christian Scientists consist largely of making such declarations as, "All you have to do is to think you are well;" "You haven't any pain—you only think you have," and others of the same ilk, and these are cited as the methods employed by Christian Scientists in healing the sick. How contrary all this is to genuine Christian Science! Mrs. Eddy writes: "The tender word and Christian encouragement of an invalid, pitiful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love" (Science and Health, p. 367).

Throughout her writings Mrs. Eddy has dealt fearlessly with the problem of evil and evil-doers, and the wise student is he who accepts her teachings without permitting himself to become confused or disturbed because he cannot at once fathom the origin of evil. Under the heading, "No Reality in Evil or Sin," in her Message to The Mother Church, June, 1901, Mrs. Eddy has made it especially clear that Christian Science does not countenance or condone evil-doing. Christian Scientists will find profit in an earnest study of this section, for in it Mrs. Eddy goes to the very foundation of this false belief and annihilates it. On page 14 of this Message she writes: "The evil-doer receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality. Error uncondemned is not nullified. We must condemn the claim of error in every phase in order to prove it false, therefore unreal."

Just as untrue as is the erroneous impression that Christian Scientists excuse sin by a sort of mental legerdemain, is also the supposition that they are trying to cure sickness by some similar process. It is the echo of the old pharisaical accusation, "He casteth out devils through Beelzebub the chief of the devils;" and to this accusation the Christian Scientist replies as did the Master, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." Christian Scientists do not ignore either sin or sickness, for they have learned through their own deliverance how very real the burden of sin or suffering seems so long as the sufferer is in bondage to the false belief that evil has either reality or power. They know that if he is to be freed from his burden, this false belief must be wholly destroyed, and they enter upon this undertaking not by closing the eyes to it, but by a "right apprehension of the truth of being" (Science and Health, p. 460), which deals patiently and compassionately with the sufferer.

Sometimes this problem of the unreality of evil presents itself to those who have perhaps taken the initial step in the way of understanding. Adventuring on this stupendous proposition, they are disappointed when they do not receive what they consider satisfactory answers to their whole demand for explanations. Yet this nothingness of evil, because God does not know it and never created it, is a point in metaphysics which elucidates itself as through faithful study the inquirer advances from understanding to demonstration. It is through demonstration of the simpler truths of Christian Science that we grow to an apprehension of "the deep things of God."

Christian Scientists are engaged in demonstrating that God is the divine Principle of the universe, and that He is not the author of evil of any kind. This right understanding of God and His creation heals the sick and destroys sin, not through the negative process of ignoring evil, but through the positive process of destroying false beliefs of our own nature, by knowing the truth. This is the knowledge of the truth which Jesus said would make us free indeed; the knowledge or understanding of God which is life eternal.

Archibald McLellan

❖

Ways and Means

Some years ago a minister went to Swatow, China, to found a mission. He was a man of unusual forethought and believed in success, hence first of all he acquainted himself so far as possible, with the existing facts of the situation—with the customs, the religious beliefs, the superstitions, the prejudices, the moral standards, the hopes, and the economic conditions of the people. He studied also the methods of propaganda which other missionaries had used, and then determined upon a course which was destined to become interestingly eventful.

Instead of standing at the street corners and speaking to the passing multitudes, as others were wont to do, thus sowing the seed under circumstances most unfavorable to its growth, he gathered a number of elderly native Christian women for other missions, and in the quiet of his own home trained and counseled them. Thus equipped, he sent them out two by two into the fields and shops where the masses spend their lives in a toil that knows no vacation or Sabbath rest, that standing by them in their work by day, or lying down with them in their simple homes at night, they might find opportunity to tell them the sweet story of the coming of the Christ-man to comfort and to save. The touch was thus made intimate, sympathetic, and as it proved, effective, so that no one could visit the mission and meet these workers without gaining a new assurance of the feasibility of the world's redemption.

This method of bringing the gospel to the Chinese brings remembrance that the Master thus sent out his workers, two by two, and the idea becomes peculiarly interesting to those who through Christian Science are awakening to the fact that they are each called to inaugurate a kindred ministry, to bring not only to those immediately about them but to all peoples and all problems that spiritual truth and love which will accomplish the work outlined by Mrs. Eddy in her statement that "those who discern Christian Science will hold crime in check. They will aid in the ejection of error. They will maintain law and order, and cheerfully await the certainty of ultimate perfection" (Science and Health, p. 57

Digitized by Google

This can but mean that we are each not only to work out our own salvation, but to aid in the solution of every communal and every world problem.

How to compass so great a calling and achieve so great an end is the existing test-question which Christian Science has answered in its disclosure of the nature of evil and the issues it presents, and how God, who is expressed in the activities of spiritual intelligence and affection, is able to "do exceeding abundantly above all that we ask or think," through our scientific and compassionate attitude toward every man and every situation. All the Master's requirements of his disciples are summed up in these two,—to know the truth, and to love, and Christian Science has again brought the Christian world face to face with the fact that both one's spiritual status, or faith, and his success are determined by his realization that the ministry of these two is sufficient for the world's evangelization, and this surely is the larger meaning of St. Paul's figure, "Christ in you, the hope of glory." Demonstrable truth, the Christ-idea, is the one corrective standard, and brotherly love is the one healing balm,—truth to dispel the error of human sense, and love to comfort and inspire human sense. Whatever else we may do for our brother men, these inseparable two are they "in white robes" whom you and I are to send out "into all the earth" day by day, and who shall measure what they are to accomplish for human betterment!

No one can gain even a modest understanding of Christian Science without coming into the conscious possession of the secret of all true reform. He can but perceive that truth knowing, the continuous correlation of thought with divine Principle, and the reflection of infinite Love, relate themselves in an irresistibly redemptive way with every kind and variety of the human hurt. One's life now takes on largeness, its hitherto narrow horizon moves out into the limitless blue, and he begins to feel the uplift of that spiritual inspiration which alone can healingly meet the human need.

JOHN B. WILLIS.

"That which was lost"

IN the eighteenth chapter of Matthew, Christ Jesus states his earthly mission in these words: "The Son of man is come to save that which was lost." Then follows the beautiful and oft-quoted parable of the lost sheep, which is also given by Luke. However viewed, this parable strikingly presents the unchanging nature of divine Love, and shows how unfailingly it follows its own until the oneness of God and His manifestation is realized. It has been thought by many that the good shepherd went out to bring back one who was wilful and lawless; but in Christian Science we find another meaning for this parable, one which does not conflict with the idea of divine Love reaching out to human need, but which lifts thought from the material to the spiritual. We are helped to discover this when we ponder the definition of sheep as given on page 594 of Science and Health: "Innocence; inoffensiveness; those who follow their leader." This divine idea lies down in green pastures, beside the still waters of Soul; it fears no evil, even in passing through "the valley of the shadow of death," and is comforted alike by the rod and the staff of the shepherd.

When Christ Jesus went among men and saw the sick, the sinful, and the sorrowful, he knew that there was a sure remedy for their woes, and it was "that which was lost." Now it was quite possible to find at every turn of the way the densest belief in evil's reality and power; but to mortal sense the power which had brought the children of Israel safely through the Red sea, fed them in the wilderness, and assured them of freedom from disease, was "lost," and no one apparently knew where it was to be found. It is true that Daniel had known it when he was delivered from the lions, and his three companions when they came forth unharmed from the fiery furnace, but to those whose dependence was matter and material law the truth that heals and saves was lost.

In Jesus' time there was one large fold, rigidly guarded by creed, dogma, and ceremonial; in our own day are many such folds, but the decree against the shepherds was written by Ezekiel in these words: "The diseased have ye not strengthened, neither have ye healed that which was sick, neither have ye bound up that which was broken, . . . neither have ye sought that which was lost." Then follows the cheering assurance that God will seek His own sheep and lead them to their fold "upon the high mountains of Israel." To divine Love His reflection can never be separated from Him, and the one who knows this as did the Master can always prove it. To him the divine idea, the sheep of Truth's pasture, was never lost, and though mortal sense held that Jairus' daughter had lost her life, and the woman who came unbidden to Simon's feast her innocence, Christ Jesus quickly revealed to each her true selfhood, which is never sick, sinful, or dead. It is not a depraved mortal which the good shepherd, the eternal Christ, lays upon his shoulders and carries rejoicingly. No, that false concept is left behind, for "that which was lost" has taken its place; and who can measure the joy in heaven and earth over this restoration of the true!

Christ Jesus rightly called himself the "good shepherd." He declared that he had come to bring life "more abundantly" to those who would accept his teachings, and he gave what might be called the secret of his power in these words: "As the Father knoweth me, even so know I the Father." But what did some say in comment upon this? "He hath a devil, and is mad." Well might he warn his own against wolves, especially those in sheep's clothing, which denied the Christ-power then and deny it today. But this denial can do nothing when the command "Feed my sheep" is heard and heeded. In many passages of our text-book, "Science and Health with Key to the Scriptures," our revered Leader patiently explains why the true idea has so long been lost sight of by the world, and on page 360 she assures all earnest Truth seekers that "they will find that nothing is lost, and all is won, by a right estimate of what is real."

ANNIE M. KNOTT.

Among the Churches

Current Notes

YONKERS, N. Y.—Probably no church organization in Yonkers has had such a remarkable growth in so short a time as First Church of Christ, Scientist, which started with barely thirty members in December, 1904, in a small photographic studio at 502 South Broadway. Originally the church was at Hastings-on-the-Hudson, but was moved to Yonkers, and the Hastings and Yonkers Scientists combined. Before the congregation was started here, Yonkers Christian Scientists were accustomed to travel as far as New York to attend services. For more than a year the Yonkers Scientists held their meetings in a hall at 498 South Broadway. By October, 1905, the membership had increased greatly. Lectures on Christian Science were given at various auditoriums and halls in the city, and as a result many became interested. Owing to the increase in membership, it became apparent that the meeting place on South Broadway was too

Digitized by Google

small, so larger quarters were secured in the Guinzburg Building on North Broadway, where meetings were held regularly.

First Church of Christ, Scientist, of Yonkers, was incorporated March 1, 1906. In 1908 the church bought five lots in one of the residential sections of the city, with the intention of building a church structure on the ground. A movement was afoot to raise funds with which to erect the building, when it was finally decided to purchase the chapel of St. John's Episcopal church parish, which stood at the corner of North Broadway and Greenvale avenue. The chapel was dedicated with fitting ceremonies by the Christian Scientists on Thanksgiving day, Nov. 30, 1911.

Yonkers Record.

SHELBYVILLE, IND.—To one passing the northeast corner of Tompkins and Jackson streets, the new church building being erected by First Church of Christ, Scientist, comes as a very pleasing surprise. This church is less than ten years old in our community, yet the progress and interest has been such, and the character and lives of the people interested have spoken so well for its teaching, that the growth has warranted an early removal from the second floor of the business block where services have been held, to the new and harmonious church home soon to be completed. While the building itself may be a surprise in beauty and simplicity, the fact that a congregation so young and of such apparently limited numbers should be able to construct a church home in so short a time and, as we are told, will dedicate it in a few weeks free from debt, is still more surprising, and speaks well for the earnestness and devotion of its members. The chapel will seat more than a hundred and fifty people.

Shelbyville News.

PRINCETON, IND.—The local society of Christian Science is growing to such an extent that larger quarters have been secured. About six weeks ago it became necessary to purchase extra chairs to accommodate the steady growth in attendance in the old quarters in the Welborn Block. Since then it has become necessary to secure larger meeting rooms, and arrangements have been completed to have the room on the second floor of 125½ North Hart street prepared for the chapel of the society.—*The Princeton Democrat.*

ALBERT LEA, MINN.—The corner-stone of First Church of Christ, Scientist, corner Adams avenue and Clark street, was laid Thursday morning [June 10].—*The Tribune.*

The Lectures

Washington, D. C.

The remarks of Maj. H. M. Lord, in introducing Rev. William P. McKenzie at Poli's Theater, were as follows:—

It is nearly half a century since the revelation of truth expressed in Christian Science was given to the world; and this great truth itself, which heals sickness and sin, is as old as creation, and has been available for health and salvation since God made man in His image and likeness. Gathered here are many Christian Scientists who have come to learn something more of this greatest thing in all the world, this revelation of infinite Love that makes all life one perennial springtime. Probably with us today are those who face perplexing and apparently unsolvable problems of business and harassing questions of daily living that urgently call for solution, and possibly also those who are burdened with family troubles and discords from which they vainly seek relief; discouraged ones; afflicted ones, who with shattered health face a future of blank despair; those who are fettered with harmful habits and held in bondage of sin, almost ready to give up the fight. They have all come here with a hope that the day of miracles has not forever passed, that there is still "balm in Gilead," and that the arm of God is not shortened. Christian Science holds out to them a definite and sure promise of adequate relief; for there is no problem, be it social, financial, physical, mental, or moral, be it individual or national, that cannot find in Christian Science its legitimate solution.—*Correspondence.*

❖

Port Angeles, Wash.

A very attentive and interested audience filled the Opera House, to listen to the lecture on Christian Science delivered by Virgil O. Strickler. The introductory remarks made by Frank Teck, secretary of the Port Angeles Commercial Club, are as follows:—

I confess that I am neither a Christian Scientist nor a denominational Christian of any other kind. All my life I have been a newspaper man,—a newspaper writer, magazine writer, or city development writer. The typical newspaper man is the most cynical of human beings. His intimate knowledge of the shams and foibles of mankind makes him a personification of enlightened skepticism. To the experienced newspaper man, no man occupies a pedestal, none wears a halo. He is usually a good-natured and forgiving iconoclast who minds his own business by learning everything possible about all human activities.

It is therefore to me a significant circumstance that among all my daily newspaper friends there is an overwhelming preponderance of Christian Scientists. Mrs. Eddy's inspiring and remarkable interpretation of the Bible seems to have impressed these trained analysts of contemporary thought more profoundly than all other forms of religious belief. I know newspaper men holding important positions on the daily press of Seattle and Tacoma whose lives have been ineffably sweetened and ennobled by this simple yet mysterious faith. The author of the most exalted act of sacrificial charity of which I have personal knowledge is a representative Seattle newspaper man who has been a Scientist for the last three years. Some of the most lovable, unselfish, ingenuous friends I have are newspaper writers who have become students of Christian Science.

I therefore listen with grateful respect to any enlightened discourse on this subject. Moreover, I have yet to hear a regular Christian Science lecture that falls short of challenging the intellectual quality of an enlightened and thoughtful audience.—*Port Angeles Olympic Leader.*

❖

Spokane, Wash.

The lecture on Christian Science by Jacob S. Shield in Auditorium Theater was attended by more than two thousand people, with all standing room taken. There were over two hundred seated on the stage, and many could not gain entrance. Dr. H. Walton Hubbard in introducing the speaker said:—

The importance of gaining a greater knowledge of Christian Science, and what it does for man, is becoming more and more generally recognized, and is evident in the constantly increasing interest and attendance which the various activities of this movement are receiving. It is probable that all who are present have seen some convincing proof of the power of Christian Science, either in cases of physical healing or of spiritual regeneration. In my own case, while I was

Digitized by Google

actively engaged in the practice of medicine, I saw cases which were hopelessly incurable from a medical standpoint, perfectly and permanently healed through the application of this Science, and it was this which led me to investigate and accept it. Any honest investigation will furnish abundant proof of this character.

There is also much evidence of the power of Christian Science to uplift spiritually, and those who have been vainly groping for a better understanding of God, find in this teaching an avenue which admits of immediate progress, with the consequent consciousness of peace and power which comes from a closer relationship to God. The investigation of Christian Science is sometimes retarded, and its blessings deferred, because of prejudices arising out of misconceptions as to the nature of its teachings, and it is the purpose of these lectures to explain and correct these misapprehensions and to present a correct statement of its Principle.

Correspondence.

❖

Chicago, Ill.

In introducing Col. William E. Fell at a lecture in Fifth Church, D. A. Clippinger said:—

In the epistle to the Philippians, Paul says, "Let this mind be in you, which was also in Christ Jesus." What is the Mind which was in Christ Jesus? It is the Mind that healed the sick, cleansed the lepers, cast out devils, stilled the tempest, raised the dead, and finally triumphed over death. It is the Mind that knows the omnipotence and omnipresence of good, and the nothingness, the unreality of evil. The Mind which was in Christ Jesus is the basis of Christian Science and its activity. It was promised by the Master to all who follow him in truth, and the healing of sickness and sin which is going on all over the world today, proves that mankind is beginning to manifest this Mind.

But today, as in the time of Jesus, truth is often misunderstood. Most of us who have been healed in Christian Science, have had to revise our first opinion of it. The old Greek philosopher Epictetus stated the proposition clearly two thousand years ago, when he said, "Men become offended at their opinion of things, not at the things themselves." Now, one cannot argue Christian Science any more than he can argue the multiplication table. Christian Science is built on eternal, absolute truth, and truth is its own protection and defense.—*Correspondence.*

At a second lecture, Colonel Fell was introduced by Oscar J. Duke, who said:—

Christianity has reiterated for ages that God is omnipotent. Christian Science says that because God, infinite good, is all powerful, there can be no power but His, hence no evil power. Christianity has reiterated for ages that God is omnipresent. Christian Science says that because infinite, omnipotent good is ever present, it is impossible that any evil can be present; for there is no place where it could be. Again, Christianity has reiterated that God is omniscient. Christian Science says that because God—infinite, omnipotent, omnipresent good—knows all, there is no knowledge in or of evil, and that because man is created in the image and likeness of God, it is impossible for sickness or sin to be in that image and likeness.

Through the larger understanding of God and man which is gained by the study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, people throughout the civilized world are being healed of all manner of ills, and are repeating the healing works which Jesus said should follow them that believe. Christian Scientists accept the inspired word of the Bible as applicable to the problems of life today, and with Paul declare that "now is the day of salvation." The proof of Christian Science is found in its fruits, just as proof of the science of mathematics is found in results obtained from its application.—*Correspondence.*

❖

Des Moines, Iowa

The Hon. S. F. Prouty, congressman from Iowa, in introducing Bicknell Young, who lectured on Christian Science, said in part:—

I was born, reared, and educated in the Protestant faith, and still hold to it as the best faith I know; but I am more tolerant now than formerly. The time was when I could not bring myself to believe that anybody could be right who did not believe as I believed, but after years of reflection, study, and research, I have about convinced myself that there possibly may be some truths that are not contained in my catechism. Every year I have less and less respect for doctrines and dogmas and more and more profound respect for convictions and beliefs.

I have little knowledge of the faith that will be presented to you tonight. I have not been quite able to understand or grasp its profoundest doctrines, but I have witnessed some of its manifestations and benefactions. It does make this old world happier and brighter; it does soothe the sorrows and lessen the pains of humanity. It has cured where human science and skill have proved powerless; it has quieted the temper, sweetened the disposition, cheered the despondent mind, and composed the life where moral philosophy has failed. As a harbinger of good to humanity I welcome it, although I may not comprehend it.

The Register and Leader.

❖

Duluth, Minn.

An audience that completely filled First Church of Christ, Scientist, listened to a lecture delivered by William R. Rathvon. He was introduced by Robert Rankin, a former first reader, who said:—

Christian Science asks a fair hearing for the message it has to bring. Recent events in this state have proved that when it is properly presented to those who have the making of our laws, it receives the consideration to which it is entitled. Christian Scientists ask no privileges except those which are guaranteed by the Constitution of the United States, among them that of worshiping God under their own vine and fig tree, none daring to make them afraid. Much of the misconception in regard to the teachings of Christian Science, as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, comes from a lack of understanding of the truth as expounded by that wonderful book.

Testimonies of Healing

I wish to express my gratitude for the blessings that have come to me and mine through the study and application of Christian Science. I had become a nervous wreck, as a result of various diseases, and my sister had been an invalid for nineteen years. We brought her to our home and took care of her on three different occasions, and for several weeks each time. My husband would carry her from her bed and put her in the buggy, then when our home was reached, he would lift her out and put her in bed, where she would stay until taken back to her own home the same way. The last time she was here the doctor told my husband to take her home or he would have us both on his hands, as I would soon be bedfast too.

A few months after this, my husband went to see my sister, and when he returned he told me she was much better. In my weakened, discouraged condition, however, I was skeptical, and said that the next time I heard from her she would probably be worse than ever. Then he told me she was trying Christian Science; but all I had ever heard of this teaching was that it was a religious belief which claimed that if one just thought so, there would be nothing the matter with one, and I wondered what the family could be thinking of to try it for a person as ill as my sister was.

I went out in a few days to see for myself, and to my great surprise found my sister up and around the house. A friend had come to see her and brought the glad news that God heals sickness, the same now as He did in Bible times. I went to see if this lady could help me, and I can never forget the relief I felt when she told me it was not God's will that I should suffer. She advised me to buy a copy of "Science and Health with Key to the Scriptures." I did so, and Truth has ever since proved to be the only physician we need. The lady gave me treatment, and it seemed as if I was lifted upon the mountain top. I was healed almost instantaneously of many of the ills from which I suffered, and the rest all disappeared as I learned to know myself as God's child.

We have one child, and he has never taken a drop of medicine since I came into Science, now over six years ago. At one time he was healed of a bad attack of croup, and on another occasion he fell down the stairs and hurt his ankle badly; but he was quickly freed from the pain by the realization that "accidents are unknown to God" (Science and Health, p. 424). While we are thankful to God, and grateful to our revered Leader, Mrs. Eddy, for all these healings, they are as nothing compared with the spiritual awakening. I live in the country, far from any Christian Science church, but I study the Lesson-Sermons daily, also read the *Sentinel* and the *Journal*, both of which I am very grateful to have. Where discord once reigned in our home, now peace and harmony prevail.—Viola Halliday, Langsville, Ohio.

My wife's testimony is a true statement of the healing of her sister and herself. They had doctored for years, but did not receive any permanent help until they took up Christian Science. I am a farmer, and my wife does all the housework. She is stout and hearty now. I feel very grateful for the blessing she has received through Christian Science, and for the benefits we have received in our home, which is much more pleasant and happy now that we enjoy good health. I was ruptured in 1895, and wore a truss until January, 1913, when a practitioner told me I could be healed in Science. He gave me treatment and told me to lay off the support. I did so, and have not had it on since, whereas before that I could not get along without it.

S. A. Halliday.

For five years I have depended entirely on Christian Science for all conditions that have arisen. During this time I have experienced many wonderful healings and have never found Science lacking. I wish to give heartfelt praise to God and to express gratitude to our dear Leader, for the help I have received.

On Wednesday, eight days before Thanksgiving, [illegible] while at work in the chemical laboratory of the Johns Hopkins University, a flask containing a boiling mixture of sulphuric and chromic acids, in which were organic compounds in solution, broke. The contents fell upon my left hand and burned it severely, so that the flesh fell off. I declared the truth at once and felt no great pain. I went to service that evening free from all fear and unconscious of the condition of the hand. The following morning, however, the man with whom I worked at the university noticed the condition and tried to compel me to have an operation because gangrene had set in, as he said. I sent for a practitioner in the building who was a Christian Scientist, and the pain was destroyed. Then we called on a Christian Science practitioner, with the result that in less than an hour the poisonous flesh was gone and the bandage removed, though the hand was burned to the bone.

I continued to have Christian Science treatment alone. The only application was a clean bandage, to conceal the condition. This bandage was removed the following Wednesday, and that night, one week from the day of the accident, my hand was healed and practically without a scar, while another week one could not tell which hand had been burned. For this remarkable healing I am deeply grateful. More, however, is thankfulness due to God for my enlarged view of life, resulting from the understanding I now have of the Bible through the study of the Scriptures in conjunction with the Christian Science text-book, "Science and Health with Key to the Scriptures."

Leslie D. Smith, Ph.D., Rapid City, S. Dak.

◆

When I was about seventeen years old I had an attack of measles, and the doctor said if I drank water or became chilled in any way, blindness might result. I did drink cold water, and grew much worse, but was afraid to tell what I had done. The doctor was sent for, and he said at once that if I ever got well I would be blind or deaf. When I first recovered, the sight of the left eye was nearly gone, and in the years passed the right one became affected also. I went to a celebrated oculist, who said that in time I would be totally blind. It seemed strange that with the exception of the left eyelid drooping, my eyes did not look badly, and although I suffered I did not complain, as it was necessary for me to continue teaching music or to sing in public when called upon, for I was dependent on my own exertions. When standing before the footlights, however, at the opera house sometimes I could not see a note, and I had to arrange with the leader of the orchestra to take up my solo as a violin obligato when I gave him a signal agreed upon. Everything was done for me materially, but without avail.

About this time an intimate friend was healed through Christian Science, and she told me my eyes could be healed in the same way. The bishop of the church to which we both belonged had spoken very bitterly of Christian Science and warned the people against it as the work of the devil. Nevertheless, my friend insisted on my trying it, and my mother joined with her, saying if healing the sick was the work of the devil why did Jesus command it.

That night my friend came and I consented to let her give me a treatment. The first thing I noticed was that I had a

Digitized by Google

upulse to look up (previously I had no control over my yelids). I was startled; then I picked up a newspaper and ound I could read. I exclaimed, "Oh, I can see!" and my riend fervently replied, "Thank God!" Now the best doc-ors had said the optic nerve was almost paralyzed, so how ould I see? But my friend was patient with my ignorance. he next day the bishop called to ask me if it were true that was practising this fearful heresy against the teaching of he church, and I told him I was like the man in the Bible,— nce I was blind, but now I could see. I took up a copy of 'ennyson's poems in fine print and read for him, then handing he book to him, asked, "Can you do that, even with your lasses on?" He made no reply. This occurred about wenty-five years ago, and since then I have used my eyes onstantly in reading, writing, and sewing, without the need f glasses.

After this healing I stayed in the church for ten years. Then one Easter Sunday the bishop preached against Chris-ian Science, and as I listened I felt condemned, for I well new that but for Christian Science I would not have been itting there with clear sight and perfect health. Before he services were over I left the church, and I have never eturned. I next applied to the minister in charge for dis-nissal, but he refused, saying he had no right to give it nless I lived an evil life, and the church would again receive ne when I saw the error of my ways. I told him I intended o join The Mother Church in Boston, take class instruction, nd devote my life to this holy work; and surely God has lessed me in it.—ANNIE L. WALTERS, Chicago, Ill.

I write this testimony to express my gratitude for the ealing I have received through Christian Science. I had een a sufferer for nearly twenty-seven years, and the doc-ors said nothing would relieve the pain in my spine, supposed to have been caused by a fall from a carriage, except an peration, and this could not be performed because they were afraid to give me an anesthetic. One day I was led to go to the Christian Science reading-room. There I met the daugh-ter of an old friend, and she told me of Christian Science. After quite a long talk I returned home, pondering over the truths I had heard. I live alone, and when I gathered from a *Journal* which had been given me that man is God's perfect child, there came a great sense of strength, and I did not feel nearly so tired doing my washing. Always before, I would have to lie down when about half through. I had one Christian Science treatment and began to get better. I no longer grew tired in doing my work and had no desire to lie down every day, as had been my custom for years. From that time I have steadily gained strength and activity, and have had no return of the painful condition for four years.

I am so grateful for all our literature and for our services. I am also grateful and happy in doing all I have to do, because after years of searching the Scriptures and church wandering, I have learned through Christian Science what God is, and man's relation to Him. This brings the peace "which passeth all understanding."

JANE HALLOCK, Port Jervis, N. Y.

I want to express my thanks to God, and my gratitude to our beloved Leader, Mrs. Eddy, for the spiritual and physi-cal healing which came to our home through the understand-ing of Truth demonstrated through Christian Science. The complete healing of my wife of rheumatism, five years ago, thoroughly convinced me of the efficacy of divine Love, and a short time afterward I was entirely healed of the tobacco habit, which had been contracted in boyhood. Repeatedly I had tried to stop using the weed through will-power, but had as often failed, and not until I asked God to help me was I absolutely relieved of any desire for it whatever.

Words are inadequate to express my heartfelt thanks for this great truth which has enabled humanity to overcome the many trials and vicissitudes incident to human life. Greatest of all blessings, however, is the spiritual understanding re-vealed to us by "Science and Health with Key to the Scrip-tures," and other works by Mrs. Eddy.

H. M. TYLER, San Diego, Cal.

I wish to say that the above statement by my husband is true. Many blessings have come to us, and are coming to us every day, through the understanding of divine Love as demonstrated by Christian Science, which is the watchword in our home. I wish to thank God for the spiritual understand-ing, and am indeed grateful to Mrs. Eddy for teaching us how to get it.—CADDIE BELL TYLER.

It is with loving gratitude for the healing, but more for the clear realization of the allness of God as taught through this experience in Christian Science, that I give my testimony. Through my great suffering at the birth of our second child, it was discovered by two physicians that there was a fibroid growth present. One of the physicians wanted to operate immediately, but we decided to trust in God, and I was very soon relieved from the intense pain. Under kindred condi-tions in 1914, some members of my family became very much alarmed, remembering the testimony of the physicians that it would be extremely dangerous to pass through this experience again, and that birth could never take place normally.

To quiet this fear, I placed myself in the care of a surgeon in Boston, who upon examination said the growth was still there and must be removed. Accordingly I entered the hos-pital and was prepared for the operation. The peace which I felt from the time I entered the hospital until I came out was indescribable. The story of the Israelites in the Red sea was beautifully explained to me by a Christian Science practitioner, and it was a very great help, for I felt that God could and would deliver me as He did them. When I was put on the operating-table, my last conscious thought was one which I would have liked to have had remain forever; it was the clear realization of the omnipresence of God, and I immediately thanked Him for this deliverance. The effects of the ether were readily overcome, and the surgeon's report was that the growth had disappeared. He was not satisfied with his own examination, however, and called in another surgeon, and without telling him anything about the case, asked him to diagnose it. This he did, and both agreed that although there were indications that there had been a growth, not a trace of it could be found.

Is it any wonder that I now exclaim with joy, There is none so great as our God. Surely I can never again doubt God's power to heal. I would like to add that in the ful-ness of time a dear little daughter appeared to us after only twenty-five minutes of labor. My thankfulness and love to God is unbounded, as is my gratitude to Mrs. Eddy, and I trust my life will show it.

LOUISE A. MORDE, New Bedford, Mass.

It is with pleasure and gratitude that I can testify to the healing of my wife as given in her testimony, and also to many other demonstrations of Christian Science help and healing in our home.—ALBERT MORDE.

Digitized by Google

Just three years ago Christian Science found me laboring with a bad physical ailment. At that time I was living in western Kansas, and one day, when I was calling on a friend, we talked about our health. He told me that from what he knew about Christian Science he thought it would heal me, or at least it would do me good to look into it. He had a *Sentinel* that had been sent to him by a friend, and he gave it to me. On my return home I read it carefully. One of the testimonies was given by a man who had been healed of a trouble similar to mine, so the thought came to me that I needed better health, and if any one had a "Key to the Scriptures" I wanted to get it. At this time I did not know enough about Christian Science to know that I could buy Science and Health in Kansas, so I sent to Boston for a copy. In a short time I received it, and began to read it immediately. In three weeks' reading I was completely healed. When I came to understand that illness is mental, I threw away my material remedies.

Shortly after the physical healing I was able to overcome the tobacco habit. I kept right after the study of the Bible and Science and Health, and a year later had the great privilege of class instruction. I am now beginning to understand Science very well, and words are inadequate to express my gratitude to our dear Leader, Mrs. Eddy, for our literature, which so lovingly explains what Christian Science means, and which makes the reading of the Bible a great pleasure. Since buying my first copy of "Science and Health with Key to the Scriptures" I have been able to make many demonstrations, and have had no occasion to resort to any material remedy.—S. L. Thomas, Washington, Ill.

❖

I wish to say how sincerely grateful I am for all that Christian Science has done for me. Although I have no great physical healing to record, the good that has come to me is immeasurable. Some one once said to me that many of the testimonies she had heard at one meeting were of very trifling ailments, but had she realized the moral sweetening and brightening of life that accompanies all Christian Science healing, she would have seen that no healing is too trifling to make one thankful. It is often the little discords, the petty cares and worries, that make life bitter, and if Christian Science had only healed us of these it would have earned our gratitude.

Before coming into Christian Science I used to take medicine regularly, but one night, after reading Science and Health, I declared for Truth and did not take the usual dose. Until then I had not accepted this teaching, but the immediate help I received filled me with wonder and joy, and I knew I had found the "pearl of great price." Although the complete healing was slow, it has been perfect and permanent, and I am far healthier and happier than I was before. I used to have a great deal of sickness, but have had only a few attacks since I began the study of Christian Science, and each time I have been healed very quickly.

I used to think how beautiful it must have been to be healed by Jesus, and what wonder and joy and gratitude must have filled the hearts of the sick and sorrowing. Now I know that even today there are hearts filled with this same joy and gratitude, not only for the ease from pain, but for these proofs which bring the "sweet and certain sense that God is Love" (Science and Health, p. 569). Christian Science has also healed me of intense morbidness, and that is one of the things for which I am most grateful. This morbidness, coupled with an uncontrollable imagination, was daily gaining a firmer hold on me, until it finally resulted in a nervous breakdown for which I had to go to a doctor and leave home for several weeks; but Christian Science has lifted me above all that, and now I no longer fear to be left alone with my thoughts, for I know that no thoughts are real but those of love and peace.

Christian Science has given me better ideals and aspirations, a purpose and joy in life which I never had before. Above all, it has led me out of dense materialism, given me an understanding of God as Love, an ever present help, and a religion that is logical and practical. Just a few years before I became interested in Christian Science I was training for a profession, but was disqualified as physically unfit. My future looked very blank, but Christian Science has opened the way for me to do a useful and interesting work, and in this, as in every detail of my life, it has meant the healing of discord. I know that it is a practical religion because I can apply it to every problem in my business life. I am very grateful for the loving-kindness I have met with from Christian Scientists, even while I ridiculed their religion. It was this spirit of love which at length drew me to Christian Science. Although I know I have still a great deal to overcome, I feel I must give thanks for all the good I have already received.

Madge M. Elder, Musselburgh, Scotland

❖

My first experience in Christian Science healing reminds me that I must have been much like the merchantman who went down to Jericho and fell among thieves, who robbed him of all he possessed and left him lying, wounded and bleeding, by the roadside. The generally accepted beliefs about God, man, and the universe, had robbed me of my birthright as the image and likeness of my creator, of all that I possessed; consequently I was left wounded and bleeding away from home, God, without one thing good or to be desired, but quite the reverse,—with unhappiness, sorrow, sickness, and not even a hope that God was willing or could heal or in any way relieve my distressed condition.

Then one who understood Spirit and spiritual laws came that way. She did not pass by "on the other side," nor did she take the same view of my condition as some others who had tried without avail to help me. She denied that I could even appear to be sick, fallen, or in despair, for she knew him to be the image and likeness of God, pure and perfect, and discord to be only a false mortal belief, not God-created, God-sustained, or God-ordained, and the happy result was that I was healed almost instantaneously. From the hour I was free from pain and suffering, and the cause of my seeming suffering was destroyed. I was well, and my words cannot express my gladness. I never again thought of the past sorrows, but rejoiced; I knew God, and was satisfied.

There had been priests and Levites many, but each looked and said man has sinned and he must suffer; it is the divine will, and we cannot prevent it. Be reconciled, bear up bravely and courageously, and you will be blessed in the world to come. Good people, many score, lovingly and tenderly ministered unto me; with patience they nursed and cared for me, and all kinds of material remedies were applied and faithfully adhered to, with no permanent results. Then came one with a clear understanding of the truth of being and the wonderful truth as taught in Christian Science, and accomplished for me in a very short time what years of treatment with material means had failed to do.

I was traveling on the Pacific coast for my health with my little son, who stood by my side and saw me healed, likewise saw me relieved almost immediately, to his astonishment. A lady at the hotel had told me of Christian Science.

Digitized by Google

was not a practitioner, but only a student, and I owe it all to her right thinking, for I never asked for help; I did not know enough. She gave me Science and Health, and I read, "The wisdom of man is not sufficient to warrant him in advising God" (p. 3). I saw that, and only that, and I was well. I did not then know it was a permanent healing, but time has proven that, for ten years have passed and I am in perfectly good health.

Many others have been awakened through my experience to the understanding that to "know the truth" is the one thing needful; if there had been any better way Jesus would have told us about it. Our dear Leader has so lovingly and clearly pointed out in our text-book, "Science and Health with Key to the Scriptures," the great and eternal truth about God, man, and the universe, that though one be a fool he need not err therein. It is in gratitude for the many blessings I have received from the study of Christian Science that I send this testimony.

MRS. M. E. RABICK, Paterson, N. J.

✧

While on my way here from Massachusetts, I was taken with a burning, creeping, and somewhat painful sensation in my left limb, from the knee to the hip. This did not yield very readily to the truth. For a few days it grew worse, and that part of my limb became numb, without any feeling except at times that peculiar sensation. This condition continued for two weeks or more, but I did not make it known to any one, and with the help I received through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, it was healed by divine Love.

Some time ago, I was taken with what seemed to be a severe attack of stomach trouble. I became suddenly dizzy, so I at once sat down in a chair and tried to declare the truth. This brought relief, but only for a short time, for I had a return of the dizziness, and although striving to hold to God's allness, I fell to the floor and remained in an unconscious condition for an hour or more. When I regained consciousness, the room was filled with people and a doctor was standing beside me. He wanted to treat me, but I would not let him. Instead I rose to my feet, and declared that divine Love meets all human need. Surely divine Love did meet my human need at this time, for soon I was entirely well. While I was unconscious, all in the room but one declared there was no hope, as they could detect no evidence of life; but this one declared that there was hope, and I would soon be all right.

I am thankful for this demonstration of the truth, but more so for the better understanding I have gained of God and His creation and for the spiritual uplift that has been realized through the study of Science and Health. The little understanding I have of this truth has brought me perfect health.—FRED N. CLARK, Long Beach, Cal.

✧

[Translated from the German]

This testimony is given with a sense of deep gratitude for the great benefits which I have received, and with the hope that it may prove a help to others who are laboring under a sense of distress. I had much pain in my hand, accompanied with fever and ague, said to be caused by poisoning, which I had contracted for the fourth time. On other occasions the physician in attendance made incisions, and I suffered intensely, whereas this time I put myself under the care of a Christian Science practitioner and was healed after the second treatment, without experiencing pain. For this healing I am profoundly thankful to God.

FRAU ELISE BALSIGER-WENGER, Höfen, Kistlern bei Thun, Switzerland.

From Our Exchanges

[*The Congregationalist and Christian World*]

In the midst of world confusion and distress, and in the peculiarly testing situation in which this nation finds itself, one method of procedure is at hand. If honestly and earnestly followed, it is bound to carry us through the thickets of uncertainty and fear into the clear, safe path of progress and of peace. It is all summed up in the simple injunction, "Keep Christian."

Public opinion is easily, in a time of crisis, consolidated and swung toward moods and policies not consonant with the ideals and purposes of Jesus Christ. Many a man, confronted by bewildering moral issues, may be tempted to surrender his own instinctive Christian judgment to that of the pessimist who says that human nature is the same from age to age, or to that of the materialist who declares that the teachings of Christ are not workable, or to that of the unbeliever who affirms that there is no God, or if there be one, that He does not care what happens on this planet. But by all the sacred vows which can hold and guide a Christian man he is bound, first, last, and all the time, to adhere to and to champion the teachings of his Master. They have always collided with the avarice, the ambition, and the self-interest of individuals and of nations. Yet the silent pressure of these ideals of Jesus has brought the world to the highest pitch of development it has ever known.

[*Zion's Herald*]

Whatever it is that is fettering our usefulness in the efforts of the kingdom should receive our thoughtful attention. There are too many times in our lives when we are not usable in God's work because of some infirmity that is encumbering our lives. When the plight that we are in is like that, it is full time that we should take knowledge of the disorderly things which are holding sway within us. It will require a measure of prayerful and painstaking insistence upon our part to set us right again; and the endeavor that we should put forth to that end should be prompt and forceful. There is no one of us who wants to be a dead weight when the forces that make for righteousness are in need of helpers; and if our serviceableness is in danger of being shackled like that, we should act today, and we should not call a halt until there is a spirit within us that is so pure and willing and sweet and obedient that God can use us at whatever task He may find for us.

[*The Independent*]

Right beaten down is not and never can be overwhelmed. It is all black now, but wrong ever overreaches itself. When in supreme effort it attempts final sway, it exhausts its strength. War, vastly more malicious and ruinous than ever before, has overshot its own mark. The world will have no more of it. After the blackest night the new morn will rise to clear the storm and repair the wreckage, and unending peace will heal the wounds and breaches of hate; and the losses and the cost of war will add force to the elder rule of human love, and the song of hate and the lust of revenge and the curse of lawless ambition will be quenched, if not by the spirit of Christ, yet by the necessity of prudence.

[Prof. George E. Dawson, Ph.D., in *The Homiletic Review*]

To suffer long and be kind, to be patient with those who offend, is an evidence of strength. Only the large-minded and the large-hearted are strong enough thus to suffer and to endure, and to such there will come with every thought and act of forbearance a large measure of strength and

Digitized by Google

completeness of being. The men and women, and the nations, who in these great days can consciously relate themselves to the largest human interests, will most consistently practise the virtue of long-suffering in their judgments of events and in their conduct.

[*The Universalist Leader*]

A prominent doctrine in the teaching of Jesus was that God's approval would be equally bestowed on him who had done most and him who had accomplished least in His service, provided always that each had done the best he could. Peter and John, who had helped him lay the foundation of his kingdom, and Paul and Barnabas, who were destined to extend its dominion over foreign lands, would rank no higher in the divine regard than the humblest disciple who, with equal faithfulness, should practise the precepts of the Sermon on the Mount within the narrower sphere to which his influence was limited. This was the essential truth enforced by his praise of the widow who dropped her mite into the treasury, and his commendation of the woman who, in token of her wish to render a more needed service, anointed his head with precious ointment. It is also illustrated in the parable of the talents, and in that of the laborers in the vineyard.

[*American Lutheran Survey*]

No war can ever shake down or uproot true Christianity. It is not strange, as every thinking man concludes, that logicians are shaken in their logic, agnosticism is shaken, materialism is shaken, positivism is shaken, humanitarianism as the salvation of society is shaken, the superficial substitute of social service for true religion is shaken. The worship of intellectuality is shaken and has fallen to the earth. Man's pride and diplomacy, his self-elevation and self-glorification, his worship of human intelligence, his trust in science, his hope in social reconstruction, all his panaceas for the salvation of society are in ruins and none to restore them. The recourse of humanity, after all, in peace as in war, is the everlasting love of God as revealed in the cross of Christ.

[*The Christian Register*]

The garment of righteousness is not a conscious creation. Those who weave this garment for themselves, do not go about it with purpose. They are mainly humble and lowly followers of him who blessed the poor in spirit, the meek and lowly, the pure in heart, the despised and forsaken of men. The virtues he commended are still the light of the world. Before him no makeshifts, no pretenses, no subterfuges can hold a place, for he demands the absolute truth and sincerity of being.

[C. B. Hamilton in *The Standard*]

No millennium will suddenly dawn in which men will be in paradise; but we will gradually and slowly approach a better understanding of what truth really is, an acknowledgment of the truth of that statement, "Ye shall know the truth, and the truth shall make you free." It is coming in a growing consciousness in the minds of all men of what is really good, in a clearer discernment of the better way to live, in a conservation of moral resources as well as material ones. My understanding of this higher ideal is a travel toward the kingdom which must ultimately prevail, and of which all men are to become a part.

[*Northwestern Christian Advocate*]

The supreme force in the world is spiritual, not material, and though at times the tide of battle seems to favor the material, it is but for a time. In the end triumph, final and complete, waits upon the will of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A large edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. The special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any of all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

The lecture by Bicknell Young, C.S.B., "Christian Science: The New Birth," has been translated into Norwegian, "Christian Science: Gjenfødelsen," and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"The Sons of God," a lecture by Col. William E. Fox, C.S.B., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The Tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership, or extracts from their by-laws, can be had at seventy-five cents per hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership in The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. For earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current matter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

CHRISTIAN SCIENCE: ITS RESULTS. By WILLIAM R. RATHVON. Also printed in German.

CHRISTIAN SCIENCE: THE GOSPEL OF THE KINGDOM. By JUDGE CLIFFORD P. SMITH. Also printed in German and French.

CHRISTIAN SCIENCE: A RELIGION OF LOVE. By VIRGIL O. STRICKLER. Also printed in German.

CHRISTIAN SCIENCE: THE NEW BIRTH. By BICKNELL YOUNG. Also printed in German and in Norwegian.

CONFIDENCE AND SUPPLY.

FULFILLING THE LAW.

ENVIRONMENT AND OPPORTUNITY.

THE FATHER'S BUSINESS. Also printed in German.

THE DIVINE NATURE. Also printed in Dutch and Norwegian.

THE PROVIDENCE OF GOOD. Also printed in Spanish and Swedish.

PRAYER AND HEALING. Also printed in German.

SEEKING AND FINDING. Also printed in Dutch, German, and Swedish.

"THRUN THE FULL GRAIN IN THE EAR."

UPWARD FOOTSTEPS. Also printed in Dutch.

THE LAW OF KINDNESS.

BIRTHRIGHT AND DOMINION.

Other Translated Pamphlets

"PEACE ON EARTH." Printed in German only.

PRAYER AND CONFIDENCE. Printed in German only.

MARY BAKER EDDY. By ARTHUR BRISBANE. Printed in German only.

MARY BAKER EDDY: HER PURPOSE AND ACCOMPLISHMENT. By FREDERICK DIXON. Printed in German and French.

THE FOUNDER OF CHRISTIAN SCIENCE. By B. O. FLOWER. Printed in German only.

CHRISTIAN SCIENCE: THE COMFORTER OF PROMISE. By FRANK H. LEONARD. Printed in French only.

CHRISTIAN SCIENCE: DEMONSTRABLE RELIGION. By FRANK H. LEONARD. Printed in Norwegian only.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. By PROF. HERMANN S. HERING. Printed in Dutch only.

CHRISTIAN SCIENCE: A RELIGION OF PROGRESS. By WILLIAM D. MCCRACKAN, M.A. Printed in French and Swedish, but not in English.

CHRISTIAN SCIENCE: ITS PRINCIPLE AND METHOD. By BICKNELL YOUNG. Printed in French and Swedish, but not in English.

PRICE, POSTPAID: Single copy 5 cents; twelve copies to one address 55 cents; fifty copies $2; one hundred copies $3.50. Orders for above pamphlets may be assorted as desired.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

For quantity rates on goods specified in the following list please refer to the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $3.25.

01561 x. Large type Bible, 7½ x 6¼ inches, 1½ inches thick, bound in Alaska seal. Specially adapted for use of second readers, $7.25.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY, 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated. 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco $1.40; full morocco $2.50; levant $3.50; pocket edition, size 4⅝ x 6⅝, $3.

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Bi-se Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper slidelds, 50 cents. Extra paper slidelds, one hundred, 15 cents.

BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart

For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of the Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 15 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.13.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and direct refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman P. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor

JOHN R. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our current catalogue in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XV indicates the year 1915; XVI is used for the year 1916. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post office as second-class matter.

Items of Interest

As the result of experiments carried out by a Swedish paper expert, it has been ascertained that Argentina produces in abundance a tree which provides excellent raw material, better even in quality than that usually employed in making paper pulp in either the United States or Europe. This tree is the *Araucaria imbricata*. The United States minister of agriculture commissioned two government engineers to investigate and report upon the properties of this tree. These gentlemen recently presented their report, from which it appears that in the territory of Neuquen this tree is found over an area of more than two million four hundred and seventy thousand acres. Three and one half average trees suffice to produce one ton of pulp. Where news print-paper is concerned, two and one-half trees will provide one ton of pulp. The average value of paper and cardboard imported into Argentina during each of the years 1909 to 1914 is given as 85,000,000 gold ($4,825,000 United States currency), while in the same years the wood-pulp imports varied between $1,081,000 and $865,000 gold (between $443,000 and $926,400 United States currency).

The secretary of the United States department of agriculture has promulgated a set of regulations for administering the new law, which provides that national forest land may be leased for summer home sites and other recreational purposes in tracts of five acres or less for periods not to exceed thirty years. This law supplements the revocable permit system under which recreational use of the forests had already developed considerably. Many users have been unwilling to make substantial improvements because of the uncertainty of tenure involved in the old form of permit, which, however, is still expected to meet the requirements of persons who are not likely to occupy the land for more than a few years or to make elaborate improvements. Since permittees receive special benefits, it is regarded as only fair that they should reimburse the government for the expenditure incurred in administering the forests. The rates range from five dollars a year up, in accordance with the location of the land, the demand for it, and the use to which it will be put.

Officials of the Detroit United Railway have made public a letter which is being sent to the stockholders of the road recommending that they vote in favor of the proposed purchase contract under which the city will take over the ownership of the company's street-car lines in Detroit. The purchase price of the street-car lines and equipment is to be decided by the judges of Wayne county, in which Detroit is located, and it is reported that it will amount to more than twenty-five million dollars. The city's payment under the proposed contract shall be made to meet the mortgage debt of the Detroit United Railway so far as the purchase price fixed by the court shall extend toward that debt, and such payments are to be made out of the earnings of the lines, if the earnings are sufficient to meet the required amounts due.

The power was recently turned on in a large electrical plant at Tocopilla, north of Antofagasta, Chile, for the operation of a copper mill at Chuquicamata. This starts the exploitation of mines which officials of the company say penetrate the largest known deposits of copper in the world. When completed the mill will have a capacity of twenty thousand tons of ore daily it is stated. The plant is constructed in two units. One unit of ten thousand tons has been put in operation. The deposit was believed to be extremely large, as the formation for some eight thousand feet in length and two thousand feet in width was favorable to the deposit of copper minerals, but its true size, when options were taken in 1910, was not then suspected. The "ore in sight" has grown to approximately three hundred thousand tons of 2.10 per cent copper.

Members of the committee in charge of the movement for the planting of shade-trees on the three hundred and twenty mile circuit of highway through Massachusetts, which is being pushed by the Massachusetts Forestry Association, have made an inspection tour of the circuit. The plan of the association is to make through the state a continuous highway, beautified by trees and shrubs, on which the lovely vistas and views will be accentuated and the unsightly places hidden. About 95 per cent of this road, which starts at Boston, crossing the state by the way of Worcester, Springfield, and Pittsfield, and returning through North Adams, Greenfield, Fitchburg, and Cambridge, is already an improved state highway, but there are in sections long distances without trees.

The Cleveland *Leader* says: There is another steel trust in the hatchery. This second trust will not be so large as the United States Steel Corporation, but it will approximate it closely. The companies named as definitely lined up for the greatest industrial merger since the United States Steel Corporation was formed in April, 1901, include the Bethlehem Steel Corporation, Colorado Fuel & Iron Company, Jones & Laughlin Steel Company of Pittsburgh, Crucible Steel Company of America, Lackawanna Steel Company of Buffalo, Pennsylvania and Cambria Steel companies. The capitalization of these companies amounts to $540,500,000.

The federal government has withdrawn 9481 acres of oil land in Natrona county, Wyoming, about thirty miles north of Casper, covering what is known as the Teapot Dome in the Salt creek field, and a part of the petroleum reserve withdrawn July 2, 1910. No wells have been drilled on this new area, but a careful study of the conditions indicates that it will prove to be productive territory. The setting aside of the new reservation is in line with the policy of the administration to improve every opportunity to provide an adequate, dependable supply of fuel oil for the navy, which is yearly increasing its fuel oil requirements.

Uniform automobile laws, it is expected, will be one of the topics to be discussed at the conference between state governors called by Governor Walsh of Massachusetts, to be held in Boston during the last week in August. Preliminary work to this end has already been done by a special commission in New Jersey in the form of a comparison of the automobile laws of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, and Delaware. For ten years the American Automobile Association of America has sought to promote a movement for a joint interstate commission on uniform automobile laws.

Lloyd's ship-building return shows that during the quarter ended June 30, 1915, there were four hundred and thirty-four vessels of 1,505,025 gross tons, and eighteen vessels of nineteen hundred tons under construction in the United Kingdom, eighty-one thousand tons less than at the end of the previous quarter, and two hundred and fifteen thousand tons below the figure for the corresponding period of last year. During the quarter ended June 30 this year were four steamers of 147,964 gross tons launched.

The municipality of Berlin, Germany, has decided to take over the electricity undertaking owned by the large and powerful company, the Berliner Elektrizitäts-Werke, which has hitherto been responsible for the whole of the electricity supply in Berlin. The works are to be transferred to the municipality on Oct. 1, but the decision was not arrived at by the Berlin authorities on Feb. 2 was only confirmed by the town council in May. The purchase price will be about six million five hundred thousand pounds.

The American navy made its first passage through the Panama canal on July 15, when the naval academy practice squadron, in command of Rear-Admiral William F. Fullam, superintendent of the naval academy at Annapolis, made the voyage from the Atlantic to the Pacific. The squadron was composed of five battleships Missouri, Ohio, and Wisconsin, the Missouri being the flagship.

The final wheat forecast for India is not merely a bumper but a record one. The total area reported is 82,230,000 acres, an increase of 8,755,000 acres, or 13 per cent, over last year. The total yield is estimated at 269,000 tons, as compared with 8,500,000 the revised final estimate of last year, an increase of nearly 23 per cent.

Production of petroleum in the United States last year was the greatest in the history of the country, the aggregate being 281,000,000 barrels. California retained first place as oil producer, with Oklahoma a close second. Wyoming and West Virginia, respectively, showed the greatest relative increase in decline.

Ten of the principal peach growers of Fairfield county, Conn., who met at the call of County Agent S. J. Wright to confer concerning the season's crop and the market, report that the county will produce upward of two hundred thousand baskets.

Work on the Lincoln highway during 1915 in the thirteen counties of Iowa over which the great transcontinental highway passes will cost $146,000. The cost of the work to be done in 1915 is estimated at $87,371.

Mind's Control Over the Body

WILLIAM D. MC CRACKAN, M.A.

From time immemorial, humanity, striving to be better d purer, has sought to control the body, and Mrs. Eddy ls us (Science and Health, p. 417) that it is important to derstand "the complete control which Mind holds over the dy." It would take many volumes to describe with any gree of accuracy the well-nigh innumerable ways and means ich have been used by mortals in the attempt to bring ir bodies into subjection. When the motive has been solely ical or religious, the results have been apparently most otesque and unsatisfactory. Efforts to chastise the body to render it insensible have led to pitiable exhibitions d mutilations, thus making the physical more conspicuous d more obtrusive instead of reducing it to relative unimrtance. So likewise has the attempt to control the body drugs, manipulations, injections, and the like, proved unrtunate. The more attention the body has received, the re it has seemed to demand. Even when the motive has n purely esthetic, the pampered flesh has not rewarded care expended upon it and real beauty has vanished in portion as artificial aids have been considered necessary. Perhaps the least illogical of the illusions about the body been the athletic point of view, which seeks to gain and to ablish power, grace, and activity and place the body in jection to the law of dominion by exercising it. It should recognized that law is mental, not physical, and therere to bring the body into subjection to law for any purse, whether it be religious, curative, esthetic, or athletic, essarily involves a mental *modus operandi*. Christian ience shows how this control is to be accomplished in a ristian and scientific manner. The general practice of ing this has seized the problem at the wrong end. The ght practice is just as necessary today as it was in the e of Paul, and it involves being "absent from the body" d "present with the Lord." Paradoxical as it may seem, only sure way of controlling the body is to be absent from . To be present with Christ, Truth, means the rejection of teriality and reveals man as wholly spiritual, governed by law of God, Spirit, and not by matter.

The inevitable effect of dwelling constantly in the thought the body is set forth on page 260 of the Christian Science t-book, "Science and Health with Key to the Scriptures" Mrs. Eddy: "Selfishness and sensualism are educated in rtal mind by the thoughts ever recurring to one's self, by nversation about the body, and by the expectation of pertual pleasure or pain from it; and this education is at the pense of spiritual growth." Thus the attempt to spiritlize thought by making the body a first consideration, either punishing it, starving, drugging, or exercising it, is omed to failure, because such action constantly recalls it one's attention and revives it in one's thought. Obviously, n, the true way of controlling the body, to make it subrvient instead of masterful, is to turn away from the conmplation of it. It is not possible to reach the kingdom of aven, the consciousness of the presence of God as All, by a choice of foods. Neither dieting nor fasting can procure for us this state of consciousness, but being "present with the Lord" can and does accomplish this. "Present your bodies a living sacrifice, holy, acceptable unto God," writes the apostle. Lay down this false sense of man as a material body, even the generally accepted teachings of anatomy and physiology, and present man as the spiritual, incorporeal idea of divine Mind, then the sacrifice of the false is complete and the presentation of the true has taken place.

This realization of the truth about man cannot, however, be reached without a preliminary spiritual understanding about God. It is the genius of Christian Science that it bases its teachings wholly upon God as first cause, Principle, source, and origin of all that has existence. Popular opinion is rapidly outgrowing the belief that God is corporeal. We are today very far from the primitive notion of God as a being who can be depicted or outlined in painting or statue. The savage with his hideous idols, and the artist in bygone ages who ventured the attempt to give form to God, would find no acceptance today in popular opinion for their concepts. Yet the thought of God as person, with attributes and characteristics common to human persons, such as jealousy and the desire for punishment and revenge, has by no means disappeared. For great multitudes God is still an object of fear, and not in the Biblical sense of fear as reverence, but rather as downright fright. In the imagination of innumerable individuals God is still the watchful parent waiting to catch them in their misdeeds and administer to them the strokes of correction. It still remains to displace this false picture by the impersonal understanding which Christian Science teaches, namely, that "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love" (Science and Health, p. 465). The divine nature thus explained cannot inspire fear, but on the other hand evokes admiration, adoration, and love.

This understanding makes God available in the hour of temptation, sin, sickness, suffering, and sorrow. From this understanding also the student of Christian Science can advance to the spiritual perception of man as the idea of divine Mind, discarding the false belief that he is a material body that needs to be either drugged or dieted, pampered or pounded into health and harmony. Man as idea reflects or expresses divine perfection, and the realization of this is what brings well-being to the human consciousness, and so to the substratum of mortal mind, namely, the physical body.

The road to health for the physical body lies through metaphysics. Physics cannot reach the source of being, nor accomplish any more for the body than to indulge its false beliefs. Metaphysics of the right kind, based upon the teachings of the great Master, illustrated by his glorious works, and explained by Christian Science in our own time, brings the body into subjection to Truth and leaves it in the control of Principle. Therefore whosoever would establish a spiritual ascendency over physical sense and thus become a law unto himself, can do so by placing himself under the law of God, which governs man harmoniously. Before this

law all manifestation of weakness, disorder, pain, or stagnation will vanish; all riotous desire for self-indulgence will fade away; mad ambition, equally with self-love and egotism, will be corrected; the overweening sense of self-importance which comes from constant thought about physique will yield to the joyous emancipation from material thraldom. Then will remain the spiritual satisfaction of unity with God, and humanity, no longer trammeled by the fear or love of the material body, will reach the true perception of the atonement, the at-one-ment of God and man, Principle and idea.

Love's Atmosphere

EVA S. W. WILLIAMS

THE absolute impartiality of what we term nature, in her gifts to men and in her total disregard of mortal beliefs, has always been very obvious. The rain falls and the sun shines on all alike; the air we breathe is given without discrimination to each and all; and the ocean recognizes no differences among men. There are conditions, however, avoidable and unavoidable, owing to which men have not profited in equal measure by nature's impartiality. Thus, the air surrounding a city set in a valley is not the fresh pure air that blows on the mountain top, and the light which penetrates to the interior of the homes of a smoke-filled district is not the clear and cloudless downpour of sunlight. Though in themselves these gifts are of universal bestowal, they have not been equally available to all.

There are other gifts which prior to Mrs. Eddy's discovery of Christian Science were always imagined to be bestowed upon individuals separately, namely, the means of cognizing our surroundings. How little we realized, before the teachings of Christian Science enabled us to do so, that there is an all-pervading atmosphere of Mind's ideas, an atmosphere upon which all may draw, and which is an unfailing and limitless source of supply! Yet it is an actual and ever-present fact that "we live, and move, and have our being" in the very midst of this supply, wholly spiritual, but expressing itself in mercy to mortals, in terms of so-called human sense faculties, namely, those of sight, hearing, smell, touch, and taste. In the first line of one of the Christian Science hymns this all-embracing manifestation of compassionate intelligence is called the "atmosphere of love divine" (Hymnal, p. 84), and it includes everything good and pure and holy and true, everything of which true thought can conceive.

Mortals have made the great mistake of outlining what they believed to be material (though intangible) gifts and separating them in belief from what they considered spiritual ones. Thus the gifts of the Spirit, "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance," were rightly regarded as spiritual, and as such offered to all men; but sight and hearing have been thought of as physical, and supposed to be given or withheld from certain individuals according to some scheme beyond our human comprehension.

To return to our simile of the valley and the mountain top. Men have recognized that the air was given to all, but mortal mind has placed arbitrary and often cruel limits to the individual man's ability to avail himself of the bestowal; and two of these limits or obstacles have been known as poverty and ill health. From the outset we read, "In the sweat of thy face shalt thou eat bread, till thou return unto the ground;" and the need to earn his own living and fill the mouths of his little ones has kept mortal man in the city, or tilling the soil of the valley, with neither time nor means to ascend the mountain and breathe its fresh air. It is to be noted that those who are rich in this world's goods often health, the one thing needed for enjoying them. Sign of warning may have been placed on the mountainside for rich man as well as for the poor, but they have sought in vain a climate whose qualities of heat or clemency or rigor, might restore their health. Even men have not been set free from belief in laws of heredity, wrong education, environment, etc., and these considered as a handicap to their efforts to draw up unfailing supply of love and joy and goodness.

Christian Scientists, however, classify their possessions a new-old way. According to St. James, "Every good and every perfect gift is from above, and cometh down the Father of lights, with whom is no variableness, neither shadow of turning." As Christian Scientists we enter into the world and prove that all true perception is spiritual. Mrs. Eddy says: "Sight, hearing, all the spiritual senses of man, are eternal. They cannot be lost" (Science and Health, p. 486). It is ours to demonstrate that there are circumstances, no unjust decrees of poverty, illness, accident, can deprive men of the benefit of those daily gifts of God as the sunshine, the quickening breeze, and the refreshing shower. Mrs. Eddy further says: "There is more Science in the perpetual exercise of the Mind-faculties than in their loss. Lost they cannot be, while Mind remains" (Science and Health, p. 487). It should be kept clearly before us that the atmosphere of Mind, divine Love, includes all, is real, and that all conditions are mental. Christian Scientists can all witness gratefully to changes for the better which are brought about in the mental and moral realm through the activity of Truth; and as we rise in thought above what is impure or vitiated, we become superior to abnormal physical conditions.

Knowing that we can never deprive our brother man of good in going up into the mount and breathing the pure air of Spirit, but instead that we greatly help the world by so doing, we shall remember also our Leader's advice found in Science and Health (p. 452), "Never breathe an immoral atmosphere, unless in the attempt to purify it."

Scars Obliterated

DR. EDMUND F. BURTON

LIFE is often spoken of as a battle. A battle is a conflict between forces opposed in interest and purpose, each of sufficient strength to put the other in peril of its existence. If this be a true view of the life of men, it means that a man must go to his work in the world without any guarantee of safety or success in his legitimate pursuit of happiness, must be constantly filled with uncertainty as to how his day will pass or end. Battles have made all the great blots on the pages of the world's history, for they have to do with death, not with life. Men are wearying of them, and are hoping for their elimination from human experience. Is it really possible to look upon life thus and continue to believe in a supreme power that is good? Mrs. Eddy says (Science and Health, p. 485): "The notion of any life or intelligence in matter is without foundation in fact, and you can have no knowledge of falsehood when you have learned falsehood's true character." To the human sense life is made up of trials, tests of faith in God, but they are far from being pain or tribulation when rightly understood. The baby's first uncertain steps are trials of its faith in life; the man who faces new difficulties and the woman who in the strength of divine Love

Digitized by Google

ast her faith, are learning through the trials of their trust n God that life is good.

It is not dangerous to live. Life means joy, as man's every nstinct assures him. The one who understood more about ife than any other, said that to live is to know; and it is the erdict of all the world's great thinkers that beyond all other ursuits is that of learning, reading the open book of Truth, nd that there is no vitalizing happiness surpassing this joy f coming to know. There is a familiar maxim which is even ore true when turned about and made to read, To learn is o live. All conditions that go to make up the years of fe are truths appearing to the human mind, at first in terrogative form perhaps, yet not with doubtful answers. 'ailing to perceive the operation of changeless Principle, ortals regard many experiences and conditions as unanverable puzzles, whereas they are all soluble in accordance ith the one great law that there is no other reality an good.

The state of mind that scientifically understands a given ondition or problem, is a Christian Science treatment, nd every condition appeals to a Christian Scientist as a roblem to be solved according to the one rule of life, the ne law of the universe, the allness of God, good. Moreover, ery condition met with in life, from the most trivial to the ost significant, is a demand for such knowledge, an invitaon to stand still and see a new evidence of God's presence. he consistent Christianly scientific solution of problems eans that the history of each moment is an illustration id evidence of all-governing good as the only activity and ality, and of nothing else,—nothing whatever remaining in e mind of the individual to mar the consciousness of being perfect harmony and unity.

It follows that the life of every Christian Scientist should such that his thoughts, words, and acts contain no acowledgment of evil in any form. The presence of his ought in any situation should be so redolent of the one preme fact of the universe as to reveal the godlike atmosere which is light to evil's darkness. Should a condition resent difficulties which he cannot at once see past, he may rn away from these clouds and look steadfastly toward rinciple, knowing that whatever of truth is necessary to sprove and dispel the claim of evil will be revealed to the ought that really ceases to regard evil and waits on God.

This treatment is not limited in application or efficacy to e new problems of today. Those of the past need not be nsidered irremediable and left unsolved to do their cording work in memory. According to belief, they were evils posed upon us which, although useless, seemed unavoidable, id hence were allowed to pile up in experience, in mind and dy, as the uneliminated débris of life. Death is an endured, neliminated evil, a fact which has been faintly recognized y certain physicists, who declare that there is no reason for e death of the human body other than lack of elimination of eless material. But these problems are still beliefs in evil, ver facts, and the knowledge of Truth brings them into a ed-filled present. Just as surely as they are taken up and lved under the one rule, so surely will their manifestations mental and physical scars of age and accident, signs of e passage of time, disappear from feeling and sight, for the ortal mind and body is but visible belief, tangible thought. very scar on mind or body is an interrogation mark left anding, which, whether regarded as normal or adventitious, n be done away with by the true answer.

Even though we feel that we have been healed of certain oubles by the power of God and that they cannot recur, ill to grant that they ever had any reality whatever is to allow their footprints to remain and to deepen. Scientifically to know that all evils are untrue, and so cannot be causative, is to wipe out all their asserted effects. To realize that a particular burden never existed, is to be free from the sense of a body which is a burden in that particular, and to find instead a consciousness of joyous activity. Let one know that right thinking is not toil, because it is the unlabored expression of Mind, then there will be no more "brain-fag," and all the scars of former beliefs respecting it will disappear. He will come to be filled with the joy of new knowledge, with increasingly luminous visions, as with unwearied wing he rises above perplexity and ignorance into the realm of pure Mind.

Thus right sense eliminates all haste, which is waste, because it induces neglect to solve each problem in turn. Haste is due to the belief that passing time pushes on relentlessly and presents new conditions before we are able to master those already upon us. As ever, mortal mind has miscalled cause and effect. Time is the effect, rather than the cause, of unsolved problems. For the average individual it is a sense of something that passes, dies; of something that exists and then ceases to exist; the opposite of God, eternity. This sense of something passing out of life is all there is to the past. Life is Mind. Man's life is a state of Mind. Events are thoughts. It takes no time to know that God is All and to rely upon this truth, since this truth is the substance of every event.

Events or crises, so called, are not entities apart from man, not things that can attack him and put him in danger, change his status, or occur so rapidly as to affect his relation to God. There is neither thought nor thing swift enough to forestall his reliance or strong enough to change this relationship. Thus it is evident that it is never necessary in truth to accept any evil, past or present, as unavoidable, any trouble as real, any problem as too difficult for present solution. We can always know the answer, even when the human mind does not follow at once the process leading thereto; for whenever any claim of evil presents itself, we may instantly be grateful that it is not the truth. And it is the joyous work of every follower of Christ to meet every statement of error that comes to his notice, however and wherever apparent, with the realization of Truth's omnipotence and omnipresence.

Man is Mind manifested. Jesus said to his disciples, "The light of the body is the eye," and again, "Ye are the light of the world." His disciples are the light of the world because they are the transparency through which the truth is seen. Through the revelations of the greatest seer of this age the students of Christian Science are enabled to perceive higher verities than have heretofore been visible to the world; and because of their understanding of the truth that there is one Ego, and that the Christ has "overcome the world," they know that all their problems are soluble, are even now solved. Through this truth there is removed from thought all doubt as to the rationale of treatment in Christian Science. All power to heal through this treatment is based upon this unity of man and man's oneness with God, together with the truth of the spiritual nature of man; so that whatever member gives or receives the treatment, it is in cause and effect the truth manifesting itself.

This understanding also makes it inevitable that we love our neighbor as ourselves—neither more nor less, since there is one real self, God's idea; for so long as mortals believe themselves to be made up of mortal faults, subject to unconquered evil conditions, so long will they fail to see their neighbors as lovable, faultless, and free. But with the understanding of changeless good as all-inclusive, there comes

Digitized by Google

into experience the true self-consciousness which includes the perfect universe.

The race, individually and collectively, can progress only as Truth's lessons are learned. The problems of today are the problems of all the yesterdays, repeatedly appearing because still unsolved. Nevertheless we have this as an uplifting incentive: that the correct doing of today's work by each one of us brings not only to each an harmonious present, a future filled with hope instead of fear, obliteration of the scars and shadows of the past, but also inevitably somewhat of healing and enlightenment to the whole body of men. And how simple is this key to heaven!—just the mental attitude toward every-day experiences which looks upon them with childlike confidence that all may be met so as to give proof of an infinite Love. This mental state finds joy in the work of every hour. It changes troubles into teachings, stumblings into steps, and brings the realization of the prophecy, "Thou shalt not see evil any more."

Christian Science Reading-rooms

OLIVE P. SIMCOX

THE twenty-first chapter of Revelation is one of the most inspiring chapters in the whole Bible, describing as it does the "new Jerusalem," which metaphysically interpreted stands for the perfect spiritual consciousness. We learn in Christian Science that it is only as we gain this perfect consciousness that we make any real progress. Our effort as students is to lift our thought above material phenomena and to learn that all cause and effect are mental.

Many years ago, when the writer was a very young student of Christian Science, she had an experience in a reading-room which is still shedding light upon her daily life. The room was maintained by a small church, the membership of which was composed mostly of young people, and all of them young in Christian Science. Few of the workers had really grown to the positions they were filling, but the church was doing the best it could with the means at hand. The writer was chairman of the reading-room committee, assigning different members for the various afternoons, ordering literature, and caring for the rooms generally. If for any reason the appointee could not serve, it was the chairman's duty either to get a substitute or to fill the vacancy herself.

On this special afternoon no one could be found to fill a vacancy, so it fell to the chairman to go to the reading-room. As preparations had been made to attend a party and a particularly pleasant afternoon had been planned, she was not at all pleased to give it up; in fact, she went to the room in anything but the proper frame of mind, and I am afraid she fretted quite a while in a dusty, disorderly room. Presently the voice of Truth, clearer than it had ever before been heard, told her that she whose duty it was to care for it, should be ashamed to look at the untidy room. Suppose the Master should walk in? Then in a moment came the clear conviction that Christ, Truth, was already there, that here was the manger where the Christ-idea is born to the receptive consciousness. Finally the Scientist rolled up her sleeves and went to work, literally and mentally; and she has tried ever since to keep her thought free from the dust of materiality.

Article XXV, Sect. 7, in the Church Manual, cannot be followed too closely. It reads: "No objectionable pictures shall be exhibited in the rooms where the Christian Science text-book is published or sold. No idle gossip, no slander, no mischief-making, no evil speaking shall be allowed." Our beloved Leader realized the importance of the mental atmosphere of the reading-room, and provided this wise safeguard.

A great deal of the writer's work has been in the read... rooms and for them, and this chapter of Revelation has ... been to her as the pattern showed to Moses in the ... Selected Articles

[Judge Clifford P. Smith in *The Herald*, Newburyport, Mass.]

The editorial entitled "Unskilled Tampering with Human ilments," which appeared in the *Journal of the American edical Association* recently, and which was reprinted with ief comments in your paper, contained the latest device this association for obtaining control of all efforts to event or cure disease. This device was presented in the llowing words: "The practice of medicine,—that is, the ding of the sick." In fine, the American Medical Asso- ation would identify these terms with each other, and put em into general use as equivalents, so that the injustice of ving a monopoly to medical practitioners would be less ident than it is at present. For this purpose the editorial question was doubtless furnished to newspapers through- t the United States, including *The Herald*.

This editorial further contained a very interesting point the following words: "Without a correct diagnosis, any rm of treatment is guesswork." The evident purpose this statement was to deny the efficacy of any curative ethod that is not based on physical diagnosis. It was par- cularly aimed at Christian Science, which was presently amed. Logically, however, the effect of the statement was mply to admit the uncertainty of every curative system hich is based on physical diagnosis, for diagnosis is uncer- in under the most favorable conditions.

The *Journal of the American Medical Association* recently ntained an article on clinical medicine by a professor of ysiology, in which he referred to the pathologic conditions scovered by post-mortem examination, as compared with e diagnoses made during life, in the cases of three thousand tients who had died at the Massachusetts General Hospital. hese cases included twenty-eight diseases. In the article ferred to the result of these comparisons of diagnoses with tual conditions was summed up as follows: "The average mistaken diagnosis in these twenty-eight diseases was 46.5 r cent, or nearly one half, and this in one of the leading spitals of the country, where all available aids to correct iagnosis ought to be had."

Considered as a whole, the editorial of which you made use ainly begged the question whether the study of man as atter, or the study of man as the reflection of Spirit, con- itutes the better equipment for the recovery and preserva- ion of health. The only infallible practitioner in the history f the world declared, "It is the spirit that quickeneth; the esh profiteth nothing." He healed the sick, but he did not ractise medicine. He commanded his followers in "all na- ions" to do likewise, but he did not base his practice on a hysical diagnosis. He demanded knowledge on the part of is followers, so that they might work for human freedom n all its aspects, but the knowledge which he inculcated was urely spiritual.

You will agree with me, I presume, that disease is not omething, but the absence of something. Now what is this omething? Perhaps medicine would say that physical dis- ase is the lack of physical health. Christian Science would ay, Yes, that statement is correct as far as it goes, but it goes only half way into the subject. The basic fact of which hysical disorder is the extreme opposite, is not merely hysical health, it is life or being. The knowledge, therefore, hich is essential for the healing of the sick is the knowledge f the absolute truth of being. Christian Science, therefore, eals disease by looking "not at the things which are seen, ut at the things which are not seen."

With your comments on the American Medical Association editorial I have no contention. As you say, "The whole question of medical legislation is a delicate one, but there can be no question about the necessity of thorough training for all practitioners of whatever name." I would, however, advance two other propositions. First, the training of each practitioner should correspond to his own practice. No one should be forbidden to heal the sick because he is not qualified to practise medicine. If he were qualified to practise medicine, he might not be able to heal the sick. Second, no school of practitioners should be given any control over others.

As the supreme court of Idaho recently said: "These are times of advanced science and liberal thought, when every person may think and act for himself. Every community has its multitude of beliefs and modes of treatment of diseases and human ailments, and every citizen is absolutely free to adopt, believe, or employ any one he pleases. If the results are not what he would wish or the rest of the community think they ought to be, he can nevertheless not be haled into court and have his method of treatment and his school of thought tested by the disciples or experts of some other school or belief."

✧

[Harry I. Hunt in *Long Branch* (N. J.) *Record*]

A sermon entitled "The Truth about Christian Science," reported in a recent issue of the *Record*, contains so many misstatements that it should not pass without correction. Indeed, the discourse travels so far from the truth that it is apparent our critic has given his attention to criticisms of Christian Science rather than to a study of Christian Science itself. It is quite evident, also, that the critic has forgotten the command of the Master, "Judge not according to the appearance, but judge righteous judgment."

Abuse of Mrs. Eddy is of course no argument against Christian Science, and intelligent people are apt to regard it as evidence of an intolerance which is all the more regrettable when expressed by one who is supposed to be an exponent of the golden rule. When with little trouble the facts about Mrs. Eddy's life may be obtained in almost any public library, there is no excuse whatever for a clergyman to "bear false witness" against one who has done so much to lift the burden of pain and sorrow and to redeem men and women from lives of sin and suffering.

To say that Mrs. Eddy simply took Berkeley's idealistic system of philosophy and called it Christian Science, is to betray an ignorance of both Berkeley's philosophy and Christian Science. Bishop Berkeley based his philosophy upon God, or Mind, as the first cause, but in defining matter as the expression of Mind, he plunged headlong into pantheism. On the other hand, Mrs. Eddy makes her starting-point the declaration of the Scripture, "Hear, O Israel; The Lord our God is one Lord,"—the one omnipotent, omnipresent, all-knowing Mind, or Spirit, whose creation is spiritual; and on the subject of matter she takes a stand directly opposed to that of Berkeley. Mrs. Eddy teaches that "matter is nothing beyond an image in mortal mind" (Science and Health, p. 116), and is not real substance. Natural scientists now explain matter as energy, or "centers of force," and so explain matter away. Our critic, therefore, in ridiculing Mrs. Eddy for her teachings on matter, also heaps ridicule upon the most advanced natural scientists and thinkers of the day.

If one is to consider the question of pain, sorrow, and death, to which our critic refers, surely the teaching of Christ Jesus is authoritative. In the midnight talk with Nicodemus, the Master said, "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." The flesh, as is pointed out by one writer, includes "all that belongs to the

Digitized by Google

life of sensation, all by which we are open to the physical influence of pleasure and pain." Follow this with Jesus' declaration to his disciples, who murmured over his "hard saying" when he said, "The flesh profiteth nothing," or, as another translation gives it to us, "The flesh is of no avail," and we see that Mrs. Eddy in putting aside the testimony of the senses, stands with Jesus and with John in her emphasis of the spiritual. As for death and the grave, Jesus proved them powerless to destroy life, and declared to the Jews who questioned him, "If a man keep my saying, he shall never see death." Paul in his letter to the Corinthians, in his remarkable analysis of death, makes the positive statement, "The last enemy that shall be destroyed is death," or, as it appears in the original, "The last enemy shall be destroyed, death;" and this triumph is to follow when "all rule and all authority and power" opposed to God shall have been put down by the understanding of the truth taught by Christ Jesus.

If Mrs. Eddy ever taught anything that would, in the words of our critic, "hurl the mother from her rightful throne," or "things which it would be an outrage to teach to any pure girl," Christian Scientists have never heard of it; nor can this critic produce a single teaching of Mrs. Eddy's which will support a statement for which there is not the slightest pretext. On page 60 of Science and Health we read: "A mother's affection cannot be weaned from her child, because the mother-love includes purity and constancy, both of which are immortal. Therefore maternal affection lives on under whatever difficulties."

Our critic says that Mrs. Eddy "denied the personality of God." In Science and Health, Mrs. Eddy says, "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*" (p. 116). Our critic further states that Mrs. Eddy denied the creation of man; but we read on page 294 that "God created man," and this is only one of many similar declarations. Christian Science does not deny the existence of sin to mortal sense, but denies it as a reality or creation of God, who is "of purer eyes than to behold evil, and canst not look on iniquity."

Christian Science not only does not deny "the privilege and power of prayer," as our critic states, but it accepts and strives to put into practice the Master's injunction to "pray without ceasing." The first chapter of Science and Health is devoted to a wonderfully clear and enlightening exposition of true prayer. The opening sentence of this chapter reads: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God." Christian Science teaches how to pray aright. Its healing work is the answer to prayer, and Christian Scientists therefore should be the last people in the world to be accused of denying the privilege and power of prayer.

Christian Science does not deny the forgiveness of sin, the Holy Spirit, or the atonement of Christ, our critic to the contrary notwithstanding. Because it differs from orthodoxy, so called, upon certain propositions deemed fundamental to theological dogma, that does not necessarily prove that Christian Science is untrue. In answer to the question, "Do I believe in the atonement of Christ?" Mrs. Eddy replied, "I do; and this atonement becomes more to me since it includes man's redemption from sickness as well as from sin" (Miscellaneous Writings, p. 96). Christian Science lays hold here and now of the atonement of Christ, and makes it available for the overcoming of evil and the healing of disease, just as it was made available by the Christian church in the first three centuries of the Christian era.

Lastly, our critic declares that Christian Science denies the deity of Jesus, but Jesus himself never said he was God. He frequently spoke of himself as a man, or as the son of man; in two instances he virtually denied that he was God, and many of his sayings are wholly inconsistent with the theory that he is Deity. See John viii. 40; Luke xviii. 19; John iv. 19-24, especially verses 22 and 24; x. 22-39, especially verses 34 and 36; xiv. 28; xvii. 16-22; Mark xii. 28-34, especially verses 32 and 34. Many other citations could be given, but these will furnish food for thought.

Christian Science does not deify Jesus, but it recognizes him as above the general level of humanity, accepting the scriptural account of his origin. Mrs. Eddy calls Jesus "the most scientific man that ever trod the globe" (Science and Health, p. 313), and on page 539 she writes: "The divine origin of Jesus gave him more than human power to express the facts of creation, and demonstrate the one Mind which makes and governs man and the universe." In distinguishing as it does between Jesus and his Messianic title and office, Christian Science illuminates the way which he opened for us. As one writer puts it: "We need to know what he was, and to know that his work was spiritually natural, in order to conceive the way of salvation which he showed,—that way which was referred to by two of the New Testament writers as 'a new and living way,' 'the way of truth.'"

❖

[Robert S. Ross in *The Times*, Watertown, N. Y.]

A sense of humor is one of the most precious assets one can possess. It is often an antidote to fear and worry. It usually lessens the strain and stress that seem to be when we take too seriously the problems of human existence. But in order to be real, humor must be constructive. Humor never wounds, never misrepresents. It is, in short, the recreation of right ideas, depicted by Mrs. Eddy on page 514 of the Christian Science text-book, "Science and Health with Key to the Scriptures," where she writes: "Mortal infinite ideas run and disport themselves. In humility they climb the heights of holiness."

The average Christian Scientist is a humorist in the best sense of the word, for his jokes and jests are first cousins by Principle. Truth and joy go hand in hand. But Christian Scientists may be pardoned for objecting to the manner in which their religion was referred to in a talk at the recent dinner of the Watertown Rotary Club. How could a man be "at ease while he has inflammatory rheumatism?" Christian Science is not stoicism or a fool's paradise. The only method it has of making one at ease is by removing the suffering that causes the uneasiness, and it does this in the most effectual manner. Christian Science is the Science of Christ, by which sin and disease are cast out, now as aforetime, by Truth; even that to which Jesus referred when he declared, "Ye shall know the truth, and the truth shall make you free."

Christian Science is so indispensable to human welfare that it is attracting such world-wide interest that no well informed person can afford to be without at least some understanding of the subject. The Rotary Club speaker should read the Christian Science text-book.

❖

[Avery Coonley in *Weekly Reporter*, Shannon, Ill.]

In the *Weekly Reporter* of recent date you indulge in a good-natured joke on Christian Scientists because, since they hold that pain is an illusion, you "have never seen one yet who would not drop a hot poker just as if it were the real thing." I do not know how common hot pokers may be in Shannon, and therefore cannot conjecture how frequently the temptation to drop them might assail one; but in other parts of the world Christian Scientists find the need of demonstrating the unreality of all evil, pain inclu-

Digitized by Google

presents itself more urgently in other ways. They have progressed far enough to heal disease in its most serious forms, and relieve pain and distress. While working toward the attainment of so complete an understanding as to permit the holding of hot pokers, should that become desirable, they hope not to lose their sense of humor, but to continue to enjoy a good laugh, even at their own expense.

❖

[Charles E. Jarvis in *El Cajon* (Cal.) *Valley News*]

In a recent issue of the *News*, a contributor whose good intentions are obvious, unfortunately attempted an explanation of Christian Science which might create with your readers the impression that autosuggestion is the most efficient factor in its healing work, whereas it would be difficult to find two subjects more diametrically opposed to each other. It should be remembered that autosuggestion, hypnotism, and mesmerism, all of which are closely allied, are but slightly varying phases of the belief that one human mind can control another for good or evil. They therefore not only become unstable agencies, but dangerous to human welfare.

On the other hand, Christian Science, in consonance with the Scriptures, teaches that man is created and governed by an infinite, eternal, omnipotent God, who, because of His infinity, can only be comprehended by human sense as divine intelligence or Mind, and it is this Mind which enabled Jesus to perform the works which he said his followers should do also. Jesus did not merely look on the bright side of things, nor was it because of faith in himself that he attained his results; rather was it by reason of his clear understanding of the operation of God's unerring law. When he said, "My Father worketh hitherto, and I work. . . . I can of mine own self do nothing . . . I seek not mine own will, but the will of the Father which hath sent me," he made it perfectly clear that neither autosuggestion, mesmerism, nor self-will entered into his inspired undertakings.

On page 469 of the Christian Science text-book, "Science and Health with Key to the Scriptures," to which we would refer those who seek further light on this subject, Mrs. Eddy tells us: "The exterminator of error is the great truth that God, good, is the *only* Mind, and that the supposititious opposite of infinite Mind—called *devil* or evil—is not Mind, is not Truth, but error, without intelligence or reality. There can be but one Mind, because there is but one God; and if mortals claimed no other Mind and accepted no other, sin would be unknown. We can have but one Mind, if that one is infinite. We bury the sense of infinitude, when we admit that, although God is infinite, evil has a place in this infinity, or evil can have no place, where all space is filled with God."

❖

[S. T. Downs in *Crawfordsville* (Ind.) *Review*]

The statement in a recent issue, by an evangelist, that Christian Scientists do not know how to pray, voices a notion sometimes held by those who judge superficially. This erroneous idea is probably due to the fact that Christian Scientists do not indulge in audible petitions (other than the Lord's Prayer) to Him who supplies our every need in greater abundance than we can accept, nor does the Christian Science prayer attempt to advise God what is best for His children. The great Teacher, in the Sermon on the Mount, first admonishes mankind for all time to avoid praying to be "seen of men," and then immediately preceding the most devout and most Christian of all prayers, the Lord's Prayer, he said, "Your Father knoweth what things ye have need of, before ye ask him."

In this great truth, Christian Science finds that the effectual prayer cannot be for the purpose of coaxing, teasing, benefiting, or instructing God. Christian Science declares that the prayer which "availeth much," must affirm the omnipresence and omnipotence of divine Truth, Life, Love, and it must manifest belief in and reliance upon the further promise of the Master, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Through the understanding of God and man's relation to Him that Christian Science gives, multitudes are learning how to pray constantly, and the proof of their correct understanding is found in the healing, through prayer, of every disease known to mankind. Christian Science says to its critics in the language of a New Testament writer, "Show me thy faith without thy works, and I will show thee my faith by my works."

Mental suggestion, to which the evangelist referred also, is the direct opposite of Christian Science, as is shown in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in which this statement is made (p. 103): "The malicious form of hypnotism [suggestion] ultimates in moral idiocy." The most earnest advocate of suggestion, no matter what good he may claim for it, must acknowledge that it can be used to produce evil, and Christian Science boldly declares that for this reason the whole thing is evil and not of God, and its use can produce no permanent benefit. Suggestion, as well as hypnotism, mesmerism, and the like, is another form of the theory that man exists separate and apart from God,—it is the Adam-dream of many minds,—and that one human mind governs another human mind.

Christian Science reveals the great truth that God is Mind, and that man in God's image and likeness is the reflection or expression of divine Mind, and is governed by the law of divine Mind, the same Mind to which St. Paul referred as being in Christ Jesus. Christian Science is capable of no misuse; its teaching and practice uplift, purify, and benefit all mankind. The understanding of God that Christian Science gives, destroys the seeming power and evil results of suggestion.

Regarding the evangelist's reference to the Christian Science teaching about the "blood of Jesus" (see Science and Health, p. 25), Christian Science gives the understanding that the shedding of blood was not necessary to appease the wrath of God. The real glory of the cross and its wonderful message to all mankind is the proof Christ Jesus gave of the power of Truth and Love to destroy hate, revenge, retaliation, jealousy, envy, and all sin, and the power of Life to annul the belief of death. In the destruction of sin, sickness, disease, misery, poverty, all inharmony, there is realized now, in no small degree, the promise of the Master, "He that believeth on me, the works that I do shall he do also," and this raises our feeble hope to the demonstrable understanding that his glorious resurrection and ascension furnishes positive proof that we shall finally rise above the torments and discords of the flesh into the heritage of the sons and daughters of God.

❖ ❖ ❖

If God were all-in-all to me,
I'd think good thoughts the while,
And inwardly I'd joyous be,
And outwardly I'd smile.
No thought of sorrow could there be,
Nor aught but what is true,
If God were all-in-all to me,
If good were all I knew.

Editorial

"With signs following"

THE question which is always on the lips of those who have for the first time seen and felt the works of Christian Science, is in a sense similar to that which John's messengers conveyed to Christ Jesus in regard to the validity of his claim to the Messiahship. These persons are largely concerned about the origin of these works of healing and as to whether they are genuine and lasting. Our Master's answer to John through these messengers was, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." He referred to these signs of Immanuel—"God with us"—because he knew that his claim must stand upon the testimony of his works, rather than upon anything he might say; that a mere verbal reiteration of his claim to be the Messiah might be controverted even by these messengers, but they could not dispute the evidence of divine power which they had seen with their own eyes.

The present-day question about the truth and permanence of Christian Science healing must be answered in the same way, that is to say, by the demeanor of Christian Scientists and by the evidence shown forth in the lives of those who have been cleansed and purified in morals or restored to health. The man who had been blind from his birth, referred to in the ninth chapter of John, was believed by those who were unprejudiced, not so much because of what he said, but because he was known to some of them as a blind man who for years had "sat and begged." Now he was as other men,—able to see and to give thanks unto God for his deliverance.

Sincere seekers for the truth are looking not to the words of Christian Scientists, but to the works wrought through Christian Science,—through the power of Truth,— for proof that this modern gospel of health and salvation is the same gospel that Jesus taught and practised. Such being the case, it is incumbent upon Christian Scientists to heed the advice of our Leader (Science and Health, p. 495) to "study thoroughly the letter and imbibe the spirit" of Christian Science, and thereby acquire a clear understanding of its teachings, so that they may demonstrate its Principle with unerring certainty. Mrs. Eddy has said on page 241 of Science and Health, "The error of the ages is preaching without practice," and this is an error into which Christian Scientists must not permit themselves to fall. Christian Science has grown by reason of its works,—the "signs following" which attest its truth,—and it will continue to grow so long as the same reason continues.

Were Christian Scientists to neglect to use the understanding of God and man that has come to them through study of the Scriptures in the light of Science and Health, and instead of actually practising their religion merely talk about it, they should have no expectation of convincing the world that Christian Science is the truth or that it is and ought to be a vital force in the salvation of mankind,—salvation from both sin and sickness. Mrs. Eddy won a hearing for the truth she had discovered through demonstration of its teachings. She met the sneers and ridicule of the scoffers with the irrefutable argument of healing. It was her privilege to say, as did the Master: "If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works."

So, too, the group of Christian Scientists just beginning to till the soil of unbelief and prejudice in their locality, must bring to bear the sunshine of love and gratitude for ... destroyed and sickness healed if they would sow the ... seed that shall bring forth many fold. Nothing wi... arouse public interest in the organization and its servi... the ocular proof that Christian Science does heal the ... One good case of healing will bring many inquirers to ... testimony meetings, and it will be found that interest incre... in proportion to the proofs that are offered of the efficac... "A pure language"

IN conversing with people of different nationali... are often met with the statement that the native tong... the one with whom we are talking is the best on earth, ... it is the most poetical, or that it expresses ideas with gr... accuracy than does any other. All this is interesting, fo... may inspire us to make better use of our own mother ton... whatever it be, and this is no unworthy aspiration. B... there is a deeper thought which should appeal to all ... kind, and it is to make one's speech a vehicle for spir... truth, for all that uplifts, strengthens, and purifies the ... ter. That wonderful things may be accomplished in ... way is certain, and it should not be forgotten that ... grossness or impropriety in speech points to a lack of ... finement in thought, and conversely that strength and pur... of speech point to mental and moral refinement.

It is now generally admitted by educators that Mrs. Edd... teachings have brought about great changes in our langua... that many words have been given a meaning different fro... that in common usage, but one which is warranted by ... root meanings of these words. It may not, however, ... observed by all that her writings direct thought away fr... the material to the spiritual,—and this does not mean ... the intangible or uncertain, but rather to that which is ... stantial, enduring, perfect. In the Apocalypse we read ... in the new heaven and the new earth there is no sin, di... or death, nothing that defileth "or maketh a lie," and ... would necessarily shut out the vocal expression of all ... and leave us in the enjoyment of whatsoever things are ... honest, just, pure, lovely, and "of good report," to use ... Paul's classification, which is surely very comprehensive.

In the prophecy of Zephaniah a great world-struggle ... lined, when the nations are "cut off;" but in the midst ... comes the promise, "Then will I turn to the people a pure ... guage, that they may all call upon the name of the Lord, ... serve him with one consent." This recalls the words of ... Master as given in the sixteenth chapter of Mark, respe... "them that believe," or who understand his teachings. Am... the signs here given are these: "They shall speak with ... tongues; they shall take up serpents; and if they drink ... deadly thing, it shall not hurt them; they shall lay hands ... the sick, and they shall recover." It is self-evident that ... who do these works must speak "a pure language."

We may well ask ourselves what we would say if we ... confronted with any of the startling conditions above ... merated. This would certainly depend upon what we ... accustomed to say at other times. If we were given to ... ing evil, ascribing power to sin or discord of any sort, ... would not be ready to deny its authority in an emerg... If, for instance, one did not acquaint himself with the spi... ual law underlying the overcoming of the asserted ...

Digitized by Google

of disease and its so-called remedies, among which are poisonous drugs, or if he denied that such effects could be overcome by spiritual means, he would most likely, in the presence of impending danger, pronounce sentence of death upon the one involved. If, on the other hand, one who spoke the pure language of Spirit were called upon, he would naturally repeat the words of Christ Jesus, "Be not afraid," and he would say this with assurance.

Some years ago Whittier wrote,—

> Through the harsh noises of our day,
> A low sweet prelude finds its way;
> Through clouds of doubt and creeds of fear,
> A light is breaking calm and clear.

Today we rejoice that Spirit's sweet tones are being heard above the din of war's alarms and other "harsh noises," and that the moderation counseled by St. Paul is coming to characterize to a greater extent the speech of public men. Let us hope that sincerity as well may be a marked element, and also brotherly love. Back of the speech there must of course be a pure purpose to heal all the wounds of humanity, and then, as on the day of Pentecost, every man will hear the words of Truth "in his own language."

Our Attitude Toward Evil

No problem presented to human thought is so inclusive, so intrusive, and so ubiquitous as that of evil. The misery, injustice, and pain which attend its sway are matters of universal protest. Even those who are consciously identified with it and who get their gain thereby, recognize the curse it brings and often seek to mitigate it because of a genuine if not consistent sympathy, while the struggle against its debasing dominion in public and private life begets most of the heroisms of history. Nevertheless, how tremendously it figures as a seemingly forever fact, and how apparently little seems to have been accomplished in all the Christian centuries toward its banishment or overcoming!

It is this everlastingness of the thing in human experience which becomes the great proponent and advocate of its necessity. Men say, "How can anything which is so universal and so inescapable be otherwise than essential to that inscrutable order which expresses the will of the infinite?" This is the sly, energy-sapping suggestion of material sense which Christian Science instantly rebukes. It persistently preys upon the thought that has become wearied and discouraged as the result of labored, unintelligent resistance, and which is thus led ofttimes to become hospitable to the conclusion that in some way evil must contribute to the fulfilment of the will of God.

All sane people recognize the inherent distinction between good and evil, their eternal separation as opposites; but the thought that evil is antecedent to good, that it supplies the occasion and opportunity for that choice of and adherence to good which begets strength and nobility of character,—this seems so reasonable that in the absence of any better explanation of unquestioned facts it has come to be very generally entertained. With a large school of thinkers today, including not a few professed Christians, the proposition that evil is "good in the making" has found a tolerance which amounts to practical approval and acceptance. There is no one of us perhaps who has not been tempted to wonder whether, since evil is a fact that nobody is able to bow out of the universe, it may not be best to take things as they are, and account the world as it is the best that could be under the circumstances.

If one can give up thinking about the divine allness and ideality, and the way Christ Jesus and his disciples triumphed over and proved the powerlessness of evil, he may seem to temporarily lessen the stress of struggle by listening to this tempter and drifting with the stream. The "fight of faith" is always won by volunteers and not by conscripts, and oftimes the unseasoned soldier balks at the prospective length of the campaign; so that when this thought that maybe after all one is fighting against divine law is given place, failure is practically assured. Said a minister recently, "To pray that the laws of the universe may be set aside in the interest of our individual point of view is an impertinence." In this he was quite right, and it follows that the moment men concede the legitimacy of evil, that moment they lose all consistent courage and reason for combating it.

This logical sequence and suggestion of materialistic theology explains in large part its utter inefficiency today; nevertheless not a few theologians seem to account Mrs. Eddy guilty of her greatest offense when she affirms the truth of Jesus' declaration that evil, the devil, is a liar,—fulsome falsity and nothing else,—and that the knowing of spiritual truth will do away with it and all it entails. Christian Science declares and is proving that we can escape from the toils of evil not by admitting its claims as true, but by denying them in the name of omnipresent Truth, and this right-about change of attitude is one of the most distinctive and noticeable effects wrought in all its students. The scientific explanation of the phenomena of evil does not vitiate the integrity of the divine nature, and it does not paralyze desire and determined effort to overcome it. This is the strength of the Christian Science position.

JOHN B. WILLIS.

❖ ❖ ❖

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m. (during July and August the Sunday evening service is omitted); Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

ATLANTA, GA.—Christian Science services were first held at the federal prison in July, 1914, by persons appointed for that work by First Church of Christ, Scientist, Atlanta. They have since been held every Sunday morning, except for two or three occasions, when the time was consumed by the prison authorities in other ways. The attendance at the services averages about thirty.

There are about twelve hundred men in the prison, and the Trustees under the Will of Mary Baker Eddy have supplied the prison library with a liberal number of copies of Science and Health and Mrs. Eddy's other writings, also two copies of the Life of Mrs. Eddy, twenty annual subscriptions to the *Monitor*, ten each to the *Sentinel* and *Journal*, and twenty-five *Quarterlies*. The librarian states that there is a constant demand for this literature, especially the *Monitor*, which is often ten days old before all who wish to read it have had the opportunity.—*Correspondence.*

Digitized by Google

CANON CITY, COL.—The library at the prison has ten new copies of Science and Health. There are fifteen daily *Monitors*, ten *Sentinels*, five *Journals*, and ten *Quarterlies* there all the time, all being used and appreciated. The attendance at the services is good,—from three hundred and fifty to six hundred. There are over eight hundred on roll in the prison, but many are out in the different road camps, and attendance depends entirely upon themselves.

Correspondence.

CONCORD, N. H.—During the one hundred and fiftieth anniversary celebration of the granting of the charter of Concord, First Church of Christ, Scientist, was open to visitors. The vestibule was used as a reading-room and for the distribution of literature. Large numbers visited the church and accepted the literature, and so became acquainted with our daily, weekly, and monthly publications. Eight hundred and fourteen pieces of literature were given away. The regular reading-room was also open mornings, afternoons, and evenings of both days. Camp-chairs were placed on the platform for the visitors to view the two large parades as they passed the church.—*Correspondence.*

❖ ❖ ❖

The Lectures

Somerville, Mass.

In introducing William D. McCrackan, who lectured on Christian Science in the High School auditorium, James E. Kelley, attorney, said:—

Great and new experiences are before us. We are advancing. God is no longer believed to be a man seated on a great white throne afar in the sky, to whom in the past men vainly lifted their hands in prayer and their voices in praise. That dream-vision of a material God has vanished, and man has awakened to find his true God, good; that God is Spirit and is everywhere. The time has come when men need a wayshower, a light to lead them out of the wilderness of error, and the truth of Christian Science has come as "the pillar of the cloud" to guide them.

Like Paul, we count not ourselves to have yet fully attained, but this one thing we do, "forgetting those things which are behind, and reaching forth unto those things which are before," we "press toward the mark for the prize of the high calling of God in Christ Jesus."—*Correspondence.*

❖

Medford, Ore.

A large audience heard Virgil O. Strickler of New York lecture on Christian Science at the Natatorium. Judge William S. Crowell, in introducing the speaker, said in part:—

Christian Science is God's love manifest for us in the demonstration of the healing truth of His holy Word. As our revered Leader has said, "Through discernment of the spiritual opposite of materiality, even the way through Christ, Truth, man will reopen with the key of divine Science the gates of Paradise which human beliefs have closed, and will find himself unfallen, upright, pure, and free" (Science and Health, p. 171). Thus we realize our entry "into the glorious liberty of the children of God," and as His children we find exemption from want, sickness, and sin. Here Christ shuts for us the gates of bondage unto death, which no man can open, and opens wide for us the doors of immortality which no man can shut, bringing to us the consciousness that "the kingdom of heaven is at hand," within us not through the death of the body, but by the life of the spirit. Thus Christian Science reveals its divine and healing mission to the sons and daughters of men, giving to them the peace "which passeth all understanding," and that joy which no man takes from them.

The speaker of this evening has not come here to defend Christian Science, for the mighty multitude whom God, through its ministrations of love, has released from disease and redeemed from sin, makes defense of Christian Science unnecessary. He comes, however, hoping to confirm your faith in God's unfailing love without criticizing any church or channel through which that love first came into your consciousness; and he also hopes to remove some erroneous impressions about Christian Science.

Medford Mail Tribune.

❖

Minneapolis, Minn.

The Hon. Clarence A. Buskirk delivered two lectures on Christian Science for Second Church of Christ, Scientist. The church was filled each night to its capacity and seven hundred were turned away. A noticeable feature was the large number of strangers present. Prof. John W. Gonez in his introduction said in part:—

Christian Science means a great deal to those of us who have experienced its healing touch and have felt the spiritual awakening which follows from a more direct and understandable knowledge of God and His allness. Christ told his followers to "preach the gospel" and "heal the sick." Christian Science does both. Scientific Christianity is the new-old gospel which produces health, happiness, and holiness. With these three results experienced in our consciousness, we know what Christ meant when he said, "The kingdom of God is within you."

Henry Deutsch in his introduction said in part:—

In introducing a lecturer on Christian Science, one recalls the great growth of the Christian Science movement and the promulgation of the truth discovered by its Founder, Mrs. Eddy, but sees in its progress and history the same steps which attend the growth of any great movement of truth. First, we find proved by our Leader, and substantiated in the thousands of instances since the promulgation of her discovery, that the truth of Christian Science heals disease and sickness of every form and kind. We next find that this truth reforms and redeems the sinner, and thus proves the doctrine of human salvation and regeneration; also that it brings comfort to the sorrowing and peace to the disturbed and the confused. Last of all, we find that Christian Science is bringing hope to the world, the great thought of hope and faith in God. To a world steeped in materialism, committed to the despairing doctrine of fatalism, this great cry of freedom comes as the birthright of the children of God.

❖

Barre, Vt.

A very attentive audience listened to a lecture on Christian Science by Clarence W. Chadwick in Howland Hall. The speaker was introduced by A. G. Fay as follows:—

I am not a full-fledged Christian Scientist, but I believe from my observation, from my reading, and from some knowledge of this teaching, that I am beginning to understand just a little of what the Christian Science church stands for. I believe it stands for right thinking, for right living, for strong faith, for as nearly a perfect understanding of God's love and care for His children as we can obtain. It does not stand for dogma, but for love; not for a

Digitized by Google

theology, but for a complete and perfect faith; not for a scheme of saving men from consequences of sin in the hereafter, but a saving of men from sinning here and now; not, perhaps, for a new belief, for a new theory, but for a return to the old and regular Christianity; not for a profession, not for the belief in creed, but for a clean and healthful life —clean for ourselves and healthful for others.

The Barre Times.

❖

Fresno, Cal.

George Shaw Cook outlined the doctrines and work of Christian Science before an audience of one thousand persons in the White Theater. He was introduced by J. L. Beall of Fresno, who said:—

The modern religious movement named Christian Science is the result of a discovery similar to other scientific discoveries. Its Founder, Mrs. Eddy, will go down in history as a world benefactor, simply because she was able to discern the healing power of Truth which has existed since the "morning stars sang together." Indeed, this truth runs like a golden thread through the pages of sacred history, and has been applicable to human affairs whenever mankind has approached sufficiently near the divine Mind to discern it. The patriarchs at the dawn of history had access to it, the prophets of Israel made practical application of it, and the humble Nazarene and his disciples demonstrated it in their ministry to mankind. Since the third century, however, this has been "the stone which the builders have rejected," until during the last half century it has been made the "head of the corner" in the most wonderful of modern religious movements—Christian Science.—*Fresno Herald.*

❖

New Haven, Conn.

Bliss Knapp delivered a lecture on Christian Science in the Hyperion Theater. The introduction by Frank J. Linsley was in part as follows:—

That Christian Science is Christian, and that it is scientific, has been proven over and over again for nearly fifty years past by thousands of people who have studied and put into practice its teachings. Those who have availed themselves of the loving and far-reaching ministrations of Christian Science have been healed of diseased and sinful conditions of mind and body; peace and happiness have come to their homes; harmony and prosperity prevail in their business activities. These blessings in abundant measure stand at our very doors now, as ever, knocking for admission.

Correspondence.

❖

Butte, Mont.

Col. William E. Fell lectured at the Auditorium to an audience of about eight hundred people. J. B. Patterson, local manager of the Underwood Typewriter Company, in introducing the lecturer, spoke in part as follows:—

About nineteen hundred years ago, it is recorded in the Bible, there was born in the village of Bethlehem of Judæa a male child whose career lasted over thirty-three years; but in that brief space of time he said and did things which completely upset tradition. His teaching, and the works which he performed, antagonized the people of his time to such an extent that they crucified him, chiefly because through his understanding of what God is, and man's relation to Him, he was enabled to heal both sin and sickness of every nature, and even to raise the dead.

Once this man, whom we know to be Jesus the Christ, made this statement before a number of people who had gathered to hear him: "Before Abraham was, I am." We are told that this statement so enraged the people that they took up stones to cast at him. We know that the Christ, Truth, existed before the time of Abraham, and that Truth exists now as surely as it did during the time of Jesus, is proven by the fact that today, through the understanding of what God is, the sick are healed, the blind see, the deaf hear, and the lame walk. Nearly fifty years ago Mrs. Eddy discovered the Principle of primitive Christianity as taught and demonstrated by the lowly Nazarene, and named her discovery Christian Science.—*Correspondence.*

❖

Greenwood, British Columbia

Jacob S. Shield lectured on Christian Science in the Auditorium, and was introduced by A. H. Marcou, local manager of the Canadian Bank of Commerce, who said:—

While I am not a Christian Scientist, I think it is apparent to even the most casual observer that this teaching has made a most wonderful appeal to all sorts and conditions of mankind. It is a well-known fact that all theories or teachings when first presented to the world have met with opposition and criticism; and the best answer we could make to the criticism on this subject is to point out the acceptance of Christian Science teachings by thousands of students. This alone is proof conclusive that the principles involved are capable of demonstration.—*Correspondence.*

❖

Carson City, Nev.

An audience which filled Odd Fellows Hall to the doors, listened to a lecture on Christian Science by Virgil O. Strickler. The speaker was introduced by the Hon. John Edwards Bray, state superintendent of public instruction, who said:—

Great religious discoveries or reforms are seldom understood by the generation in which they arise, and sometimes hundreds of years elapse before wide recognition is given them. Though only in the second generation of its existence, it is an interesting fact that Christian Science today is attracting world-wide attention. The world certainly needs more real sunlight,—physical, mental, and spiritual,—more of the Saviour's healing and saving power. That Christian Science has brought and is bringing into the world enlarged health conditions, wholesome peace of mind, and abiding happiness for thousands upon thousands of its followers, is a fundamental claim of its members.

A system of religion that does away with or largely minimizes the ills and worries of humanity, that displaces disease by health, distress by happiness, and despair by hope, rightly deserves careful attention and study. It is because Christian Science confidently asserts claim to these achievements that we are assembled here tonight to learn from an authoritative source what this religion is and upon what it bases its great work.—*Carson City Appeal.*

Testimonies of Healing

At the age of seventy years I fell and sustained a severe injury to the left thigh. I was under medical treatment and lay for months in bed, suffering great pain continually, and when at last I was able to get up, I could only move about on crutches, the effort to move causing so much pain that for years I was confined to my home, seldom ever leaving it.

At the age of seventy-nine I had another fall, breaking the same thigh in another place. When this was learned, my family, remembering my former experience, abandoned all hope of my recovery. In fact one of the doctors said I could live only a few days, and advised against setting the bone, saying it would be better to make me as comfortable as possible, as it would never heal, and that even if it were possible I could not endure the pain and tediousness of long confinement at my age. I then decided to have Christian Science treatment, so the bone was set. The doctor left an opiate in case the pain became too great; but I slept through the first night and all the other nights that followed, without ever touching the drug or any other medicine. Strange as it may seem, I had not the slightest pain at any time after having treatment in Christian Science, but ate and slept well at all times. Two doctors were present to set the bone, and while they agreed to Christian Science treatment, they asked to be allowed to drop in and watch the case.

After four weeks the doctor removed the cradle in which the leg was swung, saying the break was so well healed that I no longer needed it. I asked him when I could get up, and he said, "Not for several weeks yet." He added laughingly, "Be good, and lie there till I come again." At the end of five weeks I arose and dressed myself. Using my crutches as a precaution, I surprised my family by suddenly appearing in the dining-room. They were alarmed about me, but I had no fear, and felt so well that they finally became convinced that I was really well. The doctor did not make that promised visit until two weeks later, when he found me up and about. He was much surprised and somewhat alarmed; but after a careful examination asked if I could stand on that leg. I arose immediately, and without crutch or cane walked diagonally across a long room and back again, a thing I had not done in ten years. The doctor threw up his hands in amazement and soon after left the house, shaking his head and saying, "Well, you certainly have a good constitution."

During that time I was also healed of a chronic bowel disorder, from which I had suffered for years. When the practitioner told me I could not take medicine, I was alarmed, as my bowels never moved without it; but she told me not to worry as I would be all right, and I was. I have never taken any medicine since. Three months from the day I fell, I walked a distance of eight city blocks to the Wednesday evening meeting.

My healing was so marvelous that several members of my family and many friends began to investigate Christian Science, among them a son who had been addicted to the drink habit for twenty-five years. He was healed in a few treatments and has never taken a drop of liquor since. My healing took place over two years ago, and I am strong, well, and active today. I am deeply grateful for Christian Science.

ELIZA J. CURTIS, St. Louis, Mo.

Mrs. Eliza J. Curtis suffered a fracture of the neck of the femur of the left leg, from which the pain and shock is very great to one of her age and condition of health when it occurred. As one of the physicians who replaced the broken bone, and who was allowed to see her occasionally during her convalescence, I can testify to the accuracy of the above statement. I am not a Christian Scientist, but am a practicing physician.—DAVID REECE OVERMAN, M.D., St. Louis, Mo.

❖

Christian Science came to me, a man of many needs, and has met these needs. Existence for years was burdened by spinal, stomach, and nervous troubles, also inability at times to think coherently or speak without effort. As I was embarrassed in meeting people, broken down in body, and unable to concentrate thought, business was merely a means of gaining a meager livelihood and discouragement was chronic. My family was sympathetically affected. Years of medicine and devotion to religion and so-called mental science in quest of relief were alike futile. Then a little over four years ago Christian Science appeared, and its appearing has brought deliverance.

For three years and nine months I have been entirely well. With mental and bodily health came success in business, and from a small salary I was led to establish my own business with ample means. Family conditions are altered, and home is heaven, for God reigns. There is no longer gloom, but abundance of peace, health, success, joy of life and action. I address myself to all, especially to business men: "Ho, every one that thirsteth, come ye to the waters" from the endless reservoir of divine Love. My deliverance, success, and gratitude are due to the study of the writings of Mrs. Eddy and my response to a loving Father, ever ready to answer the cry of a suffering heart when rightly directed.

THOMAS POWER, Mamaroneck, N. Y.

❖

After nearly five years in Christian Science without one dose of medicine for myself or my two children, I feel it a privilege as well as a pleasure to tell others of some of my blessings. To any one who worries, let me say there is nothing that can meet your need and bring you peace in trials like Christian Science. It has taught me to be a better woman, a better wife, and a better housekeeper. Instead of letting circumstances trouble me, I am learning to meet them as they come, with the understanding of Science which I have gained. The problems that were once like mountains to me now speedily disappear like clouds before the sunshine. I am one who experienced a slow healing, and of all my blessings I consider that the greatest. It has forced me to take up my cross, that I may win the crown. It has compelled me to learn of and lean upon God. My heart swells with gratitude when I think of "the helps along the way" that have been provided for those who are in earnest,—Mrs. Eddy's writings, our periodicals, our churches, practitioners, and lecturers.

Since giving up *materia medica*, we have had demonstrations over various ailments, also a number of severe bruises caused by falls, and burns, for both of my little girls; besides a serious chronic bowel trouble for the younger, and a difficulty in breathing that could be heard by any one in the room with her, for the elder. I have been healed of what is called double pleurisy, with only three days in bed; of a state of mind bordering on insanity; of nervousness, on account of which any unusual exertion brought on a heart difficulty; also of headache, hay-fever of three years' standing, and many other ills.

My greatest desire now is to live so that I may pass on to others the good that has been given me, and in this way prove my thankfulness to God, also my gratitude to Mrs. Eddy and the dear friends who have helped me.

JANETTA M. POWARS, Houston, Texas.

Some time ago, while playing lawn tennis, I slipped and fell heavily on my arm, which broke under me. I at once sent for my wife, who was in the house preparing the lesson for her Sunday school class on the following day, and asked her to treat me. The result was, that I was soon free from pain and able to go in to dinner in the evening. Mrs. Eddy says that "until the advancing age admits the efficacy and supremacy of Mind, it is better for Christian Scientists to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon, while the mental healer confines himself chiefly to mental reconstruction and to the prevention of inflammation." She also says, "Neither philosophy nor skepticism can hinder the march of the Science which reveals the supremacy of Mind" (Science and Health, pp. 401, 209).

Those words were written about forty years ago. Since then Christian Science has been marching with rapid strides all over the world, and the age is more ready to admit the truth of Mrs. Eddy's words. I was therefore hoping to complete my demonstration. I went about my ordinary work and was able to perform my duty as usher in First Church of Christ, Scientist, London, on the Wednesday evening following the accident. At the end of the week all inflammation had gone and my arm was better, but it had not regained its normal shape, so I reluctantly called upon a surgeon and asked him to examine it. As soon as he saw my arm he asked when I had broken it, and on learning that the accident had been about a week before, he said I must have been in great pain. I asked him to set the arm, so he pulled it into shape, put it in splints, and told me that it would be a long job, and that I would have to undergo a course of massage before I got the use of my wrist and fingers.

I kept the splints on for a few days and then returned to the surgeon before the appointed time to ask him to relieve me of them. The doctor who set the arm was away for the week-end, so I got his partner to take them off. As he was cutting away the bandage he somehow got the flesh into his scissors and cut away a portion of my arm. He was very much concerned and asked why I did not cry out; but I can truthfully say that until I saw the ugly wound which he had made I was not conscious of what he had done. I saw him a few days later and he told me that the accident had caused him two sleepless nights; he also said that he considered I had had a wonderful experience, for he had never seen a broken arm heal as mine had done. It was usual in such cases, he said, for the muscles and sinews to get disorganized, but a fortnight after my fall all the fingers were free and the arm was perfectly well, needless to say without any massage.

Although I cannot perhaps call this a complete demonstration, it has taught me something, and I rejoice in the experience and can sing with the psalmist, "Make me to hear joy and gladness." I rejoice for Christian Science, for the power which is able to relieve poor humanity of needless suffering, and my earnest hope is that the whole world will awake from its dream of materialism, acknowledge Mrs. Eddy as the greatest discoverer of the age, and rise up and call her blessed, as I do.

CHARLES F. HORNCASTLE, London, England.

✧

About twelve years ago, after seven years of illness, during which she passed through a surgical operation and was treated by various doctors of different schools, my mother was at last pronounced hopelessly ill, a noted nerve specialist of Chicago having said that she would be helpless and melancholy to the end of her days. We then turned to the great Physician for help, praying daily for light. At this point we heard of Christian Science. My mother was brought home from the hospital, where it had been said she must end her days, and placed for seven months in the care of a kind lady who was sent to us from the city, and who was said to be a Christian Scientist, but who did not prove to be such. At first mother seemed to improve somewhat under her care, but afterward she grew worse than before; so this lady left our home, and my sister gave up her position as a teacher to care for mother. We also persuaded our father to leave the farm and move to Warsaw, where I was teaching, so that we, together with the help of a cousin, might care for both parents, as father also was ill.

About this time the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was brought to us by some dear friends, and we began to read it. As there was no practitioner in our city at that time, we read on faithfully, with many doubts and trials. My father was most diligent in the reading at first, and thus was healed of chronic stomach disorder and rheumatism. Heart trouble, catarrh, severe headaches, and various other ills in the family vanished also, besides fear and dread of examinations, and we found ourselves finally united in hopefully and happily expecting even better things.

As my mother grew better, she began to read for herself. The old illusions, which were such monsters to her, gradually disappeared, and her thought became clearer, until at the end of two years she was restored entirely, not only to health of mind and body, but together with her family she was brought to the possession of a peace and satisfaction in regard to our spiritual welfare never before anticipated. The knowledge that there existed an organization of people with whom I should soon be identified, working toward the elimination of sin, disease, and death in the human consciousness, was indeed glad news for me.

One of my mother's tenacious illusions was the hell of orthodoxy, and from this she was almost instantly delivered on reading that "it is a sense of sin, and not a sinful soul, which is lost" (Science and Health, p. 311). Thus other errors disappeared, until the last vestige of her trouble vanished. For over ten years she has been, and is today, well and happy, living a life of usefulness,—a joy and great help to her family as well as to others.

During the years we have been studying Christian Science, our problems have all been solved through the realization of the truth. We have never called in a doctor for any of the family or resorted to material means for help.

RETTA HESS, Warsaw, Ind.

We unite in loving gratitude for these blessings, and for the opportunity and the ability to rise, through the study and practice of Christian Science, to where God, absolute good, is revealed and demonstrated.

JOHN R. HESS, EMELINE HESS, Syracuse, Ind.

✧

I first heard of Christian Science when I was about fourteen years old. At that time I seemed to be well and happy, and although I saw something of the beauty of the truth, I felt no pressing need for earnest study; therefore I drifted away into what seemed the easier paths of belief in the power of the human mind, variously called mental science, autosuggestion, etc. In a year or two I found myself becoming morbid, unhappy, and despondent. Though exterior circumstances were the same, I was inwardly miserable, filled with fear of all kinds, and developing a very disagreeable disposition. I had joined a church at the age of twelve, fully believing that my religious convictions were settled, and lov-

Digitized by Google

ing my church and all of its activities. Now, however, my religion seemed not to give me the joy and feeling of certainty that I had expected. I stopped reading my Bible and attending church, and was for a time in a hopeless and despairing state of mind, with little trust in or understanding of God.

After about two years more I came to see the utter inability of the human mind, with its belief in both good and evil and its reliance on personality, to help me out, and I finally turned to the one divine Mind. I started to read the Psalms, often late at night, in an utterly wretched state of mind, which seemed well expressed in some of the passages that I found; then I again took up Science and Health for study in connection with the Bible, and found in this study a practical help rather than the intangible theory which had been my former idea of Christian Science. I began to grow brighter, healthier, and happier. My work, which had seemed to be a failure, turned into success beyond my hope. Sensitiveness, nervousness, dread of the future, and neurasthenic tendencies began to disappear, and I felt like a different being. The growth into this new understanding of Life has not been rapid, but now that the darkest times are some six years removed, I can look back at the change with a joy that cannot be expressed in words.

I have had numerous small physical demonstrations, although the healing was always secondary, in my opinion, to the mental and spiritual uplift. Some instances which may be mentioned are the overcoming of a severe case of dysentery in two treatments, relief from a condition of acute suffering almost as soon as help was telephoned for, the overcoming of a sense of considerable pain from a sprained ankle by the remembrance that "inflammation is fear" (Science and Health, p. 414) and that ever present Love casts out fear. Colds, headaches, weariness, and the sense of pain in an ulcerated tooth (which did not cause me to lose a moment's sleep, much to the surprise of others), have also been destroyed. Then, too, my slight understanding of Christian Science has been of inestimable value in overcoming various problems which seemed to come up during an extensive trip under all sorts of conditions.

Many different fears have been cast out, including fear of physical ills, of nervous and mental breakdown, of lack, and of accidents. The fear of public appearances, which are a part of my business, has likewise vanished. I have been very lovingly helped and encouraged by a Christian Science practitioner and by a member of my family. To say that I am grateful is little return for all the good I have received; but I hope to continue to "press toward the mark for the prize of the high calling of God in Christ Jesus."

I have had the privilege of class instruction, and now enjoy splendid health, as well as more joy, peace, and a higher sense of the certainty of Christian Science than I ever had. I am increasingly grateful.

SARAH E. PAINE, Chicago, Ill.

❖

I feel it a pleasant duty to write a partial list of the many blessings which Christian Science has brought to me. I was a physical wreck and had no hope of ever being better. I had suffered from rheumatism for many years, also from a bowel difficulty, for which I had been treated by many of the best physicians of the East and of this city. Finally I was taken suddenly with a pain in my right shoulder and arm, and it was so intense that for over a week I was unable to lie down day or night. I called in a specialist of this city, and he said I would have to go under the X-ray in order that he might determine the trouble. This I did, and the examination showed that my shoulder was dislocated and the bone of my arm diseased to the elbow. The physician said he could do nothing for me and that I would have to undergo an operation; but this I refused to do.

At this time a neighbor brought me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the first I had ever seen. I have been reading this book ever since, and am free from all the above ailments. Since December, 1910, when this healing took place, Christian Science has been my only physician, and I am at the present time enjoying perfect health. Words cannot express my gratitude for this religion and all it has done for me. I am thankful to God for His love and guidance, and grateful to our beloved Leader, Mrs. Eddy, for the legacy she has left us in Science and Health. My greatest desire is that I may demonstrate the truth of Christian Science by my living.

MRS. F. E. GRAU, San Francisco, Cal.

❖

It is seven years since I took up the study of Christian Science. I lived in hotels for the first twenty years of my life, then for the next ten was out in the world, tossed to and fro, seeking for something to satisfy my longings. Finally I was led to Christian Science, and there not only found what I was reaching out for, but was healed of nervousness which affected me mentally. Not having much education, I was ignorant of everything that was good, until I gained a slight understanding of Truth and found that nothing but good for God's idea, and that it only remained for me to practise and prove this, as I have to a certain extent. What means so much to me is the education I am acquiring through the study of Christian Science. Before I became interested in this religion I never read at all, but now I can honestly say that the Christian Science periodicals are my friends. I am deeply grateful to Mrs. Eddy for Science and Health and her other writings, for through them I am learning to understand the Bible in its spiritual meaning.

ELLA FORD, Berlin, Ontario, Canada.

❖

[Translated from the German]

About a year and a half ago my attention was called to Christian Science through a family of friends. I at once took much interest in its teachings, and soon afterward procured a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and subscribed to the *Herold*. Both have become my constant companions. I am deeply thankful to God for having again revealed to humanity, through Mrs. Eddy, the pure Christ-teaching, whereby we may find the way to health and peace, to true happiness and bliss. Through the daily study of the Lesson-Sermon and the prayerful reading of the text-book, as well as of the other literature, I have learned that we indeed find our refuge in God, for this truth is our shield and buckler; that the truth makes us free from evil of every kind.

From youth I was afflicted with a severe nervous condition, which gradually extended over the whole body and manifested itself in various forms of disease, such as extreme pain in the back, knees, and limbs, almost unbearable headaches, great timidity, abdominal trouble, and pain in the eyes. I also suffered much with stomach disorder and lack of appetite. I was, however, freed from all these ills through the realization that evil is not of God, hence it is powerless, a nonentity, and that divine power is supreme above all false belief and transcends all material means of healing. Jesus said: "It is the spirit that quickeneth; the flesh profiteth nothing."

Last autumn our little daughter, now three and a half

Digitized by Google

years old, was taken ill with high fever and a serious bowel disorder. I immediately turned to our text-book, and upon opening it at once found what I was seeking. The passage seemed to cover the case. I then proceeded to assimilate its meaning and to make the thought expressed therein my own. The child presently asked what I was doing, whereupon I answered that I was doing some reading for her. She became restful instantly, breathed gently, and soon afterward said, "Mama, the Saviour has taken away all pain." She slept very quietly all night, yet upon waking up in the morning still had high fever; but despite the journey on which we took her the same day, the truth gradually prevailed. I then understood the words of our Wayshower: "Judge not according to the appearance, but judge righteous judgment," for no matter how much error may seem to rule, the truth remains the same,—that there is no disease in God's kingdom, and the kingdom of heaven is within us.

Recently the little girl manifested a similar trouble. She had been ailing somewhat, and on putting her to bed the second day, I found that she had high fever, and therefore let my thought rest upon the truths of Christian Science. She went to sleep, though in a very restless condition and showing signs of thirst. At two o'clock in the morning she became delirious, and as I was alone with her, fear tried to get hold of me. The words then came to my mind: "There is no fear in love; but perfect love casteth out fear: because fear hath torment;" also, "Fight the good fight of faith;" and "As thou hast believed, so be it done unto thee." I then continued to work in Christian Science to the best of my knowledge, expecting to call in a practitioner in the morning, but when the child woke up she was well.

Thus I have come to see that God, our dear Father, "is no respecter of persons," and that "whatever blesses one blesses all" (Science and Health, p. 206); that all good is here, and that we need only have the right kind of faith and trust in order to receive it. For all these instances of healing, and the blessings received, I am most grateful to our all-loving, omnipotent Father.

FRAU NIEDERHÄUSER, Bern, Switzerland.

❖

I was healed by Christian Science after being sick all my life. In November, 1912, one very serious complication, for which I had submitted to an operation several years before, seemed to be manifesting itself again, and to such an extent that I felt obliged to have help. The doctor's verdict was, that if the medicine did not relieve me soon, I would have to be operated on again. At the end of a week I was no better, so I turned to Christian Science, and was practically healed at the first treatment. I was also able to lay off glasses that had been worn for several years, without any special Science work being done to meet this need, but simply as a result of the law of harmony. I had in all six treatments, but after the first one I went more for a better understanding of this great truth than for physical help. I have enjoyed perfect health since my healing and do all my own housework. I am thankful to God, also grateful to Mrs. Eddy, for the blessings I have received. Christian Science is indeed to me the "pearl of great price."—MRS. H. S. WILLIAMS, Portland, Ore.

❖ ❖ ❖

Oh, speed the moment on
When wrong shall cease, and liberty and love
And truth and right throughout the earth be known
As in their home above.

WHITTIER.

From Our Exchanges

[*The Christian Register*]

The man who, thinking of God, cannot bow in any temple as well as in any mountain, has thought vainly of God, and the consistency with one faith which cannot recognize and assimilate the truth and beauty and goodness in other faiths is a fatal consistency, the sign that it lives in a mental cubiculum.

Appreciativeness will go farther toward a desirable church unity than any possible doctrinal agreement. Indeed, the effort to attain unity by doctrinal mergers always ends in developing more obstacles than it began with. But appreciativeness violates no consistency, forestalls no conclusions, interferes with no freedom, and embarrasses no loyalties. It makes a genial climate in which the best growths come to fruition. It makes it natural and easy to follow Emerson's advice: "Always put the best interpretation on a tenet." No one is likely to put the best interpretation on a tenet in a mood of scrupulous definition; but in a mood of appreciation the best interpretation comes by nature. Appreciation is the dinner-table around which people draw, inclined to like each other and ready to come to the best possible understanding. It is the after-dinner disposition out of which come good nature and harmony. It is the temper in which it is not easy to make friction.

[Prof. John Reid Shannon, S.T.D., Ph.D., in *Zion's Herald*]

A man is a developed, rounded, full-orbed man only as he is religious; for religion centers in the noblest exercises of the natural and yet noblest faculties of man, to the end of bringing to pass the realization of his noblest hopes and dreams; its deep-down essence is the thirst of God's child for his divine Father, the desire to feel that he is not an orphan, that his life is not aimless and worthless. This desire is just as natural as is the impulse of the rootlet to reach down and out after water and food, or the impulse of the flower to turn to the sun from the darkness of the room where it is growing.

The Christian religion has to do with the most inclusive of all human relations,—man's relation with God. Man can no more escape this relation than can a bird escape the confines of the atmosphere by means of which it flies, than can a fish outswim the limits of the sea, than can a mariner outsail the horizon. Christianity brings man practically into right living relations with God, reveals to him the secret of the highest life, makes him a complete man; it is the expression of his perfect relation to the father-heart of God, and to all the forms and forces of the moral universe about him.

[*The Congregationalist and Christian World*]

We live in days when the old order changes swiftly. Great issues lie before us, new occasions and new duties that must be decided on new principles. In every sphere of our common lot the strife for progress ought to be free and fair, a wide battle on the open sea.

Christ was exposed to this assault of stealth and submerged hypocrisy. Out in the wilderness, at the very beginning of his career, the evil one dared not challenge boldly his power, his purity, and his divine descent. Therefore he struck with more craftiness, with thrusts from Scripture and from the very depths of human aspiration, but nevertheless treacherous attacks from below. When the end came, Jesus once more became a victim to treachery, attacked in the quiet night upon the Mount and betrayed by the kiss from Judas' lips. In the dark days between these first and last

Digitized by Google

attacks, the Master was ever warily vigilant against cunning foes, and for hypocrisy—that submarine of sin—he reserved his most terrible rebukes.

[G. G. L. Sawyer in *American Lutheran Survey*]

Let Christian nations be Christian, and it will be easier for all humanity to live a more highly cultured and civilized life. The religion of Christ is as reasonable as it is noble, and it is the only method of settling international disputes, of maintaining peace, and of federating the nations, that combines good reason with pure ethics, and that has stood the test of centuries. The church can fulfil its mission in the evolution of peace by making its protest against militarism more vigorous and more practicable; by making clear its substitute of arbitration for the obsolete method of settling international questions by recourse to arms; by creating a finer quality of public opinion; by giving to the world the higher ideal of Christianity.

[*The Christian Advocate*]

This generation of men needs to be "drawn" unto Jesus, drawn up to the moral and spiritual level on which he lived and moved. It is growing weary of its wilderness wanderings. The collapse of its mock-Christian civilization under the stress of war has dissipated its self-satisfaction and its complacency. It is groping after some sure standard of conduct, some principle of action which can be depended upon to stand such storms as are now trying the souls of the hardiest. Its dissatisfaction with imitation Christianity, and with substitutes for Christianity, is bringing it back to Christ's cross, the supreme example of loving service, the one uplifted personality who is able to draw all men unto himself, and to give them both a standard of living and the motive and power to achieve it.

[*The Advance*]

Shall we not have a vision of God and duty, a vision which will assure us that God still reigns and the world cannot escape Him? "Where there is no vision, the people perish." This generation and all its works will perish in war and in anarchy and brutal strife, unless there is the vision of an ideal that is higher than greed and self-interest. But if the men of this generation can see and understand the true meaning of life and their place and privilege as heirs of the ages, the kingdom of God will move forward with mighty power and the men of this generation may be kings and prophets of the Most High.

[*The Christian Intelligencer*]

The life we long for, whether we know it or not, is life that partakes of the life of God. Our natural life was given us without our will; but the new life of the second birth will not be forced on any one. We must want it and ask for it and seek it with persistence. It is God's gift in answer to prayer. We must pray for it day by day in order that thus our capacity for it may enlarge and our participation in it increase. This is the end of our being,—that we may win our souls, that we may become charged with such a quality of life that death shall no more have dominion over us.

[*The Living Church*]

"Blessed are the pure in heart: for they shall see God." We need the clear moral vision of the Christ to see life as he saw it. Then we shall grow younger though the years increase, and old age will be opalescent with the sunlight reflected from the source of divine light and truth. And best of all, the light that shines on us will shine through us to bless the world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued as a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

The lecture by Bicknell Young, C.S.B., "Christian Science: The New Birth," has been translated into Norwegian, "Christian Science: Gjenfødelsen," and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"The Sons of God," a lecture by Col. William E. Fell, C.S.B., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

"Christian Science: 'The Resurrection and the Life,'" a lecture by Clarence W. Chadwick, C.S.B., is now published in pamphlet form.

"Mary Baker Eddy, Son But et Son Oeuvre" (Mary Baker Eddy, Her Purpose and Accomplishment), an article by Frederick Dixon which was originally published in the *Cosmopolitan* magazine is now printed with the English and French versions on opposite pages.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The Tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 105 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $2.50; half calf or half morocco $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each eight cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 864 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, bound in leather, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather cover, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 37 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 65 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.33.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

During the month of June the activities of the department of the interior in the classification of public lands were confined practically to classifications as to irrigability under the enlarged homestead act. In this same period somewhat more than one million acres were designated for entry under this act. Two of the states to which the act was extended during the last session of Congress, namely Kansas and South Dakota, were beneficiaries of the designations made during June. About thirty-seven thousand acres were designated in Kansas, and somewhat more than fifty-six thousand acres in South Dakota. The states most affected were New Mexico, with designations of three hundred and seventy thousand acres; Colorado, one hundred and eighty-one thousand acres; Montana, one hundred and twenty-nine thousand acres; and Oregon, one hundred and twenty thousand acres. Arizona was affected to the extent of sixty-one thousand acres, and in a number of other states areas of less than fifty thousand acres were classified as nonirrigable, and so opened to entry as double homesteads of three hundred and twenty acres each.

The secretary of the department has recently approved an order which will open to entry on Sept. 10, under the provisions of this act, approximately one hundred and twenty thousand acres of nonirrigable lands in the state of Washington. The areas affected by this order are located in eleven counties in the eastern part of the state, the greater part being situated in Walla Walla, Adams, and Yakima counties. The secretary has also announced that by the approval of an order of designation, more than two hundred and twenty thousand acres of nonirrigable lands in New Mexico will be open to entry on the same date, under the provisions of the same act, in so far as these lands are still subject to entry thereunder. The areas affected by this order are distributed through ten counties in the northeastern and southern parts of the state, the greater portion being located in Sierra, Grant, and Chaves counties.

The national forests turned into the United States treasury during the fiscal year ended June 30, 1915, nearly $2,500,000, an increase of more than $40,000 over the receipts of the previous year. The timber sales, which amounted to $1,164,000, yielded on account of the depressed condition of the lumber industry about $79,000 less than those of the previous fiscal year. The grazing receipts, which totaled $1,125,000, increased $127,000 over last year, and the water power receipts, which amounted to not quite $90,000, showed an increase of nearly $42,000.

The demoralization of the turpentine industry on account of the war's curtailment of the naval stores market, caused the receipts from the sale of turpentining privileges on the national forests to drop to about $9,000, as against nearly $15,000 last year. The sale of special use permits, under which all sorts of enterprises, from apiaries to whaling stations, are operated on the forests, yielded nearly $78,000, an increase of $9,000 over last year. There was a decrease of nearly $37,000 in the revenue derived by the settlement of trespass cases in which government timber had been cut without intent to defraud, the revenue from this source being only a little more than $3,000. More than $7,000, however, was collected from other timber trespass cases. Grazing trespass cases yielded nearly $6,000, an increase of about $1,000.

Representatives of nearly all the water-power states in the West will meet in Portland the coming summer, in accordance with the invitation issued by the Oregon legislature, to consider pending legislation by Congress affecting water-power development of the West. Oregon took the lead in the movement, and has been followed by Washington, Idaho, Utah, and Colorado, all of which states have named delegates. The governor of each state is to be a member of the conference. The invitation was received in Wyoming, Nevada, North Dakota, South Dakota, and Montana too late for action by the legislatures, but its terms permit appointment of delegates by the governor.

Arizona and New Mexico were not included in the original invitation, but it is reported that these states will send delegates. In that event every state west of the Rocky mountains will be represented, and the action taken will be a formidable presentation of the western view on the question of water-power development and water-power conservation. The action by the Oregon legislature was called forth by the introduction in Congress of a measure known as the Ferris bill, which aimed to give to the federal government additional jurisdiction over the latent resources of the Pacific coast and mountain states.

Amendment of the law of 1912 to permit the taking of fur seals on the land of the Pribilof islands, Alaska, for commercial purposes, under governmental regulation, is recommended in a report of the commission of the bureau of fisheries appointed to make an exhaustive study of the subject. This conclusion is considered an indorsement of the recommendations made by the commission of 1897, headed by David Starr Jordan, which started a heated discussion on the conservation of the Alaskan seals.

While the report urges the taking of seals for commercial purposes, it specializes on an indorsement of land taking and strongly condemns pelagic sealing. It was the unrestricted pelagic sealing, in the opinion of the committee, which produced the conditions that made the stringent provisions of the law of 1912 seem advisable. This law prohibits all taking of fur seals on the Pribilof islands for a period of five years from its passage, except the number of seals needed as food for the natives. The census of 1914 shows the fur seal herd to contain upward of 294,000 animals.

A genuine real estate boom has developed at Anchorage, the southwestern terminus of the government railroad now being constructed in Alaska. About the middle of May the town was not on the map, and was the habitat of only half a score of persons. On June 1 it had a population of twenty-five hundred, and was growing by leaps and bounds. Business in all branches was represented. The greater part of the location at Anchorage was public land, and it was decided by the secretary of the department of the interior to dispose at public sale of the lots into which it had been laid off. These lots practically sixty by one hundred and forty feet, streets and parkings and playgrounds being provided. The sale, which took place July 15, was in every way a success, and every one was satisfied. About four hundred and fifty lots went for one hundred and thirty-three thousand dollars. It is estimated that an average of three hundred dollars a lot, or about nine hundred dollars an acre, was realized by the sale.

Disposal of Oregon lands amounting to 2,469,678 acres, much of it classed as the best timber holdings in the state, is a question to be determined by Congress at its next session. The land has been turned over to Congress for disposition by two important court decisions, one handed down by Justice McKenna of the by Judge Wolverton of the federal district court of Oregon, in the government's last United States Supreme Court, and the other grant suits. The Supreme Court decision was made in the government's plea for entire forfeiture of the lands in the Oregon and California railroad land grant of 3,302,000 acres, of which 2,800,000 acres yet remain. By the terms of the original grant the Oregon and California railroad was to sell the land to actual settlers in lots of not more than 160 acres and for not more than $2.50 per acre. Flagrant violation of the grant in the price and quantity of land sold was the basis of the government's contention for forfeiture.

The secretary of the department of the interior has received reports from the general land office showing that allotment claims of nearly six hundred Indians to lands outside of any reservation were found to be invalid, and were finally rejected during the past fiscal year, as a result of which some ninety thousand acres of land were rendered subject to settlement and disposal under the public land laws. This action was due largely to the requirement that each Indian allottee should present a certificate of the Indian office to the effect that he is an Indian entitled to an allotment under the law.

That packers of salmon in Bering sea and all northern points in Alaska are facing a short pack of Alaska red salmon is held to be practically certain. Telegrams confirming earlier advices have been received in the trade, and these report a shortage of fully 33⅓ per cent as compared to the total output on corresponding date last year.

Reports have been received from the general land office which show that during the fiscal year ending June 30, 1915, over twenty-seven hundred patents, embracing [illegible] acres, were issued to desert land claimants as against 346,794 acres patented to desert land claimants during the fiscal year of 1914.

Returns on the sugar crop of 1914-15 for the Cienfuegos district of Cuba, reported by the United States consul under date of June 25, indicate that the total value of the output exceeds twenty-nine million dollars.

Exports of automobiles in May amounted to $10,500,000, a new high record.

Love's Sure Reward

ROBERT NALL

WHITTIER's picture of "the passive soul" who "in waiting stands" to receive the blessings of "the one true Life," makes a very insistent appeal in moments of quietness. It portrays a halcyon mental condition that seems to be a foretaste of the attained perfect ideal. A similar thought is evolved by the psalmist's counsel of trust: "Rest in the Lord, and wait patiently for him;" but a literal interpretation is, as we know, often misleading. Passivity and rest are relative; they may be the only true activity. The mightiest forces are the most silent; all nature evidences this. If we lived more in the unseen, to mortal vision, we should know more of the power of Love.

The only effective healing treatment for our ills is that which rises above the clamor of the mutable and the mortal, and apprehends that spiritual law which ever operates peacefully and gently in the fulfilment of its majestic and sacred function. Yet is it not human experience, as Mrs. Eddy has so clearly explained, that "because God is Spirit, evil becomes more apparent and obnoxious proportionately as we advance spiritually (Science and Health, p. 207)? One might understand its becoming more "obnoxious,"—our whole mental world becomes transformed under the gracious influence of Truth,—but why more apparent? We do not desire to see more of evil, but less; that is the longing of every earnest heart. And it is just this surely that Mrs. Eddy meant, for she concludes the sentence quoted above by saying, "until it disappears from our lives." This stamps its unreality.

We may take it for granted as an axiom that in the study and practice of Christian Science there is nothing to discourage but everything to encourage. Spiritual gravitation is heavenward, not earthward. Love makes no demand upon any of us that we cannot fulfil. Every divine command, every promise, every instruction, is accompanied by enabling power. This is implied—involved indeed—in the eternal truth of the unity between God and man. Thus it is that in Science the fear which sometimes besets the pilgrim that he will falter and fail, and perhaps not be able to persevere to the end, is seen to be an illusion. We are not to be afraid even when evil or any mortal belief takes what appears to be an aggravated form; it may be this is a token that in a measure we are doing our work aright, and thus forcing the entrenchments of the enemy. Error will have caused us to retreat if it can make us discouraged. Our privilege is to press on, ever faithful to the spiritual ideal of God and His perfect creation.

If we cannot always spontaneously know the truth and apply it as Jesus did, we can be alert and prayerful. "How is it," asked the Greek philosopher Horace, "that you are quick to remove what hurts the eye, but if any canker touch the mind, you put off the cure till this day twelve month?" The ratio of spiritual progress, and therefore of success in subjugating the fleshly lusts and conquering physical ills, is seen in the keener capacity to detect error. Not that we are to wait for it or expect it; but knowing that mortal man is only the embodiment of error, and that at this period we have not yet arisen entirely above every earthly concept, we shall be aware of our responsibility to God, to ourselves, and to humanity at large, manifesting this in spiritual sensitiveness to all that is unchristlike, and in demonstrating the irresistible power of Truth. "If any man love the world [the material and the sensual], the love of the Father is not in him," the apostle writes. Conversely, the love that we have for God as absolute good determines our whole life-practice and effectually brings a reward. It should not be forgotten, however, that we must see and acknowledge the truth declared in the epistle to the Hebrews, namely that God is "a rewarder of them that diligently seek him."

What is the reward? The apostle Paul speaks of it in one place as "the reward of the inheritance," and in another place he utters a great truth when he declares that "whatsoever good thing any man doeth, the same shall he receive [again, Rev. Ver.] of the Lord." The "kingdom prepared for you" is how the Master described this inheritance. It is the kingdom of Life, Love, and Truth into which we enter here; not easily, not without whole-hearted effort, not without learning, perhaps through tribulation, that "the natural man receiveth not the things of the Spirit of God," for these are "spiritually discerned," but conscious that every step of the way is marked by a growing sense of Love's sweetness, of divine strength, of victory over the illusive and aggressive claims of the carnal mind.

Just here it is good to remember that the wealth of the kingdom, or the inheritance, cannot be a mere selfish possession. Nothing is of any value, it has been said, apart from its relationships, just as nothing is worth having which is contrary to God's law. As truth is assimilated it is reflected, and as it is reflected it is a power for righteousness; therefore "none of us liveth to himself." We may sometimes feel that we are each only a unit in the arena of human life; but in our real being are we not God's unit, made in His image and likeness? This is made clear as we ponder the divine declaration to the patriarch: "Fear not, Abram: I am thy shield, and thy exceeding great reward." Mortal assertiveness sometimes takes the form of belittlement, at other times of inordinate pride. Both tend to human bondage, the only freedom from which is to be found in complete surrender to Mind's healing power.

Our reward is proportionate to our expression of love, and does this not explain much limited demonstration? How far do we apprehend what the apostle meant by being "filled with all the fulness of God"? Imagine, if possible, the wonderful comprehensiveness of the glory of this divine consciousness, and then think how, as we are purified and strengthened and warmed by the coming of the Christ into our hearts, we may triumph over errors which now seemingly baffle us, because perhaps we are not quite willing to live up to the standard of Truth or welcome that greater inflow of spiritual understanding which would mean the abandonment of material pleasures. Spiritual poverty is an anachronism in Christian Science. We may claim the "unsearchable riches

Copyright, 1915, by The Christian Science Publishing Society

Digitized by Google

of Christ," and demonstrate that it is heaven's gifts alone that enrich and make us able to bring forth the "signs" which follow them that believe. Does the price we pay seem sometimes heavy? Listen to what our Leader says (Miscellaneous Writings, p. 341): "O learn to lose with God! and you find Life eternal! you gain all."

Spiritual Manifestation

GRACE SQUIRES

MRS. EDDY says, "The letter of Science plentifully reaches humanity today, but its spirit comes only in small degrees" (Science and Health, p. 113). She also counsels, "Continue the mental argument . . . until you can cure without it instantaneously, and through Spirit alone" (Miscellaneous Writings, p. 359). One reads these pregnant statements and asks himself vaguely, What is the spirit of Christian Science in contradistinction to the letter? If it is the vital current of instantaneous healing, one would do well to search, and to continue searching until he finds.

As Christian Scientists we are for the most part faithful to our obligations; we read and work with daily interest and care, yet not infrequently our problems seem difficult of solution. There seems indeed to be a strange discrepancy between one's faithfulness in reading and working and his demonstrations. Perhaps we increase both, read more, work more, but results are still incommensurate. Our problems remain, and we sometimes decide, not without bitterness, that we have done all we can.

One can travel long and wearisomely on this broad road which leads to destruction, for the demonstration of Christian Science is not always made by such efforts, unless these aids are utilized in the spiritualizing of individual character, in the daily, hourly overcoming of one's temptations to be *mortal*, to yield to the old quality of thought, to judge, to resent, to withhold, to gossip,—aye, to destroy rather than construct. But we learn as time goes on, and not infrequently we learn when the lesson is thrust upon us rather than sought.

A Christian Scientist while shopping was once quite overcome by an old ailment which suddenly and violently reasserted itself. One more purchase, however, seemed imperative, and she sought a quiet place to gain sufficient relief to go on her way; but the situation grew worse. It was with great difficulty that she reached the store and made her want known, only to encounter a clerk surprisingly indifferent, disobliging, and discourteous. In her strained condition she was sorely tempted to give vent to irritation and sharp reproof; but she mercifully withheld both. She swept the rising tempest completely from her consciousness, realizing for once that it is love and not scorn that heals, and that her own standard of courtesy must be beyond the reach of another's acts, if it is to be worthy of her professions. With the utmost kindness and an entire disregard of the clerk's manner, she made her purchase.

As she took her package and walked to the elevator, this Scientist was conscious of a sense of exhilaration so marked that it forced itself for an explanation, and while searching for its answer there came the added realization that the violent attack of illness had completely disappeared. She could not understand it; the usual mental work had not done it. Then came the overwhelming conviction that the victory over herself at the counter had healed her and flooded her consciousness with spiritual light and peace. And why not? "To him that overcometh will I give to eat of the hidden manna." Then these words from John, which had always been vague in meaning, suddenly stood before her: "He that hath my commandments, and keepeth them, he it is that loveth me: . . . and I will love him, and will manifest myself to him." Will manifest myself to him! That was it; she had kept the commandments, and spiritual law had manifested itself.

Since that experience the demonstration of healing has seemed very, very simple on this base of a triumphant right act. Other foundation there is none. Time and time again the essence of this experience has been repeated, the victory over self has been followed not by a moment's glow, but by hours and days of an illuminating peace and spiritual understanding that cannot be described. To argue for the truth at such times is an impossibility; one possesses without argument and heals without effort. Is not this the spirit and not the letter, the hidden manna, the sweet secret of the narrow way which, when found, proves, "Lo, I am with you alway"?

Why do we not all do better? Why not fight the battle where it needs to be fought—in our own sinful selves? Why not pray for patience, meekness, love, and good deeds, as our Leader has taught us, and having so prayed, leave our suffering flesh and lack and longings, on which we spend so many struggling hours, to be devastated on the base of the prayer's fulfilment. There are no discrepancies between righteousness and the demonstration of spiritual healing. Personal experience proves there are none, proves that spiritual law will rush to enfold one if he will step into that law and out of his mortality; but the mesmerism of our mortal sense blinds us.

Jesus said, "If thou wilt enter into life, keep the commandments." If we do not keep them, we break them. That even so small an evil as irritability shuts the door on the Christ is proven when we find that its suppression opens it. Verily they are costly,—the gossip, the slander, all selfishness and uncharitableness of the human mind,—if one would reckon his suffering and disappointments, his weary hours of fruitless reading and fruitless work, his mental darkness and debt. But there is redress. If the letter fail, we may even learn by failing and so find the spirit, and the power of divine Truth will be made manifest in Christlike words and deeds.

The Lesson-Sermon

KATE HOLT

FOR some years past it has been a daily practice with a certain mother and daughter for the former to read aloud to the latter while she had her breakfast and dressed for business, the books being confined to admitted classics. Recently the selection was from Herbert Spencer on self-dependence, from "Essays, Moral, Political, and Æsthetic," in which occurred the following: "The teacher of the old school who showed his pupil the way out of every difficulty did not perceive that he was generating an attitude of mind greatly militating against success in life. The modern instructor, however, who induces his pupil to solve his difficulties himself, believes that in so doing he is preparing him to meet the difficulties which, when he goes into the world, there will be no one to help him through."

On reading this passage an overwhelming sense of gratitude was felt for our Leader's wisdom in preparing the Lesson-Sermons. It would have been a small matter to have had the Scriptural references with their correlative passages from our text-book printed in the *Sentinel* each week, and this would have made the reading and study of the Lesson very easy indeed. Such an arrangement would render the constant use of the Bible entirely unnecessary. Each of the six sections of the Lesson brings out a distinctive thought, and these too could have been given; but it was not so ordered by our Leader. Wisdom guided her in this as certainly as in the writing of her great book.

Digitized by Google

The number of people to whom the Bible was almost a sealed book before Christian Science came to them, is past reckoning. The daily study of our Lesson-Sermon is certainly a liberal education, and the endeavor to grasp the leading thought of each section is of great and lasting benefit to every student. Many testimonies are given by Christian Scientists as to improved memory, and the daily study and effort to assimilate the truth has proved to thousands that "no faculty of Mind is lost" (Science and Health, p. 407). When the writer was just beginning to study this way of salvation, a friend who was older in Science remarked that she often found her remedy in the Lesson. Soon afterward, while sitting at the breakfast table, a clamoring pain was most insistent, and struck with such force that it was impossible to rise from the table to call a practitioner. Suddenly the Lesson remedy occurred to thought, and an effort was made to recall something from it; but nothing came except the title, "God the Preserver of Man." Grasping this single thought and holding to it, the demonstration was made, the pain disappeared, and the usual duties of the morning were resumed.

[Translated from the German]

"Blessed are the poor in spirit"

KÄTE WEBER

THE modern thinker often fails to find an interest in religious questions, as a result of having grown up with a strong prejudice against everything which cannot be cognized by the physical senses and grasped by the human intellect. His strongest argument against religion is that it requires blind faith. He is striving after mental freedom, and as a proof that religion imposes restrictions upon the mind, he quotes the Master's words, "Blessed are the poor in spirit."

Christian Science has completely refuted the argument that religion and reason are incompatible, and furthermore has proved that religion, in order to be religion at all, must be founded upon Truth, upon eternal, immutable law, the knowledge of which constitutes science, the only science there is or can be; for in the last analysis Truth and its laws alone, the facts of being, can be considered science or true knowledge. That Jesus in saying "Blessed are the poor in spirit" could not have meant that dulness and ignorance lead unto salvation, is clearly evidenced by the fact that he made the salvation of mankind dependent on knowledge of the truth. "Ye shall know the truth," he said, "and the truth shall make you free." Knowledge of the truth results in mental emancipation, and therefore is the exact opposite of ignorance and narrowness of mind. When Jesus spoke of the "poor in spirit," he cannot possibly have meant people whose thought was narrowly circumscribed.

Our current conception of the poor is of people who are destitute, who lack the necessities of life, and who, because they are conscious of this fact, accept alms in order to relieve their want; indeed, they consciously go where they believe they will be given what they need, and when they do not receive where they have knocked, they proceed until at length they find elsewhere that wherewith to satisfy their hunger. Therefore the "poor in spirit," in the sense Jesus used this term, may be assumed to be those who recognize or are conscious of their lack of things needful, things spiritual; that is, of an understanding of the truth, and who earnestly seek to receive that for which they are yearning. They are striving to attain to spiritual apprehension, and are quite unlike the Pharisee, who takes the position that he does not need to receive because he has knowledge, and who, instead of being desirous to learn, is incensed when others do not accept from him gratefully and reverently what he thinks he is bestowing upon them as a favor. The "poor in spirit" are the meek, to whom Mrs. Eddy refers in Science and Health (p. 34) as those who have a "receptive thought."

Love's Ministry

OLIVER M. CUNNINGHAM

ONE who has received without question the belief of the majority of Christian people,—that the healing works of Jesus of Nazareth were for his time only, and for those alone who came under his immediate ministry,—and who believes unquestioningly that the days of so-called miracles are past, cannot understand the expressions made by Christian Scientists of faith in the continuity of God's loving and active relation with man, though these declarations are made with the clearness and fearlessness of demonstrable truth. Even when fortified with proof as clear as that which he would accept as conclusive in his daily affairs, one does not receive with patience these statements that the laws of God are as operative and available for good now, and in every phase of human experience, as when utilized by the Master and his immediate disciples.

To one who is satisfied with a fragment of the Christly garment, the promise "My presence shall go with thee" has not now a part in the experience of every-day life, where the so-called laws of nature hold cruel and merciless sway; nor to one who is content with a limited perspective of a far-off God, has the blessed assurance "I will heal thee" the significance of a promise kept. And yet he who has received even the faintest gleam from the light of Christian Science, knows that this light is the dawn of that knowledge of God which reveals spiritual law, the law of health, holiness, and immortality, and which brings freedom and dominion. He knows that this message of Love's saving power is continuous for all time and for all peoples; that Truth is as surely corrective of error as in Jesus' day, as capable of demonstration and realization by humanity as when the Master was about the "Father's business" in Palestine.

That this is true was made plain in an experience shared by the writer last summer while accompanying a party of friends on an excursion off the California coast. There were in all about sixty people aboard,—the boat's capacity. The day proved a rough one, with the sea running high and breaking now and then over the deck. When we had been out half an hour, the engine suddenly stopped and we were apparently at the mercy of a pitiless power which knows no distinction between good and evil and which respects neither saint nor sinner. The captain hurriedly left the wheel and ran down the ladder into the engine-room, but Truth was already in command. It was learned afterward that the engineer told the captain to get back on deck and assure the passengers that there was nothing the matter with the engine, save some water in the carbureter, and this would soon dry out. He added, however, that if the passengers should get excited there was no telling what would happen.

It was clear to a Christian Scientist who was in the boat that, as the psalmist declared, "it is time for thee, Lord, to work: for they have made void thy law." What a moment before had so counterfeited life and power, pulsating with simulated energy, beautiful and delicate in its mechanism, was now but a mass of metal, lifeless and inert; but measured by Truth's standard, where "Mind is the source of all movement" (Science and Health, p. 283), there was just as much of life, activity, and intelligence within itself after the engine had stopped running as had been manifested before, and that was,—none whatever.

Digitized by Google

Then there came to the writer as never before a realization of the truth of what our Leader saw with the clearness of inspiration,—that "the divine Mind includes all action and volition, and man in Science is governed by this Mind," and that "physical force and mortal mind are one" (Science and Health, pp. 187, 484). Unlike the divine, however, this "mortal mind" had blundered. Blind to the leadings of Truth, unresponsive to the voice of wisdom, deaf to the call of protecting Love, believing in an intelligence that knows no sponsor, it had blundered; it had forgotten to protect the engine sufficiently; it had neglected to provide against the water entering the engine-room.

To the dweller in matter and its world of unreality, where error rules and belief is law, with safety and danger his varying attendants, buffeted about at the will of the blind force of the sea, the conditions for freedom from a sense of fear and danger on the part of the occupants of the boat were anything but reassuring. There was present, however, in all the strength of omnipotent good, the Mind which never blunders, never forgets. In the midst of the seeming danger, Love was reigning; as unyielding in its will to save, as blighting to evil's self-asserted power, as destructive to every fear, as when he who wielded the power of God to the full said, "Peace, be still," and the surging sea was stilled.

At the end of half an hour, during which spiritual harmony was being declared, an incident occurred which gave further evidence of Love's ministry. A gentleman, a stranger with whom the writer had never spoken before, turned and using a friendly term of address said, "I never saw people behave so splendidly and with such good sense as these are doing under such trying circumstances." This was true. There was no complaining, no fretting, no anxious expressions or looks; nothing was heard but good-natured conversation. Moreover, there was comparatively little evidence of seasickness, considering the indefinite waiting attended by the incessant rolling and plunging of the boat.

Soon the engine started, and we were away; but mortal mind seemed not yet ready to surrender, for with an unusual swell of the sea a boy went overboard. Before the bell could be sounded and the engine reversed, he was some three hundred feet behind, but swimming strongly. There was no flurry, no crying out, no anxious movement from those on board, further than that they rose to their feet and watched the rescue. And why? Because God was there, even though but faintly realized, just as unchanging in His love, just as powerful to save, just as destructive to fear, as when manifested through the Master to the disciples on the sea of Galilee. A life-preserver and a line were thrown to the lad, and soon he was drawn aboard. From then on there was peace. Under Love's protection we rested, and were carried safely home. Love had guarded and guided us all the way.

And what does this gleam in the dark, this confident reaching out for the hand of God in troublous times, mean for mankind? It means this: promised dominion; the majesty of kingship with Christ; "the power of an endless life."

Glory of Reflection

J. LILIAN VANDEVERE

THERE is a pretty fashion followed nowadays of placing a crystal globe on a pedestal in the garden. Looking into it, one may compass at a glance almost the entire circle of vision, from the flaming foreground of gladioli to the sequestered seat in the distant arbor. To the alert seeker for the spiritual interpretation of experience, this interesting ornament suggests that the human face may be made thus to mirror everything of beauty, both within and without.

Oftentimes though the lips do not move, there flashes upon the face the trail of a fine emotion which tells us a story. It is the appearing of the strength of sure knowledge, the confidence of fearlessness, the light of Love. Indeed, the signs of good should glow upon our faces unfailingly, so that our love for and devotion to the ideal may be "known and read of all" about us; and this will surely come to pass if we are but mindful of our privilege ever to bear witness to the sovereignty and the joy of Truth. This light, which is the first requisite for reflection, is the inner flame that set the haloed Moses when he had gained a measure of that vision that maketh the face to shine. The Scriptures continually admonish us to shine. Their admonitions range from Isaiah of the prophets to Jesus' appeal to his little group of followers, his declaration that they and all after them who sought the Father in sincerity should be the light of a waiting world.

Those who have turned to Truth and caught something of its glory, realize in a degree that their light is come, and they are divinely impelled to radiate its beams. Every reflector throws light into otherwise dark places, and all true Christian Scientists leave this benediction wherever they go. Those in the darkness of material bondage are attracted by their glow, and daily they are turning to them with the cry, What keeps you so happy and well and unafraid? That they are led into the light of Life.

In the Weymouth translation of the New Testament, Paul speaks of Christian believers as "bright mirrors," and implies that it is their natural province to reflect God. And as a mirrored form is clearest when the glass is flawless, we should make spiritual perfection the basis of our thought of God and man. When Truth and Love have thus become the health or wholeness of our countenance, all that shows forth will be beautiful and lovable; our faces will "declare the glory of God." As thought is cleared of false beliefs so that it reveals only the divine likeness, a new brightness comes in every lineament and a new spirit in every act. The business man has a finer sense of honesty, a keener judgment; the parent a more loving patience; the child a more ready obedience.

These higher conceptions of loveliness are speedily gained in Christian Science, and they necessarily effect our transformation. As we advance in spiritual understanding, we reflect the light divine more continuously and helpfully, and thus the saving Truth becomes more visible to our fellowmen in what Mrs. Eddy in "Miscellaneous Writings" (p. 6) calls a "changed appearance and diviner form."

[Written for the *Sentinel*]

Guidance

FRANCES THOMPSON HILL

O WONDROUS peace of Love divine,
My heart doth sing thy song sublime!
Love's gentle presence bringeth joy
That doth all sense of grief destroy.
Forever Christ, Life unconfined,
Revealing one eternal Mind.
Thou All-in-all, Truth, Love, and Life,
Knowing nor war nor human strife,
Grant us Thy peace, Thy way to know,
Till hid in Thee we perfect grow.
So step by step shall we fulfil
The mandates of Thy heavenly will,
And nations guided by Thy rod
Shall learn at last to know Thee—God.

Selected Articles

[Judge Clifford P. Smith in *Sioux Falls* (S. Dak.) *Press*]

The fact that a clergyman would not allow a lecture on Christian Science to appear in your columns without giving vent to a tirade of vilification, is one of the signs of these times. An evolution of religious thought is going on, and the rate of its progress is indicated by the nature of the opposition it has aroused.

The speaker whose lecture was recently published, preached the gospel of Christ as it is understood in Christian Science, and left all other religionists to do the same from their different points of view. He presented what he had found to be true, in a dignified, orderly, and dispassionate manner, so that all who might be interested in his subject could calmly consider the points we stand for in the quiet of their own meditation. This was something which your reverend and censorious correspondent would not tolerate. He said, "The American people are a busy folk, and have not time to think out the answer to every word-puzzle." In fine, he reasserted the claim—outworn by the clergy of a former period—that the people are not able to think for themselves.

It is to be observed, however, that your correspondent paid but little attention to the particular lecture for which his letter was to be an answer, since it for the most part consisted in a prolonged effort to say whatever might be prejudicial to Christian Science. Only on one point did he fairly state the teaching of Christian Science, and even this single point was not left without erroneous comment. After stating that Christian Scientists do not believe that Christ is God (and it is true they do not believe that Jesus is God), your correspondent went on to say: "Christian Science thus breaks with historic Christianity, and allies itself with Unitarianism, Judaism, and Mohammedanism against the most fundamental doctrine of Christianity, the incarnation."

What is "historic Christianity"? If it is something different from what was taught by Christ Jesus, Christian Science does indeed break with it. On the other hand, if it is the Christianity he taught, as this is recorded in the Bible, then Christian Science is based on it and identical with it. For Christians at least, the question whether Jesus is God ought to be settled by what he said. He must have known whether he was man or God, and this subject is within the scope of the topics on which he spoke. If therefore he were God, he would have said so plainly and often. Your readers are accordingly invited to consider the following facts: First, Jesus never said that he was God; second, he spoke of himself as "a man who hath told you the truth;" third, twice he virtually denied that he was God; fourth, several of his sayings are flatly inconsistent with the theory that he is the Deity.

The gospel record also shows that Jesus did not teach that God is three persons, but plainly taught that He is one. When a scribe asked him, "Which is the first commandment of all?" the answer which Jesus gave included the words, "Hear, O Israel; The Lord our God is one Lord." The scribe's reply, which Jesus expressly approved, included the words, "There is one God; and there is none other but he." The truth thus affirmed and reaffirmed was the cardinal point or central fact in the religion of the Jews. They had always steadfastly held to the oneness of God. Surely it cannot be said that Jesus intended to introduce a contrary belief. The theory of three persons in one was formulated by the ecclesiastics of a later time.

On this subject the New International Encyclopedia contains the following information: "The doctrine of the trinity is not found in its fully developed form in the Scriptures; but is supposed to be fully revealed in its elements in the New Testament. It is generally conceded, however, that the Christians of the second and even of the third century did not treat the subject with the same definiteness and accuracy of expression as later writers." In this extremely moderate comment is the fact, guardedly stated, that the doctrine of a personal trinity dates from the fourth century. Perhaps this was the beginning of what your correspondent described as "historic Christianity." However this may be, the introduction of this theory was the beginning of an endless disputation, during which doctrine more than demonstration, words rather than works, liturgy instead of life, became the accepted criterion of ecclesiastical Christianity.

Although Christian Science does not deify Jesus, it neither breaks with his Christianity nor agrees with the religions which reject the Scriptural account of the conception that led to his birth. "The divine origin of Jesus," Mrs. Eddy has written on page 539 of Science and Health, "gave him more than human power to expound the facts of creation, and demonstrate the one Mind which makes and governs man and the universe." Christian Science, therefore, attaches much importance to Mary's spiritual conception, and to his knowledge of it. Without this wonderful proof of God's fatherhood, Jesus might not have been able to say in his youth, "Wist ye not that I must be about my Father's business?" nor able afterward to perceive and teach the further fact of spiritual being, "Call no man your father upon the earth: for one is your Father, which is in heaven."

And what is to be said about "the incarnation"? On this subject also Christian Science goes directly to what is written in the Scriptures, and ascribes first importance to the teachings of the Master. He did not use the word incarnation, nor any word of which it is a translation; but he said, "He that hath seen me hath seen the Father." Did he mean that he was the Father? At present nobody claims that he meant this. What did he mean? According to the first chapter of Genesis God created man to be "his own image," and according to John the divine life "which was with the Father" was made manifest to human perception through Jesus the Christ.

With entire consistency Mrs. Eddy has said: "Man is not absorbed in Deity, and man cannot lose his individuality, for he reflects eternal Life . . . The divine nature was best expressed in Christ Jesus, who threw upon mortals the truer reflection of God and lifted their lives higher than their poor thought-models would allow,—thoughts which presented man as fallen, sick, sinning, and dying" (Science and Health, p. 259). It was the mission of Jesus the Christ to demonstrate the truth of being so that we may know it and be free,—free from all that is adverse to the welfare of man. This he was able to do, and did, not because he was God, but because he was, as St. Paul declared, "the first-born among many brethren." He manifested for himself and for us the infinite Life which is not confined in man, but is reflected in the truth or reality of being by all men. It was therefore possible for him to say, "Because I live, ye shall live also."

I reiterate that the letter to which I have referred did not truly present the teachings of Christian Science on any other point, and I shall speak briefly of two comments which your correspondent made on the works of Christian Science and the conduct of Christian Scientists. He said, "Christian Science has been the death of hundreds of confiding men and women." If these words have any logical meaning, they imply that there is some method other than Christian Science by which death can be surely averted or prevented; but such

Digitized by Google

is not the case. In the entire history of the world no method of preventing or overcoming death, other than original Christianity, ever has been developed to the point of perfection in practice. At the present time Christian Science is the most effective and reliable method of dealing with mortality that is known to mankind.

In 1909 the government printing office at Washington issued a "Report on National Vitality" which was prepared for the national conservation commission by Prof. Irving Fisher of Yale University. In this report Professor Fisher said: "There is no reason why it [the medical profession] should have lost hundreds of thousands of patients to Christian Science, except that these patients were for the most part benefited, and greatly benefited, by Christian Science after having received no benefit, and often injury, from the profession."

The clergyman further said: "Mrs. Eddy's disciples are busy curing ills that Mrs. Eddy denies exist. On the very face of the returns they are practising humbug. They are curing where there is no disease." It would seem that the same conduct may appear to be either evil or good from different points of view. For example, the editors of the *Living Church*, although of the same communion with your correspondent who has spoken evil of us, have seen our efforts in a different light. Their comment, as recently published, was this: "Christian Scientists are now taking seriously the command to heal the sick; and they are having much success."

❖

[John Ashcroft in *St. Louis* (Mo.) *Globe-Democrat*]

The truth of the first tenet of Christian Science, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497), has been verified in the experience of every Christian Scientist. Any denial of the Scriptural origin and character of this Science must necessarily be unconvincing to those who have found the Bible, through Mrs. Eddy's interpretation of it, their most valued possession. It is not with them a matter of theorizing as to its teachings, but of putting them to practical proof. Christian Scientists realize humanity's need of a salvation that will save today from the distresses and temptations incident to human experience, and they have found in Mrs. Eddy's spiritual interpretation of the Scriptures greater freedom from suffering and sin than they have ever before known.

From the premise of the infinite nature of Spirit, God, in whom St. Paul declared "we live, and move, and have our being," the conclusion is inevitable that such being is purely spiritual. Christian Scientists are learning that this is the true nature of man, and they are also learning to discard as unreal all that does not measure up to this standard of perfection. Christian Science does not define God as "a divine principle," as our critic avers, but as "divine Principle." The Standard dictionary defines principle as "a permanent or fundamental cause that naturally or necessarily produces certain results." Christian Science draws a sharp distinction between man in the image and likeness of God, of Spirit, and Adam, "of the earth, earthy." It is noticeable that in the second chapter of Genesis, Adam is not spoken of as the image and likeness of the creator.

The present writer has been a student of Christian Science for a number of years, but it is news to him that Christian Scientists regard as the most potent ever written the first ten words of the "scientific statement of being" (Science and Health, p. 468), "There is no life, truth, intelligence, nor substance in matter." Had our critic noted the succeeding sentence, "All is infinite Mind, and its infinite manifestation, for God is All-in-all," he would possibly have gained a better idea of the basis of our faith in the divine omnipresence.

The Christian Scientist's view of death is akin to his view of life,—that neither is what it seems to be. Mortals believe life to be physical, but Christ Jesus declared that life eternal is the knowledge of his Father and of himself. Christian Science recognizes that belief in mortality ends in belief in death; but it teaches the overcoming of this belief through the attainment of the right idea of God and man, and its consequent ultimate destruction of his "last enemy."

Writing of human effort in this direction, Mrs. Eddy says in "Unity of Good" (p. 43), "The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth." Any earnest seeker after truth can, however, readily satisfy himself of the Scriptural foundation of this teaching, and in so doing he will find something of the freedom which the Master declared knowledge of the truth would give.

❖

[Walter S. Cross in *Baltimore* (Md.) *News*]

Our critic says the doctrines of Christian Science "should be honestly treated, not misrepresented." With this we heartily agree, and we also respect the right of every one to his own opinion. It is, however, but right that the truth about Christian Science should be presented to your readers, though it would be impossible in a newspaper article to present a full statement. This may be found in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

While it may seem to some who do not agree with her, that Mrs. Eddy has perverted the teaching of the Bible, there are nevertheless hundreds of thousands of men and women all over the civilized world who are daily bearing witness to healed and regenerated lives that her teaching has revealed to them the vital truths of the Bible, who are today reading and understanding the Word as never before, and who are furthermore confirming this truth-teaching with "signs following." Christ Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Again, "These signs shall follow them that believe . . . they shall lay hands on the sick, and they shall recover." It is interesting to note that in both cases the word here translated "believe," comes from the Greek word meaning "to adhere to, trust, rely on."

"The tree is known by his fruits." Thus Christian Science, instead of perverting the Bible teaching, is rather confirming the fact that the teachings of the Bible are as true today as they ever were, and can be so demonstrated when these truths are strictly adhered to. It is plain that what is true at one time must be true eternally. One and one make two today, as they always have and always must, and wherever this is understood it can be demonstrated. The same may be said of the healing power of God, for He is "the same yesterday, and today, and forever."

The simplicity of the teachings of Christian Science is found in the fact that not infrequently healing has been brought about through the reading of the Christian Science text-book, without consultation or treatment from a practitioner. Also, physical ills have often been healed at Christian Science lectures and at the regular church services, confirming Jesus' words: "Ye shall know the truth, and the truth shall make you free." In regard to sin, disease, and death, the teaching of Christian Science is such that many suffering from disease pronounced incurable by reputable physicians, or burdened with sin, have been restored to lives of health and usefulness, and the so-called dying have had years of comfort and happiness added to their lives.

Digitized by Google

Christian Science does believe in God as omnipotent, omniscient, and omnipresent; that "God is love," as John so simply and profoundly declares, "and he that dwelleth in love dwelleth in God, and God in him." If we dwell in Love, it must be evident that Love, or God, is ever present. "In him we live, and move, and have our being." In fact, Christian Science teaches that we can never know a far-away God, for no such God exists. "Am I a God at hand, saith the Lord, and not a God afar off? Can any hide himself in secret places that I shall not see him? . . . Do not I fill heaven and earth? saith the Lord." Christian Science teaching, when given an impartial hearing, is understood and proved demonstrable and true, is far from being "pernicious," and is fully in accord with the Scriptures.

❖

[Frank Bell in *The Sun*, North East, Pa.]

It is not contended for Christian Science that the healing through its method is miraculous in the usual sense of that term. On the contrary, it is held to be the result of perfectly natural means, available to all who will give the subject the open-minded study and earnest application essential to the practical understanding thereof.

Christian Science healing may be said to be due to the operation of divinely natural spiritual law, which is demonstrably operative for good in proportion as the obstructive qualities of human thought are overcome. The process is essentially religious, and Christian Science is in the first place a religion. Those who are regenerated mentally or spiritually through Christian Science, find as a rule that the healing of disease or some other inharmonious condition is the incidental result. "Mind over matter," therefore, does not properly describe this process, because a mere human mind influence may be as readily exerted for an irreligious as for a religious purpose, and does not necessarily involve any moral element whatever.

Whether the most enlightened persons are those who in time of sickness turn to material rather than spiritual means, is dependent on the point of view. Preponderance of numbers on one side is not an infallible guide, and even if it were, the verdict might shortly be reversed, for a distinguished speaker at a recent medical gathering in this country estimated that ten million persons in the United States do not call the medical doctor when sick, and the growth of Christian Science has been such that, with a continuance at the same ratio, the time cannot be far off when in many communities its adherents will be no longer in the minority. In any city or town where Christian Science is well established it will probably be found that Christian Scientists will compare favorably with members of other denominations in the matter of intelligence. It will be found also that a large proportion of these have been healed through Christian Science of diseases of all kinds, from which they had failed to obtain relief through other methods.

❖

[Editorial in *Coshocton* (Ohio) *Tribune*]

Following the attempt of several state legislatures in recent years to enact laws concerning the religious denomination known as Christian Science, the members of that church have made an appeal to the country at large for "religious liberty." To one who knows the history of the American people an appeal of that kind has a strange sound. On reading that appeal in the literature of the Christian Scientists one is moved to ask: Why need such an appeal be made? Why should any American legislature seek to abridge a right as old as the nation itself?

The question in this case is certainly most appropriate. The Christian Scientists have not sought to force their religion upon any community or any individual of whom we have ever heard. They merely seek the right of peaceful assembly and peaceful worship. They acknowledge the sovereignty of the Almighty in their spiritual affairs and ask only to be permitted to worship Him as their own consciences dictate. The charge is made against them that they are not "orthodox." To our way of thinking the lack of "orthodoxy," as at present interpreted by many churches, will be a badge of honor, rather than a moral stigma, before another generation has passed from the scene of action. In the matter of Scriptural interpretation it were better that none of the so-called orthodox churches cast stones at those without their pales, if they would avoid disturbance and dissension among the brethren within their own folds.

Measured by the standards of clean living, high thinking, and unselfish, patriotic citizenship, we believe the men and women of the Christian Science faith will compare favorably with the membership of any church in America or the world. But whether they will or not is beside their contention. They are simply taking safe ground, in their plea for religious liberty, on the guaranties of the federal constitution, of the ordinance of 1787, and of every state constitution of which we have knowledge. The whole trend of American history was given more definite shape by those who sought her shores as the result of religious persecution abroad than any other single factor. The awful condition in which Europe was plunged for centuries as the result of wars in the name of the peaceful Founder of the Christian faith, left a deep impress on the founders of our own Union. That any American legislative body in the twentieth century should even think of abridging the time-honored right of peaceful and unrestricted worship, is to betray an amazing ignorance of the basic thought and purpose of this government.

❖

[Harold Priestman in *The Leigh* (England) *Chronicle*]

In the report of a lecture at Leigh on "Miracles," which appeared in a recent issue, I notice that Christian Science is mentioned in association with faith-healing and suggestion. The healing works of Christian Science are in no way dependent upon the action of the human mind or mental suggestion, nor have they any connection with what is usually understood by the term faith-healing. Christian Science healing is effected by means of the application of known laws of God. We know that laws may exist without their presence being suspected, and that they are not available for intelligent application for the use of mankind until some one discovers them. No one now thinks there is anything mysterious or impossible about sending a wireless message over the ocean, yet there was a time when every one thought so.

Christian Science teaches that laws of God have always existed by means of which all the ills of life—physical, mental, and moral—can be healed, and that these laws are available for the benefit of every one as soon as they are understood. Christ Jesus revealed these divine laws of healing centuries ago, and Christian Science is simply the restatement of them which was given to the world by Mrs. Eddy as the result of her careful study of the Bible, after she herself had been healed through the operation of these laws.

Editorial

"I will trust in thee"

"WHAT time I am afraid," the psalmist declares, "I will trust in thee." That Christian Scientists through trust in God have been relieved of many of the fears, both tangible and intangible, which have so long seemed to hold sway over mortals, is a cause of real thanksgiving to them. This is evidenced by the testimonies which are received for publication, as well as those given at the Wednesday evening meetings, as almost invariably much gratitude is expressed for this deliverance through Christian Science.

Mrs. Eddy has explained that "the procuring cause and foundation of all sickness is fear, ignorance, or sin" (Science and Health, p. 411), and it is because Christian Scientists have learned the truth of this statement that they are so largely successful in mastering sickness. It has been proved to them that "fear hath torment," and that it is necessary to cast out fear and to deny its claim of reality and power if the ills for which it is responsible are to be reduced to their native nothingness.

Yet fear is not a condition to which humanity need be tamely submissive. Rather is it a thraldom against which they must strive, and from which they must seek earnestly to be emancipated. Fear is a weapon of the one evil, and its seeming potency can be destroyed, its fetters cast off, by a clear recognition of God's ever-presence and all-power. "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?" was David's declaration of faith in God's power to deliver him, and it should be ours.

In the practice of Christian Science Mrs. Eddy's counsel is: "Always begin your treatment by allaying the fear of patients. . . . If you succeed in wholly removing the fear, your patient is healed. The great fact that God lovingly governs all, never punishing aught but sin, is your standpoint, from which to advance and destroy the human fear of sickness" (Science and Health, p. 411). Christian Scientists, while heeding this advice in their work for others, sometimes forget to apply it to their own problems, and seem to be more or less in bondage to the belief that they may be harmed or influenced by the thoughts and desires of others, whether these thoughts and desires are wittingly or unwittingly directed against them. There is no reason to fear the accomplishment of any evil purpose if we are constantly awake to the omnipotence and omnipresence of divine Love,—that perfect Love which "casteth out fear" and before whose light the shadows of sin, disease, and death vanish.

Fear is not consistent with nor a part of divine creation. The only reality is the reality of good, and this fact when demonstrated in Christian Science is so apparent that the false belief of fear is destroyed, and the healing of sickness and sin becomes an inevitable consequence. Jesus bade his followers "be of good cheer," and Mrs. Eddy writes (Science and Health, p. 410), "Christian scientific practice begins with Christ's keynote of harmony, 'Be not afraid!'" In order to realize to the full man's birthright, it is necessary that fear be seen for what it is, namely, a product of evil; also that evil and its progeny have no reality, power, or intelligence, but are illusions which tempt mortals to their own undoing. When this is seen, mankind will fear no more, but enter into that freedom which was promised them by the Master when he said, "Ye shall know the truth, and the truth shall make you free."

An admission that evil is real, therefore something to be feared, must carry with it either the belief that it is of divine origin or that there is some other creator equal to or more powerful than God. The peace and safety of mankind is, therefore, bound up in the knowledge that is expressed in the great declaration of the Hebrew lawgiver, "Hear, O Israel: The Lord our God is one Lord: and thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might."

ARCHIBALD MCLELLAN

A Peculiar People

SPEAKING to the Christian believers of his day, St. Peter uses the word "peculiar" in a way which lifts its meaning quite above the state of being queer, or daft in some degree about some things. He says, "Ye are a chosen generation, a royal priesthood, an holy nation, a peculiar people;" and straightway adds this very significant statement, "that ye should show forth the praises of him who hath called you out of darkness into his marvelous light." St. Paul also dwells upon this idea of the contrast which the "followers of God" should naturally present to the habits of the unbelieving; and it is saddeningly true that in their failure to measure up to this divine requirement, the standard set by Christian men and Christian nations was never at a lower ebb than it is today. This is strikingly revealed just now in the comments which are made by Orientals respecting those who have presumed to instruct them how they should think and live.

No demand is more elemental or more logical than this, that a Christian man shall be consistent, that his doings shall comport with his sayings; in other words, that he shall not be a liar. He who is without reproach in this regard cannot avoid being "peculiar," and to every earnest Christian Scientist this thought must make continuous appeal. In view of what he stands for, inconsistency at once becomes his chief exhibit if he is not eschewing the ways of the world. We constantly affirm that "there is no life, truth, intelligence, nor substance in matter" (Science and Health, p. 468). What therefore shall be said of us, or how shall we think of ourselves, if we are evidencing great content if not an engrossing interest in material things, if we are so absorbed in money getting and money spending as not to be scrupulously careful regarding the fairness and justice of the means by which it is acquired?

We dare to give voice to our Leader's stirring call on page 227 of Science and Health: "Citizens of the world, accept the 'glorious liberty of the children of God,' and be free!" Shall we be enslaved by any inducements to get rich quick, by any unchaste habit of sense indulgence, by the evanescent follies of fashion in dress, or by the lure of "cheap" amusements? How wholesomely "peculiar" and helpfully inspiring would we be if the avoidance of everything that is at all questionable distinctly characterized every one of us!

Moreover we stand for Christian brotherhood, for the one family of God. It is therefore incumbent upon us to see that every brother man with whom we have to do, is dealt with just as we would have him deal with us; that no economic injustice be consented to, much less profited by, and that the communal interest be faithfully conserved. Many an otherwise scrupulously honest man is woefully derelict here. The speculative impulse, the disposition to profit by a chance to get something for nothing, is forever tempting one to ignore the demands of justice. Surely there was never a time when genuinely honest, unselfish, and manly living was more imperatively needed, and this need it is peculiarly our province and privilege to supply.

Digitized by Google

'rom the beginning the cause of Christ has been handiped by the unmanlikeness of men. Think of what it would e meant to history if the world had found the spirit of the ster among all his followers, and of what it would mean he happiness and well-being of the so-called Christian ions today if genuine unselfishness and good will had 'ked all their diplomacies! Compassionate judgment is those who are ignorant or who have inherited a lower idard of moral duty, but to us the Christ-man in all his ngth and beauty has been made known, and the demand concrete consistency on our part is becoming more and e insistent, and it is your business and mine to meet it.

'alled indeed out of darkness into marvelous light, how we fail to present to all men, under all conditions and at times, a more luminous, more winsome aspect? As Chris- Scientists we are bound to be the more observed, our ds and deeds subject to more exacting criticism; let us efore make sure that we are "peculiar" by virtue of the that we are distinctly more consistent and exemplary.

JOHN B. WILLIS.

Elemental Thought

THERE are perhaps few who observe carefully their own king processes in order to see whether these are governed divine Principle, yet there is nothing else which is of such portance to us in all we attempt. The psalmist tells us of a -satisfied mortal who says, "I shall never be in adversity," he is plotting to bring his fellow men to grief, and vainly eving that he can do this and prosper. Of such a one we told that "God is not in all his thoughts." From this we urally conclude that the one mentioned must have been a y wicked man, but this does not after all concern us. iat does concern us is how much God, good, is in our ughts, to what extent these are controlled by Truth and e, in short by all that expresses the divine nature. Mrs. dy tells us that man as God's likeness "has not a single dity underived from Deity;" and again she says, "A spiral idea has not a single element of error" (Science and alth, pp. 475, 463). Here then is the true standard which all our thought should be tested, for unquestionably thought is what shapes our words and deeds and measures success or failure in life.

It is hardly necessary to say that there can be no failure the divine activity, and we cannot too often remind ourves of this fact. If we cherish anxiety, hatred, impurity, even doubt in our thought, we are harboring elements ich inevitably lead to failure, and excuses will not help us. e may say that he cannot help entertaining fear of a good ny things, but in the twenty-first chapter of Revelation find "the fearful" at the head of a long list of evil-doers o "have their part" in the cleansing fire provided by Truth d Love. A careful study of this passage shows what ntal elements we have to get rid of; but this is not all: we ed to become better acquainted with God in order to reflect e qualities and elements of the one perfect Mind. If we em to fail in the working out of any of our problems, we rely need to know better the Mind that knows all things, that we may think and act intelligently and unselfishly all occasions. Readiness to see and overcome our own ults will aid us in demonstrating the scientific rule that we nnot suffer for the sins of others.

Here we should see that the truth can be applied to all gitimate work, even on the ordinary human plane, and the oser one comes to divine intelligence the greater success will have in his work. Principle is impartial, and the Christian cience healer can claim no more of God than can any faithful worker. The only difference is that the Christian Science practitioner is compelled to draw near to God in order to reflect the light of Truth to his patient; but if the "infinite elements of the one Mind" (Science and Health, p. 512) are lacking, results will be at best uncertain until this is remedied. If, for instance, the mortal elements of indolence, selfishness, or sensuality linger in thought, these must be cast out, and the stern command of the Christ, spoken at Jairus' threshold,—"Give place,"—must be heeded, that life in its fulness may be expressed. Doubt and fear are a virtual denial of divine omnipotence and omnipresence, and even humanly speaking they are very undesirable traits. On the other hand, the oft-repeated admonition to the children of Israel, "Be strong and of a good courage," directs thought to the spiritual elements which make for fearlessness whatever the situation, and these can never be truly realized until we recognize and acknowledge their divine source.

If we are willing to let in the light of Truth, we may sometimes be startled at the discoveries of unspiritual qualities which had been hidden in the depths of our consciousness, possibly by self-righteousness; but the light should be welcomed whatever it may disclose, for it can bring nothing but blessings. Happily the elements of mortal belief have no principle, no substance, no life, no intelligence, and they cannot usurp the place and power of the real and the true by means of which we trace our relation to God, and with love and confidence can say, "our Father."

ANNIE M. KNOTT.

Among the Churches

Current Notes

JERSEY CITY, N. J.—The corner-stone of the edifice of First Church of Christ, Scientist, of this city, now in course of construction on Harrison avenue, between Bergen avenue and Boulevard, was laid at 7 o'clock last Saturday morning [May 8]. The service was simple, only eleven Scientists being in attendance. These were the readers, the board of trustees, and the building committee, with the architect. This church is a branch of The Mother Church in Boston.

The Jersey Journal.

SALEM, ILL.—The Christian Scientists in Salem have purchased the Dave Marsha property on West Main street for the sum of fourteen hundred dollars, and they will begin at once to remodel the dwelling thereon and make it a suitable place for holding services for a while. In the near future they expect to erect a house of worship that will be commensurate with their idea of worship and thereby add to their comfort and likewise make it an important corner of this city.

The Republican.

WILKES-BARRE, PA.—Interest grows in the Christian Science church building under construction on South Franklin street, near South street, as work progresses. The building that is now being erected will cost, it is estimated, seventy-five hundred dollars, and though it will be only a temporary home for the congregation, it will remain to be used as a chapel after the permanent church building is erected. The site that was purchased by the congregation is two hundred and twenty-five feet in depth, and the building that is now being erected will only have a depth of eighty-one feet and is on the extreme rear of the lot, so that it will not interfere with the main building when this can be built. For the present, the front of the lot will be developed as a park area. The auditorium will seat approximately four hundred persons.—*The Record.*

Digitized by Google

PORTLAND, MAINE.—At the Maine state exposition held in this city June 7-19, First Church of Christ, Scientist, maintained a *Monitor* booth and reading-room for the first time. It was attractively fitted up, and pages from the *Monitor*, mounted on a gray mat, were displayed. A show-case contained an exhibit of Mrs. Eddy's writings. The amount of literature distributed was 3,825 *Monitors*, 324 *Sentinels*, and 44 *Journals*.—*Correspondence.*

SAN FRANCISCO, CAL.—The congregation of Third Church of Christ, Scientist, now meeting in rented quarters in Schroeder street, will occupy its own building before the close of the year. The structure was to cost seventy-five thousand dollars, but later estimates exceed this amount. It is situated in Haight street, opposite Buena Vista park.

San Francisco Examiner.

KANSAS CITY, MO.—Third Church of Christ, Scientist, now worshiping in the completed basement at the northeast corner of Fortieth and Walnut street, is having plans drawn for a superstructure. Work on the building will start before Aug. 1. The completed building will cost one hundred thousand dollars.—*The Kansas City Star.*

The Lectures

Anacortes, Wash.

A lecture on Christian Science was delivered by Jacob S. Shield at the Empire Theater, and Judge J. W. Norvell made the following introductory remarks:—

Less than fifty years ago Christian Science was discovered by Mrs. Eddy, one of the noblest and purest women that ever lived. She devoted her life to making plain the way, that all who will may partake of the "water of life freely." She was to a remarkable degree possessed of pure wisdom, and to her was revealed the spiritual meaning of the Scriptures. Her discovery and practice of Christian Science was but the demonstration of the teachings of the New Testament, and through "Science and Health with Key to the Scriptures" she has made available to all mankind the truth as taught and explained by Jesus of Nazareth. Christian Science has brought to suffering and sinning humanity that great spiritual law which the Master had in mind when he said, "Ye shall know the truth, and the truth shall make you free."

This new-old religion has also brought rest to the weary and comfort to the sorrowing. Many thousands of persons who were suffering from all manner of disease and sin have thereby been made free, and they have proven that the prayer of faith does heal the sick and give peace to the troubled heart, that it does make men and women better and happier and shows them how to love God with their whole heart and mind and their neighbor as themselves. Christian Science has changed a religion of gloom and fear to the pure light of hope and joy, and hundreds of thousands of people all over the world have been elevated from the dark valley of despair to the mountain top of a sublime faith in God.

Correspondence.

❖

Chicago, Ill.

Willis F. Gross, who lectured on Christian Science for Third Church of Christ, Scientist, was introduced by Albert E. Barnard, who said in part:—

To those of you who are non-Scientists we would say: Christian Science makes no contest with other systems of religion, has no quarrel with doctors of medicine, and does not claim anything that has not been fully proved. It does, however, insist upon reckoning everything from a basis of spiritual causation, in contradistinction to the more or less material basis of reasoning upon which the world at large has been content to depend for a number of centuries. It is this difference of reckoning that has caused many misconceptions may have arisen concerning Christian Science, and it is through the medium of these lectures that such misconceptions are in large degree eradicated and a fairer and saner view of the subject is established in the mind of the public.—*Correspondence.*

❖

Walla Walla, Wash.

Virgil O. Strickler spoke at the Keylor Grand Theater, addressing the largest audience that has ever attended a lecture upon Christian Science in this city. He was introduced by O. C. Soots, secretary of the Walla Walla Commercial Club, who said:—

Twenty years ago, publicly to acknowledge affiliation with the Christian Science church, or even to admit an interest in the teachings of Mrs. Eddy, required strong courage and a wholesome disregard for criticism. A remarkable thing in connection with the growth and progress of Christian Science is, that its true adherents never argue or remonstrate with those who take opposite view-points, but on the contrary manifest love and charity toward all mankind, with a steadfast reliance upon divine Principle which begets health and happiness. This attribute is in great measure responsible for the extraordinary advancement of Christian Science, which in a half-century has extended to every civilized nation in the world.

It is plain that something more than an outward manifestation is essential to the permanence of any religious faith. When, however, we consider that thousands of intelligent men and women, among them some of our ablest statesmen, authors, financiers, artists, and journalists, testify to the healing power of this new-old understanding; when cities like Chicago support sixteen large church congregations with nearly as many fine church edifices, Los Angeles and Oakland, Cal., seven; when The Christian Science Publishing Society can successfully conduct one of the great daily newspapers in the world and disseminate hundreds of thousands of weekly and monthly periodicals,—then fair-minded persons everywhere are willing to believe that a foundation of truth must underlie this structure.

Correspondence.

❖

Aspen, Col.

The remarks of the Rev. Benjamin Eitlegeorge of the Methodist church, in introducing Clarence C. Eaton, who lectured on Christian Science, were as follows:—

We live in an age of religious toleration—the most hopeful age the world has yet seen; but the one that is just before us will be even more hopeful. The Master once sent out his disciples on a mission of healing and ministering, and upon their return John brought back the startling information that they had seen one casting out devils in their Master's name, and they forbade him, because he was not of their number. To which the Master replied, "Forbid him not; for there is no man which shall do a miracle in my name, that can lightly speak evil of me." And to make the application more general he added, "He that is not against us is on our part."

I am heartily glad that we have got away from such

Digitized by Google

ctions. It is a matter of deep humiliation to us that men e ever been so limited in vision as to make such an ex- ssion possible. The only question we ask today is, Does ork? does it get results? and if the answer can be given he affirmative, we are not only ready but eager to hear and n more about it.—*Correspondence.*

❖

San Jose, Cal.

he introduction of Francis J. Hambly, first reader, at lecture on Christian Science given by George Shaw Cook, in part as follows:—

t is distinctly noticeable that the world is becoming more rant and fair in the way new ideas are dealt with and ived, and so when Christian Science is presented to it, ming to be scientific as well as Christian,—and this truth be and is being proved and demonstrated daily,—we find ever increasing interest and desire for accurate informa- n concerning it, and these lectures are given to satisfy in a sure that desire. Christian Science is willing to be ghed and judged by its works; indeed, asks to be. It tefully points to what has been accomplished through its istrations and practice, and to the practical proof and vincing evidence of the part it has taken and is to take the coming victory of the race over sin, sickness, and th. It is true that all error must ultimately cease and ppear before Truth demonstrated; and the world is now lizing, as Mrs. Eddy has said (Miscellaneous Writings,), that "thought imbued with purity, Truth, and Love, ructed in the Science of metaphysical healing, is the most ent and desirable remedial agent on the earth."

Correspondence.

❖

Claremont, N. H.

Between four and five hundred persons gathered at The gnet to listen to a lecture on Christian Science by Prof. rmann S. Hering. The lecturer was introduced by Sen- r W. E. Kinney, as follows:—

Search for truth has occupied the minds of men in all ages. favorite theme for speculation and research has been life lf, its object and purpose, the laws that govern it, and its ation to the omnipotent. Along this line Christian Scien- ts believe their Leader discovered great truths, or at least de practical and beneficent application of great truths. d the evidence seems to be with them, for "by their fruits shall know them." The tremendous influence which ristian Science has had on the lives of the thousands and s of thousands of its earnest, thoughtful, and devoted herents the world over, must convince the honest seeker ter truth that there is truth in it, and that it is a subject rthy of the deepest research of thoughtful minds. I con- atulate this audience of truth seekers upon this oppor- nity to obtain further insight into this important subject.

Claremont Eagle.

New York, N. Y.

At the lecture on Christian Science for Sixth Church of rist, Scientist, at McKinley Square Casino, James P. Eilen- rger, in introducing Bliss Knapp, said:—

Possibly many are here this afternoon through curiosity, hers through invitations that came to them from friends d dear ones who are enjoying the blessings of Christian cience and are desirous of sharing their blessings, and still hers who belong to other denominations,—all here to hear e old, old story as told by a Christian Scientist. Whether the world knows it or not, Christian Science is what it is seeking. Mrs. Eddy not only discovered the Science of Christianity as taught by Jesus, but also what all the students of the Bible failed to discover, namely, that "Jesus of Nazareth was the most scientific man that ever trod the globe" (Science and Health, p. 313). The world is waking to the fact that Mrs. Eddy was the most scientific woman who ever lived. She brushed aside the ashes of materialism, and with the gentle breeze of demonstration has fanned into flames a vital spark of Christianity which is healing the sick and reforming the sinner. This flame has grown into a conflagration beyond the control of all who have tried to hinder this outpouring of purifying fire, the inspiration of Love. It is the eternal truth come down through the centuries,—and who or what can stop this revelation of the omnipotent, omnipresent, omniscient God, our God?—*Correspondence.*

❖

Salina, Kan.

Alex Berg, in introducing Bicknell Young at the Christian Science lecture given in the New Theater, spoke in part as follows:—

I am not a Christian Scientist, and looking into your faces I observe that most of you are not professing Christian Scientists. This being true, your presence shows an earnest desire and a willingness to learn and to study the Christ-ministry of truth from the view-point of Christian Science. Your presence also symbolizes that world-wide desire, a reaching out for something nobler, higher, and purer than has ever before come to your experience.

The message of Christian Science which we will hear this afternoon, is the message of love, truth, wisdom, and purity. Its efficacy in the healing of physical pain and suffering, and its effect in the betterment of human conditions, is being experienced on every hand by all who seek help through its teachings. It makes better men and women, better citizens, better Christians, and inspires a loftier and greater love for the Bible, as well as a higher reverence for the teachings of our Lord and Saviour. It is that message of Love, that promise, that gift which was given to us and to the whole world by the Master, who said in answer to the great human need, "Ye shall know the truth, and the truth shall make you free;" and of whom we can say, "Thou wilt show me the path of life: in thy presence is fulness of joy; at thy right hand there are pleasures for evermore."—*Correspondence.*

❖

Cleveland, Ohio

The remarks of W. S. Raeder in introducing William R. Rathvon, who lectured on Christian Science for Third Church of Christ, Scientist, at Grays Armory, were in part as follows:—

The real cause of the enthusiasm of the adherents of Christian Science is due, I believe, to three facts: First, Christian Scientists have been enabled to get a glimpse of the true nature of God; second, they are enabled to read the Bible intelligently and with understanding, so that it is to them no longer a book of doubt and mystery; third, they are enabled to give "to every man that asketh" a reason for the hope that is in them. Because of these facts, Christian Science is an eminently practical religion.—*Correspondence.*

Testimonies of Healing

A sense of deep gratitude prompts me to tell of the blessings I have received through Christian Science. Some time ago, when spending a holiday at a seaside resort, a motor-car knocked me down and badly injured one of my legs. I was taken to the local hospital, and the doctors there described the injury as a "double compound fracture," and strongly urged me to have the leg amputated. I refused assent, however, as the slight knowledge I had of Christian Science gave me an assurance that God, the great Physician, could heal me, and I resolved to put my trust in Him. Eventually I was discharged from the hospital as healed, but I was lame. Shortly after my return home, my mother, who was very much concerned about my lameness, called in a specialist, who after an examination declared that the injured leg was three inches shorter than the other and that I would be a cripple for life. He said that nothing more could be done for me and that I would have to wear a thickened boot.

I had been studying Christian Science with my married sister at her home, and as this sister had received many blessings under the care of a Christian Science practitioner, I humbly resolved to trust in God to restore me to a normal condition, comforted with our dear Leader's assurance that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). My healing came a few weeks later, when I was visiting this sister. The practitioner called in the evening, and he made everything so plain that I felt a great uplift. After he had gone I realized that the lameness had vanished and I could walk as perfectly as before the accident, the injured leg having resumed its normal length. Before I went to visit my sister, my mother had ordered a pair of surgical boots, in accordance with the advice of the specialist, and on my return home the bootmaker called with them. When told they were not needed, he was so astonished that he asked permission to measure me again, and he then found that both legs were exactly alike in length.

I desire to express my thankfulness for this proof of God's love, and also for the light our dear Leader has given to us through her priceless books, especially Science and Health, and for the help I am constantly receiving from the Christian Science literature.

FLORENCE G. PEACH, Manchester, England.

✧

I wish to express my gratitude for a wonderful healing I experienced in February, 1913. I had been visiting my daughter in Canton, Ohio, and was on my way to my home in Michigan. I had to change cars in Toledo, and as I was going from the station to the street-car I slipped on the icy pavement and seriously injured my leg. I was picked up by two men who were passing at the time, and they called to a surgeon who happened to be near. It was impossible for me to stand, so the surgeon sent me to the hospital in an automobile. I told him that I was a Christian Scientist and would not take any medicine, and as soon as I reached the hospital I sent a telegram to my daughter, asking for Christian Science treatment.

The accident occurred on Monday evening, and on Tuesday morning my daughter came to see me. An X-ray photograph of the leg was taken on Thursday and the bones were set that day. The following Monday I went back to Canton on a stretcher. When my daughter asked the surgeon how soon I could be moved, he said not for three or four weeks at least, because the leg could not be put in a cast before that time, as it was badly fractured, both bones being br... There was also a wound on the front part of the leg, ... the bone had cut through the flesh, and the surgeon fe... it might cause some trouble. He said I should have a ... in Canton look after this and put the cast on; but I d... see a doctor, nor was my leg put in a cast.

great many blessings have come to us all through the derstanding of Christian Science. Through the reading study of our text-book I was healed of lameness and stant pain, the result of milk-leg, also of an eye trouble heart disease. Croup, influenza, headaches, rheumatism, other ailments, have been readily overcome for the differ- members of the family.

For all these physical blessings I am very grateful, but I especially thankful for the help Christian Science has n to me mentally and spiritually, and my heart echoes s. Eddy's words, "Glory be to God, and peace to the aggling hearts!" (Science and Health, p. 45.) I feel t I cannot be thankful enough to God for the revelation he truth as given to our age through His messenger, Mrs. dy. It has certainly brought peace to many a weary rt, and a hope so great that it cannot be measured or even prehended by us yet, for "eye hath not seen, nor ear rd, neither have entered into the heart of man, the things ich God hath prepared for them that love him."

KATHERINE LOVELACE DRAPER, Portland, Ore.

❖

Early in the year 1913 my little daughter, aged six years, stricken with what a doctor pronounced a very severe ack of typhoid fever. She and her little sister were board- in the country, and when I received word that she was I went to her at once and found her unconscious. She had not recognized any one for two days and had so changed hould hardly have known her.

When the doctor came, I asked him just what he thought, d he said he could not tell. We therefore had a consulta- n of physicians, and they decided that the child was very k and that nothing could be done but to give stimulants keep the heart in action. This went on for three days, and ry one had given her up but myself, and I was nearly dis- ected. On the third day I asked the doctor what he in- ded to do,—if he was going to let her die and do nothing? said there was absolutely nothing that could be done; t it was beyond all human power to reach her trouble, ich was all in the brain; that he did not believe she could ssibly live three days at the most, and if she did the brain ould always be affected. He added that if he were I, would rather she did not live. It seemed for a moment if my life had become a blank, and yet something kept lling me she must not die, and I could not believe she would. ll my future plans included my little girls, and without em life seemed impossible to me.

The doctor made this statement on Monday, and the nurse ave the child stimulants all day until five o'clock that night, hen I ordered every one to leave her to me, for I intended have Christian Science treatment and save my baby's life. t half-past five the nurse reported that the little one's ondition was critical, so I telephoned to a Christian Science ractitioner and told her all the particulars, including the act that the doctor had said there was no hope. She replied hat she would begin treatment immediately. That night I nsisted on being left alone with the child. Then I took the ible and sat by her cot, reading and trying to know the ruth,—that God is the only cause and creator. I had perfect onfidence in God, realized His presence with the child, and ny burden was lifted. I was sure my darling was safe, and hat she would soon be well again.

At nine o'clock the next morning the child's temperature ad gone down somewhat, but when the doctor came he was ery angry at what I had done and said that I was making mistake and would be sorry. I clung to the truth in spite f all, however, and the following Thursday my little girl recognized me, although she could not speak. On Friday she sat up in bed and played, and on Saturday wrote a letter to her grandfather. No one can realize how happy I was to know that she was all right again. She kept gaining each day, and on Monday talked with me as intelligently as ever. On Tuesday she was dressed and walked a step or two from her cot into my arms. It was the most wonderful experience I ever knew, and I cannot tell how thankful I am for my baby's life or express my gratitude for her healing through Christian Science. She has been gaining ever since, and is today in perfect health.

This healing took place two years ago, and my daughter has never needed treatment for anything since. At the time of the fever her hair all came out; but it grew in again, and is now better than before. This was the only after effect, and it was overcome as was the illness itself. I am more thankful to God than I can express, and am sure I would never turn to other help in any case, either for my little girls or for myself, since I have found that He supplies all our needs. I have wished many times since that all mothers who are placed as I was, might know and feel the wonderful truth as I did, and realize that the little ones so dear to us may be saved from all harm by God, through the saving truth of Christian Science.—LUCY STANTON, Lynn, Mass.

❖

I deem it my duty, as well as a great privilege, to express my gratitude for the many blessings received by myself and family through the teachings of Christian Science. I could not begin to tell of the many demonstrations of this truth that we have had, but will mention two in particular. Lumbago was healed in two treatments, and a very serious attack of quinsy was overcome in a couple of days. These healings took place about three years ago, and the ailments have never returned. I am glad to know that this healing is going on throughout the world, and I hope some day to have a better understanding of Christian Science.

F. H. MILLER, San Rafael, Cal.

❖

I am thankful that I can testify to the healing power of Christian Science, for I know it is the truth that makes us free and teaches us how to find the kingdom of heaven.

From early womanhood until the past year I scarcely knew what health was. For two years I suffered from a terrible female trouble, also extreme nervousness. My ailments were too numerous to mention, but one of the most serious was an abnormal growth, from which I can gladly say I was entirely freed through Christian Science. It was just five years ago that I underwent an operation. I had employed four or five different physicians, who were exceedingly kind and did all that lay in their power for me, but all the time I was getting more discouraged and despondent. I wished more than once that the dear Lord would take me, for I had no desire to live and feel so miserable.

For months I kept away from doctors, for I knew if I sent for one he would tell me that I must go to the hospital again; but finally the pain was so intense that I felt obliged to call in a physician. He told me I would never be well unless I underwent another operation; that I would linger for some time, but could never do any work. I was more despondent than ever, and my heart went out to my family, for I thought I could not get well. It was right after this that my brother asked me to try Christian Science, and I consented. He told me that I need not suffer, for God is All-in-all and I must trust to Him. I commenced having Christian Science treatment, and I was not long in learning that God

Digitized by Google

is good and that He is indeed the only physician. It was just one year ago that I accepted Christian Science, and we have not used any medicine since. Our family is now one of health and happiness, and harmony has taken the place of discord. Instead of being sick and a burden to my loved ones, I can now take the entire care of the household.

I am truly thankful to God and grateful to Mrs. Eddy for the great blessings. I was also healed permanently of weak eyes, for which I had been obliged to wear glasses for over ten years. After my first treatment I could see to read in the evening without glasses better than I did before with them. I am deeply thankful for all that this truth has done for me; words fail to express it, but they who love will understand.—FLORENCE COLE, Groveton, N. H.

To say I am thankful for the blessings which Christian Science has brought to me in the past two years, both spiritually and physically, only partly expresses my feelings. I realize, however, that I have only begun to understand and apply it, though I have proven many times that, as we read on page 152 of Science and Health, "Truth has a healing effect, even when not fully understood."

A short time after I came into Christian Science, my little girl, then four years old, developed symptoms of croup in the night. At first fear completely overpowered me, as on a previous occasion she had been very ill from the same ailment. I had just begun to read Science and Health, but I had learned the Lord's Prayer and its spiritual interpretation as found on page 16, so I repeated it, and in less than ten minutes the child was sleeping quietly, and she was up and playing next day.

On another occasion this same little girl had been in company with my young sister, who had contracted measles at school, but through the application of what we knew of the truth my little girl was prevented from catching the disease, as were also three children of another sister. The sister who was ill was in bed only a day and a night; after that the fever was completely gone, and she ate with the others. Meanwhile another member of the family who lived near us, but who was not at all interested in Christian Science, had four children exposed, and to material sense all of them were sick for a week or more, confined in a dark room and unable to eat.

I have been healed of bad temper, discontent, worry, fear, spells of crying, self-pity, and of being very unjust to others, also of bowel disorder, dizziness, frequent headaches, terrible pain in the eyes, and colds.—LAURA HANKS, Salem, Utah.

I gladly testify to the truthfulness of my wife's statements in this testimony, as Christian Science has proved a great blessing in our home. We are very thankful for what knowledge we have of it.—CHARLES E. HANKS, JR.

[Translated from the German]

I herewith wish to give my thank-offerings for the help received through Christian Science. For nearly twenty-three years I was afflicted with various forms of abdominal complaint, and suffered with pain in the back, head, and eyes, to which a serious eruption on the face was added during the last four years. I was unable to sleep at night, and would get up in the morning as wearied as when I retired. My suffering at times was intense, and the physicians whom I consulted could do little beyond relieving me somewhat; but now I am free from these distressing conditions.

About a year ago I was told of Christian Science, and I attended church the following Sunday. From that day to this I have rarely missed a meeting or service, and I am glad that I feel much more hopeful and happy, and am reading Bible, as well as Science and Health and other Christian Science literature, daily. I am indeed grateful to know God is always with me, and that to our heavenly Father belongs the glory for all the good that has come to me. I also thankful to Mrs. Eddy for pointing out the way Truth.

MATHILDE MATTHIESEN KULLRICH, Olympia, Wash.

I wish to express my gratitude for the benefits and blessings I have received through Christian Science. My personal experience of the healing power of this religion in the healing of quinsy. I had been subject to throat for years, and each winter I had from three to five lasting from one to three weeks each. I was cured by Christian Science in two treatments, and have not had a this trouble for eight years. At the same time a condition of the nose and throat disappeared, and never returned.

While I am thankful for this proof of the healing Christian Science, the greatest blessing is the know am receiving of the omnipresence and omnipotence Since my first Christian Science treatment I have ceased to want to know more about God. I am truly

D. V. BOWER, D.D.S., Chicago, Ill.

On Saturday, June 28, 1913, at five o'clock in the a man came to my door to tell me that my little girl injured in an accident. He said that the automo which she was riding had collided with a street-car, had been thrown out, striking on her head, and had taken to the receiving hospital. For just a mo seemed more than I could bear, but like a flash the came, Why, she is God's child, and He will surely His own.

My mother and I jumped into an automobile and to the hospital. All the way I kept declaring that child could meet with no accident. When we arrive daughter was unconscious and as one dead. The doc nurse said she was suffering from concussion of the She was vomiting blood, and continued to do so until two o'clock in the morning. She had a gash on the about two and a half inches long, a bruise behind and one knee was bandaged; in fact, there were bruise all over her body.

I kept on declaring what I knew of the truth, mother telephoned a Christian Science practitioner at once. She arrived at the hospital about seven o'clock. I felt greatly relieved when I knew she was helping She said we must get the child home as soon as p I then asked the doctor how soon we could move her, said in an hour or two if all went well, but we must have family physician at the house on our arrival; therefore order not to have any controversy at this critical time called a physician whom we knew. About nine o'clock nurse ordered an ambulance, and a little after ten we home. The physician arrived about the same time, the child, and stated that the brain was injured and vitality low; also that she must be watched very and kept quiet.

The practitioner remained with us all night, and morning when the doctor called again he said that the and temperature were normal, although the child was delirious. He again declared that great care should be

Digitized by Google

.l, and that under no circumstances should she be allowed
.et up or raise her head from the pillow. He added that it
ld be two weeks, and possibly three, before she could sit
that complications might arise, and if certain symptoms
irred he should be called at once, as she might have to
·perated on. I then told him I did not think I should need
any more, and he need not call unless I sent for him.
ıve never seen him since that day.

Ionday my little girl was "flighty" at times; Tuesday she
quite herself, and asked why she was in bed; Wednesday
sat up for a while; Thursday she was up and dressed, and
less than a week there was no evidence of an injury.
atment was continued for a few days to destroy the fear
·elapse, but nothing occurred except increased health and
·ngth. The healing has been permanent, and my daughter
never enjoyed better health than she does now.

ıny mother reading this testimony must know how thank-
I am to God for Christian Science, and for His faithful
senger, our beloved Leader. I am striving to make my
an expression of my gratitude.

MRS. L. A. SUTTON, Los Angeles, Cal.

: am deeply grateful for all that Christian Science has
e for me. Several years ago I was suffering intensely, as
h ears were discharging and my hearing had become much
.aired. The doctor, an ear specialist, was very conscien-
ıs and did all he could to help me, but there seemed to be
relief in *materia medica*. He said that if only the ears
ld be healed and the discharge stopped, I must be content
could not hear. I had been under his care for two years,
l at this time was using twice a day the strongest wash
t he dared give me, besides another medicine. I also had
·tric treatments once a week.

·very much discouraged, I finally turned to Christian Sci-
e, and after the first treatment was so fully convinced of
uth's healing power that all my medicines were thrown
ay. I had also been doctoring for other physical disor-
·s, but I went away for a six weeks' visit with no other
nedy than Christian Science. After a few treatments the
.charge stopped, and I am thankful to say that my hearing
ıdually returned. The healing is now complete. All other
ysical ailments have been healed by this saving truth, and it
hard to realize that there was a time when I was seldom
·ling well. I am indeed thankful for many other proofs of
ıd's care.—FLORENCE SPELLMAN, Janesville, Wis.

I wish to testify to the wonderful power of Christian
ience in the healing of my little daughter of spinal menin-
tis. In February, 1913, she was taken very ill, being
ıconscious for twenty-four hours before we could obtain
lp, as we live in the country and it was the middle of
nter. My husband telegraphed to a Christian Science prac-
ioner, who began treating her at once. In six days, when
all appearances she was slowly passing away, she sud-
·nly regained consciousness, and from that time continued
improve, so that in a month she was able to go out to
lay. Her back is perfectly straight and her thought quite
ear. We had been studying Christian Science only a short
hile, so there was much fear to be overcome.

The same child had been healed of bad sores on her face and
ınds shortly before this, entirely by absent treatment. I am
ıdeed most thankful to God for His goodness, and also very
rateful to all those who have helped me to understand even
little of this wonderful truth.

LUCY E. FOX, Wapella, Saskatchewan, Canada.

From Our Exchanges

[Prof. John Reid Shannon, S.T.D., Ph.D., in *Zion's Herald*]

All the dogmatic beliefs in which men have embodied their religious ideas may burst like soap-bubbles and Christianity itself be no more affected than were the stars by the overthrow of the Ptolemaic system of astronomy. If both the emanation theory of light and the wave theory of light and a thousand other theories of light were blown to the winds, still the sun would shine in the heavens; its solar splendor would remain undimmed. The different theological schemes that have crystallized about the religion of Jesus are no more a part of his religion than are the different theories of light a part of the sun.

Systems of theological thought are subject to perpetual changes. A boy grows, and his trousers and jacket are not large enough for him when he gets to be a man. Such changes are as inevitable in regard to religious beliefs as they are in the matter of clothes; they must always be going on, unless man ceases to advance, for they inhere in the very fact that the human race is finite and is in process of development in an infinite universe. Growing religious thought cannot be kept back; trying to keep it back into old forms of expression is like trying to crowd an oak tree back into the acorn or an eagle back into its shell. Jesus speaks of the uselessness of such an attempt: Do not put your new wine into old wine-skins. If you do, the fermentation will burst them, and the wine will be lost and the wine-skins ruined. Put your new wine into new wine-skins and you will keep both.

[*The Congregationalist and Christian World*]

There is a rest of the soul in going bravely about our business in the face of difficult or challenging conditions. While we weary ourselves with sterile anxieties and the fretful criticism of social and political conditions, harvests are being gathered, corn is growing, and the ministrant seasons pursue their blessed and appointed courses. A confidence which looks for its wages or its dividends to "seed-time and harvest" and brotherly interchange of effort for the satisfaction of human need, is never disappointed.

A vast deal of our physical weariness is the outcome of strains and tensions which are really rooted in the want of confidence in such blessed and unfailing realities,—in the lack of trust in God. His is the true sanctuary of the soul's rest. It is after all our nearness to Him which counts, our sense of the unseen and eternal. The channels by which His healing tides reach our weary or troubled spirits have many names, but how He reaches us does not greatly matter; the main thing is that some new sense of a power beyond ourselves should come in to heal, exalt, and sustain us.

[*American Lutheran Survey*]

Altruism is as old as the Christian religion, as old even as the religion of revelation. So is patriotism, and among the true followers of God there has never been any conflict between these two things. The Christian altruist recognizes the necessity of individual regeneration and the presence of the love of God in the heart. A regenerated heart filled with the love of God has no place in it for selfishness, for envy, for false pride, or for enmity. As "God is no respecter of persons" in the offers of His grace, so the Christian citizen is impartial in desire and effort to bring good to men of all races and nations.

This is the time for the leaders in the church of Christ, especially those who have labored long for the evangelization of the world, to take part in the discussion involved in

Digitized by Google

national honor, national rights, and the exercise of national power. This is the time for Christians to make emphatic protests against the spirit which produces jingoism and incites fear and hatred in one nation against another, and there are new opportunities and possibilities in the declaration and application of the fundamental truths of the Christian religion.

[*The Christian Work*]

If what we have said is true of Christ's claim to world sovereignty, then it is our duty as preachers to make this central in our preaching as we have never done before, and to apply it to the great issues which now confront us, in order that we may generate the public sentiment which is to be our ally in the great enterprise to which we are committed. We must apply it to the causes of war, showing that back of all the individual blunders of diplomatists and statesmen lie the twin evils of selfishness and unbelief, against which in every age it is the duty of the Christian preacher to wage ceaseless war. We must apply it to the remedy for war, showing that back of treaties and courts and international police, and whatever machinery we may devise to express and enforce our new ideals, there must be a new spirit, a spirit of brotherhood which is the spirit of forgiveness and trust and love; and we must begin the application of these principles at home in our own lives as individuals, testing ourselves as we have never tested ourselves before, to see whether as a matter of fact we are truly Christians in that unconscious faith that speaks through acts and sentiments more loudly than through words. We must apply it in our own social class, reminding the men and women with whom we are most intimately connected that the lines which separate us into social groups are not ultimate, but only subdivisions in the organization of the one great family of God. We must apply it to our country, testing our own conduct toward other nations by the principles of Jesus Christ, preparing ourselves for whatever work we may be called to do as interpreters and helpers of our sister nations at strife, by showing in our own conduct as a people our loyalty to the principles we preach.

[*The Christian Register*]

People who have it in them to do so will make life serve their will, not dull it; liberate their souls, not confine them; and they will get used to things at first difficult, so that they have greater freedom by means of them than they could ever have had by not going through them. The discipline of experience which enables one to bear it, emancipates the spirit. We do unconsciously and without effort what at first took all our souls, and our souls range above our tasks, ever acquiring new possessions, depositing new capital, and exploring new possibilities of power. In this way it is literally true that men may "run, and not be weary," may "walk, and not faint," and that their minds may thereby be set free.

[*The Universalist Leader*]

It is not enough that our lives shall be made beautiful with the tenderness of the dawn and the splendor of the sunset; they must also be glorified with the luster of the noontide, ennobled by the duties it demands and enriched with the joys which it bestows. And indeed the last is essential to the first. Only as we have learned to prize what is near shall we find a like value in the same things when they are distant. Only in so far as we are faithful to our present duties are we justified in expecting a happy future. Only in proportion as the interests of today are rightly cared for will their memory sweeten the past when today has become yesterday and tomorrow today.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.48; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, largest-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1887 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum. Stiff leather cover, single copy $3.00; six or more, each $1.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $1.50; six or more, each $1.25.

Retrospection and Introspection. A brief sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, and affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather, gilt edges, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance both to the history and to the readers of Christian Science; containing the sermon or sermon written for the dedicatory service of the Mother Church, January 6, 1895, and scathing rebukes to the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and comprehensive statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, 28 large pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 48 large pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including the first volume, 291 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.

Christian Science *versus* Pantheism. Dr. Eminitus' Message delivered at the Communion Service of Mother Church in Boston, June, 1898. A clear and concise refutation of the charge that Christian Scientists are Pantheists. Pebbled cloth covers, 15 pages, single copy 30 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 30 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 30 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 56 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy; music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

A plan to develop 2,000,000 electric horsepower by damming the lower Niagara river just above Queenston, Ontario, and Lewiston, N. Y., is reported to have been presented to the New York state authorities by the same man who introduced the original power development bill in the New York state legislature in 1886. The proposal calls for the expenditure of $100,000,000, which would cover the damages to the Gorge route. The dam would be ninety feet high. The Whirlpool rapids would be done away with. The drop of the river from the falls to Lewiston is one hundred feet. The waters of the river would be impounded back to within a mile of the falls. The falls would not be damaged, and the creation of the new falls at Queenston would compensate, it is claimed, for the loss of the rapids. One million horse-power would go to New York and a like amount to Ontario. By taxing the companies five dollars per horse-power, $5,000,000 would be derived by each government.

The historic edifice in New Orleans which has housed the United States mint since 1838 is to be turned over to the city for use as a museum or any other public purpose desired. Since 1911 there has been no coinage conducted in New Orleans, but the mint building has been used as an assay office. Its vaults continue to be used to store $22,000,000 in silver dollars against which silver certificates have been issued. The mint was established by an act of Congress March 3, 1835, and the site was donated by the city of New Orleans. The present building was completed in 1838 at an original cost of $182,000. The dimensions of the structure are 282 by 108 feet.

It is pointed out by the United States government that the opening of the new naval radio station at Darien, on the Canal Zone, does not add to the facilities for the transmission of commercial messages. The new station will be used exclusively for government business. Primarily it will be used as a means of directing operations of various kinds on the Canal Zone and keeping in communication with ships at sea, but it will also be used freely by the department of commerce for the sending of its official messages. Out of a total of forty-seven naval radio stations now in use in various parts of the United States or its possessions, twenty-one, it is pointed out, are open to commercial messages, the others being reserved strictly for official business.

The last California legislature passed a bill for keeping Santa Catalina island waters closed for three miles to netting for bait. The island, about twenty-two miles long and from one to four and a half miles wide, is the meeting ground of many great game-fishes indigenous to the locality,—the leaping, the long-finned, and the yellow-finned tuna, the white sea-bass, and the yellowtail. The island waters were regarded as proper prey by the fish-market men. The previous netting had resulted in a decline of half in the number of fish, the leaping tuna in particular having practically disappeared. The establishment of Santa Catalina as a fish reservation is regarded as a triumph of the policy of the conservation of natural resources.

Two hundred and fifty-six international, national, and state organizations and societies will hold individual meetings of from one to fifteen days' duration between Aug. 1 and 30 at the Exposition in San Francisco. These conventions are industrial, commercial, educational, and technical in nature. The convention of greatest importance will be that of the National Educational Association. Its sessions will be held in Oakland, just across San Francisco bay, and will extend over the period between Aug. 16 and 28, inclusive. The attendance at this convention is expected to be the largest of any held so far. Delegates and visitors are expected to total forty thousand persons.

A series of hearings will be held by the international joint commission of Canada and the United States early in September relating to the levels of the Lake of the Woods and its tributary waters. The lake covers an area of over eighteen hundred square miles, and many industries have been established on its waters. The problem which is to be solved is the recommendation to the two governments of the establishment of such levels on the lake as will best serve the interests of all concerned on both sides of the boundary—power interests, agricultural interests, transportation, fishing, lumbering, and other interests.

Students of the University of Chicago, assisted in securing positions through the university employment bureau, earned $148,518.90 last year, the bureau reports. The largest amount made in any one occupation came through housework and cooking. Twenty-three men and eighteen women made $14,970.15 in this way, the average being $210.84 for the 780 hours spent. Work at the polls brought in $1,556.05. In all, some 1,170 students obtained work through the university bureau, and nearly all of them were men.

Receipts for packages deposited in the parcel post, upon payment of an extra fee of one cent, will be issued after Sept. 1, in accordance with an order issued by Postmaster-General Burleson. This will enable persons who deposit goods with the government agency to prove to customers, in case they are not delivered, that shipment actually was made. Merchants now have no way of proving that goods have been sent by parcel post, and when the goods are lost in transit the customer sometimes insists that the shipment was not made.

The Lincoln highway across the continent will pass through Baltimore and the District of Columbia. The original decision was not to include these cities, but to proceed due westward from Philadelphia to Gettysburg, thence to Pittsburgh. Under the new plan the highway will drop southwest from Philadelphia to Baltimore, thence farther southwest to Washington, and thence northwest to Frederick, Md., and so on to Gettysburg.

In preparing the ground for the erection of a railway depot at Ventimiglia, Italy, on the spot where the ancient Roman town of Intemelium once stood, many objects of archeological interest have been excavated. The discoveries have been made along the Roman Via Aurelia and are supposed to date from the first century. They comprise receptacles for ointments, chalices, buckles, earthenware, and goblets of delicate workmanship and ornamented with floral designs unknown to the finds of this district.

The steps of the United States capitol leading down from the rotunda to the capitol plaza are now being removed in accordance with a design of Congress, and will be replaced by those of granite. The old steps were put in place by the administration of President Andrew Johnson. They have been bought by the owners of the *Cincinnati Enquirer* and the Washington *Post*, and will become a part of the estate garden at Friendship, his country estate in the outskirts of the city of Washington.

At the annual convention of the conference on uniform state laws, which met in Salt Lake City Aug. 10-16, a concerted effort was made for the harmonization of varying statutes dealing with land titles. Eleven of the twenty-eight states have enacted legislation designed to simplify the land registration and transfer system. They are California, Colorado, Illinois, Massachusetts, Minnesota, Mississippi, North Carolina, New York, Oregon, Ohio, and Washington.

A society to encourage agriculture and industries in Costa Rica has recently been formed in Port Limon. Its first efforts will be to furnish free of cost to planters and farmers all kinds of seeds of vegetables and grains that will grow in that climate. Leading business men in the cities, as well as the agriculturists, have joined the organization and promise support it, in order to build up new industries to supplement the banana industry.

California is described as "the raisin state" by the department of agriculture. According to the last census, the production of raisins and dried grapes over the whole country amounted to 169,245,161 pounds, and of this total California furnished 169,210,878 pounds. It is estimated that there are now 130,000 acres planted to raisin grapes in that state.

Beginning Aug. 2, 208 automobile rural delivery routes, in eight states, went into operation. All told, 298 routes have been authorized. The routes vary in length from thirty to sixty-four miles, and the carriers will be paid from fifteen hundred to eighteen hundred dollars a year.

Craigie House, the colonial house on Brattle street, Cambridge, Mass., where the poet Henry W. Longfellow resided for a number of years, is to be held as a memorial. To this end the care of the building has been entrusted to a corporation.

The ministry of public works of Venezuela as an experiment has paved a section between Principal and San Mauricio streets in Caracas with macadam. The results have been excellent, and will probably lead to further improvements.

Figures compiled by the local railroads predict that 5,000 car-loads of peaches from Tennessee and Georgia orchards will have passed through Chattanooga, Tenn., before the season is brought to a close.

"What I say unto you, I say unto all, WATCH" Jesus

ol. XVII August 21, 1915 No. 51

Teaching in the Sunday School

REV. JAMES J. ROME

TEACHING a class in Sunday school is not a task to be onsidered lightly. The old idea of taking a class of children o teach from a sense of duty, and spending an hour with the upils each Sunday morning, possibly with the feeling of aving done something meritorious, and calling that Sunday chool work, is a great mistake. Such a notion must give lace to something more practical and genuine. Sunday chool work is a vital and important part of the church work, nd not a mere auxiliary.

The Sunday school teacher may well ponder the responsiility of undertaking the task and carefully examine himself s to his fitness, for much will be demanded of him. He needs o be possessed of keen discernment, clear perception, spiritality of thought, patience and earnestness in pursuing the work. Above all, perhaps, he needs that humility which nables him to see his own personal inability to do anything, and on the other hand to know the great possibilities of our work when divine Mind is reflected through His idea. Thus the teacher may be emboldened to take hold of the work and do it rightly, not in his own strength, but by the support and power of divine intelligence.

In dealing with the members of a Sunday school class much charity and consideration is needed, since there are peculiar conditions to be dealt with. It is always a pleasure and a satisfaction to teach those who have come to the class thirsting for the truth and eager to drink it in, but unfortunately this does not characterize the attitude of all. There may be many who have been impelled to come for very different reasons. Some may attend from a sense of duty, some from the pleasure of association, and some even in unwilling compliance with a parental requirement. The teacher then may have the task of endeavoring scientifically to stimulate his pupils with a desire to learn, as well as of teaching them what to learn and how to learn it.

However, when we consider the result which may be attained, it is well worth the most patient and persistent effort, for we can never tell how far-reaching our influence for good may prove. Early impressions are lasting, and for this reason it is important that they be correct. Usually impressions are quickly and easily made in childhood because of the plasticity of the young mind; they are likely to enter largely into the formation of character, and so will influence the life of the child in subsequent years. Again, who knows what comfort and help may be carried into the child's home through impressions received in the Sunday school class. If the right thought is imparted, it is sure to produce good results.

There is also the work of correction to be attended to. There may be encountered some erroneous condition of thought as the result of wrong influences, caused perhaps by wrong associations, peculiarities of disposition, waywardness, carelessness, indifference, all largely owing to a lack of discipline,—mental errors having been left to grow wild, like weeds in a neglected garden. The Sunday school teacher, having only one hour in the week in which to counteract and correct these wrong tendencies, surely has need of faith, firmness, and fortitude; but he will find courage in the knowledge that a right thought has all power, while a wrong thought has none, and that one minute of truth can dissipate a whole century of error.

This leads to the importance of emphasizing the spiritualization of thought, for all right thought is spiritual. Mere appeals to the intellect are not sufficient; the teacher must strive to lead his pupils higher. Talks on intellectual research and material scientific discoveries may be interesting and entertaining, but of what spiritual benefit are they? To look "through nature up to nature's God" is legitimate, but to confine thought to nature without looking beyond it, is a violation of the first and great commandment, "Thou shalt have no other gods before me."

The natural tendency of the child's thought, as well as that of every other person, is to run off at a tangent on some material line of speculation or investigation. It may be true that we have not yet reached a point beyond intellectual development, and that certain branches of human learning are still useful. This is true, however, only so far as they aid us in outgrowing them, and if made use of in Sunday school, it should be only as a means by which to lead up to higher spiritual things. For instance, the understanding of mathematics can be used to illustrate the difference between human belief and spiritual understanding, or the changing theories of material science to show the inadequacy of human theories to explain existence; but we should never allow the illustration to absorb the attention and so obscure the pupil's sense of Truth.

The analogy between the conditions of nature and the laws of Spirit was used to good advantage by Jesus in his parables. He used his need for a drink of water as an introduction to the teaching which led the thought of the woman of Samaria to the water of life, and brought from her the request, "Sir, give me this water, that I thirst not, neither come hither to draw." The story of how Jacob dug the well, or a dissertation on the chemical properties of water, would have left her thirsting heart without refreshment. Jesus was always alert to grasp an opportunity to lead thought to God as the ever present Father and friend, and never did he leave his hearers stranded on the rocks of materiality. So, too, the Sunday school teacher who by his teaching and example has led the thought of the pupils away from self, sin, and materiality, to rely upon God, Spirit, as their counselor, healer, guide, and protector, has earned the plaudit of "Well done, good and faithful servant."

In "Science and Health with Key to the Scriptures" (pp. 235, 349) Mrs. Eddy writes: "The pure and uplifting thoughts of the teacher, constantly imparted to pupils, will reach higher than the heavens of astronomy." "The chief difficulty in conveying the teachings of divine Science accurately to human thought lies in this, that like all other languages, English is inadequate to the expression of spiritual conceptions and propositions, because one is obliged to use material terms in dealing with spiritual ideas. The

elucidation of Christian Science lies in its spiritual sense, and this sense must be gained by its disciples in order to grasp the meaning of this Science. . . . Speaking of the things of Spirit while dwelling on a material plane, material terms must be generally employed. Mortal thought does not at once catch the higher meaning, and can do so only as thought is educated up to spiritual apprehension."

"The great commandment"

RALPH B. SCHOLFIELD

In answer to the lawyer who asked him which was "the great commandment in the law," Jesus replied, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind." Inasmuch as the answer was given by one so preeminently spiritual and practical as was Jesus, it is only reasonable to assume that he did not place before the lawyer an ideal wholly beyond the latter's grasp. It is probable, rather, that Jesus answered him as man to man, displaying as he ever did that wisdom, tact, and foresight which attracted the multitudes and silenced his accusers. His answer to the lawyer was straight and to the point, and it should immediately have made the lawyer question his own concept of God. What was the God whom he was to love with all his heart?

Had he wished, the lawyer could have obtained the answer to that question by observing the life of Jesus, his works of healing, and his method of teaching. Whether he did this or not we are not told, but it does not alter the force of Jesus' reply. To any or all who may ask themselves what is the God whom they must love with all their heart, there is still the possibility of obtaining a correct answer by a study in the Bible of the life, the works, and the teaching of Christ Jesus; hence the answer made by him to the lawyer is as imperative and as true now as it ever was. His words were never merely theoretical, but always practical, and had not this great command been true and demonstrable, it could never have lasted through the intervening centuries and retained its vitality.

Throughout his teaching Jesus implied the importance of this great commandment. It is, as it were, an extension of the first commandment given to Moses, and for all we know it was constantly used by the Master in addressing all classes and conditions of men. Christian Science reiterates this command today, and in so doing it is not placing before us an ideal wholly beyond our grasp, however much human affairs may seem to obscure this ideal. On page 9 of Science and Health Mrs. Eddy asks, "Dost thou 'love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind'?" Then she says, "This command includes much, even the surrender of all merely material sensation, affection, and worship."

In the center of a city, in the rush and hurry of modern business, amid the keen competition, the financial activity or inactivity, and in spite of so much that is dishonest, it is possible to listen to and obey the command which Jesus gave to the lawyer. Is it conceivable to think that Jesus would have stated this command as a great vital law, if it were not possible to obey it under all circumstances? Moreover, would it have been given to us by one so wise, were it not of incalculable value and absolute necessity? The more apparently impossible it may seem to recognize this law, the more need for its emphasis. The intelligence and the power that lay behind Jesus' words and works are what we need to love, for they are manifestations of God. Christian Science is bringing to us the understanding of this power and intelligence, and to seek to love with all his heart that which reflects God, is a matter of vital importance to the business man. It means his advance from ignorance and fear to understanding, from belief in the power of envy and hatred to the knowledge of their powerlessness, and from belief in limited opportunities and opportunities to the knowledge of the supremacy of infinite Mind, or God.

It is therefore important for the business man to obey the command of Christ Jesus and to love what he knows as God with all his heart. It is easy to underestimate the necessity for constant effort to hold this ideal before one. The arguments of the human mind in its methods of transacting business, the temptation to believe that Christian Science is for study during solitude and that one has not time to think of it, are all suggestions which if entertained greatly tend to bring on a state of apathy. To prevent such a condition from arising, and to hold before humanity the fact of the ever-presence of divine Mind, a splendid opportunity is furnished to Christian Scientists in several of the business centers of the world's large cities. This opportunity is in the form of a Christian Science reading-room, where it is possible at all times, and especially when human affairs are trying, to place God, divine good, first in our hearts and minds, and to watch the marvelous healing effect of obedience to the first and great commandment. Thus we are enabled to help ourselves and to lift up the influence of the Christ in our lives, a sacred healing influence that will "draw men" unto it.

One such use of a reading-room was clearly shown to the writer, when a young man out of work came to read regularly every day for several weeks. When first he came to the rooms, he knew almost nothing of Christian Science. Within a short time, however, he obtained work which though not very remunerative gave him employment, and he continued to visit the reading-room nearly every day for some period, saying that he knew Christian Science had helped him to get work, and that it would continue to help him to advance in his work. After some weeks he obtained quite a good position, and though it took him away from the district where the rooms were situated, he freely acknowledged his indebtedness to them. Perhaps one of the most remarkable and yet the most natural features of the case was that from the time he entered the rooms to read regularly, his appearance improved in every way. This we know to be the natural outcome of the influence of Christian Science on those who seek it with all their hearts.

Man's Heritage of Joy

LOUISE KNIGHT WHEATLEY

The consciousness of the Christian Scientist is like a sweet, still garden, wherein each day is unfolding new blossoms of thought, nourished by the dews of faith, refreshed by the winds of hope, and quickened into life and beauty by the warm sunshine of love. It is a place of perpetual springtime. As the world awakens each year from its long winter's sleep, so do mortals, too long asleep in material beliefs, awaken sooner or later under the transforming touch of Truth to find themselves in a new world of loveliness, the "new heaven" and the "new earth" of John's prophetic vision. The activity which unlocks the frozen shallows of the brooks, which flings green garlands on every bough and coaxes the frail anemone to uncurl its shy petals in the sunshine, is but a type of that spiritual activity which makes "the wilderness and the solitary place" of some struggling human consciousness to bud and "blossom as the rose."

Mrs. Eddy asks, "Who that has felt the loss of human nce has not gained stronger desires for spiritual joy?" en she adds, "The pains of sense quickly inform us that e pleasures of sense are mortal and that joy is spiritual" cience and Health, p. 265). Joy, then, being spiritual, but a part of man's eternal heritage. God's obedient idea s a right to be happy, because it is ever knowing and doing e Father's will. It is just as natural for man to be happy it is for a bird to sing. Joy is a spiritual possession, and necessarily follows that it is impartially and universally stowed,—an ever present fact, as changeless and eternal as e Mind from which it emanates.

But what says mortal mind to all this? It flatly contra-cts it, of course, just as it attempts to contradict and verse everything that is true. It says that joy is far from ing a universal possession, but is instead some rare gift lotted to a favored few. It says that joy is not the normal ate of man, but the abnormal. It insists that man is aturally "of few days, and full of trouble." Job once lieved this, but it was before he had learned to differenti-te between frail humanity and the perfect man of God's reating. Popular opinion on this subject has not greatly anged since that day when beggared self-righteousness, orn of all it held most dear, sat in dust and ashes, listening o the false sympathy of false friends.

Job was supposed to be happy when he was at ease in per-onal sense, and to be unhappy as soon as this sense of ease as taken from him. The world in general agrees with Job; t says that a man's happiness consists "in the abundance f the things which he possesseth," so it straightway goes to ork to accumulate "things." It says that joy is synonymous ith wealth, power, fame, worldly success, gratified ambi-ion, ample leisure for self-indulgence,—all that stands for 'the lust of the eyes, and the pride of life." It therefore pends its short span of time in pursuing these, as children ursue some dancing will-o'-the-wisp, yet all the while know-ng that when this evanescent thing called happiness is once ttained, it will be retained only so long as chance and change decree, and that at any moment a sudden turn of that elusive weather-vane called "circumstance" may send it floating provokingly away into the distance.

How it rests one, after thinking of these things, to remem-ber that the man who had as little in material possession as any one of whom the world has ever known, once included "my joy" in the rich legacy which he left to his disciples. In the hour before Gethsemane, Christ Jesus said to those sorrowing hearts, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full." His joy, when he was about to be crucified! Yet as we read those matchless words spoken that day in the "upper room" at Jerusalem, we feel sure that in the face of him who uttered them there must have shone that look of holy joy which shines in the faces of all who follow him, because it is the clear and undisturbed radiance of right thinking.

The only sort of joy which really exists, loses not one iota of its pure serenity through the empty flutter of passing events. Paul once wrote that he rejoiced in tribulation. Joy does not mean that one has run away from trouble; it means that he has overcome it. Joy has proven the affluence of its God, and is giving thanks. It is not the untried, undisturbed tranquillity of a garden bathed in June sunshine; rather is it this same garden uplifting fragrant chalices of gratitude because of the refreshing of the rain. It is the rainbow blossoming into beauty against the black-ness of disappearing storm-clouds. It is the smile that shines through tears. It is that which has had its starless midnight and at dawn has heard the thrush's song.

In a certain quiet room there stands a vase of iridescent glass, delicately sensitive to the tint of any flower confided to its care. All day long it sparkles like a fleck of impris-oned rainbow, flinging out soft blues and purples and opal-escent rose color, a thing of perpetual beauty, changing its hues each hour as the sunshine shifts its point of view. But it is when the sunshine goes away and evening shadows creep into the room that it grows most beautiful of all in the eyes of its possessor; for while it loses its color, it still shines on, like some clear, steady little star, long after everything else around it has melted into darkness. Thus it reminds one of the true Christian Scientist, lifting his gaze above the clouds of sense, rejoicing in the sunshine, merging himself with delicate self-effacement into the general harmony of his sur-roundings, a source of unfailing light and gladness to all about him.

In "Miscellaneous Writings" our Leader says: "The lives of great men and women are miracles of patience and per-severance. Every luminary in the constellation of human greatness, like the stars, comes out in the darkness to shine with the reflected light of God" (p. 340). "Your joy," said Jesus, "no man taketh from you." Then shine on, little star! Who knows how many are watching for your light? Who knows how many, now wandering afar in the darkness, shall see your steady glow, and come out from among the shadows to find, as you have found, the eternal sunshine of Love's abiding presence?

Supply Spiritual

FRANCES A. HALDANE

In Christian Science we are taught that God, divine Love, is the source of supply. Just what this may mean will unfold in various ways through the years spent in learning Love's lessons. At first it will probably mean to us a sense of God's love toward us; that we are His children; that He will not leave us unprovided for; that we have a right to expect His ample provision, and that we shall not be disap-pointed. Jesus said, "Your heavenly Father knoweth that ye have need of all these things."

Then as we work on, realizing God's love toward us, we learn that the problem of supply demands that we reflect divine Love. In other words, we must keep the channels of our thought clear and loving, that no sense of resentment, pride, bitterness, disdain, anger, or hate may obstruct the flowing of the currents of Love. In Science and Health (p. 2) we read of "the open fount, which is pouring forth more than we accept." That we do not receive more, is some-times due to the fact that we are harboring some thought which constantly shuts out the divine benefits. The work to be done is therefore in our own consciousness, to cast out that which is the opposite of divine Love, to come into accord with the infinite and eternal goodness of the divine Mind. If others have seemingly wronged us, we should feel only compassion for such a perverted sense, that can but injure itself and cannot hurt us if we are resting in a loving con-sciousness and a realization of the divine protection.

Especially must the thought be watched if we are owing a debt. Indebtedness so often in the human mind begets a feeling of humiliation as a consequence of obligation; and there may follow, perchance unperceived, a sense of bitter-ness and resentment. Then the command "Owe no man any-thing, but to love one another," urges us to realize that the primary debt is love, not money, and if the primary debt of

Digitized by Google

love toward the individual and all humanity be paid, the material obligation will be taken care of.

Supply is also the consequent of a more unselfed love. That some lack while others have plenty, is often the result of what seems an almost universal manifestation of selfishness. This takes the form of injustice and infringement of rights, national and corporate as well as social and individual; therefore in making our own demonstration we must realize that we are under and protected by the law of justice. It is ours to demonstrate that, since there is but one Mind, justice and moral sense are universal, and govern on every plane of life, in every circumstance. Since the administration of justice among men is still very imperfect and the human sense of compassion is limited, we must get back of the seeming and realize the universality of divine Love, reflected all over the world. Love's reflection inevitably does what is right to all; it would loose every captive, reclaim and feed every outcast. So in knowing the truth about supply for the world at large, through the realization of universal Love we strike at the impersonal claim of selfishness, and will reap the consequences in the freeing, to a greater or less extent, of our own lives from the results thereof.

Thus at different stages of our journey varying forms of the problem may have to be met and mastered, by holding always to the thought that supply comes not from persons or conditions but, together with every other good and perfect gift, "from the Father of lights, with whom is no variableness, neither shadow of turning."

✧

Christian Science and the Jew

ISRAEL GITTELSON

WHENEVER and wherever I attend a Christian Science service, I find a goodly number of Jews enthusiastically taking part in the services and testifying to the grand verity of this teaching, and I desire to express my profound gratitude for the bringing of so many of these my people into this wonderful truth. It is recorded in the Scriptures that the Master enjoined his disciples to go "unto the lost sheep of the house of Israel." He also said, "Feed my sheep." It is told of him that he preached in the synagogue and in the temple at Jerusalem, but although "he came unto his own, . . . his own received him not." I am therefore very grateful that through Christian Science we are now coming into our own, and it should be particularly gratifying to all Christian people that another statement of the Master is being fulfilled, "And there shall be one fold, and one shepherd."

I was born a Jew of the tribe of Judah, and raised an Israelite, that is, in the fear of the Lord, and now I am a Christian Scientist, to me a grand evolution, a spiritual growth. I have come into the understanding of man's unity with God, the selfsame God of Israel whom I have learned to know more intimately as the ever present God, who is always ready and willing to aid and guide us in everything that is good. Christian Science teaches that God is Love, "the underived, the incomparable, the infinite All of good, the *alone* God" (Miscellaneous Writings, p. 249).

I was once asked by a Jewish rabbi why so many Jews go into Christian Science, and he added, "Where wilt thou find a God like our God?" The Christian Scientist might respond by saying, "Where will you find a God like our God, who is Love, and Life and Truth, the infinite Mind?" It is recorded in the Hebrew writings that a certain centurion came to Rabbi Hillel, the compiler of the Talmud, and said: "I came to ask you to teach me this great religion of yours, for I must know your God. Can you teach it to me this day, for before the setting of the sun I must return to camp." The rabbi replied: "You may return to camp immediately, for I will teach you this religion of ours in one minute, and that is, 'Love thy neighbor as thyself.' You will then know God."

I can understand this answer more clearly since I became interested in Christian Science, for our text-book tells us that God is Love. Again, it is very reasonable that many Jews should accept Christian Science. It takes at least a vital spark of religion to be susceptible to this truth, and the Jew has it. No matter how clothed it may be with ritualism, dogmatism, and superstition, that spark of religion is there, inbred in the innermost part of his nature since the days of Abraham, and when the breath of Christian Science is directed to it, it is soon fanned to that fervent heat of understanding which melts away all superstition and prejudice and welds the old faith and the new understanding in everlasting union.

It is now some five years since I became interested in Christian Science. My physical condition was then at its worst, and I needed help, but could not get it in *materia medica*. I finally turned to Christian Science and was healed. I have studied the Hebrew Scriptures in the original from childhood, but it is since coming into Christian Science, and through the close study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, that I have come to understand why Moses represents the integrity of moral law, and Jesus of spiritual law. The Jew is quick to see the truth if he only starts to look into it, and hundreds of Jews are becoming wise to the fact that the rejected Jesus of Nazareth is the Messiah who revealed the eternal Christ. How pertinent are the words of the great Teacher himself: "Did ye never read in the scriptures, The stone which the builders rejected, the same is become the head of the corner: this is the Lord's doing, and it is marvelous in our eyes?"

✧

[Written for the *Sentinel*]

"Ever with me"

ADELA V. SCRIMGEOUR

I LAY upon a hillside cold and bare;
I had no friends, no home, no means to live,
When on my dull ears struck a voice divine,
"Son, thou art ever with me; all is thine."

A hope sprang up within my darkened heart.
If all is mine, how was I ever poor?
If Love is ever with me, I can rest
My head forever on the Father's breast.

No foe could follow where I chose to roam,
For Love is my protector night and day.
All hate fled powerless when the searching light
Of Love divine illumined all the night.

And ever as I went upon my way
Sin, sickness, sorrow fled from off my path.
"Son, thou art ever with me," rang the voice,
"All that I have is thine; live and rejoice!"

So now I roam upon that hillside bare
To seek for those distressed as I had been.
For when I fold my hands in idle sleep,
I hear a voice which bids me feed His sheep.

And when I raise the tired and drooping head,
And see the hope return to hopeless eyes,
What joy on earth could ever equal mine?
"Son thou art ever with me; all is thine."

Selected Articles

[Judge Clifford P. Smith in *The Times*, Hartford, Conn.]

The sermon on "Christian Science and Christian Logic," of which a notice and a report were published in recent issues, presented a curious contrast with Christian logic as found in the New Testament. The thesis of the sermon in question was that the cures which the speaker credited to Christian Science do not prove the soundness of its tenets. This was maintained because cures have occurred when "a certain power of mind over the body" has been brought into play by "touching the bones of saints," by "humbugs," and by "quack medicines," as well as by Christian Science. I submit, however, that the reverend and learned gentleman left the subject at the precise point where an intelligent inquiry should begin.

An impression on the human mind, by whatsoever means it may be made, is always liable to produce a corresponding effect on the human body. Why? Because, to quote from Mrs. Eddy, "*mortal mind* and body combine as one" (Science and Health, p. 409). Every cure of a physical disorder furnishes some evidence of this fact, the proof being most distinct when no palpable agent or instrument can be seen. The cures wrought by Christian Science, therefore, furnish evidence of the proposition just quoted, but they are not alone in doing this. They draw apart from all similar phenomena, and furnish proof of something more than the proposition just stated, by reason of the method which they instance and the Principle which they illustrate. In other words, Christian Science healing is distinctive because it results from the action and power of God, the divine Mind, over the so-called human mind and its embodiment. Thus Christ Jesus distinguished his healing work from all other curative efforts, even from human mind-cures, when he said, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." In short, he pointed to the method and Principle of his work as the distinguishing factors.

And did not the Master speak of his healing works as having evidential value? He certainly did, on many occasions. For instance, "Though ye believe not me, believe the works: that ye may know, and believe, that the Father is in me, and I in him." Even the Jewish multitude was more logical than this minister, in its appreciation of spiritual healing; for, as St. Matthew relates, "when the multitudes saw it, they marveled, and glorified God, which had given such power unto men." It can be said, therefore, that the cures wrought by pure Christianity or Christian Science prove that God is, and that His law and power are operative and available to men for the destruction of evil, including disease. It is for this reason that Christian healing has turned thought to God in this age, and will naturally do so, even as it did when it was first practised.

❖

[W. D. Kilpatrick in *Pontiac* (Mich.) *Press Gazette*]

A recent issue, reporting the sermon of an evangelist holding meetings in your city, contains a brief reference to Christian Science which may be misleading to your readers, and concerning which I should like to make a correction.

Christian Science is a religion based on the teachings of the Bible and on the words and works of Jesus, and is held by Christian Scientists to be in strict accord with the spiritual interpretation of the Bible at every point. Critics are pleased to offer divers and sundry tests of their own creating, whereby they would like to have Christian Science judged; but the test imposed by Jesus is probably as safe and reliable as any that could be applied to religion, and is one which Christian Scientists are very glad to have applied to them.

Jesus said, "By their fruits ye shall know them," and further, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Then in the sixteenth chapter of Mark he gives us a brief outline of what these works by which we are to be judged consist. He says: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." These are the real tests whereby any religion should be judged, and they are the tests by which Christian Scientists are pleased to have their religion compared with that of other religious denominations or systems.

Mrs. Eddy spent many years in unselfish but thankless toil, with the Bible and in prayer, in preparing to give to the world this great truth which is today being so universally accepted throughout the world. For years she labored in meager surroundings, with little or no means, working unremittingly for the betterment of mankind. It was only in later years that larger means came to her, and this but stimulated her endeavors in behalf of the great work to which she had devoted her life, for we find her living simply and lovingly, building solely for the future of Christian Science.

The revenues derived from the sale of books were devoted by Mrs. Eddy to the establishment and perpetuation of the work of Christian Science. Those of us who are fortunate enough to include her books among those for our daily reading, do not feel that the price thereof has been placed too high; but quite to the contrary, we would gladly pay many times the amount asked for the books, if it were necessary to do so to obtain them. Today the revenue derived from the sale of Mrs. Eddy's works and other Christian Science literature is devoted to the work of spreading this great truth throughout the world, that all mankind may be blessed.

❖

[J. Arnold Haughton in *Radcliffe* (England) *Times*]

I would like to state that the object of my letter in answer to Doctor ——'s criticism of Christian Science was to insist upon the fact that Christian Science is a religion which has a spiritual message for mankind. It seems a pity that because in obedience to the commands of our Master it also includes physical healing within its faith, it should be spoken of as rather mean and selfish. It is true that physical healing is the element of Christian Science which has most largely arrested the attention of the world; nevertheless that does not make it less true that the primary object of Christian Science is not to heal, but to take away the sins of the world.

The physical healing is a sign or proof of spiritual understanding, as I stated, but from this it does not follow that it should be the primary aim of Christian Science to "produce those signs and proofs, and when they are produced the work of Christian Science is over." That might be so if the physical healing were a sign of complete spiritual perfection; but no one, I think, has ever urged that it is. Moreover, many Christian Scientists have not stood in need of physical healing, but have been attracted to this religion by its spiritual power and beauty.

It is quite true, as the doctor says, that a healthy man does not want to talk about his body, but experience teaches that the sick person usually does; and Christian Science operates to enable the latter to cease from talking or think-

Digitized by Google

ing about the body, so that it has not been "so engrossed with the physical body as not to have thought of any special treatment for the body politic or even the body ecclesiastic." Christian Scientists are fulfilling their part in public life and citizenship all the better because they are Christian Scientists. It is almost trite to say that the character of those bodies is only an expression of the character of the individuals of whom they are composed, and that therefore the real solution of problems of public and social morality is to be found in the corrected lives and ideals of individuals as such. In this connection Christian Scientists deny the reality of evil in the sense that all that is real is eternal, but they do not pretend that it does not exist in human consciousness as a false belief. Its falsity conceded, its unreality premised, its destruction becomes a logical necessity.

In conclusion I am glad to acknowledge that there was an element of commendation in the critic's reference to Christian Science, but undoubtedly his misconception of the subject has prevented him from rightly estimating it as a factor in the religious life of the world.

✧

[E. P. in *Law Notes*, Northport, N. Y.]

Not so very long ago in New York, a Christian Science practitioner, regularly engaged in Christian Science healing, was convicted of accepting fees from his patients, who were glad to pay for his services, and was sentenced to be punished as a criminal. So subversive of liberty and justice did this seem to the then legislature of the state, that it passed a law the purpose of which was in effect to exempt such persons from similar prosecutions in the future; but at the instance of the doctors the governor vetoed the bill. And now very recently another bill, known as the Thorn bill, intended to exempt Christian Science practitioners from the state law requiring physicians to be examined and licensed, has been defeated, ostensibly on the ground that it would imperil public health by permitting persons to practise healing without being subject to any state regulation or supervision, although it would appear that twenty-seven states have enacted laws exempting such practitioners from the provisions of statutes governing physicians, and we are not aware that sickness or death has as a consequence exacted an added toll therefrom.

It is evident, however, that the result of legislation compelling Christian Science practitioners to take an examination, and so to perfect themselves in methods of treatment which they and their religion hold in abhorrence before they can apply their own understanding otherwise than gratuitously, is to discriminate directly against them in favor of other means of healing, as well as indirectly to prevent or hinder from doing so those who may desire to resort to them for relief. And the question which concerns us is, Is such discrimination by government in favor of one set system of medicine just, especially in view of the present state of the world's knowledge on the subject of disease and the proper cure therefor? For be it said on the testimony of the physicians themselves, medicine is at best but empirical. Nor can we think of the changes in professional opinion since the days of John Hunter without the most painful feelings of distrust in all modes of treatment.

In the space of some forty years we have gone through three revolutions of opinion with respect to our treatment of typhoid, a disease of very frequent occurrence and of the most decisive and urgent symptoms. Until quite recently one of the most efficacious remedies for tuberculosis in its milder forms was raw meat, which was given the patient at least once a day; but after a time it was discovered that this had a tendency to generate tapeworms, and as a result the treatment is now practically obsolete. Voicing the sentiment of distrust in the prevailing system of curing disease, Dr. Oliver Wendell Holmes, who was himself a past master in the practice of medicine, said: "Mankind has been drugged to death, and the world would be better off if the contents of every apothecary shop were emptied into the sea, though the consequences to the fishes would be lamentable."

The schools of medicine called irregular have each been compelled to fight their way against the regular school. The old-school doctors, with their powerful political organizations, have persecuted them with a shocking degree of bigotry and intolerance. They have persecuted them through unjust restrictive laws procured by them from altogether too trusting legislative bodies; but in spite of this persecution these new schools of medicine—homeopaths, osteopaths, chiropractics, and others—have been established with more or less success and have gained a greater or less degree of public confidence and favor.

The Hon. Edgar M. Cullen, former chief judge of the court of appeals of New York, in the annual address before the New York State Bar Association, reported in *Law Notes*, March, 1914, speaking on "The Decline of Personal Liberty in America," said by way of emphatic conclusion: "The only way in which our own conduct can be secured against the inroads of paternal or socialistic government is to be alert to protect the conduct of others and to condemn violations of private rights equally whether the violation is of our rights or of those of others." Whenever, therefore, there exists a clear discrimination against one class in the community in favor of another or others, as appears in some states in the case of Christian Science practitioners, it behooves us to raise our voice in protest, unless it satisfactorily appears that such distinction is clearly justified by paramount considerations of a public nature.

Undoubtedly the guardianship of the public health is a sacred trust properly residing in government, and to that end it is justified in employing such means as to it seem most effective to prevent the spread of contagion. But does it not seem that otherwise it ought to allow every citizen to be perfectly free to resort to such means of preserving his health as he desires and believes in? If one wants the doctor, whether regular, homeopathic, or of any other school, he has or ought to have just as much of a constitutional right to choose his physical remedy as he has to choose his church. So, if he believes in Christian Science as a means of preventing and healing disease, his right to resort to that remedy ought to be just as sacred in this free country as is the right of the other man to resort to the doctor and his material remedies.

In the address adverted to above, Judge Cullen thus admirably summed up the subject we are discussing:—

"Surely there is no nobler, none so charitable and unselfish a profession as that of the physician. Yet the persecution which some of the physicians seek to inflict on the Christian Scientists is discreditable. Personally, when ill, if compelled to make a choice, I prefer the attendance of the physician to that of the minister, but others may entertain a different view. It took centuries of time and untold human suffering to establish the right of a man to be saved or damned in the next world in his own way. And the right of an adult sane person to be cured or killed in this world, in his own way, seems to me to be equally as great, unless his disease, being contagious, endangers others, and even in that case it is difficult to see how the attendance of the Christian Scientist can increase the danger.

"Doubtless the requirements of technical education and

Digitized by Google

skill prescribed as conditions for a license to practise as a physician are proper. In default of such requirements we would be subject to being imposed upon by impostors and charlatans. But no one, however, can be deceived by the Christian Science reader except as to the extent of the special intervention of the Deity in human affairs. As to that, a man has a right to believe what he chooses, and the further right to act on his belief. In all Christian churches prayers are offered for the recovery of the sick, and all decent Christians, Friends possibly excepted, believe in supporting their clergymen. The Christian Scientist has exactly the same right to be paid for his services. The sect seems to be unpopular and to have few defenders. That is only a greater reason why we should see to it that its rights be respected."

❖

[Jesse Pickard in *The Tribune*, New York, N. Y.]

May I reply briefly to an editorial in which you express the opinion that Christian Scientists should be compelled by law to qualify as medical practitioners before being allowed to practise their religion for the benefit of the sick? This opinion is, I believe, based upon the untrue assumption that there is some sort of medical supervision over people upon the part of Christian Science practitioners. The fact is that those who go to Christian Science for help, get no medical treatment of any kind, and they are advised by Christian Scientists that whenever there is a suspicion of communicable disease they should consult a regular physician and see that all the health regulations are observed. They call upon physicians for such diagnosis when necessary, even more punctiliously than does the average citizen, and the health records of the state prove this fact.

Those who have exercised their constitutional privilege to rely upon prayer as offered in Christian Science, and who have not, therefore, desired to rely upon drugs for healing, have not been, in all the years of successful Christian Science practice, the cause of spreading contagious disease or epidemics, nor have they subjected others to danger in this direction. It is due to Christian Science to state this, and the records of the health departments will bear it out, however much intentional or unintentional misrepresentation has been advanced to the contrary. At the same time, it may be observed that Christian Science churches, whose members are at least of average intelligence, who are well and happy and helpful members of the community, have sprung up broadcast to testify to the healing efficacy of the Principle to whom the prayers are offered.

The history of Christian Science up to date is a remarkable one, and is good proof that freedom to worship God according to one's conscience, even if that worship goes so far as to rely upon God alone for the healing of disease, is perfectly compatible with protection of the public health. Such regulations as have heretofore governed Christian Scientists in their ministrations to the sick have not included compulsory medical study, because it is very generally recognized by those who understand the nature of Christian Science treatment that it has nothing to do with medical treatment.

Here a distinction should be made between the law which requires that those who practise medicine shall qualify as physicians and the health or sanitary regulations which apply to all citizens under the rules of the board of health or similar authority, and by which in their practice Christian Scientists are governed. These regulations are sufficient to safeguard the health of the people, and have proved so in the practice of Christian Science up to now. It should be recognized that our state and national laws do not require of spiritual advisers, whether clergymen of other denominations or Christian Scientists, a medical training in order to qualify them for ministering either to the sick or the sinful.

It should not be assumed that Christian Scientists are bent upon evading the law relating to the practice of medicine. They neither diagnose nor treat disease, nor do they advise those who come to them in regard to the care of their bodies. Their practice consists solely in ministering "to a mind diseased," as Shakespeare puts it in the play of "Macbeth." This requires no medical preparation, else clergymen should also come under the provision. Is it the province of our government to decide the religion of its citizens and compel them to mix drugs and prayer if they do not so conceive of the divine power? Is the state to say that it is legal to preach the religion of Christ and its benefits, but illegal to practise this religion?

The efficacy of prayer to heal the sick depends upon virtue and Christlikeness, not upon medical knowledge. Is the state to declare that "the prayer of a righteous man availeth much" only when accompanied by medical qualifications, and to declare illegal and unavailable to mankind the prayers of all those who have not so qualified? Such paternalism on the part of the government applying to the practice of the Christian religion is not inherent in our national life. Our citizens have not been trained to expect it or to accept it.

❖

[Robert S. Ross in *The Yonkers* (N. Y.) *Herald*]

A few days ago an item appeared in your paper which stated that because a resident of Yonkers, who was a Christian Scientist, had died without medical treatment, the coroner was making an investigation. On the same day the newspapers of New York, Yonkers, and other places in the state contained in the aggregate hundreds of notices of death under licensed medical treatment; but up to the present I have not heard that the coroners have taken steps to investigate any of these cases. Doubtless your readers will see the inconsistency of a system which penalizes trust in God, but promotes and protects trust in material methods, no matter what the physical or moral effect of medical treatment or advice may be. Christian Science, which is the reinstatement of the Christianity of Jesus, is daily proving itself to be the most efficacious healing system known to mankind, healing where *materia medica* fails.

Compared to material methods, the failures of Christian Science treatment are significantly few. Despite this, shall failures of Christian Science treatment be reported to the coroner, heralded broadcast in the newspaper, and respected and law-abiding relatives and practitioners be haled before police courts, while the daily, yea hourly, failures of *materia medica* shall be given the stamp of legal approval? Christian Scientists see no valid reason for subjecting them to abuse because of an occasional failure, while multitudinous failures of *materia medica* are permitted to pass practically unnoticed. Furthermore, they predict that the time is not far distant when this inconsistency will be recognized and rectified by a justice-loving public.

❖ ❖ ❖

The world may sound no trumpets, ring no bells;
The book of life the shining record tells.
Thy love shall chant its own beatitudes
After its own life working. A child's kiss
Set on thy sighing lips shall make thee glad.
A sick man helped by thee shall make thee strong.
Thou shalt be served thyself in every sense
Of service which thou renderest.

ELIZABETH BARRETT BROWNING.

Editorial

A Religion of Work

Our Master warned his disciples, and through them all mankind, against the dangers of mere profession, saying, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." He was insistent upon the necessity for activity in the doing of the mighty works which he performed and which he commended to his followers. Mrs. Eddy also has laid great stress upon the necessity for this same activity in well-doing, and has reemphasized it in the saying, "The song of Christian Science is, 'Work—work—work—watch and pray'" (Message to The Mother Church for 1900, p. 2).

Christian Scientists understand the value of the Wednesday evening meetings as a means for bringing to the attention of those in need knowledge of the efficacy of Christian Science in the healing of disease, and they will appreciate the following simple statement taken from the testimony of a woman who during the space of several years had been under the care of four different physicians, only to be informed by the last of these that her case was hopeless and that she must make up her mind to go through life suffering from the disease for which she had vainly sought relief all this time; in brief, that nothing more could be done. Her statement is: "Soon afterward, my attention was called to Christian Science, and I attended a testimony meeting. I was so much impressed by what I heard that I decided to apply for Christian Science treatment. My healing was not quickly accomplished, but through treatment, with earnest study on my own part, I am healed and regenerated, quickened to a new understanding of life in God. I have also had the joy of seeing three members of my family become earnest students of Christian Science as a result of my healing."

In this instance the Wednesday evening meetings fully justified our Leader's foresight in establishing such means for proving that Christian Science is a religion of work,—of practice as well as of preaching. It is because Christian Science is of this character that it takes its place as the Christianity established by Christ Jesus. Few outside of Christian Science realize that these testimony meetings are among the greatest marvels of the age. Remembering that they are held in more than fifteen hundred cities and towns throughout the world, and that each week fully ten thousand persons speaking at these meetings testify to their healing in Christian Science, it is not to be wondered at that the sincerity of these persons, and their gratitude so earnestly expressed, should impress their hearers with the value of this religion in the daily affairs of mankind.

Unquestionably it is the wide-spread longing for relief, for a lifting of the burden, that brings so many inquirers to the testimony meetings, and it is the high privilege of every Christian Scientist to be a witness for Truth at this service of thanksgiving. Perhaps a testimony is to be given; and if we remember that what we have to offer "of love and light" (Miscellaneous Writings, p. 149) may be to some one just the word of proof that will turn the scale of decision to try Christian Science, then very simply and plainly we shall tell what Truth has done for us. It may be our contribution is to be only a loving thought, yet every needy one is included in this reflection of Love, for "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13). Did we fully realize the value of these meetings in replenishing our own store of understanding, as well as in what we can contribute to that of others, there would be no question as to our rightful place and action on Wednesday evenings.

There is no doubt but that many are turned to Christian Science and led to seek the help of a practitioner, as was this lady from whose testimony we have quoted. It thus becomes incumbent upon practitioners to see that those who come to them are given such care and attention as will meet their need. The Christian Science practitioner has a duty to his patients beyond the mere healing of their physical ills, which may be merely the meeting of temporary difficulties. He must turn their thought to God and to the study of the Bible and Science and Health, enabling them to work out their own salvation, and likewise giving them courage to spread abroad the "good news," thus reaching others who are in as great need as they themselves once were.

Archibald McLellan.

❖

"Know thyself"

The pronouncement of the ancient oracle, "Know thyself," takes on a new meaning for the student of Christian Science. To those outside of this teaching the knowing of one's self usually includes a knowledge of the bodily structure, also of the symptoms of disease to which it is supposedly subject, although it is true that many physicians to a large extent discourage efforts to acquire this sort of knowledge. They do so on the ground that it tends to make people morbid, also that a little knowledge is a dangerous thing; yet experience shows that further study along material lines does not make one "healthy, wealthy, and wise," but on the contrary induces fear of disease for one's self and others.

At the same time there can be no doubt that self-knowledge of the right kind is to be desired and sought after, both for the sake of our health and of our moral and spiritual progress. If, for instance, one is attacked by illness or trouble of any sort, a thorough acquaintance with one's mental and spiritual condition is the surest way to get at the root of the discord, and to learn wherein one has failed to respond to the spiritual law which ever makes for harmony.

For enlightenment along this line we cannot do better than to read and ponder our Leader's words at the beginning of the chapter Exemplification on page 86 of "Retrospection and Introspection." Before quoting with approval the motto already mentioned she says, "To energize wholesome spiritual warfare, to rebuke vainglory, to offset boastful emptiness, to crown patient toil, and rejoice in the spirit and power of Christian Science, we must ourselves be true." Then after bidding us become better acquainted with ourselves she says, "Note well the falsity of this mortal self!" She does not stop here, however, but says, "Cleanse every stain from this wanderer's soiled garments, wipe the dust from his feet and the mote from his eyes, that you may behold the real man, the fellow-saint of a holy household."

This brings before us in clear light the Master's command to the disciples in sending them out upon their healing mission,—"Whosoever shall not receive you, nor hear your words, when ye depart out of that house or city, shake off the dust of your feet." The "dust," which typifies the universal belief in matter, with its attendant fears, clings to us much longer than we are consciously aware of. We therefore need to press on toward deeper self-knowledge, until we reach the selfhood which does not respond to mortal and material belief, but radiantly reflects the light in all the changing vicissitudes of human experience.

It goes without saying that we cannot know ourselves until we know God, for, as the psalmist says, "it is he that hath made us, and not we ourselves." Just here it is well to

Digitized by Google

inquire how God made us. When in darkness and sorrow, Job said to God, "Thou hast made me as the clay,"—and there are, alas, too many who believe as did Job before his enlightenment; but when the patriarch became aware of the vileness of the mortal sense of man's being, he was silent while Truth demanded of him where this mortal concept came from. He was told that it was unknown when the foundations of the earth were laid, "and all the sons of God shouted for joy." It is surely clear that no studying of this mortal concept can bring any true self-knowledge. No one would deny that ignorance can never correct error of any sort, whether in mathematics or in human experience; only a thorough acquaintance with that which is real and true can do this, and the more thorough this acquaintance the more quickly the error will be discovered and the correction made.

When Christ Jesus said that to know God is life eternal, he also said, "and Jesus Christ, whom thou hast sent." When we come to understand him we are prepared to know our true selfhood and to realize that it is under divine protection day and night. The Master has also assuringly said of the one who accepts the truth he taught, "The water that I shall give him shall be in him a well of water springing up into everlasting life."

ANNIE M. KNOTT.

Following the Trail

NOTHING is more significant to the mountaineer than "the trail." It is inseparably associated not only with his hardships but with his happiness and his hopes. Whether open or obscure, whether easy or difficult, it always links him to his goal; hence, whatever the situation or circumstance, he knows that it is the one thing he must stick to. Moreover, he is very likely to remember that, though so plain and so comfortably followed today, time was when it was but an indefinite direction, a line of obstructing rocks and undergrowth. Then came the pioneer whose heart was set on reaching the mountain top, and who, though sure only of the course to be made, had the courage to face both the seen and the unseen difficulties before him, and who aspired to make plain the way for all who might have his longing for the summit's broader view. His task called not only for thoughtful daring but for patient endurance, and in locating a safe path for himself he rendered an inestimable service for all who came after him. The question of the feasibility of the undertaking was now forever settled, since it could never be so hard for another as it was for him.

Thus in the climb to any inspiring outlook one is led to place a high value upon the service rendered him by the one who first blazed the way. It was he who opened the door of opportunity. Though clouds may be hiding the peak, and though they may settle down so as to obscure even the lesser landmarks, an open trail and a determined purpose to follow it will remove all danger of our losing the way and dispel all doubt as to our reaching the sun-bathed summit.

It is readily seen that all these things are no less true respecting our spiritual ascent than they are respecting our mountain climbing. To any reasonable person this will satisfactorily explain why not a few people lay much stress upon the teaching of Christian Science as having proved a "Key to the Scriptures," and why they speak so appreciatively of its author as the one to whom they feel indebted for their most valued possessions, namely, health, and the assurance that they will some day reach the heaven of which they have already gained clear glimpses. A knowledge of Christian Science not only points the way to the ideal, but it marks the succeeding stages and steps, the faithful following of which will effect its attainment.

The bird has a way of his own. His trail is altogether unaffected by ledges and ravines and fallen trees, for the reason that it is such a goodly distance above them. So too we can understand that if we were adequately winged with spiritual intuition we might also mount to the heights in a straight, unimpeded, unvarying course, even as did the Master so frequently. Being the plodders that most of us are, the knowledge of a safe, well-marked trail through the tangled underbrush, around the gulches, and over the cliffs, becomes a matter of the greatest significance to us, and our indebtedness to the one whose feet first trod it is very heartily and very naturally expressed. As we are taught in Science and Health (p. 227), Jesus first "marked out the way." Indeed he is "the way," even as he said, but the trail had become obscured by theological débris; it was practically lost long since, and its discovery and adequate marking, so that though yet stupid, every sincere truth-seeker may safely follow it, is certainly the one supreme event of our times.

As he patiently advances, the aspiring wayfarer is sure to reach an elevation now and then which, though relatively modest, brings him unmistakable evidence that he is getting on and up, and in this he has occasion to rejoice continually, however numerous his seeming disabilities and discouragements along the way. Every least demonstration over sickness or sin proves unmistakably that we are rising, and this gives gladdening assurance of that glorious day when we shall stand in the undimmed sunlight which abides above the clouds, and know that all the valleys of humiliation and all the stones of stumbling are forever beneath us.

JOHN B. WILLIS.

Among the Churches

Current Notes

HONOLULU, HAWAII.—March 1 was mortgage burning day for Honolulu First Church of Christ, Scientist. It is not recorded that the mortgage was burned, but it could have been, as on that date the final payment was made for the purchase of the lot at the corner of Wilder avenue and Kewalo street, where the new church building of this organization will be erected. The lot was bought last July [1914] at a cost of seven thousand dollars. The church had at that time a building fund of twenty-eight hundred dollars, and an additional seventeen hundred dollars was contributed from various sources, so that the first payment was forty-five hundred dollars. The collections each month in the church and Sunday school have been applied on the mortgage of the church lot. These, with voluntary contributions, made possible the wiping out of the debt on March 1. The next work is to assemble the fund for the twenty thousand dollar church building planned for the lot. Already several hundred dollars has been accumulated for that purpose.—*Star-Bulletin.*

AKRON, OHIO.—Located on what is generally conceded to be the prettiest building site in the city, and rising slowly tier upon tier of subdued buff tapestry brick and art stone, is appearing the new church edifice of First Church of Christ, Scientist, on the corner of Fir street and Buchtel avenue. This building is about 60 by 96 feet, with basement and main auditorium floors. The main auditorium with its balcony will have a capacity to seat more than six hundred people.

Akron Times.

LOCK HAVEN, PA.—The Christian Scientists have leased the home of J. J. Hulburt on West Church street, where they will hold their meetings, the first floor being used for an auditorium and reading-rooms.—*The Times.*

Digitized by Google

PHILADELPHIA, PA.—Christian Scientists to the number of two hundred were present yesterday [May 30] morning when the first services of Fourth Church of Christ, Scientist, were held in Red Men's Hall, 251-253 South Sixtieth street. The services were really organization services, as the church has but recently been formed among residents of West Philadelphia. Plans are under way for the purchase of ground and the erection of a church building in West Philadelphia. The members of the new congregation feel greatly encouraged by the fact that the body is in a flourishing condition financially and numerically.—*The Record.*

SOUTH PASADENA, CAL.—About two years ago a number of Christian Scientists, most of whom had been members of the Science church in Pasadena, started First Church of Christ, Scientist, in South Pasadena. A hall at 1130 Mission street was rented, and the first services were held in it Sunday morning, Jan. 21, 1912. The regular attendance was large from the beginning, and has steadily increased ever since.
Daily Record.

CHAMPAIGN, ILL.—Second Church of Christ, Scientist, formerly located over the Quirk drug-store, has moved to the Price estate rooms over Terwilliger's hardware store, 120 North Neil street, where it has a large room seating one hundred and fifty people and a spacious reading-room. The church outgrew its old quarters and was compelled to seek larger rooms.—*Champaign Gazette.*

The Lectures

Los Angeles, Cal.

Francis O. Cass, first reader of Sixth Church of Christ, Scientist, in introducing William R. Rathvon, who lectured on Christian Science at Shrine Auditorium before an audience of about fifty-three hundred people, said:—

Christian Science, the subject of the lecture this afternoon, is today engaging the attention and thought of the whole world. And well may it do so, because it is a demonstrable knowledge of God and man's relation to Him. It heals the sick and the sinning, and brings the kingdom of heaven to the consciousness of all who accept its message of Love, proclaiming again, as did the angels at the birth of the Bethlehem babe, "Glory to God in the highest; and on earth peace, good will toward men."—*Correspondence.*

❖

Marquette, Mich.

Bicknell Young delivered a lecture on Christian Science to a large audience assembled in Fraternity Hall. He was introduced by Prof. John E. Lautner of the Northern State Normal School as follows:—

Seven years ago I had the honor of introducing the speaker of the evening to a Marquette audience. I had then paid little attention to Christian Science, but the lecture of that evening led me to become more seriously interested in the subject. Since that time I have given considerable thought to Christian Science, and have found it to be the most logical, scientific, complete, and spiritually satisfying interpretation of Christianity yet given to the world. For years I had been closely associated at different times with half a dozen of the leading denominations of the Christian church, and in all of them I found good, as well as inspiration to higher living.

But there came a time in my experience when these teachings and practices ceased to satisfy. I then turned to philosophy to find an explanation of life and its problems. The entire history of philosophic thought from Thales to Euken and Bergson was eagerly studied and devoured, but I failed to find the solution of life's most serious problem in any of these purely speculative systems of thought. Here and there, to be sure, I found a flash of insight into the higher life of man, but the real problems of life, the nature of God and man, the nature of evil, sin, suffering, and death, remained unsolved. It is these problems that Christian Science aims to solve; even a rudimentary understanding of this teaching, and that is all I claim at present, leads to the conviction that the ultimate and complete solution of these problems is to be found in this profoundest of all sciences and all philosophies. Coming with such a message,—and this is nothing but the message of Christ Jesus rightly understood,—Christian Science ought to, and finally will, make a strong appeal to every human being.—*Correspondence.*

❖

Williamsport, Pa.

Clarence W. Chadwick delivered a lecture on Christian Science in the Lycoming Opera House. He was introduced by A. P. Sharp [chief draughtsman of the motive power department of the Pennsylvania Railroad Co., Williamsport, Pa.], who said in part:—

The rapid growth of Christian Science is not a result of what it promises its followers at some distant place called heaven or at some future time beyond the grave, but it is rather the result of what it is doing here and now to relieve suffering humanity of sickness and sin, and all the other discords that enter into human experience. Thousands and thousands of healthy, happy Christian Scientists owe their health and happiness to God, through Christian Science. Freed from the fetters of fear and disease, they rejoice in a liberty that rightfully belongs to all the children of a loving God. Christian Science has rescued multitudes from the depths of despondency and despair, and has given to them "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." Not alone does this religion heal sickness and sorrow, but through its holy influence it causes the wicked to "forsake his way, and the unrighteous man his thoughts."—*The Williamsport Sun.*

❖

Montrose, Col.

Virgil O. Strickler lectured on Christian Science in Knights of Pythias Hall, and was introduced by Mrs. Charles Nickoll, who said:—

Occasionally in our magazines and newspapers we see articles setting forth the half-dozen greatest achievements of the past century. Never on the list have I seen Mrs. Eddy's great gift to the world; and until men cease to reckon their progress on a purely material basis, this great woman's elucidation of the Scriptures will fail to receive its just recognition.

As an "outsider," I see only good in Christian Science. It has challenged my attention because of its scientific instead of dogmatic interpretation of the Bible; because it defines God as unvarying Love; because it believes man to be inherently good, created in the image of his Maker; because it declares that the realm of Spirit, God, is the real world; because it demonstrates that sin, sickness, grief, and poverty are but illusions which divine Love can obliterate; because of the compactness and harmony of its organization, and because of its Christian dealing with those who have reviled and ridiculed it, for, like all harbingers of Truth, Christian Science has had the bitterest of enemies, and surely no other church has so persistently sought to bestow good for evil upon those who have despised and hated it.

Digitized by Google

In its campaign for the uplift and cheer of humanity, the Christian Science church sends out over the world those who have consciously felt the power of the Spirit, and who are prepared to help others seeking the road to Truth.

Virden, Manitoba

A large audience listened with deep attention to the lecture on Christian Science by Col. William E. Fell at the Auditorium. He was introduced by J. A. C. Fraser, first reader of First Church of Christ, Scientist, who spoke briefly as follows:—

Christian Science is an interesting subject, and one which grows in favor as it becomes better understood. It continues to command respect and win favorable consideration among open-minded people,—people who are seeking Truth; and day by day fresh evidence accumulates to attest its great power to heal sickness and sin. Every one is interested in good health and happiness. Go where you will, you find people seeking these conditions in one way and another, and ready to welcome into their lives whatever they believe will secure to them an increase of these blessings. Christian Science offers them to us through a provable understanding of God.—*The Empire-Advance.*

❖

La Junta, Col.

The introductory words of Attorney C. C. Hearnsberger, at a lecture on Christian Science by Willis F. Gross, were as follows:—

Early teachings, associations, and environments start our lives upon different paths; but all followers of Christ Jesus have the same goal,—to serve God and uplift humanity,—and therefore have many things in common. The longer I live the more I am convinced that no one church or denomination has a monopoly on divine Truth. Arbitrarily to forbid a man from interpreting the Scriptures in his own way would indeed be a travesty upon justice and a violation of his own and God-given right. Desire for religious liberty was the leading cause for the founding of the American colonies. This is an age of investigation,—careful weighing, dissecting, analyzing,—of pulling theories and institutions to pieces, turning on the light, and reconstructing into new theories that will more efficiently meet the needs of modern times.

Some may call Christian Science a new religion; but its fundamentals are not new, for its teachings are based directly and absolutely upon the teachings of Christ Jesus. We find thousands of Christian Scientists living pure, clean, wholesome, unselfish, and exemplary lives, while their mental poise and spirit of good cheer can only be envied by us all. I am not a Christian Scientist myself, but am in hearty sympathy with its basic teachings.—*Correspondence.*

❖

International Falls, Minn.

An audience of upward of three hundred people had the opportunity of listening to a lecture on Christian Science by the Hon. Clarence A. Buskirk in the Viking Theater. Attorney John Brown introduced the speaker, and said in part:—

The presence of so many here this afternoon would seem to indicate a lively interest in the great and growing subject that is to be presented. Whether we agree with Christian Science or not, we cannot but be deeply impressed by its rapid progress and development in recent years. In the comparatively brief space of half a century it has grown from a modest beginning to be one of the greatest forces of the age, contending for clean and righteous living; and I think it is due largely to this fact that a great deal of the world's attention is being fixed upon it today.

In recent years it has too often been the habit, especially of unthinking people, to laugh and scoff whenever a new idea is presented, or even a new application of an old idea. I believe the habit has to a great extent been overcome by a spirit of fair play, which gives to every man and every measure an impartial hearing. All that Christian Science asks of the world today is a fair and impartial hearing. Great movements of all kinds are coming more and more to be judged by the results they show rather than the promises that are made by them. I believe that Christian Science has more than merited the respect and esteem in which it is now held. I am not a Christian Scientist, but I deem it an honor to be invited to introduce the speaker.—*Correspondence.*

❖

Hoboken, N. J.

Alvin Hunsicker, in introducing William D. McCrackan, who lectured on Christian Science, said in part:—

From a spiritual point of view men have made great progress during the past fifty years. In spite of the apparent evidence to the contrary, the world is becoming better. Slavery has been abolished in all parts of the earth; intemperance is rapidly disappearing in a world-wide movement; education is becoming compulsory, even in countries which a few years ago were regarded as uncivilized; an honest effort is being made to know how to live better. If men are not becoming more religious, they are at least becoming more spiritual. Mrs. Eddy, when she discovered Christian Science about fifty years ago, like the great inventors, created nothing new. She simply discovered that the religion of Jesus the Christ, as practised by him and his disciples, could again be made practical, that sin and sickness can be cured, and through a proper understanding of the Christ-principle the lives of men, women, and children may be made wholesome and happy. There is nothing mythical or magical about Christian Science; it is simple, reasonable, and practical. It is, so to speak, the application of the old law of cause and effect interpreted through the attributes of Truth and Love.

Testimonies of Healing

It is now over eight glad years since I first heard of Christian Science, and each year has been more beautiful than the one before. My testimony is given with a heart filled with gratitude for the countless blessings that have come into my life through this Science.

We had spent the winter in Arizona in the hope of benefiting my health, as I had been told by a specialist that I could not live longer here and not long in any climate. While there, and at first after our return, my health seemed a little better, but with the approach of cool weather the old ailments came back even worse than before. At this time I first heard of Christian Science as a means by which people were healed through prayer, and so went to our family physician, who had always been very kind to me, and asked if he knew what it was. He replied that he knew something of it, and advised me to try it, as I had tried nearly everything else and no drugs would ever do me any good. He added, however, that the children should not be entrusted to its care. I immediately sought the only Christian Science practitioner I had ever heard of, arriving at his home late in the evening. After giving me treatment he asked me to come again the next morning. I did so, although it was not necessary, as the trouble for which I was constantly taking opiates had vanished, and it has never returned. The specialist who had rendered the verdict of *materia medica*, examined my lungs after the treatment in Christian Science, and pronounced them perfectly sound.

When I left the home of the practitioner, he placed in my hands the first copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy that I had ever seen, telling me to learn the "scientific statement of being" on page 468, and the Lord's Prayer as spiritually interpreted, on page 16. He then added, "God will teach you to know and to do." I had always believed that God could heal our diseases, and now I had found where to learn the way, and also the "pearl of great price." Never since then have I doubted, but have gone steadily onward, "trusting Truth, the strong deliverer" (Science and Health, p. 226).

My earnest wish is that every mother might know what Christian Science brings to the home. Children gladly learn the truths that make them happy and good. While formerly mine were constantly under the doctor's care, now they are happy and free, and have seldom needed the help of a practitioner. They have had nearly all the ailments common to children, but have not been in bed twenty-four hours at one time in eight years. Every symptom of illness that has presented itself has been quickly destroyed by the power of Truth as revealed in Science and Health. "Who is so great a God as our God?" "Who forgiveth all thine iniquities; who healeth all thy diseases."

Many diseases have been quickly overcome by reading from Science and Health, and then holding thought to some passage of Scripture that filled the seeming need. Two well defined cases of a so-called contagious fever were completely vanquished in a few hours by reading to the children from Science and Health, and then repeating the ninety-first psalm. These healings do not seem wonderful to me, just divinely natural and beautiful proofs of God's love and care for His children. At first the light came slowly,—here a thought and there another. When discordant thoughts present themselves in my consciousness, a realization of God's presence and power, and the declaration "Be still, and know that I am God," dispel the seeming mists, and I find the ever present God an ever present help. Occasions to use my knowledge of this Science arise daily. There is no problem so small and none so large that it does not help in the solving. As I practise what I learn, and abide steadfastly by the truths contained in the Bible and Mrs. Eddy's works, there is a joy in solving them that nothing else can give.

I have been a member and an active worker in other Christian churches, but their ordinances were a disappointment and their creeds brought no comfort. I was always looking for something that was never found, always expecting something that never came. In Christian Science I have found all I desire. My feet are on the solid rock, and daily proofs of God's care bear witness that I am on the right way. Obedience to Truth surrenders nothing and gains for us all. I hear the Master's command, "Be ye therefore perfect," and know I have a long way to go, but "the warfare with one's self is grand" (Miscellaneous Writings, p. 118). And be the journey fast or slow, it is a joyous one, if we strive to be obedient to the demands of Truth.

Not all my problems have been solved, but I know the clouds will roll away, and "I shall be satisfied, when I awake, with thy likeness." I am grateful for every thought, word, and deed that has helped me on my journey, and ever grateful to Mrs. Eddy, who so wisely provided for us our literature and established the various activities of the Christian Science movement.—CLARA E. SNYDER, Sedgwick, Kan.

✧

Having received so much benefit from reading the testimonies in the *Sentinel* and the *Journal*, I want to show my appreciation of the good received by sending in my own. While attending school in Oklahoma City in the fall of 1907, I suffered so much from stomach disorder and constant fear of it, that life was a burden. I used to pray every night that I would get well, and felt that some time, somehow, God would show me the way. Then I used to wonder about religious matters, but the more I pondered over them the more hopelessly tangled they became; yet it always seemed as though there must be some explanation to the questions that puzzled me.

I was living with some old friends, and the lady of the house, who had just commenced treatment with a Christian Science practitioner, noticed my condition, for I could eat scarcely anything. Often for days nothing but a little bread with salt on it was taken once a day. Many different medicines would seem to help a little, and then cease to have any effect whatever, even though the doses were increased. My friend therefore asked why I did not try Christian Science, and my reply was that I would try anything which she thought would help me. An appointment was accordingly made with a practitioner, and I remember wondering whether the treatment would really benefit me, or whether this would prove to be like everything else, for I had been using first one remedy and then another for four years or more. The practitioner gave me treatment, and when she said that God had made all that was made and that it was good, and that man is governed by His law alone, it seemed entirely reasonable,—just what I had always thought should be. She told me not to be afraid, but to eat what was set before me; so I went home and ate a hearty supper. After treating me for a week, the practitioner advised me to try to help myself. My health was wonderfully improved: I was able to go to school and do justice to my studies, and was very grateful and happy.

In a few months I returned to my home. There were no other Scientists near, and my reading was neglected. When ill or in trouble, I would read until relief came or the clouds

Digitized by Google

lifted, but often would not look at Science and Health for weeks, and I never could understand much of the Bible. There was no desire to go back to the old way of thinking, but I see now that not nearly enough time was devoted to systematic reading and study. In 1912, while on a visit in the eastern states, I met an old friend who had become a Scientist and a practitioner. During my visit with her I resolved to study more and try harder to be a true Christian Scientist. Since then much more time has been given to the study of the Bible and Science and Health, and both are becoming clearer to me every day. In the spring of 1913 I had the privilege of class instruction, which has been a great help and inspiration.

I have been helped many times out of physical and other difficulties, and I can truly say that life would not be worth living without Christian Science, since through it we learn what Life really is. It is a wonderful blessing to have the opportunity to learn the truth about God and man which Mrs. Eddy made possible to this age by her purity and her obedience to divine Principle.

ALICE RHUE, Bristow, Okla.

❖

It is with a feeling of deep gratitude for the understanding of the Bible which I have gained through reading "Science and Health with Key to the Scriptures," that this testimony is written. I was healed of serious nervous and heart trouble through Christian Science treatment. I had reached the mental state which knows no peace or rest, and was in fact very sick, both mentally and physically, at the time the text-book was given me to read about seven years ago. Physicians had said there was no cure for the nervous trouble; that I was a physical wreck. Then, too, I was in deep sorrow, and my grief seemed beyond human endurance. With it all, I was tired of living at the time I began to read the chapter on Prayer in Science and Health. I cannot express the joy that came with the realization that God does not send sickness and sorrow to His children, and that I had a right to life, health, and happiness.

Since coming into Christian Science I have had many difficulties to surmount, but with my understanding of Truth and the help of a loving and patient practitioner, I have been able to rise above them. The way has seemed dark at times, but by clinging steadfastly to God, and knowing that He is Love and an ever present help, relief has never failed in the hour of need. I cannot express my thankfulness to God, also my gratitude to Mrs. Eddy for this understanding of Truth. Christian Science has been the greatest blessing that ever came into my life; it has brought that peace "which passeth all understanding." I am also deeply grateful to all who have helped me on the way.

FANNIE L. SCHULZE, Galveston, Texas.

❖

[Translated from the German]

We gratefully avail ourselves of the opportunity to testify to the blessings received through Christian Science. As far back as I can remember, my wife suffered from stomach trouble and consequent ills. The physicians were able to afford only temporary relief by advising her to abstain from certain kinds of food. About three and a half years ago, after we lost an eight year old daughter as a result of appendicitis, our sister-in-law called our attention to Christian Science and gave us copies of the *Herold* to read. I had been disappointed in religious matters previous to that time, and therefore was not disposed to give the subject any attention; but my wife began to read the literature given her. In September, 1912, she was again taken very ill with stomach trouble and nervous debility, and after recovering somewhat from this attack, went to Bern to see a Christian Science practitioner and was given treatment. From the first there was a marked improvement, while in four weeks the trouble disappeared, and there has been no return of it since.

On New Year's eve, 1912, our second youngest boy was taken with appendicitis, and my dread of this pernicious ailment caused me to call up the physician by telephone, while my wife sent word to a Christian Science practitioner. The physician confirmed the presence of the trouble above mentioned, and prescribed for it. We did not give the medicine to the boy, however, for he soon quietly fell asleep. When on Jan. 2 the physician came to see the child, he found to his surprise that the ailment had disappeared. The conviction then came to me that God is Love, and I began to search the Scriptures zealously. Since that time we have not employed the services of a physician. We have had many attacks of illness in our family, but most of them were overcome in their incipient stages.

I should like to mention one more instance of healing. In August, 1913, our eleven year old daughter bit into an apple in which there was a bee, and was stung. We were greatly alarmed the first few moments, especially as the child seemed to have difficulty in speaking. My wife thought she would go to Bern at once and apply for help to a practitioner, but I told her the quicker way would be to telephone. Our fear soon subsided, as we had the certain sense of God's omnipotence, and that infinite Love is ever present. We tried to meet the trouble to the best of our knowledge, and in about two hours all danger was over, and the swelling, which had been visible externally on the throat, completely disappeared toward evening. The most glorious thing to me is, that I am not called upon merely to believe, as was the case formerly, but that divine Truth has become a certainty to me.

I am filled with thankfulness to God for the understanding of His omnipresent help, and we are most deeply grateful to our revered Leader, Mrs. Eddy, and to all workers in that wonderful vineyard of Truth who labor in behalf of humanity.—FRITZ WASEM, Kaufdorf, Ct. Bern, Switzerland.

❖

Christian Science has cured members of four generations of my family. My grandmother was healed first, many years ago, of a very serious stomach disorder of long standing; my mother was healed of varicose veins and numerous other ills; my niece, of paralysis caused by an overdose of poisonous medicine taken during an attack of a throat disease; and myself when a young girl of lung trouble, and since that time of other ailments. This winter we four are together under one roof, and we find that time is indeed only "mortal measurements" (Science and Health, p. 595), and that there is no disparity of age when we study together the words of life given in the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. We meet in Christian Science on a common plane, and find that the youngest is not too young to grasp the meaning of its profound statements, nor is the eldest too wise to appreciate its sweet simplicity and to turn with childlike confidence to the Father. Other members of the family have also been healed, and we are very grateful.

What Christian Science means to me individually is beyond human expression. I can liken it to nothing but the "white stone" mentioned in Revelation, which is to be given to "him that overcometh," and "in the stone a new name written, which no man knoweth saving he that receiveth it." My

Digitized by Google

deepest experiences I cannot tell, but when I have been ill, Christian Science has led me to the great Physician, and I have found healing; when I have seemed to lack, it has opened for me the channels of Love's infinite supply; when I have needed wisdom, it has taught me to look to the "Father of lights," and I have always found enough to meet the need; when I have sorely needed the Comforter, it has revealed to me the "Spirit of truth" which the Master promised, and taught me to apprehend, in the measure in which I have sought, man in God's image, "complete and forever expressed" (Science and Health, p. 519).

For all these blessings I am thankful to God, and grateful to Mrs. Eddy, who had love enough for mankind to want to give us what she had gained through leaving all things for Christ.—THORA B. BUCHANAN, St. Joseph, Mo.

❖

For some time I have desired to give my testimony of healing, first that God may be glorified and that the great truth which Christ Jesus taught through his life may be demonstrated as the true Principle to live by, and secondly that perchance some one suffering from similar ills may be helped by my experience.

More than fourteen years ago I was told by a prominent surgeon in Chicago that to obtain relief it would be necessary for me to have certain glands in my body removed. I had suffered long and intensely from these swelling up like so many boils for about six weeks at a time. Later on, one of my lungs became affected from an acute trouble of a recurrent type, and I was advised to go to Phœnix, Ariz., for a period of five years. Again it was the judgment of three good physicians that I was affected by a malignant growth, and I was informed that the part should be removed at once in order to save my life.

About this time a Christian Science friend made frequent calls at our house and tried to induce me to take treatment, but this I refused to do. The so-called malignant growth, however, soon began to disappear, and I am now certain that it was the impersonal denial by my friend which healed the disease, for I neither had the operation nor went to Phœnix. I had no sympathy either with the idea of an operation or with Christian Science, but a little later on interest in my recovery led me to the study of this Science to see for myself what it was like. A single treatment relieved me of bowel disorder and hemorrhoids, from which I had suffered for five years. During that time I was anything but an agreeable person to live with, since my nerves were in a dreadful condition. In order to sleep at all, I had been resorting to tablets every three hours, besides a sedative at night.

It is now eight years since I began to study and in a humble way to practise Christian Science. All my physical ills, including gall-stones, have entirely disappeared. I want to emphasize the word study, because many people have said to me, "I have read Science and Health, but have got nothing out of it." This is easily understood, for I had the book for five years before I could interpret a word of it,—but what wonder? It is a text-book to be studied and practised. Who could understand arithmetic by a casual reading of the text with no attempt to apply the basic laws involved in its statements? I have proved the efficacy of Science, and I know that its teachings never fail when the understanding of its Principle is properly applied. I am thankful to God for sending that friend to me in my need; otherwise I might have been in the grave. The wonderful truth in Christian Science has been revealed to me,—I say revealed, for it is nothing new; it is "the old, old story of Jesus and his love."

The truth as told in the Bible is made savingly clear by Science and Health. Truly "the leaves of the tree" are "for the healing of the nations," if only daily applied to our every need. In all problems the Bible is my constant guide, as it is of all Christian Scientists. Of special value are the words of the ninety-first psalm; and if, as it says, we abide "in the secret place of the most High," divine Mind, this alone will heal every disease. If we will only study it and desire to live in it, we shall know that God is what the Scriptures declare Him to be,—Spirit, Love, Mind.

JENNIE HARDIN DISNEY, Monmouth, Ill.

❖

In the year 1911 my wife, who had been an invalid for many years, after exhausting all material means, was healed through Christian Science of what is called a fatal disease. I was so much impressed by her wonderful recovery that I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. In a short time I was cured of the tobacco habit, then of the pill habit, while after one treatment by a practitioner I was healed of the drink habit. I am, and have been since my false belief regarding these things was changed, entirely free from them.

I am also glad to testify to a changed consciousness, and a clearer understanding of God and our relation to Him. I am grateful for the knowledge that He is our tender, loving Father, "who giveth us richly all things to enjoy;" that He is our strength, our life, our healer, and the source of infinite supply. I am daily studying the Bible and our text-book, striving for the Mind of Christ. I am thankful to God, also grateful to Mrs. Eddy, who has so patiently and lovingly given us the glorious truth discovered by her, for it makes us free indeed.—GEORGE D. BURDETT, Lexington, Ky.

❖

It is nearly three years since I was cured by Christian Science of hemorrhoids, after doctors said there was no hope for me unless I was operated on. I was, however, weak and worn out, and my heart was not strong, so I was afraid to undergo an operation. My sister then wrote me that she knew a lady who had been healed of stomach disorder through Christian Science. I immediately wrote to the nearest Christian Science practitioner, and in three days I was well. There has never been a sign of the trouble since. Christian Science has surely done wonders for me. I wish to express my deep gratitude for the work done by Mrs. Eddy in giving the world this practical Christianity.

MRS. J. H. JARRETT, Salt Lick, Ky.

❖

On Thanksgiving night, 1905, I was at a friend's house, and as it was very cold I was advised to take a hot-water bottle to bed with me. This I did, and the water was at the boiling point. I was a trained nurse, and had been using hot-water bottles for the past twelve years, but I do not think that I had ever put boiling water in a rubber bottle before. I had no sooner got into bed than the bottle burst, and I was scalded on the left side from hip to foot, while from the knee down the flesh was burned quite deep, and my right leg was scalded from the knee to the foot. Large blisters formed all around where the skin was off.

My friend telephoned to a Christian Science practitioner, who came at once. This was at ten in the evening, and at one o'clock in the morning I was easy and asleep. When I awakened in the morning, I found the blisters and the raw flesh, but to my surprise there was no pain or inflammation. I arose and sewed all day, and the following Monday went out to nurse a case of typhoid fever. The healing was complete, but at that time I knew very little about Christian

Digitized by Google

Science and had a fear of poisoning, so I had treatment for a week. I am now convinced that the healing was done that night.

Since this experience I have taken only one dose of medicine, and on that occasion a doctor stood over me and gave it; but the medicine which he left to be taken every hour I threw away. I then telephoned the Christian Science practitioner that the doctor said I was coming down with acute lung trouble, and that I should go to bed that night and he would take me home the next morning. In the morning, however, I was able to take charge of my patient and felt real well. Since then I have depended on Christian Science for the healing of all ills that have come into my home. Today I know that God is the healer, and a practitioner only the instrument in His hands. I am thankful for all the good that comes to me through the understanding of the allness of God and the consequent nothingness of evil.

DRUCILLA HALE COLLAR, Florence, Col.

❖

[Translated from the German]

It is with a heart filled with gratitude that I wish to testify to the help experienced through Christian Science at a time when I seemed in great need. During the latter part of December, 1914, I was taken ill with severe catarrh and suffered from the effects of contusion of the chest, so that it became impossible for me to go out alone. In fact I had to stay in bed, as I had lost greatly in strength. Then a condition of apathy settled upon me, and I had to have some one with me constantly. My grown-up daughter, who had been healed of gall-stone trouble through Christian Science in 1913, applied to a practitioner, who gave me two present and several absent treatments. After the first present treatment the pain subsided and there was daily improvement. At the time of this writing I am perfectly well, and my appetite is normal. For this wonderful healing I am thankful first to God, and next to Christian Science.

FRIEDRICH BERGMANN, Potsdam, Germany.

❖

Christian Science came into my life at a time of great physical need, and by reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of what two doctors called creeping paralysis. Besides the wonderful peace that came to me, I soon realized that the terrible ache was gone and that I had peace of mind "past finding out." The Bible became beautiful and clear, such a "help in trouble." For years I suffered intensely from a skin disease, and went from one doctor to another in the hope of being cured. After I became a Christian Scientist and was healed of sleeplessness, bowel disorder, female trouble and kindred ills, I realized that "with God all things are possible," and finally the dryness of the cuticle also yielded and I was free.

I am very grateful for the helpful articles on the Home Forum page of the *Monitor* each day, and for all our Christian Science periodicals, as well as for the writings of our dear Leader, who has again given the world the Christ-teaching to be understood and demonstrated. I am also grateful for class instruction, and for all the help I have been able to bring others. Mrs. Eddy says that "the divine Love, which made harmless the poisonous viper, . . . can heal the sick in every age" (Science and Health, p. 243). I wish to acknowledge the help and comfort Christian Science was to us during a case of typhoid fever. When hope was gone I clung steadfastly to God, and the patient was saved.

LOUISA R. FORD, Newton, Mass.

From Our Exchanges

[*The Christian Work*]

Are we not right in supposing that at this moment, in spite of all your feelings of unworthiness and self-reproach, you are dimly aware—or perhaps vividly aware—that there is a you undeclared, a you known only to yourself, who in a manner of speaking is still the ideal of your dreams? Have you not the feeling that there is something in you which is better than any of your performances, higher than the general level of your achievements? We have; we cannot get away from it; and we believe most people have it in some degree. Notwithstanding all the evil you have done and the good you have left undone, you remain aware that there is a you which has never come down, which is still aiming at the skies, which is not the poor weak creature that your spiritual history would seem to prove. What are we to say about this? We say that you see true. That is the you of which Christ has never let go, and through which he will redeem all your poor broken life. "My sheep hear my voice, and I know them, and they follow me: and I give unto them eternal life; and they shall never perish, neither shall any man pluck them out of my hand. My Father, which gave them me, is greater than all; and no man is able to pluck them out of my Father's hand. I and my Father are one."

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Spiritual birth is a real thing, and it is because spiritually-minded men have known it to be such that they have always laid stress upon it. To some it may come as an uprush of thought and feeling, transforming and revolutionizing the whole personality all at once; to others it will come as gradually as the dawning promise of springtime after the darkness and death of winter, but a new birth all the same. To the one class belongs such an experience of mental and moral upheaval as that which befell Saul on the road to Damascus; to the other the new life ripens into fruition in the same way as John the son of thunder was insensibly transformed into the apostle of love. To put the matter into a sentence, we may say that the new birth is a lifting of the personality from the intellectual or natural to the spiritual plane, with a consequent readjustment of all our activities from the higher point of view.

[Prof. A. B. Curtis, Ph.D., in *The Universalist Leader*]

It is the heart that has transformed the world; the story of a life is the story of its love. Our thoughts in themselves are as cold as icicles; touched with feeling, they become human, they glow with holy light and are sweet with a divine perfume. We sometimes think the greatest truths are thought out. We err; they are first felt out. When felt out in the fervor of a new affection, they always seem too good to be believed. Then it is that the head blunders in and tries to prove them, and failing in this it next tries to rob us of them. Fools and blind! "Depth of mind!" as a modern prophet has reminded us, "begins with depth of heart. The greatest writers are primarily seers and only incidentally thinkers."

[*The Outlook*]

Christ did not palliate wrong-doing. He did not treat the wrong-doer as a victim more sinned against than sinning. He demanded repentance. But the repentance he demanded was not emotion or words, but action. The only evidence of repentance he required, the only evidence he recognized, was ceasing to do evil and entering upon a new life of righteous service.

When one has committed a sin, his first duty is to recog-

Digitized by Google

nize the fact, to seek for no justification, excuse, or apology, to consider what lesson his wrong-doing has for him, what revelation of his inmost character it makes to him. He is next to consider whether he has injured any one by his wrong-doing, and if so, what he can do to repair the injury. Then he is to take up again the duties of life and go on, better prepared to fulfil those duties because he knows, as he did not know before, what are the weaknesses of his character and what the temptations which he must avoid.

[*American Lutheran Survey*]

Spiritual power is, after all, the most potent power in the world. It is the power of God Himself, and manifests itself in the hearts of men. The Word of God aims at men's hearts, and if it succeeds in regenerating men's hearts, making new creatures of men, it at the same time succeeds in abolishing wars, bloodshed, and misery in the world.

The church is in duty bound to impress upon this nation the surpassing value of spiritual power, the power of justice and righteousness as it is in Christ Jesus. The church must remind the world that the real values are not material things, but "righteousness, and peace, and joy in the Holy Ghost." The Word of God determines for men what righteousness is. It will not be left to the individual nation or to a congress of nations to determine what righteousness is. Men's judgments are fallible. God's judgment in His Word is everlastingly reliable and trustworthy. We are right in so far as we are armored in truth and righteousness as revealed in God's Word, not in our individual conception of truth and righteousness aside from the Word of God. Justice and righteousness are revealed to us through God's Word. Therein are we doubly armed and prepared for any eventuality.

[*The Universalist Leader*]

Jesus had no sympathy with those who substituted religious ceremonies for practical righteousness; but he did value all forms of worship in so far as they expressed a desire to obey the will of God in the conduct of life. He said, "If thou bring thy gift to the altar, and there rememberest that thy brother hath aught against thee; leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift." What is said of the gift brought to the altar applies of course to any formal homage that we may offer to God. The meaning is that in the scale of obligation moral conduct comes first and religious observance afterward.

[*New-Church Messenger*]

They who keep the commandments in the acknowledgment of the Lord are given to know the truth, because in keeping the commandments the truth does its work. The entrance of the word giveth light, because when the word is entered into by living according to its precepts, it accomplishes that whereunto it is sent. It removes evil. It takes away wrong desire. It strengthens good affections. It brings one into a state in which he experiences delight in unselfish acts, in the duties of his office, and in a life of service.

[*The Christian Register*]

Thinking about religion never reaches the assurance which using it brings. Once to have prayed in time of stress, once to have found that "perfect disenthralment" which Lowell said is prayer, sets religion beyond the blight of doubt. Such experiences fix something deep within which even subsequent moods of depression cannot remove. When they cease to be felt they do not cease to be believed in. Then, if not now, we say, we prayed; and no gloom of depression affects the fact and no glare of question fades it.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Publishing Society

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish and is now published with the English and Swedish versions on opposite pages.

The article by Frederick Dixon entitled "Christian Science Healing *vs.* Mental Suggestion," originally published in the *Weekly Budget* of London, England, has been translated into Norwegian, "Christian Science Helbredelse i motsætning til Mental Suggestion," and is now published in pamphlet form.

The lecture by Bicknell Young, C.S.B., "Christian Science: The New Birth," has been translated into Norwegian, "Christian Science: Gjenfødelsen," and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"The Sons of God," a lecture by Col. William E. Fell, C.S.B., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 103 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1 but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum. Stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

A Colorado highway which is destined to become known for its scenic attractions was completed recently. It is a twenty-three mile stretch between the towns of Parkdale and Cotopaxi, and forms a gateway to the western part of the state through the cañon of the Arkansas river. Construction of the road began two years ago and cost $100,000. Much of the way was cut through solid granite, it being necessary at one point to build the highway through a tunnel. The road skirts the Arkansas river the entire distance. The new highway takes the place of a thirty-two mile hill road between Parkdale and Cotopaxi, which ran through Copper gulch and crossed the sandy bottom of the gulch forty-eight times in eight miles. It gives an easy water grade between Cañon City and Salida, and is a link in the Santa Fé trail and Rainbow transcontinental route from the East to the Pacific coast.

The president of the Atlantic Deeper Waterways Association has just issued a call for the eighth annual convention of the association, to be held in Savannah, Ga., Nov. 9-12. "The unfortunate filibusters," says President Moore, "that developed in the last two sessions of Congress over the river and harbor bills, ended in the adoption of compromise measures carrying lump sum appropriations in insufficient amount and excluding all new projects, thereby postponing and even threatening abandonment of the coastal waterways for which this association has stood since its inception. An unmistakable demonstration should now be made of the popular demand for adequate recognition at the next session of Congress of commercial necessities in the East."

The thirty-third annual report of the fishery board of Scotland, covering the operations of 1914, was recently issued. The sea fish of all kinds landed within the year amounted to 7,440,321 cwts., of the value of £3,208,536, including shell fish valued at £65,029, a decrease of about 25 per cent in value as compared with the previous year. This result was obtained by 8,869 fishing vessels, manned by crews aggregating 37,594. During 1914, 108 steam and 171 motor boats were added to the fishing fleet.

More than 2,000,000 motor cars and trucks are registered in the United States, according to a compilation made in the current number of *The Automobile*. The exact figures, after all deductions for duplications have been made, are 2,070,903 motor vehicles registered in the several states on July 1. This is an increase of 331,809 registrations since the first of the year. New York leads with a total of 185,767, and Ohio is second with 152,950. Illinois is a close third with 151,832; California fourth with 138,600; Pennsylvania fifth with 128,062, and Iowa sixth with 117,407. Michigan has 93,609, Minnesota 82,000, Indiana 81,208. Massachusetts is credited with 76,168, Texas with 72,133.

A new double-tracked railroad link connecting the freight and passenger distributing centers of East Boston, Everett, Somerville, Cambridge, and Allston, Mass., will probably be a leading recommendation made in the report of the special legislative commission to inquire into the steam freight and passenger terminal facilities of Boston. The consensus of opinion was that such a link of two tracks, or preferably four tracks, is an urgent necessity if Boston commercial interests are to have adequate service, and if convenient transfer of passenger trains is to be effected between the Boston & Maine, Boston & Albany, and New York & New Haven railroads, pending solution of a more direct connection between the North and South stations.

A project to build a system of light railways in a virgin agricultural district of the territory of Misiones, Argentine Republic, has progressed so far that the director-general of railways has been requested to prepare preliminary plans and estimates. The Argentine minister of public works has been investigating the feasibility of the project. The line would be government built and owned. Either Posadas or Apostoles, it is stated, would be the terminus, and the system would thus be connected with the Argentine Northeastern Railway, which traverses the southern extremity of the territory between the two points named. With this exception Misiones possesses no railways.

Panama hats are not made in Panama, but in the province of Manabi, Ecuador. The hats are made only at night, because owing to the heat the straw becomes too brittle to use in the daytime. Thousands of natives in the interior of Ecuador are engaged in the weaving of these hats, working from a little after midnight to seven o'clock in the morning. The plants producing toquilla straw, from which Manabi (Panama) hats are made, are five or six species of stemless screw pine. The plant is seen at its best in the dense, dark, tropical forests on the Pacific coast of Ecuador. It attains a height of six to ten feet, and has the appearance of a diminutive palm tree.

After having been under consideration for ten years, the Torrens land registration act was adopted at Salt Lake City, Utah, by the recent conference of the commissioners on uniform state laws. The vote was seventeen to seven, with Illinois, Kansas, Maryland, Massachusetts, Nevada, Rhode Island, and Wisconsin voting in the negative. The act is similar to those in effect in California, Colorado, Illinois, Massachusetts, Mississippi, North Carolina, New York, Nebraska, Ohio, Oregon, and Washington, the changes being largely to conform with recent court decisions. It does away with abstracts of titles and provides that the state shall guarantee titles.

Circuit Court Judges Buffington and McPherson have entered a decree in the United States district court for the district of New Jersey, enjoining the officers and directors of the Delaware, Lackawanna & Western Railroad Company and the Delaware, Lackawanna & Western Coal Company from continuing the business of coal mining and purchase and shipping heretofore in existence between the two concerns. The decree is in accordance with the recent decision of the United States Supreme Court.

It is reported that a chain of wireless stations is to be erected along the proposed steamer route through Hudson bay, Canada. Preliminary work is to be commenced almost immediately at Mansell island at the western entrance to Hudson straits, where the first of the stations will be constructed. The chain will eventually extend to Port Chidley at the Atlantic entrance to the straits. When it is completed vessels will be in touch with the canal stations right to Port Nelson.

Members of the Appalachian Mountain Club are to take a leading part in the dedicatory celebration of the opening of the New Summit House, on Mt. Washington, N. H., which is to be marked by an illumination on Saturday evening, Aug. 21. At nine o'clock that evening a bonfire will be built on the hotel grounds, and it will be answered by fires on all the peaks up and down the notches and on mountain peaks in Vermont.

There are 6,361,502 farms in the United States, according to recent census figures, and they represent 878,798,325 acres, or 46.2 per cent of the total land area of the country. Of the total acreage given only 478,451,750 acres are classed as improved land. The balance comprises wood land and other unimproved land in farms. The average size of farms is 138.1 acres, of which 75.2 acres are improved and 62.9 acres unimproved.

Salt consumed in the United States amounted to 9,998,520,560 pounds during 1914, an increase of 41,475,800 pounds over that consumed in 1913. The geological survey estimates this amount would mean a per capita consumption of almost one hundred pounds for the year. The per capita consumption of sugar in 1914 was 88.14 pounds.

Official advices are to the effect that the 1915 peach crop of the United States will be the largest in the country's history. On July 1 a total of 58,000,000 bushels was reported, which was an increase of 8 per cent over the figures for 1914. It is now believed that the 1915 total will be considerably larger than the figure quoted.

The estimated outlay on road construction in Ontario, Canada, under the good roads act this season has been submitted. Last year the actual expenditure on road construction was $847,000, of which the government contributed one third. The estimates this year provide an outlay of $640,000.

The dairy production of the province of Alberta, Canada, is valued at $10,500,000, according to a report made by the dairy commissioner. With the exception of a negligible quantity of fancy cheese, the dairy production of Alberta is marketed in the form of milk, cream, butter, and Cheddar cheese.

A large contract for the purchase of apples has been closed with the Hood river growers of Oregon by the Netherlands consul, who bought 100,000 boxes at $1.50 a box. The apples will be shipped to the Netherlands in October.

The ninth annual conference of the National Tax Association was in session at San Francisco Aug. 10-14.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVII August 28, 1915 No. 52

"A new commandment"

WILLARD S. MATTOX

JESUS said, "A new commandment I give unto you, That ye love one another; as I have loved you, that ye also love one another." These words epitomize Jesus' life-mission, they are a summing up of his boundless love for mankind. When Jesus' "new commandment" is understood in its consummate beauty, it will be practised generally by those who know its value. It will ultimately dominate the thoughts, motives, speech, and action of mankind, to the complete exclusion of every intent and purpose that today means criticism or condemnation. Its benign mission is to heal every propensity to speak ill of our neighbor.

Analyze that commandment and you will find that Jesus gives us a standard which shall mold our new born incentive to "love one another." We must love our neighbor, Jesus said, "as I have loved you." That is to say, his love was the perfect type or model which must order the nature and character of our love if we would fulfil his commandment. It follows that our thought must comprehend the majesty and the supremacy of that unselfed love which enabled Jesus to say from the cross, "Father, forgive them; for they know not what they do."

Many of the tragedies of mortal existence have been brought about by harsh rebuke and cruel censure. Divine Love, which has been appropriately defined as "infinite consideration," heals both the oppressed and the oppressor. Weary of the struggle against calumny and accusation, many mortals are praying today as David prayed, "Remember, Lord, the reproach of thy servants; how I do bear in my bosom the reproach of all the mighty people; wherewith thine enemies have reproached, O Lord; wherewith they have reproached the footsteps of thine anointed." One clear thinker has summed up in a single sentence the experiences of those who have been reproached unjustly: "The problem of the centuries has been, how to get on with one another;—and there is not a saint among us."

Jesus was the most misunderstood man who ever lived, and as a consequence he was reviled and calumniated. The Master exposed the inconsistency and hypocrisy of his critics when he said: "John came neither eating nor drinking, and they say, He hath a devil. The son of man came eating and drinking, and they say, Behold a man gluttonous, and a winebibber, a friend of publicans and sinners." It is well for all who are inclined to make unfriendly comment on their neighbors to note the moderation and patience of Jesus' defense. He was content to say, "But wisdom is justified of her children." That Jesus was accused of being the friend of sinners was an unwitting tribute to the beauty and nobility of his character, which the orthodox purists of his day could not understand and which the same class cannot comprehend today.

The Leader of Christian Science has shared with the prophets and the spiritually minded of the centuries "the reproach of all the mighty people," and she has understood, as perhaps no one else in this age has been called upon to understand, the significance of Jesus' warning to his followers: "It is enough for the disciple that he be as his master, and the servant as his lord. If they have called the master of the house Beelzebub, how much more shall they call them of his household?" Mrs. Eddy has taken Jesus as her example in maintaining through public attack and vilification the same gentle patience which characterized the dignity of the Master's replies to the scribes and Pharisees, who traduced his mission and slandered his character. Let those whose too frequent habit it is to malign and criticize, listen to these gentle words of Mrs. Eddy, which are as compassionate as was the love of Jesus for all who misjudged him: "To be a great man or woman, to have a name whose odor fills the world with its fragrance, is to bear with patience the buffetings of envy or malice—even while seeking to raise those barren natures to a capacity for a higher life. We should look with pitying eye on the momentary success of all villanies, on mad ambition and low revenge" (Miscellaneous Writings, p. 228).

Who that is longing to be good, to live at peace with his environment, to be honest with all men, has been spared the undeserved reproach of friends as well as enemies? The common belief that there is an enemy, that there is a reproach, comes to be met and mastered by every good man who has started on the way Jesus exemplified. The condemnation of the world was overcome by Jesus, and he distinctly said that those who followed him must go the way he went and overcome as he overcame,—by loving divinely and loving enough to neutralize all hate, and by being considerate of our neighbor. One of the most important lessons that the man who is struggling with the reproach of the critics has to learn, is to overcome a sense of the power of hate. The remedy is pointed out by Mrs. Eddy in these words of cheer and encouragement: "Mind is supreme; Love is the master of hate; Truth, the victor over a lie" (Miscellaneous Writings, p. 336).

Jesus' benediction, "Blessed are the merciful: for they shall obtain mercy," has inspired many today to embark on an earnest effort to reform the human by putting out of thought all criticism. To be gentle and merciful and unselfish, is to wear an armor that is impregnable to the "whispering tongues" which Coleridge says "can poison truth." Talebearers and gossipers have no place in the kingdom of God, and Truth can never be perverted in its life-giving purposes. Spenser has it in his "Faerie Queene" that—

> The gentle minde by gentle deeds is knowne;
> For a man by nothing is so well bewrayed
> As by his manners.

The innate longing of many mortals to be worthy of the name "a son of God," makes them grateful for the understanding of man's real self, which came to the world first through the Nazarene, and today, in a fulfilment of his teaching, by Christian Science. They are grateful because they are being delivered from the discouraging arguments which have so long assailed them,—arguments proceeding from that world which, according to John, "knoweth us not," because it knew not God, our Father.

Man is the son of God. He is heir to all that is good, to

a capacity for right thinking and right living, which accompany his relationship to his heavenly Father. The real man inherits or reflects the divine nature; he does not inherit or express the faults or frailties of a mortal ancestry. This means that Love's man cannot be conscious of anything that is unlike love. Criticism is hate, for it is the reverse of love, and what is not love is hate. Mrs. Eddy makes pointed comment on criticism when she says: "I admonish Christian Scientists either to speak charitably of all mankind or to keep silent, for love fulfils divine law and without this proof of love mental practice were profitless" (The First Church of Christ, Scientist, and Miscellany, p. 106). Criticism is a destructive state of mortal mind, and Christian Science is bringing to light the real man, in whom is no impulse to destroy, to deface, or to extinguish any created thing. All initiative, all impulse, according to the teaching of Christian Science, originate in God, in divine Love, and are reflected or expressed by man. As the idea of God, man cannot be conscious of any motive or intent which is foreign to omniscient and omnipresent good, because he expresses in all his relationships the Love that is "infinite consideration."

The impersonal message of Christian Science has come to earth to emphasize and perpetuate the love that heals those mortal natures which are given up to carping criticism. This message is transforming character and destroying the human tendency to make evil real, with a tender forgiveness which heals hate and malice. It is raising human nature to the standard of nobility which Jesus established. Christian Science is doing the world a service which cannot be calculated except by the metaphysician who understands the value and importance of the spiritually mental action that is operative in universal consciousness today. This influence for good is destined ultimately to bring about universal peace, a unity of men and nations which will finally usher in the millennium, and reveal Immanuel, "God with us."

The "new name"

JESSIE BALFOUR ELLIS

Mrs. Eddy's gift to the world is the discovery of the divine Principle on which to establish and demonstrate all facts about the nature of God and man. In St. John's revelation we are told of the rewards to be bestowed upon "him that overcometh," one being thus defined: "I will write upon him my new name."

Christian Science, the "new name" for the scientific knowledge of God, has excited and still excites remonstrance from those who, admittedly or otherwise, regard the teaching of Jesus as an impossible ideal for humanity, and from those who think of science as being essentially founded on what they call material law. The existence of material law would imply the existence of matter as a reality; and the instability of foundation for the latter hypothesis needs no further demonstration than the ever changing definitions of matter supplied by students of natural science, so called, ultimating in the statement recently made by a distinguished thinker, that "the natural scientist in explaining matter has explained it away."

It was inevitable that natural science and religion should appear irreconcilable so long as the former insisted on the reality of matter, while the latter regarded man as partly spiritual and partly material. That man is wholly spiritual, that he is subject to no material limitations, was incontrovertibly proved by Jesus; but the religious world had for many centuries lost sight of the true significance of his victory over all that menaces man's peace before our Leader made the fearless statement, "Man is not material; he is spiritual" (Science and Health, p. 468). The point at issue between the two sets of thinkers was thus made clear. Moreover, in this brief sentence Mrs. Eddy expressed the very essence of the revelation she had received of the Principle on which Jesus did his mighty works, the Principle which he commanded his students to continue to demonstrate for all time.

In the interval, humanity had been taught to believe that Jesus "came down" out of a remote and unknown region of which this earth was a kind of foreign dependency; that he gave men a glimpse of a possible future in the blissful realm which he had temporarily left, to be attained by them after they had "shuffled off this mortal coil," provided they were then found to be sufficiently purified by suffering; but that in the mean time they must regard themselves as material beings, subject to material laws and limitations, and to what are vaguely called "dispensations of Providence." The last named, when analyzed by the honest investigator, appear to be mainly arbitrary and capricious inflictions and deprivations which no human parent worthy of the name would willingly impose on his offspring.

Mrs. Eddy has given back to us the healing Christ, the Christ whom Jesus sought to reveal, even "the Spirit of truth," which is inseparable from the omnipotence and omnipresence of God, the one Spirit, good, whose infinity precludes the possibility of reality in anything unspiritual. Accepting the dictum that "man is not material; he is spiritual," we find the interpretation of another fundamental statement, namely, that when God saw everything He had made, "behold, it was very good." We know that this could never have been affirmed of matter. This being understood, we realize that we have found the starting-point from which we may proceed to demonstrate the divine Principle of life.

So long as we believe in the reality of matter, it seems incredible that all things were made by the Word of God that "without him was not any thing made that was made;" but we have only begun to discover what things are possible to the one who accepts the divine Principle of life and who knows that man is wholly spiritual. The Greek word logos bears not only the meaning of "the Word of God incarnate," but also that of "the active principle living in and determining the world." Mrs. Eddy says: "The true Logos is demonstrably Christian Science, the natural law of harmony which overcomes discord,—not because this Science is supernatural or preternatural, nor because it is an infraction of divine law, but because it is the immutable law of God, good" (Science and Health, p. 134). This, then, is the light that "shineth in darkness; and the darkness comprehended it not."

Daily to every Christian Scientist there comes the call, "Arise, shine; for thy light is come." Is he not ever gaining and reflecting more of that scientific knowledge of God which is the foundation of the spiritual city that has no need of any material sun? Already in awe and wonder we hold our "peace at the presence of the Lord God," recognizing that "the day of the Lord is at hand," that it is ever the day of the Lord, and that apart from Him we have no existence; therefore, since matter is no part of Spirit, "man is not material; he is spiritual."

The Christian Scientist denies reality to that which is corruptible and destructible; he understands that the material semblance of reality borne by things beautiful, good, and true, is a counterfeit of the eternal, incorruptible, and indestructible; whereas all the error he discerns is part of the lie which asserts the existence of gods other than the one Mind,—omnipotent, omnipresent Life, Truth, Love. Spirit is the eternal illuminator of consciousness; it reveals man to himself as the spiritual reflection of his creator. The

Digitized by Google

student is thus furnished with the inward witness that man is spiritual.

That system which teaches and demonstrates that nothing is scientific which is not Christlike, and that all that is Christlike is capable of scientific proof, thus reconciling apparent discrepancies which have been the age-long distraction of humanity, has surely made good its right to the great "new name," even the name of Christian Science; for does it not teach and demonstrate that true Science and true Christianity are alike the Word of God?

[Translated from the German]

Righteous Prayer

ELFRIEDE EBBINGHAUS

"HAPPY is he that hath the God of Jacob for his help, whose hope is in the Lord his God," sings the psalmist. The Bible contains the assurance that such a one's trust will not be in vain, and the divine admonition through the psalmist, "Call upon me in the day of trouble," is followed straightway by the promise, "I will deliver thee." Did not the great Master say, "Ask, and it shall be given you"? The admonition to ask of God may be heeded by many, but the attendant promise, "and it shall be given you," does not as a rule seem to be fulfilled. It was evidently with reference to such cases that the apostle uttered the words, "Ye ask, and receive not, because ye ask amiss."

Like the strayed children of Israel, mortals in the course of centuries have gradually turned away from the source of light, because of their false beliefs based on the deceptive testimony of material sense. Their concept of God and His creation has been darkened more and more, and the number of those whose lives were in accordance with the law of Life, Truth, and Love, grew steadily smaller, until the prayers of Christians remained unanswered. This was due largely to their failure to understand what constitutes righteous prayer, or else to the conditions which make an answer to such prayer possible. Jesus said, "Whatsoever ye shall ask the Father in my name, he will give it you." The asking, then, must be done in Christ's name.

This cannot be interpreted to mean that a reference to Christ Jesus' achievements would induce God to bestow a blessing upon us. Our Master could not have meant a mediatorial prayer, intercession through him. This becomes apparent by his further words, "I say not unto you, that I will pray the Father for you," which follow shortly after the above passage. In order to pray in the name of Christ Jesus, much more is needed than a blind, passive reliance on the Lord. He surely meant that we must pray in the way that he taught, the effectiveness of which was attested by his demonstration. He showed by his ministry that God, divine Mind, was to him the only causation. He healed the sick, gave sight to the blind, hearing to the deaf, and caused the lame to walk; even death was no obstruction to him, as he proved by raising those who had succumbed to it. He never conceded aught to matter, or endowed it with any power. To him there was only one harmonious state of being, of which God is the creator, and which He sustains and maintains by reason of His infinite wisdom, truth, and love.

With the great Teacher every claim of evil was dissolved and reduced to its native nothingness through the light of his understanding. His prayers were all answered because they were based on the understanding of God's universe and its perfect laws. They did not consist in words, but in the proof that God's work is done; that it is good, and subject to no other power. Understanding the close relation between God and His idea, he acted in the conscious strength of Spirit. His life-work was to benefit mortals. Mrs. Eddy says, "He worked for their guidance, that they might demonstrate this power as he did and understand its divine Principle" (Science and Health, p. 25).

To be answered, prayer must be offered in Christ's name; that is, men must attain to the knowledge of the Principle which Jesus demonstrated. Like Jesus, they must know but one reality and abandon that which is mortal and material. In Mrs. Eddy's words, "To break this earthly spell, mortals must get the true idea and divine Principle of all that really exists and governs the universe harmoniously" (Science and Health, p. 39). This calls for great sacrifices; indeed, the constant immolation of self is required.

Like the star which shone in ancient times, so Christian Science comes today with the purifying fire of Truth, leading mankind out of the chaos of human belief into the realm of reality. Through it mortals come to understand Jesus' life-work, for they begin to see the true relationship between God and His creation. They begin to see man as God's idea reflecting eternal health and eternal Life. They learn to use their birthright of spiritual power, and finally attain peace in the certainty that God is all powerful, omnipotent Mind, the only intelligence which maintains and sustains all its ideas. They learn that they need not fear, for they realize that the ever present God, good, will supply them in due time with the heavenly manna.

In "No and Yes" (p. 42) our Leader says: "God is not unable or unwilling to heal, and mortals are not compelled to have other gods before Him, and employ material forms to meet a mental want. The divine Spirit supplies all human needs." When this understanding is reached, the words of the Master will be fulfilled, "Whatsoever ye shall ask the Father in my name, he will give it you."

Hatred Overcome

E. LOUISE BOSTWICK

WHEN the writer became interested in Christian Science and found that it is a religion of love, it seemed quite impossible for her to love her fellow men as we are taught to do. There was a strong sense of hatred toward one who had been a friend of the family for many years, and this sense, which was roused at any mention of the person's name, seemed to increase as the years went on.

One day, while reading the Lesson-Sermon, attention was drawn to the statement of Christ Jesus that "there is nothing from without a man, that entering into him can defile him: but the things which come out of him, those are they that defile the man." This passage was carefully studied, and it was noted that in response to the inquiry of the disciples Jesus told them of the things which entered into and the things which came out of a man. Immediately the thought came to me that this explained an ailment from which I had suffered for a considerable period. With this illumination came a great desire to love my fellow beings, and the fact that I was healed was speedily made apparent.

Occasion was given me that week to prove the depth and sincerity of my gratitude. I had started to go to my room on Sunday after returning from church, and when I went back to open the door in response to the ringing of the bell, there stood the friend, who had called to see my sister. I shook hands with her, and even kissed her instinctively, and asked her to be seated until my sister came. I then went to my room and did not give the circumstance another thought for several hours; but when the realization came to me of

Digitized by Google

what I had done, and why I had done it, I could not express in words my gratitude to God for this revelation of the true healing. There has never been any further sense of the physical inharmony from which I had suffered. To hate or even to dislike a "neighbor" again, after such a spiritual illumination, would be impossible.

❖

"There is no Pelee"

ESTHER HIGGS

At a missionary exhibition held in London a few years ago, there was given a dramatized representation of the introduction of Christianity into heathen lands. One scene in particular was most impressive from the Christian Science point of view. It represented the worship of the goddess Pelée, who was supposed to preside over the people's destiny, and at certain seasons to show her displeasure by causing a volcanic eruption.

The eruption was depicted, and at the first sound of it the people, who had been innocently engaged in work or play, suddenly stopped, and an expression of fear came over their faces. This deepened into horror as an old man, the priest of Pelée, stepped forward, and with portentous frown and solemn mien looked around upon the hapless little company. Then, choosing the youngest and fairest maiden, who was evidently finding life most sweet, he pointed his staff toward her, thus signifying that she must die, be thrown into the boiling lava as a sacrifice to Pelée, who must be appeased at all costs.

The anguish portrayed on the faces of the condemned maiden and her friends may be imagined, as they knew the fiat of the priest to be inexorable. All the brightness had suddenly gone out of their lives, and blank despair, the terrible impotency of fear, possessed them. But at this point, like an angel of light, the queen of the country, who had embraced Christianity, came forward and stayed the proceedings. Instead of the helpless victim going to her doom, the queen herself walked up the side of the burning mountain, and stepping to the edge of the crater said in defiant tones, "Do your worst, Pelée." The priest and the people shuddered at such blasphemy, and wondered if the queen would not be destroyed in the wrath of the goddess; but nothing happened, and the spell of superstition was broken. Then the queen descended and in earnest tones exclaimed, "There is no Pelée," and forthwith proclaimed that thereafter the worship of the false goddess should cease and the truths of Christianity be taught her people.

This pictured story made a great impression on the writer, for it brought vividly to her remembrance all that is going on today, even in Christian lands. Through the worship of the Pelée of some supposedly incurable disease, for instance, many a fair young life is sacrificed. Though efforts are made to save it, the fiat has gone forth, and the underlying thought of family and friends is one of fear, and an acknowledgment of the power of the dreaded evil. If we did not believe in its power, we certainly should not fear it; and the sadness and sorrow of all this needless sacrifice would be done away with forever, did we but realize that we have been laboring under an illusion, conceding power to an utter falsity, and breaking the first commandment. Thank God that Christ's message of joy and deliverance has come to this age, immersed as it is in the worship of the Pelée of materialism, telling us again there is no such deity and no power in evil, and bringing to light the revelation of Truth.

Christ, Truth, was revealed to Mrs. Eddy when she was condemned to death by material law, and it set her free. On page 226 of Science and Health she writes: "I saw before me the sick, wearing out years of servitude to an unreal master in the belief that the body governed them, rather than Mind. The lame, the deaf, the dumb, the blind, the sick, the sensual, the sinner, I wished to save from the slavery of their own beliefs and from the educational systems of the Pharaohs, who today, as of yore, hold the children of Israel in bondage. I saw before me the awful conflict, the Red Sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged." On the following page she says: "Citizens of the world, accept the 'glorious liberty of the children of God,' and be free! This is your divine right."

Our Leader explains why the worship of the Pelée of disease is illegitimate, when she says: "There is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God. The humble Nazarene overthrew the supposition that sin, sickness, and death have power. He proved them powerless" (p. 228). Let us, then, who have heard this joyful proclamation, be earnest and faithful in our efforts to prove in daily living that there is no power in evil and to realize more abundantly the omnipotence of good.

❖

The Snow Man

GORDON J. MURRAY

I had been wrestling with a sense of discord, trying to realize in consciousness the character and nature of the perfect man, made in the image and likeness of God, in contradistinction to the mortal concept of man, made in the likeness of mortals, and in the struggle my thoughts were directed back to my boyhood days in the north country. I remembered that one of our boyish sports was the making of a snow man. On a winter's day we would make a snowball and then roll it on the ground, so that it would gather up the snow with which it came in contact. In a very short time it would assume large proportions, and with this great ball as a base, we would fashion our man of snow and give him all the human features. We could look upon our piece of statuary as long as the freezing winds blew and the weather remained cold; but when the soft winds came out and the warmth of the sunshine greeted the earth, calling into life the beauties of nature, our snow man disappeared, and the verdant grass and spring flowers came up to mark the place where he had stood.

A wonderful awakening to the truth resulted from this reminiscence of earlier years. I could plainly see that the snow man was a type of mortal man, a man-made man, depending for his existence upon the "long and cold night of discord" (Science and Health, p. 378). When, however, he was touched by the soft zephyrs of Spirit and the warmth of Love, this man, made up of the misconceptions, doubts, and fears of the past, would likewise disappear, and in his place would blossom the flowers of a new springtime of consciousness to gladden him whose birthright is joy and happiness, health and holiness.

❖ ❖ ❖

In each true heart where there is a spark of the divine, life turns eagerly toward the unblemished page, the untrodden way, of the new year, not with wonder simply, or with hope, but with fervent resolve that the dead past shall bury its dead, and that a nobler, fuller, sweeter spirit shall glisten in the chalice of existence.—Rev. F. B. Meyer.

Selected Articles

[Editorial in *The Los Angeles* (Cal.) *Journal*]

Arrangements for the erection of a splendid monument to the memory of Mary Baker Eddy have been perfected, and in the near future will assume definite expression in the granite column which the members of the church she founded will erect in Mt. Auburn cemetery, Cambridge, Mass., in honor of one of the world's remarkable and truly great characters. The work wrought by Mrs. Eddy in the religious world, her notable accomplishments in the field of spiritual endeavor, are now matters of world knowledge, and are of such colossal magnitude as exalted achievements in and for the cause of the Christ as to challenge the admiration and the lasting gratitude of the people of this and of coming generations. Like all really great reforms, her activities in furtherance of man's emancipation from the bondage of the archaic and superstition-laden materialism of the orthodox church met with most bitter and persistent opposition from the beginning of her ministry to the day of her passing.

But so precious is the truth which her wonderful spiritual insight unfolds in the profound depths of the soul's consciousness, so true to divine law is her message to the race, that opposition to Mrs. Eddy and her work, though both intense and relentless, has but served to bring into finer and clearer relief the beautiful outlines of the magnificent structure which her prophetic teachings have reared in the life of the human race,—a temple of divine truth in which Jesus the Christ lives a potential reality, as much so now as in the time of his personal ministry on earth.

This wonderful and divinely appointed woman, whom future ages will rank with the world's few really great personalities, needs no commemorative shaft. Granite decays and disintegrates and commingles with the dust of the ages. Truth—God's law—endures forever, and naught shall prevail against it. The manifestation here on earth of this great woman was as a bright light shining through the darkness of man's ignorance, revealing the great wide roadway of our divine course toward a truer understanding of and a closer fellowship with the infinite. Her imperishable work is her monument, one that will never decay.

✧

[Editorial in *Dayton* (Ohio) *News*]

The committee having the matter in charge have just accepted a design for the monument to be erected to the memory of Mary Baker Eddy in Mount Auburn cemetery, Cambridge, Mass., where reposes the body of this beloved woman. The cost of the monument is to be about a hundred thousand dollars, and the sum was raised through free-will offerings from persons interested in Christian Science.

There have been few characters in human history who have had more followers than this one woman. There have been none who had more while they were living, nor who gathered about their memories in so short a time such multitudes. There is no other case in history where such a monument has been so easily erected to the memory of any one. When our great monuments—and we have but few of them that can really be called great—have been erected, they have been provided for by governments, or only after campaigns in which great publicity was obtained. These monuments have been erected only to people who have accomplished great things in statecraft or war. But here is a hundred thousand dollar monument built with offerings from people who so loved her that they made whatever sacrifice was necessary, absolutely without a general campaign, and apparently with little trouble,—and it is to the memory of a woman who in a simple manner said certain things about religion and about sin and suffering and life and death.

Whatever one may think of Christian Science as a religion, as a cult, or as a fad, the Founder of Christian Science and the influence of her life upon millions of people is worthy of the most serious study. It will not do to dismiss Christian Science and this woman who founded it with a shrug of the shoulders. It is worthy of the most serious study upon the part of all persons who would be students of the world's activities and of the ethics and manners and customs and beliefs of the world, for one can count upon his finger tips the names of those characters in history who have had such influence in the world.

✧

[Frank Bell in *The News*, Mount Carmel, Pa.]

The writer whose opinions on the subject of Christian Science are printed in a recent issue, is not original in his conclusion that if Christian Science were to dispense with everything wherein it appears to differ from his views, it might thereby become unobjectionable to persons of intelligence. A similar thought has been modestly put forth from time to time by not a few persons who have essayed to address the public on that theme.

Our critic is less commonplace, however, in the further assertion that Christian Science does appear to be coming around to his way of thinking,—is in fact "steadily changing front." Here is an important discovery, if true, because Christian Science is of vital concern to a large and constantly increasing body of men and women throughout the world. But when one comes to examine that which is offered in support of this rather startling conclusion, it is evident that not Christian Science, but only our friend's opinion in regard thereto, has changed. In explanation of the assertion that Christian Science "is today openly acknowledging what twenty years ago it strenuously denied," he says, "I refer to its admission that sickness, disease, is an actual physical condition, and not necessarily imaginary."

Twice twenty years have passed since the first publication of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. On page 460 of that book we find the statement that "sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than a fancy; it is solid conviction." And it is explained that the practice of Christian Science does not consist of buffeting the sick "with the superficial and cold assertion, 'Nothing ails you.'" Christian Science teaching always has been that disease is just as much of a reality as any other physical phenomenon; that sickness is a logical and inevitable incident to that imperfect and abnormal sense of existence in which life is regarded as a mere vitalization of material organisms and man as a highly developed fleshly machine.

Consistently with this, Christian Science always has taught that the way out of sickness is through the opening up of a better and truer sense of life, through an approach toward that perfect understanding wherein ultimately it shall be wholly clear that the real man is not animal, physical, or material, but spiritual, and that he lives, moves, and has his being in God, Spirit, whose spiritual image and likeness he is. It is to man's spiritual selfhood that Mrs. Eddy refers in terms which, if undertaken to be applied to mortals, would be ludicrous in the extreme; but of course no such meaning is intended.

Our critic was not happy in "calling to witness," as marking "an historical cleavage in Christian Science," the alleged action of a Christian Science church in New Jersey "not long ago," in withdrawing from association with The Mother

Digitized by Google

Church "in order that in case of sickness a physician might be called." The incident to which he doubtless refers took place about five years ago, and not in the city he mentions. An authentic report on the case is to the effect that because of the attitude of two or three individuals, who have not since been identified with Christian Science, the church was closed for a time, but "several years ago the church was reorganized and is now in flourishing condition, and is of course in harmony with The Mother Church."

Desire for the privilege of calling a physician in time of sickness could never have been the impelling reason for any one's withdrawing from the Christian Science church, because the church does not attempt to interfere with the freedom of its members in such matters. To endeavor through any means, direct or indirect, to impose Christian Science treatment where it is not desired would be inconsistent and futile. Those who look to Christian Science for the healing of their ills, do so because experience or observation has convinced them they will derive the most good by so doing. That such confidence is not misplaced, is attested by the increasingly large numbers who continue to identify themselves with this movement.

Whence came the notion that Christian Science has been holding out the assurance or hope that human beings might through its ministration experience an indefinite lease of years in the flesh, would doubtless be difficult to establish. Certainly nothing of the kind is to be found in the authorized literature of Christian Science, and the writer, who knows hundreds of Christian Scientists, never heard of one who associated the idea of eternal life, declared by the great Teacher to be the knowledge or understanding of "the only true God" and His Son Christ Jesus, with mortal existence.

All Christian Scientists will agree with our critic that any one who may be looking for the earthly reappearance of Mrs. Eddy will be disappointed. It was never contended by her or any one accredited to expound her teachings, that as a human personality she would continue here, or, having passed away, would return. Foolish speculations to such effect have come, not from her followers, but from those who would distort and discredit Christian Science. Mrs. Eddy taught that life is spiritual, not corporeal, and that therefore life is not interrupted by any physical or bodily change, whether sickness or death. She knew that her life found its real expression in her work for the betterment of mankind, and that the work would go on after the material body which mortals had associated in thought with the discovery and promulgation of Christian Science had been laid away. The vast majority of Christian Scientists have had no acquaintance with Mrs. Eddy except through her helpful writings. To them she is as present today as she ever was, and that presence will continue as long as mankind continues to find in her writings practical guidance in the way to health, strength, purity, and solace.

Nothing would be gained by getting into a discussion of the question raised by the author of the sermon referred to, as to whether the so-called orthodox church is in duty bound to accept as incumbent upon it the full command of the Master to preach the gospel and heal the sick, or only that portion of the command which the Master himself practised the least, namely, preaching. The so-called orthodox church must determine that for itself. We may at least be permitted to venture the opinion that if, as alleged, the Christian Science church, which heals as well as preaches, is attracting members away from the church which preaches but does not heal, that fact is not utterly devoid of valuable instruction for the so-called orthodox body.

From the Christian Science point of view, real orthodoxy is not a matter of words and phrases, but of the demonstrable fruits of Christianity in the "accepted time," "now." Christian Science shuns comparison with no other religious movement on the basis of the degree of good actually being accomplished for its adherents. By a like test the Founder of Christianity refuted the "orthodox" opposition of his day.

❖

[W. G. Watkins in *Milwaukee* (Wis.) *Sentinel*]

In your report of the Rev. Mr. ——'s criticism of Christian Science in his address at a session of the Lutheran synod at Watertown, there is to be found a reiteration of what others have said who have misinterpreted the healing and saving mission of Christian Science. In answer to the charge that "Christian Science is incompatible with true Christianity," attention is called to the practical and much-needed response which it is making to the appeals of humanity for deliverance from its suffering and woe.

The Master departed from the traditional beliefs of his time in order to prove that Christianity is demonstrable; and Christian Science insists that the power and success of Christianity is not to be found elsewhere than in the understanding of God and of the gospel which Christ Jesus taught and practised. From a survey of the many denominations at variance more or less with each other as to what the Scriptures teach, arises the question, Is there nothing more than mere human opinion upon which to lean for salvation? Christian Science replies in the affirmative and supports its assertion with practical proof.

The Master said: "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself," and in "Science and Health with Key to the Scriptures" (p. 358) Mrs. Eddy says: "Christian Science, understood, coincides with the Scriptures, and sustains logically and demonstratively every point it presents. Otherwise it would not be Science, and could not present its proofs. . . . It presents the calm and clear verdict of Truth against error, uttered and illustrated by the prophets, by Jesus, by his apostles, as is recorded throughout the Scriptures."

❖

[Paul Stark Seeley in *Rainier* (Ore.) *Review*]

There was recently printed in the columns of the *Review* an article relative to Christian Science which originally appeared in *Puck*. The statements made therein are so manifestly unfair and inaccurate that I beg your leave to correct them. The gist of *Puck's* comment was that a law pending in New York would legalize Christian Science practice, regarded by this publication as "a dangerous retrogression;" that the orthodox physician spends several thousand dollars in preparing himself for practice, and the Christian Science practitioner much less; hence the law should protect the former from competition with the latter. Misstatements were also made regarding the attitude of Christian Scientists toward quarantine and contagious disease, and relative to Mrs. Eddy. The article was noticeably lacking in any statement concerning the comparative results of the two systems of healing referred to, a side of the question in which it is fair to suppose that the outsider would be most interested.

First, what is the nature of Christian Science practice, and is there any good reason for legislative enactment to restrain it? Christian Science is a religion founded on the teachings of the Bible, and its practice is the use of prayer as it was used by Christ Jesus and the early Christians to heal from sickness as well as sin. "The prayer of faith shall save

Digitized by Google

the sick, and the Lord shall raise him up," were the words of the disciple James. Christian Scientists believe these words express as true a statement of spiritual law today as when they were written; hence their practice is prayer, the prayer of faith that comes from understanding God aright. That such prayer "availeth much," as the Bible promises, they have abundant proof, for the success of the Christian Science movement has been based on its efficacy. That legislators should be asked by the medical fraternity to make laws restraining man's right to pray for his brother in need, is one indication of how far a part of the world has drifted from the teachings of Christianity. That such requests have with but few exceptions been disregarded by our legislators, is evidence of their sense of justice and their recognition of man's right to pray to God without interference from man-made law.

It must be plain that the reason for requiring the medical practitioner to secure a license from the state is that by the very nature of his profession he holds himself out as being qualified in certain of the physical sciences, competent to administer dangerous drugs and use dangerous instruments and remedies. The Christian Science practitioner makes no such representations. His method is wholly spiritual, and every one seeking his help knows that it is prayer alone which is employed. He uses no drugs, employs no instruments, and gives no advice on physiology or medicine. The wholly different viewpoint of the two schools of healing makes clear the reason for state regulation in one instance and not in the other. The worship of God can hardly be regarded as a subject to be regulated by the laws of man.

It should be noted that the demand upon state legislatures for laws against Christian Science practice, laws which in effect would permit Christian Scientists to practice only if they studied *materia medica* and secured a state license therefor, was asked for only when the practice of Christian Science became a serious competitor with the regular school. To support the doctors' demand, the high cost of the physician's preparatory work is made an argument for protecting him from competition in healing the sick. It can be readily seen that for the state to do this would be to grant a medical monopoly to one class of practitioners, who by their own argument are unable to command the confidence of the sick in the measure they desire it, even after years of costly preparation, and therefore ask governmental support in the form of restrictive legislation.

What interests the public and the sick, I am sure, is what school or method can restore them to health, and they are not caring much in the first instance what may be the name of the healing system through which the result is accomplished. It seems reasonable to presume that the system accomplishing the greatest good for those in distress will gain the recognition it deserves. Legislative enactment is not needed to assist the public to a right conclusion on so vital an issue. If allopathy had met the world's need for better health, it would not now have to be calling for state aid to protect it from the Christian method of healing by prayer as taught and practised by the Man of Galilee.

The cost of preparation for the medical and Christian Science practitioner is measured by *Puck* by the dollar standard, thus emphasizing this publication's failure to understand the nature of Christian Science practice and the work involved in preparation for it. As any fair inquirer might learn, the student of Christian Science enters upon the public practice of its teachings only after the most painstaking preparation, usually covering many years of the most earnest study, seeking in the way the Bible teaches to gain in some measure the Mind of Christ. "The preparation for a metaphysical practitioner is the most arduous task I ever performed," Mrs. Eddy wrote on page 14 of her sermon on "Christian Healing." Unfamiliarity with the teachings of Christian Science may lead the uninformed to overlook these facts, but their ignorance in no way lessens the divine requirements which the master Metaphysician made the prerequisite for doing the works which he did and said his followers should do.

Christian Scientists obey and support laws relating to quarantine and sanitation. Their conscientious observance of these regulations has frequently been the cause for favorable comment from health officers. They recognize the presence of disease to the material sense and make no such irrational statements regarding it as *Puck* avers. What, however, is most important, they understand that its nature is temporal and mortal, therefore not of God, and so destructible, and they destroy it through the understanding of man's divine right to health as an attribute of his true, spiritual selfhood, made as the Bible declares man to be, in God's image and likeness.

Careless opinions relative to the Discoverer and Founder of Christian Science no longer carry weight with the seeker for truth. Honored by men and women of highest repute, by state and nation, her character and attainments are beyond the touch of him who is wittingly uninformed. It is now a matter of history how Mrs. Eddy through a storm of hate and malicious slander persisted in her life-work to give to the world the message which is reinstating "primitive Christianity and its lost element of healing" (Manual, p. 17). More than personal praise, her greatest accomplishment is found in the lives of thousands who have been uplifted and purified from sin and disease, a lasting encomium beyond written or spoken word. Mrs. Eddy never held aught but the kindest feeling toward those of differing schools of religion and medicine, nor is the attitude of Christian Scientists in any way different from hers.

✧

[S. T. Downs in *Terre Haute* (Ind.) *Tribune*]

Evangelist —— unwittingly paid a fine compliment to Christian Science in his reference to the followers of Mrs. Eddy, when in the sermon reported in a recent issue he pointed out that people are turning to Christian Science for real solace and comfort, after the things the world calls pleasure have lost their glamour and cease to interest. He did not put it just that way, but it is the exact fact of what he tried to make out as a passing fancy.

The history of the cause of Christian Science, covering approximately a half-century, may be said to be the combined experience of thousands upon thousands of those "really sensible people in other respects," as our brother termed them, who are learning the nothingness of the "carnal mind," material sense, and are turning to the somethingness of divine Mind, God. In the effort to "put off the old man with his deeds," and to "put on the new," no seeming vacuity or sense of loss is expressed, because Christian Science gives an understanding of the teachings of the Master that brings what Paul termed "the peace of God, which passeth all understanding."

It is this present availability of Scriptural promises that is attracting the multitudes who are turning to Christian Science. This fulfilment is manifested through those who were bound with the cords of greed and self-seeking, and who have found that true happiness is gained only in doing for others. Here the weary business man finds rest from care and strife, discord of every name and nature is destroyed, and every known disease is healed.

Editorial

Only One Mind

EVERY Christian Scientist is familiar with the fundamental reason for the hope that is in him, namely, "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and that this infinite Mind—God, good—alone governs. While he is always ready to give this reason to "every man that asketh," nevertheless a popular but mistaken belief regarding this religion is that it is one and the same with mental suggestion and that it is used simply to bring about the personal desires of those who have become its adherents. The fact is that Christian Science has nothing in common with mental suggestion and that its sole use and purpose is to bring to humanity that understanding of God which reveals divine law, frees all human and personal desires from selfishness and will-power, and brings mankind under the control and guidance of God's law; in brief, that knowledge of "the only true God," divine Mind, which Christ Jesus declared is life eternal.

Closely related to this mistaken concept of Christian Science is a somewhat similar one, which is the supposition that the practice of this religion includes something called "animal magnetism," a supposed mental force which Christian Scientists are alleged to make use of to the detriment of other persons. The truth is that simply for the sake of convenience Mrs. Eddy has classified all erroneous beliefs under this one term; for instance, on page 484 of Science and Health she writes, "Animal magnetism is the voluntary or involuntary action of error in all its forms." Again, as showing the powerlessness and unreality of this aggregation of erroneous beliefs, she also writes on pages 102 and 103 of the same book: "Animal magnetism has no scientific foundation, for God governs all that is real, harmonious, and eternal, and His power is neither animal nor human. Its basis being a belief and this belief animal, in Science animal magnetism, mesmerism, or hypnotism is a mere negation, possessing neither intelligence, power, nor reality. . . . It is the false belief that mind is in matter, and is both evil and good; that evil is as real as good and more powerful. This belief has not one quality of Truth."

We would reiterate, therefore, that the whole purpose of Christian Science—and this is proved by its works—is to bring to mankind the full knowledge of God, good, and His creation, and thus to bring about the destruction of all evil. Those who believe or profess to believe that animal magnetism is allied with this system or is a part of its practice, simply show that they have not comprehended Mrs. Eddy's teachings. They are as inconsistent in the face of what Christian Science is doing for the regeneration of humanity as are those who believe that the use of evil is permissible or efficacious in an effort to do good. Throughout Mrs. Eddy's writings she constantly exhorts Christian Scientists to abstain from all evil beliefs and evil practices, and on page 450 of Science and Health she describes the mission of her followers in these words: "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good. Sickness to him is no less a temptation than is sin, and he heals them both by understanding God's power over them. The Christian Scientist knows that they are errors of belief, which Truth can and will destroy."

Christian Scientists in protecting themselves against mental suggestion or animal magnetism are simply protecting themselves against evil, and in doing this they must be as careful that they do no evil to others as they are that evil is not done to them. They are taught in Christian Science that they cannot even attempt to do evil to others without its reacting upon themselves; and should they make such an attempt, at that instant they would cease to be able to demonstrate Christian Science. Those who believe that evil has power over humanity and is able to bring about suffering and disaster, need to free themselves from this belief, and this they can do by strict adherence to the teachings of Christian Science.

ARCHIBALD MCLELLAN.

❖

Misplaced Distrust

THE train was crowded, and on entering it a commuter asked if he might share a seat with an open-faced fellow, who answered most obligingly and with whom a pleasant conversation was speedily opened. The traveler proved to be a ranch owner who was making his first visit to the East, being "bound," as he said, for a brother whom he had not seen for forty years or more. He was full of questions, and frankly communicative, so that many interesting facts were gathered respecting the far-away home country.

The commuter was destined for the heart of Boston, where his companion said he would "like to look 'round a bit," so it was arranged that he should leave his valise at the terminal and be shown some of the sights as they talked their way up toward the capitol. Everything was spontaneous and brotherly and they were both having a very nice time, when suddenly it must have occurred to the Westerner that this show of fraternal friendliness to which he had responded so heartily must have some selfish end in view,—be a pretense of which it were well to beware,—and instantly the happy bond between them was severed. Suspicion enthroned itself upon the stranger's face, and offering a stumbling excuse he turned away, to avoid—as he thought—being victimized by one who was guilty only of innocently loving him!

As the commuter sat at his desk that day, he thought many times and with a sense of sadness of the blight which the world-wide rule of misplaced distrust brings to human relations and hence to human character. He thought that perhaps this brother's many experiences fully accounted for his fright at the possibility of imposition. He thought too of the separation between friends, of the discouragement and defeat of unselfish good will, and of the long delay of human redemption thus effected; of the cut-throat competition and the crowding to the wall which distrust begets in commercial affairs; of the unspeakable ills now being inflicted upon the innocent through the rule of this disposition among the nations; of the passing of elemental virtues,—simple honesty, sincerity, unselfishness,—of which even unwarranted distrust gives unmistakable evidence. But most he thought of how all these ills shrink into insignificance as compared with the desolation and decay brought upon the religious life by distrust of God, of Truth and Love.

It is here that the coming of Christian Science has effected the uncovering of a situation in the Christian world which can but startle every meditative man. In Science and Health (p. 231) Mrs. Eddy calls attention to the fact that our subjection to fear measures our distrust of God's omnipotent care, and when one begins to think of how largely fear has to do with the conduct and determination of the very great majority of professed Christians, he begins to glimpse the significance of Jesus' query, "When the Son of man cometh, shall he find faith on the earth?"

Christ Jesus, as it is written, "came unto his own, and his own received him not," and today history is repeating itself

Digitized by Google

in the attitude of the many toward the new revelation in Christian Science of the ever present Christ, coming again as aforetime to save the sinning and heal the sick. At its minimum, faith must mean unswerving confidence in the divine power, and how much of such confidence can he have who daily ignores if he does not decry the healing efficiency of Truth, and who relies upon materiality, "other gods," for present succor and salvation. Certainly nothing can be more true than this, that "when we lose faith in God's power to heal, we distrust the divine Principle" (Science and Health, p. 351).

Christian Science opens the one way of escape from the rule of this paralyzing distrust by again making known that perfect source of being whose law is ever present and unchangeable, and man, His perfect image and likeness. It awakens and develops that spiritual perception which is able to discern between good and evil, to recognize that on which we may always rely as well as that which it is right always to question. This discriminating sense shaped every judgment of the Master, and only in so far as we attain to the Mind that was in him, shall we be saved and be able to save others from the desolating ills of misplaced distrust.

JOHN B. WILLIS.

Choosing

IN all human experience we are confronted by the necessity for deciding or choosing what we shall do. Some may say here that they have no choice at all; that what seems a hard fate decides all things for them. This is not true, however, for freedom is man's birthright, and freedom necessarily implies choice. Again, others might say that oftentimes the choice is only between two evils. Even if this were admitted, it is clear that the right choice, which is that of the lesser evil, would tend to lift one to the plane of thought and action where good is supreme.

At the dedication of the extension of The Mother Church our Leader's message was entitled "Choose Ye," and many times since then have Christian Scientists been aroused from the lethargic tendencies of mortal mind by pondering its stirring appeal, as found in "The First Church of Christ, Scientist, and Miscellany" (p. 5). The command to choose between God and the false gods of mortal mind is familiar to all Bible students, as it marked oftentimes a crisis in the history of the Hebrew people, when enslaved by sensual and cruel idolatry. We read that Joshua made a stirring appeal to the people, reminding them of the blessings which had been showered upon them, and of the wonderful manifestations of divine power which they had witnessed. He entreated them to put away "the strange gods" which were among them and to turn with all their hearts to the God of Israel. It was then that he said, "Choose you this day whom ye will serve; . . . but as for me and my house, we will serve the Lord."

It would seem that this appeal of Joshua was not in vain, for we read that "Israel served the Lord all the days of Joshua," and also during the time of the elders who were associated with him in the work of spiritualizing the ideals of the nation. We find, however, that five hundred years later the people were steeped in idolatry, so that Elijah mournfully declared he was the only one left to serve God. We nevertheless read that there were seven thousand who had not "bowed unto Baal," but they had apparently done nothing to stem the tide of wickedness, or to let their light burn brightly enough to outshine the error of their time.

As we read the pages of history, both sacred and secular, we see that the general tendency of mortals is to drift backward, and save for the brave efforts of seers and prophets the grossest materialism would prevail, which of course would mean the destruction of mankind. The vision of the prophet has always been one of moral and spiritual grandeur, a vision so vital that to the awakened sense all material considerations have paled before it, and brave deeds were done which marked the time as an era of progress. Sad to say, these awakenings have too often been followed by lapses into mental and moral conditions which should have been left behind, and this apparently for the reason that mortals in general are too well content with improvement in physical and social conditions but stop far short of the divine demand for perfection.

It is not enough that we seek peace, there must also be "holiness, without which no man shall see the Lord," as we read in the epistle to the Hebrews. It is therefore a "Choose you" every hour of the day, and the decision made is a vital one. The allurements of sense come through "the lust of the flesh, and the lust of the eyes, and the pride of life," which St. John tells us are "not of the Father." Divine Principle requires of us that we shall express justice and mercy, that we shall reflect Truth and Love, and so "enter into life," as the Master said to an inquirer. The light of Truth cannot shine through an unclean consciousness, and if impurity is allowed to linger in one's thought this may harm those who look to him as a transparency for the light, besides the cost to himself of finding the path from which he has strayed.

Let us then ponder these words of our Leader in "Choose Ye": "Wholly apart from this mortal dream, this illusion and delusion of sense, Christian Science comes to reveal man as God's image, His idea, coexistent with Him—God giving all and man having all that God gives."

ANNIE M. KNOTT.

Among the Churches

Current Notes

HALIFAX, ENGLAND.—The marked growth of Christian Science in Halifax is portrayed in the fact that First Church of Christ, Scientist, has found it necessary to remove into more commodious premises, and the address is now Savile Lodge, Harrison road.

Christian Science was first brought into Halifax as the result of the healing of a lady suffering from spinal and brain trouble. This lady was recommended to try Christian Science by her medical practitioner as a last resort, all other means having failed. After she was healed, the interest of friends was aroused, and these friends began to meet at a neighbor's house at Glenfield, Burnley road. A small room was allotted to their use, and services were conducted there for some time. A move was then made into Halifax, where a small room was taken at the corner of Cow Green and Central street. These premises, however, were soon outgrown, and a larger room was taken a few yards away—at 6 Central street. Here seating accommodation was provided for some one hundred and fifty.

After a stay of six years on these premises the accommodations have again been outgrown, and at last the church is established at Savile Lodge, which is so situated as to enable subsequent extensions. Interior alterations have been made so that room has been found for approximately two hundred and fifty persons.—*Halifax Guardian.*

LOS ANGELES, CAL.—Plans have been accepted by Fifth Church of Christ, Scientist, of Los Angeles, for a new edifice, and it is expected by the officials that before the expiration of the present year the building will be ready for occupancy. The site is a spacious one at the northwest corner of La Brea

Digitized by Google

avenue and Hollywood boulevard, and the structure will cost approximately forty thousand dollars. The auditorium will have a seating capacity of one thousand.

Los Angeles Examiner.

MARSHFIELD, ORE.—The growth of Christian Science in Marshfield has caused the society there to secure new and larger quarters. They have rented the auditorium in the Public Library for their Sunday and Wednesday services, but will maintain the former hall at 237 North Third street for the Sunday school.—*Coos Bay Times.*

PORTLAND, ORE.—At the semiannual business meeting of Third Church of Christ, Scientist, held on the evening of July 6, a motion to contribute their building fund toward the indebtedness of First Church of Christ, Scientist, was passed unanimously, and in accordance therewith a check for two hundred dollars was forwarded. The gift was unanimously acknowledged and lovingly accepted by First Church.

The Lectures

Pasadena, Cal.

Addressing a large and apparently deeply interested audience, Prof. Hermann S. Hering delivered a lecture on Christian Science at the church edifice on Oakland avenue. J. L. Mothershead, Jr., in introducing the lecturer, said:—

The one word which meets with more response today than any other is peace. Long ago Isaiah prophesied the coming of the "Prince of Peace," and when he came to earth his advent was heralded by the God-given thought of "on earth peace, good will toward men." But when this "Prince of Peace" was fulfilling his mission he said: "Think not that I am come to send peace on earth: I came not to send peace, but a sword." Jesus knew that men could never be at peace while they maintained a belief in material life. He knew that all men must lose the material belief of life before they could gain the spiritual reality, "for whosoever will save his life shall lose it: but whosoever will lose his life for my sake, the same shall save it." So Jesus brought the sword of spiritual understanding to cut away that deceptive belief of materiality.

Once again that sword of Truth is being wielded. Once more men are seeing that there is no peace for material sense. Once more spiritual intelligence instead of blind belief is being employed for the salvation of mankind. And so the thought of the world is being prepared to respond to that word of love, "Peace I leave with you, my peace I give unto you," for as Jesus said later, "I have overcome the world."

The Pasadena Star.

✧

Great Falls, Mont.

A lecture on Christian Science, by Col. William E. Fell, was delivered at the Grand Opera House. The speaker was introduced by William C. Kaufman, who spoke as follows:—

The tendency of human nature is to remedy its ills with human inventions. The sick look for health in drugs, the poor look for supply in money, the unhappy look for happiness in material pleasures. The time comes, however, when these human sources fail, and mortals are forced to look to a spiritual source to meet their need. At this period of human experience individuals are ready for Christian Science, because they are ready to accept the truth which Jesus said would make them free,—the truth about God and man.

Christian Science teaches that the right idea of health destroys ill health, the right idea of wealth destroys poverty, and the right idea of happiness destroys unhappiness. Christ Jesus knew these truths. He had acquired them through an understanding of God as divine Life, Truth, and Love, and the conscious communion with this source. Because of his spiritual understanding of God and spiritual man, his compassionate love caused him to say to all mortals, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Christian Science is again inviting mortals to this Christ-method of healing and teaching. It is restoring primitive Christianity. The practice of Mrs. Eddy's teaching is original Christianity.—*Great Falls Leader.*

✧

Nashville, Tenn.

Frank K. Wanner, in presenting William D. McCracken, who lectured on Christian Science, said:—

There is no doubt whatever concerning the Biblical provisions that God forgiveth all our iniquities, healeth all our diseases, and redeemeth us from destruction. Also, that He giveth not "the spirit of fear; but of power, and of love, and of a sound mind." The adequacy of these assurances to meet all human needs was unmistakably proved through the works of Christ Jesus. Therefore it is reasonable to predict that when his teachings are scientifically and practically understood by all men, for whom his statement that the works which he did they should do also was intended, then the sacred promises of the Bible inevitably will be fulfilled, and all mankind will come in the "unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ." This is the acme of salvation,—the perfected human merging into the divine,—the goal all of us must finally attain. Every step of the direct way thereto necessarily is provable, and involves the overcoming of sin, sickness, and death.

In view of the facts that long established religious acceptances and ancestral influences have such strong holds on the general thought as to cause it consciously and unconsciously to generate prejudicial feelings toward teachings of a progressive nature, one who fairly reviews the history of the growth of Christian Science and accurately measures its present stage of progress cannot but conclude that the teaching builds strictly upon merit. Those of us who through Christian Science have actually found God an ever present help in every time of need, desire to give the public correct impressions of this demonstrable teaching; hence this lecture.

Correspondence.

Los Angeles, Cal.

William R. Rathvon delivered three lectures on Christian Science for Second Church of Christ, Scientist. At the first lecture Miss Agnes Hedenbergh, second reader, in her introduction said:—

Mrs. Eddy did not present Christian Science to the world until she had fully tested its healing efficacy; but she says on page 330 of her book, "Science and Health with Key to the Scriptures," that until she "learned the vastness of Christian Science, the fixedness of mortal illusions, and the human hatred of Truth, she cherished sanguine hopes that Christian Science would meet with immediate and universal acceptance." It is the purpose of the Christian Science board of lectureship to prepare human thought for the acceptance of this healing Truth by defining Christian Science and correcting false beliefs regarding it. These lectures are as "the voice of one

Digitized by Google

crying in the wilderness, Prepare ye the way of the Lord, make his paths straight."

Amaziah D. Davis, first reader, said in his introduction:—

Everywhere, through a right apprehension of God, Christian Science is raising the standard of obedience and love to Him whose service secures freedom from bondage to sin and sickness, opens opportunities for helpfulness to mankind, and brings to them that peace "which passeth all understanding."

Freeman R. Derby in his introduction said:—

Standing in the presence of Pilate, Jesus was asked the question "What is truth?" a question that has echoed through the centuries, engaging the attention of thoughtful persons, especially those who have sought an answer that would satisfy. Mrs. Eddy in presenting Christian Science to the world has given the answer to this question, an answer that satisfies because it is demonstrable. Christian Science is the truth, explaining the relation between God and man.

❖

Columbia City, Ind.

There was a thoroughly representative audience, and one of large proportions as well, in attendance at the Christian Science lecture given at Tuttle's Opera House. The speaker of the evening, Bliss Knapp, was introduced by Miss De Maris Rush of this city, who said in part:—

All men are seeking happiness,—they are seeking it as water is seeking its level,—and "happy is the man," runs the proverb, "that findeth wisdom." But adown the ages since the time of Job echoes the cry, "Where shall wisdom be found? and where is the place of understanding?" with the answer: "The depth saith, It is not in me: and the sea saith, It is not in me. It cannot be gotten for gold, neither shall silver be weighed for the price thereof. . . . Behold, the fear of the Lord, that is wisdom; and to depart from evil is understanding." To Sir Galahad it was permitted to find the Holy Grail because he took the path apart from evil; as the poet has it, "because his heart was pure." So today, as always to the pure in heart and the unprejudiced, comes the revelation. "Seek, and ye shall find."

Christian Scientists have no desire to force upon any one the teachings of Christian Science. These lectures are given that the subject may be correctly presented. We are happy, however, to bring the good tidings to all who are ready to hear; for we know that as we share our blessings we receive unto ourselves an added measure. We have learned it to be a scientific fact that "love is the fulfilling of the law." The invitation at the hands of the loving Christ is the same tonight as of old: "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." The prophet cried, "Ho, every one that thirsteth, come ye to the waters," and the Master taught, "Blessed are they which do hunger and thirst after righteousness [after right thinking]: for they shall be filled."—*Commercial-Mail.*

❖

Rogers Park, Ill.

A large audience listened attentively to an address on Christian Science by Clarence C. Eaton. The introductory remarks by William M. Schellinger, chairman of the board of directors, were as follows:—

You are here by invitation of Sixteenth Church of Christ, Scientist, of Rogers Park, whose members have proved for themselves how Christian Science unfolds the goodness of God, and by its healing of the sick and its reformation of the erring has restored to this age what for ages past has been the lost element of Christianity. If the records of the Scripture concerning the healing works of Jesus be accepted as true, no one can deny that he was the most successful healer of the sick the world has ever known. It is recorded that he healed all manner of disease, and there is no record that he ever met with failure. If it is possible to understand and practise the method of healing that was practised by Jesus the Christ, then it must be admitted there is a method of healing more desirable than the employment of material means.

Christian Science is the exact and demonstrable knowledge of the words and works of Christ Jesus. Therefore it is based on the never changing, ever operative, and eternal laws of God, those laws to which the Master referred when he said: "My Father worketh hitherto, and I work. . . . The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." Christian Science is built not on personality but on divine Principle, is "born, not of blood, . . . nor of the will of man, but of God." On this account it is capable of repeating, and is repeating in large measure, the works which Jesus did and said should be done by all who believe on him, or in other words, by all who understand the truth of being as God means it to be understood.

According to the Scriptures, God is and always will be the same as He was in the days of the earthly Jesus, and so His will is and always must be the same as then. If it was possible for the early Christian church to overcome sin, sickness, sorrow, and death, and to be governed by the divine will with its unselfishness, gentleness, goodness, health, holiness, and joy, it is possible today; and the fruits of Christian Science are bearing witness to this fact. Men everywhere are seeking light and truth, and so it is pleasant to know that this evening we will receive the word from one competent to give it.

Testimonies of Healing

For a long time I have contemplated giving to the world, through the columns of the *Sentinel*, an expression of my joy and gratitude for the new life which Christian Science has brought to me. An incident occurred in January, 1914, when the allness of God was so definitely proven to me that I wonder more and more that every one who witnessed the affair could not see the divine power at work.

With my little daughter, two and a half years of age, I was visiting a sister, also a Scientist, who lived on an orange ranch close into the shadow of the southern California mountains. I remember so vividly that we read together that morning a testimony written by a survivor of the Titanic wreck, and my sister said to me, "We have proven God's allness many times. I wonder what we would do if we were to face such a seeming danger!" I replied that it was the same God, who is always present no matter what the seeming, and we would surely remember that.

Later on, with the children, who were all very young, we went for a long walk through the groves. Several times we were obliged to cross a stream about ten feet wide, over little bridges, and sometimes just a plank. Although the stream was narrow, it came down the mountain with great force, and was in some places really deep, while the bed was very rocky and there were occasional falls. My little girl, being entirely fearless and of an independent nature, crossed several times alone, and I expressed fear that she might fall in. Later on I received the well deserved rebuke for my lack of trust.

On our return trip the child ran on ahead of the others with one of the little boys, and no doubt attempted to cross alone, for the boy ran back and told us that she was in the river. Instantly silencing the voice of fear that the news called forth, I stood still and waited. My sister said, "Water has no power over God's child," and I knew perfectly well that this was true. For some time after reaching the bank I failed to see the child, and then some distance down the stream the little face came to the surface and looked calmly up at me. She disappeared twice, I think, and was nearing the falls, where the water was quite deep; but each time she came to the surface there was on her face no expression of fear or physical discomfort.

My daughter was taken from the water below the falls by a young man in the crowd, but I did not witness the rescue; I was thanking God that He had carried her unharmed, and would deliver her for His own sake. Then I heard her call out, "I want my mama," and the crowd laughed, though there were white faces and fast beating hearts, and none but my sister and I were calm. All expressed wonder and amazement that the child never even struggled, and one remarked, "In another instant she would have been beyond help;" but we knew that neither time nor distance nor any other circumstance could separate her from our Father's protecting care. She experienced no ill after effects, nor did the incident impress her as being extraordinary. On our return home the day following, she said, when crossing the stream, "Mama, I'm going to tell daddy I took a ride in the river."

Christian Science was brought to my notice a few years ago by several quick healings in the family of some Scientists who had recently moved into our neighborhood. To say that I needed help that mortals could not give, would not express my almost hopeless condition. Following the birth of my baby and an operation which I barely survived, I was induced to take anti-toxin as a preventive to a so-called contagious disease to which it was thought I had been exposed. Not having the strength to throw off the poison, I became very ill, and seemed to my family and to my own thought to be gradually slipping away. The physician, who was a dear friend and had surely done all that mortal man could do, accordingly decided to put me under "typhoid treatment," and this I felt I could not survive.

God was a stranger to my ignorant thought, but slowly and surely I was made acquainted with Him as understood in Christian Science, and thereby was healed. I am truly grateful to those dear friends who patiently fed my starving sense with the bread of life, and silenced my impatient, doubting words with declarations of the truth. I have been well since then, and better than ever in my life before. My healing brought every one of my loved ones to see and accept, as their daily guide in all things, the truth as taught in Christian Science. My little girl has a demonstrable understanding of this truth, and no one but a Christian Scientist can understand what this means to a mother. I cannot express my gratitude, but I can live what I know of the truth, and gain more each day. I can give thanks that God gave the world Mrs. Eddy, and strive always to follow in the footsteps of the Master.

Not only has my healing, which was my introduction into Christian Science, been permanent, but since that time we have had many more proofs of the supremacy and permanency of Science treatment over any other method. Christian Science has been our only healing agency for over three years, and it has lifted us to a plane of thought where we are more capable of handling all problems that present themselves in our home. We hope to be found faithful in every way to the cause of Christian Science.

HAZEL BUSSERT GRUND, San Bernardino, Cal.

I can testify to the truth of my wife's statements. She was healed by Christian Science treatment when all hope of her recovery had gone. I myself have been healed of several diseased conditions, one of which was thought to be ptomaine poisoning. This attack came on in the night, and although desperately ill for about four hours, I was freed from all sense of pain, as well as the overactive condition of the bowels and the vomiting, before five o'clock in the morning. At six I arose, ate breakfast, and went to my place of business, and before noon all trace of illness had disappeared. Early in our experience with Christian Science I was healed of flatfoot in less than a day through my own understanding and my wife's treatment. I am more grateful for the freedom from fear that seemed to manifest itself so frequently, especially that of a sense of lack, and the fear that I would not always have the needed supply. I am sure we are better in every way since Christian Science became our guide, and we are indeed grateful.—H. P. GRUND.

[Translated from the German]

A sense of deep gratitude impels me to offer this testimony. I first heard of Christian Science through my brother-in-law, who called on me in Dresden at Easter, 1914, coming from Teplitz. He told me of the work accomplished through Christian Science, the teachings of which had seemed incomprehensible to me up to that time. After having been repeatedly urged to attend a Christian Science service, my wife and I did so, and at once were inspired with love for and confidence in this teaching. I thought to myself that here was indeed found the truth which makes people happy and satisfies them by giving them an understanding. My family and myself have experienced many blessings since then; also in a business way, in the measure of our apprehension of divine Love as the creator and sustainer of man and his source of supply.

Digitized by Google

I would like to tell of a wonderful surprise which came to my son recently. He was totally blind in the right eye and half blind in the left. The physicians, after many consultations and much unsuccessful treating, gave him no hope of regaining his eyesight, and I had reached the point where I thought I would not continue to seek help for him. I could not consent to an operation, but when through Christian Science it became clear to me that there is help for all men, we talked matters over with a local Christian Science practitioner and asked her to take up treatment for the boy. After treatment had been given for several weeks, our son on Feb. 3 suddenly realized that he was able to see with the eye which formerly was blind. Filled with joy, he exclaimed at noontime: "Father, I can see with the right eye!" and proceeded to pick up the objects on the table, all of which were visible to him. This blessed experience made us all feel most happy, as it showed how our erroneous beliefs may be removed from consciousness, and gave us the assurance that God is good. I am most deeply grateful for this recognition, and feel greatly indebted to our revered Leader, Mrs. Eddy.

OSCAR REUTER, Niedersedlitz near Dresden, Germany.

[Translated from the German]

I am very happy indeed to be able to testify to the blessings which have come to me through Christian Science after an illness extending over eighteen years. When I first went to the Christian Science reading-room in order to obtain some information on the subject, I limped badly and suffered severe pain in the whole body, due in the physician's opinion to an old case of muscular rheumatism. Since the first year of my marriage I had been afflicted with dreadful headaches and had suffered from neuralgic pain. I went through three operations, two of which were considered most dangerous. In spite of these, however, I retained all my ailments, and naturally became a very unhappy woman. I was expected to submit to another extensive operation, but to this my husband would not consent, and I did not care to undergo it. I had been laid up for five weeks with pain in the hip, and neither steam baths, massage, applications, nor any of the other means employed, brought about a favorable change.

The letters which came from my brother, who is a Christian Scientist, seemed incomprehensible to me. When he came to Dresden, he took me to the Christian Science reading-room. He seemed very much distressed that I should be limping as I did and have to hold on to one piece of furniture after another in moving about. The lady who had charge of the reading-room told me as much as possible about Christian Science, we being alone, and when I left her I felt better; in fact, I was very well able to walk home. My maid, who was waiting at the entrance of the house to help me go up-stairs, could hardly believe it was I, when she saw me coming along so easily with my brother. The lameness has not returned since, and severe headaches, with which I suffered very much, disappeared with a few treatments, along with the distressing pain in the body.

I am very grateful for all the good that has come to me through Christian Science. I have come to see through this healing how glorious an understanding divine Love has given us of true being through Christian Science, and I am grateful to its Discoverer, Mrs. Eddy.

GISELA REUTER, Niedersedlitz near Dresden, Germany.

❖

I have thought for a long time that I would like to send to the *Sentinel* a testimony of my healing through Christian Science. Eight years ago I was taken with a chill; then acute lung trouble with severe pain under the shoulder-blades set in, followed by hemorrhage of the lungs, and to mortal sense I was a very sick person. I was in this condition for four days, when a Christian Science practitioner was wired for, and he came at once. In three days I went down-stairs to my meals. There have been no disagreeable after effects, and I have had no serious ailments since that time.

I am very grateful for the truth given to us through our dear Leader, Mrs. Eddy. I know that without it I would not be here today.—RUBY A. SAGE, Pekin, Ill.

❖

Before coming to Christian Science I had been very unhappy all my life. I tried hard to do right and be contented, but I drifted farther away and found nothing but discouragement. I took a wrong step which disgraced me publicly, and this experience brought the error before me as an obstacle which I thought I could never surmount. "Stripped of its coverings, what a mocking spectacle is sin!" (Science and Health, p. 241.) I thoroughly understood that there was nothing to be gained in wrong-doing and all to be lost, also that one cannot stand still but will get deeper and deeper in the mire. With this shadow about me there seemed to be nothing more to live for; but I decided to leave all behind, go to a strange city, and try again. The thought came to me so often that God would help me if I did what was right, although I knew nothing about God, for the ideas that had been given to me in Sunday school I could not accept. With the advice of my husband, who was very reasonable under the circumstances, I went to a city where I knew no one except a young lady whom I had met in a business way, to ask her to help me find work and a place to stay. To my surprise she took me in as she would have welcomed an own sister, and her method of reasoning brought me such peace and comfort that life seemed easier to live.

When I had told my story, she asked me if I was willing to do right. I answered that I was both willing and anxious, but could never go back to my husband, for we had been very unhappy together; however, if I could understand that it was right I would, though I doubted if I ever would understand. I soon realized that this young lady was living as taught by Christian Science, so I attended the services. I thought it all very beautiful, but felt that it was not for me, as I had done wrong. Nevertheless, in a short time I had "Science and Health with Key to the Scriptures" by Mrs. Eddy, also a Bible, and was studying, for I had been told that the study of this truth (with understanding) would make me happy. When I began to understand that sin is forgiven when forsaken, a great weight was lifted from my shoulders and I had new hope. After about a year of faithful study I understood that my place was with my husband. I had read the chapter on Marriage in Science and Health many times, and I began to understand these words: "Happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it" (p. 57). As my husband had become interested in this healing truth, I knew we could help each other. Since then my husband and I have been healthier and happier than ever before. The greater difficulties have been cleared away, and even strangers remark about how well we get along together.

I am glad also to tell of the physical healing I have received in Christian Science. After the age of thirteen years I was never without medicine for bowel, kidney, and other troubles. People spoke of me as being thin and unhealthy looking, but now they speak of me as being well and healthy. It was about six years ago that I began to read Science and Health, and I had treatment for one month. I do not know exactly when the healing took place, as I was

Digitized by Google

so interested in reading the text-book, which impressed me as being both reasonable and true.

I am very grateful to kind Christian Scientists who helped me when in need. I am also thankful for the literature, reading-rooms, Sunday services, and Wednesday evening meetings; they are all a great help to me. Words can never express my gratitude for the health, joy, and peace which right living brings, as taught by Christian Science.

GERTRUDE KRABILL, Milwaukee, Wis.

❖

I was first attracted to Christian Science through the healing of my sister, and was myself cured of many ills after the doctor said he would have to give up the case, as he had experimented with me as long as he dared. I was suffering from severe pains in my back and weakness of the eyes. I had a baby six weeks old, but had been unable to nurse it for some time. After having Christian Science treatment, however, I was healed of both my troubles, and the supply for the child returned also.

This was nearly nine years ago, and every year since then conditions have been growing brighter. Harmony and peace now reign in our home, whereas before there seemed to be discord and friction. Formerly my husband and I thought we could not possibly go through the summer without having one or two children down with a long spell of sickness, but I thank God that is all over now, for we knew that He does not send sickness to us, but is always present to help if we but call on Him. My husband also had numerous ailments, the worst of them being what is considered an incurable disease of the head, called catarrh of the third ear, which was affecting not only his hearing, but his mental condition as well. This trouble was overcome entirely through Christian Science treatment, and for this healing especially we are thankful to God.

Early in the spring of 1913, three of our children, as well as myself, had what was thought to be a bad cold, but which proved to be whooping-cough. We had very little trouble and were healed in a few treatments. Measles and a case of scarlet fever have been healed in from thirty-six to forty-eight hours, and many other kinds of sickness have been overcome. I am indeed thankful to God for the numberless blessings I have received, and grateful for Christian Science because I have grown to a better understanding of the Bible and of God's love for me. The rugged path has been made smooth, and when days seemed dark and dreary I turned to Him who says, "I have loved thee with an everlasting love: therefore with lovingkindness have I drawn thee."

FLORENCE M. BARZIZA, Houston, Texas.

❖

I wish to express my gratitude for the help I have received through Christian Science during the past twenty-four years. For six years I was a physical wreck and never free from pain. I suffered from kidney trouble and a complication of ailments, but the most severe pain was in my back. I spent one winter in a hospital. Later I gained a little, but there came a relapse, and I was able to do only the very lightest of work, while even that required every effort I was able to put forth. I took medicine and was under the care of doctors continually, but nothing had any lasting effect.

As the years went on I became unable to eat without suffering extreme pain afterward, and all my organs were said to be affected. Finally I felt I must give up the fight, for I had lost faith in every kind of doctor and was rapidly growing worse. I was then living in Nova Scotia, but a brother in the West asked me to come to his home, as he thought the climate might agree with me, and with new hope I accepted his invitation. Before a month had passed, however, I was worse than ever, for the cold air seemed to affect my lungs and a walk of six blocks left me exhausted. At this time I heard by letter of a lady who had been healed of lung trouble through Christian Science after the doctors had given her up. I had never heard of this religion, but after listening to the reading of that letter, the thought that I must try Christian Science never left me, although I was still under a doctor's care, and I finally determined to give it a trial as my last chance.

I obtained the address of a practitioner in Minneapolis, and without reading the Christian Science literature or talking with any one on the subject, I sought help. Up to the fourth treatment there was not the slightest change in my condition. The following night I retired early, as usual, and woke up about daylight with the most wonderful feeling of strength and happiness. I moved to one side very carefully, as formerly any movement had always brought pain; but this time there was not a twinge. I was startled, and made a quick jerk to see what would happen,—but still no pain. Then I jumped out of bed and went through a series of contortions of all sorts to find out if this sudden freedom from pain could be real. As it finally dawned on me that I was healed, and whole, the wave of gratitude and happiness that flooded my being was beyond the power of words to express. This happiness has continued with me ever since. It does not seem to depend on my physical well-being, but is something apart from that; it has strengthened me in every way, and enabled me to overcome difficulties of all sorts.

It is hardly necessary to add that in the twenty-four years since my healing I have never tasted medicine or consulted a doctor. I have been able to work, and have worked a whole year at a time in a mining camp without any vacation or without losing one hour. I have depended entirely on Christian Science, and it has never failed me. I am deeply thankful to God for the great blessings I have received, and grateful to Mrs. Eddy for bringing Christian Science to us. It has changed everything for me, and given me a great sense of strength, security, and happiness.

HIRAM BRIGGAN, Ione, Wash.

❖

[Translated from the German]

I would like to express my gratitude for all the good received through Christian Science. As the result of a difficult birth, I had sustained a rupture of the bowels, which did not heal despite immediate medical treatment, while an operation proved unsuccessful; but with a few treatments in Christian Science I was freed from this trouble. Christian Science has proved a great help to me at a time when my children were taken ill and fears were voiced all around me. The thought that God is eternal good, our ever present and only help, subdued all fear and overcame the inharmonious conditions. I am most deeply grateful for Christian Science.

FRAU MARTA STRAUCH, Hermsdorf i.M., Germany.

❖

I can hardly find words to express my gratitude for the benefits I have received through Christian Science. I had always thought this religion too high for my education, until I had a talk with a friend and later attended a Wednesday evening meeting and heard that if we have faith as a grain of mustard-seed, we shall remove mountains. A great peace came over me then, and I felt I had found the truth and was free. I was advised to get a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and did so. I cannot enumerate the burdens it has taken from me. For many years I had been subject to rheumatism, colds, nervousness, and the

Digitized by Google

habit of chewing tobacco, also used glasses for reading; but these, as well as many minor ills, have disappeared like fog before the sun. I have not had treatment by a practitioner, but the healing came through the study of the Bible and the Christian Science text-book. I have had the truth fully demonstrated to me, and now am like a new man. I thank God for all these benefits, and am grateful to Mrs. Eddy that it was given her to reveal Christian Science to us; and how I do rejoice, and would like others to rejoice with us, for this truth is surely free to all.

ELIAS TRUST, Santa Cruz, Cal.

✧

About twelve years ago a skin disease developed from which I suffered terribly. I was treated by three doctors in London, England, for seven years, and by one doctor in Montreal, Canada, five years ago. This last physician told me it was an extremely rare disease and also the most painful of all skin troubles. After doing all in his power for me, he gave up the case as hopeless, saying I must make up my mind to go through life suffering from this trouble. Soon afterward my attention was called to Christian Science, and I attended a testimony meeting. I was so much impressed by what I heard that I decided to apply for Christian Science treatment. My healing was not quickly accomplished, but through treatment, and study on my own part, I am healed and regenerated, quickened to a new understanding of life in God. I have also had the joy of seeing three members of my family become earnest students of Christian Science as a result of my healing.

No words can express my thankfulness to God for all the good that has come into my life since I turned to Christian Science, or my gratitude to Mrs. Eddy for having brought the truth once again to mankind.

FRANCES G. HOOPER, Ottawa, Ontario, Canada.

✧

A few years before I became interested in Christian Science I assisted in caring for a brother-in-law who had what physicians said was a malignant growth. Both *materia medica* and surgery failed him, and after about two years he passed away. This pathetic case evidently left so vivid an impression upon my thought that some years later a similar growth appeared on my own body in the same locality. At the time of its appearance I had already been a student of Christian Science about a year and a half, and I feel sure that my deep interest in this teaching was the means of bringing the disorder so quickly to the surface to be destroyed. A period elapsed in which I used my understanding of the power of Truth to overcome this encroachment of error, and was successful in allaying the pain it occasioned; but in time the size of the growth attracted attention, and I then appealed to a Christian Science practitioner for treatment. In three weeks the growth had entirely disappeared, leaving me in a normal condition, and I have remained so. This healing took place twelve years ago, so I am sure it is permanent.

At another time I had an attack of acute lung trouble, so severe that the fever raged for several days. From the start the case was put in the hands of an experienced practitioner, and in seven days the disease was so thoroughly destroyed that I went back to work on the following day, and but for a little weakness felt as well as ever. I began the study of Christian Science in 1896, and since that time it has been my physician, surgeon, teacher, and guide. Divine Truth is my reliance under all circumstances.

ROBERT C. GOWDY, Los Angeles, Cal.

From Our Exchanges

[*The Christian Intelligencer*]

While many will enjoy respite from labor during part of the summer season and will seek refreshment of body, mind, and spirit in change of environment, those whose lot it is to continue the established order of their lives with no hope of a vacation need to remind themselves that there are ways of refreshment which do not require a trip and a financial outlay. A translation of the familiar gospel invitation found in Matthew, which differs somewhat from the accepted version, indicates the source of this invigoration: "Come unto me, all ye that labor and are heavy laden, and I will refresh you." A deeper sense of God's presence with us and of the vast resources of grace which are ours in Christ would serve to revive many fainting souls. It may be that the way often grows weary for the very reason that we are not marching on in the strength of the Lord. In Psalms we read, "They looked unto him, and were radiant." It may not be possible to take a trip to the mountains, but "the heavenlies in Christ" are always and instantly accessible. We may be the daily recipients of multiplied grace, so that we can say with Paul, "Wherefore we faint not; but though our outward man is decaying, our inward man is renewed day by day." And this inner renewal has a salutary effect on the "outward man." Life will be better sustained and more fruitful and satisfying in proportion as we wait on the Lord.

[*The Outlook*]

There are evidences in many parts of the world of a revival of interest in the authority of religion; not in ecclesiastical forms or theological phrases, but in the deepening feeling that men cannot live without God, and that without religion rules of morality have no vital power. Thoughtful men in all parts of the East are looking with apprehension at the decay of ethnic religions; unless some religion can take their place, they fear that the bonds which keep society together will be loosened. Man is incurably religious, and the nations of the world cannot escape the challenge of Christianity, for it is Christianity which is challenging rather than being challenged. Having tried force, wealth, comfort, scientific achievements, and been overtaken with bankruptcy, Christianity now challenges the world to test its teaching and practise its precepts. There never has been but one Saviour of the world, and against the blackness of the darkness today he stands the hope and light of the world.

[Rev. Dr. Howard N. Brown in *The Universalist Leader*]

We are now in the midst of quite a reaction against intellectualism and scientific criticism in the church. What, it is asked, has all this brought us that is really worth while? Does it not tend to make men cold blooded, and to dry up the springs of their enthusiasm and their hope? After all, faith is a great adventure into the unknown. But who makes that venture when he has become so critical and so cautious that he dares not put his foot forward till he has minutely measured and surveyed the ground where he is invited to place it?

[*The Congregationalist and Christian World*]

The educated man grows to that high quality of wisdom which can only come through the experience of life with others. "Wisdom is the principal thing," without which "knowledge puffeth up." "But love buildeth up" [Rev. Ver., marginal reading], the apostle hastens to add to that hard saying. Man exists for personal relations, in which his best powers have play and his best joys are born. The educated

Digitized by Google

man is supremely practised in high personal transactions with God and with his fellow men. In these relations his individuality is not sacrificed but heightened. He becomes more himself as he gives more to others. In the thought of Christ,—the man of no schools but that school of sympathy and insight from which he graduated with the title of "the Son of man,"—in the thought of Christ the completely educated man is he who is most successful in obedience to the great commandments of love to God and man.

[*Western Christian Advocate*]

The old theory that property rights are superior to human rights dies hard, but it is dying fast. The low, false, unwholesome views of human nature are being swept away, and a new public conscience and sense of social responsibility has come into being in all Christian lands. This better attitude is manifestly the effect of Christ's influence upon our age. With him were no personages, only men, and his proclamation of the infinite value of the individual soul and the sympathy of God with the perfection of each of us, on which all practical religion depends, sounded the death-knell of aristocracies and every form of caste and privilege. Democracy and freedom sprang into being with his birth. And as time goes on, "drudgery and despair will be replaced by interest and hope," labor will get a new sense of free service, master and man will serve a mutual end, and the welfare of all will be paramount to the prosperity of a few.

[H. S. Wilkinson in *Pacific Christian Advocate*]

Jesus never attempted to prove the existence of God; he assumed it. His teaching presupposed that the fact of God was written on the consciences of men. He did not say God was unknowable. He claimed personal acquaintance with Him. "As the Father knoweth me, even so know I the Father." He claimed personal converse with Him. He declared that the messages he delivered were given by the Father. His word for God is usually the word "Father." He is always sure the Father hears him when he prays. He asserts that we can know the Father. God has a personal relationship to man. God is a personal God. By this is not meant that He is a magnified man. "God is a Spirit."

[*Zion's Herald*]

There may have been times when we have seemed to follow the Christ afar off; but there is the comforting thought that God looks upon what is in the heart. If there is something there that yearns for those things that are true and pure and holy, and that strives to express itself ever so feebly in our acts of every day, we may take courage. The storms of this day and the next may blow adversely, and make it seem that we are not progressing toward the goal for which we are steering; but it is for us to remember that it is the prevailing purpose of our lives that counts; if that is right, all is right. And there should be comfort enough in that thought to send us along with fresh courage, humming some little song of content.

[*The Christian Work*]

The greatest services our religion can render us are to inspire us with high and lasting motives for duty; to give us such a sense of the honor of God and of the welfare of men that evanescent work is impossible; to prompt in us a resolution to offer the best we are and have, even though others, so far from praising, condemn or assail us; and above all else to cause us to ask for no reward except that of an approving conscience on earth and an approving Father in heaven.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

LARGE TYPE EDITION OF SCIENCE AND HEALTH.—A new edition of the text-book, "Science and Health with Key to the Scriptures," designed especially for the use of first readers. This special edition, printed in large type (18-point) on Oxford India Bible paper, and bound in leather, is about the same thickness as the cloth edition of Science and Health. Size, 10¾ inches long by 8 inches wide. The price of this edition is $7.50 per copy, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings, to be sent to one address.

In response to many requests, the CHURCH MANUAL, heretofore published only in the cloth binding, is now issued in a "pocket edition" size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

The pamphlet entitled "The Father's Business," already printed in English and German, has been translated into Swedish and is now published with the English and Swedish versions on opposite pages.

The article by Frederick Dixon entitled "Christian Science Healing *vs.* Mental Suggestion," originally published in the *Weekly Budget* of London, England, has been translated into Norwegian, "Christian Science Helbredelse i motsætning til Mental Suggestion," and is now published in pamphlet form.

The lecture by Bicknell Young, C.S.B., "Christian Science: The New Birth," has been translated into Norwegian, "Christian Science: Gjenfødelsen," and is now published in pamphlet form with the English and Norwegian versions on opposite pages.

"The Sons of God," a lecture by Col. William E. Fell, C.S.B., has been published in pamphlet form and is now on sale at prices shown on the opposite page for our regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken at less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 103 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¼ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, and Addendum, stiff leather cover, single copy $5.00; six or more, each $4.50.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.
